Electronic Filing: Received, Clerk's Office 04/19/2023 C000001

September 16, 2022

VIA PERSONAL DELIVERY

Ruben Pineda, City Mayor
City of West Chicago
c/o Clerk of City of West Chicago
475 Main Street
West Chicago, Illinois 60185

Dear City Clerk, Mayor Ruben Pineda and the City Council:

Lakeshore Recycling Systems, LLC, with this letter of transfer, files an Application for Site Location for the West DuPage Recycling and Transfer Station (Application) located at 1655 Powis Road in West Chicago. The Application is being filed in accordance with Section 39.2 of the Illinois Environmental Protection Act, which establishes procedures for pollution control facility siting, and Article VII of the City of West Chicago's Code of Ordinances (Ordinance), which provides procedures for pollution control facility siting within West Chicago's jurisdiction. In accordance with the Ordinance, four hard copies (one original and three copies) and thirty electronic copies (USB flash drive) of the Application are being submitted.

With this Application, we also enclose a cashier's check payable to the City of West Chicago in the amount of $100,000 in payment of the required filing fee for this Application. We look forward to working with the City of West Chicago as we proceed to hearing and decision in this matter.

Very truly yours,

LAKESHORE RECYCLING SYSTEMS, LLC

Richard Golf
Managing Partner

CHASE

Terms and Conditions (Remitter and Payee):

* Please keep this copy for your record of the transaction
* The laws of a specific state will consider these funds to be "abandoned" if the Cashier's Check is not cashed by a certain time
  - Please cash/deposit this Cashier's Check as soon as possible to prevent this from occurring
  - In most cases, the funds will be considered "abandoned" before the "Void After" Date
* Placing a Stop Payment on a Cashier's Check
  - Stop Payment can only be placed if the Cashier's Check is lost, stolen, or destroyed
  - We may not re-issue or refund the funds after the stop payment has been placed until 90 days after the original check was issued
* Please visit a Chase branch to report a lost, stolen, or destroyed Cashier's Check or for any other information about this item

EXECUTIVE SUMMARY

This Application for Local Siting Approval (Application) for the West DuPage Recycling and Transfer Station (West DuPage RTS) is being filed in accordance with the provisions of state law, specifically Section 39.2 of the Illinois Environmental Protection Act, 415 ILCS 5/39.2 (Act). The information presented in this Application will be the subject of testimony at public hearing before the City of West Chicago City Council (City Council). The purpose of the public hearing is to provide an opportunity for the public to comment on the application, and for the applicant to demonstrate to the City Council that the factors set forth in Section 39.2 of the Act are met.

The Applicant

This Application is filed by Lakeshore Recycling Systems, LLC (LRS). For approximately twenty years, LRS has provided recycling and 100% waste diversion programs, affordable roll-off container service, on-site storage, portable restrooms, street sweepers, and comprehensive waste removal to businesses and homeowners. LRS is the leading independent provider of recycling, diversion and non-hazardous, solid waste management services, as well as other community services (sweeping and portable restrooms) across the Chicagoland area. LRS differentiates itself through aggressive and innovative diversion and recycling programs, technology advances, exceptional customer service and strong awareness for the environment with the goal of diverting as much waste as possible. LRS operates approximately ten strategically located MSW transfer stations and/or construction or demolition (C&D) recycling and transfer facilities in Illinois and Wisconsin, and operates a single-stream sorting facility with state-of-the-art technology in Forest View.

West DuPage Recycling and Transfer Station

The West DuPage RTS is located on approximately 27.66-acre parcel located at 1655 Powis Road, West Chicago, DuPage County, Illinois. LRS currently operates a permitted C&D recycling facility and performs other operations that support its overall business at the site. Most of the infrastructure, personnel, and systems required to appropriately operate the West DuPage RTS are already present at the site. As proposed, West DuPage RTS will also perform the following operations:

- Receipt and transfer of non-hazardous municipal solid wastes (referred to as "MSW" or more generally as "solid waste");
- Receipt, solidification, and transfer of hydro excavation wastes;
- Receipt and transfer of single-stream recyclables (referred to as "SSR" or more generally as "recyclables");

- Drop-off area for West Chicago residents' electrical/electronic devices; and
- Drop-off area for recyclables generated by residents and small businesses.

If siting and permitting are achieved, the West DuPage RTS is expected to be operational in 2024 and have an operational life of a minimum of twenty years. West DuPage RTS is anticipated to accept up to 1,950 tons per day of which up to 650 tons per day may be MSW, up to 300 tons per day may be hydro excavation wastes, up to 750 tons per day may be C&D and up to 250 tons per day may be SSR. Only wastes allowed by the Illinois Environmental Protection Agency (IEPA) will be accepted. No disposal of waste will occur at the site.

Regulatory Approval for Illinois MSW Transfer Stations: A Two-Step Process

The Act provides a two-step approval process for the development of MSW transfer stations in Illinois: local siting and IEPA permitting.

Local Siting

This Application initiates the first step, which is local siting approval. In promulgating the local siting provisions of the Act, the legislature created a local approval process for pollution control facility siting, including MSW transfer stations such as West DuPage RTS. The process takes the place of local zoning, and requires the local governing authority (here the City of West Chicago City Council) to apply certain statutory criteria to its decision, which must be made in writing and which can only be made after a fair public hearing where the applicant and other persons are afforded the right to participate. Those who participate, including the applicant, are also afforded the right to appeal the local government decision to the Illinois Pollution Control Board.

IEPA Permitting

The second step is the IEPA permitting process. IEPA permitting is required prior to operation of West DuPage RTS, and LRS cannot apply for IEPA permitting until the local siting discussed above is granted. Upon local authorization, LRS will immediately file an application for an IEPA permit and that application will undergo a rigorous technical review by qualified IEPA engineers, for the purpose of ensuring protection of the environment and compliance with all applicable laws and regulations.

The Application

This Application presents the information necessary for the City of West Chicago City Council (City Council) to evaluate the nine statutory criteria, as those criteria relate to West DuPage RTS. At the hearing, the applicants will present this information through testimony of environmental

experts and other professionals who will be prepared to answer questions posed by the City Council, City of West Chicago staff, or the public. The applicants have presented the information contained in this Application for Local Siting Approval in a way that is responsive to Article VII of the City of West Chicago's Code of Ordinances, which establishes procedures for pollution control facility siting, and the Act.

The application addresses all criteria required for local consideration under the Illinois Environmental Protection Act. A criteria- by-criteria synopsis follows. (As West DuPage RTS is not a hazardous waste landfill, Criterion 7 is not applicable.)

Criterion 1: West DuPage RTS is necessary to accommodate the waste needs of the area it is intended to serve.

The Act requires that the City Council evaluate whether West DuPage RTS is necessary to accommodate the waste needs of the service area, as defined by the applicants. The applicants have identified a service area that includes the majority of DuPage County and adjacent townships in Kane and Will Counties.

Information provided demonstrates that:

- The West DuPage RTS will increase competition and available transfer capacity in the service area, which has been clearly recognized to help control price increases and maintain a high quality of service in both the residential and commercial sectors.
- The West DuPage RTS will provide a conveniently located facility to manage hydro excavation wastes, which will result in significant transportation efficiencies.
- The West DuPage RTS will provide additional operational flexibility for the service area through extended operating hours.
- The West DuPage RTS will provide direct benefits to the City of West Chicago as detailed in the Host Community Benefit Agreement with West Chicago.
- The West DuPage RTS will provide direct benefits to DuPage County as detailed in the Secondary Host Community Benefit Agreement with DuPage County.
- The West DuPage RTS will facilitate recycling in the service area by expanding it service offerings and allowing additional investments in site infrastructure and operational improvements.
- The West DuPage RTS will reduce environmental impacts to the City of West Chicago and the area by decreasing the travel distance of its collection vehicle fleet.
- Waste quantities in the service area are projected to increase in the future as a result of the continued population and employment growth.

For the reasons cited above, West DuPage RTS meets the requirements of Criterion 1, as it is "necessary to accommodate the waste needs of the area it is intended to serve".

Criterion 2: West DuPage RTS will be so designed, located, and proposed to be operated that the public health, safety, and welfare will be protected.

The Act requires that the City Council evaluate whether West DuPage RTS is designed, located, and proposed to be operated so that the public health, safety, and welfare will be protected. The development of the West DuPage includes the following:

- Conversion of the expanded C&D expansion building to an MSW and SSR transfer building;
- Integration of the C&D recycling and transfer operations with the MSW transfer operations;
- Construction of mixing pits and a building for solidification of hydro excavation wastes (hydro excavation waste building);
- Installation of a second scale;
- Use of northern driveway for the exiting of vehicles; and
- Establishment of drop off area for electronic wastes and recyclables.

Information provided demonstrates the West DuPage RTS meets all required location standards, and is designed and will be operated to meet all IEPA requirements.

Criterion 3: West DuPage RTS is located as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of the surrounding property.

The Act requires that the City Council evaluate whether West DuPage RTS will be located as to minimize incompatibility with the character of the surrounding area and as to minimize the effect on the value of surrounding properties. To demonstrate compliance with this criterion, the applicants retained Associated Property Counselors, Ltd. (APC) to complete a study of the proposed West DuPage RTS. APC is an experienced firm qualified to evaluate these land use and property-related issues.

APC determined that the West DuPage RTS is located in an historic industrial area that is well buffered from surrounding areas through man-made boundaries. These man-made boundaries effectively minimize any influences the West DuPage RTS have on properties located outside of the area. These factors clearly demonstrate that the West DuPage RTS minimizes incompatibility with the character of the surrounding area.

APC also determined that the West DuPage RTS is the highest and best use of the subject property, as improved. APC concludes that, because the proposed use is very consistent with the current and planned uses in the subject area and meets the criteria for highest and best use, the impact the West DuPage RTS will have on adjacent and nearby property values is minimized.

Criterion 4: West DuPage RTS is located outside the boundary of the 100-year floodplain or is flood-proofed.

The Illinois Environmental Protection Act requires that MSW transfer stations, like West DuPage RTS, be located outside the boundary of the 100-year floodplain or be flood-proofed. The 100-year floodplain can be determined from Federal Emergency Management Area maps and related information. The proposed buildings and associated operations are located well above and distant from a small area (approximately 0.05 acres) of the site that was determined to be within the floodplain. As such, the West DuPage RTS is not located within the 100-year floodplain or is flood-proofed.

Criterion 5: The plan of operation for West DuPage RTS is designed to minimize the danger to the surrounding area from fire, spills, or other operational accidents.

The Act requires that the City Council evaluate whether West DuPage RTS will operate pursuant to an operational plan that is designed to minimize the dangers related to potential fires, spills, or other operational accidents. West DuPage RTS will operate pursuant to an incident prevention and response plan that covers all of those elements and more.

Criterion 6: The traffic patterns to or from West DuPage RTS are designed to minimize the impact on existing traffic flows.

The Act requires that the City Council evaluate whether traffic patterns to and from West DuPage RTS have been designed as to minimize any impact on existing traffic flows. Currently, the southern driveway at the site is used for both incoming and outgoing vehicles, and the northern driveway is unused. The southern access drive is proposed to be used only for incoming vehicles, and the northern driveway is proposed to be used for outgoing vehicles. In addition, improvements are proposed to Powis Road and the both access driveways.

To demonstrate compliance with this criterion, the applicants retained Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA). KLOA determined that, as proposed, the site will have adequate access drives, and the surrounding roadways and intersections have more than adequate capacity to accommodate the traffic generated by West DuPage RTS. Hence, KLOA concluded that traffic patterns to and from West DuPage RTS have been designed to minimize any impact on existing traffic flow.

Criterion 8: West DuPage RTS is consistent with the DuPage County Solid Waste Management Plan.

The Act requires that where a county solid waste plan (County Plan) is in effect in a county (as it is in DuPage County), any proposed MSW transfer station must be consistent with the County Plan. To demonstrate compliance with this criterion, a report is provided which summarizes the relevant information in the most recent DuPage County Solid Waste Management Plan and concludes that West DuPage RTS is consistent with the County Plan.

Criterion 9: If West DuPage RTS will be located within a regulated recharge area, any applicable Illinois Pollution Control Board requirements will be followed.

Only one regulated recharge area has been established in Illinois as of the date of this report, which is the Pleasant Valley Public Water District located in Peoria County. West DuPage RTS is not located within a regulated recharge area, as defined by the Act.

Closing

The applicants are confident that this Application, and the testimony provided at the siting hearing, will demonstrate to the City Council that West DuPage RTS meets the statutory criteria and that siting approval should be granted.

CRITERION 1:

“the facility is necessary to accommodate the waste needs of the area it is intended to serve”
415 ILCS 5/39.2(a)(i)

CRITERION 1:
THE FACILITY IS NECESSARY TO ACCOMMODATE THE WASTE NEEDS OF THE SERVICE AREA

The Illinois Environmental Protection Act, at 415 ILCS 5/39.2 (a)(i), requires that an applicant for a transfer station siting demonstrate that the proposed facility is necessary to accommodate the waste needs of the area it is intended to serve. This report demonstrates that the proposed Lakeshore Recycling Systems, LLC West DuPage Recycling and Transfer Station is necessary to accommodate the waste needs of the area it is intended to serve.

CEC Project 163-899

AUGUST 2022

1.0 INTRODUCTION

The Illinois Environmental Protection Act requires that a pollution control facility (in this case a transfer station) be necessary to accommodate the waste needs of the area it is intended to serve. This report defines the area that the proposed Lakeshore Recycling Systems, LLC (LRS) West DuPage Recycling and Transfer Station (West DuPage RTS) is intended to serve, and demonstrates that the proposed West DuPage RTS is necessary to accommodate the waste needs of its service area.

1.1 WEST DUPAGE RTS

The West DuPage RTS is located on an approximately 27.66-acre parcel located at 1655 Powis Road, West Chicago, DuPage County, Illinois (site). LRS currently operates a permitted solid waste management facility [Permit No. 2015-124-OP] that receives, sorts/separates, transfers, and recycles construction or demolition debris (C&D) on approximately 6.11 acres of the site (C&D Recycling Facility). The C&D Recycling Facility is shown on Drawing C100 and includes the site entrance, the scale, the C&D transfer/screening building, the C&D sorting line building, and storage bunkers.

The site also includes an office, maintenance building, parking areas, additional hard surfaced areas, access controls, utilities, outdoor lighting, and a stormwater control system. As such, LRS currently performs other operations at the site, which support its overall business. In addition, most of the infrastructure, personnel, and systems required to appropriately operate the West DuPage RTS are already present at the site. In summary, LRS currently conducts the following operations at the site:

- Receipt, sorting/separation, recycling and transfer of up to an annualized average of 1,250 tons per day of C&D;
- Staging and removal of recyclable materials;
- Mulch production and sales from recycled wood;
- Parking and maintenance of waste collection vehicles;
- Parking and maintenance of street sweepers;
- Parking and maintenance of portable restroom transportation vehicles;
- Staging and maintenance of containers, totes and portable restrooms; and
- Dispatch and customer service (call center).

As proposed, West DuPage RTS will also perform the following operations:

- Receipt and transfer of up to 650 tons per day of non-hazardous municipal solid wastes (referred to as municipal solid waste or “MSW” or more generally as solid waste);
- Receipt, solidification and transfer of up to 300 tons per day of hydro excavation wastes;
- Receipt and transfer of up to 250 tons per day of single-stream recyclables (referred to as “SSR” or more generally as “recyclables”);
- Drop-off area for West Chicago residents of electrical/electronic devices; and
- Drop-off area for recyclables generated by residents and small businesses.

Incoming materials will be delivered to the proposed transfer station by LRS and other haulers. Based on historical acceptance volumes, the West DuPage RTS proposes to lower the maximum

acceptance amount of C&D from 1,250 tons per day to 750 tons per day. The maximum material acceptance amounts for MSW, hydro excavation wastes and SSR are based on the internalization of the materials currently hauled by LRS, potential diversion of materials from other haulers, reasonable growth projections and a contingency to account for peak days.

As demonstrated in this report, the proposed transfer station is necessary to accommodate the waste needs of its intended service area. This conclusion is supported by the following:

- The West DuPage RTS will increase competition and available transfer capacity in the service area, which has been clearly recognized to help control price increases and maintain a high quality of service in both the residential and commercial sectors.
- The West DuPage RTS will provide a conveniently located facility to manage hydro excavation wastes, which will result in significant transportation efficiencies.
- The West DuPage RTS will provide additional operational flexibility for the service area through extended operating hours.
- The West DuPage RTS will provide direct benefits to the City of West Chicago as detailed in the Host Community Benefit Agreement with West Chicago.
- The West DuPage RTS will provide direct benefits to DuPage County as detailed in the Secondary Host Community Benefit Agreement with DuPage County.
- The West DuPage RTS will facilitate recycling in the service area by expanding its service offerings and allowing additional investments in site infrastructure and operational improvements.
- The West DuPage RTS will reduce environmental impacts to the City of West Chicago and the area by decreasing the travel distance of MSW and hydro excavation collection vehicles.
- Waste quantities in the service area are projected to increase in the future as a result of the continued population and employment growth.

1.2 WEST DUPAGE SERVICE AREA

The intended service area for the West DuPage RTS (Service Area) is shown in Figure 1-1 and includes the majority of DuPage County, a portion of Kane County, and the northwest portion of Will County. The Service Area includes the townships listed in Table 1-1, and is generally based on the current service area of the LRS hauling operations proximate to the site, an approximately five to twenty mile travel distance from the site, and the location of other LRS transfer stations.

Table 1-1: West DuPage Recycling and Transfer Station Service Area Townships

DuPage County Townships	Kane County Townships	Will County Townships
Bloomingdale	Aurora	DuPage
Lisle	St. Charles	Wheatland
Milton	Elgin	
Naperville	Geneva	
Wayne	Batavia	
Winfield		

As indicated above, LRS operates an existing MSW waste hauling operation from the site. LRS currently provides routine collection of residential waste and recycling material, and other related services to the Service Area including the following communities [https://www.lrsrecycles.com/residential/]:

- City of Geneva;
- Village of Lisle;
- Unincorporated Lisle Township;
- City of St. Charles;
- City of Wheaton; and
- Village of Montgomery.

LRS began providing MSW collection services to communities and businesses in the Service Area in 2016. LRS acquired the West DuPage RTS from the K. Hoving Companies in 2017 to facilitate the expansion of its services. LRS has steadily grown its services to include the above listed communities, and also services commercial and industrial customers throughout the Service Area. As discussed in this report, LRS currently provides collection services to more municipalities than any other privately owned waste collection company in the Service Area.

1.3 WEST DUPAGE RTS SERVICE AREA WASTE GENERATION AND DISPOSAL VOLUMES

The Illinois Solid Waste Planning and Recycling Act was approved on August 23, 1988 and required that each county in the state adopt a twenty-year plan for managing the MSW generated within its boundaries [415 ILCS 15/1 et seq.]. Each county waste management plan is required to be updated and reviewed every five years, and any necessary or appropriate revisions are required to be submitted to the Environmental Protection Agency for review and comment. Each waste management plan is required to include a description of the origin, content, and weight or volume of MSW currently generated within the county's boundaries, and the origin, content, and weight or volume of MSW that will be generated within the county's boundaries during the next twenty years, including an assessment of the primary variables affecting this estimate and the extent to which they can reasonably be expected to occur.

DuPage, Kane, and Will counties have each developed a solid waste management plan (SWMP). These plans provide information and insights regarding waste generation and disposal trends in the Service Area including per capita waste generation rates and waste disposal diversion (i.e., recycling) rates. The methodology employed to evaluate waste generation and disposal trends in the Service Area are based on information from the SWMPs, information from independent studies, and population/employment trends primarily obtained from the Chicago Metropolitan Agency for Planning (CMAP).

1.3.1 PER CAPITA WASTE GENERATION RATE

<u>DuPage County</u>

The DuPage County Board approved its first SWMP in February 1991 (Adopted SWMP). Updates to the SWMP were approved by the DuPage County Board in 1996, 2001, 2007, 2012, and 2017 (DuPage County Updates). The DuPage County 2017 Update evaluates the waste disposal capacity of DuPage County. The following are relevant excerpts:

- Waste is estimated to be generated at a rate of 8.7 pounds per capita per day based on the rate identified in the 2015 Illinois Commodity/Waste Generation and Characterization Study Update [Appendix 8-H, page 8].
- The estimated MSW generation rate for DuPage County is 4,042 tons per day or 1,475,604 tons per year [Appendix 8-H, page 8]. Based on waste generation and recycling rates, DuPage County is estimated to need to dispose of approximately 929,431 tons of waste annually [Appendix 8-H, page 16].

Kane County

Kane County adopted its first solid waste plan in 1992 and has since adopted the required updates in 1997, 2004, 2009, 2015, and 2020 (Kane County Updates). The Kane County 2020 Update indicates the following:

- Total waste generation has been calculated by using population and per capita generation data. The 2020 Update estimates a per capita municipal solid waste generation rate based on the 2015 Illinois Commodity/Waste Generation and Characterization Study Update (Illinois DCEO Update) and Kane County hauler reports. The Illinois DCEO Update, which excludes C&D material, estimated Kane County's waste generation rate to be 7.68 pounds per capita per day. Based on 2019 hauler reports, C&D material contributes 0.53 pounds per capita per day of generation in Kane County. Combining these values results in an estimated waste generation rate for Kane County of 8.21 pounds per capita per day [Section 3.2.1, pages 23–24].
- Review of historical and current generation rates indicate generation rates have declined since the 1990s and have been fairly consistent from 2001 through the current period [Section 3.2.1, page 25].

Will County

The Will County Board approved its first SWMP in January 1991. Updates to the plan were approved in 1996, 2001, 2007, and 2017 (Will County Updates). The Will County 2017 Update indicates the following:

- The per capita municipal solid waste generation rate is estimated based on information in the Illinois DCEO Update.
- Given the economics of the service area, the MSW generation rate is most likely 7.56 pounds per capita per day.

Illinois Department of Commerce and Economic Opportunity Study

The Illinois Department of Commerce and Economic Opportunity (DCEO) commissioned a waste characterization study to be performed across Illinois. One of the purposes of the study was to develop the quantity of MSW generated within the state by pounds per capita per day, differentiating urban and rural values. Intensive waste sampling was performed at nineteen solid waste facilities located throughout Illinois, consisting of seventeen landfills and two transfer stations. The results of the study are contained in a report entitled Illinois Commodity/Waste Generation Study, dated 2009 (Illinois DCEO Report).

The Illinois DCEO Report estimated the following:

- DuPage County generates 9.19 pounds per capita per day of MSW;
- Kane County generates 8.10 pounds per capita per day of MSW; and
- Will County generates 7.99 pounds per capita per day of MSW.

The generation estimates were calculated by applying factors based on Illinois-specific economic indicators to the 2007 national per capita generation rates derived in the United States Environmental Protection Agency report titled Municipal Solid Waste in the United States: 2007 Facts and Figures. The study was limited to the Illinois statutory definition of MSW defined as "garbage, general household, institutional and commercial waste, landscape waste and construction or demolition debris". The waste generation rate was defined as "the quantity of products considered municipal waste entering the waste management system from residential, commercial, industrial, institutional and construction and demolition debris sources before material recovery or disposal takes place".

The DCEO commissioned the Illinois Recycling Association to develop an update to the Illinois DCEO Report. The results are contained in the Illinois Commodity/Waste Generation and Characterization Study Update, dated March 30, 2015 (Illinois DCEO Update). The tasks and objectives of the Illinois DCEO Update included developing the composition and quantification of the MSW originating and disposed within the state, and developing the quantity of MSW generated within the state. Overall, twenty-eight sampling events were conducted at twenty-seven solid waste facilities located throughout Illinois, consisting of fifteen landfills and twelve transfer stations, over thirty-one days between September 10, 2014 and December 2, 2014. The Illinois DCEO Update estimated that the Chicago metropolitan area generated 8.72 pounds per capita per day of MSW [Table 3-7 of Illinois DCEO Update].

1.3.2 POPULATION PROJECTIONS

United States Census data and published information of population, households, and employment for communities in the Service Area during the period 2020–2040 are presented in Table 1-2A. The year 2020 is used because it was the most recent base year (i.e., a year when a census was performed). The data is provided by township for the applicable portion of each county within the Service Area. Demographic projections were primarily obtained from the CMAP (formerly the Northeastern Illinois Planning Commission). The communities are projected to experience modest growth between 2020 and 2040.

The total population within the Service Area is estimated to be approximately 1,087,505 million as of 2020. The total population within the Service Area is projected to increase to approximately 1,303,450 in 2040. The increase is approximately 20% over the twenty-year time period.

The number of households in the Service Area is projected to increase from 385,224 in 2020 to 482,488 in 2040, which is a 25% increase in households. The employment is projected to remain approximately the same from 2020 to 2040. Table 1-2A includes the services areas and corresponding data.

1.3.3 RECYCLING RATE

The following are relevant excerpts from the most recent updates to the county solid waste management plans:

- The DuPage County 2017 Update indicates that the residential recycling rate was calculated to be 41% in 2011, with commercial recycling much lower. The estimated combined recycling rate is 30% [Appendix 8-H, page 8]. The recycling rate for DuPage County has remained relatively constant over the last fifteen+ years based on the DuPage County Updates from 2001 to 2017.
- The Kane County 2020 Update indicates that approximately 37% of the waste generated was diverted through recycling and composting [Executive Summary, page 3]. The recycling rate has remained nearly level over the last twenty years [Section 4.3, page 35].
- The Will County 2017 Update indicates that the recycling, C&D and composting diversion rate is approximately 43% as of 2014 [Table 3-10, page 25].

The Illinois DCEO Update estimated that the overall Illinois diversion rate is 37.3% by weight, assuming the difference between the generation quantities (estimated to be 19.3 million tons), and disposal quantities (estimated to be 12.1 million tons) is the quantity of materials recovered (approximately 7.2 million tons).

1.3.4 WASTE DISPOSAL VOLUME

To estimate the waste disposal volume for the Service Area, the per capita generation rate is multiplied by the population and then the estimated recycled amount is subtracted. The SWMPs indicate that the per capita generation rates and recycling amounts have stayed relatively the same over the past ten+ years. Thus, the trends in waste disposal volumes will be primarily dictated by the population trends.

Daily MSW waste disposal amounts (generation amount minus the recycling amount) are estimated in Tables 1-2B and 1-2C using information from both the SWMPs and the Illinois DCEO study.

The tables indicate that the 2020 volume of MSW requiring disposal in the Service Area is 2,997 tons per day based on the data from the SWMPs and 2,973 tons per day based on the data from the

Illinois DCEO Update. These volumes are estimated to increase to 3,574, to 3,564 tons per day by 2040 depending on the data used. If the population increases are less than the 2040 projections, the waste volumes would still increase but at a proportionately lower rate.

Table 1-2B: Summary of Waste Disposal Volume

Data Source	2020 Estimated Volume (tons per day)	2040 Estimated Volume (tons per day)
Solid Waste Management Plan	2,997	3,574
DCEO Update	2,973	3,564
Average	2,985	3,569

1.4 WASTE DISPOSAL SYSTEM

The Service Area currently has no operational landfills and two operational MSW transfer stations. One of the MSW transfer stations, the Batavia Transfer Station, is owned and operated by Waste Management, Inc. (WMI or Waste Management). The other, the DuKane Transfer Station, is owned and operated by Waste Connections, Inc. (Waste Connections). Figure 1-1 shows the locations of the existing MSW transfer stations in the Service Area.

Transfer stations also exist proximate to the Service Area, which may receive MSW from the Service Area. Figure 1-1 shows the locations of the existing MSW transfer stations within an approximately 15-mile distance from the Service Area. In addition, the Service Area has numerous hauling companies, including LRS, which pick up and deliver waste to the transfer stations located within and proximate to the Service Area. The MSW transfer stations within the Service Area, the MSW transfer stations proximate to the Service Area, and hauling companies in the Service Area are discussed below.

1.4.1 TRANSFER STATIONS IN SERVICE AREA

As indicated above, the following is the list of MSW transfer station facilities in the Service Area:

- DuKane Transfer Station, DuPage County, operated by Waste Connections; and
- Batavia Transfer Station, Kane County, owned and operated by WMI.

Additional information regarding each is provided below.

DuKane Transfer Station

The DuKane Transfer Station is located on an approximately 6.3-acre property in West Chicago on Powis Road approximately 0.5 miles north from the West DuPage RTS. The DuKane Transfer Station began operation in 1999 [Nonhazardous Solid Waste Management and Landfill Capacity in Illinois - 2009 or generally as Illinois Environmental Protection Agency (IEPA) solid waste capacity reports] by Groot Industries, Inc. (Groot) as owner and Crown Recycling and Waste Services, Inc. as operator. The DuKane Transfer Station is now owned and operated by Waste Connections.

Based on information provided by DuPage County, the DuKane Transfer Station accepted approximately 1020 tons per day in 2021. Based on information provided by West Chicago, the DuKane Transfer Station accepted approximately 963 tons per day in 2020; 1,030 tons per day in 2019; 893 tons per day in 2018; 995 tons per day in 2017; and 1,158 tons per day in 2016. In

addition, the 2016 acceptance volume was the largest since 2010 and the 2018 acceptance volume was the lowest since 2010 [April 1, 2019 West Chicago City Council Memorandum].

The DuKane Transfer Station is subject to a pre-annexation agreement that was entered into on September 17, 1997 between the City of West Chicago, Omni Holding, Inc., and Browning-Ferris Industries (1997 Agreement). Groot purchased the facility from BFI Waste Systems of North America, Inc. in 2000 [April 1, 2019 West Chicago City Council Memorandum] and Waste Connections purchased the facility from Groot in 2017. Pursuant to the 1997 Agreement, West Chicago receives a host fee from the facility, which is adjusted annually by the consumer price index each March 1st. DuPage County receives 25% of the host fee. The fire district also receives $0.10 per ton, and West Chicago receives an additional $0.10 per ton if Groot has the city's residential waste and recycling contract [April 1, 2019 West Chicago City Council Memorandum]. As of December 2021, the host fee was $2.40 per ton (including the $0.10 to the fire district and $0.10 service fee) based on information provided by DuPage County.

The siting approval initially limited the DuKane Transfer Station to 1,500 tons per day of MSW, landscape waste and recyclables. The pre-annexation agreement was modified in October 2001 to increase the limit to 2,500 tons per day, with no more than 3,000 tons during a single day. The pre-annexation agreement was modified again in July 2003 to increase the limit to 3,000 tons per day and eliminate the daily maximum [April 1, 2019 City Council Memorandum].

The Illinois Environmental Protection Agency (IEPA) permit for the DuKane Transfer Station [Log No. 2005-343] indicates that the site shall only accept municipal solid waste, residential landscape waste and segregated recyclables all of which shall not exceed 3,000 tons per day. The permit also indicates that the site may receive waste from 4:00 a.m. on Monday through 12:00 p.m. (noon) on Saturday, but that the operating hours on Saturday may be extended to 12:00 a.m. (midnight) on Sunday during weeks with one of the six major holidays.

Batavia Transfer Station

The Batavia Transfer Station is located on an approximately 5-acre property in Batavia, Kane County (766 Hunter Drive) approximately 6 miles southwest from the proposed West DuPage RTS. The Batavia Transfer Station began operation in 2005 by Veolia ES Solid Waste Midwest, LLC (Veolia) [2009 IEPA Solid Waste Capacity Report]. The 2009 annual IEPA solid waste capacity report indicates that the site has a maximum accepted amount of 1,250 tons per day. The Batavia Transfer Station is currently owned and operated by Veolia, which was previously a subsidiary of Advanced Disposal Services Inc. (Advanced Disposal). Veolia is now a subsidiary of WMI. Waste receipt data for the facility is not available from the annual IEPA solid waste capacity reports.

The IEPA permit for the Batavia Transfer Station [Log No. 2017-225] indicates that the site is allowed to receive and transfer MSW including separated landscape waste, C&D debris for recycling and recyclable materials. The permit also indicates that the site may receive waste from 5:00 a.m. to 6:00 p.m., Monday through Friday, and from 6:00 a.m. to 2:00 p.m. on Saturdays, except during a holiday week or instances of inclement weather, then the facility may remain open until 6:00 p.m. on Saturday. The permit does not include any waste amount acceptance limits.

Information obtained from the City of Batavia [June 24, 2020 and April 12, 2022 phone calls with City Administrator] indicates the following:

- The amount of host fees obtained from the Batavia Transfer Station in 2019 was approximately $535,000 and the 2019 host fee was $2.71 per ton;
- The amount of host fees obtained from the Batavia Transfer Station in 2020 and 2021 was $555,782.93 and $532,408.35, respectively;
- The host fee as of the beginning of 2022 is $2.81 per ton; and
- The host fee adjusts each year based on the consumer price index.

Based on the above information, the Batavia Transfer Station received an average of approximately 690, 709, and 672 tons per day in 2019, 2020, and 2021, respectively tons per day (total host fees/year divided by host fees/ton divided by 286 operating days/year).

Comparison to Waste Disposal Volume from Service Area

The following are observations regarding the transfer stations in the Service Area:

- The above information indicates that the combined amount of waste being accepted at the two current transfer stations has been relatively consistent over time (1,692 tons per day in 2021, 1,672 tons per day in 2020, and 1,720 in 2019).
- The information provided in Section 1.3 indicates that the 2020 volume of waste requiring disposal in the Service Area is approximately 2,985 tons per day. These volumes are estimated to increase to approximately 3,569 tons per day by 2040.
- The rationale for the increases to the permitted maximum daily acceptance volumes at the DuKane Transfer Station to 3,000 tons per day is not apparent since the site seems to have consistently accepted substantially lower volumes (in the range of 900 to 1,000 tons per day of MSW).
- The permitted capacity of the transfer station(s) may not be fully available. The capacity of a transfer station typically considers the anticipated market conditions (e.g., the amount of waste reasonably anticipated to be received), and can vary based on a variety of factors including available manpower, equipment and operating hours.

- A comparison with the disposal amounts from Section 1.3 indicates that the MSW amount being managed by the transfer stations in the Service Area is approximately 1,313 tons per day less than the MSW amount needing to be disposed from the Service Area (see Table 1-3A below) and, based on population and employment projections, this difference may increase over time. This reflects an approximately 1,313-ton-per-day shortfall/need for transfer stations in the Service Area, which can be met by the West DuPage RTS.

Table 1-3A Summary of Shortfall/Need in Service Area

MSW Estimate for Service Area	2020 Volumes (tons per day)
Volume (Ave.) Requiring Disposal	2,985
Volume Accepted at Transfer Stations in Service Area	1,672
Shortfall/ Need	1,313

1.4.2 TRANSFER STATIONS PROXIMATE TO THE SERVICE AREA

Additional transfer stations are located outside of the Service Area. Transfer stations located within approximately fifteen miles of the Service Area are listed below and shown on Figure 1-1. The following is information regarding each that was obtained from the annual Illinois solid waste capacity reports:

- Elburn Transfer Station, Kane County, owned and operated by LRS - began operation in 1992 and was previously owned by New Horizons Ltd. and operated by Speedway Disposal and Recycling, Inc., was acquired by WMI and was then acquired by GFL Environmental, Inc. (GFL);
- Bluff City Transfer Station, Cook County - began operation in 2007 and is owned and operated by WMI;
- Waste Connections transfer station in Plano - opened in 2016 with local siting received by Plano Transfer Station, LLC, who was acquired by Groot, who was then acquired by Waste Connections in 2017;
- WMI Virginia Road Transfer Station in Crystal Lake - opened in 2009 by WMI;
- GFL transfer station in Rolling Meadows - opened in 1991 and previously operated by Veolia/Advanced Disposal;
- Republic Services, Inc. (Republic Services) transfer station in Mount Prospect - opened in 1984 and previously owned/operated by ARC Disposal and Recycling;
- Waste Connections' Elk Grove Transfer Station - opened in 1983 and previously operated by Groot;

- WMI transfer station in Wheeling - opened in 1984 and owned/operated by WMI since at least 1996;
- LRS transfer station in Northbrook - opened in 1983 and previous owners/operators include BFI, Onyx, Advanced Disposal, and GFL;
- The Glenview Transfer Station in Des Plaines - opened in 1994, owned by the Solid Waste Agency of Northern Cook County (SWANCC), was operated by Groot from at least 1996 and is currently operated by Waste Connections;
- Republic Services transfer station in Northlake - opened in 2008 and originally owned/operated by Northlake Transfer, Inc.;
- WMI transfer station in Melrose Park - opened in 1998 and previously owned/operated by Veolia/Advanced Disposal;
- Republic Services transfer station in McCook - opened in 1997 and previously owned/operated by Liberty Waste Services and then Allied Waste Industries;
- Waste Connections transfer station in McCook - opened in 1998 and previously owned/operated by Groot;
- WMI Joliet Transfer Station in Joliet - opened in 1996 and previously owned/operated by CDT Transfer Material Recovery Facility; and
- Moen Transfer Station in Rockdale - opened in late 2020 and owned/operated by Environmental Recycling and Disposal Services (ERDS).
- LRS West Cook Transfer Station in Forest View - opened in 1996 and previously owned/ operated by Foster-Wheeler Midwest, Inc. and then Town & Country Transfer, LLC (as owner) and Heartland Recycling, LLC (as operator).
- LRS Greenwood Transfer Facility in Maywood - opened in 2004 and previously owned by Roy Strom Building Corporation, Inc. and operated by Greenwood Transfer, LLC.
- WMI South Transfer Station - opened in 1982 and owned/operated by WMI since at least 1996.
- Republic Services Crestwood Transfer Station - opened in 1981 and previous owners/ operators included Groen Waste Services, Allied Waste Transportation, Inc., USA Waste Services, and Illinois Recycling Services.
- WMI Prairie Lake Recycling and Transfer - opened in 2006 and previously operated by Land and Lakes Company.

Dekalb County Landfill is located approximately 25 miles west of the Service Area and is also shown on Figure 1-1. The landfill has been owned/operated by WMI since at least 1995. The amount of waste accepted at the landfill has increased from 2010 to 2020 from approximately 340 tons per day to approximately 2,300 tons per day.

The following are observations regarding the active transfer stations proximate to the Service Area:

- Three transfer stations are located south or southwest of the Service Area (Plano Transfer Station, which was acquired by Waste Connections, the Moen Transfer Station, and WMI Joliet Transfer Station). The Plano Transfer Station is located on an approximately 2.8-acre property and began operation in 2016. This transfer station is believed to accept waste from the Service Area because (1) no other transfer stations are located proximate to the Service Area in this relative direction, (2) waste collection companies generally deliver waste to its most economical vertically integrated facility, and (3) portions of the Service Area are closer to the Plano Transfer Station than Waste Connections' DuKane Transfer Station. The WMI Joliet Transfer Station is believed to have previously accepted waste from Naperville when WMI had the MSW hauling contract with Naperville. The Moen Transfer Station opened in late 2020 and may be accepting waste from the Service Area.
- One transfer station is located west of the Service Area (Elburn Transfer Station). This transfer station is operated by LRS, is located very close to the Service Area, and is known to accept waste from the Service Area.
- Two transfer stations are located directly north of the Service Area (WMI Bluff City and WMI Virginia Road Transfer Stations). The most recent IEPA permit for the Bluff City Transfer Station [Log No. 2014-474] indicates that the site is allowed to receive and transfer municipal waste from household, commercial, industrial and construction/ demolition sources, non-special waste, source separated landscape waste and SSR materials. The permit also indicates that approximately 2,000 tons per day of waste may be received. Information obtained from the Cook County MSW transfer station reports for the Bluff City Transfer Station indicates the following: approximately 671 tons per day were transferred for disposal during 2017; approximately 700 tons per day were transferred for disposal during 2018; and approximately 645 tons per day were transferred for disposal from January 1 through June 30, 2019. Based on the acceptance volumes, the Bluff City Transfer Station is believed to accept waste from the Service Area. Conversely, the Virginia Road Transfer Station likely accepts very little, if any, waste from the Service Area as it is located a relative far distance from the Service Area, and WMI has another transfer station located significantly closer the Service Area (Bluff City).

- The Glenview Transfer Station (owned by SWANCC) is located northeast of the Service Area. This transfer station likely accepts only small amounts of the waste from the Service Area because the transfer station primarily accepts residential waste from its member communities, which have only a small overlap with the Service Area. The annual financial report for SWANCC for the year ending April 30, 2018 indicates that approximately 72% of the waste received in fiscal year 2018 was from its member communities, and that the remainder was generally delivered by small commercial customers and Groot/Waste Connections (due to a contract stipulation to deliver at least 100 tons per day of outside waste). Because multiple other transfer stations are operational in the northern portion of Cook County, the non-member waste was very likely local to the Glenview Transfer Station (and thus outside the Service Area).
- All of the other active proximate transfer stations are located east/southeast/northeast of the Service Area, were previously owned/operated by a variety of other companies and are now all owned and/or operated by WMI, LRS, Waste Connections, or Republic Services. WMI and Waste Connections also own/operate one transfer station in the Service Area. The transfer stations located closer to the Service Area are more likely to accept waste from the Service Area than those that are farther away. For example, the LRS Northbrook Transfer Station is known to not accept any waste from the Service Area. Also, the WMI Wheeling and WMI Prairie Lake Recycling and Disposal likely do not accept any waste from the Service Area because WMI operates other transfer stations that are closer to the Service Area.

The above observations are consistent with the population demographics of the Service Area. Specifically, the population density is generally greatest at the eastern portion of the Service Area (nearest Chicago), generally decreases in an east to west direction, and is lowest at the western portion of the Service Area (farthest from Chicago).

Given the number of transfer stations proximate to the Service Area and tendency of waste companies to vertically integrate, it is reasonable that the approximately 1,313-ton-per-day difference is currently being managed by transfer stations located outside of the Service Area.

1.4.3 WASTE COLLECTION COMPANIES IN SERVICE AREA

Waste from customers is picked up in a variety of types of trucks by waste collection companies. The services provided vary by the type of customer (residential, commercial, and industrial).

Commercial and industrial hauling services are generally bid on a client or company basis. This is demonstrated by the variety of company names easily observed on waste containers outside commercial and industrial businesses. Rates are negotiated based on client specific needs such as

the size of requested container and the pick-up frequency. LRS picks up waste from a wide variety of commercial customers over the Service Area as discussed in Section 1.3 of this report.

Contracts for residential service in the Service Area are generally bid out by the municipality and are typically very competitive. Waste Connections' 2021 Form 10-K indicates that the solid waste industry "is highly competitive and requires substantial labor and capital resources". In addition, "we compete for collection, transfer and disposal volume based primarily on the price and, to a lesser extent, quality of our services". Republic Services' 2021 Form 10-K indicates that "we operate in a competitive industry", and "we compete for collection accounts primarily based on our product offering, quality of service and price".

Table 1-4 provides a summary of which hauling companies provide services to listed municipalities in DuPage County, Will County and Kane County, respectively (based on various county and municipality websites as of approximately April 2022).

The Service Area includes all of the townships in DuPage County and two townships in Will County west of I-355. Table 1-4 indicates the hauling companies that serve the DuPage and Will County municipalities that are predominantly in the Service Area and west of I-355 include the following:

- Waste Connections/Groot (eight communities - Aurora, Bartlett, Glen Ellyn, Hanover Park, Naperville, Warrenville, West Chicago, Woodridge);
- Republic Services (one community - Glendale Heights);
- LRS (two communities - Lisle, Wheaton);
- SBC Waste Solutions, Inc. (SBC Waste Solutions) (two communities - Winfield, Bloomingdale)
- WMI (two communities - Plainfield, Romeoville); and
- Flood Brothers Disposal (three communities - Carol Stream, Roselle, Bolingbrook).

The Service Area does not includes the townships in DuPage County east of I-355. Table 1-4 indicates the hauling companies which serve the DuPage County municipalities east of I-355 include the following:

- Republic Service (six communities - Addison, Bensenville, Downers Grove, Elmhurst, Hinsdale, Itasca);
- WMI (three communities - Lemont, Westmont, Lombard);
- Flood Brothers Disposal (three communities - Oak Brook Terrace, Oak Brook and Wood Dale);

- Groot/Waste Connections (three communities - Burr Ridge, Elk Grove Village, Willowbrook); and
- LRS (three communities - Villa Park, Darien, Clarendon Hills).

Table 1-4 indicates the hauling companies which serve the Kane County municipalities in the Service Area include the following:

- Waste Connections/Groot/MDC Environmental Services (three communities - Aurora, North Aurora, South Elgin);
- WMI (two communities - Batavia, Elgin); and
- LRS/DC Recycling Systems (three communities - Geneva, St. Charles, Montgomery).

Table 1-3B summarizes the population of the communities predominantly within the Service Area served by the various hauling companies. As shown, the population of communities served by Waste Connections is larger than all of the other companies combined. The population of communities served by Waste Management is the second largest followed by LRS.

Table 1-3B: Population of Municipalities Served by Hauling Company

Hauling Company	Population of Municipalities Served
Waste Connections	552,954
Waste Management	215,022
LRS	151,906
Flood Brothers	136,673
Republic Services	33,176
SBC Waste Solutions	32,217

The municipalities generally do not direct the hauler where to dispose of the waste. Thus, the hauler has the discretion to dispose of the waste at a transfer station or directly to a landfill. Economics (e.g., driving distance, tipping fee) are the main criteria that dictate the disposal location and a variety of other factors are considered and potentially impact the economics (contract terms, payment terms, "turnaround time" at the facility, operating hours, ability to "stage" loads, location where collection vehicles are parked, location of vertically integrated landfill relative to locations of transfer station options). Hauling companies that are part of a company that owns and/or operates transfer stations and/or landfills also have financial incentives to "vertically integrate" their services and bring waste that they pick up to their own transfer or disposal facility (see discussion in Section 1.5.5). Figure 1-2 shows which municipalities are hauled by which companies; the transfer stations in the Service Area and their respective operators; and the transfer stations proximate to the Service Area and their respective operators.

The following are observations regarding waste collection companies in the Service Area:

- The population of communities served by Waste Connections/Groot serves is by far the largest in the Service Area. They have one transfer station within the Service Area and other transfer stations proximate to the Service Area. They also own and/or operate landfills west of the Service Area in Ogle County (Rochelle Landfill) and Winnebago County (Winnebago Landfill). The Kane County 2015 Update suggests that a significant portion of the Kane County's waste is shipped through the DuKane Transfer Station located in West Chicago [Section 3.5, page 34].
- The population of communities served by WMI is the second largest in the Service Area. They have one transfer station within the Service Area and serve the community in which the transfer station resides (Batavia). The Batavia Transfer Station was owned/operated by Advanced Disposal until October 2020, and Advanced Disposal had not previously served any communities in the Service Area other than Batavia. WMI owns other transfer stations proximate to the Service Area, and own and/or operate a landfill in DeKalb County (DeKalb County Landfill), a landfill in Lake County (Countryside Landfill), a landfill in Whiteside County (Prairie Hill Recycling and Disposal Facility), a landfill in Ogle County (Orchard Hills Landfill, which had the largest waste acceptance volume of any landfill in Illinois during 2020), and two landfills in Will County (Laraway Recycling and Disposal Facility, Prairie View Recycling and Disposal Facility). Elgin, Plainfield, and Romeoville are located at the outskirts of the Service Area near their transfer stations proximate to the Service Area.
- The community that Republic Services serves within the Service Area is located at the eastern outskirts of the Service Area in the general direction of their transfer stations proximate to the Service Area. Conversely, Republic Services serves the most DuPage County communities east of I-355 (outside the Service Area), which is twice the communities of any other hauler.
- The population of communities served by LRS is the third largest in the Service Area. LRS currently services five communities in the Service Area. As of April 2022, LRS hauls the residential waste from:
    - The communities they serve in the Kane County portion of the Service Area (St. Charles, Geneva, and Montgomery) to the Elburn Transfer Station.
    - The communities they serve in the DuPage County portion of the Service Area as follows:
        - Wheaton to WMI's Batavia Transfer Station.
        - Lisle to both LRS's Greenwood Transfer Facility (first round) and WMI's Batavia Transfer Station (second round as the collection vehicles park overnight at the LRS West DuPage RTS).

LRS's current operations in DuPage County are heavily reliant upon transfer stations owned and operated by others (because LRS does not have any transfer stations in the Service Area), or must haul the waste a farther distance than their competitors to one of their transfer stations east or west of the Service Area. The population density of the Service Area is larger towards the east. LRS anticipates hauling MSW from the Service Area to the West DuPage RTS while using the Elburn Transfer Station as a secondary facility, as needed, for MSW from the western extent of the Service Area (e.g., Kane County west of the Fox River).

- Flood Brothers Disposal and SBC Waste Solutions are privately owned companies that do not own any MSW transfer station in or proximate to the Service Area. Flood Brothers Disposal and SBC Waste Solutions do not own any MSW landfills, so they are reliant upon transfer stations owned and operated by others.

1.5 TRENDS IN THE WASTE DISPOSAL SYSTEM

1.5.1 DECREASING NUMBER OF AVAILABLE PROXIMATE LANDFILLS

The number of operational landfills in Illinois has been decreasing for many years. Table 1-5 summarizes the number of operational landfills in Illinois over time. As shown, the number of operational landfills in Illinois has decreased from fifty-eight to thirty-six from 1995 through 2020.

Table 1-5: Illinois Active Landfills

Year	Active Landfills in Illinois
1995	58
2000	53
2005	51
2010	43
2015	38
2020	36

Note: Data taken from IEPA Solid Waste Capacity Reports.

This trend has been most dramatic in northeast Illinois, which includes the Service Area. The IEPA annually provides a summary of various landfill information by seven regions (see Figure 1-3). Region Two - Chicago Metropolitan includes Cook, DuPage, Grundy, Kane, Kankakee, Kendall, Lake, McHenry, and Will counties. Figure 1-4A shows all of the active landfills in northern Illinois in 1995. Figure 1-4B shows all active landfills in northern Illinois and northwest Indiana and the operator of each landfill. The active landfills in Regions Two from 1995 through 2020 are listed on Table 1-6. As shown, the number of active landfills in Region Two has dramatically decreased from eighteen to four over this period. Figure 1-4B also shows the landfills in northern Illinois that have closed since 1995. The Service Area contains five landfills, which have been closed since 1995.

The remaining active landfills in Region Two are located in Lake County (Countryside Landfill and Zion Landfill) or Will County (Prairie View Recycling and Disposal Facility and Laraway Recycling and Disposal Facility). Three of these landfills provide limited MSW disposal capacity for the Service Area based on the following:

- Laraway Recycling and Disposal Facility is not permitted to accept MSW.
- Zion Landfill is estimated to have approximately eight years of remaining capacity (as of January 1, 2020 at the five-year average disposal volume).
- Countryside Landfill is estimated to have approximately five years of remaining capacity (as of January 1, 2020 at the five-year average disposal volume).

1.5.2 INCREASING DISTANCE AND CONSOLIDATION OF AVAILABLE LANDFILLS FROM SERVICE AREA

As indicated above, the IEPA annually provides a summary of various landfill information by seven regions. One of the items provided is the amount of waste disposed within each region. Table 1-6 summarizes the amount of waste disposed within each region from 1995 through 2020. Consistent with the above trend, the amount of waste disposed in Region Two decreased dramatically over time from approximately 26.12 million gate cubic yards per year (or approximately 27,700 tons per day) in 1995 to approximately 8.4 million gate cubic yards per year (or approximately 9,300 tons per day) in 2020. The amounts disposed in Region Two during 1995 and 2020 are shown on Figures 1-4A and 1-4B, respectively.

Conversely, the amount of waste disposed in Region One has increased dramatically over the same time period from approximately 1.89 million gate cubic yards per year in 1995 (or 2,000 tons per day) to approximately 17.2 million gate cubic yards per year in 2020 (or 18,000 tons per day). The amounts disposed in Region One during 1995 and 2020 are shown on Figures 1-4A and 1-4B, respectively. Region One - Northwest Illinois includes Boone, Bureau, Carroll, DeKalb, Jo Daviess, LaSalle, Lee, Ogle, Putnam, Stephenson, Whiteside, and Winnebago counties. The volumes accepted by Region One have been relatively consistent for approximately the last decade. The landfill with consistently the largest acceptance volume (in the range of 7,000 tons per day) is WMI's Orchard Hills Landfill located near Rockford (see Figure 1-4B). This landfill has consistently been ranked highest in the entire state. The other landfill that is also consistently ranked in the top three in the State in waste acceptance (in the range of 5,000 tons per day) is Waste Connections' Winnebago Landfill, which is also located near Rockford (see Figure 1-4B). Consistent with the data and industry common knowledge, these landfills accept substantial volumes of MSW from the Chicago metropolitan area.

The amount of waste disposed in Regions Three and Four have been consistent from 1995 to 2020. The amounts disposed in Regions Three and Four during 1995 and 2020 are shown on Figures 1-4A and 1-4B, respectively. Region Three - Peoria/Quad Cities includes Fulton, Hancock, Henderson, Henry, Knox, Marshall, McDonough, Mercer, Peoria, Rock Island, Stark, Tazewell, Warren, and Woodford counties. The landfills most accessible via truck from the Chicago metropolitan area are the Atkinson Landfill/Eco Hill, the Quad Cities Landfill, and the Upper Rock County Landfill (see Figure 1-4B). The waste acceptance volumes at the Quad Cities Landfill and the Upper Rock County Landfill have also been consistent over time (see Table 1-6), which indicates that waste acceptance from the Chicago metropolitan area is not occurring. The Atkinson Landfill was acquired by Ecology Solutions LLC (a subsidiary of LRS) in June 2019, re-opened in late 2019, is currently accepting waste volumes from the Chicago metropolitan area, and significantly increased its waste acceptance volume in 2020 (see Table 1-6).

The above information clearly demonstrates that waste disposal from the Service Area has shifted over time from landfills proximate to the Chicago metropolitan area, to landfills at substantially farther distances. Given the difficulty of siting new landfills and expanding existing landfills near populated areas, the required travel distance from waste origination locations to the disposal facility will likely continue to increase in the future. Increased transportation distances result in increased challenges of managing transportation costs.

As shown on Figure 1-4B, with the recent acquisition of Advanced Disposal by Waste Management, the landfills in northern Illinois are all operated by one of three publicly traded companies (Waste Management, Republic Services, Inc., and Waste Connections) except for three (Zion Landfill in Zion, Eco Hill in Atkinson, and Knox County). Based on the information in Table 1-6, the three publicly traded companies control approximately 97% of the capacity in Regions One and Two (i.e., all except for the capacity at Zion Landfill). The consolidation of landfill ownership by the three publicly traded companies will have a negative impact on competition.

1.5.3 CONSOLIDATION OF TRANSFER STATION OPERATORS

While the landfills were decreasing in number and consolidating, the transfer stations were increasing in number but also consolidating. As discussed in Sections 1.4.1 and 1.4.2, the following privately-owned or regional companies owned and/or operated transfer stations and provided hauling services in or proximate to the Service Area:

- Groot Industries, Inc.;
- Crown Recycling and Waste Services, Inc.;
- Plano Transfer Station, LLC;
- Veolia ES Solid Waste Midwest, LLC;
- New Horizons Ltd.;
- Speedway Disposal and Recycling, Inc.;
- ARC Disposal and Recycling;
- Northlake Transfer, Inc.;
- Liberty Waste Services;
- CDT Transfer Material Recovery Facility;
- Town & Country Transfer, LLC; and
- Roy Strom Building Corporation, LLC.

In 1995, DuPage County had no transfer stations. The only transfer stations proximate to the Service Area were one in Kane County (Elburn Transfer Station) and eight in Cook County (most of which were northeast of the Service Area). At least eight of these transfer stations were owned

by different companies, most of which no longer exist. The approximate location of the transfer stations proximate to the Service Area in 1995 is shown in Figure 1-2A.

Since 1995, the following transfer stations were permitted in or proximate to the Service Area:

- One in DuPage County (DuKane Transfer Station);
- One in Kane County(Batavia Transfer Station);
- One in Kendall County (Plano Transfer Station);
- Two in Will County (Moen, Transfer Station, Joliet Transfer Station);
- One in McHenry County (Virginia Road Transfer Station);
- One in Cook County north of the Service Area (Bluff City Transfer Station); and
- Seven in Cook County east/southeast of the Service Area.

Each of the proximate transfer stations are shown on Figure 1-2B, and most have been acquired over time. For example, in January 2017, Waste Connections acquired Groot Industries, Inc., an Illinois-based firm with total annual revenue of approximately $200 million. The deal occurred nearly a year after Waste Connections' merger with Progressive Waste Solutions Ltd. At the time, Groot was the largest privately owned solid waste services company in Illinois serving approximately 300,000 customers primarily in northern Illinois. Waste Connections acquired a network of six collection operations, six transfer stations, and two recycling facilities [https://www.waste360.com/haulers/waste-connections-acquire-groot-industries].

The result is that, at this time, seventeen of the twenty-three listed transfer stations in or proximate to the Service Area discussed in Sections 1.4.1 and 1.4.2 are operated by one of the three national waste companies (eight by WMI, five by Waste Connections, and four by Republic Services). The remaining six transfer stations are operated by LRS (five) or ERDS (one). This trend has reduced competition.

1.5.4 ONGOING WASTE INDUSTRY CONSOLIDATION

Republic Services and Groot Asset Swap

In late 2017, Groot/Waste Connections acquired various assets from Republic Services in the western suburbs including the municipal contracts with the City of Aurora, Bartlett, and Glen Ellyn. We understand that Republic Services generally received Groot assets closer to Chicago, and the general intent of the swap was for both companies to increase their customer densities in their respective markets (which should result in positive financial benefits to both companies) [https://kanecountyconnects.com/2017/10/groot-acquires-city-of-aurora-refuse-contract/; https://www.publicnow.com/view/DDCA344B8B8980C540E806501E707A39278FFB06; and https://

myemail.constantcontact.com/VGE-eNews;Groot-Acquires-Refuse-Contract.html?soid=1102224453228&aid=jb3fwSsYV84].

The asset swap is evident by the observations discussed above (i.e., Waste Connections serves the most DuPage County municipalities west of I-355 and Republic Services serves the most DuPage County municipalities east of I-355).

WMI Acquisition of Advanced Disposal

In April 2019, WMI (the largest residential garbage and recycling company in North America) announced it entered an agreement to acquire Advanced Disposal Services, Inc. for $4.9 billion. Advanced Disposal is the fourth largest garbage and recycling company in North America. The Wall Street Journal described the deal as Waste Management's largest acquisition ever. [https://resource-recycling.com/recycling/2019/04/16/waste-management-unveils-majormerger/].

Advanced Disposal shareholders on June 28, 2019 voted to adopt the merger agreement proposed by WMI, and the acquisition was approved by WMI's shareholders in July 2019 [https://resource-recycling.com/recycling/2019/07/09/ stockholders-give-nod-to-advanced-wm-merger/].

The acquisition of Advanced Disposal was completed on October 30, 2020. The acquisition expanded WMI's collection and disposal business in a number of markets in the Eastern half of the country and allows WMI to provided services to approximately three million new commercial, industrial, and residential customers [WMI 2020 Annual Report].

Divestiture of WMI/Advanced Disposal Assets to GFL

In June 2020, GFL announced that it signed an agreement to purchase $835 million worth of waste collection assets from WMI and Advanced Disposal. The acquisition was subject to closing of the WMI and Advanced Disposal transaction and approval by the United States Department of Justice. The Wisconsin asset package represents the majority of the acquired assets. The remaining assets are located in Michigan, Illinois, Indiana, Georgia, Alabama, Maryland, Minnesota, Pennsylvania, and Florida [GFL Environmental, Investor Update, June 25, 2020].

GFL and WMI/Advanced Disposal agreed to enter into a transition services agreement to support a successful integration of the assets and operations, including disposal arrangements and other operating considerations intended to minimize disruptions to operations during the transition. To improve operating margin, WMI and GFL agreed to enter into a reciprocal five-year disposal arrangement that will provide GFL with competitive, stable, and predictable pricing and disposal terms [GFL Environmental, Investor Update, June 25, 2020].

On October 23, 2020, the United States Department of Justice announced that WMI would be required to divest fifteen landfills, thirty-seven transfer stations, twenty-nine hauling locations, over 200 waste collection routes, and other assets in order to proceed with its $4.6 billion acquisition of Advanced Disposal. The department said that without the divestiture, the proposed acquisition would substantially lessen competition for small container commercial waste collection or municipal solid waste disposal services in over 50 local markets. Under the terms of the proposed settlement, WMI and Advanced Disposal must divest assets covering over fifty local markets including landfills, transfer stations, hauling locations, and waste collection routes to GFL, or to an alternate acquirer approved by the United States. GFL, based in Ontario, Canada, is a provider of small container commercial waste collection and MSW disposal in local markets in Canada and the Unites States. [https://www. justice.gov/opa/pr/justice-department-requires-waste-management-divest-assets-order-proceed-a dvanced-disposal].

Immediately following the completion of the Advanced Disposal acquisition on October 30, 2020, WMI and Advanced Disposal completed the sale to GFL of all of the assets required by the United States Department of Justice to be divested in connection with the Advanced Disposal acquisition [https://investors.wm.com/news-releases]. The Illinois facilities sold to GFL consisted of Advanced Disposal's Zion Landfill, Rolling Meadows Transfer Station, and Northbrook Transfer Station; and WMI's Elburn Transfer Station [Proposed Final Judgment, filed October 23, 2020].

The Complaint, proposed Final Judgement, and Competitive Impact Statement were published in the Federal Register on November 3, 2020. Comments were received from two entities: the Solid Waste Agency of Lake County (SWALCO) and the SWANCC. SWALCO and SWANCC are both intergovernmental organizations that advise and assist member communities with solid waste management issues and provide a variety of resources. In their comments, both SWALCO and SWANCC asserted that the proposed Final Judgment be revised to include the sale of collection routes and assets in the Chicagoland area. Alternatively, SWALCO proposes that WMI be required to commit to take waste to the divested disposal assets or to sell those disposal assets to LRS instead of GFL. Both SWALCO and SWANCC asserted such modifications were necessary to make the divested assets "economically viable" and to create a "strong fourth vertically integrated competitor". Finally, both SWALCO and SWANCC asserted that (1) GFL has not shown a commitment to the Chicago area since the close of the divestiture transaction, and (2) GFL will not be able to attract sufficient independent collection providers to the divested MSW assets, and thus, will eventually sell the assets to a larger market participant. SWALCO indicated that they believe that LRS is the only independent hauler in the Chicago market with the size and market share necessary to compete with the three publicly traded and vertically integrated companies operating in the Lake County and Chicagoland markets [Federal Register 2021-06147].

1.5.5 IMPORTANCE OF VERTICAL INTEGRATION

The above-discussed consolidation has resulted in the vertical integration of the waste management operations (i.e., hauling, transfer, and disposal) of the national waste companies. Vertical integration has a number of advantages in the waste industry, including control of disposal pricing. Hauling contracts predominantly include disposal in the pricing so, if a company is unable to establish their own disposal pricing, they are at a significant competitive disadvantage. Each of the national waste companies acknowledge the critical importance of vertical integration in their annual reports and Form 10-K reports as discussed below.

Advanced Disposal's Form 10-K (for the fiscal year ending December 31, 2019) indicates that vertical integration of its transfer stations enable them to:

- Increase the operational reach of their landfill operations;
- Increase the volume of disposal revenue at their landfills;
- Achieve greater leverage in negotiating more favorable disposal rates at landfills that they do not operate;
- Improve efficiency of collection, personnel and equipment; and
- Build relationships with municipalities and other operators that deliver waste to their transfer stations, leading to additional growth and acquisition opportunities.

Republic Services' 2021 summary annual report (and Form 10-K) indicates that one of their three foundational elements includes a goal "to develop the best vertically integrated infrastructure to build density and improve returns". Their "goal is to create market-specific, vertically integrated operations typically consisting of one or more collection operations, transfer stations, landfills and recycling processing centers".

Waste Connections' 2021 annual report (and Form 10-K) indicates that providing vertically integrated services is one of their operating strategies. The annual report states that, in markets where they believe that owning landfills is a strategic advantage to a collection operation because of competitive or regulatory factors, they "generally focus on providing integrated services, from collection through disposal of solid waste in landfills that we own and operate". The annual report also states that "generally, the most profitable operators within the solid waste industry are those companies that are vertically integrated or enter into long-term collection contracts. A vertically integrated operator will benefit from (1) the internalization of waste, which is bringing waste to a company-owned landfill; (2) the ability to charge third-party haulers tipping fees either at landfills or at transfer stations; and (3) the efficiencies gained by being able to aggregate and process waste at a transfer station prior to landfilling".

Waste Management's 2021 annual report (and Form 10-K) indicate that:

- Access to transfer stations in critical to haulers who collect waste in areas not in close proximity to disposal facilities;
- The utilization of Waste Management's transfer stations by their own collection operations improves internalization by allowing them to retain fees that they would otherwise pay to third parties for the disposal of the waste they collect.
- The transfer stations enable them to manage costs associated with waste disposal because (1) transfer trucks have larger capacities than collection trucks, allowing them to deliver more waste to the disposal facility in each trip; (2) the transfer stations are strategically located to increase the efficiency of their network of operations; and (3) they can retain the volume by managing the transfer of the waste to one of their own disposal sites.

The operating revenues of the largest national waste management companies are almost entirely derived from the collection, transfer, and disposal of wastes from their customers with the majority derived from collection [Waste Connections' 2019 Form 10-K, page 50; Republic Services' 2019 Form 10-K, page 40; Advanced Disposal's 2019 Form 10-K, page 8; Waste Management's 2019 Form 10-K, page 35]. Waste Connections' 2019, 2020, and 2021 Form 10-K indicates that over 71% of their revenues were attributed to collection (residential, commercial and industrial and construction roll-off). Republic Services' 2019, 2020 and 2021 Form 10-K indicates that over 75% of their revenues were attributed to collection (residential, small-container, large-container and other), and they internalized approximately 68% of the waste collected into their own landfills. Advanced Disposal's 2019 Form 10-K indicates that over 66% of their revenues were attributed to collection, and they internalized 62% of the waste collected into their own landfills. Waste Management's 2019, 2020 and 2021 Form 10-K indicates that over 65% of their revenues were attributed to collection (residential, commercial, industrial, and other). The percentage of collection revenues and internal disposal is summarized in Table 1-7.

Table 1-7: Percentages of Collection Revenues and Internal Disposal

	Percentage of Revenues Attributed to Collection	Percentage of Waste Which is Internally Disposed
Waste Management	>65%	Not Available
Republic Services	>74%	68%
Waste Connections	>71%	Not Available
Advanced Disposal	>66%	62%

As discussed above, LRS currently performs hauling and now owns/operates an MSW landfill (in Atkinson). However, LRS does not currently own or operate a MSW transfer station in the Service Area so is not vertically integrated in the Service Area. From June 2018 to the end of 2020, LRS

had been delivering nearly all of the MSW waste it collects in the Service Area to Advanced Disposal's Batavia Transfer Station. The MSW waste was then transported to Advanced Disposal's Orchard Hills Landfill for disposal.

LRS's lack of full vertical integration in the Service Area puts LRS at a significant competitive disadvantage compared to the national waste companies that are vertically integrated in the Service Area for the reasons discussed above and including the following:

- LRS must pay fees to other companies (which are competitors), which reduces LRS's margins and improved the competitor's margins.
- LRS does not have control of long-term pricing, which creates a significant unknown cost factor when bidding on municipal hauling contracts (which are typically five years).
- The lack of known long-term pricing creates hurdles for LRS to make capital investments.
- The use of a competitor's facility causes operational efficiencies for LRS (e.g., trucks must drive from the transfer station back to the LRS facility at the end of the day versus parking at the same location, LRS trucks must travel extra miles to deliver loads within the transfer station operating hours).

This disadvantage was on full display after the merger of WMI and Advanced Disposal. After the merger, WMI increased the rates at the Batavia Transfer Station by approximately $5 per ton or approximately 10% (see affidavit in Appendix 1-A). In addition, WMI raised the rates at the Orchard Hills Landfill by approximately 33% (see affidavit in Appendix 1-A). These price increases caused LRS to divert waste and recyclables it collects to the Elburn Transfer Station. In addition, the disposal has now been diverted to Eco Hill in Atkinson. These changes both add substantial hauling distance and time, which is a significant competitive disadvantage for LRS in the market.

1.5.6 OTHER TRANSFER STATIONS NOT NECESSARILY AVAILABLE AT COMPETITIVE COSTS

Since other transfer stations are present in the Service Area, LRS requested pricing from the DuKane Transfer Station in June 2018 (which is closest to LRS's waste collection company where the vehicles are parked overnight so would minimize miles driven by its collection vehicles). Waste Connections quoted LRS a price for waste acceptance that is approximately $14 per ton higher than the price that was being paid at the Batavia Transfer Station (see affidavit in Appendix 1-A), which is a dramatic financial barrier. The disposal price quoted by Waste Connections was also substantially higher than the pricing typically provided by WMI for its transfer stations in the area (see affidavit in Appendix 1-A). This pricing was a key factor in the decision for LRS to move forward with this local siting application for the West DuPage RTS. As discussed in Section 1.5.5, the pricing at the Batavia Transfer Station has also increased with the merger of WMI and

Advanced Disposal, and was further increased beginning in April 2022. The combined pricing increases over an approximately one year and three month time period at the Batavia Transfer Station are approximately $10 per ton.

To provide some perspective on the significance of this price increase/discrepancy, a macro-scale total cost of collection, transfer, and disposal of waste was estimated from the respective Form 10-K reports from the three national waste management companies. The 2021 revenues for each company are summarized in Table 1-8 provided below. Table 1-8 also includes the total amount of waste disposed at all of the company landfills during 2021 as listed in their respective Form 10-Ks. A comparison of these amounts indicates that the revenue per ton of waste disposed ranges from approximately $130 per ton to $144 per ton. It is noted that the revenue per ton seems to be directly proportional to the revenues of the national companies (i.e., the largest company generates the largest revenue per ton of waste disposed and the smallest company generates the least revenue per ton of waste disposed).

Table 1-8: Revenues per Ton of Waste Disposed - 2021

	Revenues (millions)	Waste Disposed at Company Landfills (millions of tons)	Revenue per Ton of Waste Disposed
Waste Management	$17,931	124.8	$144
Republic Services	$11,295	79.3	$142
Waste Connections	$6,151	47.2	$130
Average			**$139**

These companies are very focused on vertical integration (including collection, transfer, transportation, and disposal) and, as noted in Section 1.5.5, these companies control approximately 97% of the disposal capacity in Regions 1 and 2. These companies all also make a profit so the above listed revenues per ton must exceed the collective cost of their collection, transfer, transportation, and disposal operations. Thus, in very general terms, the total cost to collect, transfer, transport and dispose of a ton of waste is less than but in the range of $130 to $144 per ton.

This data is summarized to provide a general quantification of the competitive advantage of full vertical integration. Specifically, when a waste management company (such as LRS) is responsible for the management of waste from collection to eventual disposal in a landfill (such as with a municipal waste contract), the waste management company's overall costs are directly dependent on the pricing for waste acceptance at a transfer station. As discussed above, the transfer station costs for an independent waste management company (such as LRS) can be caused to increase by $10 (e.g., at the Batavia Transfer Station) to $14 per ton (e.g., at the DuKane Transfer

Station) at the discretion of the transfer station operator. These cost increases represent approximately 6.9% to 7.7% of the average total revenue generated ($10 to $14 price difference divided by $130 to $144 revenue per ton from Table 1-8). If the transfer station operator is a competitor (as is typically the case and is the case for LRS within the Service Area), the competitive advantage is obvious and dramatic. Stated another way, LRS's competitors currently can impact up to 7.7% of LRS's overall total waste management costs for the same service which the competitor is also seeking in a highly competitive industry. This difference does not include all of the other competitive advantages discussed above by fully vertically integrated waste management companies in the Service Area. The other competitive advantages can equate to an even greater cost advantage than the disposal pricing differential.

If the West DuPage RTS becomes operational, LRS would control its transfer station costs and recognize the other advantages of vertical integration in the Service Area. These cost controls and operational advantages would allow LRS and potentially other companies to better compete in the Service Area.

1.5.7 RECYCLING CHALLENGES

DuPage County, along with many local government and private sector partners, has successfully completed several recycling goals over the years although challenges remain. The DuPage County 2017 Update discusses the status of various initiatives and challenges. The following are relevant excerpts:

- Recycling has seen a significant amount of change over the last decade with volatile market values, contamination issues, and shrinking end users. The county recognizes the local challenges of these issues as limiting factors in expanding or increasing programs or the diversion rate [Appendix 8-H, page 17].
- Due to its volume in the waste stream, C&D debris recycling is an option to reduce landfilled waste. The county is unique in that it is currently home to three C&D debris recycling sites which are able to process thousands of tons of debris that would be disposed of as a waste otherwise. This type of landfill diversion is being encouraged [Appendix 8-H, page 9]. This sector was identified under the county's strategic plan as a priority waste reduction category and as such, the county is launching an outreach effort that supports the displacement of this waste from landfills both through recycling and reuse [Appendix 8-H, page 17].

- Certain electronics products were banned from landfills as of January 1, 2012. The program to work with electronic recyclers has struggled to remain sustainable. In 2016, the county pursued a system using a recycling fee for harder to handle items and relaunched collection sites. The Electronics Products Recycling and Reuse Act was significantly amended in 2017 and mandated a specified number of collection sites in counties based on population density. The changes are effective January 1, 2019 [Appendix 8-H, pages 10 and 11].

Kane County has routinely updated its solid waste management plan. The Kane County 2020 Update indicates the following:

- Since the Kane County 2015 Update, waste haulers nationally moved to increase costs for recycling services and modify material acceptance criteria, and across the nation programs have been disrupted and degraded [Section 1.4, page 9].
- The residential diversion rate in Kane County has been slowly declining from 2015 to 2019 [Section 4.3.3, page 37].
- Since all solid waste in Kane County is collected, recycled, transferred, and landfilled by private companies, the greatest need is to ensure sufficient competition for both waste transfer and landfilling in the private sector. Competition serves to control price increases, and also maintains a high quality of service in both the residential and commercial sectors [Section 4.5, page 58].
- C&D recycling capacity has been developed by the private sector in Illinois and recycling activity in this sector has been market-driven [Section 4.3.6, page 42].
- The continued diversion of construction and deconstruction-related materials is recommended [Section 7.5, page 67].

1.6 HYDRO EXCAVATION WASTES

As proposed, West DuPage RTS will receive, solidify, and transfer hydro excavation wastes as defined in Criterion 2.0 of this report. Hydro excavation is the process of removing or moving soil with pressurized water and suction (via a hydrovac truck). The pressurized water cuts through the soils and breaks it up. The suction then lifts the slurry from the excavation area. The debris is transferred to a debris tank. This allows for a non-destructive and more accurate way to excavate soil and locate underground utilities. Hydro excavation wastes are considered "liquids" (i.e., do not pass the paint filter tests) so must be solidified prior to disposal in a landfill.

The popularity of hydro excavation today started with oil and gas industries in Canada. The Canadian contractors were able to see the efficiency of hydro excavation as compared to other methods of daylighting.

Applications include:

- Slot trenching - The purpose of slot trenching is to dig narrow trenches. This is commonly needed for installing pipes, cables, signs, posts, and other utilities underground.
- Potholing or daylighting - Potholing or daylighting is the process of digging a test hole to expose underground facilities. This is to check those facilities for cracks, leaks or any kind of damage. Industrial, commercial, and residential communities all need to "daylight" their facilities from time to time.
- Piling holes - Installation holes are needed for poles, signs, posts, and more. The holes needed are of varying diameters and depths. These holes serve as foundations to support the structure that will be installed.
- Cold weather digging - The hydro excavation trucks are equipped with heaters. This allows the water to be able to excavate through frozen earth and ground frost [https://hydroexcavation.com/information/].

LRS's Heartland Recycling facility in Forest View, which is approximately 40 miles from the West DuPage RTS (by vehicle) and approximately 15 miles (by distance) from the Service Area, is permitted to accept hydro excavation and other low-solids wastes (i.e., wastes which do not meet the IEPA definition of a solid waste). The hydro excavation and other low-solids wastes are unloaded into concrete lined mixing pits, and mixed with absorbent materials such as wood chips. The solidified waste is then hauled to a permitted landfill for disposal. The proposed hydro excavation waste infrastructure and operations at the West DuPage RTS are very similar to those at Heartland Recycling. Heartland Recycling receives and processes 100 tons per day to 400 tons per day of hydro excavation and other low-solids wastes, with the higher acceptance volumes generally occurring during the construction season. Waste acceptance information provided for

the Heartland Recycling facility indicate that the hydro excavation and other low-solids wastes are received from locations across northern Illinois.

Publicly available information regarding the amount of hydro excavation wastes that are generated within Illinois and/or a geographic area within Illinois is not available. A publicly available list of permitted facilities in Illinois that are permitted to accept hydro excavation waste is also not available. Due to the lack of publicly available information, CEC performed a survey of various customers, generators, and known management facilities. The following sections provide a summary of our findings.

1.6.1 LIMITED NUMBER OF PERMITTED FACILITIES PROXIMATE TO SERVICE AREA

The only facility in or within 10 miles of the Service Area which is known to be currently permitted to accept hydro excavation and similar low-solids waste is the Woodridge-Greene Valley Wastewater Facility (Wastewater Facility). The location of the Wastewater Facility is shown on Figure 1-2D. The Wastewater Facility is operated by DuPage County and is rated at 12 million gallons per day of wastewater treatment capacity. Based on information provided by the Operation and Maintenance Manager at the Wastewater Facility, the Wastewater Facility accepts wastes from hydrovac trucks and processes the waste by:

- Decanting off the water in the hydrovac truck by pumping into a wastewater manhole;
- Unloading the remaining low solids material in the hydrovac truck into an approximately 2- to 3-foot tall roll off box (with a screen offset off the bottom) located in a processing building;
- Allowing the liquid to separate from the solids in the roll off box by gravity over at least a one week period;
- Treating the removed liquid at the Wastewater Facility; and
- Hauling the dried solids for disposal at a permitted landfill.

The following is additional information regarding the operations:

- The hyrodvac wastes accepted are primarily storm sewer cleanings from municipalities such as Naperville and Woodridge, which generally have less solids than hydro excavation wastes.
- The Wastewater Facility does not accept hydrovac wastes after 3:00 p.m.
- The Wastewater Facility removes approximately one roll off box (approximately 15 cubic yards) for disposal at a landfill per week, although the amount removed varies by season.

1.6.2 SUBSTANTIAL TRAVEL DISTANCES TO MANAGE WASTES

Commonwealth Edison Company (ComEd) is a unit of Chicago-based Exelon Corporation (NASDAQ: EXC), a Fortune 100 energy company with approximately 10 million electricity and natural gas customers. ComEd provides power for more than four million customers across northern Illinois, or 70% of the state's population. ComEd's service territory borders Iroquois County to the south (roughly Interstate 80), the Wisconsin border to the north, the Iowa border to the west, and the Indiana border to the east [https://www.comed.com/AboutUs/Pages/CompanyInformation.aspx]. ComEd uses contractors and/or internal resources to perform non-destructive excavation (i.e., hydro excavation) services proximate to its underground infrastructure across northern Illinois. Waste acceptance information for the Heartland Recycling facility indicate that the cities from which hydro excavation wastes were received from Commonwealth Edison during 2020 included the following: Oakbrook Terrace, Hoffman Estates, Orland Park, Waukegan, Alsip, Naperville, Chicago, Huntley, Channahon, DeKalb, Wheeling, Skokie, Monee, Marengo, Rockford, Pontiac, Fox Lake and Streator.

Nicor Gas (Nicor) is the largest natural gas distribution company in Illinois, is part of Southern Company Gas and has a nearly 34,000 mile distribution system [https://www.nicorgas.com/company/about-us.html]. Nicor also uses contractors and/or internal resources to perform non-destructive excavation (i.e., hydro excavation) services proximate to its underground infrastructure across northern Illinois. Waste acceptance information for the Heartland Recycling facility indicate that the cities from which hydro excavation wastes were received from Nicor during 2020 included the following: Hudson, Crystal Lake, Bellwood, Shorewood, Elgin, Naperville, Rockford, Elk Grove Village, Freeport, Morris, Joliet, Glenwood, and Aurora.

Badger Daylighting (Badger) builds their own custom hydrovac trucks and has the largest hydro excavation fleet in North America. Their website [https://www.badgerinc.com/what-is-hydrovac-excavation/] indicates that they have a fleet of more than 1400 hydrovac vacuum trucks that provide non-destructive excavation services throughout United States and Canada. Badger appears to be the largest company providing hydro excavation and related services in northern Illinois. Badger's fleet in northern Illinois includes approximately sixty hydrovac vehicles, and they stage/park its fleet of vehicles in multiple locations to try to minimize drive times and better serve its customers. Badger's operating locations include Rockford, Illinois; Joliet, Illinois; Elk Grove Village, Illinois; and Whiting, Indiana [https://www.badgerinc.com/locations/]. The hydrovac vehicles typically originate and return to their operating locations each day. Badger routinely uses LRS's facility in Forest View to manage its hydro excavation and related wastes generated from locations across the Chicagoland area. The limited operating hours preclude their use of the Wastewater Facility (see Appendix 1-B1).

J.A.C.K. Contractor Services, Inc. (JACK) is based out of Crete and operates hydrovac vacuum trucks [https://www.jackcsi.com/]. They provide stormwater catch basin cleanout, non-destructive excavation services, and related services across the Chicagoland area to a variety of customers including the Illinois Department of Transportation. JACK uses LRS's facility in Forest View to manage some of its stormwater catch basin, hydro excavation, and related wastes.

1.6.3 INCREASING DEMAND

The Underground Contractor's Association of Illinois provided a letter of support for the proposed hydro excavation facility at the West DuPage RTS (see Appendix 1-B1). The letter indicates that hydro excavation services have become quintessential for utility companies, excavators, horizontal directional drilling, and many other essential services. This service has grown exponentially in recent years and is anticipated to continue to increase in demand.

Badger indicated that a large portion of their work is for utility companies. Badger also indicated that the demand for hydrovac services (and thus the generation of hydro excavation wastes) has been growing and is anticipated to continue to increase over time (see Appendix 1-B1).

HydroChemPSC is a national company that provides various industrial services to a variety of customers, including utility companies [https://www.hydrochempsc.com/]. They help manage hydro excavation and related wastes for various customers in northern Illinois, including utility companies. The hydro excavation and related wastes for which HydroChemPSC provides various services are routinely managed at LRS's facility in Forest view. HydroChemPSC indicated that their utility customers now require their contractors to use hydro excavation any time trenching, potholing, piling, or digging is performed close to their utility lines. They believe the need for hydrovac services (and thus the generation of hydro excavation wastes) has been growing and is anticipated to continue to increase over time.

1.7 WEST DUPAGE RTS BENEFITS

Waste recycling and transfer stations play an important role in a community's total waste management system, serving as a link between a community's solid waste collection program and a final waste disposal facility. West DuPage RTS will provide the following benefits.

1.7.1 INCREASE COMPETITION AND TRANSFER CAPACITY IN THE SERVICE AREA

Increase Transfer Capacity to the Service Area

The Service Area is almost entirely served by transfer stations as available landfills are too distant for MSW to be direct hauled. The transfer stations in the Service Area are owned by WMI and Waste Connections, and the landfills located closest to the Service Area are predominantly owned/operated by WMI and Waste Connections. This vertical integration provides significant financial and related advantages over collection companies without a similar waste management network of facilities. For these reasons, the waste collection in the Service Area is predominantly provided by WMI and Waste Connections.

The information in Section 1.4 suggests that amount of waste being accepted at the two current transfer stations is approximately 1,672 tons per day and that this amount has been relatively consistent over the years. A comparison with the generation amounts from Section 1.3 indicates that the MSW amount being managed by the transfer stations in the Service Area is approximately 1,313 tons per day less than the MSW amount being generated in the Service Area and, based on population and employment projections, this difference may increase over time. This reflects an approximately 1,313-ton-per-day shortfall/need for transfer stations in the Service Area, which can be partially met by the West DuPage RTS. Given the number of transfer stations proximate to the Service Area and advantages of waste companies to vertically integrate, it is reasonable that the approximately 1,313-ton-per-day difference is currently being managed by transfer stations located outside of the Service Area.

Increase Competition

The number of transfer stations in the Service Area and proximate to the Service Area increased during the 1990s and 2000s due to the closure of landfills in and proximate to the Service Area (e.g., five landfills within the Service Area have closed since 1995). At that time, the transfer stations were operated by a variety of companies. Over time, these transfer stations have been acquired and consolidated primarily by the publicly traded waste management companies. The merger of WMI and Advanced Disposal eliminated one of the waste management companies that had a substantial presence in the Service Area (Advanced Disposal). By forcing WMI/Advanced

Disposal to divest the Elburn Transfer Station, LRS eventually acquired this facility. However, this transfer station is located west of the Service Area, which is also the area of least population density. As such, the competition provided by this transfer station is only helpful for the western portion of the Service Area (e.g., Kane County west of the Fox River). LRS has no optimum solution for transfer of waste hauled from communities in the other portions of the Service Area, such as Lisle and Wheaton.

As previously discussed, the Service Area is almost entirely served by transfer stations as available landfills are too distant for MSW to be direct hauled. The companies that are vertically integrated with hauling companies, transfer stations, and landfills that serve the Service Area have significant advantages over companies without a similar waste management network of facilities. Hauling companies which operate in an area without their own disposal location (transfer station or landfill) are at a competitive disadvantage because the owner and/or operator of the disposal location is also a hauling competitor. The owner and/or operator of the disposal location can readily "drive up" the disposal cost of their competition and give their own hauling company a cost advantage. The overall likely impact is higher pricing and a reduction in services. The economic factor which tends to prevent this from occurring is competition; specifically, multiple potential transfer/disposal locations that are incentivized to want and bid on the hauling volume. West DuPage RTS would provide another option to haulers in the area.

As discussed in Section 1.4.3, only three privately owned companies remain who are providing hauling services to municipalities in or proximate to the Service Area (LRS, SBC Waste Solutions, and Flood Brothers Disposal). None currently own or operate an MSW transfer station in the Service Area. Roy Strom Companies sold their company to LRS in December 2020. Appendix 1-B2 contains a letter from George Strom, explaining their rationale for selling. In summary, a key reason Roy Strom sold to LRS is the exact reason discussed above: diminishing ability to compete in the market due to rising disposal costs caused by a lack of competition.

Appendix 1-B3 contains letters from the following waste haulers, which express their support for approving the local siting of the West DuPage RTS due to concerns about the need for recycling and disposal options given the industry consolidation:

- Flood Brothers Disposal - family run business based in Oak Brook Terrace that provides MSW collection, recycling services and dumpster rentals in the Service Area [https://www.floodbrothersdisposal.com/];
- Independent Recycling Services - family owned business based in Chicago that has "provided a competitive edge against large, corporate companies by providing customized waste management programs, cost-effective pricing, and in-demand services for waste hauling and recycling" [https://independentrecycle.com/];

- E&J Disposal - family run business based in Carol Stream specializing in contractor, homeowner, and business dumpster rentals in the Service Area [https://ejdisposal.com/];
- Bosman Disposal - family-owned and operated company based in Elmhurst that has built a reputation on providing quality junk removal services for commercial and residential properties [https://www.bosmandisposal.com];
- ERDS - family run business based out of Rockdale that offers residential and commercial waste collection services in the Service Area and operates the Moen Transfer Station [https://envrd.com/];
- Tri-State Disposal - family-owned and operated waste management company based in Riverdale that specializes in providing waste and recycling collection, dumpster rentals, and waste tire recycling services in Chicago and the surrounding suburbs [https://tri-statedisposal.com/];
- DisposAll Waste Services - Woman Business Enterprise/Disadvantaged Business Enterprise-certified privately owned refuse collection company operating out of Cicero that provides services the residential, commercial, industrial and construction markets in the Service Area [http://www.disposallwaste.com/];
- SBC Waste Solutions - a family and woman-owned business based in Broadview providing recycling, garbage and trash disposal, and waste management services in the Service Area [http://sbcwastesolutions.com/];
- MBL Recycling - recycling company working in conjunction with Economy Disposal Service [www.mblrecycling.com];
- Economy Disposal Service - family run business based out of McCook that offers residential, commercial and contractor waste hauling services in the Service Area [https://economydisposal.com/]; and
- Molenhouse Enterprises, Inc. - family run business based out of Warrenville that offers dumpster rental in the Service Area for MSW or C&D [https://molenhouse.com/].

As discussed in Section 1.4.2, ERDS began operating a new transfer station (the Moen Transfer Station) in late 2020 which is approximately 10 miles from the Service Area. The local siting application for the Moen Transfer Station (which was unanimously approved by the Village of Rockdale) states that the Moen Transfer Station service area had only one transfer station (the WMI Joliet Transfer Station) that accepts and transfers MSW, and it is owned by the same company (WMI) that operates the landfill (the Prairie View RDF). The local siting application similarly recognized that:

- This situation may discourage other haulers from using the waste disposal system in Will County.
- The owner and/or operator of the disposal location can potentially “drive up” the disposal cost of their competition and give their own hauling company a price advantage.

- The economic factor which tends to prevent this from occurring is competition; specifically, multiple potential transfer/disposal locations that are incentivized to want and bid on the hauling volume.
- While the Moen Transfer Station and WMI Joliet Transfer Station are in relatively close proximity to each other, competition for disposal services in the service area will be promoted by the addition of the Moen Transfer Station.

Appendix 1-B4 contains letters from the following municipalities, which express their support for approving the local siting of the West DuPage RTS due to concerns about the need for recycling and disposal options given the industry consolidation:

- City of Wheaton;
- Village of Forest View;
- Village of Hinckley; and
- Village of Lisle.

Appendix 1-B5 contains letters from twenty-one waste contractors/demolition companies, which express their support for approving the local siting of the West DuPage RTS due to concerns about the need for recycling and disposal options given the industry consolidation.

Appendix 1-B6 contains letters from over 110 citizens, which express their support for approving the local siting of the West DuPage RTS due to concerns about the need for recycling and disposal options given the industry consolidation.

In summary, the West DuPage RTS will increase the available capacity to the Service Area up to 650 tons per day for MSW. The maximum MSW amount requested in this application is based on internalizing the current LRS MSW hauling amount while allowing reasonable room for internal growth and potential acceptance of MSW from other haulers.

Examples of Benefits of Increased Competition

The City of West Chicago has already been a beneficiary of just the initial efforts to develop the West DuPage RTS. Waste Connections held the contract with West Chicago from July 1, 2012 to December 31, 2019 to haul the contract for curbside and/or alley collection of refuse, yard waste, and recyclable materials. The City of West Chicago provided a request for proposal to LRS and Waste Connections, dated June 24, 2019, for a new hauling contract. Bids were submitted in July 2019 (which was after the Host Community Benefit Agreement for the West DuPage RTS had been executed in May 2019). Based on just the potential development of the West DuPage RTS, LRS submitted a proposal for the residential waste service program. Waste Connections offered

significant improvements to the rate structure and overall program relative to the current contract. Waste Connections was awarded the new waste hauling contract for the City of West Chicago. Tangible benefits to West Chicago and its residents of the new waste hauling contract include:

- Cost Savings - Five-year savings of approximately $1,700,000 compared to the previous contract (or approximately $300 for each of the approximately 5,700 single-family units within the City of West Chicago);
- Organics Services - The city was offered a modified organics program which allowed organic food waste to be disposed with grass clippings on a subscription basis;
- Electronics Waste - The city requested, and received an offer to provide a monthly curbside collection of e-waste from West Chicago residents (up to six items for a fee of $30);
- Gratis Roll-off Service - The city requested, and received an offer to provide at least ten free roll-off boxes to use at its discretion for city projects and festivals;
- Organics/Pumpkin Seasonal Service - The city requested, and received an offer to provide a roll-off box at a central location in the fall for the free collection and composting of pumpkins from West Chicago residents;
- Gratis Waste and Recycling Services at City Facilities - The city requested, and received an offer to provide free waste and recycling services at five additional city facilities (relative to the previous contract);
- Gratis Holiday Light Collection - The city requested, and received an offer to providing a roll-off box at a central location after the holidays for the free recycling of holiday lights from West Chicago residents; and
- Amnesty Collection Event - The city requested, and received an offer to provide an annual clean-up/amnesty day service in May, which would allow residents to put an unlimited amount of acceptable waste at the curb for removal for a modest cost of eight stickers.

The other communities in the Service Area for which LRS provides services have realized similar savings. Examples include:

- Village of Lisle - the approximately 11,000 homes/residential units serviced realized an approximately 25% cost reduction in base services, and gained additional services for electronic waste, household hazardous waste, and organic food scrap compost;
- City of Wheaton - the approximately 14,800 homes/residential units serviced realized an approximately 50% cost reduction in base services, and gained a Radio Frequency Identification Program (RFID technology) for waste and recycling, which resulted in community wide waste minimization and increased recycling participation; and
- City of St. Charles - the approximately 11,000 homes/residential units serviced realized an approximately 23% cost reduction in base services, and gained additional services for an organic food scrap compost program.

The benefits discussed above generally reflect LRS's anticipation of being able to vertically integrate in the Service Area and eventually recognizing all of the associated benefits/advantages. If LRS does not receive approval of the West DuPage RTS, LRS's ability to compete on a long-term basis will be seriously jeopardized and all of the above listed benefits may eventually disappear.

Example of Transfer Station Density to Facilitate Competition

An example of the demonstrated economic factors which cause multiple companies with competing transfer stations to serve a market area is suburban Cook County. Suburban Cook County encompasses an aggregate area of approximately 1,400 square miles, and, as of 2016, had an estimated population of 2,498,541 [2018 Cook County SWMP Update, page 12]. The movement of waste in suburban Cook County is supported by a complex network of waste and recycling haulers, transfer stations, and material recovery facilities. As of the end of 2017, suburban Cook County had twenty operational MSW transfer stations, with one additional transfer station that was under construction at that time [2018 Cook County SWMP Update, page 12]. Owners and/or operators include WMI, Republic Services, Waste Connections, LRS, Tri-State Disposal, SWANCC and Homewood Disposal.

As a comparison, the Service Area has an aggregate area of approximately 640 square miles and a population of approximately 1.087 million (so approximately 45% of the land and approximately 43% of the population of the Suburban Cook County Area). In contrast, the Service Area currently has less than 10% of the MSW transfer stations than suburban Cook County (two MSW transfer station in the Service Area divided by twenty-one MSW transfer stations in suburban Cook County). Similar to the Service Area, suburban Cook County (and the City of Chicago) have no active MSW landfills.

Table 1-9: Comparison of Transfer Station Density

	Aggregate Area (square miles)	Population (persons)	Number of MSW Transfer Stations
Service Area	640	1.087 million	2
Suburban Cook County	1,400	2.499 million	21
Percentage Difference	45%	43%	**10%**

The ongoing operation all of the transfer stations in suburban Cook County are a result of ongoing market demands for competitive disposal costs. All disposal occurs outside of Cook County, primarily northwest, southwest, and southeast of Chicago. As previously discussed, waste disposal

from Chicago, suburban Cook County and adjoining counties (including DuPage County) has shifted over time from landfills proximate to the Chicago metropolitan area to landfills at substantially farther distances. The distance of these landfills from the Chicago metropolitan area are in the range of 60–90 miles one way. The same trends have occurred in the Service Area. The same economic factors discussed above for the Service Area (i.e., multiple potential transfer/ disposal locations with multiple owners/ operators that are incentivized to want and bid on the hauling volume) result in the continued operation of a much denser number of MSW transfer stations in suburban Cook County than in the Service Area. This further demonstrates the need for additional MSW transfer stations in the Service Area.

1.7.2 PROVIDE NEEDED TRANSPORTATION EFFICIENCIES FOR HYDRO EXCAVATION WASTES

As discussed in Section 1.6, the Service Area has a limited number of permitted facilities to manage hydro excavation and related wastes. The volume of hydro excavation waste will clearly continue to increase over time. The West DuPage RTS will provided needed operational capacity and flexibility to manage these wastes. Letters and emails from various contractors and the Underground Contractors Association that support the proposed processing of hydro excavation waste at the West DuPage RTS are provided in Appendix 1-B1.

Badger indicated the following:

- The anticipated benefit to Badger if the proposed LRS facility is approved is primarily transportation logistics. Specifically, Badger provides services in many areas that are more conveniently located to West Chicago than other permitted facilities (such as the Forest View) so the use of the proposed West DuPage RTS would reduce transportation costs.
- Badger would save approximately two hours for each load that could be re-directed to the proposed West DuPage RTS in lieu of the LRS Forest View Facility.
- The typical cost to a customer for Badger's hydrovac services is approximately $250 per hour plus disposal costs.
- The decreased driving time would also increase Badger's productivity (i.e., more time to be providing services versus driving).
- Approximately 40% of the work Badger performs is located more convenient to West Chicago than Forest View.
- The extended operating hours (i.e., open past 3:00 p.m.) of the LRS Forest View facility is very helpful to Badger, and similar operating hours at the proposed West DuPage RTS would be desirable.

The above information indicates that, if the West DuPage RTS is permitted and Badger is able to recognize the above efficiencies for one-third (or twenty) of their trucks, Badger would save

approximately 11,440 hours of drive time for their hydrovac trucks per year (two hours per load x twenty loads per day x 286 days per year). This equates to approximately $2.86 million in costs (11,440 hours x $250 per hour).

JACK indicated the following:

- The anticipated benefit to JACK if the proposed LRS facility is approved is primarily transportation logistics. Specifically, JACK provides services in certain areas that are more conveniently located to West Chicago than other permitted facilities (such as the Forest View) so the use of the proposed West DuPage RTS would reduce transportation costs.
- The decreased driving time would also increase JACK's productivity (i.e., more time to be providing services vs driving).
- Approximately 25% of the work JACK performs is located more convenient to West Chicago than other available locations.

The anticipated transportation logistics benefits to JACK are very similar to the anticipated benefits to Badger. HydroChemPSC also confirmed that, if the proposed West DuPage RTS is approved, the location would be more ideally located for a significant amount of their customer's hydro excavation wastes.

If the drive time savings of other providers is similar to the savings anticipated by Badger and approximately forty loads are accepted per day at the West DuPage RTS, the savings for all providers would equate to almost 23,000 hours of drive time per year (two hours per load x 40 loads per day x 286 days per year) and approximately $5.72 million in cost savings per year (2 hours per load x 40 loads per day x $250 per hour x 286 days per year). The reduction in drive time would result in increased productivity and/or costs savings, which would presumably be passed along to their clients (such as ComEd, Nicor, and Illinois Department of Transportation) and the rate payers.

Assuming each vehicle saves an average of 60 miles per day (note that the one-way driving distance from the West DuPage RTS to Heartland Recycling is approximately 40 miles), the reduction in drive time would eliminate approximately 686,400 road miles per year (60 miles per load x 40 loads per day x 286 days per year) . These savings may increase in the future based on the anticipated growing demand of hydro excavation services.

1.7.3 PROVIDE ADDITIONAL OPERATIONAL FLEXIBILITY FOR THE SERVICE AREA

West DuPage RTS will have longer operation hours than the other transfer stations in the Service Area. LRS previously primarily used the Batavia Transfer Station. LRS trucks needed to reach

the Batavia Transfer Station by approximately 4:30 p.m. or they were not allowed to unload. The operator of the transfer station controls the operating hours. The control of operating hours is another advantage for large national waste companies who own/operate all of the transfer stations in the Service Area. CEC is familiar with other instances where a transfer station owner/operator allowed longer operating hours for internal collection vehicles but not third party haulers.

The limited operating hours at the Batavia Transfer Station caused some LRS collection vehicles to routinely need to cease pick up without a full load, and essentially cause extra trip(s) to be made. The West DuPage RTS will allow more operational flexibility and efficient hauling operations by providing extended operating hours. The operation of the West DuPage RTS would also provide an option to privately owned haulers who provide hauling in the Service Area.

The operational flexibility will facilitate West DuPage RTS providing safe and environmental protective waste removal for its residents and businesses.

1.7.4 PROVIDE DIRECT BENEFITS TO THE CITY OF WEST CHICAGO

In planning for the proposed transfer station, LRS has executed a host community agreement with the City of West Chicago. The host community agreement contains provisions for economic benefits to be provided to the City of West Chicago (if the siting request meets the statutory requirements as set forth in 415 ILCS 5/39.2 and is built and operated). These benefits include LRS providing a host benefit fee of $2.45 for each ton of MSW or hydro excavation waste received; “most favored nation” rates for waste generated within West Chicago; free disposal of up to 2,500 tons of waste generated by West Chicago; free use of up to a total of twenty 1.5-cubic yard dumpsters or sixty 90-gallon carts annually for one-time pick up each at special events and/or West Chicago use; preference to suitably skilled applicants residing in West Chicago for work at the West DuPage RTS; and establishment of a courtesy drop-off area for West Chicago residents of electrical/electronic devices. The host community agreement between the City of West Chicago and LRS is provided in Appendix 1-C.

If the West DuPage RTS accepts an average of 600 tons per day of MSW and hydro excavation waste per day, this will result in over $420,000 per year of revenues to the City of West Chicago.

1.7.5 PROVIDE DIRECT BENEFITS TO DUPAGE COUNTY

LRS has executed a secondary host community benefit agreement with DuPage County. The secondary host community benefit agreement contains provisions for economic benefits to be provided to DuPage County (should West Chicago approve the siting application and the West DuPage RTS is built and operated). These benefits include LRS providing a host benefit fee of $0.58 for each ton of MSW or hydro excavation waste received; establishment of a drop-off area

for recyclables (e.g., bottles, cans, cardboard, and paper) generated by residents and small businesses at no cost to the resident; and partnering with DuPage County on an application(s) to the IEPA for the funding of household hazardous waste collection(s) at the site at the request of DuPage County. The host community agreement between DuPage County and LRS is provided in Appendix 1-D.

As discussed in Section 1.3.1, DuPage County is estimated to need to dispose of approximately 929,431 tons of waste annually based on waste generation and recycling rates. Based on the information in Section 1.4.1, DuPage County only disposes of approximately 30% of this amount at the one transfer station within the county (the DuKane Transfer Station). Neighboring counties are managing the majority of waste that DuPage County generates. As such, DuPage County is not collecting the host fees from the waste which its residents and businesses generate. Using the above host fee of $0.58 per ton, this is lost revenue to DuPage County of almost $400,000 per year.

The West DuPage RTS will facilitate DuPage County capturing more of these revenues because LRS would be able to recognize the advantages of full vertical integration within the Service Area. If the West DuPage RTS accepts an average of 600 tons per day of MSW and hydro excavation waste per day, this will result in approximately $100,000 per year of revenues to DuPage County.

1.7.6 FACILITATE RECYCLING IN THE SERVICE AREA

The West DuPage RTS currently plays an important role in the diversion of waste from landfills through its sorting/separation and recycling of general construction or demolition debris. The site is currently responsible for recycling and/or beneficially re-using approximately 75,000 tons of waste per year, including recycling wood into a high quality mulch and/or silt control material.

The C&D recycling facilities in Illinois, including the existing operations at the West DuPage RTS, are facing increasing challenges to meet the Illinois operational requirements and maintain their C&D recycling permits. These challenges include:

- More limited options to beneficially re-use screening fines due to odor issues at landfills (caused by the conversion of the calcium sulfate in drywall to hydrogen sulfide); and
- More limited options to beneficially re-use asphalt shingles in roadways due to potential performance issues (relative to roadways with no recycled asphalt component).

The proposed West DuPage RTS will allow the site to expand and/or provide more efficient recycling operations including the following:

- Allowing additional investments in C&D recycling infrastructure (e.g., screens, conveyors) to minimize the generation of screening fines and improve recycling of C&D;
- Operation of a courtesy drop-off for electronic wastes from West Chicago citizens;
- Recycling of loads which are predominantly recyclable material but are not classified as C&D (and thus not acceptable under the current site permit); and
- Receipt and transfer of SSR.

LRS owns and operates a material recovery facility at its Heartland Recycling in Forest View. The SSR from the site will be transported to Heartland Recycling where it will be sorted/separated into its components (plastic, metal, paper, cardboard, etc.). The component material is then baled and sent to various facilities for further processing and/or recycling. The ability to transfer the SSR through its own site will allow LRS to better manage and improve the efficiencies of this operation.

DuPage County and the other communities in the Service Area have historically taken a proactive leadership role in recycling. The DuPage County 2017 Update and Kane County 2020 Update both discuss the current challenges with recycling and continuing to increase the diversion rate from landfills. The MSW waste operations will allow infrastructure and operational improvements to be made at the West DuPage RTS which will facilitate increased recycling and waste diversion amounts in the area.

1.7.7 REDUCE ENVIRONMENTAL IMPACTS TO THE CITY OF WEST CHICAGO AND THE AREA

LRS is currently performing waste hauling operations within the Service Area. LRS currently parks and maintains approximately twenty-one waste or recyclable collection vehicles at the site. The collection vehicles travel from the site to their route, unload the waste or recyclables at another transfer station (currently the Batavia Transfer Station or the Greenwood Transfer Facility), generally complete a second route/ unloading, and then return to the site to park overnight. With the West DuPage RTS, each truck will minimally save the mileage of returning from the Batavia Transfer Station to the site at the end of the day (at least 6 miles per day).

As indicated above, the Batavia Transfer Station ceases accepting waste each day at 4:30 p.m. to 4:45 p.m., depending on the number of collection vehicles waiting to unload. If an LRS collection truck is not finished with its route by the cut off time, it needs to leave its route to travel to the transfer station and unload the amount of waste collected at that time, then return to complete its route. Based on data from June 2020, this situation occurs with about six collection trucks per day. The West DuPage RTS will have extended hours and eliminate the need for an extra trip to the transfer station.

The proposed West DuPage RTS will reduce the travel distance of its hauling fleet. Eliminating the travel of all of the current collection vehicles to the Batavia Transfer Station would reduce vehicle mileage by a minimum of 36,036 miles per year (twenty-one collection vehicles x 6 miles per day x 286 days per year). Eliminating the extra trip per day for the approximately six vehicles would save an additional approximately 10,300 miles per year (six collection vehicles x 6 extra miles per day x 286 days per year). In addition, at least ten LRS collection vehicles currently hauling MSW to the other transfer stations (e.g., LRS's Greenwood Transfer Station) would be diverted to the West DuPage RTS resulting in a reduction in vehicle mileage of approximately 28,600 miles per year (ten collection vehicles x 10 extra miles per day x 286 days per year).

As evidenced by the letters of support from the multiple other haulers servicing the Service Area, the West DuPage RTS is anticipated to be used by other haulers providing services to the Service Area. These haulers would be expected to similarly realize reduced miles for their collection vehicles. If the use of the West DuPage RTS provided a mileage savings of only 10 miles per day for approximately 100 tons of waste per day (or fourteen vehicles per day), a reduction in vehicle mileage of approximately 40,000 miles per year would occur (fourteen collection vehicles x 10 miles per day x 286 days per year).

As discussed in Section 1.7.2, hydro excavation services are a growing market, and the development of a second facility in the western portion of the Chicago metropolitan area to manage hydro excavation waste will enhance transportation efficiency by at least 686,400 miles per year.

The above reductions in truck miles will save fuel and reduce wear on roads. The reduction in fuel usage will reduce the emissions and carbon footprint associated with managing this waste stream. A summary of the environmental savings is provided in Table 1-10.

Table 1-10: Summary of Reduced Environmental Impacts

	Reduced Miles (per year)	Reduced Miles (over 20 year operating period)	Reduced Fuel Usage (gallons over 20 year operating period)	Reduced Emissions (pound of CO_2 over 20 year operating period)
LRS MSW Collection Vehicles	75,000	1.5 million	425,000	9.51 million
Other Collection Vehicles	40,000	800,000	230,000	5.15 million
Hydro Excavation Vehicles	685,000	13.7 million	3.914 million	87.60 million
Total	800,000	16.0 million	4.569 million	102.26 million

Over the minimum design period, the use of the West DuPage RTS is estimated to eliminate approximately 16.0 million heavy truck miles on area roads, reduce fuel consumption by over 4.5 million gallons, and reduce the carbon footprint by over 100 million pounds of CO2 emissions. These savings would increase if the operations and/or the operating period at the West DuPage RTS increases in the future.

1.8 SUMMARY AND CONCLUSION

This report demonstrates that the West DuPage RTS is necessary to accommodate the waste needs of the area it is intended to serve. The following conclusions support this opinion:

- The West DuPage RTS will increase competition and available transfer capacity in the service area, which has been clearly recognized to help control price increases and maintain a high quality of service in both the residential and commercial sectors.
- The West DuPage RTS will provide a necessary and conveniently located facility to manage hydro excavation wastes, which will result in significant transportation efficiencies.
- The West DuPage RTS will provide additional operational flexibility for the service area through extended operating hours.
- The West DuPage RTS will provide direct benefits to the City of West Chicago as detailed in the Host Community Benefit Agreement with West Chicago.
- The West DuPage RTS will provide direct benefits to DuPage County as detailed in the Secondary Host Community Benefit Agreement with DuPage County.
- The West DuPage RTS will facilitate recycling in the service area by expanding its service offerings and allowing additional investments in site infrastructure and operational improvements.
- The West DuPage RTS will reduce environmental impacts to the City of West Chicago and the area by decreasing the travel distance of MSW and hydro excavation collection vehicles.
- Waste quantities in the service area are projected to increase in the future as a result of the continued population and employment growth.

For the reasons cited above, West DuPage RTS meets the requirements of Criterion 1 as it is "necessary to accommodate the waste needs of the area it is intended to serve".

1.9 CERTIFICATION

I hereby certify that all information contained in this Application for Local Siting Approval for Criterion 1 was prepared by me or under my direct supervision, and is true and correct to the best of my knowledge and belief.

Notes:

1. Populations totals for 2020 and 2040 were taken from Table 1-2.
2. The values for pounds per capita per day and the recycling percentages were taken from the report titled "The Illinois Commodity/Waste Generation & Characterization Study", commissioned by Illinois Department of Commerce and Economic Opportunity (DCEO), prepared by CDM, Dated May 22, 2009.
3. Pounds per day was calculated by taking the Population Census * pound per capita day * (100% - recycling rate %).
4. Tons per a day was calculated by dividing the total pounds per a day by 2000 pounds per a ton.

Table 1-4
West DuPage Recycling and Transfer Station
Collection Company by Municipality

Municipality	Population	Proximity to I-355	Collection Company	Reference	Notes
Addison	35,702	DuPage County, East of I-355	Republic Services	http://www.addisonadvantage.org/services/trash_removal/garbage_pickup.php	Offers garbage, recycling, and landscape waste removal. Garbage pickup is on a weekly basis. Landscape waste requires a sticker.
Aurora	180,542	DuPage County, West of I-355	Waste Connections/Groot Industries	https://www.aurora-il.org/1114/Sanitation	Offers garbage, recycling, and landscape waste removal. All waste and recyclables are scheduled to be picked up on the same day. Garbage that does not fit in the refuse cart will need to properly attach a waste sticker to bag. Yard waste have a waste sticker attached. The stickers used for yard waste are the same as the stickers used for excess garbage.
Bartlett	41,105	DuPage County, West of I-355	Waste Connections/Groot Industries	https://www.village.bartlett.il.us/services/utilities-resident-services/garbage-service	Offers garbage, recycling, and landscape waste removal. Weekly collection. Yard waste must have sticker.
Batavia	15,600	DuPage County, West of I-355	Waste Management	http://www.cityofbatavia.net/288/Garbage-Refuse	Weekly refuse pickup. Recycling picked up same day as garbage. Sticker is required for both refuse and yard waste.
Bensenville	18,813	DuPage County, East of I-355	Republic Services	http://www.bensenville.il.us/241/Refuse-Recycling-and-Yard-Waste	Yard waste must be set out in either a yard waste paper bag or an unlined garbage can designated for yard waste. Collection is scheduled weekly.
Bloomingdale	22,382	DuPage County, West of I-355	SBC Waste Solutions Disposal	http://www.villageofbloomingdale.org/379/Residential-Waste-Collection	Effective March 1, 2021, SBC Waste Solutions Disposal (SBC) will be the village's exclusive hauler. Collects garbage, recycling, and landscape waste. Please call SBC with collection related questions at 312-522-1115.
Bolingbrook	73,922	DuPage County, West of I-355	Flood Brothers Disposal & Recycling Systems Co.	https://www.bolingbrook.com/refusecollection	Landscape waste must be in paper bag, did not seem to mention if it needed a sticker. Certain areas have weekly pickup for garbage/refuse, while others are biweekly.
Burr Ridge	11,192	East of I-355	Waste Connections/Groot Industries	https://www.burr-ridge.gov/community/garbage___recycling.php	Garbage pickup is weekly. Rate increase as of August 1, 2019 burr-ridge.gov/wp-content/uploads/sp-client-document-manager/3/groot-brochure-2017.pdf
Carol Stream	39,854	DuPage County, West of I-355	Flood Brothers Disposal & Recycling Systems Co.	https://www.carolstream.org/residents/residential-garbage-recycling	Collect general refuse, yard waste, and recycling. Garbage pickup is weekly, yard waste must have a sticker.
City of Aurora	180542	Kane County	Waste Connections/Groot Industries	https://www.aurora-il.org/1114/Sanitation	Refuse, yard waste and curbside recycling service is provided once a week for each residence. All waste and recyclables are scheduled to be picked up on the same day. However, depending on volume, bundled brush or yard waste may be a day late. Refuse and recycling collection is a volume-based cart program. Stickers are needed for any yard waste and garbage that does not fit into the provided cart.
City of Batavia	15,600	Kane County	Waste Management	http://www.cityofbatavia.net/288/Garbage-Refuse	Weekly refuse pickup. Each single-family household will be supplied with a 65- or 95-gallon refuse and recycling carts for collection. Recycling picked up same day as garbage. Sticker is required for yard waste except during October and November.
City of Geneva	21,539	Kane County	Lakeshore Recycling Systems	https://www.geneva.il.us/1124/Garbage-Recycling-Yard-Waste	Residents can dispose of their trash with a "pay as you throw" user base model or subscribe to a garbage cart from Lakeshore Recycling that carries a monthly charge. That option requires a sticker be placed on all trash bags or cans. Yard waste also requires a sticker. If using a cart, refuse stickers are not needed for trash.

Table 1-4
West DuPage Recycling and Transfer Station
Collection Company by Municipality

Municipality	Population	Proximity to I-355	Collection Company	Reference	Notes
City of St. Charles	32,797	Kane County	Lakeshore Recycling Systems	https://www.stcharlesil.gov/services/refuse	Sticker is required for yard waste. Weekly pickup for refuse, recycling, and yard waste. Cart is provided for yard waste that does not need a sticker.
Clarendon Hills	8,702	East of I-355	Lakeshore Recycling Systems	https://www.clarendonhills.us/226/Refuse-Recycling	Weekly pickup for garbage. Landscape sticker is required. Recycling is picked up weekly.
Darien	22,011	DuPage County, East of I-355	Lakeshore Recycling Systems	https://www.darien.il.us/City-Services/Utilities.aspx	Use a sticker program for both refuse and yard waste. Both recycling, refuse, and landscape is picked up on same day.
Downers Grove	50,247	DuPage County, East of I-355	Republic Services	http://www.downers.us/res/garbage-and-recycling	Republic collects weekly. Refuse, yard waste and recycling are collected on the same day each week. Downers Grove uses a pay-per-bag system for both refuse and yard waste. Stickers are purchased and placed on each item. Republic Services is Downers Grove's provider of solid waste services, which includes the collection of refuse, yard waste and recycling.
Elk Grove Village	32,812	DuPage County, East of I-355	Waste Connections/Groot Industries	https://www.elkgrove.org/services/refuse-recycling	Weekly garbage pickup. Yard waste collection takes place the same day as the homeowner's garbage collection date. Yard waste stickers are required
Elmhurst	45,786	DuPage County, East of I-355	Republic Services	https://elmhurst.org/473/Refuse-Recycling-Yard-Waste-Organic-Wast	City Council approved a new five-year contract with Republic Services. Pickup is weekly. Cans or bags of yard waste must have a yard waste sticker and must be clearly labeled.
Glen Ellyn	28,846	DuPage County, West of I-355	Waste Connections/Groot Industries	http://www.glenellyn.org/210/Unlimited-Refuse-Collection	Weekly refuse/recycling collections, yard waste as well. Sticker is required for yard waste and refuse.
Glendale Heights	33,176	DuPage County, West of I-355	Republic Services	https://glendaleheights.org/contactus.asp#serviceproviders	Can use a container, clearly labeled for yard waste, or you can use a yard waste paper bag, no mention of stickers needed. Weekly collection of recycling, refuse, and yard waste.
Hanover Park	37,470	DuPage County, West of I-355	Waste Connections/Groot Industries	https://www.hpil.org/360/Collection-Information	Some areas have weekly pickup, while some pickup twice a week. Yard waste stickers are required. Offers recycling, garbage, and yard waste.
Hinsdale	17,395	DuPage County, East of I-355	Republic Services (former Allied Waste)	https://www.villageofhinsdale.org/departments/public_services/garbage_waste_disposal.php	Offers recycling, yard waste, and garbage removal. Weekly removal. Yard waste sticker is required. Two stickers needed for bulk items.
Itasca	9,543	DuPage County, East of I-355	Republic Services (former Allied Waste)	http://il-itasca.civicplus.com/1297/Garbage-Pick-up-Information	Garbage, recycling, and yard waste is picked up same day and weekly. No mention of a sticker for yard waste, only that it be clearly labeled.
Lemont	17,629	DuPage County, East of I-355	Waste Management	https://www.lemont.il.us/departments/administration/garbage-recycling-services	Recycling is collected same day as garbage pickup, weekly. Yard waste is collected same way as well and you may purchase a cart for yard waste, no mention of a sticker though.
Lisle	24,223	DuPage County, West of I-355	Lakeshore Recycling Systems	https://www.villageoflisle.org/403/Refuse-Yard-Waste-Recycling	Weekly garbage/refuse, recycling and yard waste and all on same day. Stickers for garbage/refuse and yard waste are used. The offer a waste cart that does not need a sticker.
Lombard	44,476	DuPage County, East of I-355	Waste Management	http://www.villageoflombard.org/187/Refuse-Recycling-Yard-Waste	Refuse and recycling services are provided for both residential and commercial properties by Waste Management. Yard waste stickers are required and yard waste is collected same day as regular collection.

Table 1-4
West DuPage Recycling and Transfer Station
Collection Company by Municipality

Municipality	Population	Proximity to I-355	Collection Company	Reference	Notes
Naperville	149,540	DuPage County, West of I-355	Waste Connections/Groot Industries	https://www.naperville.il.us/services/garbage-and-recycling/	Yard waste must be set out in either a biodegradable paper bag or an unlined garbage can designated for yard waste. Collection is scheduled weekly.
Oak Brook	8,163	DuPage County, East of I-355	Flood Brothers Disposal & Recycling Systems Co.	http://oak-brook.org/278/Refuse-Recycling	As of January 1, 2020, the village has contracted Flood Brothers to provide refuse and recycling services. Pick-up is on Mondays for one time per week pick and on Mondays and Thursdays for two times per week pickup, depends on what you subscribe to. Yard waste sticker must be put on yard waste bag. Yard waste is collected Mondays.
Oakbrook Terrace	2,047	DuPage County, East of I-355	Flood Brothers Disposal & Recycling Systems Co.	https://www.oakbrookterrace.net/community/page/residents-frequently-asked-questions	No sticker required for yard waste. Refuse picked up weekly along with yard waste and recycling. Stickers for refuse may be used if all does not fit in provided containers.
Plainfield	44,762	Will County, West of I-355	Waste Management	https://www.plainfieldil.gov/services/waste-recycling	Refuse and recycling services are provided by Waste Management. Yard waste is collected beginning in April and continuing through the second full week in December. No mention of yard waste sticker. Collection is scheduled weekly.
Romeoville	39,863	Will County, West of I-355	Waste Management	https://www.romeoville.org/406/Refuse-Recycling-Yard-Waste	Refuse, recycling, and yard waste services provided by Waste Management. Yard waste is collected same day as regular collection and must be placed in kraft-paper bags or a 96-gallon cart. Yard waste to be placed 4 feet away from obstacles. Collection is scheduled weekly.
Roselle	22,897	DuPage County, West of I-355	Flood Brothers Disposal & Recycling Systems Co.	http://www.roselle.il.us/92/Solid-Waste-and-Recycling	Weekly refuse and recycling system. Yard waste collection is either a sticker/pay-per-bag system, or a 95-gallon cart option with an annual fee.
Schaumburg	78,723	DuPage County, West of I-355	Lakeshore Recycling Systems	https://www.villageofschaumburg.com/residents/garbage-recycling	Recently, Schaumburg officials approved a five-year contract to select Lakeshore Recycling Systems that goes into effect on May 1, 2022.
St. Charles	33,081	DuPage County, West of I-355	Lakeshore Recycling Systems	https://www.stcharlesil.gov/services/refuse	Residents are given the option of monthly rented refuse carts or refuse stickers. Weekly pickup and the day depends on the area you live in. Recycling collection is free.
Villa Park	22,263	DuPage County, East of I-355	Lakeshore Recycling Systems	http://www.invillapark.com/156/Garbage-Recycling	Dual collection system allows it to collect refuse and recycling from village residences in one pass with one truck. Yard waste must have a sticker. Refuse and recycling collected on a weekly basis.
Village of Barrington Hills	4,114	Kane County	There is no municipal pickup of household waste.	https://barringtonhills-il.gov/water-septic-waste-management/	Residents must contract individually with private waste and recycling companies. Containers, collection schedules, types of waste handled (including yard waste and manure) and recycling are established by each carrier. Groot, Prairie Land, SWALCO, and Waste Management was listed as the four options on the website.
Village of Bartlett	41105	Kane County	Waste Connections/Groot Industries	https://www.village.bartlett.il.us/services/utilities-resident-services/garbage-service	Offers garbage, recycling, and landscape waste removal. Weekly collection. Yard waste must have sticker.

Table 1-4
West DuPage Recycling and Transfer Station
Collection Company by Municipality

Municipality	Population	Proximity to I-355	Collection Company	Reference	Notes
Village of Elgin	114,797	Kane County	Waste Management	http://www.cityofelgin.org/619/Garbage	Sticker required for all refuse that does not fit inside provided container. Sticker required for yard waste and recycling, yard waste, and refuse are picked up on a weekly basis.
Village of Montgomery	19,377	Kane County	Lakeshore Recycling Systems	https://ci.montgomery.il.us/177/Garbage-Recycling	Weekly pickup for yard waste, recycling, and refuse; all on the same day. Yard waste is in either certain container or brown Kraft bags. There is no mention of needing a sticker for yard waste.
Village of North Aurora	18261	Kane County	Waste Connections/Groot Industries	https://northaurora.org/	Starting June 1, 2021, the village will be switching to Groot for waste hauling services. Weekly recycling, refuse, and recycling pickup. Any trash outside provided cart will require a sticker.
Village of South Elgin	23865	Kane County	Waste Connections/Groot Industries	https://www.southelgin.com/government/departments/administrative_services/garbage,_recycling___yard_waste/index.php	Weekly yard waste, refuse, and recycling pickup. It does not mention a sticker needed for yard waste, just that it needs to be in a Kraft bag that clearly says "yard waste".
Village of Wayne	2,446	Kane County	No information was found	https://villageofwayne.org/	No information was found.
Warrenville	13,553	DuPage County, West of I-355	Waste Connections/Groot Industries	https://www.warrenville.il.us/803/Garbage-Recycling-Yard-Waste	Weekly pickup for refuse and recycling. Residents may put decals on their garbage cans for yard waste instead of buying yard waste bags. Decals can be obtained free.
West Chicago	25,614	DuPage County, West of I-355	Waste Connections/Groot Industries	https://westchicago.org/services-guide/garbage-and-recycling/	Residents may either purchase a cart for yard waste or use bags with a sticker attached to it. Collection is a weekly basis.
Westmont	24,429	DuPage County, East of I-355	Waste Management	https://westmont.illinois.gov/index.aspx?NID=221	Weekly collection; however, there are three different trucks for each kind of waste: garbage, recycling, and yard waste. You may purchase a yard waste and garbage sticker. A refuse container are to also be used.
Wheaton	53,970	DuPage County, West of I-355	Lakeshore Recycling Systems	https://www.wheaton.il.us/364/Garbage-Recycling	Recycling, garbage, and yard waste are picked up weekly. Stickers are only necessary for yard waste/organics, excess garbage outside of the cart, electronics, and bulk items.
Willowbrook	9,236	DuPage County, East of I-355	Waste Connections/Groot Industries	https://www.willowbrookil.org/116/Refuse-Recycling	Refuse, recycling, and yard collection is a weekly basis. Yard waste placed in yard waste bags will require a yard waste sticker per bag for collection. Residents may choose to subscribe to a yard waste cart service for a monthly fee.
Winfield	9,835	DuPage County, West of I-355	SBC Waste Solutions Disposal	http://www.villageofwinfield.com/index.aspx?nid=70	For all yard waste/refuse one sticker is required per bag/bundle. For those residents on the flat rate program no stickers are required. Recycling requires no sticker.
Wood Dale	14,012	DuPage County, East of I-355	Flood Brothers Disposal & Recycling Systems Co.	http://www.wooddale.com/residents/garbage-removal-recycling-yard-waste	Weekly collection for recycling, yard waste, and refuse. each acceptable container must be properly designated with a Wood Dale yard waste decal, which shall mean that it has a yard waste decal exclusively supplied by Wood Dale. No mention of a sticker being used.
Woodridge	34,158	DuPage County, West of I-355	Waste Connections/Groot Industries	https://www.woodridgeil.gov/my_government/administration/garbage_and_recycling/index.php	Sticker is required for all yard waste bags, weekly collection for refuse, recycling, and yard waste.

APPENDIX 1-A

AFFIDAVIT BY RICH GOLF

AFFIDAVIT

Richard Golf being first duly sworn on oath deposes and states as follows

1. That I am of legal age, under no disability and have personal knowledge of the matters contained herein.
2. That I am a Managing Partner of Lakeshore Recycling Systems, LLC (LRS).
3. LRS has been delivering municipal solid waste (MSW) and single stream recyclables (SSR) which LRS collects to the Advanced Disposal/ WMI transfer station in Batavia (Batavia Transfer Station) from approximately 2016 to current.
4. The price per ton (or rate) that LRS is charged by Advanced Disposal for the acceptance of MSW at their Batavia Transfer Station was approximately $45 per ton from 2016 to approximately October 2020.
5. After the acquisition in October 2020, WMI increased the rates at the Batavia Transfer Station by approximately $5 per ton (or approximately 10%). In addition, WMI raised the rates at the Orchard Hills Landfill by approximately 33%. These price increases caused LRS to divert a significant portion of the MSW and recyclables it collects in the Service Area to the Elburn Transfer Station. In addition, the disposal of the MSW was diverted to Eco Hill in Atkinson.
6. Starting April 1, 2022, WMI increased the rates at the Batavia Transfer Station by another approximately $5 per ton (or approximately 10%). This rate increase may cause additional amounts of MSW and recyclables that LRS collects from the Service Area (and is currently delivered to the Batavia Transfer) to be diverted to other transfer station(s) outside of DuPage County.
7. LRS requested pricing for the acceptance of MSW from the DuKane Transfer Station in June 2018. Waste Connections quoted LRS a price per ton which was approximately $14 per ton higher than the price per ton that LRS was receiving from Advanced Disposal at the Batavia Transfer Station at that time for the same service, which has precluded LRS's use of the DuKane Transfer Station.
8. LRS has periodically requested pricing for the same service from the DuKane Transfer Station from June 2018 to April 2022. Waste Connections has continued to quote LRS a price per ton which is similar or higher than the rate quoted by them in June 2018. The rates quoted by Waste Connections remain even higher than the rates charged at the Batavia Transfer Station for the same service.
9. If the West DuPage Recycling and Transfer Station (RTS) is permitted to accept MSW and SSR, the MSW and SSR that LRS collects from the Service Area is planned to be delivered to the West DuPage RTS and transferred to a permitted landfill for disposal. The West DuPage RTS would provide the following benefits.
    - Internalization of transfer and disposal fees, which will improve margins
    - Operational efficiencies (e.g., parking trucks at transfer station)
    - Long term control of transfer and disposal costs
    - Greater certainty for capital investments

In a competitive environment, the cost savings from the above benefits would result in lower costs to LRS's customers, including the municipalities for which LRS serves.

Further Affiant sayeth not.

LETTERS OF SUPPORT FROM HYDRO EXCAVATING COMPANIES AND ASSOCIATIONS

UNDERGROUND CONTRACTORS™ ASSOCIATION

July 24, 2020

West Chicago City Hall
475 Main Street
West Chicago, IL 60185

Re: Municipal Waste Transfer Station - 1655 Powis Rd

Dear Mayor Ruben Pineda,

I am writing to support the inclusion of a non-hazardous liquid waste solidification permit for the LRS West Chicago facility. This will support a cost-efficient means to support hydro-excavation services for major utility companies, municipalities, public and private construction; for the purpose of safely excavating non-hazardous soils surrounding areas requiring excavation, utility installation or repair.

Hydro-excavation services have become quintessential for utility companies, excavators, horizontal directional drilling (HDD) and many other essential services. This service has grown exponentially in recent years and is anticipated to continue to increase in demand.

The LRS West Chicago facility proposes to accept “Hydro Excavation Wastes” such as hydro/vacuum excavation muds, underground excavation material, and other similar materials, which are regulated as liquid wastes due to their low solids content. The Hydro Excavation Wastes will be unloaded directly into a fully contained, concrete lined mixing pit, and then be mechanically mixed with wood chips or other similar absorbent materials using a hydraulic excavator or wheel loader. The solidification process continues until the resultant material blend passes the regulatory test (i.e., paint filter test) for demonstrating the material is a solid. The solidified waste is then hauled off-site for disposal at a permitted non-hazardous waste landfill.

Due to the limited disposal locations for this liquid waste, please permit LRS the opportunity to provide this necessary service to reduce the amount of time and cost to properly dispose of non-hazardous, liquid wastes for projects DuPage and surrounding counties. With the budget constraints in the current economic environment, this will allow for more money to go towards

Underground Contractors Association of Illinois

Mayor Ruben Pineda
City Council of West Chicago
475 Main St
West Chicago, Illinois 60185

Re: Municipal Waste Transfer Station

Dear Mayor Ruben Pineda and City Council,

Badger Daylighting Corp is writing to you and City Council to express our support for the siting of municipal solid waste transfer located at 1655 Powis Road, West Chicago. With consolidation within the waste and recycling industry, it is strategically important to have alternatives for Badger Daylighting to bring materials to this site. The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving suburbs of Dupage and Kane Counties.

Thank you,

Scott Schulz

Subject: Letter of Support - West DuPage Recycling and Transfer Station
Attachments: Badger Solidification 8-18-20.pdf

Scott,

Thank you for taking the time yesterday to discuss the potential benefits to your company of the proposed Lakeshore Recycling System (LRS) Facility in West Chicago for which you provided the attached letter of support. As discussed, the proposed West DuPage Recycling and Transfer Station (RTS) would accept hydro excavation wastes and similar materials for solidification. The solidified material would then be transported off-site for disposal at a permitted landfill. We understand the following based on our discussion.

- Badger Daylighting's (Badger) hydrovac vacuum trucks provide non-destructive excavation services across all of northern Illinois to a variety of customers including utility companies (e.g., Com Ed, Nicor Gas).
- Badger's fleet in northern Illinois includes approximately fifty hydrovac vehicles.
- Badger stages/ parks its fleet of vehicles in multiple locations to try to minimize drive times and better serve its customers.
- The demand for hydrovac services (and thus the generation of hydro excavation wastes) has been growing and is anticipated to continue to increase over time.
- Badger routinely uses LRS's facility in Forest View to manage its hydro excavation and related wastes.
- The anticipated benefit to Badger if the proposed LRS facility is approved is primarily transportation logistics. Specifically, Badger provides services in many areas that are more conveniently located to West Chicago than other permitted facilities (such as the Forest View) so the use of the proposed West DuPage RTS would reduce transportation costs.
- Badger would save approximately two hours for each load that could be re-directed to the proposed West DuPage RTS in lieu of the LRS Forest View Facility.
- The typical cost to a customer for Badger's hydrovac services is approximately $250 per hour plus disposal costs.
- The decreased driving time would also increase Badger's productivity (i.e., more time to be providing services vs driving).
- Approximately 40% of the work Badger performs is located more convenient to West Chicago than Forest View.
- The extended operating hours (i.e., open past 3 pm) of the LRS Forest View facility is very helpful to Badger, and similar operating hours at the proposed West DuPage RTS would be desirable.

Please let us know if our understanding of any of the above is incorrect. Also please let us know of any questions you may have. Thank you again for your support of the proposed West DuPage RTS.

Scott,

Thank you for taking the time today to discuss the proposed Lakeshore Recycling System (LRS) Facility in West Chicago for which you provided the attached letter of support. As discussed, we understand that the information in the letter of support and the below email are still accurate with the following clarifications.

- Badger's fleet in northern Illinois has increased to approximately sixty hydrovac vehicles.
- The limited operating hours at the Woodridge-Greene Valley Wastewater Facility preclude Badger Daylighting's use of this facility.

Please let us know if our understanding of any of the above is incorrect. Also please let us know of any questions you may have. Thank you again for your support of the proposed West DuPage RTS.

As discussed, the proposed West DuPage Recycling and Transfer Station (RTS) would accept hydro excavation wastes and similar materials for solidification. The solidified material would then be transported off-site for disposal at a permitted landfill. We understand the following based on our discussion.

- J.A.C.K. Contractor Services, Inc. (JACK) hydrovac vacuum trucks provide stormwater catch basin cleanout, non-destructive excavation services, and related services primarily in the Chicagoland area to a variety of customers including the Illinois Department of Transportation.
- JACK uses LRS's facility in Forest View to manage its stormwater catch basin, hydro excavation and related wastes.
- The anticipated benefit to JACK if the proposed LRS facility is approved is primarily transportation logistics. Specifically, JACK provides services in certain areas that are more conveniently located to West Chicago than other permitted facilities (such as the Forest View) so the use of the proposed West DuPage RTS would reduce transportation costs.
- The decreased driving time would also increase JACK's productivity (i.e., more time to be providing services vs driving).
- Approximately 25% of the work JACK performs is located more convenient to West Chicago than other available locations.

Please let us know if our understanding of any of the above is incorrect. Also please let us know of any questions you may have. Thank you again for your support of the proposed West DuPage RTS.

Re: Municipal Waste Transfer Station - 1655 Powis Rd

Dear Mayor Ruben Pineda,

I am writing to support the inclusion of a non-hazardous liquid waste solidification permit for the LRS West Chicago facility. This will provide a cost-efficient means to support hydro-excavation services for major utility companies, municipalities, public and private construction; for the purpose of safely excavating non-hazardous soils surrounding areas requiring excavation, utility installation or repair.

Hydro-excavation services have become quintessential for utility companies, excavators, horizontal directional drilling (HDD) and many other essential services. This service has grown exponentially in recent years and is anticipated to continue to increase in demand.

The LRS West Chicago facility proposes to accept "Hydro Excavation Wastes" such as hydro/vacuum excavation muds, underground excavation material, and other similar materials, which are regulated as liquid wastes due to their low solids content. The Hydro Excavation Wastes will be unloaded directly into a fully contained, concrete lined mixing pit, and then be mechanically mixed with wood chips or other similar absorbent materials using a hydraulic excavator or wheel loader. The solidification process continues until the resultant material blend passes the regulatory test (i.e., paint filter test) for demonstrating the material is a solid. The solidified waste is then hauled off-site for disposal at a permitted non-hazardous waste landfill.

Due to the limited disposal locations for this liquid waste, please permit LRS the opportunity to provide this necessary service to reduce the amount of time and cost to properly dispose of non-hazardous, liquid wastes for projects DuPage and surrounding counties. With the budget constraints in the current economic environment, this will allow for more money to go towards actual construction budgets and improving both horizontal and vertical infrastructure modernization, safety and efficiency.

I look forward to working with you on this important issue to keep construction strong in Illinois while protecting the environment and reducing expenses. If you have any questions or need further clarification; please do not hesitate to contact me at (708) 868-0074

Sincerely,

Michael Giglio
President

APPENDIX 1-B2

LETTER OF SUPPORT FROM STROM

September 2, 2022

To Whom It May Concern:

Roy Strom Refuse Removal Service was the premier family-owned waste collection service provider in the Chicagoland area. With 76 years of family ownership, we knew how to take care of our customers to ensure they were provided with the best service within the industry. Over the past several years, the dynamics within the industry have changed dramatically. Due to consolidation and ever-increasing competition from much larger national waste firms we believed that it was in the best interest of our family to sell our firm to a larger non-national waste hauler.

The dynamics within the waste industry have been ever evolving over the past 25 years, but more recently the industry has consolidated at a much faster pace than previously experienced. Prior to 2007, Roy Strom did not have a solid waste transfer station. After much work and determination, we were granted a permit for a solid waste transfer station. Prior to that time, we were unable to secure even a long-term disposal agreement at a transfer facility. This transfer station (Greenwood Transfer) was a lifeline for our business as we were now able to negotiate long-term agreements direct with the landfill. This allowed us to competitively bid on long-term municipal agreements. At that time, we had several options to negotiate landfill agreements (Waste Management, Republic Services, Advanced Disposal, and Rock River Environmental (2 landfills)). After discussions with the national waste haulers, we ultimately chose Rock River as they were the most responsive and eager to work with another non-national service provider.

In 2015, Rock River Environmental was acquired by Waste Connections, a large national waste provider. After review of the agreements in place, Waste Connections determined they would no longer accept our material at Rochelle Landfill so they required Roy Strom (Greenwood Transfer) to move the disposal to Winnebago Landfill. Upon review, Greenwood Transfer and Waste Connections were unable to maintain a relationship after this request. In 2017, Greenwood Transfer entered into an agreement with Waste Management (DeKalb Landfill) and Advanced Disposal (Davis Junction). This agreement would allow Greenwood Transfer long-term pricing.

In 2020, Waste Management and Advanced Disposal announced a merger that would bring together two of the largest waste firms in the world. Upon approval by the Department of Justice they were allowed to move forward. This changed the model from 2007 when we had four firms controlling the landfills, including 1 non-national, to today when Waste Management and Republic Service (two of the largest waste firms in the world) control almost all the landfill

space. The third option was not available as our relationship with them was not in good standing due to the 2015 merger.

After this merger was complete, we believe that the industry could eventually get to the point where long-term agreements for landfill volume will not exist for the non-national waste haulers similar to when we did not have a transfer station and were at the mercy of the national waste haulers with transfer rates that could change without notice. The biggest challenge for Greenwood Transfer in the longer term would have been the reduced options for a competitive price at the landfill. While this was just one of the several reasons ultimately Roy Strom and Greenwood Transfer station was sold to LRS Holdings in late 2020.

I believe it is in the best interest of the consumer, the private waste haulers and the municipalities that the West DuPage Recycling and Transfer Station be approved for local sitting. To be more specific as to why this should be approved is that this will increase the disposal competition in the DuPage County market which will drive the disposal prices down and allow for lower prices to the communities and businesses, and bring a lifeline to the few non-national waste haulers that are left.

Sincerely,

George Strom
Vice President of Municipal Services
LRS

Re: Municipal Waste Transfer Station

Dear Mayor Pineda & West Chicago City Council,

I am writing you and to express our support for the siting of the Municipal Solid Waste Transfer located at 1655 Powis Road in West Chicago.

My family owned enterprise has been in the waste hauling business in DuPage County for over 40 years, and we have witnessed massive consolidation of the waste and recycling industries in the last 15 years or so. For small haulers such as ourselves to remain competitive, it is critical to have choices in transfer stations to bring our materials. Competition within this industry segment allows our company to offer better service, competitive pricing and is ultimately beneficial for our customers, who are primarily contractors and homeowners in DuPage County.

The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving the suburbs of DuPage and Kane County.

RE: Municipal Waste Transfer Station

Dear Mayor Ruben Pineda and City Council Members;

As an independent and family owned waste and recycling business for over 40 years we are writing the leadership of West Chicago to express our support for the siting of the Municipal Solid Waste Transfer Station located at 1655 Powis Road, West Chicago.

The waste and recycling industry continues to be dynamic and evolves to meet the needs of the many communities and marketplace. Therefore it is strategically important to have cost effective alternatives for our company and others to dispose and recycle material. This Municipal Solid Waste Transfer Station will do just that allowing company's like ours the ability to service our customers better and at competitive rates.

We commend the City of West Chicago for having taken the steps to expand this facility into a Municipal Solid Waste Transfer Station.

Sincerely,

Edward C. Kalebich

Re: 1655 Powis Road, West Chicago -Transfer Station

Attention: All concerned Officers of the City of West Chicago

We are happy to endorse the opportunity for a new citing of a COMPLETE transfer station that can handle both CD debris and MSW all in one location. The area is perfect and new competition would definitely be welcomed.

We have been doing business with Lakeshore Recycling at 2 other sites in the Chicago area and this company has the knowledge to run an efficient program that has rigorous guidelines for the waste industry, they run a tight ship.

Here is hoping that this possibility will become a reality in the very near future.

Sincerely,

Frank Caligiuri - President

Re: Municipal Solid Waste Transfer Station
1655 Powis Road, West Chicago

Dear Mayor Pineda and the City Council of West Chicago,

I am writing to you today in support of the proposed Municipal Solid Waste Transfer Station seeking siting at 1655 Powis Road, West Chicago.

Within the past two decades, our industry has seen a lot of consolidation, leaving smaller organizations like ours with limited disposal options. I believe that the construction of a privately held waste transfer station in your area is necessary for the sustainability of the area's private hauling companies. Since the majority of transfer stations in the area are owned by publicly traded companies, the need for this location is greater now that ever.

If you have any questions or concerns, please contact me at 708.388.9910 extension 217.

Re: Lakeshore Recycling Systems, LLC Municipal Solid Waste Transfer Station

I am writing to you and the City Council of West Chicago to express my support for the sitting of the Municipal Solid Waste Transfer Station located at 1655 Powis Road in West Chicago.

It is so important to have strategically located options to best serve the community and waste and recycling industry. The success of my small business, which operates as both a WBE and DBE depends on having strategically important alternatives for my company to dispose and recycle material. I can provide a better quality of service and offer competitive pricing because of having this transfer station as an option. In turn, I can grow my business and give back to the communities in which we work.

The City of West Chicago sets itself apart as a leader in making informed business decisions that benefit their community and the suburban areas of both DuPage and Kane County, and should be commended for having taken the steps to secure this Solid Waste Transfer Station.

Dear Bill,

The City of Wheaton is extremely pleased that you are seeking to locate a Municipal Solid Waste Transfer Station in nearby West Chicago at 1655 Powis Road.

We are aware of the consolidation that continues to occur within your industry. As a partner with Lakeshore Recycling Systems, we certainly see the strategic importance and value for your company having alternatives for material disposal and recycling. This new Transfer Station would create efficiencies and not only benefit LRS, but also your partners, as there would be options for disposal; and therefore, some degree of competition.

We are encouraged that West Chicago has taken steps towards opening a Municipal Waste Transfer Station serving DuPage County and the surrounding area. Thanks for your great work and desire for positive progress!

Re: Municipal Waste Transfer Station

Dear Mayor Ruben Pineda and City Council Members:

I am writing you to express my support for Lakeshore Recycling Systems and your efforts to site a Municipal Solid Waste Transfer Station at 1655 Powis Road in West Chicago.

The Solid Waste Collection and Disposal Industry continues to consolidate and it is vitally important to site new waste transfer facilities to remain competitive in the solid waste industry and to provide alternatives for the disposal of solid waste and recyclable materials. Lakeshore Recycling Systems has made significant improvements at their facility located at 6201 W. Canal Bank Road in Forest View and a new Transfer Station in West Chicago will allow LRS to enhance service and offer competitive pricing to the suburbs of DuPage County and the surrounding Chicagoland metropolitan area.

With all of the difficulties involved with siting a new waste transfer facility, I commend you, Lakeshore Recycling Systems and the City of West Chicago for your efforts.

Re: Municipal Waste Transfer Station

Dear Honorable Mayor Pineda and Members of the West Chicago City Council,

I am writing you and the City Council to express support for the siting of the Municipal Solid Waste (MSW) Transfer Station located at 1655 Powis Road in West Chicago.

As the waste and recycling industry is consolidating, alternative disposal and recycle processing options are imperative to maintain a competitive landscape. The siting of this MSW transfer station will provide a more balanced and competitive platform. This level of competition will result in better services and competitive pricing for the residents, businesses and industries throughout northern, IL.

The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving the suburbs of DuPage and Kane County.

Respectfully Submitted,

Nancy Nelson
Village President

Lisle™
THE ARBORETUM VILLAGE

September 9, 2019

To Whom It May Concern:

When the Village of Lisle set out to issue an RFP for refuse and recycling services in 2018, there was interest in determining whether new technology, services, and cost savings were available in the hauling market. At this point, the Village had an incumbent hauler that had worked in the community for over two decades. They were well established within the community, the drivers knew their routes, residents knew their driver, and customer service was provided in a predictable fashion.

The issuance of an RFP signified that the Village would be exploring opportunities to modernize this service as well as achieve cost-savings for Lisle residents. One of the unique aspects of this process is that Lisle includes its multi-family accounts in the RFP, which added an additional layer of complexity.

Lakeshore Recycling Systems (LRS) was one of three proposals received in response. Lakeshore's proposal stood out amongst the other submittals as they (LRS) offered competitive pay-per-use as well as modified-volume-based pricing, comprehensive services, and a technological solution – the use of RFIDs – which no other company had proposed. They were extremely responsive to requests for more information, appeared at Village Board meetings to introduce themselves and answer questions, and were willing to explore a solution that was the best fit for the Lisle community.

Now, over a year since they began providing services, we are extremely pleased with their service. Single and multi-family accounts have had the opportunity to realize cost savings, while at the same time are able to take advantage of new programs such as curbside electronics recycling, household hazardous waste pick up, and composting. LRS staff is also extremely responsive to customer service needs as well as needs to communicate program information to the public. The company has also supported several community events, including the Lisle Eyes to the Skies Festival and Downtown Car Shows.

LRS provides professional and responsive customer service and innovative programs all at extremely competitive rates. We have been pleased with their performance and with the services, they provide to Lisle residents.

Sincerely,

Eric Ertmoed

I am writing this letter to recommend the services of Ecology Solutions to you. During the past year this company has been working with the Village of Atkinson on numerous different kinds of projects. The company offers high quality services. We can say that we have always been satisfied by their work.

One of the projects that we worked on was an upgrade, adding on of a waterline that helped to improve the Village and Ecology solutions with the need for water. The line was put in in a quick organized manner that did not cause any delays for the community as well as not causing a financial burden on the Village all at once.

The Village of Atkinson feels we are very lucky to have Ecology Solutions on our side to help improve our community. There is an agreement in place that the Village collects what is known as a host fee. Those are funds that the Village receives which in return are used for more updates and possible expansions in our small town.

From day one the Ecology's Solutions employees have always been great at communication and being on top of any matter that may come up. They have cleaned up after themselves and have graciously cleaned our streets as well. Ecology Solutions has really made improvements to the appearance of the landfill compared to the prior operator.

I would like to ask you to consider Ecology Solutions. I strongly recommend the services of the company and I am looking forward to working with the company into the future.

Sincerely,

Kenneth Taber

Dear Mayor Ruben Pineda & City Council,

We are writing you and the City Council of West Chicago to express our support for the siting of the Municipal Solid Waste Transfer Station located at 1655 Powis Rd, in West Chicago.
With the consolidation within the waste and recycling industries it is strategically important to have alternatives for our company to dispose and recycle material. Creating competition within the industry allows our company to offer better service and competitive pricing.
The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving the suburbs of DuPage and Kane County.

To whom it may concern:

Xtreme Environmental is a waste consulting company located in West Chicago. We help our clients secure the lowest possible pricing on their scavenger service contracts while providing best practice recommendations, as well as implement efficient and cost reducing procedures. We've been in business for nearly 12 years. Competition in any industry is important. Without it, we as a consumer will eventually pay more when there is less competition.

Right now, Waste Management (who is merging with Advanced Disposal) and Waste Connections (who merged with Groot) are the two scavenger service companies with transfer stations in Dupage County. We support and recommend approving Lakeshore Recycling Systems Municipal Waste Transfer Station in West Chicago. This is needed now more than ever to ensure we maintain competition in this area.

Thank you for your time and consideration,

Sincerely,

Lori Davis

Diversified Waste Solutions, LLC
321 Stevens Street
Geneva, IL 60134

City of West Chicago,

I am writing to you today to endorse the expansion of the Lakeshore Recycling Systems facility on Powis Road into a solid waste transfer station.

By way of introduction, my name is David Walker and I am president of Diversified Waste Solutions.

My firm is based in Geneva Illinois with satellite offices in Atlanta and Denver.

Our business is waste consulting/brokering and we have customer presence in every major market in the country. We manage 1600 customer locations and control many millions is waste spend.

Our base of customers are most often large companies with multiple facilities scattered throughout the US.

Closer to home, we manage some 175 locations in the greater Chicagoland market. These locations vary from large industrial facilities to office buildings. All told, our local customers generate upwards of 50,000 tons of waste material annually.

With our volume, we work with every waste hauler in the Chicagoland market and utilize many of the available transfer stations and landfills.

We have worked closely with Lakeshore Recycling Systems since our inception in early 2000.

Over the past 20 years that we have been in business, we have had a front row seat to many of the consolidations, mergers and acquisitions of waste haulers throughout the country.

Some have been advantageous to the markets where the transaction has taken place, but more often than not, the customers have suffered. A reduction in competition results in a loss of opportunities, a decrease in efficiencies and an increase in overall costs to the customers.

The recent divestiture of Advanced Waste to Waste Management and GFL has been of particular concern.

The addition of a Lakeshore run transfer in the area could only result in a better business environment for our collective customers.

Sincerely,
David F Walker

Re: Municipal Waste Transfer Station

Dear Honorable Mayor Pineda and Members of the West Chicago City Council,

I am writing you and the City Council to express support for the siting of the Municipal Solid Waste (MSW) Transfer Station located at 1655 Powis Road in West Chicago.

As the waste and recycling industry is consolidating, alternative disposal and recycle processing options are imperative to maintain a competitive landscape. The siting of this MSW transfer station will provide a more balanced and competitive platform. This level of competition will result in better services and competitive pricing for the residents, businesses and industries throughout northern, IL.

The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving the suburbs of DuPage and Kane County.

Re: Municipal Waste Transfer Station

Dear Honorable Mayor Pineda and Members of the West Chicago City Council,

I am writing you and the City Council to express support for the siting of the Municipal Solid Waste (MSW) Transfer Station located at 1655 Powis Road in West Chicago.

As the waste and recycling industry is consolidating, alternative disposal and recycle processing options are imperative to maintain a competitive landscape. The siting of this MSW transfer station will provide a more balanced and competitive platform. This level of competition will result in better services and competitive pricing for the residents, businesses and industries throughout northern, IL.

The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving the suburbs of DuPage and Kane County.

Respectfully Submitted,

Re: Municipal Waste Transfer Station

Dear Honorable Mayor Pineda and Members of the West Chicago City Council,

I am writing you and the City Council to express support for the siting of the Municipal Solid Waste (MSW) Transfer Station located at 1655 Powis Road in West Chicago.

As the waste and recycling industry is consolidating, alternative disposal and recycle processing options are imperative to maintain a competitive landscape. The siting of this MSW transfer station will provide a more balanced and competitive platform. This level of competition will result in better services and competitive pricing for the residents, businesses and industries throughout northern, IL.

The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving the suburbs of DuPage and Kane County.

West Chicago, Illinois 60185

Re: Municipal Waste Transfer Station

Dear Honorable Mayor Pineda and Members of the West Chicago City Council,

I am writing you and the City Council to express support for the siting of the Municipal Solid Waste (MSW) Transfer Station located at 1655 Powis Road in West Chicago.

As the waste and recycling industry is consolidating, alternative disposal and recycle processing options are imperative to maintain a competitive landscape. The siting of this MSW transfer station will provide a more balanced and competitive platform. This level of competition will result in better services and competitive pricing for the residents, businesses and industries throughout northern, IL.

The City of West Chicago should be commended for having taken steps to open another Municipal Waste Transfer Station serving the suburbs of DuPage and Kane County.

Respectfully Submitted,

ATTEST:

City Clerk Nancy M. Smith

HOST COMMUNITY BENEFIT AGREEMENT BETWEEN THE CITY OF WEST CHICAGO, DUPAGE COUNTY, ILLINOIS, AND LAKESHORE RECYCLING SYSTEMS, LLC FOR A SOLID WASTE TRANSFER FACILITY

This HOST BENEFIT COMMUNITY AGREEMENT ("Agreement") is made as of the 1st day of April, 2019, between the CITY OF WEST CHICAGO, DuPage County, Illinois ("City") and LAKESHORE RECYCLING SYSTEMS, LLC ("Company").

RECITALS

WHEREAS, the Company currently operates a solid waste management facility, which receives, sorts/ separates, recycles and transfers Construction or Demolition Debris (hereinafter referred to as the C&D Recycling Facility) on the premises legally described in Exhibit A attached hereto and consisting of approximately 27.81 acres (hereinafter referred to as the "Subject Property"); and

WHEREAS, the Company plans to file with the City a request for site location approval for the construction and operation of a new Transfer Facility with sufficient capacity to receive and transfer to landfills an annual average of 1,500 tons per day of non-hazardous Municipal Waste and Hydro Excavation Waste (as those terms are defined below) with ancillary truck parking and storage and maintenance facility combined ("Transfer Facility"); and

WHEREAS, the Company desires to construct the Transfer Facility on the Subject Property and operate the Transfer Facility in conjunction with the C&D Recycling Facility; and

WHEREAS, the City is authorized by State of Illinois law, pursuant to Section 39.2 of the Illinois Environmental Protection Act (415 ILCS 5/39.2) to, among other things, receive, hold hearings, and decide an application for the site location of a pollution control facility proposed to be located in the City of West Chicago; and

WHEREAS, the City Council of the City of West Chicago ("City Council") adopted Pollution Control Facility Site Approval Procedures consistent with Section 39.2 of the Illinois Environmental Protection Act, for the purpose of preparing a comprehensive approach to the site location review process of a solid waste pollution control facility in the City of West Chicago; and

WHEREAS, Section 39.2 of the Illinois Environmental Protection Act acknowledges a local government's power to negotiate and enter into a host community benefit agreement with an applicant for site location of a pollution control facility; and

WHEREAS, the Company desires to provide certain environmental protection and compensation to the City with respect to the Transfer Facility, if the Transfer Facility obtains all required approvals and commences operation; and

WHEREAS, the City is desirous of obtaining such environmental protections and compensation, provided that the City shall have no obligation to grant site location approval of the Transfer Facility unless and until, through the local site location review process, it finds that the Transfer Facility meets or exceeds all criteria required by 415 ILCS 5/39.2. Regardless of whether site location approval is granted, this Agreement survives the local site location review process; and

WHEREAS, the City has not consented to, concurred in or objected to the proposed plans of the Company to develop the Transfer Facility, and nothing in this Agreement shall be deemed by the Company, the City, other public agencies, or the public to indicate that the City has heretofore adopted any position on the potential development of the Transfer Facility; and

WHEREAS, if the City grants site location approval of the Transfer Facility, and if thereafter the Illinois Environmental Protection Agency issues permits for the development and operation of the Transfer Facility, the Company is willing to pay a host community benefit fee, as hereinafter set forth, to the City to assist the City in meeting the costs associated with the Transfer Facility and for other general revenue needs of the City as the City may deem appropriate.

NOW, THEREFORE, in consideration of the mutual covenants and agreements hereinafter set forth, the City and the Company agree as follows:

ARTICLE 1
DEFINITIONS AND TERM OF AGREEMENT

Section 1.1 Definitions

"Act" as used in these definitions and this Agreement, shall mean the Illinois Environmental Protection Act, as amended from time to time (415 ILCS 5/1, et seq.).

"Construction or Demolition Debris" whether or not capitalized, means "clean construction or demolition debris" as defined by Section 5/3.160(b) of the Act (415 ILCS 5/3.160(b)), or "general construction or demolition debris," as defined by Section 5/3.160(a) of the Act (415 ILCS 5/3.160(a)).

"Food Scrap" whether or not capitalized and used in any of its grammatical forms, means "food scrap" as defined in Section 5/3.197 of the Act (415 ILCS 5/3.197).

"Hydro Excavation Wastes" means solid/liquid waste such as hydro/vacuum excavation muds, underground excavation material, drilling muds, and other similar materials.

"IAC" as used in these definitions and this Agreement, shall mean the Illinois Administrative Code.

"IEPA" means the Illinois Environmental Protection Agency.

"IPCB" means the Illinois Pollution Control Board.

"Landscape Waste" whether or not capitalized and in any of its grammatical forms, means "landscape waste" as defined by Section 5/3.270 of the Act.

"Municipal Waste" whether or not capitalized and used in any of its grammatical forms, means "municipal solid waste", as defined by Section 5/3.290 of the Act (415 ILCS 5/3.290), except that such waste does not include Construction or Demolition Debris, Recyclables, Unacceptable Waste, or Landscape Waste.

"Recyclables" whether or not capitalized and used in any of its grammatical forms, means any material, which would otherwise be disposed of or discarded, which is separated from Municipal Waste or Construction or Demolition Debris at the source of generation so as to render it useable in a process, or alone, such that it can be returned to the economic mainstream in the form of raw materials or products. Examples of recyclables are newspaper, glass bottles, high density, polyethylene containers, aluminum food and beverage containers, chipboard, and corrugated containers. Recyclables do not include any materials removed or separated from, or containing Unacceptable Wastes.

"Regular Business Hours" of the Transfer Facility shall mean 4:00 a.m. to 12:00 a.m. on weekdays and 4:00 a.m. to 12:00 p.m. on Saturdays, with no operation on Sundays or the six major Federal holidays (New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas), provided that on the Saturday following any Federal holiday Regular Business Hours may be extended by the Company to 12:00 a.m. The Regular Business Hours for accepting Municipal and Hydro Excavation Waste may be extended but only upon the prior approval of the City, such approval being in writing.

"Solid Waste" whether or not capitalized, means Municipal Waste, Landscape Waste, Food Scrap, , and Construction or Demolition Debris, including those materials in these classifications that have received a Beneficial Use Determination (BUD) designation by the IEPA, as those terms are defined in this Section.

"Transfer Facility" whether or not capitalized, means, "Transfer Station" as defined by 5/3.83 of the Act (415 ILCS 5/3.83), including the property on which the Transfer Station is located, and specifically references the Transfer Facility the Company desires to construct and operate located on approximately 27.81 acres at 1655 Powis Road, Illinois, permanent parcel #01-32-101-004 and #01-32-200-001, at the property described on Exhibit A.

"Unacceptable Waste" whether or not capitalized and used in any of its grammatical forms, means (a) "hazardous waste" as defined by Section 5/3.15 of the Act (415 ILCS 5/3.15) or by 35 IAC 721.03; (b) "industrial process waste" as defined by Section 5/3.235 of the Act (415 ILCS 5/3.235), except allowable special waste and such industrial process waste which poses no present or potential threat to human health or the environment and which has no inherent properties which makes its disposal in a landfill difficult to manage by normal means, and which has been specifically approved by the IEPA; (c) "pollution control waste" as defined by Section 5/3.335 of the Act (415 ILCS 5/3.335); (d) "sludge" as defined by Section 5/3.465 of the Act (415 ILCS 5/3.465); (e) "potentially infectious medical waste" as defined by Section 5/3.360 of the Act; (f)

"special waste" as defined by Section 5/3.475 of the Act; (g) "polychlorinated byphenyls" as defined in the Toxic Substances Control Act, 15 U.S.C. Section 2601-2692, or regulations promulgated thereunder; (h) source, special or byproduct nuclear materials, radioactive waste, high-level or low-level radioactive waste, or transuranic waste as defined in the Atomic Energy Act, 42 U.S.C. Sections 2014, et seq., or regulations promulgated thereunder; or (i) "asbestos" as defined in 40 CFR 763.83, except that Unacceptable Waste does not include Hydro Excavation Waste.

Section 1.2 Term

This Agreement commences on the date executed and continues in force and effect until the Transfer Facility ceases to operate and is no longer permitted by the IEPA to accept Muncipal Waste and/or Hydro Excavation Waste. In addition, the City may terminate this Agreement if the Company is in default of this Agreement as provided in Section 4.2. The terms of this Agreement that are specifically extended beyond termination (i.e., as provided in Sections 2.1, 2.2, 2.3, 4.1, 4.6, 4.7, 4.8, 4.9, and 5.2), survive this term provision. The Company, in turn, may, at its sole discretion, terminate this Agreement if it determines that it is no longer economically desirable to operate the Transfer Facility and it rescinds its IEPA permit to operate. The Company agrees that, should this Agreement be terminated, the Company will immediately remove all Muncipal Waste and/or Hydro Excavation Waste from the Transfer Facility and stop its operations and receipt and acceptance of Muncipal Waste and/or Hydro Excavation Waste.

ARTICLE 2
ENVIRONMENTAL PROTECTIONS

Section 2.1 Compliance with Laws

The Company shall comply at all times, in connection with the development and operation of the Transfer Facility, with: all laws, ordinances, and final and non-appealable conditions of this site location (should it be approved by the City); conditions and requirements of any permit that is issued for development or operation of the Transfer Facility; modified or amended rules and regulations and ordinances of any Federal, State or local governmental agency or authority relating to the development, operation, monitoring, remediation, or closure of the Transfer Facility; and, this Agreement. In addition, should the Company obtain approval from the City, pursuant to Section 39.2 of the Act, but contest on appeal, one or more conditions, if any, placed on such approval, the Company agrees that, with respect to such contested condition(s), it will not commence permitting, development, construction or operation of the Transfer Facility, until a final decision has been entered by the IPCB . With respect to the closing of the Transfer Facility, the Company agrees to comply with any government ordinance, rule, law or directive as to post-closure requirements and pay the entire costs associated therewith. This Section 2.1 survives the termination of this Agreement.

Section 2.2 Waste Acceptability

The Company shall only allow Solid Waste and/or Hydro Excavation Waste to be intentionally accepted at, transported to, stored at, or otherwise present at the Transfer Facility. All

Municipal Waste and/or Hydro Excavation Waste, except when being transported to or from the Transfer Facility, must be kept inside (i.e., within a fully enclosed area of) the Transfer Facility. Unacceptable Waste accepted at, transported to, stored at, or otherwise present at, on, or in the Transfer Facility shall be properly removed within 24 hours. Willful violation of this prohibition of Unacceptable Waste is a material breach of this Agreement and enforceable by injunction, or any other legal theory, and the enforceability of this provision survives the termination of this Agreement.

The Company agrees that it shall not receive at the Transfer Facility more than 1,500 tons of Municipal Waste and/or Hydro Excavation Waste per day (calculated on a rolling twelve (12) month average, based on 5.5 days per week), except with the prior written approval of the City. The parties may at any time by mutual agreement modify this provision, and such modification shall not be considered an event which triggers the requirement of local siting approval.

Section 2.3 Defense and Indemnification and Insurance

The Company covenants and agrees at Company's sole cost and expense to defend, indemnify and hold harmless the City, individual members of the City Council, and any and all employees, agents, officers, or representatives of the City (collectively "City Affiliates"), from and against all claims, suits, actions, administrative enforcement proceedings, losses, damages of all kinds, costs, expenses, fines and penalties, attorneys' fees and expenses of litigation, of any nature whatsoever, relating in any way directly or indirectly to the Transfer Facility where the same are caused by the Company's negligence, willful misconduct or breach of this Agreement. This includes, but is not limited to, any condition or occurrence, or any release, discharge or emission at, onto, above, under, through or from the Transfer Facility; or the Company's execution, performance, or non-performance of this Agreement or of any conditions placed on siting (should the facility be approved or the operations of the Company conducted at the Transfer Facility). This includes, but is not limited to, any claims of injury to any person (including, but not limited to death) or property for violation of or non-compliance with any law, ordinance, rule or regulation (including without limitation any environmental, health, antitrust, civil rights, employment or trade law, or statutory or common law obligation or liability). The Company shall with the advice and consent of the City (which consent shall not be unreasonably withheld, conditioned or delayed)assume the defense of all suits, administrative proceedings and disputes of any description with all persons, entities, political subdivisions or government agencies arising out of the matters to be indemnified under this Agreement. In the event of a written offer to settle such matter on monetary terms only, and the Company wishes to accept and pay the same, but the City does not agree to suchsettlement, the Company shall pay the amount to the City and the City shall assume the further defense of the matter, and Company shall have no further liability for defense or indemnification, provided however, that the foregoing shall not apply to any non-monetary terms of an offer, such as where consent to an injunction is stated as a term in the offer to settle.In the event that the City or any of the City Affiliates is/are named as a defendant(s) in any lawsuit arising out of the matters to be indemnified under this Agreement, the Company shall have the right to choose the attorney(s) who represent(s) them in said lawsuit, and the reasonable costs, expenses and fees associated with said attorney(s) in relation to said lawsuit shall be paid by the Company pursuant to the indemnification provisions herein. City shall have the right to reject said choice in the event of actual conflict of interest or if the attorney has a family relationship to any City employee, officer,

or official,.and in any event, the City shall have the right to participate at its own expense in any proceeding, claim, suit or action. Company shall pay, promptly upon entry, any nonappealable order, judgment or other final resolution of any claim or dispute arising out of the matters to be indemnified under this Agreement and shall pay promptly when due any fines, penalties or agreed settlements arising out of the matters to be indemnified under this Agreement. In the event that such payment is not made, the City or any City Affiliate, at their sole discretion, may proceed to file suit against the Company to compel such payment. The City Affiliates shall give reasonable notice of the service of any suit upon them to the Company, and shall give reasonable notice of any claim, action, administrative proceeding, loss or other damages. In the event of a claim or suit against Company arising out of the sole negligence, willful misconduct or breach of this Agreement by the City or any City Affiliate, City shall be obligated to defend and indemnify Company on the terms set forth in this section.. The City shall be responsible on the same terms as the Company's responsibility is based for indemnification of any injury or damage to the extent the same results from the sole negligence, willful misconduct or breach of this Agreement by the City or any City Affiliate. In addition, nothing in this Agreement shall be construed as a waiver of any common law or statutory immunity the City may have to such liability. This Section 2.3 survives termination of this Agreement.

Nothing in this Section shall be construed as a waiver of any rights either party may have with regard to contesting its alleged obligation for defense and indemnification by way of Declaratory Judgment or otherwise.

Further, any defense and indemnity provided herein is independent of and shall not be limited by reason of the enumeration of any insurance coverage which the Company has obtained. In that regard, Company shall purchase and maintain the following types of insurance with the following aggregate coverage limits: (a) General Liability - $5,000,000; (b) Automobile Liability - $5,000,000; and (c) Workers Compensation - $3,000,000. Such insurance shall include the City of West Chicago as an additional insured, except for workers' compensation insurance, on a non-contributory primary basis and, if such coverage is commercially available, shall include "Occurrence" basis wording or provide for other substantially similar coverage that protects the City against the equivalent risks issued by a company or companies qualified to do business in the State of Illinois . A Certificate of Liability Insurance in substantially the form of the sample Certificate of Liability Insurance attached as Exhibit C shall be filed with the City, and this Certificate of Liability Insurance and the insurance policies required by this Section shall contain a provision that coverage afforded under the policies will not be canceled or allowed to expire until at least thirty (30) days prior written notice (ten (10) days in the case of nonpayment of premium) has been given to the City. Company assures the City that a valid Certificate of Insurance will be in the City's possession at all times.

ARTICLE 3
HOST FEES

Section 3.1 Purpose

In consideration of the additional fees and costs to be incurred by the City, should the West Chicago City Council approve the Transfer Facility site location and should the Company build the Transfer Facility and begin accepting Municipal Waste and/or Hydro Excavation Waste, the Company agrees to pay the City the following fees.

Section 3.2 Quantity Based Fees

The Company shall pay to the City a base fee as provided below for each ton of Municipal Waste and/or Hydro Excavation Waste, except landscape waste and recyclables, received at the Transfer Facility (whether received in the same or separate vehicles) from the first date Muncipal Waste and/or Hydro Excavation Waste is received through the termination of this Agreement. In the event the Transfer Facility accepts Food Scraps either in dedicated truckloads or commingled with Landscape Waste, the Company agrees to pay the per ton fee provided for in this section on the Food Scraps accepted at the Transfer Facility. The parties agree to work together to track and implement the mechanisms needed to assure the City payment on Food Scraps. The parties agree that the initial concept for implementing such a program may but need not necessarily be as the following language which is included herein for illustrative purposes only: "in order to determine the amount of Food Scrap accepted at the Transfer Facility that has been commingled with Landscape Waste from residential sources, the Company shall annually weigh and track the amount of Food Scrap it receives during the months of January, February and March when Food Scrap is not commingled with Landscape Waste. The Company shall determine a monthly average based on these three months and shall pay the City the per-ton fee on Food Scraps for those three months and for the remaining nine months of the calendar year based on the monthly average computed for that calendar year. If the Company receives Food Scraps from non-residential sources, for example grocery stores, restaurants and food processing firms, the Company shall pay the City the per ton fee on those Food Scraps based on the actual weights received. The Company shall provide the City with the data and calculations used to compute the monthly average by April 10 of each year and the City shall either accept or reject the monthly average proposed by the Company by April 20 of each year." Beginning on January 1, 2021, the annual increase provision in Section 3.3 will be used to determine the per-ton fee.

Per Ton Fee

The Company shall pay the City a Host Benefit Fee equal to two dollars and forty-five cents ($2.45) per ton of Muncipal Waste and/or Hydro Excavation Waste received at the Transfer Facility. Per-ton fees shall be payable only if, as and when waste is received and accepted at the Transfer Facility.

If the Company is awarded the City contract for curbside and/or alley collection and disposal of refuse, recyclable, and yard waste from all present and future single-family residences and multiple family dwellings of four (4) or less residential dwelling units in the City, the Company shall pay the City a separate Collection Fee of $0.40 for each ton of Municipal Waste received at the Transfer Facility. The Collection shall be paid from the first date Municipal Waste is received at the Transfer Facility pursuant to the City contract through the terminaton of the City contract.

Section 3.3: Annual Increase

Beginning as of January 1, 2021, and as of each January 1 thereafter, the per-ton fees described in Section 3.2 above will be adjusted from the per-ton fees of the previous year by the percentage change during the previous year in the Revised Consumer Price Index for All Urban Consumers (CPI-U) published by the United States Department of Labor – Statistics for the Chicago-Gary-Kenosha area, provided, however, that at no time shall the increase be less than 0% or greater than 4%. If the Consumer Price Index for All Urban Consumers shall cease to be published in the time frame described above, the City and Company shall designate a comparable time frame or index, which shall then be used for determining the annual rate of adjustment.

Section 3.4 Identification and Weight of Receipts

The Company shall weigh all receipts of Solid Waste and/or Hydro Excavation Waste on a certified scale, which is inspected at least once each calendar year by the Company, and a copy of said inspection shall be provided to the City upon request. In addition, the Company shall identify for the City, in writing, a listing of all receipts categorized by date, type of Solid Waste and/or Hydro Excavation Waste and other material in each receipt (if not Solid Waste and/or Hydro Excavation Waste), and weight of Solid Waste and/or Hydro Excavation Waste (or other material if not Solid Waste and/or Hydro Excavation Waste) in each receipt, so that the City can determine by its review of these records the number of incoming vehicles, the type of vehicle and identification of the hauling entity or person (in the case of an individual rather than business hauler), the load weight and total weight of each vehicle, and the type of waste or material contained on each vehicle received at the Transfer Facility each calendar day.

Further, the Company shall keep records of outgoing Solid Waste and/or Hydro Excavation Waste, such that the City can determine by its review of these records the number of outbound vehicles, the type of vehicle, the destination of each vehicle, and the type of waste contained on each vehicle leaving the Transfer Facility each calendar day. In addition, should the City request records concerning the load weight and total weight of each outbound vehicle, the Company agrees to provide that information, from weights measured at the Transfer Facility or at the destination of the vehicles leaving the Transfer Facility, from the time the Company receives the City's request on moving forward basis for any time period(s) designated by the City.

Section 3.5: Auditing

The Company shall keep complete and accurate books and records relating to the determination of the fees described in Article 3, in an auditable form, including those records described in Section 3.4. No more than once per year, the Company shall permit the City and its designated representatives access to such books and records (paper and electronic version) for inspection and copying. In the event that such inspection reveals any underpayment(s) of the fees described in Sections 3.2 and 3.3, the Company shall promptly pay the City the amount(s) of such underpayment(s), and if such underpayment is in excess of $1,500.00, shall reimburse the City for its reasonable costs and expenses of such inspection and, if necessary, collection, including any professional and technical fees (including attorneys' fees) in connection therewith. If any inspection reveals an underpayment in excess of $1,500, the City may inspect again within six months. In the event that such inspection reveals any overpayment(s) of the subject fees, the

Company may credit the amount of such overpayment(s) against the payments of the subject fees in subsequent quarters. The City shall give the Company at least seven (7) days notice before incurring such costs and expenses but nothing in this Agreement or this Section shall limit the City's right and ability to review, inspect, copy and audit the Company's books and records as set forth in this Section.

Section 3.6: Payment Schedule for Fees

The fees described in this Article shall be paid on a quarterly basis. The quarterly payments shall be calculated on a calendar-year basis; that is, they shall be calculated for the three-month periods ending on the last day of March, June, September and December of each year during the term of this Agreement and any extension thereof. The payment shall be made not later than forty-five (45) days after the last day of the preceding quarter and shall be limited to the Solid Waste transferred during the quarter to which it applies. Past due payments of the fees shall be subject to a late charge of one-and-one-half percent (1½ %) per month or fraction of a month for which the payment is late. Payment of such interest shall not otherwise excuse or cure any default by the Company under this Agreement.

Section 3.7: Inspection and Enforcement

If the Company is charged by the City with having violated any City enforceable law, ordinance, rule or regulation, or any of the Company's permit or site location approval conditions, the Company will be given a corrective notice along with a deadline to comply. If the Company fails to come into compliance and correct the violation, the City will proceed to issue a citation that requires the Company to appear at an Administration Adjudication hearing or the City will proceed through the court process. If the Company is found by a court or through the Administration Adjudication process to be guilty of such violation, or if the Company admits guilt or pleads no contest to such violation, the Company shall reimburse the City for all reasonable fees and costs associated with the City's investigation and prosecution of such violation, including, but not limited to, attorneys' fees. Additionally, Company agrees to pay upon a finding or admission of guilt or a plea of no contest to the City $500.00 per day as liquidated damages, for each day after notice of such violation was received until the violation is cured, for the Company's violation of the provisions of this Agreement which require compliance with any City enforceable law, ordinance, rule or regulation, or any of the Company's permit or site location approval conditions or requirements, or siting conditions (such as conditions concerning tarping or untarping of vehicles, pick-up or clean-up of litter, noise control, odor control, vector control, dust control, or random load inspections),. The $500.00 liquidated damages provision shall increase annually, pursuant to the manner and method set forth in Section 3.3 of this Agreement.

ARTICLE 4
MISCELLANEOUS

Section 4.1: Assignment

The Company shall not assign or attempt to sublet this Agreement or any interest in this Agreement or any right or privilege appurtenant to this Agreement without first obtaining the City's written consent, which consent shall not be unreasonably withheld, conditioned or delayed: provided, however, that the Company may assign or transfer its interest in this Agreement to an affiliate of the Company without consent in the event that the affiliate is more than 50% owned by the Company. In addition, no transfer of any ownership or other interest in the Transfer Facility may be made without the prior written approval of the City, which approval shall not be unreasonably withheld, conditioned or delayed. The right to seek assignment or approval may occur only if all payments to the City by the Company have been made and if the Company is not otherwise in default in connection with obligations under this Agreement. If the Company requests the City's consent to an assignment of this Agreement or approval of a transfer of ownership or other interest in the Transfer Facility, the Company shall submit written notice containing at least the following information, plus any information required by the City's ordinance pertaining to such assignment request, should such an ordinance be in existence at the time of the request:

(a) The name of the proposed assignee;

(b) The terms of the proposed assignment except that Company is not required to disclose consideration, price or payment terms

(c) The nature of business of the proposed assignee and the proposed use by the assignee; and

(d) Information relating to the financial responsibility and general reputation in the solid waste field of the proposed assignee that City may require.

In the event of the City's agreement to assignment, the proposed assignee shall agree to the following:

(e) To assume all obligations and duties of the Company under this Agreement and any conditions placed on the site location approval by the City;

(f) To be bound as an original party to this Agreement; and

(g) To make any and all payments due under this Agreement and/or assignment to City directly at its offices, as such payments become due; and

Subject to the provisions of this Agreement limiting the right to assign this Agreement shall be binding on and inure to the benefit of the parties and their heirs and successors. Furthermore, in the event of an approved assignment or transfer, the Company shall remain primarily responsible for all obligations and liabilities of this Agreement which accrue prior to the execution of any approved assignment or transfer. Transfer of a fifty-percent (50%) or greater interest in the Company to another owner or owners shall be deemed an unpermitted transfer under this Section, unless made with the approval of the City. The City may require an additional written commitment from the assignee or transferee to assume and comply with the duties and obligations of this

Agreement. The City shall not unreasonably withhold, condition or delay approval of a proposed assignment or transfer. This Section 4.1 survives termination of this Agreement.

Section 4.2: Default

The occurrence of any one or more of the following constitutes a "default" by the Company under this Agreement. Should the Company be in default of this Agreement, the City may, at its sole discretion, terminate this Agreement.

(a) The failure by the Company to pay any fee due and payable under this Agreement; if the Company does not cure such failures within thirty (30) days after notice thereof from the City to the Company;

(b) The failure by the Company to observe or perform in any material respect pursuant to Section 2.1 of this Agreement or any other provision of this Agreement, if the Company does not cure such failure within thirty (30) days after notice thereof from the City to the Company. In the event such failures cannot reasonably be cured within thirty (30) days, the Company must, before the thirtieth day: notify the City that it cannot complete its cure, present the City with a plan and timeline (which meets with the reasonable approval of the City) for completing the cure and implementing a plan to prevent the same or a similar failure from occurring again, and diligently continue to cure such failures during the initial thirty (30) day cure time period and any additional period beyond the thirty (30) days approved by the City. However, to the extent the Company's default under this Agreement concerns its failure to comply with Section 2.2 (Waste Acceptability), the more restrictive provision (this or Section 2.2) shall control in determining whether the Company is in default of this Agreement;

(c) The Company admits in writing its inability to pay its debts as they mature and makes an assignment for the benefit of creditors or applies for or consents to the appointment of a trustee or receiver for the Company or a major part of its property;

(d) A trustee or receiver is appointed for the Company or for a major part of its property, and it is not discharged within ninety (90) days after such appointment; or

(e) Bankruptcy, reorganization arrangement, insolvency or liquidation proceedings or other proceedings for relief under any bankruptcy law, or similar law, for the relief of debtors are instituted by or against the Company and, if instituted against the Company, are allowed against it or are not dismissed within 180 days after such institution.

Section 4.3: Notice

Any notice to be given hereunder by either party to the other shall be in writing and be sent by personal delivery, by overnight delivery service or by registered or certified mail, postage

prepaid, return receipt requested, and shall be deemed communicated when delivered or three (3) business days from the date of mailing, whichever is earlier. Notices shall be addressed as set forth below, but each party may change its address by written notice to the other in accordance with this Section:

To the City, notice shall be sent to both the City and the City's Attorney at the following addresses:

TO THE CITY AT:

Attention: Michael Guttman, City Administrator
Address: West Chicago City Hall
475 Main Street
West Chicago, Illinois 60185

WITH COPY TO THE CITY'S ATTORNEYS AT:

Attention: Dennis G. Walsh, Esq.
Address: Klein, Thorpe and Jenkins, Ltd.
20 N. Wacker Drive - Suite 1660
Chicago, Illinois 60606-2903

To the Company, notice shall be sent to the Company at the following addresses:

TO THE COMPANY AT:

Attention: Alan Handley
Address: Lakeshore Recycling Systems, LLC
6135 Oakton Street
Morton Grove, Illinois 60053

Section 4.4: Agreement Controls

This Agreement constitutes the entire understanding of the parties hereto relating to the subject matter contained herein, except that it does not, in any way, constitute the City's agreement or obligate the City to approve the Company's site location application. If such application is filed with the City and if such application is approved by the City, this Agreement is to be read as an additional obligation and not as superseding the Company's obligation to comply with any conditions of the City's site location approval and any laws, ordinances, rules or regulations applicable to the site or Transfer Facility.

Section 4.5: Captions

Captions of the Articles, Sections and paragraphs of this Agreement are for convenience or reference only, and the words contained therein shall in no way be held to explain, modify, amplify or aid in the interpretation, construction or meaning of the provisions of this Agreement.

Section 4.6: Enforcement of Siting Conditions

The Company agrees that, should the Transfer Facility receive site location approval pursuant to Section 39.2 of the Act from the City of West Chicago, that any final and non-appealable conditions imposed on the Transfer Facility or Company as part of such approval are enforceable by the City against the Company, in the same manner in which the City's ordinances or this Agreement are enforceable, or pursuant to a City ordinance, should one be in effect at the time of the enforcement. Section 4.6 survives the termination of this Agreement.

Section 4.7: Governing Law and Forum for Litigation

This Agreement shall be governed by and construed in accordance with the laws of the State of Illinois. Any litigation filed by the Company or the City against the other party and involving this Agreement shall be filed in the Circuit Court of DuPage County, Illinois. Section 4.7 survives the termination of this Agreement.

Section 4.8: Severability

The provisions of this Agreement shall be deemed to be severable, and the invalidity or unenforceability of any provision shall not affect the validity and enforceability of the other provisions hereof. Section 4.8 survives the termination of this Agreement.

Section 4.9: Binding Effect

This Agreement shall inure to the benefit of and be binding upon the respective parties hereto, their successors and assigns. However, nothing in this Section should be construed to allow the Company to assign its interest in this Agreement unless done pursuant to Section 4.1 of this Agreement. Section 4.9 survives the termination of this Agreement.

Section 4.10: Force Majeure

Neither party hereto shall be deemed to be in default or to have breached any provision of this Agreement as a result of any delay, failure in performance or interruption of services resulting directly or indirectly from acts of God, acts of civil or military authority, civil disturbance, or war or labor strikes or interruptions, which are beyond the control of such non-performing party.

Section 4.11: No Third-Party Beneficiaries

Nothing in this Agreement, whether expressed or implied, is intended to confer any rights or remedies under or by reason of this Agreement on any person other than the parties and their respective successors and assigns, nor shall any provision give any third persons any right or rights of action against any party to this Agreement.

Section 4.12: Legal and Related Expenses

The Company shall pay the City within 45 days after receiving the appropriate documentation, the reasonable and necessary costs incurred by the City in the pre-filing review process, including, but not limited to, staff review time, engineering and other consultant fees and expenses and attorneys' fees and expenses. The Company shall reimburse the City, within 45 days after receiving the appropriate documentation, for such pre-filing review costs. The City agrees that the pre-filling review costs to be reimbursed by the Company will not exceed $35,000 without prior written agreement from the Company.

The Company agrees to reimburse the City, within 45 days after receiving the appropriate documentation, for the reasonable and necessary fees and costs (including, but not limited to consulting and attorneys' fees and costs and City staff costs) incurred in connection with the drafting and negotiation of this Agreement. The City agrees that the host agreement drafting and negotiation costs to be reimbursed by the Company will not exceed $15,000 without prior written agreement from the Company.

Section 4.13: Records

In addition to those records described in Sections 3.4 and 3.5, above, the Company shall provide to the City, upon the City's request, free of charge and in a timely manner, copies of all of the following documents in any manner connected with the Transfer Facility:

1. Documents submitted or received by the Company, its representatives, agents, attorneys, employees, or consultants to or from any State or Federal government, or any regulatory or administrative agency, including:

(a) those documents and/or records that are to be submitted by the Company and/or its agents, representatives or consultants to any state and/or federal environmental regulatory/compliance agency including but not limited to documents and/or records which involve changes to the construction or operation of the Transfer Facility;

(b) correspondence and/or other communications of any type, kind or sort with any state and/or federal environmental regulatory/ compliance agency;

(c) those documents not otherwise subject to attorney client privilege or work product privilege, and/or records filed with or received from any state or federal regulatory agency relevant to investigations, inquiries, charges, complaints, citations or notices of violations made and/or issued by any such governmental authority with respect to the Company's conduct and/or activity on or related to the Transfer Facility. Draft settlement decrees and orders, shall not be subject to disclosure to the City.

All such documents and/or records described herein shall be provided to the City prior to, if reasonably possible, or otherwise contemporaneously with their anticipated submittal by the Company and/or its agents and consultants to any state and/or local federal regulatory agency, and the City shall have a reasonable opportunity to review such anticipated submittals and make comments and/or suggested changes and modifications to the same, which the Company is neither required to respond to or accept. The Company shall provide the City with any documents and/or records received by the Company from any state, local and/or federal regulatory agency within ten (10) days of receipt thereof.

2. . Subject to the limitation in Section 4.13 (1)(c), documents not otherwise subject to attorney client privilege of work product privilege submitted or received by the Company, its representatives, agents, employees, or consultants to or from any citizen pertaining to the development or operations of the Transfer Facility, particularly comments or complaints concerning such development or operations and including but not limited to the inbound or outbound vehicles to the Transfer Facility.

3. The Company shall maintain on a daily basis books and records pertaining to the weight and volume of Solid Waste at the Transfer Facility and the daily traffic count of vehicles utilizing the Transfer Facility (setting forth the truck number of each vehicle, the weight of waste each vehicle contains, the classification of waste and its origin). The City, its authorized agents and representatives shall be permitted to inspect such books and records which the Company shall maintain. The City shall also be permitted to inspect any and all books, records, data, documents and reports maintained by the Company concerning compliance with any and all applicable federal, state and local laws, statutes, regulations, rules and/or ordinances relating to the operation of the Transfer Facility and the waste handling/disposal activities described herein.

The Company shall maintain a true and accurate copy of any and all books, records, data, information, documents and reports noted herein at the Transfer Facility.

Section 4.14: Access

The Company shall allow any agent duly authorized by the City:

(a) Except in case of emergency, all entries under this 4.14 shall be upon at least one day notice, and all City representatives entering shall be escorted at all times by designated Company personnel. Entries pursuant to 4.14(f) shall be only upon probable cause, as set forth in written notice of the proposed entry, to believe that a material term of this Agreement has been or is being violated; provided, however, nothing in this section or this Agreement shall limit in any way the City's rights under any of its codes and/or ordinances, including but not limited to any rights of inspection.

(b) To enter the Transfer Facility at reasonable times. For purposes of this Section, "reasonable times" means any time during Regular Business Hours and any time not during Regular Business Hours when persons are at the Transfer Facility and/or operations are being conducted and/or the City wants to assure that any siting conditions, local ordinances or contractual provisions between the Company and City are not being violated during non-operational hours (e.g., if there is a siting condition or law or regulation prohibiting overnight storage of waste and the Transfer Facility stops operating at 6:00 p.m., the Company must provide access for the City to enter the Transfer Facility at any time after 6:00 p.m., if the City desires to verify the Company's compliance with the overnight storage restriction);

(c) To have access to and copy at reasonable times any records required to be kept under the terms and conditions of this Agreement or any local ordinance

(d) To inspect no more than four times per year during Regular Business Hours of equipment constructed or operated under this Agreement or pursuant to a siting condition. If such inspection reveals any violation of this Host Agreement or a siting condition, the City may inspect again within two weeks;

(e) To obtain and remove no more than once per year during Regular Business Hours samples of any discharge or emission of contaminants or suspected contaminants. As used in this Section "contaminants" is defined pursuant to Section 3.06 of the Act (415 ILCS 5/3.06). Any samples obtained shall be split samples and shared with the Company;

(f) To enter at reasonable times and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring, or recording any activity, discharge, or emission authorized or prohibited by this Agreement.

Section 4.15 City's Use of Transfer Facility

Subject to the force majeure provisions of this Agreement, upon written request of the City, the Company shall arrange for disposal capacity for all of the residential waste generated within the City's boundaries which Company is permitted to receive for storage and transfer. The Company's obligation to secure disposal capacity shall extend only to residential waste which is initially abandoned or discarded within the City.

The Company agrees that its charges to the City or its contractor for storage, transfer and off-site treatment, recycling and/or disposal of Municipal Waste will be no greater than the lowest charges the Company charges any other non-affiliated, non-trans-load, non-swap solid waste customer with similar volume. If requested by the City, the Company agrees to demonstrate to the City's satisfaction that the Company has and is complying with this Section 4.15 including providing access to all documents and/or records, which may be redacted to avoid disclosure of customer identities, reflecting the amounts and types of waste accepted by the Transfer Facility as well as any and all documents, which may be redacted to avoid disclosure of customer identities, affecting charges assessed to customers and/or users of the Transfer Facility. The City acknowledges that this is proprietary information and will not disclose the same to any other person or entity except as required by law.

In addition, upon issuance of an operating permit by the IEPA for the Transfer Facility and upon the Transfer Facility beginning to accept Municipal Waste and for a period extending through the term of this Agreement for as long as the Transfer Facility continues to accept Municipal Waste, City employees may dump up to 2,500 tons per year of the following items: Municipal Waste (maximum of 800 tons);wood chips, stumps and logs; Construction or Demolition Debris, and cement or asphalt materials at the Transfer Facility at no cost to the City.

Contractor shall annually provide up to a total of twenty (20) 1-1/2 cubic yard dumpsters or up to sixty (60) 90 gallon carts (or a combination of dumpsters and carts up to the total proportionate amounts) for one-time pick up each at special events and/or City use, at no cost where ease and frequency of collection is deemed to be in the best interest of the City.

Section 4.16 Preference for City Residents and Firms

The Company agrees that it shall give preference to suitably skilled applicants residing in the City before hiring applicants residing in other communities for work at the Transfer Facility, to the extent that such preference does not violate any state or federal employment, civil rights or similar laws, or union contracts, but the ultimate decision will be left with the Company. Further, the Company agrees that, for all work performed at the Transfer Facility, it shall require its contractors to give preference to hiring new employees from suitably skilled applicants residing in the City before hiring applicants residing elsewhere. The Company further agrees that it shall give preference to firms and businesses located in the City which provide a competitive price or bid

(where bidding is required) and which are capable of performing the required work before contracting with or otherwise retaining firms and businesses headquartered elsewhere.

The Company, at the written request of the City, will notify the City promptly of each job opening and contract opportunity at the Transfer Facility, and shall use reasonable efforts to provide such notice not less than forty-eight (48) hours before the Company publicly announces such opening or opportunity.

The Company agrees to incorporate a courtesy drop-off area into the facility design, for the convenient use and benefit of the citizens of the City. The drop-off area will accept, at no charge to the residents of the City subject to providing proof of residency at the time of drop off, up to two discarded electrical or electronic devices per household per year commonly known as electronic waste or e-waste, excluding CRT monitors or big screen televisions. CRT monitors or big screen televisions would be accepted for a fee of $35 per item. If the Company is awarded the City contract for curbside and/or alley collection and disposal of refuse, recyclable, and yard waste from all present and future single-family residences and multiple family dwellings of four (4) or less residential dwelling units in the City, CRT monitors and big screen televisions shall be accepted at no charge subject to the two devices per household per year limitiation and subject to providing proof of residencey at the time of drop off. The acceptance of the CRT monitors and big screen televisions for free shall occur from the first date Municipal Waste is received at the Transfer Facility pursuant to the City contract through the terminaton of the City contract.

Section 4.17 Traffic Control

All transfer trailer truck traffic entering and existing this site must utilize Powis, Kress and Roosevelt Roads and North Avenue (IL 64). Site plan and off-site road improvements are subject to final engineering approval of the Public Works Department and must meet all applicable codes and ordinances in affect at the time of permitting.

Section 4.18 Transfer Facility Control Measures

The Company shall seek to prevent any waste, litter or debris from being discarded onto public traveled roads due to the Company's operation of the Transfer Facility and shall abide by a litter control plan as approved by the City as a result of the siting process. Should the waste, litter or debris from such operation pose a problem in the reasonable opinion of the City, the City, at its option, may require the Company to sweep or otherwise clean Powis Road in the City of West Chicago, as needed. The Company shall keep the Transfer Facility and all buildings and other improvements built or utilized by the Company in good condition and repair for the term of this Agreement. In addition:

a. All tipping of Municipal Waste at the Transfer Facility shall be on the tipping floor inside the transfer building, and, except as provided in Subsection b. below, the Company shall have the tipping floor free of waste and cleaned with a mechanical street sweeper by the end of each operating day;

b. No Municipal Waste shall be left on the tipping floor inside the transfer building or outside the transfer building on the Transfer Facility property overnight, except:

i. In transfer trailers, provided that such trailers are suitably covered and staged at least 500 feet from Powis Road right-of-way;

ii. In the event of an emergency, the IEPA or person previously appointed by the City Council or, in the absence of such an appointment, the Mayor has given prior approval of temporary overnight storage on the tipping floor inside the transfer building; and

c. Empty waste collection containers and empty transfer trailers may be stored outside the transfer building at least 500 feet from Powis Road right-of-way;

d. The Company shall conduct all operations in a manner that is protective of the public health, safety, welfare, groundwater resources and the environment. The Company shall comply with all City ordinances and all applicable laws, ordinances, rules and regulations, including but not limited to IPCB regulations and the City code.

e. At a minimum, the Company shall provide a street sweeper to remove mud, dirt and dust tracked on to hard surfaces inside and outside the Transfer Facility property including onto Powis Road within three-fourths (3/4) mile of the Transfer Facility property on an as needed basis, but not less frequently than daily except during severe weather conditions (e.g., heavy rains, winter conditions when salt has been applied to the roadway). All access drives, parking areas, storage areas and vehicle maneuvering areas of the Transfer Facility property shall be paved and swept with a street sweeper as needed, but not less frequently than daily;

f. The Transfer Facility and any area used for the outdoor storage of any material or equipment will be fenced and visually screened from viewing from off the Transfer Facility property by means of said fence and appropriate landscaping as approved by the City.

g. For odor control the Company agrees to the following.

i. conduct all Municipal Waste handling and transfer operations completely indoors.

ii. Municipal Waste will be delivered primarily in enclosed vehicles, and tarps will be required on all non-enclosed loads.

iii. Unloading, transferring, and loading operations for Municipal Waste will be performed within the building.

iv. Municipal Waste will be removed from the tipping floor with a frequency adequate to greatly minimize the generation of odors.

v. The Municipal Waste tipping floor areas will be cleaned with a pressure washer as needed.

vi. If malodors are detected off-site, the source of odor generation will be removed from the Site, and the off-site condition will be monitored by Transfer Facility

personnel to insure against reoccurrence. If a continuous source of odorous materials is identified, the generator will be contacted and advised that the materials must be effectively treated for odor control or the service will be discontinued and the materials no longer brought to the Transfer Facility.

Nothing in this subsection shall limit the Company's ability to implement new odor control technologies.

h. The Company agrees to keep the truck doors to the Transfer Facility closed, except for emergencies and to allow trucks to enter and exit the facility, during Regular Business Hours.

Section 4.19 Community Relations/Complaint Resolution

As of the date of commencement of development of the Transfer Facility, and for the balance of the operating life of the Transfer Facility, the Company shall assign and designate a telephone number and representative which shall be responsible for receipt of inquiries, complaints and calls which may arise from the public relative to the operation of the Transfer Facility as outlined in this Agreement. This telephone number will be answered by a person employed or retained by the Company during Regular Business Hours. The Company shall also provide a voice mail telephone number and a website for public inquiries and complaints. All complaints shall be initially investigated by the Company within forty-eight (48) hours. All such complaints and inquiries received from the public shall be responded to and addressed promptly. The Company shall also keep a log of the date and time such complaint, inquiry or communication was received, the nature of the complaint, inquiry or communication, the name of the person initiating such contact, the date and time which response was made to such complaint, inquiry or communication, as well as the method in which any such complaint, inquiry or communication was addressed and or resolved. The Company shall supply the same information as from time to time requested by the City. In addition, the Company shall provide the City with an emergency telephone number for contacting the Transfer Facilty Manager after Regular Business Hours in the event of an emergency.

Section 4.21 Site Location Decision

The City has not, by entering into this Agreement with the Company, predetermined whether it will grant or deny site location approval for the Transfer Facility or whether the Company can (or cannot) establish any of the criteria related to site location approval. The City shall review the Company's application for site location approval for the Transfer Facility on the Transfer Facility Site in accordance with the criteria set forth by Illinois law as provided for in 415 ILCS 5/39.2.

Section 4.22 Siting Application and Pre-Filing Review

The Company shall provide a siting application consistent with the terms of this Agreement and the requirements of Section 39.2 of the Act and the City of West Chicago's Siting Procedures. Prior to filing the siting application with the City the Company agrees to provide the City an

opportunity to conduct a pre-filing review of the siting application. The pre-filing review shall consist of the Company submitting a final draft of the siting application to the City for its review and comment. The Company agrees to reimburse the City for its pre-filing review costs in accordance with Section 4.12 of this Agreement.

Section 4.23 Green Building Principles

The Company shall consider utilizing green building principles in the design and operation of the Transfer Facility. These green building principles used for the design and operation of the Transfer Facility shall be documented to the City in a memorandum as part of the Pre-Filing review to be conducted pursuant to Section 4.22 of this Agreement.

City and Company acknowledge that solid waste hauling, transfer and disposal are subject to possible improvements due to ongoing technological developments. Company agrees to monitor technological developments relevant to its business, and the parties will periodically discuss the feasibility and cost effectiveness of incorporating such developments into the Transfer Facility.

Section 4.24 **Fees**

The Fee, as described in Article VII, Section 14-93(a)(3) of the City's Code of Ordinances must be paid by the Applicant at the time an application is filed and additional payments must be made as required by Article VII, Section 14-93(a)(3) of the City's Code of Ordinances, before the application may be considered

ARTICLE 5
AUTHORITY AND GUARANTY OF PAYMENT

Section 5.1: Authority to Enter Into Agreement

The Company hereby represents and warrants that it is a valid and existing Illinois corporation, in good standing, authorized to do business in the State of Illinois, and that individuals executing this Agreement have been duly authorized by the Company to act on its behalf and enter into this Agreement. In addition, the Company agrees to provide the City, at the time of execution of the Agreement, with a copy of the corporate resolution authorizing the execution of this Agreement.

The Company, by its signature on this Agreement, certifies that it has not been barred from contracting with a unit of local government as a result of a violation of Section 33E-3 or 33E-4 of the Illinois Criminal Code (720 ILCS 5/33E-3, 5/33E-4).

Section 5.2: Guaranty of Payment

As additional consideration for and assurance of performance of this Agreement, the Company and _____ tender to the City and the City accepts, the Guaranty of Performance and Payment attached to this Agreement as Exhibit B. This Guaranty of Performance and Payment survives termination of this Agreement.

Section 5.3: Covenants Run with the Land

The parties agree that the covenants, agreements and understandings contained in this Agreement, which expressly survive its termination touch and concern the Subject Property, and that such covenants, agreements and understandings shall run with the Subject Property. The Company agrees that the City may prepare, and the Company shall promptly execute duplicate originals of an instrument, in recordable form, which will constitute a memorandum of Host Community Benefit Agreement, attaching an executed copy of this Agreement as an exhibit, and record such Memorandum in the Office of the DuPage County, Illinois Recorder of Deeds.

Section 5.4: Financial Assurance

The Company shall to provide, if reasonably feasible, a minimum of six (6) months notice to the City prior to ceasing operations at the Transfer Facility. Regardless of the foregoing, the Company shall provide to City within seven (7) days notice of any final internal decision to close the facility. Not less than three (3) months prior to ceasing operations, the Company, at its sole cost, shall provide to the City financial assurance, in a form reasonably acceptable to the City, sufficient (as agreed to by the Parties) to cover the costs of properly closing the Transfer Facility, which financial assurance shall be maintained until the Transfer Facility has been closed in accordance with all applicable legal requirements. Such financial assurance shall be in the form of a letter of credit, escrow account, policy of insurance or a guaranty from a creditworthy guarantor.

IN WITNESS WHEREOF, the parties hereto have executed this instrument on the day and year first written above.

Certificate

The undersigned, _____, hereby certifies that he is the duly elected, qualified and acting _____ of _____, a corporation duly organized and existing under the laws of the State of Illinois (the "Corporation"); that as such officer, he is in charge of the Minute Book and other corporate records of said Corporation; that the following is a full, true and correct copy of the resolutions appearing in the records of the Corporation, and that said resolutions were adopted by a legal majority of the Board of Directors of said Corporation, at a meeting thereof duly and regularly held on _____; and the undersigned further certifies that as of the date hereof, said resolutions have not been rescinded or modified and are in full force and effect.

Resolved, that any two officers of the Company be, and hereby are, authorized upon such terms and conditions as they shall deem proper to execute and deliver for and on behalf of the Company such guaranty agreements and other instruments or written obligations of the Company as may be desired or required in connection with the Guarantees containing such terms and conditions as may be acceptable or agreeable to any two of said officers, such acceptance and agreement to be conclusively evidenced by any two of said officers' execution and delivery thereof;

Further Resolved, that the Company's execution of any guaranty agreements and other instruments or written obligations in connection with Guarantees, in the judgment of the Board of Directors, may reasonably be expected to benefit, directly or indirectly, the Company;

Further Resolved, that any two of said officers, are hereby authorized in the name of an on behalf of the Company to take such further action and to do all things that may appear in the discretion of any of them to be necessary in connection with renewals, extensions for any period, rearrangements, retirements or compromises of the indebtedness, obligations and liability of the Company or Affiliates to the Lenders arising out of Guarantees or any other indebtedness, obligations and liabilities of the Company or Affiliates owing to the Lenders;

Further Resolved, that any two of said officers are authorized and empowered to do or cause to be done all such acts or things and to sign and deliver, or cause to be signed and delivered, all such documents, instruments and certificates (including, without limitation, any and all requests, notices, and certificates required or permitted to be given or made to Lenders under the terms of any of the instruments executed on behalf of the Company in connection with the

Guarantees), in the name and on behalf of the Company as any two of said officers, in their discretion, may deem necessary, advisable or appropriate to effectuate or carry out the purposes and intent of the foregoing Resolutions and to perform the obligations of the Company under all instruments executed on behalf of the Company in connection with the Guarantees;

Further Resolved, that the execution by any of said officers, of any document authorized by the foregoing Resolutions or any document executed in the accomplishment of any action or actions so authorized, is (or shall become upon delivery) the enforceable and binding act and obligation of the Company, without the necessity of the signature or attestation of any other officer of the Company or the affixing of the corporate seal;

Further Resolved, that all acts, transactions, or agreements undertaken prior to the adoption of these Resolutions by any of said officers or representatives of the Company in its name and for its account in connection with the foregoing matters are hereby ratified, confirmed and adopted by the Company; and

Further Resolved, that the Secretary, Assistant Secretary, or other appropriate officer of the Company is hereby authorized to certify these Resolutions.

CERTIFICATES OF LIABILITY

APPENDIX 1-D

DUPAGE COUNTY HOST AGREEMENT

EN-R-0266-20

SECONDARY HOST COMMUNITY BENEFIT AGREEMENT BETWEEN DUPAGE COUNTY, ILLINOIS AND LAKESHORE RECYCLING SYSTEMS, LLC FOR A SOLID WASTE TRANSFER FACILITY

WHEREAS, the Illinois General Assembly has granted the County of DuPage ("County") authority to enter into agreements and do all other acts in relation to the concerns of the County necessary to the exercise of its corporate powers (55 ILCS 5/5-1005), including specific authority relative to the disposal of solid wastes (55 ILCS 5/5-15, *et seq.*); and

WHEREAS, the Lakeshore Recycling Systems. LLC ("Company") currently operates a solid waste management facility, which receives, sorts, separates, recycles and transfers Construction or Demolition Debris on a parcel in DuPage County of approximately 27.81 acres; and

WHEREAS, the Company plans to file with the City of West Chicago a request for site location approval for the construction and operation of a new municipal solid waste transfer facility ("Transfer Facility") with sufficient capacity to receive and transfer to landfills an annual average of 1,500 tons per day; and

WHEREAS, the Illinois General Assembly has authorized the County, pursuant to the Illinois Environmental Protection Act, (415 ILCS 5/39.2), to negotiate and approve a secondary host agreement for the pollution control facility proposed to be located in the City of West Chicago; and

WHEREAS, the County has not consented to, concurred in or objected to the proposed plans of the Company to develop the Transfer Facility, and nothing in the attached Agreement shall be deemed by the Company, the County, other public agencies, or the public to express or indicate that the County has adopted any position relative to the proposed development of the Transfer Facility; and

WHEREAS, in the event the City of West Chicago grants site location approval for the Transfer Facility, and if, thereafter, the Illinois Environmental Protection Agency issues permits for the development and operation of the Transfer Facility and operations commence, the Company is willing to pay a secondary host community benefit fee, as set forth in the attached Agreement, to the County; and

WHEREAS, any fees received by the County pursuant to the attached Agreement shall be applied to assist the County in meeting its costs associated with the Transfer Facility and for County's responsibility to plan for the management of municipal solid waste including providing recycling and reuse programs.

NOW, THEREFORE, in consideration of the mutual covenants and agreements stated herein, the Agreement between the County and Company is hereby accepted and approved and that the Chairman of the DuPage County Board is hereby authorized and directed to execute the attached AGREEMENT on behalf of the COUNTY; and

BE IT FURTHER RESOLVED that the DuPage County Clerk be directed to transmit certified copies of this Resolution and the attached AGREEMENT to Lakeshore Recycling Systems, LLC, Attn. Alan Handley, 6135 Oakton St., Morton Grove, IL 60053.

Enacted and approved this 10th day of March, 2020 at Wheaton, Illinois.

SECONDARY HOST COMMUNITY BENEFIT AGREEMENT BETWEEN DUPAGE COUNTY, ILLINOIS, AND LAKESHORE RECYCLING SYSTEMS, LLC FOR A SOLID WASTE TRANSFER FACILITY

This HOST BENEFIT COMMUNITY AGREEMENT ("Agreement") is made as of the 10th day of March, 2020, between DuPage County, Illinois ("County") and LAKESHORE RECYCLING SYSTEMS, LLC ("Company").

RECITALS

WHEREAS, the Company currently operates a solid waste management facility, which receives, sorts/ separates, recycles and transfers Construction or Demolition Debris (hereinafter referred to as the C&D Recycling Facility) on the premises legally described in Exhibit A attached hereto and consisting of approximately 27.81 acres (hereinafter referred to as the "Subject Property"); and

WHEREAS, the Company plans to file with the City of West Chicago a request for site location approval for the construction and operation of a new Transfer Facility with sufficient capacity to receive and transfer to landfills an annual average of 1,500 tons per day of non-hazardous Municipal Waste and Hydro Excavation Waste (as those terms are defined below) with ancillary truck parking and storage and maintenance facility combined ("Transfer Facility"); and

WHEREAS, the Company desires to construct the Transfer Facility on the Subject Property and operate the Transfer Facility in conjunction with the C&D Recycling Facility; and

WHEREAS, the County is authorized by State of Illinois law, pursuant to the Illinois Environmental Protection Act to negotiate and approve a secondary host agreement for the pollution control facility proposed to be located in the City of West Chicago; and

WHEREAS, the Company desires to provide certain environmental protection and compensation to the County with respect to the Transfer Facility, if the Transfer Facility obtains all required approvals and commences operation; and

WHEREAS, the County has not consented to, concurred in or objected to the proposed plans of the Company to develop the Transfer Facility, and nothing in this Agreement shall be deemed by the Company, the County, other public agencies, or the public to indicate that the County has heretofore adopted any position on the potential development of the Transfer Facility; and

WHEREAS, if the City of West Chicago grants site location approval of the Transfer Facility, and if thereafter the Illinois Environmental Protection Agency issues permits for the development and operation of the Transfer Facility, the Company is willing to pay a secondary host community benefit fee, as hereinafter set forth, to the County to assist the County in meeting the costs associated

with the Transfer Facility and for other general revenue needs of the County as the County may deem appropriate.

NOW, THEREFORE, in consideration of the mutual covenants and agreements hereinafter set forth, the County and the Company agree as follows:

ARTICLE 1
DEFINITIONS AND TERM OF AGREEMENT

Section 1.1 Definitions

"Act" as used in these definitions and this Agreement, shall mean the Illinois Environmental Protection Act, as amended from time to time (415 ILCS 5/1, et seq.).

"Construction or Demolition Debris" whether or not capitalized, means "clean construction or demolition debris" as defined by Section 5/3.160(b) of the Act (415 ILCS 5/3.160(b)), or "general construction or demolition debris," as defined by Section 5/3.160(a) of the Act (415 ILCS 5/3.160(a)).

"Food Scrap" whether or not capitalized and used in any of its grammatical forms, means "food scrap" as defined in Section 5/3.197 of the Act (415 ILCS 5/3.197).

"Hydro Excavation Wastes" means solid/liquid waste such as hydro/vacuum excavation muds, underground excavation material, drilling muds, and other similar materials.

"IAC" as used in these definitions and this Agreement, shall mean the Illinois Administrative Code.

"IEPA" means the Illinois Environmental Protection Agency.

"IPCB" means the Illinois Pollution Control Board.

"Landscape Waste" whether or not capitalized and in any of its grammatical forms, means "landscape waste" as defined by Section 5/3.270 of the Act.

"Municipal Waste" whether or not capitalized and used in any of its grammatical forms, means "municipal solid waste", as defined by Section 5/3.290 of the Act (415 ILCS 5/3.290), except that such waste does not include Construction or Demolition Debris, Recyclables, Unacceptable Waste, or Landscape Waste.

"Recyclables" whether or not capitalized and used in any of its grammatical forms, means any material, which would otherwise be disposed of or discarded, which is separated from Municipal Waste or Construction or Demolition Debris at the source of generation so as to render it useable in a process, or alone, such that it can be returned to the economic mainstream in the form of raw materials or products. Examples of recyclables are newspaper, glass bottles, high density, polyethylene containers, aluminum food and beverage containers, chipboard, and corrugated

containers. Recyclables do not include any materials removed or separated from, or containing Unacceptable Wastes.

"Regular Business Hours" of the Transfer Facility shall mean 4:00 a.m. to 12:00 a.m. on weekdays and 4:00 a.m. to 12:00 p.m. on Saturdays, with no operation on Sundays or the six major Federal holidays (New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas), provided that on the Saturday following any Federal holiday Regular Business Hours may be extended by the Company to 12:00 a.m. The Regular Business Hours for accepting Municipal and Hydro Excavation Waste may be extended but only upon the prior approval of the City of West Chicago, such approval being in writing.

"Solid Waste" whether or not capitalized, means Municipal Waste, Landscape Waste, Food Scrap, , and Construction or Demolition Debris, including those materials in these classifications that have received a Beneficial Use Determination (BUD) designation by the IEPA, as those terms are defined in this Section.

"Transfer Facility" whether or not capitalized, means, "Transfer Station" as defined by 5/3.500 of the Act (415 ILCS 5/3.83), including the property on which the Transfer Station is located, and specifically references the Transfer Facility the Company desires to construct and operate located on approximately 27.81 acres at 1655 Powis Road, Illinois, permanent parcel #01-32-101-004 and #01-32-200-001, at the property described on Exhibit A.

"Unacceptable Waste" whether or not capitalized and used in any of its grammatical forms, means (a) "hazardous waste" as defined by Section 5/3.15 of the Act (415 ILCS 5/3.15) or by 35 IAC 721.03; (b) "industrial process waste" as defined by Section 5/3.235 of the Act (415 ILCS 5/3.235), except allowable special waste and such industrial process waste which poses no present or potential threat to human health or the environment and which has no inherent properties which makes its disposal in a landfill difficult to manage by normal means, and which has been specifically approved by the IEPA; (c) "pollution control waste" as defined by Section 5/3.335 of the Act (415 ILCS 5/3.335); (d) "sludge" as defined by Section 5/3.465 of the Act (415 ILCS 5/3.465); (e) "potentially infectious medical waste" as defined by Section 5/3.360 of the Act; (f) "special waste" as defined by Section 5/3.475 of the Act; (g) "polychlorinated byphenyls" as defined in the Toxic Substances Control Act, 15 U.S.C. Section 2601-2692, or regulations promulgated thereunder; (h) source, special or byproduct nuclear materials, radioactive waste, high-level or low-level radioactive waste, or transuranic waste as defined in the Atomic Energy Act, 42 U.S.C. Sections 2014, et seq., or regulations promulgated thereunder; or (i) "asbestos" as defined in 40 CFR 763.83, except that Unacceptable Waste does not include Hydro Excavation Waste.

Section 1.2 Term

This Agreement commences on the date executed and continues in force and effect until the Transfer Facility ceases to operate and is no longer permitted by the IEPA to accept Muncipal Waste and/or Hydro Excavation Waste. In addition, the County may terminate this Agreement if the Company is in default of this Agreement as provided in Section 4.2. The Company, in turn, may, at its sole discretion, terminate this Agreement if it determines that it is no longer economically desirable to operate the Transfer Facility and it rescinds its IEPA permit to operate. The Company agrees that,

should this Agreement be terminated, the Company will immediately remove all Muncipal Waste and/or Hydro Excavation Waste from the Transfer Facility and stop its operations and receipt and acceptance of Muncipal Waste and/or Hydro Excavation Waste.

ARTICLE 2
ENVIRONMENTAL PROTECTIONS

Section 2.1 Compliance with Laws

The Company shall comply at all times, in connection with the development and operation of the Transfer Facility, with: all laws, conditions and requirements of any permit that is issued for development or operation of the Transfer Facility; modified or amended rules and regulations and ordinances of any Federal or State agency or authority relating to the development, operation, monitoring, remediation, or closure of the Transfer Facility. With respect to the closing of the Transfer Facility, the Company agrees to comply with any government ordinance, rule, law or directive as to post-closure requirements and pay the entire costs associated therewith.

Section 2.2 Waste Acceptability

The Company shall only allow Solid Waste and/or Hydro Excavation Waste to be intentionally accepted at, transported to, stored at, or otherwise present at the Transfer Facility. All Municipal Waste and/or Hydro Excavation Waste, except when being transported to or from the Transfer Facility, must be kept inside (i.e., within a fully enclosed area of) the Transfer Facility. Unacceptable Waste accepted at, transported to, stored at, or otherwise present at, on, or in the Transfer Facility shall be properly removed within 24 hours.

Section 2.3 Defense and Indemnification

The Company covenants and agrees at Company's sole cost and expense to defend, indemnify and hold harmless the County, individual members of the County Board, and any and all employees, agents, officers, or representatives of the County (collectively "County Affiliates"), from and against all claims, suits, actions, administrative enforcement proceedings, losses, damages of all kinds, costs, expenses, fines and penalties, attorneys' fees and expenses of litigation, of any nature whatsoever, relating in any way directly or indirectly to the Transfer Facility where the same are caused by the Company's negligence, willful misconduct or breach of this Agreement. This includes, but is not limited to, any condition or occurrence, or any release, discharge or emission at, onto, above, under, through or from the Transfer Facility; or the Company's execution, performance, or non-performance of this Agreement or of any conditions placed on siting (should the facility be approved or the operations of the Company conducted at the Transfer Facility). This includes, but is not limited to, any claims of injury to any person (including, but not limited to death) or property for violation of or non-compliance with any law, ordinance, rule or regulation (including without limitation any environmental, health, antitrust, civil rights, employment or trade law, or statutory or common law obligation or liability). The Company shall assume the defense of all suits, administrative proceedings and disputes of any description with all persons, entities, political subdivisions or government agencies arising out of the matters to be indemnified under this Agreement. Company

shall pay, promptly upon entry, any nonappealable order, judgment or other final resolution of any claim or dispute arising out of the matters to be indemnified under this Agreement and shall pay promptly when due any fines, penalties or agreed settlements arising out of the matters to be indemnified under this Agreement. In the event of a claim or suit against Company arising out of the sole negligence, willful misconduct or breach of this Agreement by the County or any County Affiliate, County shall be obligated to defend and indemnify Company only to the extent permitted by law. In addition, nothing in this Agreement shall be construed as a waiver of any common law or statutory immunity the County may have to such liability. This Section 2.3 survives termination of this Agreement.

Nothing in this Section shall be construed as a waiver of any rights either party may have with regard to contesting its alleged obligation for defense and indemnification by way of Declaratory Judgment or otherwise.

ARTICLE 3
HOST FEES

Section 3.1 Purpose

In consideration of the additional fees and costs to be incurred by the County's Environmental Division and the County's responsibility to plan for the management of municipal solid waste including providing recycling and reuse programs, the Company agrees to pay the County the following fees should the West Chicago City Council approve the Transfer Facility site location and should the Company build the Transfer Facility and begin accepting Municipal Waste and/or Hydro Excavation Waste. The Company agrees to pay the County the following fees.

Section 3.2 Quantity Based Fees

The Company shall pay to the County a base fee as provided below for each ton of Municipal Waste and/or Hydro Excavation Waste, except landscape waste and recyclables, received at the Transfer Facility (whether received in the same or separate vehicles) from the first date Muncipal Waste and/or Hydro Excavation Waste is received through the termination of this Agreement. In the event the Transfer Facility accepts Food Scraps either in dedicated truckloads or commingled with Landscape Waste, the Company agrees to pay the per ton fee provided for in this section on the Food Scraps accepted at the Transfer Facility, in accordance with the methodology and calculations agreed to between the Company and the City of West Chicago.

Per Ton Fee

The Company shall pay the County a Host Benefit Fee equal to $.58 per ton of Muncipal Waste and/or Hydro Excavation Waste received at the Transfer Facility. Per-ton fees shall be payable only if, as and when waste is received and accepted at the Transfer Facility.

Section 3.3: Annual Increase

Beginning as of January 1, 2021, and as of each January 1 thereafter, the per-ton fees described in Section 3.2 above will be adjusted from the per-ton fees of the previous year by the percentage change during the previous year in the Revised Consumer Price Index for All Urban Consumers (CPI-U) published by the United States Department of Labor – Statistics for the Chicago-Gary-Kenosha area, provided, however, that at no time shall the increase be less than 0% or greater than 4%. If the Consumer Price Index for All Urban Consumers shall cease to be published in the time frame described above, the County and Company shall designate a comparable time frame or index, which shall then be used for determining the annual rate of adjustment.

Section 3.4 Identification and Weight of Receipts

The Company shall weigh all receipts of Solid Waste and/or Hydro Excavation Waste on a certified scale, which is inspected at least once each calendar year by the Company, and a copy of said inspection shall be provided to the County upon request.

Further, the Company shall keep records of outgoing Solid Waste and/or Hydro Excavation Waste, such that the County can determine by its review of these records the number of outbound vehicles, the type of vehicle, the destination of each vehicle, and the type of waste contained on each vehicle leaving the Transfer Facility each calendar day. In addition, should the County request records concerning the load weight and total weight of each outbound vehicle, the Company agrees to provide that information, from weights measured at the Transfer Facility or at the destination of the vehicles leaving the Transfer Facility, from the time the Company receives the County's request on moving forward basis for any time period(s) designated by the County.

Section 3.5: Auditing

The Company shall keep complete and accurate books and records relating to the determination of the fees described in Article 3, in an auditable form, including those records described in Section 3.4. No more than once per year, the Company shall permit the County and its designated representatives access to such books and records (paper and electronic version) for inspection and copying. In the event that such inspection reveals any underpayment(s) of the fees described in Sections 3.2 and 3.3, the Company shall promptly pay the County the amount(s) of such underpayment(s). In the event that such inspection reveals any overpayment(s) of the subject fees, the Company may credit the amount of such overpayment(s) against the payments of the subject fees in subsequent quarters.

Section 3.6: Payment Schedule for Fees

The fees described in this Article shall be paid on a quarterly basis. The quarterly payments shall be calculated on a calendar-year basis; that is, they shall be calculated for the three-month periods ending on the last day of March, June, September and December of each year during the term of this Agreement and any extension thereof. The payment shall be made not later than forty-five (45) days after the last day of the preceding quarter and shall be limited to the Solid Waste transferred

during the quarter to which it applies. Past due payments of the fees shall be subject to a late charge of one-and-one-half percent (1½ %) per month or fraction of a month for which the payment is late. Payment of such interest shall not otherwise excuse or cure any default by the Company under this Agreement.

ARTICLE 4
MISCELLANEOUS

Section 4.1: Assignment

The Company shall not assign or attempt to sublet this Agreement or any interest in this Agreement or any right or privilege appurtenant to this Agreement without first obtaining the County's written consent, which consent shall not be unreasonably withheld, conditioned or delayed: provided, however, that the Company may assign or transfer its interest in this Agreement to an affiliate of the Company without consent in the event that the affiliate is more than 50% owned by the Company. In addition, no transfer of any ownership or other interest in the Transfer Facility may be made without the prior written approval of the County, which approval shall not be unreasonably withheld, conditioned or delayed. The right to seek assignment or approval may occur only if all payments to the County by the Company have been made and if the Company is not otherwise in default in connection with obligations under this Agreement.

Subject to the provisions of this Agreement limiting the right to assign this Agreement shall be binding on and inure to the benefit of the parties and their heirs and successors. Furthermore, in the event of an approved assignment or transfer, the Company shall remain primarily responsible for all obligations and liabilities of this Agreement which accrue prior to the execution of any approved assignment or transfer. Transfer of a fifty-percent (50%) or greater interest in the Company to another owner or owners shall be deemed an unpermitted transfer under this Section, unless made with the approval of the County. The County may require an additional written commitment from the assignee or transferee to assume and comply with the duties and obligations of this Agreement. The County shall not unreasonably withhold, condition or delay approval of a proposed assignment or transfer. This Section 4.1 survives termination of this Agreement.

Section 4.2: Default

The occurrence of any one or more of the following constitutes a "default" by the Company under this Agreement. Should the Company be in default of this Agreement, the County may, at its sole discretion, terminate this Agreement.

(a) The failure by the Company to pay any fee due and payable under this Agreement; if the Company does not cure such failures within thirty (30) days after notice thereof from the County to the Company;

(b) The Company admits in writing its inability to pay its debts as they mature and makes an assignment for the benefit of creditors or applies for or consents to the appointment of a trustee or receiver for the Company or a major part of its property;

(c) A trustee or receiver is appointed for the Company or for a major part of its property, and it is not discharged within ninety (90) days after such appointment; or

(d) Bankruptcy, reorganization arrangement, insolvency or liquidation proceedings or other proceedings for relief under any bankruptcy law, or similar law, for the relief of debtors are instituted by or against the Company and, if instituted against the Company, are allowed against it or are not dismissed within 180 days after such institution.

Section 4.3: Notice

Any notice to be given hereunder by either party to the other shall be in writing and be sent by personal delivery, by overnight delivery service or by registered or certified mail, postage prepaid, return receipt requested, and shall be deemed communicated when delivered or three (3) business days from the date of mailing, whichever is earlier. Notices shall be addressed as set forth below, but each party may change its address by written notice to the other in accordance with this Section:

To the County, notice shall be sent to both the County and the County's Attorney at the following addresses:

TO THE COUNTY AT:

Attention: DuPage County
Daniel J. Cronin, Chairman
421 N. County Farm Rd.
Wheaton, IL 60187

WITH COPY TO THE COUNTY's ATTORNEYS AT:

Attention: DuPage County State's Attorney
Honorable Robert Berlin
Judicial Office Facility Annex
503 N. County Farm Rd.
Wheaton, IL 60187

To the Company, notice shall be sent to the Company at the following addresses:

TO THE COMPANY AT:

Attention: Alan Handley
Address: Lakeshore Recycling Systems, LLC
6135 Oakton Street
Morton Grove, Illinois 60053

Section 4.4: Agreement Controls

This Agreement constitutes the entire understanding of the parties hereto relating to the subject matter contained herein.

Section 4.5: Captions

Captions of the Articles, Sections and paragraphs of this Agreement are for convenience or reference only, and the words contained therein shall in no way be held to explain, modify, amplify or aid in the interpretation, construction or meaning of the provisions of this Agreement.

Section 4.6: Governing Law and Forum for Litigation

This Agreement shall be governed by and construed in accordance with the laws of the State of Illinois. Any litigation filed by the Company or the County against the other party and involving this Agreement shall be filed in the Circuit Court of DuPage County, Illinois. Section 4.6 survives the termination of this Agreement.

Section 4.7: Severability

The provisions of this Agreement shall be deemed to be severable, and the invalidity or unenforceability of any provision shall not affect the validity and enforceability of the other provisions hereof. Section 4.7 survives the termination of this Agreement.

Section 4.8: Binding Effect

This Agreement shall inure to the benefit of and be binding upon the respective parties hereto, their successors and assigns. However, nothing in this Section should be construed to allow the Company to assign its interest in this Agreement unless done pursuant to Section 4.1 of this Agreement. Section 4.8 survives the termination of this Agreement.

Section 4.9: Force Majeure

Neither party hereto shall be deemed to be in default or to have breached any provision of this Agreement as a result of any delay, failure in performance or interruption of services resulting directly or indirectly from acts of God, acts of civil or military authority, civil disturbance, or war or labor strikes or interruptions, which are beyond the control of such non-performing party.

Section 4.10: No Third-Party Beneficiaries

Nothing in this Agreement, whether expressed or implied, is intended to confer any rights or remedies under or by reason of this Agreement on any person other than the parties and their respective successors and assigns, nor shall any provision give any third persons any right or rights of action against any party to this Agreement.

Section 4.11: Access

The Company shall allow any agent duly authorized by the County to enter the Transfer Facility at reasonable times. For purposes of this Section, "reasonable times" means any time during Regular Business Hours and any time not during Regular Business Hours when persons are at the Transfer Facility.

Section 4.12 Traffic Control

All transfer trailer truck traffic entering and existing this site must utilize Powis, Kress and Roosevelt Roads and North Avenue (IL 64). Site plan and off-site road improvements are subject to final engineering approval of the Land Use or Zoning Department and must meet all applicable codes and ordinances in affect at the time of permitting.

Section 4.13 Transfer Facility Control Measures

The Company shall seek to prevent any waste, litter or debris from being discarded onto public traveled roads due to the Company's operation of the Transfer Facility and shall abide by a litter control plan as approved by the City of West Chicago as a result of the siting process.

a. All tipping of Municipal Waste at the Transfer Facility shall be on the tipping floor inside the transfer building, and, except as provided in Subsection b. below, the Company shall have the tipping floor free of waste and cleaned with a mechanical street sweeper by the end of each operating day;

b. Empty waste collection containers and empty transfer trailers may be stored outside the transfer building at least 500 feet from Powis Road right-of-way;

c. The Company shall conduct all operations in a manner that is protective of the public health, safety, welfare, groundwater resources and the environment. The Company shall comply with all applicable laws, ordinances, rules and regulations, including but not limited to IPCB regulations.

d. At a minimum, the Company shall provide a street sweeper to remove mud, dirt and dust tracked on to hard surfaces inside and outside the Transfer Facility property including onto Powis Road within three-fourths (3/4) mile of the Transfer Facility property on an as needed basis, but not less frequently than daily except during severe weather conditions (e.g., heavy rains, winter conditions when salt has been applied to the roadway). All access drives, parking areas, storage areas and vehicle maneuvering areas of the Transfer Facility property shall be paved and swept with a street sweeper as needed, but not less frequently than daily;

e. The Transfer Facility and any area used for the outdoor storage of any material or equipment will be fenced and visually screened from viewing from off the Transfer

Facility property by means of said fence and appropriate landscaping as approved by the City.

f. The Company agrees to keep the truck doors to the Transfer Facility closed, except for emergencies and to allow trucks to enter and exit the facility, during Regular Business Hours.

Section 4.14 Green Building Principles

The Company shall consider utilizing green building principles in the design and operation of the Transfer Facility.

Section 4.15 Drop Off Area for Recyclables from Residents

The Company shall establish a recycling drop-off for recyclables including but not limited to bottles, cans, cardboard, paper generated by residents and small businesses, at the Transfer Facility property. The recyclables will be accepted at no cost to the resident. The list of acceptable recyclables may be amended by agreement between the County and the Company.

Section 4.16 Household Hazardous Waste Collection

The Company will partner with the County on an application(s) to the Illinois EPA for the funding of household hazardous waste collection(s) at the Transfer Facility at the request of the County. The Company's sole responsibility will be to provide the location for each event.

ARTICLE 5
AUTHORITY AND GUARANTY OF PAYMENT

Section 5.1: Authority to Enter Into Agreement

The Company hereby represents and warrants that it is a valid and existing Illinois corporation, in good standing, authorized to do business in the State of Illinois, and that individuals executing this Agreement have been duly authorized by the Company to act on its behalf and enter into this Agreement. In addition, the Company agrees to provide the County, at the time of execution of the Agreement, with a copy of the corporate resolution authorizing the execution of this Agreement.

The Company, by its signature on this Agreement, certifies that it has not been barred from contracting with a unit of local government as a result of a violation of Section 33E-3 or 33E-4 of the Illinois Criminal Code (720 ILCS 5/33E-3, 5/33E-4).

Section 5.2: Covenants Run with the Land

The parties agree that the covenants, agreements and understandings contained in this Agreement, which expressly survive its termination touch and concern the Subject Property, and that such covenants, agreements and understandings shall run with the Subject Property. The Company agrees that the County may prepare, and the Company shall promptly execute duplicate originals of an instrument, in recordable form, which will constitute a memorandum of Host Community Benefit Agreement, attaching an executed copy of this Agreement as an exhibit, and record such Memorandum in the Office of the DuPage County, Illinois Recorder of Deeds.

IN WITNESS WHEREOF, the parties hereto have executed this instrument on the day and year first written above.

CRITERION 2:
DESIGN, LOCATION STANDARDS, AND OPERATING PLAN

The Illinois Environmental Protection Act, at 415 ILCS 5/39.2 (a)(ii), requires that an applicant for a transfer station siting demonstrate that the facility is so designed, located, and proposed to be operated so that the public health, safety, and welfare will be protected. This report demonstrates that the proposed Lakeshore Recycling Systems, LLC West DuPage Recycling and Transfer Station is designed, located, and proposed to be operated so that public health, safety, and welfare will be protected.

AUGUST 2022

2.0 INTRODUCTION

The Illinois Environmental Protection Act requires that a pollution control facility, such as the transfer station that is the subject of this application, be so designed, located, and proposed to be operated that the public health, safety, and welfare will be protected. This report demonstrates that the proposed Lakeshore Recycling Systems, LLC (LRS) West DuPage Recycling and Transfer Station (West DuPage RTS) is designed, located, and proposed to be operated so that public health, safety, and welfare will be protected.

The West DuPage RTS is located on an approximately 27.66-acre parcel located at 1655 Powis Road, West Chicago, DuPage County, Illinois (see Figure 2-1). LRS currently operates a permitted solid waste management facility [Permit No. 2015-124-OP] that receives, sorts/separates, transfers and recycles construction or demolition debris (C&D) on approximately 6.11 acres of the site (C&D Recycling Facility). The C&D Recycling Facility is shown on Drawing C100 and includes the site entrance, the scale, the C&D transfer/screening building, the C&D sorting line building, and storage bunkers.

The site also includes an office, maintenance building, parking areas, additional hard surfaced areas, access controls, utilities, outdoor lighting, and a stormwater control system. As such, LRS currently performs other operations at the site that support its overall business. In addition, most of the infrastructure, personnel, and systems required to appropriately operate the West DuPage RTS are already present at the site. In summary, LRS currently conducts the following operations at the site:

- Receipt, sorting/separation, recycling and transfer of up to an annualized average of 1,250 tons per day of C&D;
- Staging and removal of recyclable materials;
- Mulch production and sales from recycled wood;
- Parking and maintenance of waste collection vehicles;
- Parking and maintenance of street sweepers;
- Parking and maintenance of portable restroom transportation vehicles;
- Staging and maintenance of containers, totes, and portable toilets; and
- Dispatch and customer service (call center).

As proposed, West DuPage RTS will also perform the following operations:

- Receipt and transfer of non-hazardous municipal solid wastes (referred to as “MSW” or more generally as “solid waste”);
- Receipt, solidification, and transfer of hydro excavation wastes;

- Receipt and transfer of single-stream recyclables (referred to as "SSR" or more generally as "recyclables");
- Drop-off area for West Chicago residents' electrical/electronic devices; and
- Drop-off area for recyclables generated by residents and small businesses.

Loads of MSW from collection vehicles will be consolidated into larger loads for transport to an area landfill for disposal. Loads of hydro excavation wastes will be solidified and then transported to an area landfill for disposal. Electronic waste from West Chicago citizens will be consolidated and transported to a recovery facility. Loads of recyclables from collection vehicles (and recyclables from residents) will be consolidated into larger loads for transport to a material recovery facility (MRF), such as LRS's MRF in Forest View, for re-use as a commodity. The proposed operations at the West DuPage RTS will allow for more efficient processing and/or transportation of these materials to a MRF or disposal facility (landfill). In addition, the expanded operations at the facility will allow for more improved recycling of the C&D.

West DuPage RTS is a unique facility due its desirable location, relatively large size, and diversity of operations, and will be a premier waste management and recycling facility in the State of Illinois.

Subject to Illinois Environmental Protection Agency (IEPA) permitting, West DuPage RTS is anticipated to accept up to 1,950 tons per day of which up to 650 tons per day may be MSW, up to 300 tons per day may be hydro excavation wastes, up to 750 tons per day may be C&D, and up to 250 tons per day may be SSR.

The C&D operations, MSW/SSR operations, and hydro excavation waste operations are separate business lines so the probability of the site receiving peak amounts of waste from these three different business lines on the same day is highly unlikely. Regardless, the site has been designed to manage the peak amounts of each material type on the same day.

2.1 SITE LOCATION

2.1.1 CURRENT PROPERTY USE AND EXISTING SITE CONDITIONS

The West DuPage RTS property consists of an approximately 27.66-acre parcel located at 1655 Powis Road, West Chicago, DuPage County, Illinois. The site is located on the east side of Powis Road, approximately 0.6 miles south of the intersection of North Avenue and Powis Road, within the corporate limits of West Chicago, Illinois. A site location map is provided on Drawing C000 and an aerial photograph showing the existing site features is provided on Drawing C100.

A single industrial building is present on the southwest portion of the site, and is being used for offices, vehicle maintenance, and transfer/recycling of construction and demolition debris. The remainder of the west side of the site consists of paved surfaces and parking lots, and vegetated landscaping and drainage areas. On the east side of the property are a stormwater detention area, a jurisdictional wetland area in the southeast corner, and a closed sludge impoundment area.

The western end of the existing building is the office/administration area. A second floor area is used for storage of records and spare vehicle parts. This section of the existing building was constructed utilizing current "green" construction methods and materials. Multiple parking spaces are provided west of the office/administration area for employees and visitors. Additional parking for employees is provided in the northwest portion of the site.

East of the office/administration area is the vehicle maintenance facility, with six service bays. The south side of vehicle maintenance facility includes storage rooms, a mechanical room, an electrical room, and an employee break room and lockers.

The eastern, high-bay portion of the existing building is an approximately 15,000-square-foot C&D transfer/screening building. C&D is unloaded inside the building on the concrete floor, and is moved via a front loader and grapple to the screener and then the C&D sorting line building.

The C&D sorting line building is an approximately 7,600-square-foot addition, which has sheet metal housing on a second-story structure suspended across the top of parallel concrete walls that form ground level, storage bays. Waste moves from west to east through the C&D sorting line building. Waste is first screened in the C&D transfer/screening building to separate material by size and then conveyed through a manual sorting line. On the sorting line, laborers segregate materials by dropping them down separate chutes into the storage bays below the C&D sorting line building.

As indicated above, LRS currently operates a C&D recycling facility; waste hauling business; street sweeping business; and portable restroom business at the site. The C&D Recycling Facility

operates pursuant to IEPA Permit No. 2015-124-OP, which is provided in Appendix 2-A. All vehicles currently enter and exit the site from the south entrance. C&D collection vehicles pass over the scale for identification, weighing and screening prior to proceeding to the C&D transfer/ screening building for unloading (see Drawing C100).

The C&D Recycling Facility operates in accordance with Section 22.38 of the Act. Currently, the site:

- Limits the receipt and transfer of general C&D to approximately 1,250 tons per day [Special Condition 4].
- Receives general C&D at the site Monday through Saturday, twenty-four hours per day [Special Condition 20].
- Sorts all general C&D (to separate recyclable material from non-recyclable material) within forty-eight hours of receipt [Special Condition 28].
- Transports all non-recyclable and unacceptable material off-site for disposal within seventy-two hours of its receipt [Special Condition 30].
- Limits the percentage of non-recyclable general C&D to 25% or less of the total incoming general C&D [Special Condition 31].
- Transports off-site all putrescible or combustible recyclable general C&D within forty-five days of receipt [Special Condition 33].
- Stores recyclable concrete or clean soil for a maximum period of three months [Special Condition 37].
- Transport off-site all non-putrescible recyclable general C&D within six months of receipt [Special Condition 32].

The C&D Recycling Facility permit requirements are anticipated to be updated based on the recent revisions to Section 22.38 of the Act.

LRS uses a focused and targeted approach based on years of industry experience to maximize the recovery and recycling of materials. The processes begins with an understanding and identification of the predominant types of materials in the load, as different materials are managed differently. Separation techniques used include mechanical (e.g., scalping, screening, magnetic, and shredding) and manual (e.g., sorting lines). Materials which are recycled/reused include:

- “A” wood (processed into mulch);
- “B” wood (hauled to landfills for use as road base);
- Asphalt shingles (hauled to beneficial re-use facilities);
- Metal such as iron, aluminum and nails (hauled to metal reclaimers);
- Concrete, brick, block, and various aggregates (hauled to recycling/crushing facilities);

- Unpainted drywall (hauled to recycling facilities); and
- Cardboard (hauled to processing facility for baling and subsequent recycling).

Separated materials are generally staged in bunkers underneath the sorting line or along the perimeter of the C&D sorting line building. Wood is processed (e.g., shredded) in the area north of the C&D transfer/screening building. Non-recyclable material is loaded into transfer trailers for transportation to a landfill for disposal.

A particular site operation that is unique and noteworthy is the mulching operation. The site creates mulch from the "A" wood, which is clean processed wood such as pallets and new construction lumber scraps. The wood is size-reduced through two shredders, which also remove any nails, and then colored (e.g., brown, red). The mulch is "dry" relative to mulch created from branches/logs because it is created from processed wood. LRS's mulch degrades much slower (and thus lasts much longer) and does not grow funguses, which results in a highly desired superior product over other mulches.

LRS parks and maintains vehicles and containers associated with its waste collection, street sweeping, and portable toilet businesses at the site. Containers are staged in various locations on the site (see Drawing C100).

2.1.2 AMENDMENT TO PLANNED UNIT DEVELOPMENT AND SITE DEVELOPMENT PERMIT

West Chicago approved Ordinance No. 15-O-0018 on May 18, 2015 (see Appendix 2-B1), which granted a preliminary and final planned unit development (PUD) and special use permits and allowed the site to be operated as:

- A construction and demolition debris recycling facility with outside storage;
- Fuel sales and storage; and
- Building material sales with outside storage.

The PUD includes the development and operation of the following:

- Existing C&D recycling and transfer building;
- Existing C&D sorting line and storage bunkers;
- Inbound and outbound scales (note only one scale is installed at this time);
- Existing office and maintenance building;
- Existing mulching operation;
- Existing stormwater management features; and
- Existing employee parking, vehicle parking, and container staging areas.

LRS submitted a PUD Amendment Application and a Site Development Permit Application to West Chicago on June 20, 2019 (PUD Amendment Application). Revisions to the PUD Amendment Application were submitted on September 27, 2019 and November 11, 2019. The PUD Amendment Application was approved by West Chicago on June 15, 2020. The ordinance approving the PUD Amendment Application is provided in Attachment 2-B2 (PUD Amendment).

The PUD Amendment authorizes improvements to existing site operations and facilities, summarized as follows:

- Additional passenger vehicle parking;
- Additional truck/industrial vehicle parking;
- Additional paved outside storage areas for separated materials, roll-off boxes, storage containers, and portable toilets;
- An expansion of the existing C&D transfer/screening building including a loading pit (C&D expansion building);
- A new maintenance building;
- Stormwater management improvements;
- Site utility modifications;
- Re-establishment of prior disturbed wetland buffer; and
- Appurtenances related to the above.

The C&D expansion building is designed to be an approximately 22,500-square-foot rectangular, pre-engineered metal building with access doors along the east perimeter. A drive-through loading pit is located on the south perimeter approximately 8 feet lower than the tipping floor. These improvements will provide a more efficient site operation and accommodate LRS's growing operations. No additional special uses or operations were requested by the PUD Amendment Application. The site features being added and/or modified as part of the PUD Amendment are shown on Drawings C104 through C109. Phase I improvements on the east side of the site, including paving and stormwater, were completed during 2021. As a clarification, the site operations described in the PUD Amendment are not subject to this local siting application.

2.1.2.1 Identification of Applicant and Property Owner

West DuPage RTS will be operated by LRS. LRS is also the applicant. LRS is a limited liability corporation. The officers of LRS are:

- Alan Handley - Chief Executive Officer
- Tom Martin - Chief Financial Officer
- John Larsen - Chief Operating Officer
- Brian Tibble - Chief Marketing Officer

Appendix 2-C1 contains a certificate of good standing. The sole manager and member of LRS is LRS Holdings, LLC whose address is 5500 Pearl Street, Rosemont, Illinois 60018. The current major investor of LRS and LRS Holdings, LLC is the Macquarie Infrastructure Partners.

As required by Section 2.3 of the Host Community Benefit Agreement Between the City of West Chicago and LRS (see Appendix 1-B), LRS will obtain certificates of insurance from companies having a Best rating of A VI or better that shall, at such time as the West DuPage RTS is permitted, cover accidents such as fires, explosions, non-sudden accidental occurrences and pollution impairment.

For approximately twenty years, LRS has provided recycling and 100% waste diversion programs, affordable roll-off container service, on-site storage, portable restrooms, street sweepers, and comprehensive waste removal to businesses and homeowners. The following is additional information regarding LRS:

- LRS is the leading independent provider of recycling, diversion and non-hazardous, solid waste management services, as well as temporary services (sweeping and portable restrooms) across the Chicagoland area.
- LRS differentiates itself through aggressive and innovative diversion and recycling programs, technology advances, exceptional customer service and strong awareness for the environment with the goal of diverting as much waste as possible.
- LRS operates approximately ten strategically located MSW transfer stations and/or C&D recycling and transfer facilities in Illinois and Wisconsin.
- LRS operates a single-stream sorting facility with state-of-the-art technology in Forest View.

The operating experience of LRS and its subsidiaries in the field of solid waste management is summarized in Appendix 2-C2. This information includes the past operating experience of subsidiaries of the parent corporation operating or licensed in Illinois in the field of solid or hazardous waste management. A summary is also provided of any actual or alleged violations

during the last ten years with environmental laws and regulations governing solid or hazardous management operations or activities. As applicable, the information includes a citation of the applicable statute or ordinance violated or alleged to be violated and a brief written summary of the activities or operations giving rise to the actual or alleged violations and the ultimate outcome of the matter, including whether any fines or penalties were imposed. In summary, all alleged violations/compliance issues involved actions by former operators prior to LRS's acquisition of those facilities.

The property is currently owned by Oscar (IL) LLC, which is part of W. P. Carey Inc (W. P. Carey). W. P. Carey is an asset management company that leases properties to tenants on a long-term basis. The lease extends to at least the year 2044 and LRS may purchase the property at its discretion during the lease term. Documentation regarding the ownership of the property is provided in Appendix 2-C3.

2.1.2.2 Plat of Survey

The address of the West DuPage RTS is 1655 Powis Road, West Chicago, DuPage County. A plat of survey and legal description for the property is provided on Drawing C101. The property is comprised of two parcels (property index numbers 01-31-101-0004 and 01-32-100-001) that total approximately 27.66 acres.

2.1.2.3 Existing Topography and Features

The existing site features (including the existing construction or demolition debris recycling and transfer facility) and land uses within 500 feet of the West DuPage RTS are shown on the aerial photograph provided on Drawing C100. No other regional pollution control facility is operated on, adjacent to, or within 500 feet of the West DuPage RTS.

A topographic survey of the West DuPage RTS, the aerial photograph of the West DuPage RTS, and United States Geological Survey data for the property within 500 feet of the West DuPage RTS property line is provided on Drawing C100A. The same information shown on Drawing C100A along with existing zoning and the boundary of the floodway and floodplain (as defined by the Federal Emergency Management Agency flood insurance rate map and as discussed in Criterion 4) is provided on Drawing C100B.

A topographic survey and existing features of the West DuPage RTS, including the existing construction or demolition debris recycling and transfer facility, are shown on Drawings C102 (west) and C103 (east).

2.1.3 EXISTING UTILITIES

The existing utilities are shown on Drawings C102 and C103 and include electric (Commonwealth Edison Company [ComEd]), telephone/data (Comcast Corporation [Comcast]), natural gas (Nicor Gas [Nicor]), water (Village of West Chicago), and sanitary (Village of West Chicago).

Certain utilities (e.g., water main) will be relocated or improved as part of the improvements described in the PUD Amendment Application. The utility improvements are shown on Drawings C108 and C109. Additional description for each utility is as follows:

- Electric: The site is fed by a ComEd 24kV, three-phase power line that enters the site underground via conduit/cabling near the southern property boundary, originating from the west side of Powis Road. The conduit/cabling leads to an electrical transformer located south of the southeast corner of the existing building. From the transformer, power enters an existing mechanical room at the southeast corner of the building and is distributed. The 24kV power was looped through the site and provides more than adequate power for the site.
- Telephone/Data: Telephone and high-speed internet lines enter the site near the south side of the property via underground cable. An additional fiber optic cable enters at the same location and is a redundant measure providing backup for the site telephone/data services. All cables enter the existing building near the southwest corner.
- Natural Gas: The natural gas supply is a high-pressure 2-inch line provided by Nicor. Gas enters the site from an 8-inch gas line on the east side of Powis Road that runs due east from Powis Road and enters the existing building near the southwest corner. The high-pressure line has sufficient capacity to heat various portions of the building while at the same time powering an Ingersoll Rand generator that (in the case of a power outage) can run the office, scale, building lighting, and other loads.
- Water: The water supply to the site is provided from a public 8-inch ductile iron pipe that loops around the west half of the site. The 8-inch loop connects to an existing City of West Chicago 12-inch water main that runs north-south on the west side of Powis Road. The 8-inch main crosses Powis Road near the south and north access driveways. Services are tapped off the 8-inch main in the locations indicated on the plans.
- Sanitary Sewer: The sanitary sewer is an 8-inch polyvinyl chloride sewer that runs on the south side of the site and leads to a 12-inch polyvinyl chloride sewer that runs south to north along the east side of Powis Road.

2.1.4 LOCATION STANDARDS

2.1.4.1 Residential Properties

Section 22.14(a) of the ACT states the following:

> *No person may establish any pollution control facility for use as a garbage transfer station, which is located less than 1000 feet from the nearest property zoned for primarily residential uses or within 1000 feet of any dwelling, except in counties of at least 3,000,000 inhabitants.*

DuPage County has less than 3,000,000 inhabitants, so West DuPage RTS may not be established within 1,000 feet of the nearest property zoned for primarily residential uses or within 1,000 feet of any dwelling. West DuPage RTS is located in West Chicago but portions or the surrounding area are located in unincorporated DuPage County. The West Chicago and DuPage County zoning for the surrounding properties are shown on Figure 2-2. A 1,000-foot setback is also shown on the figure.

Figure 2-2 indicates that all of the surrounding properties within 1,000 feet of the West DuPage RTS are zoned Airport District (by West Chicago), Manufacturing District (by West Chicago), or Light Industrial (by DuPage County), except for railroad properties directly to the east of the site. Residences are not permitted uses in an Airport District (by West Chicago), Manufacturing District (by West Chicago), or Light Industrial (by DuPage County).

Two railroad properties are present directly east of the site, which are zoned Estate Residence District (ER-1). The West Chicago Municipal Code indicates that the purpose of the ER-1 is to establish regulations for larger lot single-family residential areas, and that neighborhoods in this district shall consist of very low-density single-family homes. Permitted uses are single-family detached dwellings, home occupations, small community residences, forest preserves, and parks and recreational areas when publicly owned. Accessory buildings may include swimming pools, bathhouses, tennis courts, green houses, guesthouses, and horses/stables. Allowable "special uses" are golf courses including driving range, bar, restaurant, meeting and banquet rooms; country club; site reclamation and cleanup plan areas; and above ground service facilities.

The western railroad property is currently owned by the Union Pacific Railroad and the eastern railroad property is currently owned by Canadian National Railway. The railroads have been present for over seventy years, and remain active today. The properties are each approximately 100 feet wide, have steep banks that rise up approximately 10 feet above surrounding grade, and have no nearby vehicle access (see photographic log in Appendix 2-D1). The lot requirements for a residence in an ER-1 include the following:

- Minimum lot area: 40,000 square feet;
- Minimum lot width: 100 feet at front, lot line and 200 feet at building line; and
- Minimum setbacks:
  - Front yard: 50 feet;
  - Corner side yard: 50 feet;
  - Side yard: 30 feet;
  - Rear yard: 50 feet; and
  - Maximum lot coverage: 30%

The physical features of the property, the lack of access, and the above lot requirements make it physically impossible to construct a residence on the railroad property. This conclusion is supported by the letter from West Chicago provided in Appendix 2-D2, which indicates that the ER-1 zoning classification is a remnant from when it was annexed into West Chicago, residential development on this property is physically impossible, and West Chicago concludes the setback criteria is not applicable to this property. Thus, as shown on Figure 2-3, the nearest property zoned for primarily residential use is approximately 2,000 feet to the east.

Figure 2-3 also demonstrates that there are no residential properties or dwellings within 1,000 feet of West DuPage RTS. The figure was based upon Civil & Environmental Consultants, Inc.'s (CEC) review of zoning maps, aerial photographs, as well as a visual survey, performed by John Hock of CEC, of all properties and buildings within approximately 3,500 feet of the site. Figure 2-3 demonstrates that the nearest residential property is over 3,000 feet to the east.

2.1.4.2 100-Year Floodplain Limits

As part of the PUD Amendment process, a stormwater report was submitted to DuPage County to demonstrate compliance with the DuPage County Countywide Stormwater and Floodplain Ordinance. DuPage County issued Stormwater Management Certification No. SM2019-0061 to the site on December 6, 2019. A summary of the approved evaluation and an assessment of the site improvements is provided in Criterion 4. In summary, the base flood elevation (BFE) encroaches on the site in an approximately 0.05-acre area located north of the east detention pond as shown on Drawing C103. As discussed in more detail in Criterion 4, the proposed operations are located over 500 feet west of the floodplain area and the finished floor elevations of buildings are approximately four feet higher than the BFE. Thus, the West DuPage RTS is not within the designated 100-year floodplain or is flood proofed.

2.1.4.3 Wetland Location Documentation

Section 404 of the Clean Water Act prohibits filling within jurisdictional Wetlands or Waters of the United States without prior authorization from the United States Army Corps of Engineers. As

part of the PUD Amendment process, a stormwater report, which also addressed on-site wetlands, was submitted to DuPage County to demonstrate compliance with the DuPage County Countywide Stormwater and Floodplain Ordinance. DuPage County issued Stormwater Management Certification No. SM2019-0061 to the site on December 6, 2019 (see Appendix 2-F2). The wetland evaluation (Tab 4 of the Stormwater Report) that was approved is provided in Appendix 2-F1. In summary, wetlands are located on the eastern extent of the West DuPage RTS as detailed in the report prepared by V3 Companies located in Appendix 2-F1. The location of the wetlands are also shown on Drawing C103. The wetlands are well buffered from the proposed operations and no filling of jurisdictional wetlands are proposed.

2.1.4.4 Archaeological or Historical Sites

The Illinois Historic Preservation Agency (IHPA) was requested in correspondence, dated August 22, 2018, to perform a file search for the property and determine if any significant historic, architectural, or archaeological resources are located at the site (see Appendix 2-E1). The IHPA correspondence indicates that no significant historic, architectural, or archaeological resources are known to be located at the site. The IHPA correspondence is provided in Appendices 2-E2.

2.1.4.5 Threatened or Endangered Species

The site is located in an industrial area of West Chicago, Illinois and has a long history of industrial uses. As part of the PUD Amendment process, a stormwater report, which also addressed on-site wetlands and potential threatened and endangered species, was submitted to DuPage County to demonstrate compliance with the DuPage County Countywide Stormwater and Floodplain Ordinance. DuPage County issued Stormwater Management Certification No. SM2019-0061 to the site on December 6, 2019 (see Appendix 2-F2). The threatened and endangered species evaluation is provided in Appendix V of October 9, 2018 Wetland Delineation and Assessment Report provided in Tab 4 of Appendix 2-F1. In summary, no threatened or endangered species or critical habitats were determined to be present.

To confirm the ongoing lack of presence of any threatened or endangered species, an updated Illinois Ecological Compliance Assessment Tool (EcoCAT) report was obtained. The updated EcoCAT report indicates that the Illinois Natural Heritage Database contains no record of state-listed threatened or endangered species, Illinois natural area inventory sites, dedicated Illinois nature preserves, or registered land and water reserves in the vicinity of the project location. The updated EcoCAT information is provided in Appendix 2-E3.

2.1.4.6 Wild and Scenic Rivers

The National Wild and Scenic Rivers Act was passed in 1968 to preserve selected rivers that possess outstandingly remarkable scenic, recreational, geologic, fish and wildlife, historic,

cultural, or other similar values. The National Wild and Scenic Rivers System [www.rivers.gov] online database was queried. The website indicates that Illinois has one stretch of river designated as a wild and scenic river: the Vermilion River from river mile 46.9 to river mile 29.8 [www.rivers.gov/illinois.php]. This location is near Danville and is over 100 miles from the site.

2.1.4.7 Airports

The nearest airport to the proposed transfer station facility is the DuPage Airport. The DuPage Airport is located directly west of the site. Transfer stations are not prohibited from being located nearby to airports. Federal Aviation Administration (FAA) Advisory Circular 15/5200-33B (Advisory Circular) provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports. The Advisory Circular indicates the following regarding MSW transfer stations:

- Enclosed waste-handling facilities that receive MSW behind closed doors; process it via compaction, incineration, or similar manner; and remove all residue by enclosed vehicles generally are compatible with safe airport operations, provided they are not located on airport property or within the runway protection zone (RPZ).
- These facilities should not handle or store putrescible waste outside or in a partially enclosed structure accessible to hazardous wildlife.
- MSW transfer facilities that are open on one or more sides; that store uncovered quantities of municipal solid waste outside, even if only for a short time; that use semi-trailers that leak or have trash clinging to the outside; or that do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully enclosed trash transfer stations.

As discussed in the operating plan, the West DuPage RTS meets all of the above criteria so will be compatible with safe airport operations.

As noted above, the Advisory Circular indicates that waste handling facilities should not be located within an RPZ. FAA Advisory Circular 150/5300-13A, Section 310 indicates the following regarding the RPZ:

- The RPZ's function is to enhance the protection of people and property on the ground through the airport ownership over RPZs.
- The RPZ is trapezoidal in shape and is centered about the extended runway centerline.
- The RPZ has two components with varying widths (central portion and controlled activity), and the approach RPZ may be different from the departure RPZ.
- The RPZ generally extends 1,000 feet from the end of the runway.

The RPZ for the DuPage Airport in the area of the site is shown in Appendix 2-G1. As shown, the western portion of the site is located within the RPZ. This portion of the facility is only used for ingress/egress, landscaping, vehicle parking, and stormwater controls. All waste handling and management facilities, occupied structures, and storage of recyclable materials are located farther to the east.

The height of all buildings and structures at the West DuPage RTS are subject to a clear zone avigation easement (Avigation Easement). The Avigation Easement is provided in Appendix 2-G2 and indicates that a specified clear zone area be and remain free and clear of any structure, tree or other object which is or would constitute an obstruction or hazard to the flight of aircraft landing or taking off from the DuPage Airport. The clear zone area varies in elevation across the site ranging from approximately elevation 785 feet mean sea level at the western property limit (closest to the DuPage Airport) to approximately elevation 825 feet mean sea level at the eastern property limit (farthest from the DuPage Airport). The following are the clear zone area elevations and maximum elevations for the buildings at the site:

- The clear zone area elevations at the MSW and SSR transfer building vary from approximately 801 to 805 feet mean sea level. The maximum elevation of the MSW and SSR transfer building is approximately 800 feet mean sea level.
- The clear zone area elevations at the solidification building vary from approximately 797 to 798 feet mean sea level. The maximum elevation of the solidification building is approximately 787 feet mean sea level.
- The clear zone area elevations at the portable restroom building vary from approximately 797 to 801 feet mean sea level. The maximum elevation of the portable toilet building is approximately 787 feet mean sea level.

Based on the above information, the proposed buildings meet the height requirements of the Avigation Easement.

An agreement was executed between the DuPage Airport Authority (DAA), OSCAR, LLC, and LRS dated January 19, 2022 (Airport Agreement), which is provided in Appendix 2-G3. The Airport Agreement indicates the following:

- Upon receiving final, non-appealable siting approval pursuant to 415 ILCS 5/39.2 to construct and operate the West DuPage RTS, and upon receiving an IEPA development permit, LRS shall 1) execute and grant to DAA a new avigation easement (see attachment to Airport Agreement in Appendix 2-G3), 2) LRS shall reduce the roof height of its existing

transfer building so as to stay below all critical elevations in the new avigation easement, and 3) LRS shall not allow any penetrations whatsoever to the new avigation easement.

- LRS shall pay to the DAA a fee of $0.15 for each ton of municipal waste and/or hydro excavation waste received at the West DuPage RTS.
- LRS shall comply with all design and operational features described in a letter and corresponding attachments, dated September 8, 2021, which is attached to the Airport Agreement.
- The DAA, based upon its current knowledge of the proposed West DuPage RTS, agrees that the proposed West DuPage RTS will not pose a threat to the safe operation of the DuPage Airport. Accordingly, the DAA currently has no objection and will not object to the siting approval of the West DuPage RTS.
- The DAA is not currently aware of any violations of or contradictions with the guidance set forth in FAA Advisory Circular 15/5200-33B and FAA Advisory Circular 150/5300-13A by the proposed construction and operation of the West DuPage RTS.

2.2 SITE DESIGN

As discussed in Section 2.1, LRS currently operates a permitted C&D recycling facility at the site and currently performs other operations at the site that support its overall business. The proposed development includes the following:

- Conversion of the expanded C&D expansion building to an MSW and SSR transfer building;
- Integration of the C&D recycling and transfer operations with the MSW transfer operations;
- Construction of mixing pits and a building for solidification of hydro excavation wastes (hydro excavation waste building);
- Installation of a second scale;
- Use of northern driveway for the exiting of vehicles; and
- Establishment of drop off area for electronic wastes and recyclables.

The site plan for West DuPage RTS is provided on Drawings C200 and C201. The site design is discussed further below.

2.2.1 MSW AND SSR TRANSFER BUILDING

The C&D expansion building will be converted to an MSW and SSR transfer building. Barrier walls will be installed around the majority of the perimeter as shown on Drawing C302. A deflector plate will be installed at the top of the barrier wall, as needed, to prevent litter from falling behind the barrier wall. The proposed design of the barrier wall is the same as the barrier wall currently installed in the C&D tipping building. It is also the same design as has been used at LRS's MSW transfer station at 3152 South California Avenue for over fifteen years. This barrier wall has required only minimal repairs during this time.

The tipping floor will be a minimum 8-inch thick slab-on-grade reinforced concrete as shown on the detail on Drawing C302. Floor elevations of the transfer station are designed so that the highest elevation will be at the building walls with a downward slope both into and out of the building. Similarly, the loading pit is designed to be slope in the direction of a collection sump in the approximate center of the pit. Any wastewater that flows to either sump will flow through an oil-water separator into the sanitary sewer (see Drawing C302).

2.2.1.1 Integration of C&D and MSW Operations

The operations of the existing C&D recycling and transfer operations will be fully integrated with the MSW transfer operations:

- An opening will be present between the C&D transfer/screening building and the MSW and SSR transfer building. The opening will have a door that will be closed when not in use.
- Non-recyclable C&D material deposited in the C&D transfer/screening building can be transported into the MSW and SSR transfer building.
- A load (or a portion of a load) that is accepted as MSW which predominantly contains recyclables (e.g., wood, metal, cardboard) can be transported from the MSW and SSR transfer building into the C&D transfer/screening building for processing.
- Non-recyclable materials from the sorting line will fall into a storage bunker on the east end of the C&D sorting line building. The non-recyclable material will be removed and managed as MSW.

Currently, the site cannot accept loads that are not all C&D. The ability to accept MSW will allow additional material to be recycled that is not currently able to be recycled. The integrated operation will thus actually increase the amount of material that the site is able to recycle. The scalping of MSW loads would not occur if sufficient tip floor space and equipment is unavailable or if unloading or loading activities would be significantly impeded (i.e., during peak hours of high waste acceptance days).

The ability to accept MSW will provide needed revenues to allow the site to upgrade is C&D screening and sorting system. The upgraded infrastructure will also facilitate an increase in the amount of C&D material able to be recycled.

If approval of the MSW transfer operations receive local siting and IEPA approval, the facility boundary will become the entire 27-acre property and the "22.38" permit for the C&D transfer and recycling operation will no longer be applicable.

2.2.2 HYDRO EXCAVATION WASTE BUILDING

Mixing pits and a building will be constructed for the solidification of hydro excavation wastes. The location of the hydro excavation waste building is shown on Drawing C200, and is designed to be an approximately 3,000-square-foot rectangular, pre-engineered metal building. The south perimeter of the building will be open to provide access to staged solidification material and the mixing pits. The hydro excavation waste building will be equipped with electric and water service (see Drawings C108 and C109).

Two mixing pits will be constructed as shown on Drawing C300. A staging area for solidification material will be constructed in between the loading pits. The mixing pits will be constructed from reinforced concrete and lined with high-density polyethylene. The mixing pits will slope down from down from the south perimeter to flat area approximately four feet in depth. A plan and elevation views of the building are provided on Drawing C300. Details of the mixing pit are also provided in Drawing C300.

2.2.3 SECOND SCALE

Access to the site is currently provided by a two-way access drive located on the west perimeter of the facility along the east right-of-way of Powis Road. The access drive currently accommodates all vehicles entering and exiting the site, including employee vehicles, single-unit waste collection vehicles, semi-trailer transfer vehicles, and emergency vehicles. The same access drive (the South Drive) will be used only for incoming vehicles at the West DuPage RTS.

The PUD allows both an inbound and outbound scale to be installed. However, only one scale is currently installed. If a second scale is not installed prior, a second scale will be installed south of the existing scale upon operation of the MSW transfer station. The new scale (to the south) will used for entering vehicles and the existing scale (to the north) will be used for exiting vehicles.

2.2.4 NORTHERN DRIVE AND TRAFFIC FLOW

A second two-way access drive is located on the west perimeter of the facility along the east right-of-way of Powis Road. This drive (the North Drive) is approximately 350 feet north of the South Drive. To improve traffic flow, the site will open the North Drive and use it for all exiting vehicles. The planned traffic flow using the North Drive is shown on Drawing C400.

Collection vehicles will enter the site through the South Drive (middle lane) and proceed east to the inbound truck scale. At the scale, each incoming disposal vehicle will be weighed and billing information will be obtained from the driver (i.e., company, type of waste, origin of waste, etc.). MSW disposal vehicles will then proceed east to unload in the transfer station building through the east bay doors. After unloading, they will proceed out of the site in a counterclockwise direction and, presuming the truck's tare weight (weight when empty) is known, the truck will exit the facility. If the truck's tare weight is unknown, the truck will proceed across the outbound scale to obtain the tare weight, and then proceed north to exit the facility. Vehicles with hydro excavation wastes will proceed in a similar manner, only proceeding to the hydro excavation waste building. The traffic flow pattern for collection vehicles is shown on Drawing C400 and further detail is provided on Drawing C401.

Vehicles entering the site that do not need to pass over the scale (e.g., employees, street sweepers, portable restroom vehicles) will use the left lane. These vehicles will proceed north and then travel the appropriate route as shown on Drawing C400.

Transfer trailers will enter the site using the right hand lane and proceed around the south side of the existing building to the loading pit. They do not need to pass over the scale. A pit scale will be installed and used to measure the weight of the contents of the transfer trailer, during loading. After loading, the transfer trailers will exit the loading pit and move forward onto the exit ramp, where the load will be tarped. All transfer trailers are planned to be equipped with auto tarpers. The exit ramp will be approximately 20 feet wide and building extension at the loading ramp exit will be provided to allow adequate space for the autotarping prior to exiting the building. Once the load is tarped, the transfer trailer will proceed in a counter-clockwise direction and exit the facility. The traffic flow pattern for transfer trailers is shown on Drawing C400.

The turning radius for the various vehicle types and movements were evaluated and, as shown on Drawings C401 and C404, adequate space is available for anticipated turns. Planned signage and pavement markings are shown on Drawing C403. Queuing space is provided as vehicles enter the site, potentially wait to use the C&D tipping building, potentially wait to use the MSW and SSR transfer building and potentially wait to receive their ticket as they exit the site (see Drawing C402).

2.2.5 ELECTRONICS AND RECYCLABLES DROP OFF AREA

Pursuant to Section 4.16 of the Host Community Benefit Agreement with West Chicago, the site will accept, at no charge to the residents of West Chicago (subject to providing proof of residency at the time of drop off), up to two discarded electrical or electronic devices per household per year, excluding cathode-ray tube monitors or big screen televisions. Cathode-ray tube monitors or big screen televisions would be accepted for a fee of $35 per item. The site may also accept electronic wastes from other area residents on a fee based system.

Pursuant to Section 4.15 of the Host Community Benefit Agreement with DuPage County, the site will establish of a drop off area for recyclables (e.g., bottles, cans, cardboard and paper) generated by residents and small businesses at no cost to the residents.

An electronic and recyclables drop off area will be established just north of the office building as shown on Drawing C200. Customers will enter the site by proceeding over the scale and will be directed to park in the designated parking spots. A trained LRS employee will then assist the customer at the drop off location. Customers will place recyclables directly in the designated container at no cost. For electronic wastes, the LRS employee will check that the item(s) is allowable to be received, assist with unloading (if needed), receive payment (if needed), and place the electronic waste in the

designated container for consolidation and transport to a recovery facility. The LRS employee will also provide exit instructions for customers using this area.

2.3 STORMWATER MANAGEMENT DESIGN

The stormwater at the site will be managed in accordance with the applicable requirements of IEPA and as listed in the IEPA General National Pollutant Discharge Elimination System (NPDES) Permit for Storm Water Discharges from Industrial Activities, in addition to the local requirements of the City of West Chicago and DuPage County. The stormwater management design for the site is provided below. The stormwater management features may be modified, as requested, based on comments during IEPA permitting.

2.3.1 SURFACE WATER MANAGEMENT SYSTEM

The site has an existing surface water management system that includes the following major components:

- Two permanent above ground detention structures (east detention pond and west detention pond);
- A forebay (settling basin) for the east detention pond;
- Inflow and outflow structures;
- Underground pipes; and
- Drainage ditches.

In general, stormwater from the western portion of the site flows to the west detention pond via sheet flow and underground piping, and discharges through an outflow structure to the stormwater sewer system along Powis Road. Stormwater from the eastern portion of the site flows to the east detention pond via sheet flow or underground piping, and discharges through an outflow structure to Kress Creek.

As part of the PUD Amendment process, a stormwater report was submitted to DuPage County and the City of West Chicago to demonstrate compliance with the DuPage County Countywide Stormwater and Floodplain Ordinance. DuPage County issued Stormwater Management Certification No. SM2019-0061 to the site on December 6, 2019 (see Appendix 2-F2). The approved Stormwater Report (Tabs 1 and 2) are provided in Appendix 2-F1. The stormwater improvements were subsequently approved by the City of West Chicago as part of the site development permit (i.e., Building Permit) on November 20, 2020 (see Appendix 2-F3).

As part of the PUD Amendment, both ponds are being expanded, and a new restrictor is being added to each. Due to the addition of increased restriction, post-development discharges are decreased for both ponds as compared to pre-development, and the maximum allowable release rate will meet the requirements in the DuPage County Stormwater Ordinance. The stormwater management system is shown on Drawings C106 and C107. The approved stormwater

improvements on the eastern portion of the site, including the enlargement of the east detention basin and modifications to the outflow control structure, were completed in 2021. The record drawings for the improvements to the eastern portion of the site, including the stormwater improvements, were approved by the City of West Chicago on November 16, 2021 (see Appendix 2-F4).

The Stormwater Management Permit Application that was approved by DuPage County and West Chicago contemplated the impervious nature of all of the improvements proposed in this siting application. Thus, no additional improvements to the stormwater management system are proposed in this siting application.

2.3.2 STORMWATER POLLUTION PREVENTION

Stormwater pollution prevention will be managed on site both during operations as required by the site's General Storm Water NPDES Permit from Industrial Activities (see Appendix 2-F5). Discharges associated with the operation of West DuPage RTS are managed through controls and procedures as detailed in the site's stormwater pollution prevention plan, which incorporates the following:

- Settling Basin: The existing settling basin functions to settle out solids before water entry into the east detention pond area. The settling basin has been regraded to remove sediment buildup and increase settling capacity.
- Floating Boom with Silt Curtain: A floating boom with silt curtain will be installed near the outfall of each detention pond, and will help collect sediment, oil, and other pollutants that may have entered the pond prior to discharge. The floating boom will be an Elastec Type I Stillwater Screen equipped with a PIG Oil-Only Absorbent Boom (or equivalent) to aid in oil removal.
- Infiltration Trench: The existing 2.5-foot wide infiltration trenchwill be reinstalled and expanded in length to serve the west pond tributary area. This is being expanded to assist with the volume control requirement of the west pond upstream impervious area. The infiltration trench will be equipped with a Filtrexx PetroLoxx tubular mesh devise (or equivalent) to add oil removal capacity to the post-construction best management practice.
- Erosion Controls: Silt fencing, straw bale filters, temporary seeding, and other methods will be used as needed to prevent erosion.
- Employee Training: Employees will be trained to identify situations that may cause exposure of waste or other materials to stormwater runoff.
- Routine Inspections: Trained employees will perform routine inspections of stormwater management features to identify any needed maintenance or repairs.

- Quarterly Monitoring: Sample collection and visual observations of the stormwater discharge from the west detention pond to the storm sewers along Powis Road (Outfall #1) and from the east detention pond into Kress Creek (Outfall #2) are performed and documented on a quarterly basis.

2.4 OPERATIONS PLAN

This section describes the daily operating procedures at the proposed transfer station facility. The operations plan details waste acceptance and handling procedures, nuisance control procedures, staffing and equipment requirements, cleaning procedures and closure plan for the proposed transfer station. Per the Host Agreement Community Benefit Agreement between the City of West Chicago, DuPage County, Illinois, and Lakeshore Recycling Systems, LLC for a Solid Waste Transfer Facility (Host Agreement), West DuPage RTS shall conduct all operations in a manner that is protective of the public health, safety, welfare, groundwater resources and the environment. West DuPage RTS shall comply with all city ordinances and all applicable laws, ordinances, rules, and regulations, including but not limited to Illinois Pollution Control Board regulations and the city code.

2.4.1 DAYS AND HOURS OF OPERATION

Consistent with the Host Agreement, West DuPage RTF anticipates operating hours for the MSW Transfer Station of 4:00 a.m. to 12:00 a.m. on weekdays and 4:00 a.m. to 12:00 p.m. on Saturdays, with no operation on Sundays or the six major federal holidays (New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day), provided that on the Saturday following any federal holiday regular business hours may be extended by the company to 12:00 a.m. The regular business hours for accepting municipal and hydro excavation waste may be extended upon the prior approval of the city in writing (definition of regular business hours in Host Agreement). C&D will continue to be accepted Monday through Saturday, twenty-four hours per day, consistent with the current operations.

2.4.2 FACILITY STAFFING AND TRAINING

LRS currently employs approximately 125 persons at the facility including office personnel, mechanics, drivers, operators, facility manager, and laborers. The proposed transfer station will be staffed with the necessary number of employees to safely and efficiently operate the facility. A facility manager and operators will primarily manage and perform the operations at the MSW transfer and solidification buildings. A brief description of the primary duties and training requirements for the facility manager and operators are provided below. The exact number and duties of personnel managing and performing the operations at the MSW transfer and solidification buildings may vary over time.

2.4.2.1 Facility Manager

The facility manager is responsible for the supervision of all activities at the site, including safety and emergency response coordination (emergency coordinator), inspection of all operational and

safety equipment, on-the-job training for personnel, site inspection, production and incident reporting and record keeping, and load inspections. The facility manager duties are:

- To allocate work efficiently to all support staff in order to maximize productivity, meet customer demands and maintain quality of service.
- To efficiently develop and provide appropriate work training and instruction to staff members, in accordance with company deadlines.
- To communicate customer requirements to relevant staff members.
- To manage the completion of all operating equipment installations, repairs, and replacements in accordance with company procedures and deadlines.
- To recruit and train/arrange training for staff for the site as required.

Responsibilities will also include coordinating and maintaining site records. These records include, but are not limited to, waste and recyclable receipt data, load checking reports, results of inspections (by IEPA or relevant local authorities), copies of all submitted reports (to IEPA or any relevant local authorities), employee training records, and employee personnel records.

The facility manager's training will include operating requirements, safety and emergency response, record keeping and reporting, and identification of unacceptable wastes/load inspections.

2.4.2.2 Equipment Operators

At least one trained operator per shift will be present and responsible for operating the wheel loader used to load waste and recycling materials from the tipping floor into the transfer trailer, and operate any other equipment needed for operations. This person will also ensure that all weight records of transfer trailers are collected and stored. This position requires training on hazardous waste and unacceptable waste identification. A similarly trained operator will be present in the C&D transfer/screening building and the hydro excavation waste building during operations.

The equipment operator's training includes operating requirements, safety and emergency response, record keeping and reporting, and identification of unacceptable wastes/load inspections.

2.4.3 WASTE ACCEPTANCE

West DuPage RTS will accept municipal waste and SSR for transfer to off-site disposal location(s). "Municipal waste" is defined by Section 3.290 of the Illinois Environmental Protection Act to mean garbage, general household and commercial waste, industrial lunchroom or office waste, landscape waste, and construction or demolition debris. The site will also accept SSR for transfer to processing facilities for separation and re-use as a commodity.

While included in the definition of municipal waste, landscape waste has been banned from disposal in Illinois landfills since July l, 1990 and now has an entirely separate regulatory structure that involves composting. Thus, West DuPage RTS will not accept loads of landscape waste.

Hydro excavation wastes are a solid/liquid waste created through a combination pressurized water and air vacuum system generally used for construction or maintenance services, such as potholing to expose utilities, installation of utility poles, installation of piers/footings, trenching near utilities, and clean out of storm sewers. The system cuts through soils/materials, breaks them up, and lifts the slurry from the excavation area into a debris tank.

West DuPage RTS will accept hydro excavation wastes for solidification and transfer to off-site disposal location(s). "Hydro Excavation Wastes" is defined to mean solid/liquid waste such as hydro/vacuum excavation muds, underground excavation material, and other similar materials (definitions in Host Agreement). This is the same definition as listed in the Host Agreement except that "drilling muds" has been removed. Operational procedures for the hydro excavation wastes is provided in Appendix 2-H.

The C&D Recycling Facility will continue to meet the following requirements contained in the site's current IEPA Permit (Permit No. 2015-124-OP provided in Appendix 2-A) and Section 22.38 of the Illinois Environmental Protection Act.:

- Sort all general C&D (to separate recyclable material from non-recyclable material) within forty-eight hours of receipt [Special Condition 28].
- Transport all non-recyclable and unacceptable material off-site for disposal within seventy-two hours of its receipt [Special Condition 30].
- Transport off-site all putrescible or combustible recyclable general C&D within forty-five days of receipt [Special Condition 33].
- Store recyclable concrete or clean soil for a maximum period of three months [Special Condition 37].
- Transport off-site all non-putrescible recyclable general C&D within six months of receipt [Special Condition 32].

The site will reject materials that are not compatible with the operations of the proposed transfer station facility. The following wastes, at a minimum, are considered unauthorized and will not be knowingly accepted at the site:

- Hazardous substances (as defined by Section 3.215 of the Illinois Environmental Protection Act);

- Hazardous waste (as defined by Section 3.220 of the Illinois Environmental Protection Act);
- Potentially infectious medical wastes (as defined by the Illinois Environmental Protection Act in Section 3.84);
- Universal waste (as defined by Title 35 of the Illinois Administrative Code Part 733 including batteries, pesticides, mercury-containing equipment and lamps);
- Regulated asbestos containing materials;
- Polychlorinated biphenyl wastes;
- Used motor oil;
- Source, special or by-product nuclear materials;
- Radioactive wastes (both high and low level);
- Sludge;
- White goods (incidental white goods received at the proposed transfer station will be segregated and stored for pickup by an off-site recycler);
- Lead-acid automotive batteries (incidental automotive batteries received at the transfer station will be segregated and stored for pickup by an off-site recycler);
- Used tires (incidental tires received at the transfer station will be segregated and stored for pickup by an off-site recycler); and
- Landscape waste.

Rejected materials will not be allowed to unload, or will be promptly removed and transferred to an appropriate facility for ultimate disposition or, to the extent allowed by law, legally placed back on the vehicle that transported said unauthorized waste to West DuPage RTS and sent away from West DuPage RTS.

West DuPage RTS reserves the right to reject any other materials or loads that are deemed incompatible with site operations. West DuPage RTS will deny access to a vehicle for reasons that include, but are not limited to, the following:

- The vehicle is known, or reasonably suspected, to contain unauthorized waste materials.
- The vehicle appears likely to leak or spill material, especially material that is easily windblown or otherwise scattered.
- The vehicle does not appear to be in safe operating condition.
- The vehicle has repeated non-compliance with LRS's tarping policy.

2.4.4 OPERATING EQUIPMENT

Mobile equipment will be used to facilitate all transfer operations and to handle material for storage and load out after processing. The following provides an overview of the typical types of equipment that will be used at the proposed transfer station facility:

- Semi-tractor/yard tractors for transfer trailer hauling/on-site movement;
- Semi-trailers for material transfer to landfill; and
- Wheel loaders for material handling to transfer trailers.

Other equipment may also be used as needed. If replacement equipment is necessary, due to equipment failure or breakdown, the equipment will be brought in from contractor rental yards. The list of mobile equipment may be changed or supplemented in response to incoming volumes, materials types, etc.

2.4.5 TRANSFER OPERATIONS AND STORAGE

Per the Host Agreement, all tipping of municipal waste at the transfer facility shall be on the tipping floor inside the transfer building, and, except as provided below, the West DuPage RTS shall have the tipping floor free of waste and cleaned with a mechanical street sweeper by the end of each operating day.

Per the Host Agreement, no municipal waste shall be left on the tipping floor inside the transfer building or outside the transfer building on the transfer facility property overnight, except:

- In transfer trailers, provided that such trailers are suitably covered and staged at least 500 feet from Powis Road right-of-way;
- In the event of an emergency, the IEPA or person previously appointed by the city council or, in the absence of such an appointment, the mayor has given prior approval of temporary overnight storage on the tipping floor inside the transfer building; and
- Empty waste collection containers and empty transfer trailers may be stored outside the transfer building at least 500 feet from Powis Road right-of-way.

Unloading and loading of the waste will take place only inside the transfer station building, and only under the direction of West DuPage RTS operating personnel. Loading equipment inside the structure will load the waste into transfer trailers in the loading pit on the south side of the building. All transfer trailers are planned to be equipped with auto tarpers. The exit ramp will be approximately 20 feet wide and a building extension will be provided at the loading ramp exit to allow adequate space for the autotarping prior to exiting the building. During tarping, the driver

will be trained to make sure that no waste is clinging to the outside of the transfer trailer and no leaks are occurring.

Per the Host Agreement, West DuPage RTS agrees to keep the truck doors to the transfer facility closed, except for emergencies and to allow trucks to enter and exit the facility, during regular business hours. Spotters will be present inside and outside of the MSW and SSR transfer building to open and close the doors as vehicles enter and exit the MSW and SSR transfer building.

No waste shall be left on the floor of the transfer station for more than twenty-four hours. SSR may be stored on the floor inside the transfer station building as needed to allow sufficient material to be accumulated to provide a full transfer trailer load. Salvaging of recyclable material from MSW loads may occur if adequate tipping floor space is available (e.g., during non-peak hours or during lower volume days). For example, loads with predominantly metal or concrete material may be salvaged from the incoming waste and placed in storage bunkers for subsequent recycling (similar to the material from the C&D recycling operation).

Waste and/or recyclables may be kept temporarily outside in transfer trailers which are tarped/covered for no more than twenty-four hours, except over holidays and weekends, when the time shall be extended by an additional twenty-four hours for a holiday and forty-eight hours for a weekend. As indicated above, all transfer trailers shall be tarped/covered at all times during such periods of temporary storage.

2.4.6 ON-SITE TRAFFIC CONTROLS

As vehicles enter the site, pavement markings and/or signs will direct the vehicle which lane to use. A spotter will be stationed at the entrance to assist/ direct vehicles as needed (see Drawings C400 through C404).

In-bound collection vehicles will proceed over the in-bound scale. Security cameras, a screen display and an intercom is present for the driver to communicate with the scale clerk located in the office. The purpose of the scales is the measure the weight of the waste being delivered to the site. Typically an in-bound and out-bound weight are obtained, and then the difference between the two weights is the amount of waste delivered to the site (and is the basis of the customers invoice). Customers may request a ticket/receipt documenting the recorded weights upon exiting the site. Currently, drivers need to park and exit their vehicles to walk into the office to provide payment and/or obtain a printed ticket.

LRS will be implementing an electronic ticketing system at the site to minimize time on the scales and the ticketing/ receipt process. This system is currently in the process of being deployed at the

other LRS facilities, and has received positive feedback to date. The process includes the following:

- For the inbound trucks, the scale clerk simply records the company name, license plate, driver, material, weight, and related information. The process is very quick, and the truck generally only needs to stop for about ten seconds on the in-bound scale.
- LRS collects and stores tare-weights (empty weights) of each of the packer-trucks for its own vehicles and regular customers (recalibrated monthly). The stored tare-weight is then used for each transaction, which allows those vehicles to predominantly bypass the outbound scale. For these customers, the scale clerk routinely sends a batch-ticket to the designated customer via email.
- For those that do need to proceed over the out-bound scale, a large monitor/screen (approximately 50 inches) and corresponding camera system will be present which will display the truck, license plate, driver, tare- weight and related information. The driver can take a picture of the monitor/screen with their phone, opt for an emailed ticket, or request a printed ticket/receipt.
- For those that request a printed ticket/receipt or need to provide payment, the vehicle will pull off the scale and park in the designated area along the east side of the exit drive. A scale assistant will then obtain payment and/or print the ticket/receipt from a handheld device. This eliminates the driver exiting the truck or entering the office, and dramatically decreases the per truck scale time.

A spotter will also be present at the queuing areas for the C&D tipping building and the MSW and SSR transfer building (see Drawings C401 through C404). The spotters will communicate to the waiting vehicles when a loading area is available and which to use. They will assist outbound vehicles as needing regarding the outbound route. Signage will be present at the site as shown on Drawing C403 to assist drivers.

2.4.7 CLEANING PROCEDURES

The tipping floor will be cleaned using a mechanical street sweeper with a water spray and vacuum system at least once per twenty-four-hour period. The tipping floor and barrier walls will be cleaned with a pressure washer after sweeping at least weekly to remove waste residue and further control odors. A disinfectant may be used in the washwater to control odors. The area behind the barrier walls will also be routinely inspected and cleaned. All excess washwaters from the tipping floor will be directed through the oil-water separator to the sanitary sewer system along the south perimeter of the MSW and SSR transfer building (see Drawing C302).

2.4.8 LITTER CONTROL

Unloading, transferring and loading of all waste will be performed within the transfer station building to minimize the potential for wind-blown distribution of litter. Tarps on all loaded incoming and outgoing open-top trucks will contain the waste to prevent its escape onto the grounds or the public roadways. Loaded transfer trailers will be tarped using auto tarpers prior to exiting the loading pit ramp. A building extension is provided on the east (outbound) end of the loading pit such that the tractor will be on level ground while tarping. LRS uses the ratchet side roll for open top trailers manufactured by Mountain Tarp. LRS has a fleet of approximately 100 transfer trailers and approximately twenty-five are equipped with these auto tarpers. The remainder of the fleet is planned to be equipped with auto tarpers in the next two years. Any brokers which are used will be required to use a similar auto tarper. West DuPage RTS shall use its best efforts to assure that vehicles hauling waste to and from West DuPage RTS shall be suitably covered so as to prevent waste from leaving the vehicles.

Fencing surrounds the West DuPage RTS property, and assists in keeping any windblown litter from leaving the site. In order to ensure the effectiveness of these litter prevention measures, West DuPage RTS will patrol the site during hours of operation to collect any litter. Any litter collected will be added to the waste being managed on the tipping floor.

Per the Host Agreement, West DuPage RTS shall seek to prevent any waste, litter or debris from being discarded onto public traveled roads due to the operation of the West DuPage RTS and shall abide by a litter control plan as approved by the city as a result of the siting process. Should the waste, litter or debris from such operation pose a problem in the reasonable opinion of the city, the city, at its option, may require the West DuPage RTS to sweep or otherwise clean Powis Road in the City of West Chicago, as needed. West DuPage RTS shall keep the site, including all buildings and other improvements built or utilized by West DuPage RTS, in good condition and repair for the term of the Host Agreement.

2.4.9 VECTOR CONTROL

Several design and operational features have been incorporated into the proposed transfer station to minimize the potential to attract vectors, including:

- Elimination or minimization of available food by removing waste on a first in, first out basis. The waste material will remain at the proposed transfer station for only a short period of time before being processed and removed;
- Daily cleaning of the floor inside the proposed transfer station building, as discussed above;
- Regular inspections by site personnel for rodents, insects and birds;
- Containment of waste within the transfer station building;
- Requiring that all vehicles entering and exiting the site be properly tarped or fully enclosed; and
- Contracting with a professional exterminator to inspect and/or treat the site on at least a biweekly basis.

2.4.10 DUST AND MUD CONTROL

All access roads, parking areas, storage areas and vehicle-maneuvering areas will be appropriately paved, thus minimizing dust generated at the site. With the exception of entrance and exit bays, the transfer station buildings will be fully enclosed to protect operations from the wind. Potential dust impacts from material operations within the structure (e.g. unloading, processing, and loading) will be mitigated by periodic wash downs of the floors and barrier wall areas.

Per the Host Agreement, at a minimum, the company shall provide a street sweeper to remove mud, dirt and dust tracked on to hard surfaces inside and outside the site including onto Powis Road within three-fourths mile of the site on an as-needed basis, but not less frequently than daily except during severe weather conditions (e.g., heavy rains, winter conditions when salt has been applied to the roadway). All access drives, parking areas, storage areas and vehicle maneuvering areas at the site shall be paved and swept with a street sweeper as needed, but not less frequently than daily.

2.4.11 ODOR CONTROL

Odors will be controlled at the facility through several effective design and operating features. Waste will be delivered primarily in enclosed vehicles, and tarps will be required on all non-enclosed loads. Unloading, transferring, and loading operations will be performed within the building. Waste will be removed from the tipping floor with a frequency adequate to greatly minimize the generation of odors. The cleaning procedures discussed in Section 2.4.7 will also help control odors.

Per the Host Agreement, West DuPage RTS agrees to the following to control odors:

- Conduct all MSW handling and transfer operations completely indoors.
- MSW will be delivered primarily in enclosed vehicles, and tarps will be required on all non-enclosed loads.
- Unloading, transferring, and loading operations for MSW will be performed within the building.
- MSW will be removed from the tipping floor with a frequency adequate to greatly minimize the generation of odors.
- The MSW tipping floor areas will be cleaned with a pressure washer as needed.
- If malodors are detected off-site, the source of odor generation will be removed from the site, and the off-site condition will be monitored by site personnel to insure against reoccurrence. If a continuous source of odorous materials is identified, the generator will be contacted and advised that the materials must be effectively treated for odor control or the service will be discontinued and the materials no longer brought to the site.

Due to the site's proximity to the DuPage Airport, the MSW and SSR transfer building will be equipped with a ventilation and filtration system. The ventilation system will remove air from the building and be designed to work in conjunction with the building design and operations to provide a negative air pressure condition within the building. The filtration system will be designed to effectively eliminate any odors from the exhaust. The ventilation and filtration system will include the following:

- Ventilation fans mounted in the roof or outside walls of the MSW and SSR transfer building;
- A duct system at the inlet of each ventilation fan;
- An ozone generating equipment and dispersion device installed within each duct system which will destroy any odorous compounds or bacteria; and
- A particulate filter system at the inlet of each ventilation unit.

The design details of the ventilation and filtration system are provided in Appendix 2-I and Drawing C301. As agreed up with the DAA, the ventilation and filtration system will be equipped with a filtration or treatment system designed to address hydrogen sulfide or other reduced sulfur compounds if said odors can be detected off-site.

The MSW and SSR transfer building will be equipped with fast opening/closing doors at all vehicle ingress/egress locations including openings for transfer trailers and waste collection vehicles. LRS employees serving as spotters will open and close the doors as vehicles enter and exit the MSW and SSR transfer building. Doors will also be provided at vehicle access locations to the C&D tipping building and any storage bunkers under the sorting line. The doors are sized and will be

operated to minimize the area open to the outside at any one time (which will maximize the effectiveness of the ventilation system).

The design of the ventilation and filtration system and proposed odor control procedures were agreed upon and incorporated into the Airport Agreement discussed in Section 2.1.4.7. The Airport Agreement indicates that DAA agrees that the proposed West DuPage RTS will not pose a threat to the safe operation of the DuPage Airport.

2.4.12 NOISE CONTROL

Noises associated with the operation of the proposed transfer station include vehicular traffic, equipment, and safety signals on mobile equipment. The design and location of the proposed transfer station minimizes the potential for noise related concerns.

West DuPage RTS is located in an industrial area and will have minimal noise impact to the surrounding properties. Noise characteristics are expected to be similar to those generated by existing surrounding land uses.

Unloading and loading of the transfer vehicles will take place inside the proposed transfer station building, thereby reducing noise levels outside of the building. All on-site equipment will be equipped with mufflers and will utilize other sound-suppressing devices, as required, for compliance with applicable state regulations. A routine maintenance program will be followed to ensure all on-site equipment is kept in good working order.

2.4.13 SITE SECURITY

West DuPage RTS as proposed is bordered on the north by manufacturing properties, the east by railroad tracks, the south by a closed landfill, and to the west by Powis Road and the DuPage Airport. The site is surrounded with 6-foot fence with a locking gate system. The point of access to the proposed transfer station will be two gated entrance/exits off Powis Road. Signage is present at the entrance gate identifying the facility, operating hours and a warning to all unauthorized persons. A similar sign will be placed at the exit gate.

During operating hours, all traffic entering the facility passes by the scale office, which is visible to the scale personnel and equipped with multiple security cameras that are visible on monitors by the scale personnel. The security cameras are positioned to allow full and constant visibility of the driveway, scale, and entrance area. Any unauthorized traffic will be stopped at this point. During non-operating hours, the access gates at Powis Road will be in a closed and locked position. Lights are installed at the site entrance, in parking areas and on the transfer station building to provide adequate lighting. A security camera system will also be installed at strategic locations

around the site. The site currently has approximately fifty security cameras located inside and outside of buildings, which have twenty-four-hour local and remote viewing access.

Per the Host Agreement, any area used for the outdoor storage of any material or equipment will be fenced and visually screened from viewing from off the site by means of said fence and appropriate landscaping as approved by the city.

2.4.14 VEHICLE FUELING PROCEDURES

Vehicles will be fueled using mobile equipment. Fuel tanks are also located on-site.

2.4.15 COMMUNICATIONS

All equipment operators at the facility will be equipped to communicate with the facility manager and other personnel via mobile phone at all times during operating hours. Emergency numbers will be clearly posted.

2.4.16 MONITORING PLAN

Stormwater discharges will be monitored quarterly at the West DuPage RTS in accordance with the NPDES permit and stormwater pollution prevention plan as described in Section 2.3.2. Wildlife will also be monitored quarterly as discussed in Section 2.4.18.

The proposed design and operations of the West DuPage RTS preclude the potential for impacts to groundwater. In addition, the West DuPage RTS does not include the construction or operation of any regulated air emission sources. As such, no groundwater and/ or air quality monitoring is anticipated to be required by the IEPA, and no groundwater and/or air monitoring is proposed.

2.4.17 RECORDKEEPING

Accurate and up-to-date records documenting facility operations will be maintained at the site. These records will include, but are not limited to, the following:

- Daily records of the amounts and description of the various types of materials received;
- Load inspection reports;
- Results of inspections (by IEPA, county, or local authorities);
- Copies of all submitted reports (to IEPA, county, or local authorities);
- Employee training records; and
- Employee personnel records.

The records will be maintained for a period of at least two years. The records of the amounts and description of the various types of materials received will include both waste receipts and scale weight on the disposal tickets and logs (electronic and/or hard copies), including, without limitation, those showing the amount in tons of all material received.

2.4.18 WILDLIFE HAZARD MITIGATION

LRS agreed to perform various items to mitigate potential wildlife hazards, which were incorporated into the Airport Agreement discussed in Section 2.1.4.7. The Airport Agreement indicates that DAA agrees that the proposed West DuPage RTS will not pose a threat to the safe operation of the DuPage Airport.

The site proposes to perform the following to mitigate potential wildlife hazards, which includes all of the items incorporated into the Airport Agreement:

- Train Staff: The site will create their own wildlife hazard management plan, which will state how trained staff will monitor and deter certain wildlife species. The wildlife hazard management plan will assign titles and responsibilities to individuals whom will be responsible for wildlife control activities. Management will train assigned facility employees on the role they will play to reduce wildlife hazards (e.g. use of pyrotechnic harassments). If any questions about the formation, implementation, or general questions about the contents of the management plan ever occur, a qualified airport wildlife biologist will be consulted.
- Install Anti-Perching Devices: Anti-perching devices will be installed on building edges of the MSW and SSR transfer building.
- Perform Routine Wildlife Surveys: The site will perform quarterly wildlife surveys to ensure that the wildlife mitigation techniques are working as intended. The inspections will include the MSW and SSR transfer building, and any observed small gaps that may allow birds to enter the building will be sealed. As agreed upon with the DAA, the quarterly wildlife surveys will also include the ponds, storage areas and inactive equipment, and the records of the quarterly wildlife surveys will be retained for a period of no less than three years and submitted to the DAA upon request by the DAA.
- Use of Deterrents in Misters: Misters will be installed in the MSW and SSR transfer building. A deterrent (e.g., methyl anthranilate, which is a grape-flavored food grade

additive that acts as an irritant to birds when applied to the air) can be used in the misters, as needed, to prevent birds from nesting and/or entering the building.

- Install Netting Along Roof Structures: Netting will be installed along the bottom of roof structures, as needed, to prevent birds from accessing flat areas (where birds like to roost and nest).
- Focus Ventilation: Duct work will be installed, as needed, to provide focused ventilation where odors are anticipated to be more prevalent (e.g., MSW staging areas).
- Extend Riprap Around West Pond: The riprap that is currently surrounding the west pond is preventing birds, such as waterfowl, from walking into or out of the pond. This feature will be extended further into the grass, widening the buffer between the water and grass. As agreed upon with the DAA, riprap will also be added around the east pond.
- Monitor Wildlife With Game Cameras: Wildlife at the ponds will be monitored with game cameras, which will capture wildlife utilizing the ponds when employees are not present. Checking the cameras periodically will periodically viewed to provide information regarding the time and type of wildlife using the ponds. Trained staff can then mitigate the hazards as needed. As agreed upon with the DAA, the records of the wildlife camera footage will be retained for a period of no less than three years and submitted to the DAA upon request by the DAA.
- Vary Harassment: To keep the birds from becoming accustomed to harassment tactics, the site will designate an employee or employees to periodically patrol the west and east ponds and harass any birds observed.
- Maintain Grass Height: The grass around the east pond, if any beyond the riprap area, will be maintained at a height (approximately twelve inches) that allows easy inspection of the pond so that any wildlife may be harassed to leave the area. The shortened grass height will also deter many species from utilizing it, such as Canada geese.
- Install Grid-Wire System: A grid-wire system will be installed on the east and west ponds to keep most waterfowl and wading birds from utilizing the ponds. To keep larger birds from using the water, a checkerboard pattern is planned. The grid-wire system involves running cables from one side to another in one direction (north to south) and then running a second set of wires perpendicular.
- As agreed upon with the DAA, LRS shall develop a communications plan along with the DAA to alert the DAA staff to the presence of any wildlife hazards, if observed by LRS on-site and to communicate the results of the quarterly wildlife surveys.

2.4.19 SITE THROUGHPUT CAPACITY

Subject to IEPA permitting, West DuPage RTS is anticipated to accept up to 1,950 tons per day of which up to 650 tons per day may be MSW, up to 300 tons per day may be hydro excavation wastes, up to 750 tons per day may be C&D and up to 250 tons per day may be SSR.

The maximum volumes are based on the following:

- MSW: LRS currently hauls approximately 250 tons per day of MSW from the Service Area. The 650-ton-per-day limit would accommodate the existing volume LRS hauls, a similar volume from other privately owned companies, reasonable growth, and a contingency for a peak day.
- C&D: The site is currently permitted to accept up to 1,250 tons per day. LRS currently accepts an average of approximately 300 tons per day with peaks of approximately 750 tons per day. These volumes are not anticipated to change if the acceptance of MSW is approved. The 750-ton-per-day limit (which is reduced from the current limit of 1,250 tons per day) would accommodate the existing volume LRS accepts and a contingency for a peak day.
- Hydro Excavation Waste: LRS currently accepts between 100 to 400 tons per day at its Heartland Recycling facility in Forest View. Approximately half of this volume is anticipated to be diverted to the West DuPage RTS if approved because customers have indicated that this approximate percentage of hydro excavation waste is generated closer to West Chicago than Forest View (and they would want to take advantage of the reduced transportation costs). The proposed limit of 300 tons per day would accommodate the diversion of approximately 100 to 150 tons per day, reasonable growth, and a contingency for a peak day.
- SSR: LRS currently hauls approximately 90 tons per day of SSR from the Service Area. The 250 tons per day limit would accommodate the existing volume LRS hauls, a similar volume from other privately owned companies, reasonable growth, and a contingency for a peak day.

The C&D operations, MSW/SSR operations and hydro excavation waste operations are separate business lines so the probability of the site receiving peak amounts of waste from these three different business lines on the same day is highly unlikely. Regardless, the site has been designed to manage the peak amounts of each material type on the same day.

The site and operating features that determine the daily throughput capacity of a transfer station are the following:

- Incoming waste flow;
- The available capacity to queue incoming waste vehicles;
- The time needed for collection vehicles to empty their loads and exit the facility;
- The time needed to load a transfer trailer;
- The tipping floor size and stockpiling capacity; and
- The operating hours of the facility.

2.4.20 DAILY OPERATING CAPACITY AND THROUGHPUT CAPACITY DESIGN

The following summarizes our evaluation of site features that are determinative of daily operating capacity and throughput capacity, relative to the anticipated acceptance volumes. The assumptions discussed below are typical estimates and may vary.

2.4.20.1 Incoming Waste Flow

This evaluation utilizes a summary of the anticipated collection and transportation times based on the following:

- MSW and SSR:
  - The typical route schedules of West DuPage RTS MSW and SSR collection vehicles, which schedules are consistent week to week and are not expected to significantly change with the operation of West DuPage RTS.
  - The typical arrival times of West DuPage RTS MSW and SSR collection vehicles at the Batavia Transfer Station, with the exception that the West DuPage RTS will accommodate the acceptance of MSW and SSR vehicles after 4:30 p.m. (which is approximate cut off time at the Batavia Transfer Station).
  - The typical distribution of the number of West DuPage RTS packer trucks versus roll off trucks that deliver MSW to the Batavia Transfer Station (i.e., approximately 90% packer trucks versus 10% roll-off trucks).
  - The typical average weights of West DuPage RTS MSW and SSR collection vehicles as received at the Batavia Transfer Station, which average weights are not expected to significantly change with the operation of West DuPage RTS.
- C&D:
  - The typical incoming C&D collection vehicle times at the site.
  - The typical incoming distribution and average weight of C&D material types at the site.
- Hydro Excavation Wastes:
  - The incoming hydro excavation waste acceptance times at LRS's facility in Forest View, which are anticipated to be similar at the West DuPage RTS.
  - The typical average weights of hydro excavation waste in incoming vac trucks at LRS's facility in Forest View, which are anticipated to be the same at the West DuPage RTS.

The information indicates the following:

- Minor amounts of MSW and SSR will be accepted prior to 9:00 a.m.
- The peak hours of MSW and SSR acceptance will be between 10:00 a.m. and 12:00 p.m., and then again between 3:00 p.m. and 6:00 p.m.

- Waste and SSR acceptance volumes will diminish after 6:00 p.m.
- The C&D waste acceptance is more evenly distributed throughout the day, and minor amounts are accepted in early morning and evening hours.
- The hydro excavation waste is unloaded in a separate building in a different area of the site so the acceptance of these materials do not affect the throughput evaluation for the C&D, MSW, and SSR.

2.4.20.2 Unloading Time and Queuing Capacity

Trucks may be required to queue (i.e., wait in line) if multiple trucks arrive at the transfer station facility in a short amount of time. The time needed to weigh-in a vehicle at the scale is approximately thirty seconds. The time for a collection vehicle (MSW, SSR, or C&D) to pull forward to the transfer station building, back into the building, discharge its load and pull out of the area (such that the area is clear for another disposal vehicle) is estimated to be approximately five minutes.

The C&D transfer/screening building is equipped with two 30-foot wide bay doors. Two vehicles can be unloading in each bay door at a time. Based on an unloading time of five minutes, up to forty-eight C&D collection vehicles can be unloaded in the C&D transfer/screening building in an hour (sixty minutes/hour x one unloading vehicle/five minutes x four concurrent vehicles/ unloading vehicle). To be conservative and allow for maneuvering of a loader, only three vehicles at a time are assumed to be unloaded at one time so the capacity would be thirty-six C&D collection vehicles per hour.

The MSW and SSR transfer building will be equipped with four 14-foot wide bay doors. During a peak time, a second loader would be needed to push the waste to storage areas, which may preclude the use of one of the bay doors during that time. To be conservative, only three vehicles at a time are assumed to be unloaded at one time (i.e., either two MSW collection vehicles and one SSR vehicle, or one MSW collection vehicle and two SSR vehicles). Based on an unloading time of five minutes, up to thirty-six vehicles can be unloaded at the MSW and SSR transfer building in an hour (sixty minutes/hour x one unloading vehicle/five minutes x three concurrent vehicles/unloading vehicle).

The West DuPage RTS entrance drive has sufficient capacity for at least seven collection vehicles: one on the scale and at least six queuing between Powis Road and the scale. Additional queuing capacity is available between the scale and the unloading areas as shown on Drawing C400, if needed, to prevent any on-site traffic gridlock.

2.4.20.3 MSW and SSR Transfer Trailer Loading Rate

LRS will use a large excavator with an approximately ten cubic yard bucket for the transfer of MSW and SSR. Based on similar operation at another LRS facility, the typical time to load MSW into a transfer trailer with this front-end loader is approximately eight minutes and the capacity of a transfer trailer loading with MSW is approximately 24 tons. CEC viewed video from surveillance cameras and observed loading operations at the LRS facility at 3152 S California, and confirmed transfer trailers are consistently loaded with MSW within this time. The average weight of a loaded transfer trailer with SSR is estimated to be approximately 18 tons per load and, primarily due to the lower density of SSR relative to MSW, the time to load a transfer trailer with SSR is estimated to be approximately eleven minutes.

If the MSW and/or SSR is being unloaded onto the tipping floor at a rate less than the respective load out rates, MSW and/or SSR may not need to be stored on the tipping floor (assuming waste is being loaded during that time). If the MSW and/or SSR is being unloaded onto the tipping floor at a rate greater than the respective load out rates, MSW and/or SSR will need to be stored on the tipping floor. If a longer time is taken to load the transfer trailer, additional waste will need to be stored. It should be noted that transfer trailer loading can occur simultaneously with unloading occurring.

Based on the above, the facility has the capacity to load up to 7.5 transfer trailers per hour of MSW and approximately 5.5 transfer trailers per hour of SSR.

2.4.20.4 C&D Transfer and Processing Rate

The C&D transfer and processing procedures vary by the type of material accepted. Source separated materials (e.g., shingles, broken concrete) are not processed through the screener and sorting line. These types of loads are much heavier than mixed C&D loads so typically comprise a significant percentage of the general C&D accepted on a weight basis.

Mixed loads of C&D are processed through the screener and sorting line to remove as much recyclable material as practical. Materials separated by the screener are transported via conveyor to the cover building. Materials separated by the sorting line are dropped into storage bunkers. Non-recyclable materials from the sorting line proceed through the sorting line and are deposited in a separate storage bunker for subsequent transfer through the MSW and SSR transfer building loading pit.

Based on historical operations, the site can manage (separate, screen, sort, transport and/or distribute into storage bays for subsequent recycling) approximately 40 tons per hour. The load out of recyclable material is not required every day so is not a limiting factor in the throughput

evaluation. The estimated maximum amount of non-recyclable material required to be loaded out via the MSW and SSR transfer building loading pit is 188 tons per day (25% of 750 tons per day of C&D). The load out of the non-recyclable material is included in the evaluation of the load out of the MSW. The portion of non-recyclables from the sorting line would be consistently brought to the MSW and SSR transfer building throughout the day. The other portion of non-recyclables (e.g., bulky items) are separated from loads prior to processing and can be moved to the MSW and SSR transfer building during the operating day or at the end of the operating day. During a maximum MSW and SSR acceptance day, the non-recyclable C&D would be staged and loaded out from the MSW and SSR transfer building at the end of the day.

2.4.20.5 Tipping Floor Size

The tipping floor for the MSW and SSR transfer building is approximately 16,150 square feet (85 feet by 190 feet). Waste and SSR will be unloaded in separate locations, which may vary based on actual daily acceptance volumes of each. Waste and SSR cannot occupy the entire tipping floor as adequate maneuvering space is needed for the loader and the disposal vehicles. During a maximum waste acceptance day, the MSW is anticipated to be stored on the southeast and/ or southwest portion of the MSW and SSR transfer building, and the SSR stored in the northwest portion. During peak hours of a maximum MSW and SSR acceptance day, the opening between the MSW and SSR transfer building and the C&D tipping floor is not anticipated to be used.

The tipping floor for the C&D transfer and screening building is approximately 10,850 square feet (70 feet by 155 feet). C&D is unloaded and bulky, non-recyclable materials are separated. The remainder of the C&D will be provided to the excavator that will feed the C&D to the screening/ sorting system.

2.4.20.6 Operating Hours

C&D will continue to be accepted Monday through Saturday, twenty-four hours per day, consistent with the current operations. West DuPage RTS anticipates operating hours for MSW, SSR, and hydro excavation wastes of up to 4:00 a.m. to 12:00 a.m. on weekdays and 4:00 a.m. to 12:00 p.m. on Saturdays. These hours will allow operational flexibility to accommodate specific customer or market needs. However, the transfer station facility will not be open all of these hours if the customer needs and market do not warrant those hours.

2.4.20.7 Evaluation of Maximum Amount - MSW, SSR, and C&D

Tables 2-1, 2-2, and 2-3, located in the tables section of this Criterion 2, provide an evaluation of the needed tipping floor storage volume for 650 tons per day of MSW, 750 tons per day of C&D

and 250 tons per day of SSR. The MSW and SSR are accepted into and loaded out of the same building so are evaluated together as follows:

- The distribution of acceptance times (by percentage) for MSW and SSR is based the current arrival times of West DuPage RTS MSW and SSR collection vehicles at the Batavia Transfer Station, with the exception that the West DuPage RTS will accommodate the acceptance of MSW and SSR vehicles after 4:30 p.m. (which is current approximate cut off time at the Batavia Transfer Station).
- MSW and SSR collection vehicles have needed to leave a route to unload at the Batavia Transfer Station prior to closing and then go back to complete their route, or miss the closing time; these loads then unload early in the morning at the Batavia Transfer Station. With the later operating hours at the West DuPage RTS, all of these trucks will complete their second routes and unload at the West DuPage RTS at the end of the operating day.
- The collection vehicle arrivals are generally spread out over the course of each hour (e.g., data generally indicates two minute to ten times between load acceptance at the Batavia Transfer Station).
- The arrival times were extrapolated to the maximum acceptance volumes. This is a conservative assumption as the addition of routes would tend to spread the traffic distribution (due to additional variations in route times and travel distances back to the West DuPage RTS).
- The percentage of MSW accepted by packer truck versus roll off truck is the same as the typical distribution of West DuPage RTS MSW collection vehicles delivering MSW to the Batavia Transfer Station.
- Each packer truck (for both MSW and SSR) generally completes two routes during the day, although some vehicles will only complete one route. The first peak occurs between 10:00 a.m. and noon, with the largest amount of trucks received between 11:00 a.m. and noon. The 11:00 a.m. to noon hour thus corresponds to the time that the most MSW and SSR is stored on the tipping floor.
- A lull in the number of MSW and SSR trucks occurs after the first peak, with the lowest acceptance hour of the operating day between 1:00 p.m. and 2:00 p.m. On average, only one truck at a time will be unloading in the building during this time period (versus up to three at a time during a peak hour). This time period of low waste acceptance allows the large majority of the MSW and SSR to be loaded out and the storage areas to be nearly empty before the afternoon peak.
- The afternoon peak starts after 3:00 p.m. (when the second round for each vehicle is completed) and goes to about 6:00 p.m.
- Non-recyclable C&D arrives in the MSW and SSR transfer building as described in Section 2.4.19.7.

As shown in Tables 2-2 and 2-3, the MSW and SSR transfer building is anticipated to receive up to fifteen MSW waste collection vehicles and eleven SSR vehicle in one hour (from 11:00 a.m. to noon), which is less than the thirty-six vehicles per hour capacity. SSR takes up a higher proportion of the tip floor (since its density is less than the density of MSW). During this time, MSW trucks would generally be unloading two at a time while the SSR vehicles would be primarily unloading one at a time.

The anticipated storage locations, vehicle unloading locations, typical loader movements and approximate storage volumes for MSW and SSR over a peak acceptance day are shown on Figure 2-4. The largest storage volumes would occur during the 11:00 a.m. to noon hour (as the collection vehicles complete their "first round"). During the second round, the SSR trucks could be parked/ staged on-site and unloaded later if helpful for site operations. As shown on Figure 2-4, more than adequate staging areas are available.

As shown in Tables 2-1, the C&D transfer/screening building is anticipated to receive up to twenty-two C&D collection vehicles in one hour (which is approximately 60% of the unloading capacity of the C&D transfer/screening building). The anticipated storage locations, vehicle unloading locations, typical loader movements, and approximate storage volumes for C&D over a peak acceptance day are shown on Figure 2-4. The largest storage volumes would occur at the end of the operating (as the staged non-recyclable C&D increases until it is transported to the MSW/SSR transfer building). As shown on Figure 2-4, more than adequate staging areas are available.

As mentioned above, an acceptance rate of 650 tons per day of MSW, 750 tons per day of C&D and 250 tons per day of SSR is proposed. The above evaluation indicates that the proposed West DuPage RTS can easily manage an acceptance rate of up to 650 tons per day of MSW, 750 tons per day of C&D and 250 tons per day of SSR under the anticipated incoming waste flow.

2.4.20.8 Evaluation of Maximum Amount - Hydro Excavation Wastes

The capacity of the solidification operation is dependent on the time to unload the hydro excavation waste, solidify the material with wood chips or similar, and load the solidified mixture. The capacity is also dependent on the capacity of the mixing pits. The following is information regarding the hydro excavation waste process:

- The dimensions of the two solidification pits are shown on Drawing C300. Each pit has the capacity to hold approximately 23,000 gallons.
- At least 8,000 gallons of hydro excavation waste can be added to each prior to mixing (to avoid overtopping during mixing).
- A typical load contains up to approximately 1,400 gallons (approximately 6.5 tons) and takes ten to fifteen minutes to unload.
- Since the site has two unloading pits, the unloading capacity is 65 tons per hour (6.5 tons/ load x five loads/hour x two mixing pits) or 780 tons over a twelve-hour operating day.
- The ratio of hydro excavation waste to wood chips is approximately 2:1 (so every 100 tons of hydro excavation waste would be mixed with about 50 tons of wood chips).
- The weight of an outgoing load is approximately 20 tons (consisting of approximately 6.7 tons of wood chips and 13.3 tons of hydro excavation waste).
- The mixing and loading process takes approximately ten minutes per load so the loading capacity is approximately 120 tons per hour (six loads per hour x 20 tons per load) or 1,440 tons over a twelve-hour operating day.
- Unloading in one pit can occur simultaneous with mixing/loading in the other pit.
- The anticipated material processing and traffic volumes are provided in Table 2-4.

The capacity is also dependent on the availability of solidification material, which is dependent on the incoming C&D.

The anticipated maximum acceptance amount is 300 tons per day (or approximately forty-six trucks at 6.5 tons per truck). The forty-six trucks would result in a total of approximately 4.6 hours of unloading time (forty-six trucks divided by five trucks per hour divided by two pits) over a twelve-hour day, which the site can easily accommodate. The number of outgoing loads for the approximately 450 tons of solidified material (300 tons of hydro excavation waste + 150 tons of wood chips) would be approximately 22.5 trucks (at 20 tons per load). The total load time would be approximately 3.75 hours (22.5 trucks divided by six trucks per hour) over the approximately twelve-hour day, which the site can easily accommodate.

The above evaluation indicates that the proposed West DuPage RTS can easily manage an acceptance rate of up to 300 tons per day of hydro excavation waste under the anticipated incoming waste flow.

2.4.21 FINAL CLOSURE

The expected life of the facility is at least twenty years. Final closure of West DuPage RTS will consist of the following activities:

- Removal of all wastes from the transfer station building;
- Cleaning of the transfer station building and equipment;
- Removal of all equipment; and
- Preparation and submittal of closure documentation to the IEPA.

Per Section 5.4 of the Host Agreement, LRS will provide, if reasonably feasible, a minimum of six months' notice to West Chicago prior to ceasing operations. Regardless of the foregoing, LRS shall provide West Chicago with seven days' notice of any final internal decision to close the MSW transfer operations.

Closure activities will be initiated within thirty days of the date LRS declares the acceptance of its last load of waste, or within thirty days of notification of closure, whichever is less. No waste will be accepted at the proposed transfer station after either of the two above-mentioned activities. Access gates will be secured and signs will be posted which indicate that the facility is closed and is no longer accepting MSW.

2.4.21.1 Waste Removal

All waste materials are anticipated to be removed from West DuPage RTS within twenty-four hours of arrival to the transfer station.

2.4.21.2 Building and Equipment Cleaning

After all waste has been removed from the MSW transfer building, all areas and equipment that were in contact with waste will be thoroughly cleaned. Such areas will include, but are not limited to, the tipping floor and barrier walls. The building is anticipated to remain and be re-purposed.

2.4.21.3 Equipment Removal

After the MSW transfer building has been cleaned, on-site equipment will be removed from the proposed transfer station for beneficial reuse or resale.

2.4.21.4 Continued Monitoring

Since all wastes will be removed, continued monitoring is not anticipated to be required by the IEPA and no continued monitoring after certification of closure is proposed.

2.5 CONSTRUCTION QUALITY ASSURANCE AND CONTROL PROGRAM

Construction quality assurance (CQA) generally consists of a planned and systematic actions to assess conformity of construction with the required plans and specifications, and to provide adequate confidence that constructed items meet contractual and regulatory requirements. Construction quality control (CQC) generally consists of actions implemented by the contractor to document that its methods, materials, and workmanship are accurate and correct, and meet contractual and regulatory requirements including required plans and specifications.

All required regulatory approvals, including an IEPA development permit and any local permits, will be received prior to construction of the West DuPage RTS. The development features of the West DuPage RTS will described in the narrative and drawings which will be submitted to the IEPA as part of the application for a development permit. The narrative and drawings submitted to the IEPA will be consistent with the approved local siting application.

Construction level drawings and specifications will be developed prior to the construction of the various project components. A CQA/CQC plan will also be prepared which will define the requirements regarding the following:

- Roles and responsibilities;
- Contractor submittals;
- Quality assurance testing;
- Field observations;
- Survey requirements;
- Project documentation and routine reporting; and
- Project coordination meetings.

The construction of the following features will be observed and documented:

- Foundations and slabs;
- Roadways and/or paving;
- Buildings and ancillary features;
- Scale;
- Utilities; and
- Stormwater control features.

A construction documentation report and certification, including as-built drawings, will be submitted to the IEPA as part of the application for an operating permit. All construction documentation will be consolidated and maintained at the site.

2.6 NOTICE INFORMATION

No later than fourteen days prior to a request for location approval, the applicant caused written notice of this request for location approval to be served by certified mail, return receipt requested, on the owners of all property within 400 feet in each direction of the site, said owners being such persons or entities which appear from the authentic tax records of DuPage County. Written notice was also served upon members of the General Assembly from the legislative district in which the site is located and was published in a newspaper of general circulation published in the county in which the Site is located. The notices stated the name and address of the applicant, the location of the site, the nature and size of the development, the nature of the activity proposed, the probable life of the proposed activity, the date when the request for site approval will be submitted, and a description of the right of persons to comment on such request as hereafter provided. The notices were all performed more than fourteen days prior to this request for location approval. An affidavit demonstrating the above is provided in Appendix 2-J.

2.7 CERTIFICATION

I hereby certify that all information contained in this Application for Local Siting Approval for Criterion 2 was prepared by me or under my direct supervision, and is true and correct to the best of my knowledge and belief.

Assumptions:

211 is total collection vehicles per day.
750 tons = maximum daily throughput of C&D.
4.85 is average tons per load of those unloaded directly to outdoor bunkers (8 tons per load for concrete/ heavies and 4 tons per load for shingles).
3 is average tons per load to C&D tip floor/building for separation and processing.
20 tons = average tons of outbound truck load.
1 ton C&D = 5 cubic yards on tipping floor (or 400 pounds/cubic yard).
75% = percentage of total incoming C&D that is recycled.
25% = percentage of total incoming C&D that is not recycled (and hauled off as MSW).
70% is percentage of vehicles unloaded in C&D tip floor.
30% is percentage of clean loads unloaded directly in outdoor storgage bunkers.
17% is percentage of material unloaded on C&D tip floor that is separated and removed as MSW.
40 is rate of separation and feeding of C&D into screener and sorting line (in tons per hour).
30% is percentage of non-recyclables from screening and sorting system.

Assumptions:

85 is total collection vehicles per day.
650 tons = approximate daily throughput of MSW.
8 tons = average MSW packer truck load.
4 tons = average MSW roll-off truck load.
24 tons = average MSW transfer trailer load.
1 ton MSW = 5 cubic yards on tipping floor (or 400 pounds/cubic yard).
90% of total incoming vehicles are MSW packer trucks.
10% of total incoming vehicles are MSW roll-off trucks.

LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equalled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A: No Base Flood Elevations determined.
- ZONE AE: Base Flood Elevations determined.
- ZONE AH: Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO: Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR: Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99: Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V: Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE: Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- ZONE X: Areas of 0.2% annual chance flood; Areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from the 1% annual chance flood.

SURVEYOR'S NOTES:

1. THIS SURVEY IS BASED ON PROFORMA TITLE COMMITMENT 18000150813A REVISED DECEMBER 11, 2018, PREPARED BY STEWART TITLE GUARANTY COMPANY, THESE PROPERTIES ARE SUBJECT TO ALL COVENANTS AND RESTRICTIONS RELATING TO THE USE AND CHARACTER OF THE LAND AS ALL MATTERS APPEARING OF PUBLIC RECORD AND AS MAY BE DISCLOSED BY A MORE CURRENT TITLE COMMITMENT OR REPORT.
2. BASIS OF BEARING: ILLINOIS STATE PLANE – EAST ZONE
3. NO PZR ZONING REPORT WAS PROVIDED AT THE TIME OF THIS SURVEY. PER THE CITY OF WEST CHICAGO 2018 ZONING MAP, DATED 04/18/2018, THE SURVEYED PROPERTY IS ZONED MANUFACTURING DISTRICT PLANNED UNIT DEVELOPMENT.
4. TO THE BEST OF OUR KNOWLEDGE THERE ARE NO GAPS OR OVERLAPS.
5. THE SURVEYED PROPERTY IS LOCATED WITHIN AREAS OF 0.2% ANNUAL CHANCE FLOOD, AREAS OF 1% ANNUAL CHANCE FLOOD WITH AVERAGE DEPTHS OF LESS THAN 1 FOOT OR WITH DRAINAGE AREAS LESS THAN 1 SQUARE MILE; AND AREA S WITHIN ZONE AE, BASE FLOOD ELEVATIONS DETERMINED, ACCORDING TO MAP NO. 17043C0036J WITH EFFECTIVE DATE OF AUGUST 1, 2019.
6. THE UNDERSIGNED DID NOT OBSERVE EVIDENCE OF CURRENT EARTH MOVING, BUILDING CONSTRUCTION OR BUILDING ADDITIONS.
7. THE UNDERSIGNED HAS OBSERVED NO EVIDENCE OF SITE USED AS A SOLID WASTE DUMP, SUMP OR SANITARY LANDFILL.
8. THE UNDERSIGNED HAS NO KNOWLEDGE OF PROPOSED CHANGES IN STREET RIGHT OF WAY LINES. THERE IS EVIDENCE OF PAVEMENT RESURFACING ON OGDEN AVENUE.
9. THE UNDERSIGNED OBSERVED PARKING AS FOLLOWS:

REGULAR SPACES	150
HANDICAP SPACES	0

10. THE UNDERGROUND UTILITIES SHOWN HAVE BEEN LOCATED FROM FIELD SURVEY INFORMATION AND EXISTING DRAWINGS. THE SURVEYOR MAKES NO GUARANTEES THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED ALTHOUGH HE DOES CERTIFY THAT THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM INFORMATION AVAILABLE. THE SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES.
11. NO WETLAND DELINEATION WAS OBSERVED AT THE TIME THIS SURVEY WAS PERFORMED.

SURVEYOR'S CERTIFICATE

754.00	4.97	4.83	19.11	0.008	–	1.81	*1.89 cfs at 754.16 (tailwater conditions)
755.00	5.25	5.11	24.22	0.008	–	--	*see note 3
755.10	5.30	5.85	24.76	0.008	–	--	*see note 3

NOTES:
1. Acre-feet of storage per contour interval approximated by multiplying the average contour acreage between the interval, times contour depth.
2. Tributary area to East Pond is 22.47 acres, therefore, allowable release shall not exceed 2.247 cfs.
3. 100-year high water level is dictated by tailwater condition model and is 754.16. There is no release above 754.16 for the 100-year tailwater model condition.

Permit No. 2015-124-OP
Log No. 2019-132-SP
Log 2019-132
Permit Storage/Treatment File
Permit Approval

Dear Mr. Bates and Mr. Golf:

Permit No. 2015-124-OP has been granted to West DuPage Recycling & Transfer, Inc. to operate a solid waste management site, known as West DuPage Recycling & Transfer, Inc., to receive and transfer construction or demolition debris, consisting of 6.11 acres, Section 32, Township 40 North, Range 9 East of the Third Principal Meridian and also described as 1655 Powis Rd. in the city of West Chicago, Illinois, pursuant to 35 Illinois Administrative Code (hereinafter IAC) Part 807 and the Illinois Environmental Protection Act (Act), and in accordance with the application and plans, as modified by the regulations and the Act. Final plans, specifications, application and supporting documents as submitted and approved shall constitute part of this permit and are identified on the records of the Illinois Environmental Protection Agency, Bureau of Land by the permit number(s) and log number(s) designated in the heading above.

Supplemental Permit No. 2019-132-SP is hereby granted to transfer ownership from West DuPage Recycling & Transfer, Inc, to Oscar (IL) LLC in accordance with the application submitted by Elizabeth S. Schwartz, Project Manager of Civil Environmental Consultants, Inc. The application was signed, dated and sealed on April 9, 2019 by John Hock, P.E, of Civil Environmental Consultants, Inc. Final plans, specifications, application and supporting documents as submitted and approved shall constitute part of this permit and are identified on the records of the Illinois Environmental Protection Agency, Bureau of Land, by the permit number and log number designated in the heading above.

The application approved by this permit consists of the following documents:

DOCUMENT	DATE	DATE RECEIVED
Original Application (Log No. 2019-132)	April 12, 2019	April 12, 2019
Addendum (PA1 & 39(i))	July 1, 2019	July 9, 2019

Except as noted below, the special conditions of the permit letter for Permit No. 2019-132 are essentially identical to the special conditions of Permit No. 2017-032. The following changes have been made to the permit conditions:

Condition in Permit No. 2019-132	Condition in Permit No. 2107-032	Changes
44	44	Updated to reflect changes in procedures.

Pursuant to Section 39(a) of the Illinois Environmental Protection Act (Act) and 35 Illinois Administrative Code 807.201, this permit is issued subject to the development, operating, and reporting requirements for non-hazardous waste management facilities in 35 Ill. Adm. Code, Part 807, the standard conditions attached hereto and incorporated herein by reference, and further subject to the following special conditions. In case of conflict between the application and plans submitted and these conditions, both standard and special, the conditions of this permit shall govern:

The site consists a material tipping and sorting area, single line C & D recycling processing system, front end loaders and skid steers, 18-wheel tractor trailers, sweeper, and street sweeper, grinder.

1. This permit approves the operation of a facility to process and treat construction and demolition debris, in accordance with section 22.38 of the Act and the application Log No. 2015-124 as modified by the conditions of this permit.

2. The permitee is authorized to operate the units described below in accordance with the application Log No. 2015-124:
   a. Concrete pad 90' X 160' in size.
   b. Sorting lines
   c. Storage bunkers

3. The facility may only receive general construction and demolition debris as described in Log No. 2015-124.

4. The operator shall limit management activities at the facility to the receipt and transfer of approximately 1250 tons per day of general construction and demolition debris.

5. The development permit does not authorize the development of a pollution control facility, as defined in Section 3.330 of the Illinois Environmental Protection Act.

6. The general construction and demolition debris recycling facility consists of 6.11 acres, in North Half of Section 32, Township 40 North, Range 9 East, in West Chicago, DuPage County, Illinois

7. The facility shall be designed and constructed with roads and traffic flow patterns adequate for the volume, type and weight of traffic using the facility including, but not limited to hauling vehicles, emergency vehicles, and on site equipment. Sufficient area shall be maintained to minimize traffic congestion, provide for safe operation, and allow for queuing waste hauling vehicles.

8. The operator shall provide adequate parking for all vehicles and equipment used at the facility and as necessary for queued hauling vehicles.

9. Roadways and parking areas on the facility premises shall be designed and constructed for use in all weather considering the volume, type and weight of traffic and equipment at the facility.

10. The facility shall be designed and constructed so that site surface drainage will be diverted around or away from the recycling and management areas. Surface drainage shall be designed and controlled so that adjacent property owners encounter no adverse effects during development, operation and after closure of the facility.

11. Run-off from roadways and parking areas shall be controlled using storm sewers or shall be compatible with natural drainage for the site. Best management practices (e.g., design features, operating procedures, maintenance procedures, prohibition of certain practices and treatment) shall be used to ensure that run-off from these areas does not carry wastes, debris or constituents thereof, fuel, oil or other residues to soil, surface water or groundwater.

12. The facility including, but not limited to, all structures, roads, parking and recycling areas, shall be designed and constructed to prevent malodors, noise, vibrations, dust and exhaust from creating a nuisance or health hazard during development, operation and closure of the facility. Facility features (e.g., berms, buffer areas, paving, grade reduction), best available technology (e.g., mufflers, machinery enclosures, sound-absorbent materials, odor neutralizing systems, air filtering systems, misting systems), and building features (e.g., enclosed structures, building orientation) shall be among the measures to be considered to achieve compliance.

13. The facility shall be designed and constructed to prevent litter and other debris from leaving the facility property. Facility features (e.g., windbreaks, fencing, netting, etc) shall be among the measures considered to ensure that the debris does not become wind strewn and that no other provisions of the Act are violated.

14. The permit is issued with the expressed understanding that no air emissions will occur from these facilities, except as authorized by a permit from the Bureau of Air (BOA). This permit is issued with the expressed understanding that no process discharge to Waters of the State or to a sanitary sewer will occur from these facilities, except as authorized by a permit from the Bureau of Water (BOW).

15. The facility shall be designed and constructed with a water supply of adequate volume, pressure, and in locations sufficient for cleaning, firefighting, personal sanitary facilities, and as otherwise necessary to satisfy operating requirements (e.g., dust suppression, wheel washing) and the contingency plan.

16. The facility shall be designed and constructed with exterior and interior lighting for roadways, and waste handling areas adequate to perform safely and effectively all necessary activities.

17. The facility shall be designed and constructed with truck wheel curbs, guard rails, bumpers, posts or equivalents to prevent backing into fuel storage tanks, equipment, and other structures.

18. The facility shall be designed and constructed with adequate shelter, sanitary facilities, and emergency communications for employees.

19. The facility operator shall install fences and gates, as necessary to limit entry. Except during operating hours, the gates shall be securely locked to prevent unauthorized entry.

20. The facility may receive general construction and demolition debris at the site Monday through Saturday, 24 hours a day. When the facility is operated before sunrise or after sunset, adequate lighting shall be provided. If it is required for the facility to be open beyond normal operating hours to respond to emergency situations, a written record of the date, time and reason the facility was open shall be maintained in facility operating records. The Illinois EPA's Regional Office and when applicable the county authority responsible for inspection of this facility, per a delegation agreement with the Illinois EPA, or Emergency Response Center must be notified and must grant approval each day that the operating hours need to be extended.

21. Fire safety equipment (fire extinguishers) shall be maintained in accordance with recommended practice.

22. Non recyclable waste may be left at the site overnight; however, it shall be in a covered container or waste collection vehicle.

23. Piles of general construction or demolition debris shall be covered or wetted to prevent air-borne dust.

24. The facility shall be designed and constructed to prevent unauthorized access to recycling areas, storage areas for unauthorized wastes, salvaged and recycled materials, and staging areas where loaded site equipment or vehicles may be parked. Facility features such as fences and gates shall be provided.

25. Waste handling areas shall be designed and constructed to prevent exposure of wastes and recyclable materials to run-on and flooding.

26. The sorting areas shall be properly graded and compacted to prevent ponding from forming leachate during storms.

27. Records shall be maintained on-site at the facility office for each operating day. The operator shall record operating hours, load ticket information, load inspections, daily processing time, volume processed per day, transfer load out and waste disposition details.

28. The operator shall, within 48 hours of receipt of the general construction or demolition debris at the facility, sort the general construction or demolition debris. The operator shall separate the recyclable general construction or demolition debris from non-recyclable general construction or demolition debris and dispose of the non-recyclable general construction or demolition debris, in accordance with Section 22.38(b)(1) of the Act.

29. The operator must place wood, tires, and other unacceptable materials in covered dumpsters or vehicles adequate to prevent the release of leachate.

30. The operator must separate and place all non-recyclable general construction or demolition debris and unacceptable materials in covered dumpsters, in accordance with Section 22.38(b)(2) of the Act. The operator shall transport all non-recyclable general construction or demolition debris, and unacceptable material offsite for disposal in accordance with all applicable federal, State, and local requirements within 72 hours of its receipt at the facility.

31. For each operating day, the operator shall limit the percentage of incoming non-recyclable general construction/demolition debris to 25% or less of the total incoming general construction/demolition debris, as calculated on a monthly basis, in accordance with Section 22.38(b)(3) of the Act.

32. The operator shall transport all non-putrescible recyclable general construction or demolition debris for recycling or disposal within 6 months of its receipt at the facility, in accordance with Section 22.38(b)(4) of the Act.

33. Within 45 days of its receipt at the facility the operator must separate and place all putrescible or combustible recyclable general construction or demolition debris in covered dumpsters for recycling or disposal, and transport offsite, in accordance with Section 22.38(b)(5) of the Act.

34. In accordance with Section 22.38(b)(6) of the Act, the operator shall employ tagging and record keeping procedures to (i) demonstrate compliance with Section 22.38, and (ii) identify the source and transporter of material accepted by the facility.

35. The operator shall use load tickets to control the site activities and comply with the tagging and record keeping procedures in condition 34 above. These load tickets shall identify the source of the material delivered to the site. The operator shall use these tickets to identify the location in the yard or in the covered dumpsters and the length of time stored at the site to achieve compliance.

36. The operator is prohibited from receiving hazardous and asbestos containing materials.

37. The operator may separate clean concrete and clean soil from the general construction or demolition debris as recyclable materials for use in construction. The operator is permitted to store recyclable concrete and clean soil for a maximum period of 3 months.

38. The operator may store the steel separated from concrete or other construction or demolition debris for a maximum period of 6 months. After six months, the steel must be sent offsite for disposal or recycling.

39. The operator shall notify the Illinois EPA of any changes from the information submitted to the Illinois EPA in its application for a Development and Operating permit for this site. The operator shall notify the Illinois EPA of any changes in the names or addresses of both beneficial and legal titleholders to the herein-permitted site. Such notification shall be made in writing within fifteen (15) days of such change and shall include the name or names of any parties in interest and the address of their place of abode; or, if a corporation, the name and address of its registered agent.

40. The operator shall ensure that site surface drainage, during development, during operation and after the site is closed, shall be such that no adverse effects are encountered by adjacent property owners.

41. The best available technology (mufflers, berms and other sound shielding devices) shall be employed to minimize equipment noise impacts on property adjacent to the site during both development, operation and during any applicable post-closure care period.

42. Management of Unauthorized Waste by the operator

    a. Landscape waste found to be mixed with general construction and demolition debris shall be removed the same day and transported to a facility that is operating in accordance with the Illinois Environmental Protection Act (Act), Title V, Sections 21 and 39 [415 ILCS 5/21 and 39].

    b. Lead-acid batteries mixed with general construction and demolition debris will be removed the same day and transported either to a drop-off center handling such waste, or to a lead-acid battery retailer.

    c. Special wastes including hazardous waste, non-hazardous special waste, and potentially infectious medical waste mixed with general construction and demolition debris shall be containerized separately and removed as soon as possible by a licensed special waste hauler. Special wastes shall be transported to a licensed special waste management facility that has obtained authorization to accept such waste. The operator shall maintain a contract with haulers so that the immediate removal is ensured. The operator shall develop an emergency response/action plan for such occurrences.

    d. Asbestos debris from general construction and demolition debris shall be managed in accordance with the National Emission Standards for Hazardous Air Pollutants (NESHAPS) regulations.

    e. Tires found to be mixed with general construction and demolition debris shall be removed and managed in accordance with Section 55 of the Act [415 ILCS 5/55].

f. White good components mixed with general construction and demolition debris shall be removed and managed in accordance with Section 22.28 of the Act [415 ILCS 5/22.28].

g. No person may knowingly mix liquid used oil with general construction and demolition debris.

h. After the unauthorized waste has been removed from the facility, a thorough cleanup of the affected area will be made according to the type of unauthorized waste managed. Records shall be kept for three years and will be made available to the Illinois EPA-BOL upon request.

43. Special wastes generated at the site for disposal, storage, incineration or further treatment elsewhere shall be transported by the operator to the receiving facility utilizing the Illinois EPA's Special Waste Authorization system and manifest system.

44. The permittee(s) shall submit a 39(i) certification with all permit applications.

45. The closure plan and cost estimates in Application Log No. 2015-124 are hereby approved in accordance with 35 Ill. Adm. Code, Subtitle G, Part 807, subject to the following conditions:

a. The operator shall notify the Illinois EPA within 30 days after receiving the final volume of waste.

b. The operator shall initiate implementation of the closure plan within 30 days after the site receives its final volume of waste.

c. The operator shall not file any application to modify the closure plan less than 180 days prior to receipt of the final volume of waste.

d. Upon completion of closure activities, the operator will notify the Illinois EPA that the site has been closed in accordance with the approved closure plan utilizing the Illinois EPA's "Affidavit for Certification of Completion of Closure of Non-Hazardous Waste Facilities." Financial assurance is not required for transfer facilities in accordance with 35 Ill. Adm. Code, Subtitle G, Part 807, Subpart F. The current cost estimate for closure is $17,625.00.

The original and two (2) copies of all certifications or reports, required to be submitted to the Illinois EPA by the permittee, shall be mailed to the following address:

Illinois EPA
Permit Section, Bureau of Land -- #33
Post Office Box 19276
Springfield, Illinois 62794-9276

The applicant may appeal this final decision to the Illinois Pollution Control Board pursuant to Section 40 of the Act by filing a petition for a hearing within 35 days after the date of issuance of the final decision. However, the 35-day period may be extended for a period of time not to exceed 90 days by written notice from the applicant and the Illinois EPA within the initial 35-day appeal period. If the owner or operator wishes to receive a 90-day extension, a written request that includes a statement of the date the final decision was received, along with a copy of this decision, must be sent to the Illinois EPA as soon as possible.

For information regarding the request for an extension, please contact:

Illinois Environmental Protection Agency

Work required by this permit, your application or the regulations may also be subject to other laws governing professional services, such as the Illinois Professional Land Surveyor Act of 1989, the Professional Engineering Practice Act of 1989, the Professional Geologist Licensing Act, and the Structural Engineering Licensing Act of 1989. This permit does not relieve anyone from compliance with these laws and the regulations adopted pursuant to these laws. All work that falls within the scope and definitions of these laws must be performed in compliance with them. The Illinois EPA may refer any discovered violation of these laws to the appropriate regulating authority.

Sincerely,

Kenneth E. Smith, P.E. Manager

STANDARD CONDITIONS FOR CONSTRUCTION/DEVELOPMENT PERMITS ISSUED BY THE ILLINOIS ENVIRONMENTAL PROTECTION AGENCY BUREAU OF LAND

August 22, 2001

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

These standard conditions shall apply to all permits which the Agency issues for construction or development projects which require permits under the Bureau of Land. Special conditions may also be imposed in addition to these standard conditions.

1. Unless this permit has been extended or it has been voided by a newly issued permit, this permit will expire two years after date of issuance unless construction or development on this project has started on or prior to that date.

2. The construction or development of facilities covered by this permit shall be done in compliance with applicable provisions of Federal laws and regulations, the Illinois Environmental Protection Act, and Rules and Regulations adopted by the Illinois Pollution Control Board.

3. There shall be no deviations from the approved plans and specifications unless a written request for modification of the project, along with plans and specifications as required, shall have been submitted to the Agency and a supplemental written permit issued.

4. The permittee shall allow any agent duly authorized by the Agency upon the presentation of credentials:

    a. to enter at reasonable times the permittee's premises where actual or potential effluent, emissions or noise sources are located or where any activity is to be conducted pursuant to this permit.

    b. to have access to and copy at reasonable times any records required to be kept under the terms and conditions of this permit.

    c. to inspect at reasonable times, including during any hours of operation of equipment constructed or operated under this permit, such equipment or monitoring methodology or equipment required to be kept, used, operated, calibrated and maintained under this permit.

    d. to obtain and remove at reasonable times samples of any discharge or emission of pollutants.

e. to enter at reasonable times and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring, or recording any activity, discharge, or emission authorized by this permit.

5. The issuance of this permit:

   a. shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are to be located;

   b. does not release the permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the proposed facilities;

   c. does not release the permittee from compliance with other applicable statutes and regulations of the United States, of the State of Illinois, or with applicable local laws, ordinances and regulations;

   d. does not take into consideration or attest to the structural stability of any units or parts of the project;

   e. in no manner implies or suggests that the Agency (or its officers, agents or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. Unless a joint construction/operation permit has been issued, a permit for operating shall be obtained from the Agency before the facility or equipment covered by this permit is placed into operation.

7. These standard conditions shall prevail unless modified by special conditions.

8. The Agency may file a complaint with the Board for modification, suspension or revocation of a permit:

   a. upon discovery that the permit application contained misrepresentations, misinformation or false statements or that all relevant facts were not disclosed; or

   b. upon finding that any standard or special conditions have been violated; or

   c. upon any violation of the Environmental Protection Act or any Rule or Regulation effective thereunder as a result of the construction or development authorized by this permit.

APPENDIX 2-B1

2015 ORDINANCE GRANTING PLANNED UNIT DEVELOPMENT

CITY OF WEST CHICAGO

ORDINANCE NO. 15-O-0018

AN ORDINANCE AMENDING THE CODE OF ORDINANCES OF THE CITY OF WEST CHICAGO – APPENDIX A ARTICLE 11.2 OF THE ZONING CODE

ADOPTED BY THE CITY COUNCIL OF THE CITY OF WEST CHICAGO May 18, 2015

Published in pamphlet form by the authority of the City Council of the City of West Chicago, DuPage County, Illinois, on the 19th day of May 2015.

15-16-22

ORDINANCE NO. 15-O-0018

AN ORDINANCE AMENDING THE CODE OF ORDINANCES OF THE CITY OF WEST CHICAGO – APPENDIX A ARTICLE 11.2 OF THE ZONING CODE

WHEREAS, Ken Hoving of KKLK, L.L.C. (the "APPLICANT") proposes an amendment to Article 11.2 of the Zoning Code, which is Appendix A of the Code of Ordinances of the City of West Chicago to add the construction and demolition debris recycling use and use restrictions to the Manufacturing Zoning District regulations; and,

WHEREAS, Notice of Public Hearing on said application was published in the Daily Herald on or about April 20, 2015, all as required by the ordinances of the City of West Chicago and the statutes of the State of Illinois; and,

WHEREAS, a Public Hearing was conducted by the Plan Commission/Zoning Board of Appeals of the City of West Chicago, commencing on May 5, 2015, pursuant to said Notice; and,

WHEREAS, at the Public Hearing, the APPLICANT provided testimony in support of their application, and all interested parties had an opportunity to be heard; and,

WHEREAS, the corporate authorities of the City of West Chicago have received the recommendation of the Plan Commission/Zoning Board of Appeals which contains specific findings of fact, pursuant to Recommendation No. 15-RC-0006, a copy of which is attached hereto as Exhibit "A" which is, by this reference, made a part hereof.

NOW, THEREFORE, BE IT ORDAINED by the City Council of the City of West Chicago, Du Page County, Illinois, in regular session assembled, as follows:

Section 1. That Appendix A, Article 11, Section 11.2-1 of the Code of Ordinances of the City of West Chicago entitled "Use restrictions" is hereby amended by adding the following language:

"(H) Construction and demolition debris recycling.
(1) Shall be located on a lot having a minimum lot area of three (3) acres.
(2) Shall be located in a zoning district having a minimum district area of three (3) acres.
(3) Shall be located on a lot that is contiguous to both a railroad right-of-way and property that is zoned Airport District."

Section 2. That Appendix A, Article 11, Section 11.2-4 of the Code of Ordinances of the City of West Chicago entitled "Special uses" is hereby amended by adding the following the following language:

"(FF) Construction and demolition debris recycling."

Section 3. That all ordinances and resolutions, or parts thereof, in conflict with the provisions of this Ordinance are, to the extent of such conflict, expressly repealed.

Section 4. That this Ordinance shall be in full force and effect after its passage, approval and publication in pamphlet form as provided by law.

PASSED this 18th day of May 2015.

RECOMMENDATION # 15-RC-0006

TO: The Honorable Mayor and City Council

SUBJECT: PC 15-03
Text Amendment
Construction and Demolition Debris Recycling

DATE: May 5, 2015

DECISION: The motion to approve the request was unanimously approved by a (5-0) vote.

After review of the proposed text amendment as presented, the Plan Commission/Zoning Board of Appeals finds that it does not pose a threat to the health, safety and welfare of the community. It is the Commission's opinion that the proposed construction and demolition debris recycling use as a special use with certain use restrictions in the Manufacturing Zoning District is beneficial to the City because it expands the allowable uses in the District with an industrial type use while regulating such a use in a way that will protect the health, safety and welfare of the community.

AN ORDINANCE APPROVING SPECIAL USE PERMITS FOR A CONSTRUCTION AND DEMOLITION DEBRIS RECYCLYING FACILITY, FUEL SALES AND STORAGE, BUILDING MATERIAL SALES WITH OUTSIDE STORAGE, AND A PRELIMINARY AND FINAL PLANNED UNIT DEVELOPMENT AT 1655 POWIS ROAD

ADOPTED BY THE
CITY COUNCIL
OF THE
CITY OF WEST CHICAGO
May 18, 2015

Published in pamphlet form by the authority of the City Council of the City of West Chicago, DuPage County, Illinois, on the 19th day of May 2015.

ORDINANCE NO. 15-O-0019

AN ORDINANCE APPROVING SPECIAL USE PERMITS FOR A CONSTRUCTION AND DEMOLITION DEBRIS RECYCLYING FACILITY, FUEL SALES AND STORAGE, BUILDING MATERIAL SALES WITH OUTSIDE STORAGE, AND A PRELIMINARY AND FINAL PLANNED UNIT DEVELOPMENT AT 1655 POWIS ROAD

WHEREAS, on or about February 27, 2015, Ken Hoving of KKLK L.L.C. (the "APPLICANT"), filed a special use application for a construction and demolition debris recycling facility with outside activities, fuel sales and storage, and building material sales with outside storage in addition to filing an application for a preliminary and final planned unit development on the property legally described on Exhibit "A", which is attached hereto and incorporated herein as the "SUBJECT REALTY"; and,

WHEREAS, Notice of Public Hearing on said application was published in the Daily Herald on or about April 20, 2015, all as required by the ordinances of the City of West Chicago and the statutes of the State of Illinois; and,

WHEREAS, a Public Hearing was conducted by the Plan Commission/Zoning Board of Appeals of the City of West Chicago, commencing on May 5, 2015, pursuant to said Notice; and,

WHEREAS, at the Public Hearing, the APPLICANT provided testimony in support of his application, and all interested parties had an opportunity to be heard; and,

WHEREAS, the corporate authorities of the City of West Chicago have received the recommendation of the Plan Commission/Zoning Board of Appeals for a construction and demolition debris recycling facility with outside activities, fuel sales and storage, and building material sales with outside storage in addition to filing an application for a preliminary and final planned unit development, which contains specific findings of fact, pursuant to Recommendation No. 15-RC-0007, a copy of which is attached hereto as Exhibit "B" which is, by this reference, incorporated herein.

NOW, THEREFORE, BE IT ORDAINED by the City Council of the City of West Chicago, DuPage County, Illinois, in regular session assembled, as follows:

Section 1. A special use permit for a construction and demolition debris recycling facility with outside activities in conformance with Sections 5.5 and 11.2-4(FF) is hereby granted for the SUBJECT REALTY.

Section 2. A special use permit for fuel sales and storage in conformance with Sections 5.5 and 11.2-4(M) is hereby granted for the SUBJECT REALTY.

Section 3. A special use permit for building material sales with outside storage in conformance with Sections 5.5 and 11.2-4(F) is hereby granted for the SUBJECT REALTY.

Section 1. A preliminary and final planned unit development in conformance with Sections 11.2-4(U) and 15 is hereby granted for the SUBJECT REALTY, subject to compliance with the following conditions:

1. The APPLICANT shall apply for a text amendment to delete the construction and demolition debris recycling use from the ORI zoning district regulations within six (6) months of obtaining a temporary or final certificate of occupancy for the SUBJECT REALTY.
2. The SUBJECT REALTY shall be developed in conformance with the Site Plan prepared by Tebrugge Engineering, dated January 20, 2015 with a last revision date of April 15, 2015, attached hereto and incorporated herein as Exhibit "C".
3. The SUBJECT REALTY shall be developed in conformance with the Landscape Plan prepared by Dowden Landscape Design, dated February 27, 2015 with a last revision date of April 3, 2015, attached hereto and incorporated herein as Exhibit "D".
4. The SUBJECT REALTY shall be developed in conformance with the Exterior Building Elevation Plan A3.0 prepared by Architect Steven W. Hansen, dated February 17, 2015, with a final revision date of February 26, 2015, attached hereto and incorporated herein as Exhibit "E".
5. The APPLICANT shall have all gravel surfaces on the SUBJECT REALTY either paved or restored to turf within four (4) years of City Council approval of the preliminary and final planned unit development.
6. All mulch piles on the SUBJECT REALTY shall not exceed twenty-five (25') feet in height and shall be contained within the designated mulch storage area, as depicted on the Site Plan by Trebrugge Engineering, dated January 20, 2015 with a last revision date of April 15, 2015, attached hereto and incorporated herein as Exhibit "C".

Section 5. This Ordinance shall also constitute the approval of the following deviations associated with the preliminary and final planned unit development and special use permits identified in Sections 1, 2, and 3 herein:

1. A deviation from Section 11.2-2(C)(2) of the Zoning Code to reduce the minimum required side yard parking setback from fifteen (15') feet to nine (9') feet along a portion of the north lot line of the SUBJECT REALTY, as depicted on the Site Plan by Trebrugge Engineering, dated January 20, 2015 with a last revision date of April 15, 2015, attached hereto and incorporated herein as Exhibit "C".
2. A deviation from Section 11.2-1(E) to allow the APPLICANT to construct and utilize multiple principal structures on the SUBJECT REALTY in compliance with all applicable building, fire and zoning and codes.

Section 6. That all ordinances and resolutions, or parts thereof, shall, to the extent not expressly modified by the terms and conditions of this Ordinance, remain in full force and effect as therein provided.

Section 7. That this Ordinance shall be in full force and effect ten (10) days from and after its passage, approval and publication in pamphlet form as provided by law.

PASSED this 18th day of May 2015.

RECOMMENDATION NO. 15-RC-0007

TO: The Honorable Mayor and City Council

SUBJECT: PC 15-03
Special uses for a construction and demolition debris recycling facility with outside activities, fuel sales and storage, and building material sales with outside storage in addition to a preliminary and final planned unit development
1655 Powis Road

DATE: May 5, 2015

DECISION: The motions to approve the special uses for a construction and demolition debris recycling facility with outside activities, fuel sales and storage, and building material sales with outside storage in addition to a preliminary and final planned unit development each unanimously passed with a (5-0) vote.

RECOMMENDATION

After review of the requested special uses for a construction and demolition debris recycling facility with outside activities, fuel sales and storage, and building material sales with outside storage in addition to a preliminary and final planned unit development, the Plan Commission/Zoning Board of Appeals (PC/ZBA) recommended approval of the special uses based on the flowing findings of fact and recommended approval of the preliminary and final planned unit development based on the following standards:

Special Use Findings of Fact:

(1) Is necessary for the public convenience at that location or, the case of existing nonconforming uses, a special use permit will make the use more compatible with its surroundings:

(This standard should be interpreted as indicating whether or not the proposed use is good for the public at that particular physical location, and not whether or not the use itself is needed there).

The proposed construction and demolition debris recycling facility with outside activities, fuel sales and storage, and building material sales and storage are uses that are best suited for an industrial area. The subject property is located within the City's primary industrial corridor and is compatible with the existing industrial uses that surround it.

(2) Is so designed, located and proposed to be operated that the public health, safety and welfare will be protected:

The use of the subject property is designed to protect the public health, safety and welfare by using berms, fencing and landscaping as a visual screen along the property's street frontage, stockpiling all of the bulk

materials in the central portion of the property, and enclosing the construction and demolition debris recycling sorting operations within the building.

(3) Will not cause substantial injury to the value of other property in the neighborhood in which it is located:

The proposed use of the subject property should not cause substantial injury to the value of other property in the neighborhood in which it is located because the uses are best suited for an industrial area and the subject property is located within the City's primary industrial corridor and is compatible with the existing industrial uses that surround it.

(4) The proposed special use is designated by this code as a listed special use in the zoning district in which the property in question is located:

The proposed construction and demolition debris recycling use will be listed as a special use per Section 11.2-4 (FF) of the Zoning Code, assuming the City Council approves the text amendment identified within this staff report.

PUD Standards:
Per Section 15.3 of the Zoning Ordinance: "...if the final plan and plat are, in the opinion of the Plan Commission, deemed to be sufficient in compliance with all applicable City ordinances and in substantial conformity with the approved preliminary plan and plat, they shall be approved by the Plan Commission and recommended to the City Council". The proposed final plan shows in detail the use of the subject property, landscaping and building elevations. Said use of the subject property is in compliance with all applicable City ordinances, subject to approval of the deviations requested in conjunction with the preliminary and final planned unit development.

CITY OF WEST CHICAGO

ORDINANCE NO. 20-O-0002

AN ORDINANCE APPROVING AN AMENDMENT TO THE PRELIMINARY AND FINAL PLANNED UNIT DEVELOPMENT FOR LAKESHORE RECYCLING SYSTEMS, LLC - 1655 POWIS ROAD

ADOPTED BY THE
CITY COUNCIL
OF THE
CITY OF WEST CHICAGO
June 15, 2020

Published in pamphlet form by the authority of the City Council of the City of West Chicago, DuPage County, Illinois, on the 16th day of June, 2020.

ORDINANCE NO. 20-O-0002

AN ORDINANCE APPROVING AN AMENDMENT TO THE PRELIMINARY AND FINAL PLANNED UNIT DEVELOPMENT FOR LAKESHORE RECYCLING SYSTEMS, LLC - 1655 POWIS ROAD

WHEREAS, on or about June 20, 2019, Lakeshore Recycling Systems, LLC (the "APPLICANT"), filed an application for amendment to the Preliminary and Final Planned Unit Development plan for 1655 Powis Road, with respect to the property legally described on Exhibit "A" attached hereto and incorporated herein (the "SUBJECT PROPERTY"); and

WHEREAS, the corporate authorities of the City of West Chicago (the "CITY") approved the Preliminary and Final Planned Unit Development plan for the SUBJECT PROPERTY on May 18, 2015 according to Ordinance 15-O-0019; and

WHEREAS, Notice of Public Hearing on the proposed amendment to the Preliminary and Final Planned Unit Development of the SUBJECT PROPERTY was published in the Daily Herald on or about February 17, 2020, all as required by the ordinances of the CITY and the statutes of the State of Illinois; and

WHEREAS, a Public Hearing was conducted by the Plan Commission/Zoning Board of Appeals of the CITY, commencing on March 3, 2020, pursuant to said Notice; and

WHEREAS, at the Public Hearing, the APPLICANT provided testimony in support of its application, and all interested parties had an opportunity to be heard; and

WHEREAS, the corporate authorities of the CITY have received the recommendation of the Plan Commission/Zoning Board of appeals which contains specific findings of fact, pursuant to Recommendation No. 2020-RC-0001, a copy of which is attached hereto as Exhibit "B" which is, by this reference, incorporated herein.

NOW, THEREFORE, BE IT ORDAINED by the City Council of the City of West Chicago, DuPage County, Illinois, in regular session assembled, as follows:

Section 1. That this Ordinance shall constitute approval of the following documents with respect to the SUBJECT REALTY, copies of which are attached hereto as Exhibit "C", which are, by this reference, incorporated herein and consisting of:

A. The Final PUD Plan, consisting of one (1) sheet, prepared by CEC, Inc. dated April 2, 2019 with a final revision date of September 27, 2019.

B. The Site Plan (Sheets C201 and C202) prepared by CEC, Inc. dated April 2, 2019 with a final revision date of September 27, 2019.

C. The Final Landscape Plan (Sheets L1.0, L1.1, and L2.0) prepared by Kimley Horn and Associates dated May 1, 2019.

D. Building Elevations for Transfer Building Expansion, consisting of one (1) sheet, prepared by MJ Root Architects, dated October 4, 2018.

E. Building Elevation for Portable Toilet Building, consisting of one (1) sheet, prepared by MJ Root Architects, dated October 4, 2019.

F. Building Elevation for Fractions Building, consisting of one (1) sheet, prepared by MJ Roots Architects, dated October 4, 2019.

G. Bird Deterrent Wire Exhibit, consisting of one (1) sheet, prepared by CEC, Inc. dated February 27, 2020.

H. Bird Deterrent Wire Typical Section, consisting of one (1) sheet, dated stamped received February 27, 2020.

Section 2. That the documents referenced in Section 1 above shall supersede in all respects the documents approved in Section 4 of Ordinance 15-O-0019.

Section 3. All construction, use, operation, and maintenance of the SUBJECT PROPERTY shall be in substantial conformance with the documents listed above in Section 1 of this Ordinance, in addition to the terms and conditions set forth in Section 6 of this Ordinance.

Section 4. That the following deviations from the requirements of the City's Zoning Code previously approved by Ordinance 15-O-0019 are hereby reaffirmed and approved with respect to the SUBJECT PROPERTY:

A. A deviation from Section 11.2-2(C)(2) of the Zoning Code to reduce the minimum required side yard parking setback from fifteen (15) feet to nine (9) feet along the north lot line of the SUBJECT PROPERTY.

B. A deviation from Section 11.2-1(E) to allow the APPLICANT to construct and utilize multiple principal structures on the SUBJECT PROPERTY in compliance with all applicable building, fire and zoning and codes.

Section 5. That the following new deviations from the requirements of the City's Zoning Code of Ordinances are hereby granted with respect to the SUBJECT PROPERTY:

A. A deviation from Section 11.2-2(C)(6) to allow a transitional yard along the south property line as little as twenty-three (23) feet in lieu of the minimum required sixty (60) feet when adjacent to a business district.

B. A deviation from Section 14.9(A) to omit the two (2) required landscape islands on the east end of the two (2) proposed double parking rows located at the southwest corner of the property.

C. A deviation from Section 14.6(D) to omit the required curbing around the proposed parking area in the southwest corner of the property.

Section 6. That an amendment to the Preliminary and Final Planned Unit Development hereby granted subject to the following conditions, which are approved with respect to the SUBJECT PROPERTY:

A. The Conditions contained in Section 1 of Ordinance 05-O-0019 shall remain in full force and effect.

B. Bird deterrent wire shall be installed on the two detention ponds on the SUBJECT PROPERTY, in accordance with the plans attached hereto as Exhibit "C".

Section 7. That the recommendation and findings of fact of the Plan Commission/Zoning Board of Appeals previously incorporated herein as Exhibit "B" be and the same are hereby adopted as the findings of fact of the City Council.

Section 8. That all ordinances and resolutions, or parts thereof, shall, to the extend not expressly modified by the terms and conditions of this Ordinance, remain in full force and effect as therein provided.

Section 9. That this Ordinance shall be in full force and effect ten (10) days from and after its passage, approval and publication in pamphlet form as provided by law.

RECOMMENDATION NO. 2020-RC-0001

TO: Honorable Mayor and City Council

SUBJECT: PC 19-16
Amendment to the Preliminary and Final Planned Unit Development Plan of 1655 Powis Road for Lakeshore Recycling Systems, LLC

DATE: March 3, 2020

DECISION: The Plan Commission/Zoning Board of Appeals (4-0 vote) recommended approval of the request.

RECOMMENDATION:

After holding a public hearing and after review of the requested amendment to the preliminary and final PUD of 1655 Powis Road, the Plan Commission/Zoning Board of Appeals (PC/ZBA) recommended approval, subject to the following conditions:

1. The site shall be developed in substantial compliance with the following plans:
   A. The Final PUD Plan, consisting of one (1) sheet, prepared by CEC, Inc. dated April 2, 2019 with a final revision date of September 27, 2019.
   B. The Site Plan (Sheets C201 and C202) prepared by CEC, Inc. dated April 2, 2019 with a final revision date of September 27, 2019.
   C. The Final Landscape Plan (Sheets L1.0, L1.1, and L2.0) prepared by Kimely Horn and Associates dated May 1, 2019.
   D. Building Elevations for Transfer Building Expansion, consisting of one (1) sheet, prepared by MJ Root Architects, dated October 4, 2018.
   E. Building Elevation for Portable Toilet Building, consisting of one (1) sheet, prepared by MJ Root Architects, dated October 4, 2019.
   F. Building Elevation for Fractions Building, consisting of one (1) sheet, prepared by MJ Roots Architects, dated October 4, 2019.
   G. Bird Deterrent Wire Exhibit, consisting of one (1) sheet, prepared by CEC, Inc. dated February 27, 2020.
   H. Bird Deterrent Wire Typical Section, consisting of one (1) sheet, dated stamped received February 27, 2020.
2. The Conditions contained in Section 1 of Ordinance 05-O-0019 shall remain in full force and effect.
3. Bird deterrent wire shall be installed on the detention ponds in substantial compliance with the Bird Deterrent Wire Section Profile Plan.

The recommendation is based on the following findings of fact:

1. *In what respects the proposed plan is consistent with the comprehensive plan and the stated purpose and intent of the PUD regulations:*

   The proposed plan is designed to be compatible with the City's Comprehensive Plan which contemplates Industrial for this area. The amendment to the PUD for the construction of a additional structure, as well as additions to existing structure, is in keeping with the intent of the PUD to use the facility as a CCDD with outside storage.

2. *The extent to which the proposed plan meets the requirements and standards of the PUD regulations:*

   The petitioner has provided documentation indicating the proposed plan meets all of the necessary requirements and standards of the PUD regulations as defined in Section 15 of the West Chicago Zoning Ordinance. City staff has reviewed the plans and documents for the proposal and determined that it adequately addresses the standards.

3. *The extent to which the proposed plan departs from the zoning and subdivision regulations otherwise applicable to the subject property including, but not limited to, the density, dimension, area, bulk and use and the reasons why such departures are deemed to be in the public interest:*

   A limited number of zoning deviations are being sought and have little impact on the surrounding area. The deviations related to the parking lot islands and curbing around the parking area will not have a detrimental effect on either the subject property or the surrounding properties and are consistent with the previously approved plan from 2015. The reduction in the required transitional yard along the south property line will have little impact on the adjacent property. The property to the south is owned by the DuPage Airport Authority and is a decommissioned landfill with minimal potential uses.

4. *The method by which the proposed plan makes adequate provision for public services, provides adequate control over vehicular traffic, provides for and protects designated common open space and furthers amenities of light and air, recreation and visual enjoyment:*

   The proposed plan adequately addresses existing and proposed vehicular use areas and will not affect the existing access on Powis Road. The petitioner has taken steps to ensure the existing wetlands on the east portion of the property will not be impacted by the proposed changes. Required modifications will be made to the stormwater management area to accommodate the increase in the amount of hard surfaces on the property.

5. *The relationship and compatibility of the proposed plan to the adjacent properties and neighborhood:*

   The proposed plan is consistent with other uses and properties in the area. The Powis Road corridor is entirely industrial with manufacturing uses on the east side of the roadway and the DuPage Airport on the west side.

6. The desirability of the proposed plan as regards physical development, tax base and economic well-being of the City:

The proposed plan is designed to enhance the existing operation. This type of use is logical for a former brownfield site located on a roadway corridor consisting of industrial uses.

Respectfully submitted,

Steve Hale
Acting Chairperson

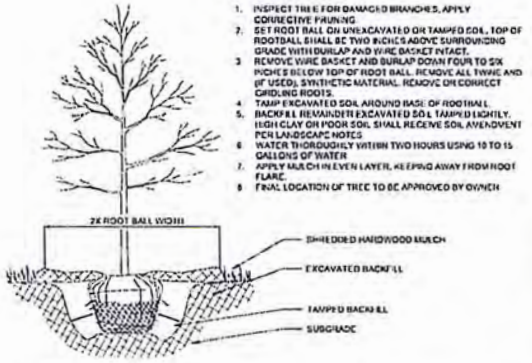
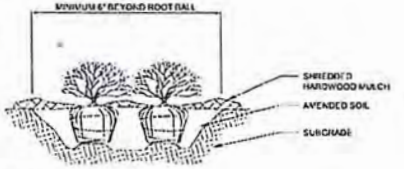
LANDSCAPE NOTES

1. THE LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING MATERIALS AND PLANTS SHOWN ON THE LANDSCAPE PLAN. THE CONTRACTOR IS RESPONSIBLE FOR THE COST TO REPAIR UTILITIES, ADJACENT LANDSCAPE, PUBLIC AND PRIVATE PROPERTY THAT IS DAMAGED BY THE CONTRACTOR OR THEIR SUBCONTRACTORS OPERATIONS DURING INSTALLATION OR DURING THE SPECIFIED MAINTENANCE PERIOD. CALL FOR UTILITY LOCATIONS PRIOR TO ANY EXCAVATION.
2. THE CONTRACTOR SHALL REPORT ANY DISCREPANCY IN PLAN VS. FIELD CONDITIONS IMMEDIATELY TO THE LANDSCAPE ARCHITECT, PRIOR TO CONTINUING WITH THAT PORTION OF WORK.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REPAIR OF ANY OF THEIR TRENCHES OR EXCAVATIONS THAT SETTLE.
4. ALL NURSERY STOCK SHALL BE WELL BRANCHED, HEALTHY, FULL, PRE-INOCULATED AND FERTILIZED. DECIDUOUS TREES SHALL BE FREE OF FRESH SCARS. TRUNKS WILL BE WRAPPED IF NECESSARY TO PREVENT SUN SCALD AND INSECT DAMAGE. THE LANDSCAPE CONTRACTOR SHALL REMOVE THE WRAP AT THE PROPER TIME AS A PART OF THIS CONTRACT.
5. ALL NURSERY STOCK SHALL BE GUARANTEED, BY THE CONTRACTOR, FOR ONE YEAR FROM DATE OF FINAL INSPECTION.
6. AMENDED SOIL SHALL BE PROVIDED AND GRADED BY THE GENERAL CONTRACTOR UP TO 6 INCHES BELOW FINISHED GRADE IN TURF AREAS AND 18 INCHES IN PLANTING AREAS.
7. PLANTING AREA SOIL SHALL BE AMENDED WITH 25% SPHAGNUM PEATMOSS, 5% HUMUS AND 65% PULVERIZED SOIL FOR ALL SHRUB, ORNAMENTAL GRASS, PERENNIAL AND ANNUAL BEDS. AMENDED TURF AREA SOIL SHALL BE STANDARD TOPSOIL.
8. SEED/SOD LIMIT LINES ARE APPROXIMATE. CONTRACTOR SHALL SEED/SOD ALL AREAS WHICH ARE DISTURBED BY GRADING WITH THE SPECIFIED SEED/SOD MIXES.
9. CONTRACTOR SHALL INSTALL SHREDDED HARDWOOD MULCH AT A 3" DEPTH TO ALL TREES, SHRUB, PERENNIAL, AND GROUNDCOVER AREAS. TREES PLACED IN AREA COVERED BY TURF SHALL RECEIVE A 4 FT WIDE MAXIMUM TREE RING WITH 3" DEPTH SHREDDED HARDWOOD MULCH. A SPADED BED EDGE SHALL SEPARATE MULCH BEDS FROM TURF OR SEEDED AREAS. A SPADED EDGE IS NOT REQUIRED ALONG CURBED EDGES.
10. WEED FABRIC SHALL ONLY BE APPLIED UNDER DECORATIVE STONE APPLICATIONS.
11. INSTALLATION OF TREES WITHIN PARKWAYS SHALL BE COORDINATED IN THE FIELD WITH LOCATIONS OF UNDERGROUND UTILITIES. TREES SHALL NOT BE LOCATED CLOSER THAN 5' FROM UNDERGROUND UTILITY LINES AND NO CLOSER THAN 15' FROM UTILITY STRUCTURES. SHRUBS SHALL NOT BE LOCATED CLOSER THAN 10 FEET FROM UTILITY STRUCTURE. PERENNIALS SHALL NOT BE LOCATED CLOSER THAN 5 FEET FROM UTILITY STRUCTURE.
12. DO NOT DISTURB THE EXISTING PAVING, LIGHTING, OR LANDSCAPING THAT EXISTS ADJACENT TO THE SITE UNLESS OTHERWISE NOTED ON PLAN.
13. PLANT QUANTITIES SHOWN ARE FOR THE CONVENIENCE OF THE OWNER AND JURISDICTIONAL REVIEW AGENCIES. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING ALL PLANT QUANTITIES AS DRAWN.
14. THE OWNER'S REPRESENTATIVE MAY REJECT ANY PLANT MATERIALS THAT ARE DISEASED, DEFORMED, OR OTHERWISE NOT EXHIBITING SUPERIOR QUALITY.
15. THE CONTINUED MAINTENANCE OF ALL REQUIRED LANDSCAPING SHALL BE THE RESPONSIBILITY OF THE OWNER OF THE PROPERTY ON WHICH SAID MATERIALS ARE REQUIRED. ALL PLANT MATERIALS REQUIRED BY THIS SECTION SHALL BE MAINTAINED AS LIVING VEGETATION AND SHALL BE PROMPTLY REPLACED IF THE PLANT MATERIAL HAS DIED PRIOR TO FINAL ACCEPTANCE. PLANTING AREAS SHALL BE KEPT FREE OF TRASH, LITTER, AND WEEDS AT ALL TIMES.
16. PLANTING INSTALLATION DETAILS AND ALL PLANT SIZES AND CONDITIONS SHALL CONFORM TO THE AMERICAN STANDARDS FOR NURSERY STOCK LATEST EDITION.



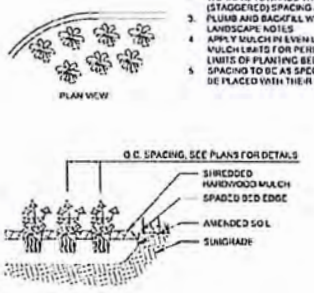
NOTES:
1. INSPECT TREE FOR DAMAGED BRANCHES, APPLY CORRECTIVE PRUNING.
2. SET ROOT BALL ON UNEXCAVATED OR TAMPED SOIL, TOP OF ROOTBALL SHALL BE TWO INCHES ABOVE SURROUNDING GRADE WITH BURLAP AND WIRE BASKET INTACT.
3. REMOVE WIRE BASKET AND BURLAP DOWN FOUR TO SIX INCHES BELOW TOP OF ROOT BALL. REMOVE ALL TWINE AND (IF USED), SYNTHETIC MATERIAL. REMOVE OR CORRECT GIRDLING ROOTS.
4. TAMP EXCAVATED SOIL AROUND BASE OF ROOTBALL.
5. BACKFILL REMAINDER EXCAVATED SOIL TAMPED LIGHTLY. HEAVY CLAY OR POOR SOIL SHALL RECEIVE SOIL AMENDMENT PER LANDSCAPE NOTES.
6. WATER THOROUGHLY WITHIN TWO HOURS USING 10 TO 15 GALLONS OF WATER.
7. APPLY MULCH IN EVEN LAYER, KEEPING AWAY FROM ROOT FLARE.
8. FINAL LOCATION OF TREE TO BE APPROVED BY OWNER.

① TREE PLANTING NTS



NOTES:
1. APPLY CORRECTIVE PRUNING.
2. SET ROOT BALL OR CONTAINER ON UNEXCAVATED OR TAMPED SOIL. TOP OF ROOTBALL (CONTAINER) SHALL BE ONE INCH ABOVE SURROUNDING GRADE. FOR LARGER SHRUBS WITHIN PLANTING BED DIG A DEEPER PIT ONLY FOR THOSE SHRUBS.
3. REMOVE BURLAP FROM TOP HALF THE LENGTH OF ROOTBALL. TWINE AND (IF USED) SYNTHETIC MATERIAL SHALL BE REMOVED FROM PLANTING BED. FOR CONTAINER GROWN SHRUBS, REMOVE CONTAINER AND LOOSEN ROOTS PRIOR TO INSTALLATION.
4. REMOVE OR CORRECT GIRDLING ROOTS.
5. PLUMB AND BACKFILL WITH AMENDED SOIL PER LANDSCAPE NOTES. WATER THOROUGHLY WITHIN TWO HOURS.
6. APPLY MULCH IN EVEN LAYER, KEEPING AWAY FROM ROOT FLARE. MULCH LIMITS FOR SHRUBS EXTEND TO ALL LIMITS OF PLANTING BED. SEE PLANS FOR BED LAYOUTS.

② SHRUB PLANTING NTS



NOTES
1. EXCAVATE PLANTING BED.
2. BED HEIGHT IS TO BE 2" ABOVE FINISH GRADE AND WELL DRAINED.
3. REMOVE CONTAINER, SCORE SOIL MASS TO REDIRECT AND PREVENT CIRCLING ROOTS. CORRECT CIRCLING ROOTS.
2. PLANT MATERIAL SHALL BE LAID OUT BY FOLLOWING THE BED EDGE, WORKING TOWARDS THE CENTER OF THE BED USING TRIANGULAR (STAGGERED) SPACING AS PLAUSIBLE.
3. PLUMB AND BACKFILL WITH PLANTING MIX AS SPECIFIED IN LANDSCAPE NOTES.
4. APPLY MULCH IN EVEN LAYER, KEEPING AWAY FROM ROOT FLARE. MULCH LIMITS FOR PERENNIALS/GROUNDCOVER EXTEND TO ALL LIMITS OF PLANTING BED, SEE PLANS FOR BED LAYOUTS.
5. SPACING TO BE AS SPECIFIED IN THE PLANT LIST. PERENNIALS SHALL BE PLACED WITH THEIR CENTER 24" FROM EDGE OF BED.

③ PERENNIAL PLANTING NTS

CERTIFICATE

I, Nancy Smith, Certify that I am the duly elected and acting City Clerk of the City of West Chicago, DuPage County, Illinois.

I further certify that on June 15, 2020 the Corporate Authorities of such municipality passed and approved Ordinance No. 20-O-0002 entitled:

AN ORDINANCE APPROVING AN AMENDMENT TO THE PRELIMINARY AND FINAL PLANNED UNIT DEVELOPMENT FOR LAKESHORE RECYCLING SYSTEMS, LLC – 1655 POWIS ROAD

Which provided by its terms that it should be published in pamphlet form.

The pamphlet form of Ordinance No. 20-O-0002 including the ordinance and a cover sheet hereof was prepared, and a copy of such ordinance posted in the municipal building, commencing on June 16, 2020 continuing for at least ten days thereafter. Copies of such ordinance were also available for public inspection upon request in the Office of the City Clerk.

Dated at West Chicago, Illinois, this 15th of June, 2020.

SEAL

SPECIAL WARRANTY DEED

THIS INDENTURE is made as of the 14th day of December, 2018 between KKLK LLC, a Colorado limited liability company ("**Grantor**"), and OSCAR (IL) LLC, a Delaware limited liability company ("**Grantee**"). For and in consideration of the sum of Ten and No/100 Dollars, and other good and valuable consideration in hand paid by Grantee, the receipt of which is hereby acknowledged, Grantor REMISES, RELEASES, ALIENS AND CONVEYS to Grantee and to its successors and assigns, FOREVER, all of the following described real estate (the "**Property**"), situated in DuPage County in the State of Illinois, known and described as follows:

See attached **Exhibit A** for legal description

PINS: 01-32-200-001; 01-32-101-004

Common Address: 1655 Powis Road, West Chicago, Illinois 60185

Together with all and singular the hereditaments and appurtenances thereunto belonging, or in anywise appertaining, and the reversion and reversions, remainder and remainders, rents, issues and profits thereof, and all the estate, right, title, interest, claim or demand whatsoever, of the Grantor, either in law or equity, of, in and to the Property with the hereditaments and appurtenances; TO HAVE AND TO HOLD the Property as above described, with the appurtenances, unto the Grantee and its successors and assigns forever.

And the Grantor, for itself, and its successors, does covenant, promise and agree, to and with the Grantee, its successors and assigns, that it has not done or suffered to be done, anything whereby the Property hereby granted is, or may be, in any manner encumbered or charged, except as herein recited; and that the said Grantor will warrant and defend the Property against all persons lawfully claiming, or to claim the same, by, through or under it, subject to those exceptions set forth on the attached **Exhibit B** and **Exhibit C**.

[REMAINDER OF PAGE INTENTIONALLY LEFT BLANK; SIGNATURE PAGE TO FOLLOW.]

IN WITNESS WHEREOF, Grantor has caused its name to be signed to this Special Warranty Deed the day and year first above written.

KKLK LLC,
a Colorado limited liability company

EXHIBIT B

SUBJECT TO THE FOLLOWING EXCEPTIONS:

1. GENERAL REAL ESTATE TAXES AND SPECIAL ASSESSMENTS FOR THE YEAR 2018 AND SUBSEQUENT YEARS, NOT YET DUE AND PAYABLE;

2. ACTS OF TENANT AND THOSE PARTIES ACTING BY, THROUGH OR FOR TENANT; AND

3. ALL MATTERS CURRENTLY ENCUMBERING TITLE TO THE PREMISES WHICH ARE LISTED ON **EXHIBIT C**, OTHER THAN MATTERS PERTAINING TO LIENS OR ENCUMBRANCES OF A DEFINITE OR ASCERTAINABLE AMOUNT CAUSED SOLELY BY LANDLORD WHICH MAY BE REMOVED BY THE PAYMENT OF MONEY.

EXHIBIT C

PERMITTED EXCEPTIONS

1. CLEAR ZONE AVIGATION EASEMENT RECORDED MARCH 24,1959 AS DOCUMENT 916606 MADE BY KAWNEER CO, A CORP OF DELAWARE, OWNER OF THE LAND, WHICH TRACT OF LAND IS IDENTIFIED AS CLEAR ZONE AREA, TRACT G ON PLAT DATED FEBRUARY 2, 1959. THE COUNTY OF DUPAGE IS THE OWNER AND OPERATOR OF THE DU PAGE COUNTY AIRPORT, SITUATED IN THE COUNTY OF DU PAGE, STATE OF ILLINOIS IN CLOSE PROXIMITY TO THE LAND, AND WHEREAS IT IS DEEMED NECESSARY THAT SAID LAND, IDENTIFIED AS CLEAR ZONE AREA, TRACT G, BE AND REMAIN FREE AND CLEAR OF ANY STRUCTURE, TREE OR OTHER OBJECT WHICH IS OR WOULD CONSTITUTE AN OBSTRUCTION OR HAZARD TO THE FLIGHT OF AIRCRAFT IN THE LANDING AND TAKING OFF AT DU PAGE COUNTY AIRPORT. NOW THEREFORE, THE GRANTOR, FOR ITSELF, ITS SUCCESSORS AND OR ASSIGNS, DOES THEREBY COVENANT AND AGREE WITH THE GRANTEE, THAT, FOR THE BENEFIT OF THE PUBLIC IN ITS USE OF THE AIRPORT, IT WILL NOT THEREAFTER ERECT OR PERMIT THE ERECTION OR GROWTH OF ANY STRUCTURE, TREE OR OTHER OBJECT WITHIN SAID CLEAR ZONE APPROACH AREA, (TRACT G) (WHICH AREA IS IDENTIFIED ON THE SAID PLAT ATTACHED THERETO) TO A HEIGHT ABOVE THE CLEAR ZONE APPROACH SURFACE FOR THE APPROACH AREA AS AN INCLINED PLANS WITH A SLOPE OF 50.1 (ONE FOOT OF ELEVATION FOR EACH FIFTY FEET OF HORIZONTAL DISTRICT) LOCATED DIRECTLY ABOVE THE CLEAR ZONE APPROACH AREA. GRANTOR, FOR ITSELF, ITS SUCCESSORS AND OR ASSIGNS, DOES HEREBY GRANT AND CONVEY TO THE GRANTEE, ITS AGENTS, SERVANTS AND EMPLOYEES, A CONTINUING RIGHT AND EASEMENT, AT THE GRANTEE'S SOLD EXPENSE, TO TAKE ANY ACTION NECESSARY TO PREVENT THE ERECTION OR GROWTH OF ANY STRUCTURE, TREE OR OTHER OBJECTS INTO THE AIR SPACE ABOVE THAT PART OF SAID APPROACH SURFACE WHICH IS DIRECTLY OVER SAID APPROACH AREA, TRACT G, EXCEPTING THE PRESENTLY EXISTING STRUCTURES AS SHOWN ON THE PLAT ATTACHED THERETO, AND AT GRANTEE'S SOLD EXPENSE, TO REMOVE FROM SUCH AIR SPACE OR MARK AND LIGHT AS OBSTRUCTIONS TO AIR NAVIGATION, ANY AND ALL STRUCTURES AND OTHER OBJECT THAT MAY AT ANY TIME PROJECT OR EXTEND ABOVE SAID APPROACH SURFACE.

PLAT ACT AFFIDAVIT OF METES AND BOUNDS

STATE OF Illinois)
) SS
COUNTY OF DuPage)

Kenneth A. Hoving, Manager of KKLK LLC, a Colorado limited liability company, being duly sworn on oath, states that affiant resides at 363 Trinity Lane, Oak Brook, Illinois 60523.

And further states that: (please check the appropriate box)

A. [X] That the attached deed is not in violation of 765 ILCS 205/1(a), in that the sale or exchange is of an entire tract of land not being a part of a larger tract of land; or

B. [ ] That the attached deed is not in violation of 765 ILCS 205/1(b) for one of the following reasons: (please circle the appropriate number)

1. The division or subdivision of land into parcels or tracts of 5.0 acres or more in size which does not involve any new streets or easements of access;
2. The division of lots or blocks of less than one (1) acre in any recorded subdivision which does not involve any new streets or easements of access;
3. The sale or exchange of parcels of land between owners of adjoining and contiguous land;
4. The conveyance of parcels of land or interests therein for use as right of way for railroads or other public utility facilities and other pipe lines which does not involve any new streets or easements of access;
5. The conveyance of land owned by a railroad or other public utility which does not involve any new streets or easements of access;
6. The conveyance of land for highway or other public purposes or grants or conveyances relating to the dedication of land for public use or instruments relating to the vacation of land impressed with a public use;
7. Conveyances made to correct descriptions in prior conveyances;
8. The sale or exchange of parcels or tracts of land following the division into no more than two (2) parts of a particular parcel or tract of land existing on July 17, 1959 and not involving any new streets or easements of access;
9. The sale of a single lot of less than 5.0 acres from a larger tract when a survey is made by an Illinois Registered Land Surveyor; provided, that this exemption shall not apply to the sale of any subsequent lots from the same larger tract of land, as determined by the dimensions and configuration of the larger tract on October 1, 1973, and provided also that this exemption does not invalidate any local requirements applicable to the subdivision of land;
10. This conveyance is of land described in the same manner as title was taken by grantor(s).

AFFIANT further states that he makes this affidavit for the purpose of inducing the Recorder of Deeds of DuPage County, Illinois, to accept the attached deed for recording.

APPENDIX 2-D2

LETTER FROM WEST CHICAGO

CITY OF
WEST CHICAGO

WHERE HISTORY & PROGRESS MEET

August 24, 2022

RE: Residential-zoned property located east of 1655 Powis Road, West Chicago, Illinois

To Whom It May Concern:

Both the Union Pacific Railroad and the Canadian National Railroad operate parallel tracks on land running northwest to southeast, east of and adjacent to the subject property. The right-of-way for these rail lines carries a remnant zoning classification of Estate Residential, which is the classification assigned upon annexation. No effort was made to reclassify the property.

As an active rail corridor, there can be no residential development. Furthermore, there is insufficient room to construct homes on one-acre minimum lots and no convenient way to access what would be a narrow string of properties. Residential development on this property is physically impossible.

As such, the City concludes that the 1,000-foot setback requirement in 415 ILCS 5/22.14(a) is not applicable.

Please contact me if you have any questions.

REQUEST FOR STATE HISTORIC PRESERVATION OFFICE REVIEW

Civil & Environmental Consultants, Inc.

September 8, 2020

Illinois Department of Natural Resources
Illinois State Historic Preservation Office
1 Natural Resources Way
Springfield, Illinois 62702
Attn: Review and Compliance/Old State Capitol

Subject: **Request for Illinois State Historic Preservation Office Review**
1655 Powis Road, West Chicago, Illinois
CEC Project 163-899

Dear Sir/Madam:

Civil & Environmental Consultants, Inc. (CEC) is hereby requesting a review by the Illinois State Historic Preservation Office (SHPO) of the property located at 1655 Powis Road, West Chicago, Illinois. We are preparing a local siting application for this property, and a SHPO review is requested to be included in the application. The property is currently operated by Lakeshore Recycling Systems, LLC as a construction or demolition debris recycling facility including ancillary operations. The previous SHPO review (SHPO Log #008082718) for the property dated September 21, 2018 is attached as reference, and indicates the clearance will remain in effect until September 21, 2020. We are requesting an additional review since the local siting application will not be submitted until after the expiration. There are three permanent buildings on-site that house the recycling operation tipping floor, recycling equipment, and equipment maintenance garage. A site location map is attached as Figure 1, and the current layout of the buildings on the property is shown on the site diagram in Figure 2. The current owner plans to make some upgrades to the property, such as paved roads, parking spaces, and additional buildings. Historically, the property was formally the location for Alumax Extrusions, Inc., ALCOA Extrusions Inc., K Hoving Recycling & Disposal, and West DuPage Recycling and Transfer facility. Adjacent properties to the north and east historically have been zoned for manufacturing use, the closed DuPage County Landfill #2 is located to the south, and the DuPage Airport Authority is located west of the property.

Please feel free to contact us at (630) 963-6026 if you have any questions regarding this review. We appreciate your assistance on this project.

Sincerely,

CIVIL & ENVIRONMENTAL CONSULTANTS, INC.

Chastity Montalvo Lee, P.E.
Project Manager

John Hock, P.E.
Vice President

Lombard, IL 60148

Dear Ms. Schwartz:

The Illinois State Historic Preservation Office is required by the Illinois State Agency Historic Resources Preservation Act (20 ILCS 3420, as amended, 17 IAC 4180) to review all state funded, permitted or licensed undertakings for their effect on cultural resources. Pursuant to this, we have received information regarding the referenced project for our comment.

Our staff has reviewed the specifications under the state law and assessed the impact of the project as submitted by your office. We have determined, based on the available information, that no significant historic, architectural or archaeological resources are located within the proposed project area.

According to the information you have provided concerning your proposed project, apparently there is no federal involvement in your project. However, please note that the state law is less restrictive than the federal cultural resource laws concerning archaeology. If your project will use federal loans or grants, need federal agency permits, use federal property, or involve assistance from a federal agency, then your project must be reviewed under the National Historic Preservation Act of 1966, as amended. Please notify us immediately if such is the case.

This clearance remains in effect for two (2) years from date of issuance. It does not pertain to any discovery during construction, nor is it a clearance for purposes of the IL Human Skeletal Remains Protection Act (20 ILCS 3440).

Please retain this letter in your files as evidence of compliance with the Illinois State Agency Historic Resources Preservation Act.

If further assistance is needed please contact Jeff Kruchten, Chief Archaeologist at 217/785-1279 or Jeffery.kruchten@illinois.gov.

Sincerely,

Robert F. Appleman
Deputy State Historic
Preservation Officer

Natural Resource Review Results

Consultation for Endangered Species Protection and Natural Areas Preservation (Part 1075)

The Illinois Natural Heritage Database contains no record of State-listed threatened or endangered species, Illinois Natural Area Inventory sites, dedicated Illinois Nature Preserves, or registered Land and Water Reserves in the vicinity of the project location.

Consultation is terminated. This consultation is valid for two years unless new information becomes available that was not previously considered; the proposed action is modified; or additional species, essential habitat, or Natural Areas are identified in the vicinity. If the project has not been implemented within two years of the date of this letter, or any of the above listed conditions develop, a new consultation is necessary. Termination does not imply IDNR's authorization or endorsement.

Location

The applicant is responsible for the accuracy of the location submitted for the project.

Disclaimer

The Illinois Natural Heritage Database cannot provide a conclusive statement on the presence, absence, or condition of natural resources in Illinois. This review reflects the information existing in the Database at the time of this inquiry, and should not be regarded as a final statement on the site being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are encountered during the project's implementation, compliance with applicable statutes and regulations is required.

Terms of Use

By using this website, you acknowledge that you have read and agree to these terms. These terms may be revised by IDNR as necessary. If you continue to use the EcoCAT application after we post changes to these terms, it will mean that you accept such changes. If at any time you do not accept the Terms of Use, you may not continue to use the website.

1. The IDNR EcoCAT website was developed so that units of local government, state agencies and the public could request information or begin natural resource consultations on-line for the Illinois Endangered Species Protection Act, Illinois Natural Areas Preservation Act, and Illinois Interagency Wetland Policy Act. EcoCAT uses databases, Geographic Information System mapping, and a set of programmed decision rules to determine if proposed actions are in the vicinity of protected natural resources. By indicating your agreement to the Terms of Use for this application, you warrant that you will not use this web site for any other purpose.

2. Unauthorized attempts to upload, download, or change information on this website are strictly prohibited and may be punishable under the Computer Fraud and Abuse Act of 1986 and/or the National Information Infrastructure Protection Act.

3. IDNR reserves the right to enhance, modify, alter, or suspend the website at any time without notice, or to terminate or restrict access.

Security

EcoCAT operates on a state of Illinois computer system. We may use software to monitor traffic and to identify unauthorized attempts to upload, download, or change information, to cause harm or otherwise to damage this site. Unauthorized attempts to upload, download, or change information on this server is strictly prohibited by law.

Unauthorized use, tampering with or modification of this system, including supporting hardware or software, may subject the violator to criminal and civil penalties. In the event of unauthorized intrusion, all relevant information regarding possible violation of law may be provided to law enforcement officials.

Privacy

EcoCAT generates a public record subject to disclosure under the Freedom of Information Act. Otherwise, IDNR uses the information submitted to EcoCAT solely for internal tracking purposes.

TAB 1. PROJECT NARRATIVE

The following Stormwater Report has been prepared by Civil & Environmental Consultants, Inc. (CEC) for Lakeshore Recycling System, LLC's (LRS) West DuPage Recycling & Transfer Facility (Facility) located at 1655 Powis Road in West Chicago, DuPage County, Illinois. The report has been prepared in accordance with the requirements of Chapter 14, Article III, Stormwater Control, of the City of West Chicago (City) Code of Ordinances, and the DuPage County (County) Countywide Stormwater & Flood Plain Ordinance (Ordinances). The format of the submittal is in accordance with DuPage County Stormwater Management Certification Application (Application) requirements.

The Facility is situated on approximately 27.6 acres of property comprised of two existing parcels (Property Index Numbers 01-31-101-0004 and 01-32-100-001). A single industrial building is currently being used for offices, vehicle maintenance, and sorting of construction and demolition (C&D) debris on the west half of the site. The remainder of the west side consists of concrete paved surfaces, gravel and recycled asphalt-covered surfaces and parking lots, vegetated landscaping, and a west detention pond. On the east side of the property, the site is comprised of an existing (east) detention pond (including stilling basin), designated wetland areas in the northeast and southeast corners, and open land that is to be paved and repurposed for material/equipment storage. The southeast area of the site is a closed sludge impoundment area.

The existing site history is complex. Current site use as a C&D recycling facility was approved by the City through Ordinance No. 15-O-0018 on May 18, 2015, in favor of previous site owner Ken Hoving of KKLK, LLC (KKLK). Prior to this approval in 2015, the site was a brownfield and unused since 1999. Prior to 1999, the site was an aluminum extraction and painting facility owned and operated by Alcoa.

Both the west and east detention ponds existed during the period of operation by Alcoa. It is understood that the initial primary use of the east pond was as an industrial treatment pond (though also functioned as a stormwater pond). The east pond was then, and is still now, comprised of a forebay (stilling basin) where industrial wastewater and/or stormwater would circulate through settling areas before outletting to the larger pond area further east. It is assumed the west pond has only ever been used for stormwater management purposes. No historical design information for either pond is available.

A substantial portion of the west half of the site was covered with an Alcoa building until most of the building was demolished sometime between 2002 and 2005. A portion of the building on the south side (west half) of the site remained following demo and was later repurposed for the current C&D use.

As part of the approval process for KKLK in 2015, Tebrugge Engineering (Tebrugge) prepared site improvement plans and a stormwater management report. The final engineering plans were issued for construction on September 15, 2015, and an "as-built plan for grade & utilities" was issued on July 7, 2016. The Stormwater Management Report was issued on December 9, 2016. Both the drawings and stormwater report are provided as Attachments 1-1 and 1-2, respectively.

Based on CEC's review of these documents, the following conclusions are made:

- Tebrugge recognized the function of both the west and east ponds as existing stormwater management facilities. The proposed improvements for KKLK were small enough to not trigger additional detention requirements.
- Tebrugge analyzed tributary areas and developed hydrographs for both the east and west ponds; however, did not offer any opinion relative to adequacy of pond volume. An allowable release calculation was provided for the east and west ponds. East release rate was 1.74 cubic feet per second (cfs) and west was 0.34 cfs, both based on 0.10 cfs/tributary acre.
- Tebrugge noted the east pond had a 6-inch restrictor at the outlet, and the west pond had a 4-inch outlet. No opinion was provided as to the adequacy of these outlets. The outlets appear to have been existing outlet pipe/restrictor sizes based on the Tebrugge "Existing Conditions & Demolition Plan" included in the as-builts.
- No improvements were proposed to either the east or west pond on the plans; however, an "Outfall Structure With Restrictor" detail dated November 29, 2016 was included in the stormwater report and indicated a "proposed 6" restrictor" (see page 23 of 26 of the Tebrugee stormwater report). This detail was not included in the as-builts, however; and no information is provided that would indicate this restrictor was installed.**
- Site improvements focused only on the west half of the Facility; therefore, the special management areas (i.e. floodplain and wetland) on the east side of the Facility were not impacted or evaluated.
- A 2.5-foot wide infiltration trench was installed at the edge of existing pavement directly east of the west pond as a water quality post-construction best management practice. The limits of the installed infiltration trench are not provided on the as-built plans.

**Note, a subsequent survey completed by CEC of the east pond outlet indicates an existing 8-inch steel pipe restrictor with at elevation 750.54. The existing pipe condition is rusted/worn, suggesting it has been in use since Alcoa operated the site.

LRS is proposing to improve the existing C&D recycling facility by reconfiguring outside storage and operational areas, paving outside storage and operational areas, adding and improving existing parking, expanding the main sorting building eastward and northward (including the addition of a loading pit and weigh scales), adding a previously approved second scale adjacent to the existing scale, and adding a new port-o-let cleaning and maintenance building. The project includes site utility modifications, improvements to the existing stormwater management ponds, re-establishment of a prior-disturbed wetland buffer, and other appurtenant improvements.

The site redevelopment engineering is complicated by the layered history of improvements - none of which include a holistic analysis of the site stormwater features. There is no information available that discusses the original design of the two ponds. The Tebrugge stormwater report identified tributary areas and recommended a restrictor size for each pond, but as communicated above, did not offer an opinion as to the adequacy of existing pond volume. No modifications were made to the existing ponds during the KKLK project approval; however, an infiltration trench was added to the west pond.

Based on the foregoing, two approaches are available for this current analysis:

1) Design drainage features and stormwater detention for only the proposed site disturbance and new impervious areas. Similar to Tebrugge, this approach would assume that existing east and west pond volume is adequate to accommodate the needs of the rest of the undisturbed site.
2) Assume that existing and proposed impervious areas tributary to the ponds are “new” and to evaluate/resize the detention ponds based on current Ordinances.

After preliminary internal analysis by CEC, both approaches resulted in the need for more detention volume. Given the additional complications that would arise from trying to separate existing detention volume from proposed, and given that there is no record of a comprehensive site stormwater analysis, it was determined that “starting from scratch” and looking at the whole site was a more straightforward approach to the design.

The site also includes a portion of floodplain from the influence of Kress Creek and several wetlands. Issues relative to these two special management areas are addressed in detail in their respective tabs.

The bearings shown on the project Site Improvement Plans are based upon Illinois State Plan, East Zone. Vertical datum is based upon observation of DuPage County benchmark DK3273. Signed and sealed surveyor notes from the level loop tying in to the established source benchmark (DuPage County PID DK 3273, aka West Chicago WC105) are provided at the end of this tab.

UTILITY STATEMENT

THE UNDERGROUND UTILITIES SHOWN HAVE BEEN LOCATED FROM VISIBLE FIELD EVIDENCE AND EXISTING DRAWINGS, MAPS AND RECORDS SUPPLIED TO THE ENGINEER. THE ENGINEER MAKES NO GUARANTEES THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED. THE ENGINEER FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED, ALTHOUGH THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM AVAILABLE INFORMATION. THE ENGINEER HAS PHYSICALLY LOCATED VISIBLE STRUCTURES; HOWEVER, HE HAS NOT PHYSICALLY LOCATED THE UNDERGROUND LINES.

1. GENERAL NOTES & DESCRIPTIONS

THE STORM WATER POLLUTION PREVENTION PLAN (SWPPP) INCLUDES, BUT IS NOT LIMITED TO THE EROSION AND DEMOLITION PLAN INCLUDED IN THE ENGINEERING PLANS WITH THE DETAIL SHEET, THE NOTICE OF INTENT, PERMIT AUTHORIZATION, GENERAL PERMIT, NOTICE OF TERMINATION. ALL RECORDS OF INSPECTION AND ACTIVITIES WHICH ARE CREATED DURING THE COURSE OF THE PROJECT, AND OTHER DOCUMENTS AS MAY BE INCLUDED BY REFERENCE TO THIS SWPPP, CHANGES, MODIFICATIONS, REVISIONS, ADDITIONS, OR DELETIONS SHALL BECOME PART OF THIS SWPPP AS THEY OCCUR.

- ALL CONTRACTORS AND SUB-CONTRACTORS THAT ARE RESPONSIBLE FOR IMPLEMENTING AND MEASURE OF THE SWPPP MUST BE IDENTIFIED AND MUST CERTIFY THIS SWPPP BY SIGNING THE SWPPP CERTIFICATION IN ACCORDANCE WITH PART VI.G (SIGNATORY REQUIREMENTS) OF THE ILR10 PERMIT.

ALL SIGNED CERTIFICATIONS MUST BE KEPT WITH THE SWPPP DOCUMENTS AND BE AVAILABLE FOR INSPECTION.

THE CONTRACTOR AND ALL SUB-CONTRACTORS INVOLVED WITH CONSTRUCTION ACTIVITY THAT DISTURBS SITE SOIL OR WHO IMPLEMENT A POLLUTANT CONTROL MEASURE IDENTIFIED IN THE STORM WATER POLLUTION PREVENTION PLAN MUST COMPLY WITH THE FOLLOWING REQUIREMENTS OF THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) GENERAL PERMIT, THE NPDES PERMIT NO. ILR10 FOR THE STATE OF ILLINOIS AND ANY LOCAL GOVERNING AGENCY HAVING JURISDICTION CONCERNING EROSION AND SEDIMENT CONTROL.

A. GENERAL PERMIT INFORMATION
ALL CONSTRUCTION SITES THAT WILL RESULT IN THE DISTURBANCE OF ONE ACRE OR MORE MUST BE PERMITTED UNDER THE ILLINOIS GENERAL NPDES PERMIT. THE NOTICE OF INTENT (NOI) HAS BEEN SUBMITTED AT THE ADDRESS BELOW. THE NOI IS FOR THE ONSITE AND OFFSITE IMPROVEMENTS. THE NPDES PERMIT WILL BE ISSUED 30 DAYS AFTER THE POSTMARK DATE OF THE SUBMITTAL OF THE NOI AND INITIAL YEARLY FEE.

PERMIT INFORMATION: THE OWNER HAS MAILED THE OWNER-SIGNED NOI FORM AND THE INITIAL YEARLY FEE OF $500 TO THE ADDRESS LISTED BELOW. THE CONTRACTOR WILL BE RESPONSIBLE FOR SUBMITTING EACH SUBSEQUENT $500 YEARLY FEE, IF APPLICABLE. A COPY OF THE SIGNED NOI FORM WILL BE SUPPLIED TO THE CONTRACTOR.

UNLESS NOTIFIED BY THE ILLINOIS ENVIRONMENTAL PROTECTION AGENCY (IEPA) TO THE CONTRARY, CONSTRUCTION ACTIVITIES MAY BEGIN IN ACCORDANCE WITH THIS SWPPP AND THE ILR10 IN 30 DAYS FOLLOWING THE POST MARK DATE OF THE NOI.

TRANSFER INFORMATION: IF A PORTION OF THE PROPERTY IS SOLD, THAT NEW OWNER MAY OBTAIN THEIR OWN GENERAL PERMIT BY SUBMITTING A SEPARATE NOI. THE ORIGINAL NOI MAY THEN BE MODIFIED BY RE-SUBMITTING THE NOI WITH UPDATE ACREAGE AND CHECKING THE BOX "CHANGE OF INFORMATION". ALSO INCLUDE DOCUMENTATION EXPLAINING THAT A LOT HAS BEEN SOLD, THE ACREAGE DIFFERENCE AND THE DATE OF SALE. THERE IS NO FEE INVOLVED WITH MODIFYING THE NOI.

THERE ARE NO REQUIREMENTS FOR A PRE-CONSTRUCTION MEETING FROM ANY OF THE REVIEWING AGENCIES.

AGENCY INFORMATION:

ILLINOIS ENVIRONMENTAL PROTECTION AGENCY DIVISION OF WATER POLLUTION CONTROL 1021 NORTH GRAND AVENUE EAST SPRINGFIELD, ILLINOIS 62794-9276 PHONE: (217) 782-0610	CITY OF WEST CHICAGO ENGINEERING DEPARTMENT 475 MAIN STREET WEST CHICAGO, ILLINOIS 60185 PHONE: (630) 293-2200

B. PUBLIC POSTING
THE FOLLOWING DOCUMENTS WILL BE SUPPLIED TO THE CONTRACTOR AND MUST BE POSTED ON THE ENTRANCE SIGN IN A PROMINENT PLACE FOR PUBLIC VIEWING UNTIL TERMINATION OF PERMIT COVERAGE HAS BEEN OBTAINED BY FILING THE NOTICE OF TERMINATION (NOT).

1. NOTICE OF INTENT SIGNED IN ACCORDANCE WITH ILR10.
2. PERMIT AUTHORIZATION FROM THE ILLINOIS ENVIRONMENTAL AGENCY (IEPA).
3. CONSTRUCTION SITE NOTICE.

THE LOCATION OF THE SWPPP MUST BE CLEARLY VISIBLE.

C. RETENTION OF RECORDS
A COMPLETE COPY OF THE SWPPP, INCLUDING COPIES OF ALL INSPECTION REPORTS, PLAN REVISIONS, ETC., MUST BE RETAINED AT THE PROJECT SITE AT ALL TIMES DURING THE DURATION OF THE PROJECT (UNTIL NOT IS FILED) AND KEPT IN THE PERMANENT PROJECT RECORDS OF THE CONTRACTOR FOR AT LEAST THREE YEARS FOLLOWING SUBMITTAL OF THE NOTICE OF TERMINATION (NOT).

D. CONTRACTOR/SUB-CONTRACTOR LIST
THE CONTRACTOR MUST PROVIDE NAMES AND ADDRESSES OF ALL SUB-CONTRACTORS WORKING ON THIS PROJECT WHO WILL BE INVOLVED WITH THE MAJOR CONSTRUCTION ACTIVITIES THAT DISTURB SITE SOIL. THIS INFORMATION MUST BE KEPT WITH THE SWPPP.

E. CONTRACTOR/SUB-CONTRACTOR CERTIFICATION FORM
THE CONTRACTOR AND ALL SUB-CONTRACTORS INVOLVED WITH GROUND DISTURBING OR INSTALLATION AND MAINTENANCE OF ANY BEST MANAGEMENT PRACTICE (BMP) ON THE SITE MUST SIGN A COPY OF THE CONTRACTOR CERTIFICATION THAT WILL BE SUPPLIED TO THE CONTRACTOR. THIS INFORMATION MUST BE KEPT WITH THE SWPPP.

F. INSPECTIONS
AT LEAST ONCE EVERY SEVEN CALENDAR DAYS AND WITH 24 HOURS OF A 0.5 IN RAINFALL EVENT, INSPECTIONS BY DOCUMENTED CONTRACTOR COMPLIANCE OFFICER MUST BE MADE TO DETERMINE THE EFFECTIVENESS OF THE SWPPP. IF THE STATE OR LOCAL AGENCIES HAVE A REQUIRED INSPECTION FORM, THE BOTH FORMS MUST BE COMPLETED. THE SWPPP, INCLUDING THE BEST MANAGEMENT PRACTICES IMPLEMENTED ON THE JOBSITE, SHALL BE MODIFIED AS NEEDED TO REDUCE OR PREVENT POLLUTANTS FROM DISCHARGING FROM THE SITE.

AN EXAMPLE BMP INSPECTION FORM WILL BE SUPPLIED TO THE CONTRACTOR.

A DELEGATION OF AUTHORITY LETTER AUTHORIZING THE CONTRACTOR COMPLIANCE OFFICER TO SIGN THE INSPECTION FORMS WILL ALSO BE SUPPLIED TO THE CONTRACTOR.

THE INSPECTOR MUST BE A PERSON FAMILIAR WITH THE SITE, THE NATURE OF MAJOR CONSTRUCTION ACTIVITIES, AND QUALIFIED TO EVALUATE BOTH OVERALL SYSTEM PERFORMANCE AND INDIVIDUAL COMPONENT PERFORMANCE. THE INSPECTOR MUST EITHER BE SOMEONE EMPOWERED TO IMPLEMENT MODIFICATIONS TO THIS SWPPP AND THE POLLUTANT CONTROL DEVICES, IF NEEDED, IN ORDER TO INCREASE EFFECTIVENESS TO AN ACCEPTABLE LEVEL, OR SOMEONE WITH THE AUTHORITY TO CAUSE SUCH THINGS TO HAPPEN. ADDITIONALLY, THE INSPECTOR SHALL BE PROPERLY AUTHORIZED IN ACCORDANCE WITH THE APPLICABLE GENERAL PERMIT TO CONDUCT THE CERTIFIED SITE STORM WATER INSPECTIONS.

SEE SECTION VII ON THIS SHEET FOR FURTHER REPORTING REQUIREMENTS.

G. SWPPP UPDATES & AMENDMENTS
THIS SWPPP MUST BE UPDATED EACH TIME THERE ARE SIGNIFICANT MODIFICATIONS TO THE POLLUTION PREVENTION SYSTEM OR A CHANGE OF CONTRACTORS WORKING ON THE PROJECT THAT DISTURB SITE SOILS. THE SWPPP MUST BE AMENDED AS NECESSARY DURING THE COURSE OF CONSTRUCTION IN ORDER TO KEEP IT CURRENT WITH THE POLLUTANT CONTROL MEASURES UTILIZED ON THE SITE. AMENDING THE SWPPP DOES NOT MEAN THAT IT HAS TO BE REPRINTED. IT IS ACCEPTABLE TO ADD ADDENDA, SKETCHES, NEW SECTIONS, AND/OR REVISED DRAWINGS. THE SITE MAP SHOWING THE LOCATIONS OF ALL STORM WATER CONTROLS MUST BE POSTED ON THE SITE AND UPDATED TO REFLECT THE PROGRESS OF CONSTRUCTION AND CHANGES TO THE SWPPP. ANY CONTROL MEASURE THAT HAS A HYDROLOGIC DESIGN COMPONENT MUST BE UPDATED OR AMENDED BY THE ENGINEER. SUBSTITUTION OF SEDIMENT CONTROL BMPS BEYOND THOSE SPECIFIED IN THE SWPPP IS CONSIDERED A HYDROLOGIC DESIGN COMPONENT.

H. DISCHARGE OF PETROLEUM PRODUCTS OR HAZARDOUS SUBSTANCES
DISCHARGE OF PETROLEUM PRODUCTS OR OTHER HAZARDOUS SUBSTANCES INTO STORM WATER OR THE STORM WATER (STORM SEWER) SYSTEM IS SUBJECT TO REPORTING AND CLEAN UP REQUIREMENTS. SEE SECTION VI.B & OF THIS SWPPP FOR STATE AND LOCAL INFORMATION ON REPORTING SPILLS. REFER TO THE GENERAL PERMIT FOR ADDITIONAL INFORMATION.

I. NOTICE OF TERMINATION
ONCE THE SITE REACHES FINAL STABILIZATION AS DEFINED IN THE GENERAL PERMIT, WITH ALL PERMANENT EROSION AND SEDIMENTATION CONTROLS INSTALLED AND ALL TEMPORARY EROSION AND SEDIMENTATION CONTROLS REMOVED, THE CONTRACTOR AND OWNER'S REPRESENTATIVE MUST COMPLETE A FINAL INSPECTION, UPON APPROVAL BY THE OWNER'S REPRESENTATIVE, THE OWNER AND CONTRACTOR, AS APPLICABLE, MUST COMPLETE AND SUBMIT A NOT.

J. CONTRACTORS RESPONSIBILITY
THIS SWPPP INTENDS TO CONTROL WATER-BOURNE AND LIQUID POLLUTANT DISCHARGES BY SOME COMBINATION OF INTERCEPTION, SEDIMENTATION, FILTRATION, AND CONTAINMENT. THE CONTRACTOR AND SUB-CONTRACTORS IMPLEMENTING THIS SWPPP MUST REMAIN ALERT TO THE NEED TO PERIODICALLY REFINE AND UPDATE THE SWPPP IN ORDER TO ACCOMPLISH THE INTENDED GOALS. THE CONTRACTOR IS ULTIMATELY RESPONSIBLE FOR ALL SITE CONDITIONS AND PERMIT COMPLIANCE.

K. LOG OF CONSTRUCTION ACTIVITY
A RECORD OF DATES WHEN MAJOR GROUND-DISTURBING ACTIVITIES OCCUR, WHEN CONSTRUCTION ACTIVITIES TEMPORARILY OR PERMANENTLY CEASE ON A PORTION OF THE SITE, AND WHEN STABILIZATION MEASURES ARE INITIATED OR COMPLETED MUST BE MAINTAINED UNTIL THE NOT IS FILED. A LOG FOR KEEPING SUCH RECORDS IS INCLUDED. CONTROLS MUST BE IN PLACE DOWN GRADIENT OF ANY GROUND-DISTURBING ACTIVITIES PRIOR TO THE COMMENCEMENT OF CONSTRUCTION AND NOTED ON THE SITE MAP AND RECORD OF STABILIZATION AND CONSTRUCTION ACTIVITY DATES.

2. INTRODUCTION

THIS SWPPP INCLUDES THE ELEMENTS NECESSARY TO COMPLY WITH THE NATURAL BASELINE GENERAL PERMIT FOR CONSTRUCTION ACTIVITIES ADMINISTERED BY THE US ENVIRONMENTAL PROTECTION AGENCY (EPA) UNDER THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PROGRAM, THE NPDES PERMIT NO. ILR10 FOR THE STATE OF ILLINOIS, AND ALL LOCAL GOVERNING AGENCY REQUIREMENTS. THIS SWPPP MUST BE IMPLEMENTED AT THE START OF CONSTRUCTION.

CONSTRUCTION PHASE POLLUTANT SOURCES ANTICIPATED AT THE SITE ARE DISTURBED (BARE) SOIL, VEHICLE FUELS AND LUBRICANTS, CHEMICALS ASSOCIATED WITH BUILDING CONSTRUCTION, AND BUILDING MATERIALS. WITHOUT ADEQUATE CONTROL THERE IS A POTENTIAL FOR EACH TYPE OF POLLUTANT TO BE TRANSPORTED BY STORM WATER. PROJECT CONSTRUCTION WILL CONSIST PRIMARILY OF SITE GRADING, UTILITY SERVICE CONNECTIONS, AND SITE PAVING TO FACILITATE CONSTRUCTION.

A. PURPOSE
A MAJOR GOAL OF POLLUTION PREVENTION EFFORTS DURING PROJECT CONSTRUCTION IS TO CONTROL SOIL AND POLLUTANTS THAT ORIGINATE ON THE SITE AND PREVENT THEM FROM FLOWING TO SURFACE WATERS. THE PURPOSE OF THIS SWPPP IS TO PROVIDE GUIDELINES FOR ACHIEVING THAT GOAL. A SUCCESSFUL POLLUTION PREVENTION PROGRAM ALSO RELIES UPON CAREFUL INSPECTION AND ADJUSTMENTS DURING THE CONSTRUCTION PROCESS IN ORDER TO ENHANCE ITS EFFECTIVENESS.

B. SCOPE
THIS SWPPP MUST BE IMPLEMENTED BEFORE CONSTRUCTION BEGINS ON THE SITE IT PRIMARILY ADDRESSES THE IMPACT OF STORM RAINFALL AND RUNOFF ON AREAS OF THE GROUND SURFACE DISTURBED DURING THE CONSTRUCTION PROCESS. IN ADDITION, THERE ARE RECOMMENDATIONS FOR CONTROLLING OTHER SOURCES OF POLLUTION THAT COULD ACCOMPANY THE MAJOR CONSTRUCTION ACTIVITIES. THE SWPPP MUST TERMINATE WHEN DISTURBED AREAS ARE STABILIZED, PERMANENT EROSION AND SEDIMENTATION CONTROLS ARE INSTALLED, TEMPORARY EROSION AND SEDIMENTATION CONTROLS ARE REMOVED, CONSTRUCTION ACTIVITIES COVERED HEREIN HAVE CEASED, AND A COMPLETED NOTICE OF TERMINATION (NOT) IS TRANSMITTED TO THE GOVERNING AGENCY.

3. PROJECT DESCRIPTION

DESCRIBED BELOW ARE THE MAJOR CONSTRUCTION ACTIVITIES THAT ARE SUBJECT OF THIS SWPPP. ALSO INCLUDED IN THE SEQUENCE ARE BMP INSTALLATION ACTIVITIES THAT MUST TAKE PLACE PRIOR TO CONSTRUCTION ACTIVITIES. NOTE: DOWN SLOPE PROTECTIVE MEASURES MUST ALWAYS BE IN PLACE BEFORE SOIL IS DISTURBED. ACTIVITIES ARE PRESENTED IN THE ORDER (SEQUENCE) THEY ARE EXPECTED TO BE COMPLETED.

ALL ACTIVITIES AND TIME FRAMES (BEGINNING AND ENDING DATES) SHALL BE NOTED ON THE SITE MAP. THE SEQUENCE OF CONSTRUCTION IS AS FOLLOWS:

UPON IMPLEMENTATION AND INSTALLATION OF THE FOLLOWING AREAS: TRAILERS, PARKING, LAY DOWN, PORTA-POTY, WHEEL WASH, CONCRETE WASHOUT, MASON'S AREA, FUEL AND MATERIAL STORAGE CONTAINERS, SOLID WASTE CONTAINERS, ETC., IMMEDIATELY DENOTE THEM ON THE SITE MAPS AND NOTE ANY CHANGES IN LOCATION AS THEY OCCUR THROUGHOUT THE CONSTRUCTION PROCESS.

TYPICAL STAGE OF CONSTRUCTION, ITEMS SHALL BE ADDED OR DELETED AS NEEDED FOR EACH INDIVIDUAL PROJECT.

PHASE I
1. INSTALL SILT FENCE(S) ON THE SITE (CLEAR ONLY THOSE AREAS NECESSARY TO INSTALL SILT FENCE).
2. INSTALL AND STABILIZE HYDRAULIC CONTROL STRUCTURES (DIKES, SWALES, CHECK DAMS, INLET PROTECTION, ETC.).
3. BEGIN ROUGH BORING & INSTALLING PITS FOR CASING PIPE INSTALLATION AND WILL BE SERVICED BY A COMMERCIAL OPERATOR.
4. START CONSTRUCTION OF CASING PIPE UNDER ROADWAY AND FIRE SUPPRESSION ROOM IN SORTING BUILDING.

PHASE II
5. TEMPORARILY SEED, THROUGHOUT CONSTRUCTION, DENUDED AREAS THAT WILL BE INACTIVE FOR 14 DAYS OR MORE.
6. EXCAVATE FOR OFFICE BUILDING ADDITION & NEW SCALES.
7. INSTALL FIRE SUPPRESSION LINE, HYDRANT LINES & DOMESTIC SERVICE LINES.
8. PERMANENTLY STABILIZE AREAS TO BE ARTIFICIALLY DRAINAGE; ROUTINE MAINTENANCE; AND WHICH DOES NOT USE DETERGENTS; PAVEMENT WASHDOWNS WHERE SPILLS OR LEAKS OF TOXIC OR HAZARDOUS MATERIALS HAVE NOT OCCURRED (UNLESS ALL SPILLED MATERIAL HAS BEEN REMOVED) AND WHERE DETERGENTS ARE NOT USED; AIR CONDITIONING CONDENSATE; SPRINGS, UNCONTAMINATED GROUND WATER; AND FOUNDATION OR FOOTING DRAINS WHERE FLOWS ARE NOT CONTAMINATED WITH PROCESS MATERIALS SUCH AS SOLVENTS.
9. PREPARE PIPE TRENCHES FOR PAVING.
10. PAVE PIPE TRENCHES & PARKING SPACES NEXT TO OFFICE BUILDING & ENTRY DRIVE.
11. COMPLETE GRADING AND INSTALLATION OR PERMANENT STABILIZATION OVER ALL AREAS.
12. CALL ENGINEER AFTER THE SITE APPEARS TO BE FULLY STABILIZED FOR INSPECTION.
13. REMOVE ALL TEMPORARY EROSION AND SEDIMENT CONTROL DEVICES AFTER APPROVAL OF THE ENGINEER AND STABILIZE ANY AREAS DISTURBED BY THE REMOVAL OF THE BMP.

NOTE: THE CONTRACTOR MAY COMPLETE CONSTRUCTION-RELATED ACTIVITIES CONCURRENTLY ONLY IF ALL PRECEDING BMPS HAVE BEEN CORRECTLY INSTALLED.

THE ACTUAL SCHEDULE FOR IMPLEMENTING POLLUTANT CONTROL MEASURES WILL BE DETERMINED BY PROJECT CONSTRUCTION PROGRESS AND RECORDED BY THE CONTRACTOR ON THE SOIL EROSION/SEDIMENT CONTROL OPERATION TIME SCHEDULE ON THE EROSION AND SEDIMENT CONTROL PLANS. DOWN SLOPE PROTECTIVE MEASURES MUST ALWAYS BE IN PLACE BEFORE SOIL IS DISTURBED.

4. SITE DESCRIPTION

1. SITE DESCRIPTION
SITE CONSTRUCTION ACTIVITIES CONSIST OF BORING AND JACKING A WATER MAIN UNDER POWS ROAD. DIRECTIONAL BORING 2 ELECTRICAL CONDUITS, INSTALLATION OF WATER MAIN, FIRE HYDRANTS, AND SIAMESE CONNECTION PIPING.

2. CONSTRUCTION SEQUENCE OF WORK SHALL BE:
a. DIGGING PITS & JACKING PITS
b. WATERMAIN INSTALLATION
c. BUILDING PAD CONSTRUCTION
d. ASPHALT PAVEMENT, INSTALLATION AND TOPSOIL PLACEMENT AND SEEDING

3. TOTAL AREA OF SITE = 27.65 ACRES
TOTAL DISTURBED AREA ON SITE = 0.38 ACRES

4. SITE DRAINAGE IS RECEIVED BY KRESS CREEK LOCATED EAST OF THE PROJECT.

5. STORM WATER POLLUTION PREVENTION MEASURES AND CONTROLS

A VARIETY OF STORM WATER POLLUTANT CONTROLS ARE RECOMMENDED FOR THIS PROJECT. SOME CONTROLS ARE INTENDED FOR FUNCTION TEMPORARILY AND WILL BE USED AS NEEDED FOR POLLUTANT CONTROL DURING THE CONSTRUCTION PERIOD. THESE INCLUDE TEMPORARY SEDIMENT BARRIERS AND PERMANENT STORM RETENTION PONDS (WHICH CAN ALSO FUNCTION AS TEMPORARY SEDIMENT BASINS). PERMANENT STABILIZATION WILL BE ACCOMPLISHED IN ALL DISTURBED AREAS BY COVERING THE SOIL WITH PAVEMENT, BUILDING FOUNDATION, VEGETATION, OR OTHER FORMS OF SOIL STABILIZATION.

A. EROSION AND SEDIMENT CONTROLS

1. SOIL STABILIZATION
THE PURPOSE OF SOIL STABILIZATION IS TO PREVENT SOIL FROM ERODING AND LEAVING THE SITE. IN THE NATURAL CONDITION, SOIL IS STABILIZED BY NATIVE VEGETATION. THE PRIMARY TECHNIQUE TO BE USED AT THIS PROJECT FOR STABILIZING SITE SOILS WILL BE TO PROVIDE A PROTECTIVE COVER OF GRASS, PAVEMENT, OR BUILDING STRUCTURE.

A) TEMPORARY SEEDING OR STABILIZATION – ALL DENUDED AREAS THAT WILL BE INACTIVE FOR 14 DAYS OR MORE, MUST BE STABILIZED TEMPORARILY WITH THE USE OF FAST-GERMINATING ANNUAL GRASS/GRAIN VARIETIES, STRAW/HAY MULCH, WOOD CELLULOSE FIBERS, TACKIFIERS, NETTING OR BLANKETS.

B) PERMANENT SEEDING OR SODDING – ALL AREAS AT FINAL GRADE MUST BE SEEDED OR SODDED WITHIN 14 DAYS AFTER COMPLETION OF WORK IN ANY AREA. THE ENTIRE SITE MUST HAVE PERMANENT VEGETATIVE COVER ESTABLISHED IN ALL AREAS NOT COVERED BY HARDSCAPE AT THE COMPLETION OF ALL SOIL DISTURBING ACTIVITIES ON SITE. EXCEPT FOR SMALL LEVEL SPOTS, SEEDED AREAS SHOULD GENERALLY BE PROTECTED WITH MULCH OR A ROLLED EROSION CONTROL PRODUCT. ALL AREAS TO BE SEALED WILL HAVE TOPSOIL AND OTHER SOIL AMENDMENTS AS SPECIFIED ON THE LANDSCAPE PLAN.

2. STRUCTURAL CONTROLS
A) SILT FENCE – SILT FENCE IS A SYNTHETIC PERMEABLE WOVEN OR NON-WOVEN GEOTEXTILE FABRIC INCORPORATING METAL SUPPORT STAKES AT INTERVALS SUFFICIENT TO SUPPORT THE FENCE (5-FEET MAXIMUM DISTANCE BETWEEN POSTS), WATER, AND SEDIMENT RETAINED BY THE FENCE. THE FENCE IS DESIGNED TO RETAIN SEDIMENT-LADEN STORM WATER AND ALLOW SETTLEMENT OF SUSPENDED SOILS BEFORE THE STORM WATER FLOWS THROUGH THE FABRIC AND DISCHARGES OFF-SITE. SILT FENCE SHALL BE LOCATED ON THE CONTOUR TO CAPTURE OVERLAND, LOW-VELOCITY SHEET FLOWS. THE CONTRACTOR MAY UTILIZE TRIANGULAR SILT DIKE AND/OR NON-WIRE BACKED SILT FENCE AS INTERMEDIATE BMPS. INSTALL SILT FENCE AT A FAIRLY LEVEL GRADE ALONG THE CONTOUR WITH THE ENDS CURVED UPHILL TO PROVIDE SUFFICIENT UPSTREAM STORAGE VOLUME FOR THE ANTICIPATED RUNOFF. DRAINAGE AREAS SHALL NOT EXCEED ½ ACRE PER 100 FEET OF SILT FENCE FOR SLOPES LESS THAN 2 PERCENT.

B) CONSTRUCTION EXIT – ALL ACCESS POINTS FROM THE PUBIC STREET INTO THE CONSTRUCTION SITE SHALL INCLUDE A CONSTRUCTION EXIT COMPOSED OF COURSE STONE TO THE DIMENSIONS SHOWN ON THE EXISTING CONDITIONS AND DEMOLITION PLAN. THE ROUGH TEXTURE OF THE STONE HELPS TO REMOVE CLUMPS OF SOIL ADHERING TO THE CONSTRUCTION VEHICLES TIRES THROUGH THE ACTION OF VIBRATION AND JARRING OVER THE ROUGH SURFACE AND THE FRICTION OF THE STONE MATRIX AGAINST SOILS ATTACHED TO VEHICLE TIRES.

IN ADDITION TO THE STONE AT THE CONSTRUCTION EXIT, IT MAY BE NECESSARY TO INSTALL DEVICES SUCH AS PIPES (CATTLE GUARDS) OR GRATES TO INCREASE THE VIBRATIVE AND JARRING ACTION AND MAY ALSO BE NECESSARY TO INSTALL A WHEEL WASH SYSTEM. IF THIS IS DONE, A SEDIMENT TRAP CONTROL MUST BE INSTALLED TO TREAT THE WASH WATER BEFORE IT DISCHARGES FROM THE SITE.

ALL SITE ACCESS MUST BE CONFINED TO THE CONSTRUCTION EXIT(S). BARRICADE, SUFFICIENT TO PREVENT USE, ANY LOCATIONS OTHER THAN CONSTRUCTION EXIT(S) WHERE VEHICLES OR EQUIPMENT MAY ACCESS THE SITE.

C) STORM SEWER INLET PROTECTION – CURB AND GRATED INLETS ARE PROTECTED FROM THE INTRUSION OF SEDIMENT THROUGH A VARIETY OF MEASURES AS SHOWN ON THE DETAILS INCLUDED IN THE CONSTRUCTION DRAWINGS. THE PRIMARY MECHANISM IS TO PLACE CONTROLS IN THE PATH OF FLOW SUFFICIENT TO SLOW THE SEDIMENT-LADEN WATER TO ALLOW SETTLEMENT OF SUSPENDED SOILS BEFORE DISCHARGING INTO THE STORM SEWER. IT IS POSSIBLE THAT AS CONSTRUCTION PROGRESSES FROM STORM SEWER INSTALLATION THROUGH PAVING THAT THE INLET PROTECTION DEVICES SHOULD CHANGE. ALL INLET PROTECTION DEVICES CREATE PONDING OF STORM WATER. THIS SHOULD BE TAKEN INTO CONSIDERATION WHEN DECIDING ON WHICH DEVICE OR DEVICES SHOULD BE USED.

SOIL EROSION / SEDIMENT CONTROL OPERATION TIME SCHEDULE

NOTE: GENERAL CONTRACTOR TO COMPLETE TABLE WITH THEIR SPECIFIC PROJECT SCHEDULE

CONSTRUCTION SEQUENCE	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	JAN	FEB	MAR	APR	MAY	JUN	JUL
TEMPORARY CONSTRUCTION EXITS																			
TEMPORARY CONTROL MEASURES																			
SEDIMENT CONTROL BASINS																			
STRIP & STOCKPILE TOPSOIL																			
ROUGH GRADE																			
STORM FACILITIES																			
SITE CONSTRUCTION																			
PERMANENT CONTROL STRUCTURES																			
FOUNDATION / BUILDING CONSTRUCTION																			
FINISH GRADING																			
LANDSCAPING / SEED / FINAL STABILIZATION																			

1) CONTRACTOR SHALL UPDATE THE TABLE BY SHADING OR DATING THE APPLICABLE ACTIVITIES AS PROJECT PROGRESSES.

2) TIME SCHEDULE MUST COINCIDE WITH SEQUENCE OF CONSTRUCTION.

AS-BUILT PLANS
FOR GRADE & UTILITIES
JULY, 7, 2016

DESCRIPTION AND ANY NECESSARY CLEANING OF THE UNDERGROUND DETENTION SYSTEM SHALL BE INCLUDED AS PART OF THIS SWPPP.

FINAL SITE STABILIZATION IS ACHIEVED WHEN PERENNIAL VEGETATIVE COVER PROVIDES PERMANENT STABILIZATION WITH A DENSITY GREATER THAN 70 PERCENT OVER THE ENTIRE AREA TO BE STABILIZED BY VEGETATIVE COVER. THIS IS EXCLUSIVE OF AREAS PAVED, ROCKED, OR HAVING A BUILDING ON THEM.

B. OTHER POLLUTANT CONTROLS
THIS SECTION INCLUDES THE CONTROLS OF POLLUTANTS OTHER THAN SEDIMENT AND ADDITIONAL REQUIREMENTS OF THE GENERAL PERMIT.

1. DUST CONTROL
CONSTRUCTION TRAFFIC MUST ENTER AND EXIT THE SITE AT THE STABILIZED CONSTRUCTION EXIT. WATER TRUCKS OR OTHER DUST CONTROL AGENTS WILL BE USED AS NEEDED DURING CONSTRUCTION TO REDUCE DUST GENERATED ON THE SITE. DUST CONTROL MUST BE PROVIDED BY THE CONTRACTOR TO A DEGREE THAT IS IN COMPLIANCE WITH APPLICABLE LOCAL AND STATE DUST CONTROL REGULATIONS.

2. SOLID WASTE DISPOSAL
NO SOLID MATERIALS, INCLUDING BUILDING MATERIALS, ARE ALLOWED TO BE DISCHARGED FROM THE SITE WITH STORM WATER. ALL SOLID WASTE, INCLUDING DISPOSABLE MATERIALS INCIDENTAL TO THE MAJOR CONSTRUCTION ACTIVITIES, MUST BE COLLECTED AND PLACED IN CONTAINERS. THE CONTAINERS WILL BE EMPTIED AS NECESSARY BY A CONTRACT TRASH DISPOSAL SERVICE AND HAULED AWAY FROM THE SITE. COVERS FOR THE CONTAINERS WILL BE PROVIDED AS NECESSARY TO MEET STATE AND LOCAL REQUIREMENTS. THE LOCATION OF SOLID WASTE RECEPTACLES SHALL BE SHOWN ON THE SITE MAPS.

SUBSTANCES THAT HAVE THE POTENTIAL FOR POLLUTING SURFACE AND/OR GROUNDWATER MUST BE CONTROLLED BY WHATEVER MEANS NECESSARY IN ORDER TO ENSURE THAT THEY DO NOT DISCHARGE FROM THE SITE. AS AN EXAMPLE, SPECIAL CARE MUST BE EXERCISED DURING EQUIPMENT FUELING AND SERVICING OPERATIONS. IF A SPILL OCCURS, IT MUST BE CONTAINED AND DISPOSED OF SO THAT IT WILL NOT FLOW FROM THE SITE OR ENTER GROUNDWATER, EVEN IF THIS REQUIRES REMOVAL, TREATMENT, AND DISPOSAL OF SOIL. IN THIS REGARD, POTENTIALLY POLLUTING SUBSTANCES SHOULD BE HANDLED IN A MANNER CONSISTENT WITH THE IMPACT THEY REPRESENT.

3. SANITARY FACILITIES
ALL PERSONNEL INVOLVED WITH CONSTRUCTION ACTIVITIES MUST COMPLY WITH STATE AND LOCAL SANITARY OR SEPTIC REGULATIONS. TEMPORARY SANITARY FACILITIES WILL BE PROVIDED AT THE SITE THROUGHOUT THE CONSTRUCTION PHASE. THEY MUST BE UTILIZED BY ALL CONSTRUCTION PERSONNEL AND WILL BE SERVICED BY A COMMERCIAL OPERATOR. THE LOCATION OF SANITARY FACILITIES SHALL BE SHOWN ON THE SITE MAP.

4. NON-STORM WATER DISCHARGE
NON-STORM WATER COMPONENTS OF SITE DISCHARGES ARE NOT PERMITTED UNDER ILR10 EXCEPT AS FOLLOWS: DISCHARGES FROM FIRE FIGHTING ACTIVITIES; FIRE HYDRANT FLUSHINGS; WATER USED TO WASH VEHICLES WHERE DETERGENTS ARE NOT USED; WATERS USED TO CONTROL DUST; POTABLE WATER SOURCES INCLUDING UNCONTAMINATED WATERLINE FLUSHINGS; IRRIGATION DRAINAGE; ROUTINE EXTERNAL BUILDING WASHDOWN WHICH DOES NOT USE DETERGENTS;

5. CONCRETE WASTE FROM CONCRETE READY-MIX TRUCKS
DISCHARGE OF EXCESS OR WASTE CONCRETE AND/OR WASH WATER FROM CONCRETE TRUCKS WILL BE ALLOWED ON THE CONSTRUCTION SITE, BUT ONLY IN SPECIFICALLY DESIGNATED DIKED AREAS PREPARED TO PREVENT CONTACT BETWEEN THE CONCRETE AND RUNOFF AND WATER THAT WILL BE DISCHARGED FROM THE SITE. ALTERNATELY, CONCRETE WASTE CONCRETE CAN BE PLACED INTO FORMS TO MAKE RIP RAP OR OTHER USEFUL CONCRETE PRODUCTS. THE CURED RESIDUE FROM THE CONCRETE WASHOUT DIKED AREAS SHALL BE DISPOSED IN ACCORDANCE WITH APPLICABLE STATE AND FEDERAL REGULATIONS. THE JOBSITE SUPERINTENDENT IS RESPONSIBLE FOR ASSURING THAT THESE PROCEDURES ARE FOLLOWED. THE LOCATION OF CONCRETE WASHOUT AREAS SHALL BE SHOWN ON THE SITE MAPS.

6. MASON'S AREA
CONTRACTOR SHALL IDENTIFY MASON'S AREA ON THE SITE AND INDICATE LOCATION ON THE SITE MAP. TO THE EXTENT PRACTICAL, ALL MASONRY TOOLS, MATERIAL, INCLUDING SAND AND SACKED CEMENT OR MORTAR MATERIALS, AND EQUIPMENT SHALL BE LOCATED WITHIN THE AREA DENOTED. RUNOFF CONTROL SUCH AS BERMS OR DIVERSION DITCHES, SILT FENCE, STRAW WATTLES, OR OTHER MEANS OF CONTAINMENT SHALL BE PROVIDED TO PREVENT THE MIGRATION OF STORM WATER POLLUTANTS IN RUNOFF FROM THE MASON'S AREA. RECEPTACLES FOR DEBRIS AND TRASH DISPOSAL SHALL ALSO BE PROVIDED.

WATERMAIN NOTE:

1. ALL PIPE CONFLICTS WHERE THE WATERMAIN TRAVELS UNDER THE STORM/SANITARY PIPE SHALL HAVE THE TRENCH FILLED WITH CLSM/FLOWABLE FILL FROM THE TOP OF THE WATERMAIN TO THE SPRINGLINE OF THE STORM/SANITARY PIPE.

PIPE CONFLICT STATIONS

STA 20+57 STORM OVER WATERMAIN

STA 21+27 STORM OVER WATERMAIN

STA 25+02 STORM OVER WATERMAIN

STA 26+54 SANITARY OVER WATERMAIN

STA 28+59 STORM OVER WATERMAIN

AT EACH STATION THE THE PROPOSED WATERMAIN SHALL HAVE A CASING PIPE INSTALLED A MINIMUM OF 10' ON EITHER SIDE OF THE CROSSING. THE SANITARY PIPE SHALL BE CONSTRUCTED WITH WATERMAIN GRADE PIPE AT THE CROSSING A MINIMUM OF 10' EITHER SIDE.

2. ALL PRIVATE UTILITIES MUST MAINTAIN A MINIMUM FIVE (5) FOOT PARALLEL SEPARATION FROM THE PROPOSED WATERMAIN AND IF THE PRIVATE UTILITY IS TO CROSS THE PROPOSED WATERMAIN, THE PRIVATE UTILITY MUST MAINTAIN A MINIMUM DISTANCE OF 36" ABOVE THE WATERMAIN OR A MINIMUM 18" DISTANCE BELOW THE WATERMAIN.

3. CONTRACTOR SHALL SUPPORT STORM/SANITARY PIPE DURING CONSTRUCTION TO PREVENT ANY SETTLEMENT AND INSTALL CLSM BETWEEN THE WATERMAIN AND SEWER FOR THE WIDTH OF THE TRENCH.

CITY OF WEST CHICAGO
PUBLIC IMPROVEMENT MATERIALS LIST

UPDATED MARCH 21, 2013

WATER

1. PIPE
CLASS 52 DUCTILE IRON, CEMENT LINED ASPHALTIC COATING OR PAINT, PUSH ON JOINTS, POLYETHYLENE ENCASED WITH TAPED JOINTS. ALL PVC PIPE SHALL CONFORM TO AWWA C-900 SPECS, AND ONLY BE USED UPON CITY APPROVAL. ALL POLYETHYLENE PIPE SHALL CONFORM TO AWWA C-906 SPECS AND ONLY BE USED UPON CITY APPROVAL.

2. MAIN LINE VALVE
VALVES – SHALL BE RESILIENT WEDGE TYPE, RATED FOR 250 PSI WORKING PRESSURE AND MEET AWWA C-509 AND C-515 SPECS. VALVES SHALL HAVE FACTORY INSTALLED 304 STAINLESS STEEL EXTERIOR BOLTING. ALL INTERNAL AND EXTERNAL SURFACES SHALL HAVE A FUSION BONDED EPOXY COATING. VALVES SHALL BE AMERICAN FLOW CONTROL, CLOW, EAST JORDAN, OR MUELLER. SPECIAL STRUCTURES MAY BE REQUIRED FOR LARGER VALVES.

BUTTERFLY VALVES – REQUIRE SPECIAL APPROVAL BY CITY ENGINEER – SHALL BE EITHER CLOW SERIES 4500 MJ OR HENRY PRATT GROUND HOG. ALL VALVES SHALL HAVE 'OPTIONAL' EPOXY COATING CONFORMED TO AWWA C-550 SPECS, AND BE SUPPLIED WITH 2" OPERATING NUT. ALL EXTERIOR BOLTS WILL BE FACTORY INSTALLED 304 STAINLESS STEEL.

VALVE OPERATING NUTS DEEPER THAN 7" – MAY REQUIRE VALVE OPERATING ROD EXTENSIONS.

3.INSERTION VALVES
UNITED STATES PIPE AND FOUNDRY COMPANY INSERTION VALVE WITH SLEEVE AND RETAINER RINGS.
PART NUMBER 910314

TEAM VALVE, WITH 304 STAINLESS STEEL TRIM.

4. LINE STOP FITTINGS
UP TO AND INCLUDING 12"

JCM 440 – ALL 304 STAINLESS BODY – BRANCH OR NOZZLE AND FLANGES. ALL BOLT TRIM SHALL ALSO BE 304 STAINLESS INCLUDING NUTS AND WASHERS. BUNA-N OR SBR RUBBER GASKET MATERIAL IS ACCEPTED.

SMITH BLAIR – 685 SERIES – ALL 304 STAINLESS BODY – BRANCH OR NOZZLE AND FLANGES. ALL BOLT TRIM SHALL ALSO BE 304 STAINLESS INCLUDING NUTS AND WASHERS. BUNA-N OR SBR RUBBER GASKET MATERIAL IS ACCEPTED.

HYDRA-STOP-PREMIER SERIES – ALL 304 STAINLESS BODY, BRANCH OR NOZZLE AND FLANGES.
ALL BOLT TRIM SHALL ALSO BE 304 STAINLESS INCLUDING NUTS AND WASHERS. BUNA-N OR SBR RUBBER GASKET MATERIAL IS ACCEPTED.

LINE STOPS LARGER THAN 12" WILL REQUIRE SUBMITTAL AND APPROVAL OF THE CITY ENGINEER. ONLY ALL STAINLESS FITTINGS WILL BE DIRECT BURY, ALL OTHERS WILL REQUIRE A PRE-CAST STRUCTURE.

5. VALVE VAULTS
PRE-CAST CONCRETE, NEENAH R 1772 TYPE 'B' LID OR EJW 1022-1 HD
'WATER' AND 'CITY OF WEST CHICAGO' TO BE CAST INTO LID
EZ-STICK GASKET OR EQUAL SHALL BE INSTALLED AT ALL JOINTS
4" DIAMETER FOR VALVES 8" AND LESS
5' DIAMETER FOR VALVES 10" AND LARGER
5' DIAMETER FOR ALL PRESSURE CONNECTIONS UP TO 12"
5' DIAMETER FOR ALL INSERTION VALVES UP TO 12"
NO STEPS
CONCRETE ADJUSTING RINGS NOT TO EXCEED 12" IN HEIGHT AND 3 IN NUMBER. RUBBER MASTIC SHALL BE INSTALLED BETWEEN EACH JOINT.

6. FIRE HYDRANTS
WATEROUS PACER 250 OR EAST JORDAN 5-BR WITH 304 STAINLESS STEEL TRIM AND BREAKAWAY TRAFFIC FLANGE. ASSEMBLY SHALL BE FACTORY PAINTED WITH CHROME YELLOW PRIMER. HYDRANTS MAY BE FLANGED OR MJ. ALL HYDRANTS INSTALLED ON 12" OR LARGER WATER MAIN MUST BE INSTALLED ON LOCKING HYDRANT TEES WHERE AVAILABLE. ALL MJ FITTINGS WILL REQUIRE MEGALUGS. PAINT COATING FOR FIRE HYDRANTS SHALL BE SHERWIN WILLIAMS BRAND, INDUSTRIAL URETHANE ALKYD ENAMEL, SERIES B54-150. COLOR FOR HYDRANTS ON POTABLE DISTRIBUTION MAINS SHALL BE SAFETY YELLOW. COLOR FOR HYDRANTS ON RAW WATERMAINS SHALL BE SAFETY GREEN.

7. AUXILIARY VALVE BOXES
EAST JORDAN SERIES 8550 OR TYLER 6850 SERIES ADJUSTABLE CAST IRON WITH 'WATER' CAST INTO LID. VALVE BOX STABILIZERS WILL BE EAST JORDAN NO. 98725 OR ADAPTER INC. RUBBER DOUGHNUTS.

8. FITTINGS
AMERICAN DUCTILE IRON C153, TYLER OR US PIPE CLASS 350 MECHANICAL JOINT. ALL FITTINGS SHALL HAVE MEGALUG RETAINER GLANDS. SLEEVES SHALL BE DUCTILE OR CAST IRON MJ. CUTTING IN SLEEVES SHALL BE MUELLER, CLOW, AMERICAN FLOW CONTROL OR TYLER MECHANICAL JOINT. WHERE APPLICABLE, ALL HYDRANT TEES ON 12" OR LARGER WATER MAIN SHALL BE 'LOCKING.' NO BELL REPAIR CLAMPS WILL BE ALLOWED.

BOLTS FOR MJ FITTINGS – FLUOROCARBON COATED COR-TEN STEEL. T-BOLTS AND NUTS.

9. TAPPING TEE FOR DUCTILE IRON PIPE
MUELLER CAST IRON MJ #H615, AMERICAN FLOW CONTROL DUCTILE IRON SERIES 2800, TYLER/UNION DUCTILE IRON, US PIPE DUCTILE IRON T-9

TAPPING TEE FOR PVC PIPE
ROMAC INDUSTRY, INC. SST III WITH 304 STAINLESS STEEL FLANGE, CASCADE CST-EX

10. CASINGS
OF NECESSARY DIAMETER, THICKNESS, AND LENGTH TO MEET ALL APPLICABLE REQUIREMENTS OF THE SPECIFIC AGENCY – CITY, COUNTY, STATE OR RAILWAY. CASING SPACERS TO BE CASCADE MODEL CSS OR APPROVED EQUAL. MATCHING CASING SIZE TO PIPE SIZE. CASING END SEALS TO BE CASCADE MODEL CCES OR APPROVED EQUAL, MORTARING OF CASING ENDS SUBJECT ONLY TO PRE-APPROVAL. ALL PUSH JOINTS IN CASING SHALL HAVE 'FIELD LOCK GASKETS.' ANNULAR SPACE WITHIN CASING MAY REQUIRE FILLING BY SPECIFIC AGENCY. MINIMUM CASING WALL THICKNESS – ¼ INCH.

11. LOCATING WIRE
SHALL BE USED ON ANY PVC LINE. 8 GAUGE COPPER WIRE TAPED TO PIPE WITH TEST HOOKUPS IN VALVE BOXES EVERY 400 FEET AND AT ALL ALIGNMENT CHANGES.
WARNING TAPE – DETECTABLE METALLIC UNDERGROUND TAPE (BURIED WATER LINE).

12. WATER SERVICE
TYPE 'K' COPPER 2" AND LESS, INSTALLED AS ONE CONTINUOUS PIECE FROM MAIN TO B-BOX.
DUCTILE IRON 3" AND LARGER.

13. B-BOX
¾", 1", & 1 ¼ " – TYLER NO. 6500 WITH VITELLI OR EQUIVALENT CONCRETE B-BOX PAD

1 ½"& 2" – TYLER 6500 WITH TYLER 6500 ENLARGED BASE OR MUELLER NO. E2032 FOOTPIECE. FOR ENLARGED FOOT, A BRICK MAY BE USED FOR LEG BASE.

14. CORPORATION STOP
¾" AND 1" – FORD F-600 SERIES OR MUELLER H 15000. BOTH SHALL HAVE FLARED COPPER OUTLET AND AWWA/CC THREAD INLET.

1 ¼" – FORD F-600 OR F-1000 SERIES OR MUELLER 15000 SERIES BOTH SHALL HAVE AWWA/CC THREAD INLET BUT MAY HAVE A FLARE OR COMPRESSION OUTLET.

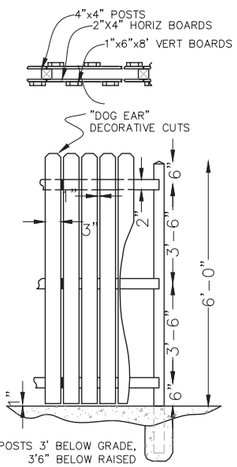
1 ½" AND 2" – FORD FB-600 SERIES OR MUELLER 300 SERIES. BOTH SHALL HAVE AWWA/CC THREAD INLET BUT MAY HAVE A FLARE OR COMPRESSION OUTLET

15. ROUNDWAY-CURB STOP
¾" AND 1" – FORD B-22 SERIES OR MUELLER H-15204

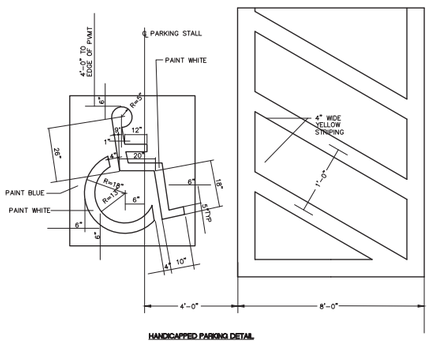
1 ¼", 1 ½" AND 2" – FORD 'B' SERIES OR MUELLER 300 SERIES. FLARED OR COMPRESSION ARE ACCEPTABLE.

16. PACK FITTINGS-BRASS
ONLY FORD OR MUELLER PACK FITTINGS ACCEPTABLE.

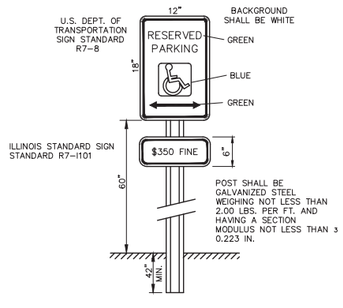
17. SERVICE SADDLES
ALL NON-DIRECT TAPS 1 ½ AND 2" SHALL USE SMITH BLAIR #372, CASCADE #CSC2, OR FORD FS313.
ONLY 1 ½ AND 2" TAPS CAN BE MADE INDIRECT.



WOOD FENCING DETAIL
N.T.S.



HANDICAPPED PARKING DETAIL
N.T.S.



LOCATE SIGN AT EACH END OF HANDICAP PARKING AREA, 2 FT. FROM EDGE OF PAVEMENT

HANDICAP PARKING SIGN

GENERAL CONDITIONS

1. ALL EARTHWORK, ROADWAY WORK, DRAINAGE WORK OR STORM SEWER WORK SHALL BE PERFORMED UTILIZING MATERIALS AND METHODS IN STRICT ACCORDANCE WITH THE ILLINOIS DEPARTMENT OF TRANSPORTATION "STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION" LATEST EDITION, AS WELL AS THE STANDARD DETAIL SHEETS ATTACHED TO THESE PLANS. ALL MUNICIPAL, COUNTY, STATE AND FEDERAL REQUIREMENTS AND STANDARDS SHALL BE STRICTLY ADHERED TO IN WORK PERFORMED UNDER THIS CONTRACT.

2. ALL SANITARY SEWER AND WATER MAIN WORK SHALL BE PERFORMED USING METHODS AND MATERIALS IN STRICT ACCORDANCE WITH THE LATEST EDITION OF "STANDARD SPECIFICATIONS FOR WATER AND SEWER MAIN CONSTRUCTION IN ILLINOIS", LATEST EDITION, AS WELL AS THE STANDARD DETAIL SHEETS ATTACHED TO THESE PLANS. ALL MUNICIPAL, COUNTY, STATE AND FEDERAL REQUIREMENTS AND STANDARDS SHALL BE STRICTLY ADHERED TO IN WORK PERFORMED UNDER THIS CONTRACT.

3. ANY SPECIFICATIONS WHICH ARE SUPPLIED ALONG WITH THE PLANS SHALL TAKE PRECEDENCE IN THE CASE OF A CONFLICT WITH THE STANDARD SPECIFICATIONS NOTED IN ITEMS NO. 1 AND 2 ABOVE. THE ABOVE STANDARD SPECIFICATIONS & THE CONSTRUCTION PLANS ARE TO BE CONSIDERED AS PART OF THE CONTRACT DOCUMENTS. INCIDENTAL ITEMS OR ACCESSORIES NECESSARY TO COMPLETE THIS WORK MAY NOT BE SPECIFICALLY NOTED BUT ARE TO BE CONSIDERED A PART OF THE CONTRACT.

4. PRIOR TO COMMENCEMENT OF CONSTRUCTION, THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS AFFECTING THEIR WORK WITH THE ACTUAL CONDITIONS AT THE JOB SITE. IF THERE ARE ANY DISCREPANCIES FROM WHAT IS SHOWN ON THE CONSTRUCTION PLANS, HE MUST IMMEDIATELY REPORT SAME TO THE ENGINEER BEFORE DOING ANY WORK, OTHERWISE THE CONTRACTOR WILL BE CONSIDERED TO HAVE PROCEEDED AT HIS OWN RISK AND EXPENSE. IN THE EVENT OF ANY DOUBT OR QUESTION ARISING WITH RESPECT TO THE TRUE MEANING OF THE CONSTRUCTION PLANS OR SPECIFICATIONS, THE DECISION OF THE ENGINEER SHALL BE FINAL AND CONCLUSIVE.

5. ALL WORK PERFORMED UNDER THIS CONTRACT SHALL BE GUARANTEED AGAINST ALL DEFECTS IN MATERIALS AND WORKMANSHIP OF WHATEVER NATURE BY THE CONTRACTOR AND HIS SURETY FOR A PERIOD OF 12 MONTHS FROM THE DATE OF FINAL ACCEPTANCE OF THE WORK BY THE GOVERNING MUNICIPALITY, OTHER APPLICABLE GOVERNMENTAL AGENCIES, AND THE OWNER.

6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL REQUIRED PERMITS FOR CONSTRUCTION ALONG OR ACROSS EXISTING STREETS OR HIGHWAYS. HE SHALL MAKE ARRANGEMENTS FOR THE PROPER BRACING, SHORING AND OTHER REQUIRED PROTECTION OF ALL ROADWAYS BEFORE CONSTRUCTION BEGINS, ALONG WITH ADEQUATE TRAFFIC CONTROL MEASURES. HE SHALL BE RESPONSIBLE FOR ANY DAMAGE TO THE STREETS OR ROADWAYS AND ASSOCIATED STRUCTURES AND SHALL MAKE REPAIRS AS NECESSARY TO THE SATISFACTION OF THE ENGINEER, AT NO ADDITIONAL COST TO THE OWNER.

7. THE UTILITY LOCATIONS, AND THE DEPTHS SHOWN ON THESE PLANS ARE APPROXIMATE ONLY, AND SHALL BE VERIFIED BY THE CONTRACTOR WITH ALL AFFECTED UTILITY COMPANIES PRIOR TO INITIATING CONSTRUCTION OPERATIONS. THE ENGINEER AND OWNER ASSUME NO RESPONSIBILITY FOR THE ADEQUACY, SUFFICIENCY OR EXACTNESS OF THESE UTILITY REPRESENTATIONS.
8. PRIOR TO STARTING CONSTRUCTION THE CONTRACTOR SHALL CONTACT THE OFFICE OF J.U.L.I.E. AT 1-800-892-0123 FOR EXACT FIELD LOCATION OF ALL UNDERGROUND UTILITIES IN THE PROXIMITY OF, AND ON, THE PROJECT SITE; IF THERE ARE ANY UTILITIES WHICH ARE NOT MEMBERS OF THE J.U.L.I.E. SYSTEM, THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR DETERMINING THIS AND MAKE ARRANGEMENTS TO HAVE THESE UTILITIES FIELD LOCATED.

9. EASEMENTS FOR THE EXISTING UTILITIES, BOTH PUBLIC AND PRIVATE, AND UTILITIES WITHIN PUBLIC RIGHTS-OF-WAY ARE SHOWN ON THE PLANS ACCORDING TO AVAILABLE RECORDS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING THE EXACT LOCATION IN THE FIELD OF THESE UTILITY LINES AND THEIR PROTECTION FROM DAMAGE DUE TO CONSTRUCTION ACTIVITIES. IN CASES OF ANY NATURE ARE ENCOUNTERED WHICH CONFLICT IN LOCATION WITH NEW CONSTRUCTION, THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR RELOCATING THESE FACILITIES AT HIS EXPENSE TO ACCOMMODATE THE NEW CONSTRUCTION.

10. ALL FIELD TILE ENCOUNTERED DURING CONSTRUCTION OPERATIONS SHALL BE CONNECTED TO THE PROPOSED STORM SEWER OR EXTENDED TO OUTLET INTO A PROPOSED DRAINAGE WAY. IF THIS CANNOT BE ACCOMPLISHED, THEN IT SHALL BE REPAIRED WITH NEW PIPE OF SIMILAR SIZE AND MATERIAL TO THE ORIGINAL LINE AND PUT IN ACCEPTABLE OPERATIONAL CONDITION. A RECORD OF THE LOCATION OF ALL FIELD TILE FOR ONSITE DRAIN PIPE ENCOUNTERED SHALL BE KEPT BY THE CONTRACTOR AND TURNED OVER TO THE ENGINEER UPON COMPLETION OF THE PROJECT. THE COST OF THIS WORK SHALL BE CONSIDERED AS INCIDENTAL TO THE CONTRACT AND NO ADDITIONAL COMPENSATION WILL BE ALLOWED.

11. IT SHALL BE THE RESPONSIBILITY OF EACH RESPECTIVE CONTRACTOR TO REMOVE FROM THIS SITE ANY AND ALL MATERIALS AND DEBRIS WHICH RESULT FROM HIS CONSTRUCTION OPERATIONS AT NO ADDITIONAL EXPENSE TO THE OWNER.

12. THE ENGINEER AND OWNER ARE NOT RESPONSIBLE FOR THE CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES OR PROCEDURES, TIME OF PERFORMANCE, PROGRAMS OF FOR ANY SAFETY PRECAUTIONS USED BY THE CONTRACTOR. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR EXECUTION OF HIS WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS AND SPECIFICATIONS.

13. THE CONTRACTOR SHALL COMPLY WITH ALL STATE AND FEDERAL SAFETY REGULATIONS AS OUTLINED IN THE LATEST REVISIONS OF THE FEDERAL CONSTRUCTION SAFETY STANDARDS (SERIES 1926) AND WITH APPLICABLE PROVISIONS AND REGULATIONS OF THE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) STANDARDS OF THE WILLIAMS STELGER OCCUPATIONAL HEALTH STATE SAFETY ACT OF 1970(REVISED). THE CONTRACTOR, ENGINEERS, AND OWNER SHALL EACH BE RESPONSIBLE FOR HIS OWN RESPECTIVE EMPLOYEES.

14. THE CONTRACTOR SHALL INDEMNIFY THE OWNER, THE ENGINEER, AND ALL GOVERNING AUTHORITIES, THEIR AGENTS SUCCESSORS AND ASSIGNS FROM ANY AND ALL LIABILITY WITH RESPECT TO THE CONSTRUCTION, INSTALLATION AND TESTING OF THE WORK REQUIRED ON THIS PROJECT. IT SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR TO PERFORM THE WORK OF THIS CONTRACT IN A MANNER WHICH STRICTLY COMPLIES WITH ANY AND ALL PERTINENT LOCAL, STATE OR NATIONAL CONSTRUCTION AND SAFETY CODES; THE ENGINEER, OWNER, AND GOVERNING AUTHORITIES ARE NOT RESPONSIBLE FOR ENSURING COMPLIANCE BY THE CONTRACTOR WITH SAID CODES AND ASSUME NO LIABILITY FOR ACCIDENTS, INJURIES, OR DEATHS, OR CLAIMS RELATING THERETO WHICH MAY RESULT FROM LACK OF ADHERENCE TO SAID CODES.

UNDERGROUND UTILITIES

1. ALL UTILITY TRENCHES BENEATH PROPOSED OR EXISTING UTILITIES, PROPOSED OR EXISTING PAVEMENT, DRIVEWAYS, SIDEWALKS AND FOR A DISTANCE OF TWO FEET ON EITHER SIDE OF SAME, AND/OR WHEREVER ELSE SHOWN ON THE CONSTRUCTION PLANS SHALL BE BACKFILLED WITH SELECT GRANULAR BACKFILL (CA-6 OR CA-7) AND THOROUGHLY COMPACTED IN ACCORDANCE WITH THE EARTHWORK SPECIFICATIONS.

2. STRUCTURES FOR SANITARY AND STORM SEWERS AND VALVE VAULTS FOR WATER SHALL BE IN ACCORDANCE WITH THESE IMPROVEMENT PLANS AND THE APPLICABLE STANDARD SPECIFICATIONS. WHERE GRANULAR TRENCH BACKFILL IS REQUIRED AROUND THESE STRUCTURES THE COST SHALL BE CONSIDERED AS INCIDENTAL AND SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE FOR THE STRUCTURE.

3. ALL WATERMAINS SHALL HAVE COMPACTED CA-7 GRANULAR BEDDING, A MINIMUM OF 4" BELOW THE BOTTOM OF THE PIPE FOR THE FULL LENGTH. BEDDING SHALL EXTEND TO THE SPRING LINE OF THE PIPE. COST FOR THE BEDDING SHALL BE INCLUDED WITH THE UNIT PRICE BID FOR THE PIPE.

4. THE UNDERGROUND CONTRACTOR SHALL BE RESPONSIBLE FOR DEWATERING ANY EXCAVATION FOR THE INSTALLATION OF THE SEWER OR WATER SYSTEMS. ANY DEWATERING ENCOUNTERED SHALL BE INCIDENTAL TO THE RESPECTIVE UNDERGROUND UTILITY.

5. ALL STRUCTURES SHALL HAVE A MAXIMUM OF 8" OF ADJUSTING RINGS, UNLESS OTHERWISE NOTED.

6. ALL TOP FRAMES FOR VALVE VAULT COVERS AND B-BOXES ARE TO BE ADJUSTED TO MEET FINAL FINISH GRADE UPON COMPLETION OF FINISHED GRADING AND FINAL INSPECTIONS. THIS ADJUSTMENT IS TO BE MADE BY THE UNDERGROUND CONTRACTOR AND THE COST IS TO BE INCIDENTAL. THE UNDERGROUND CONTRACTOR SHALL INSURE THAT ALL ROAD AND PAVEMENT INLETS OR STRUCTURES ARE AT FINISHED GRADE. ANY ADJUSTMENTS NECESSITATED BY THE CURB OR PAVING CONTRACTOR TO ACHIEVE FINAL RIM GRADE, RESULTING IN AN EXTRA FOR SAID ADJUSTMENTS, WILL BE CHARGED TO THE UNDERGROUND CONTRACTOR.

7. ANY ANTICIPATED COST OF SHEETING SHALL BE REFLECTED IN THE CONTRACT AMOUNTS. NO ADDITIONAL COST WILL BE ALLOWED FOR SHEETING OR BRACING.

8. IT SHALL BE THE RESPONSIBILITY OF THE UNDERGROUND CONTRACTOR TO REMOVE FROM THE SITE ANY AND ALL MATERIALS AND DEBRIS WHICH RESULT FROM HIS CONSTRUCTION OPERATIONS AT NO ADDITIONAL EXPENSE TO THE OWNER.

9. CONTRACTOR SHALL VERIFY DEPTH OF BURY OF THE 12" WELL COLLECTOR LINE PRIOR TO STARTING BORING AND JACKING.

10. ALL EXISTING WELLS ON SITE SHALL BE ABANDONED AND CAPPED PER STATE OF ILLINOIS REQUIREMENTS.

EARTHWORK

1. ALL EARTHWORK OPERATIONS SHALL BE IN ACCORDANCE WITH SECTION 200 OF THE I.D.O.T. SPECIFICATIONS.

2. THE CONTRACTOR SHALL PROTECT ALL PROPERTY PINS AND SURVEY MONUMENTS AND SHALL RESTORE ANY WHICH ARE DISTURBED BY HIS OPERATIONS AT NO ADDITIONAL COST TO THE CONTRACT.

3. IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE ALL MATERIAL QUANTITIES AND APPRISE HIMSELF OF ALL SITE CONDITIONS. THE CONTRACT PRICE SUBMITTED BY THE CONTRACTOR SHALL BE CONSIDERED AS LUMP SUM FOR THE COMPLETE PROJECT. NO CLAIMS FOR EXTRA WORK WILL BE RECOGNIZED UNLESS ORDERED IN WRITING BY THE OWNER.

4. THE GRADING AND CONSTRUCTION OF THE SITE IMPROVEMENTS SHALL NOT CAUSE PONDING OF STORM WATER. ALL AREAS ADJACENT TO THESE IMPROVEMENTS SHALL BE GRADED TO ALLOW POSITIVE DRAINAGE.

5. THE PROPOSED GRADING ELEVATIONS SHOWN ON THE PLANS ARE FINISH GRADE. A MINIMUM OF SIX INCHES (6") OF TOPSOIL IS TO BE PLACED BEFORE FINISH GRADE ELEVATIONS ARE ACHIEVED.

6. EMBANKMENT MATERIAL WITHIN ROADWAY, PARKING LOT, AND OTHER STRUCTURAL CLAY FILL AREAS SHALL BE COMPACTED TO A MINIMUM OF NINETY-FIVE PERCENT (95%) OF MAXIMUM DENSITY IN ACCORDANCE WITH ASTM SPECIFICATION D-1557 (MODIFIED PROCTOR METHOD), OR TO SUCH OTHER DENSITY AS MAY BE DETERMINED APPROPRIATE BY THE SOILS ENGINEER. EMBANKMENT MATERIAL FOR BUILDING PADS SHALL BE COMPACTED TO A MINIMUM OF NINETY-FIVE (95%) OF MAXIMUM DENSITY IN ACCORDANCE WITH ASTM DESIGNATION D-1557 (MODIFIED PROCTOR METHOD) OR TO SUCH OTHER DENSITY AS MAY BE DETERMINED APPROPRIATE BY THE SOIL ENGINEER.

7. EMBANKMENT MATERIAL (RANDOM FILL) WITHIN NON-STRUCTURAL FILL AREAS SHALL BE COMPACTED TO A MINIMUM OF NINETY PERCENT (90%) OF MAXIMUM DENSITY IN ACCORDANCE WITH ASTM SPECIFICATION D-157 (MODIFIED PROCTOR METHOD).

8. THE SUB GRADE FOR PROPOSED STREET AND PAVEMENT AREAS SHALL BE PROOF-ROLLED BY THE CONTRACTOR AND ANY UNSTABLE AREAS ENCOUNTERED SHALL BE REMOVED AND REPLACED AS DIRECTED BY THE SOILS ENGINEER.

9. IT SHALL BE THE RESPONSIBILITY OF THE EXCAVATION CONTRACTOR TO REMOVE FROM THE SITE ANY AND ALL MATERIALS AND DEBRIS WHICH RESULT FROM HIS CONSTRUCTION OPERATIONS AT NO ADDITIONAL EXPENSE TO THE OWNER.

PAVING & WALKS

1. WORK UNDER THIS SECTION SHALL INCLUDE FINAL SUBGRADE SHAPING AND PREPARATION: FORMING, JOINTING, PLACEMENT OF ROADWAY AND PAVEMENT BASE COURSE MATERIALS AND SUBSEQUENT BINDER AND/OR SURFACE COURSES; PLACEMENT, FINISHING AND CURING OF CONCRETE; FINAL CLEAN-UP; AND ALL RELATED WORK.

2. ALL PAVING WORK SHALL BE DONE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS (I.D.O.T.) AND PER LOCAL REGULATIONS.

3. SUBGRADE FOR PROPOSED PAVEMENT SHALL BE FINISHED BY THE EXCAVATION CONTRACTOR TO WITHIN 0.1 FOOT, PLUS OR MINUS, OF THE PLAN ELEVATION. THE PAVING CONTRACTOR SHALL SATISFY HIMSELF THAT THE SUBGRADE HAS BEEN PROPERLY PREPARED AND THAT THE FINISH TOP SUBGRADE ELEVATION HAS BEEN GRADED WITHIN TOLERANCES ALLOWED IN THESE SPECIFICATIONS. UNLESS THE PAVING CONTRACTOR ADVISES THE OWNER AND ENGINEER IN WRITING PRIOR TO FINE GRADING FOR BASE COURSE CONSTRUCTION, IT IS UNDERSTOOD THAT HE HAS APPROVED AND ACCEPTS THE RESPONSIBILITY FOR THE SUBGRADE. PRIOR TO PLACEMENT OF PAVEMENT BASE MATERIALS, THE PAVING CONTRACTOR SHALL FINE GRADE THE SUBGRADE SO AS TO INSURE THE PROPER THICKNESS OF PAVEMENT COURSES. NO CLAIMS FOR EXCESS BASE MATERIALS DUE TO IMPROPER SUBGRADE PREPARATION WILL BE HONORED.

4. THE PROPOSED PAVEMENT SHALL CONSIST OF THE SUB-BASE COURSE, BITUMINOUS AGGREGATE BASE COURSE, BITUMINOUS BINDER COURSE, AND BITUMINOUS SURFACE COURSE, OF THE THICKNESS AND MATERIALS AS SPECIFIED ON THE CONSTRUCTION PLANS. PRIME COAT SHALL BE APPLIED TO THE SUB-BASE COURSE AT A RATE OF 0.5 GALLONS PER SQUARE YARD. UNLESS SHOWN AS A BID ITEM, PRIME COAT SHALL BE CONSIDERED AS INCIDENTAL TO THE COST OF THE CONTRACT. ALL PAVEMENT SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE "I.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION," CURRENT EDITION.

5. AFTER THE INSTALLATION OF THE BASE COURSE, ALL TRAFFIC SHALL BE KEPT OFF THE BASE UNTIL THE BINDER COURSE IS LAID. AFTER INSTALLATION OF THE BINDER COURSE AND UPON INSPECTION AND APPROVAL BY GOVERNING AUTHORITY, THE PAVEMENT SHALL BE CLEANED, PRIMED AND THE SURFACE COURSE LAID. ALL DAMAGED AREAS IN THE BINDER, BASE OR CURB AND GUTTER SHALL BE REPAIRED TO THE SATISFACTION OF THE OWNER PRIOR TO LAYING THE SURFACE COURSE. THE PAVING CONTRACTOR SHALL PROVIDE WHATEVER EQUIPMENT AND MANPOWER IS NECESSARY, INCLUDING THE USE OF POWER BROOMS TO PREPARE THE PAVEMENT FOR APPLICATION OF THE SURFACE COURSE. EQUIPMENT AND MANPOWER TO CLEAN PAVEMENT SHALL BE CONSIDERED INCIDENTAL TO THE COST OF THE CONTRACT. PRIME COAT ON THE BINDER COARSE SHALL BE CONSIDERED AS INCIDENTAL TO THE COST OF THE CONTRACT AND SHALL BE APPLIED TO THE BINDER AT A RATE OF 0.5 GALLONS PER SQUARE YARD.

6. BACKFILLING ALONG PAVEMENT SHALL BE THE RESPONSIBILITY OF THE EARTHWORK CONTRACTOR.

7. IT SHALL BE THE RESPONSIBILITY OF THE PAVING CONTRACTOR TO REMOVE FROM THE SITE ANY AND ALL MATERIAL AND DEBRIS, WHICH RESULTS FROM HIS CONSTRUCTION OPERATIONS AT NO ADDITIONAL EXPENSE TO THE OWNER.

8. TESTING OF THE SUB-BASE, BASE COURSE, BINDER COURSES AND SURFACE COURSE WORK SHALL BE REQUIRED IN ACCORDANCE WITH THE "I.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION" CURRENT EDITION, AND IN ACCORDANCE WITH THE SPECIFIC REQUIREMENTS OF THE GOVERNING MUNICIPALITY. A QUALIFIED TESTING FIRM SHALL BE EMPLOYED BY THE OWNER TO PERFORM THE REQUIRED TESTS.

TRAFFIC CONTROL NOTES:

1. CONTRACTOR SHALL SUPPLY TRAFFIC CONTROL AS REQUIRED ALONG THE EDGE OF POWIS ROAD WHILE COMPLETING WORK IN THE RIGHT OF WAY. THE TRAFFIC CONTROL SHALL INCLUDE ALL WORK, EQUIPMENT AND LABOR NECESSARY TO INSTALL AND MAINTAIN THE TRAFFIC PROTECTION UNTIL THE WORK IS COMPLETED WITH IN THE RIGHT OF WAY.

2. THE TRAFFIC CONTOL PLAN SHALL BE IN ACCORDANCE WITH THE APPLICABLE SECTIONS OF THE STANDARD SPECIFICATIONS, THE SUPPLEMENTAL SPECIFICATIONS AND THE "ILLINOIS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS".

3. CONTRACTOR TO SUPPLY TRAFFIC CONTROL AND FLAGMEN AS REQUIRED TO KEEP BOTH LANES OF POWIS ROAD OPEN TO TRAFFIC DURING WORKING HOURS.

4. ALL DRUMS AND BARRICADES IMMEDIATELY ADJACENT TO THE EDGE OF TRAVELED WAY SHALL BE EQUIPPED WITH STEADY-BURN MONO-DIRECTIONAL LIGHTS.

5. ANY MODIFICATIONS TO THE TRAFFIC CONTROL SHALL BE SUBMITTED TO THE ENGINEER AND THE CITY OF WEST CHICAGO FOR REVIEW.

CITY OF WEST CHICAGO STANDARD WATER NOTES

1. PIPE
CLASS 52 DUCTILE IRON, CEMENT LINED ASPHALTIC COATING OR PAINT, PUSH ON JOINTS, POLYETHYLENE ENCASED WITH TAPED JOINTS. ALL PVC PIPE SHALL CONFORM TO AWWA C-900 SPECS, AND ONLY BE USED UPON CITY APPROVAL. ALL POLYETHYLENE PIPE SHALL CONFORM TO AWWA C-906 SPECS AND ONLY BE USED UPON CITY APPROVAL.
2. MAIN LINE VALVE
VALVES 16" AND SMALLER – SHALL BE RESILIENT WEDGE TYPE, RATED FOR 250 PSI WORKING PRESSURE AND MEET AWWA C-509 AND C-515 SPECS. VALVES SHALL HAVE FACTORY INSTALLED 304 STAINLESS STEEL EXTERIOR BOLTING. ALL INTERNAL AND EXTERNAL SURFACES SHALL HAVE A FUSION BONDED EPOXY COATING. VALVES SHALL BE AMERICAN FLOW CONTROL, CLOW, EAST JORDAN, OR MUELLER.
VALVES LARGER THAN 16" – SHALL BE BUTTERFLY STYLE, EITHER CLOW SERIES 4500 MJ OR HENRY PRATT GROUND HOG. ALL VALVES SHALL HAVE 'OPTIONAL' EPOXY COATING CONFORMED TO AWWA C-550 SPECS, AND BE SUPPLIED WITH 2" OPERATING NUT. ALL EXTERIOR BOLTS WILL BE FACTORY INSTALLED 304 STAINLESS STEEL.
VALVE OPERATING NUTS DEEPER THAN 7" – MAY REQUIRE VALVE OPERATING ROD EXTENSIONS.
3. INSERTION VALVES
UNITED STATES PIPE AND FOUNDRY COMPANY INSERTION VALVE WITH SLEEVE AND RETAINER RINGS.
PART NUMBER 910314

STORMWATER MANAGEMENT
DETENTION DESIGN COMPUTATIONS
FOR HOVING- WEST DUPAGE RECYCLING & TRANSFER, LLC
IN WEST CHICAGO, IL
BY
TEBRUGGE ENGINEERING
410 E. CHURCH ST. SUITE A
SANDWICH, IL

WEST DUPAGE RECYCLING IS COMPLETING SITE RENOVATIONS, BUILDING EXPANSIONS AND PARKING LOT IMPROVEMENTS FOR THEIR RECYCLING BUSINESS LOCATED AT 1655 POWIS ROAD IN WEST CHICAGO,IL. THE SITE COVERS 27.64 ACRES AND THERE CURRENTLY EXISTS A WEST AND EAST DETENTION POND. REVIEW OF THE SITE GRADES SHOWS 3.39 ACRES TRIBUTARY TO THE WEST POND AND 17.38 ACRES TRIBUTARY TO THE EAST POND. THERE IS 6.87 ACRES CONSISTING OF WETLANDS, LAND ADJACENT TO KRESS CREEK AND PORTIONS OF THE NORTH AND WEST PROPERTY WHICH DRAIN AWAY FROM THE PONDS.

WEST POND ANALYSIS: TRIBUTARTY AREA = 3.39 AC
SUMMARY OF AREAS – PAVEMENT AREA = 1.73AC & GRASS= 1.40 AC & POND = 0.26 AC

CALCULATION OF PROPOSED SITE CURVE NUMBER (CN)

IMPERVIOUS (PARKING LOT):	96 X 1.70 AC = 163.20
PERVIOUS (GREEN AREAS):	65 X 1.44 AC = 93.60
DETENTION POND :	90 X 0.25 AC = 22.50
TOTAL:	3.39 AC = 279.3

CN (WEIGHTED) = 279.3/3.39 AC. = 82.3 USE CN = 82

EAST POND ANALYSIS: TRIBUTARTY AREA = 17.38 AC
SUMMARY OF AREAS – PAVEMENT/BUILDING AREA = 8.78 AC & GRASS = 1.58 AC
POND = 3.85 AC & GRAVEL AREAS= 3.17

CALCULATION OF PROPOSED SITE CURVE NUMBER (CN)

IMPERVIOUS (BUILDING & PARKING LOT):	96 X 8.78 AC = 842.88
PERVIOUS (GREEN AREAS):	65 X 1.58 AC = 102.70
DETENTION POND :	90 X 3.85 AC = 346.50
GRAVEL AREAS :	82 X 3.17 AC = 259.94
TOTAL:	17.38 AC = 1552.02

CN (WEIGHTED) = 1552.02/17.38 AC. = 89.2 USE CN = 89

RESTRICTOR SIZING: Q = CA (2GH) 1/2

West Pond -100 yr Q allow = 0.10 * 3.39 AC. = 0.34 cfs West Pond has 4" restrictor
East Pond - 100 yr Q allow = 0.10 * 17.38 AC = 1.74 cfs East Pond has 6" restrictor

ectronic Filing: Received, Clerk's Office 04/19/202

RE: FACILITY: WEST DUPAGE RECYCLING & TRANSFER WEST CHICAGO, IL
COUNTY: DU PAGE NPDES Permit No:ILR10V500
Notice of Termination Under Construction Site Activity Storm Water General Permit

Dear NPDES Permittee:

Thank you for notifying us that construction activities at the above referenced site have ceased and that final stabilization of the site has been completed. Based on your notification, we have terminated Permit Number ILR10V500 effective immediately.

If you have any questions or comments regarding the above, or if we can be of any further assistance, please contact Melissa Parrott at the above telephone number.

Very truly yours,

Alan Keller, P.E.
Manager, Permit Section
Division of Water Pollution Control

SANDWICH, IL

WEST DUPAGE RECYCLING IS COMPLETING SITE RENOVATIONS, BUILDING EXPANSIONS AND PARKING LOT IMPROVEMENTS FOR THEIR RECYCLING BUSINESS LOCATED AT 1655 POWIS ROAD IN WEST CHICAGO,IL. THE SITE COVERS 27.64 ACRES AND THERE CURRENTLY EXISTS A WEST AND EAST DETENTION POND. REVIEW OF THE SITE GRADES SHOWS 3.39 ACRES TRIBUTARY TO THE WEST POND AND 17.38 ACRES TRIBUTARY TO THE EAST POND. THERE IS 6.87 ACRES CONSISTING OF WETLANDS, LAND ADJACENT TO KRESS CREEK AND PORTIONS OF THE NORTH AND WEST PROPERTY WHICH DRAIN AWAY FROM THE PONDS.

WEST POND ANALYSIS: TRIBUTARTY AREA = 3.39 AC
SUMMARY OF AREAS – PAVEMENT AREA = 1.73AC & GRASS= 1.40 AC & POND = 0.26 AC

CALCULATION OF PROPOSED SITE CURVE NUMBER (CN)

IMPERVIOUS (PARKING LOT):	96 X 1.70 AC = 163.20
PERVIOUS (GREEN AREAS):	65 X 1.44 AC = 93.60
DETENTION POND :	90 X 0.25 AC = 22.50
TOTAL:	3.39 AC = 279.3

CN (WEIGHTED) = 279.3/3.39 AC. = 82.3 USE CN = 82

EAST POND ANALYSIS: TRIBUTARTY AREA = 17.38 AC
SUMMARY OF AREAS – PAVEMENT/BUILDING AREA = 8.78 AC & GRASS = 1.58 AC
POND = 3.85 AC & GRAVEL AREAS= 3.17

CALCULATION OF PROPOSED SITE CURVE NUMBER (CN)

IMPERVIOUS (BUILDING & PARKING LOT):	96 X 8.78 AC = 842.88
PERVIOUS (GREEN AREAS):	65 X 1.58 AC = 102.70
DETENTION POND :	90 X 3.85 AC = 346.50
GRAVEL AREAS :	82 X 3.17 AC = 259.94
TOTAL:	17.38 AC = 1552.02

CN (WEIGHTED) = 1552.02/17.38 AC. = 89.2 USE CN = 89

RESTRICTOR SIZING: Q = CA (2GH) 1/2

GENERAL NOTES

ANY DISCREPANCIES IN SITE CONDITIONS, FIELD MEASUREMENTS AND OR PLAN CONFIGURATIONS SHOULD BE BROUGHT TO THE ATTENTION OF THE ARCHITECT IMMEDIATELY!

DO NOT SCALE DRAWINGS

ALL WORK PERFORMED SHALL COMPLY WITH ALL APPLICABLE LOCAL AND STATE BUILDING CODES, ORDINANCES REGULATIONS AND ALL OTHER AUTHORITIES HAVING JURISDICTION

CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND DIMENSIONS ON THE JOB SITE, AND SHALL IMMEDIATELY NOTIFY THE ARCHITECT OF ANY DISCREPANCIES BEFORE PROCEEDING WITH WORK OR BE RESPONSIBLE FOR SAME

ALL MATERIALS TO BE INSTALLED PER MANUFACTURERS SPECIFICATIONS

THE OWNER AND / OR GENERAL CONTRACTOR RECOGNIZE AND AGREE THAT THE ARCHITECT AND OR DESIGNER IS NOT TO PROVIDE ANY ON-SITE SERVICES AND WILL NOT EXERCISE ANY CONTROL, NOR PROVIDE ANY SUPERVISION OF SITE CONDITION NOR WORKING CONDITIONS OR CONSTRUCTION PRACTICES.

THESE PLANS WHERE PREPARED UNDER MY SUPERVISION AND TO THE BEST OF MY KNOWLEDGE COMPLY TO ALL APPLICABLE CODES AND ORDINANCES IN FORCE AT THE TIME PLANS WERE ISSUED.

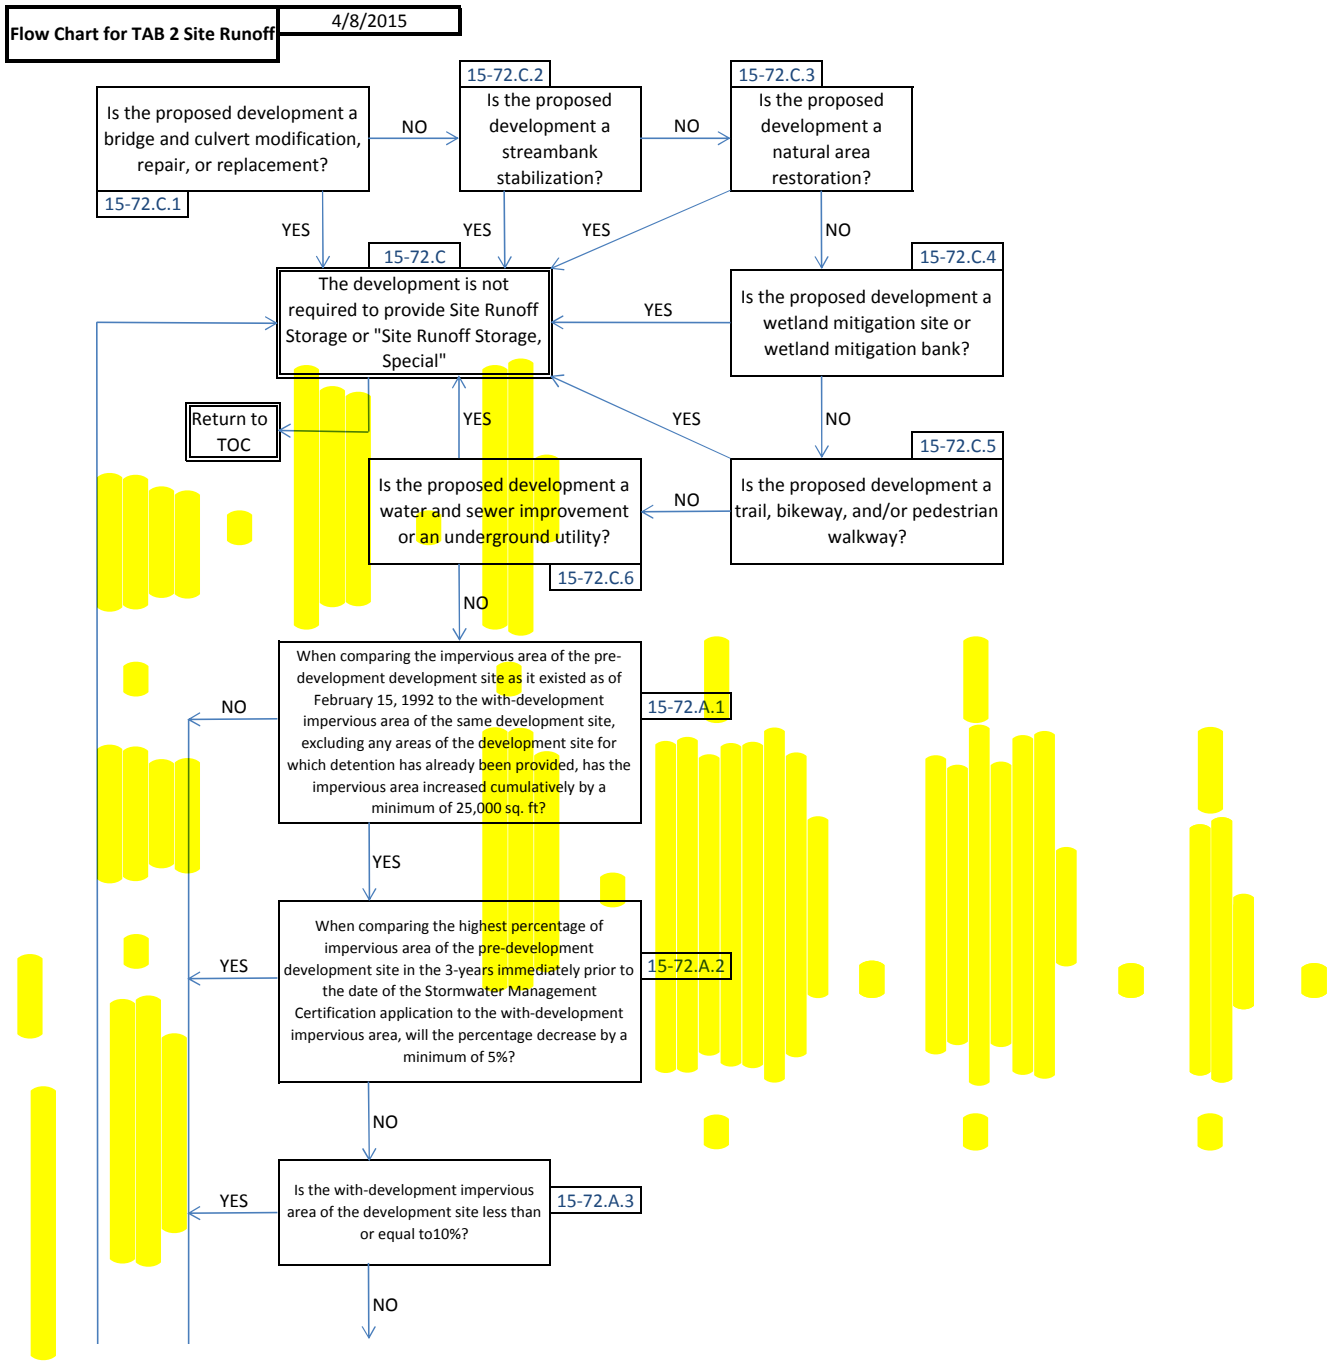
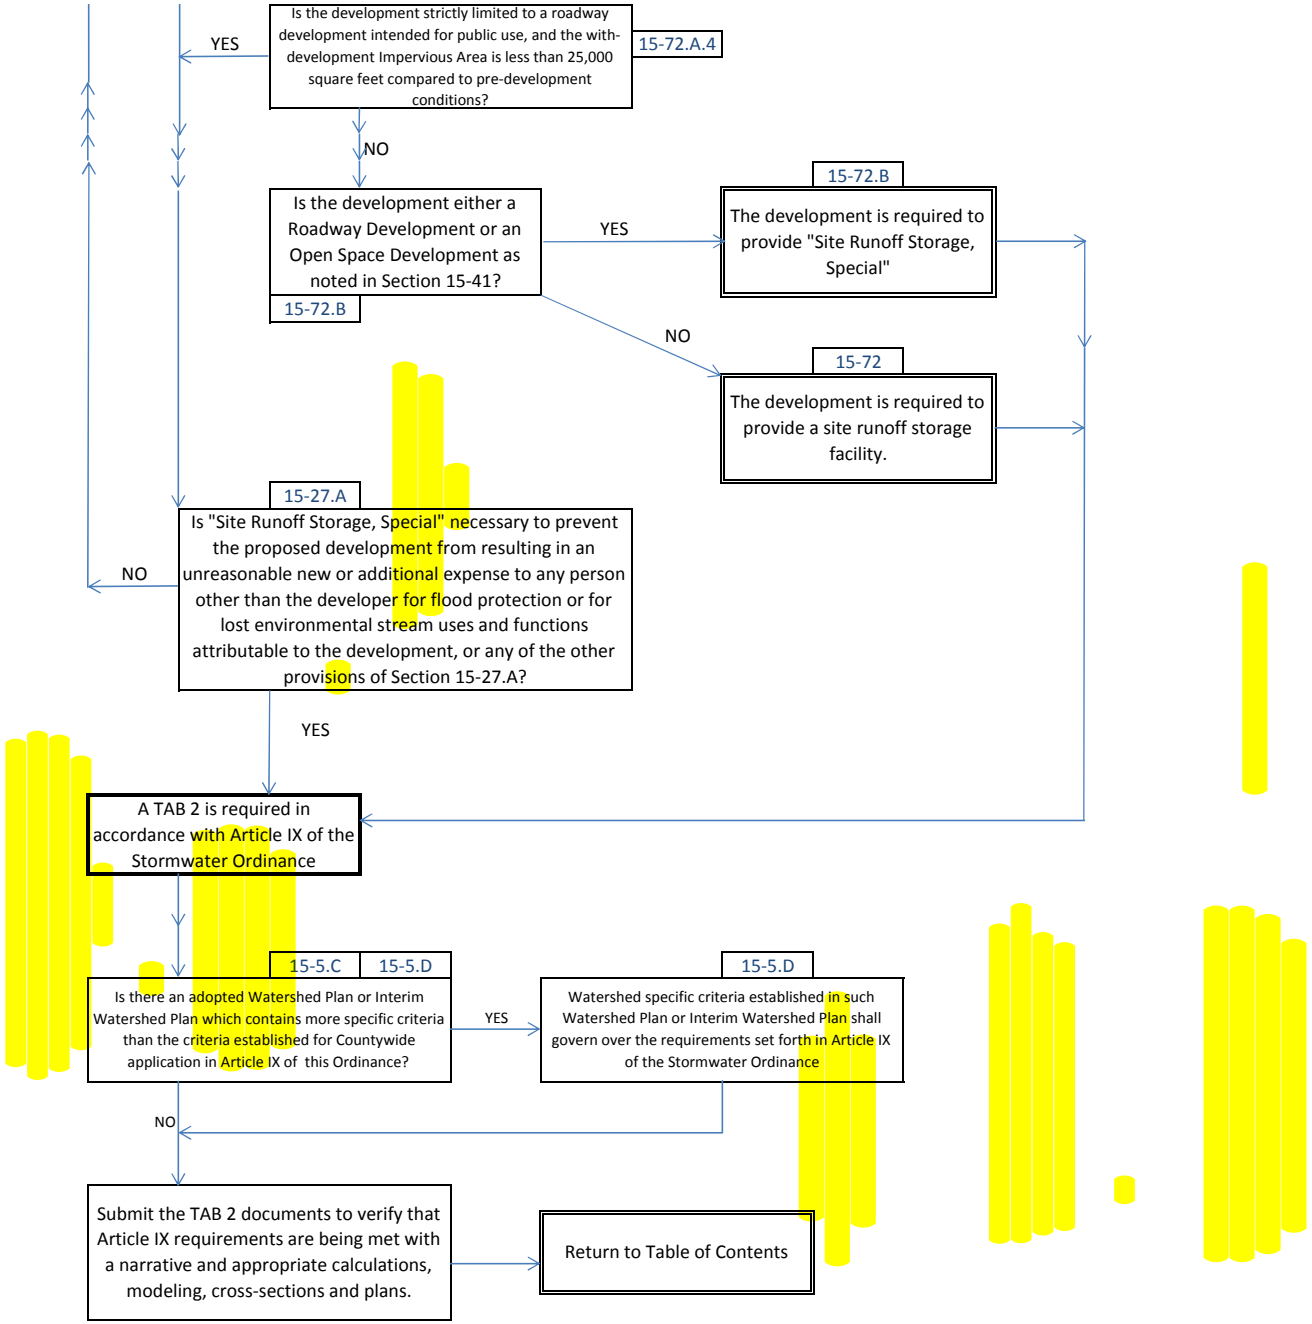
TAB 2

SITE RUNOFF STORAGE



Flow Chart for TAB 2 Site Runoff
4/8/2015
Is the proposed development a bridge and culvert modification, repair, or replacement?
15-72.C.1
NO
15-72.C.2
Is the proposed development a streambank stabilization?
NO
15-72.C.3
Is the proposed development a natural area restoration?
YES
YES
YES
NO
15-72.C
The development is not required to provide Site Runoff Storage or "Site Runoff Storage, Special"
YES
15-72.C.4
Is the proposed development a wetland mitigation site or wetland mitigation bank?
Return to TOC
YES
YES
NO
15-72.C.5
Is the proposed development a water and sewer improvement or an underground utility?
NO
Is the proposed development a trail, bikeway, and/or pedestrian walkway?
15-72.C.6
NO
When comparing the impervious area of the pre-development development site as it existed as of February 15, 1992 to the with-development impervious area of the same development site, excluding any areas of the development site for which detention has already been provided, has the impervious area increased cumulatively by a minimum of 25,000 sq. ft?
15-72.A.1
NO
YES
When comparing the highest percentage of impervious area of the pre-development development site in the 3-years immediately prior to the date of the Stormwater Management Certification application to the with-development impervious area, will the percentage decrease by a minimum of 5%?
15-72.A.2
YES
NO
Is the with-development impervious area of the development site less than or equal to10%?
15-72.A.3
YES
NO



Is the development strictly limited to a roadway development intended for public use, and the with-development Impervious Area is less than 25,000 square feet compared to pre-development conditions?
15-72.A.4
YES
NO
Is the development either a Roadway Development or an Open Space Development as noted in Section 15-41?
15-72.B
YES
15-72.B
The development is required to provide "Site Runoff Storage, Special"
NO
15-72
The development is required to provide a site runoff storage facility.
15-27.A
Is "Site Runoff Storage, Special" necessary to prevent the proposed development from resulting in an unreasonable new or additional expense to any person other than the developer for flood protection or for lost environmental stream uses and functions attributable to the development, or any of the other provisions of Section 15-27.A?
NO
YES
A TAB 2 is required in accordance with Article IX of the Stormwater Ordinance
15-5.C
15-5.D
Is there an adopted Watershed Plan or Interim Watershed Plan which contains more specific criteria than the criteria established for Countywide application in Article IX of this Ordinance?
YES
15-5.D
Watershed specific criteria established in such Watershed Plan or Interim Watershed Plan shall govern over the requirements set forth in Article IX of the Stormwater Ordinance
NO
Submit the TAB 2 documents to verify that Article IX requirements are being met with a narrative and appropriate calculations, modeling, cross-sections and plans.
Return to Table of Contents

TAB 2. SITE RUNOFF STORAGE

Site runoff storage is required by DuPage County for developments with a net new impervious area of 25,000 square feet or greater. Site runoff storage facilities consist of the east and west detention ponds, each including a restrictor structure with an emergency overflow.

The maximum allowable release rate, as defined in the Ordinance, is equal to 0.10 cubic feet per second (cfs) multiplied by the number of acres disturbed by the development. As communicated in Tab 1, our approach to the analysis assumed all upstream tributary to the ponds was "disturbed." The design rainfall depth and duration is the 100-year, 24-hour duration ISWS Bulletin 71 rainfall depth. Details and exceptions to site runoff storage requirements are in Article IX of the Ordinance.

The following items are being submitted to demonstrate and support that the application for certification is in compliance with the Ordinance:

- A scaled plan or plans illustrating the major and minor conveyance system, including the size, type, length, and inverts of conveyance structures including drainage pipes, culverts, manholes, catch basins, inlets, and drain tiles. **Provided on Drawing C100 of the Plan Set in Tab 8, Attachment 8-1.**
- A scaled exhibit illustrating the existing impervious area of the site prior to the certification along with a calculation of the percentage of the site that is impervious. **Provided as Figure 2-1, Stormwater Facilities Map.**
- A scaled exhibit illustrating the proposed impervious surfaces of the development. **Provided on Drawings C200 to C202 of the Plan Set in Tab 8, Attachment 8-1.**
- Calculations of the percentage of impervious surfaces after complete construction of the proposed development. **Provided on Figure 2-1, Stormwater Facilities Map.**
- Scaled plans illustrating the location of and details for site runoff storage. **Provided on Figure 2-1, Stormwater Facilities Map.**
- Calculations that establish the required site runoff storage volume along with calculations confirming that the proposed plan achieves either the site runoff storage or the modified site runoff storage. **Provided as Attachment 2-1.**
- When site runoff storage special is required, calculations that demonstrate the specified post-development discharges have not exceeded the predevelopment values. **This part is not applicable to the proposed development project.**

Both ponds will be expanded based on the analyses, and a new restrictor will be added to each. The east pond will include a dual stage restrictor & weir which provides both the required volume control storage (with release over 48 – 96 hours) as well as the 100-year release rate restrictor. The 100-year release rate restrictor was sized assumed free release from the pond; however, the detention pond volume was determined assuming Kress Creek as at 100-year flood stage (i.e. tailwater condition).

Due to the addition of increased restriction (as compared to existing condition), post-development discharges are decreased for both ponds as compared to pre-development. The design normal water level, high water level, volume, and other design details for each pond are provided in the project drawings (Attachment 8-1) and within the calculation summary (Attachment 2-1).

East Detention Pond
24-hr, 100-yr event, tailwater condition

Summary Results for Reservoir "East Pond"

Project: Project 2 Simulation Run: 100YR24HR
Reservoir: East Pond

Start of Run:	01Jan2000, 00:00	Basin Model:	Final
End of Run:	03Jan2000, 00:00	Meteorologic Model:	100YR24HR
Compute Time:	24Sep2019, 16:26:22	Control Specifications:	24HR

Volume Units: (•) IN ( ) AC-FT

Computed Results

Peak Inflow:	17.88 (CFS)	Date/Time of Peak Inflow:	01Jan2000, 15:00
Peak Discharge:	1.89 (CFS)	Date/Time of Peak Discharge:	02Jan2000, 00:09
Inflow Volume:	7.26 (IN)	Peak Storage:	19.94 (AC-FT)
Discharge Volume:	2.97 (IN)	Peak Elevation:	754.16 (FT)

East Detention Pond
24-Hour, 100-year Event,
With Tailwater

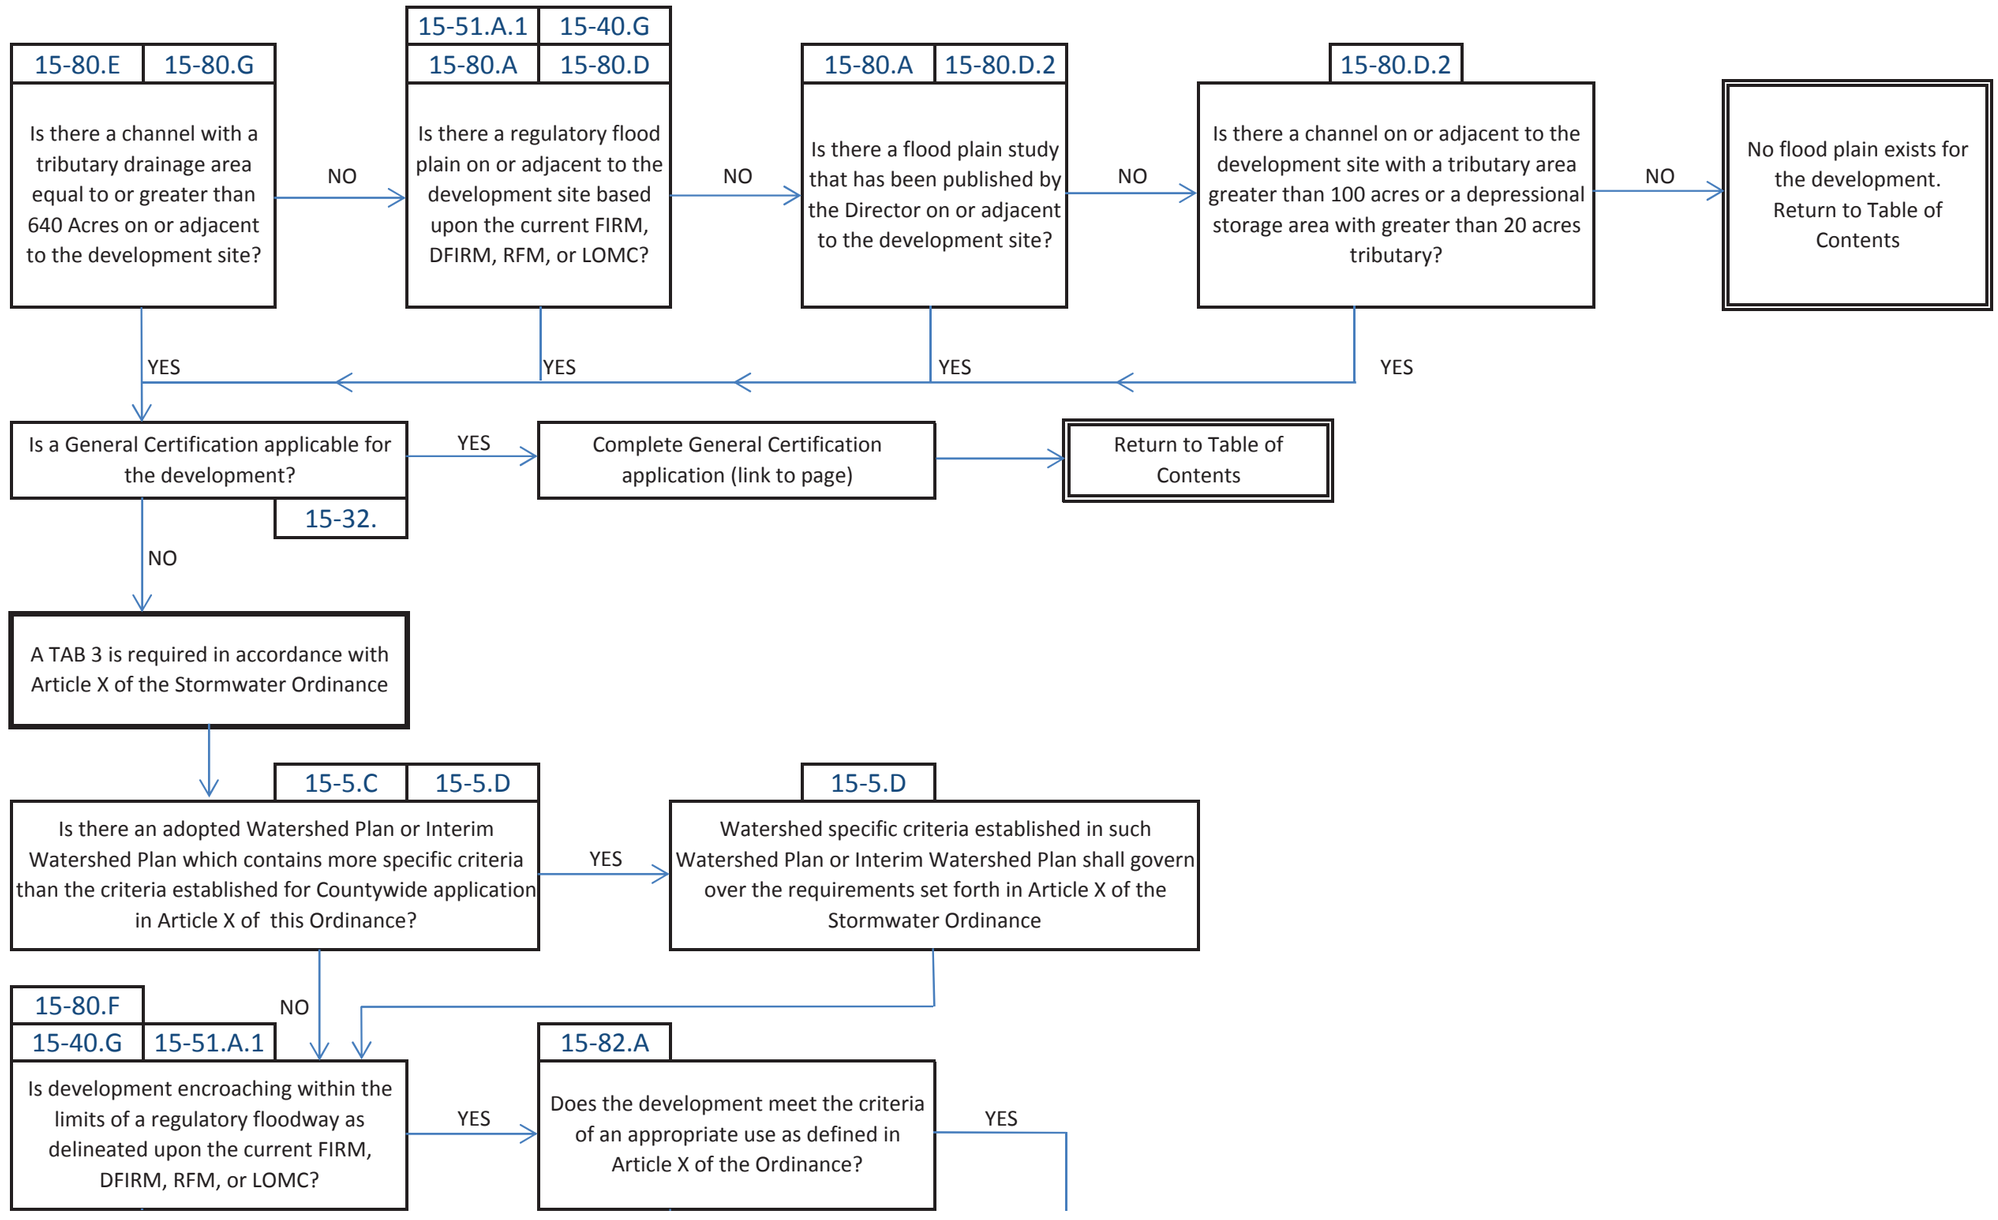
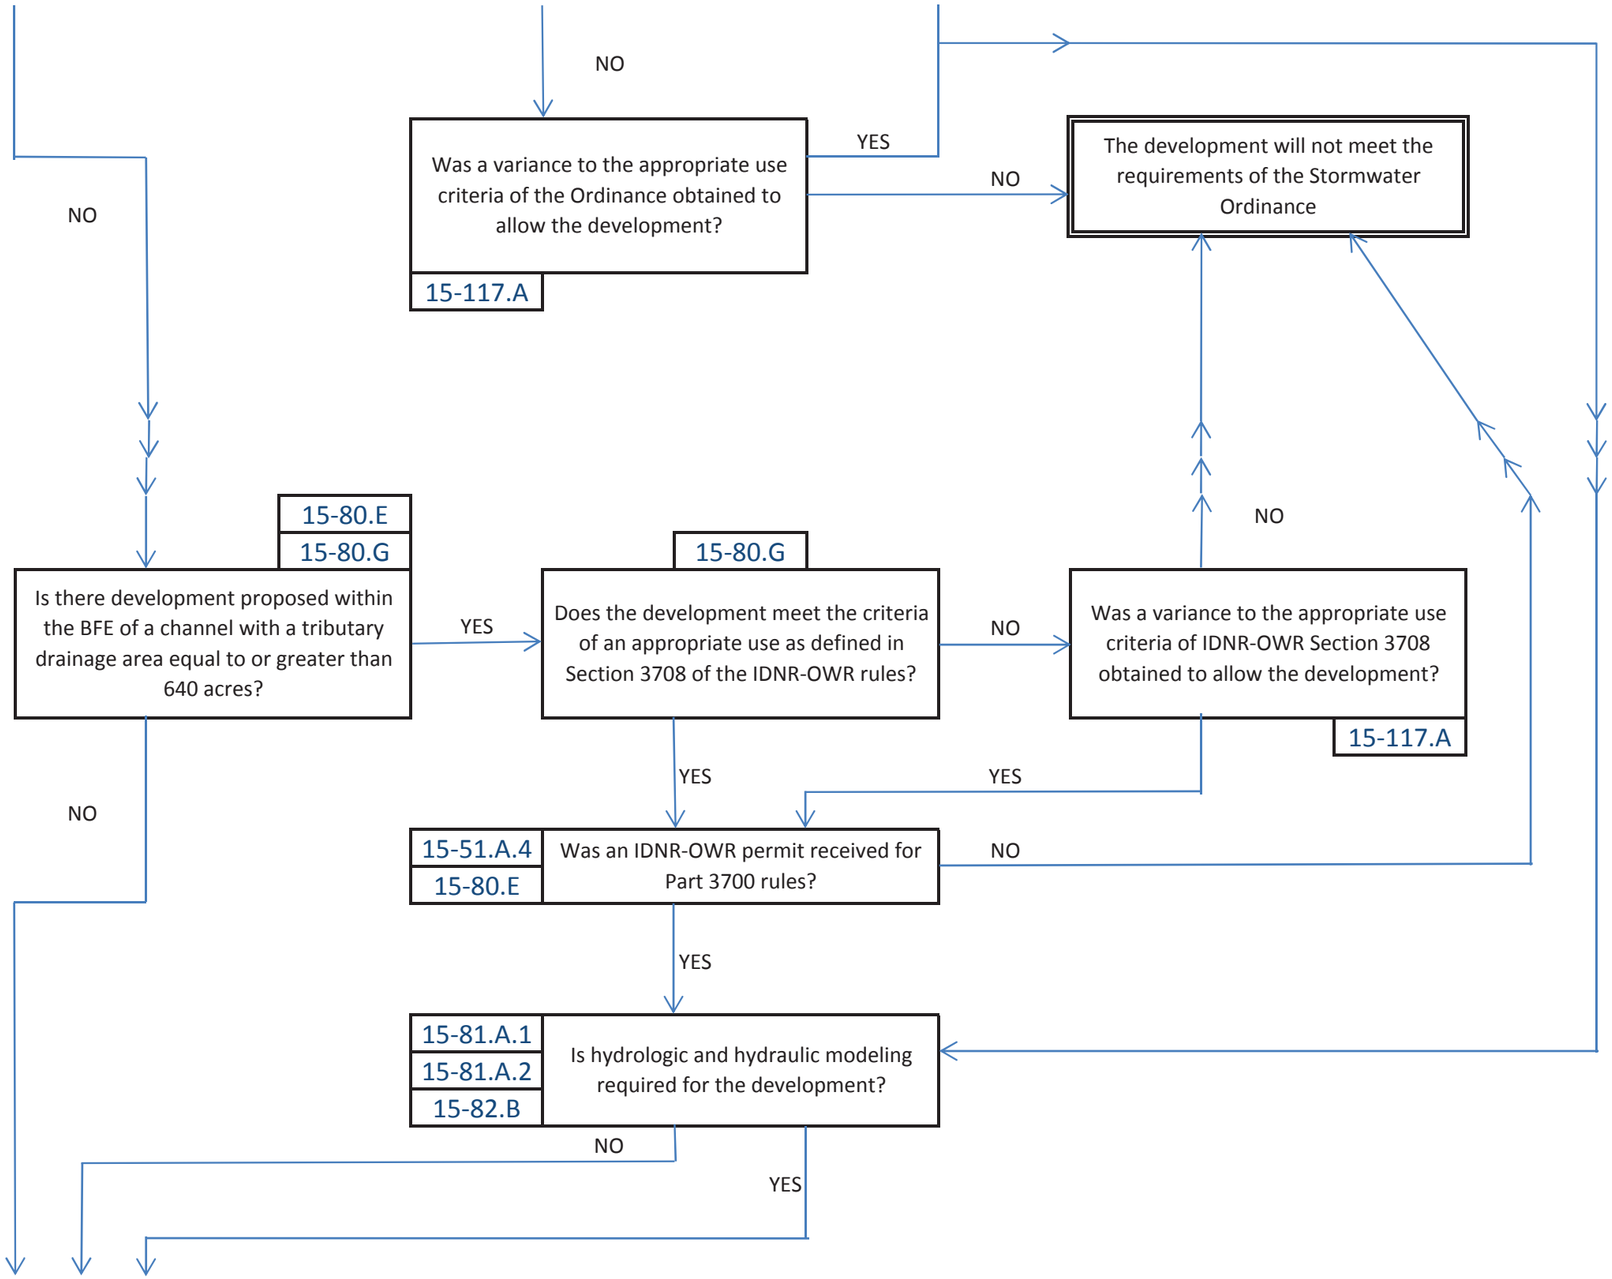
FLOOD PLAIN

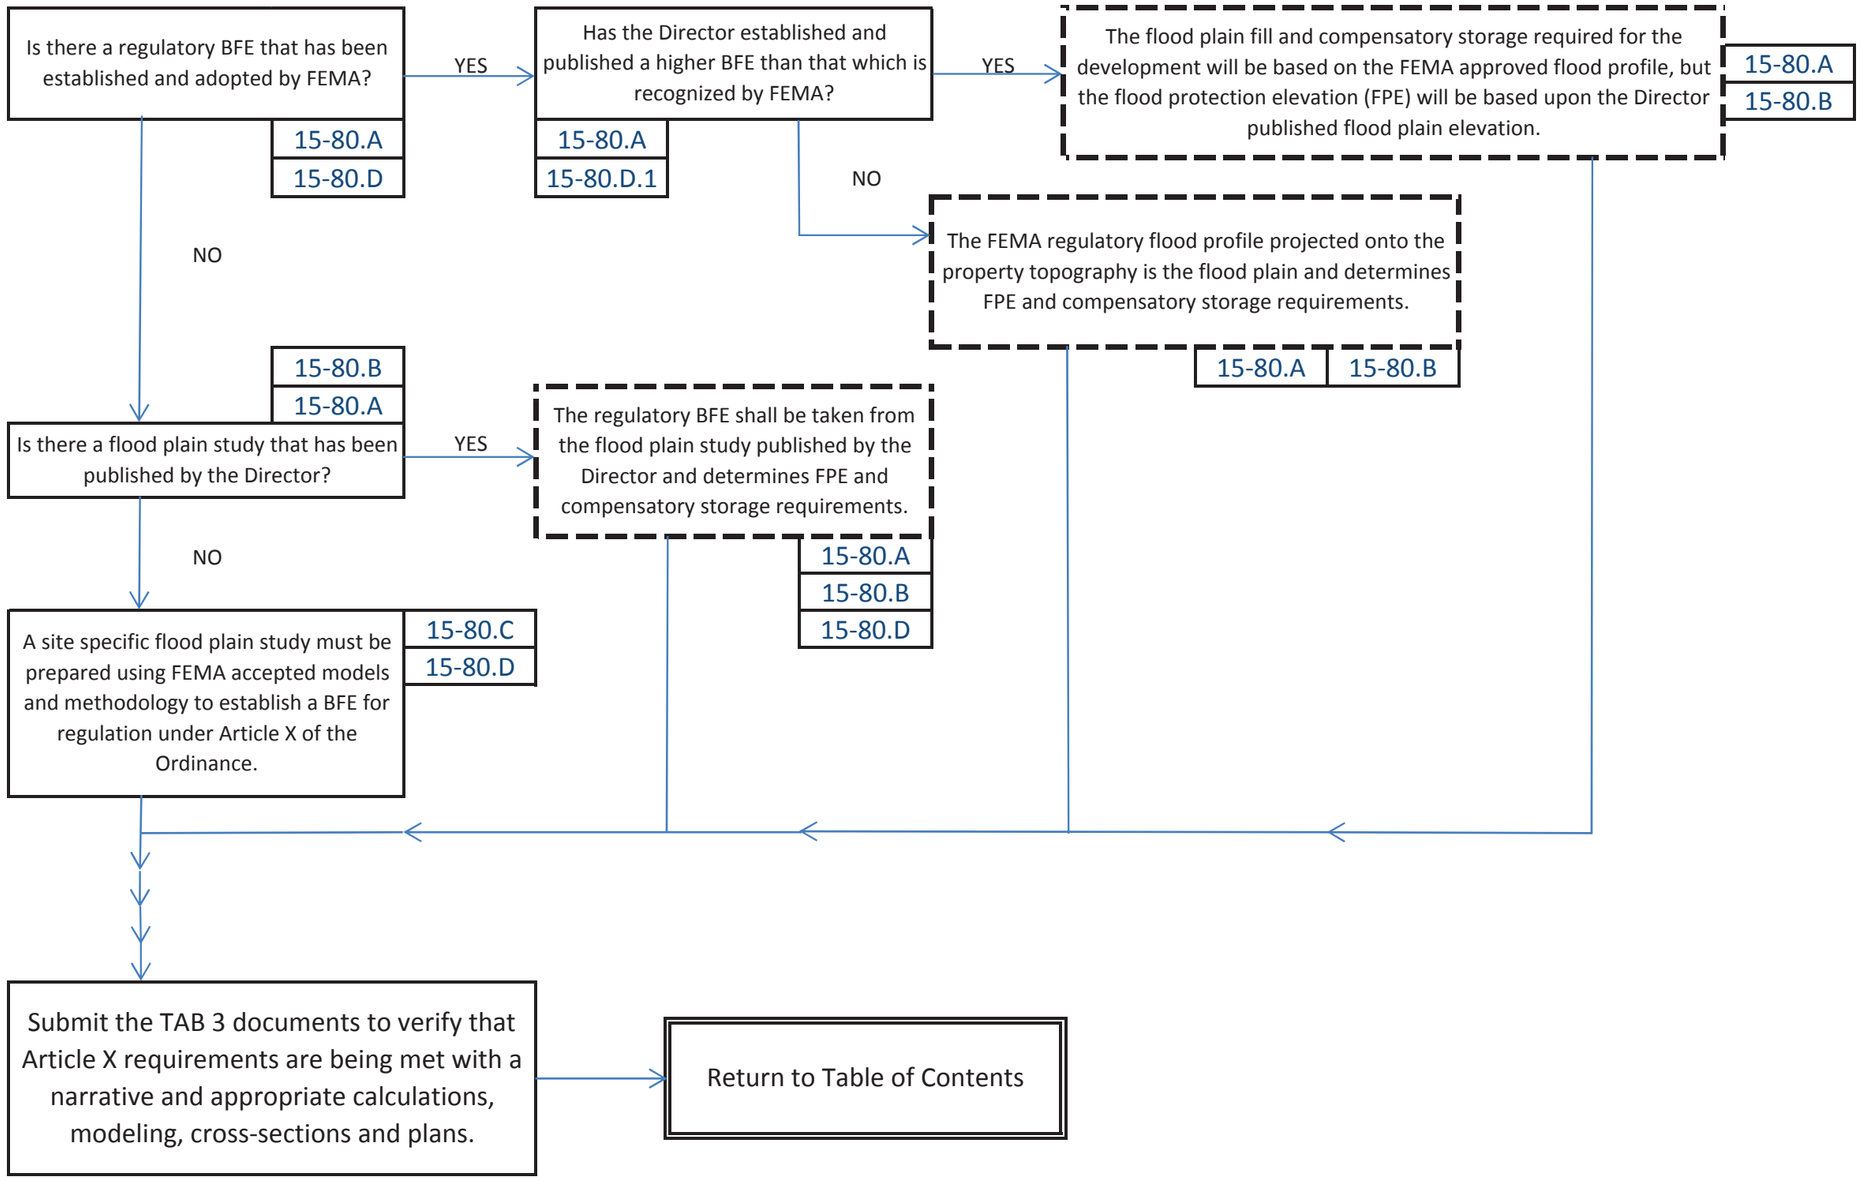
TAB 3 Flood Plain

9/22/2015





NO
Was a variance to the appropriate use criteria of the Ordinance obtained to allow the development?
15-117.A
YES
NO
The development will not meet the requirements of the Stormwater Ordinance
NO
15-80.E
15-80.G
Is there development proposed within the BFE of a channel with a tributary drainage area equal to or greater than 640 acres?
YES
15-80.G
Does the development meet the criteria of an appropriate use as defined in Section 3708 of the IDNR-OWR rules?
NO
NO
Was a variance to the appropriate use criteria of IDNR-OWR Section 3708 obtained to allow the development?
15-117.A
NO
YES
YES
15-51.A.4
15-80.E
Was an IDNR-OWR permit received for Part 3700 rules?
NO
YES
15-81.A.1
15-81.A.2
15-82.B
Is hydrologic and hydraulic modeling required for the development?
NO
YES



Is there a regulatory BFE that has been established and adopted by FEMA?
15-80.A
15-80.D
YES
Has the Director established and published a higher BFE than that which is recognized by FEMA?
15-80.A
15-80.D.1
YES
The flood plain fill and compensatory storage required for the development will be based on the FEMA approved flood profile, but the flood protection elevation (FPE) will be based upon the Director published flood plain elevation.
15-80.A
15-80.B
NO
The FEMA regulatory flood profile projected onto the property topography is the flood plain and determines FPE and compensatory storage requirements.
15-80.A
15-80.B
NO
15-80.B
15-80.A
Is there a flood plain study that has been published by the Director?
YES
The regulatory BFE shall be taken from the flood plain study published by the Director and determines FPE and compensatory storage requirements.
15-80.A
15-80.B
15-80.D
NO
A site specific flood plain study must be prepared using FEMA accepted models and methodology to establish a BFE for regulation under Article X of the Ordinance.
15-80.C
15-80.D
Submit the TAB 3 documents to verify that Article X requirements are being met with a narrative and appropriate calculations, modeling, cross-sections and plans.

TAB 3. FLOOD PLAIN

Kress Creek abuts the property on the east side of the Facility and is the location of both the current and proposed east detention pond outfall. At the location of the outfall, the Kress Creek upstream tributary area includes approximately 0.99 square miles of drainage. Based on the current Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), and associated Flood Insurance Study for DuPage County, Illinois and Incorporated Areas, Volume 1-6, Revised" August 1, 2019 (FIS), the Kress Creek 100-year base flood encroaches on the east side of the site. The FIRM does not indicate presence of floodway on the site (other than within the immediate banks of Kress Creek). A copy of the United States Geological Survey (USGS) "Streamstats" report for Kress Creek, a notated 2019 FIRM, and relevant portions of the FIS are provided as Attachments 3-1 through 3-3, respectively.

The 100-year base flood elevation (BFE) based on the current FIS is 752.25. Based on the topographic survey, the BFE only encroaches on the site in an area located north of the existing spur track as delineated on project drawings located in Tab 8, Attachment 8-1. Proposed improvements in this area are offset a minimum of 25-feet from the BFE. The rest of the west bank of Kress Creek is greater than 752.25 elevation; therefore, no additional site encroachments exist other than the connection of the east pond outfall to the creek, as discussed further below.

The existing east pond outfall is restricted with an 8-inch restrictor and is pitched towards the creek. The 8-inch restrictor invert is 750.54, which is a 1.71 foot hydraulic difference compared to the 100-year high water level of Kress Creek (752.25). Using a Manning's equation analysis of the hydraulic difference reveals that the flow back towards the pond under 100-year high water level conditions is 1.68 cubic feet per second (cfs).

Manning's Equation:

$$Q = VA = \left(\frac{1.49}{n}\right) AR^{\frac{2}{3}} \sqrt{S} \quad [U.S.]$$

$$Q = VA = \left(\frac{1.00}{n}\right) AR^{\frac{2}{3}} \sqrt{S} \quad [SI]$$

Per Table 8 of Volume 1 of 6 of the FIS, the 100-year flow in Kress Creek adjacent to the site is 52 cfs, therefore, the "backflow" at flood stage is only 3.2% of the existing bypass flow. Based on this analysis, there is negligible hydraulic conductivity between the east pond and Kress Creek at flood stage, and, as such, no existing floodplain storage within the east pond. What little hydraulically conductivity exists will be maintained with a nearly identically sized restrictor (7.15-inch) to meet Ordinance requirements for detention. Additionally, the east pond volume is being increased for detention purposes from 7.61 acre-feet (ac-ft) to 19.94 ac-ft. Based on this, storage

available will be increased significantly for the negligible amount of water that could backflow into the east pond versus pre-development conditions.

The existing outfall will be reused downstream of the new restrictor structure. The existing outfall is vegetated. The proposed outfall restrictor is smaller than the existing, therefore, release rate is lower under proposed conditions than existing. As such, no additional outlet protection is proposed which will avoid any impacts to Kress Creek.

In summary, the proposed development does not encroach on the regulatory floodplain, pond restrictor is similarly sized for the negligible backflow in flood condition, pond volume is significantly increased in comparison to the predevelopment conditions, and there are no impacts to the floodway except for the outfall protection in Kress Creek.

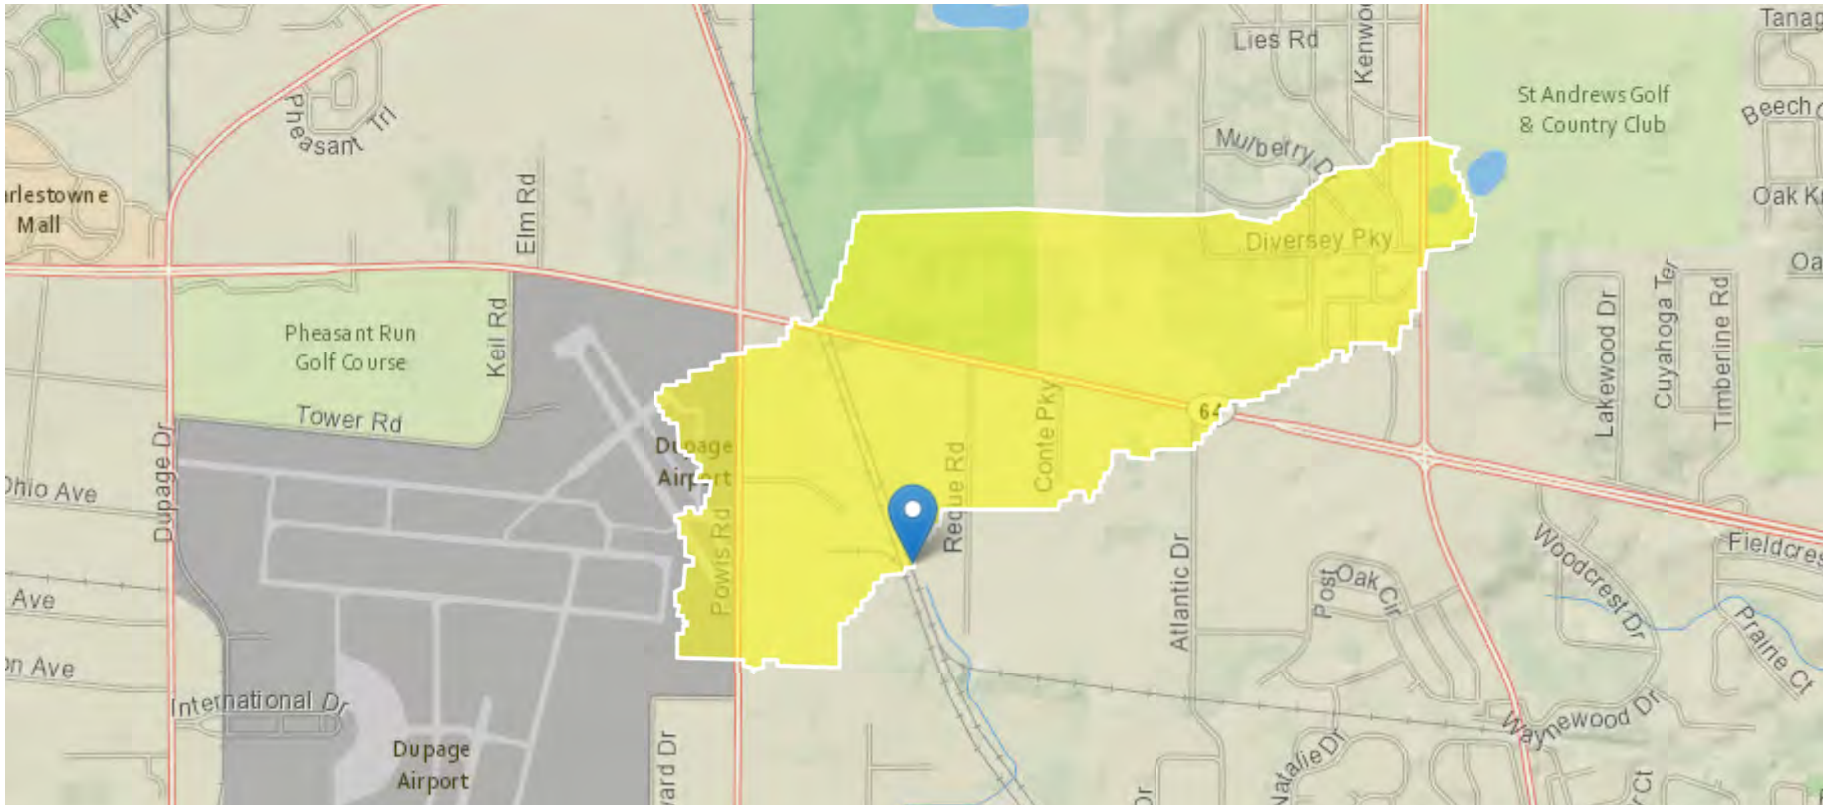
ATTACHMENT 3-1

STREAM STATS

Electronic Filing: Received, Clerk's Office 04/19/2023 C000638

Kress Creek Report at 1655 Powis Road Outfall

Region ID:	IL
Workspace ID:	IL20190521132210042000
Clicked Point (Latitude, Longitude):	41.91184, -88.23056
Time:	2019-05-21 08:22:27 -0500



Existing and proposed outfall is located just south of spur track.

Electronic Filing: Received, Clerk's Office 04/19/2023 C000639

Basin Characteristics

Parameter Code	Parameter Description	Value	Unit
BASLENAH	Basin length from outlet to basin divide determined using the method in the ArcHydro Toolset	2.04	miles
CSL1085RAW	Unadjusted 10-85 stream slope method in feet per mile.	21.705	feet per mi
CSL10_85	Change in elevation divided by length between points 10 and 85 percent of distance along main channel to basin divide - main channel method not known	19.95	feet per mi
BASINPERIM	Perimeter of the drainage basin as defined in SIR 2004-5262	6.7	miles
DRNAREA	Area that drains to a point on a stream	0.99	square miles
ELEVMAX	Maximum basin elevation	801	feet
FLC11DVLMH	Fraction of drainage area that is in low to high developed land-use classes 22-24 from NLCD 2011	0.549	decimal fraction
FSSURGDC78	Fraction of land area that is in very poorly drained and unknown likely water drainage classes 7 and 8 from SSURGO	0.337	decimal fraction
LC11DEV	Percentage of developed (urban) land from NLCD 2011 classes 21-24	67.9	percent
LC11IMP	Average percentage of impervious area determined from NLCD 2011 impervious dataset	28.3	percent
MINBELEV	Minimum basin elevation	754	feet
RELIEF	Maximum - minimum elevation	47.6	feet
RELRELF	Basin relief divided by basin perimeter	7.1	feet per mi
SOILPERM	Average Soil Permeability	4.066	inches per hour
URBTHE2010	Fraction of drainage area that is in urban classes 7 to 10 from Theobald 2010	0.558	dimensionless
WATWET	Percent open water and herbaceous wetland from NLCD	4.181	percent

Application Version: 4.3.0

ATTACHMENT 3-2

FLOOD INSURANCE RATE MAP

Electronic Filing: Received, Clerk's Office 04/19/2023

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or flood plain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or flood plain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

In the State of Illinois, any portion of a stream or watercourse that lies within the **floodway fringe** of a studied (AE) stream may have a state regulated floodway. The FIRM may not depict these state regulated floodways.

Floodways restricted by anthropogenic features such as bridges and culverts are drawn to reflect natural conditions and may not agree with the model computed widths listed in the Floodway Data table in the Flood Insurance Study report.

Multiple **topographic sources** may have been used in the delineation of Special Flood Hazard Areas. See Flood Insurance Study report for details on source resolution and geographic extent.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 16. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services, NOAA, N/NGS12
National Geodetic Survey SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at www.ngs.noaa.gov.

Base map information shown on this FIRM was provided in digital format by the Cook County Board of Commissioners. Color digital orthoimages with a 6-inch pixel resolution were photogrammetrically compiled from aerial photography acquired during the leaf-off period of spring 2012.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The Special Flood Hazard Areas and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

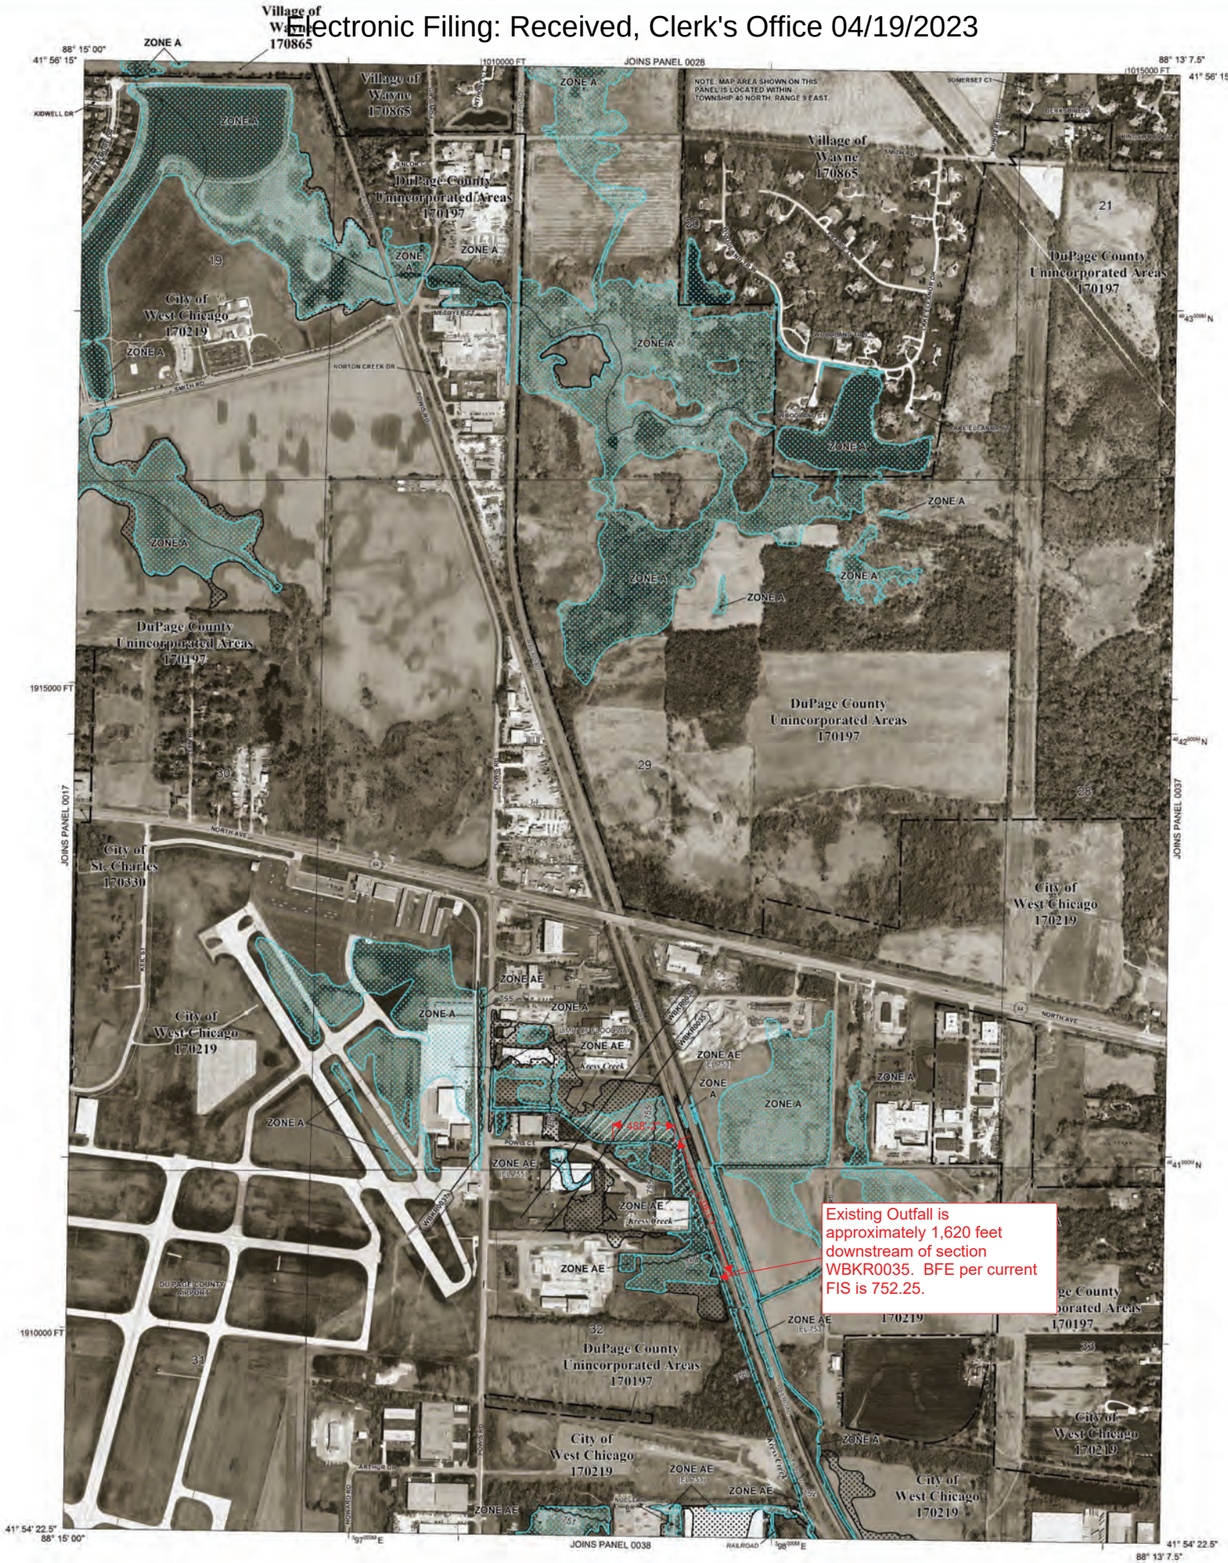
Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the Map Service Center (MSC) website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have **questions about this map**, how to order products or the National Flood Insurance Program in general, please call the **FEMA Map Information eXchange (FMIX)** at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.

PANEL INDEX

Panel Not Printed



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Areas formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X	Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D	Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- 513 — Base Flood Elevation line and value; elevation in feet*
- (EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

*Referenced to the North American Vertical Datum of 1988

- A — A — Cross section line
- 23 — 23 — Transect line
- 45° 02' 08", 93° 02' 12" — Geographic coordinates referenced to the North American Datum of 1983 (NAD 83)
- 4989000 N — 1000-meter Universal Transverse Mercator grid values, zone 16
- 1565000 FT — 5000-foot grid tick: Illinois State Plane East Coordinate System, 3776 zone (FIPSZONE 1201) Transverse Mercator
- DX5510 — Bench mark (see explanation in Notes to Users section of this FIRM panel)
- M1.5 — River Mile

EFFECTIVE DATE OF COUNTYWIDE FLOOD INSURANCE RATE MAP
DECEMBER 16, 2004

EFFECTIVE DATE(S) OF REVISION(S) TO THIS PANEL
August 1, 2019 - to change Special Flood Hazard Areas, to add Base Flood Elevations, and to incorporate previously issued Letters of Map Revision.

For community map revision history prior to countywide mapping, refer to the Community Map History table located in the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in this community, contact your insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

NOTICE TO
FLOOD INSURANCE STUDY USERS

Communities participating in the National Flood Insurance Program have established repositories of flood hazard data for floodplain management and flood insurance purposes. This Flood Insurance Study (FIS) may not contain all data available within the Community Map Repository. It is advisable to contact the Community Map Repository for any additional data.

The Federal Emergency Management Agency (FEMA) may revise and republish part or all of this FIS report at any time. In addition, FEMA may revise part of this FIS by the Letter of Map Revision process, which does not involve republication or redistribution of the FIS. It is, therefore, the responsibility of the user to consult with community officials and to check the Community Map Repository to obtain the most current FIS components.

Initial Countywide FIS Effective Date: December 16, 2004

Revised Countywide FIS Effective Date(s): August 1, 2019

The streams, or portions of streams, listed in Table 5, "Limits of New or Revised Zone AE Study," have new or revised hydrologic and hydraulic analyses for this countywide FIS.

Table 5 - Limits of New or Revised Zone AE Study

Flooding Source	Limits of Zone AE Study
East Branch DuPage River Watershed (EB)	
Armitage Creek (EBAR)	From the confluence with East Branch DuPage River to approximately 11,600 feet above the confluence with East Branch DuPage River (approximately 50 feet upstream of Paul Avenue)
Armitage Fork Tributary (EBAR)	From the confluence with Armitage Creek to approximately 4,420 feet above the confluence with Armitage Creek (just downstream of Mildred Avenue)
Army Trail Road Tributary (EBAT)	From the confluence with East Branch DuPage River to approximately 3,650 feet above the confluence with East Branch DuPage River (just upstream of Army Trail Road)
Crabtree Creek (EBCR)	From the confluence with East Branch DuPage River to approximately 8,225 feet above the confluence with East Branch DuPage River (approximately at Janes Avenue)

Table 6 - Limits Zone AE Study (continued)

Flooding Source	Limits of Zone AE Study
West Branch DuPage River Watershed (WB)	
Cress Creek (WBCC)	From the confluence with West Branch DuPage River to approximately 6,150 feet above the confluence with West Branch DuPage River (approximately 200 feet upstream of West Street)
Ferry Creek (WBFE)	From the confluence with West Branch DuPage River to approximately 19,750 feet above the confluence with West Branch DuPage River (approximately 70 feet upstream of Access Road)
Ferry Creek Tributary No. 1 (WBFE)	From the confluence with Ferry Creek to approximately 4,820 feet above the confluence with Ferry Creek (approximately at McDowell Road)
Unnamed Tributary to Ferry Creek (WBFE) [1]	From approximately 1,880 feet above the confluence with Ferry Creek to approximately 3,440 feet above the confluence with Ferry Creek
South of Foxcroft Road Tributary (WBFX)	From approximately 5,440 feet above the confluence with West Branch DuPage River (DuPage-Will County boundary) to approximately 6,600 feet above the confluence with West Branch DuPage River
South of Foxcroft Road Tributary Reach No. 2 (WBFX)	From the confluence with West Branch DuPage River (DuPage-Will County boundary) to approximately 3,850 feet above the confluence with West Branch DuPage River (approximately 1,025 feet upstream of 87th Street)
Klein Creek (WBKC)	From the confluence with West Branch DuPage River to approximately 34,850 feet above the confluence with West Branch DuPage River (approximately 1,700 feet upstream of Schmale Road)
Klein Creek Tributary No. 1 (WBKC)	From the confluence with Klein Creek to approximately 8,025 feet above the confluence with Klein Creek (approximately 1,375 feet upstream of Pleasant Hill Road)
Klein Creek Tributary No. 2 (WBKC)	From the confluence with Klein Creek to approximately 2,400 feet above the confluence with Klein Creek (approximately 150 feet upstream of Blackhawk Drive)
Klein Creek Tributary No. 3 (WBKC)	From the confluence with Klein Creek to approximately 3,570 feet above the confluence with Klein Creek (approximately 1,750 feet upstream of 84th Court)
Kress Creek (WBKR)	From the confluence with West Branch DuPage River to approximately 42,250 feet above the confluence with West Branch DuPage River (approximately 75 feet upstream of Powis Road)
Kress Creek Reach No. 2 (WBKR)	From the confluence with Kress Creek to approximately 11,950 feet above the confluence with Kress Creek (approximately 55 feet upstream of Rail Road
Spring Brook No. 1 (WBSP)	From the confluence with West Branch DuPage River to approximately 30,500 feet above the confluence with West Branch DuPage River (approximately 2,600 feet upstream of Hawthorn Street)

Table 6 - Limits Zone AE Study (continued)

Flooding Source	Limits of Zone AE Study
West Branch DuPage River Watershed (WB) - continued	
Steeple Run Tributary (WBSR)	From the confluence with West Branch DuPage River to approximately 11,550 feet above the confluence with West Branch DuPage River (approximately 900 feet upstream of Springhill Circle East)
Steeple Run Tributary Reach No. 3 (WBSR)	From the confluence with Steeple Run Tributary to approximately 2,900 feet above the confluence with Steeple Run Tributary
West Branch Tributary No. 1 (WBW1)	From approximately 5,940 feet above the confluence with West Branch DuPage River (approximately at Forest Preserve Road) to approximately 10,380 feet above the confluence with West Branch DuPage River (just downstream of Gary Avenue)
West Branch Tributary No. 2 (WBW2)	From the confluence with West Branch DuPage River to approximately 12,050 feet above the confluence with West Branch DuPage River (just downstream of Devon Avenue)
West Branch Tributary No. 3 (WBW3)	From the confluence with West Branch DuPage River to approximately 8,200 feet above the confluence with West Branch DuPage River (just downstream of Waynewood Drive)
West Branch Tributary No. 4 (WBW4)	From the confluence with West Branch DuPage River to approximately 10,150 feet above the confluence with West Branch DuPage River (approximately 950 feet upstream of Timber Lane)
West Branch Tributary No. 6 (WBW6)	From the confluence with West Branch DuPage River to approximately 2,730 feet above the confluence with West Branch DuPage River (approximately 180 feet upstream of Unnamed Road)
West Branch Tributary No. 7 (WBW7)	From the confluence with West Branch DuPage River to approximately 3,370 feet above the confluence with West Branch DuPage River (approximately 1,590 feet upstream of Oxford Lane)
West Branch Reach No. 18 (WBWB)	From the confluence with West Branch DuPage River to approximately 1,750 feet above the confluence with West Branch DuPage River (approximately 35 feet upstream of railroad; 215 feet upstream of Donald Avenue)
West Branch DuPage River (WBWB)	From approximately 11,300 feet above the confluence with DuPage River (at DuPage-Will County boundary) to approximately 164,300 feet above the confluence with DuPage River (at DuPage-Cook County boundary)
Winfield Creek (WBWF)	From the confluence with West Branch DuPage River to approximately 35,500 feet above the confluence with West Branch DuPage River (approximately 75 feet upstream of Farm Road)
Winding Creek (WBWG)	From the confluence with West Branch DuPage River to approximately 6,760 feet above the confluence with West Branch DuPage River (approximately 340 feet upstream of Modaff Road)

Zone A stream modeling was not within the requisite scope of new analyses included in this revised countywide FIS. Portions of model-based stream

delineations may, however, be depicted as Zone A on the FIRM based on engineering judgment. Additionally, some new or revised ponding area delineations may be depicted as Zone A on the FIRM based on known flood risk, topographic data analysis, and engineering judgment.

Letters of Map Revision

This FIS also provides a history of the incorporation of determination letters issued by FEMA that have resulted in map changes (Letter of Map Revision [LOMR]) since the December 16, 2004 initial countywide FIS. This incorporation is summarized in Tables 7a-b, “Incorporated Letters of Map Change.” The "Community" column entries shown as “DuPage County” refer to the unincorporated areas of the county.

It should be noted that all or portions of a given map change may be superseded by subsequent Letters of Map Revision or restudies.

Flooding Source and Location	USGS Gage No.	Drainage Area (sq. miles)	Record (years)
Klein Creek at Carol Stream	05539950	8.81	15

Kress Creek and Kress Creek Reach No. 2 (WBKR)

Discharges for the 10-, 2-, and 1-percent-annual-chance floods for Kress Creek and Kress Creek Reach No. 2 within the unincorporated areas of DuPage County were computed using the log-Pearson Type III method (Reference 29) for gaged streams and regional equations for ungaged (Reference 30, 31). The USGS stream gage used for the hydrologic analyses is presented in below. The 0.2-percent annual-chance flood discharge was estimated by straight-line extrapolation.

Flooding Source and Location	USGS Gage No.	Drainage Area (sq. miles)	Record (years)
Kress Creek at West Chicago	05540050	10.01	15

Kress Creek is within sub area 6 of the Chicago Metropolitan - DuPage River Basin study performed by the USACE's Hydrologic Engineering Center (Reference 36). Peak flows for this sub area, previously derived by the Chicago District, were utilized to derive peak flood flows for the reaches of Kress Creek and Kress Creek Reach No 2 within the City of West Chicago. A discharge-frequency relationship was developed for Kress Creek at State Highway 38, and peak flows for Kress Creek at the mouth were obtained by applying the square root of the drainage area ratio. The 0.2-percent annual-chance flood discharge was estimated by straight-line extrapolation.

The peak discharge for a portion of the headwater area of Kress Creek studied by Zone A methods was determined from a regional curve, which indicated the 1-percent-annual-chance peak discharge as a function of average streambed slope. This curve was determined by solving and plotting solutions to the multiple regression equation adopted by the State of Illinois for several streams within DuPage County (Reference 30).

West Branch Tributaries No. 1, 2, 3, 4, 6, 7, and 18
(WBW1), (WBW2), (WBW3), (WBW4), (WBW6), (WBW7), (WBWB)

For West Branch Tributaries No. 1, 2, 3, 4, 6, 7, and 18, synthetic frequency-discharge curves were derived using regional statistics developed in the Chicago Metropolitan - DuPage River Basin study performed by the USACE's Hydrologic Engineering Center (Reference 36). These discharges assume zero skew.

West Branch DuPage River (WBWB)

Discharge-frequency data for the West Branch DuPage River were developed through the use of the Chicago Metropolitan - DuPage River Basin study performed by the USACE's Hydrologic Engineering Center (Reference 36). In the Chicago study, the DuPage River Basin above Shorewood, Illinois, was

computer step-backwater model (Reference 61). Starting water-surface elevations were calculated using the slope/area method.

South of Foxcroft Road Tributary and South of Foxcroft Road Tributary Reach No. 2 (WBFX)

Both overbank and channel cross sections for South of Foxcroft Road Tributary [formerly Unnamed Creek (South of 87th Street)] and South of Foxcroft Road Tributary Reach No. 2 [formerly Unnamed Creek (South of Foxcroft Road)] were field surveyed. Water-surface elevations for South of Foxcroft Road Tributary and South of Foxcroft Road Tributary Reach No. 2 were computed for the 10-, 2-, 1-, and 0.2-percent-annual-chance floods using a HEC-2 computer step-backwater model (Reference 61). Starting water-surface elevations were calculated using the slope/area method.

Klein Creek and Tributaries (WBKC)

Cross-section data for Klein Creek, Klein Creek Tributary No. 2, and Klein Creek Tributary No. 3 were obtained by field measurement.

Water-surface elevations of floods of the selected recurrence intervals were computed using the USACE HEC-2 step-backwater computer program (Reference 61). Starting water-surface elevations were calculated using the slope/area method.

Kress Creek and Kress Creek Reach No. 2 (WBKR)

Cross-section data for part of Kress Creek and Kress Creek Reach No. 2 (formerly Unnamed Tributary to Kress Creek) were obtained by field measurement. Within the City of West Chicago, cross sections for Kress Creek up to Hawthorne Lane are identical to those used for a 1975 USACE floodplain information report (Reference 68). In addition, channel modifications to Kress Creek for a distance of 600 feet upstream of the railroad and culverts at the railroad crossing were inspected in March 1978 and incorporated into the hydraulic model.

Water-surface profiles for Kress Creek and Kress Creek Reach No. 2 were developed through use of the USACE HEC-2 step-backwater computer program (Reference 61). Starting water-surface elevations were calculated using the slope/area method.

West Branch Tributaries No. 1, 2, 3, 4, 6, 7, and 18
(WBW1), (WBW2), (WBW3), (WBW4), (WBW6), (WBW7), (WBWB)

Cross section data for West Branch Tributary No. 1, West Branch Tributary No. 2 (formerly Country Creek), West Branch Tributary No. 3, West Branch Tributary No. 4, West Branch Tributary No. 6, West Branch Tributary No. 7, and West Branch Reach No. 18 (formerly West Branch Tributary No. 5) were obtained by

3.3 Vertical Datum

All FIS Reports and FIRMs are referenced to a specific vertical datum. The vertical datum provides a starting point against which flood, ground, and structure elevations can be referenced and compared. Until recently, the standard vertical datum used for newly created or revised FIS Reports and FIRMs was the National Geodetic Vertical Datum of 1929 (NGVD29). With the completion of the North American Vertical Datum of 1988 (NAVD88), many FIS Reports and FIRMs are now prepared using NAVD88 as the referenced vertical datum.

Flood elevations shown in this FIS Report and on the FIRMs are referenced to NAVD88. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between NGVD29 and NAVD88 or other datum conversion, visit the National Geodetic Survey website at www.ngs.noaa.gov.

Effective information for this FIS was converted from NGVD 29 to NAVD 88 based on data presented in Figure 2 and Table 11a. Computations show an average conversion factor of -0.271 feet (NGVD 29 – 0.271 = NAVD 88) for the county. The conversion factor was applied uniformly across the county, with the exception of Norton Creek, Norton Creek Tributary, and Waubansee Creek, and was used to prepare the Floodway Data Tables, Flood Profiles, and FIRMs.

The countywide conversion factor could not be used for Norton Creek, Norton Creek Tributary, and Waubansee Creek since the studied portion of the streams are located in two counties and the average conversion factor determined for each county differs from the other. The Multiple Conversion Factors (stream-by-stream) method was applied to these streams. For the stream-by-stream method, each studied stream is assigned an average conversion factor based on the

conversion factors at three points along the stream. These results are shown in Table 11b.

Temporary vertical monuments are often established during the preparation of a flood hazard analysis for the purpose of establishing local vertical control. Although these monuments are not shown on the FIRM, they may be found in the archived project documentation associated with the FIS Report and the FIRMs for this community. Interested individuals may contact FEMA to access these data.

To obtain current elevation, description, and/or location information for benchmarks in the area, please visit the NGS website at www.ngs.noaa.gov.

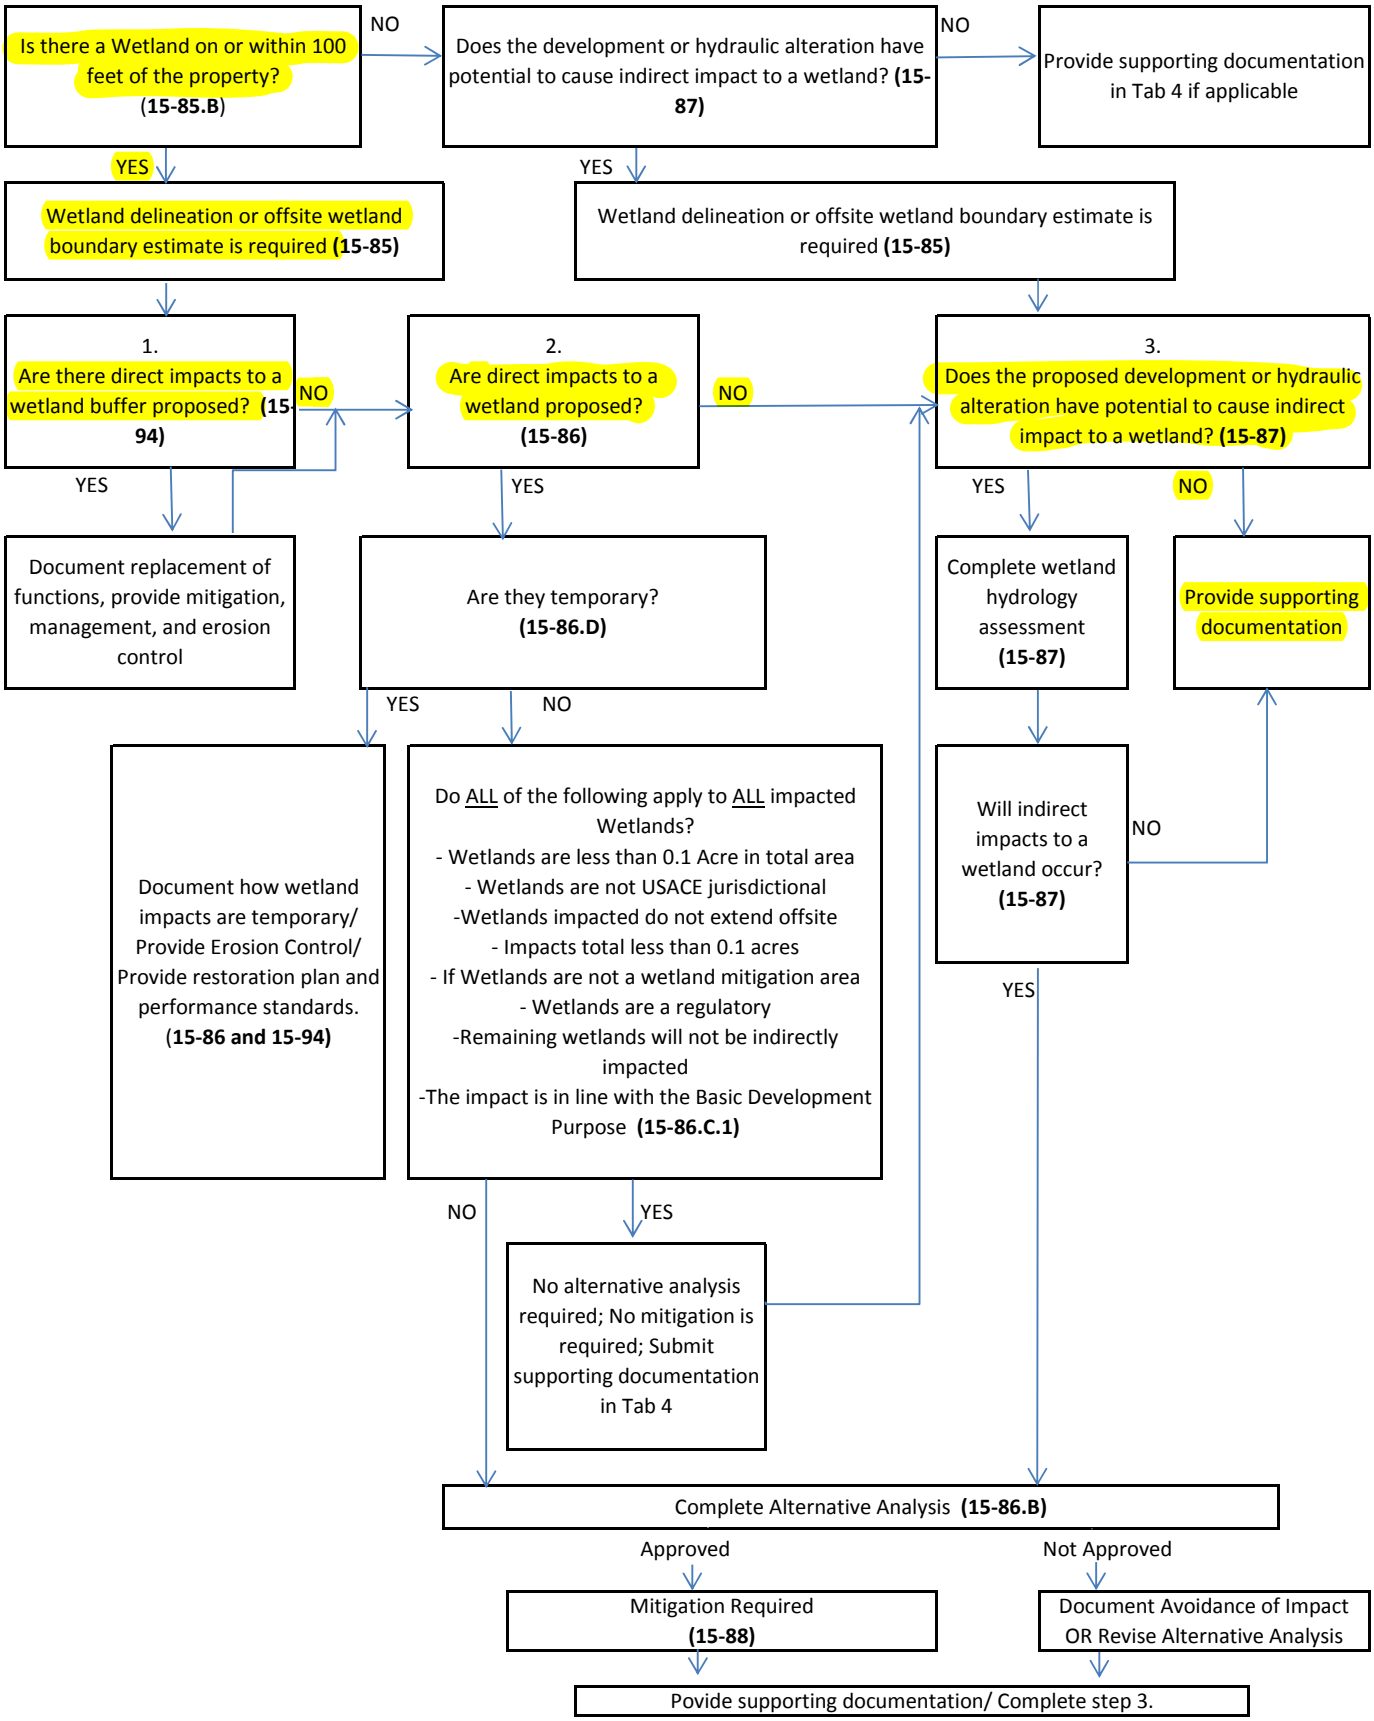
WETLANDS

Tab 4. Wetland and Wetland Buffer 3/4/2015



TAB 4. WETLANDS/WETLAND BUFFER

DuPage County Wetland and Buffer Application, dated September 2019, was prepared in accordance with the Federal Methodology by V3 Companies (V3). A copy of the V3 report is provided as Attachment 4-1. The report provides the Tab 4 submittal requirements, as listed in the Ordinance including:

- [15-48.A.1.a.] Completed USACE wetland delineation data forms.
- [15-48.A.1.b.] Aerial photograph, or other exhibit, clearly showing wetland boundaries, location of wetland delineation data points, and offsite wetlands within 100-feet of the property.
- [15-48.A.1.c.] A narrative describing the physical characteristics and size of each onsite wetland and buffer including a floristic inventory list, calculated mean C and floristic quality index calculated for each onsite wetland area.
- [15-48.A.1.d.] Representative photos of each wetland and its associated buffer.
- [15-48.A.1.e.] Copies of the below listed information:
    - [15.48.A.1.e.1.] Floristic inventory list.
    - [15.48.A.1.e.2.] NRCS DuPage County soil survey map with legend identifying any mapped hydric soils.
    - [15.48.A.1.e.3.] IDNR threatened and endangered species consultation (EcoCAT).
    - [15.48.A.1.e.4.] National wetland inventory map.
    - [15.48.A.1.e.5.] DuPage County wetland inventory map.
    - [15.48.A.1.e.6.] DuPage County regulatory flood plain map and flood insurance rate map.
    - [15.48.A.1.e.7.] Site location map with approximate scale.

A discussed in the V3 report, the proposed project includes re-establishment of the 50-foot wetland buffer adjacent to Kress Creek as well as the regulatory floodplain that extends westward near the northern boundary. The report contains all required details of the buffer re-establishment. Relevant portions of tabs 5, 8, and 9 with respect to wetlands are all included in the V3 report. The report is not re-attached to subsequent tabs for efficiency purposes.

Project Overview

Project Overview

1655 Powis Road
West Chicago, DuPage County, Illinois

March 4, 2019
September, 2019

Project Description. The subject property is located at the Lakeshore Recycling Systems facility (1655 Powis Road, West Chicago, DuPage County, Illinois). The project area is located in the eastern half of the subject property and includes the 50-foot Waters of the U.S. buffer of Kress Creek (Area 5), which traverses the east property boundary. Between 2016 and 2017, scrub-shrub vegetation within the 50-foot buffer was mowed down, ground up asphalt was placed in the center of the buffer and grading activities occurred in the northwestern portion of the buffer. The proposed project will include planting of native shrubs and trees throughout and native seed throughout the 50-foot buffer and removal of ground up asphalt in the center portion of the buffer to restore buffer function. The following information summarizes the information provided in accordance with the pertinent sections of the DuPage County Countywide Stormwater and Flood Plain Ordinance.

Floodplain and Floodway Information. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), flood zone AE and X, associated with Kress Creek, is located in the northern portion of the 50-foot Waters of the U.S. buffer.

Soils Information. Soils within the project area were mapped by the Natural Resources Conservation Service (NRCS) in 2015. One soil series, Drummer silty clay loam (152A), is mapped within the 50-foot Waters of the U.S. buffer. Drummer silty clay loam (152A) is listed on the *Hydric Soils of Illinois* list (USDA, NRCS 2018).

Wetland Delineation. A delineation of wetlands and Waters on the subject property was completed on September 13, 2018. Refer to the Wetland Delineation and Assessment Report, dated October 9, 2018, included in Tab 4. The project area includes only the 50-foot buffer around Area 5, Kress Creek, a Waters of the U.S. Area 5 was determined to be a non-high quality aquatic resource subject to USACE jurisdiction. The buffer restoration exhibit includes the finger of floodplain buffer that extends outside of the existing 50-foot buffer associated with Kress Creek.

Wetland & Buffer Summary. The project proposes to remove any fill/stone that was placed within the buffer and topdress the area with clean topsoil. Any areas disturbed within the buffer as a result of fill removal will be seeded with native seed to promote soil stabilization. Following excavation, topdressing, seeding, and blanketing, pods of native shrubs will be installed the buffer as identified on the Buffer Restoration Plan. A three year Management and Monitoring Plan is provided in Tab 9. No wetlands or Waters of the U.S. will be impacted by the proposed project.

March 4, 2019
Revised September, 2019

Project Description. The subject property is located at the Lakeshore Recycling Systems facility (1655 Powis Road, West Chicago, DuPage County, Illinois). The project area is located in the eastern half of the subject property and includes the 50-foot Waters of the U.S. buffer of Kress Creek (Area 5), which traverses the east property boundary. Between 2016 and 2017, scrub-shrub vegetation within the 50-foot buffer was mowed down, ground up asphalt was placed in the center of the buffer and grading activities occurred in the northwestern portion of the buffer. The proposed project will include planting of native shrubs and trees throughout and native seed throughout the 50-foot buffer and removal of ground up asphalt in the center portion of the buffer to restore buffer function. The following information summarizes the information provided in accordance with the pertinent sections of the DuPage County Countywide Stormwater and Flood Plain Ordinance.

Sec. 15-85. Requirements for Wetland Delineation

The 28-acre subject property was investigated by V3 Companies (V3) on September 13, 2018 to determine the presence, extent and quality of any wetlands or other areas under U.S. Army Corps of Engineers (USACE) and DuPage County Stormwater jurisdiction. Five areas were identified on the subject property and included two excavated, exempt stormwater management basins (Areas 1 and 3), one excavated, exempt settling pond (Area 2), one emergent wetland (Area 4) and one Waters of the U.S. (Area 5). The delineated boundaries for Areas 1 – 5 were field verified by Ms. Jenna Fahey of DuPage County Stormwater on October 1, 2018.

Sec. 15-86. Requirements for Developments Affecting Wetlands

The proposed project meets the requirements specified by Section 15-86 of the Ordinance for development in wetlands. No wetlands or Waters of the U.S. /DuPage will be impacted by the proposed project.

Sec. 15-87. Indirect Impacts to Wetlands

The proposed project will not alter the hydrology of Areas 1 -5. All proposed work will occur in the 50-foot Waters of the U.S. buffer of Kress Creek (Area 5) and will not alter the hydrology of Area 5.

Sec. 15-88. Wetland Mitigation Requirements

Wetland mitigation is not required because there are no proposed wetland or Waters of the U.S./DuPage impacts.

Sec. 15-92. Identification of Buffers

Kress Creek (Area 5) is a non-high quality aquatic resource and qualifies as a regulatory area with a 50-foot buffer. The buffer restoration exhibit includes the finger of floodplain buffer that extends outside of the existing 50-foot buffer associated with Kress Creek.

Sec. 15-94. Development Affecting a Buffer

The project proposes to remove any fill/stone that was placed within the buffer and topdress the area with clean topsoil. Any areas disturbed within the buffer as a result of fill removal will be seeded with native seed to promote soil stabilization. Following excavation, topdressing, seeding, and blanketing, pods of native shrubs will be installed the buffer as identified on the Buffer Restoration Plan. A three year Management and Monitoring Plan is provided in Tab 9.

EXECUTIVE SUMMARY

The approximately 28-acre subject property was investigated by V3 Companies (V3) on September 13, 2018 to determine the presence, extent and quality of any wetlands or other areas under U.S. Army Corps of Engineers (USACE) and/or DuPage County jurisdiction. V3 previously prepared a Wetland Delineation and Assessment Report, dated March 20, 2015, for the property. On March 19, 2015, the USACE issued a Jurisdictional Determination for the property, which is valid until March 19, 2020. DuPage County Stormwater Management concurred with the 2015 Wetland Delineation in an email dated January 16, 2015. The DuPage County concurrence expired in January 2017.

Delineation Summary.

One emergent wetland (Area 4), one Waters of the U.S. (Area 5), one excavated settling pond (Area 2), and two excavated stormwater management basins (Areas 1 & 3) were delineated on the subject property.

- Area 1 (~0.22 acres) is a man-made excavated stormwater management basin located in the western portion of the subject property. Historical aerial review indicates this basin was constructed between 1988 and 1993 and was previously determined to be exempt by DuPage County Stormwater on January 16, 2015. The current USACE jurisdictional determination dated March 19, 2015 (valid until March 19, 2020) exempts Area 1 (previously identified as Area 4 in the V3 2015 Wetland Delineation & Assessment Report) from USACE jurisdiction. In V3's professional opinion, Area 1 (previously identified as Area 4 in 2015) remains exempt from DuPage County and USACE jurisdiction.
- Area 2 (~0.36 acres) is a man-made excavated settling pond located in the central portion of the subject property. Historical aerial review indicates this basin was constructed between 1988 and 1993 and was previously determined to be exempt by DuPage County Stormwater on January 16, 2015. The current USACE jurisdictional determination dated March 19, 2015 (valid until March 19, 2020) exempts Area 2 (previously identified as Area 1 in the V3 2015 Wetland Delineation & Assessment Report) from USACE jurisdiction. In V3's professional opinion, Area 2 (previously identified as Area 1 in 2015) remains exempt from DuPage County and USACE jurisdiction.
- Area 3 (~3.86 acres) is a man-made excavated stormwater management basin located in the east central portion of the subject property. Historical aerial review indicates this basin was constructed between 1988 and 1993 and was previously determined to be exempt by DuPage County Stormwater on January 16, 2015. The current USACE jurisdictional determination dated March 19, 2015 (valid until March 19, 2020) exempts Area 3 (previously identified as Area 1 in the V3 2015 Wetland Delineation & Assessment Report) from USACE jurisdiction. In V3's professional opinion, Area 3 (previously identified as Area 1 in 2015) remains exempt from DuPage County and USACE jurisdiction.
- Area 4 (~0.69 acres) is an emergent wetland located in the southeast corner of the subject property. The current USACE jurisdictional determination letter dated March 19, 2015 (Valid until March 16, 2020) identifies Area 4 (previously identified as Area 5 in the V3 2015 Wetland Delineation & Assessment Report) as being subject to USACE jurisdiction. In V3's professional opinion Area 4 (previously identified as Area 5 in 2015) remains under USACE jurisdiction as the

March 19, 2015 USACE jurisdictional determination is still valid.

- Area 5 (~0.18 acres) is a Waters of the U.S. (Kress Creek) with wetland fringe and runs north south along the eastern boundary of the subject property. The current USACE jurisdictional determination letter dated March 19, 2015 (Valid until March 19, 2020) identifies Area 5 (previously identified as Area 3 in the V3 2015 Wetland Delineation & Assessment Report) as being subject to USACE jurisdiction. In V3's professional opinion, Area 5 (previously identified as Area 3 in 2015) remains under USACE jurisdiction as the March 19, 2015 USACE jurisdictional determination is still valid.

No other wetlands or Waters of DuPage were identified within 100-feet of the subject property per the DuPage County Ordinance; however, Kress Creek continues along the eastern property boundary to the north and the south.

Areas 1, 2, and 3 are man-made, excavated basins or ponds which were previously determined to be exempt by DuPage County Stormwater on January 16, 2015 and the USACE on March 19, 2015. Area 4, an emergent wetland, and Area 5, Kress Creek, are under USACE jurisdiction based on the March 19, 2015 USACE Jurisdictional Determination. The Jurisdictional Determination is valid until March 19, 2020.

The delineated boundaries for Areas 1-5 were field verified by Jenna Fahey of DuPage County Stormwater on October 1, 2018.

Regulatory Summary.

Pursuant to Section 404 of the Clean Water Act, the U. S. Army Corps of Engineers (USACE) has jurisdiction over the placement of fill or dredged material in all jurisdictional waters of the United States. Jurisdictional areas include rivers, streams, tributary waterways, lakes, natural ponds and wetlands adjacent to these areas. A Section 404 permit must be obtained before placing any fill material within a jurisdictional area.

Wetlands that lack a continuous surface connection through a relatively permanent tributary to traditionally navigable waters are considered isolated wetlands and are not regulated under the Clean Water Act.[1] To be considered relatively permanent, a tributary must have continuous flow at least seasonally (typically at least three months). Swales and erosional features are generally not considered to be tributaries or waters of the United States. Ditches excavated wholly in and draining only uplands and that do not carry a relatively permanent flow are also generally not waters of the U. S. Wetlands adjacent to tributaries and ditches that do not have a relatively continuous flow will be regulated only if they have a significant nexus to traditionally navigable waters. A significant nexus determination will be based on hydrologic and ecological factors.

If less than 0.10 acre of impact to USACE jurisdictional wetlands are proposed, the project would likely qualify for a Regional Permit from the USACE without wetland mitigation. If wetland impacts will consist of between 0.10 acre and 1.0 acre of wetland, a Regional Permit would still be possible, but compensatory mitigation will be required at a minimum ratio of 1.5:1. Mitigation at a higher ratio (typically 3:1 or greater) would be required for impacts to High Quality Aquatic Resources (HQAR).

[1] December 2, 2008, USEPA and Department of the Army Joint Memorandum, Clean Water Act Jurisdiction Following the U. S. Supreme Court Decision in Rapanos v. United States and Carabell v. United States.

Wetland impacts greater than 1.0 acre will require an Individual Permit, with a public comment period and additional regulatory scrutiny. Required buffer widths under the Regional Permit Program are shown in Table 1. If a permit from the USACE is not required, then the USACE buffer requirements are not applicable.

Pursuant to the *2013 DuPage County Countywide Stormwater and Flood Plain Ordinance* (Ordinance), any development that affects a special management area (i.e., floodplain, wetland, wetland buffer, or waterway buffer) requires a Stormwater Management Permit. All delineated wetlands are to be classified as critical or regulatory wetlands according to the criteria defined in Section 15-85 of the Ordinance. A vegetated buffer 50 feet wide is required around all regulatory wetlands and a vegetated buffer 100 feet wide is required around all critical wetlands, unless mitigation for buffer functions is provided. Information concerning applicable regulatory requirements is provided in **Appendix III**.

Table 1. Wetland Summary Table.

Area	On-Site Size (Acres)	Off-Site Size (Acres)	Native Mean Conservatism (NMC)*	Floristic Quality Index (FQI)*	Quality**	USACE Jurisdiction	Buffer Required

INTRODUCTION AND BACKGROUND

The approximately 28-acre subject property was investigated by V3 Companies (V3) on September 13, 2018 to determine the presence, extent and quality of any wetlands or other areas under U.S. Army Corps of Engineers (USACE) and/or DuPage County jurisdiction. Any identified wetland boundaries are marked in the field using pink wire flags labeled "Wetland Delineation" and numbered consecutively from beginning to end. This report summarizes the results of the field investigation and provides technical documentation for all investigated areas. The delineated boundaries for Areas 1-5 were field verified by Jenna Fahey of DuPage County Stormwater Management on October 1, 2018.

The subject property is located north Harvester Road, south of North Avenue and east of Powis Road in West Chicago, DuPage County, Illinois (Section 32, 40N, 9E; 41.911444°N, -88.237904°W; West Chicago quadrangle, Figure 1).

Three wetland areas are identified on the subject property on the National Wetlands Inventory (NWI) Map (Figure 2). The wetland areas are classified as: palustrine, unconsolidated bottom, intermittently exposed, excavated (PUBGx), and palustrine, emergent, persistent, seasonally flooded (PEM1C).

Three regulatory wetlands are identified on the subject property on the DuPage County Wetlands Map (Figure 3).

The USGS Hydrologic Atlas (Figure 4) shows the presence of Kress Creek along the eastern boarder of the subject property.

The 12-Digit Hydrologic Unit Code (HUC) Map (Figure 5) shows that the subject property lies within the Middle West Branch DuPage River sub watershed (Hydrologic Unit 071200040805), which is associated with the larger DuPage River watershed.

The FEMA Flood Insurance Rate Map (FIRM) (Figure 6) identifies flood zones AE and X along the eastern portion of the subject property associated with Kress Creek.

The DuPage County Regulatory Flood Map (RFM) (Figure 7) identifies flood zones AE and X along the eastern portion of the subject property associated with Kress Creek.

Three soil series are mapped on the subject property on the Soil Survey of DuPage County, Illinois (2015) Map (Figure 8). The soil series include Drummer silty clay loam (152A), Mundelein silt loam (442A), and Orthents loamy undulating (802B). Drummer silty clay loam (152A) is listed as a hydric soil in Illinois.

Figure 9, a Google Earth aerial photograph (2018), shows the location of all identified areas and data points as collected via a handheld GPS unit.

WETLAND DELINEATION METHODS

Wetland delineations are conducted following the methods given in the *Regional Supplement to the Corps of Engineers Wetlands Delineation Manual: Midwest Region*. Under the delineation procedures in this manual, an area must exhibit characteristic hydrophytic vegetation, hydric soils, and wetland hydrology to be considered a wetland. If field investigation determines that any of the three parameters are not satisfied, the area usually does not qualify as wetland. Moreover, drainage ditches excavated in dry land are generally not considered jurisdictional waters of the United States by the Corps of Engineers (preamble to 33 CFR Parts 320 through 330, *Federal Register* Vol. 56, No. 219, 41217).

As part of a delineation report, data forms and technical information are required by the U.S. Army Corps of Engineers, to document the three parameters for any area determined to be wetland. Data forms for wetlands identified at the subject property are provided in **Appendix I**. The vegetation data calculated on the data forms reflects the changes made to the National Wetland Plant List as of May 1, 2016. Representative photographs of delineated wetlands are provided in **Appendix II**. A brief description of the field methods used and a description of the three wetland parameters are provided in **Appendix IV**.

Plant species lists are compiled for each area identified, focusing on the plant communities within each identified wetland area. This accumulated floristic data is analyzed using the Floristic Quality Assessment (FQA) methodology, which is an assessment technique for a rapid quality evaluation of vegetation in a defined area. Technical names in the FQA and this report follow the nomenclature of *The National Wetland Plant List: 2014 Update of Wetland Ratings* (Lichvar *et. al.,* 2014). A detailed explanation of the Floristic Quality Assessment method is provided in **Appendix IV**.

As part of the wetland delineation assessment, Illinois Department of Natural Resources (IDNR) and US Fish and Wildlife Service (USFWS) threatened and endangered species evaluations were conducted (**Appendix V**).

The IDNR confirmed that the Illinois Natural Heritage Database contains no record of State-listed threatened or endangered species, Illinois Natural Area Inventory subject propertys, dedicated Illinois Nature Preserves, or registered Land and Water Reserves in the vicinity of the project location. A copy of the termination letter from the IDNR is included in **Appendix V**.

The USFWS Section 7 consultation did not find species or critical habitat present on the subject property; however, the eastern portion of the subject property lies within a zone of high potential for the Rusty Patched Bumble Bee (**Appendix V**). In V3's professional opinion, any proposed improvements on this subject property will not have any adverse effects on the Rusty Patched Bumble Bee as the subject property is already highly disturbed. The Bee requires undisturbed soils for overwintering and nesting as well as tallgrass prairie with flowering plants that provide nectar. There is only one plant species (*Asclepias spp*) on-subject property in very low distribution that is listed by the USFWS as suitable for the Bee. A copy of the USFWS Section 7 consultation is included in **Appendix V**.

RESULTS OF THE FIELD INVESTIGATION

INVESTIGATED AREAS

Area 1 – Excavated Stormwater Management Basin

Data Point X09

Area 1 (~0.22 acres) is located in the western portion of the subject property and consists of a man-made excavated stormwater management basin collecting stormwater from the subject property where it then discharges to a stormwater sewer running along Powis Road. The basin was constructed between 1988 and 1993 as identified from historical aerials (**Appendix VI**).

Summary:

- Excavated/Man-Made Basin
- Jurisdiction: Exempt
- Quality: N/A
- Vegetated Buffer Required: N/A

Vegetation: Data Point X09 is an unvegetated excavated stormwater management basin, so the vegetation criterion is not satisfied.

Soils: Data Point X09 is a rock lined excavated stormwater management basin; therefore, the soils criterion is not satisfied.

Hydrology: Data Point X09 was inundated to a depth of 1 inch, so the hydrology criterion is satisfied.

Conclusion: Data Point X09 fails the vegetation and soils criteria; therefore, Area 1 does not qualify as wetland. Area 1 is an excavated stormwater management basin previously determined to be exempt by DuPage County Stormwater on January 16, 2015. The current USACE jurisdictional determination dated March 19, 2015 (valid until March 19, 2020) exempts Area 1 (previously identified as Area 4 in the V3 2015 Wetland Delineation & Assessment Report) from USACE jurisdiction.

Area 2 – Excavated Settling Pond

Data Point X11

Area 2 (~0.36 acres) is located in the north central portion of the subject property and is an excavated settling pond for stormwater runoff. The settling pond was constructed in 1992 as identified in **Appendix VI** (Table 7 Permitting History of Wetland Construction). DuPage County Stormwater previously determined Area 2 to be exempt on January 16, 2015. The current USACE jurisdictional determination dated March 19, 2015 (valid until March 19, 2020) exempts Area 2 (previously identified as Area 1 in the V3 2015 Wetland Delineation & Assessment Report) from USACE jurisdiction.

Summary:

- Excavated/Man-Made Pond
- Jurisdiction: Exempt
- Quality: N/A
- Vegetated Buffer Required: N/A

Vegetation: Data Point X11 is an unvegetated excavated stormwater management basin, so the vegetation criterion is not satisfied.

Soils: The soil at Data Point X11 was too saturated to retrieve and could not be classified. However, inundation of the area strongly suggests the presence of hydric soil indicators, so the soils criterion is satisfied.

Hydrology: Data Point X11 was inundated to a depth of 12+ inches, so the hydrology criterion is satisfied.

Conclusion: Data Point X11 fails the vegetation criterion; therefore, Area 2 does not qualify as wetland. Area 2 is an excavated stormwater management basin previously determined to be exempt by DuPage County Stormwater on January 16, 2015. The current USACE jurisdictional determination dated March 19, 2015 (valid until March 19, 2020) exempts Area 2 (previously identified as Area 1 in the V3 2015 Wetland Delineation & Assessment Report) from USACE jurisdiction.

Area 3 – Excavated Stormwater Management Basin

Data Points X05 and X06

Area 3 (~3.86 acres) is located in the east/central portion of the subject property and consists of a man-made excavated stormwater management basin collecting stormwater runoff from the subject property before discharging to Kress Creek. This excavated stormwater basin was constructed in 1993 as identified in **Appendix VI** (Table 7, Permitting History of Wetland Construction and Figure J).

Summary:

- Excavated/Man-Made Basin
- Jurisdiction: Exempt
- Quality: N/A
- Vegetated Buffer Required: N/A

Vegetation:

- The dominant plant species at Data Point X05 is common reed (*Phragmites australis*), velvetleaf (*Abutilon theophrasti*), and common barnyard grass (*Echinochloa crus-galli*). 100% of the dominant species are hydrophytic, so the vegetation criterion is satisfied at Data Point X05.
- The dominant plant species at Data Point X06 is narrow leaf cattail (*Typha angustifolia*). 100% of the dominant species are hydrophytic, so the vegetation criterion is satisfied at Data Point X06.

Soils:

- The soil profile at Data Point X05 consisted of 0-10 inches of black (10YR 2/1) silt loam with 5% dark yellowish brown (10YR 4/6) redox concentrations. Data Point X05 consisted of mixed fill and mulch. This profile exhibits hydric soil field indicator F6, Redox Dark Surface and satisfies the soils criterion.
- The soil profile at Data Point X06 consisted of 0-10 inches of black (10YR 2/1) silt loam with 5% grayish brown (10YR 5/2) depletions. This profile exhibits hydric soil field indicator F3, Depleted Matrix and satisfies the soils criterion.

Hydrology:

- The presence of primary wetland hydrology indicator C3, Oxidized Rhizospheres on Living Roots, at Data Point X05 satisfies the hydrology criterion.
- The soil was saturated at the surface at Data Point X06 which satisfies the hydrology criterion at Data Point X06.

Conclusion: Data Points X05 and X06 satisfy all three criteria to be considered wetland; however, Area 3 is a man-made excavated stormwater management basin and was previously determined to be exempt by DuPage County Stormwater on January 16, 2015. The current USACE jurisdictional determination dated March 19, 2015 (valid until March 19, 2020) exempts Area 3 (previously identified as Area 1 in the V3 2015 Wetland Delineation & Assessment Report) from USACE jurisdiction. Therefore Area 3 is not a wetland or Waters.

Area 4 – Emergent Wetland

Data Point X02

Area 4 (~0.69 acres) is located in the south east portion of the subject property and consists of a non-high-quality emergent wetland. The USACE Jurisdictional Determination letter dated March 19, 2015 (valid until March 19, 2020), identifies this area as a USACE jurisdictional wetland.

Summary:

- Emergent Wetland
- Jurisdiction: USACE and DuPage County
- Quality: Non-HQAR
- Vegetated Buffer Required: 50’

Vegetation: The dominant plant species at Data Point X02 are eastern cottonwood (*Populus deltoides*), glossy buckthorn (*Rhamnus alnus*), and common beggar-ticks (*Bidens frondosa*). All of the dominant species are hydrophytic, so the vegetation criterion is satisfied. The floristic quality data and plant species inventory for Area 4 are provided below.

Soils: The soil profile at Data Point X02 consisted of 0-18 inches of black (10YR 2/1) silty clay loam underlain by 4 inches, to a depth of 22 inches below the surface, of dark gray (2.5Y 4/1) with 10% light olive brown (2.5Y 5/6) redoximorphic concentrations. This profile exhibits hydric soil field indicator A11, Depleted Below Dark Surface, and satisfies the soils criterion.

Hydrology: The presence of two secondary wetland hydrology indicators at Data Point X02 satisfies the hydrology criterion.

Conclusion: Data Point X02 satisfies all three criteria; therefore Area 4 qualifies as wetland, and is under USACE jurisdiction per the March 19, 2015 (valid till March 19, 2020) jurisdictional determination letter.

Area 5 – Waters of the U.S. with Wetland Fringe

Data Point X04

Area 5 (~0.18 acres) is Kress Creek and runs north to south along the eastern property boundary. A USACE jurisdictional determination letter dated March 19, 2015 (valid till March 19, 2020) identifies Area 5 (Kress Creek) as being USACE jurisdictional.

Summary:

- Waters of the U.S.
- Jurisdiction: USACE and DuPage County
- Quality: Non-HQAR
- Vegetated Buffer Required: 50’

Vegetation: The dominant plant species at Data Point X04 are common buckthorn (*Rhamnus cathartica*), common beggar-ticks (*Bidens frondosa*), and Virginia creeper (*Parthenocissus quinquefolia*).

Greater than 50% of the dominant species are hydrophytic, so the vegetation criterion is satisfied. The floristic quality data and plant species inventory for Area 5 are provided below.

Conservatism-Based Metrics		Additional Metrics	
Mean C (native species)	**2.57**	Species Richness (all)	24
Mean C (all species)	2.25	Species Richness (native)	21
Mean C (native trees)	0.50	% Non-native	0.13
Mean C (native shrubs)	4.00	Wet Indicator (all)	-0.88
Mean C (native herbaceous)	2.75	Wet Indicator (native)	-0.95
FQAI (native species)	**11.78**	% hydrophyte (Midwest)	0.92
FQAI (all species)	11.02	% native perennial	0.63
Adjusted FQAI	24.05	% native annual	0.25
% C value 0	0.21	% annual	0.25
% C Value 1-3	0.54	% perennial	0.75

Soils: The soil profile at Data Point X04 consisted of 0-8 inches of dark grayish brown (10YR 4/2) silty clay with 10% dark yellowish brown 10YR 3/6) redoximorphic concentrations. This profile exhibits hydric soil field indicator F3, Depleted Matrix, and satisfies the soils criterion.

Hydrology: Data Point X04 was inundated to a depth of 3 inches, so the hydrology criterion is satisfied.

Conclusion: Data Point X04 satisfies all three criteria; therefore Area 5 qualifies as wetland, and is under USACE jurisdiction per the March 19, 2015 (valid till March 19, 2020) jurisdictional determination.

ADDITIONAL AREAS INVESTIGATED

Area 6 – Upland

Data Point X01

Area 6 consists of the upland berm between Area 3 and Area 4 in the southeast portion of the subject property.

Vegetation: The dominant plant species at Data Point X01 are common buckthorn (*Rhamnus cathartica*), tatarica honeysuckle (*Lonicera tatarica*), tall goldenrod (*Solidago altissima*), and tall boneset (*Eupatorium altissima*). Less than 50% of the dominant species are hydrophytic so the vegetation criterion is not satisfied.

Soils The soil profile at Data Point X01 consisted of 0-12 inches of brown (10YR 5/3) silty clay loam mixed fill/gravel/asphalt underlain by 6 inches, to a depth of 18 inches below the surface, of black (10YR 2/1) silty clay loam with 5% dark yellowish brown (10YR4/6) redoximorphic concentrations. This soil profile exhibits soil field indicator A11, Depleted Below Dark Surface, and satisfies the soils criterion.

Hydrology: Neither primary nor secondary hydrology indicators were observed at Data Point X01, so the hydrology criterion is not satisfied.

Conclusion: Data Point X01 fails the vegetation and hydrology criteria; therefore, Area 6 does not qualify as wetland.

Area 7 – Upland

Data Point X03

Area 7 consists of the upland between Area 4 and Area 5 in the southeast corner of the subject property.

Vegetation: The dominant plant species at Data Point X03 are common buckthorn (*Rhamnus cathartica*), pokeweed (*Phytolacca americana*), beggars lice (*Hackelia virginiana*) and Canada thistle (*Cirsium arvense*). Less than 50% of the dominant species are hydrophytic so the vegetation criterion is not satisfied.

Soils The soil profile at Data Point X03 consisted of 0-18 inches of very dark grayish brown (10YR 3/2) silty clay loam mixed fill underlain by 2 inches, to a depth of 20 inches below the surface, of yellowish brown (10YR 5/4) silty clay loam mixed fill. The soil at this location does not meet a hydric soil indicator, so the soils criterion is not satisfied.

Hydrology: Neither primary nor secondary hydrology indicators were observed at Data Point X01, so the hydrology criterion is not satisfied.

Conclusion: Data Point X03 fails all three criteria; therefore, Area 7 does not qualify as wetland.

Area 8 – Upland

Data Point X07

Area 8 consists of the upland area located in the southeast portion of Area 3.

Vegetation: The dominant plant species at Data Point X07 are common reed (*Phragmites australis*) and ground ivy (*Glechoma hederacea*). Only 50% of the dominant species are hydrophytic so the vegetation criterion is not satisfied.

Soils The soil profile at Data Point X07 consisted of 0-6 inches of very dark grayish brown (10YR 3/2) silty clay loam, underlain by 9 inches, to a depth of 15 inches below the surface, of black (10YR 2/1) silty clay loam. Below that, to a depth of 18 inches below the surface, the soil was very dark gray (10YR 3/1) silty clay loam with 5% dark yellowish brown (10YR 4/6) redoximorphic concentrations. The soil below the fill material exhibits hydric soil field indicator A12, Thich Dark Surface, and satisfies the soils criterion.

Hydrology: Neither primary nor secondary hydrology indicators were observed at Data Point X07, so the hydrology criterion is not satisfied.

Conclusion: Data Point X07 fails the vegetation and hydrology criteria; therefore, Area 8 does not qualify as wetland.

Area 9 – Upland

Data Point X08

Area 9 consists of the upland area located along the north property boundary.

Vegetation: The dominant plant species at Data Point X08 are common reed (*Phragmites australis*), multiflora rose (*Rosa multiflora*) and sawtooth sunflower (*Helianthus grosseserratus*). Greater than 50% of the dominant species are hydrophytic so the vegetation criterion is satisfied.

Soils The soil profile at Data Point X08 consisted of 0-6 inches of black (10YR 2/1) silty clay with an impenetrable layer of rock/gravel below 6 inches. The soil at this location does not meet a hydric soil indicator, so the soils criterion is not satisfied.

Hydrology: Neither primary nor secondary hydrology indicators were observed at Data Point X08, so the hydrology criterion is not satisfied.

Conclusion: Data Point X08 fails the soils and hydrology criteria; therefore, Area 9 does not qualify as wetland.

Area 10 – Upland

Data Point X10

Area 10 consists of the upland area around Area 1.

Vegetation: The dominant plant species at Data Point X10 are Kentucky blue grass (*Poa pratensis*) and ground ivy (*Glechoma hederacea*). Only 50% of the dominant species are hydrophytic so the vegetation criterion is not satisfied.

Soils The soil profile at Data Point X10 consisted of 0-8 inches of very dark grayish brown (10YR 3/2) silty clay loam mixed fill underlain by 2 inches, to a depth of 10 inches below the surface, of brown (10YR 5/3) silty clay loam mixed fill. The soil at this location does not meet a hydric soil indicator, so the soils criterion is not satisfied.

Hydrology: Neither primary nor secondary hydrology indicators were observed at Data Point X10, so the hydrology criterion is not satisfied.

Conclusion: Data Point X10 fails all three criteria; therefore, Area 10 does not qualify as wetland.

WETLAND DETERMINATION DATA FORM - Midwest Region

Project/Site: 1655 Powis Rd | City/County: West Chicago/DuPage | Sampling Date: 13-Sep-18

Applicant/Owner: Lakeshore Recycling Systems | State: IL | Sampling Point: **X08**

Investigator(s): Alicia Metzger & Daniel Jablonski | Section, Township, Range: S 32 T 40N R 9E

Landform (hillslope, terrace, etc.): Flat | Local relief (concave, convex, none): flat

Slope: 0.0% / 0.0 ° | Lat.: 41.912703 | Long.: -88.233745 | Datum: NAD1983

Soil Map Unit Name: Orthents loamy undulating (802B) | NWI classification: None

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ◉ No ○ (If no, explain in Remarks.)

Are Vegetation ☐, Soil ☐, or Hydrology ☐ significantly disturbed? Are "Normal Circumstances" present? Yes ◉ No ○

Are Vegetation ☐, Soil ☐, or Hydrology ☐ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ◉ No ○	**Is the Sampled Area within a Wetland?** Yes ○ No ◉
Hydric Soil Present?	Yes ○ No ◉	
Wetland Hydrology Present?	Yes ○ No ◉	

Remarks:
This location fails the soils and hydrology criteria and does not qualify as wetland.

VEGETATION - Use scientific names of plants.

FACW species	100	x 2 =	200
FAC species	5	x 3 =	15
FACU species	40	x 4 =	160
UPL species	0	x 5 =	0
Column Totals:	145 (A)		375 (B)

Prevalence Index = B/A = 2.586

Hydrophytic Vegetation Indicators:

- ☐ **1 - Rapid Test for Hydrophytic Vegetation**
- ☑ **2 - Dominance Test is > 50%**
- ☑ **3 - Prevalence Index is ≤3.0** [1]
- ☐ **4 - Morphological Adaptations** [1] **(Provide supporting data in Remarks or on a separate sheet)**
- ☐ **Problematic Hydrophytic Vegetation** [1] **(Explain)**

[1] **Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.**

Hydrophytic Vegetation Present? Yes ◉ No ○

Remarks: (Include photo numbers here or on a separate sheet.)
Greater than 50% of the dominant species are hydrophytic, so the vegetation criterion is satisfied.

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

SOIL

Sampling Point: X08

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Redox Features Type[1]	Redox Features Loc[2]	Texture	Remarks
0-6	10YR 2/1						Silty Clay	Mixed Fill
6+								Impenetrable rock/gravel

[1] Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining. M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Muck Mineral (S1)
- ☐ 5 cm Mucky Peat or Peat (S3)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)
- ☐ Loamy Mucky Mineral (F1)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)

Indicators for Problematic Hydric Soils [3]:

- ☐ Coast Prairie Redox (A16)
- ☐ Dark Surface (S7)
- ☐ Iron Manganese Masses (F12)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

[3] Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes ○ No ◉

Remarks:

The soil in this location does not meet a hydric soil indicator, so the soils criterion is not satisfied.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ☐ Surface Water (A1)
- ☐ High Water Table (A2)
- ☐ Saturation (A3)
- ☐ Water Marks (B1)
- ☐ Sediment Deposits (B2)
- ☐ Drift Deposits (B3)
- ☐ Algal Mat or Crust (B4)
- ☐ Iron Deposits (B5)
- ☐ Inundation Visible on Aerial Imagery (B7)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Water-Stained Leaves (B9)
- ☐ Aquatic Fauna (B13)
- ☐ True Aquatic Plants (B14)
- ☐ Hydrogen Sulfide Odor (C1)
- ☐ Oxidized Rhizospheres on Living Roots (C3)
- ☐ Presence of Reduced Iron (C4)
- ☐ Recent Iron Reduction in Tilled Soils (C6)
- ☐ Thin Muck Surface (C7)
- ☐ Gauge or Well Data (D9)
- ☐ Other (Explain in Remarks)

Secondary Indicators (minimum of two required

- ☐ Surface Soil Cracks (B6)
- ☐ Drainage Patterns (B10)
- ☐ Dry Season Water Table (C2)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Stunted or Stressed Plants (D1)
- ☐ Geomorphic Position (D2)
- ☑ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes ○ No ◉ Depth (inches): _____

Water Table Present? Yes ○ No ◉ Depth (inches): _____

Saturation Present? (includes capillary fringe) Yes ○ No ◉ Depth (inches): _____

Wetland Hydrology Present? Yes ○ No ◉

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Neither primary nor secondary wetland hydrology indicators were observed, so the hydrology criterion is not satisfied.

APPENDIX III

REGULATORY INFORMATION

REGULATORY REQUIREMENTS

U.S. ARMY CORPS OF ENGINEERS

Pursuant to Section 404 of the Clean Water Act, the U. S. Army Corps of Engineers (USACE) has jurisdiction over the placement of fill or dredged material in all jurisdictional waters of the United States. Jurisdictional areas include rivers, streams, tributary waterways, lakes, natural ponds, and wetlands adjacent to these areas. A Section 404 permit must be obtained before placing any fill material within a jurisdictional area.

Wetlands that lack a continuous surface connection through a relatively permanent tributary to traditionally navigable waters are considered isolated wetlands and are not regulated under the Clean Water Act.[1] To be considered relatively permanent a tributary must have continuous flow at least seasonally (typically at least three months). Swales and erosional features are generally not considered to be tributaries or waters of the United States. Ditches excavated wholly in and draining only uplands and that do not carry a relatively permanent flow are also generally not waters of the U. S. Wetlands adjacent to tributaries and ditches that do not have a relatively continuous flow will be regulated only if they have a significant nexus to traditionally navigable waters. A significant nexus determination will be based on hydrologic and ecological factors.

General permits, including nationwide and regional permits, are designed to expedite the processing of permits for minor non-controversial projects that are similar in nature and of minimal environmental impact. Currently, 52 nationwide permits have been issued. They became effective on March 19, 2017, and will expire on March 18, 2022.

Within the boundaries of the Chicago District, USACE, most NWPs were replaced with the Regional Permit Program (RPP), which were reissued on April 1, 2012 and will expire on April 1, 2017. Category I RPPs will generally authorize impacts of 0.50 acres or less. Category II RPPs will authorize impacts of between 0.50 acres and 1.0 acre. Any projects proposing impacts to High Quality Aquatic Resources will be processed under Category II. Compensatory wetland mitigation, at a ratio of 1.5:1, is required for all projects that impact more than 0.10 acre. Mitigation for impacts to High Quality Aquatic Resources typically is required at a higher ratio (generally 3:1 or greater).

High Quality Aquatic Resources (HQARs) are aquatic areas considered to be regionally critical due to their uniqueness, scarcity, and/or value, and other wetlands considered to perform functions important to the public interest, as defined in 33 CFR 320.4(b)(2). These resources include Advanced Identification (ADID) sites, bogs, ephemeral pools, fens, forested wetlands, sedge meadows, seeps, streams rated Class A or B in the Illinois Biological Stream Characterization study, streamside marshes, wet prairies, wetlands supporting Federal or Illinois endangered or threatened species, and wetlands with a floristic quality index of 20 or greater, or mean C-value of 3.5 or greater. These areas generally are regarded as unsuitable for dredge or fill activities. See Appendix IV for definitions of the wetland types, and criteria used to evaluate the presence of HQARs during wetland delineations.

[1] December 2, 2008, USEPA and Department of the Army Joint Memorandum, Clean Water Act Jurisdiction Following the U. S. Supreme Court Decision in Rapanos v. United States and Carabell v. United States.

Wetland impacts greater than 1.0 acre will require authorization under an individual permit (IP), which requires greater scrutiny of the proposed project by the USACE and other concerned government agencies, and a comment period from the general public.

DUPAGE COUNTY ORDINANCE

Pursuant to the 2013 *DuPage County Countywide Stormwater and Flood Plain Ordinance* (Ordinance), any development that affects a special management area (i.e., floodplain, wetland, wetland buffer, or waterway buffer) requires a Stormwater Management Permit. Jurisdictional wetland determinations for review under the ordinance are made following the methods given in the 1987 *Corps of Engineers Wetlands Delineation Manual*. Wetland delineations conducted in DuPage County do not rely on federal jurisdiction, so both adjacent and isolated wetlands are regulated. Field verification of wetland delineations is conducted by the DuPage County, or by village staff in full waiver communities.

All delineated wetlands are to be classified as critical or regulatory wetlands according to the criteria defined in Section 15-85 of the Ordinance. If any one of the criteria is satisfied, that wetland is considered Critical and mitigation will be required at a ratio of 3:1. If none of the criteria is satisfied, that wetland is considered Regulatory and mitigation will be required at a ratio of 1.5:1. The assessment criteria are listed and addressed in Appendix V.

Under the DuPage County Ordinance, a narrative description of measures taken to avoid and minimize wetland impacts is required for all wetlands greater than 0.1 acre in size. Development in or affecting a wetland can be initiated only after an applicant demonstrates that there are no practicable alternatives to impacting a wetland. According to Section 15-92 of the Ordinance, a vegetated buffer 50 feet wide is required around all preserved regulatory wetlands and a vegetated buffer 100 feet wide is required around all critical wetlands unless mitigation for buffer functions is provided.

For projects which occur in partial waiver communities, where the wetland review is conducted by the DuPage County Department of Economic Development & Planning (EDP), the Corps of Engineers has issued General Permit (GP) Number 25, *Programmatic General Permit for Activities Requiring Review under Section 404 of the Clean Water Act Within the Established Boundaries of DuPage County, Illinois*. GP 25 authorizes the EDP to conduct technical reviews on behalf of the Corps of Engineers for projects with minimal impacts to the aquatic environment, including wetlands. Upon the completion of the technical review by EDP, the Corps of Engineers will authorize a project in accordance with the General Permit. In full waiver communities, such as Downers Grove, the community engineer has authority under the ordinance “to review and approve all applications for development in all areas under its jurisdiction.” (§15-31.3 of the County Ordinance).

APPENDIX IV

DELINEATION METHODS AND FLORISTIC ANALYSIS

WETLAND DELINEATION METHODS

The site was field-inspected and plant species lists were recorded to document the vegetation types present. A wetland indicator status is assigned to each plant species based on a regional list published by the U.S. Army Corps of Engineers in 2016. The categories are based on the estimated probability that a species would be naturally encountered in a wetland. Under the *Interim Regional Supplement to the Corps of Engineers Wetlands Delineation Manual: Midwest Region*, the area is considered to be dominated by hydrophytic vegetation and representative of a wetland plant community by one of two methods, the dominance test or the prevalence index. The dominance test is satisfied if greater than 50% of the dominant plant species in a given area have a wetland indicator status of FAC, FACW, or OBL. The prevalence index assigns a numeric value to the wetland indicator status, and uses a weighted-average of the wetland indicator status of all plant species present in the sampling area. A wetland plant community is present if the prevalence index is less than 3.0.

Plant Wetland Indicator Status Categories

Indicator Category	Symbol	Indicator Definition
Obligate Wetland Plants	OBL	Plants that occur almost always (estimated probability greater than 99%) in wetlands under natural conditions, but which may also occur rarely in non-wetlands.
Facultative Wetland Plants	FACW	Plants that usually occur in wetlands (estimated probability 67% to 99%), but occasionally are found in non-wetlands.
Facultative Plants	FAC	Plants with a similar likelihood (estimated probability 33% to 67%) of occurring in both wetlands and non-wetlands.
Facultative Upland Plants	FACU	Plants that usually occur in non-wetlands (estimated probability 67% to 99%) but occasionally are found in wetlands.
Obligate Upland Plants	UPL	Plants that occur almost always (estimated probability greater than 99%) in non-wetlands under natural conditions, but which may also occur rarely in wetlands.

In addition to being dominated by hydrophytic vegetation, each suspect wetland must also exhibit hydric soils and wetland hydrology. As defined in the Federal Register (*Federal Register, Volume 59*: July 13, 1994), “A hydric soil is a soil that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part.” According to the National Technical Committee for Hydric Soils, documentation of the presence or absence of a hydric soil can only be determined through on-site investigation, not strictly by its classification of an area on soil survey maps. Soils are identified as hydric in the field if they possess certain indicators, as defined in the *Interim Regional Supplement to the Corps of Engineers Wetlands Delineation Manual: Midwest Region.* These field indicators are a regionally specific subset of the field indicators described in the *Field Indicators of Hydric Soils in the United States* (Version 8.0; NRCS, 2016). The absence of a field indicator in a soil does not exclude that soil from

being classified as hydric. Soil series, soil color, the presence of mottling or gleying, and depth to water table are determined and recorded in the field. These features, when present, may indicate a hydric soil when hydric soil field indicators are absent.

Determinations of hydrology are based on observations wetland hydrology indicators. There are two types of indicators, primary indicators and secondary indicators. A determination of wetland hydrology requires the presence of one primary indicator or two secondary indicators. Hydrology indicators are placed into four groups, these being observations of surface water or saturated soils, evidence of recent inundation, evidence of recent soil saturation, or evidence of other site conditions or data. A listing of the wetland hydrology indicators is provided in the table below.

Indicator	Category	
	Primary	Secondary
Group A – Observation of Surface Water or Saturated Soils		
A1 – Surface water	X	
A2 – High water table	X	
A3 – Saturation	X	
Group B – Evidence of Recent Inundation		
B1 – Water marks	X	
B2 – Sediment deposits	X	
B3 – Drift deposits	X	
B4 – Algal mat or crust	X	
B5 – Iron deposits	X	
B7 – Inundation visible on aerial imagery	X	
B8 – Sparsely vegetated concave surface	X	
B9 – Water-stained leaves	X	
B13 – Aquatic fauna	X	
B14 – True aquatic plants	X	
B6 – Surface soil cracks		X
B10 – Drainage patterns		X
Group C – Evidence of Current or Recent Soil Saturation		
C1 – Hydrogen sulfide odor	X	
C3 – Oxidized rhizospheres along living roots	X	
C4 – Presence of reduced iron	X	
C6 – Recent iron reduction in tilled soils	X	
C7 – Thin muck surface	X	
C2 – Dry-season water table		X
C8 – Crayfish burrows		X
C9 – Saturation visible on aerial imagery		X
Group D – Evidence from Other Site Conditions or Data		
D9 – Gauge or well data	X	
D1 – Stunted or stressed plants		X
D2 – Geomorphic position		X
D5 – FAC-neutral test		X

FLORISTIC QUALITY ASSESSMENT

Plant communities of the site were evaluated with the Floristic Quality Assessment (FQA) methodology, a widely-used technique used for rapid assessment of the floristic quality in a defined area or plant community. In using FQA, the presence of each plant species is recorded, generating a species inventory. This inventory is entered into computer software that was used to generate the species lists used in this report. Floristic quality calculations are also generated that provides a compilation of various floristic quality data, resulting in a determination of the floristic quality of the subject area.

The floristic quality data for an area partially indicates its quality as a natural area (i.e., relative to known or perceived pre-settlement or disturbance conditions). One indicator of the degree of disturbance or floristic quality in an area is the calculated Native Floristic Quality Index (Native FQI). A high Native FQI value indicates a high-quality natural area, but how high the Native FQI must be for an area to be of high quality is a subjective determination. In general, a wetland (or other defined area) with a Native FQI greater than 20.00 from a single observation may be considered a moderately high quality plant community. These areas have a high potential for containing more conservative or high-quality plant species. Therefore, adverse impacts to such areas, especially wetlands and subsequent proposals for compensatory mitigation, may be scrutinized carefully by the regulatory agencies.

A high number of native species with high coefficients of conservatism “C” (a subjective measure of quality based on habitat specificity and relative tolerance to disturbance; weedy species are highly disturbance tolerant, and are ranked lower) will result in a high Native FQI. The C value is based on the relative rarity of a species and/or the resiliency of a species following disturbance. Coefficients of conservatism for native plant species range from 0 for common, weedy species to 10 for rare, highly conservative species. Adventive species are not assigned a C value. Adventive species are non-native species that have entered the Chicago region since European settlement. These species generally do not lend themselves to increased floristic quality, but instead appear after a disturbance. Thus, a high proportion of these species in a given area or community may be an indication of a lower quality plant community.

The wetness coefficient (W, ranging from -5 to +5) refers to the corresponding wetland indicator status (e.g., OBL = obligate wetland species, -5; FAC = facultative species, 0; UPL = upland species, +5) for U.S. Fish and Wildlife Service Region 3 (Illinois, Michigan, Indiana, Missouri, Iowa, Wisconsin, and Minnesota). A wetland indicator status noted in brackets (e.g., [FACW]) is a modification of the Region 3 indicator status to apply locally in the 22-county Chicago region covered by *Plants of the Chicago Region*. The Wetness coefficient is useful in evaluating the general “wetness” affinity of a sampled plant community. If the average indicator status among all species present is in the FAC, FACW, or OBL classes, then the plant community may be considered hydrophytic.

HIGH QUALITY AQUATIC RESOURCES

U.S. Army Corps of Engineers, Chicago District Regional Permit Program

High Quality Aquatic Resources (HQARs) include Advanced Identification (ADID) sites (mapped in Kane, Lake and McHenry Counties), bogs, dune and swale complexes, ephemeral pools, fens, forested wetlands, sedge meadows, seeps, streams rated Class A or B in the Illinois Biological Stream Characterization study, wet prairies, wetlands supporting Federal or Illinois endangered or threatened species, and wetlands with a floristic quality index of 20 or greater, or mean C-value of 3.5 or greater. These definitions are listed below. If a given wetland meets one or more of these definitions, that wetland is considered a HQAR and a Category II Regional Permit or Individual Permit is required.

Advanced Identification (ADID) sites: Aquatic sites that have been identified by the Chicago District and U.S. Environmental Protection Agency, in advance of specific permit requests, as areas generally unsuitable for the disposal of dredged or fill material, because of a variety of factors, including high floristic values, water quality or storage functions, or similar wetland functions performed at elevated levels. ADID sites include various Waters of the U.S., including wetlands. An ADID map for the subject property is included with this report as Figure 3.

Bog: A low nutrient peatland, usually in a glacial depression, that is acidic in the surface stratum and often dominated at least in part by the genus *Sphagnum*.

Dune and Swale Complex: Areas usually parallel to the Lake Michigan shoreline and typified by sandy, linear, upland ridges alternating with low-relief wetland created over time during changes in the Lake Michigan's water levels.

Ephemeral pool: A seasonally inundated depression within a forested wetland or upland community, usually located on a moraine, glacial outwash plain, or in an area shallow to bedrock; also known locally as a "vernal pool." These areas may not be permanently vegetated.

Fen: A peatland, herbaceous (including calcareous floating mats) or wooded, with calcareous groundwater flow.

Forested wetland: A wetland dominated by native woody vegetation with at least one of the following species or genera present: *Carya* spp., *Cephalanthus occidentalis*, *Cornus alternifolia*, *Fraxinus nigra*, *Juglans cinerea*, *Nyssa sylvatica*, *Quercus* spp., *Thuja occidentalis, Betula nigra, Betula alleghaniensis, Betula papyrifera, Fagus grandifolia.*.

Sedge meadow: A wetland dominated by at least one of the following genera: *Carex*, *Calamagrostis*, *Cladium*, *Deschampsia*, *Eleocharis*, *Rynchospora*, *Scleria*, or *Eriophorum*.

Seep: A wetland, herbaceous or wooded, with saturated soil or inundation resulting from the diffuse flow of groundwater to the surface stratum. [Seeps typically occur on slopes because of blocked vertical infiltration.]

Streams rated A or B in the Illinois Biological Stream Characterization study: The historical Class A and B rating system was replaced with the new Illinois Department of Natural Resources stream classification system that can be found at:
https://www.dnr.illinois.gov/conservation/BiologicalStreamratings/Pages/default.aspx

Wet prairie: A wetland dominated by native graminoid species with a diverse indigenous forb component that is seasonally saturated and/or temporarily inundated and may resemble a fen in its best development. Species found in a high quality wet prairie include at least one of the following: *Calamagrostis canadensis*, *Spartina pectinata*, *Aster puniceus firmus*, *Beckmannia syzigachne*, *Chelone glabra*, *Eleocharis wolfii*, *Lysimachia quadrifolia*, *Oenothera perennis*, *Oenothera pilosella*, *Pedicularis lanceolata*, and *Solidago ohioensis*.

Wetlands Supporting Federal or Illinois Endangered or Threatened Species: An Agency Action Report is routinely requested from the Illinois Department of Natural Resources (IDNR) and from the U.S. Fish and Wildlife Service (USFWS) for wetland delineations. These reports indicate the likelihood of listed species (that is, those species considered legally protected as threatened or endangered) being found near or on a subject property, or possible encroachment into protected natural area reserves. If a listed species record is indicated for the site, an endangered and threatened species investigation may be required to evaluate the actual presence or absence of the species in question. This inquiry is preliminary and does not preclude the presence of otherwise unrecorded listed species.

Wetlands with a Floristic Quality Index of 20 or greater or a mean C-value of 3.5 or greater: Plant species inventories collected during wetland delineations are used to generate floristic quality values using the Floristic Quality Assessment method published in *Plants of the Chicago Region* (Swink and Wilhelm, 1994). These tables are included in this report for each of the areas identified as wetland.

STREAM CLASSIFICATION
WITHIN THE CHICAGO DISTRICT

The historical Class A and B rating system was replaced with the new Illinois Department of Natural Resources stream classification system that can be found at:

https://www.dnr.illinois.gov/conservation/BiologicalStreamratings/Pages/default.aspx

APPENDIX V

DuPage County Wetland Assessment

DUPAGE COUNTY ORDINANCE WETLAND ASSESSMENT

The information provided below addresses the additional assessment criteria for wetlands as required in DuPage County under the *DuPage County Countywide Stormwater and Flood Plain Ordinance*. Each criterion is addressed independently below, with the County criteria provided in *italics* and the assessment of each following in regular type.

a. *The wetland is identified as a critical wetland in the County's wetland inventory;*

- There are no critical wetlands identified on the subject property (Figure 3).

b. *The wetland is known to possess a Federal or State listed threatened or endangered species;*

- The Illinois Department of Natural Resources' (IDNR) Ecological Compliance Assessment Tool (EcoCAT) was used to determine the presence of known state threatened or endangered species on or near the subject property. The EcoCAT sign off letter, dated September 12, 2018, indicates there are no State threatened or endangered species or their habitat within the vicinity of the site.

- In accordance with U.S. Fish and Wildlife Service (USFWS) procedures, an analysis of information concerning federally listed species was conducted on September 14, 2018 by V3 Companies. The analysis was conducted following the Section 7 technical assistance guidelines. The USFWS Section 7 consultation did not find species or critical habitat present on the subject property. A copy of the USFWS Section 7 consultation is included.

c. *The plant community within the wetland is determined to have a native floristic quality index (FQI) of 20 or higher during a single season assessment or a native mean C-value (NMC) of 3.5 or higher, as calculated by the Swink and Wilhelm methodology.*

- A floristic inventory of Areas 4 and 5 was conducted on September 13, 2018. A copy of the floristic quality inventory for each area is provided in the delineation report.

    - The floristic quality data for Area 4 yielded a NMC value of 1.84 and an FQI value of 8.03. Based on this calculation, Area 4 does not qualify as a High Quality Aquatic Resource.
    - The floristic quality data for Area 5 yielded a NMC value of 2.57 and an FQI value of 11.78. Based on this calculation, Area 5 does not qualify as a High Quality Aquatic Resource.

d. *The initial wildlife quality value using the Modified Michigan Department of Natural Resources Method is 5.0 or higher, or alternatively, the mean rated wildlife quality (MRWQ) is determined to be 8.0 or higher, as calculated by the Ludwig wildlife habitat evaluation methodology. (If both methods are performed, the Ludwig value shall prevail*

as the determining value.)

- *The Modified Michigan Department of Natural Resource Wildlife Habitat/Use Evaluation Score Sheets* were used to calculate the MRWQ on September 13, 2018. Copies of the score sheets are included.
    - Area 4 yielded a Wildlife Habitat/Use Score of 2.0. Therefore, Area 4 does not qualify as critical habitat.
    - Area 5 yielded a Wildlife Habitat/Use Score of 3.5. Therefore, Area 5 does not qualify as critical habitat.

Conclusion

Area 4 and Area 5 qualify as regulatory wetlands/Waters according to the criteria of the *DuPage County Countywide Stormwater and Flood Plain Ordinance*.

Address:	1655 Powis Rd., West Chicago		

Description: The proposed location is for redevelopment of light industrial/commercial development

Natural Resource Review Results

Consultation for Endangered Species Protection and Natural Areas Preservation (Part 1075)

The Illinois Natural Heritage Database contains no record of State-listed threatened or endangered species, Illinois Natural Area Inventory sites, dedicated Illinois Nature Preserves, or registered Land and Water Reserves in the vicinity of the project location.

Consultation is terminated. This consultation is valid for two years unless new information becomes available that was not previously considered; the proposed action is modified; or additional species, essential habitat, or Natural Areas are identified in the vicinity. If the project has not been implemented within two years of the date of this letter, or any of the above listed conditions develop, a new consultation is necessary. Termination does not imply IDNR's authorization or endorsement.

Location

The applicant is responsible for the accuracy of the location submitted for the project.

Disclaimer

The Illinois Natural Heritage Database cannot provide a conclusive statement on the presence, absence, or condition of natural resources in Illinois. This review reflects the information existing in the Database at the time of this inquiry, and should not be regarded as a final statement on the site being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are encountered during the project's implementation, compliance with applicable statutes and regulations is required.

IDNR Project Number: 1902894

Terms of Use

By using this website, you acknowledge that you have read and agree to these terms. These terms may be revised by IDNR as necessary. If you continue to use the EcoCAT application after we post changes to these terms, it will mean that you accept such changes. If at any time you do not accept the Terms of Use, you may not continue to use the website.

1. The IDNR EcoCAT website was developed so that units of local government, state agencies and the public could request information or begin natural resource consultations on-line for the Illinois Endangered Species Protection Act, Illinois Natural Areas Preservation Act, and Illinois Interagency Wetland Policy Act. EcoCAT uses databases, Geographic Information System mapping, and a set of programmed decision rules to determine if proposed actions are in the vicinity of protected natural resources. By indicating your agreement to the Terms of Use for this application, you warrant that you will not use this web site for any other purpose.

2. Unauthorized attempts to upload, download, or change information on this website are strictly prohibited and may be punishable under the Computer Fraud and Abuse Act of 1986 and/or the National Information Infrastructure Protection Act.

3. IDNR reserves the right to enhance, modify, alter, or suspend the website at any time without notice, or to terminate or restrict access.

Security

EcoCAT operates on a state of Illinois computer system. We may use software to monitor traffic and to identify unauthorized attempts to upload, download, or change information, to cause harm or otherwise to damage this site. Unauthorized attempts to upload, download, or change information on this server is strictly prohibited by law.

Unauthorized use, tampering with or modification of this system, including supporting hardware or software, may subject the violator to criminal and civil penalties. In the event of unauthorized intrusion, all relevant information regarding possible violation of law may be provided to law enforcement officials.

Privacy

EcoCAT generates a public record subject to disclosure under the Freedom of Information Act. Otherwise, IDNR uses the information submitted to EcoCAT solely for internal tracking purposes.

U.S. FISH AND WILDLIFE SERVICE: SECTION 7 CONSULTATION

Project: 1655 Powis Rd., West Chicago, DuPage County, Illinois (#18352)

Analysis conducted by: Daniel Jablonski, V3 Companies, September 14, 2018

Site Description: Current landuse is an industrial recycling plant, habitat present on the site: blue heron, the recycling plant is surrounded by industry, landfill, and a municipal airport.

SPECIES	STATUS	HABITAT	SUITABLE HABITAT PRESENT?	CONCULSION
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	Mesic prairies to wetlands such as sedge meadows, marsh edges, and bogs with full sun and little or no woody encroachment.	No, suitable habitat is not present. Mesic prairie, sedge meadow with no encroachment not on project site	Species and habitat not present. No further consultation is required.
Mead's milkweed (*Asclepias meadii*)	Threatened	Mesic to dry mesic upland tallgrass prairie or glade habitat adapted to drought and fire. Persists in stable late-successional prairie.	No, suitable habitat is not present. Tallgrass prairie not on project site.	Species and habitat not present. No further consultation is required.
Prairie bush clover (*Lespedeza leptostachya*)	Threatened	Dry to mesic prairies with gravelly soils.	No, suitable habitat is not present. Mesic prairie not on project site.	Species and habitat not present. No further consultation is required.
Northern long-eared bat (*Myotis septentrionalis*)	Threatened	Small crevices and cavities in caves, mines, and under the bark of dead and live trees.	No, suitable habitat is not present. Small crevices of tree species not present on project site.	Species and habitat not present. No further consultation is required.
Hine's emerald dragonfly (*Somatochlora hineana*)	Endangered	Spring fed wetlands, wet meadows, and marshes within the Designated Critical Habitat areas.	No, suitable habitat is not present. Project site not within habitat zones.	Species and critical habitat not present. No further consultation is required.
Leafy-prairie clover (*Dalea foliosa*)	Endangered	Prairie remnants with thin soil over limestone along the Des Plaines River.	No, suitable habitat is not present. Project site is not a dolomite prairie.	Species and habitat not present. No further consultation is required.
Rusty patched bumble bee (*Bombus affinis*)	Endangered	Grasslands with flowering plants from April – October, underground rodent cavities or clumps of grasses above ground as nesting sites and undisturbed soil for hibernating queens to overwinter; High Potential Zones	No, suitable habitat is not present, Project area is highly disturbed; however, is in zone of high potential.	Species and habitat not present. No further consultation is required.

Conclusion: Species and critical habitat are not present. No further consultation is required.

Emergent Wetland (Area 4)

WILDLIFE HABITAT/USE EVALUATION SCORE SHEET

To assess the existing and/or potential wildlife habitat use of the subject wetland, the applicant must first complete this score sheet. The attached documentation provides examples of each scoring parameter.

A separate sheet must be completed for each wetland. The wetland system as a whole must be considered. If the wetland extends off-site, aerial photographs, observations from public access areas (roads, etc.) should be considered in the evaluation sheet.

Applicants must document their basis for scoring decisions with field surveys followed by current photographs, and other appropriate information.

A. Utilization by Wildlife

Wildlife Use	Score
Significant	3.0
Evident	2.0
Low	1.0
Occasional	0.5
Non-Existent	0.0

TABLE 7
PERMITTING HISTORY OF WETLAND CONSTRUCTION

Date of Action	Permitting Agency	Special Notes
Feb 23, 1990	U.S. Army Corps of Engineers (USACOE)	National permit issued for the construction plan to control storm water. This is the result of a permit application to potentially disturb less than 1.5 acres of wetland acres.
August 24, 1990	IEPA, Water Pollution Control Division	Construction permit issued for the storm water treatment basin. Approximate capacity of 600,000 gal. Operation of this system was to be governed by existing NPDES No. IL0037681.
August 31, 1990	IL Department of Transportation (IDOT)	Since the construction activity could potentially affect the 100 year flood plain, an investigation and planning requirement was triggered by IDOT. Based on IDOT review, no permit was required.
July 25, 1991	IEPA, Water Pollution Control Division	Evaluated revised plans for storm water basin and concluded that the system could be constructed without causing water pollution as defined by the IEPA. Required that the USACOE review the project revisions and make necessary adjustments to the original permit.
November 20, 1991	City of West Chicago	Building Permit issued for the construction project.
December 3, 1991	USACOE	Final review and approval granted.
Spring – Summer 1992	NA	Construction of settling basin and drainage improvements.
October 1, 1992	IEPA, Water Pollution Control Division	Due to the introduction of Storm Water Pollution Prevention regulations, a Notice of Intent (NOI) was submitted for the on-going construction activity.
Fall 1993 – Winter 1994	NA	Construction of storm water retention ponds.
Spring 1994	NA	Final grading & seeding
July 26, 1994	IEPA, Water Pollution Control Division	Notice of Termination of coverage under general permit. Storm water project completed.

CHICAGO, ILLINOIS 60604-1437

REPLY TO
ATTENTION OF:

March 19, 2015

Technical Services Division
Regulatory Branch
LRC-2015-00097

SUBJECT: Jurisdictional Determination Request for a Parcel South of North Avenue (Route 64), East of Powis Road, and West of the Chicago and Northwestern Railroad in West Chicago, DuPage County, Illinois

Ken Hoving
K. Hoving Recycling & Disposal Inc.
2351 Powis Road
West Chicago, Illinois 60185

Dear Mr. Hoving:

This is in response to your request that the U.S. Army Corps of Engineers complete a jurisdictional determination for the above-referenced site submitted on your behalf by V3 Companies, Ltd. The subject project has been assigned number LRC-2015-00097. Please reference this number in all future correspondence concerning this project.

Following a review of the information you submitted, this office has determined that the subject property contains "waters of the United States". **Area 3 (Kress Creek), and the abutting wetland Area 5 are jurisdictional. Area 1 and Area 4 are exempt detention basins, while Area 2 is isolated, and therefore non-jurisdictional.** For a detailed description of our determination please refer to the enclosed decision documents. This determination covers only your project as depicted in the Jurisdictional Determination Submittal dated January 22, 2015 (with revised Wetland Delineation Map dated 02/26/2015), prepared by V3 Companies, Ltd.

This office concurs with the submitted wetland delineation, and wetland boundaries at the subject site. In the event an application is submitted for work within jurisdictional areas, a professional survey of the wetland boundary(s) will need to be prepared and shall accompany the approved wetland delineation. We do not concur with the boundaries of waters not under federal jurisdiction.

This determination is valid for a period of five (5) years from the date of the letter, unless new information warrants revision of the determination before the expiration date or a District Commander has identified, after public notice and comment, that specific geographic areas with rapidly changing environmental conditions merit re-verification on a more frequent basis.

This letter is considered an approved jurisdictional determination for your subject site. If you object to this determination, you may appeal, according to 33 CFR Part 331. Enclosed you will find a Notification of Appeal Process (NAP) fact sheet and a Request for Appeal (RFA) form. If you request to appeal the above determination, you must submit a completed RFA form to the Great Lakes/Ohio River Division Office at the following address:

US Army Corps of Engineers
Great Lakes and Ohio River Division
550 Main Street, Room 10524
Cincinnati, Ohio 45202-3222
Regulatory Appeals Review Officer
(513) 684-6212

In order to be accepted, your RFA must be complete, meet the criteria for appeal and be received by the Division Office within sixty (60) days of the date of the NAP. If you concur with the determination in this letter, submittal of the RFA form to the Division office is not necessary.

This determination has been conducted to identify the limits of the Corps Clean Water Act jurisdiction for the particular site identified in this request. This determination may not be valid for the wetland conservation provisions of the Food Security Act of 1985, as amended. If you or your tenant are USDA program participants, or anticipate participation in USDA programs, you should request a certified wetland determination from the local office of the Natural Resources Conservation Service prior to starting work.

It is your responsibility to obtain any required state, county, or local approvals for impacts to wetland areas not under the Department of the Army jurisdiction. For projects located in DuPage County, please contact the DuPage County Department of Environmental Concerns at (630) 682-6724.

Pursuant to Section 404 of the Clean Water Act, the U.S. Army Corps of Engineers regulates the discharge of dredged or fill material into waters of the United States, including wetlands. A Department of the Army permit is required for any proposed work involving the discharge of dredged or fill material within the jurisdiction of this office. To initiate the permit process, please submit a joint permit application form along with detailed plans of the proposed work. Information concerning our program, including the application form and an application checklist, can be found at and downloaded from our website: http://www.lrc.usace.army.mil/co-r.

If you have any questions, please contact Mr. Mike Machalek of my staff by telephone at 312-846-5534 or email at Mike.J.Machalek@usace.army.mil.

Sincerely,

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

Applicant: Ken Hoving, K. Hoving Recycling & Disposal Inc.	File Number: LRC-2015-00097	Date: March 19, 2015

Attached is:		See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of Permission)	A
	PROFFERED PERMIT (Standard Permit or Letter of Permission)	B
	PERMIT DENIAL	C
X	APPROVED JURISDICTIONAL DETERMINATION	D
	PRELIMINARY JURISDICTIONAL DETERMINATION	E

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://www.usace.army.mil/CECW/Pages/reg_materials.aspx or Corps regulations at 33 CFR Part 331.

A. INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit or a Letter of Permission (LOP), you may sign the permit document and return it to the district commander for final authorization. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district commander. Your objections must be received by the district commander within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district commander will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district commander will send you a proffered permit for your reconsideration, as indicated in Section B below.

B. PROFFERED PERMIT: You may accept or appeal the permit

- ACCEPT: If you received a Standard Permit or a Letter of Permission (LOP), you may sign the permit document and return it to the district commander for final authorization. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division commander. This form must be received by the division commander within 60 days of the date of this notice.

C. PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division commander. This form must be received by the division commander within 60 days of the date of this notice.

D. APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division commander. This form must be received by the division commander within 60 days of the date of this notice.

E. PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact:

Regulatory Branch
Chicago District Corps of Engineers
231 South LaSalle Street, Suite 1500
Chicago, IL 60604-1437
Phone: (312) 846-5530
Fax: (312) 353-4110

If you only have questions regarding the appeal process you may also contact:

Division Review Officer, CELRD-PD-REG
Great Lakes and Ohio River Division
550 Main Street, Room 10524
Cincinnati, OH 45202-3222
Phone: (513) 684-6212
Fax: (513) 684-2460

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Commanders personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15-day notice of any site investigation, and will have the opportunity to participate in all site investigations.

	Date:	Telephone number:
_____ Signature of appellant or agent.

INTRODUCTION

The Wetland Buffer Restoration Plan Summary and Management & Monitoring Plan has been prepared on behalf of Mr. K.J. Loerop, of Lakeshore Recycling Systems, 1655 Powis Road, West Chicago, DuPage County, Illinois is located north of Harvester Road, south of North Avenue and east of Powis Road in West Chicago, DuPage County, Illinois (Section 32, 40N, 9E; 41.911444°N, -88.237904°W; West Chicago quadrangle.)

The proposed planting plan for the 50-foot-wide wetland buffer and floodplain associated with the unauthorized activities along the western side of Kress Creek is provided in Appendix 1. Any fill/stone that was placed within the buffer/floodplain will be removed and topdressed with clean topsoil. Any areas disturbed within the buffer/floodplain as a result of fill removal will be seeded with a fast-establishing native seed mix with cover crop (Avena sativa) to promote soil stabilization. Following excavation, topdressing, seeding, and blanketing, pods of native shrubs will be installed along the western side of the buffer as identified on the Buffer/floodplain Restoration Plan.

The vegetation within the 50-foot buffer, and that surrounding the two disturbed /filled areas within the buffer are dominated by non-native invasive species. Species typical of the buffer consist of: reed canary grass (Phalaris arundinacea), common reed (Phragmites australis), common buckthorn (Rhamnus cathartica), honeysuckle (Lonicera tatarica), canada thistle (Cirsium arvense), and burdock (Arctium minus). Pods of hardy native shrubs and fast establishing native seed are proposed to restore any lost function attributed to the buffer/floodplain disturbance.

CONSTRUCTION AND REVEGETATION

CONSTRUCTION SPECIFICATIONS

The specifications listed below are provided to promote construction of a suitable soil condition for desirable vegetation establishment.

1. The Excavation Contractor is required to remove all stone/fill placed within the 50’ wetland buffer and floodplain.
2. All disturbed areas (stone/fill) within the 50’ wetland buffer and floodplain shall be over-excavated a minimum of one foot below the final grade to allow for placement of topdress material, unless a one foot thick topsoil layer is present following excavation to proposed final grade.
3. If topdress material needs to be imported the material shall contain an organic matter content of 3% or more and a clay content of 27% or less.
4. The Excavation Contractor is required to establish a smooth and level surface with clods no greater than 2 inches in diameter, and a surface with minimal compaction.
5. All trash, construction debris, sticks, roots, and other deleterious materials shall be removed from the planting areas.

SHRUB PLANTING SPECIFICATIONS

1. The Planting Contractor shall furnish, transport, and install all shrubs as shown on the plan.
2. Installation of shrubs shall be conducted between April 15 and May 31 or September 15 and October 31 following construction activities.
3. Shrubs shall be well branched, well formed, sound, vigorous, healthy planting material free from disease, sunscald, windburn, abrasion, and harmful insects or insect eggs and having healthy, normal, and undamaged root systems.
4. All shrubs shall be thoroughly watered following installation, to eliminate air pockets around roots, settling, and to soak the surrounding soil.
5. All shrubs shall be properly mulched to beyond the shrub's dripline.
6. All shrubs shall be transported to the site in a covered trailer and/or covered by a landscape tarp to prevent windburn.
7. All shrubs shall be subject to inspection by DuPage County or its representative.
8. Planting holes shall be over excavated to reduce soil compaction around the root ball to promote root growth.
9. Shrubs shall be properly planted with the trunk/root flare slightly above grade.
10. Prior to planting and throughout the first year of establishment the area surrounding the planted shrubs should be weed whipped to minimize vegetation height to reduce light and water competition.
11. At the end of the third year of monitoring, the Planting Contractor shall provide a guarantee that 100% of the proposed shrubs shall be alive and in healthy condition. Survivorship shall be reviewed by the Planting Contractor and DuPage County and/or it's representatives during a site inspection at the end of the third year of monitoring. All replacements shall be for dead and partially dead shrubs, be of the same kind and size as originally planted, and shall be made at no additional cost. Partially dead shrubs are shrubs with greater than 30% of the crown dead.

SHRUB MIX

Shrubs shall be planted in groups of three allowing ample space between plantings to allow species to grow to their heathy mature size. Species from Appendix 2 shall be installed in areas with correct soil and hydrologic conditions for each given species.

NATIVE SEEDING SPECIFICATIONS

1. The seeding contractor shall furnish, transport, and install the prairie seed mix as specified for the respective area shown on the planting plan
2. Seeding activities of the permanent matrices shall be performed after the seedbed has been properly prepared and following shrub installation, as applicable, between March 15 and June 15 or between October 1st and ending when snow cover exceeds a 2-inch depth or areas are covered with ice.
3. If construction activities are finished outside the permanent seeding window, then the area shall be stabilized with the temporary cover crop. Erosion control blanket shall not be installed during

this time as it will interfere with permanent seeding. The permanent seeding and erosion control blanket installation must be completed in the next available window.

4. Seed shall be surface sown with a broadcast seeder or native drop seeder.
5. All seed sources shall be within a 200-mile radius of the project site.
6. Seeds shall be true to name and variety.
7. Seeding shall only occur in areas that will receive blanket installation on the same day

EROSION CONTROL BLANKET SPECIFICATIONS

North American Green (NAG) S75BN shall be installed over all disturbed areas within the 50' wetland buffer/floodplain. All areas to be blanked shall be broadcast seeded with the specified native seed mix (Appendix 2) and lightly raked in to promote good seed/soil contact. The blanket shall be installed and secured with staples following the manufacture's specifications.

MANAGEMENT & MONITORING PLAN

This Buffer Restoration Plan Summary & Management and Monitoring Plan (MMP) for the wetland buffer/floodplain located at 1655 Powis Road establishes a means by which the naturalized buffer may be evaluated relative to pre-established goals and performance standards.

The duration of the monitoring program is three years, beginning with the completion of shrub installation, native seeding, and erosion control. The three-year management and monitoring program will be the responsibility of the applicants, Lakeshore Recycling Systems of 6132 Oakton Street, Morton Grove, DuPage County Illinois, or their successors and assigns.

WETLAND BUFFER MANAGEMENT

Proper management is critical for successful establishment of the proposed buffer/floodplain community. Irrigation and periodic mowing of surrounding vegetation are commonly used as management techniques for shrub establishment.

Mowing/Herbicide. During shrub installation the footprint of each shrub shall be weed whipped as low as possible to help the shrubs establish by reducing competition for water and light. Following installation, the mulched area around the shrubs shall be kept clean of vegetation by herbicide application, hand pulling and/or weed whipping, as well as the area directly next to the mulch shall be weed whipped to limit vegetation height. If herbicide is used, great care needs to be taken to limit any and all overspray and/or vapor drift so as to not adversely affect the health of the planted shrubs. In order to maintain surrounding vegetation height mowing/herbicide application shall take place in approximately six-week intervals during the growing season.

First Year Watering. Following the initial watering in of the shrubs directly after installation a watering schedule shall be implemented. Watering shall be conducted on a weekly basis (weather dependent) for a three-month period following the last installation date and/or as needed to limit desiccation and achieve maximum survivorship within the first year of establishment.

Pruning and Shrub Maintenance. During the first year of establishment if the restoration contractor feels maintenance activities such as but not limited to pruning or fertilization will improve shrub health these adaptive activities can be incorporated into the management plan.

Herbicide Application. Management of the vegetation in all areas should include selective application of herbicide to control aggressive plant species, such as, but not limited to, reed canary grass (Phalaris arundinacea), purple loosestrife (Lythrum salicaria), common reed (Phragmites australis), thistles (Cirsium spp.), teasel (Dipsacus spp.), and sweet clovers (Melilotus spp.). These species, including others, can displace desirable species, thereby reducing floristic diversity in the naturalized areas. Controlling these species will be required to achieve the performance standards for the project.

A determination regarding the type of herbicide to be used should be made when it is known which nuisance species are present on the site. Depending on the target weed species, a selective herbicide may be available. The choice of herbicide and timing of herbicide application will be made by a trained, experienced professional based on the target weed species and conditions.

It is recommended that a minimum of four annual weed control application periods are conducted throughout the three-year period. Below is a general guideline on the suggested schedule and target species for the application periods:

- Application Period One (early spring – April/May): problematic species such as, but not limited to, reed canary grass, red/white clover, cool season adventive grasses.
- Application Period Two (late spring to early summer – May/June): problematic species such as, but not limited to, teasel, white/yellow sweet clover, thistle.
- Application Period Three (mid to late summer – July/August): problematic species such as, but not limited to, tall goldenrod, hairy aster, ragweed, purple loosestrife.
- Application Period Four (late summer and fall – September/October): problematic species such as, but not limited to, reed canary grass, thistle, common reed, red/white clover, cool season grasses.

PERFORMANCE STANDARDS

Performance standards are established for all proposed projects involving naturalized areas so that the relative success of creation and enhancement efforts may be evaluated. If the performance standards are not achieved by the end of the one-year management and monitoring program, the permittee is responsible for correction of any deficiencies through further management activities, which may include replanting.

Wetland Buffer Performance Standards

1. Within 3 months of native seed installation, at least 85% of the buffer/floodplain area, as measured by aerial coverage, shall be vegetated with native seed and/or cover crop. A minimum 90% vegetative coverage shall be maintained throughout, and at the end of the three-year management period.

2. At the end of the first year of the monitoring period, all seeded areas shall achieve a minimum of 10% native coverage. None of the three most dominant species can be non-naïve and/or invasive.
3. At the end of the first growing season 100% of the planted shrubs shall be alive and in healthy condition. Any trees to be replaced shall have an additional 1-year survivorship assed on them.
4. At the end of the second year of the monitoring period, all seeded areas shall achieve a minimum 25% native vegetative coverage. None of the three most dominant species can be non-naïve and/or invasive.
5. At the end of the third year of the monitoring period, all seeded areas shall achieve a minimum 75% native vegetative coverage. None of the three most dominant species can be non-naïve and/or invasive.
6. At the end of the third year of monitoring period the shrub and seeded areas as a whole shall achieve a Floristic Quality Index of 15 or greater.

MONITORING

Vegetation Monitoring. Vegetation monitoring in the wetland buffer/floodplain will be conducted during the three-year period beginning immediately after seed and shrub installation. Ocular estimation will be used to calculate approximate vegetative and species coverage data. The vegetative monitoring inspections will be conducted twice per year (May/June and August/September). In addition, an inventory of all plant species present within the seeded areas will be collected and will be used to calculate a native FQI and determine seed mix presence. The planting plan will be used to identify planting areas as well as species to determine the survivorship of the planted shrubs at the end of the first growing season.

Monitoring Report. An end of growing season memo will be submitted to DuPage County SWM by January 31 of each year during the three-year period or until performance standards are met and signoff is achieved.

The end of growing season memo must include a review of site progression towards meeting the performance standards or if performance standards are met. More specifically, the memo must contain the following information, which will be based on data collected during the first growing season.

1. A summary of management activities conducted during the year.
2. Representative photographs depicting general site conditions and construction/planting activities.
3. Shrub survivorship by area and species as indicated on the planting plan.
4. Provide aerial coverage of the seeded cover crop areas and phot documentation.
5. Identify species and areas to be re-planted of 100% survivorship is not achieved within the first growing season.
6. Complete species list of planted/seeded areas as well as native FQI.
7. Evaluate the status of the areas relative to the performance standards.

TAB 5. WATERWAY BUFFER

There are identified waters of DuPage and/or flood plain on the property, as identified on Drawing C100 - Existing Site Conditions (Tab 8, Attachment 8-1). Per Section 15-92 of the Ordinance, a regulatory flood plain study has been completed. No impacts are proposed to the defined flood plains. The wetland buffer of Kress Creek will being re-established in accordance with the V3 report included as Attachment 4-1 in Tab 4. Soil erosion and sediment controls, both during and post-construction, will be provided, as discussed in Tabs 6 and 7. Refer to Attachment 4-1 for more information regarding buffers and restoration. Figure B in Attachment 4-1 provides the Buffer Restoration Plan.

NOTES:

1. UNLESS OTHERWISE INDICATED, ALL VEGETATIVE AND STRUCTURAL EROSION AND SEDIMENT CONTROL PRACTICES WILL BE CONSTRUCTED ACCORDING TO MINIMUM STANDARDS AND SPECIFICATION IN THE ILLINOIS URBAN MANUAL, LATEST EDITION. SEE THE STORMWATER POLLUTION PREVENTION PLAN PREPARED BY ROAKE AND ASSOCIATES, INC.
2. ALL GRADES DEPICTED ARE FINISHED GRADES. IN NON-PAVED AREAS, THE CONTRACTOR SHALL SUBTRACT 6 INCHES (0.5 FEET) TO ALLOW FOR TOPSOIL/MULCH MATERIAL PLACEMENT. THE BEST MANAGEMENT PRACTICE FACILITY SHALL RECEIVE 12 INCHES OF PULVERIZED TOPSOIL FROM FINISHED GRADE 699 TO 701 (MINIMUM).
3. THE CONTRACTOR SHALL PROVIDE INLET FILTER BASKETS IN ACCORDANCE WITH THE APPROVED EROSION CONTROL PLANS FOR ALL OPEN LID STRUCTURES TO MINIMIZE INTRUSION OF DEBRIS/SILT INTO THE STORM SEWER SYSTEM.
4. THE ESTIMATED CONSTRUCTION SCHEDULE IS AS FOLLOWS:

GRADING	OCTOBER 2019
PAVING	OCTOBER 2019
GROUND STABILIZATION/ SODDING	APRIL 2020
LANDSCAPING	MAY 2020

5. LANDSCAPE MATERIALS SHALL BE INSTALLED AS SOON AS POSSIBLE TO STABILIZE SITE. WHERE PROPOSED SLOPES EXCEED 4 TO 1, LOW/NO MAINTENANCE GROUND COVER SHALL BE INSTALLED. SEE LANDSCAPE PLANS FOR DETAILS.
6. SOIL EROSION AND SEDIMENTATION CONTROL MEASURES WILL BE INSPECTED WEEKLY AND AFTER EACH 1/2" RAINFALL EVENT OR MORE FREQUENTLY AS NECESSARY TO MAINTAIN THEIR FUNCTION.
7. A COPY OF THE APPROVED EROSION AND SEDIMENT CONTROL PLAN SHALL BE MAINTAINED ON THE SITE AT ALL TIMES.
8. THE CONTRACTOR IS RESPONSIBLE FOR INSTALLATION OF ANY ADDITIONAL EROSION CONTROL MEASURES NECESSARY TO PREVENT EROSION AND SEDIMENTATION AS DETERMINED BY THE CITY OF WEST CHICAGO.
9. EAST DETENTION FACILITY SHALL BE DEWATERED PRIOR TO UTILITY INSTALLATION AND EAST HALF REGRADING OPERATIONS. DURING DEWATERING OPERATIONS, WATER WILL BE PUMPED INTO SEDIMENT BASINS, FIELD BAGS, OR SILT TRAPS PRIOR TO RELEASE. DEWATERING OF THE EAST POND SHALL BE PERFOMED DURING DRY WEATHER CONDITIONS.
10. CONCRETE TRUCKS SHALL NOT BE PERMITTED TO WASH OUT OR DISCHARGE SURPLUS CONCRETE OR DRUM WASH WATER ON SITE. SPECIFIC AREAS FOR THIS ACTIVITY SHALL BE DESIGNATED BY THE CONTRACTOR AND PROVIDED WITH ADEQUATE SILTATION BASINS AND OTHER FACILITES TO ASSURE THAT DISCHARGE IS CONTAINED AND CLEANSED BEFORE ENTERING THE RECEIVING STORM SEWER SYSTEM
11. ALL ADJACENT STREETS SHOULD BE KEPT CLEAR OF MUD/DEBRIS. THE CONTRACTOR SHALL INSPECT THE STREETS DAILY AND CLEAN THEM AS NECESSARY.
12. STOCKPILES OF SOIL AND OTHER BUILDING MATERIALS TO REMAIN IN PLACE MORE THAN THREE (3) DAYS SHALL BE FURNISHED WITH EROSION AND SEDIMENT CONTROL MEASURES (I.E. PERIMETER SILT FENCE). STOCK PILES, NOT BEING ACTIVELY WORKED AND TO REMAIN IN PLACE 14 DAYS OR MORE SHALL RECEIVE TEMPORARY SEEDING. THE PROPOSED BERMS MUST BE STABILIZED IMMEDIATELY AFTER FINAL GRADING. STRAW MULCH WITH NETTING OR EROSION CONTROL BLANKET SHALL BE USED ON SIDE SLOPE AND SUMMIT.

PROPOSED PRIVATE WATERMAIN
COVER BUILDING (80' X 56', 10-FT HIGH)
ELEC/COMM LINES TO BE IN THE SAME TRENCH
3" WATER SPIGOT (LOC. PER SITE PLAN/MEP)
ROOF DRAINS TIED INTO STORM SYSTEM
RECONFIGURE INTERNAL PLUMBING TO GO UNDERGROUND INSIDE BUILDING AND CONNECT TO EXISTING BUILDING WATER LINE ON EXTERIOR. CONFIRM EXISTING WATER LINE LOCATION IN BUILDING
GAS/COMM INTERNAL ROUTING SHOWN FOR REFERENCE ONLY
MATCHLINE
EX. WM EASEMENT

WATER MAIN INSTALLATION SEQUENCE

1. CLOSE EXISTING VALVE WTR 1.3, INSTALL LINE STOP NO. 1. SERVICE IS STILL ACTIVE TO THE EXISTING BUILDING AND ALL FIRE HYDRANTS ARE ACTIVE EXCEPT FH 3. BUILDLING MAINTAINS COVERAGE FROM A MINIMUM OF TWO FIRE HYDRANTS.
2. DRAIN EXISTING WATER FROM FH 3, THEN BAG FH 3.
3. PERFORM CU-IN CONNECTION AND INSTALL VALVE VAULT NO. 1.
4. INSTALL WATER MAIN AND FIRE HYDRANTS NO. 1 AND NO. 2.
5. PERFORM CU-IN CONNECTION LOCATED JUST EAST OF EXISTING VALVE WTR 1.3.
6. REMOVE LINE STOP 1.
7. FLUSH NEW WATER MAIN THROUGH NEW FH 1 AND FH 2 BY OPENING EXISTING VALVE WTR 1.3 AND VALVE VAULT NO. 1.
8. PRESSURE TEST BETWEEN EXISTING VALVE WTR 1.3, VALVE VAULT NO. 1, AND FH 2 HYDRANT LEAD.
9. INSTALL WHIPS AT EACH END OF THE NEW SYSTEM AND CHLORINATE. CLOSE EXISTING VALVE WTR 1.3, AND VALVE VAULT NO. 1.
10. AFTER TWO (2) DAYS OF SUCCESSFUL SAMPLES, FLUSH SYSTEM AND LEAVE OPEN EXISTING VALVE WTR 1.3 AND VALVE VAULT NO. 1.

NOTES

1. YARD HYDRANT TO BE HOUSED IN A 4" DIAMETER PRECAST BARREL SECTION WITH FLAT TOP AND CLOSED LID AND 6" CA-7 BEDDING BOTTOM. YARD HYDRANT SHALL BE LABELED "NON-POTABLE WATER AND NOT USED FOR DRINKING PURPOSES" ON THE LID OR AS ADJACENT SIGN.
2. NOT ALL SANITARY SEWER LOCATIONS CONFIRMED. CONTRACTOR SHALL INSTALL REPLACEMENT SEWER IF THE EXISTING SEWER IS NOT REUSABLE. SANITARY MANHOLES SHALL SIMILARLY BE REPLACED IF FOUND UNUSABLE.
3. ALL UNDERGROUND WATER MAINS THAT ARE TO BE UTILIZED FOR FIRE PROTECTION SHALL BE PROPERLY FLUSHED. THE FIRE PREVENTION BUREAU SHALL WITNESS THE FLUSH. ALL WATER MAINS WHICH ARE CONNECTED TO THE CITY OF WEST CHICAGO WATER MAIN SYSTEM WILL REQUIRE A REPRESENTATIVE FROM THE CITY OF WEST CHICAGO'S UTILITY DIVISION BE PRESENT DURING THE FLUSHING TO OPERATE THE VALVES AND CONTROL THE FLOW.
4. ALL UNDERGROUND WATER MAINS FOR FIRE PROTECTION USE SHALL BE HYDRO TESTED AT TWO HUNDRED (200) LBS. FOR TWO (2) HOURS, AFTER THE MAINS HAVE BEEN FLUSHED.
   - 4.1. THE CONTRACTOR SHALL PERFORM A PRETEST PRIOR TO SCHEDULING THE TEST TO BE WITNESSED.
   - 4.2. THE CONTRACTOR SHALL HAVE ALL THE NECESSARY EQUIPMENT ON SITE TO PERFORM THE HYDRO TEST AND RECOVERY TEST
   - 4.3. THE CONTRACTOR SHALL PROPERLY FILL OUT A CONTRACTORS MATERIAL & TEST CERTIFICATE FOR UNDERGROUND PIPING. THE CERTIFICATE SHALL BE ON SITE AND A COPY GIVEN TO THE INSPECTOR AT THE END OF THE TEST.
   - 4.4. THE CONTRACTOR SHALL CONTACT THE FIRE PREVENTION BUREAU @ 630-231-2123 TO SCHEDULE THE TEST. PROVIDE FORTY-EIGHT (48) HOURS' NOTICE FOR TESTING.
5. PROVISIONS SHALL BE MADE TO MAINTAIN SANITARY SEWER SERVICE. CONTRACTOR SHALL MINIMIZE DOWN-TIME TO INSTALL NEW CONNECTION TO SANITARY MANHOLE NO. 1.4.
6. POTABLE WATER SOURCE IS MUNICIPAL (CITY OF WEST CHICAGO)
7. MATERIALS SHALL CONFORM TO CITY OF WEST CHICAGO REQUIREMENTS - SEE SHEET C904.
8. INSTALL WATER MAIN PROTECTION WHERE REQUIRED PER ILLINOIS STANDARD SEWER AND WATER MAIN SPECIFICATIONS.

REFERENCE:

1. SURVEY IS BASED UPON FIELD OBSERVATIONS MADE BETWEEN 10/08/2018/ AND 01/12/2019, BY CIVIL & ENVIRONMENTAL CONSULTANTS, INC.
2. THE BEARINGS SHOWN HEREON ARE BASED UPON ILLINOIS STATE PLANE EAST ZONE. VERTICAL DATUM OF SITE BASED UPON OBSERVATION OF DUPAGE COUNTY BENCHMARK DK3273 AND DK 3275 (NAVD 88 DATUM).
3. UNDERGROUND UTILITY INFORMATION SHOWN HEREON IS BASED UPON FIELD OBSERVATIONS, VERBAL INFORMATION PROVIDED BY SITE PERSONNEL, AND AS-BUILT DRAWING BY TEBRUGGE ENGINEERING DATED 1.20.15, AS-BUILT DATE JULY 7, 2016. NOT ALL STORM STRUCTURES WERE ABLE TO BE VISUALLY INSPECTED DUE TO WATER/DEBRIS IN STRUCTURES. ESTIMATED STRUCTURE LOCATIONS ARE PROVIDED WITHOUT STRUCTURE NUMBER.

SOIL PROTECTION CHART

STABILIZATION TYPE	JAN	FEB	MAR	APR	MAY	JUNE	JULY	AUG	SEP	OCT	NOV	DEC
PERMANENT SEEDING			A			*	*					
DORMANT SEEDING	D									D		
TEMPORARY SEEDING			C				D					
SODDING			E**									
MULCHING	F											

A. KENTUCKY BLUEGRASS 90 LBS/AC MIXED WITH PERENNIAL RYEGRASS 30 LBS/AC
B. KENTUCKY BLUEGRASS 135 LBS/AC MIXED WITH PERENNIAL RYEGRASS 45 LBS/AC +2 TONS STRAW MULCH/AC
C. SPRING OATS 100 LBS/ACRE
D. WHEAT OR CEREAL RYE 150 LBS./ACRE
E. SOD
F. STRAW MULCH 2 TONS/ACRE
* IRRIGATION NEEDED DURING JUNE AND JULY
** IRRIGATION NEEDED FOR 2 TO 3 WEEKS AFTER APPLYING SOD

NOTES

1. SILT FENCE AND INLET PROTECTION SHALL BE INSTALLED PRIOR TO SOIL DISTURBANCE ACTIVITIES.
2. DISTURBED AREAS SHALL BE PERMANENTLY STABILIZED AS SOON AS POSSIBLE. PAVEMENT AND FINAL VEGETATION ANTICIPATED FOR SPRING 2020.
3. SEDIMENT BASINS SHALL BE ADDED PRIOR TO DETENTION POND OUTFALLS AS REQUIRED TO CONTROL UPSTREAM EROSION.
4. DETENTION POND SHALL BE UTILIZED AS SEDIMENT BASIN DURING CONSTRUCTION. A TEMPORARY PERFORATED FILTERED RISER PIPE SHALL BE INSTALLED JUST BEFORE THE PERMANENT OUTLET FLARED END SECTION AND SHALL INCLUDE A TEE OUTLET TO CONVEY FILTERED WATER TO THE OUTLET.
5. NO MATERIAL STORAGE OR STOCKPILES SHALL BE PLACED WITHIN THE FLOODPLAIN LIMITS.
6. PERMANENT FUTURE BOOM WILL BE AN ELASTIC TYPE 1 STILLWATER SCREEN TURBIDITY CURTAIN EQUIPPED WITH 5" PIG OIL-ONLY ABSORBENT BOOMS (OR EQUIVALENT) ALONG THE FULL LENGTH OF THE TOP OF THE CURTAIN.

PHASE PLAN SCHEDULE

PHASE I - SITE PREP AND DEMO SEPTEMBER 2019

PHASE II - GRADING AND CONSTRUCTION BEGIN OCTOBER 2019

PHASE III - FINAL GRADING AND VEGETATION BEGIN APRIL 2020

SEDIMENT BASIN CALCULATION

1. EAST TRIBUTARY AREA = DA3 + DA4 + DA5
   IMPERVIOUS AREA = 9.69AC + 1.62AC + 2.99AC = 14.3 AC
   PERVIOUS AREA = 0.67AC + 0.30AC + 2.83AC = 3.8 AC
   TOTAL AREA = 14.3AC + 3.8AC + 4.1AC (AREA OF WATER IN DA5) = 22.2 AC
   2 YEAR, 6-HOUR STORM EVENT = 2.28 IN. = 0.19 FT.
   INTENSITY = 2.28IN./6 HR. = 0.38 IN/HR = 0.0000088 FT/SEC
   C-VALUE = [((14.3AC X 0.98) + (3.8AC X 0.35))/22.2AC] = 0.69
   Q = CIA = 0.69 X 0.0000088 FT/SEC X 22.2 AC = 0.0001348 AC-FT/S
   VOLUME = 0.0001348 AC-FT/S X 6 HR = **2.9 AC-FT**
2. ASSUME 193LBS/AC X 22.23AC = 4290.39 LBS
   ASSUMING 100 LB/CF
   SEDIMENT LOAD ESTIMATE = 4290.39LBS/100LB/CF = 42.90CF = 0.00098 AC-FT
3. ASSUME 3-FT DEAD WATER POOL
   AREA @ NWL = 3.7 AC
   DEAD STORAGE AVAILABLE = 3FT X 3.7AC = 11.1 AC-FT
4. LIVE STORAGE AVAILABLE = 11.8 AC-FT

   THEREFORE BOTH DEAD AND LIVE STORAGE AREA ADEQUATE TO ACCOMMODATE THE 2 YEAR, 6-HOUR STORM EVENT

VOLUME CONTROL CALCULATION - EAST POND

1. EAST TRIBUTARY IMPERVIOUS AREA = 14.3AC (SEE ABOVE FOR CALCULATION)
   VOLUME CONTROL STORAGE REQUIRED = 14.3AC X (1.25IN/12IN) = 1.49 AC-FT
2. POND STAGE AT 1.49 AC-FT = 749.9 FT (INTERPOLATED FROM STAGE-STORAGE-DISCHARGE EAST TABLE ON SHEET C301)
3. ASSUME RESTRICTOR SIZE = 3.5 IN
   INVERT = 749.5 FT
   C = 0.61
   Q = CA(2 X G X H)^1/2 = 0.292083 CFS
4. 1.49 AC-FT/ 0.292083 CFS = 61.7 HRS
   POND WILL DEWATER IN 61.7 HRS, ORIFICE IS SIZED APPROPRIATELY.

SEE RESTRICTOR DETAIL ON SHEET C903 FOR VOLUME CONTROL WEIR WALL AND RESTRICTOR.

VOLUME CONTROL CALCULATION - WEST POND

1. EAST TRIBUTARY IMPERVIOUS AREA = 1.49 AC (DA2)
   VOLUME CONTROL STORAGE REQUIRED = 1.49AC X (1.25IN/12IN) = 0.155 AC-FT
   AREA OF INFILTRATION TRENCH = 216' X 2.45' X 2.5' = 0.0304 AC-FT
   ADDITIONAL VOLUME CONTROL STORAGE NEEDED = 0.155 AC-FT - 0.0304 AC-FT = 0.1246 AC-FT
2. POND STAGE AT 0.1246 AC-FT = 752.4 FT (INTERPOLATED FROM STAGE-STORAGE-DISCHARGE WEST TABLE ON SHEET C300)
3. ASSUME RESTRICTOR SIZE = 1.0 IN
   INVERT = 752.0 FT
   C = 0.61
   Q = CA(2 X G X H)^1/2 = 0.023843 CFS
4. 0.1246 AC-FT/ 0.023843 CFS = 63.2 HRS
   POND WILL DEWATER IN 63.2 HRS, ORIFICE IS SIZED APPROPRIATELY.

SEE RESTRICTOR DETAIL ON SHEET C903 FOR VOLUME CONTROL WEIR WALL AND RESTRICTOR.

REFERENCE:

1. SURVEY IS BASED UPON FIELD OBSERVATIONS MADE BETWEEN 10/08/2018/ AND 01/12/2019, BY CIVIL & ENVIRONMENTAL CONSULTANTS, INC.
2. THE BEARINGS SHOWN HEREON ARE BASED UPON ILLINOIS STATE PLANE EAST ZONE. VERTICAL DATUM OF SITE BASED UPON OBSERVATION OF DUPAGE COUNTY BENCHMARK DK3273 AND DK 3275 (NAVD 88 DATUM).
3. UNDERGROUND UTILITY INFORMATION SHOWN HEREON IS BASED UPON FIELD OBSERVATIONS, VERBAL INFORMATION PROVIDED BY SITE PERSONNEL, AND AS-BUILT DRAWING BY TEBRUGGE ENGINEERING DATED JULY 7, 2016. NOT ALL STORM STRUCTURES WERE ABLE TO BE VISUALLY INSPECTED DUE TO WATER/DEBRIS IN STRUCTURES.

NOTES

1. REFER TO "WETLAND BUFFER RESTORATION PLAN SUMMARY AND MAINTENANCE & MONITORING PLAN", BY V3 COMPANIES, DATED FEBRUARY 20, 2019, FOR BUFFER RESTORATION PLAN AND SPECIFICATIONS.
2. SILT FENCE AND INLET PROTECTION SHALL BE INSTALLED PRIOR TO SOIL DISTURBANCE ACTIVITIES.
3. DISTURBED AREAS SHALL BE PERMANENTLY STABILIZED AS SOON AS POSSIBLE. PAVEMENT AND FINAL VEGETATION ANTICIPATED FOR SPRING 2020.
4. DETENTION POND SHALL BE UTILIZED AS SEDIMENT BASIN DURING CONSTRUCTION. A TEMPORARY PERFORATED FILTERED RISER PIPE SHALL BE INSTALLED JUST BEFORE THE PERMANENT OUTLET FLARED END SECTION AND SHALL INCLUDE A TEE OUTLET TO CONVEY FILTERED WATER TO THE OUTLET.
5. NO MATERIAL STORAGE OR STOCKPILES SHALL BE PLACED WITHIN THE FLOODPLAIN LIMITS.
6. PERMANENT FUTURE BOOM WILL BE AN ELASTIC TYPE 1 STILLWATER SCREEN TURBIDITY CURTAIN EQUIPPED WITH 5" PIG OIL-ONLY ABSORBENT BOOMS (OR EQUIVALENT) ALONG THE FULL LENGTH OF THE TOP OF THE CURTAIN.

PART 1.00 GENERAL

1.1 INTRODUCTION

A. The VortClarex® system, with the performance specifications as described in Section 2.2, shall remove essentially all free and dispersed, non-emulsified oil and settleable solids from an oil/water mixture at the specified flow rates and operating temperatures. The system design shall utilize the difference in specific gravity between oil and water (i.e., buoyancy force) to separate these fluids. The separation process shall be enhanced through the use of proprietary VortClarex coalescing media. The separator shall be designed to receive non-emulsified oily water by gravity or pumped flow and shall process it on a once-through basis. The system shall be a single wall, rectangular tank installed below grade.

1.2 DESCRIPTION

The VortClarex system shall be housed within a rectangular, precast reinforced concrete tank. Within the precast concrete vault, parallel-corrugated plate coalescing media shall be utilized to provide enhanced gravity separation of oil and water mixtures. The separator shall include a baffled inlet compartment, separation chamber, and clean water outlet chamber.

A. INLET COMPARTMENT
The inlet compartment shall be of sufficient volume to effectively reduce influent suspended solids, dissipate energy and begin separation. The inlet shall be comprised of a non-clog diffuser to distribute the flow across the width of the separation chamber. A sediment baffle will be provided to retain settleable solids and prevent sediment from entering the separation chamber.

B. SEPARATION CHAMBER
The oil separation chamber shall contain VortClarex coalescing media. The parallel corrugated plates shall be at a 45° angle with respect to longitudinal axis of the plate corrugations, and spaced ½-inch (13 mm) apart for removal of free oil 60 microns in size or greater, and settleable solids. System configuration shall not promote solids buildup on the plates, which may increase velocities and result in the discharge of an effluent of unacceptable quality.

Laminar flow with a Reynolds Number of less than 500 shall be maintained throughout the coalescing media over the range of operating flow rates (treatment through maximum conveyance flow), to prevent re-entrainment of oils with water. Flow through the coalescing media shall be cross-flow perpendicular to plate corrugations so that the oil collects and coalesces at the high point of corrugations and rises to the top of the media pack without clogging.

C. CLEAN WATER OUTLET CHAMBER
An oil retention baffle or inverted T-pipe section shall be provided to prevent free-floating oil from exiting the system.

D. PIPE CONNECTIONS
Internal SDR 35 piping shall extend through the external precast concrete wall of the vault. Influent and effluent pipes shall be connected to the VortClarex® pipe system by means of a Ferno type coupling.

1.3 QUALITY CONTROL INSPECTION

A. The quality of materials, the process of manufacture, and the finished sections shall be subject to inspection by the Engineer. Such inspection may be made at the place of manufacture, or on the work site after delivery, or at both places, and the sections shall be subject to rejection at any time if material conditions fail to meet any of the specification requirements, even though sample sections may have been accepted as satisfactory at the place of manufacture. Sections rejected after delivery to the site shall be marked for identification and shall be removed from the site at once. All sections that have been damaged beyond repair during delivery will be rejected and, if already installed, shall be repaired to the Engineer's acceptance level, if permitted, or removed and replaced, entirely at the manufacturer's expense.

B. All sections shall be inspected for general appearance, dimensions, soundness, etc. The surface shall be dense, close-textured and free of blisters, cracks, roughness and exposure of reinforcement.

C. Imperfections may be repaired, subject to the acceptance of the Engineer, after demonstration by the manufacturer that strong and permanent repairs result. Repairs shall be carefully inspected before final acceptance. Cement mortar used for repairs shall have a minimum compressive strength of 4,000 psi (28 MPa) at the end of 7 days and 5,000 psi (34 MPa) at the end of 28 days when tested in 3-inch (76 mm) by 6-inch (152 mm) cylinders stored in the standard manner. Epoxy mortar may be utilized for repairs.

1.4 SUBMITTALS

A. The Contractor shall be provided with dimensional drawings and, when specified, utilize these drawings as the basis for preparation of shop drawings showing details for construction, reinforcing, joints and any cast-in-place appurtenances. Shop drawings shall be annotated to indicate all materials to be used and all applicable standards for materials, required tests of materials and design assumptions for structural analysis. Shop drawings shall be prepared at a scale of not less than 3/16-inches per foot (1:75).

PART 2.00 PRODUCTS

2.1 MATERIALS AND DESIGN

A. Concrete for the precast VortClarex system shall conform to ASTM C 857 and C 858 and meet the following additional requirements:
1. The exterior wall thickness shall not be less than 6-inches (152 mm) or as shown on the dimensional drawings prepared by Contech Engineered Solutions LLC. In all cases the wall thickness shall be no less than the minimum thickness necessary to sustain HS20 (MS18) loading requirements as determined by a Licensed Professional Engineer.
2. Sections shall have tongue-and-groove joints or shiplap joints and be sealed with a butyl mastic sealant designed to be resistant to fuel and oil such as ConSeal™ Brand CS-440 or approved equal. All joints will be above the resting water level.
3. Cement shall be Type II Portland cement, or approved equal, conforming to ASTM C 150.
4. All precast concrete sections shall be cured by an approved method. Sections shall not be shipped until the concrete has attained a compressive strength of 4,000 psi (28 MPa) or until 5 days after fabrication and/or repair, whichever is longer.

B. Coalescing media shall be manufactured by Facet International and be made of calcium carbonate filled polypropylene corrugated plates, with corrugation angles no less than 45° with respect to longitudinal axis of the plate corrugations. Plates shall be spaced at ½-inch (13 mm) intervals and be stacked and bound together with sturdy rods and supports to form modular plate packs.

C. Polyurethane elastomeric sealant shall comply with ASTM D-412 and GSA Specification TT-S-00230C, Type II, Class A and ASTM C-920, Type S, Grade NS.

E. Manhole frames and covers shall be provided by the manufacturer in the numbers and configurations as shown on the dimensional drawings prepared by Contech.

E. Hatchways shall be provided by the manufacturer in the numbers and configurations as shown on the dimensional drawings prepared by Contech. Hatchways shall be made of Cast Iron, steel or aluminum, and shall meet HS20-44 (MS18) loading requirements.

F. Brick or masonry used to build the casting and hatchway frames to grade shall conform to ASTM C 32 or ASTM C 139 and shall be installed in conformance with all local requirements.

2.2 MANUFACTURER

The manufacturer of said VortClarex system shall have been regularly engaged in the engineering design and production of systems for the physical treatment of stormwater runoff for a minimum of 5 years.

Each VortClarex system shall be manufactured by Contech, or approved equal.

PART 3.00 EXECUTION

3.1 INSTALLATION

A. Each VortClarex system shall be constructed according to the sizes shown on the drawings and as specified herein. Install at elevations and locations shown on the drawings or as otherwise directed by the engineer.

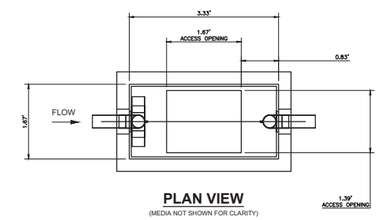
B. Place the precast base unit on a granular subbase of minimum thickness of 6 inches (152 mm) after compaction or of greater thickness and compaction if specified elsewhere. The granular subbase shall be checked for level prior to setting and the precast base section of the vault shall be checked for level at all four corners after it is set. If the slope from any corner to any other corner exceeds 0.5% the base section shall be removed and the granular subbase material re-leveled.

C. Prior to setting subsequent sections place ConSeal™ brand CS-440 butyl mastic sealant, or approved equal in conformance with ASTM C 990-91, along the construction joint in the section that is already in place.

D. After setting the precast roof section of the VortClarex system, set riser sections to the height required to bring the cast iron manhole covers or hatches to grade, so that the sections are vertical and in true alignment with a ½-inch (6 mm) maximum tolerance allowed. Backfill in a careful manner, bringing the fill up in 6-inch (152 mm) lifts on all sides. If leaks appear, clean the inside joints and caulk with lead wool to the satisfaction of the Engineer. Precast sections shall be set in a manner that will result in a watertight joint. In all instances, installation of the VortClarex system shall conform to ASTM specification C 891 "Standard Practice for Installation of Underground Precast Utility Structures".

E. Holes made in the concrete sections for handling or other purposes shall be plugged with a non-shrink grout or by using grout in combination with concrete plugs.

VCL30 DESIGN NOTES
VCL30 RATED TREATMENT CAPACITY IS 110 GPM [6.93 l/s]. OR PER LOCAL REGULATIONS. IF THE SITE CONDITIONS EXCEED RATED TREATMENT CAPACITY, AN UPSTREAM BYPASS STRUCTURE IS REQUIRED.
THE VORTCLAREX SYSTEM SHALL REMOVE ESSENTIALLY ALL FREE AND DISPERSED NON-EMULSIFIED OIL FROM THE WATER STREAM AND PRODUCE A DESIRED EFFLUENT BASED ON AN OIL DROPLET TYPICAL OF THE SITE.
THE VORTCLAREX SYSTEM SHALL BE DESIGNED IN ACCORDANCE WITH STOKES LAW AND API BULLETIN NO. 421.
THE STANDARD INLET/OUTLET CONFIGURATION IS SHOWN. FOR OTHER CONFIGURATION OPTIONS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com



PLAN VIEW
(MEDIA NOT SHOWN FOR CLARITY)

30" x 36" [762 x 914] ACCESS HATCH

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHT, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com
3. VORTCLAREX WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
4. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET AASHTO M306 LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION
5. INLET AND OUTLET PIPES MUST BE PERPENDICULAR TO THE VAULT TO ALLOW CONNECTION WITH PROVIDED PIPE STUBS.
6. FLOW LINE IN AND OUT OF THE VORTCLAREX IS RECOMMENDED TO BE AT THE SAME ELEVATION.
7. ALTERNATE UNITS ARE IN MILLIMETERS UNLESS NOTED OTHERWISE.

INSTALLATION NOTES
1. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
2. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE VORTCLAREX STRUCTURE (LIFTING CLUTCHES PROVIDED).
3. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS AND ASSEMBLE STRUCTURE.
4. CONTRACTOR TO PROVIDE AND INSTALL FERNCO, OR EQUIVALENT, COUPLER TO MATE EXISTING TRUNKLINE TO THE PROVIDED PIPE STUBS. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.

PUBLIC IMPROVEMENT MATERIALS LIST (2/20 0REV.)

WATER

1. PIPE

CLASS 52 DUCTILE IRON, CEMENT LINED ASPHALTIC COATING OR PAINT, PUSH ON JOINTS, POLYETHYLENE ENCASED WITH TAPED JOINTS. ALL PVC PIPE SHALL CONFORM TO AWWA C-900/DUCS, AND ONLY BE USED UPON CITY APPROVAL. ALL POLYETHYLENE PIPE SHALL CONFORM TO AWWA C-906 SPECS AND ONLY BE USED UPON CITY APPROVAL

2. MAIN LINES VALVE

VALVES - SHALL BE RESILIENT WEDGE TYPE, RATED FOR 250 PSI WORKING PRESSURE AND MEET AWWA C-509 AND C-515 SPECS. VALVES SHALL HAVE FACTORY INSTALLED 304 STAINLESS STEEL EXTERIOR BOLTING. ALL INTERNAL AND EXTERNAL SURFACES SHALL HAVE A FUSION BONDED EPOXY COATING. VALVES SHALL BE AMERICAN FLOW CONTROL, CLOW, EAST JORDAN, DEMUELLER, SPECIAL STRUCTURES MAY BE REQUIRED FOR LARGER VALVES.

BUTTERFLY VALVES - REQUIRE SPECIAL APPROVAL BY CITY ENGINEER - SHALL BE HTHIGH CLOW SERIES 4500 MJ OR DENLY PRATT GROUND HOG. ALL VALVES SHALL HAVE "OPTIONAL" EPOXY COATING CONFORMED TO AWWA C550 SPECS, AND BE SUPPLIED WITH 2" OPERATING NUT. ALL EXTERIOR BOLTS WILL BE FACTORY INSTALLED 304 STAINLESS STEEL.

VALVE OPERATING NUTS TO BE 1)PICK THAN 7 - MAY REQUIRE VALVE OPERATING ROD EXTENSIONS

3. INSERTION VALVES

UNITED STATES PIPE AND FOUNDRY COMPANY INSERTION VALVE WITH SLEEVE AND RETAINER RINGS.
PART NUMBER 910314

TEAM VALVE, WITH 304 STAINLESS STEEL TRIM.

HYDRA-STOP-INSTA-VALVE 2 56/P ATRIOT, WITH STAINLESS STEEL TRIM

4. LIVE STOP FITTINGS- UP TO AND INCLUDING 12"

TRIPLE T AP/O MIDLASS - MFG. BY TYLO - ALL 304 STAINLESS BODY /BRANCH OR NOZZLE AND FLANGES. ALL BOLT TRIM SHALL ALSO BE STAINLESS INCLUDING NUTS AND WASHERS. BUNA-N OR SBR RUBBER GASKET MATERIAL IS ACCEPTED

JCM 660 - ALL 304/STAINLESS BODY - BRANCH OR NOZZLE AND FLANGES. ALL BOLT TRIM SHALL ALSO BE 304 STAINLESS INCLUDING NUTS AND WASHERS. BUNA-N OR SBR RUBBER GASKET MATERIAL IS ACCEPTED

HYDRA STOP/SIX 25F PATRIOT SERIES™ - ALL 304 STAINLESS BODY, BRANCH OR NOZZLE AND FLANGES. ALL BOLT TRIM SHALL ALSO BE 304 STAINLESS INCLUDING NUTS AND WASHERS. BUNA-N OR SBR RUBBER GASKET MATERIAL IS ACCEPTED

LINE STOPS LARGER THAN 12" WILL REQUIRE SUBMITTAL AND APPROVAL OF THE PUBLIC WORKS DIRECTOR/ CITY ENGINEER. ONLY ALL STAINLESS FITTINGS WILL BE DIRECT BURY, ALL OTHERS WILL REQUIRE A MANCAST STRUCTURE.

5. VALVE VAULTS

PRE-CAST CONCRETE, NEENAH R 1772 TYPE "B" LID OR EJIW 1022-1 HD
"WATER" AND "CITY OF WEST CHICAGO" TO BE CAST INTO LID.
EZ-STICK GASKET OR EQUAL SHALL BE INSTALLED AT ALL JOINTS
EXTERNAL JOINT SEALS TO BE MAC-WRAP OR EQUIVALENT
3" DIAMETER FOR VALVES 16" AND LARGER
3" DIAMETER FOR ALL PRESSURE CONNECTIONS UP TO 12"
3" DIAMETER FOR ALL INSERTION VALVES UP TO 12"
NO STEPS
CONCRETE ADJUSTING RINGS NOT TO EXCEED 12" IN HEIGHT AND 3 IN NUMBER. RUBBER MASTIC SHALL BE INSTALLED BETWEEN EACH JOINT.

6. HOSE HYDRANTS

WATEROUS PACER 250 OR EAST JORDAN 5SB WITH 304 STAINLESS STEEL TRIM AND BREAKAWAY TRAFFIC FLANGE, ASSEMBLY SHALL BE FACTORY PAINTED WITH TWO COATS OF RUBBER ASPHALTUM AND BE FLANGED ON GL. ALL HYDRANTS SHALLGED 6X. 25' OF 6 BARREL WATER MAIN SHALL BE INSTALLED ON LOCATED HYDRANT TEES WHERE AVAILABLE. ALL MJ FITTINGS WILL REQUIRE MEGALUG. PAINT COATING FOR FIRE HYDRANTS SHALL BE SHERWIN WILLIAMS BRAND, INDUSTRIAL URETHANE ALKYD ENAMEL, SHERLIS B 65-4 150. COLOR FOR HYDRANTS ON POTABLE DISTRIBUTION MAINS SHALL BE SAFETY YELLOW. COLOR FOR HYDRANTS ON RAW WATERMAINS SHALL BE SAFETY GREEN.

7. AUXILIARY VALVE BOXES

EAST JORDAN SERIES 8550 OR TYLER 60 84 SERIES ADJUSTABLE CAST IRON WITH "WATER" CAST IN TO LID. VALVE BOX STABILIZERS WILL BE EAST JORDAN NO. 50725 OR ADAPTER INC RUBBER DOUGHNUTS.

8. FITTINGS

AMERICAN DUCTILE IRON CO, TYLER OR US PIPE CLASS 3 MECHANICAL JOINT ALL FITTINGS SHALL HAVE EIBA A MEGALUG RETAINER GLANDS. SLEEVES SHALL BE DUCTILE OR CAST IRON SE - CUTTING IN SLEEVES SHALL BE MUELLER, CLOW, AMERICAN FLOW CONTROL OR TYLER MECHANICAL JOINT. WHERE APPLICABLE, ALL HYDRANT TEES ON 12" OR LARGER WATER MAIN SHALL BE "LOCKING." NO BELL REPAIR CLAMPS WILL BE ALLOWED

BOLTS FOR MJ FITTINGS - FLUOROCARBON COATED COR-TEN STEEL T-BOLTS AND NUTS.

9. TAPPING TEE FOR DUCTILE IRON PIPE

MUELLER CAST IRON MJ #H615, AMERICAN FLOW CONTROL DUCTILE IRON SERIES 2800, TYLER/UNION DUCTILE IRON, US PIPE DUCTILE IRON T-9

TAPPING TEE FOR PVC PIPE
ROMAC INDUSTRY, INC. BUILT WITH 304 STAINLESS STEEL FLANGE, CASCADE CST-EX

10. CASINGS

OF NECESSARY DIAMETER, THICKNESS, AND LENGTH TO MEET ALL APPLICABLE REQUIREMENTS OF THE SPECIFIC AGENCY - CITY, COUNTY, STATE OR RAILWAY. CASING SPACERS TO BE CASCADE MODEL CSS OR APPROVED EQUAL. MATCHING CASING SIZE TO PIPE SIZE. CASING END SEALS TO BE CASCADE MODEL CCES OR APPROVED EQUAL, MOTARING OF CASING ENDS SUBJECT ONLY TO PRE-APPROVAL. ALL POSI-JOINTS IN CASING SHALL HAVE "FIELD LOCK GASKETS." ANNULAR SPACE WITHIN CASING MAY REQUIRE FILLING BY SPECIFIC AGENCY. MINIMUM CASING WALL THICKNESS - ¼ INCH

11. LOCATING WIRE

SHALL BE USED ON ANY PVC OR HDPE WATERMAIN

HIGH-FLEX-OPEN TRENCH - TRACER WIRE FOR OPEN-TRENCH INSTALLATION SHALL BE A 12 AWG SOLID, PRO-TRACE ® HF-CCS PE45 CONDUCTOR SHALL BE SOFT DRAWN, 27% IACS, COPPER CLAD STEEL, UTILIZING A AISI 1006 LOW CARBON STEEL CORE (REQUIRED TO MEET BREAK LOAD AND FLEXIBILITY), WITH BREAK LOAD OF 282 LBS (510MI PSI). CONDUCTOR SHALL BE EXTRUDED WITH A 45 MIL, HIGH DENSITY POLYETHYLENE, AND MEET THE APWA COLOR CODE OF THE BURIED UTILITY LINE. TRACER WIRE SHALL BE RATED FOR DIRECT BURIAL USE AT 30 VOLTS AND ROHS COMPLIANT.

DIRECTIONAL DRILLING - TRACER WIRE FOR DIRECTIONAL BORING INSTALLATION SHALL BE A 12 AWG SOLID, PRO-TRACE ® HDD-CCS PE45 CONDUCTOR SHALL BE HARD DRAWN, 21% IACS, COPPER CLAD STEEL, UTILIZING A AISI 1065 HIGH CARBON STEEL CORE (REQUIRED TO MEET BREAK LOADS, WITH RATED BREAK LOAD OF 1,330 LBS. (260.000 PSI). CONDUCTOR SHALL BE EXTRUDED WITH A 65 MIL, HIGH-DENSITY, HIGH MOLECULAR WEIGHT POLYETHYLENE (HMW-HDPE) PURSUANT TO ASTM D1248 STANDARD.

CONNECTORS - SHALL BE PRO-TRACE ® TW.

12. **TEST HOOKUPS**

IN VALVE BOXES EVERY 400 FEET OR HDPO ® HIS VIEW TEST STATION. THE MARKER POST SHALL BE TRIANGULAR IN SHAPE, WITH EACH SIDE A MINIMUM OF 3" WIDTH. OVERALL LENGTH SHALL BE 120". POST SHALL BE EXTRUDED RESNPOCY ™ OR SIMILAR THERMOPLASTIC MATERIAL. C-UP TO BE FUSED OR STAPLED TO THE TOP.
THE TEST STATION CAP SHALL BE LOCKABLE. THE TERMINAL BOARD HAS THREE STAINLESS STEEL TERMINALS.
POST SHALL INCLUDE THREE DECALS - ONE PER SIDE. TEXT "WARNING WATER PIPELINE" SHALL BE PRINTED. DECALS ARE TO CONTAIN OPERATOR NAME AND 24HR EMERGENCY PHONE NUMBER.
TEST WIRES SHALL BE A MINIMUM OF 7" WIRE.
POST SHALL BE INSTALLED VIA DIRECT BURY. TRACER WIRES ARE TO BE RUN THROUGH THE HOLE IN THE POST BASE AND ATTACHED TO THE TERMINAL BOARD WITH EACH WIRE ATTACHED TO A SEPARATE TERMINAL. POST BASE IS TO BE ATTACHED TO THE POST VIA SELF-TAPPING SCREWS.

NOTE: TYPE OF TEST STATION WILL BE DETERMINED BY THE CITY ENGINEER.

13. WARNING TAPE

DETECTABLE METALLIC UNDERGROUND TAPE (BURIED WATER LINE) TWO FEET (2') ABOVE PIPE.

14. WATER SERVICE

TYPE "K" COPPER 2" AND LESS, INSTALLED AS ONE CONTINUOUS PIECE FROM MAIN TO B-BOX.
DUCTILE IRON 3" AND LARGER.

15. B-BOX

¾", 1", & 1 ¼ " - TYLER/VO. 6540 WITH VITELLO OR EQUIVALENT CONCRETE B-BOX PAD

1 ½" & 2" - TYLER 6500 WITH TYLER 8 500 ENLARGED BASE OR MUELLER NO. H 10243 FOOTPIECE. FOR ENLARGED FOOT, A BROCK MAY BE USED FOR LEG BASE.

16. CORPORATION STOP

¾" AND 1" - FORD F-600 SERIES OR MUELLER H 15003 BOTH SHALL HAVE FLARED COPPER OUTLET AND AWWA CC THREAD INLET.

1 ¼" - FORD F-650 OR F-1000 SERIES OR MUELLER 15000 SERIES BOTH SHALL HAVE AWWA CC THREAD INLET BUT MAY HAVE A FLARE OR COMPRESSION OUTLET.

1 ½" AND 2" - FORD FB-600 SERIES OR MUELLER 300 SERIES. BOTH SHALL HAVE A WWA CC THREAD INLET BUT MAY HAVE A FLARE OR COMPRESSION OUTLET

17. ROUND WAY- CURB STOP

¾" AND 1" - FORD B-22 SERIES OR MUELLER H-15204

1 ½", 1 ½" AND 2" - FORD "B" SERIES OR MUELLER 300 SERIES. FLARED OR COMPRESSION ARE ACCEPTABLE.

18. PACK FITTINGS-BRASS

ONLY FORD OR MUELLER PACK FITTINGS ACCEPTABLE.

19. SERVICE SADDLES

ALL NON-DIRECT TAPS 1 ½ AND 2" SHALL USE SMITH BLAIR #372, CASCADE #CSCI, OR FORD FS13.
ONLY 1 ½ AND 2" TAPS CAN BE MADE INDIRECT.

CITY OF WEST CHICAGO
PUBLIC IMPROVEMENT MATERIALS LIST (2/20 0REV.) - CONT.

SANITARY SEWER

1. PIPE

PVC SDR 26/1/P TO 12' DEPTH, SDR 21 UP TO 21' DEPTH, SDR 18 OVER 21' DEPTH, SERVICES TO MATCH SEWER MAIN CLASS
WARNING TAPE - DETECTABLE METALLIC UNDERGROUND TAPE (BURIED SEWER LINE), INSTALLED 2' ABOVE PIPE.

2. MANHOLES

PRECAST CONCRETE, NEENAH R 1772 TYPE "B" SELF SEALING LID OR EJIW 1022-1 HD
"SANITARY" AND "CITY OF WEST CHICAGO" TO BE CAST INTO LID. "SANITARY FORCEMAIN" AND "CITY OF WEST CHICAGO" TO BE CAST INTO LIDS FOR AIR RELEASE VAULTS AND CLEANOUT MANHOLES
EZ-STICK GASKET OR EQUAL SHALL BE INSTALLED AT ALL JOINTS
EXTERNAL CHIMNEY SEALS TO BE CANUSA, INFORBELD, MARMAC SURSEAL, OR APPROVED EQUIVALENT.
EXTERNAL JOINT SEALS TO BE MAC-WRAP OR EQUIVALENT
CONCRETE ADJUSTING RINGS NOT TO EXCEED 12" IN HEIGHT AND 3 IN NUMBER. RUBBER MASTIC SHALL BE INSTALLED BETWEEN EACH JOINT.
NO STEPS

3. FORCE MAIN

PVC DR 18/C-900.
FITTINGS - EPOXY LINED DUCTILE IRON WITH EIBA# MEGALUG 2000 PV JUSTRAINT, OR HARCO PVC C-907 BLUE PUSH FITTINGS, OR MULTI FITTINGS PVC C-907 BLUE (BUTT, BOTH MATING 4000 PUSH ON PVC COMPOUND WITH EIBA SERIES 2600 RESTRAINT WITH ALL STAINLESS BOLTING.

NOTE - ANY PIPING CHANGES MUST BE SUBMITTED AND APPROVED BY PUBLIC WORKS DIRECTOR/CITY ENGINEER.

4. LOCATING WIRE

USED ON ANY PVC FORCE MAIN.

HIGHFLEXOPEN TRENCH - TRACER WIRE FOR OPEN-TRENCH INSTALLATION SHALL BE A 12 AWG SOLID, PRO-TRACE ® HF-CCS PE45 CONDUCTOR SHALL BE SOFT DRAWN, 27% IACS, COPPER CLAD STEEL, UTILIZING A AISI 1006 LOW CARBON STEEL CORE (REQUIRED TO MEET BREAK LOAD AND FLEXIBILITY), WITH BREAK LOAD OF 282 LBS (510MI PSI). CONDUCTOR SHALL BE EXTRUDED WITH A 45 MIL, HIGH DENSITY POLYETHYLENE, AND MEET THE APWA COLOR CODE OF THE BURIED UTILITY LINE. TRACER WIRE SHALL BE RATED FOR DIRECT BURIAL USE AT 30 VOLTS AND ROHS COMPLIANT.

DIRECTIONAL DRILLING - TRACER WIRE FOR DIRECTIONAL BORING INSTALLATION SHALL BE A 12 AWG SOLID, PRO-TRACE ® HDD-CCS PE45 CONDUCTOR SHALL BE HARD DRAWN, 21% IACS, COPPER CLAD STEEL, UTILIZING A AISI 1065 HIGH CARBON STEEL CORE (REQUIRED TO MEET BREAK LOADS, WITH RATED BREAK LOAD OF 1,330 LBS. (260.000 PSI). CONDUCTOR SHALL BE EXTRUDED WITH A 65 MIL, HIGH-DENSITY, HIGH MOLECULAR WEIGHT POLYETHYLENE (HMW-HDPE) PURSUANT TO ASTM D1248 STANDARD.

CONNECTORS - SHALL BE PRO-TRACE ® TW.

5. TEST HOOKUPS

IN VALVE BOXES EVERY 400 FEET OR HDPO ® HIS VIEW TEST STATION. THE MARKER POST SHALL BE TRIANGULAR IN SHAPE, WITH EACH SIDE A MINIMUM OF 3" WIDTH. OVERALL LENGTH SHALL BE 120". POST SHALL BE EXTRUDED RESNPOCY ™ OR SIMILAR THERMOPLASTIC MATERIAL. C-UP TO BE FUSED OR STAPLED TO THE TOP.
THE TEST STATION CAP SHALL BE LOCKABLE. THE TERMINAL BOARD HAS THREE STAINLESS STEEL TERMINALS.
POST SHALL INCLUDE THREE DECALS - ONE PER SIDE. TEXT "WARNING SEWER PIPELINE" SHALL BE PRINTED. DECALS ARE TO CONTAIN OPERATOR NAME AND 24HR EMERGENCY PHONE NUMBER.
TEST WIRES SHALL BE A MINIMUM OF 7" WIRE.
POST SHALL BE INSTALLED VIA DIRECT BURY. TRACER WIRES ARE TO BE RUN THROUGH THE HOLE IN THE POST BASE AND ATTACHED TO THE TERMINAL BOARD WITH EACH WIRE ATTACHED TO A SEPARATE TERMINAL. POST BASE IS TO BE ATTACHED TO THE POST VIA SELF-TAPPING SCREWS.

NOTE: TYPE OF TEST STATION WILL BE DETERMINED BY THE CITY ENGINEER.

6. WARNING TAPE

DITECTABLE METALLIC UNDERGROUND TAPE (BURIED SEWER LINE), INSTALLED 2' ABOVE PIPE.

5. CASINGS

OF THE NECESSARY DIAMETER, THICKNESS, AND LENGTH TO MEET ALL APPLICABLE REQUIREMENTS OF OTHER INVOLVED AGENCIES (IDOT, RAILROAD, ETC)
CASING SPACERS TO BE CASCADE MODEL CSS OR APPROVED EQUAL
CASING END SEALS TO BE CASCADE MODEL CCES END SEALS OR APPROVED EQUAL

6. SERVICE FITTINGS

INSERTA TEE 8 MJSG. OR INSERTA WYE-B BY INSERTA FITTINGS CO.
KOR-N-TEE 8 MJSG. BY TRELLEBORG ENGINEERED PRODUCTS

APPROVED EQUALS WILL REQUIRE SUBMITTAL AND APPROVAL BY THE PUBLIC WORKS DIRECTOR /CITY ENGINEER

7. COUPLINGS & ADAPTORS

NON-SHEAR TYPE, EITHER STAINLESS BAND OR PVC SHELL

STORM SEWER

1. PIPE

REINFORCED CONCRETE PIPE WITH RUBBER GASKET JOINTS, OR DUCTILE IRON, CLASS 52.
PVC SDR 26 IF APPROVED BY CITY ENGINEER ON AN PROJECT SPECIFIC BASIS

2. MANHOLES

PRECAST CONCRETE, NEENAH R 1772 2 TYPE "B" LID OR EJIW 1022-1 HD
"STORM" AND "CITY OF WEST CHICAGO" TO BE CAST IN TO LID

3. INLETS AND CATCH BASINS

PRECAST CONCRETE WITH THE APPROPRIATE FRAME AND LID AS FOLLOWS
IN CURBS - NEENAH R 3281- AL OR EJIW 7210, WITH VANE GRATE ON FLOW THROUGH STRUCTURES AND AT DOUBLE STRUCTURES AT SAG LOCATIONS. NEENAH TYPE C OR EJIW TYPE 5M GR GRATE TO BE USED AT ALL OTHER LOCATIONS. EJIW TYPE M GRATE TO BE USED IF STRUCTURE WITHIN DRIVEWAY.
NON CURB AREAS - NEENAH R 2502 B WITH TYPE "D" GRATE OR EJIW 1022 WITH TYPE M1 GRATE

STREET LIGHTS

1. RESIDENTIAL STREETS (IT ANDARD)

LUMINAIRE	COOPER/ TRUFY LIGHTING TRADITIONAIRE, OR EQUAL. POST TOP MOUNTED, WITH PHOTOCARBONATE LENS PANEL, MODEL NUMBER UTR 15 S P 233 4 J P
LAMP	WESTINGHOUSE HIGH PRESSURE SODIUM, ANSI DESIGNATION H38G -150/R, 150 WATT, 2600 HOUR RATED LIFE.
POLE	HAPCO MODEL S TYLE 76, CATALOG NUMBER 76-09F OR EQUAL, BRUSHED ALUMINUM WITH FACTORY INSTALLED LADDER RIST AND 3" X 5" SPECIAL HANDHOLE (MODIFICATION 156). 24" DIAMETER CONCRETE FOUNDATION, 5' DEEP, WITH ANCHOR BOLT COVERS ON POLE BASE 24" DIAMETER CONCRETE FOUNDATION, 5' DEEP, WITH REINFORCEMENT CAGE OF 6-#5 VERTICALS, AND 4 #3 HORIZONTAL TIES AT 12 INCH MAXIMUM SPACING
CABLE & POWER SUPPLY TO LUMINAIRE	BOTH CONDUCTORS SHALL BE SINGLE CONDUCTOR, UNDERGROUND FEEDER AND BRANCH CIRCUIT CABLE, RATED COPPER GROUND, TYPE USE INSULATED COPPER CONDUCTOR, #10 VOLT CABLE, AND MINIMUM AWG SIZE 6 OR OF THE SIZE REQUIRED BASED ON USE OF 350 WATT LUMINAIRE, IN 240 VOLT INDUCT OR CONDUIT EACH LIGHT TO BE CONNECTED DIRECTLY TO UTILITY PEDESTAL

2. RESIDENTIAL STREETS (ALTERNATIVE DECORATIVE)

LUMINAIRE	ANTIQUE STREET LAMPS, INC. CAPITOL SERIES OR EQUAL, HIGH PRESSURE SODIUM WITH CLEAR TEXTURED POLYCARBONATE ACORN GLOBE, POST TOP MOUNTED
POLE	ANTIQUE STREET LAMPS, INC. CAPITOL SERIES OR EQUAL, FIBERGLASS REINFORCED POLYESTER, WITH STANDARD HANDHOLE POLE SHALL BE 14' TALL WITH 10' MOUNTING HEIGHT WITH 10 FOOT ARM POLE HAS 10" "BRAND WITH LUMINAIRES 10-FT 24" DIAMETER CONCRETE FOUNDATION 5' DEEP, WITH REINFORCEMENT CAGE OF 6-#5 VERTICALS, AND #4 HORIZONTAL TIES AT 12 INCH SPACING, WITH 4-5/8" ANCHOR BOLTS COLOR TO MATCH "CUSTOMER GREY"
LAMP	WESTINGHOUSE HIGH PRESSURE SODIUM, ANSI DESIGNATION H38G-150/R, 150 WATT, 24,000 HOUR RATED LIFE.
CABLE & POWER SUPPLY TO LUMINAIRE	BOTH CONDUCTORS SHALL BE SINGLE CONDUCTOR, UNDERGROUND FEEDER AND BRANCH CIRCUIT CABLE, RATED COPPER GROUND, TYPE USE INSULATED COPPER CONDUCTOR, #10 VOLT CABLE, AND MINIMUM AWG SIZE 6 OR OF THE SIZE REQUIRED BASED ON USE OF 350 WATT LUMINAIRE, IN 240 VOLT INDUCT OR CONDUIT EACH LIGHT TO BE CONNECTED DIRECTLY TO UTILITY PEDESTAL

3. COLLECTOR STREETS

LUMINAIRE	GE LIGHTING SYSTEMS POWR/DOOR LUMINAIRE OR EQUAL, WITH CUTOFF OPTICS MODEL NUMBER M5AC25 S O A G M C 2 1
POLE	VALMONT MODEL #51-3103088S005 OR ISAPCO MODEL #51-532, OR EQUAL. TAPERED ALUMINUM, 30'FOOT MOUNTING HEIGHT WITH 10'FOOT ARM BREAKAWAY COUPLING AND SKIRT REQUIRED IF SPEED LIMIT IS 40 MPH OR HIGHER 30" DIAMETER CONCRETE FOUNDATION 5' DEEP, WITH REINFORCEMENT CAGE OF 6-#5 VERTICALS, AND #4 HORIZONTAL TIES AT 12 INCH MAXIMUM SPACING
CABLE & POWER SUPPLY TO LUMINAIRE	SAME AS RESIDENTIAL EXCEPT CONDUCTOR SIZE SHALL BE AS REQUIRED BASED ON VOLTAGE DROP CALCULATION

GENERAL NOTES

1. GENERAL NOTES

A. (1) THE SITE IS LOCATED IN THE NORTHWEST 1/4 OF SECTION 13, TOWNSHIP 39 NORTH, RANGE 9 EAST OF THE THIRD PRINCIPAL MERIDIAN, IN THE CITY OF WEST CHICAGO, DUPAGE COUNTY, ILLINOIS. (2) THE SITE IS BOUNDED BY INDUSTRIAL PROPERTIES TO THE NORTH, EAST AND WEST, AND BY THE CANADIAN PACIFIC RAILWAY TO THE SOUTH. (3) THE SITE IS CURRENTLY OCCUPIED BY AN EXISTING RECYCLING FACILITY AND ASSOCIATED PARKING AND DRIVE AISLES. (4) THE SITE IS ZONED I-1 (INDUSTRIAL DISTRICT). (5) THE SITE IS APPROXIMATELY 10.1 GROSS ACRES IN AREA. (6) THE SITE IS LOCATED IN FLOOD ZONE X (AREAS OF MINIMAL FLOOD HAZARD) AS SHOWN ON FLOOD INSURANCE RATE MAP NUMBER 17043C0178H, EFFECTIVE DATE 8/1/2019.

B. (1) THE PROJECT CONSISTS OF THE CONSTRUCTION OF A NEW RECYCLING FACILITY, INCLUDING THE DEMOLITION OF EXISTING STRUCTURES AND PAVEMENT, CONSTRUCTION OF NEW BUILDINGS, PAVEMENT, UTILITIES, AND STORMWATER MANAGEMENT FACILITIES. (2) THE PROJECT ALSO INCLUDES THE CONSTRUCTION OF A NEW ENTRANCE DRIVE FROM POWIS ROAD. (3) THE PROJECT WILL BE CONSTRUCTED IN ONE PHASE.

C. (1) THE CONTRACTOR SHALL COORDINATE WITH THE OWNER AND ALL UTILITY COMPANIES TO MAINTAIN UNINTERRUPTED SERVICE TO ALL EXISTING BUILDINGS AND UTILITIES DURING CONSTRUCTION, UNLESS OTHERWISE APPROVED BY THE OWNER AND THE UTILITY COMPANY. (2) THE CONTRACTOR SHALL NOTIFY THE OWNER AND ALL UTILITY COMPANIES AT LEAST 72 HOURS IN ADVANCE OF ANY PLANNED INTERRUPTION OF SERVICE.

D. (1) THE CONTRACTOR SHALL MAINTAIN ACCESS TO ALL EXISTING BUILDINGS AT ALL TIMES. (2) THE CONTRACTOR SHALL MAINTAIN ACCESS TO ALL EXISTING UTILITY STRUCTURES AT ALL TIMES.

E. (1) THE CONTRACTOR SHALL COORDINATE ALL MATERIALS AND WORKMANSHIP FOR A PREBUILT, 3 STALL GALVANIZED STEEL ENCLOSURE WITH THE OWNER AND THE GOVERNING AGENCIES.

F. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS SHOWN ON THE PLANS AND REFERENCED HEREIN. THE PLANS AND SPECIFICATIONS SHALL BE CONSIDERED COMPLEMENTARY AND WHAT IS REQUIRED BY ONE SHALL BE BINDING AS IF REQUIRED BY BOTH. (2) THE CONTRACTOR SHALL NOTIFY THE ENGINEER IMMEDIATELY OF ANY DISCREPANCIES BETWEEN THE PLANS AND SPECIFICATIONS. (3) THE CONTRACTOR SHALL NOT TAKE ADVANTAGE OF ANY APPARENT ERROR OR OMISSION IN THE PLANS OR SPECIFICATIONS. IN THE EVENT THE CONTRACTOR DISCOVERS AN ERROR OR OMISSION, HE SHALL IMMEDIATELY NOTIFY THE ENGINEER AND OBTAIN CLARIFICATION BEFORE PROCEEDING WITH THE WORK.

G. (1) THE CONTRACTOR SHALL OBTAIN ALL PERMITS AND APPROVALS REQUIRED FOR THE CONSTRUCTION OF THE PROJECT, INCLUDING BUT NOT LIMITED TO, THE NPDES PERMIT FOR STORMWATER DISCHARGES DURING CONSTRUCTION, AND ANY PERMITS REQUIRED BY THE CITY OF WEST CHICAGO. (2) THE CONTRACTOR SHALL PAY ALL FEES ASSOCIATED WITH THE PERMITS AND APPROVALS.

H. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

I. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES AND PROCEDURES, AND FOR COORDINATING ALL PORTIONS OF THE WORK UNDER THE CONTRACT. (2) THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SAFETY OF PERSONS AND PROPERTY AT THE SITE AND FOR COMPLIANCE WITH ALL APPLICABLE SAFETY REGULATIONS. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR INITIATING, MAINTAINING AND SUPERVISING ALL SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE WORK. (4) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL DAMAGE OR INJURY TO PERSONS OR PROPERTY THAT OCCURS AS A RESULT OF THE CONTRACTOR'S OPERATIONS OR THOSE OF ITS SUBCONTRACTORS.

J. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF CONSTRUCTION, INCLUDING BUT NOT LIMITED TO, EXCAVATION, SHORING, DEWATERING, AND TRENCH SAFETY. (2) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF CONSTRUCTION, INCLUDING BUT NOT LIMITED TO, EXCAVATION, SHORING, DEWATERING, AND TRENCH SAFETY.

K. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF CONSTRUCTION, INCLUDING BUT NOT LIMITED TO, EXCAVATION, SHORING, DEWATERING, AND TRENCH SAFETY.

L. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF CONSTRUCTION, INCLUDING BUT NOT LIMITED TO, EXCAVATION, SHORING, DEWATERING, AND TRENCH SAFETY.

M. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MEANS AND METHODS OF CONSTRUCTION, INCLUDING BUT NOT LIMITED TO, EXCAVATION, SHORING, DEWATERING, AND TRENCH SAFETY.

2. SITE ADMINISTRATION & REGULATIONS

A. (1) EXCEPT AS MODIFIED BY THE FOLLOWING PROJECT TECHNICAL SPECIFICATIONS, ALL EARTHWORK, UTILITY AND CONSTRUCTION REQUIREMENTS SHALL BE IN CONFORMANCE WITH THE MATERIAL, INSTALLATION AND TESTING REQUIREMENTS OF THE CITY OF WEST CHICAGO AND THE STANDARD SPECIFICATIONS FOR WATER AND SEWER MAIN CONSTRUCTION IN ILLINOIS, LATEST EDITION. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

B. SITE CLEARING

(1) CONSTRUCTION SITE ELEVATIONS AND TOPOGRAPHIC INFORMATION SHOWN ON THE PLANS ARE BASED ON AERIAL TOPOGRAPHIC SURVEY DATA. (2) THE CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND ELEVATIONS IN THE FIELD PRIOR TO CONSTRUCTION. (3) THE CONTRACTOR SHALL NOTIFY THE ENGINEER IMMEDIATELY OF ANY DISCREPANCIES BETWEEN THE PLANS AND FIELD CONDITIONS. (4) THE CONTRACTOR SHALL NOT PROCEED WITH CONSTRUCTION IN AREAS WHERE DISCREPANCIES EXIST UNTIL THEY HAVE BEEN RESOLVED BY THE ENGINEER.

C. (1) THE CONTRACTOR SHALL PROTECT ALL EXISTING UTILITIES, STRUCTURES, AND FEATURES NOT DESIGNATED FOR REMOVAL OR RELOCATION. (2) THE CONTRACTOR SHALL REPAIR OR REPLACE, AT NO COST TO THE OWNER, ANY DAMAGE CAUSED BY THE CONTRACTOR'S OPERATIONS TO EXISTING UTILITIES, STRUCTURES, OR FEATURES. (3) THE CONTRACTOR SHALL COORDINATE WITH THE OWNER AND ALL UTILITY COMPANIES BEFORE BEGINNING CONSTRUCTION TO LOCATE AND MARK EXISTING UTILITIES.

D. (1) THE CONTRACTOR SHALL PROTECT ALL EXISTING UTILITIES, STRUCTURES, AND FEATURES NOT DESIGNATED FOR REMOVAL OR RELOCATION. (2) THE CONTRACTOR SHALL REPAIR OR REPLACE, AT NO COST TO THE OWNER, ANY DAMAGE CAUSED BY THE CONTRACTOR'S OPERATIONS TO EXISTING UTILITIES, STRUCTURES, OR FEATURES. (3) THE CONTRACTOR SHALL COORDINATE WITH THE OWNER AND ALL UTILITY COMPANIES BEFORE BEGINNING CONSTRUCTION TO LOCATE AND MARK EXISTING UTILITIES.

E. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

F. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

G. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

H. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

I. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

J. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

K. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

L. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

M. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

3. MATERIAL SOURCES, STOCKPILING AND HAUL ROUTES

A. (1) EXCEPT WHERE DESCRIBED BY THE FOLLOWING PROJECT TECHNICAL SPECIFICATIONS, ALL EARTHWORK, UTILITY AND CONSTRUCTION REQUIREMENTS SHALL BE IN CONFORMANCE WITH THE MATERIAL, INSTALLATION AND TESTING REQUIREMENTS OF THE CITY OF WEST CHICAGO AND THE STANDARD SPECIFICATIONS FOR WATER AND SEWER MAIN CONSTRUCTION IN ILLINOIS, LATEST EDITION. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

B. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

C. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

D. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

E. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

F. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

G. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

H. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

I. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

J. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

K. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

L. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

M. (1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE GOVERNING AGENCY'S STANDARDS AND SPECIFICATIONS. (2) THE CONTRACTOR SHALL OBTAIN COPIES OF ALL APPLICABLE STANDARDS AND SPECIFICATIONS PRIOR TO BEGINNING CONSTRUCTION. (3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTING ALL IMPROVEMENTS IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARDS AND SPECIFICATIONS, UNLESS OTHERWISE DIRECTED BY THE GOVERNING AGENCY.

4. SANITARY SEWER SYSTEMS

A. (1) SANITARY SEWER MAINS SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

B. (1) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

C. SANITARY SEWER SYSTEMS

(1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

D. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

E. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

F. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

G. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

H. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

I. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

J. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

K. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

L. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

M. (1) (a) SANITARY SEWER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

5. STORMWATER SYSTEMS

A. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

B. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

C. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

D. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

E. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

F. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

G. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

H. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

I. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

J. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

K. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

L. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

M. (1) (a) STORMWATER MANHOLES SHALL BE CONSTRUCTED IN ACCORDANCE WITH CITY OF WEST CHICAGO REQUIREMENTS.

REVISION RECORD

NO	DATE	DESCRIPTION

Electronic Filing: Received, Clerk's Office 04/19/2023

P:\2016\163-899\--CAD\Dwg\CI\C4--Construction Plan Set\163899--CI04--C904--Site Specifications.dwg[C906] LSJr(9/26/2019 - mbluej) - LP: 11/6/2019 12:48 PM

B. WATER SUPPLY SYSTEMS

(1) WATER MAINS AND SERVICE LINES SHALL BE DUCTILE IRON PIPE AND SHALL CONFORM TO AWWA C151/A21.51.

(2) ALL VALVES AND HOUSINGS SHALL BE AS SPECIFIED BY THE CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

(3) ALL VALVES SHALL BE IN ACCORDANCE WITH THE CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

(4) ALL VALVES SHALL BE IN ACCORDANCE WITH AWWA C509/C515.

(5) WATER LINES SHALL BE INSTALLED TO A MINIMUM DEPTH OF 5.5' BELOW FINISHED GRADE.

(6) WATER LINES SHALL BE INSTALLED TO PROVIDE A MINIMUM HORIZONTAL SEPARATION OF 10' FROM ANY SANITARY OR STORM SEWER.

(7) WATER LINES SHALL BE INSTALLED TO PROVIDE A MINIMUM VERTICAL SEPARATION OF 18" FROM ANY SANITARY OR STORM SEWER.

(8) CONTRACTOR SHALL COORDINATE WITH CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT FOR CONSTRUCTION INSPECTION AND TESTING.

C. CONSTRUCTION WATER

(1) CONSTRUCTION WATER SHALL BE OBTAINED FROM A HYDRANT PROVIDED BY THE CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

(2) CONTRACTOR SHALL OBTAIN A HYDRANT METER FROM THE CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

(3) ALL EQUIPMENT, HARDWARE SHALL BE REPLACED OR CLEANED AND DISINFECTED IF FOUND CONTAMINATED DURING CONSTRUCTION.

(4) PRIOR TO REMOVAL OF TEMPORARY WATER SUPPLY, CONTRACTOR SHALL BE CLEANED OF ANY AND ALL DEBRIS AND CONTAMINANTS.

D. CONSTRUCTION WATER

(1) CONSTRUCTION WATER SHALL BE OBTAINED FROM A HYDRANT PROVIDED BY THE CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

(2) CONTRACTOR SHALL OBTAIN A HYDRANT METER FROM THE CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

(3) ALL EQUIPMENT, HARDWARE SHALL BE REPLACED OR CLEANED AND DISINFECTED IF FOUND CONTAMINATED DURING CONSTRUCTION.

(4) PRIOR TO REMOVAL OF TEMPORARY WATER SUPPLY, CONTRACTOR SHALL BE CLEANED OF ANY AND ALL DEBRIS AND CONTAMINANTS.

E. WATER DISINFECTION

(1) ALL PIPING AND APPURTENANCES SHALL BE DISINFECTED IN ACCORDANCE WITH AWWA C651.

(2) ALL CONNECTIONS TO EXISTING WATER MAINS SHALL BE PERFORMED BY CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

(3) DISINFECTION OF WATER MAINS SHALL BE IN ACCORDANCE WITH THE CITY OF WEST CHICAGO PUBLIC WORKS DEPARTMENT.

F. WATER MAIN TESTING

(1) WHEN NEW PIPING FROM CONSTRUCTION SITE HAS NOT BEEN IN SERVICE, A TRAFFIC HAZARD OR A DANGER TO THE HEALTH OR COMFORT TO PERSONS DOWNSTREAM, IT SHALL BE CONSTRUED AS EITHER PERMANENTLY OR TEMPORARILY UNPROVIDED. UPON THE STATE OF

(2) EXCEPT PROCEDURES FOR ACTIVE CONSTRUCTION AREAS SHALL BE EIGHT (8) UNDER CONTROL OF MEMBERS OF WATERWAYS DEPARTMENT AND APPLICATION OF CALCIUM CHLORIDE. APPLICATION AND REPETITION RATES SHALL BE AS NECESSARY FOR EFFECTIVE

(3) WHEN CITY PROCEDURE FROM EXISTING AREAS, WATERING CONTROL CALCIUM CHLORIDE AND WATER CONDITIONS PRESENT EFFECTIVE HYGIENIC CONTROL SUCH AREAS SHALL BE TEMPERATURE BY THE APPLICATION OF

(4) INTERRUPTION OF SERVICE NOTIFICATION PROBLEMS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROBLEM IF BE LOCATED.

G. CONCRETE

(1) CONCRETE SHALL BE CLASS SI CONCRETE AND SHALL BE PLACED ON THE SUBGRADE PRIOR TO INSTALLATION OF THE ROOT STANDARD SPECIFICATIONS, EXCEPT

(2) DOOR STANDARDS FOR BOARDWALK SHALL BE HARDWOOD WITH A MINIMUM FLAMMER FINICE 2 SQ. DOOR DOOR FROM THE STOCKPILE AREA MAINTENANCE TO CONSTRUCTION SHALL BE

(3) DOOR STANDARDS TODAY WILL BE HARDWOOD DOOR CONSTRUCTION AND SHALL BE STORED AFTER CONSTRUCTION OF THE STOCKPILE

H. CONCRETE

(1) CONCRETE SHALL BE AS SPECIFIED IN THE ROOT STANDARD SPECIFICATIONS, EXCEPT

(2) ALL CONCRETE SHALL BE PLACED ON THE SUBGRADE PRIOR TO INSTALLATION OF THE ROOT STANDARD SPECIFICATIONS

I. TOPSOIL PLACEMENT AND VEGETATIVE COVER

(1) TOPSOIL SHALL BE PLACED ON ALL DISTURBED AREAS TO A MINIMUM DEPTH OF 4" AFTER SETTLEMENT AND SHALL BE FREE OF STONES, ROOTS, STUMPS AND OTHER DEBRIS. TOPSOIL SHALL BE PLACED ON ALL DISTURBED AREAS TO A MINIMUM DEPTH OF 4" AFTER SETTLEMENT AND SHALL BE FREE OF STONES, ROOTS, STUMPS AND OTHER DEBRIS.

(2) SEED SHALL BE PLACED ON ALL DISTURBED AREAS AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE PLACED ON ALL DISTURBED AREAS AT A RATE OF 5 LBS/1000 SF.

(3) SEED SHALL BE PLACED ON ALL DISTURBED AREAS AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE PLACED ON ALL DISTURBED AREAS AT A RATE OF 5 LBS/1000 SF.

(4) SEED SHALL BE PLACED ON ALL DISTURBED AREAS AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE PLACED ON ALL DISTURBED AREAS AT A RATE OF 5 LBS/1000 SF.

(5) WHEN ASSOCIATED IN THE BANK OR RECORDED BY ENGINEER, SEEDED SLOPES SHALL BE PROTECTED BY JUTE/WOVEN CLOTH. THE AREAS WITH A WOODED FIBER MATRIX, STABILIZED FIBER MATRIX OR FLEXIBLE GROWTH MEDIUM PRODUCT APPLIED AT A RATE

(6) THE SEEDED AREAS SHALL BE PROTECTED WITH A WOOD, CELLULOSE FIBER, RECYCLED CELLULOSE, OR WOOD FIBER MULCH APPLIED AT A RATE OF 1,500 LBS/ACRE. THE TYPE OF PRODUCT TO BE USED SHALL BE AS SPECIFIED ON THE PLANS. THE SEEDED AREAS SHALL BE PROTECTED WITH A WOOD, CELLULOSE FIBER, RECYCLED CELLULOSE, OR WOOD FIBER MULCH APPLIED AT A RATE OF 1,500 LBS/ACRE. THE TYPE OF PRODUCT TO BE USED SHALL BE AS SPECIFIED ON THE PLANS.

M. PERMANENT VEGETATIVE COVERS

(1) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(2) VEGETATIVE MEDIA COVER EXISTS LAWNS DAMAGED BY CONSTRUCTION ACTIVITIES, BUT NOT WITHIN THE PROJECT DISTURBED LIMITS, SHALL BE SEEDED WITH ZOOT GLASS 10 SEED MATTHEW LINCLIBC ACRES, UNLESS A DIFFERENT TYPE OF SEED MIXTURE IS INDICATED ON THE PLANS.

N. RECREATIONAL FACILITIES

(1) RECREATIONAL FACILITIES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE ROOT STANDARD SPECIFICATIONS, EXCEPT AS FURTHER DESCRIBED HEREIN.

TYPE 1: KNITTED STRAW FIBER BLANKET WITH LIGHTWEIGHT NETTING

TYPE 2: MAT OF WOOD FIBER MATERIAL WITH STRAW FIBERS INCORPORATED INTO THE MAT, WITH LIGHTWEIGHT NETTING

TYPE 3: KNITTED STRAW FIBER BLANKET WITH A POLYPROPYLENE NET

TYPE 4: KNITTED COCONUT FIBER BLANKET WITH A FINE HEAVYWEIGHT NET

O. EROSION CONTROL SEEDS

(1) ALL SEEDS SHALL BE SPECIFIED BY BOTANICAL NAME, VARIETY AND PURITY REQUIREMENTS IN ACCORDANCE WITH THE ROOT STANDARD SPECIFICATIONS.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(5) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

P. PERMANENT SEEDING

(1) PERMANENT SEEDING ON THE PLANS SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(5) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(6) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

Q. TEMPORARY SEEDING

(1) TEMPORARY SEEDING ON THE PLANS SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(5) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(6) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

R. MAINTENANCE

(1) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(2) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(3) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

S. MAINTENANCE RESPONSIBILITIES AND REQUIREMENTS

A. GENERAL

(1) THE CONTRACTOR SHALL TAKE ESSENTIAL AND NECESSARY MEASURES TO CONTROL THE EROSION AND SEDIMENT CONTROL ACTIVITIES. THESE MEASURES SHALL BE IN ACCORDANCE WITH THE PROVISIONS OF THE ILLINOIS URBAN MANUAL AND THE ROOT STANDARD SPECIFICATIONS.

(2) PRACTICES, NOT STANDARDS OR SPECIFICATIONS, THESE ESSENTIAL AND NECESSARY MEASURES SHALL BE IN ACCORDANCE WITH THE PROVISIONS OF THE ILLINOIS URBAN MANUAL AND THE ROOT STANDARD SPECIFICATIONS.

(3) CONTRACTOR SHALL MAINTAIN ALL TEMPORARY AND PERMANENT EROSION AND SEDIMENT CONTROL MEASURES IN ACCORDANCE WITH THE ILLINOIS URBAN MANUAL AND THE ROOT STANDARD SPECIFICATIONS.

(4) CONTRACTOR SHALL MAINTAIN ALL TEMPORARY AND PERMANENT EROSION AND SEDIMENT CONTROL MEASURES IN ACCORDANCE WITH THE ILLINOIS URBAN MANUAL AND THE ROOT STANDARD SPECIFICATIONS.

(5) CONTRACTOR SHALL MAINTAIN ALL TEMPORARY AND PERMANENT EROSION AND SEDIMENT CONTROL MEASURES IN ACCORDANCE WITH THE ILLINOIS URBAN MANUAL AND THE ROOT STANDARD SPECIFICATIONS.

(6) CONTRACTOR SHALL MAINTAIN ALL TEMPORARY AND PERMANENT EROSION AND SEDIMENT CONTROL MEASURES IN ACCORDANCE WITH THE ILLINOIS URBAN MANUAL AND THE ROOT STANDARD SPECIFICATIONS.

B. INSTALLATION PRACTICES

(1) THE SITE CONTRACTOR SHALL BE RESPONSIBLE FOR THE INSTALLATION OF ALL EROSION CONTROL MEASURES SHOWN ON THE PLANS AND MADE NAMED UNTIL SOIL SURFACES HAVE BEEN STABILIZED WITH GRASS OR OTHER TYPES OF PERMANENT COVER. SUCH BARRIERS SHALL BE HELD INTACT, CLEANED AND MAINTAINED IN GOOD CONDITION AS DIRECTED BY THE PLANS.

(2) THE SITE ANTICIPATION FOR THE PLANS, CREATE ANY OTHER MEASURES THAT ANTICIPATE TO BE NECESSARY TO PREVENT EROSION AND SEDIMENT CONTROL ACTIVITIES. THESE ENGINEER DESIGNATED SHALL BE PERFORMED AT THE DIRECTION OF THE ENGINEER.

(3) CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(4) CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(5) CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(6) CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

C. DEPENDENT REMEDIES

(1) THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(2) THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(3) THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(4) THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(5) THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

(6) THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL MEANS SEEDED UNDER THE CONTRACT, INCLUDING ALL SEED BEARD, WATERING SEED BEING, AND REMOVE DEBRIS AND TRUE SATISFACTORY GROWTH OF VEGETATION ON ALL SEEDED AREAS.

D. PERMANENT SEEDING

(1) PERMANENT SEEDING ON THE PLANS SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(5) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(6) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

E. PERMANENT SEEDING

(1) PERMANENT SEEDING ON THE PLANS SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(5) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(6) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

F. PERMANENT SEEDING

(1) PERMANENT SEEDING ON THE PLANS SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(5) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(6) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

G. TEMPORARY SEEDING

(1) TEMPORARY SEEDING ON THE PLANS SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(5) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(6) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

H. MAINTENANCE

(1) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(2) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(3) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(4) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(5) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(6) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

I. TEMPORARY SEEDING

(1) TEMPORARY SEEDING ON THE PLANS SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(4) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(5) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(6) CONTRACTOR SHALL SCARIFY LOCAL DISTURBED AREAS BEFORE PLACEMENT OF SEED AND MULCH. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

J. MAINTENANCE

(1) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(2) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(3) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(4) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(5) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

(6) CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE PLANTINGS AND SEEDING FOR A MINIMUM OF 2 YEARS AFTER INITIAL PLANTING.

K. EROSION CONTROL SEEDING AND MULCHING

(1) EROSION CONTROL SEEDING AND MULCHING SHALL BE PERFORMED BY CONTRACTOR ACTIVITIES SHALL BE RECORDED BY THE PROPER APPLICATION OF FERTILIZER & NUTRIENTS. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF. SEED SHALL BE APPLIED AT A RATE OF 5 LBS/1000 SF.

(2) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

(3) SEEDING SHALL BE PERFORMED BETWEEN APRIL 1 AND MAY 15 OR AUGUST 15 AND OCTOBER 15. OTHER SEEDING DATES MAY BE PERMITTED BY THE ENGINEER.

TO: Tom Dabareiner, 475 Main Street
City of West Chicago, , West Chicago, IL 60185

RE: Authorization for Stormwater Management Certification No. SM2019-0061
Community Tracking No: 19-34-0003
West DuPage Recycling & Transfer Station
Waiver Community: West Chicago - Partial
PPN: 0132101004 0132200001

(NOTE: THIS IS NOT A PERMIT - A Building Permit must be picked up prior to any on site work.)

DuPage County Stormwater Management received the following stormwater application/submittal:

Applicant : Richard Golf, Lakeshore Recycling Systems, 6132 West Oakton Street , Morton Grove, IL 60053

Owner : Peter Bates, Oscar (IL) LLC, c/o W.P. Carey Inc.,, New York, NY 100201607

Project Location :
1655 Powis West Chicago IL
The project is located on the east side of Powis Road, north of Hawthorne Lane, and south of North Avenue, within the corporate limits of the City of West Chicago, DuPage County, Illinois.

Stormwater Certification :
Be advised that your community holds a partial waiver of enforcement status from the DuPage County Countywide Stormwater and Floodplain Ordinance. As such, your community is responsible to review and approve applications for stormwater management issues. Therefore, for the above referenced development project, our office has only reviewed and provided Authorization relating to the floodway, floodplain, wetland, or buffer. All approvals pertaining to the stormwater management facilities and post construction best management practices shall be done by your community, unless requested otherwise.

Staff has completed its review of this application and hereby authorizes the attached documents for compliance with the May 2019 DuPage County Countywide Stormwater and Floodplain Ordinance. Based upon our Authorization of the documents listed on the attachment, your community may issue a Stormwater Management Certification for the above referenced development, with the attached general and special conditions.

Respectfully,

Clayton Heffter, Stormwater Permitting Manager
421 N. County Farm Road, Wheaton, IL 60187

Love Blue. Live Green.
DuPage County

DUPAGE COUNTY STORMWATER MANAGEMENT AUTHORIZATION LETTER ATTACHMENT

Stormwater Management Certification Application No: SM2019-0061
West DuPage Recycling & Transfer Station
Waiver Community: West Chicago - Partial
Community Tracking Number: 19-34-0003

Project Coordinator: David Winklebleck 630-407-6678

PROJECT DESCRIPTION :

Work includes reconfiguration of the recycling facility with new pavement, parking lot improvements, building expansion, construction of a new building, sediment and erosion control measures, and all associated grading and restoration.

CERTIFIED DOCUMENTS:

1. Stormwater Management Certification Application, as assigned Tracking No. SM2019-0061/19-34-0003.
2. Stormwater report entitled "Stormwater Report, West DuPage Recycling & Transfer Station, 1655 Powis Road, West Chicago, Illinois, 60185," as prepared by Civil & Environmental Consultants, Inc. for Lakeshore Recycling Systems, LLC, dated June 2019, with latest revision dated November 2019.
3. Plan set entitled "Lakeshore Recycling Systems, LLC, West DuPage Recycling & Transfer Facility, 1655 Powis Road, West Chicago, Illinois, Site Improvement Plans," as prepared by Civil & Environmental Consultants, Inc., dated April 2, 2019, with latest revision dated November 8, 2019, consisting of twenty-nine (29) sheets.

SPECIAL CONDITIONS OF PERMIT:

1. The following performance standard will apply to the enhancement plantings: "At the end of the third year of monitoring, 100% of the proposed shrubs shall be alive and in healthy condition.

GENERAL CONDITIONS:

1. Per Section 15-58.B of the CSFPO, temporary erosion and sediment control measures shall be functional and consistent with Article VII of the CSFPO and the NPDES Stormwater Permit in effect prior to land disturbance activities. Therefore, the developer shall notify the City of West Chicago and request/receive a site inspection of all required sediment and erosion control devices, prior to the commencement of construction activities.
2. Per Section 15-27.C.3, site runoff storage and compensatory storage facilities shall be either constructed before or concurrently with general construction. The facilities shall be functional prior to or concurrent with any building construction that increases a site's total impervious area.

3. Per Section 15-40.A of the CSFPO, the requirement for Record Drawings (Section 15-47.B) applies to all developments that construct stormwater facilities, or include wetland, buffer or flood plain onsite. Therefore, upon construction of the development, as-built drawings of the site must be submitted to the City of West Chicago for review and approval. The as-built drawings must be prepared, signed and sealed by an Illinois registered land surveyor or professional engineer.
4. Per Article VI "Performance Security and Easements", Section 15-54.A "General Security Requirements" of the CSFPO, the developer shall, prior to the issuance of a Stormwater Management Certification and in accordance with Section 15-40.D, post performance security. It is our understanding that the City of West Chicago will collect and maintain appropriate development securities as required by ordinance for the subject development. Please note that no less than $41,849.50 for wetland and buffer plantings must be retained by the City of West Chicago until written authorization to reduce this amount in accordance with the ordinance is granted by DuPage County.
5. Per section 15-55 of the CSFPO, access for inspection and maintenance of site runoff storage facilities, compensatory storage facilities, and storm sewers covered by the certification shall be through a grant of easement. Therefore, a Plat of Easement document, which represents as-built conditions, should be approved by the City of West Chicago. The following should be incorporated into said document:
    a. Public Utility and Drainage Easements need to be provided over/about the on-site storm sewer system, and over land drainage swales, which are necessary to convey the 100 year storm runoff to stormwater management facilities.
    b. A Stormwater Management Easement needs to be granted over the limits of the stormwater management facilities.
    c. Public Utility and Drainage Easement provisions need to be incorporated into the Plat.
    d. Stormwater Management Easement provisions need to be incorporated into the Plat.
    e. Maintenance responsibility provisions, for the stormwater management facility, should be provided on the Plat of Subdivision or other recorded document.
6. Per Section 15-47.C of the CSFPO, an informational note acknowledging the presence of on-site wetlands, buffers, floodplains, or PCBMPs with drainage areas 1 acre or greater, shall be recorded against the title to alert all future owners and shall reference the Stormwater Management Certification number. This note shall be carried forward to titles on all affected properties in the event that the original property is subdivided.
7. Per Section 15-54.A.5, the developer shall grant the County, or Waiver Community, a temporary easement which authorizes, but does not obligate, the County, or Waiver Community, to access the development site to perform or complete any act or work the developer is required to do by the Stormwater Certification.

RE: Authorization for Stormwater Management Certification No. SM2019-0061
Community Tracking No: 19-34-0003
West DuPage Recycling & Transfer Station
Waiver Community: West Chicago - Partial
PPN: 0132101004 0132200001

(NOTE: THIS IS NOT A PERMIT - A Building Permit must be picked up prior to any on site work.)

DuPage County Stormwater Management received the following stormwater application/submittal:

Applicant : Richard Golf, Lakeshore Recycling Systems, 6132 West Oakton Street , Morton Grove, IL 60053

Owner : Peter Bates, Oscar (IL) LLC, c/o W.P. Carey Inc.,, New York, NY 100201607

Project Location :
1655 Powis West Chicago IL
The project is located on the east side of Powis Road, north of Hawthorne Lane, and south of North Avenue, within the corporate limits of the City of West Chicago, DuPage County, Illinois.

Stormwater Certification :
Be advised that your community holds a partial waiver of enforcement status from the DuPage County Countywide Stormwater and Floodplain Ordinance. As such, your community is responsible to review and approve applications for stormwater management issues. Therefore, for the above referenced development project, our office has only reviewed and provided Authorization relating to the floodway, floodplain, wetland, or buffer. All approvals pertaining to the stormwater management facilities and post construction best management practices shall be done by your community, unless requested otherwise.

Staff has completed its review of this application and hereby authorizes the attached documents for compliance with the May 2019 DuPage County Countywide Stormwater and Floodplain Ordinance. Based upon our Authorization of the documents listed on the attachment, your community may issue a Stormwater Management Certification for the above referenced development, with the attached general and special conditions.

Love Where You Live Green.
DuPage County

Respectfully,

Clayton Heffter, Stormwater Permitting Manager
421 N. County Farm Road, Wheaton, IL 60187

DUPAGE COUNTY STORMWATER MANAGEMENT AUTHORIZATION LETTER ATTACHMENT

Stormwater Management Certification Application No: SM2019-0061
West DuPage Recycling & Transfer Station
Waiver Community: West Chicago - Partial
Community Tracking Number: 19-34-0003

Project Coordinator: David Winklebleck 630-407-6678

PROJECT DESCRIPTION :

Work includes reconfiguration of the recycling facility with new pavement, parking lot improvements, building expansion, construction of a new building, sediment and erosion control measures, and all associated grading and restoration.

CERTIFIED DOCUMENTS:

1. Stormwater Management Certification Application, as assigned Tracking No. SM2019-0061/19-34-0003.
2. Stormwater report entitled "Stormwater Report, West DuPage Recycling & Transfer Station, 1655 Powis Road, West Chicago, Illinois, 60185," as prepared by Civil & Environmental Consultants, Inc. for Lakeshore Recycling Systems, LLC, dated June 2019, with latest revision dated November 2019.
3. Plan set entitled "Lakeshore Recycling Systems, LLC, West DuPage Recycling & Transfer Facility, 1655 Powis Road, West Chicago, Illinois, Site Improvement Plans," as prepared by Civil & Environmental Consultants, Inc., dated April 2, 2019, with latest revision dated November 8, 2019, consisting of twenty-nine (29) sheets.

SPECIAL CONDITIONS OF PERMIT:

1. The following performance standard will apply to the enhancement plantings: "At the end of the third year of monitoring, 100% of the proposed shrubs shall be alive and in healthy condition.

GENERAL CONDITIONS:

1. Per Section 15-58.B of the CSFPO, temporary erosion and sediment control measures shall be functional and consistent with Article VII of the CSFPO and the NPDES Stormwater Permit in effect prior to land disturbance activities. Therefore, the developer shall notify the City of West Chicago and request/receive a site inspection of all required sediment and erosion control devices, prior to the commencement of construction activities.
2. Per Section 15-27.C.3, site runoff storage and compensatory storage facilities shall be either constructed before or concurrently with general construction. The facilities shall be functional prior to or concurrent with any building construction that increases a site's total impervious area.

3. Per Section 15-40.A of the CSFPO, the requirement for Record Drawings (Section 15-47.B) applies to all developments that construct stormwater facilities, or include wetland, buffer or flood plain onsite. Therefore, upon construction of the development, as-built drawings of the site must be submitted to the City of West Chicago for review and approval. The as-built drawings must be prepared, signed and sealed by an Illinois registered land surveyor or professional engineer.
4. Per Article VI "Performance Security and Easements", Section 15-54.A "General Security Requirements" of the CSFPO, the developer shall, prior to the issuance of a Stormwater Management Certification and in accordance with Section 15-40.D, post performance security. It is our understanding that the City of West Chicago will collect and maintain appropriate development securities as required by ordinance for the subject development. Please note that no less than $41,849.50 for wetland and buffer plantings must be retained by the City of West Chicago until written authorization to reduce this amount in accordance with the ordinance is granted by DuPage County.
5. Per section 15-55 of the CSFPO, access for inspection and maintenance of site runoff storage facilities, compensatory storage facilities, and storm sewers covered by the certification shall be through a grant of easement. Therefore, a Plat of Easement document, which represents as-built conditions, should be approved by the City of West Chicago. The following should be incorporated into said document:
    a. Public Utility and Drainage Easements need to be provided over/about the on-site storm sewer system, and over land drainage swales, which are necessary to convey the 100 year storm runoff to stormwater management facilities.
    b. A Stormwater Management Easement needs to be granted over the limits of the stormwater management facilities.
    c. Public Utility and Drainage Easement provisions need to be incorporated into the Plat.
    d. Stormwater Management Easement provisions need to be incorporated into the Plat.
    e. Maintenance responsibility provisions, for the stormwater management facility, should be provided on the Plat of Subdivision or other recorded document.
6. Per Section 15-47.C of the CSFPO, an informational note acknowledging the presence of on-site wetlands, buffers, floodplains, or PCBMPs with drainage areas 1 acre or greater, shall be recorded against the title to alert all future owners and shall reference the Stormwater Management Certification number. This note shall be carried forward to titles on all affected properties in the event that the original property is subdivided.
7. Per Section 15-54.A.5, the developer shall grant the County, or Waiver Community, a temporary easement which authorizes, but does not obligate, the County, or Waiver Community, to access the development site to perform or complete any act or work the developer is required to do by the Stormwater Certification.

DUPAGE COUNTY STORMWATER MANAGEMENT CERTIFICATION APPLICATION (2/2)

Community Tracking No: 1 9 3 4 0 0 0 3 | **DuPage County Tracking No:** SM2019-0061

14. Statement of Opinion for Presence of Flood Plain, Wetlands, and Buffers (15-47-A.5) BLDG No. 1407006.0

I acknowledge the presence of flood plain. / I deny the presence of flood plain.	I acknowledge the presence of wetlands. / I deny the presence of wetlands.	I acknowledge the presence of buffers. / I deny the presence of buffers.
Signature of Qualified Professional: [signature] Date: 4/19/19	Signature of Qualified Professional: [signature] Date: 4/19/19	Signature of Qualified Professional: [signature] Date: 4/19/19
David A. Kamano, P.E., LEED AP (Printed Name)	David A. Kamano, P.E., LEED AP (Printed Name)	David A. Kamano, P.E., LEED AP (Printed Name)

15. Soil Erosion & Sediment Control Submittal Requirements (15-50.B)
(For developments with less than 1 acre of land disturbance that are not part of a larger common plan)

I certify that the development meets the soil erosion and sediment control design criteria found in Article VII have been met.

Signature of Qualified Designer | David A. Kamano, P.E., LEED AP (Print Name) | Date

16. Soil Erosion & Sediment Control Requirements (15-59.W) **(For developments with land disturbing activities greater than 1 acre)**

I acknowledge that the site complies with the IEPA NPDES ILR10 Permit.

Signature of Applicant: [signature] | Richard Golf (Print Name) | Date: 4/19/19

17. Acknowledgement of Required As-Built Plans (15-47.B)

I acknowledge that a record drawing signed by either a Professional Engineer or a Professional Land Surveyor depicting the as-constructed size rim, and invert elevations of pipes, stormwater structures and culverts, and contours and flood storage volumes of all required basins of the major stormwater systems and minor stormwater systems shall be submitted for review and approval upon completion of the stormwater facilities.

Signature of Owner: [signature] | Peter Bates (Print Name) | Date: 6/17/19

18. Intentional Misrepresentation Under Penalty of Perjury

I declare that I have examined and/or made this application and rider, and it is true and correct to the best of my knowledge and belief. I realize that the information that I have affirmed hereon forms a basis for the issuance of the stormwater management certification(s) herein applied for and approval of plans in connection therewith shall not be construed to permit any construction upon said premises or use thereof in violation of any provision of any applicable ordinance or to excuse the owner or his successors in title from complying therewith. The Owner and Applicant each understand and agree to construct said improvement n compliance with all provisions of the applicable ordinances.

Signature of Applicant: [signature] | Richard Golf (Print Name) | Date: 4/19/19

Signature of Owner: [signature] | Peter Bates (Print Name) | Date: 6/14/19

Building Permit No.: 19070060		
Stormwater Permit No.: 19-34-0003		
ADDRESS:		
Lake Shore Recycling Addition PHASE 1 ONLY		
1655 Powis Road		
West Chicago, IL 60185		
COST ESTIMATE		
Demolition/ Site Preparation		
Concrete Block Wall Removal/Relocation	$0.00	
Building Slab Concrete Removal	$0.00	
Concrete Wall Removal	$0.00	
Stair Removal	$0.00	
Pavement Sawcut	$0.00	
Concrete Pavement Removal	$0.00	
Asphalt Pavement Removal	$0.00	
Earthwork - Topsoil Strip, stockpile, respread	$5,625.00	
Earthwork - Excavate and Regrade on site	$37,500.00	
Earthwork - Excavate & Haul-off as CCDD	$60,000.00	
Erosion and Sediment Controls		
Silt Fence	$10,094.00	$10,094.00
Orange Cosntruction Fence	$3,712.50	$3,712.50
Inlet Protection - Temporary	$600.00	$600.00
Pavement Construction		
Light Duty Pavement	$0.00	
Heavy Duty Pavement	$610,423.33	
Concrte Sidewalk, 5"	$0.00	
Bollard	$0.00	
Pavement Striping, linear	$0.00	
Pavement Striping, ADA symbol	$0.00	
ADA Sign	$0.00	
Wheel Stops	$0.00	
Truck Scale	$0.00	
Stormwater Controls		
Storm Structure Removal	$300.00	
Storm Outlet Control structure Removal	$500.00	$500.00
Sorm Sewer Remoal / Abandonment	$150.00	
Infiltration trench Remoal / Abandonment	$0.00	
Storm Sewer, 8" PVC	$0.00	
Storm Sewer, 12" RCP	$0.00	
Storm Sewer, 18" RCP	$2,500.00	
Storm Sewer, 24" RCP	$4,800.00	
Storm Sewer, FES, 12" RCP	$250.00	
Storm Sewer, FES, 24" RCP	$900.00	
Storm Sewer, FES, 36" RCP	$600.00	
Storm Inlet, 24" Dia, w/ frame and grate	$0.00	
Storm Manhole, 60" Dia, w/ frame and grate	$3,000.00	$3,000.00
Storm Restrictor Structure, 72" dia with spillway wall and restrictor plate	$6,000.00	$6,000.00
Utilities Cosntruction		
Sanitary Structure Removal	$0.00	
Fire Hydrant Remoal	$0.00	
Sanitary Sewer Removal / Abandonment	$0.00	
Water Main Removal / Abandonment	$0.00	
Sanitary Sewer, 6" SDR26 PVC	$0.00	
Sanitary Sewer, 8" SDR26 PVC	$0.00	
Santary Manhole, 60" Dia, w/ frame and grate	$0.00	
Oil Water Separator	$0.00	
Sanitary Sewer Cleanout	$0.00	
Water Main, 6" Ductile Iron Pipe, Class 52	$0.00	$0.00
Water Main, 8" Ductile Iron Pipe, Class 52	$0.00	$0.00
Ductile Iron Fittings	$0.00	$0.00
Fire Hydrant w/ 6" auxilliary valve	$0.00	$0.00
Yard Hydrant	$0.00	
Gas Service	$0.00	
Electrical Service	$0.00	
Communications Line	$0.00	
Trench Backfill	$0.00	$0.00
Post-Construction BMPs		
Rip Rap Inlet/Outlet Protection - Permanent	$400.00	$400.00
Aggregate Infiltration Trench	$0.00	$0.00
Floating boom skimmer with silt curtain	$650.00	$650.00
Site Restoration		
Seeding, IDOT Class 1A Sallt Tolerant Lawn mixture	$6,401.06	$6,401.06
Wetland Buffer Re-establishment	$15,302.40	$15,302.40
Erosion Control Blanket	$9,434.38	$9,434.38
Landscaping Improvements	$3,750.00	
Total	$782,892.67	$56,094.34
SECURITY (125% LOC - PUBLIC IMPROVEMENTS, EARTHWORK, STORM SEWER, EROSION CONTROL, SWMR MGMT)		**$70,117.93**
ENGINEERING FEES		
Plan Review Fee		
Single Family Lots (Infill)	$790.00	$0.00
Single Family Lots (Subdivision)	$525.00	$0.00
Staff Reviewed Plans - 3.25% of Approved Cost Estimate for 3 Reviews	$25,444.01	$25,444.01
Staff Reviewed Plans - 0.5% of Approved Cost Estimate for each Subsequent Review (no. of reviews beyond 3)	0	$0.00
Consultant Review Fee + 25%	$0.00	$0.00
ENGINEERING INSPECTION FEE		
Single Family Lots	$265.00	$0.00
Non-single Family Lots (3.25% of the Engineer's estimate of cost)	$25,444.01	$25,444.01
STORMWATER PERMIT FEE		
Proposal that does not require stormwater management report	$525.00	$525.00
Proposal that does require stormwater management report	$2,100.00	$0.00
Proposal that is over 10 acres ($2,100 plus $20 per acre for every acre or portion thereof over 10 acres)	$0.00	$0.00
Best Management Practice Fee - Commercial	$1,050.00	$1,050.00
Best Management Practice Fee - Single Family	$265.00	$0.00
WORK IN RIGHT-OF-WAY		
Impacting Pavement (Including $10,500.00 refundable deposit)	$525.00	$0.00
Not Impacting Pavement (Including $2,625.00 refundable deposit)	$265.00	$0.00
Driveway only permit see Section 3.1		
FIELD CHANGE PERMIT (5% of approved Cost Estimate minimum $525.00)	$525.00	$0.00
ATTORNEY FEE	$0.00	$0.00
TOTAL FEES		**$52,463.02**

ENGINEER'S OPINION OF PROBABLE CONSTRUCTION COST - SITE IMPROVEMENTS - TOTAL

ITEM	DESCRIPTION	QTY	UNITS	UNIT PRICE ($)	TOTAL	NOTES	COST SOURCE	11-18-20 NOTES
1.00	**Demolition/Site Preparation**							
1.01	Concrete Block Wall Removal / Relocation	421	LF	$0.00	$0.00	Will be handled by operator - assume no work by contractor	3	
1.02	Building Slab Concrete Removal	0	CY	$75.00	$0.00	Assume 6" of concrete is removed at 3,733 SY "mixed aggregate pavement and building foundation remnants" area at north central part of site	1,3	
1.03	Concrete Wall Removal	0	LF	$100.00	$0.00	Assumes 12" wide, 10ft high concrete walls	1,3	
1.04	Stair Removal	0	EA	$250.00	$0.00	Assumes 12" wide, 10ft high concrete walls	3	
1.05	Pavement Sawcut	0	LF	$2.00	$0.00		1,3	
1.06	Concrete Pavement Removal	0	SY	$12.50	$0.00		1,3	
1.07	Asphalt Pavement Removal	0	SY	$7.50	$0.00		1,2,3	
1.08	Earthwork - Topsoil strip, stockpile, respread	1,125	CY	$5.00	$5,625.00	Topsoil to be cut and respread in areas to be vegetated	2,3	assume 75% will occur as part of east side pavement and pond construction
1.09	Earthwork - Excavate and Regrade on site	3,750	CY	$10.00	$37,500.00	Earth to be excavated and relocated on-site, does not include existing pavement and base removal necessary to install new pavement.	2,3	assume 75% will occur as part of east side pavement and pond construction
1.10	Earthwork - Excavate & Haul-Off as CCDD	3,750	CY	$16.00	$60,000.00	Approximately 5,000 cy excess cut, does not include existing pavement and base removal necessary to install new pavement.	3	assume 75% will occur as part of east side pavement and pond construction
				1.00 Demolition/Site Preparation Subtotal:	**$103,125.00**			
2.00	**Erosion and Sediment Controls**							
2.01	Silt Fence	2,884	LF	$3.50	$10,094.00	Includes double silt fence at wetland and floodplain areas	3	
2.02	Orange Construction Fence	1,485	LF	$2.50	$3,712.50	Along wetland and floodplains areas	1,3	
2.03	Inlet Protection - Temporary	4	EA	$150.00	$600.00		1,3	assume 75% will occur as part of east side pavement and pond construction
				2.00 Erosion and Sediment Controls Subtotal:	**$14,406.50**			
3.00	**Pavement Construction**							
3.01	Light Duty Pavement	0	SY	$25.00	$0.00	Assumes 4" asphalt over 8" stone	1,2,3	
3.02	Heavy Duty Pavement	17,441	SY	$35.00	$610,423.33	Assumes 6" asphalt over 12" stone, or 8" concrete over 6" stone	1,2,3	
3.03	Concrete Sidewalk, 5"	0	SF	$5.00	$0.00		3	
3.04	Bollard	0	EA	$250.00	$0.00	Assume 8" diameter	3	
3.05	Pavement Striping, linear	0	LF	$1.50	$0.00	Assume 4" wide	1,3	
3.06	Pavement Striping, ADA symbol	0	EA	$200.00	$0.00	Assume 4" wide	3	
3.07	ADA Sign	0	EA	$150.00	$0.00	Assume standard signage	3	
3.08	Wheel Stops	0	EA	$300.00	$0.00	Assume reinforced concrete	3	
3.09	Truck Scale	0	EA	$25,000.00	$0.00		3	
				3.00 Pavement Construction Subtotal:	**$610,423.33**			
4.00	**Stormwater Controls**							
4.01	Storm Structure Removal	1	EA	$300.00	$300.00		1,3	
4.02	Storm Outlet Control Structure Removal	1	EA	$500.00	$500.00		1,3	
4.03	Storm Sewer Removal / Abandonment	75	LF	$2.00	$150.00	Assume cap/abandon in place	3	
4.06	Infiltration Trench Removal / Abandonment	0	LF	$0.00	$0.00	Assume this is "left in place" and built upon for new pavement	3	
4.07	Storm Sewer, 8" PVC	0	LF	$30.00	$0.00		1,2,3	
4.08	Storm Sewer, 12" RCP	0	LF	$40.00	$0.00		1,2,3	
4.09	Storm Sewer, 18" RCP	50	LF	$50.00	$2,500.00		1,2,3	
4.10	Storm Sewer, 24" RCP	80	LF	$60.00	$4,800.00		1,2,3	
4.11	Storm Sewer, Flared End Section, 12" RCP	1	EA	$250.00	$250.00		1,3	
4.12	Storm Sewer, Flared End Section, 24" RCP	2	EA	$450.00	$900.00		1,3	
4.13	Storm Sewer, Flared End Section, 36" RCP	1	EA	$600.00	$600.00		1,3	
4.14	Storm Inlet, 24" Dia, w/ frame and grate	0	EA	$1,250.00	$0.00		1,3	
4.15	Storm Manhole, 60" Dia, w/ frame and grate	1	EA	$3,000.00	$3,000.00		1,3	
4.16	Storm Restrictor Structure, 72" dia with spillway wall and restrictor plate	1	EA	$6,000.00	$6,000.00		3	
				4.00 Stormwater Controls Subtotal:	**$19,000.00**			
5.00	**Utilities Construction**							
5.01	Sanitary Structure Removal	0	EA	$500.00	$0.00		1,3	
5.02	Fire Hydrant Removal	0	EA	$250.00	$0.00		3	
4.04	Sanitary Sewer Removal / Abandonment	0	LF	$4.00	$0.00	Assume cap/abandon in place	3	
4.05	Water Main Removal / Abandonment	0	LF	$2.00	$0.00	Assume cap/abandon in place	3	
4.06	Sanitary Sewer, 6" SDR26 PVC	0	LF	$30.00	$0.00	Connection between cleanouts and OWS and building included in building costs	2,3	
4.07	Sanitary Sewer, 8" SDR26 PVC	0	LF	$50.00	$0.00		2,3	
4.08	Sanitary Manhole, 60" Dia, w/ frame and grate	0	EA	$4,000.00	$0.00		3	
4.09	Oil Water Separator	0	EA	$12,500.00	$0.00	Vortclarex VCL30	3	
4.10	Sanitary Sewer Cleanout	0	EA	$250.00	$0.00		3	
4.11	Water Main, 6" Ductile Iron Pipe, Class 52	0	LF	$60.00	$0.00		3	
4.12	Water Main, 8" Ductile Iron Pipe, Class 52	0	LF	$85.00	$0.00		3	
4.13	Ductile Iron Fittings	0	LS	$5,000.00	$0.00	Assumes reuse of existing fittings, plus additional fittings as necessary	3	
4.14	Fire Hydrant w/ 6" auxiliary valve	0	EA	$3,500.00	$0.00	Assume 6' depth	3	
4.15	Yard Hydrant	0	EA	$1,500.00	$0.00	Assume 6' depth	3	
4.16	Gas Service	0	LF	$7.50	$0.00	Gas service install through site	3	
4.17	Electrical Service	0	LF	$5.00	$0.00	Size/material undetermined	3	
4.18	Communications Line	0	LF	$2.50	$0.00	Size/material undetermined	3	
4.19	Trench Backfill	0	CY	$15.00	$0.00	Assumes all underground utilities require trench backfill. Assume 4 feet height above utility to bottom of pavement section and 4 foot width along all utilities.	1,3	
				6.00 Utilities Construction Subtotal:	**$0.00**			
6.00	**Post-Construction BMPs**							
6.01	Rip Rap Inlet/Outlet Protection - Permanent	2	EA	$200.00	$400.00		3	
6.02	Aggregate Infiltration Trench	0	LF	$6.00	$0.00		3	
6.03	Floating boom skimmer with silt curtain	65	LF	$10.00	$650.00	PCBMP at east pond outlet	3	
				6.00 PCBMPs Subtotal:	**$1,050.00**			
7.00	**Site Restoration**							
7.01	Seeding, IDOT Class 1A Salt Tolerant Lawn Mixture	6,535	SY	$0.75	$6,401.06		3	assume 75% will occur as part of east side pavement and pond construction
7.02	Wetland Buffer Re-establishment	1	LS	$15,302.40	$15,302.40	See V3 report opinion of probable cost, page 120 of 120	3	
7.03	Erosion Control Blanket	1.61	AC	$2,750.00	$9,434.38	Assume jute mesh, excludes duplicate costs from item 7.02, includes labor	3	assume 75% will occur as part of east side pavement and pond construction
7.04	Landscaping Improvements	1	LS	$5,000.00	$3,750.00		3	assume 75% will occur as part of east side pavement and pond construction
				7.00 Site Restoration Subtotal:	**$34,887.84**			
				TOTAL PHASE I:	**$782,892.67**

Checked By: CAC Date: 6/7/2019
Revised: Date:

ENGINEER'S OPINION OF PROBABLE CONSTRUCTION COST - SITE IMPROVEMENTS

ITEM	DESCRIPTION	QTY	UNITS	UNIT PRICE ($)	TOTAL	NOTES	COST SOURCE
4.13	Ductile Iron Fittings	1	LS	$5,000.00	$5,000.00	Assumes reuse of existing fittings, plus additional fittings as necessary	3
4.14	Fire Hydrant w/ 6" auxiliary valve	3	EA	$3,500.00	$10,500.00	Assume 6' depth	3
4.15	Yard Hydrant	1	EA	$1,500.00	$1,500.00	Assume 6' depth	3
4.16	Gas Service	550	LF	$7.50	$4,125.00	Gas service install through site	3
4.17	Electrical Service	504	LF	$5.00	$2,520.00	Size/material undetermined	3
4.18	Communications Line	504	LF	$2.50	$1,260.00	Size/material undetermined	3
4.19	Trench Backfill	2,500	CY	$15.00	$37,502.22	Assumes all underground utilities require trench backfill. Assume 4 feet height above utility to bottom of pavement section and 4 foot width along all utilities.	1,3
				5.00 Utilities Construction Subtotal:	**$225,770.22**		
6.00	**Post-Construction BMPs**						
6.01	Rip Rap Inlet/Outlet Protection - Permanent	4	EA	$200.00	$800.00		3
6.02	Aggregate Infiltration Trench	216	LF	$6.00	$1,296.00		3
6.03	Floating boom skimmer with silt curtain	65	LF	$10.00	$650.00	PCBMP at east pond outlet	3
				6.00 PCBMPs Subtotal:	**$2,746.00**		
7.00	**Site Restoration**						
7.01	Seeding, IDOT Class 1A Salt Tolerant Lawn Mixture	11,380	SY	$0.75	$8,534.75		3
7.02	Wetland Buffer Re-establishment	1	LS	$15,302.40	$15,302.40	See V3 report opinion of probable cost, page 120 of 120	3
7.03	Erosion Control Blanket	2.15	AC	$2,750.00	$10,912.50	Assume jute mesh, excludes duplicate costs from Item 7.02, includes labor	3
7.04	Landscaping Improvements	1	LS	$5,000.00	$5,000.00		3
				7.00 Site Restoration Subtotal:	**$39,749.65**		
				TOTAL:	**$2,015,980.09**		

Cost Source:
1. IDOT Bid Tabs
2. RSMeans Site Work & Landscape Cost Data 2019 - Chicago Location Union Labor
3. Engineering Experience/Judgment

Opinion of Cost Notes/Assumptions:
A. Quantities and unit prices based on CEC Site Improvement Plans, draft May 2019, as well as various assumptions outlined herein. Assumptions, quantities, and unit prices are subject to change.
B. CEC opinion of probable construction based solely upon our own experience with construction, published cost indices and similar references. Costs should not be considered equivalent to a construction cost estimator or construction contractor quote.
C. Unit prices are shown in 2019 U.S. Dollars.
D. This estimate does not include on-going operational or maintenance costs.

All,

I have reviewed and approved the As-built record drawing. Please submit 1 paper copy for our records. If you would like a stamped approved paper copy, please submit one and we will stamp it. If not please use this email as notification that the record drawing is approved.

Thank you,
Rob

Subject: RE: 1655 Powis Road - Updated Permit for Additional Pavement

Rob,

I received a bounce-back notification to my email below due to the record drawings being to large to email. I saved them instead in a One Drive folder here:

https://cecportal-my.sharepoint.com/:f:/g/personal/dkamano_cecinc_com/Ek3b9yFffXdKjwnc2NrzVQwBqyTtfQqr1cguUJTXgVJtqw?e=tikT3m

I also saved the Plat of Easement in the same folder for convenience.

Please let us know any questions or comments.

Thanks,
Dave

Rob,

Record drawings attached for your review and use.

Please let us know if you have any comments on Plat of Easement or record drawings at your convenience. We are prepared to process the Plat for recordation when ready.

Thanks,
Dave

Subject: RE: 1655 Powis Road - Updated Permit for Additional Pavement

Rob,

Please see Plat of Easement granting the stormwater management easement to the areas of the expanded pond at 1655 Powis Road. Please review and advise if ok to record.

FYI, as-builts are being prepared and will be provided for City review/record soon (likely within the next week or two).

Thanks,
Dave

Dave,

Yes, what you are proposing will work. The rest of the stormwater management easement was granted on document R2016-144354.

Thank you,
Rob

Subject: RE: 1655 Powis Road - Updated Permit for Additional Pavement
Importance: High

Rob,

We are working on the Plat of Easement and it has come to our attention that there is an existing easement that already covers most of the expanded pond (document number R2016-144-356). The only area not covered is in the southwest corner of the pond which was excavated for additional storage as part of the Phase I improvements.

Just to make sure we are on the same page, the Plat we are preparing will only cover the southwest area of the pond that was expanded. Once this is recorded, the entirety of the pond will be covered under the combination of the new and existing easement.

If this is not the correct approach, please advise.

Thanks,
Dave

Rob,

Just FYI, the decision was made not to install the additional pavement at this time. Just to close the loop on that issue.

We are working on the Plat of Easement and I understand the City will also need record drawings. Please let us know if there is a specific delivery date required for these items.

Have a good weekend.

Dave

Dave,

I apologize for the delay. Based on the cost estimate submitted, the permit fee will be $8,112.00 for this work. We will not need an additional bond since the work is not a required stormwater improvement or public improvement or additional erosion control. We will need an additional permit application filled out for this portion. We will not need an additional stormwater permit since that one is still active and covers this area. The attached plan drawing is acceptable and will be approved when submitted.

Thank you,
Rob

Steve/Rob,

Attached is the engineering plan for the updated pavement. LRS is in the process of getting pricing before they make a decision on whether or not to proceed.

Please advise on my questions below when you can.

Thank you,
Dave

Subject: 1655 Powis Road - Updated Permit for Additional Pavement
Importance: High

Steve/Rob,

As I discussed with Steve last Thursday, 8/12/21, LRS is considering adding pavement to connect the newly paved north and south lots in order to provide a better surface for trucks/equipment moving between these two areas. As it exists now, the west edge of the new pavement ties in to the historical surface which is a combination of grindings/concrete/deteriorated asphalt.

As you may recall, the original site development permit covered the entirety of the improvements (including the pavement in the western half of the site, and other site improvements); however, for a variety of reasons, LRS elected to segment the improvements into two phases. Based on this, we understand a permit is in place that covers the additional pavement; however, we also understand that the new pavement will require an adjustment to the permit fee.

Attached for your review/feedback:

1. Email from Rob communicating the original permit fee and bond amount.
2. Plan showing the general extents of the additional pavement. We are currently working on a more detailed engineering plan.
3. Draft engineer's estimate with estimated cost of the additional pavement. I don't believe the new pavement will impact the bond amount, but please confirm.

Can you please advise what the additional permit fee will be in the case LRS decides to move forward with the additional pavement? Can you also advise if there is any additional paperwork/documentation we would need to provide to facilitate the permit update (e.g. I assume you will require the engineering plan when completed)?

Thanks,
Dave

NOTES:

1. UNLESS OTHERWISE INDICATED, ALL VEGETATIVE AND STRUCTURAL EROSION AND SEDIMENT CONTROL PRACTICES WILL BE CONSTRUCTED ACCORDING TO MINIMUM STANDARDS AND SPECIFICATION IN THE ILLINOIS URBAN MANUAL, LATEST EDITION. SEE THE STORMWATER POLLUTION PREVENTION PLAN PREPARED BY ROAKE AND ASSOCIATES, INC.
2. ALL GRADES DEPICTED ARE FINISHED GRADES. IN NON-PAVED AREAS, THE CONTRACTOR SHALL SUBTRACT 6 INCHES (0.5 FEET) TO ALLOW FOR TOPSOIL/MULCH MATERIAL PLACEMENT. THE BEST MANAGEMENT PRACTICE FACILITY SHALL RECEIVE 12 INCHES OF PULVERIZED TOPSOIL FROM FINISHED GRADE 699 TO 701 (MINIMUM).
3. THE CONTRACTOR SHALL PROVIDE INLET FILTER BASKETS IN ACCORDANCE WITH THE APPROVED EROSION CONTROL PLANS FOR ALL OPEN LID STRUCTURES TO MINIMIZE INTRUSION OF DEBRIS/SILT INTO THE STORM SEWER SYSTEM.
4. THE ESTIMATED CONSTRUCTION SCHEDULE IS AS FOLLOWS:

GRADING	OCTOBER 2019
PAVING	OCTOBER 2019
GROUND STABILIZATION/ SODDING	APRIL 2020
LANDSCAPING	MAY 2020

5. LANDSCAPE MATERIALS SHALL BE INSTALLED AS SOON AS POSSIBLE TO STABILIZE SITE. WHERE PROPOSED SLOPES EXCEED 4 TO 1, LOW/NO MAINTENANCE GROUND COVER SHALL BE INSTALLED. SEE LANDSCAPE PLANS FOR DETAILS.
6. SOIL EROSION AND SEDIMENTATION CONTROL MEASURES WILL BE INSPECTED WEEKLY AND AFTER EACH 1/2" RAINFALL EVENT OR MORE FREQUENTLY AS NECESSARY TO MAINTAIN THEIR FUNCTION.
7. A COPY OF THE APPROVED EROSION AND SEDIMENT CONTROL PLAN SHALL BE MAINTAINED ON THE SITE AT ALL TIMES.
8. THE CONTRACTOR IS RESPONSIBLE FOR INSTALLATION OF ANY ADDITIONAL EROSION CONTROL MEASURES NECESSARY TO PREVENT EROSION AND SEDIMENTATION AS DETERMINED BY THE CITY OF WEST CHICAGO.
9. EAST DETENTION FACILITY SHALL BE DEWATERED PRIOR TO UTILITY INSTALLATION AND EAST HALF REGRADING OPERATIONS. DURING DEWATERING OPERATIONS, WATER WILL BE PUMPED INTO SEDIMENT BASINS, FIELD BAGS, OR SILT TRAPS PRIOR TO RELEASE. DEWATERING OF THE EAST POND SHALL BE PERFOMED DURING DRY WEATHER CONDITIONS.
10. CONCRETE TRUCKS SHALL NOT BE PERMITTED TO WASH OUT OR DISCHARGE SURPLUS CONCRETE OR DRUM WASH WATER ON SITE. SPECIFIC AREAS FOR THIS ACTIVITY SHALL BE DESIGNATED BY THE CONTRACTOR AND PROVIDED WITH ADEQUATE SILTATION BASINS AND OTHER FACILITIES TO ASSURE THAT DISCHARGE IS CONTAINED AND CLEANSED BEFORE ENTERING THE RECEIVING STORM SEWER SYSTEM
11. ALL ADJACENT STREETS SHOULD BE KEPT CLEAR OF MUD/DEBRIS. THE CONTRACTOR SHALL INSPECT THE STREETS DAILY AND CLEAN THEM AS NECESSARY.
12. STOCKPILES OF SOIL AND OTHER BUILDING MATERIALS TO REMAIN IN PLACE MORE THAN THREE (3) DAYS SHALL BE FURNISHED WITH EROSION AND SEDIMENT CONTROL MEASURES (I.E. PERIMETER SILT FENCE). STOCK PILES, NOT BEING ACTIVELY WORKED AND TO REMAIN IN PLACE 14 DAYS OR MORE SHALL RECEIVE TEMPORARY SEEDING. THE PROPOSED BERMS MUST BE STABILIZED IMMEDIATELY AFTER FINAL GRADING. STRAW MULCH WITH NETTING OR EROSION CONTROL BLANKET SHALL BE USED ON SIDE SLOPE AND SUMMIT.

PART 1.00 GENERAL

1.1 INTRODUCTION

A. The VortClarex® system, with the performance specifications as described in Section 2.2, shall remove essentially all free and dispersed, non-emulsified oil and settleable solids from an oil/water mixture at the specified flow rates and operating temperatures. The system design shall utilize the difference in specific gravity between oil and water (i.e., buoyancy force) to separate these fluids. The separation process shall be enhanced through the use of proprietary VortClarex coalescing media. The separator shall be designed to receive non-emulsified oily water by gravity or pumped flow and shall process it on a once-through basis. The system shall be a single wall, rectangular tank installed below grade.

1.2 DESCRIPTION

The VortClarex system shall be housed within a rectangular, precast reinforced concrete tank. Within the precast concrete vault, parallel-corrugated plate coalescing media shall be utilized to provide enhanced gravity separation of oil and water mixtures. The separator shall include a baffled inlet compartment, separation chamber, and clean water outlet chamber.

A. INLET COMPARTMENT
The inlet compartment shall be of sufficient volume to effectively reduce influent suspended solids, dissipate energy and begin separation. The inlet shall be comprised of a non-clog diffuser to distribute the flow across the width of the separation chamber. A sediment baffle will be provided to retain settleable solids and prevent sediment from entering the separation chamber.

B. SEPARATION CHAMBER
The oil separation chamber shall contain VortClarex coalescing media. The parallel corrugated plates shall be at a 45° angle with respect to longitudinal axis of the plate corrugations, and spaced ½-inch (13 mm) apart for removal of free oil 60 microns in size or greater, and settleable solids. System configuration shall not promote solids buildup on the plates, which may increase velocities and result in the discharge of an effluent of unacceptable quality.

Laminar flow with a Reynolds Number of less than 500 shall be maintained throughout the coalescing media over the range of operating flow rates (treatment through maximum conveyance flow), to prevent re-entrainment of oils with water. Flow through the coalescing media shall be cross-flow perpendicular to plate corrugations so that the oil collects and coalesces at the high point of corrugations and rises to the top of the media pack without clogging.

C. CLEAN WATER OUTLET CHAMBER
An oil retention baffle or inverted T-pipe section shall be provided to prevent free-floating oil from exiting the system.

D. PIPE CONNECTIONS
Internal SDR 35 piping shall extend through the external precast concrete wall of the vault. Influent and effluent pipes shall be connected to the VortClarex® pipe system by means of a Ferrco type coupling.

1.3 QUALITY CONTROL INSPECTION

A. The quality of materials, the process of manufacture, and the finished sections shall be subject to inspection by the Engineer. Such inspection may be made at the place of manufacture, or on the work site after delivery, or at both places, and the sections shall be subject to rejection at any time if material conditions fail to meet any of the specification requirements, even though sample sections may have been accepted as satisfactory at the place of manufacture. Sections rejected after delivery to the site shall be marked for identification and shall be removed from the site at once. All sections that have been damaged beyond repair during delivery will be rejected and, if already installed, shall be repaired to the Engineer's acceptance level, if permitted, or removed and replaced, entirely at the manufacturer's expense.

B. All sections shall be inspected for general appearance, dimensions, soundness, etc. The surface shall be dense, close-textured and free of blisters, cracks, roughness and exposure of reinforcement.

C. Imperfections may be repaired, subject to the acceptance of the Engineer, after demonstration by the manufacturer that strong and permanent repairs result. Repairs shall be carefully inspected before final acceptance. Cement mortar used for repairs shall have a minimum compressive strength of 4,000 psi (28 MPa) at the end of 7 days and 5,000 psi (34 MPa) at the end of 28 days when tested in 3-inch (76 mm) by 6-inch (152 mm) cylinders stored in the standard manner. Epoxy mortar may be utilized for repairs.

1.4 SUBMITTALS

A. The Contractor shall be provided with dimensional drawings and, when specified, utilize these drawings as the basis for preparation of shop drawings showing details for construction, reinforcing, joints and any cast-in-place appurtenances. Shop drawings shall be annotated to indicate all materials to be used and all applicable standards for materials, required tests of materials and design assumptions for structural analysis. Shop drawings shall be prepared at a scale of not less than 3/16-inches per foot (1:75).

PART 2.00 PRODUCTS

2.1 MATERIALS AND DESIGN

A. Concrete for the precast VortClarex system shall conform to ASTM C 857 and C 858 and meet the following additional requirements:
1. The exterior wall thickness shall not be less than 6-inches (152 mm) or as shown on the dimensional drawings prepared by Contech Engineered Solutions LLC. In all cases the wall thickness shall be no less than the minimum thickness necessary to sustain HS20 (MS18) loading requirements as determined by a Licensed Professional Engineer.
2. Sections shall have tongue-and-groove joints or shiplap joints and be sealed with a butyl mastic sealant designed to be resistant to fuel and oil such as ConSeal™ Brand CS-440 or approved equal. All joints will be above the resting water level.
3. Cement shall be Type II Portland cement, or approved equal, conforming to ASTM C 150.
4. All precast concrete sections shall be cured by an approved method. Sections shall not be shipped until the concrete has attained a compressive strength of 4,000 psi (28 MPa) or until 5 days after fabrication and/or repair, whichever is longer.

B. Coalescing media shall be manufactured by Facet International and be made of calcium carbonate filled polypropylene corrugated plates, with corrugation angles no less than 45° with respect to longitudinal axis of the plate corrugations. Plates shall be spaced at ½-inch (13 mm) intervals and be stacked and bound together with sturdy rods and supports to form modular plate packs.

C. Polyurethane elastomeric sealant shall comply with ASTM D-412 and GSA Specification TT-S-00230C, Type II, Class A and ASTM C-920, Type S, Grade NS.

E. Manhole frames and covers shall be provided by the manufacturer in the numbers and configurations as shown on the dimensional drawings prepared by Contech.

E. Hatchways shall be provided by the manufacturer in the numbers and configurations as shown on the dimensional drawings prepared by Contech. Hatchways shall be made of Cast Iron, steel or aluminum, and shall meet HS20-44 (MS18) loading requirements.

F. Brick or masonry used to build the casting and hatchway frames to grade shall conform to ASTM C 32 or ASTM C 139 and shall be installed in conformance with all local requirements.

2.2 MANUFACTURER

The manufacturer of said VortClarex system shall have been regularly engaged in the engineering design and production of systems for the physical treatment of stormwater runoff for a minimum of 5 years.

Each VortClarex system shall be manufactured by Contech, or approved equal.

PART 3.00 EXECUTION

3.1 INSTALLATION

A. Each VortClarex system shall be constructed according to the sizes shown on the drawings and as specified herein. Install at elevations and locations shown on the drawings or as otherwise directed by the engineer.

B. Place the precast base unit on a granular subbase of minimum thickness of 6 inches (152 mm) after compaction or of greater thickness and compaction if specified elsewhere. The granular subbase shall be checked for level prior to setting and the precast base section of the vault shall be checked for level at all four corners after it is set. If the slope from any corner to any other corner exceeds 0.5% the base section shall be removed and the granular subbase material re-leveled.

C. Prior to setting subsequent sections place ConSeal™ brand CS-440 butyl mastic sealant, or approved equal in conformance with ASTM C 990-91, along the construction joint in the section that is already in place.

D. After setting the precast roof section of the VortClarex system, set riser sections to the height required to bring the cast iron manhole covers or hatches to grade, so that the sections are vertical and in true alignment with a ¼-inch (6 mm) maximum tolerance allowed. Backfill in a careful manner, bringing the fill up in 6-inch (152 mm) lifts on all sides. If leaks appear, clean the inside joints and caulk with lead wool to the satisfaction of the Engineer. Precast sections shall be set in a manner that will result in a watertight joint. In all instances, installation of the VortClarex system shall conform to ASTM specification C 891 "Standard Practice for Installation of Underground Precast Utility Structures".

E. Holes made in the concrete sections for handling or other purposes shall be plugged with a non-shrink grout or by using grout in combination with concrete plugs.

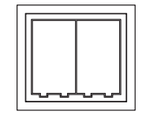
VCL30 DESIGN NOTES
VCL30 RATED TREATMENT CAPACITY IS 110 GPM [6.93 l/s], OR PER LOCAL REGULATIONS. IF THE SITE CONDITIONS EXCEED RATED TREATMENT CAPACITY, AN UPSTREAM BYPASS STRUCTURE IS REQUIRED.
THE VORTCLAREX SYSTEM SHALL REMOVE ESSENTIALLY ALL FREE AND DISPERSED NON-EMULSIFIED OIL FROM THE WATER STREAM AND PRODUCE A DESIRED EFFLUENT BASED ON AN OIL DROPLET TYPICAL OF THE SITE.
THE VORTCLAREX SYSTEM SHALL BE DESIGNED IN ACCORDANCE WITH STOKES LAW AND API BULLETIN NO. 421.
THE STANDARD INLET/OUTLET CONFIGURATION IS SHOWN. FOR OTHER CONFIGURATION OPTIONS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com



30" x 36" [762 x 914] ACCESS HATCH

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHT, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com
3. VORTCLAREX WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
4. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET AASHTO M306 LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION
5. INLET AND OUTLET PIPES MUST BE PERPENDICULAR TO THE VAULT TO ALLOW CONNECTION WITH PROVIDED PIPE STUBS.
6. FLOW LINE IN AND OUT OF THE VORTCLAREX IS RECOMMENDED TO BE AT THE SAME ELEVATION.
7. ALTERNATE UNITS ARE IN MILLIMETERS UNLESS NOTED OTHERWISE.

INSTALLATION NOTES
1. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
2. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE VORTCLAREX STRUCTURE (LIFTING CLUTCHES PROVIDED).
3. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS AND ASSEMBLE STRUCTURE.
4. CONTRACTOR TO PROVIDE AND INSTALL FERNCO, OR EQUIVALENT, COUPLER TO MATE EXISTING TRUNKLINE TO THE PROVIDED PIPE STUBS. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.

RE: Notice of Coverage - General Storm Water Permit for Industrial Site Activities
Facility: West DuPage Recycling & Transfer Inc. - West Chicago, IL - County: DuPage
NPDES Permit No: ILR007616 - Bureau ID: W0430900051

Dear NPDES Permittee:

We have reviewed your application and determined that storm water discharges associated with industrial activity (excluding construction sites) are appropriately covered by the attached General NPDES Permit issued by the Agency.

The Permit issued covers application requirements, a Storm Water Pollution Prevention Plan, and reporting requirements. Failure to meet any portion of the Permit could result in civil and/or criminal penalties. The Agency is ready and willing to assist you in interpreting any of the conditions of the Permit as they relate specifically to your discharge.

Your discharge is covered by this permit effective as of the date of this letter. You have the right to appeal the Agency's decision to cover the discharge by the General Permit to the Illinois Pollution Control Board within a 35-day period following the date of this letter.

This letter shows your facility permit number below your facility name. Please reference this number in all future correspondence. Should you have any questions concerning the Permit, please contact the Permit Section at 217/782-0610.

Very Truly Yours,

Amy Dragovich by DSC

Amy L. Dragovich, P.E.

BRUCE RAUNER, GOVERNOR ALEC MESSINA, DIRECTOR

RE: General Storm Water Permit for Industrial Site Activities Attachments

Dear NPDES Permittee:

With the issuance of the new General Storm Water Permit for Industrial Site Activities there are 3 attachments. You may access these attachments through the following website address:

https://www2.illinois.gov/epa/topics/forms/water-permits/storm-water/Pages/industrial.aspx

Should you have any questions concerning the Permit or it's attachments, please contact the Permit Section at 217/782-0610 or at the above address.

Sincerely,

Amy L. Dragovich

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

General NPDES Permit
For
Storm Water Discharges from Industrial Activities

Expiration Date: March 31, 2022

Issue Date: April 5, 2017

Effective Date: April 5, 2017

Discharges authorized by this General Permit: In compliance with the provisions of the Illinois Environmental Protection Act, the Illinois Pollution Control Board Rules and Regulations (35 Ill. Adm. Code, Subtitle C, Chapter 1) and the Clean Water Act, the following discharges may be authorized by this permit in accordance with the conditions herein:

Discharges of storm water associated with industrial activities, as defined and limited herein. Storm water means storm water runoff, snow melt runoff, and surface runoff and drainage.

This general permit regulates only storm water discharges from a facility. Other discharges such as process wastewater or cooling water shall be regulated by other NPDES permits.

Receiving waters: Discharges may be authorized to any surface water of the State.

To receive authorization to discharge under this general permit, a facility operator must submit a Notice of Intent form and additional documentation as required in Part D of this permit. Authorization, if granted, will be by letter and include a copy of this permit.

Alan Keller

Alan Keller, P.E.
Manager, Permit Section
Division of Water Pollution Control

SIC 28	(Chemicals and allied products)
SIC 283	(Drugs)
SIC 285	(Paints, varnishes, lacquers, enamels, and allied products)
SIC 29	(Petroleum refining and related industries), except discharges subject to 40 CFR 419
SIC 30	(Rubber and miscellaneous plastics products)
SIC 31	(Leather and leather products)
SIC 311	(Leather tanning and finishing)
SIC 32	(Stone, clay, glass, and concrete products)
SIC 323	(Glass products, made of purchased glass)
SIC 33	(Primary metal industries)
SIC 34	(Fabricated metal products, except machinery and transportation equipment)
SIC 3441	(Fabricated structural metal)
SIC 35	(Industrial and commercial machinery and computer equipment)
SIC 36	(Electronic and other electrical equipment and components, except computer equipment)
SIC 37	(Transportation equipment)
SIC 373	(Ship and boat building and repairing)
SIC 38	(Measuring, analyzing, and controlling instruments; photographic, medical, and optical goods; watches and clocks)
SIC 39	(Miscellaneous manufacturing industries)
SIC 4221-25	(Farm products warehousing and storage, refrigerated warehousing and storage, general warehousing and storage)

This permit is also applicable to any additional storm water discharges that are not otherwise required to obtain an NPDES permit but are comingled or mixed with discharges authorized by this permit.

3. Facilities classified as SIC 10-14 (Mineral Industry) including active or inactive mining operations and oil and gas exploration, production, processing, treatment operations, or transmission facilities, except discharges subject to 40 CFR 434, 436, or 440 or any discharges subject to general permit number ILG84. This permit does not authorize any discharge associated with the hydraulic fracturing process if additional chemicals are utilized in the process.

4. Landfills, land application sites (excluding land application sites which utilize agricultural land), and open dumps that receive or have received any industrial wastes (waste that is received from any of the facilities described in 40 CFR 122.26(b) (14)).

5. Facilities involved in the recycling of materials including metal scrapyards, battery reclaimers, salvage yards, automobile junkyards and concrete recycling facilities including but not limited to SIC 5015 (Used motor vehicle parts) and SIC 5093 (Scrap and waste materials)

6. Transportation facilities listed below with areas involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication), equipment cleaning operations, or airport deicing operations (unless individual permit required by 40 CFR 449):

SIC 40	(Railroad transportation)
SIC 41	(Local and suburban transit and inter-urban highway passenger transportation)
SIC 42	(Motor freight transportation and warehousing) except SIC 4221-4225 (Farm product warehousing and storage, refrigerated warehousing and storage, general warehousing and storage)
SIC 43	(United States Postal Service)
SIC 44	(Water transportation)
SIC 45	(Transportation by air)
SIC 5171	(Petroleum bulk stations and terminals-wholesale)

7. Treatment Works treating domestic sewage with a design flow of 1.0 mgd or more including sludge or wastewater treatment devices or systems used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, and land dedicated to sludge disposal located within the confines of the facility. This requirement excludes off-site sludge management lands, farm lands, and gardens.

8. Discharge of storm water from non-classified facilities designated by the Agency as requiring a permit. See Sector AD of Attachment 1 and 2.

7. Storm water discharges associated with inactive mining or inactive oil and gas operations occurring on Federal lands where an operator cannot be identified.

8. Storm water discharges to any receiving water identified under 35 Ill. Adm. Code 302.105(d) (6).

9. Storm water discharges that the Agency determines are not appropriately covered by this general permit.

10. Storm water or other discharges of hazardous substances or oil resulting from an on-site spill.

11. Discharges of storm water collected in containment areas at bulk storage and hazardous waste facilities where the storm water becomes contaminated by direct contact with a spill or release of stored materials into the containment area.

C. SPECIAL CONDITIONS

1. Discharging pollutants for which a water body is impaired with an approved TMDL:

   a. The Permittee must determine whether the facility discharges storm water, either directly or indirectly, to the immediate stream segment which is an impaired water body, i.e., a water body included on the most recent U.S. EPA-approved Clean Water Act Section 303(d) list of impaired water bodies. This determination must be made within 6 months of the effective date of this permit, and must be documented in the facility's SWPPP or storm water records. Information on impaired waters is contained in the Agency website below:

   http://www.epa.illinois.gov/topics/water-quality/watershed-management/tmdls/303d-list/

   b. If the Permittee determines that it discharges storm water to the immediate stream segment which is an impaired water body, the Permittee must identify if there is a U.S. EPA-approved TMDL that establishes waste load allocations for discharges of pollutant(s) of concern to the impaired water body. This determination must be made within 6 months of the effective date of this permit, and must be documented in the facility's SWPPP or storm water records. Information on TMDLs is contained in the Agency website below:

   http://www.epa.illinois.gov/topics/water-quality/watershed-management/tmdls/index

   c. If the Permittee determines that there is a U.S. EPA-approved Total Maximum Daily Load (TMDL) for a water body to which the facility discharges storm water, the permittee must determine if there is a Waste Load Allocation (WLA) applicable to the facility's storm water discharges in the approved TMDL.

   d. If the Permittee determines that it is subject to an applicable (WLA), the following requirements apply:

      i. The Permittee must calculate/quantify the facility's estimated current loading(s) of the pollutant(s) of concern to the impaired water body. This may be done using monitoring data and/or through modeling.

      ii. The Permittee must determine if, based on the estimated current loading(s), it is meeting the applicable WLA with current storm water controls and practices. If loading reductions are needed in order to achieve the applicable WLA, the permittee must update its SWPPP to incorporate Best Management Practices (BMPs) or other storm water control measures that will be implemented to reduce loadings of the pollutant(s) of concern and achieve the applicable WLA.

      The SWPPP must specifically identify the additional or enhanced BMPs or control measures necessary to reduce loadings of the pollutant(s) of concern, and must also document/summarize modeling and/or other calculations used to estimate that the practices and control measures will reduce loadings to achieve the applicable WLA.

      iii. The SWPPP must define a schedule for implementing the control measures identified necessary to meet the WLA. The schedule for implementing the planned BMPs and/or control measures above must be set out so that the management practices and control measures are in place and operational as quickly as possible. Interim milestones should be established to facilitate assessment of progress in implementing the control measures and gauging progress toward meeting the applicable WLA.

i. Facilities classified as SIC 28 (Chemicals and Allied Products) and SIC 30 (Rubber and Miscellaneous Plastics Products): Storm water discharges that come into contact with solid chemical storage piles.

j. Automobile junkyards: Storm water discharges exposed to over 250 auto/truck bodies with drivelines, over 250 drivelines, or any combination thereof (in whole or in parts); over 500 auto/truck units (bodies with or without drivelines in whole or in parts); or over 100 units per year are dismantled and drainage or storage of automotive fluids occurs in areas exposed to storm water.

k. Lime manufacturing facilities: Storm water discharges that have come into contact with lime storage piles.

l. Cement manufacturing facilities and cement kilns: Storm water discharges other than those subject to 40 CFR 411.

m. Ready-mixed concrete facilities: Sampling data is not required for new ready-mixed concrete facilities or for relocated ready-mixed concrete facilities. Schedule 2-F is not required for existing or previously permitted facilities.

n. Ship building and repairing facilities.

o. Other industrial activities when requested by the Agency.

3. When a facility has two or more outfalls that, based on consideration of features and activities within the area drained by the outfall, the Permittee reasonably believes discharge substantially identical effluents, the Permittee may sample the effluent of one such outfall and report that quantitative data also applied to the substantially identical outfalls. If the applicant is requesting approval to sample a representative outfall, identification of all storm water outfalls considered to be substantially identical along with the outfall being used to represent such outfalls and appropriate justification must be provided with the application.

4. Existing facilities application/Notice of Intent requirements:

a. For existing facilities with an individual NPDES permit covering storm water associated with industrial activity, or those facilities that have previously submitted an application for an individual permit and not yet received a permit, the Permittee/Applicant may elect to seek coverage under this general permit in place of obtaining an individual permit. To be considered for coverage the Permittee/Applicant is required to submit the information, in Part D.1.

b. For existing facilities that have submitted a NOI for coverage of any discharge of storm water associated with industrial activities under this general permit a new or revised NOI will not be required unless the industrial activity at the site has substantially changed.

5. For new facilities, the NOI and required information shall be submitted 180 days prior to the date on which the discharge is to commence unless permission for a later date has been granted by the Agency. Mobile facilities (such as concrete or asphalt batch plants) shall apply at least 30 days prior to discharge.

6. The required information from Part D.1.a.i and ii and D.1.c shall be submitted to one of the following addresses:

a. Electronic submission shall be submitted to:

epa.indilr00swppp@illinois.gov

b. If electronic submittal is unavailable the required information should be submitted to the following address:

Illinois Environmental Protection Agency
Division of Water Pollution Control
Permit Section #15
1021 North Grand Avenue East
Post Office Box 19276
Springfield, Illinois 62794-9276

7. Authorization: Owners or operators must submit either an NOI in accordance with the requirements of this permit or an application for an individual NPDES Permit to be authorized to discharge under this General Permit. Authorization, if granted, will be by letter from the Agency and include a copy of this Permit. Upon review of an NOI, the Illinois EPA may deny coverage under this Permit and require submittal of an application for an individual NPDES Permit.

c. If the Permittee discharges to an impaired water with an established U.S. EPA approved or established TMDL and the SWPPP has been modified in accordance with Part E.1.b above, Illinois EPA will review the SWPPP and inform the Permittee in writing if additional pollutant control measures for rainfall events are necessary for the discharge to be consistent with the assumptions of any available waste load allocations in the TMDL or if coverage under an individual permit is necessary.

2. Plans for new facilities shall be completed prior to submitting an NOI to be covered under this permit. An electronic copy of the SWPPP shall be submitted to the Agency at the following email address: epa.indilr00swppp@illinois.gov. Plans shall provide for compliance with the effluent limitations in Part F of this permit prior to operation of any industrial activity to be covered under this permit. [Note: If the plan has already been required to be developed under a previous permit it shall be updated and maintained in accordance with all requirements of this Special Condition within 180 days of the effective date of this permit.]. The owner or operator of an existing facility with storm water discharges covered by this permit shall submit a copy of the Plan to the Agency and shall make a copy of the Plan available to the Agency during any inspection of the site.

   Facilities which discharge to MS4 shall also make a copy available to the operator of the municipal system at any reasonable time upon request.

3. The Permittee may be notified in writing by the Agency at any time that the Plan does not meet the requirements of this permit. After such written notification, the Permittee shall modify the Plan and shall submit a revised plan to the Agency with the requested changes that have been made. Unless otherwise provided, the Permittee shall have 30 days after such notification to make the changes.

4. The Permittee shall modify the SWPPP based on the corrective actions and deadlines required in Part H.2 and that the Permittee documented in Part H.2, such that the triggering conditions for corrective action in Part H.1 do not reoccur. The Permittee shall also modify the SWPPP whenever there is a change in construction, operation, or maintenance which may affect the discharge of concentrations or quantities of pollutants to the waters of the United States. SWPPP modifications must be signed in accordance with Attachment H.

5. The Plan shall provide a description of potential sources which may be expected to affect concentration or quantities of pollutants to storm water discharges, or which may result in non-storm water discharges from the facility. The Plan shall include, at a minimum, the following items:

   a. A topographic map extending one-quarter mile beyond the property boundaries of the facility, showing: the facility, surface water bodies, wells (including injection wells), seepage pits, infiltration ponds, and the discharge points where the facility's storm water discharges to a municipal storm drain system or other water body. The requirements of this paragraph may be included on the site map if appropriate. Any map or portion of map may be withheld for security reasons.

   b. A site map showing:

      i. The storm water conveyance and discharge structures;

      ii. An outline of the storm water drainage areas for each storm water discharge point, location, and identification of any MS4 to which the industrial site discharges storm water;

      iii. Paved areas and buildings;

      iv. Areas used for outdoor manufacturing, storage trash dumpsters and compactors or disposal of significant materials, including activities that generate significant quantities of dust or particulates;

      v. Location of existing or planned storm water structural control measures/practices (dikes, coverings, detention facilities, etc.);

      vi. Surface water locations and/or municipal storm drain locations;

      vii. Areas of existing and potential soil erosion;

      viii. Vehicle service areas;

      ix. Material loading, unloading, transfer, and access areas;

      x. Direction of storm water flow (use arrows);

9. The following must be documented in the SWPPP:

   a. Good Housekeeping (F.2.c) – A requirement that waste materials be regularly picked up and disposed of, along with routine inspections for leaks and conditions of drums, tanks and containers;

   b. Maintenance (F.2.b) – Procedures and frequencies for inspection and maintenance of storm water conveyance system devices such as oil/water separators, catch basins, etc., and inspection and testing of plant equipment and systems that could fail and result in discharges of pollutants to storm water. The SWPPP shall include the schedule or frequency for maintaining all control measures;

   c. Spill Prevention and Response (Part F.2.d) – Procedures for responding to spills and leaks, including internal and third-party notification procedures. For preventing spills, include in the SWPPP the control measures for material handling and storage, and procedures for preventing spills that can contaminate storm water. Spill clean-up equipment and procedures should be identified, as appropriate;

   d. Erosion and Sediment Control (Part F.2.f) – If the Permittee uses polymers and/or other chemical treatments as part of a control measure, the Permittee must identify the polymer and/or chemicals used and the purpose; and

   e. Employee Training (Part F.2.g) – The elements of the employee training plan shall include all, but not be limited to, the requirements set forth in Part F.2.g and also include the following:

      i. The content of the training;

      ii. The frequency/schedule of the training for employees who have duties in areas of industrial activity subject to this permit; and

      iii. A log of the date on which specific employees receive training.

10. Inspections.

   a. The Permittee must document in the SWPPP its procedures for performing, as appropriate, the types of inspections specified in this permit, including:

      i. Routine facility inspections (See Part G.1), and

      ii. Quarterly visual assessment of storm water discharges (See Part J.1).

   b. If the Permittee is invoking the exception for inactive and unstaffed sites relating to routine facility inspections and quarterly visual assessments, the Permittee must include in the SWPPP the information to support this claim as required by Part G.5.

11. Monitoring.

   a. The Permittee must document in the SWPPP the procedures for conducting two types of analytical monitoring specified by the permit, where applicable to the facility:

      i. Benchmark monitoring (See Part J.2)

      ii. Site-specific monitoring

   b. For each type of monitoring, the SWPPP must document:

      i. Locations where samples are collected, including any determination that two or more outfalls are identical;

      ii. Parameters for sampling and the frequency of sampling for each parameter;

      iii. Schedules for monitoring at the facility;

      iv. Any numeric control values (benchmarks, TMDL-related requirements) applicable to discharges from each outfall; and

ii. A finding that the exceedance was due to natural background pollutant levels; or

iii. A finding that no further pollutant reductions were technologically available and economically practicable in light of best industry practice consistent with Part J.2.;

h. Documentation to support any determination that pollutants of concern are not expected to be present above natural background levels if the facility discharges directly to impaired waters, and such pollutants were not detected in the discharge or were solely attributable to natural background sources (See Part J.2);

i. Documentation to support the claim that the facility has changed its status from active to inactive and unstaffed with respect to the requirements to conduct routine inspections (See Part G.5), quarterly visual assessments (see Part J.1) and/or benchmark monitoring (see Part J.2); and

j. Electronic copies of all documents, including the SWPPP, are acceptable.

17. Modifications to the following requirements in the plan shall be submitted to the Agency pursuant to Part K.1, E.I.c, E.6, E.7, E.16.f, E.16.g, E.16.i.

F. Control Measures and Discharge Limitations

In the technology-based limits included below, the term "minimize" means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable.

1. Storm Water Controls

The Permittee must select, design, install, and implement control measures (including best management practices) to meet the discharge limitations in Part F.2 and meet the water quality-based effluent limitations in Part F.3. The selection, design, installation, and implementation of these control measures must be in accordance with good engineering practices and manufacturer's specifications. Note that the Permittee may deviate from such manufacturer's specifications where it provides justification for such deviation and include documentation of its rationale in the part of its SWPPP that describes its control measures, consistent with Part E.6. If the Permittee finds that its control measures are not achieving their intended effect of minimizing pollutant discharges, it must modify these control measures in accordance with the corrective action requirements set forth in Part H. Regulated storm water discharges from the Permittee's facility include storm water run-on that commingles with storm water discharges associated with industrial activity at its facility.

2. Discharge Limitations

a. Minimize Exposure – The Permittee must minimize the exposure of manufacturing, processing, and material storage areas (including loading and unloading, storage, disposal, cleaning, maintenance, and fueling operations) to rain, snow, snowmelt, and runoff by either locating these industrial materials and activities inside or protecting them with storm resistant coverings. In order to minimize exposure, where feasible, the Permittee must include the following BMPs where applicable:

i. Use grading, berming, or curbing to prevent runoff of contaminated flows and divert run-on away from these areas;

ii. Containment - Storage within berms or other secondary containment devices to prevent leaks and spills from entering storm water runoff. To the maximum extent practicable, storm water discharged from any area where pollutants from material handling equipment or activities, raw materials, intermediate products, final products, waste materials, by-products, or industrial machinery are exposed to storm water should not enter vegetated areas or surface waters or infiltrate into the soil unless adequate treatment is provided;

iii. Clean up spills and leaks promptly using dry methods (e.g., absorbents) or other cleanup methods to prevent the discharge of pollutants;

iv. Store leaky vehicles and equipment indoors or, if stored outdoors, use drip pans and absorbents;

v. Use spill/overflow protection equipment;

vi. Perform all vehicle and/or equipment cleaning operations indoors, under cover, or in bermed areas

contribute pollutants, measures to remove pollutants from storm water discharge shall be implemented. The following management practices shall be considered and implemented as applicable:

i. Debris & Sediment Control - Screens, booms, sediment ponds, or other methods to reduce debris and sediment in storm water discharges;

ii. Covered Storage or Manufacturing Areas - Covered fueling operations, materials, manufacturing, and storage areas to prevent contact with storm water. This includes any pesticide, herbicide, fertilizer, or any other chemical storage area;

iii. Mercury Switch Removal and Recycling – Mercury containing convenience lighting switches and anti-lock brake assemblies shall be removed from vehicles and recycled in an approved manner which prevents mercury from entering the storm water discharges; and

iv. Storm Water Reduction – To minimize storm water runoff, install vegetation on roofs of buildings within and adjacent to the exposure area to detain and evapotranspirate runoff where the precipitation falling on the roof is not exposed to contaminants. Capture storm water for use as appropriate based on quality where feasible and applicable.

f. Sediment and Erosion Prevention – where feasible and applicable, the Permittee must minimize erosion by stabilizing exposed soils at the facility and placing flow velocity dissipation devices at discharge locations. The Permittee must also use structural and non-structural control measures to prevent the discharge of sediment. If the Permittee uses polymers and/or other chemical treatments as part of its controls, it must identify the polymers and/or chemicals used and the purpose. Information on BMPs for erosion and sediment control is available at the following websites:

USEPA National Menu of Best Management Practices (BMPs) for Storm Water

https://www.epa.gov/npdes/national-menu-best-management-practices-bmps-stormwater#edu

Illinois Urban Manual:

http://www.aiswcd.org/illinois-urban-manual/

g. Employee Training – The Permittee must train all employees who work in areas where industrial materials or activities are exposed to storm water, or who are responsible for implementing activities necessary to meet the conditions of this permit (e.g., inspectors, maintenance personnel), including all pollution prevention personnel. Employees shall be trained at a minimum of once per calendar year. The Permittee shall ensure the following personnel are trained on the requirements of this permit:

i. Personnel who are responsible for the design, installation, maintenance, and/or repair of controls (including pollution prevention measures);

ii. Personnel responsible for the storage and handling of chemicals and materials that could become contaminants in storm water discharges;

iii. Personnel who are responsible for conducting and documenting monitoring and inspections as required in Parts G and J; and

iv. Personnel who are responsible for performing and documenting corrective actions as required in Part H.

h. De-icing Material Storage - Storage piles of deicing material used onsite or for other commercial or industrial purposes must be enclosed or covered to prevent exposure to precipitation (except for exposure resulting from adding or removing materials from the pile). The Permittee must document and implement appropriate pollution prevention measures that minimize exposure to storm water when adding to or removing material from the pile. Piles do not need to be enclosed or covered where storm water from the pile is not discharged to Waters of the United States or the discharges from the piles are authorized under another permit. The Permittee must document the location of any storage piles of deicing material to be used for deicing or for other commercial or industrial use in the SWPPP site map (Part E.5.b.xvii).

d. All observations relating to the implementation of control measures at the facility, including:

i. A description of any discharges occurring at the time of the inspection;

ii. Any previously unidentified discharges and/or pollutants from the site;

iii. Any evidence of, or the potential for, pollutants entering the drainage system; Observations regarding the physical condition of and around all outfalls including any flow dissipation devices, and evidence of pollutants in discharges and/or the receiving water;

iv. Any control measures needing maintenance, repairs, or replacement;

e. Any additional control measures needed to comply with the permit requirements; and

f. Any incidents of noncompliance observed.

g. Any outfall not inspected due to flooding conditions,

3 Any corrective action required as a result of a routine facility inspection must be performed consistent with Part H of this permit.

4. If the Permittee performed a visual observation required in Part J.1 during the facility inspection, the Permittee may include the results of the assessment with the report required in Part G.2, provided all components of both types of inspections are included in the report.

5. Exceptions to Routine Facility Inspections for Inactive and Unstaffed Sites.

The Permittee may exercise a waiver of the facility inspection requirement at a facility that is inactive and unstaffed, provided there are no industrial materials or activities exposed to storm water. If the Permittee exercises this waiver, the Permittee must maintain a certification with the SWPPP stating that the site is inactive and unstaffed, and that there are no industrial materials or activities exposed to storm water.

H. CORRECTIVE ACTIONS

1. Conditions Requiring SWPPP Review and Revision.

The Permittee must review the SWPPP when any of the following conditions occur:

a. An unauthorized release or discharge (e.g., spill, leak, or discharge of non-storm water not authorized by this or another NPDES permit) occurs at the facility;

b. Control measures are not stringent enough for the discharge to meet applicable water quality standards or the conditions of this permit;

c. A required control measure was never installed, was installed incorrectly, or not in accordance with this permit or is not being properly operated or maintained;

d. Visual observations indicate signs of storm water pollution (e.g., unnatural color, odor, turbidity, floatable material, settled solids, suspended solids, foam, and oil sheen);

e. The average of four quarterly sampling results exceeds any applicable benchmark monitoring concentration. If less than four samples have been taken, but the results are such that an exceedance of the four quarter average is mathematically certain (i.e., if the sum of quarterly sample results to date is more than four times the benchmark monitoring concentration) this is considered a benchmark exceedance, triggering this review;

f. Construction or a change in design, operation, or maintenance at the facility that modifies the type or concentration of pollutants discharged in storm water from the facility, or increases the quantity of pollutants discharged;

iii. does not release the Permittee from compliance with other applicable statutes of the State of Illinois or other applicable local law, regulations, or ordinances.

b. If any statement or representation is found to be incorrect, this authorization may be revoked and the Permittee thereupon waives all rights thereunder.

3. Plans and specifications of all treatment equipment being included as a part of the Storm Water Management Practice shall be included in the SWPPP.

4. Any modification of or deviation from the plans and specifications originally submitted with the initial SWPPP requires amendment of the SWPPP.

5. Construction activities which result from treatment equipment installation, including clearing, grading, and excavation activities which result in the disturbance of one acre or more of land area, are not covered by this authorization. The Permittee shall contact the Agency regarding any additional required permit(s).

J. MONITORING

1. Quarterly Visual Observation of Discharges – The requirements and procedures for quarterly visual observations are applicable to all facilities covered under this permit, regardless of the Permittee's sector of industrial activity.

a. The Permittee must perform and document a quarterly visual observation of a storm water discharge associated with industrial activity from each outfall. The visual observation must be made during daylight hours. If no storm event resulted in runoff during daylight hours on normal work days from the facility during a monitoring quarter, no visual observation is required for that quarter, provided the permittee documents that no observable runoff occurred. Normal work days do not include weekends or Federal holidays. The Permittee must sign and certify the documentation.

b. Visual observation must be made on samples collected within 1 hour of an actual discharge from a storm event equal to or greater than 0.25 inch in 24 hours. If it is not possible to take a sample within the first hour of the discharge, the sample must be collected as soon as practicable after the first hour and the Permittee must explain why it was not possible to take samples within the first hour. In the case of snowmelt, the samples must be taken from an actual discharge from the site. For storm events, samples must be collected from a storm event discharge at least 72 hours from the previous discharge. The 72 hour interval does not apply if the Permittee documents that a less than 72 hour event is representative for local storm events during the sampling period. The observation must document: unnatural color, odor, clarity, floatable solids, settled solids, suspended solids, foam, oil sheen, and other obvious indicators of storm water pollution if present in the discharge. If visual observations indicate any unnatural color, odor, turbidity, floatable material, oil sheen or other indicators of storm water pollution, the Permittee shall obtain a sample and test for the parameter or the list of pollutants as provided pursuant to Part E.5.C.ii and E.5.d and initiate corrective action in Part H.

c. The Permittee must maintain visual observation reports onsite with the SWPPP. Each report must include the observation date and time, inspection personnel, outfall location, nature of the discharge (i.e., runoff or snow melt), visual quality of the storm water discharge (including observations of unnatural color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, and other obvious indicators of storm water pollution), and probable sources of any observed storm water contamination.

d. The Permittee may exercise a waiver of the visual observation requirement at a facility that is inactive and unstaffed, as long as there are no industrial materials or activities exposed to storm water. If the Permittee exercises this waiver, the Permittee must maintain a certification with the SWPPP stating that the site is inactive and unstaffed, and that there are no industrial materials or activities exposed to storm water.

e. Representative Outfalls - If the Permittee's facility has two or more outfalls that are believed to discharge substantially identical effluents, based on similarities of the industrial activities, significant materials, size of drainage areas, and storm water management practices occurring within the drainage areas of the outfalls, the Permittee may conduct visual observation of the discharge at just one of the outfalls and report that the results also apply to the substantially identical outfall(s).

f. Visual observation documentation shall be made available to the Agency and general public upon written request.

A. The average concentration of the benchmark monitoring results is less than or equal to the concentration of that pollutant in the natural background;

B. The Permittee document and maintain with the SWPPP, the supporting rationale for concluding that the benchmark exceedances are in fact attributable solely to natural background pollutant levels. The Permittee must include in the rationale any data previously collected by the Permittee or other sources (i.e., literature studies) that describe the level of natural background pollutants in the storm water discharge;

C. Notify the Agency on the Permittee's final quarterly benchmark monitoring report that the benchmark exceedances are attributable solely to natural background pollutant levels.

D. Permittees may discontinue monitoring natural background pollutants that occur solely from run-on sources provided the Permittee analyzes the pollutant in the run-on source during the benchmark monitoring period.

f. Exception for Inactive and Unstaffed Sites - The requirement for benchmark monitoring does not apply at a facility that is inactive and unstaffed, provided there are no industrial materials or activities exposed to storm water. To qualify for any monitoring exception, the Permittee must meet the following requirements:

i. Maintain a statement with the Permittee's SWPPP stating that the site is inactive and unstaffed, and that there are no industrial materials or activities exposed to storm water in accordance with the substantive requirements in 40 CFR 122.26(g) and sign and certify the statement in accordance with Attachment H 11.

ii. If a Permittee is not qualified for this exception at the time of permit coverage but during the permit term the Permittee becomes qualified because the facility is inactive and unstaffed, and there are no industrial materials or activities that are exposed to storm water, then the Permittee must notify Illinois EPA of this change in the next benchmark monitoring report. A Permittee may discontinue benchmark monitoring once Illinois EPA has been notified, and prepared and signed a certification statement concerning the facility's qualification for this monitoring exception.

g. Representative Outfalls – If the Permittee's facility has two or more outfalls that are believed to discharge substantially identical effluents, based on similarities of the industrial activities, significant materials, size of drainage areas, and storm water management practices occurring within the drainage areas of the outfalls, the Permittee may conduct benchmark monitoring of the discharge at just one of the outfalls and report that the results also apply to the substantially identical outfall(s).

K. REPORTING

1. The Permittee shall submit an electronic copy of the annual inspection report to the Agency. The report shall include results of the quarterly benchmark monitoring as required by Part J.2 and the quarterly facility inspections which are required by Part G of this permit. The report shall include, at a minimum, a review and update of the SWPPP. The Permittee shall submit modifications of the requirements of the plan to the Agency with the Annual Report. Permittees have 180 days to update their SWPPP to comply with the new requirements and then submit with the following annual report. The report shall also include documentation of any event (spill, treatment unit malfunction, etc.) which would require an inspection, results of the inspection, and any subsequent corrective maintenance activity. The report shall be completed and signed by the authorized facility employee(s) who conducted the inspection(s). The annual inspection report is considered a public document that shall be available to the public at any reasonable time upon request.

2. For new Permittees, the first Annual Report shall contain information gathered during the one year time period beginning with the initial effective date of coverage under this permit and shall be submitted no later than 60 days after this one year period has elapsed. Each subsequent report shall contain the previous year's information and shall be submitted no later than one year after the previous year's report was due.

3. Existing Permittees renewing coverage under this permit shall continue to submit the Annual Report no later than 60 days after the original date of effective coverage under a general storm water permit.

4. If the facility performs inspections more frequently than required by this permit, the results shall be included as additional information in the Annual Report.

Agency. The request shall be granted by issuance date of an individual permit or an alternative general permit if the reasons cited by the owner or operator are adequate to support the request.

3. When an individual NPDES permit is issued to an owner or operator otherwise subject to this permit, or the owner or operator is approved for coverage under an alternative NPDES general permit, the applicability of this permit to the individual NPDES Permittee is automatically terminated on the issuance date of the individual permit or the date of approval for coverage under the alternative general permit, whichever the case may be. When an individual NPDES permit is denied to an owner or operator otherwise subject to this permit, or the owner or operator is denied coverage under an alternative NPDES general permit, the applicability of this general permit to the individual NPDES Permittee is automatically terminated on the date of such denial, unless otherwise specified by the Agency.

4. The Permittee must submit a Notice of Termination (NOT) within 30 days after one or more of the following conditions have been met:

    a. A change in ownership or operational control at the facility;

    b. The Permittee has ceased operations at the facility, there are no discharges or no longer will be any discharges of storm water associated with industrial activity from the facility, and necessary sediment and erosion controls have been implemented; or

    c. Coverage has been obtained under an individual or alternative general permit for all discharges required to be covered under an NPDES permit.

5. NOT submittals can be made to one of the following addresses:

    a. Electronic NOTs should be submitted to:

    epa.lndannualinsp@illinois.gov

    b. If electronic submittal is unavailable the NOT should be submitted to the follow address:

    Illinois Environmental Protection Agency
    Division of Water Pollution Control
    Compliance Assurance Section #19
    1021 North Grand Avenue East
    Annual Inspection Report
    P.O. Box 19276
    Springfield, Illinois 62794-9276

6. Standard Condition 15 of Attachment H is not applicable to this General Permit.

M. DEFINITIONS

1. Coal pile runoff means the rainfall runoff from or through any coal storage pile.

2. Control Measures means any storm water control or other method (including narrative effluent limitations) used to prevent or reduce the discharge of pollutants to waters of the state.

3. Discharge point or Outfall means the location where collected and concentrated storm water flows are discharged from the facility.

4. Green Infrastructure means wet weather management approaches and technologies that utilize, enhance or mimic the natural hydrologic cycle processes of infiltration, evapotranspiration and reuse. Green infrastructure approaches currently in use include green roofs, trees and tree boxes, rain gardens, vegetated swales, pocket wetlands, infiltration planters, porous and permeable pavements, porous piping systems, dry wells, vegetated median strips, reforestation/revegetation, rain barrels and cisterns and protection and enhancement of riparian buffers and floodplains.

5. Industrial activities means any of the 10 categories of industrial activities included in the definition of "storm water discharges associated with industrial activity" as defined in 40 CFR 122.26(b)(14)(i)-(ix) and (xi).

6. Land application site means an area where wastes are applied onto or incorporated into the soil surface for treatment or disposal.

Attachment H
Standard Conditions

Definitions

Act means the Illinois Environmental Protection Act, 415 ILCS 5 as Amended.

Agency means the Illinois Environmental Protection Agency.

Board means the Illinois Pollution Control Board.

Clean Water Act (formerly referred to as the Federal Water Pollution Control Act) means Pub. L 92-500, as amended. 33 U.S.C. 1251 et seq.

NPDES (National Pollutant Discharge Elimination System) means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 402, 318 and 405 of the Clean Water Act.

USEPA means the United States Environmental Protection Agency.

Daily Discharge means the discharge of a pollutant measured during a calendar day or any 24-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the "daily discharge" is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurements, the "daily discharge" is calculated as the average measurement of the pollutant over the day.

Maximum Daily Discharge Limitation (daily maximum) means the highest allowable daily discharge.

Average Monthly Discharge Limitation (30 day average) means the highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.

Average Weekly Discharge Limitation (7 day average) means the highest allowable average of daily discharges over a calendar week, calculated as the sum of all daily discharges measured during a calendar week divided by the number of daily discharges measured during that week.

Best Management Practices (BMPs) means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the State. BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

Aliquot means a sample of specified volume used to make up a total composite sample.

Grab Sample means an individual sample of at least 100 milliliters collected at a randomly-selected time over a period not exceeding 15 minutes.

24-Hour Composite Sample means a combination of at least 8 sample aliquots of at least 100 milliliters, collected at periodic intervals during the operating hours of a facility over a 24-hour period.

8-Hour Composite Sample means a combination of at least 3 sample aliquots of at least 100 milliliters, collected at periodic intervals during the operating hours of a facility over an 8-hour period.

Flow Proportional Composite Sample means a combination of sample aliquots of at least 100 milliliters collected at periodic intervals such that either the time interval between each aliquot or the volume of each aliquot is proportional to either the stream flow at the time of sampling or the total stream flow since the collection of the previous aliquot.

(1) **Duty to comply.** The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action, permit termination, revocation and reissuance, modification, or for denial of a permit renewal application. The permittee shall comply with effluent standards or prohibitions established under Section 307(a) of the Clean Water Act for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if the permit has not yet been modified to incorporate the requirements.

(2) **Duty to reapply.** If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit. If the permittee submits a proper application as required by the Agency no later than 180 days prior to the expiration date, this permit shall continue in full force and effect until the final Agency decision on the application has been made.

(3) **Need to halt or reduce activity not a defense.** It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

(4) **Duty to mitigate.** The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

(5) **Proper operation and maintenance.** The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up, or auxiliary facilities, or similar systems only when necessary to achieve compliance with the conditions of the permit.

(6) **Permit actions.** This permit may be modified, revoked and reissued, or terminated for cause by the Agency pursuant to 40 CFR 122.62 and 40 CFR 122.63. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

(7) **Property rights.** This permit does not convey any property rights of any sort, or any exclusive privilege.

(8) **Duty to provide information.** The permittee shall furnish to the Agency within a reasonable time, any information which the Agency may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with the permit. The permittee shall also furnish to the Agency upon request, copies of records required to be kept by this permit.

schedule of this permit shall be submitted no later than 14 days following each schedule date.

(e) **Monitoring reports.** Monitoring results shall be reported at the intervals specified elsewhere in this permit.
  (1) Monitoring results must be reported on a Discharge Monitoring Report (DMR).
  (2) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR 136 or as specified in the permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR.
  (3) Calculations for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified by the Agency in the permit.

(f) **Twenty-four hour reporting.** The permittee shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24-hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and time; and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. The following shall be included as information which must be reported within 24-hours:
  (1) Any unanticipated bypass which exceeds any effluent limitation in the permit.
  (2) Any upset which exceeds any effluent limitation in the permit.
  (3) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Agency in the permit or any pollutant which may endanger health or the environment.

  The Agency may waive the written report on a case-by-case basis if the oral report has been received within 24-hours.

(g) **Other noncompliance.** The permittee shall report all instances of noncompliance not reported under paragraphs (12) (d), (e), or (f), at the time monitoring reports are submitted. The reports shall contain the information listed in paragraph (12) (f).

(h) **Other information.** Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application, or in any report to the Agency, it shall promptly submit such facts or information.

(13) **Bypass.**
  (a) Definitions.
    (1) Bypass means the intentional diversion of waste streams from any portion of a treatment facility.
    (2) Severe property damage means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.
  (b) Bypass not exceeding limitations. The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (13)(c) and (13)(d).
  (c) Notice.
    (1) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass.
    (2) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in paragraph (12)(f) (24-hour notice).
  (d) Prohibition of bypass.
    (1) Bypass is prohibited, and the Agency may take enforcement action against a permittee for bypass, unless:
      (i) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;
      (ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
      (iii) The permittee submitted notices as required under paragraph (13)(c).
    (2) The Agency may approve an anticipated bypass, after considering its adverse effects, if the Agency determines that it will meet the three conditions listed above in paragraph (13)(d)(1).

(14) **Upset.**
  (a) Definition. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.
  (b) Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of paragraph (14)(c) are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.
  (c) Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:
    (1) An upset occurred and that the permittee can identify the cause(s) of the upset;
    (2) The permitted facility was at the time being properly operated; and
    (3) The permittee submitted notice of the upset as required in paragraph (12)(f)(2) (24-hour notice).
    (4) The permittee complied with any remedial measures required under paragraph (4).
  (d) Burden of proof. In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

RECORDER

CLEAR ZONE AVIGATION EASEMENT

WHEREAS, KAWNEER COMPANY, a corporation of Delaware (hereinafter called the Grantor) is the owner in fee of that certain tract of land situated in the County of Du Page, State of Illinois, more particularly described as follows:

That part of the North half of Section Thirty-two (32) Township Forty (40) North, Range Nine (9) East of the Third Principal Meridian, commencing at the Northwest corner of Section Thirty-two (32); thence North 88 degrees 25 minutes East along the northerly line of the Northwest quarter (NW¼) of said Section; 1331.65 feet to the North and South Division line of the Northwest quarter (NW¼) of said Section; thence South no degrees 05 minutes West along said Division line (being the West line of the East half (E ½) of said Northwest quarter) 500 feet to the Southwest corner of the tract of land conveyed to the Defense Plant Corporation (Book 390 Page 81) for a place of beginning; thence continuing South no degrees 05 minutes West along said Division line 685 feet; thence North 89 degrees 57 minutes East on a line parallel with the South line of said Defense Plant Corporation tract, 1984.37 feet to the Westerly line of the right of way of Chicago Northwestern Railway; thence North 20 degrees 08 minutes West along said Westerly right of way line 729.35 feet to the Southeast corner of Defense Plant Corporation tract; thence South 89 degrees 57 minutes West along said South line of Defense Plant Corporation tract 1732.32 feet to the place of beginning, containing 29.2234 acres more or less, in Du Page County, Illinois

which tract of land is identified as clear zone area, Tract C on Plat dated February 2, 1959 attached hereto and made a part hereof; and

WHEREAS, the COUNTY OF DU PAGE (hereinafter called the Grantee), is the owner and operator of the DuPage County Airport, situate in the County of Du Page and State of Illinois, in close proximity to the above described premises; and

WHEREAS, it is deemed necessary that said above described premises, identified as Clear Zone Area, Tract C, be and remain free and clear of any structure, tree, or other object which is or would constitute an obstruction or hazard to the flight of aircraft in the landing and taking off at DuPage County Airport, which said Clear Zone approach area is as above described;

NOW THEREFORE,

In consideration of the sum of One Thousand and no/100 ($1000.00) Dollars, paid by the Grantee to the Grantor, and of other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Grantor for itself, its successors and assigns, does hereby covenant and agree with the Grantee, that, for the benefit of the public in its use of the Airport, it will not hereafter erect or permit the erection or growth of any structure, tree or other object within said Clear Zone approach area, (Tract G) above described which is solely a Clear Zone area of the east and west runway (which area is identified on the said Plat attached hereto) to a height above the Clear Zone approach surface for that approach area (as also identified on said plat), said Clear Zone approach surface being an inclined plane with a slope of 50:1 (one foot of elevation for each fifty (50) feet of horizontal distance) located directly above the Clear Zone approach area, (Tract G), which inclined plane has an elevation of 756.5 feet (mean sea level) at its inner and lower edge along line A B as shown on the plat attached hereto, and an elevation of 820 feet (mean sea level) at its outer and upper edge along line C D as shown on said plat: and

The Grantor, for itself, its successor and assigns, for the said consideration, does hereby grant and convey to the Grantee, its agents, servants and employees, a continuing right and easement, at Grantee's sole expense, to take any action necessary to prevent the erection or growth of any structure, tree, or other object into the air space above that part of said approach surface which is directly over said approach area, Tract G, excepting the presently existing structures as shown on the plat attached hereto, and, at Grantee's sole expense, to remove from such air space, or mark and light as obstructions to air navigation, any and all structures, trees and other objects that may at any time project or extend above said approach surface; and, if at any future time or times, additional avigation aid lights, markers or other devices become necessary, same shall be installed and maintained at Grantee's sole expense, and also, if at any future time or times, it becomes necessary to alter any portion of the presently existing structures, the same shall be done to meet the specifications and requirements of the Grantor, the entire expense thereof to be borne by the Grantee herein, together with the right of ingress to, egress from and passage over the land of the Grantors within the said Clear Zone approach area for all of the above described purposes;

The Grantee further covenants and agrees with the Grantor that the Clear Zone area, Tract G, on the plat dated February 2, 1959 attached hereto will be included and covered by the same comprehensive insurance as is carried and kept in force on the basic airport field lying West of and adjoining the aforesaid Clear Zone area.

TO HAVE AND TO HOLD said easement and all rights appertaining thereto unto the Grantee its successors and assigns, until said Du Page County Airport shall be abandoned and shall cease to be used for public airport purposes.

It is understood and agreed that these covenants and agreements shall be binding upon the successors and assigns of the Grantor, that these covenants shall run with the land, and that, for the purposes of this instrument, that the above noted Clear Zone area, Tract G, on the Plat dated February 2, 1959 attached hereto, shall be the servient tenement and the said DuPage County Airport shall be the dominant tenement.

IN WITNESS WHEREOF, KAWNEER COMPANY, a corporation of Delaware has caused these presents to be signed by its President and attested by its Secretary and its corporate seal to be affixed hereto this 18th day of February 1959.

DUPAGE AIRPORT AGREEMENT

AGREEMENT BETWEEN THE DUPAGE AIRPORT AUTHORITY, OSCAR (IL) LLC AND LAKESHORE RECYCLING SYSTEMS, LLC

This AGREEMENT ("Agreement") is made as of the 19th day of January, 2022, between the DUPAGE AIRPORT AUTHORITY (“DAA”), OSCAR (IL) LLC (“OSCAR”), and LAKESHORE RECYCLING SYSTEMS, LLC ("LRS”).

RECITALS

WHEREAS, LRS currently operates a solid waste management facility, which receives, sorts/ separates, recycles and transfers construction or demolition debris (hereinafter referred to as the “C&D Recycling Facility”) on the premises owned by OSCAR and leased to LRS located at 1655 Powis Road, West Chicago, Illinois and consisting of approximately 27.81 acres (hereinafter referred to as the “Subject Property”); and

WHEREAS, LRS plans to file with the City of West Chicago a request for site location approval for the construction and operation of a new transfer facility with sufficient capacity to receive and transfer to landfills an annual average of 950 tons per day of non-hazardous Municipal Waste and Hydro Excavation Waste with ancillary truck parking and storage and maintenance facility combined (hereinafter referred to as the “Transfer Facility”); and

WHEREAS, LRS desires to construct the Transfer Facility on the Subject Property and operate the Transfer Facility in conjunction with the C&D Recycling Facility; and

WHEREAS, "Municipal Waste" whether or not capitalized and used in any of its grammatical forms, means "municipal solid waste", as defined by Section 5/3.290 of the Act (415 ILCS 5/3.290), except that such waste does not include construction or demolition debris, recyclables, unacceptable waste, or landscape waste; and

WHEREAS, “Hydro Excavation Wastes” means solid/liquid waste such as hydro/vacuum excavation muds, underground excavation material, drilling muds, and other similar materials; and

WHEREAS, in order to obtain site location approval from the City of West Chicago, LRS must prove that the proposed facility is designed, located and proposed to be operated so that the public health, safety, and welfare will be protected; and

WHEREAS, the DAA operates the DuPage Airport at 2700 International Drive, West Chicago, Illinois, which airport is located on the west side of Powis Road, generally adjacent to the Subject Property; and

WHEREAS, the DAA currently has an avigation easement over the Subject Property; and

WHEREAS, the DAA seeks to obtain certification of Runway 28 at the DuPage Airport for Instrument Flight Rules ("IFR") landings; and

WHEREAS, the existing transfer building on the Subject Property requires modification in the form of a reduction in height in order to remain below all critical elevations for IFR approaches to Runway 28.

WHEREAS, the DAA contracted with Geosyntec Consultants to evaluate whether the proposed design and operations of the Transfer Facility, including the proposed ventilation and filtration system, meet the guidance set forth in FAA Advisory Circular 15/5200-33C and FAA Advisory Circular 150/5300-13A (FAA Advisories). Subject to the provisions below, Geosyntec's evaluation concluded that the proposed MSW transfer station meets the definition of an enclosed transfer station.

NOW THEREFORE, in consideration of the mutual promises herein and for other good and valuable consideration the parties hereto agree as follows:

1. The recitals hereinabove are fully incorporated into this Agreement.

2. Upon receiving final, non-appealable siting approval pursuant to 415 ILCS 5/39.2 to construct and operate a Transfer Facility on the Subject Property as set forth hereinabove, and upon receiving an Illinois Environmental Protection Agency (IEPA) development permit, OSCAR shall execute and grant to DAA a new avigation easement substantially in the form attached hereto and made a part hereof as Exhibit A ("New Avigation Easement").

3. Upon receiving final, non-appealable siting approval pursuant to 415 ILCS 5/39.2 to construct and operate a Transfer Facility on the Subject Property as set forth hereinabove, and upon receiving an IEPA development permit, LRS shall reduce the roof height of its existing transfer building so as to stay below all critical elevations in the New Avigation Easement.

4. Upon receiving final, non-appealable siting approval pursuant to 415 ILCS 5/39.2 to construct and operate a Transfer Facility on the Subject Property as set forth hereinabove, and upon receiving an IEPA development permit, LRS and OSCAR shall not allow any penetrations whatsoever to the New Avigation Easement. Furthermore, this New Avigation Easement cannot be modified or withdrawn without the approval of the DAA and shall run with the land. Simultaneous with the execution of the New Avigation Easement, the DAA shall or shall cause the existing avigation easement to be vacated.

5. LRS shall pay to the DAA a fee of $0.15 on a quarterly basis within forty-five (45) days of the end of each quarter for each ton of Municipal Waste and/or Hydro Excavation Waste received at the Transfer Facility (whether received in the same or separate

vehicles) from the first date Municipal Waste and/or Hydro Excavation Waste is received through the closure of the Transfer Facility.

6. Upon receiving final, non-appealable, siting approval pursuant to 415 ILCS 5/39.2 to construct and operate a Transfer Facility on the Subject Property as set forth hereinabove, and upon receiving an IEPA development permit, LRS shall comply with all design and operational features described in its letter and corresponding attachments to the DAA Attorney, Phillip A. Luetkehans, dated September 8, 2021. A copy of the September 8, 2021 letter is attached hereto and made a part hereof as Exhibit B. Additionally, LRS shall comply with the following terms and conditions through the closure of the Transfer Facility:

    a. Wiring, riprap, and gaming cameras shall be provided for the west and east pond as shown on Exhibit C;
    b. The tarping policy provided in Exhibit D shall be implemented;
    c. Attachment 4, Section 2.4.11, to Exhibit B shall require a filtration or treatment system designed to address hydrogen sulfide or other reduced sulfur compounds be added to the odor control system if said odors can be detected off-site;
    d. Riprap shall be added to the east pond as part of the wildlife hazard mitigation set forth in Attachment 4, Section 2.4.18, to Exhibit B;
    e. Quarterly wildlife surveys shall be required for the entire facility including ponds, storage areas, and inactive equipment in addition to the surveys set forth in Attachment 4, Section 2.4.18, to Exhibit B;
    f. LRS shall be required to keep records of the quarterly wildlife surveys and wildlife camera footage shall be retained for a period of no less than three (3) years and submitted to the DAA upon request by the DAA;
    g. LRS shall develop a communications plan along with the DAA to alert the DAA staff of the presence of any wildlife hazards, if observed by LRS on-site and to communicate the results of the quarterly wildlife surveys; and
    h. If in the DAA's sole discretion, LRS is not properly mitigating a wildlife hazard existing on the property, LRS shall allow the DAA or its authorized representatives access to the LRS facility for wildlife hazard management/harassment upon request of the DAA, which cost shall be bore by LRS.

7. As consideration for the above, the DAA, based upon its current knowledge of the proposed Transfer Facility on the Subject Property, agrees that the proposed Transfer Facility will not pose a threat to the safe operation of the DuPage Airport. Accordingly, the DAA currently has no objection and will not object to the siting approval of the Transfer Facility on the Subject Property. If for some reason, the DAA becomes aware of any concerns created by the construction or operation of the Transfer Facility on the Subject Property, it will immediately notify LRS of said concern and endeavor to work with LRS to find a solution to its concern. If the DAA and LRS are unable to resolve the

DAA's concern, the DAA shall have the right to object to the siting, construction and operation of the Transfer Facility on the Subject Property. If the DAA makes a formal objection to the siting, construction or operation of the Transfer Facility on the Subject Property prior to LRS receiving final, non-appealable, siting approval pursuant to 415 ILCS 5/39.2, then LRS will be under no obligation to comply with paragraphs 2, 3, 4, 5 and 6 of this Agreement. If the DAA becomes aware of any concerns created by the construction or operation of the Transfer Facility on the Subject Property after issuance of the final non-appealable siting approval pursuant to 415 ILCS 5/39.2 and the DAA and LRS are unable to resolve the DAA's concerns, then the DAA shall have the right to exercise any rights available to it under the federal and Illinois law. In the event the DAA exercises any rights it may have, LRS shall not be relieved of its obligations to comply with any provision of this Agreement.

8. The DAA is not currently aware of any violations of or contradictions with the guidance set forth in FAA Advisory Circular 15/5200-33C and FAA Advisory Circular 150/5300-13A by the proposed construction and operation of the Transfer Facility.

9. This Agreement terminates if LRS, for any reason, does not receive final non-appealable siting approval and an IEPA development permit for the Transfer Facility, or upon closure of the Transfer Facility.

10. This Agreement shall be binding upon and inure to the benefit of any successor in interest to LRS or subsequent owner of the facility. LRS cannot transfer control of this facility, in any manner, without the transferee agreeing, in writing, to assume the obligations of LRS under this Agreement.

LEGAL DESCRIPTION:

PARENT PARCEL PER DEED DOCUMENT R2018-116700 RECORDED DECEMBER 20, 2018.
THAT PART OF THE NORTH HALF OF SECTION 32, TOWNSHIP 40 NORTH, RANGE 9 EAST OF THE THIRD PRINCIPAL MERIDIAN, DUPAGE COUNTY, ILLINOIS. DESCRIBED AS FOLLOWS, TO WIT: COMMENCING AT THE NORTHWEST CORNER OF SAID SECTION 32; THENCE NORTH 88 DEGREES 56 MINUTES 37 SECONDS EAST ALONG THE NORTH LINE OF SAID SECTION 32, A DISTANCE OF 1331.85 FEET TO THE NORTH AND SOUTH DIVISION LINE OF THE NORTHWEST QUARTER OF SAID SECTION 32; THENCE SOUTH 00 DEGREES 36 MINUTES 17 SECONDS WEST ALONG SAID DIVIDING LINE, A DISTANCE OF 500 FEET TO THE SOUTHWEST CORNER OF A TRACT OF LAND CONVEYED TO THE DEFENSE PLANT CORPORATION BY DEED RECORDED IN BOOK 390 OF DEEDS, ON PAGE 81, IN THE OFFICE OF THE DUPAGE COUNTY RECORDER; THENCE CONTINUING SOUTH 00 DEGREES 36 MINUTES 17 SECONDS WEST ALONG SAID DIVIDING LINE, A DISTANCE OF 685.0 FEET TO THE SOUTHWEST CORNER OF THE TRACT OF LAND DESCRIBED IN A SPECIAL WARRANTY DEED RECORDED FEBRUARY 6, 2001 AS DOCUMENT NO. R2001-020756; THENCE NORTH 89 DEGREES 32 MINUTES 15 SECONDS EAST ALONG THE SOUTH LINE OF SAID TRACT, A DISTANCE OF 103.80 FEET FOR THE POINT OF BEGINNING; THENCE CONTINUING NORTH 89 DEGREES 32 MINUTES 15 SECONDS EAST, ALONG SAID SOUTH LINE (SAID LINE BEING PARALLEL WITH THE SOUTH LINE OF SAID DEFENSE PLANT CORPORATION TRACT), A DISTANCE OF 1880.12 FEET TO THE WESTERLY RIGHT OF WAY LINE FOR THE CHICAGO AND NORTHWESTERN RAILWAY; THENCE NORTH 20 DEGREES 30 MINUTES 46 SECONDS WEST, ALONG SAID WESTERLY RIGHT OF WAY LINE, A DISTANCE OF 729.01 FEET TO THE SOUTHEAST CORNER OF SAID DEFENSE PLANT CORPORATION TRACT; THENCE SOUTH 89 DEGREES 32 MINUTES 15 SECONDS WEST, ALONG SAID SOUTH LINE, A DISTANCE OF 1650.66 FEET TO A POINT ON THE EASTERLY RIGHT OF WAY LINE OF POWIS ROAD PER DOCUMENT NO. R2003-145375, SAID POINT ALSO BEING 81.96 FEET EAST OF THE SOUTHWEST CORNER OF SAID DEFENSE PLANT CORPORATION; THENCE SOUTH 02 DEGREES 29 MINUTES 05 SECONDS WEST, ALONG SAID EASTERLY RIGHT OF WAY LINE, A DISTANCE OF 536.49 FEET TO A POINT OF CURVATURE; THENCE SOUTHWESTERLY, ALONG SAID EASTERLY RIGHT OF WAY LINE BEING THE ARC OF A CURVE CONCAVE WESTERLY, HAVING A RADIUS OF 739.00 FEET AND WHOSE CHORD HAS A BEARING OF SOUTH 03 DEGREES 47 MINUTES 33 SECONDS WEST, AN ARC DISTANCE OF 149.66 FEET TO THE POINT OF BEGINNING, IN DUPAGE COUNTY, ILLINOIS.

SAID PARCEL CONTAINS 1,206,775 SQUARE FEET OR 27.703 ACRES MORE OR LESS
P.I.N. 01-31-200-001 AND 31-32-101-004

EXHIBIT B

SUBMITTAL TO DAA, DATED SEPTEMBER 8, 2021

Civil & Environmental Consultants, Inc.

September 8, 2021

Mr. Phillip A. Luetkehans
Schirott, Luetkehans & Garner, LLC
105 East Irving Park Road
Itasca, Illinois 60143

RE: Request to DuPage Airport Authority
Lakeshore Recycling Systems, LLC
West DuPage Recycling and Transfer Station
CEC Project 163-899

Dear Mr. Luetkehans:

Per our recent discussions, this letter and attachments are submitted on behalf of Lakeshore Recycling Systems, LLC (LRS) and OSCAR (IL) LLC (OSCAR) for consideration by the Board of Commissioners for the DuPage Airport Authority (Authority) regarding the West DuPage Recycling & Transfer Station located at 1655 Powis Road in West Chicago, DuPage County, Illinois (Site). LRS proposes to perform improvements and begin accepting municipal solid waste (MSW) at the Site through a local siting and Illinois Environmental Protection Agency (IEPA) permitting process.

An agreement was established between the Authority, OSCAR, and LRS, dated March 18, 2020 (Agreement). The Agreement referenced information provided to the Authority by LRS on February 20, 2020, and included certain conditions that LRS and OSCAR would implement upon permitting approval so the Site would be consistent with the guidance in Federal Aviation Administration (FAA) Advisory Circular 15/5200-33B (Advisory Circular). Per your email, dated August 5, 2021, we understand that the Authority desires to investigate further the issues surrounding compliance with the Advisory Circular and bring it to the Board for future discussion.

LRS and OSCAR are committed to working with the Authority to address any concerns the Authority may have regarding the existing facility or the proposed site improvements. Since the information was provided to the Authority in February 2020, clarifications have been made to the facility design and operations to further ensure consistency with the Advisory Circular. To facilitate the Authority's discussions, we are providing information regarding the following:

- Height of existing and proposed buildings;
- Design features and operational procedures, including wildlife hazard mitigation measures; and
- Site activities within runway protection zones.

Each is discussed separately below.

1.0 HEIGHT OF EXISTING AND PROPOSED BUILDINGS

The height of all buildings and structures at the West DuPage Recycling & Transfer Station are subject to a clear zone avigation easement (Avigation Easement). The Avigation Easement is provided in Attachment 1 and indicates that a specified clear zone area be, and remain free and clear of any structure, tree or other object which is or would constitute an obstruction or hazard to the flight of aircraft landing or taking off from the DuPage Airport. The clear zone area varies in elevation across the Site, ranging from approximately elevation 785 feet mean sea level at the western property limit (closest to the DuPage Airport), to approximately elevation 825 feet mean sea level at the eastern property limit (farthest from the DuPage Airport).

We understand that lower critical elevations must be met to allow instrument flight rule certification for the DuPage Airport, and that a portion of an existing building at the Site and other objects (e.g., light poles) exceed these updated critical elevations. The Agreement indicates that, upon receiving final, non-appealable siting approval pursuant to 415 ILCS 5/39.2 to construct and operate the West DuPage Recycling & Transfer Station, and upon receiving an IEPA development permit, LRS shall:

- Execute and grant to DuPage Airport Authority a new avigation easement;
- Reduce the roof height of its existing transfer building so as to stay below all critical elevations in the new avigation easement; and
- Not allow any penetrations whatsoever to the new avigation easement.

The updated plat of survey agreed to be incorporated into the Agreement is provided in Attachment 2. Subsequent to the establishment of the Agreement, the Authority's engineers determined that other objects at the Site (e.g., light poles) appear to be above the updated critical elevations. LRS and OSCAR have committed to lowering the existing building and other identified obstructions to below the updated critical elevations upon receiving permitting approval. At the request of the Authority, LRS has subsequently agreed to clarify the Agreement to state that "LRS shall remove any other penetrations to the New Avigation Easement and will not allow any future penetrations whatsoever to the New Avigation Easement".

The height of the proposed buildings for the West DuPage Recycling & Transfer Station will be below the updated critical elevations. Prior to development, the new building information, including elevations, will be submitted to and approved by the FAA Division of Aeronautics through the notice of proposed construction or alteration (Form FAA 7460-1) either electronically via website or manually with the FAA.

2.0 DESIGN FEATURES AND OPERATIONAL PROCEDURES

The Advisory Circular was updated on February 21, 2020 to FAA Advisory Circular 15/5200-33C - Hazardous Wildlife Attractants On or Near Airports (Revised Advisory Circular). Both the Advisory Circular and Revised Advisory Circular provide guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports, and indicate the following regarding MSW transfer stations:

- Enclosed waste-handling facilities that receive MSW behind closed doors process it via compaction, incineration, or similar manner, and remove all residue by enclosed vehicles, generally are compatible with safe airport operations, provided they are not located on airport property or within the runway protection zone (RPZ).
- These facilities should not handle or store putrescible waste outside, or in, a partially enclosed structure accessible to hazardous wildlife.
- MSW transfer facilities that are open on one or more sides, that store uncovered quantities of municipal solid waste outside (even if only for a short time), that use semi-trailers that leak or have trash clinging to the outside, or that do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully-enclosed trash transfer stations.

The proposed West DuPage Recycling & Transfer Station will include a building for the acceptance and transfer of MSW and single-stream recyclables (SSR). The MSW and SSR transfer building will:

- Not have any open sides;
- Be equipped with fast opening/closing doors at all waste vehicle ingress/egress locations, which will open and close as vehicles enter and exit the MSW and SSR transfer building;
- Include a building extension at the loading ramp exit to allow autotarping and removal of any waste clinging to the outside of the transfer trailer prior to exiting the building; and
- Be equipped with a ventilation and filtration system designed to provide a negative air pressure condition and effectively eliminate any odors from the exhaust.

Attachment 3 contains the current design drawings for the MSW and SSR transfer building. Attachment 4 contains the proposed operating plan for the Site. The operating plan includes the following to mitigate potential wildlife hazards:

- Train Staff: The Site will create their own wildlife hazard management plan, which will state how trained staff will monitor and deter certain wildlife species. The wildlife hazard management plan will assign titles and responsibilities to individuals whom will be responsible for wildlife control activities. Management will train assigned facility employees on the role they will play to reduce wildlife hazards (e.g. use of pyrotechnic harassments). If any questions about the formation, implementation, or general questions about the contents of the management plan ever occur, a qualified airport wildlife biologist will be consulted.
- Install Anti-Perching Devices: Anti-perching devices will be installed on building edges of the MSW and SSR transfer building.
- Perform Routine Wildlife Surveys: The Site will perform quarterly wildlife surveys to ensure that the wildlife mitigation techniques are working as intended. The inspections will include the MSW and SSR transfer building, and any observed small gaps that may allow birds to enter the building will be sealed.

- Use of Deterrents in Misters: Misters will be installed in the MSW and SSR transfer building. A deterrent (e.g., methyl anthranilate, which is a grape-flavored food grade additive that acts as an irritant to birds when applied to the air) can be used in the misters, as needed, to prevent birds from nesting and/or entering the building.
- Install Netting Along Roof Structures: Netting will be installed along the bottom of roof structures, as needed, to prevent birds from accessing flat areas (where birds like to roost and nest).
- Focus Ventilation: Ductwork will be installed, as needed, to provide focused ventilation where odors are anticipated be more prevalent (e.g., MSW staging and handling areas).
- Extend Riprap Around West Pond: The riprap that is currently surrounding the west pond is preventing birds, such as waterfowl, from walking into or out of the pond. This feature will be extended further into the grass, widening the buffer between the water and grass.
- Monitor Wildlife with Game Cameras: Wildlife at the ponds will be monitored with game cameras, which will capture wildlife utilizing the ponds when employees are not present. Checking the cameras periodically will periodically viewed to provide information regarding the time and type of wildlife using the ponds. Trained staff can then mitigate the hazards as needed.
- Vary Harassment: To keep the birds from becoming accustomed to harassment tactics, the Site will designate an employee or employees to periodically patrol the west and east ponds and harass any birds observed.
- Maintain Grass Height: The grass around the east pond will be maintained at a height (approximately 12 inches) that allows easy inspection of the pond so that any wildlife may be harassed to leave the area. The shortened grass height will also deter many species from utilizing it, such as Canada geese.
- Install Grid-Wire System: A grid-wire system will be installed on the east and west ponds to keep most waterfowl and wading birds from utilizing the ponds. To keep larger birds from using the water, a checkerboard pattern is planned. The grid-wire system involves running cables from one side to another in one direction (north to south) and then running a second set of wires perpendicular.

The design drawings and operating plan demonstrate that the MSW transfer station meets all of the criteria in the Revised Advisory Circular so that it will be compatible with safe airport operations.

3.0 SITE ACTIVITIES WITHIN RUNWAY PROTECTION ZONES

As noted above, the Updated Advisory Circular indicates that waste handling facilities should not be located within an RPZ. FAA Advisory Circular 150/5300-13A - Airport Design, Section 310, indicates the following regarding the RPZ:

- The RPZ's function is to enhance the protection of people and property on the ground through the airport ownership over RPZs;
- The RPZ is trapezoidal in shape and is centered about the extended runway centerline;

- The RPZ has two components with varying widths (central portion and controlled activity) and the approach RPZ may be different from the departure RPZ; and
- The RPZ generally extends 1,000 feet from the end of the runway.

The RPZ for the DuPage Airport in the area of the Site (as provided by the Authority engineers) is shown in Attachment 5. As shown, the western portion of the Site is located within the RPZ. This portion of the facility is only used for ingress/egress, landscaping, vehicle parking, and stormwater controls. All waste handling and management facilities, occupied structures, and storage of recyclable materials are located farther to the east and outside the RPZ.

4.0 CLOSING

We trust that the attached information addresses any concerns the Authority may have regarding the proposed site improvements. Please let us know of any questions you may have or additional information you may need.

Sincerely,

CIVIL & ENVIRONMENTAL CONSULTANTS, INC.

Kenneth R. Kruszynski, P. E.

CLEAR ZONE AVIGATION EASEMENT

WHEREAS, KAWNEER COMPANY, a corporation of Delaware (hereinafter called the Grantor) is the owner in fee of that certain tract of land situated in the County of Du Page, State of Illinois, more particularly described as follows:

That part of the North half of Section Thirty-two (32) Township Forty (40) North, Range Nine (9) East of the Third Principal Meridian, commencing at the Northwest corner of Section Thirty-two (32); thence North 88 degrees 25 minutes East along the northerly line of the Northwest quarter (NW¼) of said Section; 1331.65 feet to the North and South Division line of the Northwest quarter (NW¼) of said Section; thence South no degrees 05 minutes West along said Division line (being the West line of the East half (E ½) of said Northwest quarter) 500 feet to the Southwest corner of the tract of land conveyed to the Defense Plant Corporation (Book 390 Page 81) for a place of beginning; thence continuing South no degrees 05 minutes West along said Division line 685 feet; thence North 89 degrees 57 minutes East on a line parallel with the South line of said Defense Plant Corporation tract, 1984.37 feet to the Westerly line of the right of way of Chicago Northwestern Railway; thence North 20 degrees 08 minutes West along said Westerly right of way line 729.35 feet to the Southeast corner of Defense Plant Corporation tract; thence South 89 degrees 57 minutes West along said South line of Defense Plant Corporation tract 1732.32 feet to the place of beginning, containing 29.2234 acres more or less, in Du Page County, Illinois

which tract of land is identified as clear zone area, Tract C on Plat dated February 2, 1959 attached hereto and made a part hereof; and

WHEREAS, the COUNTY OF DU PAGE (hereinafter called the Grantee), is the owner and operator of the DuPage County Airport, situate in the County of Du Page and State of Illinois, in close proximity to the above described premises; and

WHEREAS, it is deemed necessary that said above described premises, identified as Clear Zone Area, Tract C, be and remain free and clear of any structure, tree, or other object which is or would constitute an obstruction or hazard to the flight of aircraft in the landing and taking off at DuPage County Airport, which said Clear Zone approach area is as above described;

NOW THEREFORE,

In consideration of the sum of One Thousand and no/100 ($1000.00) Dollars, paid by the Grantee to the Grantor, and of other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Grantor for itself, its successors and assigns, does hereby covenant and agree with the Grantee, that, for the benefit of the public in its use of the Airport, it will not hereafter erect or permit the erection or growth of any structure, tree or other object within said Clear Zone approach area, (Tract G) above described which is solely a Clear Zone area of the east and west runway (which area is identified on the said Plat attached hereto) to a height above the Clear Zone approach surface for that approach area (as also identified on said plat), said Clear Zone approach surface being an inclined plane with a slope of 50:1 (one foot of elevation for each fifty (50) feet of horizontal distance) located directly above the Clear Zone approach area, (Tract G), which inclined plane has an elevation of 756.5 feet (mean sea level) at its inner and lower edge along line A B as shown on the plat attached hereto, and an elevation of 820 feet (mean sea level) at its outer and upper edge along line C D as shown on said plat: and

The Grantor, for itself, its successor and assigns, for the said consideration, does hereby grant and convey to the Grantee, its agents, servants and employees, a continuing right and easement, at Grantee's sole expense, to take any action necessary to prevent the erection or growth of any structure, tree, or other object into the air space above that part of said approach surface which is directly over said approach area, Tract G, excepting the presently existing structures as shown on the plat attached hereto, and, at Grantee's sole expense, to remove from such air space, or mark and light as obstructions to air navigation, any and all structures, trees and other objects that may at any time project or extend above said approach surface; and, if at any future time or times, additional avigation aid lights, markers or other devices become necessary, same shall be installed and maintained at Grantee's sole expense, and also, if at any future time or times, it becomes necessary to alter any portion of the presently existing structures, the same shall be done to meet the specifications and requirements of the Grantor, the entire expense thereof to be borne by the Grantee herein, together with the right of ingress to, egress from and passage over the land of the Grantors within the said Clear Zone approach area for all of the above described purposes;

The Grantee further covenants and agrees with the Grantor that the Clear Zone area, Tract G, on the plat dated February 2, 1959 attached hereto will be included and covered by the same comprehensive insurance as is carried and kept in force on the basic airport field lying West of and adjoining the aforesaid Clear Zone area.

TO HAVE AND TO HOLD said easement and all rights appertaining thereto unto the Grantee its successors and assigns, until said Du Page County Airport shall be abandoned and shall cease to be used for public airport purposes.

It is understood and agreed that these covenants and agreements shall be binding upon the successors and assigns of the Grantor, that these covenants shall run with the land, and that, for the purposes of this instrument, that the above noted Clear Zone area, Tract G, on the Plat dated February 2, 1959 attached hereto, shall be the servient tenement and the said DuPage County Airport shall be the dominant tenement.

IN WITNESS WHEREOF, KAWNEER COMPANY, a corporation of Delaware has caused these presents to be signed by its President and attested by its Secretary and its corporate seal to be affixed hereto this 18th day of February 1959.

LEGAL DESCRIPTION:

PARENT PARCEL PER DEED DOCUMENT R2018-116700 RECORDED DECEMBER 20, 2018.
THAT PART OF THE NORTH HALF OF SECTION 32, TOWNSHIP 40 NORTH, RANGE 9 EAST OF THE THIRD PRINCIPAL MERIDIAN, DUPAGE COUNTY, ILLINOIS. DESCRIBED AS FOLLOWS, TO WIT: COMMENCING AT THE NORTHWEST CORNER OF SAID SECTION 32; THENCE NORTH 88 DEGREES 56 MINUTES 37 SECONDS EAST ALONG THE NORTH LINE OF SAID SECTION 32, A DISTANCE OF 1331.85 FEET TO THE NORTH AND SOUTH DIVISION LINE OF THE NORTHWEST QUARTER OF SAID SECTION 32; THENCE SOUTH 00 DEGREES 36 MINUTES 17 SECONDS WEST ALONG SAID DIVIDING LINE, A DISTANCE OF 500 FEET TO THE SOUTHWEST CORNER OF A TRACT OF LAND CONVEYED TO THE DEFENSE PLANT CORPORATION BY DEED RECORDED IN BOOK 390 OF DEEDS, ON PAGE 81, IN THE OFFICE OF THE DUPAGE COUNTY RECORDER; THENCE CONTINUING SOUTH 00 DEGREES 36 MINUTES 17 SECONDS WEST ALONG SAID DIVIDING LINE, A DISTANCE OF 685.0 FEET TO THE SOUTHWEST CORNER OF THE TRACT OF LAND DESCRIBED IN A SPECIAL WARRANTY DEED RECORDED FEBRUARY 6, 2001 AS DOCUMENT NO. R2001-020756; THENCE NORTH 89 DEGREES 32 MINUTES 15 SECONDS EAST ALONG THE SOUTH LINE OF SAID TRACT, A DISTANCE OF 103.80 FEET FOR THE POINT OF BEGINNING; THENCE CONTINUING NORTH 89 DEGREES 32 MINUTES 15 SECONDS EAST, ALONG SAID SOUTH LINE (SAID LINE BEING PARALLEL WITH THE SOUTH LINE OF SAID DEFENSE PLANT CORPORATION TRACT), A DISTANCE OF 1880.12 FEET TO THE WESTERLY RIGHT OF WAY LINE FOR THE CHICAGO AND NORTHWESTERN RAILWAY; THENCE NORTH 20 DEGREES 30 MINUTES 46 SECONDS WEST, ALONG SAID WESTERLY RIGHT OF WAY LINE, A DISTANCE OF 729.01 FEET TO THE SOUTHEAST CORNER OF SAID DEFENSE PLANT CORPORATION TRACT; THENCE SOUTH 89 DEGREES 32 MINUTES 15 SECONDS WEST, ALONG SAID SOUTH LINE, A DISTANCE OF 1650.66 FEET TO A POINT ON THE EASTERLY RIGHT OF WAY LINE OF POWIS ROAD PER DOCUMENT NO. R2003-145375, SAID POINT ALSO BEING 81.96 FEET EAST OF THE SOUTHWEST CORNER OF SAID DEFENSE PLANT CORPORATION; THENCE SOUTH 02 DEGREES 29 MINUTES 05 SECONDS WEST, ALONG SAID EASTERLY RIGHT OF WAY LINE, A DISTANCE OF 536.49 FEET TO A POINT OF CURVATURE; THENCE SOUTHWESTERLY, ALONG SAID EASTERLY RIGHT OF WAY LINE BEING THE ARC OF A CURVE CONCAVE WESTERLY, HAVING A RADIUS OF 739.00 FEET AND WHOSE CHORD HAS A BEARING OF SOUTH 03 DEGREES 47 MINUTES 33 SECONDS WEST, AN ARC DISTANCE OF 149.66 FEET TO THE POINT OF BEGINNING, IN DUPAGE COUNTY, ILLINOIS.

SAID PARCEL CONTAINS 1,206,775 SQUARE FEET OR 27.703 ACRES MORE OR LESS

754.00	4.97	4.83	19.11	0.008	--	1.81	*1.89 cfs at 754.16 (tailwater conditions)
755.00	5.25	5.11	24.22	0.008	--	--	*see note 3
755.10	5.30	5.65	24.76	0.008	--	--	*see note 3

*2.23 cfs at 752.47 elevation (no tailwater condition)

NOTES:
1. Acre-feet of storage per contour interval approximated by multiplying the average contour acreage between the interval times contour depth.
2. Tributary area to East Pond is 22.47 acres, therefore, allowable release shall not exceed 2.247 cfs.
3. 100-year high water level is dictated by tailwater condition model and is 754.16. There is no release above 754.16 for the 100-year tailwater model condition

REFERENCE:
1. SURVEY IS BASED UPON FIELD OBSERVATIONS MADE BETWEEN 10/08/2018 AND 01/12/2019, BY CIVIL & ENVIRONMENTAL CONSULTANTS, INC.
2. THE BEARINGS SHOWN HEREON ARE BASED UPON ILLINOIS STATE PLANE EAST ZONE. VERTICAL DATUM OF SITE BASED UPON OBSERVATION OF DUPAGE COUNTY BENCHMARK DK3273 AND DK 3275 (NAVD 88 DATUM).
3. UNDERGROUND UTILITY INFORMATION SHOWN HEREON IS BASED UPON FIELD OBSERVATIONS VERBAL INFORMATION PROVIDED BY SITE PERSONNEL, AND AS-BUILT DRAWING BY TEBRUGGE ENGINEERING DATED JULY 7, 2016. NOT ALL STORM STRUCTURES WERE ABLE TO BE VISUALLY INSPECTED DUE TO WATER/DEBRIS IN STRUCTURES.

NOTES
1. PROPOSED RIMS AND INVERTS FOR EXISTING STORM STRUCTURES THAT WERE UNABLE TO BE SURVEYED SHALL BE CONFIRMED DJRING CONSTRUCTION OR REPLACED, IF NEEDED.

ATTACHMENT 4

OPERATING PLAN

2.4 OPERATIONS PLAN

This section describes the daily operating procedures at the proposed transfer station facility. The operations plan details waste acceptance and handling procedures, nuisance control procedures, staffing and equipment requirements, cleaning procedures and closure plan for the proposed transfer station. Per the Host Agreement Community Benefit Agreement between the City of West Chicago, DuPage County, Illinois, and Lakeshore Recycling Systems, LLC for a Solid Waste Transfer Facility (Host Agreement), West DuPage RTS shall conduct all operations in a manner that is protective of the public health, safety, welfare, groundwater resources and the environment. West DuPage RTS shall comply with all city ordinances and all applicable laws, ordinances, rules, and regulations, including but not limited to Illinois Pollution Control Board regulations and the city code.

2.4.1 DAYS AND HOURS OF OPERATION

Consistent with the Host Agreement, West DuPage RTF anticipates operating hours for the MSW Transfer Station of 4:00 a.m. to 12:00 a.m. on weekdays and 4:00 a.m. to 12:00 p.m. on Saturdays, with no operation on Sundays or the six major federal holidays (New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day), provided that on the Saturday following any federal holiday regular business hours may be extended by the company to 12:00 a.m. The regular business hours for accepting municipal and hydro excavation waste may be extended upon the prior approval of the city in writing (definition of regular business hours in Host Agreement). C&D will continue to be accepted Monday through Saturday, twenty-four hours per day, consistent with the current operations.

2.4.2 FACILITY STAFFING AND TRAINING

LRS currently employs over 125 persons at the facility including office personnel, mechanics, drivers, operators, facility manager, and laborers. The proposed transfer station will be staffed with the necessary number of employees to safely and efficiently operate the facility. A facility manager and operators will primarily manage and perform the operations at the MSW transfer and solidification buildings. A brief description of their primary duties and training requirements is provided below. The exact number and duties of personnel managing and performing the operations at the MSW transfer and solidification buildings may vary over time.

2.4.2.1 Facility Manager

The facility manager is responsible for the supervision of all activities at the site, including safety and emergency response coordination (emergency coordinator), inspection of all operational and

safety equipment, on-the-job training for personnel, site inspection, production and incident reporting and record keeping, and load inspections. The facility manager duties are:

- To allocate work efficiently to all support staff in order to maximize productivity, meet customer demands and maintain quality of service.
- To efficiently develop and provide appropriate work training and instruction to staff members, in accordance with company deadlines.
- To communicate customer requirements to relevant staff members.
- To manage the completion of all operating equipment installations, repairs, and replacements in accordance with company procedures and deadlines.
- To recruit and train/arrange training for staff for the site as required.

Responsibilities will also include coordinating and maintaining site records. These records include, but are not limited to, waste and recyclable receipt data, load checking reports, results of inspections (by IEPA or relevant local authorities), copies of all submitted reports (to IEPA or any relevant local authorities), employee training records, and employee personnel records.

2.4.2.2 Equipment Operators

At least one trained operator per shift will be present and responsible for operating the wheel loader used to load waste and recycling materials from the tipping floor into the transfer trailer, and operate any other equipment needed for operations. This person will also ensure that all weight records of transfer trailers are collected and stored. This position requires training on hazardous waste identification. A similarly trained operator will be present in the C&D transfer/screening building and the hydro excavation waste building during operations.

2.4.3 WASTE ACCEPTANCE

West DuPage RTS will accept municipal waste and SSR for transfer to off-site disposal location(s). "Municipal waste" is defined by Section 3.290 of the Illinois Environmental Protection Act to mean garbage, general household and commercial waste, industrial lunchroom or office waste, landscape waste, and construction or demolition debris. The site will also accept SSR for transfer to processing facilities for separation and re-use as a commodity.

While included in the definition of municipal waste, landscape waste has been banned from disposal in Illinois landfills since July l, 1990 and now has an entirely separate regulatory structure that involves composting. Thus, West DuPage RTS will not accept loads of landscape waste.

Hydro excavation wastes are a solid/liquid waste created through a combination pressurized water and air vacuum system generally used for construction or maintenance services, such as potholing to expose utilities, installation of utility poles, installation of piers/footings, trenching near utilities, and clean out of storm sewers. The system cuts through soils/materials, breaks them up, and lifts the slurry from the excavation area into a debris tank.

West DuPage RTS will accept hydro excavation wastes for solidification and transfer to off-site disposal location(s). "Hydro Excavation Wastes" is defined to mean solid/liquid waste such as hydro/vacuum excavation muds, underground excavation material, and other similar materials (definitions in Host Agreement). This is the same definition as listed in the Host Agreement except that "drilling muds" has been removed. Operational procedures for the hydro excavation wastes is provided in Appendix 2-H.

The C&D Recycling Facility will continue to meet following requirements contained in the site's current IEPA Permit (Permit No. 2015-124-OP provided in Appendix 2-A) and Section 22.38 of the Illinois Environmental Protection Act.:

- Sort all general C&D (to separate recyclable material from non-recyclable material) within forty-eight hours of receipt [Special Condition 28].
- Transport all non-recyclable and unacceptable material off-site for disposal within seventy-two hours of its receipt [Special Condition 30].
- Transport off-site all putrescible or combustible recyclable general C&D within forty-five days of receipt [Special Condition 33].
- Store recyclable concrete or clean soil for a maximum period of three months [Special Condition 37].
- Transport off-site all non-putrescible recyclable general C&D within six months of receipt [Special Condition 32].

The site will reject materials that are not compatible with the operations of the proposed transfer station facility. The following wastes, at a minimum, are considered unauthorized and will not be knowingly accepted at the site:

- Hazardous substances (as defined by Section 3.215 of the Illinois Environmental Protection Act);
- Hazardous waste (as defined by Section 3.220 of the Illinois Environmental Protection Act);
- Potentially infectious medical wastes (as defined by the Illinois Environmental Protection Act in Section 3.84);

- Universal waste (as defined by Title 35 of the Illinois Administrative Code Part 733 including batteries, pesticides, mercury-containing equipment and lamps);
- Regulated asbestos containing materials;
- Polychlorinated biphenyl wastes;
- Used motor oil;
- Source, special or by-product nuclear materials;
- Radioactive wastes (both high and low level);
- Sludge;
- White goods (incidental white goods received at the proposed transfer station will be segregated and stored for pickup by an off-site recycler);
- Lead-acid automotive batteries (incidental automotive batteries received at the transfer station will be segregated and stored for pickup by an off-site recycler);
- Used tires (incidental tires received at the transfer station will be segregated and stored for pickup by an off-site recycler); and
- Landscape waste.

Rejected materials will not be allowed to unload, or will be promptly removed and transferred to an appropriate facility for ultimate disposition or, to the extent allowed by law, legally placed back on the vehicle that transported said unauthorized waste to West DuPage RTS and sent away from West DuPage RTS.

West DuPage RTS reserves the right to reject any other materials or loads that are deemed incompatible with site operations. West DuPage RTS will deny access to a vehicle for reasons that include, but are not limited to, the following:

- The vehicle is known, or reasonably suspected, to contain unauthorized waste materials.
- The vehicle appears likely to leak or spill material, especially material that is easily windblown or otherwise scattered.
- The vehicle does not appear to be in safe operating condition.
- The vehicle has repeated non-compliance with LRS's tarping policy.

2.4.4 OPERATING EQUIPMENT

Mobile equipment will be used to facilitate all transfer operations and to handle material for storage and load out after processing. The following provides an overview of the typical types of equipment that will be used at the proposed transfer station facility:

- Semi-tractor/yard tractors for transfer trailer hauling/on-site movement;

- Semi-trailers for material transfer to landfill; and
- Wheel loaders for material handling to transfer trailers.

Other equipment may also be used as needed. If replacement equipment is necessary, due to equipment failure or breakdown, the equipment will be brought in from contractor rental yards. The list of mobile equipment may be changed or supplemented in response to incoming volumes, materials types, etc.

2.4.5 TRANSFER OPERATIONS AND STORAGE

Per the Host Agreement, all tipping of municipal waste at the transfer facility shall be on the tipping floor inside the transfer building, and, except as provided below, the West DuPage RTS shall have the tipping floor free of waste and cleaned with a mechanical street sweeper by the end of each operating day.

Per the Host Agreement, no municipal waste shall be left on the tipping floor inside the transfer building or outside the transfer building on the transfer facility property overnight, except:

- In transfer trailers, provided that such trailers are suitably covered and staged at least 500 feet from Powis Road right-of-way;
- In the event of an emergency, the IEPA or person previously appointed by the city council or, in the absence of such an appointment, the mayor has given prior approval of temporary overnight storage on the tipping floor inside the transfer building; and
- Empty waste collection containers and empty transfer trailers may be stored outside the transfer building at least 500 feet from Powis Road right-of-way.

Unloading and loading of the waste will take place only inside the transfer station building, and only under the direction of West DuPage RTS operating personnel. Loading equipment inside the structure will load the waste into transfer trailers in the loading pit on the south side of the building. All transfer trailers are planned to be equipped with auto tarpers. The exit ramp will be approximately 20 feet wide and a building extension will be provided at the loading ramp exit to allow adequate space for the autotarping prior to exiting the building. During tarping, the driver will be trained to make sure that no waste is clinging to the outside of the transfer trailer and no leaks are occurring.

Per the Host Agreement, West DuPage RTS agrees to keep the truck doors to the transfer facility closed, except for emergencies and to allow trucks to enter and exit the facility, during regular business hours. Spotters will be present inside and outside of the MSW and SSR transfer building to open and close the doors as vehicles enter and exit the MSW and SSR transfer building.

No waste shall be left on the floor of the transfer station for more than twenty-four hours. Single-stream recyclables may be stored on the floor inside the transfer station building as needed to allow sufficient material to be accumulated to provide a full transfer trailer load. Salvaging of recyclable material from MSW loads may occur if adequate tipping floor space is available (e.g., during non-peak hours or during lower volume days). For example, loads with predominantly metal or concrete material may be salvaged from the incoming waste and placed in storage bunkers for subsequent recycling (similar to the material from the C&D recycling operation).

Waste and/or recyclables may be kept temporarily outside in transfer trailers which are tarped/covered for no more than twenty-four hours, except over holidays and weekends, when the time shall be extended by an additional twenty-four hours for a holiday and forty-eight hours for a weekend. As indicated above, all transfer trailers shall be tarped/covered at all times during such periods of temporary storage.

2.4.6 ON-SITE TRAFFIC CONTROLS

As vehicles enter the site, pavement markings and/or signs will direct the vehicle which lane to use. A spotter will be stationed at the entrance to assist/ direct vehicles as needed (see Drawings C400 through C404).

In-bound collection vehicles will proceed over the in-bound scale. Security cameras, a screen display and an intercom is present for the driver to communicate with the scale clerk located in the office. The purpose of the scales is the measure the weight of the waste being delivered to the site. Typically an in-bound and out-bound weight are obtained, and then the difference between the two weights is the amount of waste delivered to the site (and is the basis of the customers invoice). Customers may request a ticket/receipt documenting the recorded weights upon exiting the site. Currently, drivers need to park and exit their vehicles to walk into the office to provide payment and/or obtain a printed ticket.

LRS will be implementing an electronic ticketing system at the site to minimize time on the scales and the ticketing/ receipt process. This system is currently in the process of being deployed at the other LRS facilities, and has received positive feedback to date. The process includes the following.

- For the inbound trucks, the scale clerk simply records the company name, license plate, driver, material, weight, and related information. The process is very quick, and the truck generally only needs to stop for about ten seconds on the in-bound scale.

- LRS collects and stores tare-weights (empty weights) of each of the packer-trucks for its own vehicles and regular customers (recalibrated monthly). The stored tare-weight is then used for each transaction, which allows those vehicles to predominantly bypass the outbound scale. For these customers, the scale clerk routinely sends a batch-ticket to the designated customer via email.
- For those that do need to proceed over the out-bound scale, a large monitor/screen (approximately 50 inches) and corresponding camera system will be present which will display the truck, license plate, driver, tare- weight and related information. The driver can take a picture of the monitor/screen with their phone, opt for an emailed ticket, or request a printed ticket/receipt.
- For those that request a printed ticket/receipt or need to provide payment, the vehicle will pull off the scale and park in the designated area along the east side of the exit drive. A scale assistant will then obtain payment and/or print the ticket/receipt from a handheld device. This eliminates the driver exiting the truck or entering the office, and dramatically decreases the per truck scale time.

A spotter will also be present at the queuing areas for the C&D tipping building and the MSW and SSR transfer building (see Drawings C401 through C404). The spotters will communicate to the waiting vehicles when a loading area is available and which to use. They will assist outbound vehicles as needing regarding the outbound route. Signage will be present at the site as shown on Drawing C403 to assist drivers.

2.4.7 CLEANING PROCEDURES

The tipping floor will be cleaned using a mechanical street sweeper with a water spray and vacuum system at least once per twenty-four-hour period. The tipping floor and barrier walls will be cleaned with a pressure washer after sweeping at least weekly to remove waste residue and further control odors. A disinfectant may be used in the washwater to control odors. The area behind the barrier walls will also be routinely inspected and cleaned. All excess wash waters from the tipping floor will be directed through the oil-water separator to the sanitary sewer system along the south perimeter of the MSW and SSR building (see Drawing C302).

2.4.8 LITTER CONTROL

Unloading, transferring and loading of all waste will be performed within the transfer station building to minimize the potential for wind-blown distribution of litter. Tarps on all loaded incoming and outgoing open-top trucks will contain the waste to prevent its escape onto the grounds or the public roadways. Loaded transfer trailers will be tarped using auto tarpers prior to exiting the loading pit ramp. A building extension is provided on the east (outbound) end of the

loading pit such that the tractor will be on level ground while tarping. LRS uses the ratchet side roll for open top trailers manufactured by Mountain Tarp. LRS has a fleet of approximately 100 transfer trailers and approximately twenty-five are equipped with these auto tarpers. The remainder of the fleet is planned to be equipped with auto tarpers in the next two years. Any brokers which are used will be required to use a similar auto tarper. West DuPage RTS shall use its best efforts to assure that vehicles hauling waste to and from West DuPage RTS shall be suitably covered so as to prevent waste from leaving the vehicles.

Fencing surrounds the West DuPage RTS property, and assists in keeping any windblown litter from leaving the site. In order to ensure the effectiveness of these litter prevention measures, West DuPage RTS will patrol the site during hours of operation to collect any litter. Any litter collected will be added to the waste being managed on the tipping floor.

Per the Host Agreement, West DuPage RTS shall seek to prevent any waste, litter or debris from being discarded onto public traveled roads due to the operation of the West DuPage RTS and shall abide by a litter control plan as approved by the city as a result of the siting process. Should the waste, litter or debris from such operation pose a problem in the reasonable opinion of the city, the city, at its option, may require the West DuPage RTS to sweep or otherwise clean Powis Road in the City of West Chicago, as needed. West DuPage RTS shall keep the site, including all buildings and other improvements built or utilized by West DuPage RTS, in good condition and repair for the term of the Host Agreement.

2.4.9 VECTOR CONTROL

Several design and operational features have been incorporated into the proposed transfer station to minimize the potential to attract vectors, including:

- Elimination or minimization of available food by removing waste on a first in, first out basis. The waste material will remain at the proposed transfer station for only a short period of time before being processed and removed;
- Daily cleaning of the floor inside the proposed transfer station building, as discussed above;
- Regular inspections by site personnel for rodents, insects and birds;
- Containment of waste within the transfer station building;
- Requiring that all vehicles entering and exiting the site be properly tarped or fully enclosed; and
- Contracting with a professional exterminator to inspect and/or treat the site on at least a biweekly basis.

2.4.10 DUST AND MUD CONTROL

All access roads, parking areas, storage areas and vehicle-maneuvering areas will be appropriately paved, thus minimizing dust generated at the site. With the exception of entrance and exit bays, the transfer station buildings will be fully enclosed to protect operations from the wind. Potential dust impacts from material operations within the structure (e.g. unloading, processing, and loading) will be mitigated by periodic wash downs of the floors and barrier wall areas.

Per the Host Agreement, at a minimum, the company shall provide a street sweeper to remove mud, dirt and dust tracked on to hard surfaces inside and outside the site including onto Powis Road within three-fourths mile of the site on an as-needed basis, but not less frequently than daily except during severe weather conditions (e.g., heavy rains, winter conditions when salt has been applied to the roadway). All access drives, parking areas, storage areas and vehicle maneuvering areas at the site shall be paved and swept with a street sweeper as needed, but not less frequently than daily.

2.4.11 ODOR CONTROL

Odors will be controlled at the facility through several effective design and operating features. Waste will be delivered primarily in enclosed vehicles, and tarps will be required on all non-enclosed loads. Unloading, transferring, and loading operations will be performed within the building. Waste will be removed from the tipping floor with a frequency adequate to greatly minimize the generation of odors. The cleaning procedures discussed in Section 2.4.7 will also help control odors.

Per the Host Agreement, West DuPage RTS agrees to the following to control odors:

- Conduct all MSW handling and transfer operations completely indoors.
- MSW will be delivered primarily in enclosed vehicles, and tarps will be required on all non-enclosed loads.
- Unloading, transferring, and loading operations for MSW will be performed within the building.
- MSW will be removed from the tipping floor with a frequency adequate to greatly minimize the generation of odors.
- The MSW tipping floor areas will be cleaned with a pressure washer as needed.

- If malodors are detected off-site, the source of odor generation will be removed from the site, and the off-site condition will be monitored by site personnel to insure against reoccurrence. If a continuous source of odorous materials is identified, the generator will be contacted and advised that the materials must be effectively treated for odor control or the service will be discontinued and the materials no longer brought to the site.

Due to the Site's proximity to the DuPage Airport, the MSW and SSR transfer building will be equipped with a ventilation and filtration system. The ventilation system will remove air from the building and be designed to work in conjunction with the building design and operations to provide a negative air pressure condition within the building. The filtration system will be designed to effectively eliminate any odors from the exhaust. The ventilation and filtration system will include the following:

- Ventilation fans mounted in the roof or outside walls of the MSW and SSR transfer building;
- A duct system at the inlet of each ventilation fan;
- An ozone generating equipment and dispersion device installed within each duct system which will destroy any odorous compounds or bacteria; and
- A particulate filter system at the inlet of each ventilation unit.

The design details of the ventilation and filtration system are provided in Appendix 2-I and Drawing C301.

The MSW and SSR transfer building will be equipped with fast opening/closing doors at all vehicle ingress/egress locations including openings for transfer trailers and waste collection vehicles. LRS employees serving as spotters will open and close the doors as vehicles enter and exit the MSW and SSR transfer building. Doors will also be provided at vehicle access locations to the C&D Tipping Building and any storage bunkers under the sorting line. The doors are sized and will be operated to minimize the area open to the outside at any one time (which will maximize the effectiveness of the ventilation system).

The design of the ventilation and filtration system and proposed odor control procedures were agreed upon and incorporated into the Airport Agreement discussed in Section 2.1.4.7. The Airport Agreement indicates that DAA agrees that the proposed West DuPage RTS will not pose a threat to the safe operation of the DuPage Airport.

2.4.12 NOISE CONTROL

Noises associated with the operation of the proposed transfer station include vehicular traffic, equipment, and safety signals on mobile equipment. The design and location of the proposed transfer station minimizes the potential for noise related concerns.

West DuPage RTS is located in an industrial area and will have minimal noise impact to the surrounding properties. Noise characteristics are expected to be similar to those generated by existing surrounding land uses.

Unloading and loading of the transfer vehicles will take place inside the proposed transfer station building, thereby reducing noise levels outside of the building. All on-site equipment will be equipped with mufflers and will utilize other sound-suppressing devices, as required, for compliance with applicable state regulations. A routine maintenance program will be followed to ensure all on-site equipment is kept in good working order.

2.4.13 SITE SECURITY

West DuPage RTS as proposed is bordered on the north by manufacturing properties, the east by railroad tracks, the south by a closed landfill, and to the west by Powis Road and the DuPage Airport. The site is surrounded with 6-foot fence with a locking gate system. The point of access to the proposed transfer station will be two gated entrance/exits off Powis Road. Signage is present at the entrance gate identifying the facility, operating hours and a warning to all unauthorized persons. A similar sign will be placed at the exit gate.

During operating hours, all traffic entering the facility passes by the scale office, which is visible to the scale personnel and equipped with multiple security cameras that are visible on monitors by the scale personnel. The security cameras are positioned to allow full and constant visibility of the driveway, scale, and entrance area. Any unauthorized traffic will be stopped at this point. During non-operating hours, the access gates at Powis Road will be in a closed and locked position. Lights are installed at the site entrance, in parking areas and on the transfer station building to provide adequate lighting. A security camera system will also be installed at strategic locations around the site. The site currently has approximately fifty security cameras located inside and outside of buildings, which have twenty-four-hour local and remote viewing access.

Per the Host Agreement, any area used for the outdoor storage of any material or equipment will be fenced and visually screened from viewing from off the site by means of said fence and appropriate landscaping as approved by the city.

2.4.14 VEHICLE FUELING PROCEDURES

Vehicles will be fueled using mobile equipment. Fuel tanks are also located on-site.

2.4.15 COMMUNICATIONS

All equipment operators at the facility will be equipped to communicate with the facility manager and other personnel via mobile phone at all times during operating hours. Emergency numbers will be clearly posted.

2.4.16 MONITORING PLAN

Stormwater discharges will be monitored quarterly at the West DuPage RTS in accordance with the NPDES permit and stormwater pollution prevention plan as described in Section 2.3.2. Wildlife will also be monitored quarterly as discussed in Section 2.4.18.

The proposed design and operations of the West DuPage RTS preclude the potential for impacts to groundwater. In addition, the West DuPage RTS does not include the construction or operation of any regulated air emission sources. As such, no groundwater and/ or air quality monitoring is anticipated to be required by the IEPA, and no groundwater and/or air monitoring is proposed.

2.4.17 RECORDKEEPING

Accurate and up-to-date records documenting facility operations will be maintained at the site. These records will include, but are not limited to, the following:

- Daily records of the amounts and description of the various types of materials received;
- Load inspection reports;
- Results of inspections (by IEPA, county, or local authorities);
- Copies of all submitted reports (to IEPA, county, or local authorities);
- Employee training records; and
- Employee personnel records.

The records will be maintained for a period of at least two years. The records of the amounts and description of the various types of materials received will include both waste receipts and scale weight on the disposal tickets and logs (electronic and/or hard copies), including, without limitation, those showing the amount in tons of all material received.

2.4.18 WILDLIFE HAZARD MITIGATION

LRS agreed to perform various items to mitigate potential wildlife hazards, which were incorporated into the Airport Agreement discussed in Section 2.1.4.7. The Airport Agreement indicates that DAA agrees that the proposed West DuPage RTS will not pose a threat to the safe operation of the DuPage Airport.

The site proposes to perform the following to mitigate potential wildlife hazards, which includes all of the items incorporated into the Airport Agreement:

- Train Staff: The site will create their own wildlife hazard management plan, which will state how trained staff will monitor and deter certain wildlife species. The wildlife hazard management plan will assign titles and responsibilities to individuals whom will be responsible for wildlife control activities. Management will train assigned facility employees on the role they will play to reduce wildlife hazards (e.g. use of pyrotechnic harassments). If any questions about the formation, implementation, or general questions about the contents of the management plan ever occur, a qualified airport wildlife biologist will be consulted.
- Install Anti-Perching Devices: Anti-perching devices will be installed on building edges of the MSW and SSR transfer building.
- Perform Routine Wildlife Surveys: The site will perform quarterly wildlife surveys to ensure that the wildlife mitigation techniques are working as intended. The inspections will include the MSW and SSR transfer building, and any observed small gaps that may allow birds to enter the building will be sealed.
- Use of Deterrents in Misters: Misters will be installed in the MSW and SSR transfer building. A deterrent (e.g., methyl anthranilate, which is a grape-flavored food grade additive that acts as an irritant to birds when applied to the air) can be used in the misters, as needed, to prevent birds from nesting and/or entering the building.
- Install Netting Along Roof Structures: Netting will be installed along the bottom of roof structures, as needed, to prevent birds from accessing flat areas (where birds like to roost and nest).
- Focus Ventilation: Duct work will be installed, as needed, to provide focused ventilation where odors are anticipated to be more prevalent (e.g., MSW staging areas).
- Extend Rip-Rap Around West Pond: The rip-rap that is currently surrounding the west pond is preventing birds, such as waterfowl, from walking into or out of the pond. This feature will be extended further into the grass, widening the buffer between the water and grass.
- Monitor Wildlife With Game Cameras: Wildlife at the ponds will be monitored with game cameras, which will capture wildlife utilizing the ponds when employees are not present.

Checking the cameras periodically will periodically viewed to provide information regarding the time and type of wildlife using the ponds. Trained staff can then mitigate the hazards as needed.

- Vary Harassment: To keep the birds from becoming accustomed to harassment tactics, the site will designate an employee or employees to periodically patrol the west and east ponds and harass any birds observed.
- Maintain Grass Height: The grass around the east pond will be maintained at a height (approximately twelve inches) that allows easy inspection of the pond so that any wildlife may be harassed to leave the area. The shortened grass height will also deter many species from utilizing it, such as Canada geese.
- Install Grid-Wire System: A grid-wire system will be installed on the east and west ponds to keep most waterfowl and wading birds from utilizing the ponds. To keep larger birds from using the water, a checkerboard pattern is planned. The grid-wire system involves running cables from one side to another in one direction (north to south) and then running a second set of wires perpendicular.

APPENDIX 2-I

VENTILATION AND ODOR CONTROL SYSTEM DESIGN

Civil & Environmental Consultants, Inc.

SUBJECT	**Ventilation and Odor Control System Design**	PROJECT NO.	**163-899**		
PROJECT	**West DuPage Recycling and Transfer Station**	PAGE	**1**	OF	**4**
MADE BY	**KRK**	DATE	**revised 9/8/2021**	CHECKED BY	**JEH**	DATE	**9/8/2021**

1.0 OBJECTIVE

The purpose of this calculation is to describe the ventilation and odor control system for Municipal Solid Waste (MSW) and Single Stream Recyclable (SSR) Transfer Building at the West DuPage Recycling and Transfer Station (Site).

2.0 DESIGN CRITERIA

Federal Aviation Administration (FAA) Advisory Circular 15/5200-33C - Hazardous Wildlife Attractants On or Near Airports (Advisory Circular), most recently updated February 21, 2020, provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports. The Advisory Circular lists various criteria for MSW transfer stations, among other items, should control odors should be controlled by a ventilation and filtration system (odor masking is not acceptable).

To control odors, the MSW and SSR Transfer Building at the West DuPage Recycling and Transfer Station will be equipped with a ventilation and filtration system designed to provide a negative air pressure condition and effectively eliminate any odors from the exhaust.

The proposed MSW and SSR Transfer Building footprint area is approximately 23,430 square feet. With proposed 40-foot high walls, the total transfer building volume is approximately 942,400 cubic feet. Standard ventilation practices suggest at least four building air changes per hour, or one building air exchange every fifteen minutes. Four air exchanges per hour will provide a negative air pressure condition. Therefore, the ventilation system should be designed to provide at least 62,850 cubic feet per minute of exhaust capacity.The odor control technology should control a wide variety of compounds and be designed for at least an equivalent capacity.

3.0 SYSTEM OVERVIEW

Ventilation Equipment

Transfer building ventilation will be performed by the use of centrifugal upblast roof exhaust fans. The site intends to use the Solar & Palau Model STXB36RHULRH1S-115V, which is a 36-inch diameter belt driven fans designed to exhaust air up to 10,525 cubic feet per minute, and provide a static pressure applications of 0.5 inches of water column gauge with a rated 2.0 horsepower motor. Six centrifugal proposed upblast roof exhaust fans would provide a total ventilation capacity of approximately 63,150 cubic feet per minute, which would provide at least four building air changes per hour during operation.

Civil & Environmental Consultants, Inc.

SUBJECT	**Ventilation and Odor Control System Design**	PROJECT NO.	**163-899**		
PROJECT	**West DuPage Recycling and Transfer Station**	PAGE	**2**	OF	**4**
MADE BY	**KRK**	DATE	**revised 9/8/2021**	CHECKED BY	**JEH**	DATE	**9/8/2021**

An equivalent model may be used as long as the total ventilation capacity is greater than 62,850 cubic feet per minute.

The non-overloading backward inclined wheel with its higher static pressure capability makes this unit suitable for either ducted or nonducted applications. Roof or sidewall mounting options permit locations near the area to be ventilated, allowing short duct runs and more efficient operation. Belt drive also permits easy performance adjustments when needed to balance the total ventilation system.

Equipment features include the heavy-gauge aluminum motor cover which provides weather protection for motor compartment, neoprene (rubber) vibration isolators to reduce vibration and noise, and aluminum, non-overloading, backward-inclined, curved centrifugal wheel with cooling vanes to provide for maximum efficiency. Isolation of motor and drive components from the airstream and the high velocity vertical air discharge make the Model STXB ideally suited for the removal of dirty, contaminated and/or high temperature air from processes and buildings.

Images of the exhaust fan are provided in Figure 1.

Figure No. 1 - Solar & Palau Model STXB Images

Odor Filtration Equipment

The ventilated air will first be physically filtered to eliminate particulate emissions from the exhaust fans. The proposed air filter is a commercial grade washable aluminum meshed framed filter unit.

To prevent the emissions of odorous compounds, a Sonozaire Model 630A Ozone Generator (or equivalent model) will be installed. The ozone generator will be installed at each of the exhaust

ventilation units, and will include an additional control cover and filter screen to provide water resistance. The proposed Sonozaire unit is shown in Figure 2.

Sonozaire odor neutralizers provide effective odor control and air purification for a variety of industrial and commercial applications. These units generate ozone from atmospheric oxygen to eliminate odors rather than "perfume" or mask them. Ozone destroys odors immediately and continuously while retarding bacterial growth. Ozone is an activated form of oxygen that oxidizes organic odor molecules and reduces them to odorless compounds. The Sonozaire Model 630A is equipped with a 100 cubic feet per minute fan and can handle areas up to 750,000 cubic feet. This unit delivers 6.8 to 8,500 milligrams of ozone generated electronically from oxygen in the ambient air.

Ozone will be introduced within the ductwork by means of an ozone diffuser assembly. The ozone diffuser is intended to be a series of 4-inch diameter perforated pipes interconnected by a top and bottom header pipeline.

When ozone is introduced into the ventilation ductwork, it will begin to react with airborne odors. By the oxidization process, it begins to convert many odors into simple and stable compounds of carbon dioxide, water, and oxygen. During exhaust air treatment, the amount of ozone that lingers in the air awaiting reaction with odors is referred to as residual. The exhaust air is agitated within the ductwork by mixing vanes to increase the reactions with odorous molecules and reduce the residual ozone.

Figure No. 2 - Sonozaire Model 630A Images

MADE BY	**KRK** DATE **revised 9/8/2021**	CHECKED BY	**JEH**	DATE	**9/8/2021**

3.0 CONCLUSION

The proposed equipment meets the ventilation and odor control requirements. The preliminary location and design of the units is shown on Drawing C301, which shows the units located on the roof. Due to height concerns, the units may be alternatively be installed on the side or suspended from the structural framing of the building. The final design of the ventilation and filtration system will consider the final design and anticipated operations of the MSW and SSR Transfer Building.

EXHIBIT D

WEST DUPAGE RTS TARPING POLICY

WEST DUPAGE RECYCLING AND TRANSFER STATION
TARPING POLICY

The Lakeshore Recycling System's (LRS) West DuPage Recycling and Transfer Station (RTS) is committed to being a good neighbor in the community, including maintaining the cleanliness of the facility and minimizing blowing litter. We recognize that the collection vehicles and transfer trailers which use the West DuPage RTS may contribute to these issues if they do not properly contain the waste in the vehicles.

The Illinois Department of Transportation requires that "No person shall operate or cause to be operated, on a highway, any second division vehicle loaded with dirt, aggregate, garbage, refuse or other similar material, when any portion of the load is falling, sifting, blowing dropping or in any way escaping from the vehicle." LRS will enforce a similar tarping policy for vehicles which use the West DuPage RTS.

Policy

All incoming and outgoing vehicles that are hauling waste will be fully enclosed or properly tarped to prevent the release of waste or material from the vehicle onto the grounds or the public roadways. Vehicles with tarps will untarp in the staging area only (after the scale and prior to unloading in the transfer building). After unloading, any remaining loose waste will be removed or contained in the vehicle prior to exiting the site.

Outgoing transfer trailers be will be properly tarped in the designated area after loading. A building extension is provided on the east (outbound) end of the loading pit such that the tractor will be on level ground while tarping. Loaded transfer trailers will be tarped using auto tarpers prior to exiting the loading pit ramp. No waste shall be hanging over the sides or remain outside the trailer, and the tarp must fully cover the trailer. Waste should not stick up above the height of the trailer. The tarp must be properly secured so that litter will not blow or spill during transport.

Drivers which are employed by LRS will be trained in the above procedures.

Enforcement

Employees at the West DuPage RTS will be trained to understand this tarping policy and recognize non-compliant actions. If a driver is observed to be non-compliant by an employee, the employee will immediately notify the driver and remind the driver of the tarping policy. The employee will also notify the West DuPage RTS operations manager, who will document the incident and notify the company representative who owns the vehicle. Multiple incidents of non-compliance may result in banning the driver and/or company from using the site in the future.

APPENDIX 2-H

HYDRO EXCAVATION OPERATING PLAN

WEST DUPAGE RECYCLING AND TRANSFER STATION
HYDRO EXCAVATION WASTE OPERATING PLAN

Lakeshore Recycling Systems, LLC (LRS) West DuPage Recycling and Transfer Station (West DuPage RTS) will accept hydro excavation wastes for solidification and transfer to off-site disposal location(s). Hydro excavation wastes are a solid/liquid waste created through a combination pressurized water and air vacuum system generally used for construction or maintenance services, such as potholing to expose utilities, installation of utility poles, installation of piers/footings, trenching near utilities, and clean out of storm sewers. The system cuts through soils/materials, breaks them up, and lifts the slurry from the excavation area into a debris tank. "Hydro Excavation Wastes" is defined to mean solid/liquid waste such as hydro/vacuum excavation muds, underground excavation material, and other similar materials. This is the same definition as listed in the Host Community Benefit Agreement between the City of West Chicago and LRS except that "drilling muds" has been removed.

The purpose of this document is to describe the operational procedures for the solidification of hydro excavation wastes. Because the hydro excavation waste is considered a "liquid waste" (i.e., does not pass the paint filter test), the waste is considered an Illinois special waste.

Pre-Approval Procedures

- Upon contact from a potential client with a hydro excavation waste stream, the following shall be performed:
  - The facility's "Special Waste Profile Sheet and Certification" form will be provided for completion by the generator and submission for review by LRS.
  - As noted above, hydro excavation wastes means solid/liquid waste such as hydro/vacuum excavation muds, underground excavation material, and other similar materials.
  - Other similar materials includes similar wastes generated from typical hydro excavation equipment. An example is storm sewer, manhole, or catch basin cleanout material.
  - The generator is responsible for all costs associated with the sampling, testing, and application preparation for any special waste permits required for the generation and transport.
- Upon receipt of the completed form or certification, the following will be performed.
  - The waste stream will be assigned a waste number.
  - The waste profile sheet and supporting documentation will be reviewed for compliance with the demonstration that the waste is a non-hazardous waste as defined in Title 35 of the Illinois Administrative Code Part 722.111.

- If the material meets the requirements, LRS will determine if it can handle the type and volume of waste proposed.
- If the waste stream is to be accepted, LRS will provide pricing and instructions/agreement/purchase order number to the generator.
- Scheduling of waste shipments will be coordinated with LRS.
- A copy of the pre-approval log of accepted and denied materials is to be provided to the scale house, to be kept updated on a daily basis. Notification should be made to the operations personnel prior to the receipt of the first shipment of a new incoming waste stream.
- Profile packets will be kept on file at the facility. The waste stream profile shall accurately characterize the waste stream and not be more than one year old.
- No hazardous waste, potentially infectious medical waste, or radioactive waste shall be accepted.

LRS shall retain copies of any special waste profile identification sheets, special waste re-certifications, certifications of representative samples, special waste laboratory analyses, special waste analysis plans, and any waivers of requirements at the facility for three years.

Gate Acceptance Procedures

- *The operator has the right to reject any load or portion of a load.*
- All special waste generators which send liquid waste to this facility for solidification and disposal shall have an Illinois Environmental Protection Agency (IEPA) generator number. The generator is responsible for the waste at all times, including all certifications, characterizations, and proper shipment.
- The driver will provide the appropriate documentation or manifest for the waste.
- Manifests will be handled and maintained as required:
  - If the shipment does not have a disposal manifest form, the load may be accepted if a facsimile copy of the completed manifest is received from the generator and the discrepancy is noted on the form. The original manifest must be mailed from the generator to the facility and attached to the corresponding facsimile manifest copy documenting that the shipment was manifested correctly to the facility. Contact must be made with the generator to obtain and utilize manifest forms for subsequent shipments.
  - If the manifest is not complete, LRS must contact the generator to properly complete all copies of the manifest. The discrepancy must be indicated on the manifest.

  - If the information on the manifest does not correspond to the information contained in the approval letter, the generator must be contacted to resolve the discrepancy. The discrepancy must be amended and indicated on the manifest.
  - If the manifest is not signed by the generator, the generator must be contacted and a follow-up letter must be forwarded to LRS to indicate the generator's acknowledgement of this discrepancy. The generator must provide certification of the manifested load in the letter. If the transporter has not signed the manifest, the item will be brought to the driver's attention and the driver will be allowed to sign the manifest prior to accepting the load.
- If the manifest is complete, the scale personnel will confirm that the waste profile has been approved according to the waste pre-approval log, and will question the driver regarding the contents of the load. The generator and the waste description must correspond with an approved waste stream. If the scale personnel determines that the waste does not conform to the waste profile on file, or that the approvals have not been issued, or for any other reason, the load will be rejected until the appropriate information is provided.
- If the scale personnel confirms that the waste profile has been approved, the scale personnel will notify the field operator that a load has arrived, indicating the type of waste, and its description, and direct the driver to the solidification area.

Load Inspection Procedures

- The field personnel will meet the driver at the solidification area. LRS will visually inspect each load received as it is first unloaded to verify that it matches the description of the waste as approved. During the visual inspection, the waste will be compared to typical color, odor, texture, and consistency as noted on the generator special waste profile sheet and acceptance approval letter. If the field personnel determines that the waste does not conform to the waste profile on file, that approval has not been issued for the waste as presented, the necessary documentation has not accompanied the load, or for any other reason, any variations shall be recorded in the records as a discrepancy and kept on file.
- When a discrepancy regarding the waste variation is found during the visual inspection of a load, the facility management will be notified, who will discuss the discrepancy with the generator. If the discrepancy cannot be properly explained, or corrected documentation cannot be provided, management may reject the load. The reason for rejection must be written on the manifest form, and the manifest will not be signed. A copy of the manifest will be kept for the rejected load file, and the manifest copies will be returned to the transporter. The transporter must then return the load to the generator.

- All accepted loads will be weighed and documented with the corresponding waste profile number by the computer, or manually, when required for backup. The load must be within 10% of that volume/weight indicated on the manifest. If the volume is beyond the 10% acceptable margin of error, the facility management must contact the generator to resolve the discrepancy. The discrepancy must be amended and noted on the manifest.
- If no discrepancies are found, the gate representative must sign the manifest for the approved acceptable load. A copy of the signed manifest will be returned to the transporter. The remaining manifest copies are to be forwarded by LRS to the appropriate facilities as noted on the form. The "Destination Copy" will be placed in the customer's manifest file. The transporter may then proceed to the solidification area to unload the waste.

Recordkeeping

- The following information shall be documented in LRS's daily operating record for each load of waste received for solidification:
  - Date the load was received;
  - Manifest number associated with the waste load;
  - Generator name, location and IEPA generator number or hauler number, if not a special waste;
  - Waste name;
  - Results of all analyses conducted on the waste load;
  - Accepted/denied loads; and
  - Volume of waste received.
- LRS shall retain a copy of the manifest, load checking, and all information relating to special waste for three years and it shall be made available at reasonable times for inspection and photocopying by the IEPA pursuant to Section 4(d) of the Illinois Environmental Protection Act.

Hydro Excavation Waste Processing

- Liquid wastes will be unloaded directly into the solidification area. The processing method involves solidifying non-hazardous liquids, sludge's and other semi-solid waste streams utilizing reagents and/or absorbents as approved by the IEPA permit and mechanically mixing as needed to achieve disposal objectives, using a hydraulic excavator or wheel loader. The solidification process continues until the resultant material blend passes the paint filter test. Care will be taken to ensure that the stabilized waste product does not set up or harden prior to removal and disposal. In the event that Portland cement is utilized as admix, the maximum holding time for any batch is four hours. LRS shall not perform solidification if the test or waste analysis plan determines incompatibility of the waste and reagent.

- The following reagents and absorbents will be employed in the solidification process:
  - Reagents:
    - Portland cement; and
    - Lime.
  - Adsorbents:
    - Screening fines from C&D recycling;
    - Soil;
    - Sand;
    - Oil dry;
    - Sawdust;
    - Kitty litter;
    - Corn cobs;
    - Wood chips; and
    - Mixtures of the above materials.
- All reagents and absorbents used must not exhibit any characteristic which would classify it as a hazardous waste. Use of other materials or wastes other than those listed above shall be subject to approval by the IEPA permit process.
- The following information shall be documented in the facility's operating record for each load of waste received for solidification:
  - Type of reagent and/or absorbent used to solidify the waste;
  - Documentation that the solidified waste does not exhibit hazardous characteristics (e.g., verification that neither the waste nor the absorbents used exhibited hazardous characteristics, or the result of the compatibility test done in accordance with the facility's waste analysis plan). A complete toxicity characteristic leaching procedure analysis shall be performed on solidified waste resulting from a liquid waste with a $pH \leq 5$ to demonstrate that no hazardous waste has been produced.
- Each load of the solidified waste shall be sampled and tested by the paint filter test prior to disposal. **Waste that yields fluid may not be disposed.** It must be solidified again or sent to an off-site treatment facility.
- Other Solidification Process Operational Guidelines:
  - The solidification unit may be operated from 5:00 a.m. to 5:00 p.m. Monday through Saturday.
  - By the end of each day of the operation, all waste received for treatment shall be solidified, removed from the solidification unit, and transported off-site for disposal.
  - The storage of reagents and absorbents to be used in the solidification process shall not contribute to a violation of Illinois' waste disposal, water pollution, or air pollution regulations.

- Reagents and absorbent shall be stored, covered, and protected from precipitation events.
- All washwater or stormwater generated from the solidification unit shall be managed as liquid waste in the storage vessel chamber.
- In the event of a spill, such materials and equipment necessary will be available on site in order to prevent leachate migration from the contaminated area.

APPENDIX 2-I

VENTILATION AND ODOR CONTROL SYSTEM DESIGN

Civil & Environmental Consultants, Inc.

SUBJECT	**Ventilation and Odor Control System Design**	PROJECT NO.	**163-899**		
PROJECT	**West DuPage Recycling and Transfer Station**	PAGE	**1**	OF	**4**

MADE BY	**KRK**	DATE	**revised 9/8/2021**	CHECKED BY	**JEH**	DATE	**9/8/2021**

1.0 OBJECTIVE

The purpose of this calculation is to describe the ventilation and odor control system for municipal solid waste (MSW) and single-stream recyclable (SSR) transfer building at the West DuPage Recycling and Transfer Station (Site).

2.0 DESIGN CRITERIA

Federal Aviation Administration (FAA) Advisory Circular 15/5200-33C - Hazardous Wildlife Attractants On or Near Airports (Advisory Circular), most recently updated February 21, 2020, provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports. The Advisory Circular lists various criteria for MSW transfer stations, among other items, should control odors should be controlled by a ventilation and filtration system (odor masking is not acceptable).

To control odors, the MSW and SSR Transfer Building at the West DuPage Recycling and Transfer Station will be equipped with a ventilation and filtration system designed to provide a negative air pressure condition and effectively eliminate any odors from the exhaust.

The proposed MSW and SSR transfer building footprint area is approximately 23,430 square feet. With proposed 40-foot high walls, the total transfer building volume is approximately 942,400 cubic feet. Standard ventilation practices suggest at least four building air changes per hour, or one building air exchange every fifteen minutes. Four air exchanges per hour will provide a negative air pressure condition. Therefore, the ventilation system should be designed to provide at least 62,850 cubic feet per minute of exhaust capacity. The odor control technology should control a wide variety of compounds and be designed for at least an equivalent capacity.

3.0 SYSTEM OVERVIEW

Ventilation Equipment

Transfer building ventilation will be performed by the use of centrifugal upblast roof exhaust fans. The site intends to use the Solar & Palau Model STXB36RHULRH1S-115V, which is a 36-inch diameter belt driven fans designed to exhaust air up to 10,525 cubic feet per minute, and provide a static pressure applications of 0.5 inches of water column gauge with a rated 2.0 horsepower motor. Six centrifugal proposed upblast roof exhaust fans would provide a total ventilation capacity of approximately 63,150 cubic feet per minute, which would provide at least four building air changes per hour during operation.

Civil & Environmental Consultants, Inc.

SUBJECT	**Ventilation and Odor Control System Design**	PROJECT NO.	**163-899**		
PROJECT	**West DuPage Recycling and Transfer Station**	PAGE	**2**	OF	**4**
MADE BY	**KRK**	DATE	**revised 9/8/2021**	CHECKED BY	**JEH**	DATE	**9/8/2021**

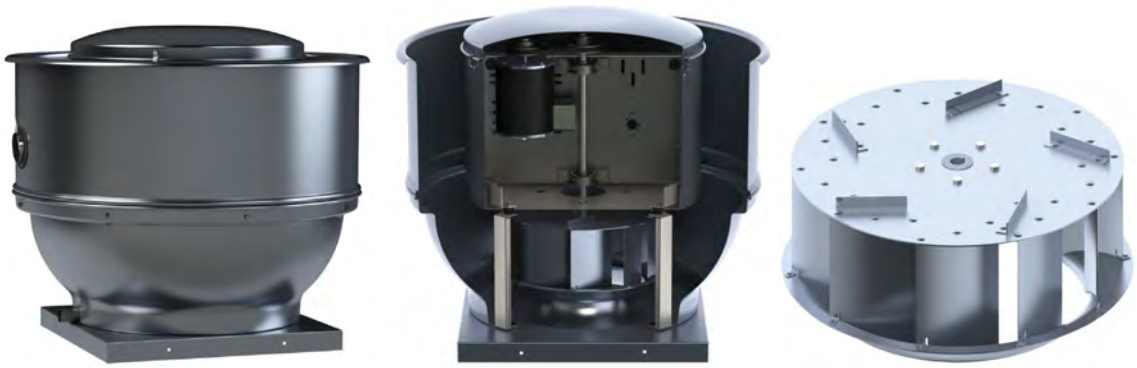
An equivalent model may be used as long as the total ventilation capacity is greater than 62,850 cubic feet per minute.

The non-overloading backward inclined wheel with its higher static pressure capability makes this unit suitable for either ducted or non-ducted applications. Roof or sidewall mounting options permit locations near the area to be ventilated, allowing short duct runs and more efficient operation. Belt drive also permits easy performance adjustments when needed to balance the total ventilation system.

Equipment features include the heavy-gauge aluminum motor cover which provides weather protection for motor compartment, neoprene (rubber) vibration isolators to reduce vibration and noise, and aluminum, non-overloading, backward-inclined, curved centrifugal wheel with cooling vanes to provide for maximum efficiency. Isolation of motor and drive components from the airstream and the high velocity vertical air discharge make the Model STXB ideally suited for the removal of dirty, contaminated and/or high temperature air from processes and buildings.

Images of the exhaust fan are provided in Figure 1.

Figure No. 1 - Solar & Palau Model STXB Images



Odor Filtration Equipment

The ventilated air will first be physically filtered to eliminate particulate emissions from the exhaust fans. The proposed air filter is a commercial grade washable aluminum meshed framed filter unit.

To prevent the emissions of odorous compounds, a Sonozaire Model 630A Ozone Generator (or equivalent model) will be installed. The ozone generator will be installed at each of the exhaust

ventilation units, and will include an additional control cover and filter screen to provide water resistance. The proposed Sonozaire unit is shown in Figure 2.

Sonozaire odor neutralizers provide effective odor control and air purification for a variety of industrial and commercial applications. These units generate ozone from atmospheric oxygen to eliminate odors rather than "perfume" or mask them. Ozone destroys odors immediately and continuously while retarding bacterial growth. Ozone is an activated form of oxygen that oxidizes organic odor molecules and reduces them to odorless compounds. The Sonozaire Model 630A is equipped with a 100 cubic feet per minute fan and can handle areas up to 750,000 cubic feet. This unit delivers 6.8 to 8,500 milligrams of ozone generated electronically from oxygen in the ambient air.

Ozone will be introduced within the ductwork by means of an ozone diffuser assembly. The ozone diffuser is intended to be a series of 4-inch diameter perforated pipes interconnected by a top and bottom header pipeline.

When ozone is introduced into the ventilation ductwork, it will begin to react with airborne odors. By the oxidization process, it begins to convert many odors into simple and stable compounds of carbon dioxide, water, and oxygen. During exhaust air treatment, the amount of ozone that lingers in the air awaiting reaction with odors is referred to as residual. The exhaust air is agitated within the ductwork by mixing vanes to increase the reactions with odorous molecules and reduce the residual ozone.

Figure No. 2 - Sonozaire Model 630A Images

3.0 CONCLUSION

The proposed equipment meets the ventilation and odor control requirements. The preliminary location and design of the units is shown on Drawing C301, which shows the units located on the roof. Due to height concerns, the units may be alternatively be installed on the side or suspended from the structural framing of the building. The final design of the ventilation and filtration system will consider the final design and anticipated operations of the MSW and SSR transfer building.

APPENDIX 2-J

WDRTS FILING AFFIDAVIT

STATE OF ILLINOIS
COUNTY OF DUPAGE
BEFORE THE CITY OF WEST CHICAGO

In Re: THE APPLICATION OF)
LAKESHORE RECYCLING SYSTEMS, LLC,)
FOR SITING APPROVAL OF A NEW)
POLLUTION CONTROL FACILITY)

AFFIDAVIT OF COMPLIANCE WITH 415 ILCS 5/39.2(b)

JOHN E. HOCK, being first duly sworn on oath, deposes and states as follows:

1. I am a professional engineer licensed to practice in the State of Illinois and am employed by Civil & Environmental Consultants, Inc., (CEC) as part of their office located at 1230 East Diehl Road, Suite 200, Naperville, Illinois, 60563.

2. I am CEC's principal for the preparation of the local siting application for the West DuPage Recycling and Transfer Station and it was my responsibility to prepare, publish and serve pre-filing notices as required in 415 ILCS 5/39.2(b).

3. 415 ILCS 5/39.2(b) requires that no later than fourteen (14) days prior to a request for location approval of a pollution control facility, the applicant shall cause written notice of such request to be served either in person or by registered mail, return receipt requested, on the owners of all property within the subject area not wholly owned by the applicant and on the owners of all property within 250 feet in each direction of the lot line of the subject property, said owners being such persons or entities which appear from the authentic tax records of the county in which such facility is to be located, provided, that the number of all feet occupied by all public roads, streets, alleys and other public ways shall be excluded in computing the 250 feet requirement, provided further that in no event shall this requirement exceed 400 feet, including public streets, alleys and other public ways. Section 39.2(b) further provides that such notice shall be served upon members of

the general assembly from the legislative district in which the proposed facility is located and shall be published in a newspaper of general circulation published in the county in which the site is located. Section 39.2(b) further provides that such notice shall state the name and address of the applicant, the location of the proposed site, the nature and size of the development, the nature of the activity proposed, the probable life of the proposed activity, the date when the request for site approval will be submitted, and a description of the right of persons to comment on such request.

4. The Notice prepared and served in connection with the aforesaid requirement is attached hereto and made a part hereof as Exhibit A. Said Notice conforms to the requirements of Section 39.2(b).

5. I identified the names and address of all members of the General Assembly from the legislative district in which the proposed facility is located by using information publically maintained and available on the Illinois General Assembly internet website www.ilga.gov.

6. I caused a copy of the Notice to be published in the Daily Herald, a newspaper of general circulation, in the county in which the application is pending on August 26, 2022. A copy of the actual publication and proof of publication is attached hereto and made a part hereof as Exhibit B.

7. On August 19, 2022, I searched the authentic tax records in DuPage County, Illinois to ascertain the names and addresses of all owners of the subject property and all other property within 400 feet of the subject property. I learned that DuPage County maintains the official tax records database, which can be accessed via the DuPage County website, and the DuPage County Treasurer's Office website. The DuPage County website

also links to a GIS database showing all real estate parcels in the county. This is the computer equivalent of information previously available in hard copies of plat books and section maps.

8. Attached hereto and made a part hereof as Exhibit C is the full and complete list of all individuals and entities which were sent pre-filing Notice on August 23, 2022, pursuant to 415 ILCS 5/39.2(b). This includes all owners of property and members of the General Assembly who were entitled to Notice. Some entities entitled to notice were sent an additional notice at a secondary address.

9. On August 23, 2022, certified mail notice was sent to all of the individuals and entities identified in Exhibit C with United States' addresses, and personal delivery notice was sent to all of the individuals and entities identified in Exhibit C with Canadian addresses. Attached hereto and made a part hereof as Exhibit D are the certified mail receipts issued by the U.S. Postal Service (green cards) for United States' addresses and personal delivery receipts from United Parcel Service for Canadian addresses. Attached hereto and made a part hereof as Exhibit E are the signed returns from the recipients. The notice sent to the post office box for the Fox Valley Airport Authority was not claimed, but the secondary notice sent to Fox Valley Airport Authority was claimed. The notice sent to the New York address for OSCAR (IL) LLC was claimed on August 29, 2022, but the green card has not yet been returned.

10. The siting application herein was filed on September 16, 2022.

11. All of the foregoing complies fully and completely with the pre-filing notice requirements of 415 ILCS 5/39.2(b).

FURTHER AFFIANT SAYETH NOT.

JOHN E. HOCK

Sworn to and subscribed before me
this 13th day of September 2022.

APPENDIX J

EXHIBIT A

NOTICE OF INTENT TO FILE A REQUEST FOR LOCAL SITING APPROVAL OF A NEW POLLUTION CONTROL FACILITY WITH THE CITY OF WEST CHICAGO, ILLINOIS

YOU ARE HEREBY NOTIFIED THAT, pursuant to §39.2(b) of the Illinois Environmental Protection Act ("the Act") 415 ILCS 5/39.2(b), the Applicant, Lakeshore Recycling Systems, LLC ("LRS"), will file its Request for Siting Approval for a new pollution control facility with the City of West Chicago, Illinois, 475 Main St., West Chicago, Illinois, 60185, on September 16, 2022. In their request for siting approval, the Applicant will seek approval to site, permit, construct, develop and operate a transfer station as defined by Section 3.500 of the Illinois Environmental Protection Act (the "Act") (415 ILCS 5/3.500), the West DuPage Recycling and Transfer Station whose address is 1655 Powis Road, West Chicago, DuPage County, Illinois, 60185. Said location being in the City of West Chicago, Illinois.

The proposed facility encompasses approximately 27.66 acres and is legally described as follows:

THAT PART OF THE NORTH 1/2 OF SECTION 32, TOWNSHIP 40 NORTH, RANGE 9 EAST OF THE THIRD PRINCIPAL MERIDIAN, DUPAGE COUNTY, ILLINOIS, DESCRIBED AS FOLLOWS, TO WIT.

COMMENCING AT THE NORTHWEST CORNER OF SAID SECTION 32; THENCE NORTH 88 DEGREES 56 MINUTES 37 SECONDS EAST ALONG THE NORTH LINE OF SAID SECTION 32, A D1STANCE OF 1331.65 FEET TO THE NORTH AND SOUTH DIVIDING LINE OF THE NORTHWEST 1/4 OF SAID SECTION 32; THENCE SOUTH 00 DEGREES 36 MINUTES 17 SECONDS WEST ALONG SAID DIVIDING LINE, A DISTANCE OF 500.00 FEET TO THE SOUTHWEST CORNER OF A TRACT OF LAND CONVEYED TO THE DEFENSE PLANT CORPORATION BY DEED RECORDED IN BOOK 390 OF DEEDS ON PAGE 81 IN THE OFFICE OF THE DUPAGE COUNTY RECORDER; THENCE CONTINUING SOUTH 00 DEGREES 36 MINUTES 17 SECONDS WEST ALONG SAID DIVIDING LINE, A DISTANCE OF 685.0 FEET TO THE SOUTHWEST CORNER OF THE TRACT OF LAND DESCRIBED IN A SPECIAL WARRANTY DEED RECORDED

FEBRUARY 6, 2001 AS DOCUMENT NO. R2001-020758; THENCE NORTH 89 DEGREES 32 MINUTES 15 SECONDS EAST ALONG THE SOUTH LINE OF SAID TRACT, A DISTANCE OF 103.80 FEET FOR THE POINT OF BEGINNING; THENCE CONTINUING NORTH 89 DEGREES 32 MINUTES 15 SECONDS EAST, ALONG SAID SOUTH LINE (SAID LINE BEING PARALLEL WITH THE SOUTH LINE OF SAID DEFENSE PLANT CORPORATION TRACT), A DISTANCE OF 1880.12 FEET TO THE WESTERLY RIGHT OF WAY LINE FOR THE CHICAGO AND NORTHWESTERN RAILWAY; THENCE NORTH 20 DEGREES 30 MINUTES 46 SECONDS WEST, ALONG SAID WESTERLY RIGHT OF WAY LINE, A DISTANCE OF 729.01 FEET TO THE SOUTHEAST CORNER OF SAID DEFENSE PLANT CORPORATION TRACT, THENCE SOUTH 89 DEGREES 32 MINUTES 15 SECONDS WEST, ALONG SAID SOUTH LINE, A DISTANCE OF 1650.66 FEET TO A POINT ON THE EASTERLY RIGHT OF WAY LINE OF POWIS ROAD PER DOCUMENT NO. R2003-146376, SAID POINT ALSO BEING 81.96 FEET EAST OF THE SOUTHWEST CORNER OF SAID DEFENSE PLANT CORPORATION; THENCE SOUTH 2 DEGREES 29 MINUTES 05 SECONDS WEST, ALONG SAID EASTERLY RIGHT OF WAY LINE, A DISTANCE OF 536.49 FEET TO A POINT OF CURVATURE; THENCE SOUTHWESTERLY, ALONG SAID EASTERLY RIGHT OF WAY LINE BEING THE ARC OF A CURVE CONCAVE WESTERLY, HAVING A RADIUS OF 739.00 FEET AND WHOSE CHORD HAS A BEARING OF SOUTH 3 DEGREES 47 MINUTES 33 SECONDS WEST, AN ARC DISTANCE OF 149.66 FEET TO THE POINT OF BEGINNING, IN DUPAGE COUNTY, ILLINOIS.

Tax ID Numbers: 01-32-101-004 and 01-32-200-001

The proposed facility would be a non-hazardous solid waste transfer station which will accept non-hazardous waste, for temporary storage, sorting, solidification and consolidation, and further transfer to a waste disposal/treatment facility. The Applicant will develop and operate the transfer station only as approved by the Illinois Environmental Protection Agency, other applicable regulatory agencies, and as authorized by applicable statutes and regulations. The waste accepted for transfer will be general municipal solid waste, Hydro Excavation waste, recyclables and construction or demolition debris generated by residential, commercial and industrial sources. The facility proposes to handle a maximum of 1950 tons per day of material, of which no more than 650 tons per day will be municipal solid waste, no more than 300 tons per day will be hydro excavation waste, no more than 750 tons per day will be construction or demolition

debris, and no more than 250 tons per day will be single stream recyclables. The facility will not accept hazardous waste. The facility is projected to have an operating life of at least 20 years.

The Applicant is Lakeshore Recycling Systems, LLC, whose address is 5500 Pearl St., Rosemont, Il. 60018.

On September 16, 2022, the Applicant will file with the City of West Chicago, Illinois, their Request for Siting Approval. The request will include the substance of the Applicant's proposal and supporting documents.

The Request filed by the Applicant with the West Chicago City Clerk will be available for your inspection in the West Chicago City Clerk's Office located at 475 Main St., West Chicago, Illinois, 60185, during normal business hours daily, not including weekends or holidays. Copies of the request or any part thereof will be available from the West Chicago City Clerk upon payment of the actual cost of reproduction, as outlined in the Illinois Freedom of Information Act (5 ILCS 140/1 *et seq.*).

The City of West Chicago must hold at least one public hearing no sooner than 90 days but no later than 120 days from its receipt of the Request for Siting Approval. You may appear at the Hearing and may comment on the application or formally participate in the proceedings. All persons desiring to be formal participants in the hearing, including members of the public, must submit written notification of said intent to the city clerk before the first day of the public hearing or register with the hearing officer on the first day of the hearing. Any person so appearing at such public hearing shall have the right to present public comment relating to the pending application. No advance written

notification shall be required to present written comment in the manner described in Section 14-94 of the West Chicago Municipal Code. Each person desiring to present evidence in the hearing and/or to cross-examine witnesses shall register as a party to the proceeding not less than ten (10) days prior to the commencement of the hearing. Any person registered as a party shall have the right to present their own personal testimony, to be represented by an attorney and, through such attorney, to present the testimony of other persons or to cross-examine witnesses. The city shall be deemed a participant and a party to all proceedings and shall proceed last with its case and cross-examination.

Any person, including those not filing a notice of participation, may file written comments with the West Chicago City Clerk concerning the appropriateness of the proposed site for its intended purpose. The West Chicago City Council shall consider any comment received or postmarked from the date of acceptance of the Application through and until 30 days after the date of the last public hearing. Said written comment shall be mailed or delivered to the West Chicago City Clerk, 475 Main St., West Chicago, Illinois, 60185. For further information concerning the hearing procedures and your right to comment and participate, please consult the Act (415 ILCS 5/39.2) and Section 14-95 of the West Chicago Municipal Code.

Re: Land Use Compatibility
and Real Estate Impact Study
Proposed West DuPage Recycling and Transfer Station
West Chicago, Illinois

Dear Mr. Golf:

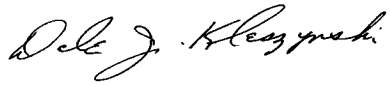
As requested by Lakeshore Recycling Systems, LLC., Associated Property Counselors, Ltd. (APC) completed a study of the proposed West DuPage Recycling and Transfer Station to determine if the development satisfies Illinois Environmental Protection Act, 415 ILCS 5/39.2 (a) (iii), commonly referred to as "Criterion 3". Criterion 3 requires that "the facility is located so as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of the surrounding property".

The attached report describes the applied methodology and contains pertinent data gathered while completing this study. The study and report are intended to meet the Uniform Standards of Professional Appraisal Practice and the Code of Ethics of the Appraisal Institute.

Based on my analysis, APC concludes that the West DuPage Recycling and Transfer Station is located "so as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of surrounding property" and meets the standards of "Criterion 3".

If you have any questions, please contact me.

Respectfully submitted,



Dale J. Kleszynski, MAI, SRA

Expires 9/30/2023

3.1 INTRODUCTION

The Illinois Environmental Protection Act, at 415 ILCS 5/39.2 (a)(iii), requires that an applicant for a transfer station siting demonstrate that the proposed facility is located so as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of the surrounding property. Associated Property Counselors, Ltd. (APC) completed a study of the proposed West DuPage Recycling and Transfer Station to determine whether the proposed development satisfies this requirement.

This section of the report contains items that are required to meet the Uniform Standards of Professional Appraisal Practice and the Code of Ethics of the Appraisal Institute. Subsequent sections of the report describe the applied methodology and contain pertinent data gathered while completing this study.

INTENDED USER OF THE REPORT

In this matter, the client is identified as Lakeshore Recycling Systems, LLC (LRS). Mr. Richard J. Golf, Managing Partner, represents the client. The client is the intended user of the study and report. Additional intended users will be named at a later date, if necessary. No other user is intended or implied.

INTENDED USE OF THE REPORT

This study and report are to be used by the client as part of the siting application for the proposed West DuPage Recycling and Transfer Station. The improvements are located and will be partially developed on the property located at 1655 Powis Road, West Chicago, Illinois. No other use is intended or implied.

IDENTIFICATION OF THE REAL ESTATE

The subject property is located on the east side of Powis Road between North Avenue (Illinois Route 64) and West Hawthorne Lane. The common address is 1655 Powis Road, West Chicago, Illinois. The property is further identified by Permanent Real Estate Tax Index Numbers 01-32-101-004 and 01-32-200-001.

PROPERTY RIGHTS AND MARKET VALUE

Neither the subject property nor any adjacent properties have been evaluated as part of this study. Where applied, the term “Market Value” refers to the fee simple estate in the property. The Dictionary of Real Estate Appraisal, Seventh Edition, defines fee simple estate as the “absolute ownership unencumbered by any other interest or estate, subject only to the limitations imposed by the governmental powers of taxation, eminent domain, police power, and escheat.”

Where applied, the definition of Market Value is taken from the Appraisal of Real Estate, Fifteenth Edition.

PURPOSE OF THE STUDY

The purpose of this study is to determine if the proposed transfer station, to be located at 1655 Powis Road, West Chicago, Illinois, complies with the applicable standards of the State of Illinois as set forth in the Illinois Environmental Protection Act, 415 ILCS 5/39.2 (a) (iii), commonly referred to as “Criterion 3”. Criterion 3 requires that “the facility is located so as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of the surrounding property”.

EFFECTIVE DATE OF THE STUDY

The effective date of the study is June 1, 2022.

EFFECTIVE DATE OF THE REPORT

The effective date of the report is September 15, 2022.

COMPLIANCE WITH USPAP

This study and report are completed in compliance with the Uniform Standards of Professional Appraisal Practice and the Code of Ethics of the Appraisal Institute. Additional data is retained in my file and/or office.

DISCLOSURE OF PAST WORK, EXTRAORDINARY ASSUMPTIONS, HYPOTHETICAL CONDITIONS AND/OR SPECIAL LIMITING CONDITIONS

Associated Property Counselors, Ltd, Dale J. Kleszynski, MAI, SRA and Patrick A. Kleszynski, MAI has completed professional services associated with this property during the past three years. Past services include the ongoing analysis of the property to determine compliance with Criterion 3.

The description of the proposed improvements is based on information provided by Civil & Environmental Consultants, Inc. (CEC). The provided information includes, but is not limited to, multiple drawings entitled “West DuPage Recycling and Transfer Station” Local Siting Application”, dated August 2022 (CEC Drawings) and Section 2.2 of CEC’s Criterion 2 report. APC reserves the right to amend this study and report if the subject transfer station is not developed in accordance with the provided plans and specifications that were prepared by CEC.

There are no other extraordinary assumptions, hypothetical conditions, and/or special limiting conditions that impact the study and/or report.

3.2 EXISTING CONDITIONS AND PROPOSED DEVELOPMENT

The subject property is located at 1655 Powis Road, West Chicago, Illinois.

A Regional Map showing the approximate location of the site is provided below. Information describing the City of West Chicago, taken from various sources, is also presented.

The CEC Drawings indicates that the subject site has approximately 686 feet of frontage along the east side of Powis Road. Depth of the site varies based on point of reference. Total site area is approximately 27.66 acres. Photographs of the subject property showing the existing conditions are provided below.

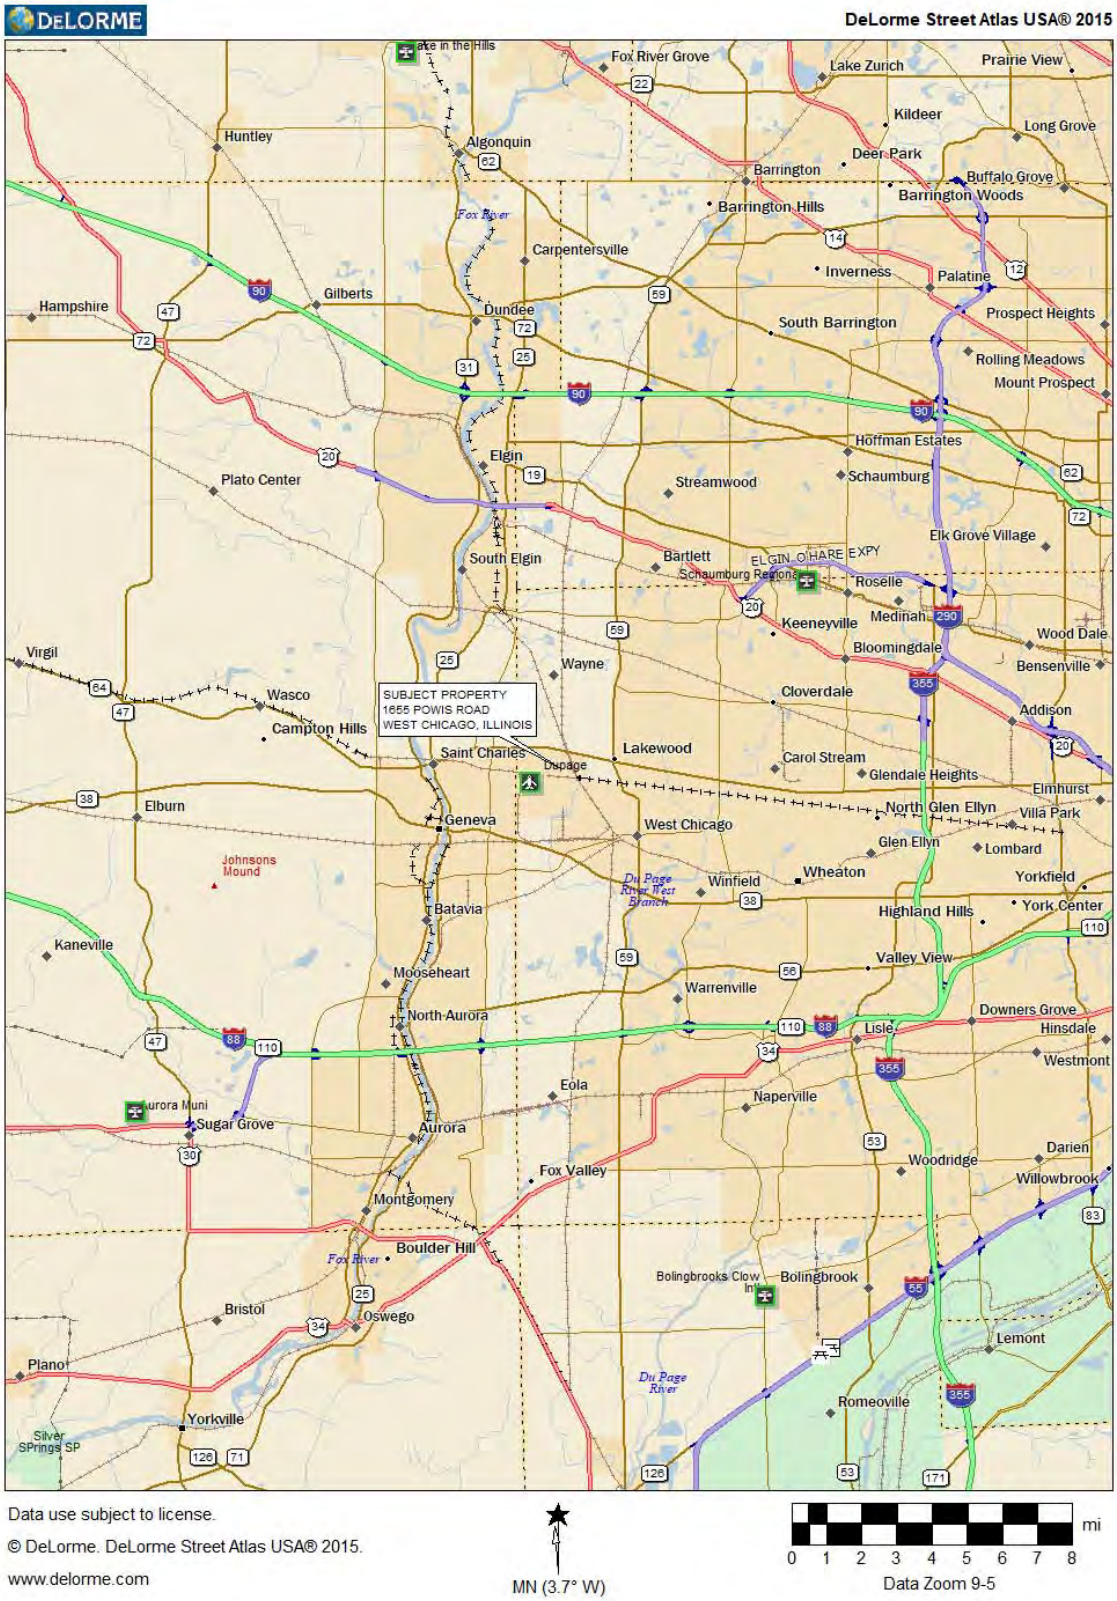
LRS currently operates a permitted solid waste management facility on approximately 6.11 acres of the subject site that receives and transfers general construction demolition debris (C&D Recycling Facility). The C&D Recycling Facility is shown on page 3-7 and includes the site entrance, a scale, the C&D transfer building, the C&D sorting line and storage bunkers. The site also includes an office, maintenance building, parking areas, additional hard surfaced areas, access controls, utilities, outdoor lighting and a stormwater control system, which support its overall operations at the subject site.

Upon completion of construction, the subject site will be improved with a building expansion of approximately 22,500 square feet that will be used to transfer municipal solid wastes and “single-stream” recyclables. The building expansion will include a tipping floor, barrier walls, a loading pit and bay doors. A smaller building to be used for the solidification of hydro excavation wastes will also be constructed. The solidification facility will include concrete mixing pits. Additional improvements include enhanced stormwater management features, a second scale, additional concrete pavement and a second access location along Powis Road.

The transfer station will have access from Powis Road. The topography of the property is generally level and at the grade of surrounding properties. This is typical of surrounding properties. All utilities are reported to be available to the subject property along Powis Road.

The primary transportation link to the subject property is Powis Road. Powis Road provides access to North Avenue (Illinois Route 64) to the north and West Hawthorne Lane to the south. North Avenue (Illinois Route 64) and West Hawthorne Lane allow access to the major and secondary streets in West Chicago and the adjacent communities. A Location Map showing the noted roadways is provided below.

REGIONAL MAP



AREA DATA

Location:	City of West Chicago DuPage County, Illinois
Distance to Major Cities:	Chicago, Illinois 30 miles Indianapolis, Indiana 174 miles Detroit, Michigan 291 miles
Housing:	West Chicago is an established community with diverse home styles ranging from historic to new construction. According to the Multiple Listing Service, the average sale price a home in West Chicago was $312,513 in 2022.
Health Care:	There are no hospitals in the city of West Chicago. Health care needs are served by Central DuPage Hospital in nearby Winfield and Delnor Community Hospital in Geneva.
Education:	There are 6 public elementary schools serving grades kindergarten through 5, one junior high serving grades 6 through 8 and one high school serving grades 9 through 12. Higher education needs are served by College of DuPage, St. Mary's and Wheaton Academy.
Recreational Facilities:	Recreational needs are well served by the West DuPage Park Forest Preserve with 15 public golf courses and 8 public swimming pools as well as convenient water access for boating and fishing.
Labor Market:	West Chicago has a large labor pool of both skilled and unskilled labor. The convenient location has attracted major industries to the area.
Employment:	Employment is provided by a number of area companies including General Mills, Inc., Siemens-Furnas, Jel Sert and Aspen Marketing Services.
Utilities:	Electricity and gas are provided by Commonwealth Edison and Nicor. Water, sewer and sanitation are provided by West Chicago.
Transportation:	Interstates 88, 355 and 90 allow convenient access to the Chicago Central Business District and surrounding suburbs. Public transportation is via Burlington Northern. Regional air transportation is facilitated by DuPage County Airport, while international service is provided through O'Hare International Airport.

3.3 HISTORIC AERIAL PHOTOS

The following aerial photographs demonstrate the development trends near the subject site from 1988 through 2012. The subject is bounded by Powis Road and the DuPage County Airport on the west; the Canadian National (E J & E), the Union Pacific Railroad Rights of Way and the Commonwealth Edison Power Line Right of Way to the east; a closed landfill and industrial facilities to the south; and industrial facilities to the north.

The aerial photos show limited industrial development in the area, indicating that nearby uses have remained generally consistent over an extended period of time. Although uses in the area are consistent, the photographs that follow demonstrate that the subject property has been modified on a regular and consistent basis to accommodate the current use and increase the efficiency of the site plan and circulation patterns. The elimination of certain building improvements and the construction of a new building demonstrate a commitment to the current use and area.

It is noteworthy that the most significant change in the area has been the development of the material yard, located within the southwest quadrant of West North Avenue (Illinois Route 64) and Reque Road. This property is reported to be owned by AA Conte & Sons Contractors (Excavating Contractor) and is consistent with the applications found in the vicinity of the subject property and proposed West DuPage Recycling and Transfer Station. See 1998 aerial photograph to identify approximate development date for the AA Conte property. Each subsequent aerial photo shows that the uses in this area have remained consistent over the past years.

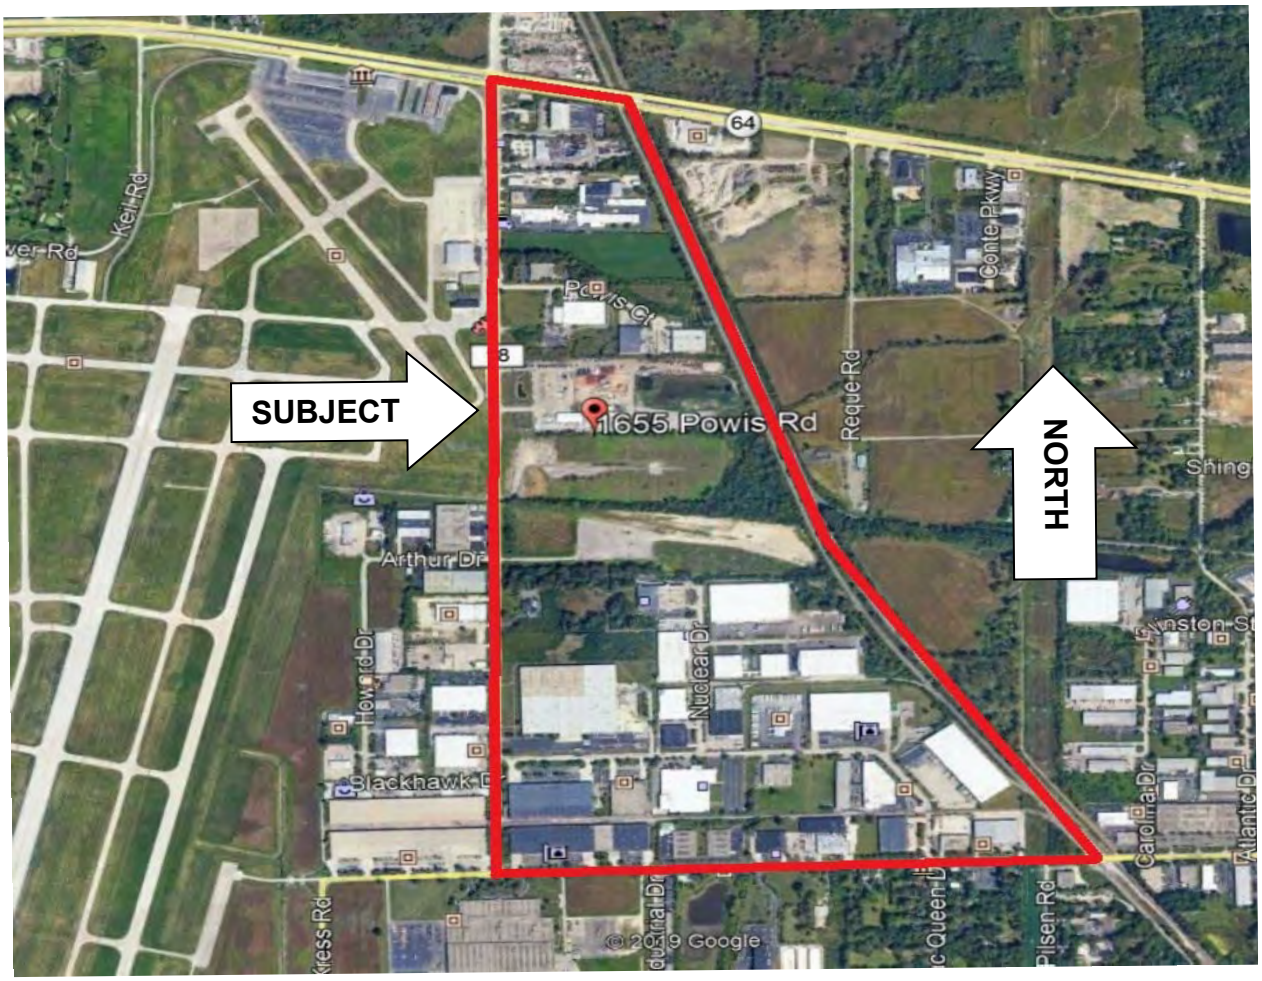
3.4 DEVELOPMENT IN THE STUDY AREA

The Project Area Map that follows this discussion identifies the location of the subject property and shows the uses that exist near the subject property. The site can only be accessed from Powis Road via North Avenue (Illinois Route 64) to the north and via West Hawthorne Lane to the south. The site cannot be accessed from the east or west between North Avenue (Illinois Route 64) and West Hawthorne Lane due to the presence of the Canadian National (E J & E) and the Union Pacific Railroad Rights of Way and the DuPage County Airport. It is noteworthy that all of the businesses along Powis Road are similar to the subject with respect to access from North Avenue (Illinois Route 64) and West Hawthorne Lane.

Manmade boundaries for the subject area are the DuPage County Airport, Powis Road (west), North Avenue – Illinois Route 64 (north), West Hawthorne Lane (south), the Canadian National (E J & E), the Union Pacific Railroad Rights of Way (east). The area within these boundaries encompasses approximately 405 acres. The man-made boundaries, applications within these boundaries and primary streets that define this area effectively isolate and buffer this 405 acre area from all adjacent applications. The impact of these locational features is to isolate and minimize any influence the uses within this 405 acre area have on properties outside the defined area. This includes the proposed development of the West DuPage Recycling and Transfer Station. See aerial photograph below.



The study area (bounded in Red on the illustration above) shows the DuPage County Airport and Powis Road Drive to the west, the Canadian National (E J & E), the Union Pacific Railroad Rights of Way to the east, North Avenue (Illinois Route 64) to the north and West Hawthorne Lane to the south. Within these boundaries (and beyond) the area uses generally consists of industrial applications that include, recycling uses, contractor yards, outside storage, material storage, equipment storage, truck farms and general industrial warehouse and distribution buildings.

Uses like the proposed West DuPage Recycling and Transfer Station, Groot Industries and property occupied by the Fox Valley Airport Authority are common, and the photographs located elsewhere in this report demonstrate that Powis Road services uses that are consistent with similar industrial applications. It is noteworthy that a material handling yard is immediately east of the railroad right of way and immediately south of West North Avenue (Illinois Route 64).

The proposed West DuPage Recycling and Transfer Station is consistent with nearby uses while being isolated by the railroad right of way, DuPage County Airport, a closed landfill and other industrial property. Uses or development within the study area that include the above-mentioned range of industrial applications are identified on the Zoning Map that is located on the following page and the aerial photograph presented elsewhere.

No residences are located within the study area. The nearest residences are located along Atlantic Drive, which is over 3,000 feet to the east of the West DuPage Recycling and Transfer Station.

SURROUNDING PROPERTIES AND ZONING FOR 1000 FOOT PROPERTY OFFSET

DRAWN BY:	MSK	CHECKED BY:	JEH	APPROVED BY:	JEH*	FIGURE NO.:
DATE:	AUGUST 2022	DWG SCALE:	1"=1000'	PROJECT NO:	163-899.0005	2-2

P:\2016\163-899\-CADD\Dwg\CV06-Siting Application\163899-SW05-SD01-Surrounding Properties.dwg[FIG 2-2] LS:(8/24/2022 - mkarpl) - LP: 8/24/2022 8:07 AM

The above zoning map indicates that zoning classifications within the Study Area only include M, Manufacturing District and Airport District applications.

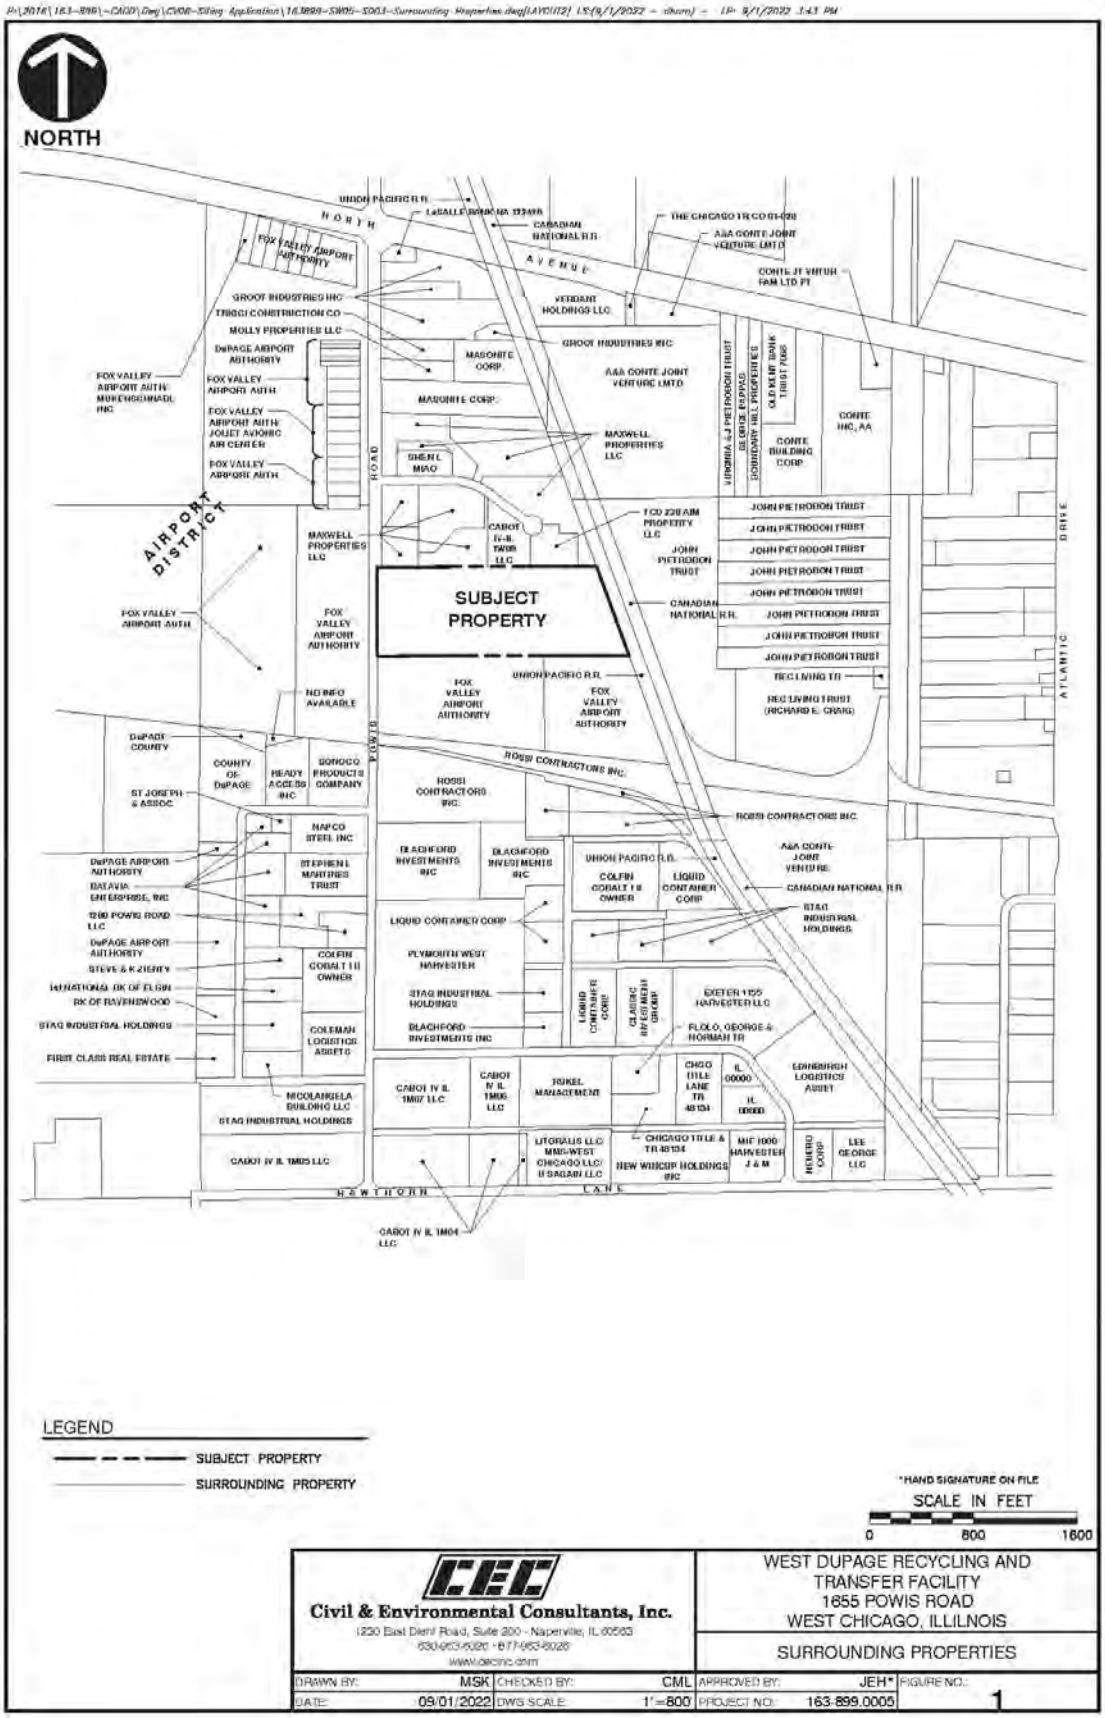
In summary, uses within the study area discussed above include the following:

- Recycling facilities
- Numerous outside storage yards and truck farms
- Railroad rights of way
- Open land that is part of the airport district
- The DuPage County Airport including various hangar, land base flight operations and open space.
- General industrial manufacturing and warehouse buildings.
- Open space- vacant land.

It is further noted that, airport, manufacturing, vacant land, railroad rights of way, waste management and/or material handling uses surround the proposed West DuPage Recycling and Transfer Station. Ownership or corporate entities that operate facilities surrounding the subject property include, but are not limited to, the DuPage County Airport, Groot Industries, Triggi Construction Company, Masonite Corporation, Stericycle Pharmaceutical Disposal, and Rossi Contractors, Inc. The location of each of these uses is identified on the maps that follow.

From an appraisal perspective it is significant to note that the value of any property is maximized, and the impact uses have on adjacent properties is minimized when individual and area developments comply with existing zoning requirements and adhere to the principle of conformity in a balanced market. Adherence to reasonable conformity and balance are supported by the above referenced inventory of nearby applications.

STUDY AREA USAGE MAP



3.5 PHOTOGRAPHS – SUBJECT LOCATION

Photographs of representative applications located along Powis Road, North Avenue, West Hawthorne Lane and the railroad right of way are demonstrated below. The photographs that follow are supportive evidence that the principles of conformity and balance have been met in the defined area. The Photographs identify the properties in the study are beginning at the Southeast Corner of North Avenue (Route 64) and Powis Road. These photographs include the properties located within the previously presented **Area Study Usage Map** on (page 3-35).

Vacant Land East and North of Railroad Right of Way – West of Commonwealth Edison Right of Way

3.6 HIGHEST AND BEST USE

A Highest and Best Use Analysis was completed in this matter.

The following definition of Highest and Best Use is applied in this study.

> "The reasonably probable and legal use of vacant land or an improved property, which is physically possible, appropriately supported, financially feasible, and that results in the highest value. The four criteria the highest and best use must meet are legal permissibility, physical possibility, financial feasibility, and maximum productivity."

The following criteria must be met in determining Highest and Best Use:

1. Legal Permissibility. A property use that is either currently allowed or most probably allowable under zoning codes, building codes, environmental regulations, and other applicable laws and regulations that govern land use restrictions.
2. Physical Possibility. The land must be able to accommodate the size and shape of the ideal improvement.
3. Financial Feasibility. The ability of a property to generate sufficient income to support the use for which it was designed.
4. Maximum Productivity. The selected land use must yield the highest value of the possible uses.

COMMENTS ON PLANNING IN DUPAGE COUNTY AND THE CITY OF WEST CHICAGO

Within the City of West Chicago and DuPage County in general, planning and zoning issues are evaluated on an individual basis with consideration given to the merits of each application. My review of the various zoning ordinances, comprehensive plans and literature suggests that DuPage County and the City of West Chicago have areas and communities that are unique in character. These areas, communities and districts are designed with consideration given to manmade boundaries, natural boundaries, available infrastructure and growth patterns. Both the City of West Chicago and DuPage County encourage development to occur in consistent and defined areas so development can take place in an efficient manner based on available public services, and development patterns. Development is designed to respect existing land uses and avoid environmental conflicts.

Based on my inspection of the study area, in which the West DuPage Recycling and Transfer Station is to be located, we conclude that appropriate planning and zoning exists to maximize the value of area property and to minimize negative impacts on surrounding uses.

DISCUSSION OF LEGAL PERMISSIBILITY

According to the City of West Chicago Zoning Department, the subject site is zoned M, “Manufacturing District”. The subject site also received a special use permit from West Chicago for a construction and demolition debris recycling facility, fuel sales, and storage building material sales with outside storage and a preliminary and final planned unit development (Ordinance No. 15-0-0019).

In addition, the subject also received approval of an amended preliminary and final planned unit development (PUD) from West Chicago (Ordinance No. 20-0-0020) for additional site improvements.

Permitted uses in this district include, but are not limited to, “Abrasive manufacture, Apparel and other products manufactured from textile, Assembly, production, processing, wholesaling or warehousing, or manufacturing of any commodity from semi-finished (other than raw) materials, provided explosives or livestock are not involved, Bakeries (nonretail), Bedding manufacture, Bicycle manufacture, Boot and shoe manufacture, Bottling companies, Furniture manufacture, Carpet and rug cleaning, Cleaning, pressing and dying plants, Cold storage plants, Dairy products processing, Dry cleaning establishments and laundries employing more than ten (10) employees, Electronic and scientific precision instruments manufacture, Food storage and manufacture, packaging and processing, Glass products production and sales, Ice plants, Medical and dental clinics, Metal stamping, polishing and plating, Paper products manufacture, Plastics processing, Above ground service facilities, Printing and publishing, Radio and television stations and studios, Research and development facilities or parks, provided explosives or livestock are not involved, Warehousing and distribution”

Special Uses within this district include, but are not limited to, “Alternative electric suppliers unless ancillary to a permitted or special manufacturing use, Asphaltic and concrete plants, Motor vehicle repair shops, Motor vehicle service stations, Motor vehicle body shops, Building material sales with outside storage, Cartage and express facilities and freight terminals, including air, motor and railroad, Chemical processing and manufacture, Cogeneration facilities unless ancillary to a permitted or special manufacturing use, Contractors equipment sales and leasing, Dwelling units for watchmen's quarters, Employment staffing agency, with any temporary employees reporting to agency to obtain a job order or to collect compensation, Fuel storage, sales and manufacturing, excluding public utilities, Governmental agency laboratories for the testing of radioactive materials from the City of West Chicago or the surrounding portions of the County of Du Page, over which the Illinois Department of Nuclear Safety, Illinois Environmental Protection Agency, United States Nuclear Regulatory Commission and/or the United States Environmental Protection Agency have jurisdiction, provided that such laboratories comply with all applicable laws, ordinances, codes, rules and regulations in their construction, use, operation and maintenance, Hotels, Kennels and animal hospitals and clinics, Landscape waste transfer stations, provided, however, that in addition to the requirements of section 5.4-6 of the zoning ordinance, an applicant for a landscape waste transfer station special use permit shall demonstrate that the proposed use shall comply with all applicable local, state and federal statutes, ordinances, codes, rules and regulations, including, but not limited to, all applicable local, state and federal requirements relating to location, siting and design, licenses, permits and/or other governmental approvals and/or review, Moving and storage facilities, Outside activity or storage ancillary to a permitted or special use, Planned unit developments on units of land not less than twenty (20) acres, Self-service storage facilities, Storage and distribution of flammable liquids, fats or oils unless ancillary to a permitted or special manufacturing use, Trade schools and adult educational facilities, Crematoriums, including those with facilities for conducting funeral services as accessory to the principal use. The space devoted to funeral services shall be less than that devoted to cremation, Utility substations, Salvage and recycling facilities, Motor vehicle sales, internet based, Medical marijuana cultivation centers and dispensaries, Construction and demolition debris recycling and Motor vehicle care centers”.

For additional information see the City of West Chicago and DuPage County zoning Ordinances, along with the Zoning Parcel Map that are located elsewhere.

DISCUSSION OF PHYSICAL POSSIBILITY

My review of the CEC Drawings and the Location Standards of the Criterion 2 report prepared by CEC indicate that no physical conditions exist that prohibit the development of the proposed West DuPage Recycling and Transfer Station in accordance with the provided specifications. My review of the above information, my physical inspection of the property, the presence of the current infrastructure allows me to conclude that there are no obvious issues that would cause us to believe that the property cannot be developed in accordance with the proposed plan.

DISCUSSION OF FINANCIAL FEASIBILITY

The test of financial feasibility examines if the intended development of the property will yield the greatest net return to the land for the longest period of time.

My analysis of available market data allows me to conclude that properties in the study area tend to be owner occupied and/or leased in third party transactions. Database material indicates that the inventory of total industrial space in West Chicago has remained generally consistent at approximately 17,000,000 square feet over the past five years. Within the available industrial market, approximately 1,500,000 to 1,700,000 square feet are available for sale with vacancy rates ranging from approximately 3 to 4 percent over the past five years. Current database information indicates that rental rates have increased over the past five year from $3.25 to approximately $5.25 per square foot. During this same period, the rate at which space has been absorbed has increased and marketing times are now less than one year when a vacancy occurs. Overall, the market condition for general industrial space is considered strong in the study area.

It is noteworthy that special purpose properties (property that is unique in style, design, use or zoning) tend to be owner occupied in the study area and these facilities are used by the owner for an extended period of time. For this property type, the Highest and Best Use and greatest net return to the land are derived from the ongoing operation of the facility and business located therein.

The intended use of the subject property as a recycling facility and transfer station is an industrial application that is unique in use because this development requires specific local approvals, intensive approvals from governmental agencies and constant monitoring/regulation for development and continued operation. The state and local permitting process is extensive, and the siting application carries with it an extensive examination of physical and operational issues. Few Transfer Stations are sold or leased and when a sale occurs the transaction typically includes the real estate, permits, and may include the ongoing business assets.

My search for sales data in the study area indicates that over 300 transactions occurred between 2013 and the present. The sales reviewed involved both improved and vacant properties with the greatest activity found in the light industrial districts of West Chicago. Only one sale involving the properties located in the “heavy industrial” portions of the study area was reported. The limited sales activity in the study area is evidence that the location is stable and conducive to long term occupancy by users like Lakeshore Recycling Systems, the DuPage County Airport, Groot Industries, Triggi Construction Company, Masonite Corporation, Rossi Contractors, Inc. and AA Conte & Sons Contractors.

DISCUSSION OF MAXIUM PRODUCTIVITY

Maximum productivity is the examination of the legally permissible, physically possible and financially feasible use that will yield the greatest net return to the land for the longest period of time. The examination of this test of Highest and Best Use requires a comparison of land values and the sale of similar improved properties.

It is noteworthy that the M, “Manufacturing District” zoning classification does not specifically mention transfer stations as a permissible use. Transfer Stations are not subject to zoning, but where they are present, they tend to be located in the most intensive industrial district of the community where that are located. In the City of West Chicago, the M, “Manufacturing District” is the most intensive industrial area where a transfer station can be developed.

Our examination of sales in the study area allows us to conclude that improved properties, with general industrial applications, sell at prices above that paid for vacant land. The data further indicates that special use properties that require a substantial effort for permitting or are sensitive to zoning considerations generally transfer between buyers and sellers who are in the same or related industries. These transfers typically reflect the “value in use” for the buyer. My search of data allowed me to conclude that the highest price paid for properties like the subject is achieved when the “special use” real estate (property that is unique in style, design, use or zoning) is compatible with the surrounding applications, is located with good access to transportation amenities and involves parties that are in similar industries. The current uses in the study area and the proposed West DuPage Recycling and Transfer Station meet the above referenced criterion. The intended use of the subject property for the development of the West DuPage Recycling and Transfer Station, therefore, is considered to be the maximally productive use of the subject property.

SUMMARY

Based on the examination of the above referenced tests and the factors presented, the Highest and Best Use of the subject site is for the development of the West DuPage Recycling and Transfer Station in accordance with the CEC Drawings. This development, as the Highest and Best Use of the property, will have the most positive impact on the surrounding property values and will not have a negative impact on the value of real estate in the subject area.

3.7 CONCLUSIONS

Based on the above information, APC concludes that the proposed development of the subject site, with the West DuPage Recycling and Transfer Station, meets the criteria set forth in the Illinois Environmental Protection Act, 415 ILCS 5/39.2 (a) (iii), commonly referred to as "Criterion 3" and that the facility is "located so as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of the surrounding property". This conclusion is supported by the following.

- The subject property is located in an area of historic and current industrial use and development.
- The industrial area within which the subject site is located has man-made boundaries that isolate and buffer the area. This effectively minimizes any influences the uses in this industrial area (including the proposed development of the West DuPage Recycling and Transfer Station) have on properties located outside of the area. It is noteworthy that the railroad right of way, located adjacent to the eastern boundary of the property, has an elevation approximately 10 feet greater than the adjacent Kress Creek which will further isolate the proposed West DuPage Recycling and Transfer station from adjacent properties.
- The location of the subject property has sufficient access to primary roadways of West North Avenue (Illinois Route 64) West Hawthorne Lane, Illinois Route 59, Kirk Road, Roosevelt Road (Illinois Route 38) and Interstate 355 to accommodate the development of the West DuPage Recycling and Transfer Station.
- Historical and current industrial activity in the area includes a large percentage of waste management and material handling uses that are similar to the intended use of the subject property. The proposed use is very consistent with the existing uses in the area.
- Both the City of West Chicago and DuPage County encourage development to occur in consistent and defined areas and the proposed use is consistent with zoning classifications in the area.
- Because the proposed use is consistent with and conforms to the current and planned uses in the subject area, the impact the proposed use will have on adjacent and nearby property values is minimized.
- The physical characteristics of the subject property, in the existing configuration and condition, are an underutilization of the property because the improvements require upgrading to extend their useful life. The intended development, with the West DuPage Recycling and Transfer Station, will include significant infrastructure and improvements that will be an enhancement to the property.
- The infrastructure improvements to the subject site will result in secondary improvements to nearby properties (e.g., improved storm water management and Powis Road improvements) and will improve the subject area.
- Market data demonstrates that users in the study area tend to be long term occupants of properties. The proposed use will ensure a long-term stable use of this property.
- Development with the proposed West DuPage Recycling and Transfer Station is the Highest and Best Use of the subject property, as improved.
- Development of property in accordance with its Highest and Best Use has the most positive impact on surrounding property values and minimizes the effect on the value of surrounding property.

3.8 CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions and are my personal, impartial, and unbiased professional analyses, opinions and conclusions.
- I have no present or prospective interest in the property that is the subject of this report and I have no personal interest with respect to the parties involved.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.
- I, Dale J. Kleszynski, MAI, SRA, have made a personal inspection of the property that is the subject of this report.
- I, Patrick A. Kleszynski, MAI, provided significant appraisal assistance.
- No one provided significant real property appraisal assistance to the person signing this certification.
- As of the date of this report, I (Dale J. Kleszynski, MAI, SRA) have completed the continuing education program for Designated Members of the Appraisal Institute.
- As of the date of this report, I (Patrick A. Kleszynski, MAI) have completed the continuing education program for Designated Members of the Appraisal Institute.
- Other than ongoing work associated with this assignment, we have not completed an appraisal or analysis of the subject property during the past three years.

Respectfully submitted,

3.9 UNDERLYING ASSUMPTIONS AND LIMITING CONDITIONS

1. By this notice, all persons and firms reviewing, using or relying on this report in any manner bind themselves to accept these assumptions and limiting conditions. **Do not use this report if you do not accept these assumptions and limiting conditions**. These conditions are a preface to any certification, definition, fact or analysis, and are intended to establish as a matter of record that the consultant's function is to provide an opinion based on the appraiser's/consultant's observations of the subject property and real estate market as of a certain date. As the property and conclusions may be impacted by the passage of time due to various factors including, by way of description and not limitation: physical changes, economic changes and/or market activity, the opinions are considered to be reliable as of the date of the assignment. Subsequent to that date, the appraiser(s)/consultant(s) reserve the right to amend the analysis and/or conclusion in light of such changed conditions. This appraisal/consulting assignment and report are not an engineering, construction, legal or architectural study or survey and expertise in these areas is not implied.

2. The liability of Associated Property Counselors, Ltd., its officers, employees, contractors, and associate appraisers/consultants (hereinafter referred to collectively as "APC") is limited to the identified client. There is no accountability, obligation, or liability to any third party except if otherwise specifically stated within the report. APC's maximum liability relating to services rendered under this assignment (regardless of form of action, whether in contract, negligence or otherwise) shall be limited to the charges paid to APC for the portion of its services or work products giving rise to liability. In no event shall APC be liable for any consequential, special, incidental or punitive loss, damage or expense (including without limitation, lost profits, opportunity costs, etc.) even if advised of their possible existence. If this report is placed in the hands of anyone other than the client, the client shall make such party aware of all limiting conditions and assumptions of the assignment and related discussions. The appraisers/consultants are in no way responsible for any costs incurred to discover or correct any deficiency in the property. In the case of limited partnerships or syndication offerings or stock offerings in real estate, the client agrees that in case of lawsuit (brought by lender, partner, or part owner in any form of ownership, tenant, or any other party), the client will defend and hold Associated Property Counselors, Ltd., its officers, employees and associate appraisers/consultants completely harmless. Acceptance of and/or use of this report by the client or any third party is prima facie evidence that the user understands and agrees to these conditions.

3. The user/client agrees that any dispute arising from the completion of this assignment shall be settled through mediation and/or arbitration.

4. The report is intended to comply with the reporting requirements set forth in the Uniform Standards of Professional Appraisal Practice and it may or may not include discussions of the data, reasoning, and analysis used in the process of developing the appraiser's/consultant's opinion. The extent of the discussion and analysis applicable is based on the scope of work and report option outlined in the letter of transmittal and report. In some instances supporting documentation data, reasoning, and analyses is retained in the appraiser's file and/or office. The information contained in the report is specific to the needs of the client and for the intended use stated in the report. The appraiser/consultant is not responsible for unauthorized use of the report.

5. Unless otherwise specifically stated in the report, the assignment is based on the following assumptions: (a) that there is full compliance with all applicable federal, state and local environmental regulations and laws; (b) that all zoning, building, use regulations and restrictions of all types have been complied with; and (c) that all licenses, consents, permits, or other documentation required by any relevant legislative or administrative authority, local, state, federal and/or private entity or organization for any use considered in the value estimate have been or can be obtained or renewed.

6. As far as possible, the appraisers/consultants have inspected the property by personal observation. It is not, however, possible to observe conditions beneath the soil or hidden structural components. In this assignment it is assumed that the existing soil has the proper load bearing qualities to support the existing or proposed improvements where they exist or where they are proposed to exist. In this assignment no investigation of the potential for seismic hazard in the subject area was made. In this assignment mechanical components within the improvements were not critically inspected and no representations are made as to these matters unless specifically stated and considered in this report. In this assignment it is assumed that there are no conditions of the property site, subsoil, or structures, whether latent, patent or concealed, which would render it less valuable.

7. Unless otherwise stated within the report, no title evidence pertaining to easements, leases, reservations or other parties-in-interest was furnished.

8. In valuation assignments the property is appraised in fee simple estate unless otherwise noted.

9. In valuation assignments, the appraisal/consulting agreement assumes responsible ownership and competent management.

10. In this assignment it is assumed that the title of the property is good and merchantable. No responsibility is assumed for matters that are legal in nature, nor is any opinion of the state of the title to the property rendered herewith. A survey was not provided to the appraiser/consultant unless specifically stated in this report.

11. All data provided by the client or researched from public records is deemed reliable. If any errors are found that could have a material impact on the conclusion, APC reserves the right to recall this report and amend the analysis and/or conclusions. No guarantee is made for the accuracy of estimates or opinions furnished by others and contained in this report.

12. No liability is assumed for matters of legal character affecting the property, including by way of description and not limitation: title defects, encroachments, liens, overlapping lines.

13. Any liens or encumbrances that may now exist have been disregarded. In valuation assignments property is appraised as though free of indebtedness and as though no delinquency in payment of general taxes and special assessments exist.

14. In valuation or consulting assignments, any value assigned to improvements is in proportion to the contribution said improvements make to the value of the property as a whole.

15. Compensation for appraisal/consulting services is dependent only upon the delivery of the report.

16. In valuation or consulting assignments, the value found by the appraiser/consultant is in no way contingent upon the compensation to be paid or the appraisal services.

17. The assignment is completed in compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) and the Code of Ethics of the Appraisal Institute.

18. In the event that the subject property enters into condemnation proceedings, it is assumed the appraiser/consultant will be given additional time for court preparation.

19. No portion of this report may be published or reproduced without the prior written consent of the appraiser/consultant and APC.

20. Unless specifically stated otherwise within the report, no earthquake compliance report, engineering report, flood zone analysis, hazardous waste or asbestos analysis was made, provided or ordered in conjunction with this assignment. The client is strongly urged to retain experts in these fields, if so desired.

21. In valuation assignments involving apartments, attempts were made to inspect a representative sample of the total number of units. In these assignments it is assumed that the condition and finish of all units is similar to the condition and finish of the inspected units. If it is determined that units not inspected differ from those inspected units in either condition or finish, the appraiser/consultant reserves the right to recall the appraisal to amend the analysis and/or conclusion.

22. Appraisal or consulting assignments involving less than the whole fee simple estate are subject to the following additional limitation: “The value reported for such estates relates to a fractional interest only in the real estate involved and the value of the fractional interest plus the value of all other fractional interests may or may not equal the value of the entire fee simple estate considered as a whole.”

23. Appraisal or consulting assignments that relate to geographical portions of a large parcel or tract of real estate are subject to the following additional limitation: “The value reported for such geographical portion relates to such portion only and should not be construed as applying with equal validity to other portions of the larger parcel or tract. The value reported for such geographical portion plus the value of all other geographical portions may or may not equal the value of the entire parcel or tract considered as an entity.”

24. The appraiser/consultant assumes that a any purchaser of the property that is the subject of this report is aware that (1) an appraisal of the subject property does not serve as a warranty of the condition of the property, (2) it is the responsibility of the purchaser to examine the property carefully and to take all necessary precautions before signing a purchase contract, and (3) any estimate for repairs is a non-warranted opinion of the appraiser/consultant unless otherwise stated.

25. Assignments prepared based upon provided plans and specifications are based on the assumption that the project is completed in a workmanlike manner in compliance with the plans and specifications. In prospective value assignments, it is understood and agreed that the appraiser/consultant cannot be held responsible for unforeseen events that impact the value or any conclusion presented. The user of the report and client agree that unforeseeable events may alter market conditions prior to completion of the project. The user and client agree the appraiser has the right to amend the report and conclusions in light of the identified changes.

26. In assignments where a Discounted Cash Flow Analysis is used as an analytical tool the user and client understand that the analysis has been prepared on the basis of information and assumptions identified in this report. The user/client understand that the achievement of any financial projections will be affected by fluctuating economic conditions and the conclusion is dependent upon the occurrence of other future events that cannot be assured Therefore, the actual results achieved may vary from the projections made and such variation may be material. The client agrees to allow the appraiser to revise the conclusion and report in light of these changes.

27. Prior to entering into an agreement to perform any assignment, an appraiser/consultant must carefully consider the knowledge and experience that will be required to complete the assignment competently; disclose any lack of specific knowledge or experience to the client; and take all steps necessary or appropriate to complete the assignment competently. The appraisers/consultants have both the knowledge and experience required to complete this assignment competently.

28. The appraisers/consultants have inspected the subject property with the due diligence expected of a professional real estate appraiser. The appraisers/consultants are not qualified to detect hazardous waste and/or toxic materials. Any comment by the appraisers/consultants that might suggest the possibility of the presence of hazardous waste and/or toxic materials are subject to review by a qualified expert in the field. The user/client agree that the appraiser/consultant has the right to amend the assignment, report and conclusion after an investigation by a qualified expert in the field of environmental assessment is completed.

29. The user/client understands that the presence of substances such as asbestos, urea formaldehyde foam insulation, or other hazardous substances or environmental conditions, may affect the property and the conclusions presented. The appraiser's/consultant's opinion and conclusions are predicated on the assumption that there is no such condition on, in or near the property that could cause a loss in value or an extension of the marketing time. The user/client agree to allow the appraiser/consultant to review and amend the analysis, report and conclusions if the referenced substances or others exist on the property.

30. No responsibility is assumed for any environmental conditions, or for any expertise or engineering knowledge required to discover them. The appraiser's/consultant's descriptions and resulting comments are the result of routine observations made during the appraisal process. The client is urged to retain an expert in this field, if so desired.

31. The Americans with Disabilities Act (ADA) became effective January 26, 1992. No specific compliance survey and analysis of this property have been made to determine whether or not it is in conformity with the various detailed requirements of the ADA. It is possible that a compliance survey of the property, together with a detailed analysis of the requirements of the ADA could reveal that the property is not in compliance with one or more requirements of the Act. The user/client understands that, this fact could have an effect on the property and conclusions presented. In this assignment the possibility of non-compliance with the requirements of ADA was not considered. The user/client agree that the appraiser/consultant has the right to amend the assignment, report and conclusion after an investigation by a qualified expert in the field is completed.

3.10 STATEMENT OF PROFESSIONAL QUALIFICATIONS

DALE J. KLESZYNSKI, MAI, SRA

Dale J. Kleszynski, MAI, SRA, is president and principal shareholder of Associated Property Counselors, Ltd. He has served as an expert witness in various areas of litigation and arbitration practice including zoning issues and disputes, legal malpractice, appraisal malpractice, dispute management, mediation, appraisal methodology, damages and eminent domain matters. As part of his service, he has prepared use impact studies, highest and best use studies, feasibility studies, cost estimates, estimates of just compensation, leasehold interests and leased fee interests. In addition to the above services, he has provided documented appraisals for financial institutions, corporations, developers, municipalities, governmental agencies, law firms, school districts and private individuals. Appraisal, arbitration and consulting assignments have been completed on a regional and nationwide basis.

Mr. Kleszynski has taught numerous appraisal and USPAP courses for professional organizations and specialized groups and he served as part of the development team that authored courses for the Appraisal Institute. He serves as a qualified instructor for the Appraisal Institute and is a certified USPAP instructor for the Appraisal Foundation. During the past 25 years, he has served on numerous national and local committees for the State of Illinois and the Appraisal Institute. Mr. Kleszynski is licensed and certified to complete appraisal and consulting assignments in the states of Illinois, Indiana, and Michigan.

Educational Background

Loyola University of Chicago, Bachelor of Arts, 1971

Completed all educational, admissions, demonstration report and comprehensive examination requirements to be awarded the MAI and SRA designations by the Appraisal Institute

Currently certified under the Appraisal Institute Continuing Education Program

Currently certified under the Continuing Education Requirements of the State of Illinois

Currently certified under the Continuing Education Requirements of the State of Indiana

Currently certified under the Continuing Education Requirements of the State of Michigan

STATEMENT OF PROFESSIONAL QUALIFICATIONS

DALE J. KLESZYNSKI, MAI, SRA

Professional Designations and Certification

Member of the Appraisal Institute - MAI No. 6747
Senior Residential Appraiser - SRA

STATEMENT OF PROFESSIONAL QUALIFICATIONS

PATRICK A. KLESZYNSKI, MAI

Patrick A. Kleszynski, MAI joined Associated Property Counselors, Ltd. in 2008. After completing both qualifying and continuing education coursework, professional experience requirements and examinations, he obtained his Certified General Real Estate Appraiser licensure with the state of Illinois in 2015 and the state of Indiana in 2016. In April 2016, Mr. Kleszynski received his MAI designation from the Appraisal Institute. Over the course of his career, he has provided real estate appraisal and consulting services involving a variety of residential, commercial, industrial and special purpose properties for mortgage financing, real estate tax appeal, estate planning and litigation assignments. Mr. Patrick A. Kleszynski, MAI is currently the vice president of Associated Property Counselors, Ltd. and is the firm's senior commercial staff appraiser.

EDUCATION

Illinois Wesleyan University, Bachelor of Arts, 2006

APPRAISAL COURSES

Real estate appraisal classes successfully completed through the Appraisal Institute:

- Basic Appraisal Principles
- Basic Appraisal Procedures
- 15-Hour National USPAP
- Business Practices and Ethics
- General Appraiser Income Approach (Part 1)
- General Appraiser Income Approach (Part 2)
- General Appraiser Site Valuation & Cost Approach
- General Appraiser Sales Comparison Approach
- General Appraiser Market Analysis & Highest and Best Use
- Real Estate Finance, Statistics and Valuation Modeling
- General Appraiser Report Writing and Case Studies
- Advanced Income Capitalization
- Advanced Market Analysis and Highest & Best Use
- Advanced Concepts and Case Studies

LICENSURE

Illinois State Certified General Real Estate Appraiser – License No. 553.002510
Indiana State Certified General Appraiser – License No. CG41600007
Currently certified under the Continuing Education Requirements of the State of Illinois and State of Indiana

AFFILIATIONS

MAI Designated member of the Appraisal Institute

PROFESSIONAL EXPERIENCE

Associated Property Counselors – July 2008 to Present

Responsibilities include appraising various types of real estate, both existing and proposed, including single-family homes, multi-family structures and complexes, industrial manufacturing and warehouse properties, commercial office and retail buildings, and vacant land (residential, commercial and industrial).

CRITERION 4:

“for a facility other than a sanitary landfill or waste disposal site, the facility is located outside the boundary of the 100-year floodplain or the site is flood-proofed”
415 ILCS 5/39.2(a)(iv)(A)

CRITERION 4:
FLOODPLAIN ASSESSMENT

The Illinois Environmental Protection Act, at 415 ILCS 5/39.2 (a)(vi), requires that an applicant for transfer station siting demonstrate that the proposed transfer station is located outside the boundary of the 100-year floodplain or that the site is flood proofed. This report demonstrates that the proposed Lakeshore Recycling Systems, LLC West DuPage Recycling and Transfer Station is outside the boundary of the 100-year floodplain or is flood proofed.

AUGUST 2022

4.0 FLOODPLAIN ASSESSMENT

The current Federal Emergency Management Agency flood insurance rate map (FIRM) for the area of the West DuPage Recycling and Transfer Station (West DuPage RTS) is shown on Figure 4-1. The FIRM indicates that the Kress Creek 100-year base flood encroaches on the east side of the site (noted as Special Flood Hazard Area Zone AE) as shown on Drawing C100B. Special Flood Hazard Area Zone AE is an area where the base flood elevation (BFE) has been determined. The FIRM does not indicate presence of floodway on the West DuPage RTS. The FIRM states that information in the flood insurance study (FIS) that accompanies the FIRM should be 1) consulted to obtain more detailed information regarding the BFE and/or floodways areas, and 2) used in conjunction with the FIRM for construction and/or flood plain management.

The FIS information was used to confirm the BFE and determine the associated floodplain area at the West DuPage RTS as part of the Planned Unit Development (PUD) amendment for the West DuPage RTS, which was approved by West Chicago on June 15, 2020 (see Appendix 2-B in Criterion 2). As part of the PUD amendment review process, a stormwater report (last revised in November 2019) was submitted to DuPage County to demonstrate compliance with the DuPage County Countywide Stormwater and Floodplain Ordinance. DuPage County issued Stormwater Management Certification No. SM2019-0061 to the West DuPage RTS on December 6, 2019 (see Appendix 2-F2), which approved the November 2019 stormwater report. The floodplain evaluation (Tab 3 of the November 2019 stormwater report) that was approved is provided in Appendix 2-F1. A summary of the BFE confirmation, floodplain area determination, and site improvement evaluation from the approved stormwater report is provided below.

4.0.1 BFE CONFIRMATION AND FLOODPLAIN AREA DETERMINATION

Kress Creek abuts the property on the east side of the site. The outfall from the east detention pond discharges into Kress Creek. At the location of the outfall, the Kress Creek upstream tributary area includes approximately 0.99 square miles of drainage. A copy of the United States Geological Survey StreamStats report demonstrating the approximately 0.99-square-mile drainage area is provided in Attachment 3-1 of Tab 3 of Appendix 2-F1.

A FIS was conducted on the area and was most recently updated August 1, 2019 [Flood Insurance Study for DuPage County, Illinois and Incorporated Areas, Volume 1-6, Revised August 1, 2019]. The 100-year BFE based on the current FIS is 752.40 feet mean sea level. The relevant portions of the FIS are provided in Attachment 3-3 of Tab 3 in Appendix 2-F1, which includes the overall study summary and Kress Creek model summary from Volume 1 of 6, the floodway table for Kress Creek from Volume 3 of 6, and the Kress Creek flood profiles from Volume 6 of 6.

Based on the West DuPage RTS topographic survey, the BFE only encroaches on the site in an approximately 0.05-acre area located north of the east detention pond as shown on Drawing C105 in Criterion 2. The improvements in this area are offset a minimum of 25 feet from the BFE. The rest of the west bank of Kress Creek is greater than the BFE; therefore, no additional encroachments onto the West DuPage RTS exist. Portions of the east detention pond have a lower elevation than the banks of Kress Creek; however, due to the outfall restrictor, the east detention pond is hydraulically disconnected from the creek.

4.0.2 SITE IMPROVEMENT EVALUATION

The municipal solid waste (MSW) and single-stream recyclables (SSR) transfer building will be located on the west half of the site and has a design top of foundation elevation of 756.40. The top of ramp elevations for the loading pit for the MSW and SSR building ranges from 756.00 to 756.40. The hydro excavation waste building will also be located on the west half of the site, and the elevation of the ingress/egress apron is 756.00. As shown on Drawings C200 and C201 of Criterion 2, the buildings are well outside of the mapped floodplain and, based on top of foundation elevations, are approximately 4 feet higher than the BFE.

On-site stormwater detention structures have or will be improved as discussed in Section 2.3 of Criterion 2. The detention structures are sized to manage on-site surface water from the 100-year storm, and will release the detained surface water at a rate that meets regulatory requirements. The calculated high water elevations of the east and west detention ponds are 754.16 and 754.55, respectively. The MSW and SSR transfer building and hydro excavation waste buildings are over 1.5 feet higher than the calculated high water elevations of the detention ponds.

4.0.3 SUMMARY AND CONCLUSION

Based on the above information, the proposed West DuPage RTS is outside of the 100-year floodplain or flood proofed, and therefore will not restrict the flow of a 100-year flood, nor reduce the temporary water storage capacity of any 100-year floodplain.

4.1 CERTIFICATION

I hereby certify that all information contained in this Application for Local Siting Approval for Criterion 4 was prepared by me or under my direct supervision, and is true and correct to the best of my knowledge and belief.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or flood plain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or flood plain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

In the State of Illinois, any portion of a stream or watercourse that lies within the **floodway fringe** of a studied (AE) stream may have a state regulated floodway. The FIRM may not depict these state regulated floodways.

Floodways restricted by anthropogenic features such as bridges and culverts are drawn to reflect natural conditions and may not agree with the model computed widths listed in the Floodway Data table in the Flood Insurance Study report.

Multiple **topographic sources** may have been used in the delineation of Special Flood Hazard Areas. See Flood Insurance Study report for details on source resolution and geographic extent.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.
