For this project we executed an agreement with the DuPage Airport Authority, which requires the following: That we will comply with certain design and operational features, and those design and operational features are the same exact items that we'll be discussing as part of the facility, so we basically incorporated these same design and
06:16:10PM operational requirements into that agreement, again, if this facility is approved. So we would do those. And then we would also execute

and grant the DuPage Airport Authority a new avigation easement. The avigation easement is -- I'll call it -- a two-dimensional surface of where the planes basically take off and land. What they would be interested in -- So there is an avigation easement over our property right now, which is basically a height limitation on how high we can construct, whether it be a building or a light pole or similar. They would like us to lower that easement. And right now there is -- one of our existing buildings that is slightly into or above that easement boundary. So we would not only give them a new easement, but we would reduce the roof height of this existing building to stay below the elevations in this new easement.

06:16:57PM

We would also, then, pay the DuPage Airport Authority 15 cents for each pound of municipal solid waste and hydro-excavation waste that is received.

06:17:32PM

As part of that the agreement, the DuPage Airport Authority agreed that our

proposed facility will not pose a threat to safe operation of the DuPage Airport, that they have no objection and will not object to the siting approval of this facility, and they are not currently aware of any violations of or contradictions with the guidance set forth by the Federal Aviation Authority in their advisory circular.

Next, we're going to talk about the existing operations. And for those who may have been here Tuesday, a portion of this will be a little bit of a review, but we'll talk in more detail now, since these are part of Criterion 2 now.

This is just a reminder of the existing operations at the facility. Again, this is an aerial photograph listing the different operations that are currently occurring. The areas on the aerial photo are color coded and hatched to provide a general indication of where those activities are occurring.

06:18:19PM

06:18:47PM

Our main operation is recycling and transfer of construction and demolition debris, which is occurring in the majority of the center portion of the site that is highlighted in light blue. In front of that, towards Powis Road, the parking and maintenance of vehicles, again, the various trucks that LRS is currently using for hauling operations that are going in and out of the site. Again, the same type of trucks that would be coming in and out if we're able to accept municipal solid waste. Again, they simply would be bringing the contents of the waste here, instead of bringing it to a different transfer station.

06:19:25PM

On the north and south perimeters is where the site currently stages and maintains containers, such as roll-off boxes, extra totes. Again, totes are the large bins typically on wheels that we all use at residences to put our waste and recyclables in and roll out to the curb.

06:19:59PM

Lakeshore Recycling is also in the

portable restroom business, so off-season they will store portable restrooms on the property as well. There is a dispatch and customer service center that is performed out of this site. That is shown in the pink rectangle. So it's, basically, the office portion of the building and the employee parking or customer parking as well right out front. On the west and east perimeters, it's highlighted or hatched in the
06:20:39PM darker blue, there are storm water detention ponds, on the west there's a berm and fencing and trees that form a buffer, and on the east there's the larger, what we call, the east detention pond, there's the wetland area that I mentioned before on the southeast, and other vegetated area to form a buffer along that perimeter.

I was hearing a mention -- I know there was a question yesterday about potential
06:21:10PM development on the closed landfill to the south. Again, you can see on this picture the runways from DuPage Airport to the west. Constructing

on a closed landfill is very challenging. I'm familiar with multiple projects where people have tried. Generally, they have not -- Well, they have had very limited success or it really has not gone well.

Regarding the recycling activities that are currently performed, I just want to spend a moment. This is a list of the main materials that are recycled. Again, the
06:22:00PM construction and demolition debris is bought in and through a series of mechanical and manual means, it's separated into the component parts, meaning the wood, the shingles, the metal, and the other materials you see there. And then those component parts are shipped off to various sources for recycling.

The one that I wanted to spend just another moment on is what we call the A-wood. A-wood is basically clean wood that is, for
06:22:31PM instance, not painted, it's not stained with oil, and that's actually processed into mulch, so you may see that out there. They color it.

For instance, an unused pallet or unused lumber from new construction is considered A-wood. It's really an excellent product. It's sold to wholesalers. So it will actually end up at Lowe's or places like that in bags. I have it at my house. It actually has worked amazingly well. The nice part about it is it's a dryer material than mulch from trees or natural wood, so it doesn't have the -- you
06:23:12PM don't get the mold kind of growing up and it, frankly, lasts longer.

This is a slide of the proposed facility improvements along the west portion of the site. Again, this is a little bit of a review for those who may have been here on Tuesday. It shows the key features that are proposed to be installed or constructed. The main item is the municipal solid waste and single-stream recycle building in the lower
06:23:49PM right hand corner. I should note that all the area you see that's kind of shaded in the gray, that's basically all paved area -- pavement or

concrete. We would have the additional scale up front. There is currently one scale already. With the additional activities, we would put a second scale in to just facilitate the movement of vehicles. We would have our resident drop-off area in front. That would include both recyclables and electronic waste. To improve the traffic circulation within the property, we would open up the northern driveway for vehicles
06:24:29PM to exit. Currently all of the vehicles both enter and exit from the southern driveway. And opening up the northern one would just create a better flow of traffic. That driveway is already there. It's just gated. So we would make improvements of both driveways, again, to facility the traffic. And we would construct a hydro-excavation waste building that I'll talk more about in a moment. That's a smaller, shorter building. It would be more right in the
06:25:02PM center of the western portion of the property.

This slide is a view of the eastern portion of the property, which, again, shows the

large detention pond right in the middle and, again, there's the railroad tracks to the right. And it's, really, again, just a paved area on the north and south sides of the pond, and alls we would do is convert a portion of the paved area on the south from material or equipment storage to parking for trucks.

So that was a quick summary of the physical improvements. In terms of the
06:25:56PM operations, again, to be clear, all of the existing operations at the site would continue. So the C&D recycling, parking, customer service all would continue as is. What we would be doing is, again, instead of the same collection vehicles leaving the site, collecting waste from residences and businesses and taking it to a different transfer station, it would simply bring it back here.

The hydro-excavation waste would be
06:26:29PM solidified in the building that I referenced before and then that would be transported off site to a landfill. We would have the

electronic waste drop-off up front that I mentioned where, again, local residents can bring in their e-waste. It would be packaged up, placed into -- the term is a Gaylor box, which is just simply a container, where it's wrapped where it can then be sent off to a facility where portions can be pulled out, recycled, and then the rest processed.

Then the recyclables -- We would also pick up recyclables from, again, residents and homes. Just like the waste is picked up like your current hauler does, we do that from various communities. We bring that back to the same building the municipal waste would go into and, again, we consolidate into the larger loads and transport it to a material recovery facility. Lakeshore has one of these facilities in Forest View currently. They are actually just going to be opening a brand new great big beautiful facility in Chicago and what that facility does is it will take the recyclables, again, pull it apart into its components, so the

06:27:09PM

06:27:43PM

cardboard with the cardboard and paper with the paper and cans with the cans and glass with the glass so that those materials can be sent off to recycle -- for recycling.

Again, just a quick reminder about the terminology and materials that we are talking about. Construction and demolition debris is what you would typically think of, it's wood, concrete, shingles, metal, things like that that comes from constructing, remodeling, repairing, or demolishing some sort of structure, utility, or road.

06:28:25PM

Municipal solid waste is what you just generally might think of as garbage, so from households and commercial buildings. It's the things we all throw away every day.

The single stream recyclables are just what I described, the paper, the cardboard, the bottles, the cans. And the term "single stream" simply comes from the fact that we all tend to put them in the same container, so it's collected as a single stream. It's mixed

06:28:59PM

together and, again, pulled apart later at a recovery facility.

And then the hydro-excavation waste I'm going to talk about more in a moment, but that is basically mud. It is -- The material is generated through pressurized water and air and used as part of excavation around critical infrastructure.

To clarify, I just told you what we
06:29:39PM will accept. This is the list of what we will not accept. There's no hazardous waste. That, I'll mention it later, is intrinsic to what is Criterion 7, so no potentially infectious medical waste, no asbestos, no PCPs, no, you know, motor oil, sludges, white goods, batteries, used tires, landscape waste. Landscape waste is somewhat of an important one. That is -- It's banned from landfills. There are transfer stations that do accept landscape
06:30:20PM waste, but we are not proposing to do that here.

So let's first talk about the construction and demolition activities. Again,

these activities are currently occurring on the property. We are currently permitted to accept up to 1,250 tons per day of construction and demolition debris. The site actually averages more around 300 tons per day. In our peaks we will hit around 750 tons per day. Regardless of what happens with municipal solid waste, we don't expect those tonnages to change. What we are proposing is actually just to reduce the
06:31:08PM limit from the 1,250 to the 750, which should accommodate our existing volume, and again provide kind of a contingency for a peak day is what we're seeing right now.

In terms of municipal solid waste and recyclables, as I mentioned, Lakeshore is currently hauling and has hauling operations in the area. They haul, approximately, 250 tons per day of municipal solid waste and 90 tons of single stream recyclables from our service area.
06:31:46PM The limit we're proposing here is 650 tons per day of municipal solid waste and 250 tons per day of single stream recyclables. The simple

logic is that would accommodate our existing volume, a similar amount of volume from other privately-owned companies that we think would be very excited to use our facility, some growth, and, again, some contingency for a peak day.

This slide is, again, one you may have seen before from a previous presentation. This is a rendering of the municipal solid waste and single stream transfer building. This view
06:32:36PM is looking from the east to the west, so the open grassy area on the left of the photo would be the closed landfill to the south of the property. The entrance to the facility would be in the background. And you can kind of see it between the trees along the roadway. That's Powis Road out beyond the trees. And this building is really tucked right in behind our existing -- existing buildings. The lighter shaded areas you see four -- there are actually
06:33:13PM four bay doors, and those are the doors that the collection vehicles would enter and exit the building from. What we have shown is what would

be a condition on a very busy hour where there's trucks waiting to get into the building and what would happen is, as space is available, one of the doors would open, the truck would pull forward and then back into the building. The door would then close. The collection vehicle would discharge its contents out onto a concrete, what we call a tipping floor. The term -- The origin of the term should be pretty
06:33:54PM obvious. It's simply where the truck tips its back end and discharges the load onto the floor. That takes a few minutes. Once that occurs and the truck is ready to leave the building, the door would open again and the truck would leave.

The tipping floor is where, then, the waste is picked up and consolidated into a larger vehicle. There's the loading areas along the south end of the building. There's actually a little area that sticks out, and you can --
06:34:29PM what we depict on the drawing is one of the larger vehicles leaving the building. We have it set up where the larger truck would already

be covered and tarped before it ever exits the building. And that operation works the same way that while a truck is in the loading area waiting to be loaded or in the process of being loaded, the doors will be closed. Once it's filled, it moves forward, and it tarps the back end. Then the door would open and it would drive out and leave the site.

A few more details about this

06:35:12PM building are listed on this slide. It's a substantial building. It's about 20,000 square feet, which is almost half an acre, about 40 feet tall. These are pre-engineered metal building, so they have steel columns that rise from the sides that span across the top and has metal siding that form the structure of the building. As I mentioned, the floor is all concrete, at least eight inches thick. It's all sloped to collect any water that may be

06:35:45PM associated with the waste itself or will be routinely -- we routinely washed down the floor with a pressure washer in there. So you spray

the floor and the walls just to keep it clean. We also put a steel plate, about 12 feet tall, we call a barrier wall around the perimeter of the interior. Really, it's just to protect the building. Primarily -- Again, the term "barrier wall" simply comes from the fact that it's a barrier to prevent any equipment or operations from damaging the building.

Those barrier walls also actually facilitate loading and provide temporary storage. As the waste is placed on the floor, maybe picture trying to pick up a load of dirt and debris with a dustpan. If you just scoop at it without anything on the backside trying to help hold those contents in place, it's hard to get all of that material off the floor if you're just kind of scooping at it with a dustpan. So the barrier walls provide that boundary within which a front-end loader can help pick up all of the waste and then get all of it off the floor and load it out. Those walls then also provide some additional temporary storage. As the waste

06:36:28PM

06:37:03PM

is placed, you just set the waste up against the wall and just add more capacity.

So this is a very large building for the proposed operations, and it has -- it's been sized to handle the amount of waste that would be anticipated to be accepted at a peak hour of a maximum volume. So, really, at our busiest time of both municipal solid waste and single streams, we would have more than adequate capacity. Again, the building is set back 800 feet from Powis Road, it's 600 feet from the northern property boundary, and 900 feet from the eastern property boundary. So it's well buffered even within the property. And as I mentioned before, it's kind of tucked back behind the other building such that if you're driving down the road, you would not even know that the building is there.

06:37:50PM

Just some additional features, that I have shown on that picture. There's four bay doors. What that just simply allows is for multiple trucks to unload simultaneously. The

06:38:25PM

loading area for the larger truck is actually below floor level so that it just lessens the time it takes to load that larger vehicle. Again, as a reminder, it's usually three to four -- The amount of waste in three to four incoming collection vehicles can be put into one of the larger vehicles that heads farther down the road to the landfill.

The doors, as I mentioned, are fast opening and closing doors. So basically it just -- Again, it helps keep the building completely sealed, everything completely indoors, which not only would help control odors, but just helps control litter and keeps everything nice and neat and clean, keeps everything indoors all the time.

Then we also would have a ventilation and filtration system installed in the building, which would be state of the art. There's -- The system we're talking about would be significantly better than any similar system at any transfer station that I'm certainly aware

06:39:11PM
06:39:38PM

of. So it is -- It's unique and very effective. It would include multiple blowers or fans that remove air from the building. There would be a duct system associated with each of those blowers or fans and then we would be using an air treatment system using Ozone within each of those duct systems, which doesn't mask the odor, it actually destroys any odor-causing compounds and eliminates any odor from the air. We have
06:40:27PM actually been talking with venders who make this Ozone equipment. It's used -- It's being used more and more.

My most recent conversation with a gentleman who was describing a warehouse in New Jersey that accepts spices and he just made a comment that -- and they use it there. That facility is, he said, 50 feet from the nearest residence. He says the odors from that facility are way beyond anything we could imagine, and
06:41:05PM it's effective at controlling the odors from there. We have all the confidence that this will be an excellent system I can see becoming a

standard in other transfer stations down the road.

A few more key features. There would be walls between our C&D transfer and screening building and the MSW and recyclable part to basically separate the operations. Although, we would have an access opening between the two to basically facilitate the appropriate movement of materials. As we bring
06:41:55PM construction and demolition material in, I mentioned before, we recycle about 75 percent of it. Well, that also means 25 percent is not recyclable. You get -- You'll get some large bulky items in there. You'll get a couch or just other things you just can't recycle. That just facilitates the movement of that from the C&D part into the municipal solid waste part.

The other thing that may happen is there may actually be -- We do get loads that
06:42:31PM are considered municipal solid waste that are predominantly recyclable. A large load of cardboard, for instance, some people will send

that off as waste. So it would allow, in those instances, for us to actually, you know, move the material from the MSW side -- That was actually a bad example. It's more like a rock or something like that. Something we would send to the other side where it would be recycled, maybe there's a bunch of metal in the load, for instance. So it would actually help us improve the amount we recycle out there. There would be
06:43:10PM a door on that access opening, and that door would be closed when it's not used.

Some other key features in terms of the operations, we were very of cognizant of litter control. One of the primary things is any waste coming into the site is in an enclosed vehicle, so the collection trucks you see; and if it's something not enclosed, meaning like a dump truck, it needs to be tarped so that there's no material blowing off of those trucks.

06:43:53PM As I described all of the unloading, transferring, and reloading is all indoors, that the loaded transfer trailers or

the larger vehicles are tarped and we use what's called an auto tarper, so it's more of a mechanical means so it's pretty straightforward to cover that load, and that would happen prior to exiting the loading ramp.

The site is, again, set far away from the property boundaries but also surrounded by fencing, and we do have folks that would patrol to collect any small amounts of litter

06:44:30PM that may get out. And as I also indicated before, this site has a street sweeping business that's run out of here, so there are street sweepers that are parked already. And the site has agreed, as part of our host agreement with West Chicago, we would sweep Powis Road as needed. Those street sweepers would also actually help keep the site clean. We actually use them inside the building at the end of the day to help clean that as well.

06:45:06PM In terms of cleaning procedures, so the waste that's brought into that building is typically on the concrete floor anywhere from,

say, 15 minutes to 2 hours. The waste business is transportation logistics, so it is all about how efficiently and quickly can we get it from our customer, meaning us, our residences and businesses, into the transfer station, get that the truck back out on the road, and get the contents put into a larger truck so that can -- that truck can head down the road to the landfill and be disposed. It's all designed to
06:45:47PM be as quick and efficient as practical.

We have a requirement that we will not leave waste on the floor for anything more than 24 hours. As I mentioned, we would be cleaning it with one of the mechanical street sweepers. Those all have water sprays and vacuum systems. We would be doing that at least once a day as well. We have the pressure washer that will be in the building. Again, that's basically a heavy duty -- well, spray wash. And
06:46:23PM we would be using that on the tipping the floor and barrier walls to remove any residues as well. We have, at times, put a disinfectant

into that to help cleans things and control any odors. Over time some dust and some dirt can get behind those barrier walls. So those are routinely inspected and we'll clean behind those, and we have it set up where it's, actually, very easy to do. And any of those excess wash water potentially can be drained and that would go through an oil and water separator before going into the sanitary sewer system.

06:47:10PM In terms of odor control -- because, again, I can't emphasize it enough, all the waste handling activities, the loading, transferring, unloading, all indoors. As I mentioned, that waste is only on site for a short time. It's going to be a first-in/first-out approach, meaning as waste comes in, that's the first waste that goes out. It's not like it really backs up, so it's, again, only there a short time. The cleaning

06:47:40PM procedures I mentioned are key to controlling odors.

And then, as I mentioned before,

the ventilation and filtration system, the fast opening and closing doors basically keep everything enclosed as much as practical. And then it is important to know -- I think I mentioned -- that these odor-control procedures, including that ventilation and filtration system, all of this information was previously provided to DuPage Airport Authority, and they have agreed with all of these approaches and
06:48:17PM that these are the features that make us compatible with the safe airport operations.

Turning back to the hydro-excavation waste, again, this is a little bit of review for those who may have been here Tuesday, but this is a material that is created with pressurized water. So it is a technique that was actually developed in Canada. It's use has been growing dramatically here, and it's used primarily around utilities so that the
06:49:06PM traditional method of using a small excavator or such happens less and less. Excavator buckets, as they dig, and they hit a pipe, well, they

break the pipe. So, then, whether it be natural gas or water or electric or communications, then, you know, everything stops and people are without that service for a period of time in the area while those repairs are made. So this is used for trenching. Potholing is just simply a term for exposing a utility. It's, again, kind of an interesting term. It just means to create a pot or a hole where you can look down and see
06:49:47PM where the utility actually is. People always believe they know where they are, but sometimes they are a little wrong. You can install utility poles. You can make a very pretty cylindrical hole to put a utility pole in. It's also used to clean out storm sewers. My understanding is that the City of West Chicago has one of these hydrovac trucks. They use it for just that purpose. And I'll show you a picture here in a moment and, hopefully, it will
06:50:16PM make a little more sense.

The system, what it does is it just cuts through the soils and materials, breaks it

up, and then there's a suction that lifts it up and puts it in a debris tank where then it's hauled down the road. The storm sewers -- Again, these are storm sewers that are up and down all of our streets. You know, debris and silt or sediment, you know, that gets into storm sewers over time, so the jet will just simply break that material up and then the vac will suck that material up into the debris tank.

06:50:52PM Here are some pictures. So the picture on the left is a typical hydrovac truck. The thing you see kind of sticking out of the top, the green, there's a Kanaflex hose that's attached to a large tube. That's the vacuum portion of the system. That's connected to what they call a debris tank because it holds debris. It's sucked up in the back of the vehicle. These trucks will typically hold anywhere from, say, 500 to a thousand gallons of water, and it

06:51:32PM has a generator on it to create the pressure. So there's a narrower wand-looking apparatus that the person would use, so they'll kind of

jet, again, break up the soil and, you know, have that excavation hose right next to it so as it's breaking the material up, it's also sucking it up into the hose so you can keep the excavation clean and see what you're doing.

Those pictures on the right are excavations that were created using that technique. So it's really pretty amazing. You can make clean vertical walls. You can see that they have been able to dig down underneath pipes without damaging them. There's no way you can do that with the traditional mechanical means.

06:52:14PM

In terms of the processing of this material, it would be very similar to what we're -- what Lakeshore Recycling is currently doing at their Heartland Recycling Facility in Forest View. The mud, it's basically, again, just picture a mixture of water and dirt, and it's sloppy. It is -- because it's got -- It's too sloppy to actually go directly to a landfill. What happens or what needs to happen is that that excess water needs to be absorbed

06:52:54PM

with some other solid material. What we typically use is woodchips. You know, woodchips we actually have at the site through the C&D recycling operations. That would typically be the B-wood. So the wood that is painted or stained or just dilapidated, but we grind it up, increase the surface area, and absorbs that excess water very nicely. It's simply mixed with -- mechanically with, like, a hydraulic
06:53:35PM excavator or a wheel loader and just -- I'm an engineer, so I like math. So it's really two parts hydro excavation material with one part woodchips equals your properly solidified material that can be taken to a landfill.

As I said, there are various purposes for this technique. The primary one is digging around utility structures in a sense of infrastructure but it is used for storm sewer clean outs and other materials as well.

06:54:11PM As I mentioned, we do this at Forest View, so we have well-established procedures for preapproval so we know exactly

what we're getting and it's just, you know, mud or similar like we talked about, acceptance, inspection, you know, where we're looking at it to, again, make sure it's the same thing, and then recordkeeping so we know who it is what it is and where it came from.

In terms of the volumes we're requesting, so right now in our Forest View facility we accept anywhere from, say, 100 to 400 tons per day of this type of material. We have talked extensively with our customers, and they have indicated that there is a significant percentage that's generated much more conveniently located to West Chicago than Forest View and they would love to bring it to a closer location. Well, why? Because it's closer, so it would reduce transportation costs. So instead of driving, they could be working. The limit we're proposing is 300 tons per day, which would accommodate the diversion of, say, 100 to 150 tons per day. And, again, some reasonable growth and a contingency for a busy day.

06:54:56PM

06:55:34PM

The building we're talking about is much smaller, so, again, the other building for the municipal solid waste and single-stream recyclables was over 20,000 feet in area -- this is about 2500 feet. It's about 29 feet tall, and we would have two areas where we could unload the material, mix it, and reload it. And it's -- It's all sloped and designed and made of concrete so that any -- any liquids would stay
06:56:23PM within the area. We actually put a geomembrane under the concrete. And a geomembrane is a fancy term for a thick, durable plastic that is used very commonly for waste containment throughout the industry. So it's just -- We haven't had any issues with any material, you know, with the concrete cracking but the geomembrane is just a belts-and-suspenders approach to be extra careful. And, again, the facility we're talking about is sized more than
06:56:57PM adequately for the peak hours at a maximum volume.

So this is a very large property.

It's about 28 acres, which provides lots of space, but we are talking about a variety of operations. So we have a great detailed traffic plan. The arrows -- I won't go through all of them for you but some of them reflect the existing patterns. What we do is we would -- we have signs, pavement markings. We would also use site staff, which we call spotters. Again, the term is fairly obvious. It's spotting the truck and telling the truck where to go to make sure they are in the right place and moving in the right direction.

06:57:46PM

What we do is this traffic would predominantly move in a counterclockwise fashion so that it just makes things simpler, makes things safer and, again, we have plenty of signs and pavement markings and folks to facilitate all of those movements. I mentioned it before with the buffer areas, where there's a pond on the west and east portion of the facility. They are key components of our storm water management system.

06:58:28PM

We recently went through -- When I say "recently," about two years ago, we wanted to pave additional portions of the property and add parking spaces and do some things like that. So we went through what's termed a planned use amendment development process, and that's the process I mentioned before where they approved our evaluation of wetlands and evaluation of the floodplain because as we pave more areas and
06:59:11PM create more impervious surface, storm water is a concern.

So we went through this process with West Chicago and DuPage County and we proposed a number of storm water improvements, which is primarily involve making the two ponds larger. Again, that simply comes from as you create more impervious, the water tends to flow off the property faster, so you need a slightly larger pond to contain it -- I shouldn't say
06:59:44PM contain -- detain it or slow it down before it leaves the property. So all of the improvements we're talking about as part of this proposed

facility were contemplated as part of that process we went through two years ago.

In fact, on the eastern portion of the property we have already performed all of that paving and we have enlarged the pond. So because all of this has already been contemplated, there is actually no additional storm water improvements that are proposed as part of this siting application.

07:00:23PM One of the other things I want to touch on with our property is wildlife management. This was another key component of our discussions and agreement with the DuPage Airport Authority. And what we have agreed to do, again, to minimize any potential impact of wildlife is to create a site-specific wildlife management plan. We would make sure that all of our staff are appropriately trained.

And I should say when we're talking

07:01:04PM about wildlife, we're really more specifically talking about birds. For all of the obvious reasons, being a bird attractant being near an

airport are a concern. Again, we have a plan. We would train our staff. We would have anti-perching devices on our buildings. Anti-perching just simply means spikes or other things that would discourage or prevent a bird from wanting to land on the building. We would perform routine wildlife surveys and we would -- When I say "wildlife surveys," we would walk around and look for are there any birds or water
07:01:49PM type -- water foul, for instance, wanting to use our ponds.

So as part of that, since we can't be everywhere at all times, we would use some game cameras. Again, when I say "game cameras," just similar to what people use when they go hunting. You put a camera out there, and if there's wildlife that moves in front of it, it will take a picture, so it will give us a better sense what's going on with our property with
07:02:18PM wildlife. We will have implemented all of those odor controls. Again, what we're talking about here, just the odor control, is above and beyond

what I have seen at any other transfer station of which I am aware.

We would perform improvements around the pond, portions of which we have already done. In all honesty, the ponds are potentially more of a hazard than anything else we're doing out there. Ponds are like large open water bodies. So we would be putting riprap or rock around the edges, we would keep
07:02:59PM the grass height low, and we would actually be putting a grid wire system over the ponds. When I say "grid wire," so bound 15 feet apart in multiple directions. We put these wires over the ponds and, again, the birds will not want to land in the pond. Then we would have a communication plan with DuPage Airport Authority, meaning a feedback, right. Nothing is ever perfect. You always want to be better. The idea is that we're implementing these --
07:03:36PM these protocols, we're evaluating it, we're looking at it, we're talking with the airport authority, and we're sharing information and

we're making improvements as we go. If they have suggestions, we would love to implement them. Again, everything we're talking about here is -- was part of the agreement with those folks and, in the end, we'll actually make this a -- the wildlife hazard potential will be lower going forward than it even is today. Meaning with all of these improvements, it will be a better situation and that is why the DuPage
07:04:17PM Airport Authority was supportive of this project -- or I should say one of the reasons.

So, in summary, our proposed operations will allow for the improved recycling of construction and demolition debris. Again, it will facilitate those operations having more stuff out there will allow us to make additional investments in infrastructure to reflect the construction and demolition debris. It will allow for more efficient management and
07:04:50PM transportation of the recyclables to a material recovery facility, again, like Lakeshore's one in Forest View or our new one in Chicago. It

will allow for the additional management of electronic waste with the drop-off area up front. It will add additional capacity and more efficient transportation to the management of the hydro-excavation waste, which is -- has our clients very excited, customers. And it will add additional capacity and more efficient transportation of wastes to a disposal facility, meaning a landfill.

07:05:25PM Again, to be clear, with what we're talking about here with the variety of operations and the design. We are proposing, this will be a premier waste management facility in Illinois. I am not aware of any other facility that will have this diversity of operations, will be this protective, and I'm very hopeful we can actually do all of this -- I shouldn't say do it -- to get approval to do all of this.

07:06:05PM So in terms of Criterion 2, it is my professional opinion that the West DuPage Recycling and Transfer Station is so designed,

located, and proposed to be operated, that the public, health, safety and welfare will be protected.

And going back to the fact that we are not going to be accepting anything that resembles hazardous waste, it is my professional opinion that the West DuPage Recycling and Transfer Station will not be treating, storing, or disposing of hazardous waste, so Criterion 7 is just simply not applicable.

07:06:40PM

Now we're going to move forward and talk about Criterion 5. Criterion 5 is that the plan of operations for the facility is designed to minimize the danger to the surrounding area from fire, spills, or other operational accidents.

So what it really boils down to is an incident prevention and response plan. The prevention is kind of obvious, that we want to take actions to prevent fires, spills, and other operation accidents from ever occurring.

07:07:23PM

The second piece is, obviously, the

response, that if something does happen, there is a plan in place. So we have an organized and coordinated course of action in responding to any potential fires, spills, or other operational accidents if they occur.

The first key item is the safety officer. When responding to any event, you need somebody in charge. So we will have a designated person on site at all times. That is typically the facility manager, but if he is not there for some reason, there will be a duly designated operator, typically one of the more senior, obviously, experienced folks, who is also well trained. It would be their responsibility to first implement the procedures to prevent any incident such as fires, spills, or other accidents; and then if something does occur, to coordinate the responses.

07:08:10PM

In terms of prevention, it's training. Facilities like this, typically have -- people are trained as they are hired, so they will go through a litany of things just to

07:08:52PM

make sure they are not only skilled in their job function but they are safe. Not only including them, but other coworkers and the customers who are using the facility. There are various systems and procedures that will be in place to contain and collect any spilled liquids. There's really not much, but whether it be from hydro-excavation waste or maybe just simply a truck. Trucks do break down. Trucks do leak oil. So what to do and spill kits and such associated with that. And then making sure everybody has and uses personal protective equipment.

07:09:32PM

Another big thing with facilities such as this is fire prevention. You may have heard stories about things such as, like, lithium batteries from phones. Those are real. So we do -- The existing buildings are equipped with fire suppression systems and all of our new buildings would have a wet or dry pipe fire suppression system as well. We have out there currently what is called a fire rover. A fire

07:10:21PM

rover is -- again, a very -- It's a newer technology that uses foam and thermal monitoring. It's contained in -- Picture a large shipping container and it will -- it monitors for heat within the building. If it detects heat, it will automatically direct the nozzle of this foam at the area and put out any fire. This has been used by Lakeshore at other facilities with very good success, and we would
07:11:22PM continue to maintain the one in the C&D building and we would add a second one of these, a second fire rover, for the MSW and single-stream building.

The other nice thing about this property is there is a very nice water source. It's an 8-inch main that actually loops through the site. So there's seven fire hydrants on the property. There's one actually just southwest of where the municipal solid waste and
07:11:54PM single-stream transfer building will be located, so you have a very nice water source there as well. We have plenty of heavy equipment on the

site. We have water trucks and loaders that if a fire were to occur, they will help extinguish it. The access plan that I've showed you before in terms of on-site traffic flows is designed to accommodate emergency vehicles, including fire trucks, and it's, again, a simple but important thing. We put fire extinguishers in all of the equipment and the scale house and in all the buildings.

07:12:35PM Just based on all this, it is my professional opinion that the plan of operations for the West DuPage Recycling and Transfer Station is designed to minimize danger to the surrounding area from fire, spills, or other operational accidents.

HEARING OFFICER PRICE: Mr. Mueller, do you have any questions at this time?

MR. MUELLER: I think that's all we have at this point.

07:13:14PM HEARING OFFICER PRICE: Okay. Protect West Chicago, you're up.

MR. MEZA: Can everybody hear me?

Okay. Great.

Mr. Hearing Officer, I have a number of exhibits, so I think I'm going to hand them all out in packets, if you don't mind. I'll be using the computer also, on occasion, but hopefully -- Can the witness see that -- that monitor?

THE WITNESS: I should be able to, if I put my glasses on.

07:14:10PM CROSS-EXAMINATION

BY MR. MEZA:

Q. Mr. Hock, we have never met before, have we?

A. Only briefly, I think, maybe at these meetings. I can't remember if you were at the prehearing meeting or not.

Q. I was. I'm saying before that, at other --

A. No.

07:14:58PM Q. My name is Ricardo Meza, so you know. Mr. Hock, one of the things you said was that -- Actually, you mentioned in 2.0 of your

Criterion 2 application, was you indicated that the West DuPage Recycling and Transfer facility is a unique facility for LRS; is that correct?

A. Yes. I think it would be -- When I say "unique," as proposed, it would have a very diverse set of operations, and it's very large. So they have a number of similar operations, but in terms of, like I said, the size and everything that's going on, yes, I think this is unique.

07:15:52PM

Q. Right. You said it's unique because of its relatively large size, right?

A. That is one of the factors.

Q. You said that in your report, though, right?

A. I would have to look back at the wording. I may have.

Q. It's on Page 2.

A. Right. We say the West DuPage Recycling and Transfer Station is a unique facility due to its desirable location, relatively large size, and diversity of

07:16:32PM

operations and will be a premier waste management and recycling facility in the state of Illinois.

Q. Right. You said it's premier because of its large size, right? Yes or no?

A. Well, I think I just clearly said it. That's one of the factors.

Q. Right.

A. Sure.

07:16:59PM Q. Large is not one of the nine criterion, is it, in 39.2?

A. Well, being protective of the public health, safety, and welfare isn't size. You know, having room on the property to maneuver in terms of traffic flow and buildings and structures is helpful. I'll say it that way.

Q. Large means more trucks, right?

A. When I say "relatively large size," I was referring to the fact that it's almost a

07:17:34PM 28-acre property, which I'm not aware of another transfer station in the Chicagoland area that has that much property.

Q. So large means more trucks can come in, right?

A. It certainly accommodates the traffic that we're proposing to bring in. In terms of relative to trucks, I mean, you have a transfer station down the road that's permitted for 3,000 tons per day.

Q. I'm not asking about that one.

A. I'm just -- it's --

07:18:08PM Q. Large means more trucks and more garbage, doesn't it?

A. That's not what I'm saying.

Q. Diversity of operations, doesn't that mean different trucks with different types of garbage?

A. Diversity of operations does mean different types of vehicles. I would agree there.

Q. With different types of garbage,

07:18:33PM right?

A. I hate to be -- When you say "garbage," hydro-excavation waste --

MR. MUELLER: Let him answer the question.

BY THE WITNESS:

A. Hydro-excavation waste is different than garbage. When I say "garbage," just to make sure we're on the same page, I'm generally referring to garbage as municipal solid waste.

Q. So am I, then.

A. Okay. Great.

07:18:57PM Q. Different trucks with different amounts of garbage, right?

A. I'm not sure how to respond to that question.

Q. Okay. We can go on. So you said, I believe it was yesterday, that you agree to cap the amount of waste -- municipal solid waste in your facility to 650 tons per day; is that correct?

A. Yes.

07:19:26PM Q. And you said you would agree to do that as a condition for West Chicago to give LRS this permit; is that correct?

A. Yes.

Q. But in your host agreement, you agree with West Chicago that you can bring up to 1,500 tons; is that correct?

A. So the number you're talking about is the correct number in the host agreement, but you have to recognize that the host agreement was put in place as a precursor to putting the application together and doing all of the

07:20:07PM detailed design and operation and detailed work that we did. So once we -- Once we performed that, we decided that we did not need 1,500 tons a day and we propose the amounts that are shown in the application. So it wasn't -- It wasn't intended to be some sort of -- I don't know -- you know, I don't know. It was just a number at the time based on what we knew. And as we moved forward, we came up with a more appropriate number.

07:20:40PM Q. But, today, you have an agreement with West Chicago that you can bring up to 1,500 tons per day; is that correct?

MR. MUELLER: Asked and answered.

HEARING OFFICER PRICE: Overruled.

You can answer.

BY THE WITNESS:

A. To be clear, the other thing that does occur, even though that agreement would remain in place, and my understanding of the regulatory rule is a more stringent requirement in a permit or approval would govern. So we wouldn't be -- We're not trying to, I don't know, trick or do any sort of slight of hand. We are fine with the volumes we're talking about and our -- We're fine with these volumes. Again, it's just an initial number created earlier.

07:21:19PM

Q. So you're fine with 650 at the cap; is that correct?

A. Yes. --

Q. Yes or no? Otherwise, we can end up being here for, like, three days.

A. Yes. My only caveat was I don't remember if the 1500 included any materials other than municipal solid waste. I just want

07:21:48PM

to be clear, the 650 is for the municipal solid waste, and then there's the single-stream number and hydro-excavation and the C&D numbers.

Q. 650 just for the municipal solid waste, which equals garbage, right?

A. Correct.

Q. You'll agree to that cap; is that correct?

A. Yes.

07:22:14PM Q. I assume you'll also agree that if you want to increase that cap, you'll agree to go through another siting hearing, is that correct, with the city as a condition to get this permit?

MR. MUELLER: I'm going to object. That's a legal question that the witness is not qualified to answer.

MR. MEZA: It's not a legal question.

HEARING OFFICER PRICE: Objection is sustained. The process set forth with a statute

07:22:35PM for how you apply a permit once it's issued, if it's issued.

BY MR. MEZA:

Q. You could agree to that, couldn't you, today?

MR. MUELLER: Object again.

HEARING OFFICER PRICE: Sustained. The process is set forth in the statute, sir.

MR. MEZA: I understand.

HEARING OFFICER PRICE: It's not this witness' expertise on that statute.

07:22:54PM BY MR. MEZA:

Q. So, Mr. Hock, I think it was Tuesday or Wednesday, you made reference to LRS as being a small private company; is that correct?

A. I think I probably used the word "midsized."

Q. So you didn't --

A. I may have used the word "small," but in the waste world, I would consider them as a midsized company.

07:23:24PM Q. So they are a midsized privately held company; is that correct?

A. Yes.

Q. You testified about vertical integration; is that correct?
A. Absolutely.
Q. You said that vertical integration is preventing you from competing with the three big waste companies, right?
A. The lack of vertical integration in this market by Lakeshore is absolutely a deterrent for us competing long term in this market.
07:24:05PM
Q. Vertical integration means that you own the trucks, right?
A. That is a component, yes.
Q. And you own the waste transfer station, right?
A. That is also a component.
Q. And that you own --
MR. MUELLER: Mr. Price, this was --
HEARING OFFICER PRICE: I'm going to sustain the objection. Mr. Leutkehans did a very thorough job of going over all of this on Criterion 1, and need was the issue, and that's
07:24:23PM

what we were talking about.

Why are we going over this ground again?

MR. MEZA: Because we're talking about 2.1.2.1, which is the application of the applicant and property owners, and we're talking about the fact that he has testified that as a, now, midsized company, he can not compete with the three large entities.

07:24:49PM HEARING OFFICER PRICE: 2.0 is not about competition. Competition was in the need criteria. Mr. Leutkehans did a very good job. We're not going to go over this and tread this geography again. Let's focus on 2.0 and go from there, please.

BY MR. MEZA:

Q. Well, 2. -- Let me direct you to Page 2-7, the application of applicant and property owners. That's part of Criterion 2,

07:25:12PM isn't it, Mr. Hock?

A. Do you have Section 2.1.2.1 in Criterion 2?

Q. Right. You talked about that in Criterion 2, right?

HEARING OFFICER PRICE: Is there a dispute as to who the applicant is or the property owner is? Is that the issue? Because if we're going to talk about who LRS is, Mr. Leutkehans did half an hour of what "midsize" versus "large" meant. We're not going to redo that.

07:25:41PM MR. MEZA: I will not take a half an hour.

HEARING OFFICER PRICE: I'm not going to give you five minutes to redo what Mr. Leutkehans already did.

BY MR. MEZA:

Q. You said Macquarie Infrastructure Partners are a major investor; is that correct?

A. Yes.

Q. Are they the owners of LRS?

07:26:05PM A. Well, the -- The applicant says -- The application says the sole managing member of LRS is LRS Holdings, LLC, and the current major

investor of LRS and LRS Holdings is Macquarie Infrastructure Partners.

Q. Who owns LRS, LRS Holdings?

MR. MUELLER: Asked and answered.

HEARING OFFICER PRICE: You can answer, Mr. Hock.

Overruled.

BY THE WITNESS:

A. The sole owner of Lakeshore Recycling Systems, LLC, is LRS Holdings, LLC.

07:26:38PM

Q. Do you know who owns LRS Holdings, LLC; yes or no?

A. I know that the major investor of both is Macquarie Infrastructure Partners.

Q. So you don't know who owns them; is that correct?

MR. MUELLER: Objection. He said he knew.

HEARING OFFICER PRICE: It's been asked and answered. Move on.

07:27:00PM

BY MR. MEZA:

Q. So you're saying that the owner is

Macquarie Infrastructures; is that correct?

MR. MUELLER: Argumentative; asked and answered.

HEARING OFFICER PRICE: You're asking about corporate entities and asking if one shareholder is an owner of a corporation. The application says Macquarie is an investor in the owner. I don't understand why you're messing around and saying things that aren't in the record. Let's focus on Criterion 2. These people want to have their public comment. I'm not going to go over the ground that's not relevant to Criterion 2.

If you have a question about ownership, focus on who the application says owns the property.

BY MR. MEZA:

Q. Who does the application says owns the property?

A. The property is owned by Oscar Illinois, LLC.

Q. Does it say who owns LRS; yes or no?

A. Yes. I thought I already said that. LRS is owned by LRS Holdings, LLC.

MR. MEZA: Judge, I'd like to show the witness Exhibit 650 -- excuse me -- 651.

HEARING OFFICER PRICE: That's in the package you have in front of you, PWC 651?

MR. MEZA: Yes. That should be in the packet.

(PWC Exhibit No. 651 marked for identification.)

07:28:53PM

BY MR. MEZA:

Q. Mr. Hock, do you know what a statement of economic interest is? If you don't, that's fine.

A. No. I mean, I could guess based on what it sounds like, but ...

MR. MUELLER: Don't guess.

BY MR. MEZA:

Q. LRS was required to give a statement of economic interest to the City of Chicago explaining to them who the owners of the company were. That's what 651 is. Can you take a look

07:29:12PM

at that?

A. Okay.

Q. Do you see how it shows on Page 1, LRS, LLC, is listed as the party disclosing the information?

A. I do.

Q. There's a separate disclosure statement asking who -- LRS, LLC, who owns them.

Do you see that? You can look on the screen, too, Mr. Hock. Sorry.

07:29:51PM

A. I'm confused. You're asking me to look --

Q. Okay. There's a statement of economic disclosure and affidavit that requires Lakeshore Recycling, LLC, to disclose who their owner is.

MR. MUELLER: Mr. Price, I want to raise a foundation objection to this exhibit. I don't know who it was prepared by or when it was prepared. The witness seems to be having the same trouble. I know that it lists LRS at an address that is obsolete, so that is what caused me concern.

07:30:28PM

HEARING OFFICER PRICE: I would agree. Can you set the foundation for this witness? I don't understand this.

MR. MEZA: Sure.

BY MR. MEZA:

Q. Mr. Hock, did you know that LRS obtained four contracts with the City of Chicago?

A. I'm generally aware that they bid on that type of work, and I understand that they have had some success, but I don't know the specifics.

07:30:58PM

Q. So you're not aware that they received or were awarded four separate contracts with the City of Chicago?

A. Not specifically.

Q. You're not aware that they received a $79-million contract for the blue cart recycling for the City of Chicago?

A. I was generally aware that they won some contracts for the recyclables, but I was not aware of the amount of the award or anything

07:31:24PM

like that.

Q. Would it surprise you to know that they received contracts totaling $107 million?

MR. MUELLER: Mr. Price, I'm going to object, unless he can produce the contract.

MR. MEZA: I have the contracts. We can go there. I'm just trying to speed it up. That's all.

HEARING OFFICER PRICE: How is it relevant? He said that the service area does not include the City of Chicago contract.

07:31:55PM

MR. MEZA: He said Macquarie Infrastructure Partners --

HEARING OFFICER PRICE: How is the contracts for Chicago relevant here to this?

MR. MEZA: I'm not looking to admit the contracts.

HEARING OFFICER PRICE: Let's move on. Ask a question.

07:32:16PM

BY MR. MEZA:

Q. So the last -- Did you know that the City of Chicago requires LRS to update their

statement of economic interest when they change ownerships? Did you know that?

A. No.

Q. Would that surprise you to know that, or not?

MR. MUELLER: What's the relevance.

HEARING OFFICER PRICE: Sustained.

Next question.

BY MR. MEZA:

07:32:39PM Q. Okay. Take a look at Page 4 of 70. This asks for ownership information.

Do you see that?

A. Again, I apologize. I'm not clear.

Q. 4 of 70.

HEARING OFFICER PRICE: It's Page 4 of, actually, 598.

MR. MEZA: Okay. I didn't copy all 600 pages.

BY MR. MEZA:

07:33:12PM Q. Can you, please, just take a look at Page 4, or take a look at the screen.

A. I'm looking at Page 4.

Q. Does that say "ownership information"?
A. I do see at the top of the page there's a No. 2 with the words "ownership" and "information" after it.
Q. It requires applicant, the person disclosing, to identify anybody who has an interest in excess of 7.5 percent; is that right?
MR. MUELLER: Relevance of what the
07:33:42PM City of Chicago requires. They are not the ones who are here.
HEARING OFFICER PRICE: Sustained.
MR. MEZA: This is about ownership.
HEARING OFFICER PRICE: What's your question about ownership? Does he know that LRS Holdings has a controlling interest in it? He has already said that.
MR. MEZA: Yes.
HEARING OFFICER PRICE: Next question.
07:33:59PM BY MR. MEZA:
Q. Do you know LRS Holdings is owned by MIP V as an intermediate? Did you know that?

If you don't, that's fine.

A. No.

Q. Did you know that MIP V owned the parent LLC is owned -- owns MIP V as an intermediate?

HEARING OFFICER PRICE: Let's ask a question. Do you know who owned LRS Holdings after this, Mr. Hock? As opposed to looking at an exhibit you have never seen before that's been objected for foundation, let's just ask the question.

07:34:33PM

Do you know who has the controlling interest in LRS Holdings, LLC?

THE WITNESS: No. Alls I know is that Macquarie Infrastructure Partners, which has the initials MIP, is a major investor.

BY MR. MEZA:

Q. All right. Take a look at Page 58 of 70, or you can take a look at the screen. That lists Macquarie Infrastructure Partners, doesn't it?

07:34:55PM

MR. MUELLER: Mr. Price, while the

witness is looking, again, I'd like some foundation as to the date of this exhibit because we think it's stale.

HEARING OFFICER PRICE: I'm not going to be bullied by an exhibit either. The question is fine. The question is -- There's a page about Macquarie Infrastructure Partners. I guess you're going to find out what Mr. Hock knows about Macquarie Infrastructure Partners.

07:35:53PM Where is this headed? Is this about the ability of the owner and that Macquarie is -- Is that what you're going to question?

MR. MEZA: Yeah. He said he didn't know who the owner was.

BY MR. MEZA:

Q. The major investor is Macquarie Infrastructure, is that correct, sir?

HEARING OFFICER PRICE: That's been

07:36:09PM asked and answered. What do you want to know about Macquarie from this witness?

BY MR. MEZA:

Q. Do you see Macquarie is listed on this disclosure statement?

HEARING OFFICER PRICE: The objection is sustained.

Next question.

BY MR. MEZA:

Q. Can you take a look at Page 69 of 70. Macquarie Infrastructure lists the what

07:36:36PM investment vehicles that are available for them. Can you read that number?

MR. MUELLER: Objection.

HEARING OFFICER PRICE: Sustained. This document is not something this witness is familiar with. If you have someone who has prepared it and you want to put them on to say this is how it is as of today, fine; but this witness doesn't know.

MR. MEZA: Sir Hearing Officer, he

07:37:05PM testified that -- Okay.

BY MR. MEZA:

Q. Did you testify that you were unable

to capitalize, raise capital? Didn't you testify to that?

A. Again --

MR. MUELLER: Objection. That was Criterion 1.

HEARING OFFICER PRICE: I'm going to give you a little leeway here. Go ahead. Capital would reflect on the ability to have a safe operation, so I'll give you a little leeway.

07:37:30PM

Go ahead and answer.

BY THE WITNESS:

A. I think what you're referring to -- What you're trying to do is mischaracterize what I said. What I'm saying is if you're not fully vertically integrated, it lends an unknown to your pricing structure as you go to bid on municipal contracts, for instance. The more unknowns you have in any process, the harder it is to make decisions of investing, make decisions about, you know, raising money to do such things. So, yes, that is true.

07:37:55PM

Q. Raising money to have a safe facility; is that correct?
A. That's not what I said.
Q. Is that why you want to raise money?
A. So if you -- let me -- as --
MR. MUELLER: I'm going to object. The question is argumentative.
HEARING OFFICER PRICE: I'm going to allow a little bit more room here. So
07:38:35PM overruled. Try to tie this up.
BY THE WITNESS:
A. My point was you go to bid on contracts, for instance, people don't have garbage trucks just sitting there waiting and doing nothing. So if you win more work, you need to buy things. You need to buy containers. You need to buy trucks. You need to invest. And you need money to do those things.
So my simple point was if there are
07:39:04PM unknowns in your cost structure and you're trying to make business decisions, if you have unknowns in the process like your disposal

costs, which are a significant piece of the cost you have to build into one of these things, it's much harder to do. That is another key reason why vertical integration is so important so people can make investments with good information. Even if somebody has the money. If you have a bunch of unknowns it doesn't mean they are going to want to use it. Again, that's the importance of having this transfer station
07:39:44PM and allowing Lakeshore Recycling to become vertically integrated in this market.

Q. The fact that the Macquarie Infrastructure Investments, who you listed in Criterion 2, has 17 billion in pooled assets, that has nothing to do with your operation; is that correct?

A. It's not what I said and it's a mischaracterization.

Q. Okay. Let's go to 2.1.4, which is
07:40:12PM location standards. I think you have one slide on that; is that right? Slide 5. It's Page 2-10 of your application.

A. Would you like me to go to the slide or the application?

Q. No. I just want you to go to the application so I can ask you some questions.

So this is the -- This is the application that deals with the location standards, which is 22.14(a) of the act; is that correct?

A. I don't remember the citation, but that's probably one of them.

07:41:06PM

Q. What's on Page 2-10?

A. 22.14(a) is the location standards for residential properties.

Q. The location standard that you're referring to, 22.14(a), that's a state statute of the Illinois Environmental Protection Act, correct?

A. Yes. I think we just said that.

Q. The Environmental Protection Act has

07:41:39PM

come up with a standard in which a company like LRS can site or not site a facility; is that correct?

A. Well, I'm struggling to figure out how to answer your question.

HEARING OFFICER PRICE: The statute applies.

THE WITNESS: Thank you.

BY MR. MEZA:

Q. So it's a yes; is that right?

A. I understand what the statute says. I can read 22.14(a), if you'd like.

07:42:24PM Q. No. There's no need to read it. My question is: The IEPA has said, for a company like LRS, if they want to build a pollution facility, like a waste transfer station, they have to comply with this section, don't they?

A. It is a requirement in the act that's applicable, which is why it's listed and referenced and discussed in our application.

Q. Right. Because the IEPA has said if it's closer -- if it's this thousand feet issue,

07:42:58PM you can't site it there; is that correct?

MR. MUELLER: It says what it says.

MR. MEZA: I understand, Mr. Mueller.

HEARING OFFICER PRICE: Objection is overruled.

BY MR. MEZA:

Q. It's very specific. It says it cannot be sited if it's within 1,000 feet from the nearest property zoned for primarily residential uses; isn't that correct?

A. That is part of the language in that section of the act.

07:43:39PM Q. Well, it's not just language. That's state law, isn't it?

MR. MUELLER: Calls for a legal conclusion.

HEARING OFFICER PRICE: I'm going to overrule the objection. He testified under this section. He talked about the West Chicago --

BY THE WITNESS:

A. I'm sorry. Can you repeat the question?

07:44:03PM Q. The statute, it's not just what it says; it's the law, isn't it?

A. I have already agreed that the statute

applies, which is why it's discussed in the application and why I put it on the slide. If you're equating statute to the law, then that's fine.

Q. Maybe you're --

A. I guess I'm confused by your language or your wording.

Q. A statute is the a law.

A. Okay.

07:44:37PM Q. So I'll just use law.

A. Okay.

Q. Can LRS circumvent the law?

A. I believe that the location of this facility meets all of the applicable laws and statutes.

Q. The question is: Is LRS allowed to circumvent the law; yes or no? 22.14(a).

MR. MUELLER: Mr. Price, I'm going to object, that's argumentative. And Counsel is

07:45:04PM aware that there has been a Pollution Control Board ruling and Appellate Court ruling that have carved out an exception to the setback

standard.

MR. MEZA: We disagree with that.

HEARING OFFICER PRICE: Right. That's for another place, not for this witness. Let's move on.

BY MR. MEZA:

Q. Now, in your application and in your presentation tonight you admitted that there was property that is zoned ER-1 within a thousand
07:45:34PM feet; isn't that correct?

A. Yes.

Q. And that is a property that is zoned primarily for residential, isn't it?

A. As I mentioned in the presentation, as discussed in the application, we do not believe that this criteria or this law applies to this property.

Q. You're relying on the City of West Chicago; is that correct?

07:46:14PM A. I think we're relying on common sense, the letter is also very helpful, and we believe it does not apply.

Q. Right. On Page 2-11, you say -- you describe the parameters for ER-1 and then you say, quote, This conclusion is supported by a letter from West Chicago provided in 2-E1; is that correct?

A. Yes. Again, that's because my opinion is that -- is that that requirement does not apply to this property for the reasons set forth, that it is -- you know, that that is about being set back from residences and it is, obviously, impossible to ever put a one-acre sized lot with hundred foot setbacks on active railroad property that's been an active railroad for 75 years. It can't possibly fit within the structure -- in the context of what they are saying and the West Chicago letter, I thought, was very helpful in pointing out it's just an anomaly from how it was originally annexed in. You know, they use it also for forest preserve that will also never be a residence. That's why we disagree that it is property that's primarily zoned for residential use because it's not going

07:46:59PM
07:47:41PM

to ever be used for residential use, so it doesn't apply.

Q. So you included a letter from West Chicago in the appendix, correct?

A. Yes, we did.

Q. And that's -- Let me direct your attention -- You can either look at it in your application or I have it on the screen. It's PWC 34.

07:48:10PM Do you see that?

(PWC Exhibit No. 34 marked for identification.)

BY THE WITNESS:

A. It's easier for me to look at in the application.

Q. Okay.

A. I'll just go to it.

MR. MUELLER: Mr. Price, while he's looking at it, to speed this up, the applicant

07:48:22PM would stipulate that there is ER-zoned property within 1,000 feet of the facility boundary. I have a full legal memorandum on this issue

prepared and ready for the city council at the appropriate time.

HEARING OFFICER PRICE: Does that save you any time?

MR. MEZA: Only if they will stipulate there's actually two City of West Chicago positions with regard to the setback.

MR. MUELLER: Well, he's asking about the letters. He's entitled to ask those.

07:48:57PM HEARING OFFICER PRICE: Okay. Onward.

BY MR. MEZA:

Q. So this letter states that it's physically impossible and that the City of West Chicago concludes that this statute doesn't apply; is that correct?

A. That's the wording in the letter.

Q. But the City of West Chicago and the mayor of West Chicago, they can't overrule or trump state law, can they?

07:49:26PM MR. MUELLER: Argumentative.

MR. MEZA: It's a question. How is that --

HEARING OFFICER PRICE: And asking for a legal conclusion from a nonlawyer.

BY MR. MEZA:

Q. I'm asking if a decision of a city council, do you know whether they can overrule state law?

A. They can certainly have an opinion. I think their opinion is in the letter.

Q. Mr. Hock, you're aware, are you not, that a number of documents and draft applications were obtained by a citizen as a result of at FOIA, Freedom of Information Act, request; you're aware of that, right?

A. Yes.

Q. So the drafts of your application and the draft exhibits for Draft No. 1, 2 and 3 of various criteria were produced. You understand that, right?

A. Okay.

Q. Is that a yes or no? Do you know?

A. I do not -- I do not know what was obtained through the FOIA request.

Q. Okay. Did you know that -- Did you prepare Criterion 2, Draft 1?

A. Yes.

Q. And preparing Criterion 2, Draft 1, you obtained a copy of the letter from the City of West Chicago, didn't you, regarding the setback?

A. Yes. If there was a letter in there, then, yes, we obtained it.

07:51:24PM Q. You may have to look at Exhibit 13-A, which is on the screen, but it's also in your folder. If you can take a look at that.

THE COURT: 13-A?

MR. MEZA: A. There should be a 13-A there.

(PWC Exhibit No. 13-A marked for identification.)

HEARING OFFICER PRICE: My packet has not a 34, nor 13-A.

07:51:57PM MR. CALLAGHAN: I don't have it either.

HEARING OFFICER PRICE: Mr. Meza, my packet doesn't have 34 and it doesn't have 13-A.

MR. MEZA: It's actually in two locations. So let me direct the hearing officer and everyone to --

HEARING OFFICER PRICE: I'm going to need 34 eventually, depending on whether you move these in.

MR. MEZA: Mr. Hearing Officer, there's also a copy of the letter in Exhibit 200.

HEARING OFFICER PRICE: All right. Thank you.

07:52:37PM

BY MR. MEZA:

Q. Mr. Hock, maybe just take a look at Exhibit 200 on the screen?

HEARING OFFICER PRICE: What page in 200?

(PWC Exhibit No. 200 marked for identification.)

BY THE WITNESS:

A. I think I found it. It's the October 15th, 2019 letter.

07:53:00PM

Q. So that letter was drafted a couple of years earlier than the one in the final

application; is that correct?

A. Yes.

Q. It's drafted by the exact same person who wrote the first -- the second letter, right?

A. Yes.

Q. But this letter doesn't include the words "physically impossible," does it?

A. No.

Q. In fact, it doesn't even include the word "concludes." It says, The city believes Section 22.14(a) is inapplicable, doesn't it?

A. Are you referring to the last sentence?

Q. Yes.

A. It says, "As such, the city believes Section 22.14(a), 1,000-foot setback requirement, is not applicable."

Q. So isn't this the official position of the City of West Chicago?

MR. MUELLER: Calls for him to read the mind of the city.

HEARING OFFICER PRICE: He's testified

about this. Go ahead. I'll overrule it.
BY THE WITNESS:
A. I'm sorry. Can you repeat the question?
Q. Yes. Isn't the first letter the position -- true position of the City of West Chicago?
A. I don't believe so. We took the most recent letter and that's what we put in the
07:54:42PM application.
Q. Where did you get the most recent letter from?
A. I always mispronounce his name. So, Tom, if you're out there, I apologize. Tom Dabareiner.
Q. Do you know who asked Tom to change that letter?
A. I asked Tom to change the letter.
Q. You asked him to change it from
07:55:05PM "believes" to "concludes"?
A. Well, if you'd like a little more insight, I'd be happy to give it to you.

Q. I just want to know if you asked him?
A. If you look at the first letter, it talks about the Union Pacific.
Q. I'm not asking about the Union Pacific, sir. I'm asking you about the words that got changed from "believes" to "concludes." Did you ask him to change that?
A. I'm trying to be as clear as I can to answer your question.
07:55:48PM MR. MUELLER: It calls for a yes or no, John.
BY THE WITNESS:
A. I asked him to change it.
Q. You asked him to change, and he changed it for you?
A. We asked him to update the letter, and he updated the letter.
Q. You asked him to change "I believe" to "I conclude," didn't you?
07:56:10PM A. When we asked them to change the letter to include both railroads, instead of just the one, which we did because we had

updated information, we did suggest language to include in the letter and this is what we have as a result.

Q. So since you're changing the railroad to add Canadian National to show that they own it, not EJ&E, go ahead and change believes to concludes, right?

A. Well, you just mischaracterized what I said again. The reason we asked him to change
07:56:52PM the letter is that the original information we had when we put the draft together back in 2019 suggested that the Canadian National Railway was part of -- well -- I'm sorry. I want to make sure I get it straight.

One of the railroads was actually in unincorporated DuPage County and was zoned light industrial. As we moved forward to finalize the application, we saw an updated zoning map from DuPage County, and it showed
07:57:33PM that both were, in fact, in West Chicago. So, as such, we wanted to update the letter.

Q. Which included changing "believes" to

"concludes," right?

A. It does include that change.

Q. Thank you.

Now, let's talk about APTIM. You know who APTIM is, don't you?

A. I see two representatives of them sitting right here.

Q. Mr. Devin Moose and Walter Willis; is that correct?

07:58:05PM A. No. I don't think Walter --

THE WITNESS: Walter, you're not with APTIM, are you?

BY MR. MEZA:

Q. Marty Fallon.

HEARING OFFICER PRICE: For the record, Mr. Willis is not with APTIM.

BY MR. MEZA:

Q. Now, the City of West Chicago hired APTIM to help them review the application; is

07:58:27PM that correct?

A. That is my understanding.

Q. Well, you know that, don't you?

A. Well, they are sitting right there. I'm assuming they were hired by West Chicago.
Q. So you never saw the contract?
A. No.
Q. So you just assume they were hired by West Chicago to help them?
A. It's --
Q. You knew West Chicago hired them, didn't you, sir?
07:58:53PM A. How do I say this? I wasn't presented with the contract, but it is customary for a community to hire a consultant to help them review this; and when they called and said they were, I took them at their word for that.
Q. Right. It's a customary practice, right?
A. Yes.
Q. When they showed up, you said, Hey, you were the guys that West Chicago hired to
07:59:19PM review my application, right?
A. Well, Michael Guttman also, I think -- I'm sure he indicated either to -- I can't

remember -- either myself or someone else on the team that that's what they were going to do. Yeah, I didn't see the contract but that's what we were told.

Q. So you were actually told that?

A. I don't know. I don't recall exactly.

Q. And the LRS representative on this matter is a person named K.J. Loerop; is that correct?

07:59:52PM A. K.J. Loerop, yes, has been involved in this project as a representative of Lakeshore Recycling since the beginning.

Q. He's the one sitting right behind you, right?

A. Yes.

Q. He knew that APTIM was hired by West Chicago also, didn't he?

A. Well, K.J. is sitting here.

Q. Do you know; yes or no? If you don't

08:00:29PM know, that's fine. If you don't know that the he knew that APTIM had been hired by West Chicago, that's fine.

A. I believe that K.J. understands that APTIM has been hired by West Chicago.

Q. And after West Chicago hired APTIM, K.J. asks APTIM if they would be willing to work and manage the wildlife plan that they developed, didn't he?

A. I'm not aware of that.

Q. Do you know if LRS has an agreement with APTIM to hire them for the wildlife plan that you did?

08:01:09PM

A. I don't understand your -- there's -- what -- I'm not clear on wildlife.

Q. If you don't know, that's fine, sir.

A. I don't know what you're talking about.

Q. You did at least three drafts of the application; is that correct? Maybe more; is that correct?

A. It's been a work in process since -- well, since 2019. So it depends how you count them, yes.

08:01:35PM

Q. How many would you count? Would it be

more than five or less than five drafts?

A. Well, we have been working on it consistently or off and on. Different sections have gone through a different number of revisions. I guess, again, I'm not --

Q. They have gone through revisions because Mr. Moose and APTIM had made comments on Application Draft 1, Draft 2, and Draft 3; isn't that correct?

08:02:13PM A. We did provide a draft that points along the way to APTIM, and it points along the way they did provide comments. Yeah, certain revisions were made. I shouldn't say in response -- Their comments were taken into consideration and, yes, we made certain changes considering those comments. Absolutely.

Q. Because you knew the City of West Chicago was going to be relying on APTIM for their expertise, right?

08:02:45PM A. Sure. That's part of it. If they made suggestions and comments then, you know, their opinion is going to matter to West

Chicago. It only makes sense that we would try to accommodate or consider those comments. Yeah, of course. That's normal course.

Q. You did consider them, right?

A. We did.

Q. And you did accept some, right?

A. We made -- We made changes considering some of those comments, yes.

Q. You accepted some of his comments, yes?

08:03:23PM

A. We did make changes considering some of their comments.

Q. You rejected some of their comments?

A. When you say "reject," yeah, there were certain comments they made that we did not change the application, based on our consideration. There were things they were suggesting that, yeah, we did not -- we didn't agree with or -- you know, other things changed, too. It's not -- There's a variety of considerations that go into the final product like any doctor. Certainly their comments were

08:03:55PM

a consideration.

Q. You said you were an engineer, so you're a math right, correct?

A. I am an engineer. I am definitely a math guy.

Q. Good. I'm not a math guy. Anyways, let's talk about Page 2-43 of your application.

HEARING OFFICER PRICE: Mr. Meza, you have done a nice job for laying a foundation for what I'm sure will be some specific questions about some specific things in the application and review, but we need to take a break. I have to give the court reporter a couple minutes here and the rest of the congregation an opportunity for a break.

Let's take ten minutes. We'll resume at 8:15, please.

(A short break was had.)

HEARING OFFICER PRICE: Back to you, Mr. Meza.

BY MR. MEZA:

Q. Mr. Hock, you said you're an engineer,

you're a numbers guy. Let me ask you this: At 650 tons per day, how many packer trucks is that?

A. It's about 80.

Q. So that's 80 packer trucks coming in with MSW, trash, and 80 going out per day max, right?

A. Yes.

Q. How many transfer trailers does that come out to? 08:18:01PM

A. About 26.

Q. The transfer trailers are simply the larger trucks that fit, like you said, two or three packer trucks. The trash gets put into the tipping floor, which is basically just the concrete floor, gets scooped up by these caterpillars, and gets put into transfer trailers; is that correct?

A. Well, there's some miswording in what you just said, but I think the -- I don't know how to answer that. I mean -- 08:18:46PM

Q. The packer trucks tip their garbage on

the tipping floor, right?

A. They do.

Q. And then the garbage gets picked up by a tractor or some machine and gets put into transfer trailers, right?

A. It does get picked up by a front-end loader and transferred into the transfer trailers.

Q. Then the transfer trailers get tarped and then they leave, right?

08:19:26PM

A. Yes.

Q. So there's 80 packer trucks coming in. Do they all stay in the facility at night?

A. Not all of them would. Not all.

Q. How many of them would stay? How many of the 80 packer trucks would stay at that facility?

A. It depends on a variety of factors.

Q. What are some of those factors?

08:19:58PM

A. How many of them Lakeshore owns.

Q. How many -- Do you have an estimate of how many Lakeshore Recycling packer trucks might

stay at the facility at the end of the night?

A. It depends.

Q. It depends on what?

A. They own a certain number of trucks now. To get to 650, they would likely have to buy more trucks and a certain amount of that volume would be third party volume. So it would be -- it would be other folks. So there's -- So it depends.

08:20:48PM Q. Well, you said that the trucks, by staying at that facility, is going to be better for the community, didn't you?

A. They would be better from the context that the miles that they would drive on the road for the wear and tear and vehicle emissions and all that stuff would be less.

Q. Right. So how many trucks is that, if you know?

MR. MUELLER: Is this a Criterion 1

08:21:24PM question.

MR. MEZA: It's safety.

HEARING OFFICER PRICE: The objection

is overruled.

You may answer.

BY THE WITNESS:

A. I'm sorry. Could you ask the question again?

Q. Is it not important to know how many trucks are going to stay at the facility at night; yes or no?

A. Yes.

08:21:52PM Q. Right. Because those trucks could have a part in what is referred as the storm water prevention plan and storm water pollution prevention plan; is that correct?

A. No.

Q. No. Okay. Then all of the transfer trailer trucks are going to stay at the facility, correct?

A. No.

Q. You have 17 spots, though, don't you?

08:22:23PM A. Yes.

Q. Okay. So up to 17 can stay there overnight, right?

A. Yes.

Q. Now, as far as operating this waste transfer station, isn't it important for you to know the peak hours of the waste transfer station?

A. Yes.

Q. How did you determine what the peak hours for this waste transfer station were going to be before it's built? How did you make that determination?

08:23:05PM

MR. MUELLER: That question should have been asked to Mr. Werthmann.

MR. MEZA: It's Criterion 2.

HEARING OFFICER PRICE: This is an operation question. The question is overruled.

You can answer.

BY THE WITNESS:

A. Would you clarify which of the waste materials you're talking about?

Q. Sure. Let's look at Page 2-43 of your final application.

08:23:23PM

A. Uh-huh.

Q. The top of the page states that the MSW and SSR recycling are accepted into and loaded out at the same buildings so are evaluated together.

Do you see that at the top of Page 2-43?

A. Yes.

Q. That's part of the evaluation of maximum amount of MSW, SSR, and C&D; is that correct?

08:24:06PM

A. Yes.

Q. It's important to know whether or not this facility can accept all of the waste that it's going to be sited for, isn't it?

A. Yes.

Q. So you want to know what are the peak hours of operation to make sure that whatever those hours are, there's going to be enough room in the facility to unload, leave, and then load the transfer trailer trucks, right?

08:24:34PM

A. Yes.

Q. And you said that the peak hours were

10:00 to noon for MSW and SSR, that's the -- let's see -- sixth bullet down.

Do you see that, 10:00 -- excuse me -- 11:00 to noon? No. The first peak hour occurs at 10:00 a.m. and noon, so 10:00 to noon, right?

A. Yes.

Q. And then the second peak goes from 3:00 to 6:00. The afternoon peak starts after 3:00 and it goes until about 6:00 p.m. right?

08:25:11PM

A. Yes.

Q. So how did you determine that those were going to be the peak hours?

A. Because Lakeshore already has hauling operations in that area where they are going out and doing collections. So they provided a breakdown of the times by truck of when they left when they came back. Basically their route times of using the Batavia Transfer Station. So with some -- so we relied on that data.

08:25:53PM

Q. So you relied on -- you relied on that data to come up with these peak times, right?

A. Yes.

Q. 10:00 to noon and 3:00 to 6:00. Based on those numbers, you created tables that told you about how many trucks would come in at 10:00 and 11:00 and between 11:00 and noon and then 3:00 to 4:00, 4:00 to 5:00, and 5:00 to 6:00; is that correct?

A. Yes, we did.

Q. And then you totaled those numbers up and then figured out you could run the operations at the peak hours, right?

08:26:24PM

A. Yes.

Q. Now, we talked about the draft application. Remember, you had, like, a couple drafts -- I don't think you remembered the exact number, but it was more than one, right?

I have at least three. So maybe there's more, but at least three?

A. Okay.

Q. Would you agree; yes or no?

08:26:55PM

A. No.

Q. Okay. Let's look at the draft

application you did in November of 2019. That's Exhibit 200, Mr. Hearing Officer and everyone else. Go ahead and take a look at that, Mr. Hock.

A. I'm sorry. Which exhibit?

Q. Exhibit 200.

HEARING OFFICER PRICE: PWC 200.

BY THE WITNESS:

A. I found it.

08:28:07PM Q. Now, in PWC 200, that was a draft, and you have it in the lower right for November 2019.

Do you see that?

Can you go to -- I didn't copy the whole thing. Can you go to Page 2-29?

A. Okay.

Q. Can you tell me what the peak hours were that you listed in this draft on Page 2-29?

A. Peak hours of MSW and SSR acceptance

08:28:44PM will be between 10:00 a.m. and 12:00 p.m. and then again between 2:00 p.m. and 4:00 p.m.

Q. So the peak hours went from 2:00 to

4:00 to 3:00 to 6:00; is that correct?

A. Yes.

Q. What caused the peak hours to change for this facility that hasn't been built yet?

A. I don't remember.

Q. In fact, do you remember the Excels you created where you were moving columns around with truck numbers?

A. I'm not -- I don't know what you're talking about.

08:29:27PM

Q. Did you or anybody under your direction create Excel documents to create the tables reflecting the trucks coming in and trucks leaving at different hours?

A. Can you clarify what tables you're talking about?

Q. Table 2.3 on Criterion 2. 2-3. Excuse me. Not 2.3, 2-3.

A. I don't recall what a draft from two years ago would have said or not said.

08:30:17PM

Q. 2-3 is the table that outlines LRS's calculations for the peak hours for MSW, SSR,

C&D, and hydro evacuation; is that correct?

A. No.

Q. Don't you have four separate tables?

A. We do. They are separate tables. They are not all on 2-3. They are separate tables.

Q. Okay. So the first one is 2-1. What is that?

A. That's the construction and demolition debris.

08:30:58PM

Q. 2-2?

A. It's the single-stream recyclables.

Q. 2-3?

A. MSW.

Q. And 2-4?

A. Is hydro-excavation waste.

Q. Let's focus on 2-3, MSW. Let me direct your attention to Exhibit 205 in the folder.

08:31:25PM

(PWC Exhibit No. 205 marked for identification.)

BY THE WITNESS:

A. I'm there.

Q. Now, you're the chief project manager of this; is that correct?

A. Yes.

Q. So you had different people working for you at CEC that were helping you prepare this application; is that correct?

A. Yes.

08:32:16PM Q. That included people who helped prepare the Table 2-3, correct? Yes or no?

A. I don't recall exactly who created it at this time, but I'm sure they worked for me.

Q. Do you recall that Table 2-3 was created off of an Excel that had various tabs on the bottom indicating move 1 percent, move 2 percent, move 5 percent, move 1 outgoing, move 2 outgoing, move 3 outgoing.

Do you remember that?

08:32:59PM A. I don't understand your question.

Q. Do you remember anybody working on an Excel where they were changing the number of

trucks in different columns?

A. Well, this is a draft from I don't know when.

Q. Mr. Hock, remember we obtained documents via the Freedom of Information Act requests?

A. Okay.

Q. This is one of the documents that was produced. It was an Excel that showed the MSW
08:33:46PM with tabs reflecting changes in numbers based on truck numbers being moved from one column to another.

Were you aware that that was being done?

A. I'm just not clear what you're referring to.

Q. Okay. You created Table 2-3, right?

A. Yes. 2-3 in the application.

Q. And that shows trucks coming in at
08:34:21PM different times and different number of trucks coming in at different times, right?

A. Yes.

Q. And you want to have that information because you have to make sure and show that your operation can safely accept trucks during the peak hours and then move them out; is that correct?

A. Yes, which the facility can.

Q. So did you know that somebody on your staff was moving numbers around? If you don't know, you don't know.

08:34:59PM A. We -- Analyzing and evaluating data is part of what we do.

Q. And the data here is: How many trucks do we think is going to come between 10:00 and 2:00 and 2:00 and 4:00 or 3:00 and 6:00, right?

A. Yes. We made estimates of how much is going to come between these hours based on the data.

Q. This data isn't just data. It's very important information, isn't it?

08:35:31PM A. It's data that we used.

Q. It's data that you're asking the city council to rely on that is accurate, right?

A. Well, the data that we used, I can assure you, is accurate.

Q. So you know today how many trucks are going to come between 3:00 and 6:00 in two years exactly, right?

A. That's not what I said.

Q. Now, let's talk about stock- -- tipping floor and stockpiling capacity. You have heard those terms before, right?

08:36:19PM A. Yes.

Q. Tipping floor is the floor in the waste transfer station that you described as eight inches of cement when the trucks tip and drop their trash; is that correct?

A. The concrete floor is at least eight inches thick.

Q. And then stockpiling -- Let me see. Stockpiling is a term to describe just putting all the waste in a pile because you don't have

08:37:09PM enough time to put it in the transfer truck, so you have to stockpile it so that maybe when there's less traffic you can pick it up and put

it in the trash -- tractor-trailer; is that correct?

A. Generally, yes. That's common at all transfer stations.

Q. Because at the end of the night you have to wash that tipping floor clean, right, so there's nothing that's going to be on there at the end of the night, right?

A. And we will.

08:37:36PM Q. So stockpiling is important, isn't it?

A. It's -- It occurs every day at all transfer stations.

Q. Now, APTIM had a lot of questions about your stockpiling information in your application, didn't he? Do you remember those questions?

A. I do remember some questions.

Q. Do you remember that he said at one time that the wheel loaders, these caterpillars, 08:38:18PM were depicted in a figure that were not drawn to scale?

Do you remember that comment?

A. No.

(PWC Exhibit No. 23 marked for identification.)

BY MR. MEZA:

Q. Okay. Let's look at PWC 23. I think we took that back from you. Let me -- We'll hand it out. Let me put it on the screen. So PWC 23, if you recall, was an August 27th, 2020, memo from APTIM that you redlined. It's not in that packet, Mr. Hock. I'll get you a copy.

08:39:05PM

Do you remember that memo?

A. Oh, yes. I handed this out the other day.

Q. Right. That was the memo that has your redline responses; is that correct?

A. Yes.

Q. But you didn't respond to every comment from Mr. Hock; is that correct -- I'm sorry -- Mr. Moose?

08:39:51PM

A. No. It wasn't necessary to.

Q. Let me direct your attention to page PWC, Page 12 -- 23, Page 12. Just tell me when

you get there.

A. I'm there.

Q. Now, take a look at that. That section is a section titled tipping floor capacity and operations; is that correct?

A. Yes.

Q. On Pages 12 through 14, Mr. Moose or APTIM is providing you comments on his observations with regard to the safety and

08:40:59PM information you provided as it relates to the tipping floor capacity in the operations; is that correct?

A. No.

Q. He's not?

A. No. It doesn't discuss the safety. It's just his comments on how he evaluated the capacity.

Q. Page 12 of 20? Are we looking at the same page?

08:41:28PM A. Uh-huh.

Q. Doesn't it say, Tipping floor capacity and operation?

A. It does.

Q. And doesn't it say, The wheel loaders that are depicted in Figure 2-3 are drawn at a smaller scale than actual size?

A. That's what it says.

Q. Isn't that about whether or not wheel loaders are able to move around in that facility, inside the enclosed facility?

A. It's not a safety issue. It's an operational issue. In the end, if you look at the figures that we have in the application, they are all drawn to scale.

Q. But the question is: That deals with not just operations, but you have to make sure you have enough room to move these wheel loaders around so people don't get hurt or for safety reasons, don't you?

A. This was a comment that the wheel loaders were not to scale.

Q. Right.

A. We drew it to scale.

Q. Because the way you had drawn it, it

made it seem like you had more room than you actually did, right?

A. No. I disagree with your -- You're mischaracterizing the comment. I disagree with what you're insinuating.

Q. Well, I didn't insinuate. Didn't Mr. Moose say, Are you going to use Model 850 Caterpillar or Model 650 so that he knew whether or not he could provide West Chicago an opinion as to whether or not those would be operated safely within your operations? Didn't he say that?

08:43:08PM

A. Can you repeat that?

Q. Sure. Didn't he say the smaller -- the smallest loader recommended by Caterpillar for use in a transfer station transfers is 1,300 tons per day is a Model 666 with an -- 966 with an 8.5-yard bucket? Do you remember reading that, or not?

08:43:44PM

A. This is a memo from two years ago. I don't remember the specific language in this memo.

Q. Okay. Tell us what size tractors you're going to have inside the facility to allow it to operate safely?

A. It's on the figure in the application. If you'll give me a moment, I'll be glad to tell you. We show two different types of loaders. We have a larger one that is a Cat® 950K, and we have dimensions shown and, again, the loader is drawn to scale, and then there's a second-size 08:44:44PM loader that's also shown and that is a Cat® 950M, and the dimensions of that are also provided.

Q. Turning your attention back to Exhibit 200. That was your first draft. Can you take a look at 200 and take a look at Section 2.4.17.5. Exhibit 200.

MR. MUELLER: What page, Counsel.

MR. MEZA: The bottom of the page should say 2-31. This was a 500-page section, 08:45:23PM so I just took out portions of it. Not Exhibit 23, Counsel. Exhibit 200. Exhibit 200, which is the first draft of your application.

BY MR. MEZA:

Q. If you just focus on Page 2-31, the tipping floor size and stockpiling capacity.

Do you see that?

A. Yes.

Q. So in your first draft, you calculated not just the tipping floor but the stockpiling capacity, correct?

A. Yes. And there's a stockpiling capacity in the current application as well.

08:46:04PM

Q. On Draft 1 you stated there was 1,333 cubic yards of stockpiling capacity for 17,100 square feet; is that correct? Isn't that what you wrote?

A. I think you may have misread it. It says assuming a 10-foot average height --

THE COURT REPORTER: I'm sorry. Can you start that over?

BY THE WITNESS:

08:46:46PM

A. Assuming a 10-foot average height and 0.8 slope loss factor, the waste storage capacity in this area is, approximately,

1,333 cubic yards paren or, approximately, 335 tons, assuming a waste density of 500 pounds per cubic yard, close paren.

Q. The first sentence of that section said that the approximate square footage was 17,100; is that correct? The very first sentence right underneath the heading.

A. 17,100 square feet.

Q. Okay. And that's tipping floor size and stockpiling capacity. Let's take a look at Exhibit 201.

08:47:29PM

(PWC Exhibit Nos. 201 and 202 marked for identification.)

HEARING OFFICER PRICE: Are we done with 200?

MR. MEZA: Yes. For now. If you see Exhibit 202, that's going to be next. Here's an extra copy of 201 and 202.

THE WITNESS: I just found 201.

08:48:44PM

BY MR. MEZA:

Q. So 201 is the second draft of Criterion 2. Let me direct your attention to

Section 2.4.18.5.

Can you read the title of that section that's on Page 2-34?

A. "Tipping Floor Size and Stockpile Capacity."

Q. How many -- How many square feet does it describe in the first sentence?

A. 17,100 square feet.

Q. Is that the same for the first application?

08:49:15PM

A. I believe it was.

Q. What's your stockpiling capacity now?

A. It says, Assuming a 12-foot average height and 0.8 slope loss factor, the waste storage capacity in this area is, approximately, 1,410 cubic yards.

Q. So you went from 1,333 at 10-foot to 1,410 at 12 feet, right?

A. I don't recall if we changed anything else in the calculation, but that would seem to -- that would seem to reflect the difference.

08:50:01PM

Q. Same square footage?

A. Same square footage.
Q. Just bigger piles, right? 10-foot to 12-foot, right?
MR. MUELLER: Objection. He's also got different waste density in there, so you're misleading him.
HEARING OFFICER PRICE: Overruled.
Mr. Hock can answer.
BY THE WITNESS:
08:50:44PM A. I would have to look and double-check we're using the same floor area. When we're calculating these stockpile capacities, we're not using the entire floor. We're using portions.
Q. Okay.
A. I'd have to look back and do the math.
Q. Take a look at 202 -- PWC 202. Let me direct your attention to 2.4.19.5. So it was .17, .18, now it's .19.5. That's on Page 2-77.
08:51:27PM A. I see it.
Q. Now, what's the title of this section?
A. "Tipping Floor Size and Stockpiling

Capacity."

Q. Is the square footage the same still, 17,100?

A. Yes.

Q. What's the stockpiling capacity this time?

A. I don't see it here.

HEARING OFFICER PRICE: We're missing -- For the record, it goes from 237 to 239.

08:52:05PM

BY MR. MEZA:

Q. Okay. Can you take a look at the screen? Mr. Hock, it's on the screen. I must have not copied that last page.

MR. MEZA: I can replace that, Hearing Officer.

BY MR. MEZA:

Q. If you can take a look at the screen, let me just read it to you. It says, Assuming a 12-foot average height and .8 slope loss factor, the waste storage capacity in this area is 1,422 cubic yards or, approximately, 284 tons;

08:52:20PM

is that correct?

If you can see it.

A. I can't see it from here.

Q. Would you take my word that I read it correctly, though?

A. I'm not going to argue with you.

Q. That's good enough, I guess.

Okay. Can you take a look at your final application and take a look at the section that talks about tipping floor and stockpiling capacity?

08:52:54PM

HEARING OFFICER PRICE: What was the cubic yards that you just read, Mr. Meza?

MR. MEZA: Sure. 1,422 cubic yards.

HEARING OFFICER PRICE: Thank you.

MR. MEZA: It should be Page 2-42.

BY MR. MEZA:

Q. Can you read the number before the words "tipping floor size"?

08:53:58PM

A. I'm not -- I'm not sure where you want me to read.

Q. Sure. It says, This is

Section 2.4.20.5. The other ones were .17 -- no -- 18 -- 17, 18, and 19. Do you remember that in 20, 21, 200, 201, 202?

A. Yeah.

Q. Now, what's the name of this section?

A. Tipping floor size.

Q. What happened to the words "and stockpiling capacity"?

A. We deleted them.

08:54:42PM Q. What else did you delete in that section?

A. Obviously, I don't know. I would have to compare these drafts. There were many things that changed between those original drafts and these.

Q. What is the stockpiling capacity now in your final application? Let me ask you that.

A. There is still stockpiling capacity in here. It's not like it's gone.

08:55:08PM Q. Can you tell me where that is in your application?

A. Give me just a moment. So if you look

at the Figure 2-4 that we show stockpile volumes there, and those are -- those are relatively large areas. What we show and discuss in here is that --

Q. Hold it. What are you looking at, Table 2-4?

A. Look at Figure 2-4.

Q. Oh. Figure 2-4?

A. Uh-huh.

08:56:44PM Q. Is that in the initial?

A. I'm talking about the application.

Q. Okay. Got it. Go ahead, sir.

A. Sure. So on Figure 2-4, we show stockpile volumes on the figure. If you notice that up in the -- Are you there yet?

Q. Go ahead. I'm listening.

A. So for the single-stream recyclables the plan is to stage them in the upper left corner. Again, to be clear, the staging of

08:57:21PM stockpiling occurs as waste or materials are coming in. If it does come in faster than we can load it out, then we end up with a volume on

the floor. What we do do is we look at the maximum capacity in the peak hours throughout the day. And the other tables that we were referring to calculate how much storage we would need using a number of conservative scenarios under these -- under the conditions. So what we'll do is compare the amount required for the floor storage based on everything we know, the available capacity, and what you'll see is that
08:58:05PM we have about -- the stockpiles shown here are about double the size of what's needed at a peak hour of a maximum capacity day and --

Q. What is the stockpiling capacity? What is that number?

A. So what we show on the figure for single-stream recyclables is 60 tons, for municipal solid waste we show 85 tons in another area, and in another area we show another 40 tons.

08:58:42PM Q. That's tons of garbage, isn't it, or trash or MSW?

A. It is. Which is -- It's just

converting the stockpile capacity from a volume to a mass. The thing that maybe would help that fundamentally changed is we lowered all of the acceptance volumes, which means the capacity volumes. So what that did is it changed the number of incoming vehicles at the same hours, reduced any of the needed stockpile capacities to very modest levels and what we were just simply showing is that we have more than ample
08:59:26PM storage space on the floor, again, during a peak-hour high-capacity day.

Q. 2:00 to 4:00 or 3:00 to 6:00?

A. It's by hour.

Q. So what's that final number? Because before you said it was 1,333 cubic yards, then it was 1,410, then it was, I think, 1,444.

What is it now?

You're a math guy, aren't you?

Mr. Hock, didn't you just take that
09:00:05PM section out because you got tired of responding to Mr. Moose's questions about that?

MR. MUELLER: That's argumentative.

BY MR. MEZA:

Q. Let me direct your attention back to Exhibit 23, Mr. Hock. This is, again, the exhibit -- the August 27th memo from APTIM to you that's redlined.

Did you do those redlines or not? Did you type that stuff or was it somebody else?

A. I don't recall.

Q. Do you recall doing -- Do you recall reading this memo, or not?

09:01:00PM

A. I just read it again the other day, which refreshed my memory.

Q. So is that a yes?

A. What was your question again?

Q. Do you recall reading this memo; yes or no?

A. Yes.

Q. Do you recall typing in red responses in this memo?

09:01:36PM

A. No.

Q. Are these your responses or are they somebody else's responses?

A. I don't recall exactly.
Q. Do you recall if you made any of the responses?
A. I don't recall which ones I may have done or which one others may have done.
Q. Do you recall personally making any of the responses; yes or no?
A. No.
Q. But you have a recollection of
09:02:39PM reading -- at least reading what Mr. Moose said about your application draft, didn't you?
A. Yes.
Q. You said earlier some of the comments he made you accepted and some you didn't, correct?
A. Yes.
Q. Some of the comments in this document, Exhibit 23, you responded -- somebody responded in red; is that correct?
09:03:10PM I can give you an example. Do you want an example? Let's go to Page 14.
A. There are comments and responses.

Q. Excuse me?
A. Yes, there's responses there.
Q. And those responses are in red, right? They are in caps, in red?
A. They are.
Q. Now, if you scroll down to Page 14 where it says, Further, the applicant incorrectly claims there's, approximately, 2,500 cubic yards.
09:03:39PM Do you see that?
A. I'm sorry. What page?
Q. It's on Page 14. The paragraph that starts, Further, comma, the applicant incorrectly claims there's, approximately, 2,500 cubic yards?
A. I see that language.
Q. There's no response after those comments, right?
A. There's nothing in red after those.
09:04:07PM Q. Mr. Moose is saying you should -- we believe the use of a more realistic density per cubic yards results in a need to store

1,200 cubic yards of SSR material as proposed.

Do you see that?

A. I do.

Q. No response, right?

A. Nope.

Q. Next paragraph you said, The applicant -- it says, The applicant also used average pile heights of 12 feet; however, with such narrow stockpiles, it will not be possible

09:04:44PM to store above the height of the push wall.

Do you see that?

A. Yes.

Q. You didn't respond to that either, right? There's no red after that, right? How about that?

A. There's no red after it, but our --

Q. Okay. The next section says, Figure 2 illustrates --

MR. MUELLER: He didn't finish his

09:05:06PM answer.

MR. MEZA: I'm sorry. Go ahead. Sorry.

BY THE WITNESS:

A. I was going to say there's so many things that changed since this draft was written that these comments -- Well, again, it's a mischaracterization. This was not -- I'll stop.

Q. Thank you. Was there any response in red to those comments and observations of the expert that the City of West Chicago hired?

A. There's no words on this piece of paper after those paragraphs. It doesn't mean we didn't consider them.

09:05:48PM

Q. There's no response was the question. Was there a response or not? Did you give a response in red here, or not?

A. Not on this piece of paper.

Q. Okay. The next paragraph talks about, Figure 2 also illustrates, as previously mentioned. He's talking about the SSR and the loader again. There's no response after that, correct?

09:06:16PM

A. Correct.

Q. He says that the waste will not be

routinely consolidated. Okay. And he's talking about how much space is needed, not to mention the inability to close the bay doors and the inherent increased likelihood for litter tracking in unwanted wildlife.

Do you see that?

A. As I'm looking at this, as I read it again, where it says, See updated throughput evaluation in Figure 2-3, that would likely have responded to all of these down below.

09:06:50PM

Q. Okay. So you didn't respond to his question about inherent increased likelihood for litter tracking, correct? There's nothing in red, right?

A. No. I think -- To be honest, I'm reading this again. It looks like what we did is we provided some comments after certain paragraphs that addresses other -- other paragraphs. There was -- Again, as I read this, there was not an intent to put words after every paragraph because it wasn't necessary or appropriate.

09:07:17PM

Q. The next paragraph starts with, In addition, Figure 3 shows the collection vehicle.

Do you see that?

A. Yes.

Q. There's no response after that paragraph, correct?

A. No. I think what he was referring to is Figure 2-3, which is what's referenced above. So it appears that, again, that general comment was referring them to a whole throughput evaluation and updated figure. We just didn't waste the time with putting words after every single paragraph.

09:07:44PM

Q. And throughput just is a fancy word for the amount of trash coming in and coming out, right?

A. Yes.

Q. Now, go on to Page 15. Mr. Moose then starts commenting on the width of the 10-foot truck. He says, Assuming a width of 10 feet for each truck.

09:08:20PM

Do you see that?

A. Yes.
Q. You did comment about that, though, didn't you?
A. Because that's specific -- you know, specific to that phrase. If you notice, it's after the clause versus after the paragraph. So, again, as I'm reading this again -- So, yeah, we provided responses to whether it be clauses or paragraphs or in some we refer to
09:08:57PM other comments and some it was just more general, so ...
Q. He said they were 10-feet wide, you said, Hey, they are only 8.5-feet wide. You corrected him. He was wrong, wasn't he?
A. We're just clarifying with the legal vehicle within Illinois.
Oh, I see why we did it now.
Q. Why did you do it?
A. He was talking about lack of distance
09:09:40PM between doors and things and he was using a wider width for the trucks, which would create a shorter distance. So we were just clarifying

that it was an overly-conservative assumption.

Q. He was off by a foot and a half, right?

A. Yes.

Q. Now, in that same paragraph, he talks about the time it takes to -- for a packer truck to unload.

Do you see that?

A. Yes.

09:10:16PM Q. Now, it's important to know how long it takes a packer truck to unload because you need to know whether you can process throughput from these trucks during the peak hours; is that correct?

A. The loading time is an important assumption in our throughput evaluation. I agree with that.

Q. Right. Because this is supposed to be a fully enclosed trash transfer facility,

09:10:54PM correct?

A. It is a fully-enclosed trash transfer stations.

Q. But in order to enter this facility, you have to open the doors, right?
A. They can't magically get in any other way.
Q. Well, are they automatic doors?
A. Yes.
Q. So they are going to be automatic doors that are going to automatically open?
A. Our plan is to have a spotter that
09:11:24PM will open and close them. When you say "automatic," they are mechanical. You can press a button and they will go up and down.
Q. Somebody has to press a button for it to come up and go down?
A. Yes.
Q. And there's four bay doors, correct?
A. Yes.
Q. And you're going to have three spotters?
09:11:44PM A. The plan is to have people helping direct traffic and managing the flow, so, yes, we'll have people that will be available and be

there to open and close the doors as needed to let trucks in and out.

Q. Didn't you testify that there was going to be three spotters the other day? If you don't remember, that's fine.

A. I don't recall is exactly what I said.

Q. How many spotters are there going to be then?

A. Well, what we have -- maybe this is what I meant -- is that there's three general spotting locations that we have planned for the facility. So one would be at the MSW and SSR building, which is what we're talking about here; we have another over by the C&D building; and then one up at the entrance, if needed.

Q. Okay. What about where the transfer trailers come in, are those automatic doors?

A. Yeah.

Q. So there's three sets of doors, right?

A. There's four bay doors.

Q. I'm saying sets of doors. There's the MSW doors. There's four of those, right?

09:12:25PM
09:12:59PM

A. Yes.
Q. There's the C&D doors. There's two of those, right?
A. Yes.
Q. Then there's a door where the trash transfer truck has to drive in to get loaded, right?
A. Yes.
Q. Then there's a door for the truck to
09:13:20PM exit, right? The trash transfer trailer truck, it goes in, it gets loaded, and then it leaves, right?
A. Yes.
Q. So there's --
A. There's two doors for that.
Q. Are those automatic doors?
A. Those would likely be automatic, depending on -- but we could have manual. Those trucks come in every ten minutes or so. It's a
09:13:58PM different operation. You could actually have the drivers operate those doors.
Q. So those doors, a driver would have to

get out of his truck, push the button, open that door, and then wait until the other truck leaves, right?

A. He wouldn't have to get out of his truck.

Q. How does he open the door then?

A. These things are a lot of times set up with lights, so you have kind of green light/red light so he knows if someone is there or not. So there's a button outside that he would push to open the door.

09:14:30PM

Q. There's going to be a button where he pulls up, he can push, and drive a transfer trailer inside, right?

A. There's a variety of means to do this. What I just gave you is an example. That level of detail, we would -- we would make an exact determination at a later time when we're actually building the facility. What you're talking about is very standard stuff that's done every day. And, like I said, there's different ways to do it.

09:14:54PM

Q. Well, it's not standard because it's close to an airport, and doesn't it have to be fully enclosed?

A. Not what I said.

Q. I understand that. My question is: It's not a standard municipal waste transfer station because it's located near an airport; isn't that correct?

A. The location is unique being close to an airport. The things we're talking about here are very standard.

09:15:26PM

Q. Right. But what you need is that it has to be fully enclosed, doesn't it?

A. And it is.

Q. Right. So what is the plan that you have to keep it fully enclosed right now?

A. We have fast opening and closing doors that will open before a truck enters and close after -- sorry -- it will open before it enters and it will close while it's in the building, and then it will open before it leaves and close after it departs.

09:15:59PM

Q. The same thing is going to happen with the municipal solid waste doors during peak hours, correct?

A. Yes.

Q. In fact, you estimated that there were going to be about three of those bay doors that would have to open and close every five minutes, correct?

A. You wouldn't need all three during the peak hours, but you could need up to three at times.

Q. And they are going to open up all the way up, all the way down, every five minutes from 3:00 to 6:00; is that correct?

A. That's how they work.

Q. So for those periods of time, when the door is open and the truck is -- it has to back in, correct?

A. Yes. It has to -- It can't magically get in the building. It has to go through the doorway.

Q. Right. But it doesn't drive in and

turn around and dump; it backs in, doesn't it?

A. It does.

Q. So it has to be open and the driver has to drive and back himself up through that door, three drivers, right -- up to three drivers, correct?

A. Again, I think you're mischaracterizing or misunderstanding.

Q. I understand. Don't the trucks have to back into the spaces, into the garage doors; yes or no?

09:17:29PM

A. Yes.

Q. And during peak hours, there can be as many as three garage doors open; is that correct?

A. There could be up to three garage doors in use.

Q. Right. In use. So one could open and one could be closed and then another one could open and another could be closed. So, technically, one door could be open at all times, then, right?

09:17:53PM

A. No.
Q. They are all going to be closed or open at the same time?
A. No.
Q. So some of them might be open while the others are closed, right?
A. I think you're getting it.
Q. Right. So it's not going to be fully enclosed, then, right?
09:18:16PM A. It will be fully enclosed.
Q. You estimated five minutes for the truck to back into the tipping floor and unload, correct?
A. Five minutes to back in, discharge the load, and leave and clear the doorway so another truck could do the same thing.
Q. Right. That's what you estimated, correct?
A. Yes.
09:18:49PM Q. Mr. Moose said he estimated loading times to be four to nine minutes on average -- Exhibit 23 -- didn't he? But you said we're

using five minutes, and we believe this is an appropriate average; is that correct?

A. Yes. It's the same we have used in other situations. All the information we have seen and my standing out watching these things over time, says five minutes is a good number.

Q. In fact, you went to the California MSW or facility that LRS owns to come up with approximate times, didn't you?

09:19:34PM A. Not for this.

Q. You didn't for this?

A. Not for the five minutes.

Q. Let me direct your attention to Exhibit 16. This is an e-mail from Lee Chastity to Marty Fallon of which you were copied.

Do you see that?

A. Yes.

(PWC Exhibit No. 16 marked for identification.)

09:20:30PM BY MR. MEZA:

Q. So I was wrong. CEC didn't go to do the times; APTIM went and did the times,

correct --

A. No.

Q. -- to the California facility?

A. No. We were both there. In fact, I was there that day, too.

Q. I was right, then, you did go?

A. Yes.

Q. And, in fact, you then -- Is the California facility one of the state of the art facilities for LRS?

09:20:58PM

A. Yes.

Q. Do they clean the floor every day like they are going to do here in West Chicago?

A. I know they clean the floor routinely. Exactly what they do every day, I can't say. It's a -- It's a flagship facility. It's very busy. It takes a lot of tonnage. They recycle a lot of C&D. It's a -- Yeah, it's a premier facility.

09:21:35PM

Q. Topnotch facility?

A. Yeah.

Q. Take a look at the next exhibit,

PWC 17. Can you tell us what that is?

(PWC Exhibit No. 17 marked for identification.)

BY THE WITNESS:

A. My apologies. I knocked the mic off.

Q. Take your time.

A. I'm sorry. Where are we at?

HEARING OFFICER PRICE: PWC 17.

BY MR. MEZA:

09:22:23PM Q. 17. Can you take a look at that?

A. Yes.

Q. Tell us what that is.

A. It's a spreadsheet of load times at their California Avenue facility. What it shows is -- So it's basically load times by different trucks.

Q. So what you were doing was going to the California facility to try to come up with some data about how long it would take you to

09:23:04PM unload a truck, correct?

A. No.

Q. What were you doing, then? What are

these tables for, then?

A. This is how long it takes to load a transfer trailer.

Q. Oh, okay. Load a transfer trailer. I'm sorry.

Did you do any -- Did you do any calculations at the California facility to determine how long it takes to unload a packer truck?

09:23:25PM A. No.

Q. Why not?

A. It wasn't needed.

Q. Why wasn't it needed?

A. Because we were good with five minutes and, you know, if you stand out there and watch, you can see -- especially at that facility, they get in and out of there faster than five minutes, so we didn't need to do it.

Q. But the California facility is not

09:23:57PM like this facility, is it?

A. There's similarities and differences.

Q. Right. It's not an enclosed facility,

right?

A. Correct.

Q. It's an open facility, right?

A. So there's an open side to the buildings.

Q. Okay. So do you think it would take more or less time to unload a packer at that facility than at this proposed new facility?

A. It depends.

09:24:37PM Q. On what?

A. Depends how much space is available, depends on cueing time.

MR. MEZA: Okay. Mr. Hearing Officer, I would like to show an exhibit, but it's a video. It's Exhibit No. 700. I'll mark it. It will be on the screen here, and it will be here.

(PWC Exhibit No. 700 marked for identification.)

BY MR. MEZA:

09:25:46PM Q. Do you recognize this location?

A. That looks like an aerial view above the 3152 California facility looking from east

to west.

Q. So this is the premier facility of LRS also; is that right?

A. They do a lot of recycling. The recycling operation is topnotch. They have actually done a number of other things to process organics and different things like that. It's a nice facility.

Q. Thank you. Do you see the time

09:26:30PM marker, it's two seconds? Do you see that? Would you take my word?

A. I'll take your word.

Q. Do you see a little blue truck there. Is that an LRS truck?

A. I would have to look closer.

Q. Come on in. Look closer.

MR. MUELLER: Mr. Price, if we're going to ask questions about a video and show a video, we need foundation.

09:27:01PM HEARING OFFICER PRICE: Overruled. You can show anybody a photograph if they recognize the photograph. So far all he said is he

recognizes this to be the California station. We'll see what the next questions are.

So overruled.

BY THE WITNESS:

A. It could be. It's a little tough to see the logo.

Q. Okay. That's fine. Let me hit play. It's 4 seconds, 5 seconds. Can you tell, from looking at the video, what this truck that may or may not be LRS is doing?

09:27:33PM

MR. MUELLER: I'm going to object based on foundation.

HEARING OFFICER PRICE: Overruled. He asked him if he could tell what the truck is doing. We haven't heard an answer.

BY THE WITNESS:

A. I don't see the truck anymore.

Q. The timer is at 44 seconds.

Do you see that, Mr. Hock?

09:28:10PM

A. Yes.

Q. Do you see the truck now?

A. Yes.

Q. I have paused it at 54 seconds.
Do you see that?
A. I'm sorry. I turned my mic off.
Q. That's all right.
A. Yes.
Q. Can you tell if that's an LRS truck now?
A. It appears so.
Q. All right. So we're at 54 seconds. We'll watch the video and then I'll ask some questions about it. We're at 3 minutes and 11 seconds.
09:28:41PM
Do you see that?
A. Yes.
Q. So we're at 5:30, but he didn't arrive until about 54 seconds, is that right, Mr. Hock, if you remember?
A. Yes. It was about the one-minute mark.
Q. Right. It looks like he's getting back in his truck. The time is 6:48; is that correct?
09:33:25PM

A. Yes.

Q. He drove off at about 7 minutes; is that correct?

A. Yes.

Q. So that would be about 6 minutes; is that correct?

A. Yes.

Q. Now, did the time that it took this driver about the same amount of time it's going to take to pull into this proposed facility, or not?

09:35:10PM

MR. MUELLER: Mr. Price, I'm going to object and move to strike this entire line of questioning because it's an apples-and-oranges comparison. We don't know what the circumstances were of that truck unloading.

HEARING OFFICER PRICE: Overruled. The question is simply whether this is an accurate representation of what we can expect at the proposed facility. That question is of minimal probative value, but nevertheless appropriate.

09:35:39PM

You can answer.

BY THE WITNESS:

A. The answer is not necessarily. It doesn't change anything. Because one of the main things you may have noticed is there was not another truck coming in behind him. It's like any task. If you have extra time, you can probably take extra time. So him taking an extra minute because he had extra time seems complete -- he actually moved out of there
09:36:15PM pretty quick given the time he had. It depends on a lot of things. It does nothing, nothing at all, to discount the five minutes that we're using.

Q. How many minutes did you calculate to load a transfer trailer?

A. So Lakeshore routinely does it in less than 8 minutes.

Q. Didn't Mr. Moose tell you that the average time he found was 13 minutes and
09:36:49PM 26 seconds?

Do you remember that?

A. No.

Q. Take a look at PWC 13 again, Page 4. You might not have seen that before. This is the first memo that Mr. Moose issued, wasn't it?

HEARING OFFICER PRICE: Do you have it, Mr. Hock?

THE WITNESS: I do.

BY THE WITNESS:

A. You're referring to the January 20, 2020 memo.

09:37:34PM Q. Right.

A. Second paragraph on Page 4 of 7?

Q. Right. Take a look at Page 4.

A. Uh-huh. It says, APTIM conducted vehicle processing times at the transfer station with the above average times: Process a transfer trailer is 13 minutes and 26 seconds.

Q. So it takes somebody else 5 minutes longer to load a transfer trailer than it takes LRS, right?

09:38:08PM A. Yeah. You should look back at PWC 16, which is the one that says -- the tables include the details for each trailer loaded. In

summary, it took 6 to 8 minutes to load a trailer, similar to our observations from the July 24, 2020 visit.

So, yeah, the time it takes to load a transfer trailer depends on a number of things. It all just confirms all of the assumptions we're using, that they are all accurate.

Q. Now, Mr. Hock, one of the things you mentioned was a -- I believe it was a 2019 PUD, a planned unit development. 09:38:51PM

Do you remember that?

A. Yes.

Q. So that was -- So correct me if I'm wrong. In 2015, LRS obtained a planned unit development to build the C&D site on Powis; is that correct?

A. I don't remember the year. I think it's in the application. I can double check it if you want. 09:39:32PM

Q. If you think I'm incorrect, go ahead and check.

A. I just don't remember.

You're correct. The original PUD was approved on May 8, 2015.

Q. The PUD is so LRS would obtain permission to build the C&D facility on Powis Road; is that correct?

A. Generally, yes. There's some other things it allowed, too; but yes.

Q. Okay. Then in 2019, CEC submitted an 09:40:51PM amended PUD; is that correct?

A. Yes.

Q. But that was for the C&D facility, wasn't it?

A. It was to make a variety of improvements to the property.

Q. Right. To the C&D facility?

A. Oh, yes.

Q. Right?

A. Well, to the existing facility and its 09:41:11PM various operations.

Q. Right. The various operations were the C&D operations, right?

A. No.
Q. It wasn't the C&D operations?
A. It involved the other operations as well.
Q. Right. So it was C&D and others, right?
A. Yes.
Q. Okay. So you were looking to expand the C&D facility, weren't you?
09:42:03PM Do you remember, Mr. Hock, or not?
A. Yes, that is part of it.
Q. In fact, you mentioned it in Criterion 2, on Page 2-5, didn't you? You said that it was an amendment to the planned unit development and site development permit; is that correct?
A. Yes.
Q. Can you flip to Page 2-6?
A. Yes.
09:42:33PM Q. The last paragraph says, The C&D expansion building is designed to be approximately 22,500-square foot rectangular

pre-engineered metal; is that correct?

A. Yes.

Q. That's the building that you want to use the waste transfer station for, isn't it?

A. It's the same size building in the exact same location.

Q. Right. But that's the building that you intend -- That's where you intend to place the waste transfer station building, correct?

09:43:05PM A. Yes.

Q. The exact same place?

A. Yes.

Q. But you didn't indicate that you were going to place a waste transfer station there in this PUD, you just said you were expanding your C&D facility, right?

A. Absolutely.

Q. Right?

A. Yeah. We couldn't -- The PUD

09:43:28PM amendment process was not about a municipal solid waste transfer station. It's not the -- It's not the appropriate process.

Q. You told the City of West Chicago that you were going to build a C&D expansion building, presumably to expand your C&D facilities, right?

A. Yes. So we have the approval to do that if we'd like.

Q. Didn't you also say that you have a permit for 1,200 tons of C&D?

A. 1,250, that's correct, that's the

09:44:10PM permitted limit as of today.

Q. But you guys don't even hit that number, do you? What's your average now, 750?

A. As I said before, the average is around 300 tons per day right now with peaks getting up to around 750 tons per day.

Q. So you want to file an amended PUD to expand a building for C&D, despite the fact that you already have 1,250, but you only take in 750, right?

09:44:38PM A. The building expansion was put in, along with other improvements, so that the storm water design that we were doing for that would

be the exact same as we're talking about for the municipal solid waste transfer station. We didn't want to have any additional impervious. We wanted the layout to be exactly the same because we didn't want to have to go through a storm water design and other such things twice. So that is why, as I pointed out before, the storm water has been approved for exactly the configuration that's out there and that's why
09:45:33PM there's no other storm water approved. So that was the logic behind --

Q. Sure. Take a look at Exhibit 10. I have it on the screen also. It should have been the one handed out just now. I'm sorry.

Can you take a look at the second page?

Does that have your signature, John Hock, P.E.?

(PWC Exhibit No. 10 marked for
09:46:36PM identification.)

BY THE WITNESS:

A. That is me.

Q. This was submitted June 20, 2019?
A. Yes.
Q. Can you flip to the fourth page that provides the information about the application for the private planned unit development?
Do you see that?
A. Yes.
Q. Now, the next page talks about the property information, doesn't it?
09:46:58PM A. Where are you looking?
Q. The following page, where it says, Property information, 1655 Powis Road.
Do you see that?
A. Yes.
Q. Then go ahead and go down. It says, Current use of the property.
Do you see that? Could you tell?
A. Yes.
Q. Could you read that?
09:47:19PM A. Construction and demolition debris recycling facility.
Q. Because that's what it's used for,

right?

A. Yes.

Q. And proposed use of the property?

A. It says, Improvements to construction and demolition recycling facility.

Q. Right. It doesn't say MSW waste transfer station, does it?

A. No.

Q. So this is for the expansion building of the C&D, right?

09:47:45PM

A. Among other things, right.

Q. In here, you included Attachment 7.1. Go ahead and flip to 7.1.

A. Okay.

Q. This is the Storm Water Pollution Prevention Plan; is that correct?

A. Yes.

Q. That's different than just a storm water plan; is that correct?

09:48:14PM

A. I don't understand your question.

Q. Don't you have to explain how you're going to deal with storm water runoff and then

also have to explain your storm water pollution prevention plan?

A. If you're referring to -- So there's a storm water design. And this is not -- The storm water pollution prevention plan is not a design. It's just how you're going to, just as it says, maintain the facility, best management practices, inspections and such to manage the design of the storm water system that's in

09:49:06PM place.

Q. Right. This is for the C&D building, right? This was attached to your application.

A. Yeah. This would be for the existing operations as of September 2018.

Q. On Page 6 of that plan, CEC has a section called, Pollutant source identification and evaluation.

Do you see that?

A. Yes.

09:49:47PM Q. That's where they are talking about what's going to happen with the water if it rains and it falls onto trucks and it's got

grease, where is that water going to go, right?

A. No.

Q. Well, isn't that why it's called a storm water pollution prevention plan?

A. The term comes from IEPA regulations. It's the term they use.

Q. So you don't use the storm water pollution prevention term?

A. Oh, yes, we do.

09:50:38PM Q. Right. Because that's part of your application, isn't it?

A. It's part of this application.

Q. It was part of -- That's right. It was part of this application, right?

A. Yes.

Q. In fact, let me direct your attention to Page 2-22 of Criterion 2, your final application.

HEARING OFFICER PRICE: I'm going to

09:51:00PM stop soon.

MR. MEZA: It's going to be tough. I can -- I can just ask him.

BY MR. MEZA:

Q. This storm water pollution plan was for the C&D. You don't have a plan for this application, do you?

A. We don't need one today. What this talks about is the management controls that are in place today. I'm just reading it again to refresh my memory. Yeah. So it talks about all of the things we already have, the settling basins and erosion controls and the training and inspections and the monitoring we do.

09:51:41PM

Q. Go to Page 20 of that Exhibit 10, which is the pollution prevention plan. Doesn't it also say that the designated representative will amend this SW -- storm water pollution prevention plan, other than is described, whenever, A, Procedure that is described in this plan has changed a control measure described in this plan is modified.

09:52:14PM

Do you see that?

A. I'm sorry. Where were you reading?

Q. Page 20, where it says, 12.0 plan

amendments?

HEARING OFFICER PRICE: Page 20 of this exhibit, John.

MR. MEZA: 10.

HEARING OFFICER PRICE: Exhibit 10, the last page.

BY THE WITNESS:

A. I'm sorry. I was looking in the wrong place.

09:52:36PM Q. That's all right.

A. Yes, I see what you're talking about.

Q. You have no storm water prevention pollution plan for the municipal solid waste transfer station that you're looking to get sited in the City of West Chicago, do you?

A. No. Because we don't need it today. You only need it once something is actually changed. Once the facility gets approved and we build it, before we start to operate it, we will

09:53:10PM absolutely have an updated storm water pollution prevention plan. What we have today is a design and we have the same features. So you don't

change the -- You don't change the plan in anticipation of things because the plan talks about things we're going to do. You don't do things for operations or something that's not yet a reality, so it's not applicable.

MR. MEZA: This will be the last question.

BY MR. MEZA:

Q. Go to 2.3.2 of your final application. Don't you write, Discharge is associated with the operation of West DuPage RTS, Regional Transfer Station, are managed through controls and procedures as detailed in the site's storm water pollution plan?

A. Yes, we have a plan. We actually are referring to an earlier draft of it. Of course we have a plan.

MR. MEZA: This is a good time, Mr. Hearing Officer.

HEARING OFFICER PRICE: Thank you, Mr. Meza. I appreciate you making an accommodation.

As I said before, we have two public participants who will be unable to be here for the public oral comment, so we will take those two people right now. I'll ask you to come down here to the microphone. We'll, start with Noreen Ligino-Kubinski and Paul Kubinski.

While they are coming forward, this is public comment, not testimony. They are not being cross-examined on this. It's just public comment.

09:54:51PM

MS. LIGINO-KUBINSKI: First of all, thank you for allowing my husband and I to provide a public comment tonight. As indicated, my name is Noreen Ligino-Kubinski. I reside in the Reserve Cornerstone Lakes subdivision in West Chicago. I have lived in the Reserve Cornerstone Lakes for 23 years. I have 40 years of business experience in corporate business, government, and community affairs. I currently serve and have served on a multitude of DuPage County and West Chicago boards for the

09:55:19PM

betterment of DuPage County and the City of West Chicago.

I am an active long-time corporate member for the DuPage Mayors and Managers Council of Government. I'm an active long-time board of director for Choose DuPage Economic Development Alliance and on the public policy board committee. I'm very proud to serve on this board for many years of the development
09:55:47PM that has come into West Chicago and our business park.

I am a former West Chicago City Council Alderman for Ward 7, former West Chicago Fire Protection District Board Trustee, and former Western DuPage Chamber of Commerce Member.

I'm very passionate about the community and ensure the best opportunities for economic development, environment, cost of
09:56:10PM living, education, and employment. I am also committed to making DuPage County and West Chicago a great place to live, raise a family,

work, have a business, and grow a business.

As stated, I live in the Reserve Cornerstone Lakes subdivision, which is, approximately, 2.5 miles away from Lakeshore.

Groot Waste Connections is actually closer to our subdivision. I have taken the time to learn about LRS, their staff, the facility, and what the facility upgrades will mean for our community. There is truly a lot of misinformation about the plans for this upgrade and the impact on the community, so I'm here tonight to set the record straight based on my research.

09:56:49PM

Tonight I am speaking as a citizen of this great city of West Chicago. The LRS facility is located on 28 acres in the manufacturing industrial area directly across from the DuPage Airport. We currently do not and will not see traffic in our Cornerstone Lakes neighborhood from the daily facilities and activities of operation.

09:57:15PM

In fact, as we heard, LRS is

committed to improving the traffic safety on Powis Road. Powis Road is a DuPage County road. And upon approval of this request, they will cover the cost of over, approximately, $645,000 to widen Powis Road, adding one more turn lane making it even safer for the traffic on Powis Road. The majority of traffic on Powis Road is industrial traffic, and it's the heart of the manufacturing district, far away from our residential homes. LRS is also committed to ensuring truck traffic will use the safest transportation routes. They will not travel through West Chicago and the City of St. Charles neighborhoods.

09:57:54PM

LRS currently uses their street sweepers to clean Powis Road and have committed to continue to do this. The upgraded LRS facility, which we have heard, will have a state-of-the-art building with doors that will open and close behind the trucks before they empty and load of materials, and they do not escape. The upgraded transfer station building

09:58:23PM

will have a modern air filtration system that treats the air before it's recirculated into the atmosphere. There will be no odor or traffic in our residential neighborhoods or anywhere in West Chicago from the LRS transfer station. The LRS facility and site area are more modern and equipped to manage materials, minimize odor, and improve traffic flow.

Another safety benefit will be that
09:58:56PM the upgraded facility, as we heard, will have a lower building. This is a safety feature for all of the air traffic arriving and departing from DuPage Airport.

Residents should know that LRS present is not new to West Chicago. It already operates the construction and demolition debris transfer station there now and also stores trucks and containers overnight. LRS is committed to accepting electronic waste for no
09:59:24PM charge at their facility during all hours of operation, not just on Saturday mornings like the Groot facility.

In addition to the need for the facility, West Chicago, DuPage County, and the DuPage Airport Authority will benefit financially from the materials that are brought into this facility. It is true that excess capacity already exists at Groot, Waste Management, and other transfer stations. It would appear that this excess capacity is due to high prices. There needs to be another
09:59:56PM competitive priced option. Groot may never use its full capacity, but so what? Let them compete for the business. In today's economy, every dollar counts.

I have heard misinformation about property values being impacted and environmental racism. This could not be the furthest thing from the truth. Do not be fooled or misled. It is very sad and infuriating to me to see this occur in the City of West Chicago, who is very
10:00:27PM inclusive. Many residents that I have spoken with do not fear that West Chicago will become the garbage capital of the western suburbs. I

know that a competitor of Ken Hoving worked with the local community in 2003 to fund an opposition campaign to thwart at siting effort. Is this the competitor that started the misinformation campaign Protect West Chicago directed at LRS? How else can a grassroots-based initiative so quickly fund advertisements, websites with wrong information, drop mail letters, yard signs, experts, lobbyists, and lawyers? Who is funding the drop mail letters that have gone out one -- That's what I brought today -- Another one came out today from a marketing Oak Brook address that came out today that went to West Chicago residents, Carol Stream, St. Charles, and Wayne. How wrong is this? Who is funding the opposition effort? Please be transparent. Show us the documentation. People have a right to know the truth. It is evident and clear LRS will support continued competition, which we all need, and we already have proven this in DuPage and West Chicago for citizens and businesses.

10:01:10PM
10:01:44PM

LRS has proven to be an excellent neighbor. They are good corporate citizens currently in our community. They will continue to be an excellent neighbor once this application is approved.

It is my understanding it is the city council's responsibility to determine if LRS meets the nine criteria the state has established for this type of facility. If they have met the criteria, it means this is necessary for the entire community, as it is good economic development. Based on everything I have heard, read, and seen, West Chicago aldermen would be foolish not to approve this facility. This facility and LRS only stands to benefit the citizens and the businesses of DuPage County and West Chicago, and I thank you.

10:02:17PM

10:02:58PM

MR. KUBINSKI: Good evening. My name is Paul Kubinski. I live in West Chicago in Reserve Cornerstone Lakes subdivision, just a few miles north and west of the proposed LRS waste transfer station. My wife and I built our

house in 2000 and have lived there ever since. I'm just a retired IT guy. Her career makes me look like a real underachiever.

Based upon my research and testimony presented here over the past few days, I would like you to know for the record that I agree that this new waste transfer station is needed at the existing LRS site on Powis Road in West Chicago. Lakeshore Recycling has been a
10:03:31PM good corporate neighbor for several years now. I personally toured their existing Powis Road operation when they opened several years ago. I was impressed with the state-of-the-art design and cleanliness of the facility. It's difficult to see the LRS site as one drives down Powis Road. An earthly berm and nice landscaping shield it from casual view. I would encourage all those who are interested in this proposed waste transfer station to come out and see the
10:03:57PM site for themselves.

The proposed waste transfer station will not be a nuisance to the residents of the

two Cornerstone Lakes subdivisions. You won't see it, as its tucked away up in the existing LRS site. You won't smell it, as the waste transfer is done indoors with an odor-eliminating air filtration system. And you won't hear it, as truck traffic will be confined to Illinois state roads and DuPage County roads. Basically no waste transfer truck traffic will be on residential streets in West Chicago or St. Charles.

10:04:30PM

The proposed waste transfer station will not negatively affect the property values in the two Cornerstone Lakes subdivisions. The main driver of property values in these subdivision is St. Charles School District 303. These highly regarded 303 schools are why young families and families want to live here. A waste transfer station that is not seen, smelled, or heard will not negatively affect your property values.

10:04:56PM

The main opposition to the LRS proposal seems intent on the keeping the current

waste transfer station status quo. Currently there's no real competition, which would lead to lower garbage and recycling service prices and better services for the residents of West Chicago.

In conclusion, I think that the proposed LRS waste transfer station is a win-win for the residents of DuPage -- West Chicago, DuPage County, and DuPage Airport Authority. I would urge the West Chicago City Council vote for their approval of this project. Thank you for listening.

10:05:25PM

HEARING OFFICER PRICE: Thank you, both, for the public comment. So that concludes our work here this evening and for this week. We are here next on Tuesday evening at 6:00 p.m. And then next Thursday we will be at West Chicago High School.

Do we know which room that is specifically, Dennis?

10:05:53PM

MR. WALSH: No.

HEARING OFFICER PRICE: Pay attention,

and there will be signage at the high school. We'll have further information on Tuesday, if you're here, to know specifically where that is. Again, I'll remind you, we have reserved the 16th and the 19th during the day at 1:00 to 5:00 at city hall if we need it for either testimony or public comment.

With that, is there anything else for this evening from anybody?

10:06:25PM (No response).

If not, we will pick this up on Tuesday evening here at 6:00 p.m.

Mr. Meza, you will still have the floor. Thank you everybody. Have a good weekend.

(WHEREUPON, the above-entitled cause was continued to January 10, 2023 at 6:00 p.m.)

STATE OF ILLINOIS)
) ss:
COUNTY OF DU PAGE)

I, KRISTI LANDOLINA, Certified Shorthand Reporter, Notary Public in and for the County DuPage, State of Illinois, do hereby certify that previous to the commencement of the examination and testimony of the various witnesses herein, they were duly sworn by me to testify the truth in relation to the matters pertaining hereto; that the testimony given by said witnesses was reduced to writing by means of shorthand and thereafter transcribed into typewritten form; and that the foregoing is a true, correct and complete transcript of my shorthand notes so taken aforesaid.

IN TESTIMONY WHEREOF I have hereunto set my hand and affix my electronic signature this 20th day of January, A.D. 2023.

HEARING OFFICER PRICE: Good evening. This is the appointed hour for the resumption for the hearing on the transfer station application. One preliminary matter concerning Thursday night. This is our last hearing at this location. The next session is Thursday night at 6:00 p.m. in the high school cafeteria at West Chicago High School. The entrance is H, as in hotel. It's on the south side of the
06:00:35PM building. This information has been added to the city's website. Again, Thursday night we are at the high school in the cafeteria, Entrance H, as in hotel.

With that, Mr. Meza, you still have the floor in the middle of your examination of Mr. Hock. Mr. Hock, you're still under oath.

And unless there are any other preliminary matters, Mr. Meza, the floor is yours.

06:01:02PM MR. MEZA: Mr. Hock, just to make things go a little bit faster, I wanted to give the parties the order of exhibits that I hope to

go through so they can write it down and maybe -- I gave it to Mr. Hock already. 23, Exhibit 9 -- PWC 9, Exhibit 45, 46, and 47. And then Exhibit 38, Exhibit 43, 44, Exhibit 39, Exhibit 49, Exhibit 405, Exhibit 40, and Exhibit 701. May I start?

HEARING OFFICER PRICE: Yes.

CROSS-EXAMINATION
(Continued.)

BY MR. MEZA:

06:01:58PM Q. Mr. Hock, last week we ended talking about the Stormwater Pollution Prevention Plan. I wanted to now talk about Page 2-36 of your application, which you have titled Wildlife Hazard Mitigation. If you could take a second to just turn to that page. It's on Page 2-36.

THE WITNESS: Can you hear me okay?

HEARING OFFICER PRICE: Yep.

THE WITNESS: Great.

BY MR. MEZA:

06:02:50PM Q. So the next series of questions I'll be asking you is going to relate the wildlife hazard mitigation plan you have. So just to

remind some of the folks at the hearing, there's, actually, two ponds at the proposed facility; is that correct?

A. Yes.

Q. There's the west pond, which is in the front of the building, it's a smaller pond; is that correct?

A. It's just off of Powis Road, actually, just inside the fence, so it is to the west of the buildings.

06:03:21PM

Q. Okay. As you enter the facility, the pond is kind of between what's going to be the entrance and the exit; is that correct?

A. Yes.

Q. And then you have a pond on the east side of the facility, right?

A. Yes.

Q. That's a bigger pond, and it's kind of in the back of the facility, right?

06:03:41PM

A. Yes.

Q. Okay. Now, can you tell us how many miles there are between the closest point of the

DuPage Airport Authority and the west pond of your facility, how many miles is it, if you know?

A. I'm sorry. Can you repeat what measuring points you wanted me to use from the airport.

Q. Sure. The DuPage Airport -- So you know there's an airport across the street, right?

06:04:15PM A. Yes.

Q. It's called the DuPage Airport Authority, correct?

A. Yes.

Q. Do you know where the operations area of that airport is?

A. I'm not clear what you mean by "operations area."

Q. Where, like, the main building is or where the tower is?

06:04:32PM A. I would have to look on a map. I mean, it's set back in from their eastern property boundary quite a ways.

Q. Did you -- Did you try to calculate how many miles there was from the west pond, or the front of the facility, to either of those two locations?

A. When you say "either of those two locations," again, I'm not -- Do you mean from the tower or from -- from where?

Q. There's a tower, right?

A. Yes.

06:04:58PM Q. Did you try to -- Did you try to determine how many miles there was from the west pond to the tower?

A. No.

Q. Okay. There's another building that houses offices on the facility; is that correct? If you know.

A. I know that there's offices on the property where we've met with the DuPage Airport Authority.

06:05:20PM Q. Okay. From those offices to the west pond, did you figure out how many miles there was?

A. No.

Q. Did you figure out how many miles there was at all from the west pond to any area at the DuPage Airport Authority?

A. Like you said, it's right across the street. So did we calculate a distance, no.

Q. Now, let me direct your attention to PWC 23. That's the August 27th, 2020, memo that APTIM provided you and that you provided

06:06:00PM responses to. Okay. I want to direct your attention to Page 20 and 21 where Mr. Moose and APTIM are talking about the issue of tarping and the issue of proximity to airport and inconsistency with the circular.

If I could direct you to those two areas and if you can tell me when you're there.

(PWC Exhibit No. 23 marked for identification.)

BY THE WITNESS:

06:06:25PM A. I'm there.

Q. Now, Mr. Moose and APTIM, they had some questions about the proximity of this

facility to the airport, didn't they?

A. They did raise some questions, correct.

Q. In fact, they raised a number of questions, didn't they?

A. There's a variety of items listed here, so, yeah, I'll agree with that.

Q. And then directing your attention to Page 21, in fact, after identifying all of these issues, APTIM actually made another statement with regard to -- where it starts with, "These conditions," he states, "These conditions may provide a hazardous wildlife attractant."

Do you see that?

06:06:53PM

MR. MUELLER: I'm going to object, Mr. Hearing Officer. He's asking questions about a far previous draft of the application. Let him ask questions about what's in the application now.

06:07:27PM

HEARING OFFICER PRICE: In general, I agree with Mr. Mueller that -- You are going to tie this up, right?

MR. MEZA: Yes.

HEARING OFFICER PRICE: I have to say that in the last session I was disappointed that you didn't tie more up. You did tie up some of it. But it is the application, not the drafts, that are important. With the recognition that you've got to do that, it has to be about the application, not early drafts, I'll let you go a little farther.

06:07:54PM Overruled for now.

BY MR. MEZA:

Q. Mr. Hock, in your application you talked about issues relating to wildlife hazard mitigation; is that correct?

A. Yes. It's, actually, 2.4.18.

Q. In fact, prior to submitting your application or prior to LRS submitting their application, they took steps to determine what sort of hazard mitigation was necessary to avoid

06:08:22PM wildlife; is that correct?

A. Yeah. We did evaluate the issue and you misstated it a bit. We came up with steps,

yeah, to minimize any potential hazards.

Q. When we're talking about hazards and when you talk about the hazards in the application, you're talking about, like, birds that will fly up and might fly into planes; is that correct?

A. Predominantly, yes.

Q. Right. And it could cause damage to the plane and cause the plane to fail; is that correct?

06:09:00PM

A. Well, that's the concern that's expressed by the airport. I'm not an expert on exactly what damage they could do but, obviously, any damage is significant.

Q. It's your concern also, isn't it? Isn't it LRS's concern?

A. Sure, yeah.

Q. Because didn't LRS hire a company --

A. I'm sorry. I was trying to finish answering your question.

06:09:23PM

Q. Go ahead.

A. So, no, you're correct. So we did

come up with a very robust mitigation plan that we believe actually will make the site better, safer from the wildlife hazard mitigation than it even is today. The final items are all in the application. And as what you mentioned -- What you're referring to on a draft that's two and a half years old is somewhat irrelevant to me, but I'll continue to do my best to answer your questions.

06:09:56PM Q. The foundation of that mitigation plan came from an expert that LRS hired, didn't it?

A. Pieces -- Pieces definitely did, yes.

Q. And that expert is a company called Loomacres; isn't that correct?

A. Yeah, we did hire a company called Loomacres to help us with our evaluation. Absolutely.

Q. Because they are experts in identifying wildlife hazard -- hazards and

06:10:28PM helping you come up with mitigation; is that correct?

A. Yes.

Q. Loomacres came up highly recommended to you; is that correct?

A. They were recommended. I don't remember exactly from who, but it did come through a referral, if my memory is correct.

Q. In fact, after Loomacres -- So Loomacres came to the proposed site, correct?

A. They did.

Q. And they did a survey of the site, correct?

06:11:07PM

A. They did.

Q. After they did a survey of the site, they came up with a report, correct?

A. They did.

Q. And you included -- LRS included that report in its initial application, didn't it?

A. It's not in the application. We did provide it to APTIM early in the process and then a number of things changed and the report really became outdated from a number of aspects so we no longer included it in the report because it just wasn't necessary. What we did

06:11:40PM

is we just took the important pieces, which is what we were going to do going forward, and that's exactly what's in the application and that's exactly what we provided to the DuPage Airport Authority, so it's the exact same information that's in our agreement with them.

Q. But you didn't provide all of the information that the expert that you hired found on your site, did you?

06:12:11PM A. I don't understand the question.

Q. Well, didn't your expert find on Page 3 of Exhibit 9 that rock pigeons were already inside the sorting building?

(PWC Exhibit No. 9 marked for identification.)

BY THE WITNESS:

A. Of course there were some -- some birds already on the property. That's the whole point, is to understand what's there and come up

06:12:39PM with measures to minimize any -- any wildlife hazards going forward, so that's what we did.

Q. That expert also found that already at

that site there were birds that were loafing around in the rafters; is that correct? That's on Page 3 of Exhibit 9.

A. Uh-huh. Yeah. After the report was written, I, actually, followed up on a number of items in here. There's actually one that's already referenced. It kind of pained my soul, but they recommended taking down a couple large trees. I'm a big fan of trees, but -- So we already took it down.

06:13:21PM

There's a number of things in here that we already did, like the tree. So if what you're trying to do is compare this report to our application, again, conditions changed. You know, we did all of the improvements on the east side of the property. Again, we took the relevant important pieces of the report and put it in the application, which is what everybody agreed to, because it will work.

06:13:49PM

Q. Loomacres found various survey points in their review of your site, didn't they?

A. I think what you're referring to is

they went to different locations and did -- and observed the conditions to see if there were any wildlife present and they, actually, went to some off-site locations to do the same thing as well. So, yeah, they did a nice -- I thought they did a nice, thorough job.

Q. In fact, they found that Survey Point 1 was the small pond that we were just talking about on the west side, wasn't it? That's on Page 8.

06:14:31PM

In fact, they have at photo of it, don't they?

MR. MUELLER: Mr. Price, I'm going to object again. He continues to harp on a 2019 report that comments on conditions which are no longer in existence.

HEARING OFFICER PRICE: Well, that's what we need to establish. So I'm going to overrule it for now. Loomacres was previewed in their opening statement about the omission of information. So if, in fact, you're correct, Mr. Mueller, that will be the testimony, but we

06:14:58PM

need to establish that by an actual witness.
Overruled.
BY MR. MEZA:
Q. Mr. Hock, didn't the expert that LRS hired found -- find that Survey .1, which was the small pond, there were small perching birds, blackbirds?
A. They did. They also found that employees placed devices designed to scare
06:15:33PM wildlife around the pond. There's decoys out there. So -- We have continued to -- to monitor and manage it. Again, the point of all of this is if the facility is approved, we're actually going to do additional things as well.
Q. They found that blackbirds can pose a significant hazard to aircrafts due to their tendencies to form moderate-to-large-sized flocks, didn't they?
A. I don't see where you're reading, but
06:16:17PM I'm trusting that you're just reading a --
Q. Let me direct your attention to Page 10.

A. -- that you're just cherry picking phrases out of the report.

Q. Let me direct your attention to Page 10. Do you see that little image of the west pond?

A. I don't see any images on Page 10.

HEARING OFFICER PRICE: Do you mean Figure 10?

BY MR. MEZA:

06:17:00PM Q. Yes. It was right below Figure 11 where it says "Survey Points."

Do you see that?

HEARING OFFICER PRICE: That's on Page 8.

MR. MEZA: Yes, Page 8. I apologize.

BY MR. MEZA:

Q. Do you see where he identifies Survey Point 1 being the west pond?

A. Yes.

06:17:25PM Q. You told APTIM that you were not -- LRS was not going to include the Loomacres report in the final application; is that

correct?

A. I don't recall what I told them, but it's not in the report for the reasons I just mentioned.

Q. Let me direct your attention to Exhibit 23, Page 21, the last paragraph.

HEARING OFFICER PRICE: We have established it's not in the application.

MR. MEZA: Right. But the question was whether or not he said --

06:18:18PM

HEARING OFFICER PRICE: It doesn't matter.

MR. MEZA: I want to ask him why he didn't include it.

HEARING OFFICER PRICE: Then ask the question.

BY MR. MEZA:

Q. Okay. Why didn't you include it?

A. I thought I just told you. There's a number of conditions that have changed. Like, for instance, if you look at the pictures of the east pond, the east pond has been expanded, the

06:18:30PM

tall grass is no longer present. That was one of the recommendations that they made, that you don't want tall grass out there because birds can kind of hide in there and they are harder to see. That was a recommendation we took to heart and there's no longer tall grass out there.

Like I said, I mentioned the tree that we removed. So, again, the conditions have changed. There was no relevance to putting an outdated report in the application.

06:19:12PM

Q. Mr. Hock, let me direct your attention to Page 2-13 of your application.

A. Okay.

Q. Now, you're familiar with what's referred to as the runway protection zone, aren't you?

A. Generally, yes.

MR. MEZA: Could we have Exhibit 45 on the screen.

06:19:58PM

(PWC Exhibit No. 45 marked for identification.)

BY MR. MEZA:

Q. This is Appendix 2-G1. Can you take a look at that, Mr. Hock? Is that a photograph of the runway protection zone that LRS includes in their application?

A. Yes. That was provided by CH2M Hill, which is shown over to the right, who is a consultant for the DuPage Airport Authority. That runway protection zone was determined by them and provided to us.

06:20:31PM

Q. Tell us what a runway protection zone is and why it's necessary to be -- why we need that -- why the airport needs that runway protection zone?

A. Well, it's a trapezoidal shape, just as it shows up there. My recollection is it extends about a thousand feet out from the edge of the runway. And you can actually see -- I think it's Runway 28 there. And, you know, the exact reasons are actually -- Well, I think the general idea is you do not -- you want generally a clear area in that runway protection zone.

06:21:06PM

Q. So the airport doesn't want anything in that area; is that correct?

A. No.

Q. Okay. What do you mean then by they just want a "clear area," then? What does that mean?

A. I think where you're going, and I think it's a fair question, is that the runway protection zone is on part of our property. So

06:21:40PM we talked directly with the airport authority about it, and they were fine with the facility. That's why they gave us the information, that's why we included it in the agreement, and the fact that the runway protection zone is fine is actually kind of cited or referenced in our agreement with them.

Q. Let me direct your attention to 2-13 of your application again.

A. Uh-huh.

06:22:08PM Q. Directing your attention to the last paragraph that starts with, "As noted."

Do you see that?

A. Yes.
Q. So, there, you're referring to FAA Advisory Circulars; is that correct?
A. Yes.
Q. What are FAA Advisory Circulars?
A. It's information published by Federal Aviation Administration, which is the FAA. And they are not rules or regulations, but they are advisory circulars. So 13-A, actually, talks about the design of airports and I think it's -- yeah, Section 3-10 talks specifically about runway protection zones.
Q. In fact, you have on here that the runway protection zone's function is to enhance the protection of people and property on the ground through the airport ownership?
A. Correct. You just recited Bullet Item 1 on the -- you know, in our application on that page.
Q. The western portion of the facility is almost entirely in the runway protection zone; is that correct?

A. You can see it on the map. You know, so the area in yellow is the runway protection zone, and the area in yellow that's on our property, you know, that is on our property. Absolutely.

You can -- you can probably -- You know, the best reference is the buildings shown on the southern portion to get an idea of how much -- of where it extends to.

06:23:38PM Q. It goes almost up to kind of the front of that building on the lower right; is that correct?

A. Right. So there's no -- There's no waste handling operations on that portion. It's got the pond, it's got our berm, it's got the trees, and it's -- Other than that, it's parking.

Q. I've got this little light here. What's underneath here? What is there? Can you

06:24:00PM see what that is, or not?

A. I think what you're referring to or where the pointer is is the western pond.

Q. This would be the entrance, the bottom?
A. You look pretty close.
Q. And over here would be the exit now (indicating)?
A. Correct. That would be the new exit we would be opening up.
MR. MEZA: Can we -- Can we look at Exhibit 46.
06:24:22PM (PWC Exhibit No. 46 marked for identification.)
BY MR. MEZA:
Q. So this is your facility here; is that correct?
A. It is.
Q. So the runway protection zone would cut here, and this is Runway 33; is that right?
A. I don't remember the number of that runway but ...
06:24:53PM Q. That's a runway. How about that?
A. It is a runway.
MR. MEZA: Can we look at PWC 47.

(PWC Exhibit No. 47 marked for identification.)

BY MR. MEZA:

Q. Now this is kind of a different angle shot, a close-up. So would you agree that kind of where I have this little pointer going up, that's the western part, that's all in the runway protection zone; is that correct?

A. Roughly, yeah. Just as it's shown on the previous portion where it was yellow. So it's still a bit west of the building. But just as I mentioned, it covers the pond, the trees, the berm, and some parking areas. And that's exactly what we showed to and discussed with the DuPage Airport Authority, which they were completely fine with.

06:25:20PM

Q. Mr. Hock, isn't part of the proposed facility in the western portion of the facility in the runway protection zone?

06:25:52PM

A. I'm not sure I understood your question.

Q. Sure. Isn't it true that part of the

operations activity occurs in the western part of the facility that's located within the runway protection zone?

A. I think I already previously stated that the berms, the trees, the entrance, and parking areas are within the runway protection zone, which is, again, exactly what we showed the DuPage Airport Authority and they were fine with it.

06:26:30PM Q. But it's more than just parking, isn't it?

A. It's just parking.

MR. MEZA: Can we put Exhibit 38 up.

(PWC Exhibit No. 38 marked for identification.)

BY MR. MEZA:

Q. Do you recognize Exhibit 38?

A. Yes. That's our -- I don't remember which drawing, but that's our traffic flow plan

06:26:54PM from the application. It appears so.

MR. MEZA: Could you put up -- I'm sorry, Mr. Hock.

Can you put up the one that's not blown up?

That's fine. I can work with this.

BY MR. MEZA:

Q. Let me ask you this, Mr. Hock: Where I'm here with the pointer at the office, is this about the area where the runway protection zone ends?

Right where it says -- Like, the straight line, 60.40 straight down, is that where it ends about?

A. I'd have to look back. I think it's maybe a little bit west of there.

Q. About how far west? By where it says 45 -- By where it says "45.04," there, going up and down?

A. Probably that general vicinity.

Q. Okay. But this area west of that is part of the facility. Isn't this where vehicles cue up to get weighed for the scale on the driveway?

A. What you're pointing to is the

entrance, which is the driveway where the trucks enter.

Q. Isn't that where trucks cue up and wait before they get weighed in this scale -- or one of these scales?

A. Yeah. They really don't have to wait there at all. The trucks, as they enter the scale, everything is so electronic now that the amount of time they spend on that scale is about the time it takes to stop at a stop sign. But if two trucks come at the exact same moment, there could be a truck parked in that area, sure.

06:28:36PM

Q. Do you see where it says, Spotter base location, traffic control person?

A. Uh-huh.

Q. Do you see that?

A. Yes.

Q. Is that part of the proposed facility, that you're going to have a spotter at this base location directing traffic?

06:28:53PM

A. That's exactly what it talks about is

potentially having a spotter there just to make sure people head in the right direction and know where they are going as they enter the facility.

Q. Right. So this is part of the operations, isn't it?

A. We absolutely plan to have a spotter up front by the entrance as they come in the facility.

Q. Is having a spotter part of the proposed facility; yes or no?

06:29:31PM

A. Yes, of course it is.

Q. So part of the proposed facility operations is within the runway protection zone, isn't it?

A. You just saw it. Yeah, that portion of our facility is within the runway protection zone. Absolutely.

Q. You're not saying that the protection of people and property on the west side is less important than on the east side, are you?

06:30:03PM

MR. MUELLER: That's argumentative.

HEARING OFFICER PRICE: Sustained.

BY MR. MEZA:

Q. Now, let me direct your attention to PWC 43.

(PWC Exhibit No. 43 marked for identification.)

BY THE WITNESS:

A. The DuPage Airport Authority --

HEARING OFFICER PRICE: There's no question.

06:30:24PM THE WITNESS: Sorry.

BY MR. MEZA:

Q. Are you at 43, sir?

A. I have it.

Q. Now, PWC 43 is one of these advisory circulars that we were talking about; is that correct?

A. It is.

Q. In fact, this is -- you actually cited, I think, an expired one, the 5200-33B, but this is the actual current one.

06:30:51PM Were you aware of that or not?

A. I'm very aware that the update -- the

circular was updated in February of 2020. So, in classic fashion, when we originally drafted the agreement with the DuPage Airport Authority, it was 2019, and we referenced the advisory circular that was in play at the time. And then we were finalizing it and they updated the circular. So if you look at the agreement that's in the application, it references the updated correct circular.

06:31:25PM Q. On Page 2-13, you reference 5200-33B. That's just a typo. You meant to reference the most updated one, didn't you?

A. Oh, yeah, that's a typo. That should be 33C.

Q. That was my other point.

A. Yeah.

Q. You made a mistake on it referencing an older circular, right?

A. Yeah. We just missed updating it.

06:31:47PM Q. But there's probably nothing majorly significant that changed between the B and the C version, right?

A. No. I, at the time, went back and actually kind of compared the two, and I didn't note anything substantive.

Q. Now, Mr. Hock, let me direct your attention to 1.4 of Exhibit PWC 43. That's on Page 1-2.

A. Yes. I see it.

Q. Isn't it true that the FAA recommends a distance of five miles between the closest

06:33:06PM point of the airport's aircraft operations area and the hazardous wildlife tracking?

A. What you just referenced is what this section says, but there's additional clarification in the document about how certain uses can be compatible with safe airport operations.

Q. Are you talking about 2.2.4, where it says "enclosed trash transfer stations" on 2-3 -- Page 2-13?

06:33:53PM A. Yes.

Q. So, there, it's talking about enclosed trash transfer stations; is that correct?

A. Yes.
Q. But doesn't it say -- Let's see. Enclosed waste handling facilities that receives garbage behind closed doors, process it via compaction, incineration, or similar manner; and remove all residue by enclosed vehicles generally are compatible with safe airport operations --
HEARING OFFICER PRICE: Mr. Meza, you need to slow down and I need you to speak up.
06:34:28PM
MR. MEZA: Okay.
BY MR. MEZA:
Q. Do you see where I read, Mr. Hock?
A. I do.
Q. But doesn't it also say, Provided they are constructed and operated properly and are not located on airport property or within the runway protection zone?
A. Which is why I mentioned before it was a fair question about the runway protection zone, and that's why we talked specifically about the DuPage Airport Authority, about it
06:34:55PM

showing the same drawings that you put up on the screen, and they agreed, and it's clearly memorialized in the agreement -- if you put up a another exhibit here -- that they were good with the activities that were occurring in that area.

Q. Doesn't it also say that trash transfer facilities that are open on one or more sides -- I'm going to skip a little bit. It says, Or use semitrailers that leak or have
06:35:36PM trash clinging to the outside do not meet the FAA's definition of a fully enclosed trash transfer station?

A. Which is why our -- It does. That's why our transfer station is not open on one or more sides and will not have trash that leaks or clings to the outside of the trucks.

Q. Now, one of the concerns was the location to the transfer station to -- in fact, to the airport because of the wildlife
06:36:11PM attractants; isn't that correct?

A. I'm not sure that I understood your question.

Q. I mean, the whole reason why you have a section about wildlife attraction mitigation in airports is because you want to make sure that you're providing the reader with information that you're mitigating, you're trying to get rid of any wildlife attraction so it doesn't cause harm to an airplane. Isn't that what you're doing?

A. Yeah, that's a fair summary.

06:36:37PM Q. And you mentioned the FAA circular that we just discussed in your application, correct?

A. Yes. Like I said, we've included the agreement with the DuPage Airport Authority. And, again, if you look at it, we actually attached the same design and operational standards that are incorporated in here, including the drawings, including our operations plan, and gave them all of the information about

06:37:06PM what we're doing out there -- or planning to do, I should say.

Q. So are you saying that you attached

all of the information and the best-referenced information that you knew about?

A. Yeah. We attached all of the applicable information. We mainly gave them the operations plan and the drawings and --

Q. But did you attach the best reference of which you are aware?

A. We gave them all of the applicable information in terms of our design and operations.

06:37:39PM

Q. In your application, Mr. Hock, did you include what you describe as the best reference for which you are aware; yes or no?

A. That's not what I said.

Q. I know. I'm asking you if you did. Did you include what you refer to as the best reference for which we are aware in your application?

A. I think you're just -- I think you're cherry picking and twisting my words.

06:38:03PM

Q. All right. Let's take a look at Exhibit 23 again. Page 21. Have you ever heard

of DOT/FAA/AR-09/62? Have you ever heard of that publication?

A. I'm sorry. Counsel, if you could -- I didn't keep up with where you were directing me.

Q. Sure. Let me direct you -- If you're on Page 21, let me direct your attention to the first, second, third -- fourth paragraph that starts with the, Proposed transfer station.

Do you see that?

06:38:45PM A. We're in the application?

HEARING OFFICER PRICE: No. PWC 23.

BY MR. MEZA:

Q. Exhibit PWC 23.

HEARING OFFICER PRICE: Page 21.

BY THE WITNESS:

A. Okay. I'm there.

Q. So it's the paragraph that starts, The proposed transfer station is within 10,000 of the DuPage Airport.

06:39:06PM Do you see that?

A. Yes.

Q. So Mr. Moose is saying, hey, it's too

close to the airport. And didn't you say to him DOT/FAA/AR-09/62 is the best reference for which we are aware?

MR. MUELLER: I'm going to object. I don't see where the document says Mr. Moose said it was too close to the airport.

MR. MEZA: Okay. I'll withdraw that portion of it.

BY MR. MEZA:

06:39:38PM Q. Didn't you say in response to whatever question Mr. Moose asked, or whatever he was talking about, DOT/FAA is the best reference for which we are aware?

A. Now I understand how you're trying to twist my words. So, yeah, you're reading it correctly. And what you're referring to is a document -- I believe it's a 2010 document where they describe what, you know, open and partially open and fully enclosed transfer station means.

06:40:14PM Q. Can you take a look at PWC 44?

Did you find it?

A. Yes.

(PWC Exhibit No. 44 marked for identification.)

BY MR. MEZA:

Q. Why don't you tell us, is this DOT/FAA/AR-09/62 that I have been asking you about?

A. Yes, it is.

Q. Why don't you tell us what the name of this document is?

06:41:01PM A. It says, "Evaluation of Trash Transfer Facilities As Bird Attractants."

Q. So you didn't include this FAA document entitled "Evaluation of Trash Transfer Facilities As Bird Attractants" in your application, even though you had told Mr. Moose this is the best reference for which we are aware, did you?

A. No. Because there was no need to. It's -- It's just ancillary information that's

06:41:34PM not relevant because we went through this whole exercise with the DuPage Airport Authority and their consultants, who were also well aware of

this document, and they performed their own independent evaluation with their own consultant. And, again, it's memorialized in the agreement that the facility meets the definition of a fully enclosed transfer station.

Q. Let me direct your attention to Page 8 of this document that you did not include, this best reference. Take a look at the last paragraph that starts with, Bird use at trash

06:42:21PM transfer facilities vary considerably among those buildings that were of the same design.

Do you see that?

A. I do.

Q. Doesn't this FAA document state that the greatest amount of variation in the number of birds using trash transfer facilities occurred in -- occurred among the fully enclosed trash transfer facilities?

A. It does. I think it will also talk

06:42:50PM about how they were the lowest amount of birds seen. And if you look on another page, it shows a picture of what a fully enclosed trash

transfer facility looks like. And what we're proposing at our facility is actually well beyond what is discussed in this document as meeting the definition of a fully enclosed transfer facility.

Q. Let me direct your attention to Page 13, Mr. Hock.

A. Uh-huh.

Q. Under Paragraph 4, where it says, The number of birds using trash transfer stations differed among facilities of different buildings, but not in a consistent pattern.

Do you see that?

A. I do.

Q. Doesn't it say it was originally hypothesized that the number of birds actually using trash transfer facilities would decrease as the trash transfer buildings became more enclosed?

A. That's a correct reading of the sentence you had mentioned.

Q. But then it states, However, the data

from this study does not support that hypothesis?

A. Yeah. That's all language that's in here. There's -- That's partially why -- You know, we recognize that birds and hazards is kind of a dynamic or a potentially changing thing. So while you look at the mitigation packet, there's a variety of things we're proposing to do. And we talk about conducting routine surveys, having communications with the airport. And we recognize that it may be needed to vary exactly what we're doing, so we want to have trained people. But everything we're doing, if you look at it, it's well beyond what they use as their -- they use to describe what meets the definition of a fully enclosed transfer facility and it's why the DuPage Airport Authority consultants agreed that we clearly meet this definition and why it's memorialized in the agreement.

Q. But you clearly didn't include your best reference, did you? Yes or no?

MR. MUELLER: That's argumentative.

HEARING OFFICER PRICE: It's a simple question. And the answer is: He didn't include it.

The objection is sustained. There's no question, Mr. --

THE WITNESS: Sorry.

HEARING OFFICER PRICE: Next question.

BY MR. MEZA:

06:45:26PM Q. Now, do you consider yourself an expert in waste transfer stations?

HEARING OFFICER PRICE: That's been established. He's here as an expert. That's not in question.

BY MR. MEZA:

Q. Are you familiar with the brochure entitled EPA Brochure Waste Transfer Stations: A Manual For Decisionmaking, June 20 --

A. Yes. It's a 2002 manual. It's good

06:45:53PM general information. Like I said, it's 20 years old. So some of the information there is a little outdated and antiquated. But, yeah, I'm

generally familiar with the document.

Q. You have read it; is that correct?

A. Yeah, I have reviewed it from time to time. Haven't really looked at it in quite a while. It's -- Again, it's a 20-year-old document.

Q. In this 20-year-old document it provides -- companies looking to place or site a transfer station in a community, it provides them with information that they should consider, doesn't it?

06:46:30PM

A. It provides a whole bunch of information. And, yeah, there's some general discussion about that.

Q. Is that a yes or a no?

A. I'm sorry. Could you ask the question again?

Q. Sure. Does this brochure from the United States Environmental Protection Agency provide companies, towns, individuals with information that they should consider when siting a waste transfer station?

06:46:55PM

MR. MUELLER: I'm going to object. I don't think "they should consider" is anywhere in this document.

HEARING OFFICER PRICE: Overruled.

You can answer that, Mr. Hock.

BY THE WITNESS:

A. It's -- It's a guidance document. It's just out there to give people information that may be helpful to them as they consider these types of projects.

06:47:25PM

Q. It's a guidance document by the U.S. EPA, correct?

A. Yes.

Q. So what steps did you take to ensure that a siting decision with regard to the West Chicago -- with the LRS proposed siting did not impose a disproportionate impact or burden upon low-income or minority community in West Chicago?

06:47:54PM

MR. MUELLER: I'm going to object. That's not a criterion.

HEARING OFFICER PRICE: Sustained.

BY MR. MEZA:

Q. Doesn't it state to take that into consideration in the EPA manual?

MR. MUELLER: Object again.

HEARING OFFICER PRICE: Sustained.

BY MR. MEZA:

Q. One of the other things mentioned in the manual is requiring minimum distances between transfer stations; isn't that correct?

06:48:20PM MR. MUELLER: I'm going to object. There's no requirements in here.

HEARING OFFICER PRICE: Also not a 39.2 requirement. Sustained.

MR. MEZA: I understand that, but it says it in the manual.

HEARING OFFICER PRICE: The manual is not the criteria. The criteria are set forth in the statute. We're not here to see if we comply with a 20-year-old U.S. EPA document. It's

06:48:42PM 39.2. Let's stay focused.

BY MR. MEZA:

Q. Now, Mr. Hock, would you agree or

disagree that there's several places in your application that you talked about tarping?

A. Yes.

Q. Tell us again what tarping is.

A. So tarping is, whether it's a vehicle that's entering the facility or leaving, if it -- if the top is open, meaning it's not a fully enclosed vehicle, like a packer truck. To prevent any debris or material from blowing or

06:49:29PM being exposed, we put a heavy-duty tarp over the top of it and cinch it down and make sure that it's fastened. For those reasons, again, to make sure that there's no material or waste that's exposed or can blow.

Q. So you talk about tarping in the section where you're discussing litter, right, because if a vehicle isn't tarped and it has trash, it could cause litter, right?

A. Yeah. So that's one of the things we

06:49:56PM do talk about to prevent litter, is to make sure that, again -- Maybe I should say this: Most of the vehicles coming in with -- with municipal

solid waste are fully contained. They are within a -- you know, the metal structure of the truck. The loads that may come in with construction or demolition debris or some roll-off boxes or the transfer trailers that leave do not have a metal top, so those are the ones that we tarp.

Q. Some of the vehicles that enter your facility with trash or construction and debris should be tarped also, right?

06:50:38PM

A. Yes.

Q. For the same reasons, right, because stuff flies out and it can cause litter and maybe can cause harm, right?

A. Material may fly out and really -- Yeah, it's really a litter-control procedure or protocol.

Q. After the trash transfer trailers get filled with municipal solid waste in the waste transfer station, they leave the facility and go to the landfill; is that correct?

06:51:12PM

A. They do.

Q. Before they leave, they are supposed to be tarped; is that correct?

A. Yes. And they are. We actually talk about even before they leave the transfer building, those loads will be securely tarped.

Q. They can be tarped automatically, through an automatic tarper, or they have to be tarped manually; is that correct?

A. Yes.

06:51:42PM Q. What does it mean to tarp a trash transfer trailer manually? What does that mean? What does that entail?

A. Generally speaking, it's something where the driver has to -- well, manually pull the tarp over the top of the truck.

Q. So the driver has to get out of his truck, jump on top of the truck, and start pulling the truck tarp over, right?

A. They do.

06:52:16PM Q. How long is the trailer; how many feet?

A. In the range of 50, 55 feet.

Q. So for 55 feet he has to unroll the tarp. And does he have to hold it down with bungee cords on the side?

A. That is what they would do in that case.

Q. For your facility -- your proposed facility, that would be done after it gets loaded but before it exits the facility, right?

A. No.

06:52:43PM Q. When would it be done?

A. We're not going to use manual tarping at all. We're going to require -- So most of the trucks -- the transfer trailers that would be used are Lakeshore Recycling's own vehicle. They actually have a fleet of, oh, 100-plus transfer trailers now, and there's a good portion of them that already have auto tarpers. The only transfer trailers that would be allowed to be used at our facility would have auto

06:53:12PM tarpers.

Q. 25 of the trucks have auto tarpers, right?

A. When I had talked to them last about a fourth -- Yeah, so 25 out of the 100, and each year they are continuing to add more and more.

Q. So as of today, only 25 percent, 25 out of the 100 trucks, have automatic tarpers, right?

A. I'm not sure exactly what it is today. It's been a few months since I asked. It's something more than -- It's 25 percent or more. Like I said, by the time we begin operation of this facility, which is, you know, at least two years down the road before we go -- you know, before we get through the approval process and then we actually have to build the facility, we would have auto tarpers on however many that we need to to make sure that any that are using this facility have auto tarpers.

Q. On Page 2-31 of your application, which was dated, what, September 14th, 2022, you had, LRS has a fleet of approximately 100 transfer trailers and approximately 25 are equipped with these auto tarps, right?

A. Right. That's what I mentioned. That was as of a few months ago when we submitted the application.

Q. How many more do you have now?

A. I don't know.

Q. One more? Two more? 26? 27?

A. I said I don't know. I would have to ask the Lakeshore folks. Again, it doesn't really matter what it is today. What matters is what it will be when we begin operation of this facility, which is still a good couple of years away.

06:55:01PM

Q. What matters is if it's not an auto tarper, some guy has to jump on top of the truck and unwrap it. How long does it take a person to do that?

MR. MUELLER: Objection; he testified it won't happen.

HEARING OFFICER PRICE: Sustained. He laid foundation for a good condition here, Mr. Meza. I think we can move on.

06:55:18PM

BY MR. MEZA:

Q. Do you know how many minutes?

MR. MUELLER: Objection again.

HEARING OFFICER PRICE: Sustained. He said they are not going to use manual tarping. They will not be permitted. Everybody wrote down that's going to be a condition of approval.

Next.

BY MR. MEZA:

06:55:43PM Q. Mr. Hock, does LRS have a tarping policy?

A. Well, yes.

Q. Is it included in the application?

A. Yes. I'm trying to remember where we put it.

Q. What are you referring to in the application?

HEARING OFFICER PRICE: Well, where are we headed with this, Mr. Meza? He testified,

06:56:19PM which is part of the application process, that no manual tarping will be permitted. So everybody is going to put down for the city that

if they recommend approval, that it be on the condition that it be only auto tarpers. You have done your job. What's next about tarping?

MR. MEZA: Let's go to Exhibit 40. Can we put Exhibit 40 on the screen?

(PWC Exhibit No. 40 marked for identification.)

BY MR. MEZA:

Q. Is Exhibit 40 your auto tarping

06:56:46PM policy -- or your tarping policy? I'm sorry. Not auto tarping. Just tarping policy.

Look at Exhibit 40. It might be easier to find. It should be in one of the exhibits I handed you.

MR. JONES: Which one is 40? I don't have a 4 0.

MR. MEZA: It's the West DuPage Recycling and Transfer Station policy. It's got the logo on top.

06:57:15PM THE WITNESS: Yeah, I remember seeing it. Yes, this is correct.

BY MR. MEZA:

Q. Is this the same auto tarping -- I'm sorry.

Is this the same tarping policy that LRS has across all of its facilities?

A. I don't know what they do at every facility, but this is the policy that will be used at the West DuPage Recycling and Transfer Station, which is what it's titled and why it

06:57:45PM was included.

Q. In fact, according to LRS's policy, it says that all incoming and outgoing vehicles will be fully and properly tarped, doesn't it?

A. Yeah. The wording is actually "fully enclosed" or "properly tarped." And, again, the "fully enclosed" refers, again, like, a packer truck that the metal body or steel body of the truck fully encloses it and completely agreed that we want all incoming vehicles to be fully

06:58:17PM enclosed or properly tarped as well.

Q. That's because in the policy you actually cite the state law that says no person

shall operate it if it's not properly tarped; is that correct?

A. Yes.

Q. And you or LRS knows that it doesn't own all of the trucks coming in, does it? It allows third parties to come in and drop trash; is that correct?

A. Correct. That's why we have an enforcement section down below. So it is -- we

06:58:48PM can't control every person coming in at every moment, but what we can do -- and we do have customers -- is we can -- if something like that occurs, we would notify the driver, we would remind them, if needed, we would call their company representative, and if it really became -- if it happened multiple times, we would just simply ban that driver's use of the site. It's actually very effective. I have been involved with other facilities that had a

06:59:18PM similar policy and, yeah, once you -- Once you throw a driver off the property, it gets everybody's attention.

Q. So all incoming vehicles hauling waste will be fully enclosed or properly tarped, correct?

A. Yes.

Q. But if they are not, they are going to be reminded of the tarping policy, right?

A. That is one of the steps.

Q. They are not going to be prohibited from entering your facility, are they?

06:59:46PM A. Well, no. Again, what you have to realize is that --

Q. You're just going to remind the driver, hey --

MR. MUELLER: You interrupted him.

HEARING OFFICER PRICE: I agree, Mr. Mueller. Mr. Hock has a tendency to do more than just answer the question. I'm going to let it go a little bit. Come on. We need to get this done. Let's not step on each other.

07:00:10PM You can answer. Mr. Hock, focus on the question and the answer, and Mr. Meza will allow you to finish. We don't need an editorial

for every yes-or-no question.
BY THE WITNESS:
A. In this case all I was trying to say is the majority of the customers that use the site are regular customers. These are -- These are people who do this for a living, and they understand the rules and it's -- It's a fairly straightforward policy.
Q. Right. But if it's not a regular
07:00:38PM customer and they come untarped, you're going to remind them of the policy, correct?
A. Of course we will.
Q. LRS has the ability to prohibit anybody from entering the facility if it's untarped, doesn't it?
A. We have the right to prohibit anybody from using the facility for whatever reason we'd like.
Q. But you won't do that, you'll just
07:01:00PM remind them, right?
A. It seems a lot safer and appropriate if it's already there, if it's a regular

customer and it's waste to be disposed of, yes, we would take it and we would -- we would accept the waste and then take the appropriate measures to make sure it doesn't happen again.

Q. If it does happen again multiple incidents, that's not going to necessarily ban them, it may result in a banning, right?

A. There's a lot of different circumstances, so that's why it's worded the way it is.

07:01:35PM

Q. Because if you ban a truck that's untarped, you can't make the money from the tipping fees, right?

MR. MUELLER: Argumentative.

HEARING OFFICER PRICE: Overruled.

BY MR. MEZA:

Q. Is that correct?

A. That's not the focus of the decision-making in this case.

07:01:59PM

Q. Do you remember the question?

HEARING OFFICER PRICE: That's an answer to the question. Next question.

BY MR. MEZA:

Q. Will you be able to stop 100 percent of hazardous material entering this facility; yes or no?

A. Depends what you mean by "hazardous material." But I think where you're going, the answer is no.

Q. There's a specific definition of hazardous material, isn't there?

07:02:38PM A. We actually included a whole list of unacceptable waste. And it is true that unacceptable wastes do come until sometimes, such as tires or appliances or landscape waste. We have procedures to manage that waste appropriately.

Q. Now, you said you weren't sure if this policy applies to the California facility; is that correct?

HEARING OFFICER PRICE: Mr. Meza,

07:03:12PM that's not a question. Which policy?

MR. MEZA: I'm sorry. This tarping policy that's on the screen, Exhibit 40.

BY THE WITNESS:

A. I don't know.

HEARING OFFICER PRICE: Why are we talking about California?

MR. MEZA: I'm trying to find out if the tarping policy is applied across the board. If not, we can just show Exhibit 701, Judge -- Hearing Officer.

MR. MUELLER: He has already testified he doesn't know.

07:03:38PM

HEARING OFFICER PRICE: 701 is the video?

MR. MEZA: 701 is another video reflecting tarping and untarped vehicles at a facility.

HEARING OFFICER PRICE: We're going to focus on this facility, not California. So let's move on from that.

MR. MEZA: Let me have a second.

07:04:54PM

BY MR. MEZA:

Q. Mr. Hock, do you know if the proposed facility in West Chicago is going to be operated

any differently than any other facility of LRS?

MR. MUELLER: Objection; that's a vague question.

HEARING OFFICER PRICE: I'm going to sustain it for the lack of foundation. We have not established that he knows how LRS operates all of its other facilities. What's been in front of you is what the proposed operation plan is here. That's fair game.

07:05:23PM BY MR. MEZA:

Q. Do you know if the proposed operation plan for this facility is the same --

HEARING OFFICER PRICE: He already testified he doesn't know. There's no foundation for that. Let's focus on -- If you have a problem with this plan, focus on it. He's not going to answer for every LRS facility. That's not relevant.

MR. MEZA: What's relevant is whether

07:05:44PM or not this facility is going to allow untarped vehicles.

HEARING OFFICER PRICE: We have been

over that ground, and the answer is no. It's an auto tarp policy, and you have been through what happens when someone shows up without a tarp on. Move on.

MR. MEZA: Can we show Exhibit 701?

HEARING OFFICER PRICE: 701 is the California station?

MR. MEZA: For the untarped.

HEARING OFFICER PRICE: I'm not letting it in. Move on. We're not talking about the California station. You can take this up as an error. It's not relevant to this proposal for this station. Move on.

He doesn't know about LRS operations in other places. I don't care how many other scenes you want to show of LRS at any other facility. If you have a problem how this policy is written, let's hear it. You did a good job establishing we have to have a policy about auto tarping. I don't know what more you want. We're not watching a California video. You're prejudicing the right of the public to

have their opportunity to speak. I'm not putting it in. It's too long. Next.

MR. MEZA: It's only two minutes.

HEARING OFFICER PRICE: No. Move on.

MR. MEZA: Since I can't play the video, I don't have any further questions for this witness.

HEARING OFFICER PRICE: It would be -- PODER would be next. Any questions from PODER?

07:07:17PM MS. ALCÁNTAR-GARCIA: Please give me a moment to confer first.

HEARING OFFICER PRICE: Okay.

MR. WEINSTOCK: Mr. Hearing Officer, if you would like to pass PODER and ask another party.

HEARING OFFICER PRICE: That's not how it works. The city has the right to be last.

MR. WEINSTOCK: Understood.

MS. ALCÁNTAR-GARCIA: Pardon me. Okay.

07:10:04PM Some questions we have from our organization, PODER.

CROSS-EXAMINATION

BY MS. ALCÁNTAR-GARCIA:

Q. Mr. Hock, the proposed facility is a waste transfer station where diesel trucks will come in and out; is that correct? Right?

A. Yes.

Q. Did you do any evaluation of the diesel emissions from the trucks?

A. Well, we talked about it in Criterion 1, which is our need evaluation, that there actually will be substantial benefits if this facility is approved and becomes operational because the overall miles the trucks would drive in the area would decrease. So the wear and tear on roads would be reduced, the amount of fuel that would be consumed would be reduced. So there's a lot of efficiencies, you know, for the transportation, and that's where those benefits come from.

07:10:47PM

07:11:16PM

Q. But, specifically, has the evaluation of the emissions from the trucks, from the diesel trucks?

HEARING OFFICER PRICE: We talked about it and we went over that ground in Criterion 1. This is focusing on the operations in Criterion 2.

Do you have questions about No. 2? Mr. DeLaRosa was here. Those kinds of questions were asked already.

MS. ALCÁNTAR-GARCIA: Particularly, because our organization is about this issue, you know, we're trying to -- You know, these are concerning questions.

07:11:46PM

HEARING OFFICER PRICE: Yes. You had the opportunity to ask those questions. Now we're focused on a different criteria.

BY MS. ALCÁNTAR-GARCIA:

Q. These are questions I have. I'm sorry. Did you do any evaluation of diesel emissions?

HEARING OFFICER PRICE: We have already been over the diesel emissions. Please move onto a different topic.

07:12:13PM

BY MS. ALCÁNTAR-GARCIA:

Q. How about an analysis of diesel emissions while the trucks are idling in the facility?

A. We didn't specifically look at idling, but the amount of time that the trucks are at the facility and idling is very short.

Q. How will LRS enforce idling limits?

A. Again, our business is moving the waste through the facility and out to the landfill as quickly as practical, so there's really not -- there's really not a need to enforce that activity in the past. Like I said, the trucks, if they are idling, it's for a very short amount of time.

Q. I would love to listen to -- You mentioned an enforcement policy. Because, you know, there's the enforcement policy as to tarping the trucks. Why not idling?

A. Again, it's never been an issue at any transfer station that I'm aware of. Again, it's because the trucks move through very quickly.

The amount of time they are actually just standing or idling and waiting is a very short amount of time.

Q. Do you agree with me that diesel emissions are bad for your health, right? Do you agree?

A. I understand there's concerns with particulate emissions from trucks that burn diesel fuel, so yes.

07:14:19PM Q. Do you agree that the public health, safety, and welfare are impacted by many facilities in our community?

MR. MUELLER: Objection with regard to other facilities.

HEARING OFFICER PRICE: I'm going to allow it because it sets a little bit of background on the overall impact.

BY THE WITNESS:

A. I'm sorry. Could you ask that again?

07:15:26PM Q. This facility, we have so many --

HEARING OFFICER PRICE: That's too broad.

Next question.

MR. WEINSTOCK: Can we have the reporter read the question back?

HEARING OFFICER PRICE: Well, where are we going?

MS. ALCÁNTAR-GARCIA: We're going to a concern that the community has.

HEARING OFFICER PRICE: This isn't the time for argument. This is the time to ask
07:15:52PM questions about the presentation that was made. I appreciate you weren't here for Mr. Hock's presentation, but the questions need to be focused on the set of criteria he testified to at this time. It's not the time for the general argument or your argument to the city council about your position generally. This part of the hearing is for this purpose, specific questions devoted to these criteria and Mr. Hock's testimony.

07:16:16PM BY MS. ALCÁNTAR-GARCIA:

Q. In the analysis of how the facility would add or relate to existing facilities that

impact the public health, safety, or welfare --

HEARING OFFICER PRICE: That's not appropriate for these criteria. It's not.

MS. ALCÁNTAR-GARCIA: Okay. Thank you.

HEARING OFFICER PRICE: Then to the city. Mr. Callaghan?

MR. CALLAGHAN: Thank you.

CROSS-EXAMINATION

BY MR. CALLAGHAN:

07:16:50PM Q. Mr. Hock, you identify one small floodplain in the northeast part of the site, correct?

A. Yes. About one-twentieth of an acre.

Q. From the plan, it appears that is not being disturbed, correct?

A. That's correct. It's actually been restored and buffered as part of our improvements on the east portion of the property.

07:17:09PM Q. You also testified that this is going to be a fully enclosed facility and, by that, I understand you to mean that a truck -- the door

will open, a truck will drive in, the door will close, it will dump its load when its empty, the door will open, and it will leave again, correct?

A. Yes.

Q. Those are automatic doors?

A. Yes.

Q. And would the applicant accept the condition that those have to open and close as you just testified: When the truck goes in, when the truck goes out, closed at all times otherwise?

07:17:43PM

A. Yes.

Q. You also testified about auto tarping. As the hearing officer said, the foundation has been laid.

Would the applicant accept a condition that auto tarping is required at this facility?

07:18:07PM

A. Yes.

Q. I believe in the application you mentioned that there is a current IEPA permit

for the construction and demolition debris facility that's there today, correct?

A. Yes.

Q. Is it the applicant's intention if this waste transfer station is approved, that that C&D permit would be terminated and essentially, rolled into this permit for the waste transfer station?

A. Yes.

07:18:41PM Q. Now, there are a lot of conditions in that -- in that C&D permit, some of which may not be applicable. But would the applicant be willing to entertain a proposal from the city staff that some of those conditions remain in this site?

A. Yes.

Q. That is something we can propose to you and you can review but we think some of them are important so we want to make sure that

07:19:12PM process is available to us. All right.

Now the hydro waste -- What is it called again?

A. Hydro-excavation waste.
Q. Okay. Is the soil tested that is -- that is excavated through that process?
A. Generally, yes.
Q. Similar to if you're doing a tank -- you're pulling a tank or something and you detect, you know, petroleum odors or whatever, testing would be done of the soil?
A. Yeah. That's not really a good
07:19:49PM example. This is about making sure that we are not taking contaminated soil in. So it's -- You know, it's basically clean soil is really what it is.
Q. Is there some process for determining whether or not it is clean soil?
A. Absolutely.
Q. What is that process?
A. It's somewhat familiar -- similar to the CCDD rules is what I have seen companies
07:20:16PM use. So Nicor Gas and Com Ed, they actually have very conservative programs where they are looking at that constantly, and they do take

routine samples. Like the CCDD rules, though, there is some judgment as to how many and where and things like that. It's a very robust process that is used.

Q. And that will be used for those contractors that use this particular facility?

A. Yes.

Q. Now the trucks -- I think we asked this question before, but it's more appropriate at this point. The hydro-excavation waste trucks, they carry -- it sounds like it's a slurry-type material. Is that a good description of it?

07:20:53PM

A. I think wet mud is a better description.

Q. Okay. So it's -- Are these watertight trucks? That's really the concern, that they are not leaking when they are coming in?

A. Yes. Maybe the quick extra editorial is for the trucks to work, meaning they remove the material by vacuum, they have to be airtight or the vacuum system on the vehicle will simply

07:21:23PM

not work.

Q. So if a truck goes over a rough surface, it doesn't have any impact on the load, causing it to leak or anything like that?

A. No, not at all. Like I said, these are airtight seals on the back of these trucks, and they do not leak.

Q. What about when they are leaving and they emptied their load. Is there any residual liquid?

07:21:57PM

A. There may be, but it's the same process. The back of the vehicle will be closed and sealed such that it cannot leak.

Q. Okay. So the hydro-excavation waste is mixed with woodchips in order to solidify it. Is that a fair description of what happens?

A. Yes.

Q. What happens to that material after it's been mixed?

07:22:23PM

A. So it's scooped up and put into, basically, a dump truck, covered, and then it will leave the site and head to a landfill for

disposal.

Q. Again, the concern is that this is -- could be wet. Is it possible that those dump trucks would leak because they have the mixed load of wood and hydro-excavation waste?

A. We put liners in those vehicles so that that will not happen.

Q. What kind of liners do you use?

A. It's like a -- it's a plastic liner that's pretty routinely used.

07:22:57PM

Q. You mentioned that there was no need to do a Stormwater Management Plan for this facility because the plan has already been approved through the amended PUD process a couple of years ago?

A. Yes.

Q. Okay. That's -- I just want to make sure, the plan that was approved included the building, which is now proposed for a waste transfer station, correct?

07:23:33PM

A. It did.

Q. So is there any additional impervious

surface you will be adding to the site as a result -- if you were to get the waste transfer station approved?

A. Nothing that was not already accounted for in the storm water design.

Q. If there were, you would have to modify your Stormwater Management Plan, correct?

A. Correct. That would be -- That's what's required by the West Chicago rules.

07:24:03PM Q. And West Chicago approved the Stormwater Management Plan as part of the PUD process a couple of years ago; is that correct?

A. Yes, they did.

Q. Did they also approve a wetland delineation and wetland management plan?

A. Yeah. Technically that was approved by DuPage County, along with the floodplain study, that they have authority over those aspects of the plan.

07:24:28PM Q. Now, you had mentioned a SWPPP, Stormwater Pollution Prevention Plan, correct?

A. Yes.

Q. That's a self-executing plan, isn't it, where you simply file it with the state?
A. You do submit it to the IEPA.
Q. Correct.
A. Then you're required to follow it?
Q. Yes.
A. And, you know, complete updates as needed and review it annually.
Q. But a separate permit is not issued for that plan?
07:24:58PM
A. No. The permit requires that you have a plan and that you implement a plan, similar to being required to train your employees.
Q. You had testified about the wildlife management report, the Loomacres report, PWC No. 9. Is it fair to say that you used that plan in the preparation of your application so that those issues that were called out in the Loomacres plan were addressed in the application
07:25:34PM
that's before us tonight?
A. Yes. Absolutely.
Q. Now, your testimony about the runway

protection zone, and we saw the map on the screen. Are there any buildings located within the runway protection zone?

A. No.

Q. You're not proposing any buildings?

A. No.

Q. And no waste handling will occur on -- in the runway protection zone?

A. Correct. No waste handling will occur in that runway protection zone.

07:26:08PM

Q. But trucks with waste will have to cross it in order to get onto the site, correct?

A. Yes.

Q. There's been testimony -- I think Mr. Werthmann mentioned it and I think you may have in your testimony -- about the route that the transfer trailers will take when they are entering the site and leaving the site. I just want to go over those with you and make sure we're in agreement on what those routes would be.

07:26:39PM

Powis Road north to Route 64 and

then 64 to Kirk Road to I-88?

A. Correct.

Q. And the reverse if they are coming to the facility, correct?

A. Correct.

Q. Will there be any need to go to I-90 with transfer trailers?

A. I don't believe so.

Q. So we don't have to establish a separate route?

07:27:07PM

A. No, I don't -- No.

Q. All right. So, again, I would ask that the applicant -- if the applicant is willing to accept the condition that the transfer trailer route will be Powis Road to Route 64 to Kirk Road to I-88?

A. Yes.

MR. CALLAGHAN: That's all we have. Thank you.

07:27:29PM

HEARING OFFICER PRICE: Before I ask -- Mr. Walsh, before I ask you, I want to follow-up with one question from the city staff on the

hydro-excavation waste.

So will the origin of the hydro-excavation waste have to be preapproved, like, you were talking about for highway projects and other things? Or is the procedure not that involved?

THE WITNESS: So all of the material accepted as part of the hydro-excavation process is preapproved.

07:28:03PM HEARING OFFICER PRICE: And that procedure, you would agree -- Would the applicant be willing to agree to that as a condition for approval for hydro-excavation waste?

THE WITNESS: Oh, yes.

HEARING OFFICER PRICE: Mr. Walsh?

CROSS-EXAMINATION

BY MR. WALSH:

Q. Good evening, Mr. Hock. How does LRS

07:28:29PM propose to handle any hazardous waste that comes on the site?

A. So in terms of hazardous waste, I'm

not even aware of any situation recently where you get a full load of something like that. What we do see are portions of loads. Again, it's more typically batteries, tires, and there's procedures to set that material to the side and appropriately manage it. We do have the right to stop a vehicle and force them to load it back up and take it back with them. My experience is that those situations are rare.

07:29:17PM What we do is we train all of our staff to be on the lookout for anything that looks funny, smells funny, that just is something that's not supposed to be there and they know to stop -- stop the driver, figure out what it is, call the appropriate folks and appropriately address it.

Q. First of all, what hazardous waste will you have on the site past the end of the business day?

07:30:01PM A. I'm sorry, Dennis. Can you repeat the question?

Q. Yes. Will the hazardous waste that

inadvertently comes to the site -- batteries, tires, whatever -- remain on the site at the end of the close of the business day?

A. So if it was hazardous waste, we would have it off of the facility property. We do accumulate things, like batteries and tires, in relatively small amounts. We have various set aside, so as we accumulate a certain amount, it will be taken off site about once a week or

07:30:37PM something like that, depending on the amount that we see.

Q. With respect to the municipal water that's going to be used at that facility, how many gallons of municipal water is proposed to be used on a daily basis at that facility?

A. In terms of an exact gallonage, I don't know. There's a -- I believe it's a six-inch water main that loops through the facility, and there's multiple fire hydrants.

07:31:32PM The predominant use of water in the transfer station is really just washing down the floor routinely and the walls to help keep it clean.

So there's really not a substantive amount of water that is used.

Q. Do you have an estimate of how much will be used to clean the floor?

A. It would be in the order of, you know, the hundreds of gallons type of range.

Q. Per day?

A. Yes.

Q. With respect to waste water, will that be discharged in the sanitary sewers?

07:32:07PM

A. Correct. The facility is designed with an oil-water separator and a screen to make sure there's no debris, or if there is a little bit of an oil spill, that gets -- you know, it doesn't get discharged into the sewer. But, yes, we would have a direct connection to the sanitary sewer system.

Q. Is there a treatment process to the waste water before it goes to the sewer?

07:32:38PM

A. Nothing more than the oil-water separator.

Q. Is there an estimate of how many

gallons of waste water are going into the sewer on a daily basis from this facility?

A. It would be the same. So all of the wash water would go to the sanitary sewer. So it would be that same -- that same amount of water.

Q. Thank you. With respect to the throughput, your application says it's going to be 650 tons per day of municipal solid waste. Is that an average or is that the max per day?

07:33:09PM

A. That's the maximum per day.

Q. Is that true for the hydro-excavation waste, the C&D, and recyclables as well?

A. Yes. If you're referring to the -- I think it's 300 tons per day of hydro-excavation and 250 for recyclables and I think it's 750 -- 750 tons per day for the construction and demolition debris. You're correct, those would all be maximums.

07:33:41PM

MR. WALSH: Thank you. One second.

That's all I have. Thank you very much.

HEARING OFFICER PRICE: All right. That brings us back to you, Mr. Mueller. Is there any redirect?

MR. MUELLER: I have a few. Thank you.

REDIRECT EXAMINATION

BY MR. MUELLER:

Q. Mr. Hock, you were asked about hazardous waste. Can you distinguish between hazardous waste and unacceptable waste?

07:35:17PM A. Yes. Are you looking for me to describe the difference or --

Q. Please.

A. So unacceptable waste are things that are routinely generated, again, like, appliances or batteries or tires or landscape waste that are not supposed to go through a transfer station. They are supposed to be managed separately, and those are the things that, if they are observed, are set aside and, again, we

07:35:49PM would talk to the generator and make sure they understand the rules.

Hazardous waste would be more of a

sludge or -- where you can tell. It would have an odor to it. It would be different from municipal solid waste. It might have more soil like properties. It's readily distinguishable.

Q. Is hazardous waste -- Excuse me.

Is unacceptable waste necessarily hazardous?

A. No.

Q. In fact, most of it is not, right?

07:36:27PM A. Correct.

Q. Now, does LRS have a load-checking program, including random load checks, to try to identify unacceptable and hazardous waste?

HEARING OFFICER PRICE: Is the question: Is that being proposed for this facility?

MR. MUELLER: Yes, for this facility.

BY THE WITNESS:

A. So the way I like to describe it is

07:36:56PM every load is checked and inspected. And it happens because as the waste is deposited on the floor, it then becomes visible to the operator.

And that's when things would be noticed if it wasn't already caught at the gate.

Again, part of the reason these things don't happen very much is just a very consistent customer base. These are knowledgeable folks who know what the rules are. The process you're talking about is more of a documentation process in terms of maybe moving it to the side and doing an extra look at it. 07:37:39PM We are completely fine with doing that type of procedure.

Q. Now, when trucks are in the transfer facility, are the emissions from those idling trucks also subject to capture and being cleaned up by the venting and fan and air cleaning system in the facility?

A. When they are unloading and idling in the building, they would be. It is also important to note that the trucks that are used 07:38:23PM by Lakeshore have particulate filters on the back of them that actually reduce the particulate emissions by over 98 percent, and

basically any vehicles that have been manufactured since 2007 have that. So the amount of that type of emissions is actually very low now from the newer trucks.

Q. Going back to the airport, did the DuPage Airport Authority just recently retain their own independent expert to evaluate your application with regard to whether or not it meets the requirements of a safe enclosed transfer station? 07:39:18PM

A. They did.

Q. Who did that work for the DuPage Airport?

A. It's a company named Geosyntec.

Q. Do you know the individual at that company?

A. I do. His name is Jesse Varsho, who led the effort.

Q. He's actually a former key employee of Mr. Moose, isn't he? 07:39:38PM

A. Yes, he is.

Q. Now, what was Geosyntec's -- Did

Geosyntec prepare a report with their conclusion?

A. They did. The conclusions are referenced in -- Their report is actually referenced in our agreement with the DuPage Airport Authority, so, yes, they did create a report.

Q. Do you have that report with you tonight?

07:40:07PM A. I do.

Q. Can we have the pleasure of seeing it, sir?

A. Sure. Maybe what's worth noting is what was originally provided was the final draft report, and that report included some recommendations that were all incorporated into the final version of our agreement with them, and they have since provided a final version of their memorandum but inadvertently forgot to

07:40:39PM include a table on the back of it that's part of it, and we have requested them to provide that table. It just has not occurred as of tonight.

So we have a draft version with the table and a final version without the table.

Q. Do you have copies of those to mark as exhibits or should we defer this to another evening?

A. We have both of them.

HEARING OFFICER PRICE: So for purposes of the record, the draft is going to be Applicant 12 and the purported final is Applicant 13. And you can tell the difference, those of you getting them now, by the very first thing under the date.

(Applicant Exhibit Nos. 12 and 13 marked for identification.)

BY MR. MUELLER:

Q. Just for formalities' sake, Mr. Hock, can you look at Applicant's Exhibit 12, identify it, and tell me if it's a true and correct copy of the report that you read?

A. What you're referring to are the reports that we just handed out?

Q. Yes.

A. Those are true and correct versions.

Q. Okay. Let's go back to your testimony from last Thursday. Can you explain to the city council the process of developing a siting application?

A. Sure. I mean, it is a long, involved process and, in this case, it took over two years to do. We start with an outline and then we start putting all the narrative and all the information with it. It is a constantly evolving document. As we have different people review it, we get different perspectives. We're only trying to improve it and make it better, either from, you know, concise language to try to clearly convey the information, to the presentation of it and it does -- it does evolve over time. Like I said, we're trying to make it better. And in the end, it turned out to be three binders full of information.

07:43:30PM

07:44:10PM

Q. There are routinely drafts along the way?

A. Oh, yes. There are many drafts of --

especially the larger criteria, which are Criterion 1 and Criterion 2. A few of these are, obviously, very short and those are established very quickly. But, yeah, there are many drafts.

Q. And drafts are routinely reviewed by people outside your organization, sometimes even clients and your attorney?

A. Of course.

07:44:42PM Q. And they are also reviewed by other experts, such as APTIM?

A. Yes. This is -- My best description of this is it's a team sport. We lead the charge and serve as the quarterback but it's a large team with many players.

Q. Let's move on to the process that's come to be known as prefiling review. Can you explain that to the city council?

A. Sure. It's really become routine and

07:45:13PM a standard, especially for larger -- I shouldn't say "larger" -- facilities such as this. What we do is we provide drafts along the way. And

in this case we wanted to make it a very collaborative process, so we started our interaction with APTIM, which is who West Chicago chose to work with, backed with a site visit all the way back in 2019, I believe. We provided, again, kind of major points for key features of the facility as we went and we did provide copies of the applications at different points in time and we appreciated their review.
07:46:09PM We took their comments into consideration. We didn't always agree, which is fine. There's professional judgment, it is intrinsic to this process, and it lead all the way up to final drafts of Criterion 1 and Criterion 2, which are the most extensive, that we provided back in May of this year. And we received some feedback and questions but by the time we got to the endpoint, those questions were -- were very minor.

07:46:47PM Q. Mr. Hock, are prefiling review comments always submitted to you in writing?

A. No. Again, we have had -- We have

multiple meetings along the way. I had multiple phone calls with Mr. Fallon to answer questions. So it is, again, multiple iterations communicated in a variety of means.

Q. Let's talk about throughput. The final draft of the application limits your solid municipal waste throughput to 650 tons per day?

A. Correct.

Q. That's a lower number than you had previously thought about, correct?

07:47:42PM

A. Yes.

Q. Why did you reduce it?

A. We just thought it made a better application. It was -- You know, we took into consideration some comments from APTIM and looked hard at what we really needed and decided it was a better application to reduce it, so we did.

Q. At 650 tons of municipal solid waste per day, are there any problems with temporary storage space on the tipping floor?

07:48:17PM

A. No. With those volumes, it becomes

very easy. We, actually, did not change the size of the building from when we were proposing larger volumes. We just simply reduced the throughput but kept the same building.

MR. MUELLER: One second.

BY MR. MUELLER:

Q. Now I think you have explained this: Doors are not open while trucks are in the building, they are only open when they enter and exit, correct?

07:49:22PM

A. Yes.

Q. When you go into your house with bags of groceries, is the door open for a few seconds?

A. Yes, it is.

Q. Do you consider your house enclosed?

A. Yes.

Q. There was significant questioning last Thursday about the amount of time it takes a garbage truck to unload.

07:49:56PM

Do you recall that?

A. Yes.

Q. Now, are there multiple types of traditional garbage trucks, the kind that pick up waste from the curb?

A. There are.

Q. What are those types?

A. So the vehicle that was shown in the video from last week was a -- referred to as a rear-load vehicle. It's an older type of truck that is necessary to navigate the alleys of the

07:50:40PM City of Chicago. The types of trucks that are used out in the suburbs and that will be used at this facility are what's generally referred to as front-load trucks, and there are substantial differences between the vehicles. Those differences lead to differences in the time it takes to discharge the load from the vehicle.

Q. Did you -- What percentage, if you know, of the trucks that would come to this facility would be front load versus rear load?

07:51:16PM A. So in our throughput analysis we assume that 90 percent of the vehicles would be these front-load packer trucks and,

approximately, 10 percent would be roll-off trucks.

Q. After your testimony last week, did you have occasion to direct the making of some videos at another LRS transfer station to look at the amount of time it look for front-load trucks to discharge their loads?

A. We did. I have actually watched vehicles unload at a number of different facilities over the years from different operators and, you know, sat there and timed it, and I always thought that five minutes was a good number -- a good conservative number. Just to double-check myself, I asked the Lakeshore folks to videotape a few different trucks at one of their facilities, and they did that at the Elburn facility over the weekend.

Q. What was the average time it took for those front-load trucks to discharge?

A. So they sent me videos of three different trucks, and they were all the front-end loader packer-type vehicles, which

are, again, the exact same vehicles which we would use at our facility. And it took an average of 3 minutes and 35 seconds for the three vehicles to discharge their load.

To give you the quick explanation of why it's quicker than the truck that we saw in the video from last week, if you remember, if you were here, before the driver was able to discharge his load, he had to get out of the
07:53:18PM vehicle, walk to the side, and maneuver some turn buckles and such; and then he had to do the same thing after the load was fully discharged. So there was time for him to do that.

With the front-end loaders, as they back into the building, they are able to open the back gate and start the discharge process without ever getting out of the cab of the truck.

Q. Have you had the opportunity to
07:53:51PM provide copies of this video to the -- to Mr. Jones?

A. Yes.

Q. We should play that now then, if we could?

A. So there are three videos. They are all very similar.

Joe, is this Video 1?

MR. JONES: Video 1.

BY THE WITNESS:

A. Maybe to give you a quick narration, so that truck is backing in --

07:54:25PM THE WITNESS: Joe, are you able to hit a button on the screen where you can see the time down in the lower left-hand corner?

MR. JONES: I'm sorry. I'm not.

BY THE WITNESS:

A. If this is the first one, it should take about three and a half minutes. What you'll notice is -- So he just backed into the transfer station, and the waste bin that he'll load the material from each household in, he

07:54:52PM just maneuvered it out of the way. And you can see now he has released the back gate, and you can see the waste coming out of the vehicle and

discharging that out onto the floor. There's basically a ram that pushes the material out.

What he'll do in a moment is move forward a little bit to let the rest of the material come out. You can see the material still spilling out the back as it's pushed out. Again, that's him moving forward now just to let the rest of it fall out of the truck. He'll now stop.

07:55:53PM What you'll see him do in a moment is put on his hardhat and he is going to get out of the cab. There he goes. He's taking his hat off and putting his hardhat on. What he's going to do when he gets out is walk over -- I'm sorry. He does that, you notice he's lowering the gate on the back. That's a safety measure. So he just leaves it slightly open.

What he's going to do right now is he's picking up a small rake. What he's going

07:56:36PM to do is go to the back and make sure that there's no debris or clean off the little bit of debris that's going to be on that bottom seal

but he wants to make sure that when he closes it fully, that it's fully sealed so there's nothing to leak or drip out. So he went to both sides and just kind of raked across that seal to make sure that it's clear. He's putting it back where he got it so the next driver can use it. He must have picked up a small back of waste from somewhere, so he took that off the truck.

Again, you'll notice the difference between this and the last one, if you remember, there's no turnbuckles or anything he has to fasten. He has now closed the back gate of the vehicle and he is going to move out. At this point, this is basically when they would be leaving the transfer station and clearing the way for another vehicle. What he is going to do, and this is routine, he's going to take 30 seconds and get out of the vehicle again just double check that the back of the vehicle is sealed just the way it's supposed to. He's also looking around the truck doing what I call a circle of safety just to make sure there's no

07:57:18PM

07:57:57PM

waste or debris that got picked up by the truck or there's nothing -- you know, nothing unusable so it will be safe to proceed down the road again. He will take the bin in the front and he'll -- again, that's the bin that is down as they are running up and down the streets and use the automatic arm and dump the tote into the back of the bin. Until he gets to the route, he'll put it up top until -- so it's out of the way.

07:58:36PM

THE WITNESS: Joe, can you tell us the total time of that video?

MR. JONES: The total time from start to end was 4 minutes and 19 seconds.

BY THE WITNESS:

A. So, again, there's probably 30 seconds once he left the facility. If you guys are interested to see it, we have two more that are basically the exact same thing. Or if you want to take my word, we can skip it. I don't know whose choice it is.

07:58:59PM

Q. I'm satisfied with the one. Let me

ask you this, then, Mr. Hock --

A. I'm sorry. For the record, I wanted three data points because, as an engineer, you can do averages. I don't like just one data point. It was 3 minutes -- From 3 minutes 35 seconds, 3 minutes 20 seconds, and 3 minutes 50 seconds were the three different times of the videos.

Q. Last area of inquiry. Why would a 07:59:47PM transfer trailer stay on your site or on this site overnight?

A. Well, we will not leave any loaded ones on site.

Q. My apologies. I should have asked the question that way.

Will you leave loaded transfer trailers there?

A. No. And we don't need to.

Q. Then why do you have 17 parking spaces 08:00:14PM for trailers?

A. I mean, it's an extra-large area. We want to have extra empty trailers there, and we

may have full trailers staged there during the day. So what we want to make sure we have is the ability to have a continuous loading operation occurring.

In a perfect world, drivers come back from the landfill with empty transfer trailers and they are able to just maneuver and get right in line and fill up and then complete -- you know, continue the rounds back
08:00:55PM to the landfill. But there may be a gap, for instance, when there's not a transfer trailer that's arrived at the site. What we'll have is extra trailers in that parking area and we'll have a yard tractor that we can use.

If we know there's going to be a gap, we can bring a yard tractor or use the yard tractor to bring an empty transfer trailer over, have it filled; if necessary, bring it back to the staging area and have it picked up later and
08:01:20PM removed. We just want to make sure that we've got operational flexibility. And the reason we do not need to leave one overnight, even though

the landfill is closed, is that there is a large parking and staging area out at Lakeshore's landfill in Atkinson, Illinois where their routine operation is as people bring in full transfer trailers, they are actually dropped in this staging area, again, picked up by a yard tractor and brought up to the landfill and disposed.

Q. What's the role of a spotter near the doors?

08:01:59PM

A. The spotter is there just to make sure that the drivers know where they are going, for instance, which door they need to back in. They will control the process of opening and closing the doors. There's -- What we plan to do is have a computer or an iPad with a screen and use cameras as well to help make sure that the inside of the transfer station is clear once they drive in.

08:02:43PM

So they are really kind of monitoring activities and making sure that the doors are opening when they are supposed to and

closing when they are supposed to and all the traffic flow is happening as efficient as practical.

MR. MUELLER: Mr. Hock, that's all I have, although, I expect you may get a few more from others.

HEARING OFFICER PRICE: Thank you, Mr. Mueller. We're going to take ten minutes. We'll start at 8:15, Mr. Meza, with any recross you may have. And so take a break until 8:15, and we'll get started then.

08:03:10PM

(A short break was had.)

HEARING OFFICER PRICE: We'll turn back to Mr. Meza. Do you have any recross?

MR. MEZA: Yes, Mr. Hearing Officer.

HEARING OFFICER PRICE: Oh. Before you get started, I'm going to -- I think we have passed out the video Mr. Hock reviewed that Mr. Mueller put in. It's a flash drive. I'm going to label it A-14 for purposes of the record. We'll hand those out to others. But for purposes of the record, the flash drive will

08:15:46PM

get the little exhibit sticker and go into the pile with the other things going into the final record for whatever purposes.

With that -- Sorry, Mr. Meza. Back to you.

(Applicant Exhibit No. 14 marked for identification.)

RECROSS-EXAMINATION

BY MR. MEZA:

08:16:24PM Q. Mr. Hock, one of the things you said --

THE WITNESS: I'm sorry. I was looking for another flash drive I thought we had.

HEARING OFFICER PRICE: We'll get to that later.

BY MR. MEZA:

Q. Can you hear me okay?

A. Yes.

Q. Mr. Mueller was asking you about the

08:16:48PM spotters. Do you remember?

A. Yes.

Q. Again, just to remind us, there's

going to be four doors with the municipal solid waste for trucks backing in, right?

A. Yes, there are four available doors on that building for the trucks to go in and out.

Q. And then there's two doors for the C&D facility, correct?

A. Yes.

Q. Then there's a door where the transfer trailer trucks come in and where they exit, correct?

08:17:23PM

A. Yes.

Q. So that's eight doors. You had mentioned earlier there was going to be three spotters. Are you going to have spotters on the inside and the outside of the doors?

A. No.

Q. So you're not going to have spotters on the inside of the municipal solid waste and the SSR doors on the outside?

08:17:52PM

A. That's where we will be using cameras with a video relay. So these facilities -- A facility like this will have many different

cameras throughout the facility, and what we are doing is using the cameras in a display, and there's a station that was shown on that plan view, if you remember; so if he needs to get out of weather, he can be there or he can have an iPad, so he'll be monitoring the opening and closing of the doors to make sure, for instance, before a vehicle enters, that it's clear, that there's not a loader or something like that in the way. So we do want to have eyes on things as well.

08:18:40PM

Q. Let me direct your attention to Page 2-29 of your application that you submitted. I think it was September of last year. Are you at 2-29?

A. Yes.

Q. The first full paragraph, does it say, Spotters will be present inside and outside of the MSW and SSR transfer building to open and close the doors as vehicles enter and exit the MSW and SSR transfer building?

08:19:00PM

A. Yes. So they may be inside, but if we

can use cameras and other means to just keep them out of the way of traffic, we would do that. So that wasn't meant to -- Maybe that language wasn't as clear as it could have been.

Q. So will you or will you not have spotters inside and outside the MSW and SSR doors; yes or no?

A. They may be inside at times, but the intent is to have them primarily outside and use other video means to stay out of the way of traffic but still monitor the operations and make sure the doors are opening and closing just as they are supposed to.

08:19:54PM

Q. Mr. Hock, one of the other things you testified to was some of the experience -- not experience -- LRS as it relates to -- I believe -- was it the Elburn transfer station, is that what -- the one that was shown on the video?

08:20:22PM

A. Yeah, they do have a transfer station in Elburn and that is where those videos were taken.

Q. Right. We only saw one, but there's actually three, right?

A. Correct.

Q. And you also said that -- You said, Not with regard to any trash transfer facilities I'm aware of. I don't recall what that was in reference to, but did that relate at all to some of the experience of LRS when you provided that response? If you recall. If you don't recall, that's fine.

08:20:55PM

A. I don't recall what you're referring to or what that answer was referring to.

Q. That's all right. My notes reflect you said that. I just didn't remember what it was in relation to.

Part of your experience -- in fact, one of the exhibits requires that LRS provide information about experience in its operation; is that correct?

08:21:17PM

A. Yes.

Q. In fact, that's sometimes considered the tenth criterion; is that correct?

A. I have heard it referred that way.

MR. MEZA: At this time, we would ask or move to play Exhibit 701, Mr. Hearing Officer.

HEARING OFFICER PRICE: Wait. Going back to -- 701 is about the tarping issue?

MR. MEZA: Yes. It's about the experience -- Right. With regard to Lakeshore Recycling as it relates to its policies that are existing for tarping.

08:21:51PM

MR. MUELLER: There is no criterion or even implied criterion as to experience with regard to tarping. There is information regarding record violations and so forth.

HEARING OFFICER PRICE: We're not going to sit on that, Mr. Mueller. It says, just so everybody can play along at home, The county board or the governing body of the municipality may also consider as evidence the previous operating experience and past record of convictions or admissions of violations of the applicant and -- You went back on redirect,

08:22:18PM

Mr. Mueller, about tarping and the transfer trailers being parked outside.

So this video is about transfer trailers and whether they were tarped at the California facility?

MR. MEZA: Yes. And also C&D trucks as they were entering the facility.

HEARING OFFICER PRICE: We have spent more time -- How long is the video?

08:22:54PM MR. MEZA: About 2 minutes and 40 seconds maybe.

HEARING OFFICER PRICE: It's going to be very tight questioning simply within this one little area of this -- of the siting ordinance. Let's make it efficient and quick. Let's show the video. I'm not spending more time than it is to probably dispense with this thing. For whatever probative value it has, we'll just dispense with it.

08:23:17PM (PWC Exhibit No. 701 marked for identification.)

(Video played.)

BY MR. MEZA:

Q. Mr. Hock, is this the California facility of LRS?

A. Yes.

Q. Now, you see an individual tarping A transfer trailer manually, do you, at the bottom?

A. Yes.

Q. Now, the truck -- We're seeing that truck entered and these trucks are entering and they are discharging the loads. Are they tarped at all?

08:23:53PM

A. Well, they are discharging their loads, so you cannot discharge the load while it's tarped.

Q. So they could have been tarped before?

A. Yes.

Q. Okay. So the red truck, you can't tell if that's tarped -- do you know if it was tarped before it unloaded?

08:24:37PM

A. It wasn't shown in the video, so, yeah, I don't know.

Q. And you see that truck, can you tell whether or not it was tarped as it entered? If you can't, that's fine.

A. It's already backing in, so he would have removed any covering prior to backing up.

Q. Same thing with this truck driving through here, do you know -- this truck -- was this truck -- Can you tell from the video -- maybe you can't -- whether or not these were

08:26:06PM tarped?

A. I can't tell because those trucks came over a scale that's all the way on the other side of the building at the entrance and drove around the building to get to the point where they are at.

MR. MEZA: You can stop it.

BY MR. MEZA:

Q. Going back to the Elburn station, is that a fully enclosed station, or not?

08:26:44PM A. The doors are left open during the day. So as it's normally operated, the door is open. That would not be fully enclosed.

Q. Is it considered a semi-enclosed facility, the Elburn station in the video that the you showed?

A. I'm not sure what you mean by -- I'd have to look back at the definitions in the circular.

Q. But it's not the type of facility that's proposed for West Chicago; is that accurate?

08:27:25PM A. That's correct. That's correct. Those doors are normally left open all day, and that is not what we're proposing for West Chicago.

Q. Now, one of the other things you said was that putting together these applications takes a large team with lots of players?

A. Yes.

Q. Can you tell us whether or not a determination had been made before

08:27:51PM September 22nd of 2022, when the application was submitted, by the City of West Chicago that they would, in fact, approve the site, or no?

MR. MUELLER: That's beyond the scope of redirect. And improper.

HEARING OFFICER PRICE: And it happened September 16th.

MR. MEZA: I'm sorry. September 16th.

HEARING OFFICER PRICE: That objection is sustained.

MR. MEZA: I don't think I have anything further. Can I have just one second.

08:28:20PM HEARING OFFICER PRICE: Sure.

MR. MEZA: Thank you, Mr. Hearing Officer. I don't have any further redirect.

HEARING OFFICER PRICE: Thank you, Mr. Meza.

PODER, nothing?

MS. ALCÁNTAR-GARCIA: No.

HEARING OFFICER PRICE: Thank you. The city?

MR. CALLAGHAN: No.

08:28:59PM HEARING OFFICER PRICE: Nothing. Mr. Walsh?

MR. WALSH: We have nothing.

HEARING OFFICER PRICE: That concludes your testimony on those criteria. I believe Criterion 8 is next.

THE WITNESS: Yes.

MR. MUELLER: That's what I have in front of me.

HEARING OFFICER PRICE: All right. That means, for those of you who are following along, we're going back to Exhibit A-11,

08:29:24PM Applicant 11, which was the comprehensive set of slides that had been provided, and now we're on Criterion 8.

(Applicant Exhibit No. 11 marked for identification.)

MR. MUELLER: Just for everybody, it starts at Slide 52.

THE WITNESS: Job well done for Joe starting on the correct slide.

DIRECT EXAMINATION

08:29:45PM BY MR. MUELLER:

Q. Mr. Hock, you also prepared a report on whether or not the proposed facility is

consistent with the county solid waste management plan, correct?

A. Yes.

Q. And that's in the application?

A. Yes.

Q. And did you then prepare a PowerPoint presentation which summarizes the report and the most salient findings in the application?

A. Yes.

08:30:25PM Q. Could you proceed with that, please?

A. So Criterion 8 states that if the facility is to be located in a county where a county board has adopted a Solid Waste Management Plan consistent with the planning requirements of the Local Solid Waste Disposal Act or the Solid Waste Planning and Recycling Act, the facility is consistent with that plan.

To maybe give a little background of what that really means, so the act they are

08:31:06PM referencing was passed back in the late '80s. What it said is that each county in the state must adopt a 20-year plan for managing the

municipal solid waste generated within its boundaries. What it was really guided to do was provide a recycling program designed to achieve at least a 25 percent recycling rate. And that's, again, about the time that recycling became customary as it is today. And the act also talked about needing to update and review that plan every five years.

So we are, obviously, in DuPage
08:31:56PM County, and DuPage County first approved their Solid Waste Management Plan in 1991 and provides a lot of detail and background, including estimating DuPage County's waste generation and disposal needs and included recommendations regarding recycling, including construction and demolition debris and made recommendations regarding transfer stations.

They subsequently made updates to the plan, which were approved by the DuPage
08:32:27PM County Board in 1996, 2001, 2007, 2012, and 2017. And as part of those updates they would generally include the status of the

recommendations from the previous updates or plans.

The key items in the plan as it relates to this application is that first the Solid Waste Management Plan encourages recycling of C&D, recognizes it's a significant portion of the waste stream, and was important to meet recycling goals. And as we have talked extensively, the site currently is recycling
08:33:15PM construction and demolition debris; and for the reasons we have previously discussed, the proposed facility would increase the amount of C&D that's recycled. The Solid Waste Management Plan also recognizes the current challenges of implementing recycling programs for single-stream recyclables and our proposed facility would provide a facility that would facilitate the economic transfer of single-stream recyclables to material recovery
08:33:48PM facilities and serve as a drop-off location for residents, so it would benefit the recycling programs.

The Solid Waste Management Plan also stated that they need additional drop-off locations for electronic waste. And, again, as previously discussed, the proposed facility would serve as a drop-off location for electronic waste.

The solid waste plan also indicates that DuPage County has relied on transfer stations to transport nonrecyclable waste and
08:34:40PM municipal solid waste to out-of-county landfills, that at least DuPage County's waste is handled by out-of-county transfer stations and newer expanded facilities for handling, treating, and recycling waste would be considered on a case-by-case basis.

Again, as previously discussed, our proposed facility would enhance the capability on behalf of DuPage County to handle, treat, and recycle a variety of wastes. DuPage County
08:35:11PM provided a letter for us that's included in the application that concludes that the proposed West DuPage Recycling and Transfer Station

appears to be consistent with the 2017 update.

Based on this information, it is my professional opinion that the West DuPage Recycling and Transfer Station is consistent with the Solid Waste Management Plan and all provisions in effect at the time of the submittal of this siting location application.

HEARING OFFICER PRICE: Any further questions, Mr. Mueller?

08:36:06PM MR. MUELLER: We have nothing else.

HEARING OFFICER PRICE: Protect West Chicago.

MR. LEUTKEHANS: Thank you, Mr. Price.

CROSS-EXAMINATION

BY MR. LEUTKEHANS:

Q. Just so we're clear, this proposed waste transfer station is in Wayne Township, correct?

HEARING OFFICER PRICE: Wayne County?

08:36:26PM MR. LEUTKEHANS: Wayne Township.

BY MR. LEUTKEHANS:

Q. Are you familiar with that?

A. In all honesty, I have it on the map, but I'd have to double-check which township it is.

Q. I don't think there's much doubt it's in Wayne Township. Would you agree Wayne Township is the furthest northwest? You go further north, you're in Cook; further west, you're in Kane?

A. Yes.

08:36:51PM Q. Let's talk about Ms. Hinz's letter. Did you submit your entire application to the county before she gave you this letter?

A. No. I think the letter is from 2019.

Q. So there were earlier versions of the application or whatever -- What did you submit to her in 2019, I guess, is the first question?

A. She provided it about the time -- I think right after we had negotiated the secondary host agreement with DuPage County.

08:37:26PM Q. So what had she seen at that point, I guess is my question?

A. Just very general information. We

provided a presentation at one of the meetings with DuPage County describing the general nature of the facility and what would be included.

Q. Okay. So you provided her general information and she said in response, in her letter, that that general information appears to be consistent with the Solid Waste Management Plan; is that fair to say?

A. Yes.

08:38:18PM Q. She never said it is consistent; she just said it appears to be, correct?

A. Well, she provided the letter demon- -- You know, she was clearly supportive of the project for the variety of reasons and the benefits that are discussed in that secondary host agreement.

Q. We're talking about a staffer letter. She never says that your plan in your application is consistent with the Solid Waste

08:38:45PM Management Plan, does she? She says she believes it, correct?

MR. MUELLER: I'm going to object to

the use -- You can't read her mind. The letter speaks for itself.

HEARING OFFICER PRICE: Sustained. Rephrase, please.

BY MR. LEUTKEHANS:

Q. The letter does not say that your application is consistent with the DuPage County Solid Waste Management Plan, does it?

A. I think that's the intent of the letter.

08:39:08PM

Q. The question is: Does she say it's consistent; yes or no?

MR. MUELLER: Letter speaks for itself.

MR. LEUTKEHANS: That objection is already overruled.

HEARING OFFICER PRICE: I'll take care of the rulings. You can answer, and it is a yes-or-no question, Mr. Hock.

BY THE WITNESS:

08:39:24PM

A. I think the intent of the letter is that it does say it is consistent.

Q. I'm not asking you about the intent?

HEARING OFFICER PRICE: The letter uses the word "appears." We have all seen it, and it doesn't say the sentence you said, Mr. Leutkehans, so that's ...

BY MR. LEUTKEHANS:

Q. Joy Hinz does not make policy for the county, does she?

A. No. She mentioned she oversees the Solid Waste Management Plan, so she's the most knowledgeable about what it means and what it's intended to mean.

08:39:52PM

Q. The county board actually approved the Solid Waste Management Plan, correct?

A. Yes. Joy's job was to oversee the preparation of the plan. And you're correct that the DuPage County Board, then, approves it.

Q. So the final authority on what the Solid Waste Management Plan says is the county board, not some staffer, correct?

08:40:19PM

A. Sounds like a legal opinion to me, but --

Q. Yes or no?

A. Well, DuPage County, you know, they approve what she prepared, so they are the approval authority.

Q. Do you know that the 2017 Solid Waste Management Plan update was the exact same thing she proposed in 2017 or if they made any modifications to it before they passed it?

A. No.

Q. Okay. So the approved document was approved by the DuPage County Board. You have said that, correct?

08:40:54PM

A. Yes.

Q. Your slide about -- Could you go back a couple slides? I think it's listed as Page 55. Yeah. Okay. No. One more. Sorry. One --

A. One more back?

Q. Forward -- I'm sorry. You know what? I have been back and forth so many times. The one right before that. Right there.

08:41:27PM

A. I'm sorry.

Q. The statement, The West DuPage RTS

would enhance the capability and capacity of DuPage County to handle, treat, and recycle a variety of wastes, that's your statement, correct? That's not in the Solid Waste Management Plan, correct?

A. Correct. The wording after the dash is our view of why it meets the language prior to the dash.

Q. Okay. You understand, don't you, the 08:41:56PM 2007 Solid Waste Management Plan update articulates the need for a transfer station in the, quote, southern portion, end quote, of DuPage County, correct?

A. Which update were you referring to?

Q. 2007.

A. No.

Q. I'm sorry. What was the answer?

A. No.

Q. You don't understand that the 2007 08:42:32PM Stormwater Management Plan update articulates the need for a transfer station in the southern portion of DuPage County? You don't think it

articulates that need?

A. No.

Q. Could you go to PWC Exhibit 23, which you have in front of you? PWC Exhibit 23. Mr. Meza used it. It's the APTIM report. Page 5 -- Page 9.

Do you see that page?

A. Yes.

Q. Okay. Under issue plan consistency, do you see APTIM made the comment, Beginning with the 2007 plan update, the county began articulating the need for a transfer station in the, quote, southern portion, end quote, of the county and the response from your company was "Understood," correct? Is that what it says; yes or no?

A. That's the word.

Q. It's a typo, but it's supposed to be understood, correct?

A. I was acknowledging the typo.

Q. That idea was carried forward in the Shaw -- starting in the 2012 update, which,

again, states, The conditions may necessitate a transfer station in the southern portion of the county.

Do you recall that?

A. Yes.

Q. That 2012 report also says that service areas must be considered, correct?

I'm sorry. Wrong question.

The 2007 update also mentions that

08:44:46PM service areas must be considered, correct?

A. 2007 update mentions that they encourage the development of three to five waste transfer facilities throughout the county, they were evaluating disposal capacity.

Q. Okay.

A. I don't --

Q. You know --

A. I don't see in my notes where they talked about the service area.

08:45:17PM Q. You're absolutely right. It's the 2017 update that mentioned service areas must be considered, isn't it?

A. Yeah. The 2017 update says that service areas must be considered, as well as the market forces of private sector waste hauling entities, and that they will consider newer expanded facilities handling, treating, and recycling on a case-by-case basis.

Q. On a case-by-case basis, correct?

A. Yes.

Q. You never gave them your application

08:45:56PM to determine whether if you met these case provisions, correct, your application was never provided to them?

A. No.

Q. The latter -- the update -- In the 2017 update, there's no mention in there that it supercedes the prior updates, does it?

A. That language is not explicitly in the 2017 update that I'm aware of.

Q. Let's go to the slide right before

08:46:26PM this. None of these three summary items that you've used from the DuPage County Stormwater Management Plan, none of these items actually

require a Section 39.2 hearing, do they? None of those three bullet points.

A. Not necessarily, but the language is still in the Solid Waste Management Plan.

Q. Correct. We're here for a siting hearing. We're not here for a C&D siting, correct?

A. Well, we're here to discuss the consistency of the plan and those items are in here, and our facility is consistent with those items of the plan. That's why we listed them.

Q. Your facility is consistent with the items of the plan with or without municipal solid waste, correct?

Those three items don't mention municipal solid waste anywhere in there, do they?

A. They do not.

MR. LEUTKEHANS: Nothing further. Thank you.

HEARING OFFICER PRICE: Thank you, Mr. Leutkehans.

PODER?

Nothing on Criterion 8. Okay.

Mr. Callaghan?

MR. CALLAGHAN: Nothing.

HEARING OFFICER PRICE: Mr. Walsh?

MR. WALSH: No.

HEARING OFFICER PRICE: Any redirect, Mr. Mueller?

MR. MUELLER: No redirect. Thank you.

08:47:49PM HEARING OFFICER PRICE: As I understand it, Mr. Mueller, that concludes the applicant's presentation?

MR. MUELLER: It does, indeed.

HEARING OFFICER PRICE: Then a bit of housekeeping while I alert Protect West Chicago that you're up for anything you want to put in. While you're getting that together, though, I do have a little bit of housekeeping.

As a formal matter, is there any

08:48:10PM objection to entering into the record as evidence Applicant's Exhibits 3 through 14?

MR. LEUTKEHANS: What was 14? That was

the only question I had.

HEARING OFFICER PRICE: 14 is the video that was shown on the --

MR. LEUTKEHANS: No objection.

HEARING OFFICER PRICE: All right. So those are in the record. Then is there any objection to the entry of Protect West Chicago's exhibits, which I have as 151-A, 23, 1, 301, 302, 604, 651, 34, 13-A, 200, 205, 201, 202, 16, 08:48:51PM 17, 700, which was the video, 13, 10, 9, 45, 46, 47, 48, 43, 44, 39, and 49 and 40, plus the 701 video.

Are there any objections?

(No response.)

Those are in.

Then, lastly, although it wasn't brought up here, it was previously provided to everyone. The city provided GHA's report on traffic, which was testified to by the 08:49:21PM applicant, Mr. Werthmann, and to some extent Mr. Hock. Is there any objection to the GHA report being added to the record?

MR. LEUTKEHANS: Not on behalf of PWC, no.

MR. MUELLER: Not on behalf of the applicant.

HEARING OFFICER PRICE: All right. The GHA report is also in. I will provide all of these to the acting city clerk, the city manager is acting in that role, so we have them all for the record.

08:49:47PM With that, thank you, Mr. Mueller. That concludes the applicant's case in chief.

We will now turn to the other parties for their presentation in their case in chief and we'll begin with Protect West Chicago.

MR. LEUTKEHANS: We will call John Lardner, L-a-r-d-n-e-r. He will testify to Criterion 1 and 8. We'll start with 1 as soon as we get set up. And I'll hand out the exhibits in one second.

08:51:15PM (Witness sworn.)

HEARING OFFICER PRICE: The witness is sworn. Please -- The floor is yours,

Mr. Leutkehans.

WHEREUPON:

JOHN LARDNER,

called as a witness herein, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. LEUTKEHANS:

Q. Mr. Lardner, would you please state your name and spell your last name for the record.

08:51:47PM

A. My name is John P. Lardner, L-a-r-d-n-e-r.

Q. You have in front of you PWC Exhibit 155, among other exhibits?

(PWC Exhibit No. 155 marked for identification.)

BY THE WITNESS:

A. Yes.

Q. Is that your current curriculum vitae?

08:52:00PM

A. Yes, it is.

Q. Okay. You also have in front of you

PWC Exhibit 156?

(PWC Exhibit No. 156 marked for identification.)

BY THE WITNESS:

A. Correct.

Q. Is that a report you prepared in this matter related to Criterion 1?

A. Yes.

Q. Also in front of you is PWC Exhibit 157. What do you recognize that to be?

08:52:20PM

(PWC Exhibit No. 157 marked for identification.)

BY THE WITNESS:

A. That is a PowerPoint presentation that reviews my assessment report review of the application.

Q. Okay. Do you want to, please, just walk us through your PowerPoint, which -- I assume, the PowerPoint is a summary of your full report?

08:52:37PM

A. Yes, it is.

Q. Why don't you walk us through that. I

think you have the controls over there.

A. I do. Okay. Thank you.

I'm going to be presenting a review report that I put together to look at the proposed West DuPage Recycling and Transfer Station, particularly Criteria 1, the facility need. And as it shows here, the criteria there is the facility is necessary to accommodate the waste needs of the area it is intended to serve.

08:53:13PM Just a little background on myself. I have lived in the Chicago area for 30 years now. I have been a professional engineer. I have 35 years of experience in the solid waste field. I have experience doing other work prior to that. I'm a registered professional engineer in Illinois and Indiana. I have a bachelor of science degree in civil engineering from Michigan State University and a master of science in civil engineering from the University

08:53:44PM of Illinois.

In the past I have prepared needs assessment studies and provided testimony for

nine waste-related facilities in Illinois, four of which were transfer stations, and I have been the design engineer for over 22 solid waste projects in Illinois and Indiana. I participate in professional associations. Those are the U.S. Composting Council, Solid Waste Association of North America, American Society of Civil Engineers, Illinois Recycling Association where I'm a current board member, and the Illinois
08:54:19PM Food Scrap & Composting Coalition, where I'm a current board member.

Just a quick overview of what I'm going to present from my review study is I'm going to go over the West DuPage RTS service area that was presented in the application. I'm going to go over a review of how we come up with waste quantity disposed of in the service area, how it's calculated, again, using the numbers that were in the application, and just kind of
08:54:49PM show how they came up with those as an example.

Then I'm going to look at other current transfer stations that overlap the

service area. When they prepared their facilities, they prepared a service area, and I'll be showing those service areas and show how they overlap to the proposed DuKane Transfer Station -- excuse me -- West DuPage RTS facility.

Q. When you say "they," you mean Lakeshore Recycling?

A. Yes, Lakeshore.

08:55:25PM Q. Thank you.

A. Then I'll summarize the waste transfer capacity that's available to the service area at the end.

Here, you see the proposed service area for the West DuPage RTS facility. Again, this is Figure 1.1 from the application in their needs assessment Criteria 1. It includes 13 townships in DuPage County, those being Bloomingdale, Milton, Lisle, Naperville, Wayne,

08:55:57PM and Winfield. Those in Kane County out Aurora, Batavia, Elgin, Geneva, and St. Charles. And then at Will County they include DuPage and

Wheatland.

One of the demographic pieces of information we use when we calculate how much waste is generated in a service area is we look at population. In this instance, I have listed the populations of DuPage County, Kane County, and Will County that we used for the townships that were in the proposed West DuPage RTS facility. And that total population comes out to 1,087,501 residents.

08:56:41PM

Q. To be clear, this is DuPage County, that is the 566,198. That's in addition of the six townships that are in the proposed service area, correct?

A. That is correct.

Q. Because all of DuPage is somewhere like 900?

A. Yes. All of DuPage is upwards of a million.

08:57:07PM

Q. Thank you.

A. So to determine from that population how much waste is generated and what will need

to be transferred, we look at how much is generated on a pounds-per-person per-day basis. For instance, DuPage County generates 8.77 pounds per person per day and it has -- It was talked about earlier. That figure comes from a study that was done by the Illinois Department of Commerce and Economic Opportunity. Among all the counties in Illinois they did waste sorts at landfills and transfer stations
08:57:44PM and then used that information to arrive at the amount of pounds per person per day that an individual would generate in these counties. We use that information to do our waste projections in terms of what needs to be disposed of from a service area.

Next, in Kane County, that amount adding up to 8.21 pounds per person per day. And in Will County, that quantity was a little bit less at 7.56 pounds per person per day.
08:58:19PM That's the amount of waste that gets generated. The amount of waste that gets disposed is something different than that because we

subtract from that the amount of recycling that gets done from that waste that gets generated.

So, for instance, DuPage County, we talked about their Solid Waste Management Plan, they reported in their 2017 update that they have a recycling percentage of 30 percent. Kane County, in their most recent 2020 update, reported they were recycling a percentage of 37 percent. In Will County that recycling percentage they reported in their most recent Solid Waste Management Plan was 43 percent.

08:58:54PM

So just a quick calculation of how we come up with how much waste needs to be -- is generated and needs to be disposed in a service area.

So we used a simple calculation. We use the number of people, multiply that times the pounds per person per day, which I just mentioned about it differs for each county, we subtract from that the amount that gets recycled and then we multiply that times 365 days and we divide that by 2,000 pounds per person to get to

08:59:28PM

tons per year.

The amount of tons per year --

Q. I'm sorry. When you say 2,000 pounds per person --

A. 2,000 pounds per ton. I'm sorry. Exactly. So we've come up with the amount of waste generated for disposal in the West DuPage RTS service area and in the report that was reported at 2,997 tons per year. So the waste
09:00:09PM generated is actually a little bit more than that because we're calculating pounds generated per day, whereas, a transfer station is only operating six days per week. So we have -- The actual calculation is a little bit higher in the report. They gave waste generated per the six-day workweek at 3,547 tons per year.

Q. When you say "per year," you mean the total year or per day in the year?

A. That's per year.

09:00:49PM Q. Okay. Thank you.

A. This figure shows the facilities -- the other nine facilities that overlap the

service area of the proposed West DuPage RTS facility. It's a rather busy diagram, and I'll go through each of these individually to make it a little easier to view.

I'll start out -- I'll start out with the Lakeshore Recycling Service Elburn Transfer Station service area. As you can see, that service area is about maybe a third of the -- the overlap is about a third of that
09:01:38PM transfer station service area but it represents about 84 percent of the population within that transfer station service area.

Next we look at the Waste Management Batavia Transfer Station service area and it overlaps a significant portion of the -- of the West DuPage RTS facility and it represents an overlap -- the service area population is 50 percent -- 6 percent within its overlapping area.

09:02:24PM Next we have the DuKane Transfer Station. It's identified here as a No. 3 diamond. Its service area encompasses almost

80 percent by area of the West DuPage RTS facility and represents 97 percent of the -- of its population.

Next we have the Waste Connections Plano transfer station. It overlaps a small portion of the West DuPage service area. It's the No. 4 diamond there off to the left. And it represents -- That service area population represents 9 percent of the population in the

09:03:19PM Waste Connections Plano Transfer Station service area.

Another transfer station just north of the proposed service area is the Waste Management Bluff City Transfer Station. The population within that overlap area represents 66 percent of the population in the Waste Management Bluff City Transfer Station.

This facility compares the overlap and service area between two transfer stations

09:04:08PM down in Joliet. One is the Joliet Transfer Station operated by Waste Management and what I'm calling the Moen Road Transfer Station, and

it's owned and operated by Environmental Recycling Disposal Systems.

MR. MUELLER: I didn't hear what you said after Moen.

THE WITNESS: The Moen Road Transfer Station.

MR. MUELLER: Road?

THE WITNESS: Moen, M-o-e-n, Road.

MR. MUELLER: What was the word after "Moen"?

09:04:34PM

THE WITNESS: Transfer station.

MR. MUELLER: Okay. Sorry.

BY THE WITNESS:

A. Again, for this one we have similar service areas in terms of boundaries, and they overlap a portion of the service area there and -- since they are pretty much in the same location. This overlap service area represents portions of Will County or areas that are contiguous of Will County that can be served by a landfill in southern Joliet owned by Will County.

09:05:09PM

This represents --

Q. Excuse me. You said "landfill." Do you mean landfill or transfer station?

A. Well, there's two transfer stations here in Will County, but in the earlier slide it showed that there is a landfill in Will County that is generally served by these two transfer stations. It's where the waste goes to.

Q. Okay. Thank you.

09:05:40PM A. This overlapped service area is 37 percent of the population of the service area for these two transfer stations. Then to the northeast portion of the service area, there's a transfer station.

Diamond No. 9 there is the Waste Connections Elk Grove Transfer Station. And that overlap area represents 10 percent of its population for that service area.

Then the last is the Melrose Park

09:06:24PM Transfer Station, which is transfer station No. 11 in the diamond there. It has a small overlap in the proposed West DuPage RTS

facility. And that overlap represents 9 percent of its transfer station population.

Q. Before you go on, it's a little hard to read on the paper copies. It didn't come out very well. It looks good on the screen.

The hatched area, that's the overlap, right?

A. Yes. The hatched area represents the overlap. You can see where the circle

09:07:02PM intersects the boundary of the diamond in green, which is the West DuPage Recycling and Transfer Station.

Q. Please proceed.

A. Then this is a summary -- is a summary figure showing the overlap in transfer stations that I represented earlier. You can see that there is many. The service areas overlap are as many as six down in the southwest portion of the proposed service area and they vary going north,

09:07:40PM approximately, four transfer stations overlap the service area and you go to the north -- northeast and there's roughly three to four

transfer stations that overlap and that's the service area. And down in the southeast portion of the service area it shows the fewest transfer station overlaps, and that's the green and there's two there.

Q. Okay. Let me stop you here for a second. Does this mean before any -- before the project is built if it's built, every portion of the service area has at least two transfer

09:08:24PM stations --

MR. MUELLER: I'm going to object as to leading.

HEARING OFFICER PRICE: It is leading. But it's in all fairness, rules don't have to be so strict, and I appreciate the time savings.

MR. LEUTKEHANS: That's what I'm trying to do.

BY MR. LEUTKEHANS:

Q. Is it fair to say -- So like the green

09:08:40PM areas, they represent where there are two current existing transfer stations --

HEARING OFFICER PRICE: What are the

green areas?

MR. LEUTKEHANS: The green areas --

HEARING OFFICER PRICE: That's the question. Let the witness talk. What are the green areas?

BY THE WITNESS:

A. The green areas on this figure are representing the southeast portion of the service area generally have two transfer

09:09:01PM stations available.

Q. So the pink area represents what? The pink areas.

A. The pink area represents three transfer stations.

Q. That are overlapping with the proposed service area?

A. Yeah, that overlap the proposed service area.

Q. For the record, the blueish/purple

09:09:22PM whatever color that is that's --

A. Those are four transfer stations that overlap within the proposed transfer station

service area.

Q. And the light blue?

A. Light blue are five transfer station service areas that overlap the proposed West DuPage RTS facility service area.

Q. And No. 6, the brown?

A. Those are -- Those are six transfer stations. Their service areas overlap the proposed service area of the -- of the West DuPage RTS facility.

09:09:53PM

Q. I see on the chart, at least, a color for yellow that corresponds to what?

A. Right. There are none.

Q. There are none?

A. Yes.

Q. So every -- Every area has at least two transfer stations serve that we know currently?

A. That is correct.

09:10:10PM

Q. Please, proceed.

A. This is a summary table that it shows the amount of waste transfer capacity that's

available in the service area. The way we calculate that is I look at the percentage of the population overlap to the service area and then I multiply that by that percentage and take that times the capacity of that particular waste transfer station.

For instance, the first one, the Waste Management Bluff City has 2,000 tons per day of capacity. The service area overlap
09:10:53PM population that I talked about earlier on the slide represented 66 percent of that population. And so the available capacity to the service area in this case was 1,320 tons. So I did that for each of the transfer stations, again, the Waste Management Bluff City, Waste Connections in Plano, DuKane Transfer in West Chicago, Waste Management Transfer in Batavia, Lakeshore Recycling Systems Transfer Station in Elburn, Waste Management Transfer in Joliet, and ERDS
09:11:29PM Transfer in Joliet, Waste Connections Transfer in Elk Grove Village, Republic Transfer Station in Melrose Park, and two are below here -- I

added these because waste -- from a construction and demolition debris recycling facility, up to 40 percent of the incoming volume in that can be treated as residuals, which would be considered waste that can go to a landfill.

So the existing capacity, for instance, here, at the LRS general construction and demolition debris facility, their permanent capacity is 1,250 tons per day. And if you take 40 percent of that residual that they could transfer out as non recyclables is 500 tons per day.

09:12:12PM

Then there's another facility just down the road from them called Falcon Green Resources. It's along Powis Road. It has a total capacity in tons per day of 300 tons per day. And, again, it can treat as residuals up to 40 percent. So it has an available capacity in tons per day, again, on the amount of waste that gets generated in this service area, it could handle 120 tons per day of that waste capacity.

09:12:46PM

This block chart shows a similar thing from the table below. Earlier there's 7,944 tons per day of current service area transfer capacity. Year 2020 need in the area for transfer that was in the application was 3,574 tons per day. They projected using population from the Chicago Metropolitan Area For Planning, CMAP, population projections and it came up with a 2040 transfer capacity, meaning in the service area of 4,263 tons per day.

09:13:40PM

Q. Did you say this was in the application, these numbers?

A. Yes.

Q. Do you disagree with the numbers? Or do you agree with them? Or did you check them?

A. For the waste generated, yes, I did check the numbers, and they did seem to appear correct.

09:14:02PM

Q. Okay. Please proceed.

A. This is Figure 1-2C from the application, the needs assessment. It shows the

different companies that haul within the proposed service area. Again, there's six of those that are there. Lakeshore Recycling, Republic Services, Waste Connections, Flood Brothers, Waste Management, and SBC Solutions. And you can see that there is the municipalities they serve. They are somewhat spread around the service area indicating, again, with all that overlap that there is facilities for all of these companies to use.

09:14:47PM

In coming up with my conclusions, based on the information presented in my review, an additional municipal solid waste transfer capacity is not necessary to serve the waste needs of the intended service area of the LRS West DuPage RTS Transfer Station. The conclusion was supported by the following facts: The LRS West DuPage RTS service area currently generates 2,977 tons per day of waste and requires transfer to landfills for disposal. This translates to 3,574 tons per operating day of the week -- per year based on operating day

09:15:23PM

of the week.

The present capacity in the service area for transfer waste is 7,944 tons per day, representing a surplus in capacity of 4,380 tons per operating day or 122 percent surplus.

The expected growth in the population through year 2040 is insufficient to create a need for additional waste transfer capacity in the service area because of the remaining 86 percent surplus of waste transfer capacity in the year 2020. Two waste transfer stations are located in the service area of the proposed LRS West DuPage RTS location and seven transfer stations that service areas spaced geographically in proximity to provide service within the proposed LRS service area. One of the nine is operated by Lakeshore Recycling Systems and its service area currently overlaps 84 percent of the population of the service area of the West DuPage RTS facility.

Then, as illustrated on Figure 11 in the report, there is currently a minimum of

two transfer stations available to serve the proposed service area on the West DuPage RTS facility, and as many as six.

Market conditions of waste volume, transfer capacity, and travel distance do not necessitate a new waste transfer station in West Chicago to meet the need in the service area.

Q. Mr. Lardner, is this the same type of analysis you have done on the other applications that you have either reviewed or presented as far as a needs analysis?

09:17:17PM

A. Yes. We normally look at the population in our proposed service area and we also look at other transfer stations whose service area overlapped those of the facility that I was looking at. And then we use the waste projections from whatever county it is I'm working in and then we come up with that tons per day of capacity that's needed.

Q. Okay. Were you here for Mr. Hock's presentation on Criterion 1?

09:17:49PM

A. Yes.

Q. Did he, in your opinion, admit that he could not meet the needs analysis that you performed?

A. Yes. They admitted that the service area had excess capacity that was necessary to meet the waste needs in their report.

Q. Do you agree with his arguments that the proposed facility is necessary from a competition standpoint?

09:18:21PM A. No, I do not agree.

Q. Okay. Mr. Hock talked about the need for LRS to compete in the industry. Do you recall that, that this was necessary for them to be able to compete in the industry?

A. Yes.

Q. Do you agree with that argument?

A. No. As mentioned on the one slide there is at least two transfer stations in the service area and, actually, LRS does have a

09:18:45PM transfer station that does overlap the service area.

Q. Could you look at the standard, which

is, The facility is necessary to accommodate the waste needs of the area it is intended to serve.

A. Yes. The standard that I -- I normally use and have seen people use is just the type of analysis that I mentioned. We look at how much waste is -- needs to be disposed of or is generated. We subtract out recycling and come up how much needs to be disposed of. We look at other transfer stations, you know, in the service area. And then we determine whether there's a deficit in transfer station capacity that's necessary for a new transfer station siting.

09:19:29PM

Q. Look at the standard. It says, The waste needs of the area, correct?

A. Correct.

Q. Does it say anything about the waste needs of the waste companies or the needs of the waste companies?

09:19:46PM

A. No. It basically talks about the waste needs to serve the people that are generating the waste in the counties where the

transfer station is located.

Q. Okay. Mr. Hock also argued that this waste transfer station was necessary for competition in the industry.

Do you recall that?

A. Yes.

Q. Do you agree with that argument?

A. No, I do not.

Q. Why not?

09:20:06PM A. Well, as I talked about, there's considerable overlap in service from other transfer stations to the proposed West DuPage RTS facility. So, generally speaking, we look is of the amount of waste that's being disposed in this service area, are there transfer stations that can handle it? The answer is absolutely, yes.

Q. Can you go to Page 17 of your PowerPoint? How does that play into this

09:20:49PM need -- this issue of whether the industry needs another transfer station in the proposed location?

A. As this particular figure shows, there is transfer stations that are to the east of the service area, some of whose service areas, again -- here we use the ten-mile radius for the service area for those transfer stations in circles there. So the waste transfer capacity need has been met by facilities outside of DuPage County in Cook County on the north and along the east and somewhat to the center of
09:21:39PM Cook County. And then there's other transfer stations to the west of DuPage County, one in DuPage County, the DuKane Transfer Station, and there's several in Kane County and then there's two transfer stations down in Will County that handle waste in the service area. So, yes, there is -- in terms of solid waste disposal market, there are transfer stations that handle waste.

Q. Let's look at competition. Is there
09:22:11PM any area within this proposed service area that does not already have at least two competitors or competitive waste transfer stations servicing

that area?

A. There is at least two competitive waste transfer stations in this proposed service area.

Q. In fact, in some places it's up to six?

A. That's correct.

Q. Do you have an opinion -- Based on your experience as an engineer and your professional background, do you have an opinion with a reasonable degree of engineering certainty as to whether this waste transfer application meets Criterion 1?

A. It is my professional opinion that the proposed application does not meet the Criterion No. 1.

Q. Have you ever testified previously that a facility did not meet Criterion 1?

A. No.

Q. So every facility, every analysis you have done in the past was stated that particular facility met Criterion 1, correct?

A. Yes.

MR. LEUTKEHANS: Nothing further. Thank you.

HEARING OFFICER PRICE: We're going to go to PODER first and then to you, Mr. Mueller.

Any questions for this witness?

MS. ALCÁNTAR-GARCIA: No.

HEARING OFFICER PRICE: They do not.

So LRS.

09:23:21PM CROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. Lardner, are you familiar with the Moen Transfer Station?

A. Yes, I am.

Q. That is close to the Joliet Transfer Station?

A. Yes, it is.

Q. Are you aware that even though those two transfer stations are literally only a block

09:23:55PM or two apart, the Pollution Control Board and the Appellate Court affirmed the need for the Moen Transfer Station?

A. Based on the review of that application, there were extenuating circumstances there that did leave them to believe there was a need for that transfer station.

Q. What were those extenuating circumstances?

A. One was the competing transfer station, the Joliet Transfer Station, it was exceeding its design capacity and there was waste that was sitting outside the facility, so it was overcapacity. And there were trucks that couldn't get in on certain days because the transfer station exceeded its incoming capacity.

Q. What was the design capacity of the Joliet Transfer Station?

A. If I'm -- I'm not certain. I think it was 1,300 tons per day.

Q. What was the permitted capacity of that transfer station?

A. I think it was -- I think that is the permit -- 1,300 is the permit.

Q. Is that 1,300 designed or permit?
A. I think it's both.
Q. It happens to be the same number, right?
A. I think so.
Q. Now, Mr. Lardner, you have been working on a project in Bloomington, Illinois, haven't you?
A. Yes.
09:25:32PM Q. On that project, there is already a transfer station that services Bloomington?
A. That particular project is not gone to a siting application, so I don't know if I'm privy to provide my information about that.
Q. Do you know, Mr. Lardner, whether or not there is a transfer station that services Bloomington and McLean County?
A. Yes.
Q. And that's the Republic Services
09:26:09PM Transfer Station, right?
A. Yes.
Q. And it does an adequate job, doesn't

it?

A. As far as I know it does.

Q. Yet, you have written a report that opines that a competitive transfer station is necessary to serve the waste needs of the area that it's intended to serve, haven't you?

A. Again, I did a study. It's not in the public domain. You know, the reasons and analysis there -- The reason for the needs there
09:26:53PM were different circumstances than there are here. So, I mean, I can talk about that but it's not a public record, so ...

Q. So you did opine that a second transfer station was necessary there even though it was adequate capacity for the public?

MR. LEUTKEHANS: Objection as to the word "opine." There is no public statement. He may have a draft report but --

BY MR. MUELLER:

09:27:16PM Q. You did put in a draft report that a second transfer station was necessary, right?

A. The reason it was necessary --

Q. Yes or no, sir?
A. Yes.
Q. Thank you. Now, if you turn to page -- Oh. Before I go to that, how many times have you testified at a transfer station hearing?
A. I think for transfer stations, four.
Q. Pardon me?
A. Four.
09:27:50PM Q. In each case you were hired by the applicant, except in this case, right?
A. Correct.
Q. So in those cases you opined that the transfer station was necessary?
A. Yes.
Q. In this case, you were hired by someone other than the applicant?
A. Yes.
Q. Who hired you?
09:28:09PM A. Protect West Chicago.
Q. How much have you been paid?
A. I don't know. I haven't put my bill

together yet. I have been paid nothing so far.

Q. How much have you quoted as a price for your testimony?

A. I think around $15,000 maybe.

Q. And that includes a report?

A. That includes report and testimony.

Q. Do you know whether or not you're being paid by Waste Connections?

A. No.

09:28:40PM Q. You don't know?

A. Again, my client is Protect West Chicago.

Q. You haven't received any checks, have you?

A. Just one.

Q. Was that check from Waste Connections?

A. No.

Q. Now, if you put up Slide 7 of your PowerPoint.

09:29:29PM A. Okay.

Q. The bottom line is that the waste generated is 3,547 tons per year?

A. No. I think that's per day. That's a mistake.
Q. Which is it? Is it per day, per week, or per year?
A. It's per day.
Q. Then why did you write "per year" there?
A. Because that was a mistake.
Q. So that's a mistake?
09:29:57PM A. Correct.
Q. If you turn to your report, sir, which has been marked as PWC Exhibit 156.
A. Okay.
Q. It says Criteria 1?
A. Yes.
Q. How many criteria are you testifying about?
A. I'll be testifying on two, Criterion 1 and Criterion 8.
09:30:35PM Q. You're testifying on two criteria?
A. Correct. I used the plural here, instead of the singular.

Q. So this report should say Criteria 1 and 2?
A. No. Just Criterion 1.
Q. That's Criterion 1, sir?
A. That is correct?
Q. Is that a mistake?
A. Yes, it is.
Q. By the way, your report in McLean County, the one for Bloomington, opined that the
09:31:18PM reason a second transfer station was necessary was because of competitive and environmental factors, right?
A. Yes.
Q. Do you know what vertical integration is?
A. Yes, I do.
Q. Are there benefits to a waste company being vertically integrated?
A. I would agree, generally, there are
09:31:44PM benefits.
Q. I didn't hear you, sir.
A. Yes, I would agree that there are

benefits.

Q. In vertical integration a company has the ability to control its pricing from the curb to the transfer station to the landfill, correct?

A. Yes. If they own each of those facilities and are doing the hauling, then they do set the price.

Q. And for a vertically integrated company, the choke point is the transfer station, isn't it?

A. Presuming that you're not hauling directly to a landfill, then, yes, the transfer station would be that intermediary point.

Q. What is Falcon Green Resources?

A. They are general construction and demolition recycling facility.

Q. They don't have the ability to take municipal solid waste, do they?

A. No, they do not.

Q. Are you aware of an asset swap about five years ago between Republic Services and

Waste Connections?

A. Just vaguely aware of it. I did hear it in the previous presentation that there was an asset swap.

Q. What is the nature of that asset swap, if you recall?

A. I recall that Republic swapped assets -- I think it was west of I-355 -- and kept the rest as Waste Connections and vice versa.

09:33:43PM

Q. Now, despite that asset swap, it's your opinion that transfer stations east of 355 are still available to the service area?

A. I would think so. I don't know why they wouldn't be. They are open for business.

Q. Can you tell me the last time any waste from this service area went to a transfer station east of 355?

A. I am not aware of any.

09:34:22PM

Q. Now, if we go to your Slide No. 9.

A. Okay.

Q. You talk about service areas -- Maybe

10 is a better slide.

A. Okay.

Q. What is the -- What's the red circle?

A. The red circle is a service area that was prepared in the report for DuPage County looking at available transfer stations capacity in one of their solid waste plans in 2007, their update. That represents, I think, approximately a 15-mile radius.

09:35:16PM Q. Is that the service area that the transfer station designated for itself?

A. I am not aware of that.

Q. Is that a service area that a siting entity restricted the transfer station to?

A. No, not -- I don't think so.

Q. It's just a circle with a 15-mile radius, right?

A. Correct. It's the radius that would be within a reasonable driving distance for

09:35:56PM someone who has big enough waste to take it to in the center of it.

Q. Does reasonable driving distance also

consider road conditions and traffic volume?

A. I would say yes.

Q. But this service area, the red circle, didn't consider any of that, did it?

A. No.

Q. That's an arbitrary number, as far as you know, correct?

A. Yes. It's a representation of what the service area would be for a facility at that time.

09:36:37PM

Q. What are you using as the DuKane Transfer Station's service area?

A. Again, that was a service area that was presented in the 2007 report for DuPage County that looked at available capacity available to DuPage County.

Q. Presented by whom, Mr. Lardner?

A. It was a 2007 report prepared by Shaw Environmental for DuPage County.

09:37:05PM

Q. Prepared by Shaw for DuPage County?

A. Yes. It's in their Solid Waste Management Plan.

Q. What did you use as a service area for the Moen Transfer Station?
A. I used their siting application.
Q. What did you use as a service area for the Bluff City Transfer Station?
A. Again, I used the 2007 Shaw Environmental report prepared for DuPage County, and the 2007 Solid Waste Management Plan update.
Q. Do you have that report with the you today, sir?
09:37:44PM
A. No, I do not.
Q. Are you aware that Bluff City isn't even in DuPage County?
A. I'm sorry. It's in -- It's in Cook County.
Q. Where did you get your values from for the Bluff City service area?
A. Again, that was presented in the DuPage report they showed the service area in --
09:38:09PM
excuse me -- of the Bluff City Transfer Station.
Q. Do you know what criteria were used in the single report where you got your service

areas from?

A. No.

Q. Have you tried to independently verify that those service areas are reasonable?

A. No.

Q. Isn't it true that an effective or reasonable service area depends on factors other than a circle with the radius?

A. Yes. Consider -- I talked about --

09:38:48PM That circle would overlap with other transfer stations. It's their service areas, too.

Q. It's your opinion, sir, that if you have overlapping circles, then there's no need for an additional transfer station; is that right?

A. I'd just say if there's enough overlapping areas of transfer stations, there would not be a need for another transfer station as long as the capacity in those transfer

09:39:13PM stations was sufficient.

Q. And that's your opinion, regardless of whether there are competitive factors that would

make a transfer station realistically unavailable?

A. I'm not aware of the competitive factors. This is how I would typically prepare a needs assessment report.

Q. Let's talk about competitive. Is price is competitive variable?

A. Generally speaking, I would say yes.

Q. So if one transfer station has a price
09:39:52PM that is significantly higher than another transfer station, are they both equally available to a customer?

A. I don't think there's anything that prevents somebody from using a transfer station, no.

Q. If you want to pay $100 a ton, then you can do it and they are all available, right?

A. If you pay the price at the gate, whatever, you know, a person charges, then you
09:40:20PM should be able to use that service.

Q. Is road mileage a variable in realistic access to transfer stations?

A. Generally speaking, a hauler would try to take the shortest route to a transfer station, yes.

Q. So if one transfer station is 30 miles away from a point and another is 10 miles away from a point, are they both equally accessible to that point?

A. I think -- Yeah. Either one. You can go to either one, yes, they are both accessible.

09:40:57PM Q. They are both equally accessible?

A. I mean, they are accessible. To say they are equal, you know, I don't know what route they are going, I don't know what kind of traffic they are going to encounter, no.

Q. In your report and your analysis did not consider variables such as price or mileage to the different transfer stations, did it?

A. No.

Q. Your report did not consider

09:41:28PM environmental factors such as emissions, did it?

A. No.

Q. Once again, your report did not

consider the impact of the Republic asset swap with Waste Connections?

A. In what regard?

Q. In regard to whether or not transfer stations within the circle that you have arbitrarily drawn are equally available to a service area?

A. No.

Q. No, I'm wrong? Or you did not consider it?

09:42:27PM

A. I did not consider it. I didn't know if there was an agreement that would preclude it.

Q. Do you have any idea why Will County's recycling rate is almost 50 percent higher than DuPage County's recycling rate?

A. No. I'd have to look -- I have read through their Solid Waste Management Plan. And I do know that -- It does seem higher than others but, again, it's -- you know, solid waste -- there's data that compares that information.

09:43:08PM

Q. You didn't do any independent work to try to figure out the difference?

A. No.

Q. You're aware that Mr. Hock, in his testimony, admitted that if you looked at pure capacity without regard to factors such as pricing and environmental impact and benefits, that there is, in fact, excess capacity in this service area?

09:44:06PM A. I did see he reported excess capacity in the service area, yes.

Q. And your conclusion is as simple as if there is excess capacity and there are multiple transfer stations that you could take garbage to, then there's no need for an additional transfer station?

A. No. I think the question was: Is there waste that's generated in a service area not being handled by transfer stations in the

09:44:38PM service area? Some of that waste could be coming from the general construction and demolition facility and some of that might be

coming -- going out to the transfer stations that are directly adjacent to the service area. So they're not exactly in the service area but very close.

Q. Now the Elk Grove transfer station, how did you generate their service area?

A. Again, I just used a ten-mile radius.

Q. Is there a learned report or treatise that says a ten-mile radius is an appropriate number?

09:45:19PM

A. It's just a general rule of thumb.

Q. Your rule of thumb, right?

A. That, and I've read other publications and it was alluded to the in the 2007 Shaw Environmental report.

Q. Give me the name of another publication that it was alluded to?

A. I can't give you one right off the top of my head.

09:45:40PM

Q. Is the Melrose Transfer Station one with a ten-mile service area?

A. Yes.

Q. Again, that's your rule of thumb, right?
A. Correct.
Q. Who else uses your rule of thumb?
A. I just think it's generally when people are looking at what's a distance between a transfer station versus other options, that ten miles is the distance and time-wise and to look at -- if it's longer than that, you might look at an alternative.
09:46:19PM
Q. How many transfer stations are located within ten miles of the center of this proposed service area?
A. I don't know the answer to that.
Q. Wasn't that part of your assignment, to analyze things like that?
A. I was looking at the service area overlaps.
Q. Now, with regard to the transfer stations that you say overlap this one --
09:47:36PM
A. Correct.
Q. -- how many of those are owned by

Waste Connections?

A. I think I have two there. I guess, three if you count --

Q. Is it three or is it four?

A. I'm referring to my Figure 8. It's three.

Q. How many are owned by Waste Management?

A. Four.

09:48:56PM Q. So you said between two and six transfer stations overlap the service area?

A. Correct.

Q. They are all owned by Waste Management or Waste Connections, other than the Republic station east of 355, right?

A. There's one down in Will County.

Q. Oh, the Moen Transfer Station?

A. Right.

09:49:28PM Q. How far is the Moen Transfer Station, sir, from the southern edge of this service area?

A. Looks to be -- Say, about maybe,

approximately, eight to ten miles.

Q. You don't know the exact number, do you?

A. No.

Q. Have you ever driven from West Chicago to Rockdale?

A. No.

Q. Would it surprise you to know that that's about an hour drive by car?

09:50:11PM A. Again, I have not driven it, so I don't know.

Q. So you're saying a transfer station south of Interstate 80 is reasonably available to this service area?

A. To the southern part. Not to all of it, no.

Q. Other than that, all of the other transfer stations that are available are owned by the two big companies Waste Connections and

09:50:45PM Waste Management, right?

A. Well, there's --

MR. LEUTKEHANS: Objection; form. I'm

not sure -- I don't know what that is. We already talked about these two.

HEARING OFFICER PRICE: Overruled.

Go ahead and answer.

BY THE WITNESS:

A. Well, in Slide 8 there -- It's not up there. But there's -- Overlapping the service area there's two other transfer stations. One is owned by Lakeshore and the other one is owned by EDRS.

09:51:16PM

Q. One owned by who?

A. Is it EDRS?

Q. EDRS?

A. ERDS.

Q. That's the Moen Transfer Station, isn't it, sir?

A. Yeah. Okay.

Q. And Falcon doesn't do municipal solid waste, right?

09:51:40PM

A. No, they do not.

Q. Pardon me?

A. No, they do not.

Q. Do you also dispute that there's a need for this transfer station's ability to dispose -- or to transfer hydro-excavation waste?

A. I don't dispute that, no.

MR. MUELLER: Mr. Lardner, that's all I have. Thank you.

THE WITNESS: Okay.

HEARING OFFICER PRICE: Mr. Callaghan, 09:52:32PM I've got -- I want to know how much time you think you're going to need.

MR. CALLAGHAN: I'll finish before 10:00.

HEARING OFFICER PRICE: I have one public comment person I have to get in tonight. If you think you can be done by 10:00 -- He's coming back for Criterion 8, right? So we'll do redirect tomorrow. So, Mr. Callaghan, go ahead. And 09:52:59PM Ms. Boza please be ready to go as soon as Mr. Callaghan is done.

CROSS-EXAMINATION

BY MR. CALLAGHAN:

Q. I just want to understand, going to Slide 8, these service areas were -- most of them came from a DuPage County report?

A. Yes, with a few exceptions; one for the Plano Transfer Station and the other one for the Moen Transfer Station.

Q. So you don't -- You don't actually know whether or not these are service areas that are actually served by these transfer stations?

09:53:33PM

A. I don't have direct knowledge of that, no.

Q. Now, you -- I think, on your resume, it says that you were the consultant who prepared the needs analysis for the Plano Transfer Station?

A. Correct.

Q. So I look at the Plano service area, which is quite large, probably -- maybe other than Moen, it looks like the largest service area up there. Where did you get that service

09:54:05PM

area from? Did you create that service area?

A. No. That was provided to me by the -- my client.

Q. So the applicant chose that. And I guess by the logic of your testimony, a good portion of that service area is not valid because there are all these other transfer stations that could serve it?

A. In essence, their service -- Yeah, there was -- There is overlap, right.

09:54:41PM

Q. But, nevertheless, you testified in favor of that service area?

A. There was a slight need there. Not so much in the present but a lot of the need occurred going into the future because it was a very fast growing area.

Q. Has it been a fast growing area recently?

A. I'm not aware. We looked at 20 years.

09:55:09PM

Q. We were talking about vertical integration, which is hauling, transfer, and landfill?

A. Correct.

Q. If you have a choice, if you can haul directly to a landfill, that's the best approach because you save the middle step, correct?

A. Correct. Historically for, especially like in DuPage County, you had the luxury to two publicly-owned landfills going back to the 1990s, so there was no need for a transfer station. And as those two landfills closed, then there was a need for a transfer station somewhere in DuPage County and that transfer station ended up being in West Chicago.

09:55:44PM

Q. So for a county of a million people, I think you said --

A. Right.

Q. -- you believe one transfer station is sufficient?

A. Depending how large it is and how accessible it is.

09:56:10PM

Q. You mean for a second one?

A. It could be, yes.

Q. Going back to Plano service area, just

north of the service area is a landfill?

A. Correct.

Q. So why would the north part of the Plano service area be necessary if there's a landfill there? After what you just said, it's more economical to haul directly to a landfill?

A. I think at the time it was their existing clients, and when they haul, they were going to do some separation of recyclables. So in that area they had clients there who they were going to bring that material to the transfer station for recycling reasons.

09:56:45PM

Q. So there are various considerations for selecting service areas, such as your clients -- convenience for your clients, correct?

A. In this case, it was the distance. If you looked at where Plano is located to the next furthest transfer station, there's mostly distance.

09:57:23PM

Q. But, again, the landfill is much closer to the north part of the service area

than the transfer station, correct?

A. Right. You have to look at the haul distance.

Q. By the way, the Plano Transfer Station is the last of the transfer stations up there on Page 8 that has been sited, correct?

A. As far as I know.

Q. So it wasn't as though it was there first and the others came along?

09:58:14PM A. No.

Q. That was the last --

A. That was the last one, correct.

Q. So it seems to me you were doing exactly -- making exactly the same determination that LRS is here, that it was a convenient, economical choice for customers of the waste company to put a transfer station in?

A. A lot of it came down to, again, the population and the growth of the area. Again,

09:58:45PM the actual transfer capacity, as I recall, was fairly close to existing, but when you looked at future, there was a need.

Q. Now, if your only choices for transfer stations are considerably more expensive, if you're a hauler and you have a landfill and your only choices for a transfer station are considerably more expensive than if you built your own within the service area, are you saying that's not a consideration for a company?

A. I always look at these as what's available to serve the amount of waste that's being generated? Where does it go? Price, obviously, affects the hauler. But you have to look at waste transfer stations, where can they go?

09:59:33PM

Q. Sure. Yeah. And this location happens to be a site that's been selected by a waste company.

MR. LEUTKEHANS: Objection. Is that a question or are we arguing now?

HEARING OFFICER PRICE: Overruled.

09:59:57PM

BY THE WITNESS:

A. What was the question?

Q. Let me just ask this question: You

have a bunch of transfer stations shown on Slide 8?

A. Correct.

Q. Is it your testimony that most of them are not necessary?

A. They have been -- Again, I wasn't through their siting process to determine, you know, what the need was. Certainly there is excess capacity for these transfer stations.

10:00:31PM Their capacity is more than what's -- at least in this service area what gets generated.

Q. So is your answer, yes, most of them are not necessary?

A. Not that it's -- No, I think they are necessary.

Q. Notwithstanding the surplus capacity?

A. Again, I don't know that the circumstances around, you know, when they projected their capacity and their service area.

10:01:02PM Obviously, it looks to be there is some excess capacity out there just because -- especially for this service area. If you looked at how

much waste is generated and how much gets recycled and what is left over, the abundant capacity exceeds that what is needed.

MR. CALLAGHAN: Nothing else. Thanks.

HEARING OFFICER PRICE: Thank you, Mr. Callaghan.

Mr. Walsh, nothing?

That's going to conclude for this evening but for the public comment from Ms. Boza. The redirect will pick up on Thursday, again, in the cafeteria at Entrance H, as in hotel.

10:01:36PM

With that, Ms. Boza, would you give your public comment. Again, for everybody this is -- Ms. Boza is giving public comment. It's not subject to cross. Please give it the appropriate weight.

Okay. Go ahead.

MS. BOZA: Good evening, everyone. I'm Jenn Boza. I have been employed with LRS since 2013, and since 2019 I have serviced across West Chicago. Our environment in the West Chicago

10:02:03PM

facility is fast paced where we work hard and provide services to the DuPage County residents every day. We get in before sunrise and ensure all of our operations are performed safely and seamlessly --

MR. LEUTKEHANS: I'm sorry to interrupt. I don't think -- I'm having a hard time hearing, and I think so is the court reporter.

10:02:29PM HEARING OFFICER PRICE: Can you move closer to the microphone?

MS. BOZA: Sure. Our environment in the West Chicago facility is fast paced where we work hard and provide services to the DuPage County residents every day. We get in before sunrise and ensure all of our operations are performed safely and seamlessly to the community's residents.

Incredibly, I have seen generations 10:02:50PM of families work at our facility over the years with the ultimate reward of being able to send their kids to college. I hope that I get to

work here in West Chicago for many more years to come and I'm grateful for the incredible career and opportunities I have had at LRS.

I urge city council to vote yes for LRS as I want to see jobs, careers, and opportunities made alike here in West Chicago. Thank you.

HEARING OFFICER PRICE: Thank you. So that concludes for this evening. Again, to pick up Thursday at the West Chicago High School. We will pick it up there at 6:00 o'clock.

10:03:22PM

Mr. Leutkehans has the floor.

Thank you, all, and good night.

(WHEREUPON, the above-entitled cause was continued to January 12, 2023 at 6:00 p.m.)

STATE OF ILLINOIS)
) ss:
COUNTY OF DU PAGE)

I, KRISTI LANDOLINA, Certified Shorthand Reporter, Notary Public in and for the County DuPage, State of Illinois, do hereby certify that previous to the commencement of the examination and testimony of the various witnesses herein, they were duly sworn by me to testify the truth in relation to the matters pertaining hereto; that the testimony given by said witnesses was reduced to writing by means of shorthand and thereafter transcribed into typewritten form; and that the foregoing is a true, correct and complete transcript of my shorthand notes so taken aforesaid.

IN TESTIMONY WHEREOF I have hereunto set my hand and affixed my electronic signature this 23rd day of January, A.D. 2023.

HEARING OFFICER PRICE: So this is the continuation of the public hearing on the proposed transfer station. This evening we don't quite have the technology we had at the --

You may have a seat, Mr. Lardner. It will take a minute.

We don't quite have the technology we had at the Academy. We don't have a PowerPoint, for example, to display, and

05:59:05PM we're -- have "A" microphone, which I will shortly hand to the witness, Mr. Lardner, who is in the middle of his testimony on Criterion 1.

But as a result, so that everybody is aware of what's going on, we've moved the court reporter over here so that she can hear Mr. Mueller's questions and the questions from the attorneys and the witnesses a little better, particularly since don't have microphones, only the witness will have them.

05:59:31PM I also have been informed that there are several people who wish to give public comment who are unavailable next week when we're

working on Monday and Thursday during the day. Given the limited technology, I'm going to not only take care of those ten people, but anybody else who has signed up to give oral public comment, if you wish to go tonight, we'll do that.

We'll use Mr. Lardner's time effectively, complete Criterion 1. He's proposed to testify on Criterion 8 and we'll get
06:00:00PM that done, then we'll do some public comment to the extent we have it, and then we'll go back to working on the testimony. So that's the game plan for this evening.

One last thing to remind everybody about, again, the City Council includes the mayor, are acting in the capacity of a jury. And while you are used to having them available and accessible to you on all sorts of things of import in West Chicago, wherever you meet them,
06:00:30PM whether it's at city hall, at meetings like this, at -- at places of worship, in the grocery store, again, I need to remind everybody, they

cannot talk to you about this. They're acting as a jury.

The statute says that it's fundamentally unfair for people to lobby them and to do the kinds of pro se interactions that would take place during the hearing. So we need to respect that process. You can put in your public comment through writing. There's -- You can do it now or 30 days after we close the
06:01:04PM hearing. You can put in everything you want in the written public comment time period, but what you can't do is attempt to interact with them on an interpersonal basis right now.

All right. With that being said, we are back to Mr. Lardner. We are on redirect.

Mr. Luetkehans, I will turn the floor over to you. I will ask that you project for the benefit of everybody, and I'm going to give the microphone to Mr. Lardner.

06:01:25PM MR. LUETKEHANS: One -- One second, Mr. Hearing Officer. Before -- I just want the schedule -- We have a -- our appraiser in from

out of state, so we are going to kind of break up Mr. Lardner and go to the appraiser, and then if you want to go to public comment, but --

HEARING OFFICER PRICE: That's fine.

MR. LUETKEHANS: -- we're -- I just didn't want anybody to think I was sandbagging.

THE WITNESS: Thank you.

MR. LUETKEHANS: You know what? I'm going to stand just because it's easier for me

06:02:15PM to be a little louder that way.

HEARING OFFICER PRICE: Anything to help everybody here.

MR. LUETKEHANS: And if you -- someone can't, please, yell, scream, whatever.

WHEREUPON:

JOHN LARDNER,

called as a witness herein, having been previously duly sworn, was examined and testified as follows:

REDIRECT EXAMINATION

BY MR. LUETKEHANS:

Q. Mr. Mueller asked you certain

questions Tuesday night about your position related to a possible waste transfer station in McLean County.

Do you recall that?

A. Yes.

Q. Can you tell us who you worked for in that assignment?

A. That assignment was for a company called Andrews Engineering.

06:02:37PM Q. Have you done a report there?

A. I prepared a preliminary report that they're going to use for preparing a Criterion 1 section for a transfer station siting.

Q. Why is it still preliminary?

A. The application has not been filed as far as I know, and I don't know if they've made any changes to it beforehand.

Q. Can you explain the purpose of that

06:02:58PM report and your preliminary findings?

A. Yes. The report was to prepare an analysis of a municipal solid waste transfer

station for a new transfer siting application so that the company would able to be -- to bid on a municipal hauling contract in Bloomington-Normal, Illinois.

The bid contract requirements included demonstration that the bidder have a waste transfer station within the city limits of Bloomington or the town of Normal, and that there was only one transfer station operated by
06:03:30PM Republic Waste in the service area. And it did not have a capacity associated with it due to its age and it never went through the Section 39.2 siting hearing process. So we didn't know what the capacity of that transfer station was.

And, again, in order to submit a bid for municipal hauling in the service area -- excuse me -- in the limits of Bloomington and Normal, which comprise most of the service area, they needed to have a transfer station.

06:04:02PM Q. Okay. Was there any competition in that county with Republic?

A. There is no -- There was competition

within the county. There is no competition for waste hauling in the city limits of Bloomington-Normal because of the qualification that the -- the bidders have a transfer station in the city limits.

Q. Okay. This is going to be a little hard for the public, but the rest of us have these slides.

In your Power Point, Mr. Mueller pointed out a typo on Slide 7 of your Power Point. Do you recall that?

06:04:30PM

A. Yes.

Q. The slide, for example, said that, quote, waste generated for disposal in WDRTS service area is 2,997 tons per year.

Is that a correct statement?

A. Yes.

Q. But then at the -- So that's what the slide said?

06:04:51PM

A. Correct.

Q. Okay. And then it discussed the six-day workweek tonnage is 3,574 tons per day

or per year again.

Do you recall that slide saying that?

A. Yes.

Q. You said Tuesday that the -- that was a typo. It should have been days versus years, correct?

A. Correct.

Q. Okay. Obviously, there are not only 3- -- they're not 3,000 tons per year of waste generated in DuPage County alone?

06:05:12PM

A. That is correct.

Q. Okay. Did that typo change your opinion or calculation in any way?

A. No.

Q. In fact, please look at Slide 18.

Are you there?

A. Yes.

Q. Does that slide discuss capacity per day or per year?

06:05:47PM

A. Per day.

Q. And is that actual calculation you

did -- Is that the actual calculation you did about the amount of capacity in the service area?

A. Yes. It corresponds to the amount of waste per day in the West DuPage RTS facility criterion report.

Q. Okay. And going to the next slide which is 19, is this the summation of your calculations on the excess capacity?

06:06:14PM A. Yes.

Q. And does this show the capacity in tons per day or per year?

A. Per day.

Q. Okay. And does this slide carry forward the same numbers from Slide No. 7 just -- it shows that it's days but it's the same numbers, correct?

A. Yes.

Q. Okay. You said Tuesday night there

06:06:35PM are benefits to vertical integration.

Do you recall that?

A. Yes.

Q. Who are those benefits to?
A. Primarily to the waste company.
Q. Not the needs of the service area?
A. No, not as there is already so much competition in the service area.
Q. Okay. Another thing you were asked about the other night was Republic swap, I think, is what it was called as it related to east and west of I-53.
06:06:59PM I think you said you were aware of some agreement in relation to that. Do you recall that statement?
A. Yes.
Q. Was that something you were aware of before Mr. Hocks's testimony or were you just saying you heard that from his testimony?
A. When it was mentioned, I recalled hearing about the swap.
Q. Okay. Also, you said you were not
06:07:14PM aware of DuPage waste going east.
Do you recall saying that?
A. Yes.

Q. Okay. Were you saying that you knew no waste was going east from this area?

MR. MUELLER: Object, he's leading him.

HEARING OFFICER PRICE: It's redirect. It's cleaning up what you asked him about. I'm going to overrule it.

BY THE WITNESS:

A. No. I was saying I did not know for sure one way or the other.

06:07:33PM Q. You were asked about the Shaw service areas that were used in -- I think it was the 2007 DuPage County Storm Water Management Plan Update.

Do you recall that?

A. It was a solid waste management update, and yes.

Q. Sorry.

And who was Shaw?

06:07:51PM A. Shaw was an environmental consulting firm specializing in waste recycling and disposal in the Chicago area.

Q. Okay. So they specialized in this

area?

A. Correct.

Q. And do you know if there's a connection between Shaw from 2007 and APTIM today?

A. Yes, there is.

Q. What's that connection?

A. The lead engineer there is an individual by the name Devin Moose.

06:08:11PM Q. Okay. So in certain circumstances, the fact it came up the other day that Shaw used a 15-mile circle and a 10-mile circuit [sic], it appears?

A. That's correct.

Q. Shaw obviously felt comfortable enough in this analysis to include that in their study they did for DuPage County; is that correct?

MR. MUELLER: I'm going to object to how Shaw felt. He wouldn't know.

06:08:31PM HEARING OFFICER PRICE: Sustained.

BY MR. MUELLER:

Q. Shaw included that number in its

study, correct?

A. Correct.

Q. And you said you reviewed the Hock report, correct?

A. Yes.

Q. Does Mr. Hock, in his needs analysis, also denote all the transfer stations in a 15-mile radius of the LRS proposed service area?

A. Yes. Page 1-10 mentions Figure 1-1 showing existing municipal solid waste transfer stations within an approximately 15-mile distance from the service area. And also, again, in their application, it included the 1996 update from the -- the solid waste plan.

06:08:54PM

And I'll read that: Due to the increase in the number of landfills and increase of haul distances, transfer stations will become an even greater integral part of the management of solid waste for DuPage County. The location of transfer stations at selected sites throughout the County will serve the management

06:09:20PM

of solid waste generated within the County and further assist in keeping down costs associated with long distance hauling of the waste. Industry standards for a packer truck haul distance to a disposal facility is approximately 15 miles.

Q. So both Hock and Shaw used the 15-mile radius, correct?

A. That's correct.

06:09:45PM Q. Okay. You were asked Tuesday night about some kind of predatory pricing scheme to keep LRS out of waste -- out of the area; is that correct?

A. Yes.

Q. Did you see any hard numbers in Mr. Hock's report to support that conclusory statement?

A. No, I did not.

06:10:04PM Q. You were also asked about whether you did any analysis on mileage or pricing to determine competition in the service area.

Do you recall that?

A. Yes, I recall it.
Q. To your knowledge, did Mr. Hock -- And you were here for Mr. Hock's testimony, correct?
A. Yes.
Q. You've read his reports, correct?
A. Yes.
Q. Did -- To your knowledge, did he do any such analysis of this type in his report or his testimony?
06:10:23PM A. No.
Q. Did he do anything other than make the conclusory statement related to this issue?
A. No.
Q. Were you asked about the distance by car between Rockdale and West Chicago Tuesday night?
A. Yes.
Q. And I think you said it would be about an hour away?
06:10:38PM A. That's correct.
Q. Is the LRS Elburn transfer station an hour away from West Chicago?

A. No. It's approximately 30 minutes.
Q. Is Rockdale an hour away from the southern portion of the service area proposed?
A. From the southern portion of the service area, it's approximately 25 minutes.
Q. Okay. Another topic that came up Tuesday was the fact that a minority of the overlapping service areas of transfer stations -- I'm sorry. Let me reread that.
06:11:04PM Another topic that came up on Tuesday was the fact that a majority of the overlapping service areas of transfer stations with the service area were owned by Waste Management and Waste Connections.
Do you remember that discussion?
A. Yes.
Q. Did you see any evidence in Mr. Hock's report that support the fact that Waste Management and Waste Connections are in any way
06:11:23PM colluding to keep LRS or any other hauler out of the market?
A. No.

Q. In fact, did you hear Mr. Hock deny that he was aware of any such collusion? Do you recall that?

A. Yes.

Q. Okay. Based on your experience in the industry, are you aware of anything along those lines, any kind of collusion to keep LRS out of the market?

A. No.

06:11:46PM Q. How many transfer stations overlap with the proposed service area that are not owned by Waste Management or Waste Connections?

A. There are three identified -- Lake Shore Recycling, Republic, and EDRS.

Q. There were questions asked the other night about the Plano transfer station as well as others about there being excess capacity.

Do you recall that?

A. Yes.

06:12:12PM Q. And then the question became, why would -- the concept was why would they be necessary?

A. Because of substantial growth anticipated in Kendall County at the time, when the transfer station was sited, it was still somewhat rural. And in the 2010 census, it was among the fastest growing counties in the nation.

Q. And did you prepare that analysis based on the traditional needs analysis you did here?

06:12:39PM A. Yes.

Q. Okay. And what was the determination there?

A. That based on future population growth in the following 20 years, there was a need for waste transfer in the service area.

Q. You heard -- Mr. Callaghan asked you about why is there ever a need if the service area is -- why is there need if the service areas overlap, and there's excess capacity in

06:13:02PM those outside service area -- outside waste transfer stations.

Do you remember that?

A. Yeah. The growth of the area outside of the service area may generate waste for disposal that exceeds the proportional capacity available at the overlapping -- overlapping transfer stations.

In this case, the area that was outside the overlap was -- was anticipated to grow faster and created the need for the transfer station.

06:13:26PM Q. And so that's Plano you're talking about there?

A. Yes.

Q. Any others that you see on the chart that -- Well, I guess the question in my mind is: Just because there's excess capacity in this service area and its transfer station is based outside the service area, does that mean we don't need the one -- I mean, I guess I'm -- I was kind of confused by Mr. Callaghan's

06:13:53PM question because -- Well, let me ask this. I'm Sorry.

MR. MUELLER: I'm going to --

HEARING OFFICER PRICE: Is there a question?

MR. LUETKEHANS: I said, Let me ask the question.

HEARING OFFICER PRICE: Strike all of that before that, please.

New question.

BY MR. LUETKEHANS:

Q. The transfer stations -- Well, here, one of the things that came up correct was that there is excess capacity in the service area, correct?

A. Yes.

Q. And that -- that is partially because or a lot because that there are transfer stations outside of the service areas that overlap --

A. Correct.

Q. -- correct?

And those transfer stations capacity may include a part of the service area, but they also include areas that are well

outside the service area; is that fair to say?

A. Correct.

Q. Okay. So when you look at their total capacity, only a certain part of it may be based in the service area?

A. Correct.

Q. Okay. Do any of the points raised by Mr. Mueller or Mr. Callaghan modify or make you doubt your analysis and the opinions that you have provided in this hearing?

06:14:54PM

A. No.

MR. LUETKEHANS: Nothing further. Thank you.

HEARING OFFICER PRICE: Next up would be PODER. Are there any questions from PODER?

MR. DELAROSA: No, not at this time.

HEARING OFFICER PRICE: Then to the applicant, Mr. Mueller.

RECROSS-EXAMINATION

06:15:07PM

BY MR. MUELLER:

Q. Now, you've done a needs analysis for some other transfer stations in the Chicago

area, correct?

A. Correct.

Q. Which ones are those?

A. There's one transfer station -- I think it was on Kedzie Avenue -- and there's another one, I think, down in Riverdale, and then, of course, the one in Plano.

Q. You did -- Did you do the needs analysis at Plano?

06:15:51PM A. Yes.

Q. And with regard to those facilities, did you do an overlap analysis?

A. Yes.

Q. How many transfer stations overlapped the Plano service area?

A. I don't know the exact number of that. I don't recall.

Q. Well, was it more than one?

A. I think it may have been more than

06:16:17PM one.

Q. Less than a million?

A. Less than a million.

Q. Okay. More than five?
A. I don't know if it's more than five. It's somewhere between one and five.
Q. And in that case, you found there was still a need, correct?
A. Correct.
Q. The -- Which were the Chicago ones that you did?
A. One was down on Kedzie Avenue and one
06:16:41PM was down in, I think, River- -- somewhere in another location in Chicago.
Q. Did you do an overlap analysis for the one on Kedzie?
A. As I recall, I did.
Q. How many other transfer stations overlapped that service area?
A. Again, I don't recall that exact number.
Q. Was that one more than five?
06:17:02PM A. Yes.
Q. And you still found there was a need, correct?

A. Correct.
Q. And the other one was Riverdale?
A. As I recall, yes.
Q. Where is that?
A. That was a -- It's a -- borders Chicago on the south side.
Q. Did you do an overlap analysis?
A. As I recall, I think I did.
Q. You think you did?
06:17:27PM A. Yeah. Again, I don't have the application. It's been several years, and I don't recall the exact details.
Q. And you believe there was some overlap?
A. I'm sure there would be.
Q. Did you find there was a need despite the overlap?
A. I'm -- Again, I don't recall the exact details, but I think it did meet the need
06:17:49PM criteria, so ...
Q. Now, you relied on a 2007 report from Shaw to determine the 15-mile service area

radius, correct?

A. I relied on the figures that were in the solid waste plan that were part of their study.

Q. Do you know whether Shaw did a study?

A. It was reported in the solid waste plan that they did a study.

Q. Who did it for Shaw?

A. I don't know. It didn't say who the author was.

Q. Your corporation, what's that called?

A. JPL Environmental Engineering.

Q. Is there a reason why it's not in good standing with --

MR. LUETKEHANS: Objection --

BY MR. MUELLER:

Q. -- the Secretary of State?

MR. LUETKEHANS: -- beyond the scope. This has nothing to do with redirect.

HEARING OFFICER PRICE: It does have to do with his qualifications. You asked him about his history and background. I'm going to allow

it.

BY THE WITNESS:

A. My -- I submitted an annual report last week, and it was due December 31st of this [sic] year. And so it's considered not in good standing because it hadn't been paid by the 31st.

Q. As of today, the Secretary of State still shows you not in good standing, correct?

06:19:15PM A. I did not check that. I don't know when the check was received along with my -- my statement.

MR. MUELLER: Thank you, Mr. Lardner. That's all we have.

HEARING OFFICER PRICE: Mr. Callahan?

MR. CALLAGHAN: Yeah, just a couple.

RECROSS-EXAMINATION

BY MR. CALLAGHAN:

Q. The McLean County transfer station, you said the bid that was made required that the

06:19:36PM app- -- or that the bidder had to have a transfer station?

A. Correct. It had to have a transfer station in Bloomington-Normal -- the city of Bloomington-Normal or the City of Bloomington or the Town of Normal.

Q. So the -- the need for the transfer station there didn't necessarily have anything to do with capacity available in that area?

A. Well, the -- the issue there was the transfer station that was in the City of
06:20:10PM Bloomington was put into operation before Section 39.2.

So when they submitted their permit application to the State of Illinois, they didn't report capacity. So we don't know what the capacity of the transfer station happened to be, so we couldn't compare what waste was being generated versus what the existing capacity was.

Q. What volume does that other transfer station report receiving on an average day?

06:20:42PM A. Again, I didn't -- I don't recall what that was --

Q. Did you --

A. -- if we had it.
Q. Did you look at that?
A. As I recall, we did, but I don't know the exact number.
Q. Okay. But -- So the reason the transfer station was proposed was because it was a bidding requirement?
A. Yes.
Q. Mr. Luetkehans asked you some
06:21:05PM questions early on and it looked like you were reading your answers?
A. I was just kind of looking at --
HEARING OFFICER PRICE: Microphone, please.
BY THE WITNESS:
A. I was looking at my notes from what we discussed today.
Q. So you were reading your answers?
A. I was paraphrasing them, yes.
06:21:23PM Q. When was the Plano transfer station sited?
A. I think it was 2014.

Q. Do you -- Are you aware -- So in that -- Strike that.

In the Plano area, you've got Yorkville, Sugar Grove, I believe. Those are the municipalities that you were anticipating to grow?

A. Yes. Again, I used the -- the Chicago metropolitan area planning CMAP population tables to -- to project what the next -- you know, in the coming future, what the population was going to be which then drove the amount of waste that would be generated.

Q. What were the dates -- What was the date of those projections?

A. It was their report that says go to -- I think it was 2040 or 2050 report. And I don't know when the exact date it was, but it was fairly current, after the 2010 census was prepared.

Q. Are you aware of what's happened with regard to population projections in that area since around 2007?

A. No. Again, the 2010 census showed a big population increase from the earlier census data.

Q. Do you know how many platted undeveloped lots are Yorkville?

A. No.

Q. Sugar Grove?

A. No.

Q. Is it fair to say if -- You apparently know something about this area. Is it fair to say that the growth in that area, basically for all intents and purposes, is considerably lower than was projected prior to the housing crash of '07?

06:23:06PM

A. I will say that it would be a reasonable statement to say that the growth may not have been as high as anticipated, but I live out that area and I drive by it, and I do see development going on.

06:23:37PM

In 2010, you know, right before the siting area, I did -- I did see some growth going on. Whether or not that total growth

measured up to what the expectations were, I don't know. I didn't, you know, look afterwards to look.

Q. But that was the basis for your needs analysis for that transfer station?

A. Again, yes, we used the best population data we had times the waste projection -- our waste generation amount to determine whether or not there would be a need in the future.

06:24:11PM

Q. And the siting was 2014?

A. Correct.

MR. CALLAGHAN: That's it.

Thank you.

HEARING OFFICER PRICE: Mr. Walsh...

MR. WALSH: No questions.

HEARING OFFICER PRICE: All right. Thank you, Mr. Lardner. That concludes your testimony for Criterion No. 1.

06:24:30PM

(Witness excused.)

HEARING OFFICER PRICE: Mr. Luetkehans?

MR. LUETKEHANS: Yeah. We would call

Kurt Kielisch.

HEARING OFFICER PRICE: So that concludes Mr. Lardner's testimony, and they're calling their next witness, appraiser, Mr. Kielisch.

(Witness sworn.)

WHEREUPON:

KURT KIELISCH,

called as a witness herein, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. LUETKEHANS:

Q. Mr. Kielisch, would you state your name and spell your last name for the record, please.

A. Yes. My name is Kurt Carl Kielisch, Kurt with K, Carl with a C, Kielisch, K I E L I S C H.

06:26:10PM Q. Showing you what has been marked PWC Exhibit 350, is that a copy of your -- 351, is that a copy of your current curriculum vitae?

A. Yes, it is.
Q. Okay. And did you prepare a PowerPoint on Criterion 3 or at least a portion of Criterion 3 in this matter?
A. I did.
Q. And is that PDC Exhibit 352?
A. Yes, it is.
Q. Please proceed with your presentation Mr. Kielisch.
06:27:03PM A. Certainly.
Okay. My presentation is going to be looking at Criterion 3, the -- obviously, for the reason we're here, the West DuPage County recycling transfer station proposal, in particular, the examination of the Kleszynski report called Land Use Compatibility and Real Estate Impact Study.
The first page I have on my PowerPoint is my credentials; very briefly,
06:27:37PM 39 years in the real estate field as well as a real estate appraiser, educator, and writer; valued over 21 different states, over

$13 billion worth of real estate; expert witness on issues that deal with complexities such as stigmatized properties, eminent domain issues in state courts, federal courts, public service commissions as well as County zoning and siting councils and committees that --

I do have two Wisconsin Supreme Court decisions that I was principal in that impacted how eminent domain is done in the state of Wisconsin; certified appraiser currently in Wisconsin and Tennessee.

I have held designations in 13 other states, certified designations, including Illinois. I'm currently not an Illinois certified appraiser; ASA designated, which is a senior member, American Society of Appraisers, as well as the senior right-of-way for the International Right of Way Association; a Realtor, though, I am not a salesperson; and approved instructor for real estate appraisal in six different states; also, a faculty member of the American Law Institute CLE, and Eminent

Domain Institute CLE International.
BY MR. LUETKEHANS:
Q. Can -- Can I stop you for a second.
Have you ever testified at a pollution control facility siting hearing in Illinois?
A. No, I have not.
Q. Have you testified at other similar-type siting hearings, however?
06:29:15PM A. Yes, I have.
Q. What types have you testified at?
A. Well, I have testified in three different ones that have come to mind; one in Door County, Wisconsin; one in open-pit mine in Milwaukee, Wisconsin; and then an impact analysis of the single -- single stream recycling facility, which was in Burlington, Wisconsin.
Q. How about other types of impacts
06:29:38PM analysis?
A. Yes. I do a lot of impact analysis, impact studies, as well as stigmatized property

studies.

Q. For what types of facilities or what types of issues?

A. Well, the issues can be the impact of wind farms, the impact of solar farms, there's impact -- I've done an analysis on impact of contaminated soils on not only the property that was contaminated but surrounding properties; of course, eminent domain issues that deal with
06:30:10PM power lines, gas and oil pipelines as well, and navigation easements that deal with airport -- in the air easements and their impact on property value.

Q. Okay. Please proceed. I'm sorry.

A. Sure.

So looking at Criterion 3, which is the next page I have, that you-all know the definition of facilities to be located as to minimize incompatibility with the character of
06:30:39PM the surrounding area and minimize the fact of value of surrounding property values.

So my examination of the -- the

report -- Kleszynski --

Q. Mr. Kleszynski.

A. -- Kleszynski -- Okay. I appreciate a difficult last name. Mine is also difficult. When you look at it, how it's spelled, there's advantages especially when someone is calling you that you don't know they mess up your name. You automatically know that they're there to sell you something. So Mr. Kleszynski. Very good.

06:31:13PM

My -- My job was to look at this report, see whether or not that the report substantially supported his concluding opinion that the proposed facility would meet Criteria 3 -- Criterion 3. And we --

The next page is something I can pass over. The committee already knows the West DuPage County recycle transfer proposal, the size of the building that's going to be utilizing transfer of both solid waste, single stream recyclables, as well as the liquid hydro waste.

06:31:43PM

My next two PowerPoints deal with the definition of -- of municipal solid waste, as well as single stream recyclables and hydro excavation waste, just so we all have an understanding of what those are.

Looking at the neighborhood, the neighborhood, of course, at 1655 Powis Road, which is going to be the location of the proposed recycling facility, that it is on Powis Road going north to south; to the west is the DuPage Airport. Surrounding the property both to the north and south and somewhat to the east is industrial and office land uses including some vacant land that is for sale. And then approximately 3,000 feet to the east is residential land use.

06:32:26PM

Q. Let me interrupt you.

You said it's a proposed recycling facility. Are you aware that it's also proposed for a waste transfer --

06:32:51PM

A. Yes.

Q. -- municipal solid waste?

A. Yes, I am.
Q. Okay. Please proceed.
A. Thank you.
Currently, it's -- the LRS, the recycling facility is at this location dealing with the waste of construction.
Now, looking at the report itself, and what I'm looking at is to see whether or not this report adequately supported the -- the
06:33:18PM concluding opinion of Criterion 3 being honored. This report focused mainly on highest and best use analysis to support the opinion that the proposed facility does satisfy the impact analysis requirements of Criterion 3.
And the highest and best use, however, does not meet, in my opinion, the analysis requirement to measure Criterion 3. And here is the reason why: Highest and best use is focused on the buyer or the property
06:33:52PM owner. It's the most profitable use of that property to the individual. And that is based on physically -- what's physically possible,

what's legally permissible, what's financially feasible, and a combination of those that -- that give the highest rate of return to the potential buyer or the current owner.

Criterion 3, however, is different. It doesn't look at the individual and their basic most profitable use of the property. Criterion 3 looks at the least intrusive use. In other words, Criterion 3 looks at the community where its highest and best use looks at the individual property and the property owner.

Q. So -- So is it fair to say they're looking at two different things?

MR. MUELLER: He's leading him again.

HEARING OFFICER PRICE: Try to make it direct, please.

BY MR. LUETKEHANS:

Q. Are -- Is highest and best in Criterion -- and lease intrusive use, are those two different things?

A. Yes, they are.

And I -- I propose that highest and best use does not equal the Criterion 3 for those very reasons.

So some of the observations -- Again, the focus of the report was highest and best use. And the conclusion was since the highest and best use was for the proposed use, therefore, it met the criterion, but, again, as I've pointed out, highest and best use looks at
06:35:16PM the individual property and the individual profitability to the owner or potential buyer. It does not look at the community or outside of that property to say, Is this the best use of the property with the community involved.

That -- It requires -- This Criterion 3 requires proof. It requires proof that has a minimum impact to the property value and that it's minimally in- -- incompatible to the land uses around.

06:35:51PM And just because a property can meet the physically and financially and legally permissible test that we use in highest and best

use, does not mean it will not negatively impact the surrounding property value.

I gave an example of a pig farm. A pig farm would be zoned A- -- AG or agricultural, so it meets the legally permissible. If the pig farm is structurally sound as far as the soils and content goes, you meet that. And if the pig farm is going to be a profitable operation, then it meets that test; but a pig farm will not have a positive impact to the surrounding property values. So that's another example of how one methodology utilized in appraisal does not necessarily equate the meeting of the requirement of Criterion 3.

06:36:28PM

That -- The proposed facility, being a -- a, you know, mixed-use, single-stream waste type of recycling operation, does have a potential of presenting odors and noises and creating insects, bugs, all sorts of different things. Now, it doesn't necessarily have to do that to impact negatively surrounding property value, just the belief it does. And that's

06:37:07PM

called perception. Perception is what drives value in real estate.

The proposed facility has potential noise and dirt and dust and other things due to its facility. The other aspect that I was looking at in observation is that there was no quantitative or analytical -- we call that qualitative -- analysis on surrounding property values.

06:37:43PM Now, qualitative is a -- that's a measurement mainly as a yes-no question. Qualitative would use things like surveys, possibly opinion surveys, possibly knocking door to door up and down Powis Road asking the -- the landowners there whether or not they see this as a positive or negative, or whether it could impact property -- property value or ability to lease or something like that. It would be interviewing, say, commercial Realtors, on that

06:38:17PM same token, looking to see what would the market respond. Is this a yes or a no as far as it meeting valuation standards.

Now, the quantitative -- quantitative analysis is the actual hard analysis that's the arithmetic analysis. That's where you would compare properties that had such an operation to those that did not both being sold, one outside of the area of influence, one in the are of influence to see whether there's a difference in property value. And you would do several of those because one does not make a
06:38:57PM market. You would want to use at least three. I like to use at least six to a dozen if I can. And that would create a pattern of whether or not there is an influence of property value, either positively, negatively, or no influence. It also answers the yes-no question, but it gives you a little bit more ammo on that yes-no question that it gives you a percentage usually.

So on the two tests of the Criterion, the first is minimize incompatibility
06:39:29PM with the character of surrounding area. I have that as blank. I -- I'm not qualified to make that decision of compatibility. That's not in

my -- my wheelhouse, if you will. I deal with value, valuation stigma, that type of thing. Not land planning, never sat on a zoning board or never wrote zoning. So that's really not my -- my capacity.

My focus was on the second test and that is, minimize the effect of the value of the surrounding property value. The question is: Did the report adequately address this test? Did it give significant proof qualitatively and quantitatively to the reader -- to convince the reader that -- of their conclusion -- the appraiser's conclusion?

06:40:04PM

I -- My observations of this report is there was not a qualitative analysis, nor was there a quantitative analysis; therefore, neither impact positive, negative, or neutral could be devised from reading of this report.

So I concluded that the report failed on the second test of minimizing the effect of property value.

06:40:31PM

Q. Okay.

A. So lastly, just as a summary, you just heard my summary on my conclusion of the report. And also that though highest and best use is used in appraisal all the time, and it's one of the fundamentals. As a matter of fact, when I teach appraisal, I teach it as the hub of real estate valuation.

From there, the spokes and the direction of the appraiser comes of what comparables to select, what methods evaluation, what approaches to select. That all comes from the highest and best use analysis. So that analysis in itself is a strong analysis when you're valuing an -- that individual property, but it does not stand the test of what was required in Criterion 3.

06:41:02PM

Q. How would you do a quantitative analysis of effect on value of surrounding properties before or after a waste transfer station?

06:41:32PM

A. Well, there would be three different -- First of all, I would do the

quantitative if I could. In the quantitative -- The ideal quantitative is to look in the neighborhood -- let's say, this neighborhood that had an identical type of building and operation, and when it came into effect. And then say it came into effect 2015, so we -- you would look for property sales prior to 2015 of properties that would be in close proximity, and then properties in 2000- -- after 2015, once the
06:42:08PM facility was in full operation, to see whether or not there was a -- any type of property fluctuation -- up, down, or neutral.

Now, chances are you probably -- You know, of course, there always was a fairly small sector there. I don't know if you're really going to find those sales. If you do there go (phonetic). But your second thing to do then is to find a facility that is similar in use -- maybe in a different proximity -- that
06:42:39PM had recently sold, and to see what -- I'm sorry -- not recently sold, but in the location, and then properties around that facility that

sold before and after, and then look at that comparison to see if there is any type of impact.

Another thing to do is a comparative, what we call a match-pair analysis, or I call it comparative sales analysis. And that's where you take a property that has under the influence or could be potentially influenced, by a similar facility and you

06:43:11PM compare it to another property similar to it equally substitutable that is outside of the area of the influence and see if there's any valuation difference there.

Another thing to do would be to do a -- a study to see if there was any -- it's called a literature study -- to see if there's any other studies that were done in the State -- in the United States or in the state of Illinois or anywhere else on -- that's trying to answer

06:43:38PM this very question of impact. That could be useful.

And the last thing I would do is I

would do a qualitative study, interview commercial Realtors as well as go up and down the area where the proposed facility is and ask those individuals in the building and property owners their opinion.

Q. Okay. You did not do any of those four things that you just talked about, correct?

A. I did not.

Q. Why not?

06:44:05PM A. That was not the assignment. My assignment was to look at the report to see whether Criterion 3 was met with adequate proof.

Q. How long would it take you to do those four things?

A. If I'm not busy, three to four months. My current schedule, more like six to seven months out.

Q. Okay. If you had done a comparative analysis or a match-pair analysis, is that

06:44:31PM something you would expect that you would put in your report or that would regularly be put in a report?

A. Yes, because you would need that to substantiate your position of any impact, yes, no, or -- or neutral.

Q. And what kind of information would be included in the report at that time just, let's say, for a match-pair analysis alone?

A. Well, a match --

MR. MUELLER: I'm going to object. It assumes facts not in evidence.

06:44:52PM HEARING OFFICER PRICE: Agreed. Sustained.

MR. LUETKEHANS: What facts are assumed? I'm sorry.

MR. MUELLER: He's speculating about --

HEARING OFFICER PRICE: He didn't do the work.

MR. LUETKEHANS: Correct.

MR. DELAROSA: So we're not going to speculate about what it would say when he didn't

06:45:03PM do the work.

MR. LUETKEHANS: Well -- Okay.

HEARING OFFICER PRICE: That's the very

point about --
BY MR. LUETKEHANS:
Q. What would you -- What do you normally put in your report --
HEARING OFFICER PRICE: No. Sustained.
MR. LUETKEHANS: What he -- What you would expect to see in this report is relevant if he had done it. Mr. Kleszynski kind of hinted that he did it.
06:45:16PM HEARING OFFICER PRICE: Ask a question about Kleszynski's report.
BY MR. LUETKEHANS:
Q. If Mr. Kleszynski had done a match-pair analysis or a comparative analysis, would you have expected to see it in your report -- in his report?
A. Yes, I would.
MR. LUETKEHANS: Okay. Nothing further.
06:45:39PM HEARING OFFICER PRICE: All right. Thank you.
First up is PODER. Anything from

PODER?

MR. DELAROSA: Actually, yes.

Because I would just like to introduce the fact that tonight's hearing is so different than the hearing that was taking place at the previous location of the hearing where we had sound equipment or the audience can see the documentation introduced or they can see it on a monitor where people can actually comprehend the information that's being presented at this public hearing. That's one thing, that it's a disadvantage for the people at this side of the table.

Secondly, is that we have no Spanish language translation here for people from the community in a minority-majority community that have an interest in this along with the rest of the people of West Chicago.

That's what I have to say. Thank you.

No further words.

HEARING OFFICER PRICE: All right.

Then to you, Mr. Mueller.

CROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. Kielisch, where do you practice out of?

A. Neenah, Wisconsin.

Q. Do you know what a pollution control facility is?

A. I have a general idea, yes.

06:47:23PM Q. Well, tell us what it is.

A. A pollution control facility -- Well, simply by the language, it would be a facility that tries to control pollution and reduce it.

Q. Do you know whether a transfer station is a pollution control facility?

A. I do not.

Q. Have you ever testified at a pollution control facility hearing?

A. No.

06:47:53PM Q. Have you been to the subject site?

A. Yes.

Q. Did it look to you like it was

compatible with the surrounding area?

MR. LUETKEHANS: Objection, beyond the scope.

HEARING OFFICER PRICE: Overruled.

BY THE WITNESS:

A. I'm not one to judge compatibility. That is not my expertise.

Q. Well, you're a long-time real estate appraiser, right?

06:48:21PM A. Yes.

Q. You must have some sense of whether something fits into the area or sticks out like a sore thumb, don't you?

A. Well, that would be true, yes.

Q. Okay. Did the existing Lake Shore facility appear to fit into the area?

A. The existing one?

Q. Yes.

A. Yes.

06:48:42PM Q. Do you know what they do there?

A. Yes.

Q. What do they do there?

A. They take construction debris and they recycle it, package it up, ship it out.

Q. What else do they do there?

A. That's all the knowledge I have of it.

Q. Are you aware of whether they have a port potty business there?

A. No, I do not.

Q. Are you aware -- Are you aware of whether or not there are other pollution control

06:49:13PM facilities nearby?

A. Yes. Well, pollution control, if you mean, like, a recycling type of facility, is that what you're speaking of?

Q. No. I -- Do you know if there are any other transfer stations nearby?

A. Yes. There's Groot, I believe is the name. It's north about a quarter mile.

Q. And do you know how long that's been there?

06:49:34PM A. Well, it says on the website that it's been in the -- in the family since 1914. I do not know it's exact existence, I mean, at that

location.

Q. So that transfer station, to your knowledge, could be 108 years old?

A. I would have no opinion if it is or not. No. It looks pretty -- It looks more modern than that for sure.

Q. Does it appear to fit into the area?

A. Again, I'm not really qualified to say whether it's compatible for the area. It looks like a square building.

06:50:13PM

Q. The -- The Lake Shore facility, you said, has a potential for odors?

A. Yes.

Q. What makes you believe it has a potential for odors?

A. Well, number one, you go on a literature survey. You see that is a very strong concern of individuals, that I have personally experienced it in Wisconsin, and I did an analysis of a single stream recycling facility. And that was the big issue, was the odor.

06:50:49PM

Q. You personally experienced odor in Wisconsin?

A. Yes.

Q. And how does that relate to whether or not this state of the art design will produce odors?

A. That facility was also state of the art, by the way, and went through a very rigorous type of analysis and engineering to prevent odors, and yet it still had the odor issue, which was causing property valuation issues.

06:51:22PM

Q. What was the name of that facility?

A. I don't recall the name right here, but it was in Burlington, Wisconsin.

Q. Okay. You experienced odors but you don't know the name of the facility?

A. Well, yeah. I do a lot of appraisals. I can't remember all the names.

06:51:45PM

Q. How old is that facility?

A. That was a new facility. It was built within about two years prior to my appraisal.

Q. When was your appraisal done?
A. 2021.
Q. And was that a fully enclosed facility?
A. Yes.
Q. Do you know what air filtration and scrubbing technology that facility had?
A. I don't know exactly what it had, but I do know it did have that air filtration
06:52:18PM scrubbing that was a requirement for the City of Burlington.
Q. Do you know whether this facility intends to mask odors or actually eliminate them?
A. This facility here, I do not know.
Q. Did you hear Mr. Hock's testimony on Criterion 2, which is whether the facility is designed, located, and proposed to be operated that the public health -- health, safety, and
06:52:44PM welfare would be protected?
A. No.
Q. So is it your opinion that this

facility will smell?

A. Well, in -- it has the potential, and that's really not the issue. In value, what you are valuing in issue is what the -- what the buying public believes will be happening, not necessarily what is happening. And that's the perception, and that's what drives value.

So though something may not have, 06:53:13PM they may have the engineering that they did not cause the -- let's say, odor for instance, the perception that they do can still drive value.

Q. How far does the perception go distance-wise?

A. I don't have an opinion on that.

Q. Well, if someone has an opinion that a pollution control facility 100 miles from their home may have odors, do you think that will negatively impact value?

06:53:52PM A. No. It must be the commonly held within the market, not just one individual.

Q. So what is the proximity required in

order for the opinion to matter?

A. Well, in the analysis I did in Burlington, the proximity was about a six-block dis- -- six-block radius.

Q. That would be, what, maybe half a mile?

A. More like probably a quarter mile.

Q. Quarter mile?

A. Quarter mile to half mile, somewhere around there, yeah.

06:54:31PM

Q. So do you know how many residential properties there are within a quarter mile of this facility?

A. No.

Q. Isn't that something you should have looked at in order to determine whether or not there's a potential impact on property value?

A. That was not my assignment. My -- My assignment was clear. It was: Did this report meet the requirement on Criterion 3 to give adequate support to the concluding opinion. My assignment was not to do an appraisal or to do a

06:54:57PM

study.

Q. All right. So let me see if I understand this. The only question you were trying to answer was whether or not the highest and best use analysis equates to whether or not it minimizes impact on property values?

A. Pretty close.

Q. Okay.

A. Pretty close.

06:55:32PM I would go a step further on whether it met the requirement of Criterion 3, was to look at outside of the property on whether there was an impact on property value.

Q. You don't have an opinion on whether or not this facility is compatible with the surrounding area?

A. I do not.

Q. Generally, isn't it true that compatible facilities tend to have less impact

06:56:00PM on property values than incompatible facilities?

A. Generally, that could be true.

Q. Okay.

A. Yes.
Q. So if we built a pig farm on the Lake Shore property, you might be concerned that that might have a negative impact on surrounding property values?
A. Correct.
Q. Especially down wind, right?
A. Absolutely, down wind.
Q. Do you have an opinion, without knowing the exact technology that Lake Shore intends to use, as to whether or not this facility will generate odors?
A. I do not.
Q. Okay. You said it also has the potential for insects?
A. Yes.
Q. What kind of insects are those?
A. Well, particularly, flies, fly larva, things that will -- will be attracted to the smells, the sweetness, for instance, things that were in bottles, that type of thing.
Q. Do you have an opinion as to whether

or not this facility, which is fully enclosed, will generate insects?

A. Again, it has the potential. I do not know if it will, nor was that my assignment.

Q. And you suggested that Lake Shore or Mr. Kleszynski should have interviewed neighbors to see how they feel about this facility's impact on property values?

A. That would be a qualitative analysis.

06:57:43PM That is one method to do that, and I mentioned many others.

Q. Are you aware that Lake Shore has letters of support from neighboring business owners?

A. I am not.

Q. If we had those kind of letters of support, then that would be in the nature of a qualitative analysis, correct?

A. Incorrect, that would not be. That

06:58:08PM would be more of a political survey. A qualitative analysis will go to the individuals and find out what their opinion is.

If they are in support, okay, let's talk about that, if they're in support. But just because they wrote a letter of support, it's not a qualitative analysis.

Q. So you're saying people who write letters of support aren't actually necessarily supporters?

A. No. I'm saying they're not necessarily going to be representing what the market is doing in that area. The appraiser would need to talk to as many people as possible. And, again, that's only one part of a suggested a qualitative analysis.

06:58:35PM

You also can do commercial real estate appraisers and things of that sort.

Q. Now, you suggested that for quantitative analysis, we should have looked at sales before and after 2015, correct?

A. That is one method, correct.

06:59:04PM

Q. What's so magical about 2015?

A. I gave that as an example. If a facility such as this was built in 2015, one

method is to look at sales in the same neighborhood prior to that date of -- of operation, and then after that date of operation to measure whether or not there was an impact.

Q. Now, with another transfer station a quarter mile away, does it become difficult to do your kind of quantitative analysis because the item that potentially impacts property values is already in the market?

06:59:47PM A. No. That would be exactly what you want because what you want is that item -- a facility like that one already in operation in business and then to look at property values of similar properties before that date and after that date to get a quantitative analysis of whether or not there is an impact.

Q. Well, how far back can you go to get a meaningful quantitative analysis?

MR. LUETKEHANS: Objection, form.

07:00:12PM HEARING OFFICER PRICE: Overruled.

BY THE WITNESS:

A. Well, you can go back -- I mean, I've

gone back ten years, if the data isn't there, and you can go back and find data ten years. 20 years is probably too far, but you can go back five, ten years.

Q. 20 years is too far. That's what you said, right?

A. Yes. In my opinion, right, I would try not to do that.

Q. The Waste Connections facility has been there over 20 years. Are you aware of that?

A. I am not. I believe you asked me before if I knew when it was there. So I do not.

Q. So we can't meaningfully go back to before when the Waste Connections facility got there?

A. Sure, but that's just one analysis, sir. That's just one potential quantitative analysis. That's not the only one that you could do.

Q. Now, you heard Mr. Kleszynski's

testimony that, in his opinion, property that is at its highest and best use minimizes the impact on the value of -- on the value of surrounding properties, didn't you?

A. That is what his report said. I -- I did not hear his testimony.

Q. You -- You disagree with that conclusion?

A. Yes. I think that doesn't meet the compatibility test, and it certainly does not meet the test of whether it has a positive or negative impact to surrounding property value.

Q. You can't talk about compatibility because you said you're unqualified on it?

A. That's correct. That's why I said I'm not having an opinion on that.

Q. Did you look at Mr. Kleszynski's credentials?

A. Yes, I did.

Q. Does he appear to be a qualified real estate expert?

A. Yes, he does.

Q. Is it the case that sometimes qualified experts disagree on things?

A. Yes. Yes. That's why we have court.

Q. So the fact that you disagree with Mr. Kleszynski doesn't mean he's wrong, it just means you disagree?

A. Well, I'm not saying he is -- Okay. I'm not getting into anything personal with Mr. Kleszynski. He could be a wonderful guy. I don't know who he is. He could be sitting here today. I have no -- And I do not go after an individual.

I simply look at the report and ask myself: Did this report meet the requirements that were set forth?

My answer is: No, it was not.

So I disagree. I believe that that report did not meet that requirement.

Q. And the reason for that is because you disagree with Mr. Kleszynski's opinion about the relationship between highest and best use and property values, right?

A. Yes, that's correct. That is not a way to measure impact of surrounding property values.

Q. In your opinion, sir?

A. Well, no. If you look at the definition of highest and best use, it has nothing to do with a methodology to measure the impact of surrounding property values.

Q. Mr. Kleszynski said property at its highest and best use is least likely to negatively impact surrounding property values.

Do you agree with that statement?

A. No, not necessarily. Highest and best use does not prove that.

Q. But it's certainly a significant factor, isn't it?

A. That's not the test of highest and best use.

Q. I'm asking you if it's a significant factor, not what the test is.

A. No, it's not a significant factor. The three tests are the significant factors.

Q. Do you think that a transfer station on this property would be its highest and best use?

A. I did not do a highest and best use analysis. This was, again, not my assignment.

Q. Do you believe that this property is negatively impacting surrounding property values?

A. Again, that was not my assignment. My assignment was: Did this report substantially support the position and the conclusion of the report --

07:04:22PM

Q. Do you have an opinion --

A. -- in that one area.

Q. Do you have an opinion, sir, as to whether or not this transfer station, if its built, will negatively impact surrounding property values?

A. I do not.

07:05:06PM

(Brief pause.)

BY MR. MUELLER:

Q. Sir, do you know where the Cornerstone

subdivision is?

A. I do not.

Q. Would it surprise you if a high-end residential subdivision was built very near a pollution control facility?

MR. LUETKEHANS: Objection, foundation, assumes facts not in evidence. I don't know what "very near" means.

MR. MUELLER: I'll withdraw the question.

07:06:13PM

HEARING OFFICER PRICE: Thank you.

BY MR. MUELLER:

Q. If a pollution control facility exists at a location and subsequently residential development -- high-end residential development occurs in the immediate vicinity of that facility, can we infer that the facility is not having a negative impact on property values?

MR. LUETKEHANS: Same objection. What is "immediate vicinity"?

07:06:49PM

HEARING OFFICER PRICE: Yeah. I'm going to sustain that. We've talked about

quarter mile. We've talked about significance.

Can you put a mileage on it, Mr. Mueller?

BY MR. MUELLER:

Q. Within three-quarters of a mile, sir?

A. Just because -- Just because the developer or someone like that decides to go through with development does not -- is not evidence of property enhancement or neg- -- or

07:07:20PM neutral or negative property value impact.

It's -- It has -- You know, in order for you to do that, you would have to then compare those property values and how they were sold to ones that were outside of that influence. That is the way that you would measure that.

(Brief pause.)

BY MR. MUELLER:

Q. Sir, would it influence your opinion

07:08:08PM to learn that Mr. Kleszynski's testimony about highest and best use being a factor that minimizes impact on surrounding property values

has been approved by the Pollution Control Board in at least two other cases in Illinois?

A. That definition --

Q. Yeah.

A. -- of highest and best use?

I would be surprised.

Q. So if we can find that -- those cases for you, that might make you rethink your position?

07:08:44PM A. Well, highest and best use is an appraisal action. And whether a board or a zoning board makes the decision, I don't think -- at least to me, in my profession, that doesn't influence us and say, Well, because a politically elected board says something else contrary to what our -- our methodology would say, therefore, they're right.

I would say no, that would not influence me.

07:09:11PM What influences me is that tradition and the methodology that hold the appraisal organizations and appraisal

associations teach.

Q. That's your story and you're sticking to it?

MR. LUETKEHANS: Objection, argumentative.

HEARING OFFICER PRICE: Sustained.

MR. MUELLER: No further questions.

HEARING OFFICER PRICE: Thank you, Mr. Mueller.

07:09:31PM Mr. Callaghan...

MR. CALLAGHAN: No questions.

HEARING OFFICER PRICE: Mr. Walsh...

CROSS-EXAMINATION

BY MR. WALSH:

Q. Sir, I got a couple questions for you. Have you ever testified before on Criterion 3?

A. No, I have not.

Q. Have you looked at any case law or

07:09:43PM Illinois Pollution Control Board rulings on how -- how they interpret the -- the ability to meet Criterion 3?

A. No, I have not.

MR. WALSH: That's all I have.

Thank you.

HEARING OFFICER PRICE: Redirect?

MR. LUETKEHANS: One follow-up line.

REDIRECT EXAMINATION

BY MR. LUETKEHANS:

Q. You were asked about going -- you couldn't go use a sale more than 20 years old because the Groot facility was older than 20 years old.

Do you recall that line of questioning?

A. Yeah, but that's not what I was answering. That line of questioning, yeah.

What I was -- What I was trying to say is that the question was, How would you do -- You know, how far back would you go if you did such an analysis.

And my point was, I would go -- you know, I could go up to five or ten years; 20, that might be a stretch because you're going to

find more than enough data within the five to ten year. Plus, if you're all the way back to 20 years, you could have different facilities, different technologies, things of this sort. So it's best to try to keep it as contemporary as possible.

Q. And there's no magic in looking at the one down the street versus another facility that might have been put in place in the last five years?

07:10:53PM

A. That is correct.

MR. LUETKEHANS: Nothing further.

HEARING OFFICER PRICE: Anything further from PODER?

MR. DELAROSA: No questions.

HEARING OFFICER PRICE: Mr. Mueller...

MR. MUELLER: Nothing. Thank you.

MR. CALLAGHAN: No.

HEARING OFFICER PRICE: Mr. Walsh...

07:11:07PM

MR. WALSH: Nothing further.

HEARING OFFICER PRICE: All right. Thank you, sir --

THE WITNESS: Thank you.
HEARING OFFICER PRICE: -- for your testimony.
(Witness excused.)
HEARING OFFICER PRICE: Why don't we -- Criterion 8 is not going to take a long time, I don't think, right?
MR. LUETKEHANS: The direct is not. I don't know about after that. We'll do it either
07:11:26PM way, however you would like.
HEARING OFFICER PRICE: All right. Well, then what I would like to do is -- I've been informed that there are ten people -- I've been given the names -- who had previously signed up to deliver oral public comment who are not able to attend the sessions we have coming up next week at City Hall during the day.
So I'm going to call those ten in the order I have them from how they signed up
07:11:56PM and were given to me. And then if there are others who have signed up previously and submitted in a timely form, you have an oral

public comment, if you would like to do it tonight because of the limited nature of what technology we have, Mr. DeLaRosa's point -- and I'm not expecting any of you to have had PowerPoints that you wanted to show -- we will take that public comment as well, and then we'll return to taking testimony from Mr. Lardner.

So, Mr. Lardner, thank you for your patience, but we're going to try and take

07:12:31PM advantage of the lack of technology to allow people to put in the oral public comment.

So with that -- And we'll -- we'll take a break at 8:00 o'clock because it's not fair to our court reporter to put it into a death march (phonetic).

So first up is Ms. Sheila Rutledge, and Ms. Rutledge will be followed by Connie Schmidt, and then on deck after that is Janice Guider.

07:12:59PM So hold on. Let me give you the microphone.

MS. RUTLEDGE: Yes. Good evening. My name

is Sheila Rutledge, and I'm coming to speak on behalf of Lake Shore Recycling tonight, both as a citizen of Incorporated West Chicago and with my work on protecting the environment.

I first became aware of Lake Shore Recycling from 2015 to 2018 when my late husband and I owned Advanced Property Solutions. Essentially, we renovated houses and sold primarily to first-time home buyers.

07:13:48PM At that time, Lake Shore Recycling was the only trash hauler that we could find that would actually reclaim any recyclable items from our demolition projects. Items such as any type of wood, concrete, gypsum board, and metals like aluminum and copper made up most of our demo debris, and it was important to us that those reusable items did not end up going directly to landfills.

As somebody who is environmentally

07:14:13PM conscious, that was important because our landfills are quickly filling up, with some estimating they will be full by 2035. We must

do a better job of keeping those things out.

Most of the other haulers at the time took all of those dumpsters directly to landfills. I can find no information about the existing transfer station recapturing those resources.

According to the EPA, recycling efforts reduced the amount of waste sent to landfills and incinerators, conserve natural
07:14:45PM resources such as timber, water, and minerals, increased economic security by tapping a domestic source of material, prevent pollution by reducing the need to mine raw materials, saves energies, supports American manufacturing, and conserves valuable resources, and creates new jobs in the recycling and manufacturing industries in the United States.

From an economic aspect, recycling adds 681,000 jobs, 37.8 billion in wages, and
07:15:10PM 5.5 billion in tax revenues. And this equates to 1.17 jobs for every 1,000 tons of materials recycled.

The ferrous metals industry provides the largest contribution to all three categories -- job, wage, and tax revenue -- followed by construction and demolition.

The first night of hearings asked the question about capacity. And I suggest that the rate of recycling in our surrounding communities is not very good and we should support a program to help educate our citizens about the importance of recycling and how to do it properly to increase our rates and keep people from wish cycling items that contaminate the streams and slow down the process.

07:15:39PM

It often comes down to confusion and inconvenience. People don't know how to recycle, what can be recycled, or what to do with those items. The top reason Americans say they don't recycle regularly is a lack of convenient access. LRS's plan helps to alleviate some of those complaints.

07:16:06PM

I've heard some people say that the existing transfer station is not maximizing

their capacity. At our current rates of recycling, that may be true, but with landfill space diminishing, we must, as a community, improve rates of recycling.

I'm an animal lover. I walk my dogs often and always shake my head at the lack of knowledge on how to recycle properly in my community. The majority of recycling receptacles at curb side are contaminated by
07:16:32PM people who bag their recycling or put in items that cannot be recycled at the curb.

My hope is that a robust education program can help to use these facilities at full capacity and help our environment overall.

The plan Lake Shore is presenting is a solid state-of-the-art facility that expands the good work they're already doing. As of 2019, the United States has yet to touch the top ten recycling countries list. We must do
07:17:01PM better.

It is time for a state-of-the-art recycling transfer station so that we can

increase the diversion of useful recyclable items from our landfills. The existing facility is old and it needs improvement, and I believe LRS has made a solid plan to mitigate any of the concerns that the local community might have. Their commitment to keeping down litter, street sweeping, capturing noxious odors is to be commended and rewarded.

Competition is the bedrock of business in this country. It improves services and controls costs. I can only surmise that the battle over the issue is not because of racial injustice but simply a publicly traded company spending huge amounts of behind the scenes money to protect their shareholder value.

Thank you.

07:17:28PM

HEARING OFFICER PRICE: Thank you.

Next up is Ms. Connie Schmidt, followed by Janice Guider, and then after that Greg Walsh.

07:17:51PM

MS. SCHMIDT: Hello. My name is Connie Schmidt. Today I'm here to speak as the chair

of the River Prairie Group of the Sierra Club.

The Sierra Club, for anyone who doesn't know, is the largest grass root organization in the United States. We have over 60 chapters across the nation and Illinois has 14 regional groups. The River Prairie is one of the most active, and we cover here in DuPage. We have over 2,600 members across this county.

Concerned citizens of West Chicago, 07:18:21PM an advocate for environmental justice contacted our group because they were concerned that a waste dump was coming to West Chicago and would negatively impact their community and residents who are already burdened with a legacy of other environmental issues.

From the onset, The River Prairie Group's interest was a built environment plan for a healthy and sustainable equitable environment for all residents. We advised this 07:18:49PM group that the data would drive any RPG decision or action. We provided some air monitors, training, data collection; and with the data

collected, significant concern was not documented with the current traffic and land use.

In addition, we met with the representatives of LRS to learn details of their plan. We learned that the plan is not for a landfill or a waste dump. It is an expansion of existing services already found on this property that they now own and are doing recycling of
07:19:29PM materials such as construction waste. LRS now wants to add household garbage do their services.

The property is in an industrial park. A particular concern to us is the intention -- attention to environmental impact. It appears to us that LRS has given considerable attention to mitigate environmental concerns with an enclosed state-of-the-art building and air filtration system to protect the workers and
07:19:58PM quickly closing doors as trucks and enter leave to protect the community.

The waste transfer station will

make it possible for the collection vehicles to travel less distance on roads, decreasing their particulate emissions and fossil fuel usage, two concerns we have for air quality.

We advocate for aggressive monitoring to ensure that LRS is compliant with commitment they are making in this process. With very careful consideration and respect for the concerns of the citizens of this community, the group of the Sierra Club is determined that we will not oppose this permit request and, in fact, we support it.

07:20:32PM

HEARING OFFICER PRICE: Thank you.

The -- Next up is Janice Guider, who will be followed by Greg Walstra, and then Barbara Laimins.

MS. GUIDER: Good evening. My name is Janice Guider.

And Connie Schmidt, who just spoke, and I are colleagues. We both serve, Connie as president, and I am chair of what we call our health equity operations.

07:20:55PM

HEARING OFFICER PRICE: Ms. Guider, could you pull the microphone closer to you.

MS. GUIDER: Okay. What if I stand closer?

Okay. And I want to take issue with the fact that there are members of this community who -- where English is not their first language. And I'm hoping as we go forward that we would make sure that there are Spanish-speaking people here to help translate and make sure people of this community understand what's going on.

07:21:34PM

I also work alongside Immigrant Solidarity DuPage, and I sit on several boards throughout DuPage County. Immigrant Solidarity and PODER brought the LRS expansion project to our attention believing LRS's plan would inflict racial and harmful environmental injustice upon the West Chicago community, particularly, the Latin population.

07:22:13PM

From the beginning, we began an objective and robust effort to research and validate the community's concerns. After a

close examination of the facts, we soon realized the LRS application is not for a new waste dump, instead an expansion of its current facility with verifiable promises for increased revenue inherent with proficiency in the management of recyclables, reduce costs for residents, and the security of local jobs for West Chicago citizens.

Perhaps more importantly is that LRS's plans for growth include a facility to minimize toxic particulates from escaping into the atmosphere and eventual addition of electric vehicles, beautification of the area with the addition of new tree plantings, and a plan right with the promise to improve the air quality around this industrial park.

07:22:59PM

We support LRS's application to expand because plans demonstrates the potential to become even a better stakeholder and to positively influence the health of all residents in the West Chicago and greater DuPage County community.

07:23:41PM

Thank you.

HEARING OFFICER PRICE: Thank you, Ms. Guider.

Next is Greg Walstra, followed by Barbara Laimins.

MR. WALSTRA: Good evening. My name is Greg Walstra. I'm a resident of Wheaton. I've lived in DuPage County well over half my live.

And the reason that I'm here supporting Lake Shore with its permit application is that I've been involved in the waste industry for over 20 years in three different states. And I know people talk about their studies and the radiuses, but I can tell you that, in my opinion, it is absolutely absurd that DuPage County, with about a million people, only has one municipal solid waste transfer.

Effectively, DuPage County is exporting its garbage, and along with it, we're exporting the revenue that goes with it, and the jobs that go with it. And the issue -- My opinion is certainly not about capacity. It's

about competition. Without -- Without disposal options, waste haulers are hurt and competition is reduced and prices go up.

In the last five years, I've worked for a law firm in Wheaton, and we consult with several small waste haulers because of my industry experience. And I can tell you that, you know, some people have been obviously hurt, some people have had to sell out or go out of
07:25:22PM business just because without those disposal options, it just -- it hurts the small hauler. It hurts competition, raises the price, and ultimately, you know, reduces freedom. It's Economics 101.

So thank you.

HEARING OFFICER PRICE: Thank you, Mr. Walstra.

Next up is Barbara Laimins, followed by David Sabathne, and Omar Espinosa is
07:25:43PM on deck.

MS. LAIMINS: Hi. With your permission, I would like to hold my comments

until next week at City Hall, after I've heard all the testimony.

Thank you.

HEARING OFFICER PRICE: Okay. Thank you.

Next is Dave Sabathne, followed by Omar Espinosa, and then John Stoetzel.

MR. SABATHNE: Good evening. My name is David Sabathne.

07:26:16PM Other than a few formative years, I'm a lifelong resident of West Chicago. I feel like brain cells are just dying by the minutes sometimes. I mean, I -- I can't possibly be the only one who listened -- I'm not an attorney. I'm not an environmentalist, and I'm not an appraiser, but the idea that we would even analyze, say, an appropriate analysis would be to take a facility that was built and compare the property values.

07:26:48PM Using the pig farm, the only comparison is, tell me what the values did when you built a pig farm next to a pig farm.

Everything else is irrelevant because there already exists a pig farm.

Like I said, I've been a resident of West Chicago my whole life. I'm president and CEO of the Western DuPage Chamber of Commerce. I'm a former alderman of the City of West Chicago, former Scoutmaster at the age of 21, a former commissioner for the DuPage Airport Authority, so I'm familiar with Mr. Luetkehans, and I chair a state-wide committee on workforce development, and I'm a trained economic developer.

07:27:26PM

The short version is I'm old, experienced, I love my community such that I've committed my life to serving it.

This experience as a councilman is most relevant. While serving, we successfully won a decades-long battle of the largest brown field in the country, 1.2 billion-dollar clean up of thorium in our community. That resulted in citizens becoming active and being able to talk about Picocuries and life cycles and -- and

07:27:55PM

technical issues and bringing that to our legislatures and getting it done.

Doris Karpiel, one of the great legal minds in environmental (indiscernible) Gainus (phonetic) and a bunch of people helped us. But through that process, we learned a whole bunch of things. As a result, it led us to further good decisions.

While Lake Michigan water runs in
07:28:33PM tubes through West Chicago, we don't access it. We built our own water treatment plant. Because we don't take the word of everyone else, we do our own study and to find out what's good for our community. And so instead of tying on to Lake Michigan water, we built a new water treatment plant, and as a result, our water rates are less, our quality is higher, our capacity is virtually unlimited, and we have control over that element. We're very proud of
07:29:02PM that.

We looked at a lot of things, potassium -- and reverse osmosis, ion exchange,

do we use sodium chloride, you know, calcium chloride? What do we do? And you know what? The same thing happened when VFI came with a proposal of a transfer station in our community. Yeah, we had some of the neighbors who, you know, imagine -- as most people do -- garbage smells. You may have the same opinion about compost piles -- it's actually dump really -- but I -- I -- I understand the assumption, but we don't live on assumptions.

07:29:38PM

So what did we do when that proposal came? The mayor at that time, Steve Lakics, and alderman, Brenda Douglas, our public works director, Ken Dean (phonetic), and I drove to Minneapolis to find the most similar facility that we could find. And we went into it and we stayed there and we used this, like, backhoe function and packed a few trucks, and then we walked the neighborhood and we talked to the businesses and said, What kind of neighbor do you have here? How has it been?

07:30:06PM

We don't have any problems. We

love the convenience when we need to get rid of a couch or something, but for all practical purpose, there isn't a problem.

So the assumption may be based on a principle that we all generally agree with, but in practice, it's not the reality.

I think this proposal meets the spirit and intent of the use and to -- to pick apart and say, Well, here is what the coach says, to limit this because of a residential zoning that -- that a house could never be built on, would be like protecting an area of grass because it was set aside to protect the species while realizing that the species went extinct 50 years ago.

07:30:40PM

It could be similar to somebody saying, Here are forms, fill out and make sure that put on your home phone number, and then rejecting it because they included a cell phone number, which isn't technically at a home, but it could be.

07:31:15PM

I mean, please. We see through

this. We've see the Columbo, Houdini kind of, you know, antics here, but that's what we see.

One of the things we learned about the environment is that when you hide money, when you cover it all up, it gets a smell. When something smells a little funny, you kind of follow the money trail to find out where the bulldung is.

Now, LRS clearly is transparent. They know what they're -- you know, their vested interest is in this. Yes, they're a business for profit, and they expect to do that.

How the other side affords the high-powered attorneys they have here sure as heck didn't get there by a neighborhood bake sale. To think so, would be naive.

Now, West Chicago is more environmentally sensitive, aware, educated, and I'm proud to say, responsible. We have a long history of protecting our community, the region and the benefits to our community and our residents, and we have unequal capacity to do

07:31:51PM
07:32:28PM

our own research, weigh our options, and do what is best for our community. That's why you have support letters from the City of West Chicago and so many residents believe strongly in approval of this project.

Thank you.

HEARING OFFICER PRICE: Thank you.

Next is Mr. Omar Espinosa. He'll be followed by John Stoetzel.

07:33:12PM MR. ESPINOSA: Hello. My name is Omar Espinosa, and I could see myself, probably one of the few minorities here.

And I belong at the Lions Club at West Chicago. I belong at the Rotary Club of West Chicago. I'm a board member of the Mexican Culture Center. I'm a board member of Neighborhood Food Pantries. I'm a board member of H.O.M.E. DuPage. As you can see, I'm in DuPage most of the time. I don't live in

07:33:41PM DuPage, but I work in DuPage. I've been working here for ten years, and I am in favor of the construction expansion of LRS.

As a minority, I think that also will benefit the people here for more jobs as well.

So thank you.

UNIDENTIFIED SPEAKER: We're the majority here, not a minority.

HEARING OFFICER PRICE: All right. This isn't a debate. It's public comment. We're not going to have that, or else we'll be excusing people.

07:34:06PM

Next is Mr. John Stoetzel, followed by Mr. Mike Hampson.

MR. STOETZEL: Hi. My name is John Stoetzel, and I've lived and worked in DuPage County since I moved to the Village of Wayne in 1973. I was elected to the Village Board of Wayne in 1975 and served as president from 1980 through 1986. So I'm very aware of this area.

My involvement with this specific property being considered tonight, which is immediately north of Lake Shore's recycling proposed transfer station was when I was

07:34:36PM

appointed around 1996 by LaSalle Bank to oversee the redevelopment of a parcel that had been foreclosed on and laid fallow for a number of years. There was a bankruptcy and an environmental issue at the time.

We were able to find a tenant for the vacant 80,000-square-foot building that, in fact, has been occupied ever since. We were also able to develop two parcels of property
07:35:13PM with industrial buildings both down the street from the Groot facility.

Today I stand to represent current owners of that property, Maxwell Properties, LLC. The property north of Lakeside [sic] Recycling property. We appreciate the relationship we've had with Lakeside as a property owner and a responsible neighbor.

I fully endorse Lake Shore's Recycling as an investment in West Chicago.
07:35:44PM Thank you.

HEARING OFFICER PRICE: Next is Mr. Mike Hampson, followed by Peter Polous.

MR. HAMPSON: Good evening. Thank you.

My name is Mike Hampson. I'm the executive secretary of Chicagoland Associated General Contractors. CAGC is a union-based construction trade association with over 200 general contractors, specialty contractors, suppliers, and development members.

The CAGC fully supports the LRS waste transfer station. In an industry where 07:36:19PM competition is on the thinnest of margins, having a more -- having more competition will greatly benefit contractors and the industry.

As a 20-year member of Chicagoland AGC, LRS continues to be a great industry partner helping the contractors achieve lead -- lead points while building a silver or gold level green buildings.

An additional transfer station in the second largest county where we have a strong 07:36:46PM member base would allow contractors to have an additional choice. And in the case of LRS, the choice of having a leader in recycling

construction materials.

Thank you.

HEARING OFFICER PRICE: Next is Mr. Peter Polous.

MR. POLOUS: Good evening. My name is Peter Polous. I'm a commercial real estate broker focused in the industrial building material trade market and very familiar with the waste industry, the requirements of general
07:37:22PM contractors in DuPage County.

I spend a lot of time trying to site facilities, logistics sites, industrial sites, quarries, mines, landfills, and I feel that this is an excellent location, incredible opportunity for the Village or City of West Chicago, county of DuPage County for asset engagement, reducing the carbon footprint that Lake Shore would have by having this facility increasing competition.

07:37:53PM And competition is excellent. It all makes us better. It's a win-win for everybody -- the consumer, the customers, and

the competitors.

Thank you.

HEARING OFFICER PRICE: All right. That concludes the list of people I was informed needed to go and weren't able to go next week. I have 17 other people who have registered to give oral public comment.

Do any of those other 17 wish to speak this evening?

07:38:22PM (No verbal response.)

HEARING OFFICER PRICE: All right. It's 7:40.

Why don't we do this. You said the direct won't be long with Mr. Lardner. So why don't we put the direct on, and then we'll take a break.

Okay. Again, for everybody's reference, next week we are meeting on Monday from 1:00 to 5:00, and again Thursday 1:00 to

07:38:50PM 5:00 in the city council chambers. That's where the work will be performed. If we need additional time after that, we'll have to figure

that out. We'll see how it goes.

Public comment can be either of those days for the 18 people remaining. It's 18 because I'm now including Ms. Laimins. She wanted to speak next week.

So for you 18, that will be your opportunity.

For everybody else who hasn't registered to give oral public comment, again, you're welcome to submit your comment in written form at any time, and that will be up to 30 days after the hearing concludes. It will be your opportunity to do that. That's by statute. We welcome that information and after that, then we -- we're going to be in a bit of a sprint to allow city council to take action on the application.

So with that, is the witness -- Mr. Lardner, why don't you come back. I'm going to grab the microphone. You're still under oath, Mr. Lardner.

MR. LARDNER: Yes, I understand.

HEARING OFFICER PRICE: With that, Mr. Luetkehans, the floor is yours.

WHEREUPON:

JOHN LARDNER,

called as a witness herein, having been previously duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. LUETKEHANS:

07:40:24PM Q. Mr. Lard- -- Okay. You have in front of you PWC Exhibit 800. That's your --

Did you do a report in this matter regarding Criterion 8 for this property?

A. Yes, I did.

Q. And that's PWC 800?

A. That is correct.

Q. Okay. And then also in front of you -- and in front of everybody else, for the record -- is PWC 801.

07:40:49PM Do you see that?

A. Yes.

Q. Is that your -- Is that the PowerPoint

plan you prepared --

A. Yes.

Q. -- in relation to Criterion 8?

A. Yes.

Q. Okay. I'll just let you proceed.

A. Okay. So since we don't have our slides, I'll just go through -- I'll be reading more than I normally would here.

So what I'm -- what I did was

07:41:10PM prepare a review on Criterion 8. My original slide said Criteria 8, plural, because I was doing 1 and 8. So this one is on Criterion 8, for the proposed West DuPage recycling and transfer station in West Chicago.

That's a solid waste management plan consistency review. The requirement is that if the facility is to be located in a county where the county board has adopted a solid waste management plan, consistent with the planning requirements that a local solid --

THE COURT REPORTER: I'm sorry. Could you slow down a little.

THE WITNESS: Okay.

THE COURT REPORTER: You're reading, so you're going a little fast for me.

BY THE WITNESS:

A. If the facility is to be located in a county where the county board has adopted a solid waste management plan consistent with the planning requirements of the Local Solid Waste Disposal Act or Solid Waste Planning and Recycling Act, the facility is consistent with that plan.

07:42:01PM

Again, going over my background, I'm a professional engineer with over 35 years of experience in the solid waste field. I'm a registered professional engineer in Illinois and Indiana. I have a B.S. in civil engineering from Michigan State University and a master's of science in civil engineering from the University of Illinois, and I've prepared solid waste manage plan consistency [sic] and testimony or actually for four waste-related facilities in Illinois, two of which were transfer stations.

07:42:29PM

And I've been a design engineer for over 22 solid waste projects in Illinois and Indiana. And I'm a member of professional associations related to the solid waste industry, those being the Solid Waste Association of North America, U.S. Composting Council, American Society of Civil Engineers, Illinois Recycling Association where I'm a current board member, and the Illinois Food
07:43:02PM Scrap and Composting Coalition, where I'm also a current board member.

So what I'm going to review here is the best solid waste -- DuPage County solid waste management plan and their five-year updates. I'm going to review a past transfer siting consistency determination in unincorporated DuPage County near this location, and provide a summary and conclusion.

Now, the 1991 solid waste
07:43:35PM management plan prepared for DuPage County was one that all the counties in Illinois were required to do. They were given budgets from

the State of Illinois to do solid waste planning. And the goal was there to recycle 25 percent of their waste stream.

DuPage County prepared their solid waste management plan and gave us four sections; one was the report, and there was three sections that were appendices.

In the report, first there is seven sections. One was an introduction and
07:44:11PM requirement and talked about previous planning efforts; two, was existing solid waste management systems and their need; three was solid waste management systems; four was education and information system; five was definitions of proposed solid waste management systems; six was implementation issues; and seven was a plan of action.

And so in that study, they also looked at the demographics of DuPage County, the
07:44:40PM population. They also looked at waste generation and disposal capabilities, similar needs analysis that has been done for this

project and which I testified on earlier evening for this process.

They also looked at different ways for recycling by commodity, for instance, like paper, glass containers. They also looked at opportunities for construction and demolition debris recycling, for landscape material recycling, and food scrap recycling. And they also looked at waste processing, disposal, and transfer options.

07:45:18PM

And the recommendations at that time for waste transfer was to evaluate its practicality, perform a siting analysis for if they were proposed, and then continue on with land filling of solid waste.

In the next slide that I had, I had the 1991 solid waste management plan recommendation, but actually this is one from 1996, and I'll read that: The County should encourage development of three to five waste transfer facilities throughout the County. The County should assist the private sector in

07:45:46PM

determining the most appropriate and efficient locations for transfer facilities, and providing education and appropriate tours to municipalities, townships, or any other people interested in knowing more about transfer stations.

Going on to the 2001 solid waste management plan update, in terms of the transfer station disposal capacity, the plan -- and I'll
07:46:23PM quote -- The permanent capacity of the DuKane transfer station be increased from 1500 tons per day to 2500 tons per day with a proportionate increase in acceptance at the facility for waste generated in DuPage County.

And a second recommendation was that a second and/or third transfer stations should be sized to accommodate the 350,000 tons of waste per year and accommodate future population growth and subsequent waste
07:46:58PM generation.

A second and/or third transfer station is expected to increase competition,

reduce wear on roads, reduce overall truck miles traveled, and decrease truck air emissions.

So in that second recommendation, was one that a second transfer station would incentivize haulers to use -- use it due to a shorter hauling distance rather than go to DuKane transfer station; and that two, that the -- the second or third transfer station would be closer to other DuPage communities that were not as close to the DuKane facility thereby reducing the wear on roads and overall truck miles.

07:47:34PM

Then going on to the 2007 solid waste management plan -- and I will, you know, paraphrase or read from that -- it says: In 2002, DuKane's capacity was increased to 3,000 tons per day. Three new transfer stations have been proposed since the last update, however, none were approved. Transfer facilities have been constructed outside the county border that are close enough to serve our needs.

07:48:06PM

So, for instance, they -- in this case, they recognized that the DuKane capacity at 3,000 tons per day was somewhat of a safety valve in case other transfer stations were not sited. And that there were other facilities outside the county that was being located in Cook County and in Kane County. In Kane, there was the Elburn transfer station and a Batavia transfer station. And in Cook County, there was
07:48:39PM that Bluff City transfer station.

A second recommendation in the 2007 solid waste management plan update was to provide an accurate snapshot of the current disposal waste disposal capacity. An evaluation was done of existing transfer stations and disposal facilities. The County was divided into quadrants and the consultant whom they hired at the time, Shaw Environmental, reviewed the nearest three transfer stations to each
07:49:13PM quadrant. The ideal transport distance is no more than ten miles. Out of ten tran- -- ten stations that were analyzed, only two facilities

serving southern DuPage County failed to meet this criteria.

And so I had showed in earlier Figure 1 in this -- in the application, and it is Slide No. 13, is that the -- there are fewer transfer stations options in the southern part of DuPage County. I think there was two compared to, I think, four up in the northwest and as many as six in the southwest.

07:49:55PM Number two, this is kind of where the ten-mile radius comes into for use in a service area delineation. Number three, recommendation they said that the position at this time is to rely on existing transfer stations both inside and outside the County borders. While this reliance comes at a cost of higher disposal rates, it is preferred method. This method will serve the county needs for five more years.

07:50:31PM And then the next -- in my PowerPoint presentation, I -- I showed where the analysis was made as part of the 2007 solid

waste management plan. The consultant at the time divided DuPage County into centroids or population geographic centers and looked at what transfer stations were available to those four centroids within DuPage County.

So, for instance, in the northeast centroid, they looked at the three transfer stations outside of Cook County, that being the Groot Chicago transfer station, the Melrose Park
07:51:15PM transfer station, and the Northlake transfer station.

In the northwest portion of DuPage County, they looked at -- from that population centroid -- the Bluff City transfer station in Cook County, the DuKane transfer station that was in DuPage County, and the Batavia transfer station in Kane County.

They looked at the service areas of transfer stations proximate to the southwest
07:51:47PM DuPage County. And those at the time, were the DuKane transfer station, the Batavia transfer station and the west Elburn transfer station.

And then the transfer stations to the southeast of DuPage County were in the -- in Cook County, those were the Heartland transfer station, now owned by Lake Shore Recycling; the Liberty transfer station and the Groot McCook transfer station, which is now Waste Connections.

And in that slide, they showed a -- again, a circular service area that did not or just barely covered the -- where the southeast quadrant of the population was located.

07:52:27PM

So now going to the 2012 solid waste management plan update, that rec- -- the recommendation there was factors that contribute to the need for new facilities are increasing population, rising waste generation rate, and fuel operating costs. Future conditions may necessitate a new facility in the southern portion of the county.

07:53:01PM

The maps and table from 2007 -- again, the maps that were those figures of the quadrants -- indicate that this area is somewhat

underserved and that some areas are out of range for existing facilities. These conditions can result in less competitive waste hauling and higher costs especially in unincorporated areas.

So in this case, they were looking at costs that might be more than residents were willing to pay because they didn't have the -- the density for the number of customers that a hauling company would desire to make it

07:53:43PM profitable for them to serve them. So in this case -- case, they might be treated like a rural area where in rural areas they actually have a transfer station where people bring their bags of waste to whatever and the recycling materials to and drop it off. And it's generally secured or guarded, and then that's how waste is handled in rural areas if it's not picked up by a waste hauler.

And then another conclusion in --

07:54:09PM or recommendation in 2012 solid waste management plan was, it is potentially foreseeable that the out-of-county facilities may cease serving all

or parts of the current DuPage area. In the event that occurs, there would be a service gap in the affected areas, thereby creating a potential need for a new facility.

Well, these concerns were unfounded because facilities that served these out-of-county facilities that were serving DuPage County never ceased to -- never ceased to stop serving them, and that they were providing
07:54:46PM hauling services at prices that communities were willing to pay.

And in Figure 1-2C in the applicant's application, they showed a colored coordinated map of DuPage County and some kind of surrounding areas color-coded by the different hauling companies that were serving to communities in DuPage County. And there were six hauling companies that were actually serving them at the time. So that concern that there
07:55:21PM would not be a service to these communities was somewhat unfounded.

And then going on to the 2017 solid

waste management plan update -- and, again, I'm going to read from the recommendation -- is that the DuKane transfer facility is permitted to accept up to 3,000 tons per day -- per operating day. So it could move 939,000 tons per year. However, service areas must be considered as well as the market forces of private sector waste hauling entities, large regions of the county are not optimally served due to the
07:56:10PM lengthy transportation routes which lead to increased costs and air emission. To address this, the County of DuPage will consider new or expanded facilities handling, treating and recycling waste on a case-by-case basis.

Now, I want to make four points there: One, where they talked about service areas must be considered as well as the market forces, there are close by transfer stations available outside the county that have been
07:56:45PM capacity to provide transfer station services here.

Number two, they talked about

market forces. Here, the market forces we're talking about the lengthy transportation routes would lead -- which were leading to costs, these being distance. So what -- you know, talked about costs that residents were willing to -- to pay versus their -- you know, the hauling costs that a provider might be encountering.

And then, again, spoke to the amount -- the density or the number of stops 07:57:19PM that a waste hauling company can make, the more that -- the closer in proximity, the easier it is for them to make the cost, cost less.

And then three, they talked about regions that optimally served are in the south part -- part of DuPage County per the 2012 update. Again, they were talking about the service in the -- the market wasn't providing optimally serving the south part of DuPage County at the time. Again, this is 2017.

07:57:55PM And then they also talked about that DuPage County will consider new or expanding facilities. Now, the word

"consider" -- and I looked at the definition -- it means, think carefully about something before making a decision. That implies that the County would evaluate any new transfer station project.

And so in terms of being consistent with the solid waste plan, you can see that these -- there's been concerns from 1996 on through 2017, which is the last solid waste management plan update. There actually was a 07:58:41PM 2003 siting application called west DuPage recycling and transfer. There was a siting in that year, and it was for a facility about a mile from the proposed facility, the west DuPage Recycling and transfer siting that's going on now.

And the board -- DuPage County board prepared a resolution as part of that siting, and I'll read two -- two paragraphs from that: The application of --

07:59:13PM MR. MUELLER: I'm going to object to a previous resolution because it's not relevant to this proceeding.

MR. LUETKEHANS: I think it is relevant because this is the actual board that passes this solid waste management plan.

HEARING OFFICER PRICE: Overruled, that the objection --

Go on, Mr. Lardner.

BY THE WITNESS:

A. Okay. The -- The resolution said the application of West DuPage recycling and
07:59:36PM transfer for siting -- for siting approval for the West DuPage transfer recycling and transfer is hereby denied. The applicant has also failed to meet its burden in establishing Criterion No. 8 in that the proposed facility is inconsistent with the solid waste disposal plan of DuPage County because the proposed facility location is within one-quarter mile of another transfer station and fails to reduce wear on roads, reduces -- reduces overall truck miles
08:00:08PM traveled, and decreased truck air emissions.

As part of that siting process, the City of West -- West Chicago prepared a

resolution on April 7th, 2003, and it stated: Whereas the County of DuPage, the County has previously adopted a solid waste management plan -- the plan that calls for siting of five waste transfer stations to be located throughout the county and, whereas granting a siting approval violated the terms of the plan by placing two transfer stations within the same community's planning area.

08:00:43PM In the application, there was a letter from the DuPage County Building and Zoning, April 20th. The letter was addressed to West Chicago, and I'm going to read a paragraph from that letter.

It says: The document finds that service areas of existing facilities be considered as well as market forces. It observes that the County lacks disposal capacity for the waste generated within the borders, and

08:01:20PM that additional pollution control facilities may be needed but will be considered on a case-by-case basis. The proposed pollution

control facility appears to be consistent with the aforementioned solid waste management plan year update in (2017.)

Four points to make there. It says: All transfer stations service areas, not just those for a particular waste transfer service application, in this case, the West DuPage recycling and transfer station. Number two, the lack of disposal capacity in the south in the 2000 update speaks to other portions of the county that were -- that needed service.

08:02:04PM

Number three, again, consider -- think carefully about -- before making a decision. No information was provided along with that letter to indicate what DuPage County thought about the West DuPage recycling and transfer project.

In that letter, it says the facility appears to be consistent with the aforementioned solid waste management plan five-year update. Appears -- Again, the definition of appears is: Give impression that.

08:02:40PM

There is no statement that it is consistent. It says appears consistent.

39.2 states that the facility is consistent, not the facility appears consistent with the county's solid waste management plan.

So my conclusion is that the West DuPage recycling and transfer station is inconsistent with the DuPage County solid waste management plan for the following reasons: The

08:03:20PM solid waste management plan updates starting in 2007 all focus on the need for additional transfer capacity in the south portion of DuPage County. Adding another transfer station in the northwest portion of DuPage County will serve as a disincentive to a south -- south facility because it requires more travel from underserved -- underserved areas. It's still -- It's still got to service out the area.

The siting application for the West

08:03:52PM DuPage RTS did not consider service areas of other pollution control facilities, nor did it ask DuPage to consider it prior to filing the

application. There was no evidence of that in the -- in the DuPage County review.

And there is no mention of the siting application that the assistance of DuPage County was requested by the applicant with determining the most appropriate location for transfer facilities.

That concludes my presentation.

Q. Do you have an opinion, based on your experience in the industry and your experience and education as an engineer, as to whether this proposed waste transfer station application meets Criterion 8?

08:04:22PM

A. It does not meet Criterion 8 because it is not consistent with the plan.

Q. And that's based on your experience in the industry and your experience as an engineer?

A. Correct.

MR. LUETKEHANS: Nothing further of this witness.

08:04:45PM

Thank you.

HEARING OFFICER PRICE: All right.

We're going to take a break. It's 8:06. So let's come back together at 8:20.

(A short break was had.)

HEARING OFFICER PRICE: Do you have questions, sir?

MR. DELAROSA: At this time, no.

HEARING OFFICER PRICE: Okay. So Mr. Lardner is getting something. Mr. DeLaRosa doesn't have questions.

So, Mr. Mueller, you will be -- soon to be up.

Okay. All right. Back to you. Mr. Mueller has the floor.

CROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. Lardner, the 1991 plan recommendation called for three to five transfer stations in DuPage County?

A. I think that was a misprint. It's the 1996.

08:20:13PM

Q. It's another typo?

A. Correct.

Q. Okay. It did call for three to five transfer stations?
A. That is correct.
Q. How many transfer stations does DuPage County have?
A. One.
Q. And the 2001 plan update referred to a second and third transfer stations, right?
A. Correct.
08:20:46PM Q. DuPage County still only has one, correct?
A. Yes.
Q. And that plan noted that the second and third transfer stations would increase competition. Do you agree with that statement?
A. That's what it says.
Q. Do you agree with it?
A. It says -- Rephrase the question.
Q. Do you agree with the conclusion of
08:21:12PM DuPage County that a second or third transfer station would increase competition?
A. I think a second or third transfer

station did have the potential for increasing competition.

Q. I'm looking at the language from the plan. I can't see the word "potential" in there?

MR. LUETKEHANS: It was -- Objection. He answered the question. The question was, what is your -- do you disagree with it? He stated what he believed.

08:21:40PM HEARING OFFICER PRICE: Overruled. Let the witness do it.

BY THE WITNESS:

A. Are you asking me to read what was in the plan?

Q. Well, no. DuPage County -- Do you agree with DuPage County's statement, correct?

A. In essence, yes.

Q. And do you agree with DuPage County's statement that a second or third transfer

08:22:01PM station would reduce wear on roads?

A. Depending on its location.

Q. Do you agree with DuPage County's

statement that a second or third transfer station would reduce overall truck miles?

A. Again, depending on where it's located.

Q. Well, the county just sought -- made the statement without regard to location, didn't it?

A. I think it implies that it was there to accommodate future population growth, meaning
08:22:44PM that areas where population growth was increasing would need a transfer station because of the distance having to travel to the DuKane transfer station.

Q. Mr. Lardner, I don't know what it implies because I just can -- I read the words. You apparently are able to see into the minds of the people in DuPage County that passed this plan update.

MR. LUETKEHANS: Objection,
08:23:13PM argumentative.

HEARING OFFICER PRICE: Sustained.

BY MR. MUELLER:

Q. Now, did you hear the testimony of Mr. Hock that our proposed facility will increase competition?

A. I remember that.

Q. Did you hear the testimony of Mr. Hock that our proposed facility would reduce wear on roads?

A. I think that was his opinion, yes.

08:23:40PM Q. Did you hear the testimony of Mr. Hock that our transfer station, if tit's approved, would reduce overall truck miles traveled?

A. In which county?

Q. In DuPage County.

A. If it's in DuPage County, yes, I remember hearing him say that.

Q. And did you hear his testimony that a second transfer station, our transfer station, would decrease truck air emissions?

08:24:09PM A. Yes, that was his -- his statement.

Q. Now, DuPage County, when they wrote the 2001 solid waste management plan update,

apparently thought all of those benefits were -- were -- were useful and important, right?

A. Yes. I think that the -- when they put together that statement, they were looking at transfer stations that would serve DuPage County or that the hauling distance was somewhat prohibitive or too far from the DuKane transfer station.

Q. So -- Well, again, I'm looking at the 08:24:54PM 2007 plan update. I don't see any reference to distance. Am I missing something?

(Witness perusing document.)

BY THE WITNESS:

A. Which plan were you talking about?

Q. 2007 plan update, the one I've been reading to you from. Excuse me. I take it back.

2001.

A. Okay. So, again, now what is your 08:25:36PM question?

Q. Do you see any references to distance or location for the transfer station in that

plan update?

A. No. It's alluded to by reducing overall truck miles traveled, and it's the distance.

Q. Let's go to the 2007 plan update.

That plan also recommended more transfer stations for DuPage County, correct?

A. I don't see anywhere where they recommended that at the time, I mean, through my slide here.

08:26:30PM

Q. Have you read the entire plan?

A. Yes.

Q. Did the plan recommend more transfer stations or didn't it?

A. I don't recall that it did.

Q. You don't recall that it did or you don't recall either way?

A. Either way.

Q. Okay. And the -- the blurb that you quoted does say "the ideal transport distance is no more than ten miles."

08:26:51PM

Do you agree with that statement?

A. I think there -- yeah, I would agree in -- in -- in concept that the -- the goal here was to try and find transport facilities or facilities that would serve -- transfer stations that would serve the community so that no more than ten miles had to be traveled.

Q. Then why are you using more than ten miles for some of your service areas?

A. Because at the time these were the service areas that were identified from the siting application.

Q. From what siting application?

A. For instance, the -- the Plano transfer station siting application, there's more than ten miles traveled.

Q. Now you got me confused. Let's do it again.

Do you -- You agree, apparently, that the ideal travel distance for transfer stations is no more than ten miles, right?

A. Again, there's a lot that goes into that.

Q. Yes or no?
A. I would say no.
Q. Okay. So you disagree with DuPage County's finding here about the ideal travel distance?
A. I don't think it's an exact number. So I would say I would have to disagree. It could be -- It could be a little bit more than that. It could be less.
08:28:40PM Q. You understand what the words "no more than ten miles" mean, don't you?
A. Yes.
Q. 11 miles would be more than ten?
A. Right. Correct.
Q. But you disagree with that statement by DuPage County?
A. I don't disagree with the exact number there. I'm just saying that ten miles, depending on where you're at, could be the
08:29:04PM equivalent of a few more miles because of, you know, conditions.
Q. This plan update didn't talk about

distances in terms of road conditions or other variables, did it?

A. No. It was talking about the -- the mileage from different quadrants in DuPage County.

Q. And I noticed that this particular update also connects reliance on existing transfer stations as resulting or could result in higher disposal rates, right?

08:29:51PM A. Which plan are you referring to?

Q. 2007 plan update.

A. I don't see that in my -- in my slide.

Q. Which of the plan updates said that reliance on existing facilities will result in higher disposal rates?

A. I think that was a 2017 where it says will lead to increase costs. Large regions in the county are not optimally served due to lengthy transportation routes which lead to

08:30:53PM increased costs and air emissions.

Q. So as recently as 2017, the county found that reliance on existing transfer

stations will result in higher disposal rates, correct?

A. That was the 2012 solid waste management plan. It says: These conditions can result in less competitive waste hauling and higher costs especially in incorporated areas.

Q. Do you agree with that statement?

A. In concept, it could.

Q. And would higher disposal rates generally be a bad thing? 08:31:44PM

A. No.

Q. So if you had a choice of paying a lower rate or a higher rate, it wouldn't matter to you?

A. If I was getting better service at the rate, yes, it would.

Q. Now, turning to the next page where you show service areas in the northeast part of DuPage County ...

A. Which slide are you referring to? 08:32:25PM

Q. I don't know. It's called 2007 Shaw Environmental report.

A. Okay. Yes. That's the -- That's those service area quadrants.

Q. All right. You've got a transfer station called Groot Chicago listed.

A. That was in there, correct.

Q. That service area is not a ten-mile radius circle, is it?

A. It's not a circle. It's more of a rectangle.

08:33:14PM Q. It's a big rectangle that goes from Lake Michigan all the way to the western edge of DuPage County?

A. Correct.

Q. Would that be more than 20 miles?

A. I don't have a scale on this drawing so I -- I can't make an exact --

Q. Let me -- Let me try to help you here, sir.

Do you know what township lines

08:33:45PM are?

A. Yes.

Q. How big is a standard township?

A. It six miles by six miles.
Q. Okay. And DuPage County is, other than the southeast corner, three townships by three townships, right?
A. Yes.
Q. So DuPage County's regular width, from east to west, is 18 miles?
A. Correct.
Q. And the service area for Groot Chicago
08:34:22PM appears to be almost twice the width of DuPage County, right?
A. Well, maybe not twice, but it's larger than DuPage County, I'll grant that.
Q. So why aren't we using the county's recommendation for a ten-mile maximum travel distance when we look at Groot Chicago?
A. Because I think that it was the county's reliance on out-of-county disposal services, even though it said it might increase
08:35:04PM costs.
Q. So when the county looks at out-of-county transfer stations, the ten-mile

rule doesn't apply?

A. I think they're showing portions of the county with- -- you know, with- -- within a ten-mile radius of the -- that Groot Chicago transfer station.

Q. Can -- Can you, sir, show me anywhere in the plan update -- any of the plan updates where the county writes that the ten-mile rule no longer applies?

08:35:41PM A. I don't think -- There was nothing there. They said this was an ideal location or ideal distance they had quoted.

Q. All right. Let's look at the next page, comes from Appendix F: Service areas of transfer stations proximate to northwest DuPage County.

Do you see that?

A. Yes.

Q. And there's a big circle that

08:36:10PM surrounds the Batavia transfer station, correct?

A. Correct.

Q. What's the radius of that circle, sir?

A. I think that was 15 miles. As I mentioned earlier this evening, that was a statement out of one of their -- I think the 2000- -- I'm not sure exactly what solid waste plan, but it talked about a 15-mile radius.

Q. So you abandoned DuPage County's ten-mile rule when drawing the Batavia transfer station service area, right?

A. In this area, you know, again, that was the -- in this particular appendix, that's what they used as the 15-mile. Again, it depends on driving distance. If you're in a more developed area, ten miles could be the equivalent of 15 miles in a rural area.

08:36:51PM

Q. So do you think 15 miles is better than ten or is ten better than 15, or don't you know?

A. It depends on what you're talking about.

Q. Now, let's go to the 2012 solid waste plan update. That's the one that says: Fewer transfer stations can result in less competitive

08:37:20PM

waste haul.

Do you agree with that statement?

A. It didn't talk about fewer transfer stations. It just says -- indicating areas are somewhat underserved and then some areas are out of range for existing facilities. It says: These conditions can result in less competitive waste hauling and higher costs especially in unincorporated areas.

08:38:22PM Again, they were talking about residents who lived in the southern part of the county and that were too far away from -- for a hauler to serve them.

Q. Now, it seems to me that several of the DuPage County plan updates talk about competitive factors; is that correct?

A. They're talking competition in that, you know --

Q. Well, I'm --

08:39:08PM A. -- what -- its service. And, again, where they're talking about here in -- in the southern portion of the county, there wasn't as

much competition because there were fewer transfer stations that were -- were close enough to serve them.

Q. Where does it say that in a plan update, what you just said?

A. That- -- That's my interpretation.

Q. Ah, your interpretation.

Now, going back to my original question: The county plan updates seem to

08:39:35PM consistently mention competitive factors as something they look at, right?

A. The word "competition" is -- was in several of the plans, and they also could say "can result in less competitive." It's not a definite statement.

Q. I guess I got to ask you: Do you want to change your testimony on Criterion 1 to now include competitive factors, because you've testified that you didn't include competitive

08:40:10PM factors when deciding there was no need?

MR. LUETKEHANS: Objection --

HEARING OFFICER PRICE: Overruled.

MR. LUETKEHANS: -- misstates the testimony.

HEARING OFFICER PRICE: That's overruled.

BY THE WITNESS:

A. So, again, your question?

Q. Do you want to change your testimony on Criterion 1 where you disregarded competitive factors in concluding that there was no need?

08:40:33PM A. No.

Q. The 2017 or 2012 plan update suggests a possible transfer station in southern DuPage County, correct?

A. That statement was there, yes. Correct.

Q. Does it rule out other locations in the county?

A. It makes no mention of other --

Q. Does that plan update say that a

08:41:09PM location in a nonsouthern portion of the county is inconsistent with the plan?

A. It does not say that, no.

Q. And then we go to the 2017 plan update. That's the most recent one, correct?
A. That is correct.
Q. And that says that large areas or large regions of the county are not optimally served due to lengthy transportation routes.
Do you see that?
A. Yes.
Q. So would lengthy transportation routes be a bad thing?
08:41:55PM
A. In this case, it -- for this -- Again, they're going back to the regions that were not optimally served. I interpret, again, that to be the southern part of the county that wasn't being optimally served and it was increasing the transportation costs for that area.
Q. Okay. That's your interpretation?
A. Correct.
Q. We looked at the 2017 plan update carefully and can't find any reference in there
08:42:30PM
to the southern portion of the county.
Have you looked at that plan update

carefully?

A. Yes.

Q. Could you find a reference to the southern portion of the county?

A. Not in a 2017 waste management plan update.

Q. So if it doesn't mention the southern portion of the county, why do you want to insist that that's what DuPage County's plan was

08:42:57PM thinking about?

A. Because both -- both mention the underserved parts of the -- of the county.

Q. And it says also that the county of DuPage will consider new or expanded facilities, right?

A. Yes.

Q. So if you have a new or expanded facility to propose, that would seem to be consistent with the plan; isn't that right?

08:43:26PM A. Depends if they considered it.

Q. Are you aware of the fact that DuPage County has signed a secondary host agreement

with Lake Shore?

A. Yes.

Q. Do you consider that -- Is that consideration on their part of a new or expanded facility?

A. I have no opinion on that.

Q. Well, you did opine that because the DuPage County expert on solid waste planning who said this proposal appears to be consistent,

08:44:15PM that because she didn't say "is consistent," the plan is automatically inconsistent; is that right?

A. I just stated that she didn't say that it is consistent.

Q. Well, appears to be consistent is pretty close to a finding of consistency, isn't it?

A. No.

Q. She didn't say it appears to be

08:44:42PM inconsistent, did she?

A. That's not what's there, no.

Q. Then why would you believe that

because she only said "appears to be consistent" that our proposal is actually inconsistent with the plan?

A. Because she gave no reason behind it.

Q. DuPage County is not the siting authority, are they?

A. No.

Q. So they don't have to consider our proposal in detail, do they?

08:45:09PM A. There's no -- There's no regulation or -- or law that states that, no.

Q. But DuPage County did consider it sufficiently to -- to execute a secondary host agreement and to give us a letter of the appearance of consistency, right?

A. It did give you the letter, I agree.

Q. And they did execute a secondary host agreement with us?

A. I agree with that.

08:45:39PM Q. Do you know what the evidence that the 2003 siting hearing was?

A. No.

Q. You just quote the findings even though you don't know the evidence?
A. That is correct.
Q. Was that proposal the same as this one?
A. No.
Q. Do you know if that proposal had evidence about reduced wear on roads, reduced overall truck miles, and decreased truck air
08:46:27PM emissions?
A. No.
Q. This proposal does that evidence on all of those figures or factors, doesn't it?
A. It was introduced by a consultant, yes.
(Brief pause.)
BY MR. MUELLER:
Q. I want to turn to your conclusions.
Your first statement is the SWMP
08:47:16PM updates, starting in 2007, all focus on the need for additional transfer capacity in the south portion of DuPage County.

Is that what you said?

A. If it's in there and -- and with the ...

Q. I didn't hear your answer, sir.

A. Yes, they do -- Some focus on the south portion of DuPage County but not all.

Q. Show me the focus on the southern portion of the county in the 2017 plan update.

A. There is no mention of that. It was in an earlier version -- earlier updated version.

08:47:51PM

Q. This says starting in 2007 "all focus." Do you know what the word "all" means?

A. Yes.

Q. You selected that?

A. Yes.

Q. And that's state- -- that word is incorrect as to the 2017 plan update; isn't that true?

08:48:11PM

A. I would agree.

Q. And then you say "adding transfer station to the northwest portion of DuPage

County will serve as a disincentive to a south facility."

Do you have any evidence of that?

A. No. I think it's implied because they're talk- -- earlier versions talked about the need for a south facility to reduce the travel distance that was going to the DuKane facility at the time.

Q. Well, in 2017, we didn't talk about a south facility?

08:48:51PM

A. That's correct.

Q. So you have no evidence that there will be a disincentive, do you?

A. No.

Q. And then your third conclusion is that the siting application did not consider service areas of other pollution control facilities, right?

A. Yes.

08:49:23PM

Q. Is that a requirement of this solid waste management plan?

A. Well, the solid waste management plan

is a conclusion, said that the document -- it says "service areas of existing facilities be considered."

Q. Mr. Lardner, you're testifying about consistency with the solid waste management plan, right?

A. Yes.

Q. Does this third conclusion that you have, have any requirement for that kind of consideration in any of those solid waste management plans?

08:49:58PM

A. In the 2017 solid waste management plan update, it said service areas must be considered.

Q. We considered our service area, didn't we?

A. It says ...

Q. Do you recall Mr. Hock testifying about other transfer stations and their service areas and the fact that they would have some impact on this service area?

08:50:36PM

A. Yes.

Q. So he did consider them?
A. Yes.
Q. So your third conclusion is also wrong?
A. (No verbal response.)
Q. Let's go to the fourth one.
A. I would -- I would say not exactly wrong. It's -- Again, he talked -- he didn't show the entire service area. He just talked
08:51:03PM about other transfer stations.
Q. Did he consider service areas of other transfer stations?
A. No, not service areas.
Q. And then -- And just backing up for one second, we've determined that the consideration of service areas of other pollution control facilities is not a plan requirement, right?
A. I think the plan says to consider
08:51:44PM service areas of other pollution control facilities.
Q. Let's go to 2017. What does it say?

A. It says service areas must be considered.

Q. And your -- your belief is that even though Mr. Hock testified about other service areas, he really didn't consider them?

A. He didn't testify to the whole service area that the tran- -- other -- other facilities had.

Q. You're correct. He didn't testify about the Lake Michigan shoreline portion of the Chicago Groot service area?

MR. LUETKEHANS: Objection, argumentative.

HEARING OFFICER PRICE: Sustained.

BY MR. MUELLER:

Q. Your fourth conclusion, there's no mention in the siting application that the assistance of DuPage County was requested.

Is it a requirement of the solid waste management plan that the county's assistance be requested when you are trying to site a facility in a municipality?

A. The plan reads that the -- that the service areas of existing facilities be considered and that the proposed control facility appears -- excuse me -- be considered on a case-by-case basis. So it does say to consider it.

Q. We're done with that one.

A. Okay.

Q. So I'm asking you whether or not there's a requirement that we ask for the county's assistance in developing --

08:53:11PM

A. Not assistance, no. You're correct.

Q. So there's no such requirement?

A. No.

Q. So at least conclusions one, two, and four are not valid, right?

A. I would say they're not valid. I would just say that, you know, in your interpretation of that, that you feel they're not.

08:53:35PM

Q. And how many transfer stations does DuPage County have now?

A. One.
Q. Still only one?
A. Correct.
MR. MUELLER: Thank you, sir.
HEARING OFFICER PRICE: Mr. Callaghan?

CROSS-EXAMINATION

BY MR. CALLAGHAN:

Q. The 2003 siting that you mentioned --
A. Yes.
08:54:03PM Q. -- did you look at the -- the file on that?
A. No, I did not.
Q. Where did you learn about it?
A. Just through -- through research.
Q. Research.
What kind of research?
A. With -- With the -- With the attorney that was -- who I'm working with.
Q. The attorney told you about it?
08:54:26PM A. We -- we discussed it, yes.
Q. But you didn't know about it before that?

A. I knew about the -- that it was -- that the 2003 was -- was not approved. And we asked about that, yeah. The 2000 [sic] siting was not approved and we discussed it and I said I would like to see the resolution.

Q. You -- You asked him about it or he told you?

A. No. I knew about the 2003 siting application not being approved and I asked him, Was there a resolution?

08:54:51PM

And he said, Yes, and he provided it to me.

Q. How did you learn the 2003 application was not approved?

A. Because I was living in the area and practicing in the solid waste industry and I followed it.

Q. Did you go to the hearings?

A. No.

08:55:06PM Q. Do you know how big that site is?

A. Which site?

Q. The 2003 site.

A. No.
Q. Is there any comparison between that site and the site that we're talking about in these hearings?
A. I'm not familiar enough to make a comparison, no.
Q. But you put it in your report?
A. No, because, in -- in general, I was talking -- looking at facilities that DuPage
08:55:34PM County wanted be on the DuKane facility and -- and to serve other portions of DuPage County. And, clearly, updates of the plan showed that that was what their interest was.
Q. Do you know anything other than what is shown on this page about it, on slide -- it doesn't have a number -- the 2003 West DuPage recycle transfer siting slide?
A. No. Just -- Just what I remember recall at the time, no, there's no more.
08:56:14PM MR. CALLAGHAN: That's all we have. Thank you.
HEARING OFFICER PRICE: Mr. Walsh...

MR. WALSH: Just a couple questions.

CROSS-EXAMINATION

BY MR. WALSH:

Q. Mr. Lardner, did you consult with DuPage County in the development of a plan or any of the updates?

A. No.

Q. Did you discuss the meaning of any of the provisions of the plan or any of the updates with anybody from DuPage County?

08:56:36PM

A. No.

Q. So your testimony is based on your interpretation of the words and the provisions in the plan and the updates, correct?

A. Yes.

Q. You don't have any independent knowledge as to what the county intended when it created the provisions in the plan or the updates other than your interpretation of those provisions, correct?

08:56:57PM

A. Correct.

MR. WALSH: Okay. Thank you.

That's all I have.

HEARING OFFICER PRICE: Redirect...

REDIRECT EXAMINATION

BY MR. LUETKEHANS:

Q. Let's start kind of where we ended, which was the -- the county board resolution board CB0002-04.

And you've cited the finding of the DuPage County board as it relates to the holding facility in 2003 as it relates to Criteria No. 8; is that correct?

08:57:30PM

A. Correct.

Q. Okay. And could you read, starting with the "proposed facility" and through the words "transfer station" in paragraph 2?

A. The proposed facility location --

MR. MUELLER: Objection, that's not proper redirect. That's just repeating direct.

HEARING OFFICER PRICE: Overruled for now.

08:58:03PM

BY THE WITNESS:

A. It says: The proposed facility

location is within one-quarter mile of another transfer station.

Q. And it says above that -- Yeah.

Okay. It's because the proposed facility location was within a quarter mile of another transfer station, that's the reason they gave, correct?

A. Correct.

Q. Not based on the size of the lot?

08:58:25PM That had -- That's not based in Criteria 8 -- their Criteria 8 finding, is it?

A. No.

Q. Okay. Do you know when DuPage County signed the host agreement with L- -- the secondary host agreement with LRS?

A. I think it was 2019 or '20.

Q. Okay. Yeah.

Actually, it was April of 2019. I don't think there's any dispute that.

08:58:55PM That was before this -- That was two and a half years before this application was filed, correct -- actually, three years before

this application was filed?

A. Correct.

Q. So it make sense that they hadn't seen the application at the time they approved their secondary host agreement?

A. Yes.

Q. Let's talk about this southern portion.

You made a mistake -- Would it be
08:59:23PM fair to say you made a mistake when you said in conclusion number one, "all focus"?

A. Yes.

Q. Okay. So -- But the two prior storm water management plans, they do focus on that, correct?

A. Yes.

Q. And is there anything you read -- and I think Mr. Hock admitted it. Is there anything that you read that 2017 somehow overruled the
08:59:46PM 2007 or 2012?

A. No, it did not overrule it. I didn't see anything to that.

Q. Did you consider it to be supplementing those prior --
A. Yes.
Q. Did you disregard competitive factors in your needs analysis?
A. No.
Q. In fact, if I remember correctly, you discussed all the competition that was already there?
09:00:15PM A. Yes. There was -- There's many transfer stations that are serving the proposed service area of the West DuPage County transfer and recycling facility.
Q. We heard about lengthy transportation routes.
Are the transportation routes any lengthier -- or are they significantly lengthier to the current Groot facility than they would be to the Lake Shore recycling facility a quarter
09:00:46PM of a mile away?
A. No. They're essentially the same.
Q. Okay. So the transportation costs

from the hauler to -- or the actual transportation costs from the hauler to the current facility in DuPage County versus the one a quarter of a mile down the street is minimal, at best?

A. That is correct.

Q. You were asked about the second or third transfer station is expected to increase competition, reduce wear on roads, reduce overall truck miles traveled, and decrease truck air emissions. That's from the 2001 plan. Do you recall that?

09:01:28PM

A. Yes.

Q. And you heard -- Mr. Mueller asked you if Mr. Hock testified to those things, to some of those issues, correct?

A. Yes.

Q. You're not here to testify to any of those issues, are you?

09:01:45PM

A. No.

Q. In fact, have you looked at those issues?

A. Not closely, no.
Q. Let's go to the 2007 solid waste management plan update slide.
A. Okay.
Q. And you were asked a bunch of questions about the word "ideal" or the ideal transport distance is no more than ten miles. Do you recall?
A. Yes.
09:02:29PM Q. Is there anything ideal about having two transfer stations next to each other in DuPage County?
A. No.
Q. And you talked about ideal -- that -- I think you kind of hinted or implied that the ideal distance may be different depending on where the transfer station is located?
A. Right. Again, in a -- in a less-developed area, the mileage might not be as
09:03:00PM important a factor as it is in the highly-developed area. You know, going ten miles in a developed area, it takes longer than

it does in a suburban less-developed area.

Q. Would it be fair to say that the traffic time in the northeast corner of DuPage County is slightly different -- is relatively different than that in Plano or Kendall County?

A. Yes.

Q. You got these four quadrant maps, and I think they were originally Appendix E, F, G, and H in the original document that Shaw or that the county had, correct?

09:03:37PM

A. Right.

Q. Okay. Are these your maps?

A. No.

Q. Okay. You took these from the plan. You did not -- You did not make these up?

A. No.

Q. Okay. So this isn't -- This Groot Chicago service area that goes probably 25 miles, I'm not going to deny, that -- you didn't do that, correct?

09:03:59PM

A. No. That was their service area selection.

Q. Okay. And you just took what the solid waste management plan said regarding these quadrants and put it in your PowerPoint?

A. Yes.

Q. In the 2012 -- Well, in a couple -- in the 2007 and in the 2012 solid waste management plan updates, it talks about the southern portion of the county, correct?

A. Yes.

09:04:34PM Q. To your knowledge, has -- do any of the solid waste management plans after the 2017 -- I guess that's the only one -- does that at any time conflict with that statement that the southern portion is the one that needs a transfer station?

A. No.

Q. And then could you look at that slide, 2012 solid waste management plan update for me?

A. Yes.

09:05:03PM Q. Okay. This is all -- The first paragraph is all in one paragraph in the plan, correct?

A. Yes.

Q. Okay. So the first two sentences talk about certain things. The second sentence talks about the southern portion of the county, right?

A. Correct.

Q. And then the third sentence, is that talking about the southern portion of the county again?

A. Yes.

09:05:23PM Q. And the fourth sentence that says, "these conditions can result in less competitive waste hauling," is that, again, talking about the need for a new facility in the southern portion of the county?

A. Yes.

Q. Okay. So those all relate to that southern portion concept?

A. Yes.

(Brief pause.)

09:06:04PM BY MR. LUETKEHANS:

Q. Let's talk about your conclusions.

Mr. Mueller tried to say that

because the word "all" was in there means your conclusion was wrong.

Would you agree with that?

A. No.

Q. It's just -- It's still -- You still have the same conclusion if you take the word out "all"?

A. That would be correct.

Q. Okay. And then the second bullet point says, Adding another transfer station in northwest portion of DuPage County will serve as a disincentive to a solid facility.

09:06:33PM

That's your opinion?

A. That is because it -- because it makes it less attractive for someone to put a transfer station in the southern part of the -- of the county.

Q. Okay. Have you seen any evidence in this hearing that that is -- that -- that conflicts with that statement?

09:06:58PM

A. None that I've heard.

Q. Okay. And you've been here for

most -- for most of the nights, correct?

A. Yes.

MR. LUETKEHANS: Thank you, Mr. Lardner.

HEARING OFFICER PRICE: PODER, anything from you?

MR. DELAROSA: No, not at this time.

HEARING OFFICER PRICE: All right. Then back to you, Mr. Mueller.

09:07:28PM MR. MUELLER: Very briefly, Mr. Price.

RECROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. Lardner, do you have the 2007 plan update in front of you?

A. The slide?

Q. No, the actual plan update. I don't want your interpretations.

A. No. I don't have it in front of me, no.

09:07:52PM Q. Are you aware that in addition to the section from the 2007 plan that was quoted in your slides, that plan also says DuPage County

should encourage the development of three to five waste transfer facilities throughout the county?

A. Yes, that's correct.

Q. You interpret that to mean that all three to five new waste transfer facilities should be in the southern portion of the county?

A. I would -- I interpret that to mean it should serve areas outside -- in DuPage County that were far enough away from the DuKane facility so as not to make a driving distance, again, a factor.

09:08:33PM

Q. So you don't interpret it as meaning it should be in the south only?

A. I think they're talk about unserved areas.

Q. It doesn't say that, does it?

A. It does not specifically mention the south, no.

09:09:02PM

Q. So as recently as 2007, DuPage County wanted, in addition to a transfer station in the southern portion of the county, they wanted

three to five overall new transfer stations, right?

A. Correct, to serve the area of waste being generated, that wasn't going to DuKane.

Q. It doesn't say that, does it?

A. It talks about it earlier in --

Q. Does it say that in the plan?

MR. LUETKEHANS: Can -- Let the witness finish the answer, please.

09:09:36PM HEARING OFFICER PRICE: Overruled. He can handle himself. You led him --

MR. LUETKEHANS: No. I'm just saying --

HEARING OFFICER PRICE: That's enough.

MR. LUETKEHANS: All I'm asking --

HEARING OFFICER PRICE: Overruled.

Ask a question.

MR. LUETKEHANS: All I'm asking is that the witness --

09:09:42PM HEARING OFFICER PRICE: Overruled.

MR. LUETKEHANS: -- be allowed --

HEARING OFFICER PRICE: Overruled.

MR. LUETKEHANS: -- to finish his -- finish his answer.

HEARING OFFICER PRICE: Answer the question.

BY THE WITNESS:

A. Could you repeat the question? I'm sorry.

MR. LUETKEHANS: He couldn't finish his answer.

09:09:49PM BY THE WITNESS:

A. Repeat the question.

HEARING OFFICER PRICE: Well, that's because you did most of the testifying, Mr. Luetkehans. I would like to hear from the witness.

BY THE WITNESS:

A. What was the question?

Q. Let me ask a different one.

A. Okay.

09:10:03PM Q. Do you have any indication in your ability to interpret the plan of where these three to five additional transfer stations

should be?

A. There is no specifics given on that, no.

MR. MUELLER: Thank you.

That's all I have.

HEARING OFFICER PRICE: Mr. Callaghan?

MR. CALLAGHAN: Just a couple.

RECROSS-EXAMINATION

BY MR. CALLAGHAN:

09:10:30PM Q. Have you looked in the area of southern DuPage County to determine whether any -- there was any location that would meet the require- -- the legal requirements for a transfer station?

A. I have not specifically looked at that. I do know that there are some large tracks of -- there are some large tracks of undeveloped. Whether they meet that criterion, I have not examined that, no.

09:11:01PM Q. Do you know if DuPage County has done that analysis?

A. No.

Q. Do you know that DuPage County concluded that there are no such locations in -- in southern DuPage County?

A. I remember reading that, that they found that the county was not -- because of this development, could not find other places to develop transfer stations.

MR. CALLAGHAN: Thank you.

HEARING OFFICER PRICE: Mr. Walsh...

09:11:28PM MR. WALSH: I don't have anything further.

HEARING OFFICER PRICE: Thank you, Mr. Lardner.

(Witness excused.)

HEARING OFFICER PRICE: Do you have another witness here this evening?

MR. LUETKEHANS: Yes. We would call Joe Abel to the stand.

HEARING OFFICER PRICE: Madam Reporter,

09:12:14PM would you swear in the witness, please.

(Witness sworn.)

(Brief pause.)

WHEREUPON:

JOSEPH ABEL,

called as a witness herein, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. LUETKEHANS:

Q. Mr. Abel, could you please state --

MR. MUELLER: Mr. Price, before the witness starts, we were handed a CV and a one-page exhibit.

Is that all --

MR. LUETKEHANS: That's it.

MR. MUELLER: -- there is with this witness?

MR. LUETKEHANS: Yep.

MR. MUELLER: Okay. Thanks.

BY MR. LUETKEHANS:

09:13:29PM

09:13:40PM

Q. Mr. Abel, could you please state and spell your name for the record?

A. Joseph Abel -- Joseph H. Abel, A B E L.

HEARING OFFICER PRICE: Mr. Abel ...
BY MR. LUETKEHANS:
Q. You got to speak into the mic.
How are you currently employed?
A. I'm a planning and zoning consultant.
Q. Could you provide us with the main history of your employment background or your -- yeah, your education and employment background?
A. Yes. I have a degree in city and
09:14:06PM regional planning with a minor in architecture from the University of Illinois. I received that -- I hate to tell you -- in 1959. I did graduate work at the University of Chicago center for urban studies, and I also completed an economic development institute program at the University of Oklahoma. It was a summer program. So that's my educational background.
I started my planning career in Lake County, Illinois with the Lake County
09:14:41PM Regional Planning Commission and worked on a number of projects. It was one of the first counties to develop county-wide comprehensive

plans. So I got in on the very ground level of preparing large area comprehensive plans. Most communities had been doing planning but not very many counties, and Lake County was the first.

After spending three years at the Lake County Regional Planning Commission, I then was hired by Carl Gardner & Associates, probably the premier planning consulting firm in the Chicago area. Back in that time frame, I was
09:15:21PM the principal consultant for a number of municipalities -- Cary, Illinois; Deerfield; Fox River Grove; Glendale, Wisconsin; Indian Head Park; Morris, Illinois; but more importantly, worked on the development of the Village of Oak Brook. I actually worked very closely with Paul Butler on the actual design of Oak Brook during that time frame.

I also, because I had worked at Lake County, specialized also in developing new
09:15:53PM county plans and accompanying zoning ordinances. I developed the first plan -- comprehensive plan and zoning ordinance for Grundy County and then

did all of the municipalities in the county, prepared their land use plans and -- and zoning ordinances -- Iroquois County, Kankakee County and Kendall County; also did a lot of urban renewal work with Carl Gardner, and things of that nature.

I actually then interviewed with DuPage County to be the consulting planner through Carl Gardner & Associates, went through
09:16:36PM the entire process. And then I got a phone call saying good news/bad news. The bad news was the county -- DuPage County wanted to prepare their first comprehensive plan in this particular area and have their own planning department and we want to hire a consultant, we want to hire you.

I had to make a decision and became the first planning director for DuPage County in 1970 and was in charge of developing the first land use plan and then accompanying zoning
09:17:12PM ordinance for DuPage County. I directed the entire program for 17 years, had a staff of approximately 40. And, again, we were the first

county in Illinois, other than Grundy County, which I had done to do a comprehensive plan that actually included all the municipalities. So my directive was, do not go to the county board with a comprehensive plan until all 37 municipalities were included and signed off on the plan. It took us seven and a half years to accomplish that, but we developed the comprehensive plan.

09:17:53PM Obviously, starting with 1970, I've been working in the area and am very familiar with it.

After the plan was adopted, I then was in charge of the comprehensive revision zoning ordinance. And by the time I left, I was in charge of the entire development process in the county. I was in charge -- I was the director of the zoning board. I was the -- was the secretary to the zoning board of appeals, 09:18:26PM was in charge of the zoning department, of the building department, and the planning department. So we called it the county

development department.

Well, after 17 years, I guess I got a little itchy and I was approached by the City of Chicago to head their economic development program. And so from 1987 to 1992, I was head of the economic development for the City of Chicago, responsible for developing industrial parks, setting up programs. We did work at the airports, and we set up an international trade
09:19:09PM council during that time frame. The budget there was 1.3 million, and I had a staff of 15.

In 1992, I decided it was time to -- to start off on my own. And so since 1992, I've had my own firm and have had many, many municipalities that I have under contract, presently working very closely with Oak Brook Terrace.

But other than that, doing primarily with the public and private sector.
09:19:49PM I've done expert testimony at the federal courts, local courts, and as an expert witness primarily zoning cases, and I have done some

site work for environmental facilities.

Q. Are you cert- -- Is PWC Exhibit 602 a copy of your curriculum vitae?

A. Yes.

In addition, I am a member of the American Institute of Certified planers. And in my planning profession, I have been very active. I was director of the Chicago metropolitan section of the Illinois chapter of the American
09:20:32PM Institute of Planners and also was elected president of the Illinois chapter of the American Planning Association and have been a member of the American Institute of Certified Planners for about 50 years.

Q. And what is that?

A. Requires -- Well, educational background has to first be met. You have to have a degree in city and regional planning from a recognized university, have to have a certain
09:20:58PM number of years of experience, and then you have to keep up your qualifications every year in terms of going to conferences and classes and

things of that nature. And I have maintained my AICP, I think, since about 1978.

Q. Okay. Are you familiar with the property that is the subject of this application for the siting of a waste transfer station?

A. Yes.

Q. And how are you familiar with it?

A. As director of planning directly for 17 years for the county. As I said, I was

09:21:36PM secretary to the zoning board of appeals. And so I did go out every night -- every Thursday night with the zoning board to public hearings.

When I was there, we actually went out to the communities for the public hearings. Now you have to go to the -- to Wheaton. But in terms of developing the plan for the county, I had become very familiar obviously with all of the communities. We actually had the advantage of going under contract with a number of

09:22:04PM municipalities after we prepared the comprehensive plan. And one of the communities that we contracted with was the City of West

Chicago.

So I -- I also was -- worked on the Groot facility, which is approximately a quarter of mile north of the subject property, and I had done a lot of work for the airport. We worked very closely with the DuPage County Airport all the years I was with the county. So that entire area we did some specialized planning studies for that area. And so I'm very familiar with
09:22:41PM Powis Road, its entire length from North Avenue to Roosevelt Road.

Q. Okay. In front of you is PWC Exhibit 350. Do you recognize that?

A. Yes.

Q. Okay. And can you -- do you -- We don't have the big one so I just have a small -- and you have it in front of you, but can you locate the proposed transfer station location?

A. Yes. If you look carefully at it,
09:23:16PM where the number 18 is, that's Powis Road, and you'll see the end of the runway of the airport and --

Q. You got to put it a little closer to you, Joe. I think she's --
A. Pardon?
Q. You got to put that mic a little closer to you.
A. Oh, yeah.
The -- The airport runway just about ends directly across from the subject property, and it's approx- -- the property is
09:23:46PM approximately midway between North Avenue and Hawthorne Road to the south.
Q. What is located directly to the east of the subject property?
A. The two rail lines.
Q. And are you familiar with the rail line parc- -- with rail line parcels in DuPage County that are no longer utilized as railroad -- rail lines and are now owned by someone or some other entity that is not a
09:24:11PM railroad?
A. Yes.
Q. How is that?

A. Just through the years following some of the vacations that have taken place. I happen to be working on a project right now in the -- near the Village of Glen Ellen and Glendale Heights. And the property that I'm working on is just directly north of a railway -- rail line that was -- was vacated.

I recently was involved in a project in Indiana also dealing with vacated rail lines. We actually are using the rail lines on the -- on the particular property for additional parking.

09:24:47PM

Sort of interesting that my first assignment out of school was in Lake County and what people don't remember is there was a major, major electrical rail system in Lake County that was vacated, and we studied that very carefully.

First, we tried to stop the vacation and then we had to decide how to handle all the vacated parcels as part of the planning process. So I've been involved with vacated rail lines and things of that nature for quite

09:25:20PM

sometime.

Q. Are there vacated rail lines that are -- Well, forget that.

Do you know the zoning of those two railroad parcels?

A. Yes.

Q. What is the zoning?

A. It's the R-1 estate residential in the City of West Chicago.

09:25:49PM Q. Now, how many different development projects -- and I know not to the exact number -- have you consulted on in private practice over the past 30 years?

A. Literally, hundreds.

Q. Do you understand how it would be difficult to develop these two rail parcels directly to the east as residential in their current size and location?

A. Yes.

09:26:13PM Q. Why is that?

A. Well, it's a linear zoning at this point. It's long, narrow, and just wouldn't be

possible to develop.

As I recall, the zoning classification requires a minimum of 40,000 square feet. And just to do a series of 40,000 square foot [sic] would just not be practical.

Q. Does that mean these railroad parcels directly to the east of the subject property cannot been developed as residential?

09:26:54PM A. No. They definitely can be developed as residential.

Q. How -- How could that occur?

A. Combining with the adjacent properties.

Q. Okay. So when you say adjacent property, do you -- it could be to the east -- it could be to the west of that; is that correct?

MR. MUELLER: I'm going to object.

09:27:12PM He's calling for witness to speculate on facts not the evidence.

MR. LUETKEHANS: Well, he's here to

give his opinion.

MR. MUELLER: The properties to the west and east are not zoned residential.

MR. LUETKEHANS: Well, we're going to get to that.

HEARING OFFICER PRICE: I'm going to allow Mr. Luetkehans a little room here.

I -- I generally agree. We haven't established a foundation that -- although he's
09:27:37PM an authority in planning, that he's a residential home builder, so I'm looking forward to you tying that up.

BY MR. LUETKEHANS:

Q. Let me ask you a question: Have you ever been involved in residential home development as a consultant?

A. Yes. Through my -- the years I've been doing this, I have designed hundreds of
09:28:02PM residential subdivisions from senior housing to small lot development to estate properties. Designing and laying out subdivisions is part of what we do, not only preparing comprehensive

plans, but also designing subdivisions throughout DuPage County, throughout the Chicago metropolitan area. I'm trying to think of the closest one to this subject property. It's probably just on the north side of North Avenue.

But the question you -- you asked is --

Q. Well, let- -- let's not go to the question yet. So let me ask another question.

09:28:44PM As community develop- -- As development director at DuPage County, did you oversee or did your -- did you oversee the development or approval of residential zoning projects in DuPage County?

A. Every subdivision had to come through our approval before it was granted permission to develop.

Q. Okay.

A. You have to remember that the time

09:29:11PM frame that I was at the county, from '70 to '87, we were the fastest growing county in the state of Illinois, the third fastest growing county in

the country.

Our zoning board was out every Thursday, 50 Thursdays out of a year. We handled sometimes three -- We had to break our zoning board appeals into two groups going out every Thursday. We handled three cases probably a night. So that's two times three is six, times 50. That's how many zoning cases we had, and most of those were residential development. We were the fastest growing county in the state of Illinois.

09:29:52PM

Q. Okay. How is the farmland to the east of the prop- -- of the railroad currently zoned?

A. It's in two zoning classifications. Part of the area is still unincorporated, and the area that is directly -- directly adjacent to the railroad is zoned manufacturing in the City of West Chicago. And then as you go a little further to the east, it's zoned R-2 residential.

09:30:24PM

Q. Okay. Do you know what the word "consolidation" means from a real estate or

zoning perspective?

A. From a zoning and planning standpoint --

Q. Yeah.

A. -- it's to consolidate as many properties as possible to -- to develop your -- to get a good development.

Q. Have you seen residential developments that consolidated different PIN numbers or

09:30:48PM different parcels throughout the years?

A. Oh, yeah.

Q. And have you seen properties be consolidated with different zoning on -- underlying zoning on them?

A. Yeah. I'm presently working on a very large 100-acre development in Oak Brook Terrace where we're developing a new town center, and it has multiple zoning on it right now and we're going to hopefully pull it all together and

09:31:16PM bring it into one development.

Q. Okay. And have you been involved with the rezoning of parcels that are commercial or

for whatever -- whether that be office or industrial into residential?

A. That's what we're doing right now on a number of projects.

Q. Okay. Could the railroad parcels being consolidated, in your opinion, at some point if -- if the railroad was vacated? Obviously, when the railroad is there, it can't happen.

09:31:50PM A. Can't happen.

Q. But once the railroad --

MR. MUELLER: I'm going to object.

BY MR. LUETKEHANS:

Q. In the railroad is vacated, could you ever -- is it possible that they could be consolidated with another parcel and be used as residential?

MR. MUELLER: I'm going to object. The statute calls for examination of current

09:32:09PM conditions. We can't speculate about a possible vacation of the busiest east-west rail line in the state, nor can we speculate about future

zoning.

MR. LUETKEHANS: Well --

MR. MUELLER: It could eventually be zoned residential and we can build hundreds of houses there, but that's not what we're required to look at now.

MR. LUETKEHANS: What we're required to look at is the current zoning --

HEARING OFFICER PRICE: The objection is overruled.

09:32:40PM

MR. LUETKEHANS: -- which is residential.

HEARING OFFICER PRICE: You can just -- The objection is overruled.

BY MR. LUETKEHANS:

Q. Do you remember the question, Mr. Abel?

A. No.

Q. Okay. And I'll try and ask it, and I'll probably ask it worse, so I apologize.

09:32:49PM

But is -- do you -- is there -- From a zoning perspective and land use

perspective, if the railroad was vacated as you've seen happen in DuPage County in the past or as you testified to has happened, is there any zoning -- could that parcel be consolidated with one of the other parcels to the east and be developed as residential from a land use and zoning standpoint?

A. Yes. And they might be wanting to pick up additional land area just to accommodate
09:33:30PM particular density thereafter. So there's -- there's definitely an advantage of adding any of that rail line -- any vacated rail line to the property to the east.

In fact, like I said, one of the properties I'm working on now down near -- finished in Indiana, that's exactly what happened. There was a manufacturing operation and they took over the easement for additional parking.

09:33:59PM Q. Do you have an opinion as to -- with a reasonable degree of planning certainty as to whether the railroad parcels directly to the

east of the subject property could be ever used as residential parcels?

A. Yes, definitely could be used for residential purposes. In fact, that's how it's zoned right now.

MR. LUETKEHANS: Thank you, Mr. Abel. Nothing further.

HEARING OFFICER PRICE: PODER...

MR. DELAROSA: Nothing at this time.

09:34:28PM HEARING OFFICER PRICE: Mr. Mueller...

CROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. Abel, you work out of your house, don't you?

A. No. I work out of an office in Wheaton.

Q. Well, you show your address as a residential address in Glen Ellyn.

A. Yes. 200- --

09:34:42PM HEARING OFFICER PRICE: Mr. Abel, I really need you to use the microphone.

THE WITNESS: Yes. Yes.

BY THE WITNESS:

A. 200 Forest is my home address where I have an office, but I work out Gary Weber & Associates. They do all of my graphics, all my secretarial, and I have accommodations there. It's in downtown Wheaton.

Q. That's not your office, though, is it? It somebody else's office that you use sometimes?

09:35:08PM A. I use it all the time.

Q. So why don't you put it down as your address?

A. That's just my preference.

Q. Sir, looking at your resume, I don't see anything on here after 1992 other than you working as a self-employed consultant; is that correct?

A. Yes.

Q. And this Exhibit PWC 350 that was

09:35:58PM handed out, do you know how old that aerial photograph is?

A. I would guess it's fairly recent.

I -- All of my work that I did at the office was using aerial photography that was from 2021.

Q. Is this a photograph that you were provided by your attorney?

A. Yes. I could have printed out my own --

HEARING OFFICER PRICE: Mr. Abel, I know we don't have a stand, but nobody can hear. You're a very soft-spoken and articulate person, but you absolutely have to speak into the microphone. I can barely hear you.

09:36:52PM

THE WITNESS: I'll stay right on top of it.

BY THE WITNESS:

A. I use primarily computer-generated aerial photography while I was working on this, so it's always on a screen in front of me. And this was printed out so that -- because of the fact that there wasn't a screen here tonight. So I don't know when they did it.

09:37:24PM

Q. I think my question is: Did -- Did your attorney provide you with this photograph?

A. Yes.

Q. So whatever photography you generate is different from what your attorney provided you here, right?

A. No, it's identical. I have photos probably in my file over on the bench. This area has not changed dramatically. Like I say, I just finished a big distribution facility about a half a mile to the west on North Avenue over the Christmas holidays. And I've done a number of projects in this area.

And this aerial photograph, whether it was -- it's two years old or three years old, wouldn't make any difference. Nothing has dramatically changed in this -- this particular area over the last two or three years.

Q. Speaking of nothing having changed, the -- the railroads still operate there, correct?

A. Correct.

Q. And the -- those railroads are actually quite busy and active, aren't they?

A. The Union Pacific is. The Canadian National is a single -- single track, and the others -- the Union Pacific is a double track.

Q. So that other railroad is the Canadian National Railroad?

A. Yes.

Q. And Union Pacific, that's a main east-west line, right?

A. Correct.

09:39:04PM Q. Who hired you, Mr. Abel?

A. Mr. Luetkehans.

Q. And have you been paid?

A. No, but I will be.

Q. How much are you going to be paid?

A. It's on an hourly basis.

Q. The -- How much time do you have in this so far?

A. About 20 hours.

Q. And what's your hourly rate?

09:39:46PM A. 275.

Q. Now, you said you've seen railroads vacated in the past?

A. Yes.

Q. What railroads in DuPage County have you seen vacated?

A. Major line now is -- that I'm familiar with because I working on the project is -- I forget which line it was, but it's halfway between St. Charles and North Avenue on Main Street in Glen Ellyn. That was where the crossing was.

09:40:22PM Q. So one DuPage railroad, that you can't identify, has been vacated?

A. No. When I was with the county, there's the EJ&E line was vacated in the West Chicago area close to Wheaton Christian Academy. So there have been a number of them throughout the 30, 40 years.

Q. And I thought I heard you correctly to say, given the nature of the activity on these railroad tracks and the zoning to the east, it

09:41:07PM would be impossible to develop that -- those railroad tracks at the present time into estate homes. Is that -- Did I hear you correctly?

A. It's presently zoned estate. If -- If it were vacated --

Q. I'm not asking if.

Can it be developed into estate homes now?

A. No.

Q. In fact, it would be -- and I think you used the word -- "impossible," right?

A. Nothing is impossible, but it wouldn't be practical.

09:41:42PM

Q. How high are the berms on the east and west side of those rail lines?

A. I'm not sure.

Q. Are there access roads to those rail lines in the immediate vicinity of the proposed site?

A. Nothing that crosses over it.

Q. Now, if the DuPage Airport were vacated and that property was rezoned residential, then we could also build houses on the property of what is now the DuPage Airport, right?

09:42:28PM

A. If the airport was vacated?
Q. Yes.
A. Yes.
(Brief pause.)
BY MR. MUELLER:
Q. So your conclusion about the possibility of developing residential uses on these railroad tracks requires not one, but two assumptions about what might happen in the
09:43:17PM future, correct?
A. Well, the first assumption is that it would have to be vacated.
Q. Right.
And the second assumption would be that you would have to rezone adjoining property?
A. The difference is between -- when you mention the airport, that's an --
Q. I'm not asking about the airport.
09:43:41PM A. No. I'm just -- I'm giving a comparison between the two sides.
One is developed. The thing that

was interesting to me as a planner is that the entire -- over 200 acres directly to the east is agricultural, for all practical purposes, vacant land. It's used for agricultural purposes and does lend itself to a major redevelopment.

This is a very dynamic area in DuPage County. And to be able to find a site like this that has been sitting vacant -- I was with the county for 17 years, and nothing happened on this site and nothing has happened on the land to the east since I've been gone. This area is right for redevelopment; and, therefore, has the potential for being a mixed-use residential area which would include residential. And that residential could be within a thousand feet of the subject property.

09:44:19PM

Q. So to get back to my question, your assumption about the possibility of residential development on those railroad tracks requires two things to happen in the future, correct?

09:44:53PM

A. No. The property does not have to have any building on it.

Q. No.
A. It would just be part of the setback.
Q. I'm asking if the potential future use requires us to vacate the railroad tracks?
A. Yes.
Q. Okay. That's one thing that has to happen in the future, right?
A. Yes.
Q. And the second thing that has to
09:45:22PM happen is that you need some other property that's contiguous that also has to be rezoned, correct?
A. Oh, yeah. It would definitely have to be rezoned.
Q. And that, again, is a future contingency?
A. That's correct.
That's what planning is all about.
Q. Mr. Abel, have you ever heard -- when
09:45:45PM people say the word "if," ever heard the phrase, if ifs were skiffs, we would be all be sailors?
MR. LUETKEHANS: Objection,

argumentative.
BY THE WITNESS:
A. No.
MR. MUELLER: That's all I have.
HEARING OFFICER PRICE: Mr. Callahan...
CROSS-EXAMINATION
BY MR. CALLAGHAN:
Q. Mr. Abel, the -- what is the zoning classification of the railroad property?
09:46:06PM A. ER-1 estate residents district.
Q. Okay. And the reason the railroad property in and of itself would be difficult to develop is -- we have an exhibit that was provided by the applicant of a tax map, and it shows each railroad has 100 feet of width.
A. Correct.
Q. So it's 200 feet wide for the entire -- both rights of way, correct?
A. Yes.
09:46:41PM Q. And the minimum lot width is, at the building line, 200 feet. It's virtually impossible to just develop the railroad track,

correct?

A. Correct. I've said.

Q. I know.

A. Yes.

Q. I just wanted to go through that.

Now, on the east side of the Canadian National Railroad track, are you aware that there's a creek that runs along there?

A. Yes.

09:47:08PM Q. Okay. So there's -- not only would you have to consolidate with property to the east, you would have to deal with a creek in between those two parcels, correct?

A. No. It would be part of the development.

Q. The creek would cut -- completely cut the two parcels off from each other?

A. From a design standpoint, there's a way of getting around that. That parcel I'm

09:47:32PM working on now in Oak Brook Terrace, we're creating a whole system of lagoons and lakes and there will be walkways and things of that

nature. So it's -- the creek can be incorporated. It might even be able to be moved, I don't know, but that's a design feature.

Q. You can engineer anything is what you're saying?

A. You can design anything, yes.

Q. Do you know how this property came to be zoned ER-1?

09:47:55PM A. No. I don't know why West Chicago rezoned it.

Q. I'm going to show you a section of the zoning ordinance, which I think explains it. And it's a fairly typical -- I'm going to mark it City Staff Exhibit 1.

HEARING OFFICER PRICE: Actually, City Staff 2.

MR. CALLAGHAN: 2.

HEARING OFFICER PRICE: You have the

09:48:31PM GHA report.

MR. CALLAGHAN: Oh, I forgot about that.

Can I have your pen?

HEARING OFFICER PRICE: You have the GHA report.

That's my job.

(Brief pause.)

BY MR. CALLAGHAN:

Q. You're familiar with that kind of a zoning classification?

A. Oh, yes.

09:49:11PM Q. And what does it provide for?

A. I'll just read it: Any land -- Any land whose classification is not shown on the official zoning map and land hereinafter and next to the city shall be automatically classified these are ER-1 estate until differently classified by amendment. Streets, alleys, public rights of way shall comply with Subsection 64.

This is pretty standard.

09:49:41PM Q. Right.

A. And I have written that into many of the ordinances that I've done, I've had to be

very careful. The ordinances that I have written --

HEARING OFFICER PRICE: Mic -- Mic.

BY THE WITNESS:

A. I've prepared the planning standards for zoning ordinances. I'm not an attorney and do not prepare --

Q. Sure.

A. -- the complete zoning ordinance.

09:49:59PM Q. So my whole point of raising this is, it is likely that this property was automatically zoned upon annexation into this district, ER-1.

A. Yes, but if they didn't want it to be ER-1 and -- on their map, they would have rezoned it.

Q. Right.

A. They had that ability at any time to rezone this property to some other zoning

09:50:21PM classification. And the way the -- the way the ordinance is written, it's the zoning that's there today, a thousand feet away from any zoned

residential.

Q. Right. I understand.

A. West Chicago has the right at any time to rezone this property.

Q. And if this were to be consolidated or the property next-door was -- was rezoned to some other classification -- I mean -- Strike that.

Any property can be rezoned at any time, correct?

09:50:54PM

A. That's correct.

Q. And so this doesn't change the use of the property, the ER-1 classification?

A. But that's not the way the ordinance reads. It's how the land is rezoned today, and it's zoned ER-1 residential.

Q. My whole point is: The zoning of the railroad property has nothing to do with the use of the property, correct?

09:51:20PM

A. That's -- You have to ask the City of West Chicago that.

Q. Well, is it -- is it being used for

residential?
A. No.
Q. It's being used for railroad?
A. Yes. I have many parcels that are zoned differently than they're used.
Q. You mentioned that you did work for Groot?
A. Yes.
Q. What did you do for Groot?
09:51:48PM A. Their initial siting.
Q. Of the transfer station down the street?
A. Yes.
Q. And you testified about Criterion 3?
A. Yes.
Q. Okay.
MR. CALLAGHAN: That's all -- That's all I have.
HEARING OFFICER PRICE: Thank you,
09:52:04PM Mr. Callaghan.
Mr. Walsh...
THE WITNESS: Just for the record,

though, at that time, the railroad was zoned industrial.

MR. WALSH: No questions.

MR. CALLAGHAN: Can I -- I'm sorry.

HEARING OFFICER PRICE: Back to you, Mr. Callaghan.

BY MR. CALLAGHAN:

Q. Have you looked at the floodplain maps for the property to the east?

09:52:25PM A. I looked at just a generalized land -- environmental map.

Q. Do you know if there was floodplain on the property to the east?

A. No.

Q. Do you know if there's wetlands on the property to the east?

A. No.

MR. CALLAGHAN: That's all I have. Thanks.

09:52:47PM HEARING OFFICER PRICE: Mr. Abel, I -- I need to ask because my job is the record. You don't know or there aren't?

You said no. I'm not sure if you meant you didn't know or that there are none.

THE WITNESS: I don't know. All I know is that it's presently used for agricultural purposes. And I just said before, just like with the creek, and in DuPage County, you design around your environmental problems.

HEARING OFFICER PRICE: I appreciate that. I just want to make sure we get what we
09:53:21PM needed on the record.

All right. Redirect, Mr. Luetkehans...

MR. LUETKEHANS: Yeah.

REDIRECT EXAMINATION

BY MR. LUETKEHANS:

Q. You were asked about doing work --

HEARING OFFICER PRICE: You passed, right?

MR. WALSH: Correct. I have no
09:53:28PM questions.

BY MR. LUETKEHANS:

Q. You were asked about doing wok for

Groot previously.

Did you also do work for West Chicago related to a prior transfer station?

A. Yes.

Q. And that was the holding facility in 2003?

A. Correct.

Q. The airport is not zoned residential, however, is it?

09:53:45PM A. That's correct.

Q. Unlike the railroad, it's actually zoned airport?

A. It's special district, yes, on its own.

Q. You were asked about railroads vacated in DuPage County, and you mentioned, you know, the one at St. Charles -- between St. Charles and North Avenue on Main Street in Glen Ellyn. We have a -- We have a bunch of trails

09:54:09PM throughout DuPage County, correct?

A. Correct.

Q. And those trails, what were they

before they were trails?

A. Most of them were railroad right of ways.

Q. When you said this property is a CN Railroad, you don't know who owns that railroad, do you, that -- those -- those parcels themselves?

A. No.

Q. Okay. And you don't know who gets the tax bills for those parcels? 09:54:30PM

A. No.

Q. Mr. Mueller kind of tried to imply that you're working out of your house, you know, and you're kind of not working.

How many --

MR. MUELLER: I'm going to object to what I implied.

BY MR. LUETKEHANS:

Q. How -- Well, let me just ask the question: How many projects do you work on per year for the last five years would you say? 09:54:48PM

A. Between 25 and 50, all over the

Chicago metropolitan area. I mean, it's full-time, and that's why I have to have a backup of Gary Weber & Associates that provides all of my drafting, my secretarial.

So, in effect, I really have a staff of about 15. What I am is a marine maker. I bring in the work to Gary Weber & Associates, and I probably generate enough to keep a good portion of their staff busy. So if -- if I didn't have this fortunate opportunity, I would have to have a staff of at least five or six to keep up with all the projects that I have.

09:55:36PM

Q. And you -- do you regularly testified in front of zoning boards and -- to this day?

A. Oh, yeah. I mean, I just finished a large -- Just to give you an example, on North Avenue, we just finished a large parking -- truck parking facility, also a large distribution facility -- all on North Avenue -- and also an indoor storage facility on North Avenue. So that's just some of the different kinds of clients.

09:56:16PM

And then I have residential zoning cases -- commercial. The communities I represent right now, the only community is Oak Brook Terrace, and -- but, again, it's more than enough to keep a big staff going.

Q. And the aerial you were provided, we provided that to you, correct?

A. Yes.

Q. But you looked at it, or did you look at it first?

09:56:50PM

A. Yeah. It's identical to the one that I've been using for last two weeks up on the wall in my -- in the office.

MR. LUETKEHANS: Nothing further.

Thank you, Mr. Abel.

HEARING OFFICER PRICE: PODER...

MR. DELAROSA: Nothing further.

HEARING OFFICER PRICE: Thank you.

Mr. Mueller...

09:57:06PM

RECROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. Abel, you said, I think twice,

under questioning from your attorney and also from Mr. Callahan, that what matters is the zoning now, correct?

A. I'm not sure what reference you're --

Q. Well, you were asked whether any property could be rezoned at any time?

A. Yes.

Q. And you said what matters, though, is the zoning now, right?

09:57:47PM A. From the standpoint of the requirement of this hearing, that's what I was getting at. It's -- It's -- The fact is that it says, no transfer facility within a thousand feet of a residential piece of property zoned.

It's zoned that now, and that's what you have to live with.

Q. I --

A. That's not my problem. It's in the ordinance. And unfortunately, the City has left

09:58:19PM that zoned residential, and you are within a thousand feet of a residentially-zoned piece of property. That's the point I was trying to

make.

Q. And we've admitted that, Mr. Abel.

A. Yes.

Q. If you say that what matters is the zoning now, also in the "now," you can't develop the property as a residence, can you?

A. No --

Q. Thank you.

A. -- because it's zoned residential.

09:58:45PM MR. MUELLER: That's all I have.

HEARING OFFICER PRICE: Mr. Callahan...

MR. CALLAGHAN: Nothing.

HEARING OFFICER PRICE: Mr. Walsh...

MR. WALSH: No.

HEARING OFFICER PRICE: Thank you, Mr. Abel.

THE WITNESS: You're welcome.

HEARING OFFICER PRICE: That concludes the testimony.

09:58:53PM THE WITNESS: Sorry I didn't pull this closer.

HEARING OFFICER PRICE: Well, we didn't

have a stand. It's awkward. I appreciate your patience. You'll hand me the microphone.

So that's going to conclude our work for this evening, right at 10:00 o'clock. So well done, all parties.

We next convene, for everybody, Monday afternoon, 1:00 o'clock, at city hall in council chambers.

Mr. Luetkehans, how many more witnesses?

09:59:26PM

MR. LUETKEHANS: We have one more expert, and we may have a short witness that -- testify for a few minutes --

HEARING OFFICER PRICE: Okay.

MR. LUETKEHANS: -- a fact -- a fact witness.

HEARING OFFICER PRICE: All right. So we have one more expert testimony and then a fact witness.

09:59:48PM

PODER, how many witnesses are you going to call? They need -- They need to be ready on Monday.

MR. DELAROSA: Okay. We probably intend to call two to three witnesses.

HEARING OFFICER PRICE: They need to be at city hall on Monday. They need to be ready to go.

MR. DELAROSA: Okay.

HEARING OFFICER PRICE: And then it will be City Staff. I don't know that we'll get to you on Monday. I might take the time to fill

10:00:14PM it in with any public comment that needs to happen.

And then the following Thursday we have more work to do, and probably City Staff will be at that time.

Okay. Thank you, everyone.

(WHEREUPON, the hearing of the above-entitled cause was adjourned until 1:00 p.m., January 16th, 2023.)

STATE OF ILLINOIS)

HEARING OFFICER PRICE: Just a reminder, we're here today to work on the witnesses. At 4:30 there are a couple of people who want to get in public comment, so we'll be calling the testimony short at 4:30 or so for that.

We're back here Thursday at 1:00 o'clock for the rest of whatever testimony and then the rest of public comment. Hopefully, we conclude Thursday by 5:00. Right now we're in the middle of the case being put on by Protect West Chicago. As I said before, remember, the elected officials aren't allowed to engage with you on this at this time, so please respect that. That's the usual warning.

01:00:58PM

Mr. Leutkehans, are you taking the next witness or Mr. Meza?

MR. LEUTKEHANS: Mr. Meza will, please.

HEARING OFFICER PRICE: Mr. Meza, the floor is yours. Would the court reporter please swear in the witness.

01:01:28PM

(Witness sworn.)

MR. MEZA: Exhibits 603 is the resume, and 603-A is a PowerPoint. We didn't know if there was going to be some extra -- We didn't know there was going to be a PowerPoint here, so I have a bunch of extra here if the members of the public want a copy or they can follow along.

HEARING OFFICER PRICE: Thank you.

MR. MEZA: Feel free to grab one if anybody wants one.

(PWC Exhibit Nos. 603 and 603-A marked for identification.)

WHEREUPON:

JAMES POWELL, QEP,

called as a witness herein, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. MEZA:

Q. Can you state your name for the record, please.

01:03:20PM

A. James Powell, P-o-w-e-l-l.

Q. Mr. Powell, where do you work?

A. Mostardi Plat.

MR. MEZA: I have handed out.

HEARING OFFICER PRICE: Mr. Meza, one second. Can people hear? There are microphones that have speakers above the people in the back -- No? Then you're going to need to speak up. Mr. Powell, please project.

THE WITNESS: I will try.

BY MR. MEZA:

01:03:43PM Q. Mr. Powell, I have handed you what's been marked as PWC Exhibit 603. I don't know if you have that. That's your resume.

Does that outline your background?

A. Yes it does.

Q. Can you summarize that for the hearing officer and the rest of us here today?

A. Sure. I've got a bachelor's degree from the University of Iowa in general science and geography and an environmental engineering

01:04:11PM degree from the University of Florida. I have been working as a consulting engineer for over 40 years and, specifically, in the field of air

pollution control the majority of that time.

Q. What is your title?

A. Director of emerging solutions.

Q. What is the name of the company you work for?

A. Mostardi Plat.

Q. You said you're an environmental engineer; is that right?

A. Correct.

01:04:40PM Q. Tell us what an environmental engineer does?

A. I help organizations evaluate impacts of various projects on both sides, from an industrial perspective, as well as public. Most of my clients are industrial, very similar to LRS. We'll do permitting work associated with the various state and local agencies and U.S. EPA for that permitting group work. We do environmental modeling where we actually do

01:05:16PM dispersion modeling and simulate what the impacts are on a neighboring area.

Q. You -- Prior to today, you created and

put together a PowerPoint; is that correct?
A. That's correct.
Q. That's been marked as Exhibit 603-A. You have that computer in front of you and you can control it through the computer; is that correct?
A. That's correct.
Q. Why don't we turn to Slide 2, I believe it is. Why don't you go ahead and tell us if that expands a little bit on your background. The next slide. There it is.
So you told us you were an environmental engineer, you have 40 years of siting and permitting experience. Go ahead.
A. Correct. My current position is director of emerging solutions. In that capacity, I'm looking at different technologies and systems to help better understand environmental issues. Some of those include sensor technology and personal monitoring. The other one is looking at the impact of PFAS and PFOA by community groups from an air quality

01:05:41PM
01:06:15PM

perspective. And then do overall environmental health and safety compliance monitoring.

Q. Have you testified in relation to Criterion 2 before?

A. Criteria 2 or similar before with Illinois EPA, Ohio EPA, and the Iowa Department of Natural Resources.

Q. So those are the acronyms, they are IEPA, OEPA, and IDNR?

01:06:50PM A. Yes.

Q. About how many times?

A. Three times.

Q. Let's continue to Slide 3. You're going to testify in the relation to Criterion 2; is that correct?

A. Correct.

Q. Let's go to Slide 4. Tell us what information is contained in Slide 4, and why you included it?

01:07:16PM A. This is direct information off the LRS website relative to the reduced miles and ultimately reduced emissions. I was evaluating

this relative to the project impacts.

Q. This slide deals directly with the proposed waste transfer station that they want to site here in West Chicago; is that correct?

A. That's my supposition, yes.

Q. Let's go to Slide 5. When you talk about public health, safety, and welfare, can you tell us what you mean by that?

A. Well, when I evaluate a project, I try
01:07:55PM to determine if it's going to have a negative impact either for the particular client or for the neighbors around it. We use a technique called modeling -- and it's mathematical modeling -- to quantify impacts on an existing air quality throughout the region impact.

Q. Let's just ask you a little bit about that term "modeling." It seems it's a technical term. Can you try to explain what modeling is?

A. Essentially we create a mathematical
01:08:26PM program to evaluate the downwind distance and impacts of various constituents.

Q. When you say "constituents," what do

you mean by that?

A. Pollutants. It could be from -- various things, from roadway, from cars.

Q. Is that the way in which pollutants are measured generally in your profession?

A. There's two ways to do it in ambient air. You either do modeling or you do monitoring. Monitoring is where you go out physically to determine the source and what

01:09:02PM their contributing at that particular point. In this case, monitoring was not done because it's a proposed facility. Generally, when that takes place, you're looking at doing modeling because it's predictive.

Q. Now, were you able to tell, with regard to the proposed siting of this facility in West Chicago, whether or not there was any impacts on health and welfare and whether or not they have been addressed in the application?

01:09:31PM A. I guess, after reviewing Criterion 2 and some of the other documentation, I didn't think it was fully addressed in the submittal,

and the specifics were public health and welfare.

Q. Let's go ahead and turn to Slide 6. Tell us the areas you evaluated and why?

A. Well, to do this type of evaluation you need to look at certain parameters, such as traffic, the air quality that's already in existence because we already have background levels, and the impact on the community as a whole.

01:10:03PM

Q. Is that what you tried to do in relation to this proposed siting?

A. Yes.

Q. Can you turn to Slide 7, please. Can you explain to us what is depicted in 7?

A. Well, when I evaluated the prior slide that was done, it did a really good job of evaluating the collection vehicles, and it looked at one constituent's carbon dioxide. It didn't look at any other pollutants. It didn't take into account also the increase in transfer vehicles from this facility and the change in

01:10:34PM

direction of those transfer vehicles.

The other thing is the apparent reduction in emissions is only within DuPage County, and we're sitting on the border between DuPage, and Kane and the majority of the transfer traffic is actually going through Kane County. So I didn't think that handled public welfare, unless we're only looking at DuPage in this case.

01:11:08PM As I said earlier, it only looked at carbon dioxide emissions, which are the greenhouse gas emissions, not particulates, which are in different sizes, or nitrogen oxides. And I couldn't find any supporting calculations to evaluate the math associated with that graphic.

Q. Right. So on this slide you talk about PM2.5 and PM10. Let's go ahead and go to the next slide. Is that a slide that kind of

01:11:37PM tries to explain a little bit more about what the PM2.5 and PM10 is?

A. Yeah. And it's difficult. I

understand from a public perspective, it's not an easy technology. When I first got started in the business, we weren't even worrying about different sized particles. We were told worry about total suspended particulate, which, essentially, you can see. Today we're worrying about things you can breathe in, and they are very small particles.

Q. Let me stop you there. When you say 01:12:08PM "particles" and "particulates," what do you mean by that?

A. Essentially dust in some form or another. And it could be made up of chemicals with water, but it's a particle of air. It's not a gas.

Q. All right. Now you have a little diagram to the right of the PowerPoint?

A. Yes.

Q. Can you explain what that is and why 01:12:30PM that's there and what the source is?

A. Well, the source is U.S. EPA. It's right off their website. And it gives the

comparison of PM10, which is the small -- I don't know if you can see where my cursor is. That's what the size of a PM10 is compared to a human hair. So PM10 is 10 microns in diameter. A human hair is between 50 and 70 microns.

Q. Hold on. So that long item there, that's depicting a human hair, right?

A. Correct.

Q. Then those little -- sorry if it's got the wrong color -- like, the blue circles around the air, is that the PM10?

01:13:05PM

A. The smaller portion of those, that's PM10, yes.

Q. What is the PM2?

A. PM2.5 is --

Q. Sorry. PM2.5.

A. -- the smaller looking of that. So these are smaller particles even than the PM10.

Q. Okay. So that -- That diagram is just trying to visualize for somebody how small these particles are; is that correct?

01:13:28PM

A. Correct.

Q. Go ahead. Tell us about the difference between these particles and what else is depicted on this slide?

A. Well, generally, PM2.5 is coming from combustion of fuel and that fuel can be diesel from trucks, it could be coal, it could be oil. Various sources. PM10, on the other hand, is from construction activities, roadway dust, brakes, tire wear. So just to give you an idea of the size difference and where they are coming from.

01:14:01PM

Q. Okay. Let's go to Slide 9.

A. Besides just looking at the particles, the PMs, again, this data is from U.S. EPA, over 60 percent of all the nitrogen oxides that are produced are from diesel-powered vehicles. Not all of them are from trucks, of course, but a good bit of it. Particulate matters, similar things, especially 2.5, and the most surprising to me when I was doing this research was is looking at ultra fine, which is less than 0.1 micron, so it's really small. 80 percent coming

01:14:41PM

from diesel. The other thing, on the left hand side it talks about some of the carcinogens that are also contained in diesel exhaust, and the graphic to the right depicts -- you know, when you're asking the question what's a particle, it's made up of various different things. It's not just dust. It's not just construction debris. There's other chemicals and other compounds tied together.

01:15:18PM Q. Let's go to Slide 10, please, and tell us what's depicted in Slide 10 and why?

A. I was just looking at all of the different constituents from diesel because all of the vehicles that I'm seeing from the LRS facility are powered by diesel oil, or other fuels like that. So nitrogen oxides is another pollutant that has a significant impact on asthma and other breathing issues.

Q. All right. Let's go to Slide 11,

01:15:55PM please. So what -- What did you evaluate here as it relates to these particulates?

A. I looked at the proposed site relative

to neighboring activities where it might conflict, and in terms of residential property related to trucks, and then overall the impact on air quality in the area.

Q. Let's go to Slide 12. That Slide 12 talks about this modeling again a little bit; is that correct?

A. Right.

Q. Go ahead.

01:16:30PM A. We used what's called air mod and it's U.S. EPA and IEPA, Illinois EPA, approved model technology. We use -- We input data. Besides the traffic data that we look from the LRS submittal, we looked at metrological data that is recommended, five years of data from O'Hare and five years from the Davenport, Iowa site, because we looked at both surface conditions and upper air conditions. Upper air is only measured in certain areas in the U.S. Davenport

01:17:04PM happens to be the closest site.

Q. Let's turn to Slide 13. Now, tell us what's included in Slide 13 and why you included

this?

A. Well, I took a look at the various sources of traffic data within Criterion 2 that were provided by LRS. This happened to be the first grouping, which are Tables 2-1, 2-2, 2-3, and 2-4, which basically outlined trucks coming in, trucks transferring out.

Q. So those were the tables. And if you turn to the following slide, 14, these are the tables that are in Criterion 2 that kind of describe how many trucks would be arriving at certain times and leaving; is that correct?

01:17:47PM

A. Correct.

Q. Was there anything else you wanted to describe with regard to Slide 14 as it relates to how you came up with your methodology -- the modeling? Excuse me.

A. The one thing that was confusing to me and we weren't able to really totally resolve it -- and I don't have the columns. I'm sorry -- but our incoming, the number of trucks is one thing but, to me, a trip is

01:18:15PM

inbound/outbound, so that's two trucks, not just one truck. So that's one of the confusions that we had to face with going through this.

Q. Let's turn to Slide 15. Again, this is just a separate table that was included in Criterion 2?

A. Correct. This is for the single-stream recyclables.

Q. And Slide 16?

01:18:51PM A. For the municipal solid waste.

Q. And Slide 17?

A. This is for the hydro-evacuation waste.

Q. And, again, these were the numbers of the trucks that you tried to use as part of your modeling; is that correct?

A. Correct.

Q. Can you turn to Slide 18, please. Tell us what else you did other than just using

01:19:15PM the tables that were just on the screen?

A. Well, we tried to look at all sources of data from the application. And within

Criterion 2, there's two other sources. The site throughput capacity, which is on Application 2-37 and the unloading time and queuing capacity in Application Page 2-40.

Q. Why did you look at that information?

A. Well, I wanted to see if it was consistent with what was being depicted in the other tables; and, if not, try to determine what the maximum capacity would be coming in and out of this facility. 01:19:52PM

Q. When you talk "capacity," you're talking about trucks; is that right?

A. Correct.

Q. Let's go to the next slide. It should be 19. Can tell us, what is Slide 19?

A. We did a comparison of basically the three -- four different areas, the Tables 2-1, 2-2, 2-3, and 2-4, the site throughput capacity, the unloading time and cueing, and the related traffic study. 01:20:19PM

As you can see, there's some inconsistency here in how it's being depicted.

Q. Give us an example.

A. Well, if you compare the unloading time and cueing capacity to the other sections, there's a significant difference. I mean, it's about -- almost double the related traffic study. The other two seem to correspond pretty well but that one sticks out and it's one that I was confused by and couldn't figure out why there was such a big difference.

01:20:57PM Q. Let's go to Slide 20. Now, Slide 20 discusses a type of fuel. Tell us why you included this slide?

A. Well, right now all trucks generally are -- that are coming in and out of this facility are all diesel-based fuel. Now, that being said, you can go from regular diesel, which is ultra low sulfur or bio diesel. Now, a lot of people are switching to that because everybody seems to think it's more

01:21:31PM environmentally friendly, but it actually has more nitrogen dioxide emissions than regular diesel. Lower particulate but higher NOx. The

other potential ways to change emissions on this is you can go with liquefied natural gas or compressed natural gas, which are the LNG/CNGs, which reduce both particulate and nitrogen dioxide. And, lastly, go electric.

Q. Were you able to see whether there was any reference to the types of fuel being used for the -- any of the trucks for this facility, or not?

01:22:06PM A. I was unable to find that.

Q. Can you go to Slide 21. So Slide 21, tell us what you have included here.

A. We used the dispersion model we talked about earlier, and we modeled the emissions solely from the maximum capacity in this facility as defined -- we had defined in that table. And that was based upon how many trucks per hour were going to go through and tip their load and then transfer the load.

01:22:48PM Then we added to the LRS impact the background conditions that are already in existence out here. The backgrounds were based

upon existing data in Naperville, Lyons Township, and Schiller Park. So those are IEPA monitoring devices.

Q. What you're saying is you -- two things: You tried to figure out what the background is now, and then what the LRS impact of the additional trucks would be, correct?

A. Yes.

Q. Then that gave you the cumulative impact; is that correct?

01:23:22PM

A. Right. That's correct.

Q. And you say -- Below cumulative impact, you have, "Current national ambient air quality standards." What is that about?

A. There are air quality standards that are updated periodically by U.S. EPA and Congress that are set to protect human health and welfare. And each -- For each parameter that we're dealing with here -- we have PM2.5, PM10, and PM2 -- all have different levels. For instance, PM2.5 has a 24-hour standard and annual standard. PM10 only has a 24-hour

01:23:49PM

standard. And NO2, on the other hand, has a one hour and an annual standard.

Q. So tell us, at least with regard to the 24-hour PM2.5 standard, what the numbers 22, 21, 23, 35, what do they represent?

A. The current standard is 35. As of last week, there was a proposal out there put out by U.S. EPA to reduce that to 25, which is a significant change. But it's there to try to improve air quality. 01:24:35PM

I'll give you one example of this. Right now, this area we're in is in a nonattainment area for ozone. What does that mean? We have too much nitrogen oxide and too much organic compounds in the air. You can debate what the cause of that is but, as a result, projects that I'm working on today have to get offsets to be able to justify the change in emissions or they have to show no net increase in emissions. 01:25:06PM

Q. So you're trying to just see what the potential impact would be to what the U.S. EPA

has set as standards; is that correct?

A. Correct.

Q. Was there anything else that you wanted to mention off of Slide 21?

A. I don't believe so.

Q. Okay. Let's go to Slide 22. This says, "Modeling Results." Tell us what the modeling results show. I know it's a little hard on the screen, but there's extra copies if someone wants to see them.

01:25:37PM

A. Yes. I apologize for these screenshots. The model isn't real good relative to depicting these things. I guess the key thing you want to see is the site is situated up in this top right corner and the transfer trucks are going along North Avenue down Kirk to 88. And what this is depicting are the concentrations as they go on that route. And you see kind of a shaded kind of blue, that's the impact of those trucks going down the road.

01:26:07PM

Being totally frank, up until about two, three years ago, we never modeled this sort

of thing this way. But the state and federal -- well, and City of Chicago is requiring this for all new sites dealing with any truck traffic.

Q. So all the numbers on the screen -- And I know it's hard to see but there's, like, numbers on the screen: 57, 57, 59, 56.

What do those numbers represent?

A. The concentrations with background at that location.

01:26:41PM Q. Okay. Then you have an arrow with the word "max." What do you mean by that?

A. That's the maximum concentration we found in that entire route.

Q. Now, does that mean -- Does that include the proposed trucks that you modeled would lead to whatever those numbers are for the EPA standards?

A. Yes.

Q. Now, I know it's very hard to see, but

01:27:05PM it looks like a yellow line going north. What road is that? Is that --

A. I'm not sure. Where are you seeing

yellow?

Q. I'm not good with -- See if you can tell us where North Avenue is?

A. This is North Avenue. This is Powis.

Q. It's hard to see from the screen. I'm not sure if you -- Just try to describe it verbally as far as the numbers. Like, how many numbers down is it?

A. Well, the transfer trailers are going
01:27:40PM north on Powis, generally west on North, south on Kirk to 88.

Q. Okay. So what is -- So where you have "max," what is that intersection?

A. That's Roosevelt Road and Kirk.

Q. Okay. So that's when they have already gone down Kirk and they have hit Roosevelt?

A. Correct.

Q. Were you able to determine how or why
01:28:04PM that's the maximum?

A. Yeah. It's primarily due to the trucks stopping at a signalized intersection and

idling at that location. So they are there for -- They aren't traveling through the area. They are actually sitting at the intersection for a while.

Q. What town is that intersection in?

A. Geneva.

Q. Geneva, Illinois. Okay. So let's go to Slide 23. And tell us what Slide 23 depicts.

A. It's looking at the same model results for PM10, instead of NO2.

01:28:32PM

Q. It looks like the max is in the same area it was before; is that right?

A. That's correct.

Q. Is the max for NO2 the same for the prior?

A. Same location.

Q. Okay. This is PM10, right?

A. Correct.

Q. Let's go to Slide 24. What does Slide 24 depict?

01:28:58PM

A. This is PM2.5 at the same location as you would expect.

Q. So the max is the same as the other slides for PM10 and NO, right?
A. Right.
Q. Do you have another slide? Okay.
What is depicted here?
A. This shows you the route of the transfer trailers. And I put on here the existing environmental justice areas that are situated near the site, as well as south on Kirk Road, and along 88.
01:29:38PM
Q. All right. Now, when you talk about environmental justice, are you -- are you aware that the Illinois EPA requires that a pollution control facility such as transfer stations be so designed to protect the public health and welfare?
A. Yes.
MR. MUELLER: I'm going to object to environmental justice testimony.
01:30:01PM
HEARING OFFICER PRICE: I'm going to sustain the objection. So, here, based on something Mr. Leutkehans said both in his

opening and in one of his questions, 39.2 has not been changed to include the environmental justice inquiry. In fact, when you go to IEPA's site and all of their published literature, they say it's part of their permitting. Not this permitting process. Until it gets to them. From here, it would go to IEPA. If people want to submit their U.S. -- their environmental justice comments to them, you can put them in as
01:30:36PM written comment here. You can also send them to IEPA when it gets there.

To my knowledge, having reviewed the case law, I do not see it as part of the 39.2 siting process, and I'm going to sustain the objection that environmental justice is not relevant to the 39.2. You're welcome to put it in as comment, the elected officials are welcome to consider it as that, but it is not relevant criteria testimony. So I'm going to sustain the
01:31:02PM objection about discussions about environmental justice.

MR. MEZA: In light of that, I do want

to submit an offer of proof that if Mr. Powell will be allowed to answer the questions that I would ask, this would be his testimony. I have the proposed offer of proof here. I'd like to include that into the record it relates to the questions he would have been asked with regard to environmental justice, as well as the related exhibits. The only exhibit that's not included is Exhibit 49, which I believe was already admitted into the record.

01:31:36PM

(PWC Exhibit No. 49 marked for identification.)

HEARING OFFICER PRICE: 49, that was the one you handed out last session?

MR. MEZA: That was EPA waste transfer station that talked about the environmental justice, yes. I believe it was admitted. If not, I would admit it as part of this --

HEARING OFFICER PRICE: 702 is going to come as an offer of proof only and that way it's in the record. You don't have to resubmit it. So for that purpose -- It's in as an offer of

01:32:00PM

proof. That's the only reason it's in.

So the city council understands the difference, it's in -- it's public testimony in the sense that it's public comment, but it's not testimony.

(PWC Exhibit No. 702 marked for identification.)

MR. WEINSTOCK: I have a request for clarification on the ruling you just issued, Mr. Price. I'm not sure what Mr. Mueller means by "environmental justice." That's a term that different people use with different meanings. I'm hoping either he or you can explain what the contours of your ruling just were and, specifically -- when you say you're excluding "environmental justice information," I just don't know what's in or out.

01:32:28PM

HEARING OFFICER PRICE: That's part of the problem. IEPA has not defined "environmental justice," except to say that all people are entitled to a safe environment. What has become an analysis of is, in particular,

01:32:52PM

question in this hearing already, trucks are going through minority communities. That is not relevant criteria of 39.2. The truck routing, in terms of the truck impacts that's one thing. That it goes through a minority community is not a piece of relevant criteria.

So environmental justice are not terms we have heard in 39.2 siting hearings ever and I don't think we need to make reference to
01:33:22PM it for precisely the reason you suggested. IEPA has not well defined it, it's not in 39.2, the legislature has not adopted it, and there's no published administrative regulation for it.

In fact, if you read the IEPA website, I don't understand what they think they are getting. They said it's an evolving area that they will consider as part of their permitting process. Fine. They are smarter people than me. They can consider it, but it's
01:33:47PM not part of 39.2. That's what I mean.

MR. WEINSTOCK: Understood.

HEARING OFFICER PRICE: I'm not going

to hear testimony about environmental justice, I'm not going to have testimony about if this were to impact on persons of whether it's color, income. None of that is relevant to 39.2.

MR. WEINSTOCK: Thank you, your Honor. One -- one -- Just want to make sure I'm connecting that. The ruling is that those -- that type of testimony is outside the scope of Criterion 2 reference to public welfare and public health?

01:34:19PM

HEARING OFFICER PRICE: Yes.

MR. WEINSTOCK: Thank you.

BY MR. MEZA:

Q. Mr. Powell, let's skip this screen and let's go ahead and skip that one. Let's go to your final opinion.

A. Okay.

Q. Do you have an opinion with regard to the application as it relates to the public health, safety, and welfare?

01:34:37PM

A. Yeah. In my opinion, the application for the proposed LRS waste transfer facility is

deficient by not determining the full impact on public health, safety, and welfare.

MR. MEZA: Thank you. We'll pass Mr. Powell.

HEARING OFFICER PRICE: Thank you, Mr. Meza. After that would be you folks, PODER.

MR. WEINSTOCK: Just a few questions for Mr. Abel.

HEARING OFFICER PRICE: This isn't --

01:35:12PM MR. WEINSTOCK: Powell. I'm sorry.

CROSS-EXAMINATION

BY MR. WEINSTOCK:

Q. My name is Rob Weinstock. I'm a lawyer here who is helping PODER through their direct testimony later today. And your testimony relates to some things they are interested in as well, so I just had a couple questions.

First, before when you were talking

01:35:33PM about diesel emissions and you mentioned that there were different types of diesel and different types of vehicle have different

emission profiles.

Do you remember that?

A. Yes.

Q. One thing you mentioned was that electric vehicles would have different levels of emissions than diesel?

A. Correct.

Q. How would you describe that difference?

01:35:51PM A. They are basically -- Electric vehicles wouldn't have any of these emissions.

Q. So if LRS committed to using an exclusively electric fleet --

A. Yep.

Q. -- for the trucks coming in and out of the facility, would that ameliorate some of these diesel emissions concerns you explained before?

A. I'll -- I have to put some proviso on

01:36:14PM that.

Q. Please.

A. On the trucks that they own, they can

probably do that. There are transfer trucks that they are outsourcing that transfer to that would have to get another company to commit to as well.

Q. Sure. We heard last week that LRS was imposing restrictions on the way incoming trucks tarped?

A. Right.

Q. So if LRS can impose restrictions on the equipment the technological specifications of the trucks coming into the facility, would you agree that a requirement that only electric trucks be permitted in and out of the facility would ameliorate some of these diesel emissions concerns?

A. Yes.

Q. Next question is -- Maybe we can go back to Slide 21. In the beginning of your direct examination you mentioned that you did a modeling exercise because there was no monitoring. Can you just repeat -- reset that point, so I know --

A. Sure. Normally if you're planning a project, you do modeling because you have no way to monitor what the actual emissions are. In the case of monitoring, if you -- Historically, and you can come back in after the fact and monitor to make sure you're in compliance using that. That's some of the things we're doing today with some of this sensor technology.

Q. The idea behind, really, the entire testimony is to determine what the impacts would be of the truck traffic emissions proposed by LRS in the context of the air quality that already exists in the area; is that fair to say?

A. Correct.

Q. So I'm looking on Slide 21, the background source for some of this data you used was monitoring stations in Naperville; is that right?

A. Yes.

Q. About how far away is Naperville from the facility?

A. Probably 25 minutes.

Q. How about in distance?
A. I'm not sure. 15, 20 miles.
Q. Okay. So for PM2.5, the best available data you have for modeling was 15 or 20 miles away?
A. Correct.
Q. Would it have strengthened your analysis to have monitoring of air quality right at the current LRS facility?
01:38:34PM A. Well, sure. That would be a benefit.
MR. WEINSTOCK: So I'll put this out, Hearing Officer, as a hypothetical based on -- contingent on facts we'll put in later.
BY MR. WEINSTOCK:
Q. If you had air monitoring data that showed existing levels of PM2.5 pollution at the LRS facility that exceeded the annual average level, for example, the current U.S. EPA level of 12, if you had air monitoring data from the
01:39:03PM LRS facility, say, as recent as a few weeks ago that showed levels well in excess of 12 micrograms per cubic meter, how would that

change -- how would you factor that into your conclusions?

MR. MUELLER: I'm going to object. Calls for speculation on a fact not in evidence.

HEARING OFFICER PRICE: He says he's going to tie it up. We'll see.

For now, overruled.

You can answer.

BY THE WITNESS:

01:39:24PM A. If the numbers were higher than the standard, then the site would be outside -- in violation of the ambient air quality standard.

Q. What would it mean to add additional diesel truck emissions -- I'm sorry. Let me finish.

What would it mean to add diesel truck emissions to an existing facility where it was already out of compliance with the national ambient air quality standards?

01:39:48PM A. It would make it even worse.

MR. WEINSTOCK: I think that's all I have.

HEARING OFFICER PRICE: Okay.
Mr. Mueller?
CROSS-EXAMINATION
BY MR. MUELLER:
Q. Mr. Powell, are you a professional engineer?
A. No.
Q. You know what a professional engineer is, right?
01:40:14PM A. Yes.
Q. They have to pass an exam and they are licensed?
A. Yes, sir.
Q. You have a credential that you call a qualified environmental professional. Is that something that is licensed?
A. I'm not sure I understand the question.
Q. Do you have to be licensed in any
01:40:46PM state to call yourself a qualified environmental professional?
A. It is U.S. based.

Q. Is there a licensing for it?
A. Yes.
Q. Did you have to take an exam?
A. Yes.
Q. When did that happen?
A. 1994.
Q. Have you had to take continuing education or update your credentials?
A. Yes.
01:41:09PM Q. How frequently?
A. Every five years.
Q. Are you a health physicist, sir?
A. No.
Q. Are you an expert in the health impacts of environmental emissions?
A. No.
Q. So you're assuming that there would be negative impacts from nitrogen oxide in the air, but you don't have any data to back that up, do
01:41:36PM you?
A. I'm not sure I understand what you're getting at.

Q. Well, the exercise here is to determine whether there's some negative public health, safety, and welfare impacts, correct?
A. Yes.
Q. For that, don't we need to know what those health impacts are going to be?
A. That's what the national ambient air quality standards were developed for.
Q. But you don't know what the health
01:42:06PM impacts would be from changing nitrogen oxide a little bit, do you?
A. I'm not sure I'm with you.
Q. Well, then I'll ask another question. I'll try to make them less hard.
A. Thank you. I'm not an engineer, so I don't understand.
Q. You modeled the potential emissions from the truck traffic at the site, correct?
A. Correct.
01:42:48PM Q. Now, how far do emissions travel from a truck?
A. It depends on the height of the

emissions from the truck, speed.

Q. In other words, if a truck is going down Main Street in front of this building --

A. Uh-huh.

Q. -- are we going to get those emissions in here?

A. In this building?

Q. Yes.

A. On the edge of the building, sure.

01:43:24PM Q. How about in the here?

A. It depends on the ventilation system in this building.

Q. You used something called a dispersion model?

A. Yes.

Q. What is that?

A. It's a mathematical representation of what the emission sources are going down a roadway and what the downwind distance is to a

01:43:46PM potential source, residents, another receptor, a human.

Q. How far from the source does your

dispersion model tell you there can be an impact?

A. The ones we saw were showing it on either side of the roadway into the residential areas.

Q. What residential areas did you look at specifically?

A. Along Kirk Road from North Avenue south to 88.

01:44:16PM Q. Did you look at any residential areas in West Chicago?

A. Yes.

Q. Which ones?

A. We looked at the Timber Lake Apartment area. Then also the Wegner Elementary School.

Q. Do you have the results of that modeling?

A. Yes.

Q. What did that show?

01:44:37PM A. Basically there's just a little bit of background levels. The key reason for that is we didn't model any of the emissions taking

place on the LRS site. We only modeled those -- the traffic along Powis to North. So we didn't include any of the trucks idling on LRS.

Q. Now you said that monitoring is more accurate than modeling because you have real data, correct?

A. Correct.

Q. Could you have monitored right in front of the LRS site on Powis Road?

01:45:15PM A. Sure.

Q. Why didn't you do it?

A. That wasn't what I was asked to do.

Q. There is another transfer station up the road operated by -- I think it's Waste Connections. Are you familiar with Waste Connections?

A. Yes.

Q. Are they the ones paying you here?

A. No.

01:45:35PM Q. Is Groot paying you? Groot?

A. No.

Q. Did you model the emissions from that

transfer station?
A. No.
Q. Do you expect they would have emissions?
A. Yes.
Q. In fact, their emissions would probably be more because they are handling more waste, right?
MR. MEZA: Objection; speculation.
01:45:58PM HEARING OFFICER PRICE: Overruled.
BY MR. MUELLER:
Q. Do you understand my question?
A. I didn't know I could answer.
HEARING OFFICER PRICE: Yes.
BY THE WITNESS:
A. I mean, if they are handling more waste. But their routing right now is going through downtown St. Charles with the transfer trucks. The routing you're talking about for
01:46:20PM LRS is going down a whole different route.
Q. Now, downtown St. Charles is an area with a lot of pedestrians and businesses right

on the road, right?

A. Yep.

Q. Would you consider it to be healthier to route your trucks down Kirk Road, which is a wide four-lane minimum road with minimal commercial activity along the side?

A. Generally, yes.

Q. By the way, do you agree with the applicant's findings with regard to reduced

01:46:56PM carbon dioxide emissions?

A. I don't have a position either way. I couldn't verify the calculations.

Q. Did you look at the appendices for Criterion 1?

A. No.

Q. Are you aware that some of that information and calculations were appended to Criterion 1?

A. I was tasked with looking at

01:47:19PM Criterion 2.

Q. So that's all you looked at?

A. Yes.

Q. You have heard the phrase with regard to modeling, "garbage in, garbage out," haven't you?
A. You bet.
Q. What that means is that the result of your modeling is only as good as the quality of the input?
A. Correct.
Q. Do you agree with that statement?
01:47:53PM A. Yes.
Q. You have never testified at a Section 39.2 siting hearing, have you?
A. No.
Q. Criterion 2 is whether the facility is -- Well, do you know what Criterion 2 says?
A. Yes.
Q. What's it say?
A. The facility is so designed, located, and proposed to be operated so that the public
01:48:38PM health, safety, and welfare will be protected.
Q. How would you change the design of this facility to improve the public health,

safety, and welfare?

A. I would change the type of trucks being used.

Q. What types of trucks would you use?

A. Go with electric.

Q. Electric trucks are not commonly available --

A. That's not true.

Q. -- in Illinois, are they?

01:49:02PM A. Yes, they are.

Q. Now, when you charge an electric truck, where does the electricity come from?

A. The electricity comes from Exelon.

Q. Where does Exelon get their electricity?

A. Nuclear.

Q. Do they also get it from coal-fired plants?

A. No, not Exelon.

01:49:30PM Q. So you're advocating that we use nuclear power rather than diesel?

A. I would. It's better for the

environment.

Q. What does a battery pack for an electric tractor -- in a semi tractor-trailer rig weigh?

A. No idea.

Q. Would it surprise you to know that those battery packs weigh -- can weigh 10,000 pounds?

A. It wouldn't surprise me.

01:50:12PM Q. Which means that they have a greater impact on roads, right?

A. Not on the air emissions.

Q. But they will have a harder impact on the pavement itself, wouldn't they?

A. I'm not a transportation engineer.

Q. So you can't even intuitively think that heavier trucks would be bad for the roads?

MR. MEZA: Objection; argumentative.

HEARING OFFICER PRICE: Overruled.

01:50:44PM You can answer, sir.

BY THE WITNESS:

A. Okay. Yeah, it's possible.

Q. Okay. If you get 3,000 feet away from an idling truck, you're not likely to get any of the emissions, are you?

A. I wouldn't expect so.

Q. You're aware that the nearest residential subdivision to the proposed facility is over 3,000 feet away?

A. That's what you're submittal indicated.

01:51:24PM Q. Do you have any reason to disagree with that?

A. Only thing -- I can't talk about it because it's in the subject I'm not supposed to talk about.

Q. To get the background emissions for this proposed site you went to Schiller Park and Naperville?

A. I didn't go there. That data is readily available on Illinois EPA's website.

01:52:04PM Q. You didn't try to establish actual background levels at the proposed site?

A. No. That would be CEC's

responsibility, not mine.

Q. Did you check background levels along Kirk Road?

A. No.

Q. The highest point you have is at the intersection of Kirk and Roosevelt, right?

A. Correct.

Q. Did you check background levels there?

A. No.

01:52:28PM Q. It would have been possible to go out with a monitoring rig and do it, right?

A. Yeah. But to collect appropriate data to get a comparable dataset is get a year's worth of data.

Q. How long do emissions stay at low altitude, meaning, you know, below a hundred feet after they've come out of a truck?

A. I don't have that information.

Q. Well, there is an issue of the

01:53:09PM duration of the emission, isn't it?

A. Uh-huh.

Q. You don't know what the duration of

those emissions might be?

A. I'd have to go back into the data and look at what we included, but no.

Q. You understand garbage has to go somewhere, right?

A. Correct.

Q. If it's not at this transfer station, it will be at another transfer station, right?

A. Correct.

01:54:05PM Q. Correct?

A. Yeah, that's what I said.

Q. And emissions would be the same issue there as here?

A. It depends on where the trucks are going.

Q. I mean, the best way to reduce truck emissions would be to reduce the amount of garbage that has to be trucked, right?

A. Sure.

01:54:28PM Q. The second best way would be to have all electric trucks?

A. It might be the second best way.

Q. Is there anything specifically wrong with the location that Lakeshore has proposed for this transfer station?
A. I'm not sure I understand the question.
Q. Well, the criterion is whether it's located so as to be protective of the public health, safety, and welfare. Is there anything specifically wrong with the proposed location?
01:55:12PM A. With the site itself?
Q. Yeah.
A. No.
Q. What coefficient of dispersion did you use in your modeling?
A. I'd have to go into the details. I don't have it off the top of my head.
Q. You didn't review that?
A. Before coming here?
Q. Yes.
01:55:50PM A. No.
Q. The answer is you didn't review it?
A. I said "no."

Q. Okay. You read the applicant's testimony or the report to indicate that they believe they are going to reduce overall emissions because there's going to be less mileage transferring waste using this location, correct?

A. Not based on what you just said. That's not what the basis is. It's based upon reducing the single-use truck traffic, not the transfer vehicles. It's only -- The only thing that was documented in the analysis was carbon dioxide.

Q. Do you agree with that documentation?

A. Those parameters, yes.

Q. If we're reducing carbon dioxide, wouldn't it be logical it would probably also be reducing nitrogen oxide in a similar amount?

A. For those trucks in particular, yes.

Q. If we're reducing carbon dioxide, wouldn't it also be logical that we're probably also reducing particulate emissions in a similar amount?

A. Yes.

MR. MUELLER: Thank you, sir.

HEARING OFFICER PRICE: City, Mr. Callaghan?

CROSS-EXAMINATION

BY MR. CALLAGHAN:

Q. The criterion that you talked about, it talks about --

HEARING OFFICER PRICE: I need you to speak up.

01:58:14PM

MR. CALLAGHAN: Sorry.

BY MR. CALLAGHAN:

Q. (Continuing.) -- it focuses on the facility, correct?

Go back to the criterion that you're testifying about?

A. For Criterion 2?

Q. Yes.

A. Yes.

01:58:26PM

Q. It doesn't say anything about trucks?

A. No.

Q. It doesn't say anything about

locations, other than where the facility is located, correct?

A. Not implicitly, no.

Q. It doesn't say explicitly either, does it?

A. Well, I mean, the way I interpreted it, it's how it's located. And part of the whole process is the trucks come in and the trucks come out. That's part of the process.

01:58:51PM Q. But the focus is on the facility?

A. That's very true.

Q. Do you know if there's a criterion that looks at traffic?

A. There was, yeah, Criterion 6.

Q. All right. Do you know that people have testified about Criterion 6?

A. Correct.

Q. And that has to do with the impact on traffic patterns?

01:59:13PM A. Correct, as I understand it.

Q. It doesn't say anything about pollutants coming from trucks?

A. No.
Q. Do you know what the definition of facility is in the Environmental Protection Act?
A. I do not.
Q. Now, the background levels that you provided, that means what's out there today?
A. Correct.
Q. And you did a model that came up with the cumulative impact, meaning adding this
01:59:56PM site -- the trucks from this site to the background level?
A. Correct.
Q. The trucks that you added, is that the total number of trucks from this facility?
A. No. Just the transfer trucks.
Q. Only transfer trucks?
A. Correct.
Q. And do you know which waste transfer stations LRS has been using because they don't
02:00:19PM have their own?
A. From what I gather, it's Batavia.
Q. Okay. Where is Batavia located?

A. South of the site and to the west.
Q. It's over by Kirk Road?
A. I'm not familiar with the site.
Q. You don't know where it's located?
A. No.
Q. What about Groot?
A. Groot is just north of LRS.
Q. So do you believe these are going to -- that this facility will create the need
02:00:46PM for more transfer trailer traffic in this area if it is approved?
A. Well, no one took a look at the reduction in transfer activities from all of the sites based upon this application, to the best of my knowledge. The other thing it didn't take into account were other sources that are new and not part of the background, such as Pheasant Run.
Q. I guess any -- You're familiar with
02:01:13PM this area where the proposed facility would be located?
A. Yes.

Q. Would you agree that it's an industrial area?
A. Where the site is the proposed?
Q. Yes.
A. Yes.
Q. Okay. And any use within this area zoned industrial is going to have trucks, correct?
A. I would say that's pretty apparent, yes.
Q. So when property is zoned industrial and I own the property and I want to use it, are you saying before I can use the property, I have to do an air dispersion model?
A. Yeah. Actually, I have a situation where I had a client that owned a piece of property in southern Illinois. He said I don't need permits to do this solar farm. Well, a core of engineers disagreed with him significantly.
Q. And they made him do an air dispersion model for --

A. Not an air dispersion model but he had to do an environmental impact study of solar farming.

Q. That is not a criterion --

A. I understand that. But I'm giving you an example. In the City of Chicago today if you were siting this same facility, you would have to do an air quality impact analysis today.

Q. Because this -- Because the city staff would tell you you have to do it?

02:02:28PM

A. No. There's an ordinance.

Q. That just passed, correct?

A. No. It's been out there for two years.

Q. That's what I mean, relatively recently?

A. Well, it's impacting my clients.

Q. But that's the City of Chicago, that's not here?

02:02:46PM

A. True.

Q. I guess the point on the other transfer stations is if this facility were to

take some of the waste from those, there would be a reduction in the overall impact of all the transfer stations, correct?

A. If they are ultimately reducing the location and where they are going with the waste, yes.

MR. CALLAGHAN: That's all I have. Thanks.

HEARING OFFICER PRICE: Mr. Walsh?

02:03:21PM MR. WALSH: No questions, Mr. Price.

HEARING OFFICER PRICE: Any redirect, Mr. Meza?

REDIRECT EXAMINATION

BY MR. MEZA:

Q. Let me just ask you this, Mr. Powell: The standards that you used, who came up with the standards?

A. U.S. EPA.

MR. MEZA: That's all.

02:03:36PM HEARING OFFICER PRICE: Any recross on that question, Mr. Mueller?

MR. MUELLER: No.

HEARING OFFICER PRICE: PODER?
MR. WEINSTOCK: No.
HEARING OFFICER PRICE: City?
MR. CALLAGHAN: None.
HEARING OFFICER PRICE: Thank you, Mr. Powell.
THE WITNESS: Thank you.
HEARING OFFICER PRICE: Mr. Meza, Mr. Leutkehans, any other witnesses?
02:03:52PM MR. LEUTKEHANS: One further witness.
MR. MEZA: We have one fact witness. We're going to call Colin Hale.
(Witness sworn.)
WHEREUPON:
COLIN HALE,
called as a witness herein, having been first duly sworn, was examined and testified as follows:
DIRECT EXAMINATION
BY MR. MEZA:
Q. Can you state your name for the record and say it loud enough so we can all hear you.

A. My name is Colin Hale. For the record, C-o-l-i-n, H-a-l-e.
Q. Where do you live, sir?
A. I live on National Street here in West Chicago.
Q. How long have you lived in West Chicago?
A. My entire life.
Q. Did your parents grow up in West
02:04:56PM Chicago?
A. They did not grow up here. They have lived in West Chicago since 1984.
Q. Where do you currently work, Colin?
A. I work at Blachford Acoustics Laboratory at 1445 Powis Road.
Q. Can you spell that for the court reporter, please.
A. Blachford is B-l-a-c-h-f-o-r-d.
Q. What do you do at Blachford Acoustics?
02:05:18PM A. I'm a new product introduction engineer for Blachford Acoustics Group but, like I said, I'm stationed at Blachford Acoustics

Laboratory. I have been there about seven years.

Q. What is the address again of that the location?

A. 1445 Powis.

Q. About how far away are you from 1655 Powis?

A. I think it's about 200 yards.

Q. Are you familiar with the current site at 1655 Powis? 02:05:45PM

A. To some extent, yes.

Q. Is that the current LRS site?

A. Yeah.

Q. Now, how long have you worked at Blachford Acoustics, how many years?

A. Nearly seven.

Q. Now, during that time period, did you have occasion to see or observe litter in or around your area, including by the LRS site?

A. On several occasions. Well, 02:06:15PM continually, yes, we have had quite an issue with litter around our property, which includes

a natural wetland area which is pretty well-peppered with trash. We found several occasions where, you know, we have got Lakeshore Recycling stickers that I think I submitted pictures of, as well as plenty of other stuff that blows out of trucks. I mean, personally witnessed, as well as other people at the company, blowing directly out of Lakeshore trucks, which are full and tarped, full and untarped, and then something I think that's generally unaccounted for here is the untarped vehicles that have the remainder of waste still blowing out of them, you know, little light things usually.

02:06:48PM

Q. Have you taken photographs of this waste?

A. I have.

Q. How are you able to tell that it's, in fact, LRS waste?

A. Like I said, on some occasions I have witnessed it. I just spent some time actually watching the trucks go by a few days ago to, you

02:07:06PM

know, refresh memory of this happening. But some of the pictures I have submitted, like I said, include Lakeshore Recycling stickers, which is pretty direct, I feel like.

Q. I'm going to show you what's been marked as Exhibit PWC 707. Can you tell us what Exhibit PWC 707 is?

(PWC Exhibit No. 707 marked for identification.)

02:07:48PM BY THE WITNESS:

A. These pictures were actually submitted to the city in April -- I think it was April 2021. And this is right after we were cited for litter on our property, and we argued this litter is not our litter. You know, we don't generate waste like this at the lab. We hardly generate any trash at all. This isn't even as bad as it was a few days ago. I just took some more pictures. I guess some of these

02:08:12PM at the end might be --

Q. Let's look at the picture on -- Picture 3 out of 14, Page 3 out of 14, tell us

what that depicts.

A. On page --

Q. Page 3 of 14.

A. Page 3. So this is back from April -- like I said, I think that was 2021. And that is the frontage -- I'm standing on Powis Road or maybe the shoulder and the driveway to the lab is just off and to the right out of view.

Q. All right. Can you flip to Page 4 of 14. What are we seeing on 4 of 14?

02:08:44PM

A. That is Powis Road, and I'm standing in the driveway of the lab.

Q. Do you see litter there?

A. Some there, yes.

Q. Now go to Page 4 of 14.

A. That's looking north on Powis. That's the lab on the right.

Q. 6 of 14?

A. This is just a poorly taken photograph of some of the trash that's in kind of like -- I don't know. I call it the meadow. It's just a brush natural area between the lab and Powis.

02:09:07PM

Q. Now, let's go ahead and flip to Page 9 of 14. Tell us what's depicted in 9 of 14?

A. 9 of 14 is a City of Geneva waste sticker and that is for Lakeshore Recycling Systems. It's one of the Lakeshore stickers.

Q. Where was this found?

A. That's in that same brush patch between the lab and Powis, which is probably 30 feet off the road, I'm guessing, maybe 50.

02:09:43PM Q. Go to Page 10 out of 14.

A. The location of that one is also -- actually I think -- This is just from a couple days ago. This is right across the street from the lab, looking south towards Hawthorne, I believe, but on Powis.

Q. Okay. Then the last couple photographs on 13 and 14, those, again, depict photos you took of the trash in and around the area; is that correct?

02:10:11PM A. Yeah. So 11 is also -- It's right across the street from the lab. 12 -- On Page 12, that is specifically, is in front of

the Lakeshore facility, also a couple of days ago. And then Page 13 -- I believe these were Thursday morning. 13 is at the lab from across the street and you can kind of see that natural area, which is just full of stuff, full of trash from blowing out of trucks. And then the wetland area I referenced is on the opposite side of the lab at that treeline there, which is maybe a hundred yards from the road. The last
02:10:42PM picture is also of the frontage of the lab from nearly the same position same day.

Q. Now, in addition to taking these photographs, have you communicated to the City of West Chicago and has your company communicated to the City of West Chicago?

A. So considering -- Considering this kind of stuff we're looking at here, Blachford Incorporated has been in contact with the City of West Chicago before. Basically what we were
02:11:09PM told is it's litter on your property, you're responsible for it, which made the president of our company pretty unhappy. That started kind

of a whirlwind of trying to hold people accountable, so we did end up getting Lakeshore to come help clean up on our property. And at that time also I think it must have -- a bunch of other people -- this is only a guess -- a bunch of other people must have gotten a citation because they were on both sides of the street everywhere helping to clean up. We were able to get their help that time but usually
02:11:45PM after at least a little bit of a struggle.

If it's pertinent, I also have a new --

Q. I want to show you what's been marked as Exhibit 706. Is this communication from your company to West Chicago relating to the litter?

(PWC Exhibit No. 706 marked for identification.)

BY THE WITNESS:

A. Yes. This is specifically on behalf
02:12:09PM of Blachford. There is a follow-up letter I just submitted, you know, maybe an hour ago that I do have a copy of, if that's also pertinent,

that describes a little more specifically relating to the litter issue. Yes, this is from Blachford Incorporated to the city.

MR. MEZA: Just a second, Mr. Hearing Officer.

BY MR. MEZA:

Q. Mr. Hale, just to clarify the photographs that are in the exhibit, I think it's 706 -- is that right -- 707.

02:13:06PM What were the dates of those photographs taken?

A. Until page -- Pages 1 through 9, those are from April of 2021. And then Pages 10 through 14 are from last Thursday.

Q. Okay. So 1 through 9 is from 2021 and then 10 through 14 are the most recent, right?

A. Yes.

MR. MEZA: We have no further questions.

02:13:33PM HEARING OFFICER PRICE: Thank you.

PODER?

CROSS-EXAMINATION

BY MR. WEINSTOCK:

Q. Hi, Mr. Hale. Thank you for being here. Just a couple questions.

You mentioned at the beginning of your testimony your job is -- about how far is it from the LRS facility where you work?

A. I think it's, like, 200 yards.

Q. It's on Powis Road as well?

02:13:51PM A. Yes, same side.

Q. Same side. Do you know if the zoning of the place where you work is also zoned industrial?

A. I don't know.

Q. Okay. Do you and the people you work with sometimes stand outside of your workplace?

A. Yes, regularly.

Q. Is that -- Does that happen more frequently in the morning, in the evening,

02:14:11PM coming and going at rush hours?

A. It depends. I often find myself out there, you know, midafternoon, 2:00/2:30.

Traffic usually ramps up a lot then, not specifically truck traffic. That seems pretty well random. To me, anyway. I haven't studied that.

Q. Fair enough. You do spend sometime -- Do you ever take lunch outside?

A. Yes.

Q. Do you know other people who do similar things?

02:14:36PM A. Yes.

Q. You mentioned before you're a resident of West Chicago?

A. Yes.

Q. I'm going to ask you a question that's going to sound really stupid. When you're standing outside, are you breathing in and out?

A. I try to.

Q. That's right. And are you breathing in and out, even though you're standing in what

02:14:50PM might be zoned an industrial property?

A. Sure. Yes.

MR. WEINSTOCK: Thank you. No further

questions.

HEARING OFFICER PRICE: Mr. Mueller?

CROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. Hale, how is it that you came to be a witness here?

A. I had contacted Protect West Chicago stating my interest in describing the issues that Blachford Incorporated has with the continual litter on our property.

02:15:16PM

Q. When did you first contact them?

A. Oh, I don't know. It was last week, I think. It was recent. I guess I have contacted them before learning from the mass e-mails probably months ago, but not in the relation to anything at these hearings. I have only been to this hearing and two before it.

Q. Who have you been dealing with at Protect West Chicago?

02:15:38PM

A. Mr. Meza. And then the person I was e-mailing with, his name was Nick. I don't remember his last name, but we have been in

contact a couple times completely unrelated to this.

Q. Ever deal with someone from Protect West Chicago named Mr. Biel (phonetic)?

A. I don't recognize that name.

Q. How far is your company from the Waste Connections site?

A. I'd only be guessing. I'm guessing it's, like, three quarters of a mile at 64 and Powis there.

02:16:16PM

Q. Now, you keep talking about there's trash and litter on the road, right?

A. Yes.

Q. Are you aware that Lakeshore does not haul trash to or from that site?

A. I can't speak to what Lakeshore is known to carry by whatever, you know -- whatever you guys are known to carry. What I know is from watching things blow out of trucks. I don't know what's supposed to be going to and from Lakeshore. I just know things blow in and out of the trucks.

02:16:53PM

Q. What kind of truck do things blow out of?

A. To give you the most recent example, on Thursday, watching from the roof of the lab, I was watching a truck that's orange on the top, white on the doors, more orange on the bottom. What I think used to be a Hoving truck but LRS must have purchased. It's colors just like those, but with the big blue LRS dumpster on the back. I watched some that were tarped with stuff in them and some that were untarped with what I would presume to be called and empty load. But I did witness on several occasions just Thursday smaller, lightweight pieces of trash blowing out of those empty containers, which is part of my concern and, of course, Blachford's concern, that those things aren't be accounted for.

02:17:15PM

02:17:38PM

And specifically referencing Page 2 -- sorry -- Criterion 2 on 2-31, my interest is the concept of litter blowing from those trucks. I understand that perhaps there

may be other trucks that litter and people who the litter and whatever else. I'm speaking specifically in relation to these hearings and what I see happening from Lakeshore and on behalf of Blachford that we have a big issue with that and we don't feel it's appropriately or entirely addressed as it stands right now.

Q. Let's look at your exhibits. Page 3 of -- Page 2 of 14.

02:18:16PM A. Sure.

Q. It looks like there's a COVID-style mask and a driver's license?

A. That's right.

Q. Whose license is that?

A. I don't know. We probably should have blurred that or something. Apparently his name is Daniel Duncan.

Q. Do you know whether he's an LRS employee?

02:18:41PM A. I have no idea.

Q. Could he be a Waste Connections employee?

A. He could be an employee of anybody.
Q. So you don't know where that license and surgical mask came from, do you?
A. I don't know where specifically any individual piece of this trash came from; however, I have pretty good reason to believe that the Lakeshore Recycling stickers probably originated from Lakeshore.
Q. Well, I'm not seeing a Lakeshore recycling sticker on 2 of 14. Am I missing something?
02:19:10PM
A. No, not on 2 of 14.
Q. Okay. 3 of 14.
A. Yes.
Q. Can you point to any specific piece of litter that you know came from a Lakeshore vehicle?
A. I cannot point to any specific piece of litter coming from a Lakeshore vehicle on that picture.
02:19:30PM
Q. All right. Let's go to 4 of 14. Can you point to any specific piece of litter that

you know came from a Waste Connections -- I mean, a Lakeshore vehicle?

A. Not on Page 4 of 14.

Q. Page 5 of 14, can you point to any specific litter that you know came from a Lakeshore vehicle?

A. For the sake of everybody's time, I'm going to point out --

Q. I didn't ask you about people's times. I asked if you can point to any specific litter that came from a Lakeshore truck?

02:20:03PM

A. No.

Q. Page 6 of 14. Can you identify anything from Lakeshore on there?

A. No.

Q. Page 7 of 14. Can you identify anything from Lakeshore on there?

A. As with any of these pages, I don't go out and write down exactly what piece of trash I saw fly out of what truck; however, as I have mentioned, I have watched trash fly out of Lakeshore trucks as recently as Thursday.

02:20:36PM

Q. So the answer to that question is, no, you can't identify anything in 7 of 14, right?
A. That's correct.
Q. Page 8 of 14. Do you know what that is?
A. It's some kind of plant information from a Planter's Palette.
Q. So it must have blown off a plant?
A. Must have blown off, presumably, the truck carrying the trash from Planter's Palette, but ...
Q. Do you know whether that was a Lakeshore vehicle?
A. I do not know.
Q. Now, on Page 9 of 14 there is a Lakeshore sticker depicted?
A. Yes.
Q. Is that a yard waste sticker, if you know?
A. It just says "waste sticker." I don't know if that's for yard waste or if it's like the stickers we used to have in West Chicago for

trash cans. I'm not sure. I don't use garbage stickers.

Q. Page 10 of 14. Can you identify anything that came from Lakeshore on that picture?

A. So on this picture, I can say that one of those things down there in that little culvert area, the lower area, one of those I know is because I watched it blow out. But, like I said, I did not specifically take count which one that was.

02:22:23PM

Q. Which one do you know that came -- that you saw blow off?

A. I know it was a sheet of paper-ish-sized white thing, and there's a few of those that I can see, so I can't say which one. Anywhere right in this little space is about where it would have landed based on what it looked like from the roof.

02:22:42PM

Q. Page 11 of 14. Anything you can link to Lakeshore there?

A. Not specifically.

Q. 12 of 14. Anything you can link to Lakeshore?

A. The thing I can link to Lakeshore that I didn't think to take a picture of at the time was the grime coming in and out of the driveway, but I was paying attention to trash than the grody stuff that leaks out of vehicles.

MR. MUELLER: Mr. Price, I'm going to move to strike that answer as nonresponsive.

02:23:13PM HEARING OFFICER PRICE: Overruled.

Move on.

BY MR. MUELLER:

Q. Page 13 of 14. Anything you can link to Lakeshore there?

A. Not specifically, no.

Q. So Exhibit 707 with its 14 pictures has one Lakeshore sticker and nothing else that you can link to Lakeshore, correct?

A. Other than one of those things on 02:23:53PM whatever page that was. Like I said, I'm not sure which one it might be, from Page 10.

Q. Now, the Waste Connections trucks go

up and down Powis Road, too, don't they?
A. Right. Yes.
Q. Do you know whether litter ever blows off of them?
A. They also have the same problem.
MR. MUELLER: That's all I have. Thank you, Mr. Hale.
HEARING OFFICER PRICE: Mr. Callaghan.
MR. CALLAGHAN: One question.
02:24:30PM CROSS-EXAMINATION
BY MR. CALLAGHAN:
Q. Across the street and a little bit south from the Blachford, there's a Secretary of State truck-driving test facility?
A. It was for a long time.
MR. CALLAGHAN: That's all I have.
CROSS-EXAMINATION
BY MR. WALSH:
Q. Mr. Hale, are you being paid to be
02:24:51PM here today?
A. No.
MR. WALSH: Thank you. That's all I

have.

HEARING OFFICER PRICE: Any redirect, Mr. Meza?

REDIRECT EXAMINATION

BY MR. MEZA:

Q. Mr. Hale, when did you first meet me?

A. I think it was Tuesday, right? Whatever the first meeting of last week during the week was.

02:25:04PM Q. And you understand I don't represent you; is that right?

A. Right.

Q. You asked to testify; is that correct?

A. Yes. To be perfectly clear, my interest is just that the litter coming out of trucks I don't think is being appropriately addressed in the way the text is currently and maybe even in the way that it's being legally enforced or not, and the accountability of,

02:25:24PM really, both waste handling companies but Lakeshore included. Since they are the topic of this hearing, that's the one I'm particularly

interested in at the moment. If we have the power to make sure that they are held accountable for whatever trash is associated with them in the future that we build that into conditions or things like that. I don't want to be unreasonable for anything. If something blows out of your truck, we do have ordinances which if you give me a second, I'll grab something from my phone. But we have multiple
02:25:52PM ordinances in place that are specifically related to if something blows out of your vehicle, you're responsible for it. I think Lakeshore's intention is as anybody's would be is to control their trash and not have it blow all over the town. The fact of the matter is that still happens.

So how dot we control that and what's the course of action once that has happened? Because I currently don't see either
02:26:15PM of those companies, but including Lakeshore, you know, walking up and down the street every so often. Street sweeping is not going to cover

that because we're not talking about the road surface but the culverts, recessed areas, and anywhere else that trash would blow around and collect. That's anywhere from a parking lot to natural wetland areas or, you know, it can blow into the residential areas or wherever you can point it. I think regular cleanup efforts should be considered.

Q. Did anybody try to convince you not to testify today?

02:26:43PM

A. No.

MR. MEZA: No further questions.

HEARING OFFICER PRICE: PODER?

MR. WEINSTOCK: No.

HEARING OFFICER PRICE: Mr. Mueller?

RECROSS-EXAMINATION

BY MR. MUELLER:

Q. Very briefly. Mr. Hale, you talked about street sweeping. You have seen the Lakeshore street sweeper out there on Powis Road, right?

02:26:58PM

A. I believe I have.

Q. Have you ever seen one from Waste Connections out there?

A. No. But what I also haven't seen would be, you know, hordes of people cleaning up the areas where the trash collects.

Q. I was going to ask you: Have you ever seen pickers in the ditch picking up paper?

A. On the one occasion that I mentioned in April of 2021 where we were cited and I think 02:27:23PM the surrounding companies were also cited for trash that was not ours.

Q. Lakeshore routinely sends pickers out there to try to keep the road and the berms clean, don't they?

A. I have not seen them, except for that the occasion.

MR. MUELLER: That's all I have. Thank you.

HEARING OFFICER PRICE: Mr. Callaghan?

02:27:42PM MR. CALLAGHAN: No questions.

HEARING OFFICER PRICE: Mr. Walsh?

MR. WALSH: Nothing. Thank you.

HEARING OFFICER PRICE: Thank you, Mr. Hale.

Does that conclude Protect West Chicago's case in chief?

MR. LEUTKEHANS: Yes, it does.

HEARING OFFICER PRICE: Then the exhibits introduced as part of the case in chief include 155, 156, 157, 51, 352, 800, 801, 602, 350, 603, 603-A, 49, 702, 707, and 706.

02:28:16PM Are there any objections to any of those being made part of the record?

MR. MUELLER: Nope.

HEARING OFFICER PRICE: They are all in, then. Thank you.

We now turn to PODER. It is your opportunity to put on your case in chief.

MR. WEINSTOCK: Thank you, Mr. Price. We will be calling two witnesses this afternoon. Before we do that, I might ask for a very brief

02:28:37PM break. The primary purpose for it is to send copies of Excel documents that are going to be attached to one of our exhibits to counsel in

the room and anybody who needs them, I suppose, so they have those electronic copies. They are Excel documents. Had we printed them, we would have been talking about --

HEARING OFFICER PRICE: Do you have them on a thumb drive and you can put them on the screen?

MR. WEINSTOCK: We don't plan to -- They are a technical backup for a document that we made a summary document. I wanted everyone to have them. I can send them out afterwards. We are not going to ask any questions about these documents. Frankly, they are hard to read but because they are the technical backup.

02:29:07PM

HEARING OFFICER PRICE: Send them later.

MR. WEINSTOCK: Could we have just a moment to use the restroom and get our witnesses ready?

02:29:21PM

HEARING OFFICER PRICE: We'll take ten minutes now, given the 4:30 stop, and we'll start again at 2:40.

(A short break was had.)

(Witness sworn.)

MR. WEINSTOCK: Good afternoon. My name is Robert Weinstock. I'm an attorney with the Northwestern University Environmental Advocacy Center. I'm appearing today for the limited purpose of helping the PODER witnesses present their direct testimony and to try to help them do so as efficiently as possible with
02:42:10PM a strong understanding of the legal process involved here as we can.

Before we begin, I do have two other introductory issues I just want to put on the record. First, as I was communicating with the hearing officer, I would just like to request a little bit of leeway in the direct testimony in terms of form and format from the PODER witnesses. Obviously, they are not used to testifying in this sort of forum, which, you
02:42:37PM know, I do recognize has more relaxed rules for testimony than a judicial forum. But I would appreciate the advanced patience and

flexibility, particularly, for our first witness, Ms. Garcia, which English is not her first language, but Ms. Garcia has been forced to participate in this hearing without the aid of Spanish interpretation at any point in the process. I would just ask for a little leeway. Ms. Garcia is ready and will do her best.

Second, I'd just like to note an objection for the record to this hearing being held on Dr. Martin Luther King, Jr., Day, which is, obviously, a national holiday during which time any witnesses or member of the public may have to, say, care for their children who are home from school and which is, of course, intended to honor and recognize the contributions of a civil rights leader for whom fighting the prejudicious effects of the solid waste transfer industry on minority communities was a key part of his legacy of work.

02:43:08PM

02:43:35PM

Recognizing that the hearing is being held today, we are prepared to participate and, as I said, I would just note that objection for the

record.

WHEREUPON:

JULIETA ALCÁNTAR-GARCIA,

called as a witness herein, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. WEINSTOCK:

Q. Ms. Garcia, can you please state your name for the record?

02:43:49PM

A. My name is Julieta Alcántar-Garcia.

Q. Where do you live, Ms. Garcia?

A. I live in West Chicago.

Q. Could you talk a little bit more about your experience in West Chicago, how long you have lived here, that sort of thing?

A. Actually, I was born here. I was born December 20, 1969. My parents are Luis Alcántar and Carmen Alcántar. My mom is no longer with us, but my dad is. It's a lovely town. I love it. I love the community. We all get along so well. Everywhere I am, hello, no matter who it

02:44:17PM

is. Everybody comes together when we need to. We all have the same concern and worries regardless of what the our ethnic background is. We get together a lot.

I'm currently the BPAC president for West Chicago District 94, and I'm always for the community. I'm always -- That's the way I have been all my life. I like to do what is right for our community, especially West Chicago.

02:45:19PM

Q. You mentioned you're the board president for -- I didn't catch what the organization was?

A. BPAC is Bilingual Parents Advisory Committee. So our children bilingual, most parents are not. I am. So we try to have this community that the -- actually, ISBE encourages us to have. It's a very good environment here in West Chicago.

02:45:55PM

Q. So it sounds like that's one way you're involved in community affairs in West Chicago. Are you also involved in an

organization called People Opposing DuPage Environmental Racism?

A. Yes. Yes, I am. PODER is an environmental community for immigrants of the area of DuPage.

Q. You have to speak up a little bit.

A. Our mission is to educate, empower, and advocate for the struggle of Latino and immigrant communities.

02:46:39PM Q. When you say "Latino and immigrant communities," where -- are you talking about in West Chicago? Can you tell me a little bit more about who PODER and ISD represent?

A. Here in DuPage County this organization, Immigrants Solidarity DuPage, began in 2007, and I joined them in 2011. And then PODER began about 2012, 2013, when members of West Chicago came to us with a different issue.

02:47:24PM Q. So PODER formed -- Well, PODER was formed in response to concerns in West Chicago?

A. Yes.

Q. But the title of the organization talks about DuPage?

A. DuPage, yes.

Q. Can you explain that? If it's West Chicago focused, why are you identifying DuPage in the name of the organization?

A. Because DuPage County is a county where the largest population probably is Latino, it's an immigrant community. It's probably -- I want to say it's in the census. Unfortunately, in the census, not everybody was counted recently. But I am sure this is our status, in DuPage County we are a majority of Latinos and immigrant communities.

02:48:05PM

Q. West Chicagoans are?

A. Yes, West Chicagoans.

(PODER Exhibit No. 1 marked for identification.)

BY MR. WEINSTOCK:

Q. I'm going to ask you to pull up what's been marked PODER Exhibit 1. You mentioned a moment ago census data and the notion that West

02:48:28PM

Chicago is the center of many of the Hispanic or Latino community within DuPage as a whole. Is that what this exhibit depicts?

A. Pretty much. To an extent where I know so many of our community were not counted but, yes, we are at the top. I do agree we are the largest population, especially here in West Chicago.

Q. Is there anything else about this chart that you think reflects your experience in West Chicago and why PODER is organized the way it is?

02:49:14PM

A. Well, because it's a Latino community. It's an immigrant community. Also, there's low-income, people of low income, there's poverty, and many people who do not speak English at home.

Q. Thank you, Ms. Garcia. So fair to say that this chart, based on the census data that you asked your attorneys to prepare, reflects, in general, your experience of the way West Chicago compares to DuPage County overall?

02:49:56PM

A. Yes.
Q. Noting the point that the census likely undercounts the foreign-born person and Latino members?
A. Yes.
Q. As part of your work with PODER -- Well, strike that.
When -- We're here today, obviously, to talk about a proposal on the table
02:50:25PM from LRS. When and how did you become aware of the proposed LRS facility that's at issue in these hearings?
A. I became aware during the first time -- I believe they submitted the -- this LRS -- The permit for the siting, the first time they came around. I want to say it was before the pandemic, and members of West Chicago came discussing this issue, and they brought it to our attention. There were some meetings around
02:51:12PM 2019 where I listened in to what was being spoken of, and that's where I learned a little more of what the LRS was and what they were

planning to do.

Q. Those meetings in 2019, were they public meetings that LRS was presenting at? Were they meetings you were hosting? I'd just like to know --

A. It was a -- It was a community organization. It may have been the citizens advocacy but, later on, we had visits at our -- at our center in Wheaton of concerned West Chicagoans that were also concerned at this -- they were concerned, actually, at the silence after it appeared that they were not approved. So they were very concerned at the silence from anything, anything about this.

02:51:59PM

Q. So you became aware of this in 2019. And, after that, you expressed a concern about the fact that the public wasn't aware of what was going on with this after 2019 for some period?

02:52:28PM

A. Right. Exactly.

Q. At a certain point, did you become aware again of what was going on with this

proposal?

A. I did become aware a bit after the pandemic started. I did periodically listen to people or there were people presenting this where I would go shop at Jimenez here and there were concerned citizens about it there. That's where I started to say, This is happening. You know, this is coming up again. It interested me to make sure I knew and got involved.

02:53:24PM Q. So you mentioned meetings in 2019. You mentioned shortly after the start of the pandemic you heard about it from some other people in the community. Were any of those people affiliated, to your knowledge, with Protect West Chicago?

A. No. No.

Q. Have you -- Are you affiliated with Protect West Chicago?

A. Not at all. I mean -- I have heard of

02:53:52PM them recently because they are in this, but I have no idea who they were or whose funding them or anything.

Q. Do you, yourself, PODER or ISD have any official relationship or connection to Protect West Chicago?

A. We do not at all.

Q. How about to Waste Connections?

A. No. I guess that's Groot. I didn't even know they were Waste Connections.

Q. That was my next question. Any connections between yourself, PODER, or ISD with Groot? 02:54:24PM

A. No, not at all.

Q. You mentioned that members of PODER have concerns about the Lakeshore proposal at issue here today?

A. Yes.

Q. Would you just introduce, sort of in general terms, what are the concerns of PODER and its members with respect to the application of LRS?

A. Well, the impact. The impact it's going to have on our community. I do hear we're going to have more trucks coming in. I do 02:54:45PM

hear -- Listening here, there's so much in concern. So many red flags waving. My concern is we're not being listened to.

Q. Thank you, Ms. Garcia. PODER and its members had these concerns with the LRS facility. Did you -- Have you taken any steps to do any investigations on your own to understand what the -- what the affects of the facility might be?

02:55:44PM A. Very interested in this. We all -- PODER, our organization, we all started to do -- My physical participation was air monitoring and the counting of diesel trucks.

Q. We're going to take those one at a time. We're going to start with the counting of diesel trucks?

A. Okay.

Q. So, first, when you mention we did -- you were engaged in the counting of diesel

02:56:17PM trucks. Who specifically counted trucks?

A. Me.

Q. You, personally?

A. I did.
Q. Anybody else?
A. No.
Q. Could you maybe talk about, in general, how you counted the trucks, where were you, when, and we'll try to get a complete picture of it?
A. Well, I began counting trucks actually in the month of December. It was difficult for me -- I have kids, my oldest with autism -- to just go out and do all of this while they were going in school, but December seemed better. I was able to be there, like, for an hour, up to three hours sometimes, if it was possible. I would sit in the front of each facility LRS and Groot, and I would count the trucks that would come into their facility and out.
Q. So you counted entering and exit?
A. Yes.
Q. Did you take any notes while you were out there to make sure you were keeping tabs on what you were seeing?

A. Well, yeah. It was little tallies -- little notes with tallies so I wouldn't miss. That's what I would do, my own old-school style.

Q. I think that's pretty much how anybody counts trucks. Did you -- did you -- Can you take a look at Exhibit 2 -- what's in the folder as Exhibit 2. Just take a moment to flip through it. And my question for you, Ms. Garcia, is just going to be: Are those the handwritten notes you mentioned?

02:57:58PM

(PODER Exhibit No. 2 marked for identification.)

BY THE WITNESS:

A. Yes. Yes, they are.

Q. Thank you. When you were counting them, when you were marking them down -- So you would count separately at each of the two facilities; is that right?

A. Yes.

02:58:17PM

Q. So you would sit out front of the facility --

A. Yes.

Q. -- and just count the trucks coming and going.

How did you know they were exiting or entering a particular facility?

A. Watching them. Yeah.

Q. Understood. How did you know -- Could you describe the trucks? What kinds of trucks were coming in and out?

A. The garbage trucks that each company has, the semi trucks, they were pretty big trucks. And there were other companies, I guess. I couldn't -- Like, Groot had Republic and LRS had other trucks come in that probably were weren't LRS, but there were other, maybe, companies independent. I don't know.

02:58:44PM

Q. In your notes you counted every truck, no matter what sort of company name was on the side?

A. Yes. No matter what was, it's counted.

02:59:21PM

Q. You didn't differentiate between -- Let me ask that a different way. I'm sorry.

Did you differentiate in your counting between, like, 18-wheel semi trucks and garbage trucks you might see in the neighborhood, or did you just count every --

A. I just counted every truck.

Q. Did you count, like, passenger cars?

A. No. No. Just, you know, the garbage trucks and up, the big things -- big rigs.

Q. I think big rigs is about how I would describe it also. Thank you.

02:59:50PM

So I'm going to ask you now to look at what's been marked PODER Exhibit 3 and PODER Exhibit 4.

Do you see those in front of you?

(PODER Exhibit Nos. 3 and 4 marked for identification.)

BY THE WITNESS:

A. Yes.

Q. Do these appear to be summaries of the notes that we looked at as Exhibit 2 that you asked myself and my team to prepare for you?

03:00:05PM

A. Yes. Yes, they are.

Q. I'd like to just ask you to just to quickly, if you could --

MR. WEINSTOCK: Well, I guess, Hearing Officer Price, I would have her walk through and testify to the fact that she saw the number of trucks indicated on each day and maybe skip over that and move these into admission if that's more efficient for everybody.

HEARING OFFICER PRICE: Put on the case you want to put on. I'll have the objections at the end when you're done with your case in chief.

03:00:41PM

MR. WEINSTOCK: Thank you, sir.

BY MR. WEINSTOCK:

Q. Ms. Garcia, do you remember being out at the LRS facility on December 6, 2022?

A. Yes.

Q. Do you remember how many trucks -- Well, do you remember how long you were out at that facility on that day?

03:01:01PM

A. An hour, yes.

Q. Do you remember how many trucks you

saw go in and out?

A. 137.

Q. Same sets of questions: Were you there on December 7th at the LRS facility?

A. Yes.

Q. About how many trucks did you see either entering or exiting?

A. 132.

Q. I guess I'll stop and ask a question. Those numbers, 132, that's both going in and going out?

03:01:21PM

A. Yes.

Q. Maybe it's the same truck counted twice because it came in and out, maybe not; it's just the number of vehicles you saw go through the gate?

A. Right. Correct.

Q. On December 13th, were you at the LRS facility?

03:01:38PM

A. Yes.

Q. About how long were you there that day?

A. December 13th?
Q. Yes, ma'am.
A. I was there 90 minutes.
Q. About how many trucks did you see entering and exiting that day?
A. 153.
Q. How about December 19th, were you at the LRS that day?
A. Yes.
03:01:55PM Q. About how long?
A. 70 minutes.
Q. About how many trucks in that span?
A. 157.
Q. How about December 19th?
A. I was there for 62 minutes.
Q. About how many trucks did you see enter or exit during that time?
A. 148.
Q. Same question on December 28th,
03:02:14PM Ms. Garcia?
A. 64 minutes. And the trucks were 170 trucks.

Q. 1:45 in the afternoon, that's -- Do you know, offhand, is Powis Road generally really busy in the middle of a day like that?

A. It looked busy, yeah. I was shocked that at that time it was busy but, yes, it was pretty busy.

Q. On December 30th, 2022, were you at the LRS facility?

A. Yes.

03:02:50PM Q. About how long were you there that day?

A. I was there 62 minutes.

Q. About how many trucks did you observe?

A. 144.

Q. I'm going to ask you the same questions about Exhibit 4.

A. Yes.

Q. Exhibit 4 represents your notes from your truck watching at the Groot facility or the

03:03:09PM Waste Connections facility; is that right?

A. Yes. Exactly.

Q. Were you out there at that facility --

the Groot or Waste Connections facility on December 8th?

A. Yes, I was.

Q. For about how long?

A. 72 minutes.

Q. How many trucks did you observe entering or exiting?

A. 141.

Q. On December 12th, 2022, were you at the Groot or Waste Connections facility? 03:03:27PM

A. Yes.

Q. How many -- About how long were you there?

A. 100 minutes.

Q. About how many trucks -- Excuse me. How many trucks? Not about how many.

A. 173.

Q. On December 21st, were you at the Groot facility?

A. Yeah. I was only there 35 minutes because it was very freezing. 03:03:41PM

Q. I think we all remember the weather

that the day. How many trucks did you see in that 35-minute session in the morning?

A. 72.

Q. Did you go back out in the afternoon that day?

A. No. I wanted to, but there was no way. It was too cold. Wait a minute. Yes, I did. From -- I remember. From 1:39 to 2:45. It was 66 minutes. And I did count 202 cars -- trucks.

03:04:23PM

Q. Thank you.

A. I remember, because I was shocked, and I had a phone call from Cristobal and he was like, 202 trucks today?

Q. That's a lot of trucks in an hour on a cold day.

A. So yes.

Q. Did you go back out on December 29th to the Groot facility?

03:04:46PM

A. Yes, I did. 82 minutes and 166 trucks.

Q. Thank you, Ms. Garcia. You can put

down the exhibits now.

What -- When you were out there over the span of those days at the two facilities observing the trucks coming in and out, what were your impressions? What did these results mean to you?

A. They are alarming to me. It's a lot. Then learning that we're going to get more. How much more? And what the impact is going to be, you know, it's -- it's frightening for me.

03:05:26PM

Q. Are you aware -- Well, I'll put it this way: On Page 2 of the Criteria 6 submission from LRS, the KLOA report, LRS claims that their proposed facility will result in fewer trips by certain trucks because they are LRS trucks that currently deliver municipal waste somewhere else and then drive back to the facility on Powis Road to park overnight and LRS is claiming that those trucks wouldn't have to go somewhere else so there will be fewer entrances and exits at the Powis Road facility because LRS can just dump the transfer and park

03:06:07PM

them in the same location. LRS states that it's a reduction in truck traffic of a certain kind.

Do you believe that that change is a benefit to the community?

MR. MUELLER: I'm going to object to her beliefs.

HEARING OFFICER PRICE: She doesn't have a foundation for this either. Sustained.

BY MR. WEINSTOCK:

03:06:38PM Q. Ms. Garcia, did you review the LRS application materials?

A. Yes, I did.

Q. Did you look at their traffic study submitted by KLOA for Criterion 6?

A. I did.

Q. Did you observe that that report indicates what I mentioned a moment ago?

A. Yes.

Q. What was your reaction when you saw

03:07:00PM LRS's claim?

A. That's not going -- It's not convenient for the community. It's convenient

for LRS.

Q. So I understand that Powis Road runs through a relatively industrial area?

A. Yes.

Q. The fact that the Powis Road is not directly a residential road, does that address any of your concerns with the amount of truck traffic that you just described?

A. Not really. It does not. It's just that when I'm doing this observation, I do see that at various times it's very windy, it's very windy. You know, the emissions of trucks or anything that's there is not going to just stay idling there. There's wind. It's going to blow. Where is that wind blowing all of that pollution? That is my concern because there are respiratory issues, asthma, in children. So I am a mom and, also, where I do -- what I do with the schools, I hear lots of concern. It's -- It's sad to see that this issue is being ignored. So as a mom, I do worry. Fellow moms worry that this is going to multiply the

03:07:43PM
03:08:43PM

diseases of -- respiratory diseases in children are going to multiply.

Q. As someone who has reviewed the LRS application materials, as a community leader in the schools in West Chicago, as a mother, do you believe that LRS has addressed concerns about where diesel pollution from within their facility or the trucks driving to it, where that pollution would end up?

03:09:26PM MR. MUELLER: I'm going to object. She clearly is not qualified.

HEARING OFFICER PRICE: I agree, but she is not an expert and is not qualified to talk about the expert opinions rendered. But the question did limit her to her experience as a citizen of West Chicago and as a mom. With the very limited scope of the question as asked, I'm going to overrule your objection.

To be clear for the record, she is

03:09:52PM not an expert and not qualified to give opinions about other expert testimony.

BY MR. WEINSTOCK:

Q. From your perspective, Ms. Garcia, do you believe LRS has analyzed or addressed the concerns about where diesel pollution would end up from the their facility?

A. No, they have not.

Q. Let's move on now to the second action you took to investigate the LRS application yourself. You mentioned air monitoring?

03:10:26PM A. Yes.

Q. Can you tell us about the air monitoring efforts you undertook?

A. Yes. We were trained to use the AirBeam device that is downloaded on our phones, the application. And then we go out there, we make sure we fully charge our device, and then as we are out there to pick our site. We go to our app, we activate a reading -- we make it active. We put the area where it's at, the map

03:11:17PM comes up, and then we initiate the session.

Q. Okay.

A. We move around a bit so the device

starts to read. And it's going into our phones. It's an application that's keeping all the graphs and maps.

Q. Again, for the record, that's the AirCasting application?

A. Yes, it is.

Q. It connects to a sensor. Is that the AirBeam sensor?

A. Yes, it is.

03:11:47PM Q. Do you -- I'm going to ask you a couple questions about how that works building off of what you just said.

A. Uh-huh.

Q. First, you mentioned you charge the device. That means you charge both the sensor and your phone, I guess?

A. Yes, of course. Yeah.

Q. When you do that -- When you activate the app -- I think you said activate or turn it

03:12:10PM on -- do you have to do anything else when -- When you're out there to take monitoring on a particular day, let's say, what steps do you as

the user need to take to start to monitoring or actually do the monitoring?

A. Well, I have to take -- Like, I filled out the form, the temperature, how the wind is blowing, these little details, and I put it in the monitor where I'm doing my air monitoring, my name, and then basically that's it. When we're done, we have to finish the session, and then we keep that until we're able to e-mail to

03:13:00PM who we need to give us that information, those sheets.

Q. When you say "finish the session," what do you need to do to finish the session?

A. To finish it, well, send it. There's, like, three dots. When we're done, we push the three dots and finish recording.

Q. So just press a button and turn it off?

A. Uh-huh.

03:13:22PM Q. Did you receive any special training to use this app or do you have any technical background?

A. Yes. I don't have any technical background, but our forest preserve commissioner, Jeffrey Gahris, trained us to use this device and how to use it appropriately so it reads. This is -- He came to us for other matters, but also this came in at the right opportunity for what I wanted to do.

Q. So who paid for the app and the monitor itself?

03:14:00PM A. This was something that was donated to us -- I would want to say to PODER.

Q. Do you know who donated it?

A. Yes. Jeffrey Gahris from -- He's a forest preserve commissioner.

Q. So when you got the app, by the way, do you need any special license or do you have to interact with the company that does the app at all or can anyone just download it?

03:14:36PM A. Well, we had to have just the training but, like, one of our coordinators, Rafael Villa, he's the one that when we want to add someone else or recruit someone else, he downloads it,

he informs us how to use it and watches us use it, so when we're out there, we use it correctly so that it reads correctly.

Q. Based on what you have seen about this app and the materials you read -- Well, I guess, did you read any of the materials from the app or instructions from the app itself when you started using it?

A. Yes.

03:15:08PM Q. Based on the things you read from the app creator, do you believe this is a device that's intended for anyone to be able to use it or is it intended only for technically trained experts?

A. I believe it's intended for anyone to use it. There have been instances where we have heard other community organizations tell workers to use it where they are working to monitor the air quality there in other instances, not here.

03:15:46PM Q. Again, I just want to backtrack so we all have a clear understanding of how this monitoring works. So you have downloaded the

app, you have been trained on it, both by people who know how to use it and by reading the materials?

A. Yes. Correct.

Q. When you go out to monitor, you enter the air temperature?

A. When you go into the app, you know, you have to turn on the device. It has you connect first. Connecting the device has you do

03:16:25PM steps to connect your phone to the device.

Q. Like Bluetooth or something?

A. Yes, Bluetooth. Then there's a screen where you put your name, the place you're monitoring -- air monitoring, LRS or Groot, and the next -- there's a little -- where you can put if it's a certain intersection, if there's a light, or the temperature, you can put it's very windy today, it's very cold and all these details. Then you turn on the session.

03:17:07PM Q. Then you leave it on --

A. You leave it on.

Q. -- for a certain period of time?

A. Yes.

Q. During that time, the monitor -- do you know what the monitor is doing, just generally?

A. It's reading. We have to move around a little bit when we're walking, and then it starts reading. It's a very interesting device. It is.

Q. Can you see the readings as they are coming in?

03:17:34PM

A. Yes. Yes. When I'm looking on my phone sometimes, I look and make sure I see it's going on and it is. It's very interesting. Very interesting to see the spikes going up. And when we began doing this, I was out there without a mask. As a precaution, I wear a mask because there's a lot going on out there.

Q. For it to take the readings, do you have to do anything as the user or does the monitor just take them automatically?

03:18:20PM

A. It does it by itself.

Q. Do you know how often it takes a

reading?

A. Maybe a second and a half.

Q. Do you know what air pollutants it monitors?

A. The one that I know for sure is the PM2.5.

Q. Do you know anything about PM2.5?

A. I do know that it's -- Can I use this?

Q. Just try to answer first based on your knowledge, as you sit here today? 03:19:04PM

A. Well, it's -- It's what is being used because it impacts public health -- it affects public health and it's very dangerous if it exceeds a certain level.

Q. To get back to sort of the way the app works. It's automatically recording, the monitoring you think it's about every one second or one-and-a-half seconds?

A. Yes.

Q. It records Particulate Matter 2.5, among other things. Then I think you mentioned before, the app, then, saves the data in some 03:19:35PM

format; is that right?

A. Yes, it does.

Q. Are you able to export that data?

A. Yes. It's still there, everything I have. At any time I can export information.

Q. I'm going to ask you a little bit about the particulars of that data in a moment. Before we do that, I just want to tee up a couple things.

03:20:06PM Have you ever downloaded that data to some format you can share with other people?

A. Well, it does have the option for me to share data. In the past I did share the sessions to our forest preserve commissioner Jeffrey Gahris and then recently to our lawyers today.

Q. When you shared that data with me, did you change any of the data before you sent it to me?

03:20:43PM A. I don't think that's possible.

Q. Do you know how I received that data? You hit send on the app, I take it. Do you know

how it showed up for me?

A. Yeah. I sent it from my app. That's how I was told I could share it.

Q. So you -- Did you even download that data yourself?

A. No.

Q. It went directly from the app to me?

A. Yes.

MR. WEINSTOCK: I'd like to now ask you to look at what's been marked PODER Exhibit 5. I'll represent for the record that this exhibit is the automated messages that my office received from Ms. Garcia's app directly. What we did -- I'll ask Ms. Garcia to talk about what these numbers are in a moment.

But just for the record, what we did was download those files directly from the app. I believe the e-mail name was AirCasting.com where I received it from. Then we just packaged up what were extremely voluminous Excel files and put the numbers here. As I indicated before the break, we are happy to

provide those Excel files to all of the parties at the hearing. We just didn't believe anybody needed stacks of Excel paper that's misformatted.

MR. MUELLER: Mr. Price, maybe counsel should testify and not Ms. Garcia, since he's the one that prepared the exhibits.

HEARING OFFICER PRICE: Ask the witness.

03:22:19PM (PODER Exhibit No. 5 marked for identification.)

MR. WEINSTOCK: I was getting to that, Mr. Mueller.

BY MR. WEINSTOCK:

Q. Ms. Garcia, you took the data; is that right?

A. Yes.

Q. I'll start with this: On PODER Exhibit 5, you see there are two -- two tables,

03:22:37PM the top table says, "PM2.5 at the LRS facility."

Do you see that?

A. Yes.

Q. And then there are -- On the leftmost column, do you see where it says "date" and "time"?

A. Uh-huh.

Q. Going down that row, do you remember going to the LRS facility on December 6th at about 9:41 and starting one of these air monitoring sessions then?

A. Yes.

03:23:01PM Q. On December 7th, do you remember going to the LRS facility at about 10:07 a.m. and starting one of these AirBeam sessions then?

A. Yes.

Q. On December 8th, at about 12:36 p.m., do you remember going to the LRS facility and starting one of these AirBeam sessions then?

A. December 8th we were inside the LRS facility. Cristobal and I were asked to come in to talk to the people at LRS, and I had the

03:23:28PM monitor on.

Q. Oh. So December 8th, those readings reflect the air quality inside the LRS building?

A. Yes, inside.
Q. I see. Okay. December 13th, do you remember going to the LRS facility and initiating an AirBeam monitoring session around 10:31 a.m.?
A. Yes.
Q. On December 19th, do you remember going to the LRS facility and starting a monitoring session around 9:09 a.m.?
03:23:56PM A. Yes, I did.
Q. December 19th, do you remember starting another session around 11:22 a.m.?
A. Yes.
Q. On December 28th, do you remember going to the LRS facility and starting a session around 1:39 p.m.?
A. Yes.
Q. On December 30th, do you remember going to the LRS facility and starting a session
03:24:16PM around 10:56 a.m.?
A. Yes.
Q. For those -- Other than the

December 8th readings, could you generally describe where you were when you turned on the AirBeam monitor?

A. There's like this front -- I'm going to call it the front lot. The LRS -- There's a gate, and I would park a bit closet to the stop sign -- there's a stop sign there -- and that's where I was, in front of the facility.

Q. Outside the gate?

03:24:49PM A. Yes.

Q. Right in front of the facility?

A. Yes.

Q. I'm going to ask you same set of questions about the Groot facility just so we know these readings are your readings?

A. Sure.

Q. On December 8th, did you start a reading at the Groot facility around -- I think there's a typo there -- 9:19 a.m.?

03:25:11PM A. Yes.

Q. On December 12th, do you recall going to the Groot facility and starting an AirBeam

session around 1:30 p.m.?

A. Yes.

Q. On December 21st, do you remember going to the Groot facility and starting a session around 9:06 a.m.?

A. Yes, I do.

Q. On December 21st, I believe that was the very cold day, did you start another session at 1:37?

03:25:32PM A. Yes, I did.

Q. On December 29th, did you go to the Groot facility and start an AirBeam session around 10:36 a.m.?

A. Yes.

Q. Did you -- Do you remember ever going to either facility on another day and doing an AirBeam session?

A. No.

Q. Ms. Garcia, I'm going to ask you to

03:26:01PM help us interpret this chart a little bit. So we have been through the left-hand column. Each of those numbers in the left hand column

represents an AirBeam monitoring session that you, yourself, started on the date specified that began at the time specified?

A. Yes.

Q. And did it at the time specified?

A. Yes.

Q. Was at the facility that's specified at the top of the table?

A. Yes. Yes, correct.

03:26:24PM Q. The headers for the table and the header for the document says "PM2.5"?

A. Uh-huh.

Q. Let's take you all the way to the column on the right side that says "Maximum." What do you understand that column to be representing?

A. Well, the highest number of that particular pollutant in our air that is being in the air at that time.

03:26:52PM Q. How about the next column in, the one that says "Minimum" at the top, what did you understand that to be?

A. Well, again, it would be the minimum, the least amount of the 2.5 pollutant.

Q. How about one more column to the left, "Average"? What do you understand that to be representing?

A. The average. I mean, throughout the time I was there, that's what was present in the air that my monitor picked up.

Q. Can you explain how the monitor works? Do you know how the monitor works? 03:27:32PM

A. No. All I know is how to use it. I was trained to use it for air monitoring.

Q. So when you took these results and you looked at them, what did these results mean to you?

MR. MUELLER: I'm going to object.

HEARING OFFICER PRICE: Sustained.

BY MR. WEINSTOCK:

Q. Ms. Garcia, based on someone who lives in West Chicago, who is active in the community, who is a leader at the schools in the community, as a mother in the community, someone who is 03:27:58PM

trained to use this app, when you saw these numbers, what did they mean to you?

MR. MUELLER: I'm going to object again.

HEARING OFFICER PRICE: Sustained.

MR. WEINSTOCK: May I ask why, your Honor?

HEARING OFFICER PRICE: You may not ask why, but I'll tell you why. She's not a trained scientist. The app has not been recognized by any court in the land. I just did a search. None of this is scientifically relevant. I appreciate the effort. She did what she did. I can't stop it from coming in as comment or, in this case, testimony. But she is not qualified to talk about -- She doesn't even know how the app works. She said so. You just laid that foundation. And she's not shown to be an expert in any of these things. So we're moving on.

03:28:20PM

03:28:45PM

She's not going to render an opinion about the science. That's not her value here. Her value is as a mom, she has made it

clear she's concerned about the pollutants. She is not qualified to talk about how polluted the air is based on an app that no court has recognized yet. Until you bring in a scientist to cite the proper foundation using the proper educated formulas for how you get in expert testimony, we're not going to do it. No.

Sustained. Next question.

MR. WEINSTOCK: Thank you, your Honor.

03:29:17PM BY MR. WEINSTOCK:

Q. Ms. Garcia, are you aware of any federal agency that issues standards that determine how much Particulate Matter 2.5 in the air is too much for public health and welfare?

A. The United States EPA.

MR. WEINSTOCK: I'd like to point you to what's been marked as PODER Exhibit 6. Your Honor -- Hearing Officer Price, I'm sorry, that -- PODER Exhibit 6 is a U.S. EPA fact sheet

03:29:52PM that is published by U.S. EPA, by the agency. I would ask you to take administrative notice of the document.

(PODER Exhibit No. 6 marked for identification.)

HEARING OFFICER PRICE: Nope. It's a proposed rulemaking, which means it's not a regulatory standard yet and it's got, for some reason, in the columns on the side is the environmental justice stuff, which I've told you is not part of 39.2. So, no, I'm not taking any notice of PODER Exhibit 6.

03:30:16PM You can do what you want right now and when it comes time to determine whether I'm going to admitted it as a piece of evidence, we'll do that. I'm not taking notice of a proposed rulemaking.

MR. WEINSTOCK: I'm not asking you to take notice of the proposed rulemaking --

HEARING OFFICER PRICE: That's what this fact sheet is. On January 6th the U.S. EPA announced a proposed rulemaking. That was only

03:30:37PM a week ago.

MR. WEINSTOCK: I'm asking you to take notice of what the EPA is saying in the

document, how they are the describing the standards.

HEARING OFFICER PRICE: It's not a regulation yet. It's a proposed rulemaking. Bring me an expert who wants to testify as to what the recognized standard is and that with the proper measurement that's violated, do that, but that's not this witness.

MR. WEINSTOCK: Okay.

03:30:59PM BY MR. WEINSTOCK:

Q. Ms. Garcia, earlier today in this hearing there was a witness, Mr. Powell, who testified on behalf of PWC. I'll offer that Mr. Powell testified that the health-based primary U.S. EPA standard for PM2.5 was 12 µg/m3?

A. Yes.

Q. I believe the record will reflect that.

03:31:23PM A. Uh-huh.

Q. As a member of the community, as a mother, not as an expert, what is your reaction

when you compare the levels on this chart to Mr. Powell's testimony that 12 µg/m3 is what is necessary to protect health and welfare?

MR. MUELLER: I'm going to object again.

HEARING OFFICER PRICE: Sustained. There's really no basis that we know that it was over 12. She's concerned about pollution as a mom and as a member of the community. We have established that. She has no basis to talk about anything technical.

Sustained.

BY MR. WEINSTOCK:

Q. Ms. Garcia, I'm going to move on because that's what we're going to get there.

You testified earlier that you have been following this proposal from -- I believe you said 2019?

A. Roughly, yeah. From the last time that it didn't go through.

Q. So you have been following this proposal. Would you -- You're aware that

Criteria 2 of the statute indicates that LRS must prove that the facility would protect public health and welfare?

A. Yes.

Q. To your knowledge, as a leader in the community, someone who has followed this proposal for several years, what steps are you aware of that LRS has taken to determine what the public health or welfare is in West Chicago?

03:33:06PM A. I don't see they tried. I don't see they even tried to talk to the community.

Q. Are you aware of any instances by LRS to solicit input from the public or regarding the potential health, safety, and welfare effects of its proposed facility?

A. No.

Q. You did mention that you were invited on December 8th, I believe, for a meeting at the LRS facility?

03:33:35PM A. Yes, we were.

Q. Can you please describe your impressions of that meeting or your recollection

of that meeting?

A. I was in there, and then we had -- It was a table with many representatives from LRS. Cristobal and I came in to see a bit of pressure from a couple of our colleagues and elected officials, but we did come in. We thought, okay, let's see what they will say. They gave us, well, all this propaganda. There was coffee, there was cookies, there was food. But

03:34:27PM everybody was talking and Cristobal and I, we couldn't even get a comment in.

In the end, Cristobal had to leave, he had something -- you know, we're busy. I stayed, I listened, and we both suggested -- it wasn't that we told them to do it -- that they -- if they honestly wanted the community, to go out to the community, go out and reach out to them, make a forum and communicate what you're doing. It started where Cristobal and I

03:35:14PM received two e-mails and then that was done.

They apparently planned to make a community forum right before New Year's or after

Christmas. We were here in city hall advocating to have these public hearings these days in January, which, thankfully, that's what happened because the concern is our community -- I'm sorry. You know, it may bother people that I'm talking about Latino communities. But in our community we are very involved with Guadalupe, with many things we do as Catholics or Christians and believers that we are. We also
03:36:04PM go visit family, maybe in Mexico and everything. We we're not going to be able to be here between the dates of Christmas. We weren't going to be able to be here December 15th or something like that.

The idea to hold a community forum, probably -- what was it -- December 29th or something. I'm getting a text from two of our colleagues. It wasn't a phone call from LRS or something -- a professional protocol to come
03:36:48PM invite us. When we have a community forum, we are inviting people, we are putting it on Facebook, we are doing everything so people

come, and we're not the professionals, as I have been told. If we would have gotten a phone call, we would have brought the community to this as much as we could. Okay. But that was the sole intention of not allowing our community to come and listen.

Then this -- These public hearings right here, I wish our Latino was included. I wish this was all in Spanish and there was every effort to go out there so that my community knows what's going on here. I may not be a professional, as I have been told.

I am a mom. I am a Latina. Born and raised in West Chicago. There's every effort to silence me because I am voicing my community. I'm sorry. I got really sentimental here but I don't know what else to do today and I just hope that what Martin Luther King once said, When it's time to do the right thing, do the right thing. Do it. There's always time to do the right thing.

03:37:39PM

03:38:31PM

MR. WEINSTOCK: Thank you, Ms. Garcia.

I'm sorry. Does someone have a tissue? I don't have one with me. I'm sorry.

BY MR. WEINSTOCK:

Q. Thank you for that, Ms. Garcia. I do have just a couple more questions. And this is going to seem really trivial at this point, but you mentioned a couple of times you attended a meeting with someone named Christoval. Can you just say who he is?

03:39:12PM A. He's our coordinator, one of the founders of Immigrant Solidarity DuPage and --

Q. Just a couple more questions. I promise. As a person who has followed this closely since 2019 -- around about 2019, as a leader in the community, are you aware of any effort made by LRS to understand how the public health, safety, and welfare impacts of its proposed facility might interact or combine with other current or historic pollution sources in

03:40:08PM the West Chicago community?

A. I'm sorry, but I have not.

MR. MUELLER: I'm going to object to

that.

HEARING OFFICER PRICE: She got her answer in.

Overruled.

BY MR. WEINSTOCK:

Q. In your opinion, as a community leader, not as an expert of any sort, do you believe it would have been important for LRS to examine the potential impacts of its proposed facility in connection and in combination with other stressors -- environmental stressors, past and current, on the community of West Chicago?

A. Yes.

Q. LRS claims that overall truck traffic will be reduced sort of overall because some of the trucks that currently drive to a facility in Batavia will now drive to this facility in West Chicago. I think the record has reflected that.

What is your -- As a resident of West Chicago, the public that this facility will be located next to, what is your reaction to the argument that it's in the public benefit because

trucks will no longer go to Batavia but will come to West Chicago instead?

A. This will benefit LRS, not our community. The idea, if I understood correctly, there will be times these trucks are going to be parked there, so, you know, that's not what we -- what we want. You know, their trucks park here. This is -- It's not it's not convenient for our community at all. Everything is

03:42:09PM community -- for LRS, the company who wants to cut costs.

Q. Ms. Garcia, you have followed this application, you said, for a long time, do you happen to know what day the application was submitted to formally kick start this process?

A. September -- I think like -- oh, gosh. A week -- A week after -- I want to say the Monday after they had the Mexican Independence Day festival, which was only one day, on

03:42:51PM Saturday. The Monday, I believe, that's when -- In September, that's when it came out. That's when I -- That week I read it came out on the

West Chicago city website.

MR. WEINSTOCK: Ms. Garcia, time is short. I want to thank you very much for your testimony today. Some of the other lawyers may have questions for you. I'll be sitting right over there.

HEARING OFFICER PRICE: Protect West Chicago?

MR. MEZA: No questions.

03:43:24PM HEARING OFFICER PRICE: Mr. Mueller.

MR. MUELLER: Can I have 60 seconds outside with my client and Mr. Hock, just to maybe cut all of this short?

HEARING OFFICER PRICE: Sure.

(Discussion off the record.)

HEARING OFFICER PRICE: Mr. Mueller?

MR. MUELLER: Thank you.

CROSS-EXAMINATION

BY MR. MUELLER:

03:45:18PM Q. Ms. Garcia, you said LRS gave you propaganda?

A. Yes.

Q. That was in the form of coffee and cookies?
A. If that's what they want to say it was, sure.
Q. But they invited you in and answered your questions and were pretty friendly, weren't they?
A. They were friendly, yes.
Q. Do you remember being telephoned by
03:45:48PM Katie Neary and talking to her briefly?
A. Nope.
Q. When you were taking readings at the Groot facility, they did not invite you in, did they?
A. No.
Q. They asked you for ID and made you feel unwelcome, right?
A. There was the one time I was asked for ID, but I thought that was fine, you know.
03:46:32PM Q. How far do you live from the LRS facility?
A. I personally live on Center Street

here in West Chicago.

Q. All right. Did you ever take any readings at your house?

A. No, because I wasn't told to take readings of my house.

Q. Okay. And the person that trained you on this device is a forest preserve commissioner?

A. Yes, Jeffrey Gahris.

03:47:07PM Q. You don't know what specialized knowledge he has, do you?

A. He is part of the Sierra Club, and he also -- he's in public health.

Q. You said he's with the Sierra Club?

A. Well, I see him with -- collaborating with the Sierra Club and he collaborates with us on other issues.

Q. You're aware the Sierra Club supports this proposal?

03:47:45PM A. Recently, yes.

MR. MUELLER: Thank you, Mr. Garcia. I have nothing else.

HEARING OFFICER PRICE: Mr. Callaghan?
MR. CALLAGHAN: No questions.
HEARING OFFICER PRICE: Mr. Walsh.
MR. WALSH: No questions.
HEARING OFFICER PRICE: Mr. Weinstock, any redirect?

REDIRECT EXAMINATION

BY MR. WEINSTOCK:

Q. Just a really quick question because I think something may have been lost in your testimony. Mr. Mueller said that -- Mr. Mueller said that when LRS invited you in, that they answered your questions.

Do you remember when Mr. Mueller just said that?

A. Yeah.

Q. When you went in to LRS, did LRS actually answer any questions that you asked?

A. They were just talking -- They presented the PowerPoint and they were all talking, but we really couldn't ask questions. It's not that maybe -- I don't know. Maybe they

just didn't think of allowing us to speak. Maybe the pressure that we were in there. But Cristobal and I weren't asked to ask questions, to address our concerns to them. We just saw everything they were planning to do.

MR. WEINSTOCK: That's all I have, Mr. Price.

HEARING OFFICER PRICE: Protect?

MR. MEZA: No.

03:49:10PM HEARING OFFICER PRICE: Mr. Mueller?

MR. MUELLER: No, thank you.

HEARING OFFICER PRICE: All right. Thank you, Ms. Garcia.

MR. WEINSTOCK: PODER is going to ask Mr. Steve DeLaRosa to testify.

(Witness sworn.)

MR. WEINSTOCK: Thank you, Mr. Price.

WHEREUPON:

STEVE DeLaROSA,

called as a witness herein, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. WEINSTOCK:

Q. Mr. DeLaRosa, can you please state your full name for the record and introduce yourself?

A. My name is Steve DeLaRosa. I'm a long-time DuPage County resident.

Q. Are you active in PODER?

A. Yes, I am. Because I am a volunteer with Immigrant Solidarity DuPage. It's been a local award-winning community organization that has received awards from the City of Wheaton for being a good community partner. And basically I have known them since their beginning, from when I was a board member of the Citizen's Advocacy Center, which I'm no longer on.

03:50:24PM

Q. As part of your work with ISD and PODER, did you become aware -- At some point, did you become aware of the proposed LRS facility we're all here talking about?

03:51:09PM

A. Basically it came to my attention in the fall of 2022, when we became aware that the

City of West Chicago was planning to host public meetings addressing the permitting process here in the City of West Chicago.

Q. After you learned about the LRS proposal in the fall of 2022, did you take any steps to learn about the proposal?

A. Yes, I did.

Q. Could you describe those steps, please?

03:51:53PM A. Basically I began to bolster up my knowledge about how DuPage County has historically produced a solid waste plan for DuPage County.

Q. Did you also look at any of LRS's materials related to the proposed operations of the facility?

A. I really didn't have any access to any of the Lakeside -- Lakeshore information because I wasn't an attorney privileged to get discovery

03:52:35PM items that have been shared with the other members of the city and besides being represented here. As a public citizen it sure

would have been nice to have those documents. As a resident, my uncle lives in West Chicago, I have other family members that live in West Chicago, and I, myself, am impacted by the permitting process which we're talking about here today.

Q. You're aware, though, that LRS did -- I guess the city posted LRS's application materials on the website?

03:53:26PM A. Yes.

Q. Did you review those posted application materials?

A. Yes, I did. But let me just say that while I may have reviewed those documents on the city website, you have to remember I am a private citizen and I am not an employee of the City of West Chicago, nor am I an attorney retained to process this quasi judicial process that we're involved in.

03:54:04PM Q. Mr. DeLaRosa, you looked at the application materials on the website. And as you were looking at them, understanding you're a

private citizen, didn't have the access to all of the materials that maybe were exchanged earlier in the hearing, did you have any professional background, though, that helped you understand what LRS was proposing?

A. Well, yes. I retired from being a manufacturing wrench supervisor/manager in the food processing industry in the greater Chicagoland area for a number of years in Burr Ridge, also a municipality of DuPage County; here in West Chicago, a municipality, as we all know, of DuPage County; and other places that have basically given me training and knowledge about how to take care of employees and how to motivate employees and how to keep employees in the same shape that they came into the building so they can go home to their families. That's how I've trained myself to act as a manager because it's a principal idea in my mind, because I have been on both sides of the table working as a wrench, as a maintenance mechanic, trained in electronics and PLC controls and HVAC

03:54:55PM
03:55:51PM

systems. I worked for Chiquita brands in Franklin Park, where we utilized different ways to clean fresh vegetables that we packaged and produced for home consumption under the Chiquita and Fresh Express label. And for a time at Chiquita, we worked in partnership with Praxair to develop a process for ozone sanitation of fresh vegetables as a way to get away from using the chemicals that we were using at the time to process these vegetables. I learned a lot working in that partnership with Praxair.

03:56:56PM

Q. Just so I have it right, the project with Praxair, that was about indoor air quality in the workspace; do I have that right?

A. Well, specifically it was dealing with the creation of and generating of ozone as a chemical property to topically apply to the surface of fresh vegetables. But I can recall Mr. Hock talking about the viability of the ozone HVAC process that he alluded to in his testimony of rooftop units to be used in the proposed facility.

03:57:37PM

Does anybody have a glass -- a bottle of water? There isn't a drinking fountain out there, and I don't want to squeak at you. I don't want to give you too much comedy -- I'm sorry. I lost my place.

Q. Maybe that was a good place, actually, for me to ask another question. I guess, can you -- You don't have it in front of you. I'm bringing you what's been marked PODER Exhibit 7, 03:58:51PM which everyone else should have in their folders.

Is that a copy of your most recent -- I'm sorry. Mr. DeLaRosa, is Exhibit 7 a copy of your most recent resume?

(PODER Exhibit No. 7 marked for identification.)

BY THE WITNESS:

A. Yes, it is my most recent resume.

Q. I'm going to ask the question that I 03:59:21PM know Mr. Mueller asked a couple nights ago.

Why does it stop in 2011?

A. Well, I didn't want to work anymore

and thought I should retire, so I did that the in 2018. I retired from being a maintenance mechanic with M&M Mars in Burr Ridge where I worked a total of ten years before I retired from them. While I was with M&M Mars, I was a part of an incipient fire brigade that was made up of volunteer employees who said that they wanted to get trained in the use of subcutaneous breathing apparatuses because we warehoused over
04:00:15PM 100,000 pounds of liquid ammonia onsite to refrigerate our ice cream manufacturing line.

Pardon me while I take a sip here.

Q. Please. So you were at Mars from 2011 to 2018, you had been there previously, as reflected on your resume; is that right?

A. Let me just take another look at this because this really is the resume that I used to come back to Mars.

Q. Sure.

04:00:54PM A. Because I worked for Mars from '90 to '95 in my first stint, and then Mars -- as corporate employees typically do at certain

points in time, is they eliminate half of their workforce in order to generate profits or, in the Mars instance, for the family; and in corporate instances, for their shareholders. So I was eliminated. Then I went onto find work for other food processors as the resume attests to.

I was just going to say that -- Because I wanted to follow up about the incipient fire brigade. So that fire brigade training, we were trained by the Illinois Fire Protection Service in air quality and monitoring because we had processes that can deplete oxygen within a confined space in a process line.

We used liquid nitrogen to freeze down ice cream to take it from soft serve to rock hard within a minute using liquid nitrogen being sprayed over the ice cream in a tunnel. When you run a process like that, you have to have air quality monitoring because the nitrogen isn't 100 percent contained in this vessel. So we had oxygen sensors within this room to

04:01:44PM
04:02:35PM

basically tell us when it was alarm time and people needed to leave. Because if the oxygen dropped beneath 19 percent, it's not good for humans and it's time for them to leave. So we had alarms set up that would go off, red lights flashing, horns sounding to get the heck out of there no matter what you were doing. Leave the line running if you want, shut it down, whatever, but leave the room to protect yourself as an employee.

04:03:22PM

I was struck by Mr. Hock's testimony about the state-of-the-art proposed facility that was going to be -- that is proposed to be built for this transfer station because I wondered --

Q. Mr. DeLaRosa, if I may stop you there for just one moment. I'm going to ask you to go back to that. I just want to ask -- Just to stay with your experience for just one more moment.

04:04:02PM

Have you -- So you described a number of experiences, professional experiences,

practical experiences. Have you received any training or certifications that relate in any way to indoor air quality issues in workplaces?

A. Yes, I have. Over the years, as my resume shows, I have received specific trainings and also I have just recently completed an OSHA 300 course regarding safety in the workplace and have a certificate from OSHA testifying to that training.

04:04:45PM MR. WEINSTOCK: I'm sorry. Mr. Price, we were unable to find the certificate. I'm going to show it to Mr. DeLaRosa to get him to authenticate it. I'll pass it around to everyone as soon as we can. We didn't have a chance to make copies.

(PODER Exhibit No. 8 marked for identification.)

HEARING OFFICER PRICE: This is 8?

MR. WEINSTOCK: This will be 8. I

04:05:04PM didn't want to put the sticker on because it's his only copy.

BY MR. WEINSTOCK:

Q. While I'm chauffeuring the certificate around, want to tell us what that certificate means, what did you do in order to obtain it?

A. Sure. This OSHA training basically was a refresher for me because I had received other OSHA training in my past work life. But this is the most recent one that I have taken because as a retired guy, and I don't know how many of you out there are getting close to the point of being -- I'm not looking at you --

04:05:54PM

MR. WEINSTOCK: I move to strike that discussion of retirement-aged individuals in the room.

(Laughter.)

HEARING OFFICER PRICE: Time is expiring. Let's focus, please.

BY THE WITNESS:

A. You pick and choose the things that you want to do. That's one of the joys of being retired. But it also is part of my work-life experience in terms of wanting to gain knowledge

04:06:12PM

about what the keeps people safe in a workplace. That's really why I was empowered to take this training and it was offered to me through Immigrant Solidarity DuPage because we had a benefactor that provided this training for us, because it's not cheap and you have to commit to being there for a whole week and you have to get up at a regular period of time and be there. And when you're retired, that's something special.

04:07:03PM

Q. You mentioned a benefactor paid for it. Do you know who that was?

A. You know, I don't -- I don't recall the name of the person who donated the training to Immigrant Solidarity DuPage, but I'm sure I can produce it if required.

Q. Do you know how much it costs, the training, roughly?

A. I think it was $1,200 per individual.

04:07:30PM

Q. Do you have any reason to believe that the individual who provided that funding has any connection to Protect West Chicago?

A. Well, seeing as I can't remember his name, I don't think that -- I can't say because I don't even remember what his name is, so it's like -- I can't answer that.

MR. WEINSTOCK: That's fair enough. I think Mr. Price would probably sustain that objection.

HEARING OFFICER PRICE: By the witness to his own testimony.

04:08:03PM BY MR. WEINSTOCK:

Q. Mr. DeLaRosa, with all that background on your experience, I'd now like to ask you to provide your reaction to the LRS proposal, the application materials you reviewed from the website, and Mr. Hock's testimony that you listened to at the hearings these past couple of weeks.

MR. MUELLER: I would object. He's not qualified as an expert in anything.

04:08:24PM HEARING OFFICER PRICE: I agree. It's very limited based on his experience. All we have asked for here is his reaction. He's not

purporting to provide an expert opinion and testimony. It's just based on his reaction. He is a participant, so I'm going to allow this question to be answered.

Overruled for now.

MR. WEINSTOCK: Thank you.

BY THE WITNESS:

A. Can you restate the question, please?

Q. Based on the professional experience you just described, the certifications you obtained, your review of the LRS materials on the website, and listening to Mr. Hock's testimony the past couple weeks on the hearings, I just want to know, simply, your reaction to their application materials?

04:08:50PM

MR. MUELLER: Same objection.

HEARING OFFICER PRICE: The objection is noted. For the record, Mr. DeLaRosa hasn't been present for all of Mr. Hock's testimony. But based on just his limited experience, I'm going to let him answer.

04:09:15PM

So, please, answer the question,

Mr. DeLaRosa.

BY THE WITNESS:

A. Okay. So I'm going to answer from the perspective of being a worker who has to perform functions in a facility where air quality is a primary concern, because you talked about having a state-of-the-art filtration system to protect your workers. But I know that you have the ability to have six different diesel operated machines indoors all running at the same time producing beaucoups -- a lot of noxious fumes in a facility. And I didn't -- I know as a worker, I'd want to know that there are air safety monitoring in place to know that the interior atmosphere within that room -- you don't have to be an expert to know this, because we're humans.

04:10:04PM

04:10:49PM

If you don't have 19 percent oxygen, you're going to start going faint you're going to start -- you're going to start not feeling normal and you could fall down trying to leave an area like that.

If I was working in a place as I

heard described and there were big front-end loaders working around me spewing stuff into the air, six different trucks coming in performing motions, tipping, dumping waste, waiting, and no system of operation for the doors to open and close. It's because -- From what I heard, they were going to rely on somebody pushing a button to open and close a door. To me, that's not very protective. Running a big front-end loader
04:11:50PM in an enclosed space that's -- with workers trying to do the best job that they can for the company. Wow. Having to keep their eyes and wits about them so that they don't run over anybody is a real challenge.

So -- And I know, from my work experience, that rooftop units only do so much work. Every time you open and close a door, you're creating an enormous inrush of air and you don't have to be an expert to know that.
04:12:29PM That's common sense. I mean, who doesn't tell their kid, Close that door or you're letting all the air-conditioning out or you're letting the

heat out. Who doesn't do that? I'm sorry. Maybe I'm a bad dad, but I do that. It's like I don't want to heat the neighborhood, I don't want to cool the neighborhood; and that same air that you're letting out, is the same air that you're talking about having ozone treat to get rid of odors and to take out particulate. So I would wonder about that.

Q. Mr. Gahris -- DeLaRosa -- I'm so sorry, Mr. DeLaRosa. 04:13:13PM

Mr. DeLaRosa, you -- noting that you haven't been able to be present for every moment of Mr. Hock's testimony, you were here -- I believe it was Tuesday night, when Mr. Hock testified --

HEARING OFFICER PRICE: We're not going to do this. He's not qualified to comment on Mr. Hock's testimony. Ask a real question.

MR. WEINSTOCK: Okay.

BY MR. WEINSTOCK: 04:13:42PM

Q. You mentioned a moment ago, Mr. DeLaRosa, that you were concerned about the

indoor air quality, based on your experience and based on your review of the application materials, what you had seen. One of the things I think you said --

MR. MUELLER: I'm going to object. That's not what his testimony was.

HEARING OFFICER PRICE: His testimony was what it was.

Ask a question.

04:13:59PM MR. WEINSTOCK: Yes, sir.

BY MR. WEINSTOCK:

Q. Diesel trucks will be inside this facility with the doors shut, maybe with the doors open. If the doors are shut, you expressed a concern about indoor air quality with those emissions; is that right?

A. Yes. I would be concerned, because as a manager -- And I had people working in a facility like that. As a manager and as a past

04:14:25PM safety officer, who I think the building manager for this site was sited to wear two hats: As a building manager and a safety manager. For a

safety manager, you really got to be on the work floor all the time because people that you have working for you do stupid things and you need to be around to see what's happening so nobody gets hurt. I know we used to keep an OSHA 300 log because we were required to keep an OSHA 300 log in our cafeteria or at a prominent site to be able to identify how many cuts, scrapes, and bruises took place within this facility within a
04:15:19PM year's time.

That was used to basically determine how safe of an organization we were creating. As a manager, that was important to me.

Q. Mr. DeLaRosa, understanding that you're not testifying here as an expert, but based on, again, the professional experience you described, the certifications you received, your review of the testimony and of the application
04:15:46PM materials, are there any measures you believe LRS should take to ensure the welfare of its workers and the people who may pass by or be

near the facility?

MR. MUELLER: He's not qualified to opine.

HEARING OFFICER PRICE: Sustained.

MR. WEINSTOCK: Mr. DeLaRosa, thank you very much. That's all I have.

HEARING OFFICER PRICE: Protect West Chicago?

MR. MEZA: No questions.

04:16:13PM HEARING OFFICER PRICE: Mr. Mueller?

CROSS-EXAMINATION

BY MR. MUELLER:

Q. Mr. DeLaRosa, you got that OSHA certificate this past December, right?

A. Yes.

Q. Was that because you wanted to be able to have that when you testified here?

A. Not at all.

Q. It's just a coincidence that you got

04:16:33PM it in December?

A. I'd be happy to answer that question.

Q. My question is: Was it just a

coincidence?

A. Can you ask that again?

Q. Was it a coincidence that you happened to get your three-day OSHA course in December? Or was that intended to help you at this hearing?

A. I had no idea I would be testifying at this hearing when I took the OSHA course.

Q. And you have been retired for a number of years, right? 04:17:10PM

A. Yes, since 2018.

Q. Mr. DeLaRosa, what is ozone?

A. Ozone? Ozone is an extra oxygen atom added to the oxygen particle.

Q. What's the chemical formula for it?

A. 03.

Q. You are not familiar with the technology that LRS proposes to use for air cleaning at their facility, are you?

A. Are you telling me or asking me? I don't understand the question. 04:18:08PM

Q. Are you familiar with the technical

aspects of their technology?

A. No. Because it hasn't been stated, except in general terms talking about ozone.

Q. At first, when you testified, you said that you didn't have access to all the information here, right?

A. Correct.

Q. But then you also said that you did have access to the entire application, which was online, right?

04:18:42PM

A. I don't recall specifically saying that, but I do recall looking online at what was available but not having access to all of these documents that I was able to receive coming for testimony. I didn't have access to that as a private citizen, no.

Q. You didn't register as a participant either, did you?

A. Yes, we did.

Q. PODER -- Who is "we"?

04:19:20PM

A. PODER.

Q. PODER has had access to all of the

documents that have been handed out in the hearing, right?

A. Within the hearing, but not before the hearing.

Q. What documents that were handed out before the hearing are you aware of that the public didn't have access to?

A. Everything that was given out at the hearing, produced by evidentiary proceedings

04:19:54PM that I'm thinking took place before the hearings took place, because you produced documents, Protect West Chicago produced documents. The city hasn't but ...

Q. PODER has gotten all those documents, right?

A. Well, we have gotten all of the documents at the hearings, yes.

Q. And you can't tell me a specific document that was released before the hearings

04:20:24PM that you didn't get, can you?

A. Not before the hearings, no.

MR. MUELLER: That's all I have.

HEARING OFFICER PRICE: Mr. Callaghan?
MR. CALLAGHAN: No questions.
HEARING OFFICER PRICE: Mr. Walsh?
MR. WALSH: Nothing, Mr. Price.
HEARING OFFICER PRICE: Redirect, Mr. Weinstock?

REDIRECT EXAMINATION

BY MR. WEINSTOCK:

Q. Mr. DeLaRosa, just a question on Mr. Mueller's question about ozone. Where did you learn about what ozone is and what the chemical formula is?

A. The joint venture that Fresh Express did with Fresh Express, Chiquita, Ready Cut did with Praxair. We had the availability of working with state-of-the-art vegetable cleaning at corporate, which the used ozone, and that's where I developed the background for my familiarity with ozone.

04:20:42PM

04:21:17PM

Q. Ozone is one of the indoor air pollutants that LRS has identified as being a problem in their potential -- Let me rephrase

that.

Is ozone one of the indoor air pollutants that LRS has identified as being relevant inside their proposed facility?

A. Well, they haven't identified it as a pollutant, but it can be. They have identified it as a component of their rooftop units that are supposed to scrub the air within this vast amount of space that's contained within the proposed site.

04:22:00PM

MR. WEINSTOCK: I understand now. Thank you. That's all I have.

HEARING OFFICER PRICE: Protect?

MR. LEUTKEHANS: Nothing.

HEARING OFFICER PRICE: Mr. Mueller?

MR. MUELLER: No, thank you.

HEARING OFFICER PRICE: Thank you, Mr. DeLaRosa.

MR. DeLaROSA: You're very welcome. And thank you for the water.

04:22:15PM

HEARING OFFICER PRICE: Do you have another witness, Mr. Weinstock?

MR. WEINSTOCK: That's it for PODER.
HEARING OFFICER PRICE: Mr. Callaghan, you would be next?
MR. CALLAGHAN: No witnesses.
HEARING OFFICER PRICE: All right. Does the city intend to call any?
MR. WALSH: No.
HEARING OFFICER PRICE: All right. What that means, unless the -- Applicant, do you
04:22:41PM intend to call anybody in rebuttal, Mr. Mueller?
MR. MUELLER: I don't believe so.
HEARING OFFICER PRICE: All right. What that means, then, is the evidentiary portion of the hearing is concluded. We'll be moving onto public comment. I'm going to excuse Mr. Walsh because he's got a prior commitment -- scheduled meeting.
The public comment will take place for the balance of the time today. That's until
04:23:16PM 5:00 o'clock. And then we'll resume Thursday at 1:00 in this room. Again, public comment is for those people who signed up for it, and I'll be

happy to take that. There's none of the usual time limits or anything on that. It's not subject to any cross. It's information that will be presented to you as part of the record to the city council.

And as a reminder to everybody, following the conclusion on Thursday of the oral public comment period, in receipt of that commentary, there will be -- I will close the hearing and there will be 30 days from Thursday for anyone and everyone to submit written comment to city council. 30 days includes a postmark on the 30th day, so if you mail it in if you're not here or something.

04:23:52PM

From there, stay tuned for the schedule of what the special meetings will be. I'm informed city council will have special meetings. That's not my call. That's the city council and their attorney's call. At the end of the 30 days, they are going to send me their proposed -- I'll set a schedule on Thursday -- their proposed findings of fact, their proposed

04:24:24PM

conclusions of law. I gather those things together in addition to them going to city council, I make a report and recommendation. And then, from there, city council does its job.

I thank everyone for coming. I know it's a holiday, the Open Meetings Act to the extent it applies, allows us to meet on special occasions on these holidays where a meeting is already scheduled, as it is today.

04:24:59PM With all of that, then, I know there were two people -- I'd like to handle them first -- who had to testify -- do their public commentary today. That was Ms. Layman's and -- I wrote it down -- and Mr. Dzierzanowski? Did you have to go today? Was there someone else that had to go today that talked to me earlier? Is there anybody here who needs to go today besides Ms. Laimins?

(No response.)

04:25:46PM All right. We'll go as long as we can go. Madame Court Reporter, we're on to public comment. And we'll begin with

Ms. Laimins.

MS. LAIMINS: My name is Barbara Laimins, L-a-i-m-i-n-s, a resident of West Chicago. Just to provide some background, my husband and I chose to raise our family in West Chicago over 50 years ago. We chose West Chicago so our son would grow up in a community that was culturally and economically diverse with excellent schools, a city government that welcomes citizen input, and had city (inaudible) that would provide a good quality of life.

04:26:23PM

While West Chicago has grown over the years, it has maintained the feeling of a small town where people care about each other. It is a community that celebrates and embraces its diversity. Excellent planning and vision by success of city leadership has grown our industrial base that has benefitted the citizens of West Chicago by maintaining our low property taxes, which are the envy of surrounding communities.

04:26:52PM

I learned about the proposed waste

transfer station through a headline in the Daily Herald that stated, West Chicago citizens fear their city will become the garbage capital of the western suburbs, experience lower home prices, and affect the quality of life for the citizens. Shortly after, a mass mailing arrived at home filled with assertions of increased odors, lower property values, and damage to our environment and encouraged residents to attend
04:27:21PM meetings.

As a result, I have attended all of the hearings. I have listened to the petitioner and the opponents and have concluded that the fear mongering, unfounded, unsubstantiated concerns raised by the opposition are more the danger to the perceptions held about West Chicago than the transfer station itself.

Testimony has been presented that demonstrated that the petitioner has met the
04:27:45PM required criteria for the siting of the transfer station and are willing to agree with additional caveats that have been identified. In fact, the

petitioner proposes a state-of-the-art facility that would seemingly exceed the procedures and practicing of the current transfer facility located a quarter mile away from the proposed site.

Importantly, the petitioner has shown there will be no increased odors, environmental impacts, or traffic on residential streets of West Chicago. The transfer station will support the DuPage County Solid Waste Plan of 2022 and the environment by increasing recycling opportunities for homeowners and those who live in apartments. West Chicago, DuPage County, and the DuPage Airport will benefit financially from the negotiated host agreements, which will, in turn, keep residential property taxes low.

04:28:16PM

The establishment of the waste transfer station will also allow for competition in the waste industry that will ultimately bring benefits to consumers through lower prices due to competitive bidding on waste hauling

04:28:41PM

contracts. A second waste transfer station located in the established industrial area of West Chicago will not negatively impact the property values of West Chicago residents. It is those who continue to malign West Chicago by negatively labeling the community as the garbage capital of the western suburbs that will do that.

My only concern and disappointment after attending the hearings is that the opposition group, Protect West Chicago, have not been transparent about their membership or released any financial information regarding donors and/or funding that would explain how they can support two lawyers, multiple experts, signs, and mass mailings. My request to the organization for this information has gone unanswered and, therefore, has created a lack of trust in my mind and in the minds of many about whose interest they are actually protecting.

In contrast, I have found the City of West Chicago to be fully transparent and, in

fact, the City of West Chicago has been commended by the Daily Herald for their efforts to inform and engage the community on this issue. As a result, I have faith and trust the City of West Chicago will do their due diligence in supervising the construction and operation of the facility to see that the site is developed and operated as proposed; therefore, the project has my full support and I will encourage my
04:30:15PM neighbors and friends in West Chicago to do the same. Thank you.

HEARING OFFICER PRICE: Thank you. The person who had contacted me was Nic Dzierzanowski. Is Nick here? Then I'll go -- People signed up. So I'll go in the order they signed up to see if they want to go today.

Bob Molenhouse.

MR. MOLENHOUSE: Here.

HEARING OFFICER PRICE: Want to got
04:30:42PM today?

MR. MOLENHOUSE: Just to let everybody know, I'm Bob Molenhouse. I was in the garbage

business --

HEARING OFFICER PRICE: Spell it.

MR. MOLENHOUSE: M-o-l-e-n-h-o-u-s-e, Robert.

(Continuing.) -- but my background is I was in the garbage business a lot of my life. I started the business with my brother Molenhouse Enterprises years ago, and I was out of it but I was back into it. And we,

04:31:12PM actually -- My brother sold the business to Lakeshore Recycling last year, and I actually worked as a contractor on the transition for them. I'm not on their payroll, never have been, but, you know, I was getting paid to do the transition, like, collect the revenues that were due.

Anyway, since I was in the business for a lot of years, I have a lot of knowledge about the business. And I, actually, heard

04:31:49PM years ago that Lakeshore in West Chicago was going to try to develop and open a waste transfer station. I was glad to hear this

because I was in the business, and it would create a much-needed competition. Free enterprise is the American way. I actually remember consciously thinking, Man, I'm impressed with West Chicago that they are even willing to consider this. Because a lot of places are like, no, I don't want that in my backyard. I also thought the location of the transfer station is perfect. It's an industrial
04:32:23PM park. It backs a rail line. It's next to an airport. It already has trucks driving to the many industrial buildings in the area. And there's no residential homes in the area, for the most part.

Why would you want another transfer station? Because I live in DuPage County, and I don't want to pay higher weekly disposal rates at my home in Wheaton because there's no competition. Over the many years Molenhouse
04:32:50PM Enterprises was in the waste hauling business and it was more and more difficult to survive. The industry has consolidated control of waste

disposal so much in DuPage County that it's very difficult to get competitive prices at the closest transfer stations. And, of course, higher dumping costs equal higher costs for DuPage and West Chicago residents.

I also care about the environment and I believe that a local transfer station -- and this is my, you know -- I'm not an expert in this, but it will help save the environment. As a former operator, I know how we operated. We would look for the best dumping rates to save money. If the closest transfer station costs too much, we would look to the next closest transfer station, which would inevitably be outside of DuPage County. We had to look at the costs to drive to the next closest site, we had to pay for labor, insurance, repairs, et cetera, and the big variable is fuel. If it was even a little bit cheaper to drive to the next closest transfer station, we would do it. How does this affect the environment? Well, Molenhouse was burning more fuel to go to a further dump site.

04:33:23PM
04:33:53PM

So do transfer stations, you know, they have to still take it to the dump. Well, because Molenhouse would save fuel, the transfer station -- at the transfer station, our disposal load is then combined with other garbage truckloads and loaded onto a transfer trailer. And I just asked somebody at Lakeshore: How many truckloads, like, from a residential truck can you fit into a transfer truck? It's
04:34:32PM basically three. So you can put three trucks' worth of garbage into one transfer trailer. So it's way cheaper per gallon or per ton for, you know, your mileage because you're getting three truckloads put in there.

Actually, when they showed that first thing about how -- the modeling and stuff. I'm like that modeling thing, to me, proves that it's worse to not have the transfer trailers because you can basically take and make it three
04:35:08PM times worse because you would have three times as many trucks running, you know, and all things equal. So it's way more efficient and way less

particulates blowing up into the air into our area around here. The fact of the matter is you have to have garbage service right now. We have a lot of garbage and that's just -- you know, you have to do it.

Anyway, basically -- I'll just tell you why -- I didn't believe this -- I thought it was very surprising, but a transfer trailer, it's just a big aluminum box. Most of them

04:35:45PM are -- There's no hydraulics on them. A transfer trailer, actually -- and truck weighs less than a garbage truck, believe it or not. You're like, hey, that thing is three times as big. It's because there's no hydraulics on it. There's no hydraulic cylinders. That all weighs a lot. That's why they can put three garbage truckloads into the thing and bring it to the dump. You know, that's a big -- a big plus for the environment.

04:36:15PM You know, in close, I just want to say they are just moving garbage from one truck to another truck. That's all they are doing.

And a smaller-capacity truck to a larger. They are not, like, storing garbage outside, and it's not blowing all over. With that being said, I fully support at second transfer station to keep our environment better and the competition better. Thanks.

HEARING OFFICER PRICE: Next one is Ms. Kathy Leski? Not here. All right.

Then I have Joshua Connell.

04:37:11PM MR. CONNELL: Good afternoon. My name is Josh Connell. Last name is C-o-n-n-e-l-l.

I am one of the cofounders and a current independent board member of LRS. What I wanted to do -- I have been here for every night of the hearings, listened to testimony, not only from our company and representatives, but also from the opposition. I just wanted to give a little history on the company.

At our roots, we are a small

04:37:43PM business. Are we today? No. I started Lakeshore Waste Services with one truck over 20 years ago. Also, my partners started their

company, Recycling Systems, a little over 20 years ago with one truck. We put our two companies together in 2012 to form Lakeshore Recycling Systems.

We have been a disrupter over the years. You know, we founded the company based on a need for necessary competition. In the late '90s, we had significant consolidation in the waste and recycling business.

04:38:18PM Mr. Molenhouse just elaborated on some of it. So we created a company based on great customer experience and we were a disrupter. We were very good at what we did. And for that reason, we have seen, you know, our -- at least one competitor put a lot of money and effort into fighting this facility.

Over the years -- And back in 2012, when we put the companies together, we did bring on private equity. Having private equity

04:38:47PM allowed us to build the facilities in the Chicago market. When you look at the Chicago market -- And we had great testimony on both

sides that I think said the same thing. In DuPage County we just don't have enough competition. On the periphery we do. We have a little bit of competition, our sites included. When you look at the vast majority of DuPage County, it's just not there. It's as close to a duopoly as you can have in a major metropolitan area.

When you look at the need -- and I can just tell you this from experience, when we grew our business in DuPage County starting in 2016, with residential contracts in Wheaton and Lisle and St. Charles and Geneva in Kane County, we did that because there was more competition at the time. We were able to secure good dumping rates at transfer stations in Batavia that were owned by Advanced Disposal.

You heard our testimony. When those facilities were bought by Waste Management, we have had nothing but massive price increases since. We have a neighbor that has capacity. We can't dump there. We have

04:39:17PM
04:39:47PM

never been able to dump at the Waste Connections facility that's a few hundred yards away. Believe me. I'd love to not spend 10 to $15 million on a waste transfer facility when we can go to our neighbor's facility. If that were the reality, we wouldn't be here having these hearings over the last couple of weeks. But it is necessary. And, as Mr. Molenhouse pointed out, it is necessary not only for West Chicago and its residents but also for DuPage County.

04:40:22PM

When you look at LRS, you know, one thing that we have done very, very well, and we'll continue to do, is be part of the community. We're always going to be a good neighbor. Are the we perfect? No, we're not perfect. Are there going to be situations where whether it's our litter or somebody else's litter, perceived litter, that's coming from our trucks, we want to be a good corporate citizen and make sure that we're taking care of those scenarios. Also, we'll do the same thing not only for our employees, but any of the residents

04:40:52PM

that are going to visit our facility for some of the free drop-offs and other benefits that this facility will bring.

At the end of the day, though, this facility is already there. All we're doing is adding another commodity, making, you know, huge upgrades to the facility that will make it better than it currently is while just bringing garbage into the facility. That's all we're doing. So I think it's a huge benefit for the City of West Chicago.

04:41:22PM

The revenue that they haven't seen before, added revenue to the community, which will help the tax base. And we'll be a good corporate citizen. We are a middle -- I guess, a middle range sized company now. We're not the small company that -- you know, from our roots but, you know, we're big enough to have the resources to solve problems and still be a disrupter in the market but small enough to know you and take care of problems and be available to the community as well.

04:41:52PM

Obviously, I support it. And I want to make myself available after the hearings for any questions or comments from concerned citizens or others. Thank you.

HEARING OFFICER PRICE: Thank you.

Next I have is Joy Rifkin.

MS. RIFKIN: Good afternoon, everyone, and happy Martin Luther King Day. My name is Joy Rifkin, R-i-f-k-i-n, and it's a pleasure to be with you all to offer a few words of support for our application to expand within West Chicago.

04:42:32PM

These are my independent comments in favor of the LRS expansion. At LRS, I help lead our sustainability, diversity, equity, and inclusion and social impact partnerships across the communities we serve.

I visit our West Chicago facility often because of our early employment program. As part of the program we mentor and train future mechanics that are currently in school at Universal Technical Institute. Our West Chicago

04:42:57PM

mechanics shop provides invaluable experience to these students allowing them to get hands-on job training on our diverse fleet of vehicles. When the students finish school and are hired full-time, we will provide up to $20,000 of tuition reimbursement, $4,000 a year for up to five years, and stable jobs with good benefits. We have already hired three of these students full-time at LRS, and I'm really proud of this program.

04:43:36PM

Combatting the climate crisis is one of the greatest challenges we'll face this generation, and I'm dedicated to being a part of this fight. Waste is an inextricably linked to climate change, and we are all part of the problem. We all create waste.

In fact, the average American creates over four-and-a-half pounds of waste a day. What happens to that waste is key. LRS prioritizes innovation and circularity. We cannot continue with business as usual. The West Chicago expansion offers an opportunity to

04:44:04PM

reduce greenhouse gas emissions, protect natural resources for future generations by recycling, and combat climate change.

Of course, we all want new projects to be net zero emissions, but the fact of the matter is we aren't there yet. We have to face the issues of our time with the resources at our fingertips. Electric garbage trucks are not readily available, as Mr. Powell mentioned incorrectly earlier.

04:44:40PM

Also, mining for lithium for batteries for electrification of trucks involves intense degradation of the environment. These trucks also don't have the battery capacity to manage the trash and recycling that we generate as American citizens. When electric trucks are readily available, environmentally sound, and have a longer battery life, LRS will be at the forefront of that transition.

04:45:08PM

City council members, I respectfully ask you to please vote yes for LRS. We are a major local employer and a recognized

leader in environmental sustainability and the repurposing material away from ethane emitting landfills. Thank you so much for your time.

MR. BRZOSKA: My name is Dale Brzoska, B-r-z-o-s-k-a. I am one of the longest serving street sweepers operators for LRS Clean Sweep. I have been a street sweeper for more than 25 years. Today our crews clean and beautify more than 60 municipalities throughout Chicagoland. We have called West Chicago our home base since I was employed back in 2007 for K. Hoving.

04:45:55PM

The management employees are hands-on locally based and live in the communities that we service. LRS cares about their employees and the environment's wellbeing. They encourage diversity and provide well-run essential services all out of our West Chicago facilities.

04:46:22PM

I encourage the city council to vote yes today. This is a win-win for west Chicago's residents, businesses, the city, and

the county. Thank you.

HEARING OFFICER PRICE: Thank you.

Next I have Christina Grano.

MS. GRANO: Good afternoon. My name is Christina Grano, G-r-a-n-o. I have been with LRS for six years working as an internal operations administrator in our West Chicago location. I'm very passionate about recycling, and that is one of the many reasons I work for LRS.

04:47:03PM

LRS is passionate about recycling, too, with reusing and finding a second and third use for material we receive from scrap metal and wood to drywall and other building materials. This is an issue that's personally important to me and with a yes vote from the council, West Chicago will be not known as the garbage capital, but as a trusted environmental leader.

I couldn't be more excited and proud to hear that our LRS will be also offering West Chicago residents free recycling drop-off six days a week. Recycling is not an option, as

04:47:32PM

well as free electronic waste drop-off for the West Chicago residents, so please vote yes.

HEARING OFFICER PRICE: Thank you.

Next I have Jennifer Tormey.

MS. TORMEY: Good evening. My name is Jennifer Tormey, T, as in Tom, o-r-m, as in Mary, e-y.

I worked in the transportation and trucking and logistics industry for more than 20 years, and I currently run our all women-run street sweeping division. LRS Clean Sweep has built its reputation operating from West Chicago earning the trust and confidence for more than 60 municipal customers across -- and hundreds of commercial businesses across Chicagoland, and continuously growing year after year.

From the pandemic to changing weather patterns, we wake up extremely early and work very long days to safely clean and dispose of the street sweeping material. This includes the buildup of debris from winter salt residue, falling seedlings from the trees in the spring

to fine particulates and piles of leaves in the fall.

The majority of our crew is dispatched from West Chicago, and we all work very long hours doing an extremely tough job, and LRS couldn't be more proud to offer a valuable career path with the outstanding benefits.

I am truly grateful to be employed
04:48:59PM by LRS and to be operating from our West Chicago facility in an extremely fast-paced operations environment. I wholeheartedly encourage city council to vote an approval for this upgraded facility. LRS is committed to keeping West Chicago a clean community and we already clean Powis Road and several of our other areas -- other roads in the area on a regular basis.

As part of this application, we committed to regular and daily sweeps of Powis
04:49:26PM Road, ensuring the areas surrounding our facility and within our facility is clean. I also -- as a mom who has stepchildren who live

in West Chicago and my child goes to school nearby, I fully support this measure, and I hope you do, too. Please vote yes.

HEARING OFFICER PRICE: Thank you.

Next I have Jennifer Quinn Morales.

MS. QUINN MORALES: Hi, good afternoon. My name is Jennifer Quinn Morales. I joined LRS earlier this year -- Sorry.

Q-u-i-n-n, space, no hyphen, M-o-r-a-l-e-s. I'll start over.

04:50:09PM

Good afternoon. My name is Jennifer Quinn Morales. I joined LRS earlier this year as one of our HR directors. I have since fallen in love with the culture and the people that we have been building across our sites and with the incredible benefits to attract and retain our union and nonunion employees.

Our company is growing rapidly and we are excited to be able to expand and grow in West Chicago. I recently had the chance to speak with many West Chicagoans recently at

04:50:34PM

St. Andrew Lutheran Church at Frosty Fest last month. As we talked -- We sponsored a heated tent there and we talked recycling, best practices, and job opportunities in West Chicago, as well as the whole LRS -- the sites nationwide.

I am proud of the many inroads we have made to support and uplift the people of West Chicago.

04:51:04PM I am also bilingual, so I would like to do this in Spanish, so our Spanish speakers in the audience can understand it. Bear with me. I am not a native speaker, but I am bilingual.

(Comments made by Ms. Quinn Morales in Spanish.)

HEARING OFFICER PRICE: Thank you. I think we're going to call it there. I have ten left for Thursday.

04:52:19PM The ten I have left are: George Strom, Jim Engineer, Joseph Lucarelli, Travis Ralph, Brian Clinite, Andy Ferrer, Jose Franco,

Ricky Reyes, Mr. Dzierzanowski, and Ms. Leski.

Mr. Dzierzanowski, did you want to do yours tonight?

MR. DZIERZANOWSKI: Yes.

HEARING OFFICER PRICE: I called you a couple of times.

MR. DZIERZANOWSKI: I had to work. I'm sorry.

HEARING OFFICER PRICE: We'll conclude
04:52:57PM with Mr. Dzierzanowski. And you're going to need to spell that.

MR. DZIERZANOWSKI: It's Nicolas, with a C. Dzierzanowski is, D, like David, z, like zebra, i-e-r-z-a-n-o-w-s-k-i.

City council members, I stand in front of you with thousands and thousands of our citizens of West Chicago in opposition to this transfer station. During the hearings the words "need" and "want" seemed to be interchangeable
04:53:27PM with Mr. Hock, Mr. Mueller, and the cofounder. Is it needed for our community? Absolutely not. We already have two that are servicing in our

area, but it's needed by LRS to increase their corporate profits on the backs of our citizens, and that is ridiculous. There is no need. There is plenty of capacity. As it was stated under oath, a 122 percent more capacity is available for our community. That's No. 1., there is no need.

Number 8, the zoning. I sat on the City Council of West Chicago for 10 years, 10 years on the Development Committee. Time and time again developers would come in front of us and use the zoning to get what they wanted. Well, this time, it's zoned residential within a thousand feet. Yes, it is railroad crossing. Can it be developed? Probably not. But that doesn't matter. It's zoned residential. That precludes it from that as well.

As my council members know, you have to adhere to the zoning at the time that the application is put in. The city council -- I, by the way, voted to have that railroad right of way changed to residential to protect our

04:54:10PM
04:54:41PM

borders from nuisance businesses. And here we are, ten years later, with a nuisance business trying to expand on our border.

20 years ago another company tried to build another transfer station within our community. Again, thousands and thousands of residents got together and voiced their opposition to it. The last I checked, only three residents that live in the actual
04:55:18PM community of West Chicago support this transfer station.

Thousands and thousands of residents of West Chicago have communicated to the city council through various e-mails and letters that they are in opposition to this. The community doesn't want it. The community doesn't need it. It is not right to put this in our community.

City council members, if you look
04:55:42PM at the facts as stated in these hearings, the truth will come out. It is not needed, nor is it zoned properly for it to be sited there.

Thank you, city council members, for your consideration. Thank you.

HEARING OFFICER PRICE: All right. We will call it there for the evening. Thursday at 1:00 o'clock for the rest of those names I had.

Again, if you hadn't signed up to do public comment, it's not timely to allow you to do oral public comment. You're welcome to submit the written public comment in the 30-day period.

04:56:17PM

With that, we're concluded for this evening, and I'll see most of you on Thursday.

(WHEREUPON, the above-entitled cause was continued to January 19, 2023 at 1:00 p.m.)

STATE OF ILLINOIS)
) ss:
COUNTY OF DU PAGE)

I, KRISTI LANDOLINA, Certified Shorthand Reporter, Notary Public in and for the County DuPage, State of Illinois, do hereby certify that previous to the commencement of the examination and testimony of the various witnesses herein, they were duly sworn by me to testify the truth in relation to the matters pertaining hereto; that the testimony given by said witnesses was reduced to writing by means of shorthand and thereafter transcribed into typewritten form; and that the foregoing is a true, correct and complete transcript of my shorthand notes so taken aforesaid.

IN TESTIMONY WHEREOF I have hereunto set my hand and affixed my electronic signature this 30th day of January, A.D. 2023.

/s/ Kristi Landolina
KRISTI LANDOLINA
C.S.R. No. 84-4611
Notary Public, DuPage County

(NO EXHIBITS MARKED)

HEARING OFFICER PRICE: Good afternoon. It is 1:00 o'clock, the appointed hour for continuation of the hearing on the application for the transfer station. Today we are here to hear oral public comment from those persons who properly registered to provide the same and haven't done so to date.

As a reminder, if you're interested in providing comment, even if you haven't signed
01:00:38PM up to do oral public comment, after the close of the hearing today you will have until February 18th to submit written comment. Anything postmarked, if you're mailing it, with a date of February 18th or earlier, will become part of the record, so everybody can submit whatever written comment they'd like. We'll talk about the time line again at the end.

For the attorneys in the room, I'd like for post findings, conclusions of law, and
01:01:06PM proposed conditions, if any, to me by the 21st, and then I will provide my report to council by the end of the 24th, then council will take it

from there.

I know the meeting dates are fluid at the moment. They are the trying to work out everybody's schedule. So stay tuned on those meeting dates. I'm sure that they will be posted on the website and they will be publicized. That's the schedule going forward.

With that, then, let's turn to the persons who are remaining who had registered for
01:01:44PM oral public comment.

We'll begin with Ms. Kathy Leski.

MS. LESKI: Hi. Thanks for letting me comment today. So, first, a couple of comments -- I made them earlier -- about transparency and the transcripts. I know it's a lot to go through and publish, but I'm happy to hear that they are going to start to be published from the earlier hearings.

The second point that I wanted to
01:02:13PM make is I'm really disappointed, even though they didn't have to attend, in our representatives not participating in these

hearings. The amount of transcripts that you're going to produce, as well as the hearings today, are a lot to go through and a lot to read and I don't have a lot of confidence that that's going to happen. I just want to make that comment.

It's a big thing for West Chicago and the residents. It appears that West Chicago has already made their decision on the direction they want to go in.

01:02:41PM Now, based on the testimony and the documents that were posted by LRS in their submission, I want to go through a few points and then I'll go into what I think, if it is going to be pushed through, of some of the things that need to be considered and put in place.

First, there's an argument made that they are not the big three companies, the public companies, that exist. But LRS is No. 4

01:03:08PM in size in the country. In fact, they are the No. 1 -- They tout the fact that they are No. 1 on roll-offs in the country. They have no -- I

mean, every company has an aspiration to grow and acquire, and they have been growing at the biggest clip of those four companies in the U.S. in the last two years. So I don't think that's an argument to be made and that somehow translates into financial benefit for the residents of West Chicago. I heard no numbers about what those numbers would look like, even for the residents of West Chicago, and how long
01:03:42PM those would be, and any commitment to stay public versus -- sorry -- stay private and not go public. So those arguments, to me, are to be not considered.

The other thing is LRS has a record of putting this kind of facility in very high-minority neighborhoods. West Chicago -- I'm proud to say I moved here because it's diverse. I have been here as a resident for ten years. I live just off of Hawthorne, so the
01:04:15PM closeness and proximity to this waste transfer station is a personal interest to me, but it should be to all residents of West Chicago for

that reason.

A couple of examples: Maywood has an 83 percent population that's diverse and Forest View has a 75 percent. And those are two transfer stations that LRS owns.

Now, on the topic of good for the environment and all of the recommendation letters that were submitted. There are very few that come from residents of West Chicago. If
01:04:51PM those counties and if those cities are interested in putting in a waste transfer station and believe that that should be done, another one is needed in DuPage, then where are they in offering up land? The only benefit to this station being West Chicago is to LRS. That is the only party in this that's going to benefit.

The thing about two hours of savings in truck traffic, I have looked for that
01:05:18PM report in the documents. I didn't see it. I'd like to request that it be posted when the transcripts get posted, because I don't buy the

two hours.

The purposeful description of the route the trucks would take when they leave LRS's transfer station takes them north on Powis, left on North to drive through the commercial section, to Kirk Road, and then over. The better route and the shorter route is to go south on Powis to Hawthorne to Kress, and then you can go to Kirk from Roosevelt or Kirk from
01:06:04PM the highway there. I can't think of the highway. Sorry. To me, that was a tactical decision or a strategic decision on their part, because the other waste station is not too far from that route.

The other thing I would challenge them with is their review of the HolyGrail 2.0 Initiative. I'm not even sure they probably even know about it, but it has to do with recyclability. I'd be interested that if this
01:06:36PM is going to be put into West Chicago, that it's done so with those lofty goals in mind, which means equipment that can stand plastics for

easier sorting and more reputable sorting.

All right. One last note on the traffic pattern. Again, they talked about the trucks leaving and to go up North Avenue. They didn't talk about the trucks coming in. I take Powis a lot because I live off of Hawthorne. So during these hours, that is heavy congested traffic. It is a two-lane road. There's no left turning lane to go into their facility. So
01:07:15PM where are the trucks going to come from? Are they going to have to go all the way around to Kress and come back up to Powis? Are they going to come down Hawthorne, which, actually, at the beginning of Hawthorne from 59 is a no-truck route. Not that the semis don't ignore that, but that causes damages. And that goes right through the city residential area proper. So I'd like to see that addressed.

The other part that was testified
01:07:44PM to is that, you know, the truck doors will close as soon as the -- you know, the sorting facility's doors will close. I have spent time

between these hearings looking at the practices. Right now, today -- and I know it's different type of material that you're sorting -- those doors don't close. They leave them open the entire time and there's no commitment that I see, other than these hearings, to say, yes, and we'll go through an audit to make sure we're doing it, an independent audit, or, better yet, have a residential council partnered with our
01:08:21PM own council to audit their practices to ensure that everything that they are promising will be committed to in practice. It's a lot of gum flapping, right, until it actually starts.

Of that, I would like to see and ensure that there are negative air systems within the facility, that there are misting devices to lower the dust and spread of smell and garbage throughout the area. I would like to see high-speed doors or loaders that close in
01:08:59PM seconds, rather than the speed at which you have now, which, obviously, is not fast enough because you leave them open the entire time.

The industrial area comment -- For those who live here, we know that West Chicago is made up of a combination of industrial and residential, but they have been very symbiotic in their living arrangements, I'll say, and very acceptable. I mean, industry brings tax revenue into the city and that should help offset our own personal property taxes.

This, on the other hand, is going to lower our property value. There was testimony earlier during these hearings that concluded, whether it's true or by perception, that property values will go down if this is instituted.

01:09:37PM

Is the environment a core driver? I mention that again. I believe that if the city approves this, some of the other things they should consider is a moratorium on cost increases for 10 to 15 years to West Chicago and real benefits down to the taxpayers.

01:10:14PM

So those are my comments. I thank you very much. And I'll turn it over to the

next person.

HEARING OFFICER PRICE: Thank you, Ms. Leski.

The next person is Jose Franco. I understand Mr. Franco will be using an interpreter.

MR. LUNA: Hi. My name is Jonathan Luna. I'm the MRF manager at West Chicago. I'm here to translate for Jose.

01:10:43PM (WHEREUPON, Jonathan Luna translated from English into Spanish.)

MR. FRANCO: Hi. My name is Jose Franco. As a MRF operator, I move materials to trailers out of the West Chicago facility. I have been employed by LRS and Prairie City Withholding for more than 22 years. I enjoy working with my colleagues. It is a great company to work for. I like my salary,

01:12:13PM attention to safety, and doing our emergency action plan to make sure we keep up with the best safety practices.

While I could have gone to work for other employers, I choose to stay at LRS because I love working with my colleagues, have a short commute, I love the industry, and I'm grateful for LRS. Please vote yes for LRS and all the facts. Thank you.

HEARING OFFICER PRICE: Thank you, Mr. Franco.

Next is George Strom.

01:12:38PM MR. STROM: My name is George Strom, S-t-r-o-m. Greetings and thank you for your time today. My name is George Strom, and I'm the vice president of municipal services for LRS. I'm also a DuPage County resident, who has spent nearly my entire life living in unincorporated DuPage County.

In my day-to-day role with the organization, I oversee all of the municipal waste hauling agreements. Until two years ago, 01:13:17PM I had spent my entire life working for my family's waste hauling company, Roy Strom, based out of Maywood, Illinois. I was the fourth

generation of the Strom legacy that was celebrating 76 years of business when we chose to sell our organization to LRS.

Over the past five years, the waste industry has consolidated into a group of either large national waste haulers: Waste Connections, locally known as Groot, $4.2 billion in revenue; Waste Management, $15 million in revenue; and Republic Services, 01:13:53PM $10 billion in revenue; or there are a few remaining local private remaining waste haulers, LRS and Flood Brothers.

While this industry has consolidated, the control of the transfer stations and landfills has drastically shrunk. Waste Connections, Waste Management, and Republic Services control all but one landfill in the Chicago region. That one landfill is owned by LRS in Atkinson, Illinois, about 01:14:22PM 145 miles away from here.

When you are a family business without a transfer station, it is becoming a

requirement to have a landfill to control your long-term disposal costs. If you think that getting a transfer station is hard based on this hearing, let me tell you, getting a landfill is next to impossible.

Roy Strom saw the writing on the wall when Waste Management and Advanced Disposal, one and, I think, four of the largest companies were allowed to merge. We believe
01:14:52PM that we would no longer be able to get favorable disposal rates from any of the large national providers, and LRS's landfill was too far away. We made the decision to sell our organization to someone who would continue with the tradition of quality service at a fair price. LRS was that partner. They kept all of our employees and have taken great care of our customers.

I believe it is unfortunate that this industry has been allowed to consolidate so
01:15:23PM drastically, because it tends to lead to a much higher price for the customer.

In my role at LRS I take great

pride in delivering value to my customers, who are municipalities and its residents. LRS, while not being the fourth largest company in the United States, we are a disrupter and we are growing, and we are always looking for ways to save money for our customers. Specifically, what I like to call "my residents" because I care for our customers.

In the past two years, while I have helped lead the municipal group, we have been able to use our close proximity of our operated and owned transfer station to win large municipal agreements. These new municipal agreements have delivered millions of dollars in savings to the municipalities and its residents. Some of the examples include the Village of Maywood. They were delivered a large savings and are located within one of our sites that has a transfer station. The Village of Oak Park, $2.8 million saved over five years, three miles away from the LRS transfer station; the Village of Schaumburg, $3.3 million saved over

01:15:57PM
01:16:28PM

five years, four miles away from the LRS transfer station; the City of Elmhurst, $2.5 million saved over five years, seven miles away from the LRS transfer station. These four municipalities have saved a combined $8.6 million. Might I add, none of them are located in DuPage County. This is due to the fact that in order for LRS to deliver large savings to its municipal clients, we must have been vertically integrated with a close LRS transfer station for the waste to get back to our LRS landfill.

01:17:07PM

If LRS were to be approved for this expansion to include a waste transfer station at our already existing facility located here in West Chicago, we would be able to deliver much more competitive rates to DuPage County and possibly, in the future, West Chicago. By being more competitive, we are able to deliver large savings to the residents of DuPage County making it that much more attractive of a place to live.

01:17:34PM

One worthwhile note, in all of but

one of those examples I provided, LRS was the only bidder versus the incumbent large corporation. If we were not here to bid, who would be the company keeping the prices fair and competitive? That might explain why so much attention and financial resources have been pumped into this hearing.

I know firsthand what the opposition is going to do to keep smaller companies from securing a transfer station. Years ago, when we attempted to gain a transfer station, a competitor hired people to go door-to-door to speak against Roy Strom and the transfer station we were trying to build. In the end, we were awarded the permit and we were able to deliver savings and continued to serve our customers for 13 more years until we were sold to LRS.

01:18:07PM

In closing, I ask you to see past the large national waste influence and think about the local influence and the support that they have expressed for this expansion. From

01:18:35PM

key stakeholders, such as Senator Villa, local union teamsters, the West Suburban Chamber of Commerce, the Sierra Club, and many others. And also look to the value that LRS is able to provide to you, West Chicago; to you, DuPage County; and to you, the residents.

I thank you very much for your time. I would ask you to strongly consider and vote yes for this new state-of-the-art recycling and waste transfer station. Thank you very much.

01:19:13PM

HEARING OFFICER PRICE: Thank you, Mr. Strom.

Next is Travis Ralph.

MR. RALPH: Good afternoon, everyone. My name is Travis Ralph, R-a-l-p-h, and I am the operations supervisor at our West Chicago facility. Part of my daily responsibilities are ensuring our residential, commercial, and roll-off drivers not only do their job but return home safely to their families. We are proud to hire local and deliver our services

01:19:46PM

safely without any disruption to the communities and neighborhoods that we serve.

I'm also super proud to be employed by LRS. I started six years ago with this company as a customer service representative; and through the growth through the years, I have since risen through the ranks thanks to the opportunities this company has provided me. We are excited about the possibility of finally
01:20:19PM being able to compete on a level playing field here in West Chicago and I wholeheartedly support our application to expand at our own facility based on our dramatic growth and the need for fair competition.

I urge the city council to vote yes for LRS. Thank you.

HEARING OFFICER PRICE: Thank you.

Next is Joseph Lucarelli.

MR. LUCARELLI: Good afternoon. My
01:20:52PM name is Joseph Lucarelli, and that's spelled L-u-c-a-r-e-l-l-i. Currently I serve as the operations manager for the West Chicago and

Elburn facilities. At West Chicago we currently employ over 125 people. And I am very proud to say it is a very diverse workforce that represents a wide variety of ethnicities and cultural backgrounds. We are also proud to say that we have had generations of families working for us over the years in various job functions.

LRS has been an outstanding, responsible corporate citizen, not only employing locally, but also investing locally as well in the communities that we serve and operate in.

A yes vote on our West DuPage Recycling and Transfer Station will help us operate more efficiently, will help reduce local and regional diesel fuel emissions, and allow us to compete fairly against our much larger competition. Thank you.

HEARING OFFICER PRICE: Thank you.

01:22:04PM Next is Brian Clinite.

MR. CLINITE: Clinite, C-l-i-n-i-t-e. My name is Brian Clinite. I'm an area safety

manager for LRS. I have been in the waste industry for over 25 years, going on 5 years with LRS. I currently live in Bartlett. I have lived in Bartlett for over 25 years. And since Bartlett is close to West Chicago, I spend the majority of my time at the West Chicago facility.

I want to talk to you today a little bit about LRS safety and compliance. LRS
01:22:40PM has an award-winning safety program called Lift Safety. Our Lift Safety slogan can be found on our safety apparel and posted at all of our different facilities. The slogan says, "Safety is more than a priority. It's a value." Priorities can change but values do not, so safety is our core value. The Lift Safety program targets all employees, their families, and the general public. Our marketing department mails safety materials out to
01:23:06PM employees' homes and we post information on the web for the general public.

Why do we do this? Because

accidents and injuries don't just happen at work. They can happen anywhere. All right. Some of the things that they put out are articles on driving safety. Okay. Distracted driving, cell phone use, okay, winter driving. We put out things about ladder safety. Statistics show that most ladder accidents happen at home. All right. Then, most recently, they put out something on space heater safety in the winter here.

01:23:35PM

My job, first and foremost, is to keep employees, customers, and the general public safe. All right. We want all employees finishing their workdays not having harmed themselves or anyone else. Any new hire that has on-boarded with LRS is told that safety is absolutely their No. 1 concern. Safety is always more important than productivity, always more important than customer service. They are told that if they can't do something safely, they are not to do it. They are to call their supervisor. That applies to all aspects of

01:23:56PM

their job, whether it be driving, sorting, collecting, lifting, et cetera. They are told that no job, no company, and no customer is more important than their safety, their health, and their wellbeing.

Safety training is part of my job, okay, a large part of it. I send out training materials to every LRS site weekly so that they have training materials they need to conduct the following week's safety meeting.

Another big part of my job is compliance. I work to ensure that every LRS site that I oversee is compliant with DOT, OSHA, and EPA regulations. I have a moral and a legal obligation to make sure that my sites are compliant. All right.

It is my opinion that a company like LRS that values and supports a good environmental health and safety program exercises good business sense. I know that LRS upper management cares about their employees, the people, and the communities that we service

and the environment.

As I stated earlier, I have been in the waste industry for over 25 years and, to date, LRS is the most environmentally conscious company that I have ever worked for. They have been on the cutting edge of technology in the industry. They are always seeking innovative solutions to decades-old industry problems, including environmental health and safety issues. I am positive that if this proposal is approved, LRS will have a facility that causes no harm to its employees, residents of West Chicago, or to the environment.

01:25:15PM

When I hear people say that LRS does not care about people or the environment, my opinion is that they are either misinformed or that they truly don't know LRS or truly don't know LRS employees.

So I'd like to thank each and every one of you for your time today. I encourage you to vote yes on this proposal. Thank you very much.

01:25:39PM

HEARING OFFICER PRICE: Thank you.
Next is Andy Ferrer.
MR. ENGINEER: I guess he's not here.
HEARING OFFICER PRICE: Then, that leaves you, Mr. Engineer.
MR. ENGINEER: My name is Jim Engineer, E-n-g-i-n-e-e-r. I'm a manager of environmental social governance initiative of LRS, as well as government affairs and communications.
01:26:18PM Before I start, LRS -- And this has not been mentioned publicly at the hearings yet, so I wanted to do that for a second. When we filed our application on September 16th, we launched a web page. I wanted to make that available. It's in English and Spanish. But want to let people know who are here today that if they go to www.LRSrecycles.com, click on the resources tab in the upper right corner, and then click on the West DuPage RTS page. And
01:26:49PM Jonathan will just translate that briefly in Spanish.

(WHEREUPON, Jonathan Luna translated from English to Spanish.)

MR. ENGINEER: I also want to add that I am delivering these remarks on my own behalf, as I'm a passionate DuPage County resident and a resident of the 25th and 49th Districts.

It's a pleasure to be with you during the week we observe and pay tribute to the life and legacy of Dr. Martin Luther King, Jr. Dr. King came to Memphis in 1968 to advocate for mistreated and grossly underpaid sanitation workers, who simply wanted more than $0.65 an hour to collect garbage in the City of Memphis. How things have changed since.

My family immigrated to the U.S. from the U.K. and India back in 1982, and we have been DuPage County residents since 1984. I attended Naperville Central High School from '84 to '88, when the student population was more than 95 percent white. Today, more than 35 years later, my daughters attend District 204

01:27:36PM
01:28:07PM

schools in Aurora where Indian-Americans today make up the majority of the student population. How things have changed. And I have no doubt that Dr. King is looking down and smiling at just how diverse and integrated our society has become.

Things also continue to change dramatically here in West Chicago. Where a Latino native has brought considerable economic
01:28:38PM growth and development and raised the standard of living. It is here where a West Chicago born and raised Latina became your state rep in 2019, and in the last election went on to be reelected as your state senator in the 25th District. And recently where the first Latina congresswoman won the 3rd Congressional District extending from Chicago's northwest side, all the way here to West Chicago. Dr. King sure would be proud. He also would be proud to see West Chicago
01:29:06PM recognized by Fortune Magazine as the ninth best place to live for families in the United States.

I have been with LRS since the

company was formed in 2013, and had the honor of working in our West Chicago facility from 2019 to 2022. For the past year, I have helped lead up the company's environmental social governance initiatives, which include our diversity, equity, and inclusion and community social impact programs. Our company's roots run deep as a sustainability industry pioneer in our use of the circular operating model, meaning the more we divert from the waste stream, the more material we reuse and repurpose back into the local economy.

01:29:43PM

In DuPage County, now home to more than one-million people, LRS is committed to increasing community access to recycling services, including free household recycling and electronic waste drop-off for West Chicago residents.

In order to provide our essential frontline services, we need a yes vote on the siting application. We are simply asking for a competitive level playing field and have more

01:30:07PM

than proven and met all nine criteria required to site a new transfer station. Friends, LRS is not a nuisance business, as the lead of Protect West Chicago told the Daily Herald in late December. On the contrary, we are in the essential and honorable business of collecting, sorting, and repurposing waste and recycling week after week. In fact, I'd argue that we divert more waste from landfills in proportion
01:30:42PM to any other provider.

Free market capitalism and innovation. That's what forms the bedrock of who we are, how we advance, and how we lift each other up. It's also how we keep prices in check, by encouraging competition. Folks, capitalism without competition is nothing more than crony capitalism driven by misinformation, fear mongering, lobbyists, marketing mailers, and special interest groups.

01:31:08PM The city and the people of West Chicago deserve better and have everything to gain by voting yes to LRS. Together, through

true public-private collaborations, we can make West Chicago and DuPage County the region's beacon for waste diversion, recycling, and environmental stewardship. Alderman, seize this critical moment for future generations of West Chicagoans. It starts by voting yes for LRS. Thank you.

HEARING OFFICER PRICE: Thank you, Mr. Engineer.

01:31:37PM Again, last call for Mr. Ferrer.

(No response.)

So that concludes those who have registered to provide oral public comment. Unless there's something from one of the parties, that will bring us to the conclusion of the hearing portion of the application process.

Mr. Mueller?

MR. MUELLER: Mr. Price, I want to file a memo that has been in my folder the entire
01:32:24PM length of the hearing. It has to do with the railroad zoning issue. I just figured it's easier to just give it to people now than to

mail it in.

That's all that the applicant has by way of supplemental information.

HEARING OFFICER PRICE: Anything from Protect?

MR. LEUTKEHANS: We'll respond to this in the proposed findings of fact and the conclusions of law, if that's acceptable.

HEARING OFFICER PRICE: Sure. That works.

Anything else for the good of the order? If not, then, I'm going to declare the hearing concluded, commencing the 30-day written comment period. Again, those dates are anything postmarked before February 18th would be accepted as written public comment that can be provided. Thereafter, I'm looking to have the proposed findings of fact and conclusions of law to me by the end of the 21st, and then I will be getting my report to the council by the end of the day on the 24th.

With that, then, I will adjourn the

hearing on the application and be on the lookout for the next meeting dates in front of the council.

Thank you, all.

(Which were all of the proceedings in the above-entitled cause.)

STATE OF ILLINOIS)
) ss:
COUNTY OF DU PAGE)

I, KRISTI LANDOLINA, Certified Shorthand Reporter, Notary Public in and for the County DuPage, State of Illinois, do hereby certify that previous to the commencement of the examination and testimony of the various witnesses herein, they were duly sworn by me to testify the truth in relation to the matters pertaining hereto; that the testimony given by said witnesses was reduced to writing by means of shorthand and thereafter transcribed into typewritten form; and that the foregoing is a true, correct and complete transcript of my shorthand notes so taken aforesaid.

IN TESTIMONY WHEREOF I have hereunto set my hand and affixed my electronic signature this 30th day of January, A.D. 2023.
