One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;
Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Flour Pellet Cooler (4750-0025-0015) controlled by Baghouse Filters MAC Cyclone HE39;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;
LTMS Truck/Rail Dump Pit (4750-0033-0000A);
LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);

One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE

located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50
90.	13.4	100.00	29.50
140.	17.0	150.00	37.00
180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.27	0.05	0.55
0.1	0.42	0.10	0.87
0.2	0.68	0.20	1.40
0.3	0.89	0.30	1.83
0.4	1.07	0.40	2.22
0.5	1.25	0.50	2.58
0.7	1.56	0.75	3.38
0.9	1.85	1.00	4.10

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in

unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

1. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a),

212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

   An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is

greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE

under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential

voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

   iv. Location of unloading and transporting operations with pollution control equipment;

   v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. The Fugitive Particulate Operating Program, as submitted by the Permittee on DATE PROGRAM APPROVED BY FOS WAS RECEIVED is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
RHOMBO Truck Dump Pit #3	0.0017	14,500	0.21	0.90
Railcar Dump Pit	0.0017	27,000	0.39	1.70
RHOMBO West General Aspiration	0.0017	6,800	0.09	0.40
RHOMBO Gallery Aspiration	0.0017	9,200	0.14	0.60
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Conveying General Aspiration	0.00085	7,600	0.05	0.24
Grain Receiving Fugitives				5.40
			Total:	14.02

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30
Cleaning North APM	0.00085	41,000	0.30	1.31
Corn Cleaning Bldg 115 #2	0.00085	57,372	0.42	1.83
North St Grain/Meal Truck Dump Pit #2	0.0017	20,000	0.29	1.28
			Total:	6.71

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bemis Bagging	0.0006	1,660	0.01	0.04
Bagging General Aspiration	0.0006	3,400	0.02	0.08
Bagging Packer General Aspiration	0.0006	4,400	0.02	0.10

			Total:	31.37

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Throughput (T/Mo)	(T/Yr)	EMISSIONS PM (lb/T)	(T/Mo)	(T/Yr)	PM_{10} (lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03

	Throughput			E M I S S I O N S				
				PM			PM_{10}	
Emission Unit	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

		Emissions	
Pollutant	(lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

		Emissions	
Pollutant	(lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	Emissions (Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	Emissions (Tons/Year)
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition, Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in

this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall

consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil

sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be

conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn,

Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points,

sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or

reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

   i. An existing stationary CI RICE located at an area source of HAP emissions.

   ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR

63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a

copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			14.02	14.02		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			28.32	28.32		
Corn Flour/Bran Handling System			3.05	3.05		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	69.03	67.86	0.51	3.16

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)(ii)	COMS-related report	No	Subpart ZZZZ does not require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.

German,

I met with personnel from the Danville plant yesterday and we have identified additional emission sources that Bunge can remove from service as part of the air Construction Permit application. This will bring the net change in emissions from the permitting action to a net zero or lower. Per our discussion this will allow IEPA to issue the construction permit by the 90 day deadline without needed to having to rush through the FESOP review and also eliminate references/conditions related to the Fugitive Dust Plan in the Construction Permit. Nonetheless, as we discussed, Bunge will continue to review the FESOP draft and work on a Fugitive Dust Plan. Bunge will submit the Fugitive Dust Plan and our comments on the Draft FESOP to IEPA by September 1, 2022.

Bunge plans to have an addendum to the Construction Permit application submitted to you today or tomorrow. The addendum will identify the emission sources being removed from service and the corresponding "Project" emissions showing a net negative emissions increase. Bunge will email you a pdf of the addendum while also overnighting two hard copies to IEPA's permit section.

Please let me know if you have any questions.

Mr. Burris,

Please find attached a draft of the proposed construction permit, and draft FESOP.
Note that there is a place holder for the fugitive dust plan receival date.

Thank you.

German,

Please find attached an Addendum to the air construction permit application, application number 22040008, submitted on April 8, 2022. This addendum is being provided to remove a number of emission sources permanently from service. These changes result in no increase in emissions for the project. Please proceed with issuing the construction permit. Two hard copies of this addendum is being mailed to IEPA's permit section.

Please let me know if you have any questions.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS and NESHAP SOURCE

PERMITTEE

Bunge North America, Inc.
Attn: Dean Hughes
11720 Borman Drive
St. Louis, Missouri 63146-1000

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 #2 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemis Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
8th FR DRACCO Screening (4880-0034-0027) controlled by Baghouse Filters DRACO 6MB-60;
9th FR DRACCO Screening (4880-0034-0001) controlled by Baghouse Filters DRACO 8MB-72;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;

LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than

major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator,

except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP

emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local

law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate

matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E

408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of

750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation

and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and

the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility

property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. The Fugitive Particulate Operating Program, as submitted by the Permittee on DATE PROGRAM APPROVED BY FOS WAS RECEIVED is incorporated herein by reference. The source shall be operated under and shall

comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30

Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Throughput (T/Mo)	(T/Yr)	EMISSIONS PM (lb/T)	(T/Mo)	(T/Yr)	PM_{10} (lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions (lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	Emissions (Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition,

Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and

malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or

USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to

demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and

(d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA: (refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process

rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding

opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after

the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for

inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site

rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January

31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)(ii)	COMS-related report	No	Subpart ZZZZ does not require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.

Jim,

The construction permit draft that I sent you last, is still the latest version, since the changes submitted addresses the removal of equipment, those changes only to be addressed in the operating permit.
The construction permit PM/PM10 limits is still 4.81 tons/year, however, there will be an overall source-wide decrease of - 0.29 tons/year, this is accomplished by the removal of several emission units (4.81 – 0.95 – 0.81 – 0.68 – 2.66 = -0.29 tons/year decrease.

German,

Please find attached an Addendum to the air construction permit application, application number 22040008, submitted on April 8, 2022. This addendum is being provided to remove a number of emission sources permanently from service. These changes result in no increase in emissions for the project. Please proceed with issuing the construction permit. Two hard copies of this addendum is being mailed to IEPA's permit section.

Please let me know if you have any questions.

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35)
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13)
RHOMBO Gallery General Aspiration Filter (03:18)
RHOMBO West General Aspiration Filter (09:09)
Conveying General Aspiration Filter (29:15)
Round Bin General Aspiration Filter (29:27)
Bin 945 Germ Receiver Aspiration Filter (17:26)
North Hominy Feed Grinding General Aspiration Filter (18:07)

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.

Some of the conditions crossed out are conditions that will be in most construction permit.

Have a great evening.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35) This filter will be removed as part of the project, date to be determined. Expected sometime in September.
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13) This filter was removed from service in 2010 and physically removed in 2018.
RHOMBO Gallery General Aspiration Filter (03:18) This filter was removed from service in 2010 and physically removed in 2018.
RHOMBO West General Aspiration Filter (09:09) This filter was removed from service in 2010 and physically removed in 2018.
Conveying General Aspiration Filter (29:15) This filter will be removed as part of the project, date to be determined. Expected sometime in September.
Round Bin General Aspiration Filter (29:27) This filter will be removed as part of the project, date to be determined. Expected sometime in September.

Bin 945 Germ Receiver Aspiration Filter (17:26) This filter will be removed as part of the project, date to be determined. Expected sometime in September.
North Hominy Feed Grinding General Aspiration Filter (18:07) This filter will be removed as part of the project, date to be determined. Expected sometime in September.

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)
This is not correct. There is no increase in air flow through these filters.

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.
A fugitive dust plan for the equipment being permit would be meaningless because none of the equipment being permitted emit fugitive dust. If you want to put a requirement to submit a fugitive dust plan for the "Entire Plant" by a certain date, say within 90 days of the permit being issued, I think that would be appropriate.

Some of the conditions crossed out are conditions that will be in most construction permit.
Understood, but please look as some of the others to see if they can be removed to help clean up the permit.

Have a great evening.

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

Jim,

The construction permit draft that I sent you last, is still the latest version, since the changes submitted addresses the removal of equipment, those changes only to be addressed in the operating permit.
The construction permit PM/PM10 limits is still 4.81 tons/year, however, there will be an overall source-wide decrease of - 0.29 tons/year, this is accomplished by the removal of several emission units (4.81 – 0.95 – 0.81 – 0.68 – 2.66 = - 0.29 tons/year decrease.

Thank you German,

We will review the draft FESOP and respond with our comments by September 1, 2022 as agreed.

Can you tell me the status of the revised draft construction permit for the project?

German,

Please find attached an Addendum to the air construction permit application, application number 22040008, submitted on April 8, 2022. This addendum is being provided to remove a number of emission sources permanently from service. These changes result in no increase in emissions for the project. Please proceed with issuing the construction permit. Two hard copies of this addendum is being mailed to IEPA's permit section.

Please let me know if you have any questions.

COMPLAINT DESCRIPTION

Complaint: No filters on grain milling exhaust systems. Grain Dust particular is unbelievable 3 blocks east of plant. A retired employee told me that is why Danville people have to wash your car's so much and you can't keep windows open on nice nights. This is also the possible reason for my wife and kids allergies. Please just check into this, I have no photos.

History of Prior Complaints:

- No history of prior complaints on file.

Contact w/ Alleged Source:

- 07-12-2022 Inspection:
  - Weather:
    - Temperature: 77°F
    - Humidity: 64%
    - Wind Speed/Direction: 10-15mph; NNW
    - Condition: Fair
  - Truck probing & fugitive emission observations taken from staging area/parking lot located on N. Buchanan St. & Van Buren St.
    - Observations were taken from 10:45AM – 11:15AM
      - Witnessed the probing of three trucks
      - Observed fugitive emissions from trucks entering and leaving staging area/parking lot
  - Loading & fugitive emission observations taken from parking lot located on Van Buren St. & Lauhoff St.
    - Observations were taken from 11:30AM – 11:50AM
      - Witnessed the loading of two trucks
      - Did not observe any visible or fugitive emissions
  - General site wide fugitive dust observations were also taken
    - Did not observe any visible emissions or fugitive dust
  - Attempted to enter facility through guard shack; however, there were no guards available and phone in guard shack was no active/no dial tone.
    - Spoke w/ an employee near guard shack and explained reason for visit and if the Environmental Contact was available
    - Was informed John Clem the environmental contact was out on vacation and would not be available until the following week
    - Employee notified Aric Silver – Project Engineering Manager of the site visit and informed me he would be available in 15-20 minutes

- Mr. Silver was not made available for 40-45 minutes due to an onsite demolition project he was observing
  - Demolition performed by FE Demolition and Remediation LLC
  - Fee and NESHAP notification form was received on 04-18-2022

- Discussion w/ Mr. Silver
  - Provided Mr. Silver with reason for site visit.
  - Mr. Silver suggested source was operating under normal operating conditions and observations that were taken would be typical on any normal day when in operation.
  - Mr. Silver stated the source is not aware of any issues at the plant that was indicative of what was described in the complaint.
  - Mr. Silver also indicated water trucks are used when the source experiences issues with fugitive dust resulting from truck traffic.
    - The source does not own or operate the water truck.
    - Water trucks are rented through a local contractor.
  - The following records request w/ Mr. Silver was made:
    - Any Method 22 observations if taken (last 6 months).
    - Maintenance records for filters, specifically the most recent date for each filter replacement.
    - Fugitive Particulate Operating Program if currently operating under one (not required by permit).
  - Mr. Silver indicated the response to the records request may take over a week to submit since the environmental contact was out on vacation.

- 07-19-2022: Follow-Up
  - Submitted an email to Mr. Silver requesting a status update on the records request.
  - Mr. Silver responded and stated that facility personnel were gathering information that was requested but had several people out on vacation which was slowing the process.

- 07-27-2022: Follow-Up
  - Submitted an email to Mr. Silver requesting another status update on the records request.

- 07-28-2022: Received Response to Records Request
  - The response to the records request included a monitoring report worksheet (attached) that contained dates of last filter change including the following:
    - The operators do daily observations of our particulate-emitting sources and take corrective action if they see emissions that are not normal for our operations, however, we do not document these observations.
    - Attached is a list of all of the filters at the facility and the dates of the most recent filter material replacements. It is standard practice that we change all of the filter media during a change-out, however, we do not document this information.
    - The facility does not currently operate under a Fugitive Particulate Operating Program.

  - The following list of questions were submitted to Mr. Silver for clarification:

- You mention it is standard practice to change-out all filter media during a change-out; however, change-outs are not tracked. To make sure I understand you correctly, the dates provided in the monitoring report worksheet do not include dates for filters that may have been replaced during a change-out, is that correct?
- It may be possible that a filter was replaced more recently then the date represented in the table; however, there is no way to confirm, is that accurate?
- What triggers a change-out to occur?
- Is this separate from maintenance or inspections performed based on manufacturer's recommendations?
- How often are filters inspected onsite, does the facility have SOP's for these units associated with filter media?

- The following response was received:
  - The dates in the spreadsheet was the dates when all the filter media was changed and thus they are tracked. It would if one or two socks would need to be changed those items are not captured.
  - The operators as part of their daily travels through the department they work in, one of the items they are to observe filter discharges to observe if there is an abnormity. If there is they are to notify their supervisor and take corrective action. Corrective action can include inspecting the unit to ensure it is discharging, if the cleaning cycle is functioning correctly, and shutting down the unit to do an internal inspection to determine the cause of the abnormity.
  - Filter media changes are done by increases in the pressure differential across the media, from the visual inspection, and age of the media. The operation group must look at when there will be ample time to take the unit down to perform the work. The plant has units with 9 filter sock up to a unit with over 500, so there is some difference between each of the units. We do preform preventive maintenance on the units, based on manufacture's recommendation and years of experience of operating the different models. We do have SOP's for changing media.

- <u>08-04-2022: Additional Records Requested</u>
  - The last three years of periodic inspections and prompt repairs of defects as it relates to filter change outs along with preventative maintenance recommended by manufacturer, and SOP's that are followed for changing filter media were requested via email.

- <u>08-31-2022: Status Update on Records Request</u>
  - As of August 31, 2022, the source has yet to provide a response to the records request.

<u>RECOMMEDATION BASED ON AVAILABLE INFORMATION:</u>

The source caused, threatened, or allowed the discharge of PM from its staging area and roadways into the atmosphere [35 IAC 201.141]. The source also caused and allowed the emission of fugitive PM from its staging area and roadways, which was visible by the observer looking toward the zenith at a point beyond the property line of the source [35 IAC 212.301]. Fugitive emissions observed from truck traffic was discussed with the permit section. Draft TitleV-FESOP was reviewed and recommended increasing frequency of opacity observations from every 5 years to every quarter.

Based on information provided by the source contact, operators perform daily observations of particulate emitting sources and take corrective action if they see emissions that are not normal for operations; however, do not document these observations. In addition, the source contact stated it is standard practice that they change all filter media during a change-out; however, do not document the information. Review of the monitoring report worksheet that was provided noted 64 areas with the last filter change date to be *prior to July 2017*. Due to concerns with the frequency in which filter media is replaced/changed, an additional records request (attached) was made on 08-04-2022. Records addressing use of good operating practices for control equipment which include records for periodic inspection and records for prompt repair of defects for the last 3 years was requested.

Records of every periodic inspection and prompt repair of defects are required to be maintained and based on the initial response, does not appear to be the case. Periodic inspections and prompt repairs of defects were requested as it relates to filter change outs, preventative maintenance recommended by manufacturer, and SOP's that should be followed when replacing or changing filter media.

As of August 31, 2022, a response to records requested on August 4, 2022, has yet to be received. Recommend VN.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

Good afternoon German and Bob, I understand that you had a meeting with Jim today regarding the minor modification construction permit application for our Danville facility. I apologize that I was not able to be on that call as I had a previous commitment, but I was able to connect with Jim and he briefed me on the discussion.

For background:
Bunge submitted a construction permit application for a minor modification that would have a potential to emit of roughly 3 tons per year of particulate. Illinois EPA notified Bunge that a construction permit that showed any increase in emissions would not be issued without a corresponding decrease in permitted emissions because the facility is located in an Environmental Justice area. Although there is nothing in the Illinois regulations that require this corresponding decrease in permitted emissions, in an effort to secure the construction permit necessary for Bunge to grow its business in Danville, Bunge submitted a list of emission units where, if removed, would show a decrease in emission rates for the project to offset the increase proposed by the new project.

Additionally, Bunge committed to reviewing the draft FESOP and drafting the fugitive dust plan by September 1, 2022. Based on the correspondence below, Bunge understood that was acceptable and that IEPA would proceed with finalizing and issuing the construction permit.

After the call today, we understand that IEPA is insistent that the construction permit can't be issued without issuing the FESOP. I understand that there was a series of questions asked to try to understand the rationale behind this position and also explore other options in an effort to move the construction permit forward, but I also understand that in the end that this was IEPA's position and that position was not going to change on the phone call.

Bunge requests your assistance to help us understand why the construction permit can't be issued without the FESOP and to help us determine if there are other options for addressing EJ concerns and issuing the construction permit for

the minor modification. As noted above, Bunge has committed to turning around the FESOP and the fugitive dust plan by September 1, but does need the time to draft the fugitive dust plan.

We would like to meet with you and your supervisor next week to discuss the above items. Please propose a couple of dates and times that you and your supervisor are available to discuss.

Sincerely
Michelle

CAUTION: This email originated from outside of Bunge. Do not click links or open attachments unless you recognize the sender !

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35)
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13)
RHOMBO Gallery General Aspiration Filter (03:18)
RHOMBO West General Aspiration Filter (09:09)
Conveying General Aspiration Filter (29:15)
Round Bin General Aspiration Filter (29:27)
Bin 945 Germ Receiver Aspiration Filter (17:26)
North Hominy Feed Grinding General Aspiration Filter (18:07)

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.

Some of the conditions crossed out are conditions that will be in most construction permit.

Have a great evening.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

Jim,

The construction permit draft that I sent you last, is still the latest version, since the changes submitted addresses the removal of equipment, those changes only to be addressed in the operating permit.
The construction permit PM/PM10 limits is still 4.81 tons/year, however, there will be an overall source-wide decrease of - 0.29 tons/year, this is accomplished by the removal of several emission units (4.81 – 0.95 – 0.81 – 0.68 – 2.66 = - 0.29 tons/year decrease.

German,

Please find attached an Addendum to the air construction permit application, application number 22040008, submitted on April 8, 2022. This addendum is being provided to remove a number of emission sources permanently from service. These changes result in no increase in emissions for the project. Please proceed with issuing the construction permit. Two hard copies of this addendum is being mailed to IEPA's permit section.

Please let me know if you have any questions.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

Good afternoon German and Bob, I understand that you had a meeting with Jim today regarding the minor modification construction permit application for our Danville facility. I apologize that I was not able to be on that call as I had a previous commitment, but I was able to connect with Jim and he briefed me on the discussion.

For background:
Bunge submitted a construction permit application for a minor modification that would have a potential to emit of roughly 3 tons per year of particulate. Illinois EPA notified Bunge that a construction permit that showed any increase in emissions would not be issued without a corresponding decrease in permitted emissions because the facility is located in an Environmental Justice area. Although there is nothing in the Illinois regulations that require this corresponding decrease in permitted emissions, in an effort to secure the construction permit necessary for Bunge to grow its business in Danville, Bunge submitted a list of emission units where, if removed, would show a decrease in emission rates for the project to offset the increase proposed by the new project.

Additionally, Bunge committed to reviewing the draft FESOP and drafting the fugitive dust plan by September 1, 2022. Based on the correspondence below, Bunge understood that was acceptable and that IEPA would proceed with finalizing and issuing the construction permit.

After the call today, we understand that IEPA is insistent that the construction permit can't be issued without issuing the FESOP. I understand that there was a series of questions asked to try to understand the rationale behind this position and also explore other options in an effort to move the construction permit forward, but I also understand that in the end that this was IEPA's position and that position was not going to change on the phone call.

Bunge requests your assistance to help us understand why the construction permit can't be issued without the FESOP and to help us determine if there are other options for addressing EJ concerns and issuing the construction permit for the minor modification. As noted above, Bunge has committed to turning around the FESOP and the fugitive dust plan by September 1, but does need the time to draft the fugitive dust plan.

We would like to meet with you and your supervisor next week to discuss the above items. Please propose a couple of dates and times that you and your supervisor are available to discuss.

Sincerely
Michelle

Subject: RE: Bunge North America, Inc. ID #183020ABT

CAUTION: This email originated from outside of Bunge. Do not click links or open attachments unless you recognize the sender !

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35)
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13)
RHOMBO Gallery General Aspiration Filter (03:18)
RHOMBO West General Aspiration Filter (09:09)
Conveying General Aspiration Filter (29:15)
Round Bin General Aspiration Filter (29:27)
Bin 945 Germ Receiver Aspiration Filter (17:26)
North Hominy Feed Grinding General Aspiration Filter (18:07)

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.

Some of the conditions crossed out are conditions that will be in most construction permit.

Have a great evening.

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

German,

Please find attached an Addendum to the air construction permit application, application number 22040008, submitted on April 8, 2022. This addendum is being provided to remove a number of emission sources permanently from service. These changes result in no increase in emissions for the project. Please proceed with issuing the construction permit. Two hard copies of this addendum is being mailed to IEPA's permit section.

Please let me know if you have any questions.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

Good afternoon German and Bob, I understand that you had a meeting with Jim today regarding the minor modification construction permit application for our Danville facility. I apologize that I was not able to be on that call as I had a previous commitment, but I was able to connect with Jim and he briefed me on the discussion.

For background:
Bunge submitted a construction permit application for a minor modification that would have a potential to emit of roughly 3 tons per year of particulate. Illinois EPA notified Bunge that a construction permit that showed any increase in emissions would not be issued without a corresponding decrease in permitted emissions because the facility is located in an Environmental Justice area. Although there is nothing in the Illinois regulations that require this corresponding decrease in permitted emissions, in an effort to secure the construction permit necessary for Bunge to grow its business in Danville, Bunge submitted a list of emission units where, if removed, would show a decrease in emission rates for the project to offset the increase proposed by the new project.

Additionally, Bunge committed to reviewing the draft FESOP and drafting the fugitive dust plan by September 1, 2022. Based on the correspondence below, Bunge understood that was acceptable and that IEPA would proceed with finalizing and issuing the construction permit.

After the call today, we understand that IEPA is insistent that the construction permit can't be issued without issuing the FESOP. I understand that there was a series of questions asked to try to understand the rationale behind this position and also explore other options in an effort to move the construction permit forward, but I also understand that in the end that this was IEPA's position and that position was not going to change on the phone call.

Bunge requests your assistance to help us understand why the construction permit can't be issued without the FESOP and to help us determine if there are other options for addressing EJ concerns and issuing the construction permit for the minor modification. As noted above, Bunge has committed to turning around the FESOP and the fugitive dust plan by September 1, but does need the time to draft the fugitive dust plan.

We would like to meet with you and your supervisor next week to discuss the above items. Please propose a couple of dates and times that you and your supervisor are available to discuss.

Sincerely
Michelle

Subject: RE: Bunge North America, Inc. ID #183020ABT

CAUTION: This email originated from outside of Bunge. Do not click links or open attachments unless you recognize the sender !

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35)
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13)
RHOMBO Gallery General Aspiration Filter (03:18)
RHOMBO West General Aspiration Filter (09:09)
Conveying General Aspiration Filter (29:15)
Round Bin General Aspiration Filter (29:27)
Bin 945 Germ Receiver Aspiration Filter (17:26)
North Hominy Feed Grinding General Aspiration Filter (18:07)

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.

Some of the conditions crossed out are conditions that will be in most construction permit.

Have a great evening.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

Jim,

The construction permit draft that I sent you last, is still the latest version, since the changes submitted addresses the removal of equipment, those changes only to be addressed in the operating permit.

The construction permit PM/PM10 limits is still 4.81 tons/year, however, there will be an overall source-wide decrease of - 0.29 tons/year, this is accomplished by the removal of several emission units (4.81 – 0.95 – 0.81 – 0.68 – 2.66 = -0.29 tons/year decrease.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

Good afternoon German and Bob, I understand that you had a meeting with Jim today regarding the minor modification construction permit application for our Danville facility. I apologize that I was not able to be on that call as I had a previous commitment, but I was able to connect with Jim and he briefed me on the discussion.

For background:
Bunge submitted a construction permit application for a minor modification that would have a potential to emit of roughly 3 tons per year of particulate. Illinois EPA notified Bunge that a construction permit that showed any increase in emissions would not be issued without a corresponding decrease in permitted emissions because the facility is located in an Environmental Justice area. Although there is nothing in the Illinois regulations that require this corresponding decrease in permitted emissions, in an effort to secure the construction permit necessary for Bunge to grow its business in Danville, Bunge submitted a list of emission units where, if removed, would show a decrease in emission rates for the project to offset the increase proposed by the new project.

Additionally, Bunge committed to reviewing the draft FESOP and drafting the fugitive dust plan by September 1, 2022. Based on the correspondence below, Bunge understood that was acceptable and that IEPA would proceed with finalizing and issuing the construction permit.

After the call today, we understand that IEPA is insistent that the construction permit can't be issued without issuing the FESOP. I understand that there was a series of questions asked to try to understand the rationale behind this position and also explore other options in an effort to move the construction permit forward, but I also understand that in the end that this was IEPA's position and that position was not going to change on the phone call.

Bunge requests your assistance to help us understand why the construction permit can't be issued without the FESOP and to help us determine if there are other options for addressing EJ concerns and issuing the construction permit for the minor modification. As noted above, Bunge has committed to turning around the FESOP and the fugitive dust plan by September 1, but does need the time to draft the fugitive dust plan.

We would like to meet with you and your supervisor next week to discuss the above items. Please propose a couple of dates and times that you and your supervisor are available to discuss.

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35)
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13)
RHOMBO Gallery General Aspiration Filter (03:18)
RHOMBO West General Aspiration Filter (09:09)
Conveying General Aspiration Filter (29:15)
Round Bin General Aspiration Filter (29:27)
Bin 945 Germ Receiver Aspiration Filter (17:26)
North Hominy Feed Grinding General Aspiration Filter (18:07)

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.

Some of the conditions crossed out are conditions that will be in most construction permit.

Have a great evening.

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with

this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

Jim,

The construction permit draft that I sent you last, is still the latest version, since the changes submitted addresses the removal of equipment, those changes only to be addressed in the operating permit.
The construction permit PM/PM10 limits is still 4.81 tons/year, however, there will be an overall source-wide decrease of - 0.29 tons/year, this is accomplished by the removal of several emission units (4.81 – 0.95 – 0.81 – 0.68 – 2.66 = -0.29 tons/year decrease.

German,

Please find attached an Addendum to the air construction permit application, application number 22040008, submitted on April 8, 2022. This addendum is being provided to remove a number of emission sources permanently from service. These changes result in no increase in emissions for the project. Please proceed with issuing the construction permit. Two hard copies of this addendum is being mailed to IEPA's permit section.

Please let me know if you have any questions.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

Good afternoon German and Bob, I understand that you had a meeting with Jim today regarding the minor modification construction permit application for our Danville facility. I apologize that I was not able to be on that call as I had a previous commitment, but I was able to connect with Jim and he briefed me on the discussion.

For background:
Bunge submitted a construction permit application for a minor modification that would have a potential to emit of roughly 3 tons per year of particulate. Illinois EPA notified Bunge that a construction permit that showed any increase in emissions would not be issued without a corresponding decrease in permitted emissions because the facility is located in an Environmental Justice area. Although there is nothing in the Illinois regulations that require this corresponding decrease in permitted emissions, in an effort to secure the construction permit necessary for Bunge to grow its business in Danville, Bunge submitted a list of emission units where, if removed, would show a decrease in emission rates for the project to offset the increase proposed by the new project.

Additionally, Bunge committed to reviewing the draft FESOP and drafting the fugitive dust plan by September 1, 2022. Based on the correspondence below, Bunge understood that was acceptable and that IEPA would proceed with finalizing and issuing the construction permit.

After the call today, we understand that IEPA is insistent that the construction permit can't be issued without issuing the FESOP. I understand that there was a series of questions asked to try to understand the rationale behind this position and also explore other options in an effort to move the construction permit forward, but I also understand that in the end that this was IEPA's position and that position was not going to change on the phone call.

Bunge requests your assistance to help us understand why the construction permit can't be issued without the FESOP and to help us determine if there are other options for addressing EJ concerns and issuing the construction permit for the minor modification. As noted above, Bunge has committed to turning around the FESOP and the fugitive dust plan by September 1, but does need the time to draft the fugitive dust plan.

We would like to meet with you and your supervisor next week to discuss the above items. Please propose a couple of dates and times that you and your supervisor are available to discuss.

Sincerely
Michelle

Subject: RE: Bunge North America, Inc. ID #183020ABT

CAUTION: This email originated from outside of Bunge. Do not click links or open attachments unless you recognize the sender !

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35)
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13)
RHOMBO Gallery General Aspiration Filter (03:18)
RHOMBO West General Aspiration Filter (09:09)
Conveying General Aspiration Filter (29:15)
Round Bin General Aspiration Filter (29:27)
Bin 945 Germ Receiver Aspiration Filter (17:26)
North Hominy Feed Grinding General Aspiration Filter (18:07)

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.

Some of the conditions crossed out are conditions that will be in most construction permit.

Have a great evening.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

Subject: [External] RE: Bunge North America, Inc. ID #183020ABT

Good afternoon German and Bob, I understand that you had a meeting with Jim today regarding the minor modification construction permit application for our Danville facility. I apologize that I was not able to be on that call as I had a previous commitment, but I was able to connect with Jim and he briefed me on the discussion.

For background:
Bunge submitted a construction permit application for a minor modification that would have a potential to emit of roughly 3 tons per year of particulate. Illinois EPA notified Bunge that a construction permit that showed any increase in emissions would not be issued without a corresponding decrease in permitted emissions because the facility is located in an Environmental Justice area. Although there is nothing in the Illinois regulations that require this corresponding decrease in permitted emissions, in an effort to secure the construction permit necessary for Bunge to grow its business in Danville, Bunge submitted a list of emission units where, if removed, would show a decrease in emission rates for the project to offset the increase proposed by the new project.

Additionally, Bunge committed to reviewing the draft FESOP and drafting the fugitive dust plan by September 1, 2022. Based on the correspondence below, Bunge understood that was acceptable and that IEPA would proceed with finalizing and issuing the construction permit.

After the call today, we understand that IEPA is insistent that the construction permit can't be issued without issuing the FESOP. I understand that there was a series of questions asked to try to understand the rationale behind this position and also explore other options in an effort to move the construction permit forward, but I also understand that in the end that this was IEPA's position and that position was not going to change on the phone call.

Bunge requests your assistance to help us understand why the construction permit can't be issued without the FESOP and to help us determine if there are other options for addressing EJ concerns and issuing the construction permit for the minor modification. As noted above, Bunge has committed to turning around the FESOP and the fugitive dust plan by September 1, but does need the time to draft the fugitive dust plan.

We would like to meet with you and your supervisor next week to discuss the above items. Please propose a couple of dates and times that you and your supervisor are available to discuss.

Sincerely

Michelle

Jim,

About those emission units we need to know when they were decommission, or a date that they will be decommission.
South APM Filter (34:35)
RHOMBO Truck Dump No. 3 Aspiration Filter (03:13)
RHOMBO Gallery General Aspiration Filter (03:18)
RHOMBO West General Aspiration Filter (09:09)
Conveying General Aspiration Filter (29:15)
Round Bin General Aspiration Filter (29:27)
Bin 945 Germ Receiver Aspiration Filter (17:26)
North Hominy Feed Grinding General Aspiration Filter (18:07)

Also we have to address these two units, because the air flow for the baghouse is changing, although there isn't emission increase.
South Lunchroom Screening (4880-0034-0010)
North Lunchroom Screening (4880-0034-0019)

We will keep the requirement to submit a fugitive dust plan in the construction permit, to be submitted before or at least by the date you indicated that comments to the FESOP draft will be submitted.

Some of the conditions crossed out are conditions that will be in most construction permit.

Have a great evening.

German,

I have attached a redlined copy of the draft Construction permit. I have added comments to the draft where I thought additional clarification to my edits were necessary. Some of my edits were to help streamline the permit and eliminate unnecessary or redundant language. I also wanted to clarify that the permit application Bunge submitted was for the addition of number of totally enclosed emission units aspirated to a new baghouse control device, the S 105 Roof Carter Day filter. The draft permit referenced North and South Lunchroom Screening for some reason. North and South Lunchroom Screening are not part of the project for which the application was submitted and references to North and South Lunchroom Screening have been removed from the draft permit. Furthermore, no emission unit associated with this project emits fugitive particulate emissions, all emissions pass through a stack, therefore, my redlined copy of the draft permit removed conditions associated with the emission of fugitive particulate emissions.

Please let me know if you have any questions regarding my edits or comments.

Thank you for your assistance getting this permit issued.

Jim,

The construction permit draft that I sent you last, is still the latest version, since the changes submitted addresses the removal of equipment, those changes only to be addressed in the operating permit.

The construction permit PM/PM10 limits is still 4.81 tons/year, however, there will be an overall source-wide decrease of - 0.29 tons/year, this is accomplished by the removal of several emission units (4.81 – 0.95 – 0.81 – 0.68 – 2.66 = - 0.29 tons/year decrease.

German,

Please find attached an Addendum to the air construction permit application, application number 22040008, submitted on April 8, 2022. This addendum is being provided to remove a number of emission sources permanently from service. These changes result in no increase in emissions for the project. Please proceed with issuing the construction permit. Two hard copies of this addendum is being mailed to IEPA's permit section.

Please let me know if you have any questions.

5/6 Allond Receiver (4900-0001-0058) controlled by Baghouse Filters APM 16014.8;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filters APM 16014.8;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters MICROPUL 6B;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filters BUHLER 16-6-220;
Milk Bins (4820-0002-0038) controlled by Baghouse Filters MICROPUL 21-6-220;
Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filters BUHLER 25S-6-30;
Blender General Aspiration (4990-0007-0036) controlled by Baghouse Filters BUHLER 16S-6-30;
Blender General Aspiration (4990-0007-0032) controlled by Baghouse Filters MICROPUL 36S-8-30;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filters BUHLER 64S-6-20;
General Aspiration (4990-0006-0040) controlled by Baghouse Filters BUHLER 9-8-220;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filters APM 14024.6;
Fiber Receiver General Aspiration (4990-0011-0001) controlled by Baghouse Filters BUHLER 9-8-220;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters MICROPUL 1F1;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filters MICROPUL 25-8-220;
Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filters HOFFMAN 60X120;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filters APM 16030.4;
Fiber Receiver General Aspiration (4990-0011-0029) controlled by Baghouse Filters APM 16019.4;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filters APM 40072.10;
Two (2) Ingredient Bins (601 (4820-0003-0022) and 602 (4820-0003-0026)) controlled by Baghouse Filters MICROPUL 4B;
Ingredient Bin 603 (4820-0003-0030) controlled by Baghouse Filters MICROPUL 2 1/2 B;
Ingredient Bin 604 (4820-0003-0034) controlled by Baghouse Filters APM 15105.4;
Micro Ingredient Dump Filter (4820-0003-0018) controlled by Baghouse Filters APM 15105.4;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filters BUHLER 25S-6-30;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filters APM 16009.6;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filters APM 16009.6;

Reprocess General Cooler Dryer Roof (4900-0005-0001) controlled by Baghouse Filters CD 376RF10;
#6 Pulverizer Grinder (4900-0001-0042) controlled by Baghouse Filters BUHLER 37-8-220;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filters MICROPUL 4B;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filters BUHLER 16S-6-30;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filters APM 16022.8;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filters APM 16014.8;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filters MICROPUL 2 1/2B;
Bldg 112 Vacuum (4900-0005-0029) controlled by Baghouse Filters HOFFMAN 36X96;
AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filters BUHLER 37-8-220;
N DAY General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filters CD 484RF12;
Blended Foods Filter (4820-0001-0093) controlled by Baghouse Filters DD 124RF10;
Hominy Truck Loadout Aspiration (4912-0002-0054) controlled by Baghouse Filters DD 484RF12;
South Hominy Feed (4860-0018-0003) controlled by Baghouse Filters MICROPUL 1F2;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filters APM 15030.8;
Bran Dryer (4860-0024-0003) controlled by Corona Cyclone;
Track 16 Bulk Rail Loadout (4912-0006-0017) controlled by Baghouse Filters WEIDENMAN LFT 2X7;
Flaking General Aspiration (4860-0017-0073) controlled by Baghouse Filters APM 40120.8;
Germ Dusters Aspiration (4860-0023-0001) controlled by Baghouse Filters APM 40120.8;
Germ Dryer (4860-0017-0003) controlled by DAY CYCLONE HV56;
Germ Rolls Aspiration (4860-0017-0072) controlled by DAY CYCLONE HV56;
Fts Dryer Aspiration (4860-0019-0003) controlled by CORONA 15 CYCLONE;
Pet Bran Kice Lites Filter (4860-0024-0037) controlled by Baghouse Filters MICROPUL;
Two (2) Cyclone Receivers (Extrusion Receiver; 108 A-Bin Receiver) controlled by Baghouse Filters (5&6 Allbond Receiving Filter);
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260);
PCM Hammermill controlled by Filter System (78-03:11);
USG Hammermill controlled by Filter System (78-03:27);
USG Extruder Pellet Transfer controlled by Collection Cyclone (78-08:22);
One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);

One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;
Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Flour Pellet Cooler (4750-0025-0015) controlled by Baghouse Filters MAC Cyclone HE39;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;
LTMS Truck/Rail Dump Pit (4750-0033-0000A);
LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than

major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator,

except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP

emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local

law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate

matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of

750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and

the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63— Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility

property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

   iv. Location of unloading and transporting operations with pollution control equipment;

   v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

   vi. Estimated frequency of application of dust suppressants by location of materials; and

   vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated

under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30
Cleaning North APM	0.00085	41,000	0.30	1.31
Corn Cleaning Bldg 115 #2	0.00085	57,372	0.42	1.83
North St Grain/Meal Truck Dump Pit #2	0.0017	20,000	0.29	1.28
			Total:	6.71

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bemis Bagging	0.0006	1,660	0.01	0.04
Bagging General Aspiration	0.0006	3,400	0.02	0.08
Bagging Packer General Aspiration	0.0006	4,400	0.02	0.10
Bran Dryer Process	0.0006	2,800	0.01	0.06

			Total:	30.85

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

	Throughput			EMISSIONS PM			PM_{10}	
Emission Unit	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition,

Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and

malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

   i. Sampling ports adequate for test methods applicable to such facility. This includes:

      A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

      B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

   ii. Safe sampling platform(s).

   iii. Safe access to sampling platform(s).

   iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or

USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to

demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and

(d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process

rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding

opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after

the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for

inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site

rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January

31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31,

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)(ii)	COMS-related report	No	Subpart ZZZZ does not require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.

Jim,

The draft construction permit draft was updated to remove the fugitive dust plan.
The draft FESOP was revised to put the 90 days requirement for the fugitive dust plan.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS and NESHAP SOURCE

PERMITTEE

Bunge North America, Inc.
Attn: Dean Hughes
11720 Borman Drive
St. Louis, Missouri 63146-1000

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 #2 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemis Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
8th FR DRACCO Screening (4880-0034-0027) controlled by Baghouse Filters DRACO 6MB-60;
9th FR DRACCO Screening (4880-0034-0001) controlled by Baghouse Filters DRACO 8MB-72;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;
Bran Bin (4880-0042-0054) controlled by Baghouse Filters BUHLER 16S-6-30;
6th Flr Screening (4880-0008-0028) controlled by Baghouse Filters WIEDENMANN 2X4 LF150-1200;
West 4th Floor Gravity Tables (4880-0008-0040) controlled by Baghouse Filters WIEDENMANN 2X5 LF225-2250;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filters CD 484RF12;
South CD Screening (4880-0034-0042) controlled by Baghouse Filters CD 484RF12;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filters CD 484RF12;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filters CD 484RF12;
Pack & Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filters TD 484RF12;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filters TD 484RF12;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filters TD 484RF12;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filters HOFFMAN S54002;
Gravity Tables #3 (4880-0044-0070), #4 (4880-0044-0073), and #5 (4880-0044-0076) controlled by Baghouse Filters TORIT CPC-12;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filters USS INC. 15CF P/D;
GERM General Aspiration (4880-0009-0005) controlled by Baghouse Filters APM 16030.4;
Lab Filter (4932-0001-0001) controlled by Baghouse Filters APM 14106.4;
AB Fin Product Surge Bin North (4900-0003-0039) controlled by Baghouse Filters MICROPUL 8B;

AB Fin Product Surge Bin South (4900-0003-0045) controlled by Baghouse Filters MICROPUL 8B;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filters BUHLER 9-6-100;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filters BUHLER 16-8-100;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filters BUHLER 9-6-100;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filters BUHLER 16009.4;

Bran Dryer (4860-0024-0003) controlled by Corona Cyclone;
Track 16 Bulk Rail Loadout (4912-0006-0017) controlled by Baghouse Filters WEIDENMAN LFT 2X7;
Flaking General Aspiration (4860-0017-0073) controlled by Baghouse Filters APM 40120.8;
Germ Dusters Aspiration (4860-0023-0001) controlled by Baghouse Filters APM 40120.8;
Germ Dryer (4860-0017-0003) controlled by DAY CYCLONE HV56;
Germ Rolls Aspiration (4860-0017-0072) controlled by DAY CYCLONE HV56;
Fts Dryer Aspiration (4860-0019-0003) controlled by CORONA 15 CYCLONE;
Pet Bran Kice Lites Filter (4860-0024-0037) controlled by Baghouse Filters MICROPUL;
Two (2) Cyclone Receivers (Extrusion Receiver; 108 A-Bin Receiver) controlled by Baghouse Filters (5&6 Allbond Receiving Filter);
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260);
PCM Hammermill controlled by Filter System (78-03:11);
USG Hammermill controlled by Filter System (78-03:27);
USG Extruder Pellet Transfer controlled by Collection Cyclone (78-08:22);
One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);

One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;
Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Flour Pellet Cooler (4750-0025-0015) controlled by Baghouse Filters MAC Cyclone HE39;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;
LTMS Truck/Rail Dump Pit (4750-0033-0000A);
LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than

major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator,

except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP

emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local

law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate

matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50

Metric		English	
P	E	P	E

360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of

750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation

and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and

the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility

property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

   iv. Location of unloading and transporting operations with pollution control equipment;

   v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

   vi. Estimated frequency of application of dust suppressants by location of materials; and

   vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated

under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30
Cleaning North APM	0.00085	41,000	0.30	1.31
Corn Cleaning Bldg 115 #2	0.00085	57,372	0.42	1.83
North St Grain/Meal Truck Dump Pit #2	0.0017	20,000	0.29	1.28
			Total:	6.71

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)

			Total:	30.85

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Throughput (T/Mo)	(T/Yr)	EMISSIONS PM (lb/T)	(T/Mo)	(T/Yr)	PM_{10} (lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition,

Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and

malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

   i. Sampling ports adequate for test methods applicable to such facility. This includes:

      A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

      B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

   ii. Safe sampling platform(s).

   iii. Safe access to sampling platform(s).

   iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or

USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to

demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and

(d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process

rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding

opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after

the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for

inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site

rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January

31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

GB:

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(c)-(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.

Bill,

Please see the attached EJ Clearance memo and indicator analysis. We are requesting clearance to issue a construction permit for one coarse gravity table aspiration cyclone collector, one fine gravity table aspiration cyclone collector, two degerminator cyclone collectors, and two satake aspiration cyclone collectors, all six new emission units controlled by a filter and to send the draft FESOP for a Corn Mill and Grain Elevator to public notice. The source is changing from CAAPP to FESOP. There will be net decreases in NOx (131.14 tons/year), PM (121.33 tons/year), SO2 (1,264.39 tons/year), and VOM (1,868.44 tons/year). The current due date for the construction permit is on July 7, 2022 and the FESOP has been pending since 2011. Thank you.

Source: Bunge North America, Inc.

Location: 321 E. North Street, Danville, Vermilion County

Project: Application is for a construction permit to install one coarse gravity table aspiration cyclone collector, one fine gravity table aspiration cyclone collector, two degerminator cyclone collectors, and two satake aspiration cyclone collectors, all six new emission units controlled by a filter. The application is also for a Federally Enforceable State Operating Permit (FESOP) for a Corn Mill and Grain Elevator. The source was previously permitted to operate a Corn and Soybean Processing plant utilizing solvent extraction to manufacture corn and soybean oils under a CAAPP permit. The construction permit will limit PM emissions to a total of 3.05 tons/year. The emissions increase will be offset by shut of the corn and soybean oil extraction processes and the sources coal fired boilers. The net change in the permitted emissions of the source will result in decreases in NO_x (131.14 tons/year), PM (121.33 tons/year), SO_2 (1,264.39 tons/year), and VOM (1,868.44 tons/year). In addition, the source was previously permitted to emit 109.9 tons/year of an individual HAP (hexane) and will now be classified as a minor source of HAP emissions as a result of the shut down of the solvent extraction processes.

Public/EJ Notice: EJ Notice was provided for this project. No comments, questions, or other expressions of concern or interest were received.

Compliance History: The source was the part of a national consent decree (No. 2:06-cv-02209-MPM-DGB) that was filed on October 26, 2006 for major modifications under PSD without undergoing any review. The consent decree was terminated on July 6, 2012 after the company certified completion of its obligations under the consent decree.

Alleged Violator's City: DANVILLE

Alleged Violator's State: Illinois

Alleged Violator's Zip: 61832

Alleged Violator's Latitude / Longitude: 40.126880 / -87.622010

Alleged Violator's FRS ID: 110041189923

Tip or Complaint: No filters on grain milling exhaust systems. Grain Dust particular is unbelievable 3 blocks east of of plant. A retired employee told me that is why Danville people have to wash your car's so much and you can't keep windows open on nice nites. This is also the possible reason for my wife and kids allergies. Please just check into this , I have no photos.

Violation Still Occurring? Yes

State DEP/DEQ/DEM Notified? No

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than

major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator,

except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP

emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local

law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate

matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of

750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation

and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and

the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility

property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

   iv. Location of unloading and transporting operations with pollution control equipment;

   v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

   vi. Estimated frequency of application of dust suppressants by location of materials; and

   vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated

under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30

			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Throughput (T/Mo)	(T/Yr)	EMISSIONS (lb/T)	PM (T/Mo)	(T/Yr)	(lb/T)	PM_{10} (T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions (lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition,

Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and

malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or

USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to

demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and

(d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process

rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding

opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after

the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for

inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site

rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January

31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

GB:

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)(ii)	COMS-related report	No	Subpart ZZZZ does not require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.

Hi Bill, I wanted to follow up and see if you had received any feedback from your management regarding our plan for proceeding with issuance of the construction permit and the FESOP for the Bunge Danville facility.

Thanks
Michelle

Trent,

Please replace the version of the final with this new version for this construction permit 22040008.
Also prepare the FESOP draft 96020027 for notice.

Thank you.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS and NESHAP SOURCE

PERMITTEE

Bunge North America, Inc.
Attn: Dean Hughes
11720 Borman Drive
St. Louis, Missouri 63146-1000

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 #2 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemis Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;

One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;
Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Flour Pellet Cooler (4750-0025-0015) controlled by Baghouse Filters MAC Cyclone HE39;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;
LTMS Truck/Rail Dump Pit (4750-0033-0000A);
LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than

major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator,

except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP

emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local

law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate

matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr

180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P Mg/hr	E kg/hr	P T/hr	E lbs/hr
0.05	0.27	0.05	0.55
0.1	0.42	0.10	0.87
0.2	0.68	0.20	1.40
0.3	0.89	0.30	1.83
0.4	1.07	0.40	2.22
0.5	1.25	0.50	2.58
0.7	1.56	0.75	3.38

320.0	29.4	350.00	64.90
360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of

750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation

and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and

the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility

property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

   iv. Location of unloading and transporting operations with pollution control equipment;

   v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

   vi. Estimated frequency of application of dust suppressants by location of materials; and

   vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated

under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30
Cleaning North APM	0.00085	41,000	0.30	1.31
Corn Cleaning Bldg 115 #2	0.00085	57,372	0.42	1.83
North St Grain/Meal Truck Dump Pit #2	0.0017	20,000	0.29	1.28
			Total:	6.71

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bemis Bagging	0.0006	1,660	0.01	0.04
Bagging General Aspiration	0.0006	3,400	0.02	0.08
Bagging Packer General Aspiration	0.0006	4,400	0.02	0.10

			Total:	30.85

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	EMISSIONS PM & PM_{10} (Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Throughput (T/Mo)	Throughput (T/Yr)	EMISSIONS PM (lb/T)	EMISSIONS PM (T/Mo)	EMISSIONS PM (T/Yr)	EMISSIONS PM_{10} (lb/T)	EMISSIONS PM_{10} (T/Mo)	EMISSIONS PM_{10} (T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions (lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition,

Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and

malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or

USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to

demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and

(d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of 'Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process

rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding

opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after

the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for

inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site

rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January

31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

GB:

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opácity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)(ii)	COMS-related report	No	Subpart ZZZZ does not require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.

Trent,

Please replace the version of the final with this new version for this construction permit 22040008.
Also prepare the FESOP draft 96020027 for notice.

Thank you.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS and NESHAP SOURCE

PERMITTEE

Bunge North America, Inc.
Attn: Dean Hughes
11720 Borman Drive
St. Louis, Missouri 63146-1000

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 #2 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemis Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
8th FR DRACCO Screening (4880-0034-0027) controlled by Baghouse Filters DRACO 6MB-60;
9th FR DRACCO Screening (4880-0034-0001) controlled by Baghouse Filters DRACO 8MB-72;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;
Bran Bin (4880-0042-0054) controlled by Baghouse Filters BUHLER 16S-6-30;
6th Flr Screening (4880-0008-0028) controlled by Baghouse Filters WIEDENMANN 2X4 LF150-1200;
West 4th Floor Gravity Tables (4880-0008-0040) controlled by Baghouse Filters WIEDENMANN 2X5 LF225-2250;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filters CD 484RF12;
South CD Screening (4880-0034-0042) controlled by Baghouse Filters CD 484RF12;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filters CD 484RF12;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filters CD 484RF12;
Pack & Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filters TD 484RF12;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filters TD 484RF12;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filters TD 484RF12;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filters HOFFMAN S54002;
Gravity Tables #3 (4880-0044-0070), #4 (4880-0044-0073), and #5 (4880-0044-0076) controlled by Baghouse Filters TORIT CPC-12;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filters USS INC. 15CF P/D;
GERM General Aspiration (4880-0009-0005) controlled by Baghouse Filters APM 16030.4;
Lab Filter (4932-0001-0001) controlled by Baghouse Filters APM 14106.4;
AB Fin Product Surge Bin North (4900-0003-0039) controlled by Baghouse Filters MICROPUL 8B;

AB Fin Product Surge Bin South (4900-0003-0045) controlled by Baghouse Filters MICROPUL 8B;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filters BUHLER 9-6-100;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filters BUHLER 16-8-100;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filters BUHLER 9-6-100;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filters BUHLER 16009.4;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filters BUHLER 16009.4;
Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters BUHLER 37-8-220;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters BUHLER 37-8-220;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters APM 16022.8;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filters MICROPUL 2 1/2B;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filters MICROPUL 2 1/2B;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filters APM 16104.4;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filters APM 16104.4;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filters MICROPUL 2 1/2B;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filters MICROPUL 2 1/2B;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filters APM 16104.4;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filters APM 16104.4;
HIBOND Visc. Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filters APM 15066.8;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filters APM 40070.7;
Blended Food Packaging (4820-0001-0052) controlled by Baghouse Filters APM 16150.6;
ALLBOND Visc. Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filters BUHLER 16-8-100;
Milk Bins (4820-0003-0007) controlled by Baghouse Filters MICROPUL 6B;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filters MICROPUL 1F1;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filters APM 16022.4;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filters MICROPUL 6B;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filters APM 400072.10;

3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filters APM16014.8;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filters APM 16009.8;
5/6 Allond Receiver (4900-0001-0058) controlled by Baghouse Filters APM 16014.8;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filters APM 16014.8;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters MICROPUL 6B;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filters BUHLER 16-6-220;
Milk Bins (4820-0002-0038) controlled by Baghouse Filters MICROPUL 21-6-220;
Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filters BUHLER 25S-6-30;
Blender General Aspiration (4990-0007-0036) controlled by Baghouse Filters BUHLER 16S-6-30;
Blender General Aspiration (4990-0007-0032) controlled by Baghouse Filters MICROPUL 36S-8-30;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filters BUHLER 64S-6-20;
General Aspiration (4990-0006-0040) controlled by Baghouse Filters BUHLER 9-8-220;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filters APM 14024.6;
Fiber Receiver General Aspiration (4990-0011-0001) controlled by Baghouse Filters BUHLER 9-8-220;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters MICROPUL 1F1;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filters MICROPUL 25-8-220;
Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filters HOFFMAN 60X120;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filters APM 16030.4;
Fiber Receiver General Aspiration (4990-0011-0029) controlled by Baghouse Filters APM 16019.4;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filters APM 40072.10;
Two (2) Ingredient Bins (601 (4820-0003-0022) and 602 (4820-0003-0026)) controlled by Baghouse Filters MICROPUL 4B;
Ingredient Bin 603 (4820-0003-0030) controlled by Baghouse Filters MICROPUL 2 1/2 B;
Ingredient Bin 604 (4820-0003-0034) controlled by Baghouse Filters APM 15105.4;
Micro Ingredient Dump Filter (4820-0003-0018) controlled by Baghouse Filters APM 15105.4;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filters BUHLER 25S-6-30;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filters APM 16009.6;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filters APM 16009.6;
Reprocess General Cooler Dryer Roof (4900-0005-0001) controlled by Baghouse Filters CD 376RF10;

#6 Pulverizer Grinder (4900-0001-0042) controlled by Baghouse Filters BUHLER 37-8-220;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filters MICROPUL 4B;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filters BUHLER 16S-6-30;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filters APM 16022.8;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filters APM 16014.8;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filters MICROPUL 2 1/2B;
Bldg 112 Vacuum (4900-0005-0029) controlled by Baghouse Filters HOFFMAN 36X96;
AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filters BUHLER 37-8-220;
N DAY General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filters CD 484RF12;
Blended Foods Filter (4820-0001-0093) controlled by Baghouse Filters DD 124RF10;
Hominy Truck Loadout Aspiration (4912-0002-0054) controlled by Baghouse Filters DD 484RF12;
South Hominy Feed (4860-0018-0003) controlled by Baghouse Filters MICROPUL 1F2;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filters APM 15030.8;
Bran Dryer (4860-0024-0003) controlled by Corona Cyclone;
Track 16 Bulk Rail Loadout (4912-0006-0017) controlled by Baghouse Filters WEIDENMAN LFT 2X7;
Flaking General Aspiration (4860-0017-0073) controlled by Baghouse Filters APM 40120.8;
Germ Dusters Aspiration (4860-0023-0001) controlled by Baghouse Filters APM 40120.8;
Germ Dryer (4860-0017-0003) controlled by DAY CYCLONE HV56;
Germ Rolls Aspiration (4860-0017-0072) controlled by DAY CYCLONE HV56;
Fts Dryer Aspiration (4860-0019-0003) controlled by CORONA 15 CYCLONE;
Pet Bran Kice Lites Filter (4860-0024-0037) controlled by Baghouse Filters MICROPUL;
Two (2) Cyclone Receivers (Extrusion Receiver; 108 A-Bin Receiver) controlled by Baghouse Filters (5&6 Allbond Receiving Filter);
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260);
PCM Hammermill controlled by Filter System (78-03:11);
USG Hammermill controlled by Filter System (78-03:27);
USG Extruder Pellet Transfer controlled by Collection Cyclone (78-08:22);
One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);

One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;
Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Flour Pellet Cooler (4750-0025-0015) controlled by Baghouse Filters MAC Cyclone HE39;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;
LTMS Truck/Rail Dump Pit (4750-0033-0000A);
LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to

obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading

station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission

limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50

230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P Mg/hr	E kg/hr	P T/hr	E lbs/hr

360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling

and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be

employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column

dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during

periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition

the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following

RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

   i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

   ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

   iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

   i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the

Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such

operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30
Cleaning North APM	0.00085	41,000	0.30	1.31

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
			Total:	30.85

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

	Throughput		E M I S S I O N S					
				PM			PM_{10}	
Emission Unit	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

	Emissions		
Pollutant	(lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

	Emissions		
Pollutant	(lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions ($lbs/10^3$ Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

	Emission Factor	Emissions

Pollutant	(lb/hp hr)	(lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition, Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in

this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each

run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the

oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the

discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling

during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate,

minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total

amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be

retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a

record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submi the report . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in CFR 63.6650(h)(2 (3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you

must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as

General provisions citation	Subject of citation	Applies to subpart	Explanation
			specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.

General provisions citation	Subject of citation	Applies to subpart	Explanation
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)	COMS-related report	No	Subpart ZZZZ does not

General provisions citation	Subject of citation	Applies to subpart	Explanation
(ii)			require COMS.

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

German and Bill, it's definitely concerning that after our call a couple of weeks ago and confirmation that the construction permit could be issued before the end of July that IEPA is asking for additional time to issue the construction permit. The draft permit has been reviewed and its final form is ready for signature.

Bunge has started review of the FESOP and does have comments but would like to ask IEPA to move forward with processing the draft permit and Bunge will provide comments during the public comment period. If you prefer, Bunge can provide comments on the draft FESOP prior to it going to public notice, but comments won't be completed until September 1. If IEPA can plan on sending the draft FESOP to public notice in early September, Bunge can supply comments in advance of the public notice period, as long as this option does not prevent the construction permit from being issued by August 1.

Bunge is also unsure why the recent inspection should impact the issuance of the construction permit. This is a minor modification with no net increase in emissions for a project that is critically important to Bunge's business. Bunge respectfully requests that IEPA please move the construction permit issuance forward and issue by August 1.

Sincerely,
Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

German,

Attached is a pdf copy of the signed 90-day waiver letter. It is also being sent via registered mail.

Let me know if you have any questions.

Edit the opacity testing condition on page 38 &39.
If you have a chance let me know if that looks ok.

Thanks

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS and NESHAP SOURCE

PERMITTEE

Bunge North America, Inc.
Attn: Dean Hughes
11720 Borman Drive
St. Louis, Missouri 63146-1000

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 #2 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemis Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;

One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to

obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading

station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission

limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E

408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling

and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be

employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column

dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during

periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition

the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following

RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

   i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

   ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

   iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

   i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the

Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such

operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30
Cleaning North APM	0.00085	41,000	0.30	1.31
Corn Cleaning Bldg 115 #2	0.00085	57,372	0.42	1.83
North St Grain/Meal Truck Dump Pit #2	0.0017	20,000	0.29	1.28
			Total:	6.71

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bemis Bagging	0.0006	1,660	0.01	0.04

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
			Total:	30.85

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

			EMISSIONS					
	Throughput			PM			PM_{10}	
Emission Unit	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

	Emissions		
Pollutant	(lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

	Emissions		
Pollutant	(lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions (lbs/10^3 Gal)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

	Emission Factor	Emissions

Pollutant	(lb/hp hr)	(lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition, Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in

this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each

run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the

oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the

discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations to determine visual emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted once every (1/4) quarter of the year from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill

Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be

representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total

amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be

retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a

record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in CFR 63.6650(h)(2)(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you

must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

Attachment B - Table 8 to Subpart ZZZZ of Part 63-Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as

General provisions citation	Subject of citation	Applies to subpart	Explanation
			specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.

General provisions citation	Subject of citation	Applies to subpart	Explanation
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)	COMS-related report	No	Subpart ZZZZ does not

General provisions citation	Subject of citation	Applies to subpart	Explanation
(ii)			require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.	

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

German,

Please revise Condition 23(a)(i) as follows:

> i. Conduct ~~opacity~~ observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted ~~once every (1/4)~~ on a quarterly basis ~~of the year from~~ no later than 30 days after the end of the preceding ~~testing date~~ calendar quarter.

Bob Bernoteit

Edit the opacity testing condition on page 38 &39.
If you have a chance let me know if that looks ok.

Thanks

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS and NESHAP SOURCE

PERMITTEE

Bunge North America, Inc.
Attn: Dean Hughes
11720 Borman Drive
St. Louis, Missouri 63146-1000

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 #2 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemis Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
8th FR DRACCO Screening (4880-0034-0027) controlled by Baghouse Filters DRACO 6MB-60;
9th FR DRACCO Screening (4880-0034-0001) controlled by Baghouse Filters DRACO 8MB-72;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;
Bran Bin (4880-0042-0054) controlled by Baghouse Filters BUHLER 16S-6-30;
6th Flr Screening (4880-0008-0028) controlled by Baghouse Filters WIEDENMANN 2X4 LF150-1200;
West 4th Floor Gravity Tables (4880-0008-0040) controlled by Baghouse Filters WIEDENMANN 2X5 LF225-2250;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filters CD 484RF12;
South CD Screening (4880-0034-0042) controlled by Baghouse Filters CD 484RF12;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filters CD 484RF12;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filters CD 484RF12;
Pack & Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filters TD 484RF12;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filters TD 484RF12;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filters TD 484RF12;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filters HOFFMAN S54002;
Gravity Tables #3 (4880-0044-0070), #4 (4880-0044-0073), and #5 (4880-0044-0076) controlled by Baghouse Filters TORIT CPC-12;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filters USS INC. 15CF P/D;
GERM General Aspiration (4880-0009-0005) controlled by Baghouse Filters APM 16030.4;
Lab Filter (4932-0001-0001) controlled by Baghouse Filters APM 14106.4;
AB Fin Product Surge Bin North (4900-0003-0039) controlled by Baghouse Filters MICROPUL 8B;

AB Fin Product Surge Bin South (4900-0003-0045) controlled by Baghouse Filters MICROPUL 8B;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filters BUHLER 9-6-100;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filters BUHLER 16-8-100;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filters BUHLER 9-6-100;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filters BUHLER 16009.4;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filters BUHLER 16009.4;
Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters BUHLER 37-8-220;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters BUHLER 37-8-220;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters APM 16022.8;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filters MICROPUL 2 1/2B;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filters MICROPUL 2 1/2B;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filters APM 16104.4;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filters APM 16104.4;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filters MICROPUL 2 1/2B;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filters MICROPUL 2 1/2B;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filters APM 16104.4;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filters APM 16104.4;
HIBOND Visc. Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filters APM 15066.8;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filters APM 40070.7;
Blended Food Packaging (4820-0001-0052) controlled by Baghouse Filters APM 16150.6;
ALLBOND Visc. Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filters BUHLER 16-8-100;
Milk Bins (4820-0003-0007) controlled by Baghouse Filters MICROPUL 6B;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filters MICROPUL 1F1;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filters APM 16022.4;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filters MICROPUL 6B;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filters APM 400072.10;

3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filters APM16014.8;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filters APM 16009.8;
5/6 Allond Receiver (4900-0001-0058) controlled by Baghouse Filters APM 16014.8;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filters APM 16014.8;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters MICROPUL 6B;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filters BUHLER 16-6-220;
Milk Bins (4820-0002-0038) controlled by Baghouse Filters MICROPUL 21-6-220;
Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filters BUHLER 25S-6-30;
Blender General Aspiration (4990-0007-0036) controlled by Baghouse Filters BUHLER 16S-6-30;
Blender General Aspiration (4990-0007-0032) controlled by Baghouse Filters MICROPUL 36S-8-30;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filters BUHLER 64S-6-20;
General Aspiration (4990-0006-0040) controlled by Baghouse Filters BUHLER 9-8-220;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filters APM 14024.6;
Fiber Receiver General Aspiration (4990-0011-0001) controlled by Baghouse Filters BUHLER 9-8-220;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters MICROPUL 1F1;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filters MICROPUL 25-8-220;
Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filters HOFFMAN 60X120;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filters APM 16030.4;
Fiber Receiver General Aspiration (4990-0011-0029) controlled by Baghouse Filters APM 16019.4;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filters APM 40072.10;
Two (2) Ingredient Bins (601 (4820-0003-0022) and 602 (4820-0003-0026)) controlled by Baghouse Filters MICROPUL 4B;
Ingredient Bin 603 (4820-0003-0030) controlled by Baghouse Filters MICROPUL 2 1/2 B;
Ingredient Bin 604 (4820-0003-0034) controlled by Baghouse Filters APM 15105.4;
Micro Ingredient Dump Filter (4820-0003-0018) controlled by Baghouse Filters APM 15105.4;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filters BUHLER 25S-6-30;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filters APM 16009.6;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filters APM 16009.6;
Reprocess General Cooler Dryer Roof (4900-0005-0001) controlled by Baghouse Filters CD 376RF10;

#6 Pulverizer Grinder (4900-0001-0042) controlled by Baghouse Filters BUHLER 37-8-220;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filters MICROPUL 4B;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filters BUHLER 16S-6-30;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filters APM 16022.8;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filters APM 16014.8;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filters MICROPUL 2 1/2B;
Bldg 112 Vacuum (4900-0005-0029) controlled by Baghouse Filters HOFFMAN 36X96;
AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filters BUHLER 37-8-220;
N DAY General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filters CD 484RF12;
Blended Foods Filter (4820-0001-0093) controlled by Baghouse Filters DD 124RF10;
Hominy Truck Loadout Aspiration (4912-0002-0054) controlled by Baghouse Filters DD 484RF12;
South Hominy Feed (4860-0018-0003) controlled by Baghouse Filters MICROPUL 1F2;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filters APM 15030.8;
Bran Dryer (4860-0024-0003) controlled by Corona Cyclone;
Track 16 Bulk Rail Loadout (4912-0006-0017) controlled by Baghouse Filters WEIDENMAN LFT 2X7;
Flaking General Aspiration (4860-0017-0073) controlled by Baghouse Filters APM 40120.8;
Germ Dusters Aspiration (4860-0023-0001) controlled by Baghouse Filters APM 40120.8;
Germ Dryer (4860-0017-0003) controlled by DAY CYCLONE HV56;
Germ Rolls Aspiration (4860-0017-0072) controlled by DAY CYCLONE HV56;
Fts Dryer Aspiration (4860-0019-0003) controlled by CORONA 15 CYCLONE;
Pet Bran Kice Lites Filter (4860-0024-0037) controlled by Baghouse Filters MICROPUL;
Two (2) Cyclone Receivers (Extrusion Receiver; 108 A-Bin Receiver) controlled by Baghouse Filters (5&6 Allbond Receiving Filter);
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260);
PCM Hammermill controlled by Filter System (78-03:11);
USG Hammermill controlled by Filter System (78-03:27);
USG Extruder Pellet Transfer controlled by Collection Cyclone (78-08:22);
One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);

One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;
Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Flour Pellet Cooler (4750-0025-0015) controlled by Baghouse Filters MAC Cyclone HE39;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;
LTMS Truck/Rail Dump Pit (4750-0033-0000A);
LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
One (1) 2,168 engine Hp Diesel-Powered Emergency Generator Set (DG-100); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to

obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading

station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15, 2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission

limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
90.	13.4	100.00	29.50
140.	17.0	150.00	37.00
180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.27	0.05	0.55

360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling

and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be

employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

l. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column

dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;

b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.

c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;

7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.

8. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during

periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

10a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition

the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following

RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

1. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

   i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

   ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

   iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

   i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the

Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas or distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such

operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30
Cleaning North APM	0.00085	41,000	0.30	1.31

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
			Total:	30.85

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

			E M I S S I O N S					
	Throughput		PM			PM_{10}		
Emission Unit	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)	(lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

		Emissions	
Pollutant	(lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

		Emissions	
Pollutant	(lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions (lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

	Emission Factor	Emissions

Pollutant	(lb/hp hr)	(lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition, Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in

this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each

run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the

oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the

discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations to determine visual emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted once every (1/4) quarter of the year from the preceding testing date.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill

Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be

representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.

b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. Pursuant to 40 CFR 60.48c(e), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records

and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.

i. Calendar dates covered in the reporting period.

ii. Identification of the F factor used in calculations, method of determination, and type of fuel combusted.

iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.

c. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:

i. The name of the oil supplier;

ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and

iii. The sulfur content of the oil.

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total

retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be

retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a

record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements: a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you

must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as

General provisions citation	Subject of citation	Applies to subpart	Explanation
			specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.

General provisions citation	Subject of citation	Applies to subpart	Explanation
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)	COMS-related report	No	Subpart ZZZZ does not

General provisions citation	Subject of citation	Applies to subpart	Explanation
(ii)			require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.	

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

   a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

   b. Maintain the following records for a period of no less than two (2) years:

      i. Date and duration of malfunction, breakdown, or startup,

      ii. Full and detailed explanation of the cause,

      iii. Contaminants emitted and an estimate of quantity of emissions,

      iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

      v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

Subject: [External] RE: Waiver - Const.docx
Attachments: 96020027 - Bunge North America Inc - FESOP - 07-05-2022 - Bunge Comments.docx; Danville - FESOP Emission Limits Documentation.docx; FESOP - Emission Unit Comparison FESOP to Actual - July 24, 2022 jb.xlsx

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf
- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading-Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note
    - Bunge left this in excel form for each of copying and pasting
    - Columns B-I contain information from the FESOP draft.
    - Columns J, K, and Y-AE were for Bunge's internal comparison purposes
    - Bunge believes that the following information should be used to replace the information in the current draft
        - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
    - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
    - These limits are achievable by well operated and maintained equipment.
    - Many of the sources are in areas that can not accommodate stack testing equipment
    - Many of the sources are not intended to operate in a manner that accommodates stack testing
        - Filter that only operate for a short time during material conveying
        - Bin vent filters

Sincerely,

Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

Boiler Natural Gas limits are based on a heat content higher than 1,000 Btu/CF. Using 1,000 Btu/CF the annual limits should be:

Boiler (MMBTu/hr)	Fuel Use (MMCF/yr)	CO (tpy)	NOx (tpy)	PM/PM10 (tpy)	SO2 (tpy)	VOC (tpy)
B&W (96.55)	845.8	35.52	21.14	3.21	0.25	2.33
Clayton (27.90)	244.4	10.26	12.22	0.93	0.07	0.67

Changes to emission unit (filter and cyclone) grain loading based on what is achievable and can be demonstrated. Below is the justification for the grain loading values used to calculate FESOP PTE.

Cell F15
Truck Dump No.
Stack Test Nov 15, 1999 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.00165	0.00165	0.0020	0.002

Use 90% CI and expected filter grain loading.

Cell F16/F17
Truck Dump No. 2 (and all other grain receiving baghouses)
Stack Test Feb 22, 2007 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00017	0.00017	0.00031	0.002
PM10	0.00035	0.00017	0.00031	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F18
Vacuum System Filters
Stack Test None

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.001	-	-	0.001

Expected value for vacuum filters.

Cell F19
LTMS Handling Aspiration Filter (grain handling aspiration)
Stack Test Oct 8, 2004 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.00129	0.00129	0.0015	0.0015

Use 90% CI.

Cell F37/F38
Corn Cleaning Filter (three corn cleaning filters)
Stack Test Sep 13, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP

PM	0.00063	0.00063	0.0011	0.002
PM10	0.00087	0.00063	0.0011	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F39/F40
Bran/Camas Milling Aspiration
Stack Test Sep 13, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00063	0.00034	0.00041	0.002
PM10	0.00087	0.00034	0.00041	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F41/F42
S. Lunchroom Corn Milling Aspiration (use for all dry corn milling processing filters)
Stack Test Sep 14, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00063	0.00037	0.00047	0.002
PM10	0.00087	0.00037	0.00047	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F43/F44
Destrehan Esher Wyss Dryer Cyclone Stack Test (use only for whole grain dryer cyclone)
Stack Test Mar 22, 2016 Method 201A/202

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.03597	0.00040	0.00052	0.030
PM10	0.02536	0.00364	0.00432	0.020

Stack Test values from Destrehan look pretty good, but cyclone emission with condensables can be unpredictable, use a realistically expected grain loading.

Cell F45/F94
One other dry corn mill process cyclone and two specialty milling cyclones
Stack Test None

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.020	-	-	0.020

Use expected cyclone grain loading.

Cell F95
Two specialty milling filters installed after 2015
Stack Test None

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.0020	-	-	0.0020

Use expected filter grain loading.

Cell F96/F97 and F192/F193

S Lunchroom Filter (80 specialty milling filters installed prior to 2015 and 8 hominy feed mill filters)
Stack Test Sep 14, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00037	0.00037	0.00047	0.002
PM10	0.00060	0.00037	0.0047	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F95
Rail Loadout Filter (single filter only)
Stack Test Feb 10, 2011 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.00067	0.00067	0.00071	0.0020

Use expected filter grain loading.

Cell F96/F497
Tail Stock Dryer Cyclone (use only three dryer cyclones)
Stack Test Sep 13, 2000 Method 5 and 201A/202

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.0454	0.0454	0.052	0.0454
PM10	0.00193	0.00193	0.002	0.0020

Pm uses stack test average, PM10 uses expected filter and stack test 90% CI..

Subject: [External] RE: Waiver - Const.docx

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf
- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note
    - Bunge left this in excel form for each of copying and pasting
    - Columns B-I contain information from the FESOP draft.
    - Columns J, K, and Y-AE were for Bunge's internal comparison purposes

  - Bunge believes that the following information should be used to replace the information in the current draft
    - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
  - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
  - These limits are achievable by well operated and maintained equipment.
  - Many of the sources are in areas that can not accommodate stack testing equipment
  - Many of the sources are not intended to operate in a manner that accommodates stack testing
    - Filter that only operate for a short time during material conveying
    - Bin vent filters

Sincerely,

Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

German,

Attached is a pdf copy of the signed 90-day waiver letter. It is also being sent via registered mail.

Let me know if you have any questions.

LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Flour Pellet Cooler (4750-0025-0015) controlled by Baghouse Filters MAC Cyclone HE39;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;
LTMS Truck/Rail Dump Pit (4750-0033-0000A);
LTMS Truck Loadout (4750-0033-0000B);

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas/Distillate Fuel-Oil Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired/Distillate Fuel-Oil Fired Boiler (Clayton Boiler);
~~One (1) 2,168 engine Hp-Diesel-Powered Emergency Generator Set (DG-100); and~~
Two (2) 193 Hp Diesel Fire-Pump Engines (insignificant)

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2a. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

b. Pursuant to 40 CFR 60.42c(d), on and after the date on which the initial performance test is completed or required to be completed under 40 CFR 60.8, whichever date comes first, no owner or operator of an affected facility that combusts oil shall cause to be discharged into the atmosphere from that affected facility any gases that contain SO_2 in excess of 215 ng/J (0.50 lb/mmBtu) heat input from oil; or, as an alternative, no owner or operator of an affected facility that combusts oil shall combust oil in the affected facility that contains greater than 0.5 weight percent sulfur. The percent reduction requirements are not applicable to affected facilities under this paragraph.

c. Pursuant to 40 CFR 60.42c(h)(1), for distillate oil-fired affected facilities with heat input capacities between 2.9 and 29 MW (10 and 100 mmBtu/hour), compliance with the emission limits or fuel oil sulfur limits under 40 CFR 60.42c may be determined based on a certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

d. Pursuant to 40 CFR 60.42c(i), the SO_2 emission limits, fuel oil sulfur limits, and percent reduction requirements under 40 CFR 60.42c apply at all times, including periods of startup, shutdown, and malfunction.

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.

Commented [MB1]: NSPS DD doesn't include "products". Not sure it is important to note that here so long as DD isn't identified as being applicable to facilities that are handling products other than listed grains

300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. Emergency Generator Set DG-100 is subject to the National Emission Standard for Hazardous Air Pollutants (NESHAP) for Reciprocating Internal Combustion Engines, 40 CFR Part 63 Subparts A and ZZZZ. The Illinois EPA is administering the NESHAP in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 63.6590(a), an affected source is any existing, new, or reconstructed stationary RICE located at a major or area source of HAP emissions, excluding stationary RICE being tested at a stationary RICE test cell/stand.

b. Pursuant to 40 CFR 63.6595(a)(1), if you have an existing stationary RICE, excluding existing non-emergency CI stationary RICE, with a site rating of more than 500 brake HP located at a major source of HAP emissions, you must comply with the applicable emission limitations, operating limitations and other requirements no later than June 15,

2007. If you have an existing non-emergency CI stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, an existing stationary CI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary CI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than May 3, 2013. If you have an existing stationary SI RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions, or an existing stationary SI RICE located at an area source of HAP emissions, you must comply with the applicable emission limitations, operating limitations, and other requirements no later than October 19, 2013.

c. Pursuant to 40 CFR 63.6603(a), if you own or operate an existing stationary RICE located at an area source of HAP emissions, you must comply with the requirements in Table 2d to 40 CFR 63 Subpart ZZZZ and the operating limitations in Table 2b to 40 CFR 63 Subpart ZZZZ that apply to you.

Table 2d to Subpart ZZZZ of Part 63—Requirements for Existing Stationary RICE Located at Area Sources of HAP Emissions

As stated in 40 CFR 63.6600 and 63.6640, you must comply with the following requirements for existing stationary RICE located at area sources of HAP emissions:

For each . . .	You must meet the following requirement, except during periods of startup . . .	During periods of startup you must . . .
4. Emergency stationary CI RICE and black start stationary CI RICE.[2]	a. Change oil and filter every 500 hours of operation or annually, whichever comes first;[1]	
	b. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first; and	
	c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.	

[1]Sources have the option to utilize an oil analysis program as described in 40 CFR 63.6625(i) or (j) in order to extend the specified oil change requirement in Table 2d of 40 CFR 63 Subpart ZZZZ.

[2]If an emergency engine is operating during an emergency and it is not possible to shut down the engine in order to perform the management practice requirements on the schedule required in Table 2d of 40 CFR 63 Subpart ZZZZ, or if performing the management practice on the required schedule would otherwise pose an unacceptable risk under federal, state, or local law, the management practice can be delayed until the emergency is over or the unacceptable risk under federal, state, or local law has abated. The

management practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State, or local law has abated. Sources must report any failure to perform the management practice on the schedule required and the Federal, State or local law under which the risk was deemed unacceptable.

5a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, Clayton Boiler, and Emergency Generator Set DG-100 are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart E (Particulate Matter Emissions From Fuel Combustion Emission Units). Pursuant to 35 Ill. Adm. Code 212.206, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu).

Commented [MB2]: Boilers only burn natural gas. This citation is for fuel combustion emissions sources that burn liquid fuel exclusively

d. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

e. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the

atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

f. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

g. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr

270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

h. When processing and handling processed materials, the emission units constructed before after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

i. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

j. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr

320.0	29.4	350.00	64.90
360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

k. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

1. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of

750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

6a. ~~Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 214 Subpart B (New Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 214.122(b)(2), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:~~

~~The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm;~~

Commented [MB3]: Boilers only burn natural gas

~~b. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 214 Subpart K (Process Emission Sources). Pursuant to 35 Ill. Adm. Code 214.301, except as further provided by 35 Ill. Adm. Code Part 214, no person shall cause or allow the emission of sulfur dioxide into the atmosphere from any process emission source to exceed 2000 ppm.~~

Commented [MB4]: This source is no longer in service

~~c. Pursuant to 35 Ill. Adm. Code 214.305(a)(2), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:~~

~~The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm;~~

~~7. Emergency Generator Set DG-100 is subject to 35 Ill. Adm. Code Part 215 Subpart K (Use of Organic Material). Pursuant to 35 Ill. Adm. Code 215.301, no person shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except as provided in 35 Ill. Adm. Code 215.302, 215.303, 215.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code Part 215 Subpart K shall apply only to photochemically reactive material.~~

8 Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

9a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. ~~This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.~~

Commented [MB5]: Facility does not manufacture prepared feeds

10a. ~~Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on site wind speed instrument measurements.~~

Commented [MB6]: Facility is not located in an area subject to 212.302

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

11. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

12a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

13a. Pursuant to 40 CFR 63.6595(c), if you own or operate an affected source, you must meet the applicable notification requirements in 40 CFR 63.6645 and in 40 CFR Part 63, Subpart A.

b. Pursuant to 40 CFR 63.6604(b), beginning January 1, 2015, if you own or operate an existing emergency CI stationary RICE with a site rating of more than 100 brake HP and a displacement of less than 30 liters per cylinder that uses diesel fuel and operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must use diesel fuel that meets the requirements in 40 CFR 1090.305 for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to January 1, 2015, may be used until depleted.

c. Pursuant to 40 CFR 63.6605(a), you must be in compliance with the emission limitations and operating limitations in 40 CFR 63 Subpart ZZZZ that apply to you at all times.

d. Pursuant to 40 CFR 63.6605(b), at all times you must operate and maintain any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by 40 CFR 63 Subpart ZZZZ have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, review of operation

and maintenance procedures, review of operation and maintenance records, and inspection of the source.

e. Pursuant to 40 CFR 63.6625(e)(3), if you own or operate any of the following stationary RICE, you must operate and maintain the stationary RICE and after-treatment control device (if any) according to the manufacturer's emission-related written instructions or develop your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions:

An existing emergency or black start stationary RICE located at an area source of HAP emissions;

f. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

g. Pursuant to 40 CFR 63.6625(h), if you operate a new, reconstructed, or existing stationary engine, you must minimize the engine's time spent at idle during startup and minimize the engine's startup time to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup in Tables 1a, 2a, 2c, and 2d to 40 CFR 63 Subpart ZZZZ apply.

h. Pursuant to 40 CFR 63.6625(i), if you own or operate a stationary CI engine that is subject to the work, operation or management practices in items 1 or 2 of Table 2c to 40 CFR 63 Subpart ZZZZ or in items 1 or 4 of Table 2d to 40 CFR 63 Subpart ZZZZ, you have the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Tables 2c and 2d to 40 CFR 63 Subpart ZZZZ. The oil analysis must be performed at the same frequency specified for changing the oil in Table 2c or 2d to 40 CFR 63 Subpart ZZZZ. The analysis program must at a minimum analyze the following three parameters: Total Base Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Base Number is less than 30 percent of the Total Base Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the engine owner or operator is not required to change the oil. If any of the limits are exceeded, the engine owner or operator must change the oil within 2 business days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the engine owner or operator must change the oil within 2 business days or before commencing operation, whichever is later. The owner or operator must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and

the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine.

i. Pursuant to 40 CFR 63.6640(a), you must demonstrate continuous compliance with each emission limitation, operating limitation, and other requirements in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you according to methods specified in Table 6 to 40 CFR 63 Subpart ZZZZ.

Table 6 to Subpart ZZZZ of Part 63– Continuous Compliance With Emission Limitations, Operating Limitations, Work Practices, and Management Practices

As stated in 40 CFR 63.6640, you must continuously comply with the emissions and operating limitations and work or management practices as required by the following:

For each . . .	Complying with the requirement to . . .	You must demonstrate continuous compliance by . . .
9. Existing emergency and black start stationary RICE ≤500 HP located at a major source of HAP, existing non-emergency stationary RICE <100 HP located at a major source of HAP, existing emergency and black start stationary RICE located at an area source of HAP, existing non-emergency stationary CI RICE ≤300 HP located at an area source of HAP, existing non-emergency 2SLB stationary RICE located at an area source of HAP, existing non-emergency landfill or digester gas stationary SI RICE located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE ≤500 HP located at an area source of HAP, existing non-emergency 4SLB and 4SRB stationary RICE >500 HP located at an area source of HAP that operate 24 hours or less per calendar year	a. Work or Management practices	i. Operating and maintaining the stationary RICE according to the manufacturer's emission-related operation and maintenance instructions; or ii. Develop and follow your own maintenance plan which must provide to the extent practicable for the maintenance and operation of the engine in a manner consistent with good air pollution control practice for minimizing emissions.

j. Pursuant to 40 CFR 63.6640(f), if you own or operate an emergency stationary RICE, you must operate the emergency stationary RICE according to the requirements in 40 CFR 63.6640 (f)(1) through (4). In order for the engine to be considered an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in 40 CFR 63.6640(f)(1) through (4), is prohibited. If you do not operate the engine according to the requirements in 40 CFR 63.6640(f)(1) through (4), the engine will not be considered an emergency engine under 40 CFR 63 Subpart ZZZZ and must meet all requirements for non-emergency engines.

i. There is no time limit on the use of emergency stationary RICE in emergency situations.

ii. You may operate your emergency stationary RICE for any combination of the purposes specified in 40 CFR 63.6640(f)(2)(i) for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by 40 CFR 63.6640(f)(3) and (4) counts as part of the 100 hours per calendar year allowed by this paragraph (40 CFR 63.6640(f)(2)).

Emergency stationary RICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Illinois EPA or USEPA for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per calendar year.

iii. Emergency stationary RICE located at area sources of HAP may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted towards the 100 hours per calendar year provided in 40 CFR 63.6640(f)(2). Except as provided in 40 CFR 63.6640(f)(4)(i) and (ii), the 50 hours per year for non-emergency situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

A. The engine is dispatched by the local balancing authority or local transmission and distribution system operator.

B. The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

C. The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

D. The power is power provided only to the facility itself or to support the local transmission and distribution system.

E. The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

k. Pursuant to 40 CFR 63.6665, Table 8 to 40 CFR 63 Subpart ZZZZ (see Attachment B) shows which parts of the General Provisions in 40 CFR 63.1 through 63.15 apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with any of the requirements of the General Provisions specified in Table 8: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing stationary RICE that combusts landfill or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, an existing emergency stationary RICE, or an existing limited use stationary RICE. If you own or operate any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in the General Provisions specified in Table 8 except for the initial notification requirements: A new stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new emergency stationary RICE, or a new limited use stationary RICE.

l. Pursuant to 40 CFR 63.6675, emergency stationary RICE means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary RICE must comply with the requirements specified in 40 CFR 63.6640(f) in order to be considered emergency stationary RICE. If the engine does not comply with the requirements specified in 40 CFR 63.6640(f), then it is not considered to be an emergency stationary RICE under 40 CFR 63 Subpart ZZZZ:

i. The stationary RICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary RICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary RICE used to pump water in the case of fire or flood, etc.

ii. The stationary RICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in 40 CFR 63.6640(f).

iii. The stationary RICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in 40 CFR 63.6640(f)(2)(ii) or (iii) and 40 CFR 63.6640(f)(4)(i) or (ii).

14a. Pursuant to 40 CFR 1090.305(a), except as specified in 40 CFR 1090.300(a), diesel fuel must meet the ULSD per-gallon standards of 40 CFR 1090.305.

b. Pursuant to 40 CFR 1090.305(b), maximum sulfur content of 15 ppm.

c. Pursuant to 40 CFR 1090.305(b), diesel fuel must meet one of the following standards:

i. Minimum cetane index of 40.

ii. Maximum aromatic content of 35 volume percent.

15a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

16a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas ~~or distillate fuel oil (Grades No. 1 and 2) as the fuel.~~ The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. ~~Emergency Generator Set DG-100 shall only be operated with distillate fuel oil (Grades No. 1 and 2) as the fuel. The use of any other fuel in Emergency Generator Set DG-100 may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.~~

h. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

i. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

j. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility

Commented [MB7]: Is this a typo? Not sure this condition belongs in the permit.

property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 16(m).

k. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

l. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

m. The emission units described in Conditions 16(j), (k), and (l) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

n. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

   iv. Location of unloading and transporting operations with pollution control equipment;

   v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

   vi. Estimated frequency of application of dust suppressants by location of materials; and

   vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

o. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated

under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 16(m) and (n).

p. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 16(m) and (n) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

17a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #1	0.0017	18,500	0.30	1.20
Hoffman Bldg 301 Vacuum	0.0017	1,000	0.02	0.10
West Headhouse Transfer General Aspiration	0.0017	55,000	0.78	3.40
Railcar Dump Pit	0.0017	27,000	0.39	1.70
Track 6 Vacuum	0.0017	700	0.01	0.04
Cleanings Discharge	0.0006	1,900	0.01	0.04
Grain Receiving Fugitives				5.40
			Total:	11.88

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.0017	36,017	0.52	2.30

			Total:	30.85

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Bldg 201/202 Vacuum	0.0006	700	0.01	0.02
Bldg 208 Vacuum	0.0006	700	0.01	0.02
Hominy Feed Bins Aspiration	0.0006	21,000	0.11	0.47
			Total:	0.50

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM & PM_{10} (lbs/Hour)	(Tons/Yr)
Hominy Binning	0.0006	30,000	0.15	0.68
Hominy Grinder General Aspiration	0.0006	21,000	0.11	0.47
Truck Hominy Loadout	0.0006	34,960	0.18	0.79
Rail Hominy/Grain Loadout #1	0.0006	34,960	0.18	0.79
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer	0.0006	20,000	0.10	0.45
LTMS & Rail Meal/Grain Loadout	0.0006	34,600	0.18	0.78
Flour Pellet Cooler	0.0055	8,000	0.38	1.65
Hominy Screener General Aspiration	0.0006	7,600	0.04	0.17
Hominy Loadout Fugitives				1.90
Grain Loadout Fugitives				0.10
			Total:	7.78

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

ii. LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	Throughput (T/Mo)	(T/Yr)	EMISSIONS PM (lb/T)	(T/Mo)	(T/Yr)	PM_{10} (lb/T)	(T/Mo)	(T/Yr)
LTMS Truck/Rail Dump Pit	12,500	75,000	0.035	0.02	0.13	0.0078	0.00	0.03
LTMS Truck Loadout	12,500	75,000	0.086	0.27	1.61	0.029	0.09	0.54
				Total:	1.74			0.57

These limits are based on the maximum throughput, standard AP-42 emission factors (Table 9.9-1, AP-42, Fifth Edition, Volume I, Update May 2003), 90% control efficiency for baghouse controlled for truck/rail dump pits, and 50% capture efficiency for loadout enclosure.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 82.274 mmscf/month, 822.741 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	(lbs/mmscf)	Emissions (Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.46	34.56
Nitrogen Oxides (NO_x)	50.0	2.06	20.57
Particulate Matter (PM)	7.6	0.31	3.13
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.26

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	(lbs/10^3 Gal)	Emissions (Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 23.771 mmscf/month, 237.712 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.00	9.98
Nitrogen Oxides (NO_x)	100.0	1.19	11.89
Particulate Matter (PM)	7.6	0.09	0.90
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.65

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

iii. Fuel Oil Usage: 141,667 gallons/month, 850,000 gallons/year.

iv. Emissions from the combustion of fuel oil:

Pollutant	Emissions (lbs/10^3 Gal)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	5.00	0.35	2.13
Nitrogen Oxides (NO_x)	20.00	1.42	8.50
Particulate Matter (PM)	3.30	0.23	1.40
Sulfur Dioxide (SO_2)	0.213	0.02	0.09
Volatile Organic Material (VOM)	0.20	0.01	0.09

These limits are based on the maximum fuel usage, a heat content of 140,000 Btu/gal, a sulfur content of 15 ppm, and standard emission factors (Tables 1.3-1, 1.3-2, and 1.3-3, AP-42, Fifth Edition, Volume I, Supplement E, September 1999, corrected May 2010).

h. Emissions from and operation of Emergency Generator Set DG-100 shall not exceed the following limits:

i. Hours of Operation: 100 hours/year;

ii. Emissions from the combustion of fuel oil in the Generator Sets:

Pollutant	Emission Factor (lb/hp hr)	Emissions (lbs/Hr)	(Tons/Year)
Carbon Monoxide (CO)	0.0055	11.92	0.60
Nitrogen Oxides (NO_x)	0.024	52.03	2.60
Particulate Matter (PM)	0.0007	1.52	0.08
Sulfur Dioxide (SO_2)	0.0000121	0.03	0.01
Volatile Organic Material (VOM)	0.000642	1.39	0.07

These limits are based on the rated output of the engine powering the generator set (2,168 engine hp), 100 hours/year of operation, standard emission factors (Table 3.4-1, AP-42, Fifth Edition,

Volume 1, Supplement B, October 1996), and a sulfur content of 15 ppm.

Commented [MB8]: See attached spreadsheet with appropriate emission limits

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

17. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

18a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and

malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

   i. Sampling ports adequate for test methods applicable to such facility. This includes:

      A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

      B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

   ii. Safe sampling platform(s).

   iii. Safe access to sampling platform(s).

   iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or

USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

19a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

20a. Pursuant to 40 CFR 60.44c(g), for oil-fired affected facilities where the owner or operator seeks to demonstrate compliance with the fuel oil sulfur limits under 40 CFR 60.42c based on shipment fuel sampling, the initial performance test shall consist of sampling and analyzing the oil in the initial tank of oil to be fired in the steam generating unit to demonstrate that the oil contains 0.5 weight percent sulfur or less. Thereafter, the owner or operator of the affected facility shall sample the oil in the fuel tank after each new shipment of oil is received, as described under 40 CFR 60.46c(d)(2).

b. Pursuant to 40 CFR 60.44c(h), for affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator seeks to

demonstrate compliance with the SO_2 standards based on fuel supplier certification, the performance test shall consist of the certification, the certification from the fuel supplier, as described under 40 CFR 60.48c(f), as applicable.

21a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 22 and 23 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

22a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and

(d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

23a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct opacity observations from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

ii. ~~Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.~~

Commented [MB9]: 13(b) is a RICE MACT condition

Commented [MB10]: This is an incredibly onerous condition. This source has over 125 sources that this draft permit proposes to requires stack testing on every 5 years. The permit limits that Bunge is proposing are standard outlet grain loading rates that would be expected from a well-operated baghouse. Routine monitoring and inspections of the equipment should be sufficient to ensure compliance.

Additionally, there is no reasonable way to conduct stack testing on all processing sources at the facility within 90 days of permit issuance. Not all sources are capable of being tested (small bin vent filters, filters on pneumatic conveying, filters that exhaust from stacks that aren't capable of being modified to accommodate testing equipment, etc.).

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process

rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

24. ~~Pursuant to 40 CFR 60.46c(d)(2), as an alternative fuel sampling procedure for affected facilities combusting oil, oil samples may be collected from the fuel tank for each steam generating unit immediately after the fuel tank is filled and before any oil is combusted. The owner or operator of the affected facility shall analyze the oil sample to determine the sulfur content of the oil. If a partially empty fuel tank is refilled, a new sample and analysis of the fuel in the tank would be required upon filling. Results of the fuel analysis taken after each new shipment of oil is received shall be used as the daily value when calculating the 30-day rolling average until the next shipment is received. If the fuel analysis shows that the sulfur content in the fuel tank is greater than 0.5 weight percent sulfur, the owner or operator shall ensure that the sulfur content of subsequent oil shipments is low enough to cause the 30-day rolling average sulfur content to be 0.5 weight percent sulfur or less.~~

~~b. Pursuant to 40 CFR 60.46c(e), the monitoring requirements of 40 CFR 60.46c(a) and (d) shall not apply to affected facilities subject to 40 CFR 60.42c(h)(1), (2), or (3) where the owner or operator of the affected facility seeks to demonstrate compliance with the SO_2 standards based on fuel supplier certification, as described under 40 CFR 60.48c(f), as applicable.~~

25. Pursuant to 40 CFR 63.6625(f), if you own or operate an existing emergency stationary RICE with a site rating of less than or equal to

500 brake HP located at a major source of HAP emissions or an existing emergency stationary RICE located at an area source of HAP emissions, you must install a non-resettable hour meter if one is not already installed.

26a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

27a. Pursuant to 40 CFR 60.48c(c)(1), in addition to the applicable requirements in 40 CFR 60.7, the owner or operator of an affected facility subject to the opacity limits in 40 CFR 60.43c(c) shall submit excess emission reports for any excess emissions from the affected facility that occur during the reporting period and maintain records according to the requirements specified in 40 CFR 60.48c(c)(1) through (3), as applicable to the visible emissions monitoring method used.

For each performance test conducted using Method 9 of appendix A-4 of 40 CFR Part 60, the owner or operator shall keep the records including the information specified in 40 CFR 60.48c(c)(1)(i) through (iii).

i. Dates and time intervals of all opacity observation periods;

ii. Name, affiliation, and copy of current visible emission reading certification for each visible emission observer participating in the performance test; and

iii. Copies of all visible emission observer opacity field data sheets;

b. ~~Pursuant to 40 CFR 60.48c(c), the owner or operator of each affected facility subject to the SO_2 emission limits, fuel oil sulfur limits, or percent reduction requirements under 40 CFR 60.42c shall keep records~~

~~and submit reports as required under 40 CFR 60.48c(d), including the following information, as applicable.~~

~~i. Calendar dates covered in the reporting period.~~

~~ii. Identification of the F-factor used in calculations, method of determination, and type of fuel combusted.~~

~~iii. If fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification is used to demonstrate compliance, records of fuel supplier certification as described under 40 CFR 60.48c(f)(1), (2), (3), or (4), as applicable. In addition to records of fuel supplier certifications, the report shall include a certified statement signed by the owner or operator of the affected facility that the records of fuel supplier certifications submitted represent all of the fuel combusted during the reporting period.~~

~~e. Pursuant to 40 CFR 60.48c(f)(1), fuel supplier certification shall include the following information for distillate oil:~~

~~i. The name of the oil supplier;~~

~~ii. A statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c; and~~

~~iii. The sulfur content of the oil.~~

d. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding

opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

e. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

28. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

29a. Pursuant to 40 CFR 63.6655(a), if you must comply with the emission and operating limitations, you must keep the records described in 40 CFR 63.6655(a)(1) through (a)(5), (b)(1) through (b)(3) and (c).

i. A copy of each notification and report that you submitted to comply with 40 CFR 63 Subpart ZZZZ, including all documentation supporting any Initial Notification or Notification of Compliance Status that you submitted, according to the requirement in 40 CFR 63.10(b)(2)(xiv).

ii. Records of the occurrence and duration of each malfunction of operation (i.e., process equipment) or the air pollution control and monitoring equipment.

iii. Records of performance tests and performance evaluations as required in 40 CFR 63.10(b)(2)(viii).

iv. Records of all required maintenance performed on the air pollution control and monitoring equipment.

v. Records of actions taken during periods of malfunction to minimize emissions in accordance with 40 CFR 63.6605(b), including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation.

b. Pursuant to 40 CFR 63.6655(d), you must keep the records required in Table 6 of 40 CFR 63 Subpart ZZZZ to show continuous compliance with each emission or operating limitation that applies to you.

c. Pursuant to 40 CFR 63.6655(e), you must keep records of the maintenance conducted on the stationary RICE in order to demonstrate that you operated and maintained the stationary RICE and after-treatment control device (if any) according to your own maintenance plan if you own or operate any of the following stationary RICE.

i. An existing stationary emergency RICE.

ii. An existing stationary CI RICE located at an area source of HAP emissions subject to management practices as shown in Table 2d to 40 CFR 63 Subpart ZZZZ.

d. Pursuant to 40 CFR 63.6655(f)(2), If you own or operate an existing emergency stationary CI RICE located at an area source of HAP emissions that does not meet the standards applicable to non-emergency engines, you must keep records of the hours of operation of the engine that is recorded through the non-resettable hour meter. The owner or operator must document how many hours are spent for emergency operation, including what classified the operation as emergency and how many hours are spent for non-emergency operation. If the engines are used for the purposes specified in 40 CFR 63.6640(f)(4)(ii), the owner or operator must keep records of the notification of the emergency situation, and the date, start time, and end time of engine operation for these purposes.

e. Pursuant to 40 CFR 63.6660(a), your records must be in a form suitable and readily available for expeditious review according to 40 CFR 63.10(b)(1).

f. Pursuant to 40 CFR 63.6660(b), as specified in 40 CFR 63.10(b)(1), you must keep each record for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record.

g. Pursuant to 40 CFR 63.6660(c), you must keep each record readily accessible in hard copy or electronic form for at least 5 years after

the date of each occurrence, measurement, maintenance, corrective action, report, or record, according to 40 CFR 63.10(b)(1).

30. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

31a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C), On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with the requirements in 35 Ill. Adm. Code 214.122(b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must:

i. Maintain records demonstrating that the fuel oil used by the process emission source complies with the requirements in 35 Ill. Adm. Code 214.305(a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil; and

ii. Retain the records for at least 5 years, and provide copies of the records to the Illinois EPA within 30 days after receipt of a request by the Illinois EPA;

32a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 16(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. The amount of grain received in LTMS Truck/Rail Dump Pit (tons/month and tons/year);

ix. The amount of grain shipped from the LTMS Truck Loadout (tons/month and tons/year);

x. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

xi. Distillate fuel oil usage for Boiler #1 (gallons/month and gallons/year);

xii. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year);

xiii. Distillate fuel oil usage for the Clayton Boiler (gallons/month and gallons/year);

xiv. Operating hours of Emergency Generator Set DG-100 (hours/month and hours/year);

xv. An inspection, maintenance and repair log of Emergency Generator Set DG-100 listing each activity performed with date; and

xvi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 32(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for

inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

33. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

34a. Pursuant to 40 CFR 63.6640(b), you must report each instance in which you did not meet each emission limitation or operating limitation in Tables 1a and 1b, Tables 2a and 2b, Table 2c, and Table 2d to 40 CFR 63 Subpart ZZZZ that apply to you. These instances are deviations from the emission and operating limitations in 40 CFR 63 Subpart ZZZZ. These deviations must be reported according to the requirements in 40 CFR 63.6650. If you change your catalyst, you must reestablish the values of the operating parameters measured during the initial performance test. When you reestablish the values of your operating parameters, you must also conduct a performance test to demonstrate that you are meeting the required emission limitation applicable to your stationary RICE.

b. Pursuant to 40 CFR 63.6640(e), you must also report each instance in which you did not meet the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ that apply to you. If you own or operate a new or reconstructed stationary RICE with a site rating of less than or equal to 500 brake HP located at a major source of HAP emissions (except new or reconstructed 4SLB engines greater than or equal to 250 and less than or equal to 500 brake HP), a new or reconstructed stationary RICE located at an area source of HAP emissions, or any of the following RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ: An existing 2SLB stationary RICE, an existing 4SLB stationary RICE, an existing emergency stationary RICE, an existing limited use stationary RICE, or an existing stationary RICE which fires landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis. If you own or operate any of the following RICE with a site

rating of more than 500 brake HP located at a major source of HAP emissions, you do not need to comply with the requirements in Table 8 to 40 CFR 63 Subpart ZZZZ, except for the initial notification requirements; a new or reconstructed stationary RICE that combusts landfill gas or digester gas equivalent to 10 percent or more of the gross heat input on an annual basis, a new or reconstructed emergency stationary RICE, or a new or reconstructed limited use stationary RICE.

c. Pursuant to 40 CFR 63.6645(a), you must submit all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (f)(6), 63.9(b) through (e), and (g) and (h) that apply to you by the dates specified if you own or operate any of the following;

i. An existing stationary CI RICE located at an area source of HAP emissions.

ii. This requirement does not apply if you own or operate an existing stationary RICE less than 100 HP, an existing stationary emergency RICE, or an existing stationary RICE that is not subject to any numerical emission standards.

d. Pursuant to 40 CFR 63.6650(a), you must submit each report in Table 7 of 40 CFR 63 Subpart ZZZZ that applies to you.

Table 7 to Subpart ZZZZ of Part 63—Requirements for Reports

As stated in 40 CFR 63.6650, you must comply with the following requirements for reports:

For each . . .	You must submit a . . .	The report must contain . . .	You must submit the report . . .
4. Emergency stationary RICE that operate or are contractually obligated to be available for more than 15 hours per year for the purposes specified 40 CFR 63.6640(f)(4)(ii)	Report	a. The information in 40 CFR 63.6650(h)(1)	i. annually according to the requirements in 40 CFR 63.6650(h)(2)-(3).

e. Pursuant to 40 CFR 63.6650(b), unless the Illinois EPA or USEPA has approved a different schedule for submission of reports under 40 CFR 63.10(a), you must submit each report by the date in Table 7 of 40 CFR 63 Subpart ZZZZ and according to the requirements in 40 CFR 63.6650(b)(1) through (b)(9).

i. For semiannual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on June 30 or December 31, whichever date is the first date following the end of the first calendar half after the compliance date that is specified for your source in 40 CFR 63.6595.

ii. For semiannual Compliance reports, the first Compliance report must be postmarked or delivered no later than July 31 or January

31, whichever date follows the end of the first calendar half after the compliance date that is specified for your affected source in 40 CFR 63.6595.

iii. For semiannual Compliance reports, each subsequent Compliance report must cover the semiannual reporting period from January 1 through June 30 or the semiannual reporting period from July 1 through December 31.

iv. For semiannual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than July 31 or January 31, whichever date is the first date following the end of the semiannual reporting period.

v. For annual Compliance reports, the first Compliance report must cover the period beginning on the compliance date that is specified for your affected source in 40 CFR 63.6595 and ending on December 31.

vi. For annual Compliance reports, the first Compliance report must be postmarked or delivered no later than January 31 following the end of the first calendar year after the compliance date that is specified for your affected source in 40 CFR 63.6595.

vii. For annual Compliance reports, each subsequent Compliance report must cover the annual reporting period from January 1 through December 31.

viii. For annual Compliance reports, each subsequent Compliance report must be postmarked or delivered no later than January 31.

f. Pursuant to 40 CFR 63.6650(c), the Compliance report must contain the information in 40 CFR 63.6650(c)(1) through (6).

i. Company name and address.

ii. Statement by a responsible official, with that official's name, title, and signature, certifying the accuracy of the content of the report.

iii. Date of report and beginning and ending dates of the reporting period.

iv. If you had a malfunction during the reporting period, the compliance report must include the number, duration, and a brief description for each type of malfunction which occurred during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report must also include a description of actions taken by an owner or operator during a malfunction of an affected source to minimize emissions in accordance with 40 CFR 63.6605(b), including actions taken to correct a malfunction.

v. If there are no deviations from any emission or operating limitations that apply to you, a statement that there were no deviations from the emission or operating limitations during the reporting period.

g. Pursuant to 40 CFR 63.6650(h), if you own or operate an emergency stationary RICE with a site rating of more than 100 brake HP that operates for the purpose specified in 40 CFR 63.6640(f)(4)(ii), you must submit an annual report according to the requirements in 40 CFR 63.6650(h)(1) through (3).

i. The report must contain the following information:

A. Company name and address where the engine is located.

B. Date of the report and beginning and ending dates of the reporting period.

C. Engine site rating and model year.

D. Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

E. Hours spent for operation for the purpose specified in 40 CFR 63.6640(f)(4)(ii), including the date, start time, and end time for engine operation for the purposes specified in 40 CFR 63.6640(f)(4)(ii). The report must also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

F. If there were no deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), a statement that there were no deviations from the fuel requirements during the reporting period.

G. If there were deviations from the fuel requirements in 40 CFR 63.6604 that apply to the engine (if any), information on the number, duration, and cause of deviations, and the corrective action taken.

ii. The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

iii. The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to 40 CFR 63 Subpart ZZZZ is not available in CEDRI at the time that the report is due, the written report must be submitted to the Illinois EPA or USEPA at the appropriate address listed in 40 CFR 63.13.

35. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

36a. Pursuant to 35 Ill. Adm. Code 214.122(b)(2)(C)(iii), on and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input smaller than, or equal to, 73.2 MW (250 mmBtu/hr), burning liquid fuel exclusively, must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in this 35 Ill. Adm. Code 214.122(b)(2). At minimum, and in addition to any permitting obligations, the notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

b. Pursuant to 35 Ill. Adm. Code 214.305(a)(3)(C), except as provided in 35 Ill. Adm. Code 214.305(b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:

The owner or operator must notify the Illinois EPA within 30 days after discovery of deviations from any of the requirements in 35 Ill. Adm. Code 214.305(a). At minimum, and in addition to any permitting obligations, such notification must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions taken, and any preventative measures taken.

37a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank and two (2) 193 Hp diesel fire pump engines are ~~is~~ exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)and 201.146(i), respectively.

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			11.88	11.88		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			6.71	6.71		
Dry Corn Milling, Processing and Products Handling			30.85	30.85		
Corn Mill Products Storage			0.50	0.50		
Corn Mill Products Milling and Handling			9.52	8.35		
Boiler #1						
Natural Gas	34.56	20.57	3.13	3.13	0.25	2.26
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Clayton Boiler					0	0
Natural Gas	9.98	11.89	0.90	0.90	0.07	0.65
Distillate Fuel Oil	2.13	8.50	1.40	1.40	0.09	0.09
Emergency Generator Set DG-100	0.60	2.60	0.08	0.08	0.01	0.07
Totals	49.40	52.06	66.37	65.20	0.51	3.16

GB:

Attachment B - Table 8 to Subpart ZZZZ of Part 63—Applicability of General Provisions to Subpart ZZZZ.

As stated in 40 CFR 63.6665, you must comply with the following applicable general provisions.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.1	General applicability of the General Provisions	Yes.	
§63.2	Definitions	Yes	Additional terms defined in 40 CFR 63.6675.
§63.3	Units and abbreviations	Yes.	
§63.4	Prohibited activities and circumvention	Yes.	
§63.5	Construction and reconstruction	Yes.	
§63.6(a)	Applicability	Yes.	
§63.6(b)(1)-(4)	Compliance dates for new and reconstructed sources	Yes.	
§63.6(b)(5)	Notification	Yes.	
§63.6(b)(6)	[Reserved]		
§63.6(b)(7)	Compliance dates for new and reconstructed area sources that become major sources	Yes.	
§63.6(c)(1)-(2)	Compliance dates for existing sources	Yes.	
§63.6(c)(3)-(4)	[Reserved]		
§63.6(c)(5)	Compliance dates for existing area sources that become major sources	Yes.	
§63.6(d)	[Reserved]		
§63.6(e)	Operation and maintenance	No.	
§63.6(f)(1)	Applicability of standards	No.	
§63.6(f)(2)	Methods for determining compliance	Yes.	
§63.6(f)(3)	Finding of compliance	Yes.	
§63.6(g)(1)-(3)	Use of alternate standard	Yes.	
§63.6(h)	Opacity and visible emission standards	No	Subpart ZZZZ does not contain opacity or visible emission standards.
§63.6(i)	Compliance extension procedures and criteria	Yes.	
§63.6(j)	Presidential compliance exemption	Yes.	
§63.7(a)(1)-(2)	Performance test dates	Yes	Subpart ZZZZ contains performance test dates at 40 CFR 63.6610, 63.6611, and 63.6612.
§63.7(a)(3)	CAA section 114 authority	Yes.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.7(b)(1)	Notification of performance test	Yes	Except that 40 CFR 63.7(b)(1) only applies as specified in 40 CFR 63.6645.
§63.7(b)(2)	Notification of rescheduling	Yes	Except that 40 CFR 63.7(b)(2) only applies as specified in 40 CFR 63.6645.
§63.7(c)	Quality assurance/test plan	Yes	Except that 40 CFR 63.7(c) only applies as specified in 40 CFR 63.6645.
§63.7(d)	Testing facilities	Yes.	
§63.7(e)(1)	Conditions for conducting performance tests	No.	Subpart ZZZZ specifies conditions for conducting performance tests at 40 CFR 63.6620.
§63.7(e)(2)	Conduct of performance tests and reduction of data	Yes	Subpart ZZZZ specifies test methods at 40 CFR 63.6620.
§63.7(e)(3)	Test run duration	Yes.	
§63.7(e)(4)	Administrator may require other testing under section 114 of the CAA	Yes.	
§63.7(f)	Alternative test method provisions	Yes.	
§63.7(g)	Performance test data analysis, recordkeeping, and reporting	Yes.	
§63.7(h)	Waiver of tests	Yes.	
§63.8(a)(1)	Applicability of monitoring requirements	Yes	Subpart ZZZZ contains specific requirements for monitoring at 40 CFR 63.6625.
§63.8(a)(2)	Performance specifications	Yes.	
§63.8(a)(3)	[Reserved]		
§63.8(a)(4)	Monitoring for control devices	No.	
§63.8(b)(1)	Monitoring	Yes.	
§63.8(b)(2)-(3)	Multiple effluents and multiple monitoring systems	Yes.	
§63.8(c)(1)	Monitoring system operation and maintenance	Yes.	
§63.8(c)(1)(i)	Routine and predictable SSM	No	
§63.8(c)(1)(ii)	SSM not in Startup Shutdown Malfunction Plan	Yes.	
§63.8(c)(1)(iii)	Compliance with operation and maintenance requirements	No	
§63.8(c)(2)-(3)	Monitoring system installation	Yes.	
§63.8(c)(4)	Continuous monitoring system (CMS) requirements	Yes	Except that subpart ZZZZ does not require Continuous Opacity Monitoring System (COMS).
§63.8(c)(5)	COMS minimum procedures	No	Subpart ZZZZ does not require COMS.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.8(c)(6)-(8)	CMS requirements	Yes	Except that subpart ZZZZ does not require COMS.
§63.8(d)	CMS quality control	Yes.	
§63.8(e)	CMS performance evaluation	Yes	Except for 40 CFR 63.8(e)(5)(ii), which applies to COMS.
		Except that 40 CFR 63.8(e) only applies as specified in 40 CFR 63.6645.	
§63.8(f)(1)-(5)	Alternative monitoring method	Yes	Except that 40 CFR 63.8(f)(4) only applies as specified in 40 CFR 63.6645.
§63.8(f)(6)	Alternative to relative accuracy test	Yes	Except that 40 CFR 63.8(f)(6) only applies as specified in 40 CFR 63.6645.
§63.8(g)	Data reduction	Yes	Except that provisions for COMS are not applicable. Averaging periods for demonstrating compliance are specified at 40 CFR 63.6635 and 63.6640.
§63.9(a)	Applicability and State delegation of notification requirements	Yes.	
§63.9(b)(1)-(5)	Initial notifications	Yes	Except that 40 CFR 63.9(b)(3) is reserved.
		Except that 40 CFR 63.9(b) only applies as specified in 40 CFR 63.6645.	
§63.9(c)	Request for compliance extension	Yes	Except that 40 CFR 63.9(c) only applies as specified in 40 CFR 63.6645.
§63.9(d)	Notification of special compliance requirements for new sources	Yes	Except that 40 CFR 63.9(d) only applies as specified in 40 CFR 63.6645.
§63.9(e)	Notification of performance test	Yes	Except that 40 CFR 63.9(e) only applies as specified in 40 CFR 63.6645.
§63.9(f)	Notification of visible emission (VE)/opacity test	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.9(g)(1)	Notification of performance evaluation	Yes	Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.
§63.9(g)(2)	Notification of use of COMS data	No	Subpart ZZZZ does not contain opacity or VE standards.

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.9(g)(3)	Notification that criterion for alternative to RATA is exceeded	Yes	If alternative is in use.
		Except that 40 CFR 63.9(g) only applies as specified in 40 CFR 63.6645.	
§63.9(h)(1)-(6)	Notification of compliance status	Yes	Except that notifications for sources using a CEMS are due 30 days after completion of performance evaluations. 40 CFR 63.9(h)(4) is reserved.
			Except that 40 CFR 63.9(h) only applies as specified in 40 CFR 63.6645.
§63.9(i)	Adjustment of submittal deadlines	Yes.	
§63.9(j)	Change in previous information	Yes.	
§ 63.9(k)	Electronic reporting procedures	Yes	Only as specified in 40 CFR 63.9(j).
§63.10(a)	Administrative provisions for recordkeeping/reporting	Yes.	
§63.10(b)(1)	Record retention	Yes	Except that the most recent 2 years of data do not have to be retained on site.
§63.10(b)(2)(i)-(v)	Records related to SSM	No.	
§63.10(b)(2)(vi)-(xi)	Records	Yes.	
§63.10(b)(2)(xii)	Record when under waiver	Yes.	
§63.10(b)(2)(xiii)	Records when using alternative to RATA	Yes	For CO standard if using RATA alternative.
§63.10(b)(2)(xiv)	Records of supporting documentation	Yes.	
§63.10(b)(3)	Records of applicability determination	Yes.	
§63.10(c)	Additional records for sources using CEMS	Yes	Except that 40 CFR 63.10(c)(2)-(4) and (9) are reserved.
§63.10(d)(1)	General reporting requirements	Yes.	
§63.10(d)(2)	Report of performance test results	Yes.	
§63.10(d)(3)	Reporting opacity or VE observations	No	Subpart ZZZZ does not contain opacity or VE standards.
§63.10(d)(4)	Progress reports	Yes.	
§63.10(d)(5)	Startup, shutdown, and malfunction reports	No.	

General provisions citation	Subject of citation	Applies to subpart	Explanation
§63.10(e)(1) and (2)(i)	Additional CMS Reports	Yes.	
§63.10(e)(2)(ii)	COMS-related report	No	Subpart ZZZZ does not require COMS.
§63.10(e)(3)	Excess emission and parameter exceedances reports	Yes.	Except that 40 CFR 63.10(e)(3)(i) (C) is reserved.
§63.10(e)(4)	Reporting COMS data	No	Subpart ZZZZ does not require COMS.
§63.10(f)	Waiver for recordkeeping/reporting	Yes.	
§63.11	Flares	No.	
§63.12	State authority and delegations	Yes.	
§63.13	Addresses	Yes.	
§63.14	Incorporation by reference	Yes.	
§63.15	Availability of information	Yes.	

Boiler Natural Gas limits are based on a heat content higher than 1,000 Btu/CF. Using 1,000 Btu/CF the annual limits should be:

Boiler (MMBTu/hr)	Fuel Use (MMCF/yr)	CO (tpy)	NOx (tpy)	PM/PM10 (tpy)	SO2 (tpy)	VOC (tpy)
B&W (96.55)	845.8	35.52	21.14	3.21	0.25	2.33
Clayton (27.90)	244.4	10.26	12.22	0.93	0.07	0.67

Changes to emission unit (filter and cyclone) grain loading based on what is achievable and can be demonstrated. Below is the justification for the grain loading values used to calculate FESOP PTE.

Cell F15
Truck Dump No.
Stack Test Nov 15, 1999 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.00165	0.00165	0.0020	0.002

Use 90% CI and expected filter grain loading.

Cell F16/F17
Truck Dump No. 2 (and all other grain receiving baghouses)
Stack Test Feb 22, 2007 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00017	0.00017	0.00031	0.002
PM10	0.00035	0.00017	0.00031	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F18
Vacuum System Filters
Stack Test None

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.001	-	-	0.001

Expected value for vacuum filters.

Cell F19
LTMS Handling Aspiration Filter (grain handling aspiration)
Stack Test Oct 8, 2004 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.00129	0.00129	0.0015	0.0015

Use 90% CI.

Cell F37/F38
Corn Cleaning Filter (three corn cleaning filters)
Stack Test Sep 13, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP

PM	0.00063	0.00063	0.0011	0.002
PM10	0.00087	0.00063	0.0011	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F39/F40
Bran/Camas Milling Aspiration
Stack Test Sep 13, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00063	0.00034	0.00041	0.002
PM10	0.00087	0.00034	0.00041	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F41/F42
S. Lunchroom Corn Milling Aspiration (use for all dry corn milling processing filters)
Stack Test Sep 14, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00063	0.00037	0.00047	0.002
PM10	0.00087	0.00037	0.00047	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F43/F44
Destrehan Esher Wyss Dryer Cyclone Stack Test (use only for whole grain dryer cyclone)
Stack Test Mar 22, 2016 Method 201A/202

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.03597	0.00040	0.00052	0.030
PM10	0.02536	0.00364	0.00432	0.020

Stack Test values from Destrehan look pretty good, but cyclone emission with condensables can be unpredictable, use a realistically expected grain loading.

Cell F45/F94
One other dry corn mill process cyclone and two specialty milling cyclones
Stack Test None

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.020	-	-	0.020

Use expected cyclone grain loading.

Cell F95
Two specialty milling filters installed after 2015
Stack Test None

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.0020	-	-	0.0020

Use expected filter grain loading.

Cell F96/F97 and F192/F193

S Lunchroom Filter (80 specialty milling filters installed prior to 2015 and 8 hominy feed mill filters)
Stack Test Sep 14, 2000 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.00037	0.00037	0.00047	0.002
PM10	0.00060	0.00037	0.0047	0.0015

Use 0.002 for PM, expected filter grain loading and because the stack test showed good values, use 0.0015 for PM10 (75% of 0.002).

Cell F95
Rail Loadout Filter (single filter only)
Stack Test Feb 10, 2011 Method 5

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM/PM10	0.00067	0.00067	0.00071	0.0020

Use expected filter grain loading.

Cell F96/F497
Tail Stock Dryer Cyclone (use only three dryer cyclones)
Stack Test Sep 13, 2000 Method 5 and 201A/202

Pollutant	AER value	Test Avg	Test 90%CI	FESOP
PM	0.0454	0.0454	0.052	0.0454
PM10	0.00193	0.00193	0.002	0.0020

Pm uses stack test average, PM10 uses expected filter and stack test 90% CI..

IEPA FESOP Draft		Vaues from the IEPA draft FESOP

Subject: RE: Waiver - Const.docx

Michelle, Jim

Thank you for providing the comments, we will do our best to review and implement what is possible.
However, some of the staff that need to decide on some items in the draft permit and placing it to notice are out of the Office, we may need possible a short term waiver.

Thank you.

Subject: [External] RE: Waiver - Const.docx

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf
- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading-Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note

  - Bunge left this in excel form for each of copying and pasting
  - Columns B-I contain information from the FESOP draft.
  - Columns J, K, and Y-AE were for Bunge's internal comparison purposes
  - Bunge believes that the following information should be used to replace the information in the current draft
    - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
  - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
  - These limits are achievable by well operated and maintained equipment.
  - Many of the sources are in areas that can not accommodate stack testing equipment
  - Many of the sources are not intended to operate in a manner that accommodates stack testing
    - Filter that only operate for a short time during material conveying
    - Bin vent filters

Sincerely,

Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

Subject: RE: Waiver - Const.docx

Michelle,

The prosed PM and PM10 limits are way higher than originally stated in the FESOP. That will cause that the record keeping be weekly or even daily.

Total	PM	PM10
PTE	160.02	95.39

We also had PM/PM10 limits that were below the 100 tons, the proposed changes splits the PM and PM10, I will have to wait till next week for some answer on how to approach some of the comments and changes to the draft permit.

Thanks

Subject: [External] RE: Waiver - Const.docx

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf

- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading-Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note
    - Bunge left this in excel form for each of copying and pasting
    - Columns B-I contain information from the FESOP draft.
    - Columns J, K, and Y-AE were for Bunge's internal comparison purposes
    - Bunge believes that the following information should be used to replace the information in the current draft
        - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
    - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
    - These limits are achievable by well operated and maintained equipment.
    - Many of the sources are in areas that can not accommodate stack testing equipment
    - Many of the sources are not intended to operate in a manner that accommodates stack testing
        - Filter that only operate for a short time during material conveying
        - Bin vent filters

Sincerely,

Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

German,

Attached is a pdf copy of the signed 90-day waiver letter. It is also being sent via registered mail.

Let me know if you have any questions.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit and D & E General Aspiration (5012-0004-0015) controlled by Baghouse Filters 37RF8; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemos Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
Bldg 105/115 General Aspiration (4880-0034-0027) controlled by Baghouse Filters DD 484RF12;
Bldg 102/105 General Aspiration (4880-0034-0001) controlled by Baghouse Filters MCF 144-756;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;
Bran Bin (4880-0042-0054) controlled by Baghouse Filters BUHLER 16S-6-30;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filters CD 484RF12;
South CD Screening (4880-0034-0042) controlled by Baghouse Filters CD 484RF12;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filters CD 484RF12;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filters CD 484RF12;
Pack & Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filters TD 484RF12;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filters TD 484RF12;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filters TD 484RF12;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filters HOFFMAN S54002;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filters USS INC. 15CF P/D;
Lab Filter (4932-0001-0001) controlled by Baghouse Filters APM 14106.4;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filters BUHLER 9-6-100;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filters BUHLER 16-8-100;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected

facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute

period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English

P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58

140.	17.0	150.00	37.00
180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause

or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency

of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility

including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

h. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

i. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(l).

j. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

k. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

l. The emission units described in Conditions 11(i), (j), and (k) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

m. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

n. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

o. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S			
				PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)

Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04
Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.002	0.002	36,017	0.62	2.70	0.62	2.70
Cleaning North APM	0.002	0.0015	41,000	0.70	3.08	0.53	2.31

Hominy Feed Bins Aspiration	0.0020	0.0015	21,000	0.36	1.58	0.27	1.18
				Total:	1.64		1.24

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

i. Corn Mill Products Milling and Handling excluding the LTMS Truck/Rail Dump Pit and LTMS Truck Loadout:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Hominy Binning	0.0020	0.0015	30,000	0.51	2.25	0.39	1.69
Hominy Grind General Aspiration	0.0020	0.0015	21,000	0.36	1.58	0.27	1.18
Hominy Truck Loadout	0.0020	0.0015	34,960	0.6	2.62	0.45	1.97
Track 15 Bulk Rail Loadout	0.0020	0.0020	34,960	0.6	2.62	0.6	2.62
Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s)

and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate

compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may

be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR

Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The

record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

ix. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

x. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance

or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

It should also be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

Bob,

This is the draft FESOP per their comments and prosed limits.
I haven't yet change the record keeping. Shall it be daily right.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit and D & E General Aspiration (5012-0004-0015) controlled by Baghouse Filters 37RF8; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemos Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
Bldg 105/115 General Aspiration (4880-0034-0027) controlled by Baghouse Filters DD 484RF12;
Bldg 102/105 General Aspiration (4880-0034-0001) controlled by Baghouse Filters MCF 144-756;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;
Bran Bin (4880-0042-0054) controlled by Baghouse Filters BUHLER 16S-6-30;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filters CD 484RF12;
South CD Screening (4880-0034-0042) controlled by Baghouse Filters CD 484RF12;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filters CD 484RF12;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filters CD 484RF12;
Pack & Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filters TD 484RF12;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filters TD 484RF12;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filters TD 484RF12;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filters HOFFMAN S54002;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filters USS INC. 15CF P/D;
Lab Filter (4932-0001-0001) controlled by Baghouse Filters APM 14106.4;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filters BUHLER 9-6-100;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filters BUHLER 16-8-100;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filters BUHLER 9-6-100;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filters BUHLER 16009.4;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filters BUHLER 16009.4;

Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters BUHLER 37-8-220;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters BUHLER 37-8-220;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters APM 16022.8;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filters MICROPUL 2 1/2B;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filters MICROPUL 2 1/2B;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filters APM 16104.4;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filters APM 16104.4;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filters MICROPUL 2 1/2B;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filters MICROPUL 2 1/2B;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filters APM 16104.4;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filters APM 16104.4;
HIBOND Visc. Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filters APM 15066.8;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filters APM 40070.7;
Blended Food Packaging (4820-0001-0052) controlled by Baghouse Filters APM 16150.6;
ALLBOND Visc. Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filters BUHLER 16-8-100;
Milk Bins (4820-0003-0007) controlled by Baghouse Filters MICROPUL 6B;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filters MICROPUL 1F1;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filters APM 16022.4;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filters MICROPUL 6B;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filters APM 400072.10;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filters APM16014.8;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filters APM 16009.8;
5/6 Allond Receiver (4900-0001-0058) controlled by Baghouse Filters APM 16014.8;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filters APM 16014.8;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters MICROPUL 6B;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filters BUHLER 16-6-220;
Milk Bins (4820-0002-0038) controlled by Baghouse Filters MICROPUL 21-6-220;

Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filters BUHLER 25S-6-30;
Blender General Aspiration (4990-0007-0036) controlled by Baghouse Filters BUHLER 16S-6-30;
Blender General Aspiration (4990-0007-0032) controlled by Baghouse Filters MICROPUL 36S-8-30;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filters BUHLER 64S-6-20;
General Aspiration (4990-0006-0040) controlled by Baghouse Filters BUHLER 9-8-220;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filters APM 14024.6;
Fiber Receiver General Aspiration (4990-0011-0001) controlled by Baghouse Filters BUHLER 9-8-220;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters MICROPUL 1F1;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filters MICROPUL 25-8-220;
Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filters HOFFMAN 60X120;

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;

Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected

facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute

period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English

P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60

2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50
90.	13.4	100.00	29.50
140.	17.0	150.00	37.00
180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause

or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency

of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility

including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

h. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

i. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(l).

j. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

k. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

l. The emission units described in Conditions 11(i), (j), and (k) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

m. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

n. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

o. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S			
				PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)

Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04
Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.002	0.002	36,017	0.62	2.70	0.62	2.70
Cleaning North APM	0.002	0.0015	41,000	0.70	3.08	0.53	2.31
Bldg. 115 Corn Cleaning	0.002	0.0015	57,372	0.98	4.31	0.74	3.23
North St Truck Dump Pit #2	0.002	0.0015	25,109	0.43	1.89	0.32	1.41
				Total:	11.98		9.65

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)

Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52

Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

g. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

		Emissions	
Pollutant	(lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be

accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at

least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the

discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill

Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be

representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for

this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/month and hours/year);

viii. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

ix. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

x. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the source with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Bureau of Air

Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).

It should also be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i).

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

Bob,

This is the draft FESOP per their comments and prosed limits.
I haven't yet change the record keeping. Shall it be daily right.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit and D & E General Aspiration (5012-0004-0015) controlled by Baghouse Filters 37RF8; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemos Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;

Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filters HOFFMAN 60X120;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filters APM 16030.4;
Fiber Receiver General Aspiration (4990-0011-0029) controlled by Baghouse Filters APM 16019.4;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filters APM 40072.10;
Two (2) Ingredient Bins (601 (4820-0003-0022) and 602 (4820-0003-0026)) controlled by Baghouse Filters MICROPUL 4B;
Ingredient Bin 603 (4820-0003-0030) controlled by Baghouse Filters MICROPUL 2 1/2 B;
Ingredient Bin 604 (4820-0003-0034) controlled by Baghouse Filters APM 15105.4;
Micro Ingredient Dump Filter (4820-0003-0018) controlled by Baghouse Filters APM 15105.4;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filters BUHLER 25S-6-30;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filters APM 16009.6;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filters APM 16009.6;
Reprocess General Cooler Dryer Roof (4900-0005-0001) controlled by Baghouse Filters CD 376RF10;
#6 Pulverizer Grinder (4900-0001-0042) controlled by Baghouse Filters BUHLER 37-8-220;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filters MICROPUL 4B;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filters BUHLER 16S-6-30;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filters APM 16022.8;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filters APM 16014.8;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filters MICROPUL 2 1/2B;
Bldg 112 Vacuum (4900-0005-0029) controlled by Baghouse Filters HOFFMAN 36X96;

AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filters BUHLER 37-8-220;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filters CD 484RF12;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filters MICROPUL 1F2;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filters APM 15030.8;
Bran Dryer (4860-0024-0003) controlled by Corona Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filters WEIDENMAN LFT 2X7;
Germ Dust Aspiration (4860-0017-0073) controlled by Baghouse Filters APM 40120.8;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filters APM 40120.8;
Germ Dryer (4860-0017-Q003) controlled by DAY CYCLONE HV56;
FTS Dryer Aspiration (4860-0019-0003) controlled by CORONA 15 CYCLONE;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filters MICROPUL;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260);
PCM Hammermill controlled by Filter System (78-03:11);
USG Hammermill controlled by Filter System (78-03:27);
USG Extruder Pellet Transfer controlled by Collection Cyclone (78-08:22);
One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;

Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected

facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute

period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English

P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50
90.	13.4	100.00	29.50
140.	17.0	150.00	37.00
180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause

or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P Mg/hr	E kg/hr	P T/hr	E lbs/hr
0.05	0.27	0.05	0.55
0.1	0.42	0.10	0.87
0.2	0.68	0.20	1.40
0.3	0.89	0.30	1.83
0.4	1.07	0.40	2.22
0.5	1.25	0.50	2.58
0.7	1.56	0.75	3.38
0.9	1.85	1.00	4.10
1.8	2.9	2.00	6.52
2.7	3.9	3.00	8.56
3.6	4.7	4.00	10.40
4.5	5.4	5.00	12.00

Metric		English	
P Mg/hr	E kg/hr	P T/hr	E lbs/hr
9.	8.7	10.00	19.20
13.	11.1	15.00	25.20
18.	13.8	20.00	30.50
23.	16.2	25.00	35.40
27.2	18.15	30.00	40.00
32.0	18.8	35.00	41.30
36.0	19.3	40.00	42.50
41.0	19.8	45.00	43.60
45.0	20.2	50.00	44.60
90.0	23.2	100.00	51.20
140.0	25.3	150.00	55.40
180.0	26.5	200.00	58.60
230.0	27.7	250.00	61.00

360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency

of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility

including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

h. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

i. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(l).

j. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

k. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

l. The emission units described in Conditions 11(i), (j), and (k) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

m. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

n. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

o. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S			
				PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)

Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04
Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.002	0.002	36,017	0.62	2.70	0.62	2.70
Cleaning North APM	0.002	0.0015	41,000	0.70	3.08	0.53	2.31
Bldg. 115 Corn Cleaning	0.002	0.0015	57,372	0.98	4.31	0.74	3.23
North St Truck Dump Pit #2	0.002	0.0015	25,109	0.43	1.89	0.32	1.41
				Total:	11.98		9.65

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S PM		PM_{10}

Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Compliance with the annual limits in Conditions 12(a) through 12(e) of this permit shall be determined on a daily basis from the sum of the data for the current day plus the preceding 364 days (running 365 days total).

g. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

h. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits in Condition 12(g) and (h) of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a

result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to

operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide,

without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning

and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled,

but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source

category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/day and hours/year);

viii. Daily and annual emissions of PM, and PM_{10} from the source with supporting calculations (tons/month and tons/year).

ix. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

x. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

xi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the combustion of natural gas, with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the

initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

It should be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i) and the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit and D & E General Aspiration (5012-0004-0015) controlled by Baghouse Filters 37RF8; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemos Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
Bldg 105/115 General Aspiration (4880-0034-0027) controlled by Baghouse Filters DD 484RF12;
Bldg 102/105 General Aspiration (4880-0034-0001) controlled by Baghouse Filters MCF 144-756;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;
Bran Bin (4880-0042-0054) controlled by Baghouse Filters BUHLER 16S-6-30;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filters CD 484RF12;
South CD Screening (4880-0034-0042) controlled by Baghouse Filters CD 484RF12;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filters CD 484RF12;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filters CD 484RF12;
Pack & Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filters TD 484RF12;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filters TD 484RF12;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filters TD 484RF12;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filters HOFFMAN S54002;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filters USS INC. 15CF P/D;
Lab Filter (4932-0001-0001) controlled by Baghouse Filters APM 14106.4;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filters BUHLER 9-6-100;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filters BUHLER 16-8-100;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filters BUHLER 9-6-100;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filters BUHLER 16009.4;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filters BUHLER 16009.4;

Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters BUHLER 37-8-220;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters BUHLER 37-8-220;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters APM 16022.8;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filters MICROPUL 2 1/2B;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filters MICROPUL 2 1/2B;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filters APM 16104.4;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filters APM 16104.4;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filters MICROPUL 2 1/2B;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filters MICROPUL 2 1/2B;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filters APM 16104.4;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filters APM 16104.4;
HIBOND Visc. Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filters APM 15066.8;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filters APM 40070.7;
Blended Food Packaging (4820-0001-0052) controlled by Baghouse Filters APM 16150.6;
ALLBOND Visc. Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filters BUHLER 16-8-100;
Milk Bins (4820-0003-0007) controlled by Baghouse Filters MICROPUL 6B;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filters MICROPUL 1F1;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filters APM 16022.4;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filters MICROPUL 6B;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filters APM 400072.10;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filters APM16014.8;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filters APM 16009.8;
5/6 Allond Receiver (4900-0001-0058) controlled by Baghouse Filters APM 16014.8;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filters APM 16014.8;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters MICROPUL 6B;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filters BUHLER 16-6-220;
Milk Bins (4820-0002-0038) controlled by Baghouse Filters MICROPUL 21-6-220;

Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filters BUHLER 25S-6-30;
Blender General Aspiration (4990-0007-0036) controlled by Baghouse Filters BUHLER 16S-6-30;
Blender General Aspiration (4990-0007-0032) controlled by Baghouse Filters MICROPUL 36S-8-30;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filters BUHLER 64S-6-20;
General Aspiration (4990-0006-0040) controlled by Baghouse Filters BUHLER 9-8-220;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filters APM 14024.6;
Fiber Receiver General Aspiration (4990-0011-0001) controlled by Baghouse Filters BUHLER 9-8-220;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters MICROPUL 1F1;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filters MICROPUL 25-8-220;
Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filters HOFFMAN 60X120;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filters APM 16030.4;
Fiber Receiver General Aspiration (4990-0011-0029) controlled by Baghouse Filters APM 16019.4;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filters APM 40072.10;
Two (2) Ingredient Bins (601 (4820-0003-0022) and 602 (4820-0003-0026)) controlled by Baghouse Filters MICROPUL 4B;
Ingredient Bin 603 (4820-0003-0030) controlled by Baghouse Filters MICROPUL 2 1/2 B;
Ingredient Bin 604 (4820-0003-0034) controlled by Baghouse Filters APM 15105.4;
Micro Ingredient Dump Filter (4820-0003-0018) controlled by Baghouse Filters APM 15105.4;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filters BUHLER 25S-6-30;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filters APM 16009.6;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filters APM 16009.6;
Reprocess General Cooler Dryer Roof (4900-0005-0001) controlled by Baghouse Filters CD 376RF10;
#6 Pulverizer Grinder (4900-0001-0042) controlled by Baghouse Filters BUHLER 37-8-220;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filters MICROPUL 4B;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filters BUHLER 16S-6-30;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filters APM 16022.8;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filters APM 16014.8;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filters MICROPUL 2 1/2B;
Bldg 112 Vacuum (4900-0005-0029) controlled by Baghouse Filters HOFFMAN 36X96;

AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filters BUHLER 37-8-220;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filters CD 484RF12;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filters MICROPUL 1F2;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filters APM 15030.8;
Bran Dryer (4860-0024-0003) controlled by Corona Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filters WEIDENMAN LFT 2X7;
Germ Dust Aspiration (4860-0017-0073) controlled by Baghouse Filters APM 40120.8;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filters APM 40120.8;
Germ Dryer (4860-0017-0003) controlled by DAY CYCLONE HV56;
FTS Dryer Aspiration (4860-0019-0003) controlled by CORONA 15 CYCLONE;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filters MICROPUL;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260);
PCM Hammermill controlled by Filter System (78-03:11);
USG Hammermill controlled by Filter System (78-03:27);
USG Extruder Pellet Transfer controlled by Collection Cyclone (78-08:22);
One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

<u>Corn Mill Products Storage:</u>
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

<u>Corn Mill Products Milling and Handling:</u>
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;

Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60.300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected

facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute

period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50
90.	13.4	100.00	29.50

180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause

or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English

454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency

of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner

consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

h. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

i. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(l).

j. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

k. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

l. The emission units described in Conditions 11(i), (j), and (k) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

m. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

n. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

o. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S			
				PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)
Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04

Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)

Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Compliance with the annual limits in Conditions 12(a) through 12(e) of this permit shall be determined on a daily basis from the sum of the data for the current day plus the preceding 364 days (running 365 days total).

g. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

h. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits in Condition 12(g) and (h) of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the

rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60

or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are

representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of

testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:
A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring

device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its

operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/day and hours/year);

viii. Daily and annual emissions of PM, and PM_{10} from the source with supporting calculations (tons/month and tons/year).

ix. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

x. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

xi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the combustion of natural gas, with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty

(30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

It should be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i) and the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

Michelle,

The prosed PM and PM10 limits are way higher than originally stated in the FESOP. That will cause that the record keeping be weekly or even daily.

Total	PM	PM10
PTE	160.02	95.39

We also had PM/PM10 limits that were below the 100 tons, the proposed changes splits the PM and PM10, I will have to wait till next week for some answer on how to approach some of the comments and changes to the draft permit.

Thanks

Michelle, Jim

Thank you for providing the comments, we will do our best to review and implement what is possible.
However, some of the staff that need to decide on some items in the draft permit and placing it to notice are out of the Office, we may need possible a short term waiver.

Thank you.

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf
- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading-Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note
    - Bunge left this in excel form for each of copying and pasting
    - Columns B-I contain information from the FESOP draft.
    - Columns J, K, and Y-AE were for Bunge's internal comparison purposes

  - Bunge believes that the following information should be used to replace the information in the current draft
    - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
  - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
  - These limits are achievable by well operated and maintained equipment.
  - Many of the sources are in areas that can not accommodate stack testing equipment
  - Many of the sources are not intended to operate in a manner that accommodates stack testing
    - Filter that only operate for a short time during material conveying
    - Bin vent filters

Sincerely,

Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

Michelle,

The prosed PM and PM10 limits are way higher than originally stated in the FESOP. That will cause that the record keeping be weekly or even daily.

Total	PM	PM10
PTE	160.02	95.39

We also had PM/PM10 limits that were below the 100 tons, the proposed changes splits the PM and PM10, I will have to wait till next week for some answer on how to approach some of the comments and changes to the draft permit.

Thanks

Michelle, Jim

Thank you for providing the comments, we will do our best to review and implement what is possible.
However, some of the staff that need to decide on some items in the draft permit and placing it to notice are out of the Office, we may need possible a short term waiver.

Thank you.

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf

- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading-Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note
    - Bunge left this in excel form for each of copying and pasting
    - Columns B-I contain information from the FESOP draft.
    - Columns J, K, and Y-AE were for Bunge's internal comparison purposes
    - Bunge believes that the following information should be used to replace the information in the current draft
        - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
    - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
    - These limits are achievable by well operated and maintained equipment.
    - Many of the sources are in areas that can not accommodate stack testing equipment
    - Many of the sources are not intended to operate in a manner that accommodates stack testing
        - Filter that only operate for a short time during material conveying
        - Bin vent filters

Sincerely,

Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf
- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading-Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note
    - Bunge left this in excel form for each of copying and pasting
    - Columns B-I contain information from the FESOP draft.
    - Columns J, K, and Y-AE were for Bunge's internal comparison purposes
    - Bunge believes that the following information should be used to replace the information in the current draft
        - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
    - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
    - These limits are achievable by well operated and maintained equipment.
    - Many of the sources are in areas that can not accommodate stack testing equipment
    - Many of the sources are not intended to operate in a manner that accommodates stack testing
        - Filter that only operate for a short time during material conveying
        - Bin vent filters

Proposed Federally Enforceable State Operating Permit (FESOP)
Bunge North America, Inc.
Danville, Vermilion County, Illinois

Site Identification No.: 183020ABT
Application No.: 96020027

Schedule
Public Comment Period Begins:
Public Comment Period Closes:

Illinois EPA Contacts
Permit Analyst: German Barria
Community Relations Coordinator: Brad Frost
217/782-7027
Brad.Frost@illinois.gov

I. INTRODUCTION

Bunge North America, Inc. has applied for a Federally Enforceable State Operating Permit (FESOP) for its plant located at 321 E. North Street in Danville. This plant requires an air pollution control operating permit because it is a source of emissions. The Illinois EPA has prepared a draft of the renewed permit that it would propose to issue for the plant. However, before renewing the permit, the Illinois EPA is holding a public comment period to receive comments on this proposed action and the terms and conditions of the draft permit that it would propose to issue.

II. SOURCE DESCRIPTION

Bunge North America, Inc. is a corn mill and grain elevator. The emission units at this plant that require an operating permit are shown in Table 1, below.

Table 1. Listing of Non-Exempt Emission Units Located at the Source.

Emission Unit and Description	Construction Date (and Date Last Modified)
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):	
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10	Prior to 1978
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96	Prior to 1970
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12	Prior to 1978
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12	Prior to 1978
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96	Prior to 1970
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30	Prior to 1978
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):	
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12	1985
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12	1996
Corn Cleaning Bldg 115 #2 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12	1996
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12	Prior to 1978

Emission Unit and Description	Construction Date (and Date Last Modified)
Dry Corn Milling, Processing and Products Handling:	
Bemos Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8	1996

One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1)	1986
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler)	2010

These units are sources of emissions because Particulate Matter (PM) and Particulate Matter less than 10 microns (PM_{10}) is generated from the receiving, handling, and milling of grain at the facility. This source is also a source of Carbon Monoxide (CO) and Nitrogen Oxides (NO_x) from the combustion of fuel in the boilers and generator at this facility. NO_x is formed thermally by the combination of oxygen and nitrogen in the air at the temperatures at which fuel is burned. Thermal NO_x is formed during all common high temperature combustion processes. CO is formed from incomplete combustion of the fuel.

The following table lists annual emissions (tons) of pollutants emitted from this source, as reported in the last three Annual Emission Reports (AER) sent to the Illinois EPA:

Table 2. Actual and Potential (as limited by permit) Emissions of the Source.

Pollutant	Actual Emissions 2019 (tons)	Actual Emissions 2020 (tons)	Actual Emissions 2021 (tons)	PTE as limited by permit (tons/year)
Carbon Monoxide (CO)	16.3400	17.3000	16.5400	45.78
Nitrogen Oxides (NO_x)	11.6000	11.9000	10.7000	33.36
Particulate Matter (PM)	65.8000	65.5000	59.7000	160.02
Particulate Matter less than 10 Microns (PM_{10})	28.0000	32.9000	31.3000	95.39
Sulfur Dioxide (SO_2)	0.1100	0.1300	0.1200	0.32
Volatile Organic Material (VOM)	1.1700	1.5800	1.4000	3.00

This source also contains emission units and activities that are exempt from permitting under 35 Ill. Adm. Code 201.146 and the emissions from such units are not limited by the conditions of the draft permit. These emission units include:

Two (2) 193 Diesel Fire-Pump Engines
150,000 gallon fuel oil storage tank

Based on a review of the estimated potential emissions from the exempt emission units as included in the permit application, the Illinois EPA has determined that the emissions from such exempt emission units are trivial and will not contribute to this source being a major source of emissions for any regulated pollutants emitted from any such exempt emission unit. This is because the emission limits for CO, NO_x, and PM_{10} in the draft FESOP are 90% or less of the applicable major source thresholds, and the combined PTE of the exempt emission units are less than 5% of the applicable major source thresholds, In other words, the emission limits for CO, NO_x, and PM_{10} have been limited to 90% or less of the applicable threshold (or 100 tons/year) by the draft FESOP and the combined potential to emit of the CO, NO_x, and PM_{10} from the exempt units is estimated to be less than 5% of 100 tons/year. In addition, as shown in Table 2, above, the margin of compliance between the actual emissions reported by the source during the last three years and the potential emissions as limited in the draft FESOP is more than 63% for CO, 65% for NO_x, and 67% for PM_{10}, which further minimizes the likelihood of the source exceeding its permit limits or the applicable major source thresholds.

In cases where the potential emissions of exempt emission units may contribute to the source exceeding major source thresholds (for example, if the emission limits in the FESOP are 90% or more of the applicable major source thresholds and the exempt units' PTE is 5% or more of the threshold) the Illinois EPA has established limits on such emission units in the draft FESOP that would normally be exempt from permitting. The permitting exemptions in 35 Ill. Adm. Code 201.146 do not relieve the owner or operator of any source from any obligation to comply with any other applicable requirements.

III. GENERAL DISCUSSION

FESOPs are federally enforceable, that is, the terms and conditions of the permits can be enforced by the United States Environmental Protection Agency (USEPA) under federal law, as well as by Illinois government and the public under state law. These permits can establish federally enforceable limitations on the operation and emissions of a source that restrict the potential emissions of the source.

The source may operate this plant under a FESOP because the actual emissions of the plant are below the levels at which the plant would be considered a major source under Title V of the federal Clean Air Act. However, in the absence of federally enforceable limitations, the plant's potential emissions would be such that the plant would be considered a major source. The permit acts to restrict the plant potential emissions so that it need not be considered a major source. As a result, the source does not need to obtain a Clean Air Act Permit Program (CAAPP) permit for the plant, as would otherwise be required.

The FESOP limits the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for CO, NO_x, and PM_{10}. The potential emissions of other pollutants (e.g., SO_2, VOM, and Hazardous Air Pollutants) from the plant are small enough that no restrictions are needed to avoid being a major source of these pollutants.

IV. APPLICABLE EMISSION STANDARDS

All emission units in Illinois must comply with state emission standards adopted by the Illinois Pollution Control Board (Board). These emission standards represent the basic requirements for sources in Illinois. The Board has specific standards for particulate matter under 35 Ill. Adm. Code Part 212. The processing and milling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions), which limits the opacity of emissions to 30 percent, and 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units), which limits PM emissions based on each units process weight rate. The receipt and handling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions) and 35 Ill. Adm. Code Part 212 Subpart S (Agriculture), which requires the source to implement and use certain housekeeping practices to reduce particulate matter emissions and to equip the sources receiving dump pits with air pollution control equipment that is capable of at least 90% collection efficiency for PM emissions. The boilers are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions).

The Clayton Boiler is at this source are subject to the New Source Performance Standards (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR 60, Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States EPA under a delegation agreement. The source also has another boiler that was constructed prior to June 9, 1989 and as result will not be subject the NSPS standards.

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) at this source are subject to the New Source Performance Standards (NSPS) for Grain Elevators, 40 CFR 60, Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States EPA under a delegation agreement. The source also has other grain receiving, cleaning and storage operations that were constructed prior to August 3, 1978 and as result will not be subject the NSPS standards.

The application shows that the plant is in compliance with applicable state and federal emission standards.

V. CONTENTS OF THE PERMIT

The permit that the Illinois EPA is proposing to issue will identify the specific emission standards that apply to the emission units at the plant. As explained, the processing and milling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B, which limits the opacity of emissions to 30 percent, and 35 Ill. Adm. Code Part 212 Subpart L, which limits PM emissions based on each units process weight rate. The receipt and handling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B and 35 Ill. Adm. Code Part 212 Subpart S, which requires the source to implement and use certain housekeeping practices to reduce particulate matter emissions and to equip the sources receiving dump pits with air pollution control equipment that is capable of at least 90% collection efficiency for PM emissions. The boilers are subject to 35 Ill. Adm. Code Part 212 Subpart B, which limits the opacity of emissions to 30 percent. The conditions of this permit are intended to ensure that the source continues to comply with applicable emission standards.

The permit would also contain limitations and requirements to assure that this plant is operated as a non-major source. The permit would limit the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for CO, NO_x, and PM_{10}. (Annual emissions of other pollutants from the plant are well below the 100 ton major source threshold.)

The permit would also set limitations on PM_{10} emissions based on the air flow to the baghouses and cyclones and the grain loading of these control devices determine by stack testing conducted at the source. The boilers are to be limited based on the types of fuel combusted and the amount of each fuel usage. These limitations are consistent with the historical operation of emission units at the plant.

The permit conditions would also continue to require appropriate compliance procedures, including inspection practices as well as recordkeeping and reporting requirements. The source must carry out these procedures on an on-going basis to demonstrate that the plant is being operated within the limitations set by the permit and the plant's emissions are being properly controlled.

VI. REQUEST FOR COMMENTS

It is the Illinois EPA's preliminary determination that the source has met the requirements for issuance of its permit. The Illinois EPA is therefore proposing to issue the permit.

Comments are requested on this proposed action by the Illinois EPA and the proposed conditions on the draft permit. If substantial public interest is shown in this matter, the Illinois EPA will consider holding a public hearing in accordance with 35 IAC Part 166.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12;
Railcar Dump Pit and D & E General Aspiration (5012-0004-0015) controlled by Baghouse Filters 37RF8; and
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12;
Corn Cleaning Bldg 115 (4880-0034-0069) controlled by Baghouse Filters TD 484RF12;
North St Grain/Meal Truck Dump Pit #2 (5012-0002-0012) controlled by Baghouse Filters DD 48RF12;

Dry Corn Milling, Processing and Products Handling:

Bemos Bagging (4870-0010-0055) controlled by Baghouse Filters APM 16019.8;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filters APM 40020.8;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filters APM 14042.8;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filters APM 14036.8;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filters APM 10144.8;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filters APM 40120.10;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filters APM 40144.8;
Bldg 105/115 General Aspiration (4880-0034-0027) controlled by Baghouse Filters DD 484RF12;
Bldg 102/105 General Aspiration (4880-0034-0001) controlled by Baghouse Filters MCF 144-756;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filters HOFFMAN 36X96;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filters DD 484RF12;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filters HOFFMAN 38405A;
Bran Bin (4880-0042-0054) controlled by Baghouse Filters BUHLER 16S-6-30;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filters CD 484RF12;
South CD Screening (4880-0034-0042) controlled by Baghouse Filters CD 484RF12;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filters CD 484RF12;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filters CD 484RF12;
Pack & Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filters TD 484RF12;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filters TD 484RF12;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filters TD 484RF12;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filters HOFFMAN S54002;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filters USS INC. 15CF P/D;
Lab Filter (4932-0001-0001) controlled by Baghouse Filters APM 14106.4;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filters BUHLER 9-6-100;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filters BUHLER 16-8-100;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filters BUHLER 9-6-100;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filters BUHLER 16009.4;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filters BUHLER 16009.4;

Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters BUHLER 37-8-220;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters BUHLER 37-8-220;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters APM 16022.8;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filters MICROPUL 2 1/2B;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filters MICROPUL 2 1/2B;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filters APM 16104.4;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filters APM 16104.4;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filters MICROPUL 2 1/2B;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filters MICROPUL 2 1/2B;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filters APM 16104.4;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filters APM 16104.4;
HIBOND Visc. Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filters APM 15066.8;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filters APM 40070.7;
Blended Food Packaging (4820-0001-0052) controlled by Baghouse Filters APM 16150.6;
ALLBOND Visc. Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filters BUHLER 16-8-100;
Milk Bins (4820-0003-0007) controlled by Baghouse Filters MICROPUL 6B;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filters MICROPUL 1F1;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filters APM 16022.4;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filters MICROPUL 6B;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filters APM 400072.10;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filters APM16014.8;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filters APM 16009.8;
5/6 Allond Receiver (4900-0001-0058) controlled by Baghouse Filters APM 16014.8;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filters APM 16014.8;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters MICROPUL 6B;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filters BUHLER 16-6-220;
Milk Bins (4820-0002-0038) controlled by Baghouse Filters MICROPUL 21-6-220;

Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filters BUHLER 25S-6-30;
Blender General Aspiration (4990-0007-0036) controlled by Baghouse Filters BUHLER 16S-6-30;
Blender General Aspiration (4990-0007-0032) controlled by Baghouse Filters MICROPUL 36S-8-30;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filters BUHLER 64S-6-20;
General Aspiration (4990-0006-0040) controlled by Baghouse Filters BUHLER 9-8-220;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filters APM 14024.6;
Fiber Receiver General Aspiration (4990-0011-0001) controlled by Baghouse Filters BUHLER 9-8-220;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters MICROPUL 1F1;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filters MICROPUL 25-8-220;
Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filters HOFFMAN 60X120;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filters APM 16030.4;
Fiber Receiver General Aspiration (4990-0011-0029) controlled by Baghouse Filters APM 16019.4;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filters APM 40072.10;
Two (2) Ingredient Bins (601 (4820-0003-0022) and 602 (4820-0003-0026)) controlled by Baghouse Filters MICROPUL 4B;
Ingredient Bin 603 (4820-0003-0030) controlled by Baghouse Filters MICROPUL 2 1/2 B;
Ingredient Bin 604 (4820-0003-0034) controlled by Baghouse Filters APM 15105.4;
Micro Ingredient Dump Filter (4820-0003-0018) controlled by Baghouse Filters APM 15105.4;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filters BUHLER 25S-6-30;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filters APM 16009.6;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filters APM 16009.6;
Reprocess General Cooler Dryer Roof (4900-0005-0001) controlled by Baghouse Filters CD 376RF10;
#6 Pulverizer Grinder (4900-0001-0042) controlled by Baghouse Filters BUHLER 37-8-220;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filters MICROPUL 4B;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filters BUHLER 16S-6-30;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filters APM 16022.8;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filters APM 16014.8;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filters MICROPUL 2 1/2B;
Bldg 112 Vacuum (4900-0005-0029) controlled by Baghouse Filters HOFFMAN 36X96;

AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filters BUHLER 37-8-220;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filters CD 484RF12;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filters MICROPUL 1F2;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filters APM 15030.8;
Bran Dryer (4860-0024-0003) controlled by Corona Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filters WEIDENMAN LFT 2X7;
Germ Dust Aspiration (4860-0017-0073) controlled by Baghouse Filters APM 40120.8;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filters APM 40120.8;
Germ Dryer (4860-0017-0003) controlled by DAY CYCLONE HV56;
FTS Dryer Aspiration (4860-0019-0003) controlled by CORONA 15 CYCLONE;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filters MICROPUL;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260);
PCM Hammermill controlled by Filter System (78-03:11);
USG Hammermill controlled by Filter System (78-03:27);
USG Extruder Pellet Transfer controlled by Collection Cyclone (78-08:22);
One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) (17,000 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Degerminator Cyclone Collector (45:09) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Aspiration Cyclone Collector (45:24) (1,400 dscfm) controlled by the S 105 Roof Carter-Day Filter (334:86);
Satake Sifter and Sifter Air Locks controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by 8th Floor Donaldson Filter (34:27) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) Pneumatic Transfer Line and Cyclone Receiver (23:102) controlled by West MAC Filter (34:01) controlled by the S 105 Roof Carter-Day Filter (334:86);

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filters HOFFMAN 36X96;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filters HOFFMAN 36X96;
Hominy Feed Bins Aspiration (4750-0029-0074) controlled by Baghouse Filters DONALDSON 276RFW12;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filters APM 40240.8;

Hominy Grinder General Aspiration (4750-0029-0001) controlled by Baghouse Filters APM 40224.4;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filters 376RF8;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filters 376RF12;
Long Term Meal System (LTMS) & Rail Meal/Grain Transfer (4750-0033-0001) controlled by Baghouse Filters 376RF8;
LTMS & Rail Meal/Grain Loadout (4750-0033-0011) controlled by Baghouse Filters MAC 144MCF416;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filters MICROPUL 100S-6-20;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected

facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute

period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35

454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause

or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.27	0.05	0.55
0.1	0.42	0.10	0.87
0.2	0.68	0.20	1.40
0.3	0.89	0.30	1.83

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency

of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner

consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.

h. The Illinois EPA shall be allowed to sample all fuels stored at the above location.

i. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(l).

j. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

k. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

l. The emission units described in Conditions 11(i), (j), and (k) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

m. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

n. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

o. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S			
				PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)
Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04

Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)
Truck Dump #4 & W. Gallery Aspiration	0.002	0.002	36,017	0.62	2.70	0.62	2.70
Cleaning North APM	0.002	0.0015	41,000	0.70	3.08	0.53	2.31
Bldg. 115 Corn Cleaning	0.002	0.0015	57,372	0.98	4.31	0.74	3.23

Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Compliance with the annual limits in Conditions 12(a) through 12(e) of this permit shall be determined on a daily basis from the sum of the data for the current day plus the preceding 364 days (running 365 days total).

g. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

h. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits in Condition 12(g) and (h) of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the

rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60

or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are

representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of

testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:
A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring

device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its

operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/day and hours/year);

viii. Daily and annual emissions of PM, and PM_{10} from the source with supporting calculations (tons/month and tons/year).

ix. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

x. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

xi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the combustion of natural gas, with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty

(30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

It should be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i) and the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

Illinois Environmental Protection Agency

Public Notice
Proposed Issuance of a Federally Enforceable State Operating Permit
Bunge North America, Inc. in Danville

Bunge North America, Inc. has applied to the Illinois Environmental Protection Agency for a federally enforceable state operating permit (FESOP) regulating air emissions from the facility, which is located at 321 East North Street in Danville. The source is a corn mill and grain elevator. The Illinois EPA has reviewed the application and made a preliminary determination that the application meets the standards for issuance and has prepared a draft permit for public review and comment.

The Illinois EPA is accepting written comments on the draft permit. Comments must be received by 11:59 PM on September 4, 2022. If sufficient interest is expressed in the draft permit, a hearing or other informational meeting may be held. Requests for information, comments, and questions should be directed to Cassandra Metz, Office of Community Relations, Illinois Environmental Protection Agency, PO Box 19506, Springfield, Illinois, 62794-9506, phone 217/785-7491, TDD phone number 866/273-5488, Cassandra.Metz@Illinois.gov.

The repositories for these documents and the application will be made available at the Illinois EPA's offices at 2125 South First Street in Champaign, 217/278-5800 and 1021 North Grand Avenue East, Springfield, 217/785-7491 (please call ahead to assure that someone will be available to assist you). The draft permit and other documents may also be available at http://bit.ly/2SiUSql. Copies of the documents may also be obtained upon request to the contact listed above.

The facility is located in an area of Environmental Justice concern. More information concerning Environmental Justice may be found at https://www2.illinois.gov/epa/topics/environmental-justice/Pages/default.aspx.

The 1990 amendments to the Clean Air Act require potentially major sources of air emissions to obtain federally enforceable operating permits. A FESOP permit allows a source that is potentially major to take operational limits in the permit so that it is a non-major source. The permit will contain federally enforceable limitations that restrict the facility's emissions to non-major levels. The permit will be enforceable by the U.S. EPA, as well as the Illinois EPA.

Illinois Environmental Protection Agency

Public Notice
Proposed Issuance of a Federally Enforceable State Operating Permit
Bunge ~~North America~~Milling, Inc. in Danville

Bunge ~~North America~~Milling, Inc. has applied to the Illinois Environmental Protection Agency for a federally enforceable state operating permit (FESOP) regulating air emissions from the facility, which is located at 321 East North Street in Danville. The source is a corn mill and grain elevator. The Illinois EPA has reviewed the application and made a preliminary determination that the application meets the standards for issuance and has prepared a draft permit for public review and comment.

The Illinois EPA is accepting written comments on the draft permit. Comments must be received by 11:59 PM on September 4, 2022. If sufficient interest is expressed in the draft permit, a hearing or other informational meeting may be held. Requests for information, comments, and questions should be directed to Cassandra Metz, Office of Community Relations, Illinois Environmental Protection Agency, PO Box 19506, Springfield, Illinois, 62794-9506, phone 217/785-7491, TDD phone number 866/273-5488, Cassandra.Metz@Illinois.gov.

The repositories for these documents and the application will be made available at the Illinois EPA's offices at 2125 South First Street in Champaign, 217/278-5800 and 1021 North Grand Avenue East, Springfield, 217/785-7491 (please call ahead to assure that someone will be available to assist you). The draft permit and other documents may also be available at http://bit.ly/2SiUSql. Copies of the documents may also be obtained upon request to the contact listed above.

The facility is located in an area of Environmental Justice concern. More information concerning Environmental Justice may be found at https://www2.illinois.gov/epa/topics/environmental-justice/Pages/default.aspx.

The 1990 amendments to the Clean Air Act require potentially major sources of air emissions to obtain federally enforceable operating permits. A FESOP permit allows a source that is potentially major to take operational limits in the permit so that it is a non-major source. The permit will contain federally enforceable limitations that restrict the facility's emissions to non-major levels. The permit will be enforceable by the U.S. EPA, as well as the Illinois EPA.

Illinois Environmental Protection Agency

Public Notice
Proposed Issuance of a Federally Enforceable State Operating Permit
Bunge Milling, Inc. in Danville

Bunge Milling, Inc. has applied to the Illinois Environmental Protection Agency for a federally enforceable state operating permit (FESOP) regulating air emissions from the facility, which is located at 321 East North Street in Danville. The source is a corn mill and grain elevator. The Illinois EPA has reviewed the application and made a preliminary determination that the application meets the standards for issuance and has prepared a draft permit for public review and comment.

The Illinois EPA is accepting written comments on the draft permit. Comments must be received by 11:59 PM on September 4, 2022. If sufficient interest is expressed in the draft permit, a hearing or other informational meeting may be held. Requests for information, comments, and questions should be directed to Cassandra Metz, Office of Community Relations, Illinois Environmental Protection Agency, PO Box 19506, Springfield, Illinois, 62794-9506, phone 217/785-7491, TDD phone number 866/273-5488, Cassandra.Metz@Illinois.gov.

Michelle,

The prosed PM and PM10 limits are way higher than originally stated in the FESOP. That will cause that the record keeping be weekly or even daily.

Total	PM	PM10
PTE	160.02	95.39

We also had PM/PM10 limits that were below the 100 tons, the proposed changes splits the PM and PM10, I will have to wait till next week for some answer on how to approach some of the comments and changes to the draft permit.

Thanks

Michelle, Jim

Thank you for providing the comments, we will do our best to review and implement what is possible.
However, some of the staff that need to decide on some items in the draft permit and placing it to notice are out of the Office, we may need possible a short term waiver.

Thank you.

German, please find attached Bunge's comments on the draft FESOP as well as a spreadsheet with our review and comments on appropriate emissions limits for facility sources and emission limit justification information. In addition to our comments included in the word document, please see the following comments:

- Bunge requests that the FESOP indicate that the conditions and limits in the FESOP (once issued) supersede conditions and limits in all previous construction and operating permits.
- The facility is a minor source of hazardous air pollutants
- The two plant boilers are capable of only burning natural gas. They were originally permitted to burn fuel oil and propane as backup but are not longer capable of burning those fuels.
- The proposed emissions limits for the boilers are based on a heat content higher than 1000 Btu/scf. Bunge suggests the limits should be based on a heat content of 1000 Btu/scf
- Remove references to specific filter/cyclone devices in the emission unit description. Replacement of filters/cyclones is exempt from permitted under 201.146(hhh). Would not want a new filter/cyclone to not match what is listed in the permit.
- Bunge's proposed emission limits are based on grain loading factors that are achievable and can be demonstrated. The justification for the grain loading values used to calculate "FESOP PTE" is included on the attached document "Grain Loading-Emission Limit Documentation".
- A comparison of emission unit information and emission limit information in the draft and Bunge's proposed descriptions and limits is attached. A couple of things to note
    - Bunge left this in excel form for each of copying and pasting
    - Columns B-I contain information from the FESOP draft.
    - Columns J, K, and Y-AE were for Bunge's internal comparison purposes
    - Bunge believes that the following information should be used to replace the information in the current draft

    - Columns M, N, P, Q, R, S, T-W
- Bunge strongly requests that IEPA remove the requirement to stack test all of the processing sources at the location within 90 days of permit issuance. This facility has roughly 135 sources that IEPA is proposing to require stack testing within 90 days of permit issuance and then again every 5 years. This is an incredibly onerous requirement and in many cases is not feasible.
    - Bunge is proposing emission limits that are based on reasonable grain loading rates from filters and cyclones.
    - These limits are achievable by well operated and maintained equipment.
    - Many of the sources are in areas that can not accommodate stack testing equipment
    - Many of the sources are not intended to operate in a manner that accommodates stack testing
        - Filter that only operate for a short time during material conveying
        - Bin vent filters

Sincerely,

Michelle

Hello Jim,

I was told that we will need another waiver, the first of August is coming quick, and although we can put the requirement for a fugitive dust plan in the FESOP of within 90 days of issuance of the FESOP,
We still need comments on the draft permit, or a statement that indicates that it is ok to move forward with the draft as is. It is my understanding that there was an inspection recently, we will need to wait for the field inspection report.
I will say another waiver until September 1, hopefully we can moved the permits sometime during the month of august though.

CONSTRUCTION PERMIT

PERMITTEE

Bunge North America, Inc.
Attn: Paul Catterson, Plant Manager
321 E. North Street
Danville, Illinois 61832

Application No.: 22040008 I.D. No.: 183020ABT
Applicant's Designation: Date Received: April 8, 2022
Subject: CCM260 Corn Meal System Upgrade
Date Issued: August 5, 2022
Location: 321 E. North Street, Danville, Vermilion County

Permit is hereby granted to the above-designated Permittee to CONSTRUCT emission source(s) and/or air pollution control equipment consisting of:

One (1) #1 Coarse Gravity Table Aspiration Cyclone Collector (05:68) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #3 Fine Gravity Table Aspiration Cyclone Collector (06:88) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Degerminator Cyclone Collector (45:07) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #1 Satake Aspiration Cyclone Collector (45:12) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Degerminator Cyclone Collector (45:09) controlled by the S 105 Roof Carter-Day Filter (334:86);
One (1) #2 Satake Aspiration Cyclone Collector (45:24) controlled by the S 105 Roof Carter-Day Filter (334:86);
Additional (1,000 c£m) aspiration to provide negative pressure on Satake Sifter and Sifter Air Locks;
One (1) Satake Germinator Pneumatic Transfer Line and Cyclone Receiver (45:20) controlled by the existing 8th Floor Donaldson Filter (34:27); and
One (1) Pneumatic Meal Transfer Line and Cyclone Receiver (23:102) controlled by the existing West MAC Filter (34:01)

as described in the above-referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This permit is issued based on the construction of #1 Coarse Gravity Table Aspiration Cyclone Collector, #3 Fine Gravity Table Aspiration Cyclone Collector, #1 Satake Degerminator Cyclone Collector, #1 Satake Aspiration Cyclone Collector, #2 Satake Degerminator Cyclone Collector, #2 Satake Aspiration Cyclone Collector, additional (1,000 cfm) aspiration for Satake Sifter and Sifter Air Locks, Satake Germinator Pneumatic Transfer Line and Cyclone Receiver, and Pneumatic Meal Transfer Line and Cyclone Receiver not constituting a new major

source or major modification pursuant to Title I of the Clean Air Act, specifically 40 CFR 52.21 and 35 Ill. Adm. Code Part 204 (Prevention of Significant Deterioration (PSD)). The source has requested that the Illinois EPA establish emission limitations and other appropriate terms and conditions in this permit that limit the emissions of Particulate Matter (PM) and Particulate Matter less than 10 microns (PM_{10}) from the above-listed equipment below the levels that would trigger the applicability of these rules.

b. Operation of the equipment listed above is allowed under this construction permit until final action is taken on the Federally Enforceable State Operating Permit (FESOP) application for this source.

c. The operation of the emission units under this construction permit shall not begin until construction of the associated pollution control equipment is complete and reasonable measures short of actual operation have been taken to verify proper operation.

2a. The #1 Coarse Gravity Table Aspiration Cyclone Collector, #3 Fine Gravity Table Aspiration Cyclone Collector, #1 Satake Degerminator Cyclone Collector, #1 Satake Aspiration Cyclone Collector, #2 Satake Degerminator Cyclone Collector, #2 Satake Aspiration Cyclone Collector , Satake Sifter and Sifter Air Locks, Satake Germinator Pneumatic Transfer Line and Cyclone Receiver, and Pneumatic Meal Transfer Line and Cyclone Receiver are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. The #1 Coarse Gravity Table Aspiration Cyclone Collector, #3 Fine Gravity Table Aspiration Cyclone Collector, #1 Satake Degerminator Cyclone Collector, #1 Satake Aspiration Cyclone Collector, #2 Satake Degerminator Cyclone Collector, #2 Satake Aspiration Cyclone Collector (45:24), Satake Sifter and Sifter Air Locks, Satake Germinator Pneumatic Transfer Line and Cyclone Receiver, and Pneumatic Meal

Transfer Line and Cyclone Receiver are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction of Modification Commenced On or After April 14, 1972:

408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

3. This permit is issued based on the #1 Coarse Gravity Table Aspiration Cyclone Collector, #3 Fine Gravity Table Aspiration Cyclone Collector, #1 Satake Degerminator Cyclone Collector, #1 Satake Aspiration Cyclone Collector, #2 Satake Degerminator Cyclone Collector, #2 Satake Aspiration Cyclone Collector, Satake Sifter and Sifter Air Locks, Satake Germinator Pneumatic Transfer Line and Cyclone Receiver, and Pneumatic Meal Transfer Line and Cyclone Receiver at this source not being subject to the National Emission Standards for Hazardous Air Pollutants (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because these emission units do not use a material containing chromium or a material containing manganese and are not primarily engaged in manufacturing of animal feed.

4. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

5a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to

minimize odors, including but not limited to, changes in material or installation of controls, in order to eliminate the odor nuisance.

b. The filters shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the S 105 Roof Carter-Day filters associated with #1 Coarse Gravity Table Aspiration Cyclone Collector, #3 Fine Gravity Table Aspiration Cyclone Collector, #1 Satake Degerminator Cyclone Collector, #1 Satake Aspiration Cyclone Collector, #2 Satake Degerminator Cyclone Collector, #2 Satake Aspiration Cyclone Collector, Satake Sifter and Sifter Air Locks, Stake Germinator Pneumatic Transfer Line and Cyclone Receiver, and Pneumatic Meal Transfer Line and Cyclone Receiver such that the filter is kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

6a. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

	Grain Loading	Total Flow Rate	E M I S S I O N S PM & PM_{10}	
Emission Unit	(gr/dscf)	(dscfm)	(lbs/Hour)	(Tons/Yr)
S 105 Roof Carter-Day Filter	0.002	40,600	0.70	3.05

These limits are based on the maximum exhaust air flow rate, maximum grain loading, 100% capture efficiency, and 8,760 hours/year of operation.

b. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 months total).

7a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA

Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Condition 8 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

8. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

9. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

10a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the S 105 Roof Carter-Day Filter associated with #1 Coarse Gravity Table Aspiration Cyclone Collector, #3 Fine Gravity Table Aspiration Cyclone Collector, #1 Satake Degerminator Cyclone Collector, #1 Satake Aspiration Cyclone Collector, #2 Satake Degerminator Cyclone Collector, #2 Satake Aspiration Cyclone Collector, Satake Sifter and Sifter Air Locks, Satake Germinator Pneumatic Transfer Line and Cyclone Receiver, and Pneumatic Meal Transfer Line and Cyclone Receiver:

A. Records for periodic inspection of the filters with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. Total flow rate for each blower associated with the S 105 Roof Carter-Day Filter and the filters associated with the North Lunchroom Screening and South Lunchroom Screening (scfm);

iii. Total grain loading for each process (gr/dscf);

iv. The hours of operation for the S 105 Roof Carter-Day Filter; and

v. On a monthly basis maintain 12-month rolling PM and PM_{10} emissions from the S 105 Roof Carter-Day Filter with supporting calculations (tons/year).

b. All records and logs required by Condition 10(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspections and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

11. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

12a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

If you have any questions on this permit, please call German Barria at 217/785-1705.

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR CONSTRUCTION/DEVELOPMENT PERMITS ISSUED BY THE ILLINOIS ENVIRONMENTAL PROTECTION AGENCY

July 1, 1985

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) authorizes the Environmental Protection Agency to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. Unless this permit has been extended or it has been voided by a newly issued permit, this permit will expire one year from the date of issuance, unless a continuous program of construction or development on this project has started by such time.

2. The construction or development covered by this permit shall be done in compliance with applicable provisions of the Illinois Environmental Protection Act, and Regulations adopted by the Illinois Pollution Control Board.

3. There shall be no deviations from the approved plans and specifications unless a written request for modification, along with plans and specifications as required, shall have been submitted to the Agency and a supplemental written permit issued.

4. The Permittee shall allow any duly authorized agent of the Agency upon the presentation of credentials, at reasonable times:

   a. to enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit,

   b. to have access to and copy any records required to be kept under the terms and conditions of this permit,

   c. to inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit,

   d. to obtain and remove samples of any discharge or emission of pollutants, and

   e. to enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring, or recording any activity, discharge, or emission authorized by this permit.

5. The issuance of this permit:

   a. shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are to be located,

   b. does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the proposed facilities,

   c. does not release the Permittee from compliance with the other applicable statues and regulations of the United States, of the State of Illinois, or with applicable local laws, ordinances and regulations,

   d. does not take into consideration or attest to the structural stability of any units or parts of the project, and

e. in no manner implies or suggests that the Agency (or its officers, agents or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. a. Unless a joint construction/operation permit has been issued, a permit for operation shall be obtained from the Agency before the equipment covered by this permit is placed into operation.

b. For purposes of shakedown and testing, unless otherwise specified by a special permit condition, the equipment covered under this permit may be operated for a period not to exceed thirty (30) days.

7. The Agency may file a complaint with the Board for modification, suspension or revocation of a permit:

a. upon discovery that the permit application contained misrepresentations, misinformation or false statements or that all relevant facts were not disclosed, or

b. upon finding that any standard or special conditions have been violated, or

c. upon any violations of the Environmental Protection Act or any regulation effective thereunder as a result of the construction or development authorized by this permit.

Subject: [External] Public Notice Permit - Comments

Cassandra,

I would like to submit comments on a public noticed permit. I have a few questions on how to do this.

1) To what address and to whose attention should I send the comments?
2) The public notice information page says comments must be received by 11:59 PM on September 4, 2022. Can the comments be emailed to you to meet this deadline and mailed separately?
3) If a hard copy is required to be received by September 4 (Sunday), will someone be a the mailing address on Saturday or Sunday to receive a Fed Ex package?

Thank you for your assistance.

Re: Comments on Public Notice Federally Enforceable State Operating Permit (FESOP)
Bunge Milling, Inc – Danville Facility
Source ID No. 183020ABT

Dear Ms. Metz:

Bunge submits this letter to provide comments on the proposed Federally Enforceable State Operating Permit (FESOP), Application No. 96020027, for the Bunge Milling, Inc. facility located in Danville, Illinois, facility ID No. 183020ABT.

Bunge has reviewed the public notice version of the proposed permit and has serious concerns about some of the language and permit conditions. Bunge looks forward to the agencies' careful consideration of our comments below.

1) On pages 1 through 6 of 35, List of Emission Unit for which the permit is issued:
   - Listing the specific baghouse model numbers in the FESOP is not necessary and provides no benefit to the permit. Under 35 IAC 201.146(hhh) replacement of air pollution control equipment is exempted from the requirement to obtain a construction permit. Therefore, when a baghouse is replaced with a different model baghouse the model number will not match what is listed in the FESOP. Bunge requests that reference to a specific baghouse model numbers be removed from the description of each emission unit. *Example: Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter ~~APM 40072.10~~*
   - Bunge reviewed the list of emission units and discovered some emission unit ID numbers and unit descriptions that are not accurate. Bunge request that the emission unit ID numbers and unit descriptions be updated to reflect the changes listed below. Some of these changes are to standardize the naming convention for emission units at the facility, some are to correct inaccuracies, and some are to allow the emission unit names to match emission unit names used in conditions 12a, 12b and 12c of the permit. See the redlined copy of the FESOP for a complete list of updated emission unit numbers and names. Some emission units were removed in the redlined version of the permit either because they are already included in the list as part of another emission unit or no longer exist at the facility.
     - Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter
     - Truck Dump #4 and West Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter
     - Bldg 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter
     - North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter

- Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012)
- PCM Hammermill (4900-0003-0011) controlled by Filter
- USG Hammermill (4900-0008-0027) controlled by Filter
- USG Secondary Extruder Transfer (4900-0008-0022) (no control)
- Whole Grain Dryer (4880-0046-0017)
- Whole Grain Hammermill (4880-0046-0028)
- Whole Grain Aspiration (4880-0046-0042)
- USG Primary Extruder Transfer (4900-0007-0020)
- 6th Floor Radar Pulsar (4860-0018-0044)
- Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter
- Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter

2) On page 6 of 35, Condition 1.c.: There are numerous construction permits have been issued to the facility that have emission limits or conditions that could conflict with conditions in the FESOP or no longer apply but are still enforceable. Bunge requests that this condition be amended to include all operating permits and construction permits.

3) On page 6 of 35, Condition 3.a.:
   - This condition states that Products Receiving is subject to the NSPS for Grain Elevators. Only Grain Receiving is subject to the NSPS for Grain Elevators not all

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

Product Receiving. Bunge requests that the words Products Receiving be removed from this condition. Bunge also no longer receives soybeans at this facility. The vacuum systems listed are not subject to the NSPS. The condition should read Corn Receiving, Cleaning and Storage.

- This condition lists the affected facilities to which the NSPS applies but does not specify which emission units at the facility are subject to the NSPS. Bunge requests that this condition be amended to state that the emission units included in the Corn Receiving, Cleaning and Storage (NSPS) emission unit group are subject to the Grain Elevator NSPS, subpart DD while the emission units in the Corn Receiving, Cleaning and Storage (Pre-NSP) emission unit group are not.

4) On page 7 of 35, Condition 4.a.: Bunge request that the exception to 35 IAC 212.123(a) be referenced. That is, include the clause …or as allowed under 35 IAC 212.123(b).

5) On page 15 of 35, Condition 9.a.: This condition states that compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60. It is not clear in the condition that this requirement refers to the initial compliance demonstration. Bunge requests that the condition be amended to state that initial compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60.

6) On page 17 of 35, Condition 11.g, 11.h and 11.i.: These conditions appear to be artifact conditions from a permit for a different facility used as a template for Bunge's FESOP and were inadvertently left in the permit or contain references to the prior facility.
   - Condition g references using liquid by-products or waste materials as fuel sources. The two permitted boilers at the Bunge facility can only burn natural gas. Bunge requests that this condition be removed.
   - Condition h allows Illinois EPA the right to sample all fuels stored at the facility. Bunge does not store any fuels at the facility. Bunge requests that this condition be removed.
   - Condition i references the Ag Transload Facility. Bunge believes this should say the Bunge Facility. Bunge request that the condition be amended to replace Ag Transload Facility with Bunge Facility.
   - Lettering of condition i (now g) and l (now j) should be modified to account for conditions g and h being removed.

7) On pages 18 through 23 of 35, Conditions12.a, 12.b, and 12.c:
   - Emission unit name and emission rate changes:
     - Bldg 105/115 General Aspiration 0.002, 0.0015, 55,000, 0.94, 4.13, 0.71, 3.10
     - Bldg 102/105 General Aspiration 0.002, 0.0015, 43,700, 0.75, 3.28, 0.56, 2.46
     - #5 Pulvocron should be #6 Pulvocron
     - Bldg 112 Vacuum hourly emission rates should be 0.01 lb/hr, not zero
     - Pneumatic Lift Receiver for WG260 Transfer, PM10 emission rate should be 0.51 tpy
     - PCM Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Secondary Extruder Transfer, PM10 emission rate should be 3.00 tpy

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

8) On page 23 of 35, Condition 12.f.: This condition requires the facility to monitor and record data from 136 emission units on a daily basis and calculate daily emission from each emission unit so that a 365-day rolling emission total from each emission unit can be used to demonstrate compliance with annual emission limits on each emission unit on a daily basis. It is unrealistic to expect the facility to perform daily and 365-day emission calculations to demonstrate compliance with annual limits. Except for the fugitive emission sources, the annual emission limits are based on 8760 hour per year of operation. In lieu of recording actual hours per day each emission unit operated, if Bunge were to assume each emission unit operated 24 hour per day 365 days per year the resulting emissions calculated would demonstrate compliance with the limits. Performing daily emission calculation for the point source emissions provides no benefit. For the three fugitive emission sources, Bunge proposes that monthly and 12-month rolling emission calculations would be sufficient to demonstrate compliance with these annual emission limits. Bunge requests that the conditions be amended to say that compliance with the annual limits in Conditions 12(a) through 12(e) be determined on a monthly basis and compliance determined on a 12-month rolling basis.

9) On pages 24 through 27, Conditions 14 and 15.: Conditions 14 and 15 are related to performance testing required by NSPS 40 CFR Part 60 regulations. Conditions 14 and 15 restate the methods for performing performance tests under 40 CFR Part 60. Two NSPS 40 CFR subparts apply to the Bunge facility; Subpart Dc for natural gas fired boiler between 10 and 100 MMBtu/hr and Subpart DD for grain elevators. Only Subpart DD contains any performance testing that would apply to any emission unit at the Bunge facility and then only for new, modified, or reconstructed emission units that are also affected facilities under Subpart DD. Adding a new Subpart DD emission unit, reconstructing, or modifying (as defined by Part 60) a Subpart DD emission unit would require an air construction permit. Any performance testing necessary should be addressed in the construction permit. Having these conditions in the FESOP provides no benefit they only serve to clutter and complicate the permit. Bunge expects a permit with only relevant permit conditions so reading and understanding each condition and compliance obligations are as easy as possible. For these reasons Bunge request the conditions 14 and 15 be removed from the permit.

10) On pages 27 and 28, Conditions 16.b. and 18.a.: Condition 16.b states testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA. Condition 18.a. states that within 90 days after the issuance of this permit the permittee shall i conduct Method 22 testing on all 136 emission units, and ii conduct Method 5 testing on all 136 emission units. These two conditions conflict.
    - Bunge believes that it is Illinois EPA intention to require testing to be performed upon written request. If this is the case the written request should identify the emission unit required to be tested, the purpose of the test, the test Methods to be used and any further testing instruction such as test duration or test frequency. There is no need to complicate the FESOP by having conditions 17 or 18 in the permit. They only serve to clutter and complicate the permit. Bunge requests to change Condition 16.b to read Upon written request from Illinois EPA to perform emission testing the permittee shall perform the requested testing using a qualified independent testing service. Bunge further requests that conditions 17 and 18 be removed from the permit as they now

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

serve no purpose.

- If, however, it is Illinois EPA intention to require Method 22 and Method 5 testing on 136 emission units within 90 days of the FESOP being issued, Bunge feels this is an unrealistic expectation and objects to this requirement.
- If Condition18 is not removed as requested as requested above, Bunge provides the following comments on Condition 18
- On page 28 of 35, Condition 18.a.i.: This condition contains the statement Thereafter, this testing shall be conducted on a quarterly basis. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit.
- On page 29 of 35, Condition 18.a.ii.: This condition contains the statement Thereafter, this testing shall be conducted at least once every five years. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit.
- On page 29 of 35, Condition 18.c: This condition requires a written test plan be submitted to Illinois EPA stating that this plan shall include at a minimum:

  i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;
  ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;
  iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;
  iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;
  v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;
  vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification
  vii. Any proposed use of an alternative test method, with detailed justification
  viii. The format and content of the Source Test Report.

  Bunge is concerned that these conditions are not consistent with regulations promulgated by the Illinois Pollution Control Board, specifically 35 IAC 283.220. 35 IAC 283.220(c) specifies what is required to be in a test plan. It states that a test plan must specify:
  - The purpose of the test,
  - The operating parameters,
  - The test method, and
  - Any other procedures that will be followed when conducting an emissions test

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

pursuant to the provisions of this Part.
Furthermore, 35 IAC 283.220(d) states that a test plan need not be submitted where the source intends to use a standard test method or procedure.

Bunge requests that Condition 18.c be amended so that the required content of a test plan is consistent with what is required by the regulation and add language to incorporate the part of the regulation that allows for circumstances when a test plan is not required.

11) On page 33 of 35, Conditions 23.a.ix and 23.a.x: These conditions are related to the daily emission calculations required by Condition 12.f. Bunge requested in a previous comment to amend Condition 12.f to be a monthly requirement. Accordingly, Bunge requests that these conditions be similarly amended, Condition 23.a.ix should change hours/day to hours/month and Condition 23.a.x should change Daily to Monthly.

Our comments present numerous concerns with the proposed FESOP permit. Because it is Bunge's desire to comply with the permit and the permit conditions it is not unreasonable to expect the conditions to be succinct, reasonable, and supported by regulation. Thank you for your careful consideration of our comments.

Please contact me at (314) 292-2937 or by email at james.burris@bunge.com if you have any questions.

Sincerely,

Cassandra,

I have attached two files as our comments on the proposed public notice FESOP permit.

1) Bunge's written comments letter
2) Redlined copy of the proposed FESOP

Please let me know if you have any questions.

CAUTION: This email originated from outside of Bunge. Do not click links or open attachments unless you recognize the sender !

Good afternoon,

Thank you for your email. Comments may be emailed directly to me. People sometimes send their comments in the mail, but a hard copy is not required. Either on their own is acceptable. If you prefer to mail the comments, you may send it with attention to me, Cassandra Metz #5 at 1021 North Grand Avenue East, Springfield IL 62794. I will let the permit writer know you contacted me so that the permit is not issued without considering your comments.

Sincerely,

Cassandra Metz

Subject: [External] Public Notice Permit - Comments

Cassandra,

I would like to submit comments on a public noticed permit. I have a few questions on how to do this.

1) To what address and to whose attention should I send the comments?
2) The public notice information page says comments must be received by 11:59 PM on September 4, 2022. Can the comments be emailed to you to meet this deadline and mailed separately?
3) If a hard copy is required to be received by September 4 (Sunday), will someone be a the mailing address on Saturday or Sunday to receive a Fed Ex package?

Thank you for your assistance.

Re: Comments on Public Notice Federally Enforceable State Operating Permit (FESOP)
Bunge Milling, Inc – Danville Facility
Source ID No. 183020ABT

Dear Ms. Metz:

Bunge submits this letter to provide comments on the proposed Federally Enforceable State Operating Permit (FESOP), Application No. 96020027, for the Bunge Milling, Inc. facility located in Danville, Illinois, facility ID No. 183020ABT.

Bunge has reviewed the public notice version of the proposed permit and has serious concerns about some of the language and permit conditions. Bunge looks forward to the agencies' careful consideration of our comments below.

1) On pages 1 through 6 of 35, List of Emission Unit for which the permit is issued:
   - Listing the specific baghouse model numbers in the FESOP is not necessary and provides no benefit to the permit. Under 35 IAC 201.146(hhh) replacement of air pollution control equipment is exempted from the requirement to obtain a construction permit. Therefore, when a baghouse is replaced with a different model baghouse the model number will not match what is listed in the FESOP. Bunge requests that reference to a specific baghouse model numbers be removed from the description of each emission unit. *Example: Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter ~~APM 40072.10~~*
   - Bunge reviewed the list of emission units and discovered some emission unit ID numbers and unit descriptions that are not accurate. Bunge request that the emission unit ID numbers and unit descriptions be updated to reflect the changes listed below. Some of these changes are to standardize the naming convention for emission units at the facility, some are to correct inaccuracies, and some are to allow the emission unit names to match emission unit names used in conditions 12a, 12b and 12c of the permit. See the redlined copy of the FESOP for a complete list of updated emission unit numbers and names. Some emission units were removed in the redlined version of the permit either because they are already included in the list as part of another emission unit or no longer exist at the facility.
     - Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter
     - Truck Dump #4 and West Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter
     - Bldg 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter
     - North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter

- PCM Hammermill (4900-0003-0011) controlled by Filter
- USG Hammermill (4900-0008-0027) controlled by Filter
- USG Secondary Extruder Transfer (4900-0008-0022) (no control)
- Whole Grain Dryer (4880-0046-0017)
- Whole Grain Hammermill (4880-0046-0028)
- Whole Grain Aspiration (4880-0046-0042)
- USG Primary Extruder Transfer (4900-0007-0020)
- 6th Floor Radar Pulsar (4860-0018-0044)
- Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter
- Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter

2) On page 6 of 35, Condition 1.c.: There are numerous construction permits have been issued to the facility that have emission limits or conditions that could conflict with conditions in the FESOP or no longer apply but are still enforceable. Bunge requests that this condition be amended to include all operating permits and construction permits.

3) On page 6 of 35, Condition 3.a.:
   - This condition states that Products Receiving is subject to the NSPS for Grain Elevators. Only Grain Receiving is subject to the NSPS for Grain Elevators not all

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

Product Receiving. Bunge requests that the words Products Receiving be removed from this condition. Bunge also no longer receives soybeans at this facility. The vacuum systems listed are not subject to the NSPS. The condition should read Corn Receiving, Cleaning and Storage.

- This condition lists the affected facilities to which the NSPS applies but does not specify which emission units at the facility are subject to the NSPS. Bunge requests that this condition be amended to state that the emission units included in the Corn Receiving, Cleaning and Storage (NSPS) emission unit group are subject to the Grain Elevator NSPS, subpart DD while the emission units in the Corn Receiving, Cleaning and Storage (Pre-NSP) emission unit group are not.

4) On page 7 of 35, Condition 4.a.: Bunge request that the exception to 35 IAC 212.123(a) be referenced. That is, include the clause ...or as allowed under 35 IAC 212.123(b).

5) On page 15 of 35, Condition 9.a.: This condition states that compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60. It is not clear in the condition that this requirement refers to the initial compliance demonstration. Bunge requests that the condition be amended to state that initial compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60.

6) On page 17 of 35, Condition 11.g, 11.h and 11.i.: These conditions appear to be artifact conditions from a permit for a different facility used as a template for Bunge's FESOP and were inadvertently left in the permit or contain references to the prior facility.
   - Condition g references using liquid by-products or waste materials as fuel sources. The two permitted boilers at the Bunge facility can only burn natural gas. Bunge requests that this condition be removed.
   - Condition h allows Illinois EPA the right to sample all fuels stored at the facility. Bunge does not store any fuels at the facility. Bunge requests that this condition be removed.
   - Condition i references the Ag Transload Facility. Bunge believes this should say the Bunge Facility. Bunge request that the condition be amended to replace Ag Transload Facility with Bunge Facility.
   - Lettering of condition i (now g) and l (now j) should be modified to account for conditions g and h being removed.

7) On pages 18 through 23 of 35, Conditions12.a, 12.b, and 12.c:
   - Emission unit name and emission rate changes:
     - Bldg 105/115 General Aspiration 0.002, 0.0015, 55,000, 0.94, 4.13, 0.71, 3.10
     - Bldg 102/105 General Aspiration 0.002, 0.0015, 43,700, 0.75, 3.28, 0.56, 2.46
     - #5 Pulvocron should be #6 Pulvocron
     - Bldg 112 Vacuum hourly emission rates should be 0.01 lb/hr, not zero
     - Pneumatic Lift Receiver for WG260 Transfer, PM10 emission rate should be 0.51 tpy
     - PCM Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Secondary Extruder Transfer, PM10 emission rate should be 3.00 tpy

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

8) On page 23 of 35, Condition 12.f.: This condition requires the facility to monitor and record data from 136 emission units on a daily basis and calculate daily emission from each emission unit so that a 365-day rolling emission total from each emission unit can be used to demonstrate compliance with annual emission limits on each emission unit on a daily basis. It is unrealistic to expect the facility to perform daily and 365-day emission calculations to demonstrate compliance with annual limits. Except for the fugitive emission sources, the annual emission limits are based on 8760 hour per year of operation. In lieu of recording actual hours per day each emission unit operated, if Bunge were to assume each emission unit operated 24 hour per day 365 days per year the resulting emissions calculated would demonstrate compliance with the limits. Performing daily emission calculation for the point source emissions provides no benefit. For the three fugitive emission sources, Bunge proposes that monthly and 12-month rolling emission calculations would be sufficient to demonstrate compliance with these annual emission limits. Bunge requests that the conditions be amended to say that compliance with the annual limits in Conditions 12(a) through 12(e) be determined on a monthly basis and compliance determined on a 12-month rolling basis.

9) On pages 24 through 27, Conditions 14 and 15.: Conditions 14 and 15 are related to performance testing required by NSPS 40 CFR Part 60 regulations. Conditions 14 and 15 restate the methods for performing performance tests under 40 CFR Part 60. Two NSPS 40 CFR subparts apply to the Bunge facility; Subpart Dc for natural gas fired boiler between 10 and 100 MMBtu/hr and Subpart DD for grain elevators. Only Subpart DD contains any performance testing that would apply to any emission unit at the Bunge facility and then only for new, modified, or reconstructed emission units that are also affected facilities under Subpart DD. Adding a new Subpart DD emission unit, reconstructing, or modifying (as defined by Part 60) a Subpart DD emission unit would require an air construction permit. Any performance testing necessary should be addressed in the construction permit. Having these conditions in the FESOP provides no benefit they only serve to clutter and complicate the permit. Bunge expects a permit with only relevant permit conditions so reading and understanding each condition and compliance obligations are as easy as possible. For these reasons Bunge request the conditions 14 and 15 be removed from the permit.

10) On pages 27 and 28, Conditions 16.b. and 18.a.: Condition 16.b states testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA. Condition 18.a. states that within 90 days after the issuance of this permit the permittee shall i conduct Method 22 testing on all 136 emission units, and ii conduct Method 5 testing on all 136 emission units. These two conditions conflict.
    - Bunge believes that it is Illinois EPA intention to require testing to be performed upon written request. If this is the case the written request should identify the emission unit required to be tested, the purpose of the test, the test Methods to be used and any further testing instruction such as test duration or test frequency. There is no need to complicate the FESOP by having conditions 17 or 18 in the permit. They only serve to clutter and complicate the permit. Bunge requests to change Condition 16.b to read Upon written request from Illinois EPA to perform emission testing the permittee shall perform the requested testing using a qualified independent testing service. Bunge further requests that conditions 17 and 18 be removed from the permit as they now

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

serve no purpose.

- If, however, it is Illinois EPA intention to require Method 22 and Method 5 testing on 136 emission units within 90 days of the FESOP being issued, Bunge feels this is an unrealistic expectation and objects to this requirement.
- If Condition18 is not removed as requested as requested above, Bunge provides the following comments on Condition 18
- On page 28 of 35, Condition 18.a.i.: This condition contains the statement Thereafter, this testing shall be conducted on a quarterly basis. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit.
- On page 29 of 35, Condition 18.a.ii.: This condition contains the statement Thereafter, this testing shall be conducted at least once every five years. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit.
- On page 29 of 35, Condition 18.c: This condition requires a written test plan be submitted to Illinois EPA stating that this plan shall include at a minimum:

  i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;
  ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;
  iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;
  iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;
  v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;
  vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification
  vii. Any proposed use of an alternative test method, with detailed justification
  viii. The format and content of the Source Test Report.

  Bunge is concerned that these conditions are not consistent with regulations promulgated by the Illinois Pollution Control Board, specifically 35 IAC 283.220. 35 IAC 283.220(c) specifies what is required to be in a test plan. It states that a test plan must specify:
  - The purpose of the test,
  - The operating parameters,
  - The test method, and
  - Any other procedures that will be followed when conducting an emissions test

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

pursuant to the provisions of this Part.
Furthermore, 35 IAC 283.220(d) states that a test plan need not be submitted where the source intends to use a standard test method or procedure.

Bunge requests that Condition 18.c be amended so that the required content of a test plan is consistent with what is required by the regulation and add language to incorporate the part of the regulation that allows for circumstances when a test plan is not required.

11) On page 33 of 35, Conditions 23.a.ix and 23.a.x: These conditions are related to the daily emission calculations required by Condition 12.f. Bunge requested in a previous comment to amend Condition 12.f to be a monthly requirement. Accordingly, Bunge requests that these conditions be similarly amended, Condition 23.a.ix should change hours/day to hours/month and Condition 23.a.x should change Daily to Monthly.

Our comments present numerous concerns with the proposed FESOP permit. Because it is Bunge's desire to comply with the permit and the permit conditions it is not unreasonable to expect the conditions to be succinct, reasonable, and supported by regulation. Thank you for your careful consideration of our comments.

Please contact me at (314) 292-2937 or by email at james.burris@bunge.com if you have any questions.

Sincerely,

James A Burris Jr

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter;
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filter;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filter;
Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter;
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filter;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filter;

Corn Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filter;
Bldg 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter;
North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter;

Dry Corn Milling, Processing and Products Handling:

Bemos Bagging (4870-0010-0055) controlled by Baghouse Filter;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filter;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filter;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filter;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filter;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filter;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filter;
Bldg 105/115 General Aspiration (4880-0034-0001) controlled by Baghouse Filter;
Bldg 102/105 General Aspiration (4880-0034-0027) controlled by Baghouse Filter;
Bldg 105 Vacuum (4880-0032-0052) controlled by Baghouse Filter;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filter;
Bldg 104 Vacuum (4870-0015-0016) controlled by Baghouse Filter;
Bran Bin (4880-0042-0054) controlled by Baghouse Filter;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filter;
South CD Screening (4880-0034-0042) controlled by Baghouse Filter;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filter;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filter;
Pack and Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filter;
CAMAS/Bran Bldg 115 (4880-0034-0077) controlled by Baghouse Filter;
Thru/Tail Stock Dryers Bldg 115 (4880-0034-0071) controlled by Baghouse Filter;
Bldg 115 Vacuum (4880-0032-0070) controlled by Baghouse Filter;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filter;
Lab Filter (4932-0001-0001) controlled by Baghouse Filter;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filter;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filter;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filter;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filter;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filter;

Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filter;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filter;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filter;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filter;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filter;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filter;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filter;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filter;
Hibond Visc Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filter;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filter;
Blended Food Packaging Aspiration (4820-0001-0052) controlled by Baghouse Filter;
Allbond Visc Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filter;
Milk Bins (4820-0003-0007) controlled by Baghouse Filter;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filter;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filter;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filter;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filter;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filter;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filter;
5/6 Allbond Receiver (4900-0001-0058) controlled by Baghouse Filter;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filter;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filter;
Milk Bins (4820-0002-0038)controlled by Baghouse Filter;

Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0036) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0032) controlled by Baghouse Filter;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filter;
Finished Product General Aspiration (4990-0006-0040) controlled by Baghouse Filter;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0001) controlled by Baghouse Filter;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filter;
Bldg 111 Vacuum (4900-0005-0035) controlled by Baghouse Filter;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0029) controlled by Baghouse Filter;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filter;
Four (4) Ingredient Bins (601 (4820-0003-0022), 602 (4820-0003-0026), 603 (4820-0003-0030), and 604 (4820-0003-0034)controlled by Baghouse Filters;
Micro Ingredient Dump Aspiration (4820-0003-0018) controlled by Baghouse Filter;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filter;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filter;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filter;
Reprocessing General Aspiration (4900-0005-0001) controlled by Baghouse Filter;
#6 Pulvocron (4900-0001-0042) controlled by Baghouse Filter;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filter;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filter;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filter;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filter;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filter;
Bldg 112 Vacuum (4900-0005-0029) controlled by Baghouse Filter;

AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filter;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filter;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filter;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filter;
Bran Dryer (4860-0024-0003) controlled by Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filter;
Germ Dust Aspiration (4860-0017-0073) controlled by Cyclone;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filter;
Germ Dryer (4860-0017-0003) controlled by Cyclone;
FTS Dryer Aspiration (4860-0019-0003) controlled by Cyclone;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filter;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012);
PCM Hammermill (4900-0003-0011) controlled by Filter;
USG Hammermill (4900-0008-0027) controlled by Filter;
USG Secondary Extruder Transfer (4900-0008-0022);
Whole Grain Dryer (4880-0046-0017);
Whole Grain Hammermill (4880-0046-0028);
Whole Grain Aspiration (4880-0046-0042);
USG Primary Extruder Transfer (4900-0007-0020);
6th Floor Radar Pulsar (4860-0018-0044);
CCM260 Process Aspiration (4912-0002-0054) controlled by Filter;

Corn Mill Products Storage:
Bldg 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filter;
Bldg 208 Vacuum (4912-0009-0005) controlled by Baghouse Filter;
Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filter;
Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filter;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filter;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filter;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating and construction permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn Receiving, Cleaning and Storage (NSPS) emission units except the Hoffman Bldg 301 Vacuum and the Track 6 Vacuum are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations. 40 CFR Part 60 Subpart DD does not apply to the emission units in the Corn Receiving, Cleaning and Storage (Pre-NSPS) emission unit group.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn Receiving, Cleaning and Storage (Pre- NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122 or as allowed under 35 Ill. Adm. Code 212.123(b).

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute

period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50
90.	13.4	100.00	29.50

180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units).

Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause

or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P Mg/hr	E kg/hr	P T/hr	E lbs/hr
0.05	0.27	0.05	0.55
0.1	0.42	0.10	0.87

360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency

of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), initial compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner

consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on the Bunge Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(j).

h. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

i. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

j. The emission units described in Conditions 11(g), (h), and (i) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

k. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

l. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

m. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S			
				PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)
Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04

Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)
Truck Dump #4 and West Gallery Aspiration	0.002	0.002	36,017	0.62	2.70	0.62	2.70
Cleaning North APM	0.002	0.0015	41,000	0.70	3.08	0.53	2.31
Bldg 115 Corn Cleaning	0.002	0.0015	57,372	0.98	4.31	0.74	3.23
North Street Truck Dump #2	0.002	0.0015	25,109	0.43	1.89	0.32	1.41
				Total:	11.98		9.65

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

c. Emissions from and operation of the Dry Corn Milling, Processing and Products Handling shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S PM		PM_{10}

Municipalities within three miles of the source: Tilton

Source: 321 E. North St, Danville IL
Located in an EJ area; 3% speak English "less than very well"

The list should include both those who have expressed an interest in, and those that may be affected by, the activity. (p47/121 from USEPA's Public Involvement in Environmental Permits)

PERMIT CALCULATION SHEET

Facility: : Bunge North America, Inc.	**I.D.:** 183020ABT
Anal. Eng.: GB **Date:** 12-29-22	**P.N.:** 96020027
Rev. Eng.: _____ **Date:** _____	**Date Rec.:** 12/05/11

Section 1: Identify noted File Traveler Sheet and ICEMAN source information that may affect permit issuance; if active VN indicate if Compliance is ok with issuance of a permit or NOI/Denial letter:
No current violation, there was a USEPA NOV/ Soybean Processing/ Consent Decree back in 2007/2008. there doesn't seem to have been a certify investigation on file. The source is located at 321 East North Street, Danville, Vermilion County. There is also a flag for the facility because this Source is located in an E.J. area with >=70% minority population.

LEGAL:	None
FOS FLAG:	None
CROPA:	None
Other	The source is not subject to 212.302(a) or (b)

Section 2: Identify type of permit and brief summary of application/permit history if submitted in response to a NOI/Denial letter or to request revision to an existing permit:
The purpose for opening this permit is to review the application for Title V FESOP received on December, 2011. The source is requesting a Federally Enforceable State Operating Permit (FESOP) permit # 96020027 for their corn mill and grain elevator. The source requires a FESOP to limit their potential emission to less than 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10}). The current ICEMAN status for the above mentioned permit number #96020027 is for operating.

Section 3: Description of the source with an itemized list of emission units and pollution control equipment included in the application. If for an operating permit, list all existing and proposed units and equipment that the operating permit will need to address:
Bunge North America, Inc owns and operates a corn mill and grain elevator that creates flour and other grain mill products such as PCM and USG specialty starch binder which are used to sold to wallboard fabricators to aid in bonding paper to gypsum. The facility located at 321 East North Street, Danville, Vermilion County. This permit is granted to the above-designated Permittee to operate emission units and/or air pollution control equipment consisting of the following:

Emission Units:

Corn Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter;
Hoffman Bldg. 301 Vacuum (5012-0010-0054) controlled by Baghouse Filter;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filter;
Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter;
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filter;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filter;

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filter;
Bldg. 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter;
North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter;

Dry Corn Milling, Processing and Products Handling:
Bemos Bagging (4870-0010-0055) controlled by Baghouse Filter;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filter;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filter;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filter;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filter;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filter;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filter;
Bldg. 105/115 General Aspiration (4880-0034-0001) controlled by Baghouse Filter;
Bldg. 102/105 General Aspiration (4880-0034-0027) controlled by Baghouse Filter;
Bldg. 105 Vacuum (4880-0032-0052) controlled by Baghouse Filter;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filter;
Bldg. 104 Vacuum (4870-0015-0016) controlled by Baghouse Filter;

Bran Bin (4880-0042-0054) controlled by Baghouse Filter;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filter;
South CD Screening (4880-0034-0042) controlled by Baghouse Filter;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filter;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filter;
Pack and Bulk Loading Bldg. 115 (4870-0013-0024) controlled by Baghouse Filter;
CAMAS/Bran Bldg. 115 (4880-0034-0077) controlled by Baghouse Filter;
Thru/Tail Stock Dryers Bldg. 115 (4880-0034-0071) controlled by Baghouse Filter;
Bldg. 115 Vacuum (4880-0032-0070) controlled by Baghouse Filter;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filter;
Lab Filter (4932-0001-0001) controlled by Baghouse Filter;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filter;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filter;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filter;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filter;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filter;
Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022),
#9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filter;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filter;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filter;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filter;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filter;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filter;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filter;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filter;
Hibond Visc Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filter;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filter;
Blended Food Packaging Aspiration (4820-0001-0052) controlled by Baghouse Filter;
Allbond Visc Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filter;
Milk Bins (4820-0003-0007) controlled by Baghouse Filter;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filter;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filter;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filter;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filter;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filter;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filter;
5/6 Allbond Receiver (4900-0001-0058) controlled by Baghouse Filter;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filter;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filter;
Milk Bins (4820-0002-0038)controlled by Baghouse Filter;
Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0036) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0032) controlled by Baghouse Filter;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filter;
Finished Product General Aspiration (4990-0006-0040) controlled by Baghouse Filter;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by

CALCULATION SHEET

Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0001) controlled by Baghouse Filter;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filter;
Bldg. 111 Vacuum (4900-0005-0035) controlled by Baghouse Filter;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0029) controlled by Baghouse Filter;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filter;
Four (4) Ingredient Bins (601 (4820-0003-0022), 602 (4820-0003-0026), 603 (4820-0003-0030), and 604 (4820-0003-0034)controlled by Baghouse Filters;
Micro Ingredient Dump Aspiration (4820-0003-0018) controlled by Baghouse Filter;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filter;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filter;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filter;
Reprocessing General Aspiration (4900-0005-0001) controlled by Baghouse Filter;
#6 Pulvocron (4900-0001-0042) controlled by Baghouse Filter;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filter;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filter;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filter;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filter;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filter;
Bldg. 112 Vacuum (4900-0005-0029) controlled by Baghouse Filter;
AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filter;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filter;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filter;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filter;
Bran Dryer (4860-0024-0003) controlled by Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filter;
Germ Dust Aspiration (4860-0017-0073) controlled by Cyclone;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filter;
Germ Dryer (4860-0017-0003) controlled by Cyclone;
FTS Dryer Aspiration (4860-0019-0003) controlled by Cyclone;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filter;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012);
PCM Hammermill (4900-0003-0011) controlled by Filter;
USG Hammermill (4900-0008-0027) controlled by Filter;
USG Secondary Extruder Transfer (4900-0008-0022);
Whole Grain Dryer (4880-0046-0017);
Whole Grain Hammermill (4880-0046-0028);
Whole Grain Aspiration (4880-0046-0042);
USG Primary Extruder Transfer (4900-0007-0020);
6th Floor Radar Pulsar (4860-0018-0044);
CCM260 Process Aspiration (4912-0002-0054) controlled by Filter;

Corn Mill Products Storage:
Bldg. 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filter;
Bldg. 208 Vacuum (4912-0009-0005) controlled by Baghouse Filter;
Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filter;
Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter;

Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filter;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filter;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filter;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NOx Burner (Boiler#1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM10 emissions.

Section 4: Identify the proposed type(s) and maximum actual operating quantities and rates of pollutant containing materials to be used/processed/produced that will be included in permit:

The amount of grain receipts in LTMS Truck/Rail Dump Pit shall not exceeded 12,500 tons per month and 75,000 tons per year;
The amount of grain loadout in LTMS Truck Loadout shall not exceed 12,500 tons per month and 75,000 tons per year;
Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year for boiler #1;
Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year for the Clayton Boiler;

Baghouse S 105 Roof Carter-Day Filter (34:86) flow rate 40,600dscfm, 99.9 control efficiency;
Baghouse 8th Floor Donaldson Filter (34:27) flow rate 600 dscfm;
Baghouse West MAC Filter (34:01) flow rate 740 dscfm; and
Baghouse South APM Filter (34:35) flow rate to be distributed to Baghouses 8th Floor Donaldson, West MAC, North Lunchroom, and South Lunchroom – 28,220 dscfm.

Section 5: Identify the proposed type(s), quantities and rates of maximum actual operating emissions for the source to be included in the permit including the units/controls proposed. Identify the source(s) of the emission factors used:

The proposed type, quantities and rates of maximum actual operating emissions for the source are as follow:

Emissions from and operation of the Corn Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	EMISSIONS PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)
Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04
Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

Emissions from and operation of the Corn Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

CALCULATION SHEET

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	(Tons/Yr)	PM_{10} (lbs/Hr)	(Tons/Yr)

Hominy Truck Loadout	0.0020	0.0015	34,960	0.6	2.62	0.45	1.97
Track 15 Bulk Rail Loadout	0.0020	0.0020	34,960	0.6	2.62	0.6	2.62
Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

Emissions from and operation of Boiler #1 shall not exceed the following limits:

Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

Emissions from and operation of Clayton Boiler shall not exceed the following limits:

Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

Source Emission Summary:

	EMISSIONS (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

Section 6: Identify the source's potential-to-emit (PTE) including any proposed additions/revisions. Show calculations or reference where in application or file PTE is satisfactorily presented. Emissions from 35 IAC 201.146 exempt units must be included in PTE calculations:

The source's potential-to-emit (PTE), including any construction construction permit thaty has previously been issued indicates that this source had been a CAAPP source, and is requesting to be issued a FESOP to limit the emissions of air pollutants from the source to less than major source thresholds, the FESOP containing federally enforceable limits in the form of permit conditions which effectively restrict the potential emissions of a source to below major source threshold, thereby excluding the source from the CAAPP.

There have been the following construction permits granted since the FESOP App was received December 5, 2011 (11110009, 15100009, 16030026, 18050016, and 22040008).

CALCULATION SHEET

Section 7: List potentially applicable State and Federal (NSPS and NESHAP) regulations and indicate if application demonstrated those regulations would not be violated by construction and/or operation of equipment/units/processes in application:
Following is a list of potentially applicable State and Federal (NSPS and NESHAP) regulations and exemptions:

Applicable Regulations:
1) 35 Ill Adm. Code 212.123 no visible of PM with opacity greater than 30 percent.
2) 35 Ill. Adm. Code 212.206. no emission of particulate matter into the atmosphere in any one hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using liquid fuel exclusively (0.10 lbs/mmBtu)
3) 35 Ill Adm. Code 212.301 no emissions beyond property line
4) 35 Ill Adm. Code 212.321, 322 process emission rate, applies to milling process.
5) 35 Ill Adm. Code 212.461 grain handling and drying in general
6) 35 Ill Adm. Code 212.462 grain handling operations
7) 35 Ill. Adm. Code 212.463 grain-drying operations for which construction or modification commenced prior to June 30, 1975
8) 35 Ill. Adm. Code 214.122(b)(2), New Fuel Combustion Emission Sources,
9) 35 Ill. Adm. Code 214.301, Process Emission Sources
10) 35 Ill. Adm. Code 215.301 Use of Organic Material,
11) 35 Ill. Adm. Code 216.121 the steam boiler is subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources).
12) New Source Performance Standards (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR 60, Subparts A and Dc for steam boiler 10mmBtu/hr or greater
13) NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD,

It should be noted that the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3).
It should also be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i).

Section 8: Conclusions and recommendations. Indicate your final recommendation (e.g., NOI, denial, issue permit with conditions, etc.) and indicate reason(s) for that action:
It is recommended that a FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE be issue. A draft of this FESOP permit has undergone a public notice period, the only comments received were from the source regarding minor corrections to emission units designsation.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter;
Hoffman Bldg. 301 Vacuum (5012-0010-0054) controlled by Baghouse Filter;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filter;
Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter;
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filter;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filter;

Corn Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filter;
Bldg. 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter;
North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter;

Dry Corn Milling, Processing and Products Handling:
Bemos Bagging (4870-0010-0055) controlled by Baghouse Filter;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filter;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filter;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filter;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filter;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filter;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filter;
Bldg. 105/115 General Aspiration (4880-0034-0001) controlled by Baghouse Filter;

Bldg. 102/105 General Aspiration (4880-0034-0027) controlled by Baghouse Filter;
Bldg. 105 Vacuum (4880-0032-0052) controlled by Baghouse Filter;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filter;
Bldg. 104 Vacuum (4870-0015-0016) controlled by Baghouse Filter;
Bran Bin (4880-0042-0054) controlled by Baghouse Filter;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filter;
South CD Screening (4880-0034-0042) controlled by Baghouse Filter;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filter;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filter;
Pack and Bulk Loading Bldg. 115 (4870-0013-0024) controlled by Baghouse Filter;
CAMAS/Bran Bldg. 115 (4880-0034-0077) controlled by Baghouse Filter;
Thru/Tail Stock Dryers Bldg. 115 (4880-0034-0071) controlled by Baghouse Filter;
Bldg. 115 Vacuum (4880-0032-0070) controlled by Baghouse Filter;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filter;
Lab Filter (4932-0001-0001) controlled by Baghouse Filter;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filter;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filter;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filter;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filter;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filter;
Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filter;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filter;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filter;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filter;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filter;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filter;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filter;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filter;
Hibond Visc Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filter;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filter;
Blended Food Packaging Aspiration (4820-0001-0052) controlled by Baghouse Filter;

Allbond Visc Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filter;
Milk Bins (4820-0003-0007) controlled by Baghouse Filter;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filter;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filter;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filter;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filter;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filter;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filter;
5/6 Allbond Receiver (4900-0001-0058) controlled by Baghouse Filter;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filter;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filter;
Milk Bins (4820-0002-0038)controlled by Baghouse Filter;
Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0036) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0032) controlled by Baghouse Filter;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filter;
Finished Product General Aspiration (4990-0006-0040) controlled by Baghouse Filter;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0001) controlled by Baghouse Filter;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filter;
Bldg. 111 Vacuum (4900-0005-0035) controlled by Baghouse Filter;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0029) controlled by Baghouse Filter;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filter;
Four (4) Ingredient Bins (601 (4820-0003-0022), 602 (4820-0003-0026), 603 (4820-0003-0030), and 604 (4820-0003-0034)controlled by Baghouse Filters;
Micro Ingredient Dump Aspiration (4820-0003-0018) controlled by Baghouse Filter;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filter;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filter;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filter;
Reprocessing General Aspiration (4900-0005-0001) controlled by Baghouse Filter;
#6 Pulvocron (4900-0001-0042) controlled by Baghouse Filter;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filter;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filter;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filter;

Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filter;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filter;
Bldg. 112 Vacuum (4900-0005-0029) controlled by Baghouse Filter;
AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filter;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filter;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filter;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filter;
Bran Dryer (4860-0024-0003) controlled by Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filter;
Germ Dust Aspiration (4860-0017-0073) controlled by Cyclone;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filter;
Germ Dryer (4860-0017-0003) controlled by Cyclone;
FTS Dryer Aspiration (4860-0019-0003) controlled by Cyclone;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filter;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012);
PCM Hammermill (4900-0003-0011) controlled by Filter;
USG Hammermill (4900-0008-0027) controlled by Filter;
USG Secondary Extruder Transfer (4900-0008-0022);
Whole Grain Dryer (4880-0046-0017);
Whole Grain Hammermill (4880-0046-0028);
Whole Grain Aspiration (4880-0046-0042);
USG Primary Extruder Transfer (4900-0007-0020);
6th Floor Radar Pulsar (4860-0018-0044);
CCM260 Process Aspiration (4912-0002-0054) controlled by Filter;

Corn Mill Products Storage:
Bldg. 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filter;
Bldg. 208 Vacuum (4912-0009-0005) controlled by Baghouse Filter;
Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filter;
Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filter;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filter;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filter;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NOx Burner (Boiler#1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM10 emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212

Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50
90.	13.4	100.00	29.50
140.	17.0	150.00	37.00
180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to

the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits

pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind

speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(l).

h. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

i. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

j. The emission units described in Conditions 11(i), (j), and (k) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

k. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

l. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

m. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	EMISSIONS PM (Tons/Yr)	EMISSIONS PM_{10} (lbs/Hr)	EMISSIONS PM_{10} (Tons/Yr
Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04
Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	EMISSIONS PM (Tons/Yr)	EMISSIONS PM_{10} (lbs/Hr)	EMISSIONS PM_{10} (Tons/Yr)
Truck Dump #4 and Gallery Aspiration	0.002	0.002	36,017	0.62	2.70	0.62	2.70
Cleaning North APM	0.002	0.0015	41,000	0.70	3.08	0.53	2.31

Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Compliance with the annual limits in Conditions 12(a) through 12(e) of this permit shall be determined on a daily basis from the sum of the data for the current day plus the preceding 364 days (running 365 days total).

g. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

h. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits in Condition 12(g) and (h) of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions

in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA: (refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate,

minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are

required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If

relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/day and hours/year);

viii. Daily and annual emissions of PM, and PM_{10} from the source with supporting calculations (tons/month and tons/year).

ix. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

x. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

xi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the combustion of natural gas, with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

It should be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i) and the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

   a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

   b. Maintain the following records for a period of no less than two (2) years:

      i. Date and duration of malfunction, breakdown, or startup,

      ii. Full and detailed explanation of the cause,

      iii. Contaminants emitted and an estimate of quantity of emissions,

      iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

      v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

Re: Comments on Public Notice Federally Enforceable State Operating Permit (FESOP)
Bunge Milling, Inc – Danville Facility
Source ID No. 183020ABT

Dear Ms. Metz:

Bunge submits this letter to provide comments on the proposed Federally Enforceable State Operating Permit (FESOP), Application No. 96020027, for the Bunge Milling, Inc. facility located in Danville, Illinois, facility ID No. 183020ABT.

Bunge has reviewed the public notice version of the proposed permit and has serious concerns about some of the language and permit conditions. Bunge looks forward to the agencies' careful consideration of our comments below.

1) On pages 1 through 6 of 35, List of Emission Unit for which the permit is issued:
   - Listing the specific baghouse model numbers in the FESOP is not necessary and provides no benefit to the permit. Under 35 IAC 201.146(hhh) replacement of air pollution control equipment is exempted from the requirement to obtain a construction permit. Therefore, when a baghouse is replaced with a different model baghouse the model number will not match what is listed in the FESOP. Bunge requests that reference to a specific baghouse model numbers be removed from the description of each emission unit. *Example: Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter ~~APM 40072.10~~*
   - Bunge reviewed the list of emission units and discovered some emission unit ID numbers and unit descriptions that are not accurate. Bunge request that the emission unit ID numbers and unit descriptions be updated to reflect the changes listed below. Some of these changes are to standardize the naming convention for emission units at the facility, some are to correct inaccuracies, and some are to allow the emission unit names to match emission unit names used in conditions 12a, 12b and 12c of the permit. See the redlined copy of the FESOP for a complete list of updated emission unit numbers and names. Some emission units were removed in the redlined version of the permit either because they are already included in the list as part of another emission unit or no longer exist at the facility.
     - Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter
     - Truck Dump #4 and West Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter
     - Bldg 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter
     - North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter

Danville, IL 61832

- Bldg 105/115 General Aspiration (4880-0034-0001) controlled by Baghouse
- Filter
- Bldg 102/105 General Aspiration (4880-0034-0027) controlled by Baghouse
- Filter
- Pack and Bulk Loading Bldg 115 (4870-0013-0024) controlled by Baghouse Filter
- 3/4 Pulvocron Meal Bin (4990-0002-0008) controlled by Baghouse
- Filter
- 1/2 Pulvocron Meal Bin (4990-0005-0010) controlled by Baghouse
- Filter
- 9/10 Pulvocron Meal Bin (4990-0004-0011) controlled by Baghouse
- Filter
- 7/8 Pulvocron Meal Bin (4990-0003-0008) controlled by Baghouse Filter
- Hibond Visc Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filter
- Blended Food Packaging Aspiration (4820-0001-0052) controlled by Baghouse Filter
- Allbond Visc Flour General Aspiration (4900-0001-0068) controlled by
- Baghouse Filter
- 5/6 Allbond Receiver (4900-0001-0058) controlled by Baghouse Filter
- Blending General Aspiration (4990-0007-0036) controlled by Baghouse Filter
- Blending General Aspiration (4990-0007-0032) controlled by Baghouse Filter
- Finished Product General Aspiration (4990-0006-0040) controlled by Baghouse Filter
- Fiber Receiving General Aspiration (4990-0011-0001) controlled by Baghouse Filter
- Fiber Receiving General Aspiration (4990-0011-0029) controlled by Baghouse Filter
- Four (4) Ingredient Bins (601 (4820-0003-0022), 602 (4820-0003-0026), 603 (4820-0003-0030), and 604 (4820-0003-0034)controlled by Baghouse Filters
- Micro Ingredient Dump Aspiration (4820-0003-0018) controlled by Baghouse Filter
- Reprocessing General Aspiration (4900-0005-0001) controlled by Baghouse Filter
- #6 Pulvocron (4900-0001-0042) controlled by Baghouse Filter
- Germ Dust Aspiration (4860-0017-0073) controlled by Cyclone (not by a Filter)
- Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012)
- PCM Hammermill (4900-0003-0011) controlled by Filter
- USG Hammermill (4900-0008-0027) controlled by Filter
- USG Secondary Extruder Transfer (4900-0008-0022) (no control)
- Whole Grain Dryer (4880-0046-0017)
- Whole Grain Hammermill (4880-0046-0028)
- Whole Grain Aspiration (4880-0046-0042)
- USG Primary Extruder Transfer (4900-0007-0020)
- 6th Floor Radar Pulsar (4860-0018-0044)
- Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter
- Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter

2) On page 6 of 35, Condition 1.c.: There are numerous construction permits have been issued to the facility that have emission limits or conditions that could conflict with conditions in the FESOP or no longer apply but are still enforceable. Bunge requests that this condition be amended to include all operating permits and construction permits.

3) On page 6 of 35, Condition 3.a.:
   - This condition states that Products Receiving is subject to the NSPS for Grain Elevators. Only Grain Receiving is subject to the NSPS for Grain Elevators not all

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

Product Receiving. Bunge requests that the words Products Receiving be removed from this condition. Bunge also no longer receives soybeans at this facility. The vacuum systems listed are not subject to the NSPS. The condition should read Corn Receiving, Cleaning and Storage.

- This condition lists the affected facilities to which the NSPS applies but does not specify which emission units at the facility are subject to the NSPS. Bunge requests that this condition be amended to state that the emission units included in the Corn Receiving, Cleaning and Storage (NSPS) emission unit group are subject to the Grain Elevator NSPS, subpart DD while the emission units in the Corn Receiving, Cleaning and Storage (Pre-NSP) emission unit group are not.

4) On page 7 of 35, Condition 4.a.: Bunge request that the exception to 35 IAC 212.123(a) be referenced. That is, include the clause ...or as allowed under 35 IAC 212.123(b).

5) On page 15 of 35, Condition 9.a.: This condition states that compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60. It is not clear in the condition that this requirement refers to the initial compliance demonstration. Bunge requests that the condition be amended to state that initial compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60.

6) On page 17 of 35, Condition 11.g, 11.h and 11.i.: These conditions appear to be artifact conditions from a permit for a different facility used as a template for Bunge's FESOP and were inadvertently left in the permit or contain references to the prior facility.
   - Condition g references using liquid by-products or waste materials as fuel sources. The two permitted boilers at the Bunge facility can only burn natural gas. Bunge requests that this condition be removed.
   - Condition h allows Illinois EPA the right to sample all fuels stored at the facility. Bunge does not store any fuels at the facility. Bunge requests that this condition be removed.
   - Condition i references the Ag Transload Facility. Bunge believes this should say the Bunge Facility. Bunge request that the condition be amended to replace Ag Transload Facility with Bunge Facility.
   - Lettering of condition i (now g) and l (now j) should be modified to account for conditions g and h being removed.

7) On pages 18 through 23 of 35, Conditions12.a, 12.b, and 12.c:
   - Emission unit name and emission rate changes:
     - Bldg 105/115 General Aspiration 0.002, 0.0015, 55,000, 0.94, 4.13, 0.71, 3.10
     - Bldg 102/105 General Aspiration 0.002, 0.0015, 43,700, 0.75, 3.28, 0.56, 2.46
     - #5 Pulvocron should be #6 Pulvocron
     - Bldg 112 Vacuum hourly emission rates should be 0.01 lb/hr, not zero
     - Pneumatic Lift Receiver for WG260 Transfer, PM10 emission rate should be 0.51 tpy
     - PCM Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Secondary Extruder Transfer, PM10 emission rate should be 3.00 tpy

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

8) On page 23 of 35, Condition 12.f.: This condition requires the facility to monitor and record data from 136 emission units on a daily basis and calculate daily emission from each emission unit so that a 365-day rolling emission total from each emission unit can be used to demonstrate compliance with annual emission limits on each emission unit on a daily basis. It is unrealistic to expect the facility to perform daily and 365-day emission calculations to demonstrate compliance with annual limits. Except for the fugitive emission sources, the annual emission limits are based on 8760 hour per year of operation. In lieu of recording actual hours per day each emission unit operated, if Bunge were to assume each emission unit operated 24 hour per day 365 days per year the resulting emissions calculated would demonstrate compliance with the limits. Performing daily emission calculation for the point source emissions provides no benefit. For the three fugitive emission sources, Bunge proposes that monthly and 12-month rolling emission calculations would be sufficient to demonstrate compliance with these annual emission limits. Bunge requests that the conditions be amended to say that compliance with the annual limits in Conditions 12(a) through 12(e) be determined on a monthly basis and compliance determined on a 12-month rolling basis.

9) On pages 24 through 27, Conditions 14 and 15.: Conditions 14 and 15 are related to performance testing required by NSPS 40 CFR Part 60 regulations. Conditions 14 and 15 restate the methods for performing performance tests under 40 CFR Part 60. Two NSPS 40 CFR subparts apply to the Bunge facility; Subpart Dc for natural gas fired boiler between 10 and 100 MMBtu/hr and Subpart DD for grain elevators. Only Subpart DD contains any performance testing that would apply to any emission unit at the Bunge facility and then only for new, modified, or reconstructed emission units that are also affected facilities under Subpart DD. Adding a new Subpart DD emission unit, reconstructing, or modifying (as defined by Part 60) a Subpart DD emission unit would require an air construction permit. Any performance testing necessary should be addressed in the construction permit. Having these conditions in the FESOP provides no benefit they only serve to clutter and complicate the permit. Bunge expects a permit with only relevant permit conditions so reading and understanding each condition and compliance obligations are as easy as possible. For these reasons Bunge request the conditions 14 and 15 be removed from the permit.

10) On pages 27 and 28, Conditions 16.b. and 18.a.: Condition 16.b states testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA. Condition 18.a. states that within 90 days after the issuance of this permit the permittee shall i conduct Method 22 testing on all 136 emission units, and ii conduct Method 5 testing on all 136 emission units. These two conditions conflict.
    - Bunge believes that it is Illinois EPA intention to require testing to be performed upon written request. If this is the case the written request should identify the emission unit required to be tested, the purpose of the test, the test Methods to be used and any further testing instruction such as test duration or test frequency. There is no need to complicate the FESOP by having conditions 17 or 18 in the permit. They only serve to clutter and complicate the permit. Bunge requests to change Condition 16.b to read Upon written request from Illinois EPA to perform emission testing the permittee shall perform the requested testing using a qualified independent testing service. Bunge further requests that conditions 17 and 18 be removed from the permit as they now

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

serve no purpose.

- If, however, it is Illinois EPA intention to require Method 22 and Method 5 testing on 136 emission units within 90 days of the FESOP being issued, Bunge feels this is an unrealistic expectation and objects to this requirement.
- If Condition18 is not removed as requested as requested above, Bunge provides the following comments on Condition 18
- On page 28 of 35, Condition 18.a.i.: This condition contains the statement Thereafter, this testing shall be conducted on a quarterly basis. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit.
- On page 29 of 35, Condition 18.a.ii.: This condition contains the statement Thereafter, this testing shall be conducted at least once every five years. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit.
- On page 29 of 35, Condition 18.c: This condition requires a written test plan be submitted to Illinois EPA stating that this plan shall include at a minimum:

  i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;
  ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;
  iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;
  iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;
  v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;
  vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification
  vii. Any proposed use of an alternative test method, with detailed justification
  viii. The format and content of the Source Test Report.

  Bunge is concerned that these conditions are not consistent with regulations promulgated by the Illinois Pollution Control Board, specifically 35 IAC 283.220. 35 IAC 283.220(c) specifies what is required to be in a test plan. It states that a test plan must specify:
  - The purpose of the test,
  - The operating parameters,
  - The test method, and
  - Any other procedures that will be followed when conducting an emissions test

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

pursuant to the provisions of this Part.
Furthermore, 35 IAC 283.220(d) states that a test plan need not be submitted where the source intends to use a standard test method or procedure.

Bunge requests that Condition 18.c be amended so that the required content of a test plan is consistent with what is required by the regulation and add language to incorporate the part of the regulation that allows for circumstances when a test plan is not required.

11) On page 33 of 35, Conditions 23.a.ix and 23.a.x: These conditions are related to the daily emission calculations required by Condition 12.f. Bunge requested in a previous comment to amend Condition 12.f to be a monthly requirement. Accordingly, Bunge requests that these conditions be similarly amended, Condition 23.a.ix should change hours/day to hours/month and Condition 23.a.x should change Daily to Monthly.

Our comments present numerous concerns with the proposed FESOP permit. Because it is Bunge's desire to comply with the permit and the permit conditions it is not unreasonable to expect the conditions to be succinct, reasonable, and supported by regulation. Thank you for your careful consideration of our comments.

Please contact me at (314) 292-2937 or by email at james.burris@bunge.com if you have any questions.

Sincerely,

James A Burris Jr

James A. Burris, Jr. PE

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn ~~, Soybean & Products~~ Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters ~~APH-40072.16~~;

One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM_{10} emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating and construction permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn ~~, Soybean & Products~~ Receiving, Cleaning and Storage (NSPS) emission units except the Hoffman Bldg 301 Vacuum and the Track 6 Vacuum are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. ~~.~~ Pursuant to 40 CFR 60. ~~300~~(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility ~~d~~

Formatted: Indent: Left: 0.08", Space Before: 0 pt, Line spacing: Exactly 11.3 pt

Formatted: Left, Tab stops: Not at 0.42"

Formatted: Indent: Left: 0.13", Hanging: 0.44", Tab stops: Not at 4.25"

~~facility~~ at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). ~~——~~The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations. 40 CFR Part 60 Subpart DD does not apply to the emission units in the Corn Receiving, Cleaning and Storage (Pre-NSPS) emission unit group.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

   i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

   ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

   i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

   ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

   iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (Pre-NSPS); Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122 or as allowed under 35 Ill. Adm. Code 212.123(b). ~~.~~

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute

Formatted: Indent: Left: 0.13", Hanging: 0.44"

Formatted: Indent: Hanging: 0.44", Tab stops: Not at 4.23"

period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (Pre-NSPS); Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40

230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (Pre-NSPS); Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause

or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr

400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn~~, Soybean & Products~~ Receiving, Cleaning and Storage (Pre-NSPS); Corn~~, Soybean & Products~~ Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency

of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code 212.314 is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (Pre-NSPS); Corn, ~~Soybean & Products~~ Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), initial compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner

consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

~~g. Organic liquid by-products or waste materials shall not be used in any emission unit at this source without written approval from the Illinois EPA.~~

~~h. The Illinois EPA shall be allowed to sample all fuels stored at the above location.~~

~~f.~~q. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on ~~the Financial~~the Bunge Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis.
All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(j~~i~~).

~~g.~~h. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

~~h.~~i. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

~~i.~~j. The emission units described in Conditions 11(g~~j~~), (h~~i~~), and (i~~k~~) shall be operated under the provisions of an operating program, consistent with
35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

~~j.~~k. As a minimum the operating program shall include the following:

i. The name and address of the source;

ii. The name and address of the owner or operator responsible for execution of the operating program;

iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

~~n.~~ l. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(l) and (m).

~~o.~~ m. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(l) and (m) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn~~, Soybean & Products~~ Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

	PM Grain Loading	PM_{10} Grain Loading	Total Flow Rate	E M I S S I O N S			
				PM		PM_{10}	
Emission Unit	(gr/dscf)	(gr/dscf)	(scfm)	(lbs/Hr)	(Tons/Yr)	(lbs/Hr)	(Tons/Yr)

CCM260 Process Aspiration(S 105 Carter-Day)	0.0020	0.0020	40,600	0.7	3.05	0.7	3.05
				Total:	116.69		62.80

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

d. Emissions from and operation of the Corn Mill Products Storage shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Bldg 201/202 Vacuum	0.0010	0.0010	700	0.01	0.03	0.01	0.03
Bldg 208 Vacuum	0.0010	0.0010	700	0.01	0.03	0.01	0.03
Hominy Feed Bins Aspiration	0.0020	0.0015	21,000	0.36	1.58	0.27	1.18
				Total:	1.64		1.24

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

e. Emissions from and operation of the Corn Mill Products Milling and Handling shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Hominy Binning	0.0020	0.0015	30,000	0.51	2.25	0.39	1.69
Hominy Grind General Aspiration	0.0020	0.0015	21,000	0.36	1.58	0.27	1.18

Track 15 Bulk Rail Loadout	0.0020	0.0020	34,960	0.6	2.62	0.6	2.62
Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Compliance with the annual limits in Conditions 12(a) through 12(e) of this permit shall be determined on a ~~daily~~ monthly basis and compliance demonstrated on a 12-month rolling basis. ~~from the sum of the data for the current day plus the preceding 364 days (running 365 days total).~~

g. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52

Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

h. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits in Condition 12(g) and (h) of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

~~14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 63.6(a)(1), (a)(2), (a)(3), and (a)(4), or such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of each facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).~~

~~b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA~~

iv. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology.

v. Approves the use of an equivalent method.

vi. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance.

vii. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard, or

viii. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

e. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

f. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

g. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be

accessibly determined by applicable test methods and procedures; and

5. Provides a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

t. Safe sampling platform(s).

u. Safe access to sampling platform(s).

v. Utilities for sampling and testing equipment.

r. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

q. Pursuant to 40 CFR 60.11(e)(5), except as provided in 40 CFR 60.11(e)(6), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

ii. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in Appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(a).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at

~~least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.~~

~~ii. Method 2 shall be used to determine the ventilation volumetric flow-rate.~~

~~iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.~~

~~e. Pursuant to 40 CFR 60.284(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.284. For Method 5, Method 17 may be used.~~

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. ~~Testing required by Conditions 17 and 18 shall be performed u~~Upon a written request from the Illinois EPA to perform emissions testing, the Permittee shall perform the requested testing ~~by~~ using a qualified independent testing service.

~~17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the~~

Formatted: Body Text, Indent: Left: 0.17", Hanging: 0.4", Right: 0.07", Space Before: 0 pt, Line spacing: single, Tab stops: 0.57", Left

discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart J shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the presence of uncombined water when applied to 35 Ill. Adm. Code 212.123 and 212.124, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.11(e) and (f), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three rather than 24-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 1, 5Ba, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within sixty (60) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

[deleted] Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Wet Products Storage; and Corn Wet Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 10 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Wet

Products Storage) and Coal Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions unless another method is approved by the Illinois EPA(refer to 40 CFR 60, Appendix A for USEPA test methods):

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing agency(ies) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the sampling in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be

Formatted: Body Text, Indent: Left: 0.17", Hanging: 0.4", Right: 0.07", Line spacing: single, Tab stops: 0.57", Left

Formatted: Body Text, Indent: Left: 0.17", Hanging: 0.4", Right: 0.07", Space Before: 0 pt, Line spacing: single, Tab stops: 0.57", Left

~~representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operation parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;~~

~~v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;~~

~~vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;~~

~~vii. Any proposed use of an alternative test method, with detailed justification; and~~

~~viii. The format and content of the Source Test Report.~~

~~d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.~~

~~e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.~~

f. ~~The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:~~

~~i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;~~

~~ii. A summary of results;~~

~~iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;~~

~~iv. Detailed description of test conditions, including:~~

~~A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);~~

~~B. Control equipment information (i.e., equipment condition and operating parameters) during testings; and~~

~~C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repairs).~~

~~V. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;~~

~~VI. An explanation of any discrepancies among individual tests, failed tests or anomalous data;~~

~~VII. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and~~

~~VIII. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.~~

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If

relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/~~day~~ month and hours/year);

viii. Monthly~~Daily~~ and annual emissions of PM, and PM_{10} from the source with supporting calculations (tons/month and tons/year).

ix. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

x. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

xi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the combustion of natural gas, with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

It should be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i) and the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- NSPS SOURCE

PERMITTEE

Bunge Milling, Inc.
Attn: Paul Catterson
321 East North Street
Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: Expiration Date:
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter;
Hoffman Bldg. 301 Vacuum (5012-0010-0054) controlled by Baghouse Filter;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filter;
Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter;
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filter;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filter;

Corn Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filter;
Bldg. 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter;
North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter;

Dry Corn Milling, Processing and Products Handling:
Bemos Bagging (4870-0010-0055) controlled by Baghouse Filter;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filter;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filter;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filter;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filter;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filter;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filter;
Bldg. 105/115 General Aspiration (4880-0034-0001) controlled by Baghouse Filter;

Bldg. 102/105 General Aspiration (4880-0034-0027) controlled by Baghouse Filter;
Bldg. 105 Vacuum (4880-0032-0052) controlled by Baghouse Filter;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filter;
Bldg. 104 Vacuum (4870-0015-0016) controlled by Baghouse Filter;
Bran Bin (4880-0042-0054) controlled by Baghouse Filter;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filter;
South CD Screening (4880-0034-0042) controlled by Baghouse Filter;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filter;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filter;
Pack and Bulk Loading Bldg. 115 (4870-0013-0024) controlled by Baghouse Filter;
CAMAS/Bran Bldg. 115 (4880-0034-0077) controlled by Baghouse Filter;
Thru/Tail Stock Dryers Bldg. 115 (4880-0034-0071) controlled by Baghouse Filter;
Bldg. 115 Vacuum (4880-0032-0070) controlled by Baghouse Filter;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filter;
Lab Filter (4932-0001-0001) controlled by Baghouse Filter;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filter;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filter;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filter;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filter;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filter;
Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filter;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filter;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filter;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filter;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filter;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filter;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filter;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filter;
Hibond Visc Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filter;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filter;
Blended Food Packaging Aspiration (4820-0001-0052) controlled by Baghouse Filter;

Allbond Visc Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filter;
Milk Bins (4820-0003-0007) controlled by Baghouse Filter;
300 Series Binning (4990-0007-0049) controlled by Baghouse Filter;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filter;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filter;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filter;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filter;
Tri Cal Bins.(4820-0003-0072) controlled by Baghouse Filter;
5/6 Allbond Receiver (4900-0001-0058) controlled by Baghouse Filter;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filter;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filter;
Milk Bins (4820-0002-0038)controlled by Baghouse Filter;
Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0036) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0032) controlled by Baghouse Filter;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filter;
Finished Product General Aspiration (4990-0006-0040) controlled by Baghouse Filter;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0001) controlled by Baghouse Filter;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filter;
Bldg. 111 Vacuum (4900-0005-0035) controlled by Baghouse Filter;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0029) controlled by Baghouse Filter;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filter;
Four (4) Ingredient Bins (601 (4820-0003-0022), 602 (4820-0003-0026), 603 (4820-0003-0030), and 604 (4820-0003-0034)controlled by Baghouse Filters;
Micro Ingredient Dump Aspiration (4820-0003-0018) controlled by Baghouse Filter;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filter;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filter;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filter;
Reprocessing General Aspiration (4900-0005-0001) controlled by Baghouse Filter;
#6 Pulvocron (4900-0001-0042) controlled by Baghouse Filter;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filter;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filter;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filter;

Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filter;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filter;
Bldg. 112 Vacuum (4900-0005-0029) controlled by Baghouse Filter;
AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filter;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filter;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filter;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filter;
Bran Dryer (4860-0024-0003) controlled by Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filter;
Germ Dust Aspiration (4860-0017-0073) controlled by Cyclone;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filter;
Germ Dryer (4860-0017-0003) controlled by Cyclone;
FTS Dryer Aspiration (4860-0019-0003) controlled by Cyclone;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filter;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012);
PCM Hammermill (4900-0003-0011) controlled by Filter;
USG Hammermill (4900-0008-0027) controlled by Filter;
USG Secondary Extruder Transfer (4900-0008-0022);
Whole Grain Dryer (4880-0046-0017);
Whole Grain Hammermill (4880-0046-0028);
Whole Grain Aspiration (4880-0046-0042);
USG Primary Extruder Transfer (4900-0007-0020);
6th Floor Radar Pulsar (4860-0018-0044);
CCM260 Process Aspiration (4912-0002-0054) controlled by Filter;

Corn Mill Products Storage:
Bldg. 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filter;
Bldg. 208 Vacuum (4912-0009-0005) controlled by Baghouse Filter;
Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filter;
Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filter;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filter;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filter;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NOx Burner (Boiler#1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler); and

Fugitive PM and PM10 emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns (PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212

Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
0.05	0.25	0.05	0.55
0.1	0.29	0.10	0.77
0.2	0.42	0.20	1.10
0.3	0.64	0.30	1.35
0.4	0.74	0.40	1.58
0.5	0.84	0.50	1.75
0.7	1.00	0.75	2.40
0.9	1.15	1.00	2.60

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr
1.8	1.66	2.00	3.70
2.7	2.1	3.00	4.60
3.6	2.4	4.00	5.35
4.5	2.7	5.00	6.00
9.	3.9	10.00	8.70
13.	4.8	15.00	10.80
18.	5.7	20.00	12.50
23.	6.5	25.00	14.00
27.	7.1	30.00	15.60
32.	7.7	35.00	17.00
36.	8.2	40.00	18.20
41.	8.8	45.00	19.20
45.	9.3	50.00	20.50
90.	13.4	100.00	29.50
140.	17.0	150.00	37.00
180.	19.4	200.00	43.00
230.	22.	250.00	48.50
270.	24.	300.00	53.00
320.	26.	350.00	58.00
360.	28.	400.00	62.00
408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^N$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

Metric		English	
P	E	P	E
Mg/hr	kg/hr	T/hr	lbs/hr

360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to

the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits

pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63 Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the

wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code Part 212~~.314~~ Subpart K is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(~~i~~j).

h. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

i. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

j. The emission units described in Conditions 11(~~i~~g), (~~j~~h), and (~~k~~i) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

k. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

iv. Location of unloading and transporting operations with pollution control equipment;

v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

vi. Estimated frequency of application of dust suppressants by location of materials; and

vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

l. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(~~l~~j) and (~~m~~k).

m. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(~~l~~j) and (~~m~~k) and shall be submitted to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04
Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	E M I S S I O N S PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)

				Total:	16.64		9.01

Formatted Table

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Compliance with the annual limits in Conditions 12(a) through 12(e) of this permit shall be determined on a daily basis from the sum of the

data for the current day plus the preceding 364 days (running 365 days total).

g. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

h. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits in Condition 12(g) and (h) of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from

this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to

operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason

for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA: (refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

Formatted: Indent: Left: 0", Hanging: 0.2"

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:
   A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

   B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

   C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/day and hours/year);

viii. Daily and annual emissions of PM, and PM_{10} from the source with supporting calculations (tons/month and tons/year).

ix. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

x. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

xi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the combustion of natural gas, with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature

of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

It should be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i) and the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

WDM:GB:[illegible]

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	-10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

Re: Comments on Public Notice Federally Enforceable State Operating Permit (FESOP)
Bunge Milling, Inc – Danville Facility
Source ID No. 183020ABT

Dear Ms. Metz:

Bunge submits this letter to provide comments on the proposed Federally Enforceable State Operating Permit (FESOP), Application No. 96020027, for the Bunge Milling, Inc. facility located in Danville, Illinois, facility ID No. 183020ABT.

Bunge has reviewed the public notice version of the proposed permit and has serious concerns about some of the language and permit conditions. Bunge looks forward to the agencies' careful consideration of our comments below.

1) On pages 1 through 6 of 35, List of Emission Unit for which the permit is issued:
   - Listing the specific baghouse model numbers in the FESOP is not necessary and provides no benefit to the permit. Under 35 IAC 201.146(hhh) replacement of air pollution control equipment is exempted from the requirement to obtain a construction permit. Therefore, when a baghouse is replaced with a different model baghouse the model number will not match what is listed in the FESOP. Bunge requests that reference to a specific baghouse model numbers be removed from the description of each emission unit. *Example: Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter ~~APM 40072.10~~* in regard to this changes, they have been implemented
   - Bunge reviewed the list of emission units and discovered some emission unit ID numbers and unit descriptions that are not accurate. Bunge request that the emission unit ID numbers and unit descriptions be updated to reflect the changes listed below. Some of these changes are to standardize the naming convention for emission units at the facility, some are to correct inaccuracies, and some are to allow the emission unit names to match emission unit names used in conditions 12a, 12b and 12c of the permit. See the redlined copy of the FESOP for a complete list of updated emission unit numbers and names. Some emission units were removed in the redlined version of the permit either because they are already included in the list as part of another emission unit or no longer exist at the facility. the list of emission units were revised per your comments
     - Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter
     - Truck Dump #4 and West Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter
     - Bldg 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter
     - North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter

- #6 Pulvocron (4900-0001-0042) controlled by Baghouse Filter
- Germ Dust Aspiration (4860-0017-0073) controlled by Cyclone (not by a Filter)
- Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012)
- PCM Hammermill (4900-0003-0011) controlled by Filter
- USG Hammermill (4900-0008-0027) controlled by Filter
- USG Secondary Extruder Transfer (4900-0008-0022) (no control)
- Whole Grain Dryer (4880-0046-0017)
- Whole Grain Hammermill (4880-0046-0028)
- Whole Grain Aspiration (4880-0046-0042)
- USG Primary Extruder Transfer (4900-0007-0020)
- 6th Floor Radar Pulsar (4860-0018-0044)
- Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter
- Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter

2) On page 6 of 35, Condition 1.c.: There are numerous construction permits have been issued to the facility that have emission limits or conditions that could conflict with conditions in the FESOP or no longer apply but are still enforceable. Bunge requests that this condition be amended to include all operating permits and construction permits.

this is an operating permit and addresses operation.

3) On page 6 of 35, Condition 3.a.:
   - This condition states that Products Receiving is subject to the NSPS for Grain Elevators. Only Grain Receiving is subject to the NSPS for Grain Elevators not all

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

Product Receiving. Bunge requests that the words Products Receiving be removed from this condition. Bunge also no longer receives soybeans at this facility. The vacuum systems listed are not subject to the NSPS. The condition should read Corn Receiving, Cleaning and Storage. this revision was implemente throughout the permit.

- This condition lists the affected facilities to which the NSPS applies but does not specify which emission units at the facility are subject to the NSPS. Bunge requests that this condition be amended to state that the emission units included in the Corn Receiving, Cleaning and Storage (NSPS) emission unit group are subject to the Grain Elevator NSPS, subpart DD while the emission units in the Corn Receiving, Cleaning and Storage (Pre-NSP) emission unit group are not.

this was not implemented. this is already clarify in the emission units listing

4) On page 7 of 35, Condition 4.a.: Bunge request that the exception to 35 IAC 212.123(a) be referenced. That is, include the clause ...or as allowed under 35 IAC 212.123(b).

this is regulatory language and it wasn't change.

5) On page 15 of 35, Condition 9.a.: This condition states that compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60. It is not clear in the condition that this requirement refers to the initial compliance demonstration. Bunge requests that the condition be amended to state that initial compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60. this is regulatory language and it wasn't change

6) On page 17 of 35, Condition 11.g, 11.h and 11.i.: These conditions appear to be artifact conditions from a permit for a different facility used as a template for Bunge's FESOP and were inadvertently left in the permit or contain references to the prior facility.
   - Condition g references using liquid by-products or waste materials as fuel sources. The two permitted boilers at the Bunge facility can only burn natural gas. Bunge requests that this condition be removed. this was implemented
   - Condition h allows Illinois EPA the right to sample all fuels stored at the facility. Bunge does not store any fuels at the facility. Bunge requests that this condition be removed.
   - Condition i references the Ag Transload Facility. Bunge believes this should say the Bunge Facility. Bunge request that the condition be amended to replace Ag Transload Facility with Bunge Facility. this was implemented
   - Lettering of condition i (now g) and l (now j) should be modified to account for conditions g and h being removed. this wqas implemented

7) On pages 18 through 23 of 35, Conditions12.a, 12.b, and 12.c:
   - Emission unit name and emission rate changes: the emission units and and emission correction were implemented
     - Bldg 105/115 General Aspiration 0.002, 0.0015, 55,000, 0.94, 4.13, 0.71, 3.10
     - Bldg 102/105 General Aspiration 0.002, 0.0015, 43,700, 0.75, 3.28, 0.56, 2.46
     - #5 Pulvocron should be #6 Pulvocron
     - Bldg 112 Vacuum hourly emission rates should be 0.01 lb/hr, not zero
     - Pneumatic Lift Receiver for WG260 Transfer, PM10 emission rate should be 0.51 tpy
     - PCM Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Hammermill, PM10 emission rate should be 0.49 tpy
     - USG Secondary Extruder Transfer, PM10 emission rate should be 3.00 tpy

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

8) On page 23 of 35, Condition 12.f.: This condition requires the facility to monitor and record data from 136 emission units on a daily basis and calculate daily emission from each emission unit so that a 365-day rolling emission total from each emission unit can be used to demonstrate compliance with annual emission limits on each emission unit on a daily basis. It is unrealistic to expect the facility to perform daily and 365-day emission calculations to demonstrate compliance with annual limits. Except for the fugitive emission sources, the annual emission limits are based on 8760 hour per year of operation. In lieu of recording actual hours per day each emission unit operated, if Bunge were to assume each emission unit operated 24 hour per day 365 days per year the resulting emissions calculated would demonstrate compliance with the limits. Performing daily emission calculation for the point source emissions provides no benefit. For the three fugitive emission sources, Bunge proposes that monthly and 12-month rolling emission calculations would be sufficient to demonstrate compliance with these annual emission limits. Bunge requests that the conditions be amended to say that compliance with the annual limits in Conditions 12(a) through 12(e) be determined on a monthly basis and compliance determined on a 12-month rolling basis. this requirements were not removed, source limits above 90%

9) On pages 24 through 27, Conditions 14 and 15.: Conditions 14 and 15 are related to performance testing required by NSPS 40 CFR Part 60 regulations. Conditions 14 and 15 restate the methods for performing performance tests under 40 CFR Part 60. Two NSPS 40 CFR subparts apply to the Bunge facility; Subpart Dc for natural gas fired boiler between 10 and 100 MMBtu/hr and Subpart DD for grain elevators. Only Subpart DD contains any performance testing that would apply to any emission unit at the Bunge facility and then only for new, modified, or reconstructed emission units that are also affected facilities under Subpart DD. Adding a new Subpart DD emission unit, reconstructing, or modifying (as defined by Part 60) a Subpart DD emission unit would require an air construction permit. Any performance testing necessary should be addressed in the construction permit. Having these conditions in the FESOP provides no benefit they only serve to clutter and complicate the permit. Bunge expects a permit with only relevant permit conditions so reading and understanding each condition and compliance obligations are as easy as possible. For these reasons Bunge request the conditions 14 and 15 be removed from the permit. these conditions stay

10) On pages 27 and 28, Conditions 16.b. and 18.a.: Condition 16.b states testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA. Condition 18.a. states that within 90 days after the issuance of this permit the permittee shall i conduct Method 22 testing on all 136 emission units, and ii conduct Method 5 testing on all 136 emission units. These two conditions conflict.
    - Bunge believes that it is Illinois EPA intention to require testing to be performed upon written request. If this is the case the written request should identify the emission unit required to be tested, the purpose of the test, the test Methods to be used and any further testing instruction such as test duration or test frequency. There is no need to complicate the FESOP by having conditions 17 or 18 in the permit. They only serve to clutter and complicate the permit. Bunge requests to change Condition 16.b to read Upon written request from Illinois EPA to perform emission testing the permittee shall perform the requested testing using a qualified independent testing service. Bunge further requests that conditions 17 and 18 be removed from the permit as they now

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

serve no purpose. this statyed

- If, however, it is Illinois EPA intention to require Method 22 and Method 5 testing on 136 emission units within 90 days of the FESOP being issued, Bunge feels this is an unrealistic expectation and objects to this requirement. this stayed
- If Condition18 is not removed as requested as requested above, Bunge provides the following comments on Condition 18 this stayed
- On page 28 of 35, Condition 18.a.i.: This condition contains the statement Thereafter, this testing shall be conducted on a quarterly basis. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit. this stayed
- On page 29 of 35, Condition 18.a.ii.: This condition contains the statement Thereafter, this testing shall be conducted at least once every five years. This requirement is inconsistent with the requirement to test based on a written request by Illinois EPA. Bunge request that this statement be removed from the permit. this stayed
- On page 29 of 35, Condition 18.c: This condition requires a written test plan be submitted to Illinois EPA stating that this plan shall include at a minimum:

these all conditions stayed

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;
ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;
iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;
iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;
v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;
vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification
vii. Any proposed use of an alternative test method, with detailed justification
viii. The format and content of the Source Test Report.

Bunge is concerned that these conditions are not consistent with regulations promulgated by the Illinois Pollution Control Board, specifically 35 IAC 283.220. 35 IAC 283.220(c) specifies what is required to be in a test plan. It states that a test plan must specify:

- The purpose of the test,
- The operating parameters,
- The test method, and
- Any other procedures that will be followed when conducting an emissions test

BUNGE

Bunge North America, Inc.
321 E. North Street
Danville, IL 61832

pursuant to the provisions of this Part.
Furthermore, 35 IAC 283.220(d) states that a test plan need not be submitted where the source intends to use a standard test method or procedure.

Bunge requests that Condition 18.c be amended so that the required content of a test plan is consistent with what is required by the regulation and add language to incorporate the part of the regulation that allows for circumstances when a test plan is not required.

11) On page 33 of 35, Conditions 23.a.ix and 23.a.x: These conditions are related to the daily emission calculations required by Condition 12.f. Bunge requested in a previous comment to amend Condition 12.f to be a monthly requirement. Accordingly, Bunge requests that these conditions be similarly amended, Condition 23.a.ix should change hours/day to hours/month and Condition 23.a.x should change Daily to Monthly. source limits are at 90% or above

Our comments present numerous concerns with the proposed FESOP permit. Because it is Bunge's desire to comply with the permit and the permit conditions it is not unreasonable to expect the conditions to be succinct, reasonable, and supported by regulation. Thank you for your careful consideration of our comments.

Please contact me at (314) 292-2937 or by email at james.burris@bunge.com if you have any questions.

Sincerely,

James A Burris Jr

Subject: RE: Bunge North Anmerica - ID #183020ABT

Comment #1: The listing of emission units has been revised per your request.

Comment #2: Construction permits in Illinois cannot be superseded by an operating permit. This condition is intended to mean that this FESOP supersedes the prior CAAPP permit and all previous state operating permits issued to the source.

Comment #3: Condition 3(a) has been revised to state that only the Corn Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD.

Comment #4: The requested change to Condition 4(a) would be a change to regulatory language. The exception from 35 Ill. Adm. Code 212.123(a) is already addressed in Condition 4(b).

Comment #5: The language in Condition 9(a) is taken from the underlying regulatory language.

Comment #6: Conditions 11(g) through (i) of the public notice draft permit have been removed. The conditions following the deleted conditions have been renumbered.

Comment #7: The proposed changes to the emission limits were not supported by the application that was submitted prior to the public notice and comment period. Any future increases to these permit limits need to be request via construction permit applications.

Comment #8: Because the permitted PM10 emissions of the source total to more than 95% of the major source threshold for the Clean Air Act Permit Program (CAAPP), the short term emission limits and recordkeeping must be on a daily basis to ensure that the source never exceeds the annual emission limits on a rolling basis (365 day total).

Comment #9: Under 40 CFR 60.8(a), the Illinois EPA or USEPA may request retesting of the emission units subject to the NSPS requirements.

Comment #10: Periodic testing of the emission units that have emissions of the pollutant of concern (i.e., for which the source is potentially major) and that are equipped with pollution controls is an expectation of the Illinois EPA, Bureau of Air. The period for such stack testing is to be not less than once every five years.

Comment #11: Daily recordkeeping of emissions and surrogate parameters (including throughputs and production rates) need to be on a daily basis to ensure that the source never exceeds the annual emission limits on a rolling basis (365 day total) because the emissions of PM10 are limited to more than 95% of the major source threshold for CAAPP.

Subject: RE: Bunge North Anmerica - ID #183020ABT

Comment #1: The listing of emission units has been revised per your request.

Comment #2: Construction permits in Illinois cannot be superseded by an operating permit. This condition is intended to mean that this FESOP supersedes the prior CAAPP permit and all previous state operating permits issued to the source.

Comment #3: Condition 3(a) has been revised to state that only the Corn Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD.

Comment #4: The requested change to Condition 4(a) would be a change to regulatory language. The exception from 35 Ill. Adm. Code 212.123(a) is already addressed in Condition 4(b).

Comment #5: The language in Condition 9(a) is taken from the underlying regulatory language.

Comment #6: Conditions 11(g) through (i) of the public notice draft permit have been removed. The conditions following the deleted conditions have been renumbered.

Comment #7: The proposed changes to the emission limits were not supported by the application that was submitted prior to the public notice and comment period. Any future increases to these permit limits need to be request via construction permit applications.

Comment #8: Because the permitted PM10 emissions of the source total to more than 95% of the major source threshold for the Clean Air Act Permit Program (CAAPP), the short term emission limits and recordkeeping must be on a daily basis to ensure that the source never exceeds the annual emission limits on a rolling basis (365 day total).

Comment #9: Under 40 CFR 60.8(a), the Illinois EPA or USEPA may request retesting of the emission units subject to the NSPS requirements.

Comment #10: Periodic testing of the emission units that have emissions of the pollutant of concern (i.e., for which the source is potentially major) and that are equipped with pollution controls is an expectation of the Illinois EPA, Bureau of Air. The period for such stack testing is to be not less than once every five years.

Comment #11: Daily recordkeeping of emissions and surrogate parameters (including throughputs and production rates) need to be on a daily basis to ensure that the source never exceeds the annual emission limits on a rolling basis (365 day total) because the emissions of PM10 are limited to more than 95% of the major source threshold for CAAPP.

Subject: RE: Co. Proposed CCA - Bunge Milling (183020ABT) - 010323

The fugitive emissions response alone is insufficient to me for a CCA. Per the inspection report, the facility doesn't own a water truck - they have to rent through a contractor. No details provided on how that will work, how quickly they can get a truck onsite, what they'll do if trucks are not available. They plan to use a truck during times of "severe drought and/or extremely dusty conditions" - but I wouldn't think the weather has to be that bad to kick up fugitive emissions, especially on gravel/unpaved areas. Based on Google Maps, I can see a lot of dust/dirt on the surrounding roads.

Also, they need to start keeping Method 22 records unless there's a conflicting requirement elsewhere.

Bart - I think they're outside the timeframe to request a meeting, but it still may be worth asking them if they want one. Some of the issues could be easily addressed that way if the source is cooperative and competent.

Subject: Bunge North America - ID #183020ABT

Dear Mr. Burris,

IEPA has prepared the final FESOP permit (No. 96020027) and in response to your comments on the draft permit, here is our response to those comments:

Comment #1: The listing of emission units has been revised per your request.

Comment #2: Construction permits in Illinois cannot be superseded by an operating permit. This condition is intended to mean that this FESOP supersedes the prior CAAPP permit and all previous state operating permits issued to the source.

Comment #3: Condition 3(a) has been revised to state that only the Corn Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD.

Comment #4: The requested change to Condition 4(a) would be a change to regulatory language. The exception from 35 Ill. Adm. Code 212.123(a) is already addressed in Condition 4(b).

Comment #5: The language in Condition 9(a) is taken from the underlying regulatory language.

Comment #6: Conditions 11(g) through (i) of the public notice draft permit have been removed. The conditions following the deleted conditions have been renumbered.

Comment #7: The proposed changes to the emission limits were not supported by the application that was submitted prior to the public notice and comment period. Any future increases to these permit limits need to be request via construction permit applications.

Comment #8: Because the permitted PM10 emissions of the source total to more than 95% of the major source threshold for the Clean Air Act Permit Program (CAAPP), the short term emission limits and recordkeeping must be on a daily basis to ensure that the source never exceeds the annual emission limits on a rolling basis (365 day total).

Comment #9: Under 40 CFR 60.8(a), the Illinois EPA or USEPA may request retesting of the emission units subject to the NSPS requirements.

Comment #10: Periodic testing of the emission units that have emissions of the pollutant of concern (i.e., for which the source is potentially major) and that are equipped with pollution controls is an expectation of the Illinois EPA, Bureau of Air. The period for such stack testing is to be not less than once every five years.

Comment #11: Daily recordkeeping of emissions and surrogate parameters (including throughputs and production rates) need to be on a daily basis to ensure that the source never exceeds the annual emission limits on a rolling basis (365 day total) because the emissions of PM10 are limited to more than 95% of the major source threshold for CAAPP.

Danville, Illinois 61832

Application No.: 96020027 I.D. No.: 183020ABT
Applicant's Designation: Date Received: December 5, 2011
Operation of: Corn Mill & Grain Elevator
Date Issued: January 4, 2023 Expiration Date: January 4, 2033
Source Location: 321 E. North Street, Danville, Vermilion County

This permit is hereby granted to the above-designated Permittee to OPERATE emission unit(s) and/or air pollution control equipment consisting of:

Corn Receiving, Cleaning and Storage (Pre-NSPS):
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filter;
Hoffman Bldg. 301 Vacuum (5012-0010-0054) controlled by Baghouse Filter;
West Headhouse General Aspiration (5012-0005-0029) controlled by Baghouse Filter;
Railcar Dump Pit and Section D & E General Aspiration (5012-0007-0015) controlled by Baghouse Filter;
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filter;
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filter;

Corn Receiving, Cleaning and Storage (NSPS):
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filter;
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filter;
Bldg. 115 Corn Cleaning (4880-0034-0069) controlled by Baghouse Filter;
North Street Truck Dump #2 (5012-0002-0012) controlled by Baghouse Filter;

Dry Corn Milling, Processing and Products Handling:
Bemos Bagging (4870-0010-0055) controlled by Baghouse Filter;
Bagging General Aspiration (4870-0010-0030) controlled by Baghouse Filter;
Bagging Packer General Aspiration (4870-0013-0019) controlled by Baghouse Filter;
Bran Dryer Process (4880-0042-0057) controlled by Baghouse Filter;
Bran Sifter Process (4880-0042-0062) controlled by Baghouse Filter;
East Meal Dryer/Cooler (4880-0034-0054) controlled by Baghouse Filter;
West Meal Dryer (4880-0034-0059) controlled by Baghouse Filter;
Bldg. 105/115 General Aspiration (4880-0034-0001) controlled by Baghouse Filter;

Bldg. 102/105 General Aspiration (4880-0034-0027) controlled by Baghouse Filter;
Bldg. 105 Vacuum (4880-0032-0052) controlled by Baghouse Filter;
Bulk Loading White Goods (4870-0021-0001) controlled by Baghouse Filter;
Bldg. 104 Vacuum (4870-0015-0016) controlled by Baghouse Filter;
Bran Bin (4880-0042-0054) controlled by Baghouse Filter;
South Lunchroom Screening (4880-0034-0010) controlled by Baghouse Filter;
South CD Screening (4880-0034-0042) controlled by Baghouse Filter;
North CD General Aspiration (4880-0034-0048) controlled by Baghouse Filter;
North Lunchroom Screening (4880-0034-0019) controlled by Baghouse Filter;
Pack and Bulk Loading Bldg. 115 (4870-0013-0024) controlled by Baghouse Filter;
CAMAS/Bran Bldg. 115 (4880-0034-0077) controlled by Baghouse Filter;
Thru/Tail Stock Dryers Bldg. 115 (4880-0034-0071) controlled by Baghouse Filter;
Bldg. 115 Vacuum (4880-0032-0070) controlled by Baghouse Filter;
Track 2 Railcar Unloading Secondary Receiver (4870-0005-0003) controlled by Baghouse Filter;
Lab Filter (4932-0001-0001) controlled by Baghouse Filter;
1/2 Pulvocron Meal Receiver (4990-0005-0012) controlled by Baghouse Filter;
1/2 Pulvocron Visc Flour Receiver (4990-0005-0042) controlled by Baghouse Filter;
3/4 Pulvocron Meal Receiver (4990-0002-0010) controlled by Baghouse Filter;
9/10 Pulvocron Meal Secondary Receiver (4990-0004-0013) controlled by Baghouse Filter;
7/8 Pulvocron Meal Secondary Receiver (4990-0003-0010) controlled by Baghouse Filter;
Three (3) Mills (#3 Pulvocron (4990-0002-0019), #4 Pulvocron (4990-0002-0022), and #5 Pulvocron (4900-0001-0039)) controlled by Baghouse Filters;
Two (2) Mills (#1 Pulvocron (4990-0005-0021) and #2 Pulvocron (4990-0005-0024)) controlled by Baghouse Filters;
Four (4) Mills (#7 Pulvocron (4990-0003-0019), #8 Pulvocron (4990-0003-0022), #9 Pulvocron (4990-0004-0022) and #10 Pulvocron (4990-0004-0025)) controlled by Baghouse Filters;
3/4 Pulvocron Grinder Surge Bin (4990-0002-0008) controlled by Baghouse Filter;
1/2 Pulvocron Grinder Surge Bin (4990-0005-0010) controlled by Baghouse Filter;
9/10 Pulvocron Grinder Surge Bin (4990-0004-0011) controlled by Baghouse Filter;
7/8 Pulvocron Grinder Surge Bin (4990-0003-0008) controlled by Baghouse Filter;
1/2 Flour Surge Bin (4990-0005-0028) controlled by Baghouse Filter;
3/4 Flour Surge Bin (4990-0002-0026) controlled by Baghouse Filter;
7/8 Flour Surge Bin (4990-0003-0026) controlled by Baghouse Filter;
9/10 Flour Surge Bin (4990-0004-0029) controlled by Baghouse Filter;
Hibond Visc Flake Roller Mill (4990-0006-0024) controlled by Baghouse Filter;
CSM Blended Food Receiver (4820-0001-0029) controlled by Baghouse Filter;
Blended Food Packaging Aspiration (4820-0001-0052) controlled by Baghouse Filter;
Allbond Visc Flour General Aspiration (4900-0001-0068) controlled by Baghouse Filter;
Milk Bins (4820-0003-0007) controlled by Baghouse Filter;

300 Series Binning (4990-0007-0049) controlled by Baghouse Filter;
Soy Meal General Aspiration (4990-0001-0002) controlled by Baghouse Filter;
Soy Meal Surge Bin (4990-0001-0006) controlled by Baghouse Filter;
Meal Bin Cooler (4990-0001-0025) controlled by Baghouse Filter;
3/4 Soy Flour Receiver (4990-0002-0043) controlled by Baghouse Filter;
Tri Cal Bins (4820-0003-0072) controlled by Baghouse Filter;
5/6 Allbond Receiver (4900-0001-0058) controlled by Baghouse Filter;
7/8 Soy Flour Receiver (4990-0003-0032) controlled by Baghouse Filter;
Five (5) Bins (Bin 308 (4990-0002-0033), 309 (4990-0002-0036), 310 (4820-0003-0038), 508 (4820-0002-0068), and 509 (4820-0002-0072)) controlled by Baghouse Filters;
9/10 Pulvicron Receiver (4990-0004-0037) controlled by Baghouse Filter;
Milk Bins (4820-0002-0038)controlled by Baghouse Filter;
Milk Bin Bag Dump (4820-0002-0035) controlled by Baghouse Filters APM 14048.6;
Blending Batch Bin General Aspiration (4990-0007-0029) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0036) controlled by Baghouse Filter;
Blending General Aspiration (4990-0007-0032) controlled by Baghouse Filter;
Two (2) CSB Binning General Aspiration (4820-0003-0063 and 4820-0003-0059) controlled by Baghouse Filter;
Finished Product General Aspiration (4990-0006-0040) controlled by Baghouse Filter;
#5 SL General Aspiration & #5 Expander (4900-0001-0091) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0001) controlled by Baghouse Filter;
PCM Binning (4820-0002-0011) controlled by Baghouse Filters;
CF Bran Packing Binning (4870-0010-0005) controlled by Baghouse Filter;
Bldg. 111 Vacuum (4900-0005-0035) controlled by Baghouse Filter;
110/210 Receiver General Aspiration (4870-0006-0006) controlled by Baghouse Filter;
Fiber Receiving General Aspiration (4990-0011-0029) controlled by Baghouse Filter;
Cooling Tower (4990-0001-0029) controlled by Baghouse Filter;
Four (4) Ingredient Bins (601 (4820-0003-0022), 602 (4820-0003-0026), 603 (4820-0003-0030), and 604 (4820-0003-0034)controlled by Baghouse Filters;
Micro Ingredient Dump Aspiration (4820-0003-0018) controlled by Baghouse Filter;
Mixer General Aspiration (4820-0003-0004) controlled by Baghouse Filter;
3/4 Hammermill (4900-0001-0065) controlled by Baghouse Filter;
#3 & #4 Expanders (4900-0001-0006) controlled by Baghouse Filter;
Reprocessing General Aspiration (4900-0005-0001) controlled by Baghouse Filter;
#6 Pulvocron (4900-0001-0042) controlled by Baghouse Filter;
5/6 Pulverizer AB Finished Product Surge Bin (4900-0001-0046) controlled by Baghouse Filter;
Pellet Bins (4900-0002-0032) controlled by Baghouse Filter;
Viscosity Flour Receiver (4990-0006-0027) controlled by Baghouse Filter;
Conditioning Receiver/Soy Meal Grinder (4990-0011-0010) controlled by Baghouse Filter;
Grind Reject/Scrap Bin (4900-0005-0007) controlled by Baghouse Filter;
Bldg. 112 Vacuum (4900-0005-0029) controlled by Baghouse Filter;

AB Grinder Surge Bin (4900-0001-0030) controlled by Baghouse Filter;
N CD General Aspiration & #5 Expander (4900-0005-0006) controlled by Baghouse Filter;
South Hominy Feed Bin General Aspiration (4860-0018-0003) controlled by Baghouse Filter;
Secondary Clean Grinding (4860-0022-0017) controlled by Baghouse Filter;
Bran Dryer (4860-0024-0003) controlled by Cyclone;
Track 16 Rail Loadout (4912-0006-0017) controlled by Baghouse Filter;
Germ Dust Aspiration (4860-0017-0073) controlled by Cyclone;
Feed Mill General Aspiration (4860-0023-0001) controlled by Baghouse Filter;
Germ Dryer (4860-0017-0003) controlled by Cyclone;
FTS Dryer Aspiration (4860-0019-0003) controlled by Cyclone;
Pet Bran Kice Lites Aspiration (4860-0024-0037) controlled by Baghouse Filter;
Pneumatic Lift Receiver for Coarse Whole Grain transfer (WG260) (4880-0048-0012);
PCM Hammermill (4900-0003-0011) controlled by Filter;
USG Hammermill (4900-0008-0027) controlled by Filter;
USG Secondary Extruder Transfer (4900-0008-0022);
Whole Grain Dryer (4880-0046-0017);
Whole Grain Hammermill (4880-0046-0028);
Whole Grain Aspiration (4880-0046-0042);
USG Primary Extruder Transfer (4900-0007-0020);
6th Floor Radar Pulsar (4860-0018-0044);
CCM260 Process Aspiration (4912-0002-0054) controlled by Filter;

Corn Mill Products Storage:
Bldg. 201/202 Vacuum (4912-0008-0006) controlled by Baghouse Filter;
Bldg. 208 Vacuum (4912-0009-0005) controlled by Baghouse Filter;
Hominy Feed Bins Aspiration (4860-0018-0048) controlled by Baghouse Filter;

Corn Mill Products Milling and Handling:
Hominy Binning (4750-0029-0032) controlled by Baghouse Filter;
Hominy Grind General Aspiration (4750-0029-0001) controlled by Baghouse Filter;
Truck Hominy Loadout (4912-0004-0022) controlled by Baghouse Filter;
Rail Hominy/Grain Loadout #1 (4912-0003-0011) controlled by Baghouse Filter;
Hominy Screener General Aspiration (4750-0029-0045) controlled by Baghouse Filter;

Boiler House/Grounds:
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NOx Burner (Boiler#1);
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler, (Clayton Boiler); and

Fugitive PM and PM10 emissions

pursuant to the above referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This Federally Enforceable State Operating Permit (FESOP) is issued to limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for Carbon Monoxide (CO), Nitrogen Oxides (NO_x), and Particulate Matter less than 10 microns

(PM_{10})). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit, are described in Attachment A.

b. Prior to issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permit(s) for this location.

2. The Clayton Boiler is subject to the New Source Performance Standard (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR Part 60 Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States Environmental Protection Agency (USEPA) under a delegation agreement. Pursuant to 40 CFR 60.40c(a), except as provided in 40 CFR 60.40c(d), (e), (f), and (g), the affected facility to which 40 CFR 60 Subpart Dc applies is each steam generating unit for which construction, modification, or reconstruction is commenced after June 9, 1989 and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (mmBtu/hr)) or less, but greater than or equal to 2.9 MW (10 mmBtu/hr).

3a. The Corn Receiving, Cleaning and Storage (NSPS) are subject to the NSPS for Grain Elevators, 40 CFR Part 60 Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the USEPA under a delegation agreement. Pursuant to 40 CFR 60. 300(a), the provisions of 40 CFR 60 Subpart DD apply to each affected facility at any grain terminal elevator or any grain storage elevator, except as provided under 40 CFR 60.304(b). The affected facilities are each truck unloading station, truck loading station, barge and ship unloading station, barge and ship loading station, railcar loading station, railcar unloading station, grain dryer, and all grain handling operations.

b. Pursuant to 40 CFR 60.300(b), any facility under 40 CFR 60.300(a) which commences construction, modification or reconstructed after August 3, 1978 is subject to the requirements of 40 CFR 60 Subpart DD.

c. Pursuant to 40 CFR 60.302(b), on and after the date on which the performance test required to be conducted by 40 CFR 60.8 is completed, no owner or operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere from any affected facility except a grain dryer any process emission which:

i. Contains particulate matter in excess of 0.023 g/dscm (ca. 0.01 gr/dscf).

ii. Exhibits greater than 0 percent opacity.

d. Pursuant to 40 CFR 60.302(c), on and after the 60th day of achieving the maximum production rate at which the affected facility will be operated, but no later than 180 days after initial startup, no owner or

operator subject to the provisions of 40 CFR 60 Subpart DD shall cause to be discharged into the atmosphere any fugitive emission from:

i. Any individual truck unloading station, railcar unloading station, or railcar loading station, which exhibits greater than 5 percent opacity.

ii. Any grain handling operation, which exhibits greater than 0 percent opacity.

iii. Any truck loading station which exhibits greater than 10 percent opacity.

4a. The Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; Corn Mill Products Milling and Handling; Boiler #1, and Clayton Boiler are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions). Pursuant to 35 Ill. Adm. Code 212.123(a), no person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to 35 Ill. Adm. Code 212.122.

b. Pursuant to 35 Ill. Adm. Code 212.123(b), the emission of smoke or other particulate matter from any such emission unit may have an opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period provided that such opaque emissions permitted during any 60 minute period shall occur from only one such emission unit located within a 305 m (1000 ft) radius from the center point of any other such emission unit owned or operated by such person, and provided further that such opaque emissions permitted from each such emission unit shall be limited to 3 times in any 24 hour period.

c. This source is subject to 35 Ill. Adm. Code Part 212 Subpart K (Fugitive Particulate Matter). Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

d. When processing and handling processed materials, the emission units constructed on or after April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.321(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process

emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

e. Pursuant to 35 Ill. Adm. Code 212.321(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.321(c) shall be determined by using the equation:

$$E = A(P)^B$$

where:

P = Process weight rate; and
E = Allowable emission rate; and,

i. Up to process weight rates of 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

ii. For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	11.42	24.8
B	0.16	0.16

f. Pursuant to 35 Ill. Adm. Code 212.321(c), Limits for Process Emission Units for Which Construction or Modification Commenced on or After April 14, 1972:

Metric		English

408.	30.1	450.00	66.00
454.	30.4	500.00	67.00

where:

P = Process weight rate in metric or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

g. When processing and handling processed materials, the emission units constructed before April 14, 1972 within the following groups: Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling are subject to 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units). Pursuant to 35 Ill. Adm. Code 212.322(a), except as further provided in 35 Ill. Adm. Code Part 212, no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any process emission unit for which construction or modification commenced prior to April 14, 1972, which, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.322(c).

h. Pursuant to 35 Ill. Adm. Code 212.322(b), interpolated and extrapolated values of the data in 35 Ill. Adm. Code 212.322(c) shall be determined by using the equation:

$$E = C + A(P)^B$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

i. For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10

	Metric	English
B	0.67	0.67
C	0	0

ii. For process weight rates in excess or 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

i. Pursuant to 35 Ill. Adm. Code 212.322(c), Limits for Process Emission Units For Which Construction or Modification Commenced Prior to April 14, 1972:

360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and
E = Allowable emission rate in kg/hr or lbs/hr.

j. The handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations are subject to 35 Ill. Adm. Code Part 212 Subpart S (Agriculture). Pursuant to 35 Ill. Adm. Code 212.462, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d), or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall demonstrate compliance with the following:

i. Cleaning and Separating Operations.

A. Particulate matter generated during cleaning and separating operations shall be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.

B. For grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area, air contaminants collected from cleaning and separating operations shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

ii. Major Dump-Pit Area.

Induced Draft.

A. Induced draft shall be applied to major dump pits and their associated equipment (including, but not limited to, boots, hoppers and legs) to such an extent that a minimum face velocity is maintained, at the effective grate surface, sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface shall be at least 200 fpm, which shall be determined by using the equation:

$$V = Q/A$$

where:
V = face velocity; and
Q = induced draft volume in scfm; and
A = effective grate area in ft^2; and

B. The induced draft air stream for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of not less than 90 percent by weight;

C. Means or devices (including, but not limited to, quick-closing doors, air curtains or wind deflectors) shall be employed to prevent a wind velocity in excess of 50 percent of the induced draft face velocity at the pit; provided, however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately 2 ft; or

iii. Internal Transferring Area.

A. Internal transferring area shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.

B. Air contaminants collected from internal transfer operations for grain-handling sources having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of not less than 90 percent by weight prior to release into the atmosphere.

iv. Load-Out Area.

A. Truck and hopper car loading shall employ socks, sleeves or equivalent devices which extend 6 inches below the sides of the receiving vehicle, except for topping off. Choke loading shall be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.

B. Box car loading shall employ means or devices to prevent the emission of particulate matter into the atmosphere to the fullest extent which is technologically and economically feasible.

k. Pursuant to 35 Ill. Adm. Code 212.463, unless otherwise exempted pursuant to 35 Ill. Adm. Code 212.461(c) or (d) or allowed to use alternate control according to 35 Ill. Adm. Code 212.461(g), grain-drying operations for which construction or modification commenced prior to June 30, 1975, with a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity (using the American Society of Agricultural Engineers Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers) shall be operated in such a fashion as to preclude the emission of particulate matter larger than 300 microns mean particle diameter, shall apply for an operating permit pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the following:

i. Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer shall not exceed 0.094 inch, and the grain inlet and outlet shall be enclosed.

ii. Rack Dryers. No portion of the exhaust air of rack dryers shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series.

A. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling facilities having a grain through-put of not more than 2 million bushels per year or located outside a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 90 percent by weight prior to release into the atmosphere.

B. All such screens will have adequate self-cleaning mechanisms, the exhaust gas of which for grain-handling sources having a grain through-put exceeding 2 million bushels per year and located in a major population area shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of 98 percent by weight prior to release into the atmosphere.

iii. Other Types of Dryers. All other types of dryers shall be controlled in a manner which shall result in the same degree of control required for rack dryers pursuant to 35 Ill. Adm. Code 212.463(b).

iv. New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, shall file applications for construction and operating permits pursuant to 35 Ill. Adm. Code Part 201, and shall comply with the control equipment requirements of 35 Ill. Adm. Code 212.463, except for new and modified grain-drying operations which do not result in a total grain-drying capacity in excess of 750 bushels per hour for 5 percent moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

5. Boiler #1 and Clayton Boiler are subject to 35 Ill. Adm. Code Part 216 Subpart B (Fuel Combustion Emission Sources). Pursuant to 35 Ill. Adm. Code 216.121, no person shall cause or allow the emission of carbon monoxide (CO) into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmBtu/hr) to exceed 200 ppm, corrected to 50 percent excess air.

6a. This permit is issued based on the Cooling Tower at this source not being subject to the NESHAP for Process Cooling Towers, 40 CFR 63

Subpart Q because the cooling tower is not operated with chromium-based water treatment chemicals and is not either major sources or is an integral part of a facility that is a major source.

b. This permit is issued based on the source no longer being subject to the NESHAP for Solvent Extraction for Vegetable Oil Production, 40 CFR 63 Subpart GGGG, because the source no longer operates a vegetable oil production process and is no longer a major source of HAP emissions.

c. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the NESHAP for Industrial, Commercial, and Institutional Boilers and Process Heaters, 40 CFR 63 Subpart DDDDD because this source is not or is part of, a major source of Hazardous Air Pollutant (HAP) emissions as defined in 40 CFR 63.2.

d. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to the requirements of the NESHAP for Industrial, Commercial, and Institutional Boilers Area Sources, 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11195(e), gas-fired boilers are not subject to 40 CFR 63 Subpart JJJJJJ. Pursuant to 40 CFR 63.11237, gas-fired boiler includes any boiler that burns gaseous fuels not combined with any solid fuels, burns liquid fuel only during periods of gas curtailment, gas supply emergencies, or periodic testing on liquid fuel. Periodic testing of liquid fuel shall not exceed a combined total of 48 hours during any calendar year.

e. This permit is issued based on the source not being subject to the National Emission Standards (NESHAP) for Area Sources: Prepared Feeds Manufacturing, 40 CFR 63 Subpart DDDDDDD because the source does not use a material containing chromium or a material containing manganese in the manufacturing of prepared feeds.

7a. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hr (25 mph). Determination of wind speed for the purposes of 35 Ill. Adm. Code 212.314 shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to 35 Ill. Adm. Code Part 212 Subpart K is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

b. This permit is issued based on the handling of grain in the Corn Receiving, Cleaning and Storage (Pre-NSPS); Corn Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling Operations not being subject to 35 Ill. Adm. Code Part 212 Subpart L while handling grain. Pursuant to 35 Ill. Adm. Code 212.461(a), 35 Ill. Adm. Code 212.302(a), 212.321, and 212.322 shall not apply to grain-handling and grain-drying operations, portable grain-handling equipment and one-turn storage space.

8. This permit is issued based on Boiler #1 and Clayton Boiler at this source not being subject to 35 Ill. Adm. Code Part 215 Subpart K. Pursuant to 35 Ill. Adm. Code 215.303, the provisions of 35 Ill. Adm. Code 215.301 and 215.302 shall not apply to fuel combustion emission sources.

9a. Pursuant to 40 CFR 60.11(b), compliance with opacity standards in 40 CFR Part 60 shall be determined by conducting observations in accordance with Method 9 in appendix A of 40 CFR Part 60, any alternative method that is approved by the Illinois EPA or USEPA, or as provided in 40 CFR 60.11(e)(5). For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

b. Pursuant to 40 CFR 60.11(c), the opacity standards set forth in 40 CFR Part 60 shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

c. Pursuant to 40 CFR 60.11(d), at all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Illinois EPA or USEPA which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

10a. Housekeeping Practices. Pursuant to 35 Ill. Adm. Code 212.461(b), all grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:

i. Air pollution control devices shall be checked daily and cleaned as necessary to insure proper operation.

ii. Cleaning and Maintenance.

A. Floors shall be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces shall be kept clean of grain and dust that would tend to rot or become airborne.

B. Cleaning shall be handled in such a manner as not to permit dust to escape to the atmosphere.

C. The yard and surrounding open area, including but not limited to ditches and curbs, shall be cleaned to prevent the accumulation of rotting grain.

iii. Dump Pit.

A. Aspiration equipment shall be maintained and operated.

B. Dust control devices shall be maintained and operated.

iv. Head House. The head house shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.

v. Property. The yard and driveway of any source shall be asphalted, oiled or equivalently treated to control dust.

vi. Housekeeping Check List. Housekeeping check lists shall be completed by the manager and maintained on the premises for inspection by Illinois EPA personnel.

11a. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

b. The baghouse filters and cyclones shall be in operation at all times when the associated emission units are in operation and emitting air contaminants.

c. The Permittee shall, in accordance with the manufacturer(s) and/or vendor(s) recommendations, perform periodic maintenance on the baghouse filters and cyclones such that the baghouse filters and cyclones are kept in proper working condition and not cause a violation of the Illinois Environmental Protection Act or regulations promulgated therein.

d. Each receiving dump pit shall be inspected for proper operation while receiving is occurring, at least once each week (Monday through Sunday) when grain is received.

e. The source shall be inspected for presence of visible emissions from internal transfer and cleaning, while such activity is occurring, at least once each week when such activity is performed.

f. Boiler #1 and Clayton Boiler shall only be operated with natural gas as the fuel. The use of any other fuel in Boiler #1 or Clayton Boiler may require that the Permittee first obtain a construction permit from the Illinois EPA and perform stack testing to verify compliance with all applicable requirements.

g. All normal traffic pattern access areas and all normal traffic pattern roads and parking facilities which are located on Ag Transload Facility property shall be paved or treated with water, oils or chemical dust suppressants. All paved areas shall be cleaned on a regular basis. All areas treated with water, oils or chemical dust suppressants shall have the treatment applied on a regular basis, as needed, in accordance with the operating program required by Condition 11(j).

h. All unloading and transporting operations of materials collected by pollution control equipment shall be enclosed or shall utilize spraying, pelletizing, screw conveying or other equivalent methods.

i. Grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins and fine product truck and railcar loading operations shall be sprayed with water or a surfactant solution, utilize choke-feeding or be treated by an equivalent method in accordance with an operating program.

j. The emission units described in Conditions 11(g), (h), and (i) shall be operated under the provisions of an operating program, consistent with 35 Ill. Adm. Code 212.310 and 212.312, and prepared by the owner or operator and submitted to the Illinois EPA for its review. Such operating program shall be designed to significantly reduce fugitive particulate matter emissions.

k. As a minimum the operating program shall include the following:

   i. The name and address of the source;

   ii. The name and address of the owner or operator responsible for execution of the operating program;

   iii. A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles and all normal traffic patterns within the source;

   iv. Location of unloading and transporting operations with pollution control equipment;

   v. A detailed description of the best management practices utilized to achieve compliance with 35 Ill. Adm. Code 212.301, including an engineering specification of particulate collection equipment, application systems for water, oil, chemicals and dust suppressants utilized and equivalent methods utilized;

   vi. Estimated frequency of application of dust suppressants by location of materials; and

   vii. Such other information as may be necessary to facilitate the Illinois EPA's review of the operating program.

l. Within 90 days from date of issuance of this permit a Fugitive Particulate Operating Program must be submitted by the Permittee and is incorporated herein by reference. The source shall be operated under and shall comply with the provisions of this Fugitive Particulate Operating Program and any amendments to the Fugitive Particulate Operating Program submitted pursuant to Condition 11(j) and (k).

m. The operating program shall be amended from time to time by the owner or operator so that the operating program is current. Such amendments shall be consistent with Condition 11(j) and (k) and shall be submitted

to the Illinois EPA within thirty (30) days of any such amendment. Any future amendment to the Fugitive Particulate Operating Program made by the Permittee during the permit term is automatically incorporated by reference provided the revision is not expressly disapproved, in writing, by the Illinois EPA. In the event that the Illinois EPA notifies the Permittee of a deficiency with any revision to the Fugitive Particulate Operating Program, the Permittee shall be required to revise and resubmit the Fugitive Particulate Operating Program within thirty (30) days of receipt of the notification to address the deficiency.

12a. Emissions from and operation of the Corn Receiving, Cleaning and Storage (Pre-NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Truck Dump #1	0.002	0.0015	18,500	0.32	1.39	0.24	1.04
Hoffman Bldg 301 Vacuum	0.001	0.001	1,000	0.01	0.04	0.01	0.04
West Headhouse General Aspiration	0.0015	0.0015	55,000	0.71	3.10	0.71	3.10
Railcar Dump Pit and Section D&E General Aspiration	0.0015	0.0015	21,600	0.28	1.22	0.28	1.22
Track 6 Vacuum	0.001	0.001	700	0.01	0.03	0.01	0.03
Cleanings Discharge	0.002	0.0015	1,900	0.03	0.14	0.02	0.11
Grain Receiving Fugitives					3.01		3.01
				Total:	8.93		8.55

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source, and 8,760 hours/year of operation.

b. Emissions from and operation of the Corn Receiving, Cleaning and Storage (NSPS) shall not exceed the following limits:

Emission Unit	PM Grain Loading (gr/dscf)	PM_{10} Grain Loading (gr/dscf)	Total Flow Rate (scfm)	EMISSIONS PM (lbs/Hr)	PM (Tons/Yr)	PM_{10} (lbs/Hr)	PM_{10} (Tons/Yr)
Truck Dump #4 and Gallery Aspiration	0.002	0.002	36,017	0.62	2.70	0.62	2.70

Hominy Screener General Aspiration	0.0020	0.0015	7,600	0.13	0.57	0.1	0.43
Hominy Loadout Fugitive					6.90		1.02
Grain Loadout Fugitive					0.10	0.27	0.10
				Total:	16.64		9.01

These limits are based on the maximum exhaust air flow rate, maximum grain loading determined by stack testing at the source or manufacturers' guaranty, and 8,760 hours/year of operation.

f. Compliance with the annual limits in Conditions 12(a) through 12(e) of this permit shall be determined on a daily basis from the sum of the data for the current day plus the preceding 364 days (running 365 days total).

g. Emissions from and operation of Boiler #1 shall not exceed the following limits:

i. Natural Gas Usage: 84.58 mmscf/month, 845.78 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	3.55	35.52
Nitrogen Oxides (NO_x)	50.0	2.11	21.14
Particulate Matter (PM)	7.6	0.32	3.21
Sulfur Dioxide (SO_2)	0.6	0.02	0.25
Volatile Organic Material (VOM)	5.5	0.23	2.33

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

h. Emissions from and operation of Clayton Boiler shall not exceed the following limits:

i. Natural Gas Usage: 24.44 mmscf/month, 244.40 mmscf/year.

ii. Emissions from the combustion of natural gas:

Pollutant	Emissions (lbs/mmscf)	(Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84.0	1.03	10.26
Nitrogen Oxides (NO_x)	100.0	1.22	12.22
Particulate Matter (PM)	7.6	0.09	0.93
Sulfur Dioxide (SO_2)	0.6	0.01	0.07
Volatile Organic Material (VOM)	5.5	0.07	0.67

These limits are based on the maximum fuel usage and standard emission factors (Tables 1.4-1 and 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

i. Compliance with the annual limits in Condition 12(g) and (h) of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

13. This permit is issued based on the Potential to Emit (PTE) for Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from this source being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this source not triggering the requirements to obtain a CAAPP Permit from the Illinois EPA.

14a. Pursuant to 40 CFR 60.8(a), except as specified in 40 CFR 60.8(a)(1), (a)(2), (a)(3), and (a)(4), at such other times as may be required by the Illinois EPA or USEPA under section 114 of the Clean Air Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Illinois EPA or USEPA a written report of the results of such performance test(s).

b. Pursuant to 40 CFR 60.8(b), performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart of 40 CFR Part 60 unless the Illinois EPA or USEPA:

i. Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

ii. Approves the use of an equivalent method;

iii. Approves the use of an alternative method the results of which the Illinois EPA or USEPA has determined to be adequate for indicating whether a specific source is in compliance;

iv. Waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Illinois EPA's or USEPA's satisfaction that the affected facility is in compliance with the standard; or

v. Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Illinois EPA's or USEPA's authority to require testing under section 114 of the Clean Air Act.

c. Pursuant to 40 CFR 60.8(c), performance tests shall be conducted under such conditions as the Illinois EPA or USEPA shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Illinois EPA or USEPA such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

d. Pursuant to 40 CFR 60.8(d), the owner or operator of an affected facility shall provide the Illinois EPA or USEPA at least 30 days prior

notice of any performance test, except as specified under other subparts of 40 CFR Part 60, to afford the Illinois EPA or USEPA the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Illinois EPA or USEPA as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Illinois EPA or USEPA by mutual agreement.

e. Pursuant to 40 CFR 60.8(e), the owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

i. Sampling ports adequate for test methods applicable to such facility. This includes:

A. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

ii. Safe sampling platform(s).

iii. Safe access to sampling platform(s).

iv. Utilities for sampling and testing equipment.

f. Pursuant to 40 CFR 60.8(f), unless otherwise specified in the applicable subpart of 40 CFR Part 60, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard under 40 CFR Part 60. For the purpose of determining compliance with an applicable standard under 40 CFR Part 60, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Illinois EPA's or USEPA's approval, be determined using the arithmetic mean of the results of the two other runs.

g. Pursuant to 40 CFR 60.11(e)(2), except as provided in 40 CFR 60.11(e)(3), the owner or operator of an affected facility to which an opacity standard in 40 CFR Part 60 applies shall conduct opacity observations in accordance with 40 CFR 60.11(b), shall record the opacity of emissions, and shall report to the Illinois EPA or USEPA the opacity results along with the results of the initial performance test

required under 40 CFR 60.8. The inability of an owner or operator to secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

15a. Pursuant to 40 CFR 60.303(a), in conducting the performance tests required in 40 CFR 60.8, the owner or operator shall use as reference methods and procedures the test methods in appendix A of 40 CFR Part 60 or other methods and procedures as specified in 40 CFR 60.303, except as provided in 40 CFR 60.8(b). Acceptable alternative methods and procedures are given in 40 CFR 60.303(c).

b. Pursuant to 40 CFR 60.303(b), the owner or operator shall determine compliance with the particulate matter standards in 40 CFR 60.302 as follows:

i. Method 5 shall be used to determine the particulate matter concentration and the volumetric flow rate of the effluent gas. The sampling time and sample volume for each run shall be at least 60 minutes and 1.70 dscm (60 dscf). The probe and filter holder shall be operated without heaters.

ii. Method 2 shall be used to determine the ventilation volumetric flow rate.

iii. Method 9 and the procedures in 40 CFR 60.11 shall be used to determine opacity.

c. Pursuant to 40 CFR 60.303(c)(1), the owner or operator may use the following as alternatives to the reference methods and procedures specified in 40 CFR 60.303: For Method 5, Method 17 may be used.

16a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Conditions 17 and 18 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

17a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code Part 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

18a. Within ninety (90) days after the issuance of this permit, the Permittee shall:

i. Conduct observations to determine visual emissions using USEPA Method 22 from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.123. Thereafter, this testing shall be conducted on a quarterly basis no later than 30 days after the end of the preceding calendar quarter.

ii. Measure and quantify the emissions of PM (gr/dscf and lb/hr) and PM_{10} (gr/dscf and lb/hr) emissions from the Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS); Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS); Dry Corn Milling, Processing and Products Handling; Corn Mill Products Storage; and Corn Mill Products Milling and Handling during conditions which are representative of maximum emissions in order to demonstrate compliance with 35 Ill. Adm. Code 212.321 and Condition 13(b) of this permit. Thereafter, this testing shall be conducted at least once every (5) five years from the preceding testing date.

b. The following methods and procedures shall be used for testing of emissions, unless another method is approved by the Illinois EPA:(refer to 40 CFR 60, Appendix A for USEPA test methods).

Sample and Velocity Traverses for Stationary Sources	USEPA Method 1
Sample and Velocity Traverses for Stationary Sources with Small Stacks or Ducts	USEPA Method 1A
Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)	USEPA Method 2
Direct Measurement of Gas Volume through Pipes and Small Ducts	USEPA Method 2A
Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)	USEPA Method 2C
Measurement of Gas Volume Flow Rates in Small Pipes and Ducts	USEPA Method 2D
Gas Analysis for the Determination of Dry Molecular Weight	USEPA Method 3
Determination of Moisture Content in Stack Gases	USEPA Method 4
Determination of Particulate Matter from Stationary Sources	USEPA Method 5
Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters	USEPA Method 5D
Visual Determination of the Opacity of Emissions from Stationary Sources	USEPA Method 9
Visual Determination of Fugitive Emissions from Material Sources	USEPA Method 22

c. Within sixty (60) days prior to the actual date of testing, the Permittee shall submit a written test plan to the Illinois EPA, Bureau of Air, Compliance Section Manager. This plan shall include at a minimum:

i. The name (or other identification) of the emission unit(s) to be tested and the name and address of the facility at which they are located;

ii. The name and address of the independent testing service(s) performing the tests, with the names of the individuals who may be performing sampling and analysis and their experience with similar tests;

iii. The specific determinations of emissions and/or performance which are intended to be made, including the site(s) in the ductwork or stack at which sampling will occur;

iv. The specific conditions under which testing will be performed, including a discussion of why these conditions will be representative of the maximum emissions, maximum operating rate, minimum control performance, the levels of operating parameters for the emission unit, including associated control equipment, at or within which compliance is intended to be shown, and the means by which the operating parameters will be determined;

v. The test method(s) which will be used, with the specific analysis method, if the method can be used with different analysis methods. The specific sampling, analytical and quality control procedures which will be used, with an identification of the standard methods upon which they are based;

vi. Any minor changes in standard methodology proposed to accommodate the specific circumstances of testing, with justification;

vii. Any proposed use of an alternative test method, with detailed justification; and

viii. The format and content of the Source Test Report.

d. The Permittee shall provide the Illinois EPA with written notification of testing at least thirty (30) days prior to testing and again five (5) days prior to the testing to enable the Illinois EPA to have an observer present. This notification shall include the name of emission unit(s) to be tested, scheduled date and time, and contact person with telephone number.

e. If testing is delayed, the Permittee shall promptly notify the Illinois EPA by e-mail or facsimile, at least five (5) days prior to the scheduled date of testing or immediately, if the delay occurs in the five (5) days prior to the scheduled date. This notification shall also include the new date and time for testing, if set, or a separate notification shall be sent with this information when it is set.

f. The Permittee shall submit the Final Source Test Report(s) for these tests accompanied by a cover letter stating whether or not compliance was shown, to the Illinois EPA, Bureau of Air, Compliance Section Manager within thirty (30) days after the test results are compiled, but no later than sixty (60) days after the date of testing or sampling. The Final Source Test Report shall include as a minimum:

i. General information describing the test, including the name and identification of the emission source, which was tested, date of testing, names of personnel performing the tests, and Illinois EPA observers, if any;

ii. A summary of results;

iii. Description of test procedures and method(s), including description and map of emission units and sampling points, sampling train, testing and analysis equipment, and test schedule;

iv. Detailed description of test conditions, including:

A. List and description of the equipment (including serial numbers or other equipment specific identifiers) tested and process information (i.e., mode(s) of operation, process rate or throughput, fuel or raw material consumption rate, and heat content of the fuels);

B. Control equipment information (i.e., equipment condition and operating parameters) during testing; and

C. A discussion of any preparatory actions taken (i.e., inspections, maintenance and repair).

v. Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration. Identification of the applicable regulatory standards and permit conditions that the testing was performed to demonstrate compliance with, a comparison of the test results to the applicable regulatory standards and permit conditions, and a statement whether the test(s) demonstrated compliance with the applicable standards and permit conditions;

vi. An explanation of any discrepancies among individual tests, failed tests or anomalous data;

vii. The results and discussion of all quality control evaluation data, including a copy of all quality control data; and

viii. The applicable operating parameters of the pollution control device(s) during testing (temperature, pressure drop, flow rate, etc.), if any.

19a. Pursuant to 40 CFR 60.7(b), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain records of the occurrence

and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

b. Pursuant to 40 CFR 60.7(f), any owner or operator subject to the provisions of 40 CFR Part 60 shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by 40 CFR Part 60 recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

The Illinois EPA or USEPA, upon notification to the source, may require the owner or operator to maintain all measurements as required by 40 CFR 60.7(f), if the Illinois EPA or USEPA determines these records are required to more accurately assess the compliance status of the affected source.

20a. i. Pursuant to 40 CFR 60.48c(g)(1), except as provided under 40 CFR 60.48c(g)(2) and (g)(3), the owner or operator of each affected facility shall record and maintain records of the amounts of each fuel combusted during each operating day.

ii. Pursuant to 40 CFR 60.48c(g)(2), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility that combusts only natural gas, wood, fuels using fuel certification in 40 CFR 60.48c(f) to demonstrate compliance with the SO_2 standard, fuels not subject to an emissions standard (excluding opacity), or a mixture of these fuels may elect to record and maintain records of the amount of each fuel combusted during each calendar month.

iii. Pursuant to 40 CFR 60.48c(g)(3), as an alternative to meeting the requirements of 40 CFR 60.48c(g)(1), the owner or operator of an affected facility or multiple affected facilities located on a contiguous property unit where the only fuels combusted in any steam generating unit (including steam generating units not subject to 40 CFR 60 Subpart Dc) at that property are natural gas, wood, distillate oil meeting the most current requirements in 40 CFR 60.42c to use fuel certification to demonstrate compliance with the SO_2 standard, and/or fuels, excluding coal and residual oil, not subject to an emissions standard (excluding opacity) may elect to record and maintain records of the total amount of each steam generating unit fuel delivered to that property during each calendar month.

b. Pursuant to 40 CFR 60.48c(i), all records required under 40 CFR 60.48c shall be maintained by the owner or operator of the affected facility for a period of two years following the date of such record.

21. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants regulated by any standard established pursuant to Section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

22. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

23a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Records addressing use of good operating practices for the baghouse filters and cyclones:

A. Records for periodic inspection of the baghouse filters and cyclones with date, individual performing the inspection, and nature of inspection; and

B. Records for prompt repair of defects, with identification and description of defect, effect on emissions, date identified, date repaired, and nature of repair.

ii. The Permittee shall keep a copy of the Fugitive Particulate Operating Program, any amendments or revisions to the Fugitive Particulate Operating Program, and the Permittee shall also keep a

record of activities completed according to the Fugitive Particulate Operating Program.

iii. Records of housekeeping check lists;

iv. Records for the inspections required by Conditions 11(d) and (e), with date, time and observations if such information is not incorporated in the housekeeping check list.

v. Total flow rate for each baghouse blower (scfm);

vi. Total grain loading for each process (gr/dscf);

vii. Total hours of operation of each baghouse (hours/day and hours/year);

viii. Daily and annual emissions of PM, and PM_{10} from the source with supporting calculations (tons/month and tons/year).

ix. Natural gas usage for Boiler #1 (mmscf/month and mmscf/year);

x. Natural gas usage for the Clayton Boiler (mmscf/month and mmscf/year); and

xi. Monthly and annual emissions of CO, NO_x, PM, PM_{10}, SO_2, and VOM from the combustion of natural gas, with supporting calculations (tons/month and tons/year).

b. All records and logs required by Condition 23(a) of this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer storage device) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

24. Pursuant to 40 CFR 60.7(a)(4), any owner or operator subject to the provisions of 40 CFR Part 60 shall furnish the Illinois EPA or USEPA written notification or, if acceptable to both the Illinois EPA and USEPA and the owner or operator of a source, electronic notification, as follows:

A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in 40 CFR 60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Illinois EPA or USEPA may request additional relevant information subsequent to this notice.

Attachment A - Emission Summary

This attachment provides a summary of the maximum emissions from the Corn Mill & Grain Elevator operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels, (e.g., 100 tons/year for CO, NO_x, and PM_{10}) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled, and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)					
Emission Unit	CO	NO_x	PM	PM_{10}	SO_2	VOM
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS)			8.93	8.55		
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS)			11.98	9.65		
Dry Corn Milling, Processing and Products Handling			116.69	62.80		
Corn Mill Products Storage			1.64	1.24		
Corn Mill Products Milling and Handling			16.64	9.01		
Boiler #1, Natural Gas	35.52	21.14	3.21	3.21	0.25	2.33
Clayton Boiler NG	10.26	12.22	0.93	0.93	0.07	0.67
Totals	45.78	33.36	160.02	95.39	0.32	3.00

GB:tan

25. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

26a. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit or otherwise, the Permittee shall submit a report to the Illinois EPA's Bureau of Air Compliance Section in Springfield, Illinois within thirty (30) days after the exceedance or deviation. The report shall identify the duration and the emissions impact of the exceedance or deviation, a copy of the relevant records and information to resolve the exceedance or deviation, and a description of the efforts to reduce emissions from, and the duration of exceedance or deviation, and to prevent future occurrences of any such exceedance or deviation.

b. One (1) copy of required reports and notifications shall be sent to:

i. Via mail or overnight delivery:

Illinois Environmental Protection Agency
Bureau of Air
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

ii. and electronically:

epa.boa.smu@illinois.gov

It should be noted that the two (2) 193 Diesel Fire-Pump Engines are exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(i) and the 150,000 gallon fuel oil storage tank is exempt from permitting, pursuant to 35 Ill. Adm. Code 201.146(n)(3)

If you have any questions on this permit, please call German Barria at 217/785-1705.

Sincerely,

William D. Marr
Manager, Permit Section
Bureau of Air

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special condition(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statutes and regulations of the Unites States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be grounds for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. These records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. At a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur, which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

I. INTRODUCTION

Bunge North America, Inc. has applied for a Federally Enforceable State Operating Permit (FESOP) for its plant located at 321 E. North Street in Danville. This plant requires an air pollution control operating permit because it is a source of emissions. The Illinois EPA has prepared a draft of the renewed permit that it would propose to issue for the plant. However, before renewing the permit, the Illinois EPA is holding a public comment period to receive comments on this proposed action and the terms and conditions of the draft permit that it would propose to issue.

II. SOURCE DESCRIPTION

Bunge North America, Inc. is a corn mill and grain elevator. The emission units at this plant that require an operating permit are shown in Table 1, below.

Table 1. Listing of Non-Exempt Emission Units Located at the Source.

Emission Unit and Description	Construction Date (and Date Last Modified)
Corn, Soybean & Products Receiving, Cleaning and Storage (Pre-NSPS):	
Truck Dump #1 (5012-0001-0016) controlled by Baghouse Filters APM 40072.10	Prior to 1978
Hoffman Bldg 301 Vacuum (5012-0010-0054) controlled by Baghouse Filters HOFFMAN 48X96	Prior to 1970
West Headhouse Transfer General Aspiration (5012-0005-0029) controlled by Baghouse Filters DD 484RF12	Prior to 1978
Railcar Dump Pit (5012-0004-0016) controlled by Baghouse Filters APM 41120.12	Prior to 1978
Track 6 Vacuum (5012-0010-0047) controlled by Baghouse Filters HOFFMAN 48X96	Prior to 1970
Cleanings Discharge (4870-0013-0015) controlled by Baghouse Filters BUHLER 16S-6-30	Prior to 1978
Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS):	
Truck Dump #4 & W. Gallery Aspiration (5012-0005-0021) controlled by Baghouse Filters DD 484RF12	1985
Cleaning North APM (4870-0013-0001) controlled by Baghouse Filters APM 41216.12	1996

Boiler House/Grounds:	
One (1) 96.55 mmBtu/hour Natural Gas-Fired Boiler with Low NO_x Burner (Boiler #1)	1986
One (1) 27.90 mmBtu/hour Natural Gas-Fired Boiler (Clayton Boiler)	2010

These units are sources of emissions because Particulate Matter (PM) and Particulate Matter less than 10 microns (PM_{10}) is generated from the receiving, handling, and milling of grain at the facility. This source is also a source of Carbon Monoxide (CO) and Nitrogen Oxides (NO_x) from the combustion of fuel in the boilers and generator at this facility. NO_x is formed thermally by the combination of oxygen and nitrogen in the air at the temperatures at which fuel is burned. Thermal NO_x is formed during all common high temperature combustion processes. CO is formed from incomplete combustion of the fuel.

The following table lists annual emissions (tons) of pollutants emitted from this source, as reported in the last three Annual Emission Reports (AER) sent to the Illinois EPA:

Table 2. Actual and Potential (as limited by permit) Emissions of the Source.

Pollutant	Actual Emissions			PTE
	2019 (tons)	**2020** (tons)	**2021** (tons)	**as limited by permit** (tons/year)
Carbon Monoxide (CO)	16.3400	17.3000	16.5400	45.78
Nitrogen Oxides (NO_x)	11.6000	11.9000	10.7000	33.36
Particulate Matter (PM)	65.8000	65.5000	59.7000	160.02
Particulate Matter less than 10 Microns (PM_{10})	28.0000	32.9000	31.3000	95.39
Sulfur Dioxide (SO_2)	0.1100	0.1300	0.1200	0.32
Volatile Organic Material (VOM)	1.1700	1.5800	1.4000	3.00

This source also contains emission units and activities that are exempt from permitting under 35 Ill. Adm. Code 201.146 and the emissions from such units are not limited by the conditions of the draft permit. These emission units include:

Two (2) 193 Diesel Fire-Pump Engines
150,000 gallon fuel oil storage tank

Based on a review of the estimated potential emissions from the exempt emission units as included in the permit application, the Illinois EPA has determined that the emissions from such exempt emission units are trivial and will not contribute to this source being a major source of emissions for any regulated pollutants emitted from any such exempt emission unit. This is because the emission limits for CO, NO_x, and PM_{10} in the draft FESOP are 90% or less of the applicable major source thresholds, and the combined PTE of the exempt emission units are less than 5% of the applicable major source thresholds, In other words, the emission limits for CO, NO_x, and PM_{10} have been limited to 90% or less of the applicable threshold (or 100 tons/year) by the draft FESOP and the combined potential to emit of the CO, NO_x, and PM_{10} from the exempt units is estimated to be less than 5% of 100 tons/year. In addition, as shown in Table 2, above, the margin of compliance between the actual emissions reported by the source during the last three years and the potential emissions as limited in the draft FESOP is more than 63% for CO, 65% for NO_x, and 67% for PM_{10}, which further minimizes the likelihood of the source exceeding its permit limits or the applicable major source thresholds.

In cases where the potential emissions of exempt emission units may contribute to the source exceeding major source thresholds (for example, if the emission limits in the FESOP are 90% or more of the applicable major source thresholds and the exempt units' PTE is 5% or more of the threshold) the Illinois EPA has established limits on such emission units in the draft FESOP that would normally be exempt from permitting. The permitting exemptions in 35 Ill. Adm. Code 201.146 do not relieve the owner or operator of any source from any obligation to comply with any other applicable requirements.

III. GENERAL DISCUSSION

FESOPs are federally enforceable, that is, the terms and conditions of the permits can be enforced by the United States Environmental Protection Agency (USEPA) under federal law, as well as by Illinois government and the public under state law. These permits can establish federally enforceable limitations on the operation and emissions of a source that restrict the potential emissions of the source.

The source may operate this plant under a FESOP because the actual emissions of the plant are below the levels at which the plant would be considered a major source under Title V of the federal Clean Air Act. However, in the absence of federally enforceable limitations, the plant's potential emissions would be such that the plant would be considered a major source. The permit acts to restrict the plant potential emissions so that it need not be considered a major source. As a result, the source does not need to obtain a Clean Air Act Permit Program (CAAPP) permit for the plant, as would otherwise be required.

The FESOP limits the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for CO, NO_x, and PM_{10}. The potential emissions of other pollutants (e.g., SO_2, VOM, and Hazardous Air Pollutants) from the plant are small enough that no restrictions are needed to avoid being a major source of these pollutants.

IV. APPLICABLE EMISSION STANDARDS

All emission units in Illinois must comply with state emission standards adopted by the Illinois Pollution Control Board (Board). These emission standards represent the basic requirements for sources in Illinois. The Board has specific standards for particulate matter under 35 Ill. Adm. Code Part 212. The processing and milling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions), which limits the opacity of emissions to 30 percent, and 35 Ill. Adm. Code Part 212 Subpart L (Particulate Matter Emissions from Process Emission Units), which limits PM emissions based on each units process weight rate. The receipt and handling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions) and 35 Ill. Adm. Code Part 212 Subpart S (Agriculture), which requires the source to implement and use certain housekeeping practices to reduce particulate matter emissions and to equip the sources receiving dump pits with air pollution control equipment that is capable of at least 90% collection efficiency for PM emissions. The boilers are subject to 35 Ill. Adm. Code Part 212 Subpart B (Visible Emissions).

The Clayton Boiler is at this source are subject to the New Source Performance Standards (NSPS) for Small Industrial - Commercial - Institutional Steam Generating Units, 40 CFR 60, Subparts A and Dc. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States EPA under a delegation agreement. The source also has another boiler that was constructed prior to June 9, 1989 and as result will not be subject the NSPS standards.

Corn, Soybean & Products Receiving, Cleaning and Storage (NSPS) at this source are subject to the New Source Performance Standards (NSPS) for Grain Elevators, 40 CFR 60, Subparts A and DD. The Illinois EPA is administering the NSPS in Illinois on behalf of the United States EPA under a delegation agreement. The source also has other grain receiving, cleaning and storage operations that were constructed prior to August 3, 1978 and as result will not be subject the NSPS standards.

The application shows that the plant is in compliance with applicable state and federal emission standards.

V. CONTENTS OF THE PERMIT

The permit that the Illinois EPA is proposing to issue will identify the specific emission standards that apply to the emission units at the plant. As explained, the processing and milling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B, which limits the opacity of emissions to 30 percent, and 35 Ill. Adm. Code Part 212 Subpart L, which limits PM emissions based on each units process weight rate. The receipt and handling of grain is subject to 35 Ill. Adm. Code Part 212 Subpart B and 35 Ill. Adm. Code Part 212 Subpart S, which requires the source to implement and use certain housekeeping practices to reduce particulate matter emissions and to equip the sources receiving dump pits with air pollution control equipment that is capable of at least 90% collection efficiency for PM emissions. The boilers are subject to 35 Ill. Adm. Code Part 212 Subpart B, which limits the opacity of emissions to 30 percent. The conditions of this permit are intended to ensure that the source continues to comply with applicable emission standards.

The permit would also contain limitations and requirements to assure that this plant is operated as a non-major source. The permit would limit the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for CO, NO_x, and PM_{10}. (Annual emissions of other pollutants from the plant are well below the 100 ton major source threshold.)

The permit would also set limitations on PM_{10} emissions based on the air flow to the baghouses and cyclones and the grain loading of these control devices determine by stack testing conducted at the source. The boilers are to be limited based on the types of fuel combusted and the amount of each fuel usage. These limitations are consistent with the historical operation of emission units at the plant.

The permit conditions would also continue to require appropriate compliance procedures, including inspection practices as well as recordkeeping and reporting requirements. The source must carry out these procedures on an on-going basis to demonstrate that the plant is being operated within the limitations set by the permit and the plant's emissions are being properly controlled.

VI. REQUEST FOR COMMENTS

It is the Illinois EPA's preliminary determination that the source has met the requirements for issuance of its permit. The Illinois EPA is therefore proposing to issue the permit.

Comments are requested on this proposed action by the Illinois EPA and the proposed conditions on the draft permit. If substantial public interest is shown in this matter, the Illinois EPA will consider holding a public hearing in accordance with 35 IAC Part 166.
