STATE OF ILLINOIS
COUNTY OF DUPAGE
BEFORE THE CITY OF WEST CHICAGO

In Re: THE APPLICATION OF)
LAKESHORE RECYCLING SYSTEMS, LLC,)
FOR SITING APPROVAL OF A NEW)
POLLUTION CONTROL FACILITY)

AFFIDAVIT OF COMPLIANCE WITH 415 ILCS 5/39.2(d)

JOHN E. HOCK, being first duly sworn on oath, deposes and states as follows:

1. I am a professional engineer licensed to practice in the State of Illinois and am employed by Civil & Environmental Consultants, Inc., (CEC) as part of their office located at 1230 East Diehl Road, Suite 200, Naperville, Illinois, 60563.

2. I am CEC's principal for the preparation of the local siting application for the West DuPage Recycling and Transfer Station and it was my responsibility to prepare, publish and serve pre-hearing notices as required in 415 ILCS 5/39.2(d).

3. 415 ILCS 5/39.2(d) requires that no later than 14 days prior to such hearing, notice shall be published in a newspaper of general circulation published in the county of the proposed site, and delivered by certified mail to all members of the General Assembly from the district in which the proposed site is located, to the governing authority of every municipality contiguous to the proposed site or contiguous to the municipality in which the proposed site is to be located, to the county board of the county where the proposed site is to be located, if the proposed site is located within the boundaries of a municipality, and to the Agency.

4. The Notice prepared and served in connection with the aforesaid requirement is attached hereto and made a part hereof as Exhibit A. Said Notice conforms to the requirements of Section 415 ILCS 5/39.2(d).

EXHIBIT
tabbies
2

5. I caused a copy of the Notice to be published in the Daily Herald, a newspaper of general circulation in the county in which the application is pending on December 15, 2022. A copy of the actual publication and proof of publication is attached hereto and made a part hereof as Exhibit B.

6. Attached hereto and made a part hereof as Exhibit C is the list of all public officials and entities which were provided notice of the siting hearing herein, said list including all members of the General Assembly from the legislative district in which the proposed site is located, the governing authority of every municipality contiguous to the proposed site, the governing body of DuPage County and the Environmental Protection Agency. I identified the names and address of all members of the General Assembly from the legislative district in which the proposed facility is located by using information publically maintained and available on the Illinois General Assembly internet website www.ilga.gov. Some entities entitled to notice were sent an additional notice at a secondary address.

7. On December 12, 2022, certified mail notice was sent to all of the public officials and entities identified in Exhibit C. Attached hereto and made a part hereof as Exhibit D are the certified mail receipts issued by the U.S. Postal Service. Attached hereto and made a part hereof as Exhibit E are the signed returns from the recipients (green cards).

8. All of the foregoing complies fully and completely with the pre-hearing notice requirements of 415 ILCS 5/39.2(d).

FURTHER AFFIANT SAYETH NOT.

JOHN E. HOCK

Sworn to and subscribed before me
this 30th day of December 2022.

WEST DUPAGE RTS NOTICE OF PUBLIC HEARING

NOTICE OF PUBLIC HEARING ON THE REQUEST FOR APPROVAL OF A SITE FOR A NEW POLLUTION CONTROL FACILITY FOR A WASTE TRANSFER STATION

PLEASE TAKE NOTICE that on the 16th day of September, 2022, an application for siting approval for a "pollution control facility" (as defined by Section 3.330 of the Illinois Environmental Protection Act) consisting of a waste "transfer station" (as defined by Section 3.500 of the Illinois Environmental Protection Act) was filed with the City of West Chicago, Illinois Clerk by Lakeshore Recycling Systems, LLC ("LRS"). The transfer station shall be referred to in this notice as the "Transfer Station".

- **PLEASE TAKE FURTHER NOTICE THAT A PUBLIC HEARING WILL BE HELD** regarding said application beginning at 6:00 p.m. on the 3rd day of January, 2023, at Wheaton Academy, 900 Prince Crossing Rd., West Chicago, Il. 60185. Illinois. The public hearing, if not completed on January 3rd, shall resume on January 4th, 2023 at 6:00 p.m., and if further hearings are necessary, on January 5th, January 10th and January 12th, 2023, all at 6:00 p.m. All hearings will continue to be held at Wheaton Academy except the hearing scheduled for January 12, if necessary, which shall be held at West Chicago Community High School, 326 Joliet St., West Chicago, Il. 60185. Additional hearing dates shall be scheduled and conducted as needed and will be announced at the close of each hearing day until the hearing is complete as determined by the Hearing Officer appointed to preside over this matter.

MEMBERS OF THE PUBLIC MAY SPEAK AND PRESENT THEIR COMMENTS AT THE PUBLIC HEARING AND/OR DO SO IN WRITING. THOSE WISHING TO OFFER ORAL PUBLIC COMMENT MUST FILE A NOTICE WITH THE CITY CLERK PRIOR TO THE PUBLIC HEARING OR REGISTER WITH THE HEARING OFFICER ON THE FIRST DAY OF THE PUBLIC HEARING. HOWEVER, IN ORDER TO PARTICIPATE AS A PARTY IN THE HEARING WITH THE RIGHT TO, AMONG OTHER THINGS, BE REPRESENTED BY AN ATTORNEY, OFFER EVIDENCE AND PRESENT WITNESSES, A PERSON MUST FILE AN APPEARANCE AS A PUBLIC PARTICIPANT WITH THE CITY CLERK AT LEAST TEN (10) DAYS PRIOR TO THE PUBLIC HEARING. THE PARTICIPATION REQUIREMENTS ARE SPECIFIED IN THE CITY SITING ORDINANCE. A COPY OF THE CITY SITING ORDINANCE MAY BE OBTAINED FROM THE CITY CLERK. SEE **POLLUTION CONTROL FACILITY SITE APPROVAL PROCEDURES,** ARTICLE VII, SECTIONS 14-94 AND 14-95.

Some pertinent details of the application for the Transfer Station are as follows:

Name and Address of Applicants:	Lakeshore Recycling Systems, LLC, 5500 Pearl St., Rosemont, Il. 60018

Transfer Station Location:	West DuPage Recycling and Transfer Station, 1655 Powis Road, West Chicago, DuPage County, Illinois, 60185.
Nature of Activity:	The proposed facility would be a non-hazardous solid waste transfer station which will accept non-hazardous waste, for temporary storage, sorting, solidification and consolidation, and further transfer to a waste disposal/treatment facility. The Applicant will develop and operate the transfer station only as approved by the Illinois Environmental Protection Agency, other applicable regulatory agencies, and as authorized by applicable statutes and regulations. The waste accepted for transfer will be general municipal solid waste, Hydro Excavation waste, recyclables and construction or demolition debris generated by residential, commercial and industrial sources. The facility proposes to handle a maximum of 1950 tons per day of material, of which no more than 650 tons per day will be municipal solid waste, no more than 300 tons per day will be hydro excavation waste, no more than 750 tons per day will be construction or demolition debris, and no more than 250 tons per day will be single stream recyclables. The facility will not accept hazardous waste.
Probable Life of the Proposed Activity:	Twenty years to Indefinite.

PLEASE TAKE FURTHER NOTICE that copies of the siting application and public record are available for review by the public in the West Chicago City Clerk's office, located at 475 W. Main St., West Chicago, Illinois, 60185. Copies of the siting application and any public record will be available for copying at the City Clerk's Office upon payment of the cost and fees requested by the City for such reproduction which are not inconsistent with Illinois law.

This **NOTICE** is prepared, served and published pursuant to 415 ILCS 5/39.2(d). Dated this 12th day of December, 2022.

DAILY HERALD CERTIFICATION

NOTICE OF PUBLIC HEARING ON THE REQUEST FOR APPROVAL OF A SITE FOR A NEW POLLUTION CONTROL FACILITY FOR A WASTE TRANSFER STATION

PLEASE TAKE NOTICE that on the 16th day of September, 2022, an application for siting approval for a "pollution control facility" (as defined by Section 3.330 of the Illinois Environmental Protection Act) consisting of a waste "transfer station" (as defined by Section 3.500 of the Illinois Environmental Protection Act) was filed with the City of West Chicago, Illinois Clerk by Lakeshore Recycling Systems, LLC ("LRS"). The transfer station shall be referred to in this notice as the "Transfer Station".

PLEASE TAKE FURTHER NOTICE THAT A PUBLIC HEARING WILL BE HELD regarding said application beginning at 6:00 p.m. on the 3rd day of January, 2023, at Wheaton Academy, 900 Prince Crossing Rd., West Chicago, IL 60185. Illinois. The public hearing, if not completed on January 3rd, shall resume on January 4th, 2023 at 6:00 p.m., and if further hearings are necessary, on January 5th, January 10th and January 12th, 2023, all at 6:00 p.m. All hearings will continue to be held at Wheaton Academy except the hearing scheduled for January 12, if necessary, which shall be held at West Chicago Community High School, 326 Joliet St., West Chicago, IL 60185 Additional hearing dates shall be scheduled and conducted as needed and will be announced at the close of each hearing day until the hearing is complete as determined by the Hearing Officer appointed to preside over this matter.

MEMBERS OF THE PUBLIC MAY SPEAK AND PRESENT THEIR COMMENTS AT THE PUBLIC HEARING AND/OR DO SO IN WRITING. THOSE WISHING TO OFFER ORAL PUBLIC COMMENT MUST FILE A NOTICE WITH THE CITY CLERK PRIOR TO THE PUBLIC HEARING OR REGISTER WITH THE HEARING OFFICER ON THE FIRST DAY OF THE PUBLIC HEARING. HOWEVER, IN ORDER TO PARTICIPATE AS A PARTY IN THE HEARING WITH THE RIGHT TO, AMONG OTHER THINGS, BE REPRESENTED BY AN ATTORNEY, OFFER EVIDENCE AND PRESENT WITNESSES, A PERSON MUST FILE AN APPEARANCE AS A PUBLIC PARTICIPANT WITH THE CITY CLERK AT LEAST TEN (10) DAYS PRIOR TO THE PUBLIC HEARING. THE PARTICIPATION REQUIREMENTS ARE SPECIFIED IN THE CITY SITING ORDINANCE. A COPY OF THE CITY SITING ORDINANCE MAY BE OBTAINED FROM THE CITY CLERK. SEE POLLUTION CONTROL FACILITY SITE APPROVAL PROCEDURES, ARTICLE VII, SECTIONS 14-94 AND 14-95.

Some pertinent details of the application for the Transfer Station are as follows:

Name and Address of Applicants: Lakeshore Recycling Systems, LLC 5500 Pearl St., Rosemont, IL 60018

Transfer Station Location: West DuPage Recycling and Transfer Station, 1655 Powis Road, West Chicago, DuPage County, Illinois, 60185.

Nature of Activity: The proposed facility would be a non-hazardous solid waste transfer station which will accept non-hazardous waste, for temporary storage, sorting, solidification and consolidation, and further transfer to a waste disposal/treatment facility. The Applicant will develop and operate the transfer station only as approved by the Illinois Environmental Protection Agency, other applicable regulatory agencies, and as authorized by applicable statutes and regulations. The waste accepted for transfer will be general municipal solid waste, Hydro Excavation waste, recyclables and construction or demolition debris generated by residential, commercial and industrial sources. The facility proposes to handle a maximum of 1950 tons per day of material, of which no more than 650 tons per day will be municipal solid waste, no more than 300 tons per day will be hydro excavation waste, no more than 750 tons per day will be construction or demolition debris, and no more than 250 tons per day will be single stream recyclables. The facility will not accept hazardous waste.

Probable Life of the Proposed Activity: Twenty years to Indefinite.

PLEASE TAKE FURTHER NOTICE that copies of the siting application and public record are available for review by the public in the West Chicago City Clerk's office, located at 475 W. Main St., West Chicago, Illinois, 60185. Copies of the siting application and any public record will be available for copying at the City Clerk's Office upon payment of the cost and fees requested by the City for such reproduction which are not inconsistent with Illinois law.

This NOTICE is prepared, served and published pursuant to 415 ILCS 5/39.2(d). Dated this 12th day of December, 2022.

John E. Hock, P.E.

Vice President

35 YEARS EXPERIENCE

EDUCATION

B.S., Chemical Engineering, The Ohio State University, 1987

EXPERTISE

Municipal solid waste transfer stations and material recovery facilities

REGISTRATIONS

Professional Engineer

- IL 062-047623
- OH E-62132
- MO 2010015702
- KS 22267
- IN PE11200176
- OK 25661

Mr. Hock has more than 35 years of experience with environmental issues at solid waste, CERCLA, RCRA, and voluntary action sites from both the private industry and consulting perspectives.

Mr. Hock spent over 11 years of his career working for large and mid-size solid waste hauling and disposal companies as a site and region engineer throughout the Midwest. In this role, he developed an expertise in directing complex environmental projects at solid waste disposal sites, including issues related to environmental monitoring, minor and major permit modifications, compliance systems, landfill development, landfill gas systems, leachate treatment plant development, wetland mitigation, and closure activities.

Mr. Hock also served as a senior project manager in the environmental group of a major corporation. In this role, he managed multiple remedial projects under CERCLA, RCRA, NRC and property transfer regulations. The main projects involved Corrective Action Programs for two active manufacturing facilities, investigation of a low-level radioactive disposal site, and O&M of multiple Superfund Sites. Other projects involved steering committee participation, pump and treat systems, deep injection well abandonment, river/ creek remediation, insurance carrier litigation, third party damage claims, allocation arguments and PRP negotiations.

At CEC, Mr. Hock has managed or led a wide variety of solid waste and environmental projects for small family run companies to mid-size independent companies to large publicly traded companies in multiple States.. He has developed an expertise in the feasibility evaluation, due diligence, local siting, permitting, design and construction support of municipal solid waste (MSW) transfer stations and material recovery facilities. He has also provided expert witness testimony on multiple projects.

PROJECT EXPERIENCE

Transfer Station Development, Henry, IL

Principal for the local siting, permitting, and design of an approximately 3,000 ton per day barge to truck municipal solid waste transfer station, including providing expert witness testimony at the local siting hearing.

Transfer Station Development, Chicago, IL

Principal for the permitting of an approximately 2,400 ton per day municipal solid waste transfer station, construction and demolition debris (C&D) recycling facility and recyclables processing facility including providing a presentation at the public meeting.

EXHIBIT tabbies 1-3

Civil & Environmental Consultants, Inc.

John E. Hock, P.E.

Vice President

Due Diligence, LJP Enterprises, Inc., Mankato, MN
Principal for pre-sale due diligence services on behalf of the seller for multiple facilities including a contract operated MSW landfill, MSW transfer stations, a recycling center, a maintenance shop and corporate offices.

Due Diligence for MSW Landfill and Transfer Stations, Multiple Locations, MN and IL
Led the engineering and environmental due diligence of an MSW landfill, and multiple MSW transfer stations and hauling companies including determining permit transfer requirements and evaluating compliance issues.

Due Diligence for MSW Landfill, MI
Led the engineering and environmental due diligence of an MSW landfill including determining permit transfer requirements; evaluating compliance issues; and preparing going forward cost estimates for cell development, site development, closure and post closure.

Due Diligence for MSW Landfill, Atkinson, IL
Led the engineering and environmental due diligence of an MSW landfill including determining permit transfer requirements; evaluating compliance issues and negotiating the transfer of a consent order; meeting with USACE representatives and evaluating wetland issues; preparing going forward cost estimates for cell development, site development, closure and post closure; and negotiating certain provisions of the purchase agreement.

Transfer Station Development, Rockdale, IL
Principal for the local siting, permitting, and design of an approximately 600 ton per day municipal solid waste transfer station, including providing expert witness testimony at the local siting hearing.

Transfer Station Development, Virden, IL
Principal for local siting, permitting, design and construction of a 400 ton per day municipal solid waste and source separated recyclables transfer station, including providing expert witness testimony at the local siting hearing.

Transfer Station and Material Recovery Facilities, Northern IL
Principal for due diligence, permitting, environmental investigation, compliance support, and/or design services at six MSW and/ or C&D transfer and material recovery facilities for multiple years.

Transfer Station Design and Construction, Newark, NJ
Principal for the design and construction of an approximately 2,000 ton per day truck to rail transfer station.

Transfer Station Due Diligence and Design, Chicago Heights, IL
Principal for the due diligence and storm water design for a municipal solid waste transfer station.

Transfer Station Due Diligence and Compliance Support, Madison, WI
Principal for due diligence and ongoing compliance support for a construction or demolition debris transfer station and material recovery facility.

Transfer Station Development, Seattle, WA
Principal for the conceptual design and preliminary cost estimate to raze an existing municipal solid waste transfer station and construct a new facility in the same location.

Transfer Station Permitting, Chicago, IL
Principal for the preparation of the permit application and environmental impact report for a construction and demolition waste recycling and transfer facility.

Transfer Station Design, Bend, OR
Provided design expertise for the development of a municipal solid waste and source separated recyclable transfer station and citizen drop off area.

John E. Hock, P.E.

Vice President

Transfer Station Design, Johnston, RI
Provided design expertise for the development of a municipal solid waste transfer station, material recovery facility and citizen drop off area.

Transfer Station Permitting, Northwest OH
Managed the permitting of a new solid waste transfer station.

Environmental Investigations, IL
Principal for environmental investigations at multiple sites under the Illinois Site Remediation Program.

Landfill Expansion Permitting, Northwest OH
Managed the permitting of a solid waste landfill expansion including presenting the proposed project at the local zoning hearing and the public meeting.

Landfill Expansion Permitting, Louisville, KY
Managed the permitting of a landfill expansion that was located in a wetland, in a floodplain and within 10,000 feet of a major airport, including satisfying approximately 17 different regulatory agencies and testifying at the local zoning hearing.

Compost Facility Permitting, Elwood, IL
Prepared the permit application and testified at the local zoning hearing for a compost facility.

Landfill Liner Development, Morris, IL
Certifying engineer for the liner development of six solid waste landfill cells with a groundwater underdrain and a composite liner system.

Composite Liner and leachate Collection System, Illinois, Kentucky, Ohio and Pennsylvania
Managed the construction of over 100 acres of composite and/or double composite liner and leachate collection systems over a 10+ year period at various solid waste landfills.

Landfill Final Cover Construction, Illinois, Kentucky, Ohio and Pennsylvania
Managed the construction of over 200 acres of soil and/or composite final cover systems over a 10+ year period at various solid waste landfills.

Leachate Treatment Plant, Clarion, PA
Managed the construction of 10M gallon per year leachate treatment plant including aerobic and anaerobic treatment capabilities and an on-site stream discharge.

RCRA Closure, Elwood, IL
Managed the RCRA Closure of an approximately 20 acre drum trench area and 60 acre co-disposal landfill, and clean closure of a decant facility, container storage area and waste storage ponds.

Landfill Investigation, Calumet City, IL
Managed the HSWA investigation of two landfill areas including the exhumation/relocation of waste material, installation of a slurry wall and retro-fitting of a leachate collection system.

Landfill Gas Collection and Control System, Illinois, Kentucky, Ohio and Pennsylvania
Managed the design, construction and operation of landfill gas extraction systems in closed and active portions of various solid waste landfills. The design included evaluating the overall effectiveness of the system and the construction included replacing/reconfiguring non-functional portions. The operations involved reviewing routine monitoring information from the system and recommending action items.

Solid Waste Landfill Exhumation and Relocation, Clarion, PA
Managed the exhumation and relocation of an approximately 20 acre unlined solid waste disposal area at a solid waste landfill.

John E. Hock, P.E.
Vice President

Wetlands Enhancement, Louisville, KY
Managed the creation or enhancement of 434 acres of wetlands in four separate areas to compensate for the ability to alter and fill 178 acres of jurisdictional wetlands.

Environmental Compliance, Various
Managed environmental compliance issues at various hauling companies and transfer stations in Illinois, Kentucky, Ohio and Pennsylvania.

Stormwater Pollution Prevention Plan, North Chicago, IL
Revised the SPCC plan, Storm water Pollution Prevention Plan and Chemical Safety Contingency Plan for an approximately 300,000 square foot custom chemical blending and packaging facility with approximately 800,000 gallons of tank storage.

Manufacturing and Distribution Facility Environmental Programs, IL
Assessed the current environmental programs with regard to applicable federal, state, and local regulations (including the revised SPCC regulations) at an approximately 500,000 square foot custom printing, manufacturing, and distribution facility.

Landfill Environmental Compliance, Illinois, Ohio, and Pennsylvania
Developed and managed an environmental compliance system for non-hazardous solid waste landfills including state and local regulations, permit requirements (from air, water and land regulatory agencies) and company policies.

Landfill Environmental Compliance System, Louisville, KY
Managed an environmental compliance system at a non-hazardous solid waste landfill in Kentucky which involved landfill operations, environmental monitoring, construction in a floodplain, a wetland mitigation program, wastewater pretreatment, a landfill gas extraction system, soil bioremediation and yard waste composting.

Groundwater Extraction and Treatment System, TN
Served as the Respondent's designated Project Coordinator pursuant to an Administrative Order for a CERCLA site in Tennessee with a 300 gallon per minute groundwater extraction and treatment system.

Solid Waste Facility Environmental Audit, Nationwide
Participated in the environmental audit of several solid waste and RCRA facilities.

Radioactive Disposal Investigation and Dose Assessment, Breckenridge, MI
Performed an investigation and dose assessment pursuant to NRC regulations of a low-level radioactive disposal site in Michigan.

Manufacturing Investigation and Remediation, St. Louis, MI
Oversaw and represented the client in regulatory negotiations and at public meetings regarding a multi-agency investigation and remediation of a CERCLA site in Michigan that was contaminated by former pesticide and PBB manufacturing operations.

Mercury Processing Facility Human Health and Ecological Risk Assessment, Newark, NJ
Served as technical contact with the agencies, and coordinated the overall RI/FS activities under CERCLA, including preparation of the human health and ecological risk assessments, for a New Jersey property that was previously used as a mercury processing facility.

Chemical Manufacturing Facility Investigation/Remediation, Chattanooga, TN
Oversaw the RCRA Corrective Action Program of a chemical manufacturing facility in eastern Tennessee including the investigation/remediation of DNAPL and chlorinated organic compounds in groundwater, construction of an engineered cap and exhumation of waste disposal areas.

John E. Hock, P.E.

Vice President

Chemical Manufacturing Facility Groundwater Extraction, Memphis, TN
Oversaw the RCRA Corrective Action Program of a former chemical manufacturing facility in western Tennessee including the construction and operation of a groundwater and vapor phase extraction and treatment system, exhumation of a buried pond/buried tank car, and investigation of off-site groundwater and sediment.

Phase I Remedial Investigation, Memphis, TN
Prepared a Phase I Remedial Investigation Report for a disposal site in Tennessee, including compiling information from various sources dating back 30 years (including information regarding two other highly contaminated adjacent properties) to help define the site conditions with regard to geology, hydrogeology, existing conditions, and potential exposure pathways.

Land Farm Area Investigation, Elwood, IL
Performed a HSWA investigation of a former land farm area in Illinois.

Landfill Financial Assurance Evaluation
Performed an evaluation of the surety industry's risk in issuing financial assurance bonds guaranteeing closure and post-closure obligations for municipal solid waste landfills, including describing current national solid waste industry trends, industry practices, regulatory requirements, risk factors, bankruptcy case studies and other catastrophic events

Landfill Planning, Various
Performed various planning and budgeting services for municipal solid waste landfills including coordinating airspace/ volume study, evaluating the results, performing budget calculations, and preparing contract/construction documents

Landfill Odor Control, Various
Supported determination of odor origin, developed and managed odor control measures at a various solid waste landfills which were receiving numerous odor complaints. Measures included improving operations of landfill gas extraction system, installing additional landfill gas extraction wells and piping, applying geosysnthetic materials as intermediate cover material and using odor masking agents, tracking the effectiveness of odor control measures based on odor observations and complaints and meeting with local officials, residents and governmental agencies.

Expert Witness Testimony, Pisanelli Bice, PLLC, Coyote Springs, NV
Provided an Expert Opinion at the request of Pisanelli Bice, PLLC on behalf of Coyote Springs Investment LLC to rebut a report in the case styled, Coyote Springs Investment LLC, et al. (CSI) v. Pardee Homes of Nevada, Inc., et al. CEC rebutted the conclusions in a report that "leach fields" were present at two Comfort Stations at the Coyote Springs Golf Course in Coyote Springs, Nevada.

Expert Witness Testimony, Illinois Association of Aggregate Producers, Springfield IL, IL
Testified to the Illinois Pollution Control Board on behalf of the Illinois Association of Aggregate Producers regarding the proposed rules (35 IAC Part 1100) to establish additional technical requirements for CCDD facilities; set operating standards for uncontaminated soil fill operations; and develop standards for the maximum allowable concentrations of chemical constituents in uncontaminated soil.

Expert Witness Testimony, Thompson Coburn, LLP, Hazelwood, MO
Provided expert opinions on behalf of Defendants Environmental Operations, Inc. and Geotechnology, Inc. regarding the generation and migration of methane gas at the Hazelwood Logistics Center, the actions taken to address the generation and migration of methane gas, the approach to address the generation and migration of methane gas, and to respond to the opinions of other experts.

PROFESSIONAL AFFILIATIONS

National Waste and Recycling Association

Civil & Environmental Consultants, Inc.

West DuPage Recycling and Transfer Station Local Siting Hearing Overview and Evaluation of Criterion 1

Presented By
Civil & Environmental Consultants, Inc.

January 2023

1

John Hock, P. E.

- Over 35 years of experience in the solid waste business, both in industry and consulting
- Have been involved with the development of a variety of solid waste management facilities with an expertise in the design and permitting of transfer stations
- Was the principal engineering witness at the local siting hearing for three other transfer stations
- B.S., Chemical Engineering from the Ohio State University
- Professional Engineer in six States, including Illinois

2

EXHIBIT
tabbies
A-4

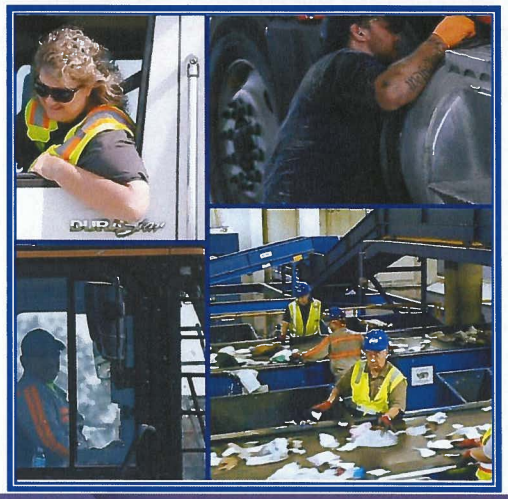
John Hock, P. E. (cont.)

- Currently Vice President of Civil & Environmental Consultants, Inc. (CEC)
- CEC has been in operation over 33 years and currently consists of about 1,250+ employees in 26 cities
- Have served as the solid waste practice lead for CEC and office lead for CEC's Naperville office
- Member of National Waste and Recycling Association

3

The Applicant – Lakeshore Recycling Systems, LLC (LRS)

- Founded over 20 years ago in Morton Grove, IL
- Began with local recycling and hauling operations
- Currently has over 2,000 employees at approx. 60 locations in the Midwest
- Employs approx. 125 personnel at West Chicago facility
- Remains privately owned



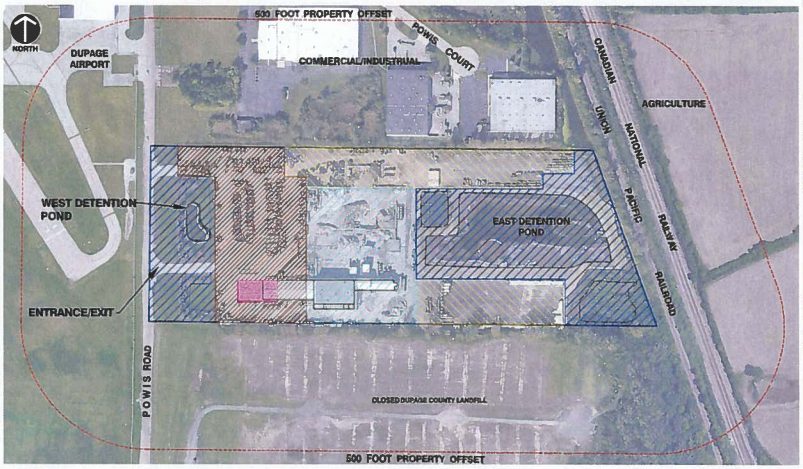
4

LRS Services

- Residential and commercial waste collection and transfer
- Construction & demolition debris (C&D) recycling
- Portable restroom services
- Street sweeping services
- Single-stream recyclable processing
- Hydro excavation waste solidification
- Solid waste disposal

5

The Site – West DuPage Recycling and Transfer Station

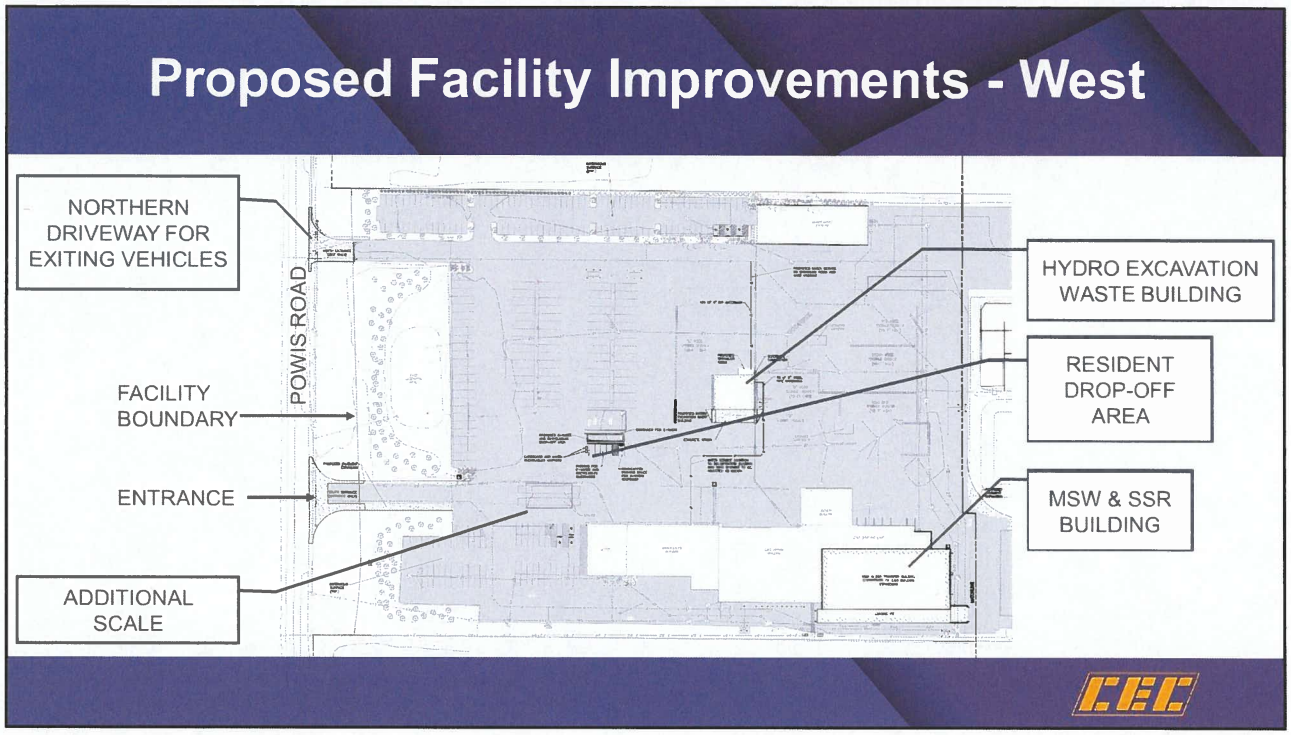


- Located on an approximately 27.66-acre parcel on the east side of Powis Road, within the corporate limits of West Chicago
- Unique facility due to its:
  - relatively large size
  - diversity of operations

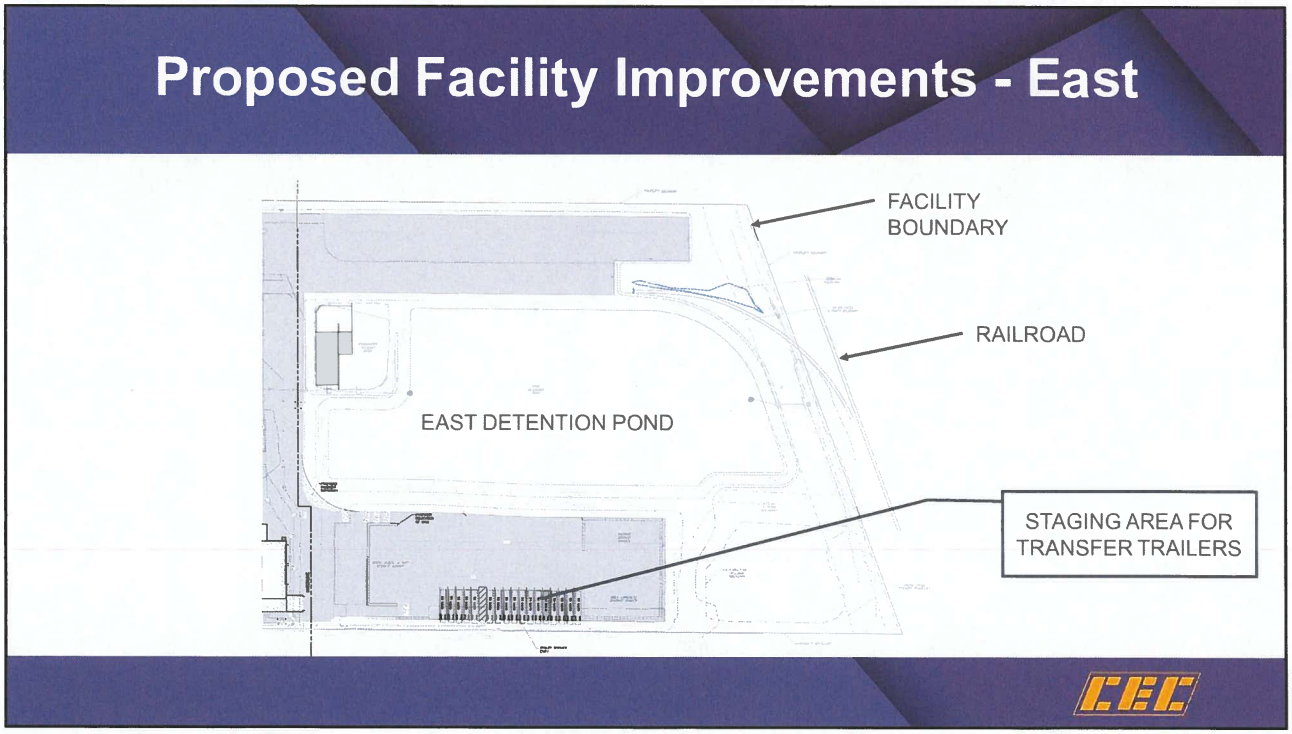
6

Existing Operations

- Recycling and transfer of C&D with 75% of incoming material recycled or re-purposed
- Parking and maintenance of vehicles
- Staging and maintenance of containers, totes, and portable restrooms
- Dispatch and customer service (call center).
- Stormwater controls and buffer



7



Proposed Facility Improvements

- Building to transfer municipal solid waste (MSW) and single-stream recyclables (SSR)
- Building for the solidification and transfer of hydro excavation wastes
- Second scale for weighing vehicles
- Improvements to northern driveway for the exiting of vehicles
- Resident drop off area for electronic wastes and recyclables
- Related infrastructure (e.g., utilities)

8

Proposed Facility Improvements - West
NORTHERN DRIVEWAY FOR EXITING VEHICLES
POWIS ROAD
FACILITY BOUNDARY
ENTRANCE
ADDITIONAL SCALE
HYDRO EXCAVATION WASTE BUILDING
RESIDENT DROP-OFF AREA
MSW & SSR BUILDING

9

Proposed Facility Improvements - East
FACILITY BOUNDARY
RAILROAD
EAST DETENTION POND
STAGING AREA FOR TRANSFER TRAILERS

10

Acceptable Materials

- Construction and Demolition Debris (C&D) - Uncontaminated materials (e.g., wood, concrete, shingles, metal) resulting from the construction, remodeling, repair, and demolition of utilities, structures, and roads
- Municipal Solid Waste (MSW) - Garbage, general household and commercial waste
- Hydro excavation wastes – "mud" created through a combination of pressurized water and air vacuum system
- Single-stream recyclables (SSR) – Various recyclables (e.g., paper, cardboard, bottles, cans) that are mixed together in a single bin/ container (e.g., from a household)

11

Hydro Excavation Waste

- Hydro excavation wastes are a solid/liquid waste created through a combination of pressurized water and air vacuum system
- Generally used for construction or maintenance services, such as trenching near utilities, potholing to expose utilities, installation of utility poles, installation of piers/footings, and clean out of storm sewers.
- The system cuts through soils/materials, breaks them up, and lifts the slurry from the excavation area into a debris tank.

12

Hydro Excavation Equipment and Applications

13

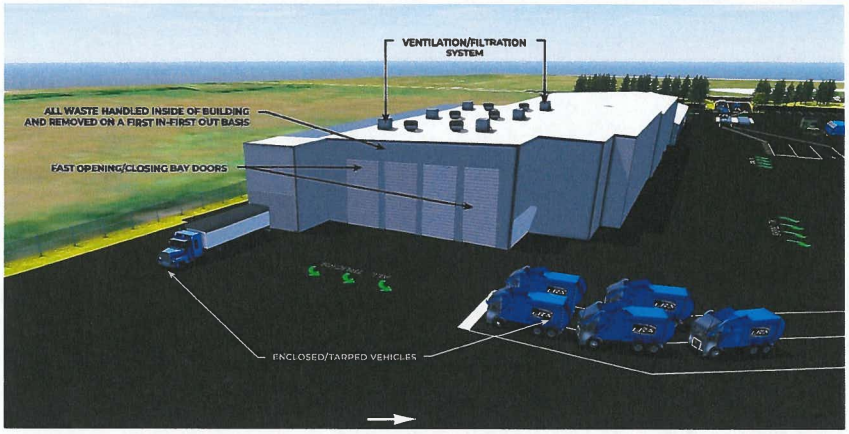
The Operation

- All existing operations would continue (e.g., C&D recycling, vehicle parking, container storage, customer service and dispatch)
- Loads of MSW from collection vehicles will be consolidated into larger loads for transport to an area landfill for disposal
  - All waste handling will occur indoors
  - Three to four incoming collection vehicles = one larger load
  - Waste on-site for a only a short time (e.g., first-in, first-out)
  - Effective controls for odors and blowing litter

14

The Operation (cont.)

- Loads of hydro excavation wastes (a.k.a. "mud") will be solidified and then transported to an area landfill for disposal
  - Absorption of excess water by solid material such as wood chips
  - Wood chips already generated by C&D recycling operations
  - Two parts hydro excavation waste + one part wood chips = Properly solidified material for landfilling
  - Well-established pre-approval, acceptance, inspection and record keeping protocols



15

The Operation (cont.)

- Electronic waste (e-waste) from local residents will be consolidated and transported to a recovery facility
- Loads of recyclables from collection vehicles (and recyclables from resident drop off area) will be consolidated into larger loads for transport to a material recovery facility (MRF), such as LRS's MRF in Forest View, for separation and re-use as a commodity

16

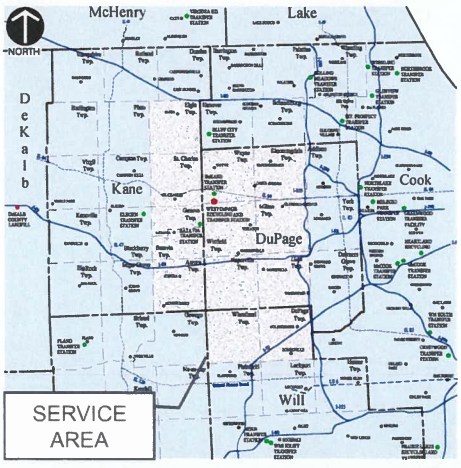
MSW and SSR Transfer Building

17

Section 39.2 of the Act : Criterion 1

- "the facility is necessary to accommodate the waste needs of the area it is intended to serve"

18



Methodology

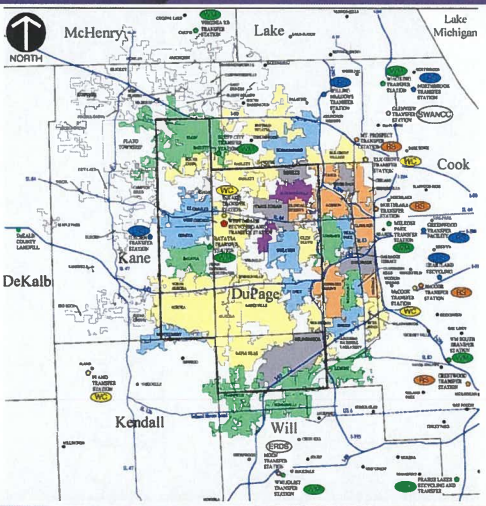
- Define West DuPage RTS Service Area
- Evaluate waste generation and disposal volume trends
- Evaluate trends in the waste disposal system
- Evaluate benefits of the West DuPage RTS

19

West DuPage RTS Service Area

- Western two thirds of DuPage County (generally west of I-355)
- Eastern portion of Kane County (generally east of the Fox River)
- Far northern portion of Will County (generally communities partially within or directly adjacent to southern boundary of DuPage County)

20



Waste Disposal System and Shortfall/ Need

- Service Area estimated to generate 2,985 tons per day as of 2020
- Estimated to increase to 3,569 tons per day by 2040
- No landfills in Service Area
- Only two active MSW transfer stations in Service Area (DuKane Transfer Station in DuPage County and Batavia Transfer Station in Kane County)
- Estimated 1,300 tons per day of MSW currently being managed by transfer stations not located in the Service Area (i.e., shortfall/ need)

21

Waste Disposal System – Companies Serving Various Municipalities

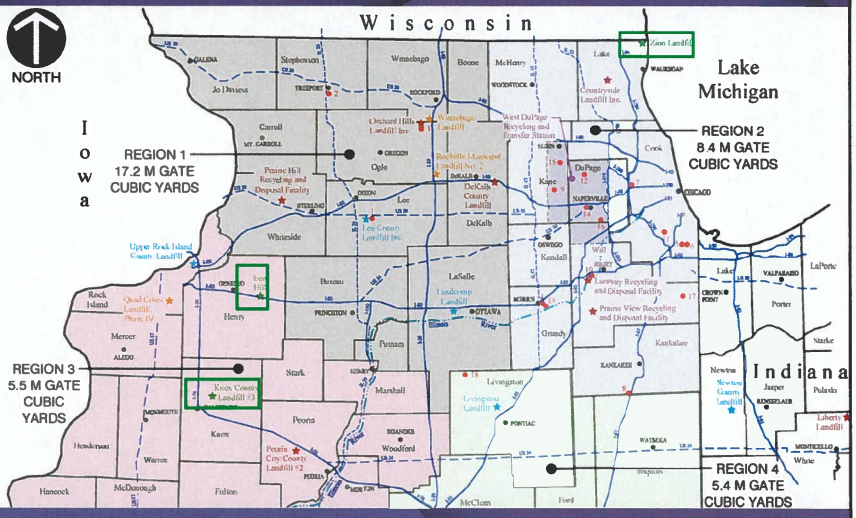
Hauling Company	Population of Municipalities Served in Service Area
Waste Connections/ Groot (WC)	552,954
Waste Management (WM)	215,022
[illegible]	151,906
Flood Brothers	136,673
Republic Services (RS)	33,176
SBC Waste Solutions	32,217

22

Trends in the Waste Disposal System – Landfills

- Decreasing number of landfills located farther from higher population areas
- Number of active landfills in Illinois decreased by nearly 40% since 1995
- Only three remaining active MSW landfills in nine county northeast Illinois region (two in Lake County and one in Will County)
- Two busiest landfills in Illinois located near Rockford

23

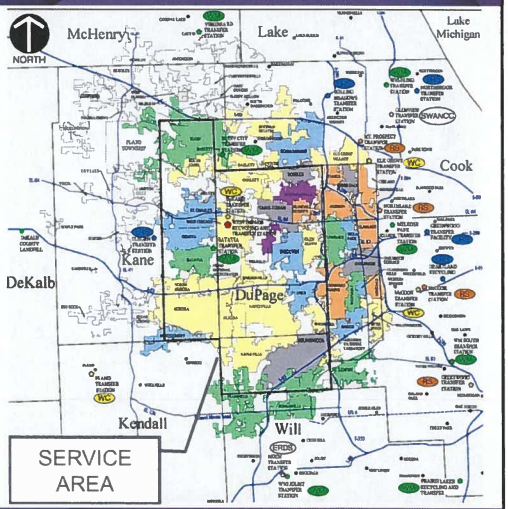


Trends in the Waste Disposal System – Transfer Stations

- Increasing number of transfer stations in or proximate to the Service Area
- In 1995, DuPage County had no transfer stations, and the only transfer stations proximate to the Service Area were one in Kane County (Elburn Transfer Station) and eight in Cook County (mostly northeast of the Service Area).
- As of 2020, fourteen additional transfer stations are permitted in or proximate to the Service Area:
  - One each in DuPage, Kane, Kendall and McHenry Counties
  - Two in Will County
  - One in Cook County north of the Service Area
  - Seven in Cook County east/southeast of the Service Area

24

Trends in the Waste Disposal System
Consolidation of Landfill Ownership



- All landfills in Illinois north of Peoria are operated by WM, WC or RS except for Zion, Knox County and Eco Hill
- The three publicly traded companies control approx. 97% of the capacity in Regions 1 and 2
- This trend has reduced competition

25

Trends in the Waste Disposal System
Consolidation of Transfer Station Ownership

- Seventeen of the twenty-three listed transfer stations in or proximate to the Service Area are operated by one of the three publicly traded companies (eight by WM, five by WC, and four by RS).
- The remaining transfer stations are operated by LRS or ERDS.
- This trend has reduced competition.

26

Trends in the Waste Disposal System – Importance of Vertical Integration

- The MSW waste disposal system in the Service Area includes:
  - Driving the collection vehicle from the parked location to the collection route
  - Collecting the waste from the generation location (e.g., homes, businesses)
  - Driving the collection vehicle to and off-loading the MSW at a transfer station
  - Transferring the MSW into larger vehicles
  - Transporting the MSW to a landfill and disposal
  - Disposing the waste at the landfill

27

Trends in the Waste Disposal System – Importance of Vertical Integration

- Most of the waste collected by the publicly traded companies is disposed in their own landfills
- Vertical integration has a number of advantages in the waste industry, including control of transfer and disposal pricing.
- Hauling contracts predominantly include disposal in the pricing so, if a company is unable to establish their own disposal pricing, they are at a significant competitive disadvantage

28

Example of Importance of Vertical Integration

- LRS currently performs hauling and owns/operates one of the few remaining MSW landfill (in Atkinson) not owned by one of the three publicly traded companies
- However, LRS does not currently own or operate a MSW transfer station in the Service Area so is not vertically integrated in the Service Area
- From June 2018 to the end of 2020, LRS had been delivering nearly all of the MSW waste it collects in the Service Area to Advanced Disposal's Batavia Transfer Station. The MSW waste was then transported to Advanced Disposal's Orchard Hills Landfill for disposal

29

Example of Importance of Vertical Integration (cont.)

- After the merger between Advanced Disposal and WM, WM increased the rates at the Batavia Transfer Station by approximately 10%, and was further increased by another 10% per ton beginning in April 2022
- WM raised the rates at the Orchard Hills Landfill by approximately 33% (for waste from other LRS transfer stations)
- WC/ Groot quoted LRS a price for waste acceptance that is approximately 25% per ton higher than the price that was being paid at the Batavia Transfer Station

30

Example of Importance of Vertical Integration

- These price increases and related factors are substantial and caused LRS to divert the majority of the MSW and recyclables it collects to the Elburn Transfer Station
- In addition, the disposal has now been diverted to Eco Hill in Atkinson
- These changes both add substantial hauling distance and time, which is a significant competitive disadvantage for LRS in the market

31

Example of Importance of Vertical Integration (cont.)

- LRS and other non-publicly owned companies in the Service Area must pay fees to other companies (which are competitors), which reduces their margins and improves the competitor's margins
- The inability for LRS and other non-publicly owned companies in the Service Area to control all of their costs:
  - Creates a significant unknown cost factor when bidding on municipal hauling contracts (which are typically five years)
  - Creates hurdles for making capital investments
  - Causes operational efficiencies (e.g., trucks must drive from the transfer station back to the origination location at the end of the day versus parking at the same location, trucks must travel extra miles to deliver loads within the transfer station operating hours)

32

Benefit 1 – Increase Competition and Transfer Capacity

- The Service Area is almost entirely served by transfer stations as available landfills are too distant for MSW to be direct hauled
- The landfills located closest to the Service Area are predominantly owned/operated by two of the three publicly traded companies: WM and Waste Connections/ Groot
- Not surprisingly, the MSW collection in the Service Area is predominantly provided by the same two companies (WM and Waste Connections/ Groot)

33

Benefit 1 – Increase Competition and Transfer Capacity (cont.)

- The design capacity of the Service Area transfer stations is adequate to manage the MSW generated in the Service Area, if negative economic and environmental impacts are not considered
- Companies collect waste from municipalities in the general direction of their transfer stations within or proximate to the Service Area due to the various advantages of vertical integration
- The available capacity in the Service Area can vary at the discretion of the pricing and operational approach of companies that control the waste management network

34

Benefit 1 – Increase Competition and Transfer Capacity (cont.)

- WM and WC/ Groot have sufficient control of the pricing in the market to effectively diminish competition from non-vertically integrated companies in the Service Area
- Letters of support were provided by the following due to concerns about the need for recycling and disposal options given the industry consolidation
  - Eleven waste haulers
  - Four municipalities
  - Twenty-one waste contractors/ demolition companies
  - Over 100 citizens

35

Benefit 1 – Increase Competition and Transfer Capacity (cont.)

- Roy Strom Companies sold their company to LRS in December 2020
- George Strom provided a letter of support explaining their rationale for selling - diminishing ability to compete in the market due to rising disposal costs caused by a lack of competition

36

Benefit 1 – Increase Competition and Transfer Capacity (cont.)

- WC/ Groot held the refuse, yard waste, and recyclable materials contract with West Chicago from July 1, 2012 to December 31, 2019
- Based on just the potential development of the West DuPage RTS, LRS submitted a proposal for the residential waste service program that forced WC/ Groot to offer significant improvements to the rate structure and overall program relative to the current contract
- WC/ Groot was awarded the new waste hauling contract for the City of West Chicago

37

Benefit 1 – Increase Competition and Transfer Capacity (cont.)

- Tangible benefits to West Chicago and its residents of the new waste hauling contract include:
  - Cost Savings - Five-year savings of approximately $1,700,000 compared to the previous contract (or approximately $300 for each of the approximately 5,700 single-family units within the City of West Chicago)
  - Other benefits regarding Organics Services, Electronics Waste, Gratis Roll-off Service, Organics/Pumpkin Seasonal Service, Gratis Waste and Recycling Services at City Facilities, Gratis Holiday Light Collection, and Amnesty Collection Event

38

Benefit 1 – Increase Competition and Transfer Capacity (cont.)

- Other communities in the Service Area for which LRS provides services have realized similar savings
  - Village of Lisle
  - City of Wheaton
  - City of St. Charles
- The benefits discussed above generally reflect LRS's anticipation of being able to vertically integrate in the Service Area and eventually recognizing all of the associated benefits/advantages
- If LRS does not receive approval of the West DuPage RTS, LRS's ability to compete on a long-term basis will be seriously jeopardized and all of the above listed benefits may eventually disappear

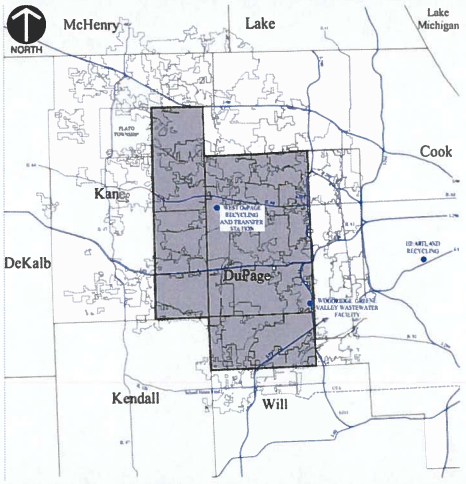
39

Benefit 1 – Increase Competition and Transfer Capacity (cont.)

- The same economic factors (i.e., multiple potential transfer/ disposal locations that are incentivized to want and bid on the hauling volume) result in the continued operation of a much denser number of MSW transfer stations in suburban Cook County than in the Service Area

	Area (square miles)	Population (persons)	Number of MSW Transfer Stations
Service Area	640	1.087 million	2
Suburban Cook County	1,400	2.499 million	21
Percentage Difference	45%	43%	10%

40



Benefit 2 – Additional Operational Flexibility

- West DuPage RTS will have longer operation hours than the other transfer stations in the Service Area
- The limited operating hours at the Batavia Transfer Station caused some LRS collection vehicles to routinely need to cease pick up without a full load, and essentially cause extra trip(s) to be made
- CEC is familiar with other instances where a transfer station owner/operator allowed longer operating hours for internal collection vehicles but not third party haulers
- The West DuPage RTS will allow more operational flexibility and efficient hauling operations by providing extended operating hours, and provide an option to other privately owned haulers

41

Trends in the Waste Disposal System – Hydro Excavation Waste Facilities

- The only known facility within 10 miles of the Service Area which is known to be permitted to accept hydro excavation and similar low-solids waste is the Woodridge-Greene Valley Wastewater Facility
- LRS's Heartland Recycling facility in Forest View is approximately 40 miles from the West DuPage RTS (by vehicle) and approximately 15 miles (by distance) from the Service Area

42

Woodridge-Greene Valley Wastewater Facility

- The hyrodvac wastes accepted are primarily storm sewer cleanings from municipalities such as Naperville and Woodridge, which generally have less solids than hydro excavation wastes.
- The Wastewater Facility does not accept hydrovac wastes after 3:00 p.m.
- The Wastewater Facility accepts only limited volumes and does not appear to have the capability to manage a significant volume of hydro excavation waste.

43

Substantial Travel Distances

- Badger Daylighting (Badger) appears to be the largest company providing hydro excavation and related services in northern Illinois
- Badger's fleet in northern Illinois includes approximately fifty hydrovac vehicles, and they stage/park its fleet of vehicles in multiple locations to try to minimize drive times and better serve its customers
- Badger routinely uses LRS's facility in Forest View to manage its hydro excavation and related wastes generated from locations across the Chicagoland area
- The limited operating hours preclude their use of the Wastewater Facility

44

Increasing Demand

- Underground Contractor's Association of Illinois provided a letter of support indicating that hydro excavation services have grown exponentially in recent years and is anticipated to continue to increase in demand.
- Badger indicated that the demand for hydrovac services (and thus the generation of hydro excavation wastes) has been growing and is anticipated to continue to increase over time
- Utility companies (Nicor, ComEd) indicate increasing need for hydrovac services

45

Benefit 3 – Transportation Efficiencies for Hydro Excavation Wastes (cont.)

- Badger indicated the following:
  - Their anticipated benefit is primarily transportation logistics
  - The decreased drive time would save approximately two hours for each load, which would increase Badger's productivity (i.e., more time providing services versus driving)
  - Approximately 40% of the work Badger performs is located more convenient to West Chicago than Forest View
  - The extended operating hours (i.e., open past 3:00 p.m.) at the proposed West DuPage RTS would be desirable

46

Benefit 4 – Reduce Environmental Impacts

	Reduced Miles (per year)	Reduced Miles (over 20 year operating period)	Reduced Fuel Usage (gallons over 20 year operating period)	Reduced Emissions (pound of CO_2 over 20 year operating period)
LRS MSW Collection Vehicles	75,000	1.5 million	425,000	9.51 million
Other Collection Vehicles	40,000	800,000	230,000	5.15 million
Hydro Excavation Vehicles	685,000	13.7 million	3.914 million	87.60 million
Total	**800,000**	**16.0 million**	**4.569 million**	**102.26 million**

47

Trends in the Waste Disposal System - Recycling Challenges from DuPage County SWMP

- Recycling has seen a significant amount of change over the last decade with volatile market values, contamination issues, and shrinking end users
- Due to its volume in the waste stream, C&D debris recycling is an option to reduce landfilled waste
- Certain electronics products were banned from landfills as of January 1, 2012. The program to work with electronic recyclers has struggled to remain sustainable

48

Trends in the Waste Disposal System - Recycling Challenges from Kane County SWMP

- Recycling has seen a significant amount of change over the last decade with volatile market values, contamination issues, and shrinking end users
- The residential diversion rate in Kane County has been slowly declining from 2015 to 2019
- The continued diversion of construction and deconstruction-related materials is recommended
- *The greatest need is to ensure sufficient competition for both waste transfer and landfilling in the private sector*
- *Competition serves to control price increases, and also maintains a high quality of service in both the residential and commercial sectors*

49

Benefit 5 – Facilitate Recycling in the Service Area

- Allowing additional investments in C&D recycling infrastructure (e.g., screens, conveyors) to minimize the generation of screening fines and improve recycling of C&D
- Operation of a courtesy drop-off for electronic wastes from local residents
- Operation of a courtesy drop-off for recyclables for area residents
- Recycling of loads which are predominantly recyclable material but are not classified as C&D (and thus not acceptable under the current site permit)
- Receipt and transfer of SSR to LRS sorting facility to better manage and improve efficiencies

50

Benefit 6 – Direct Benefits to West Chicago

- Host benefit fee of $2.45 for each ton of MSW or hydro excavation waste received - If only 600 tons per day of MSW and hydro excavation waste per day are accepted, this will result in over $420,000 per year of revenues to the City of West Chicago
- "Most favored nation" rates for waste generated within West Chicago
- Free disposal of up to 2,500 tons of waste generated by West Chicago

51

Benefit 6 – Direct Benefits to West Chicago (cont.)

- Free use of up to a total of twenty 1.5-cubic yard dumpsters or sixty 90-gallon carts annually for one-time pick up each at special events and/or West Chicago use
- Preference to suitably skilled applicants residing in West Chicago for work at the West DuPage RTS
- Establishment of a courtesy drop-off area for West Chicago residents of electrical/electronic devices

52

Benefit 7 – Direct Benefits to DuPage County

- DuPage County only disposes of approximately 30% of the waste generated within the county at the one transfer station within the county (the DuKane Transfer Station) so DuPage County is not collecting the host fees from the other 70% of waste which its residents and businesses generate, which is lost revenue of almost $400,000 per year
- Host benefit fee of $0.58 for each ton of MSW or hydro excavation waste received, which will result in approximately $100,000 per year of revenues to DuPage County

53

Benefit 7 – Direct Benefits to DuPage County (cont.)

- Establishment of a drop-off area for recyclables (e.g., bottles, cans, cardboard, and paper) generated by residents and small businesses at no cost to the resident
- Partnering with DuPage County on an application(s) to the IEPA for the funding of household hazardous waste collection(s) at the site at the request of DuPage County

54

Summary

- The West DuPage RTS will increase competition and available transfer capacity in the service area, which has been clearly recognized to help control price increases and maintain a high quality of service in both the residential and commercial sectors
- The West DuPage RTS will provide additional operational flexibility for the service area through extended operating hours
- The West DuPage RTS will provide a necessary and conveniently located facility to manage hydro excavation wastes, which will result in significant transportation efficiencies

55

Summary

- The West DuPage RTS will reduce environmental impacts to the City of West Chicago and the area by decreasing the travel distance of MSW and hydro excavation collection vehicles
- The West DuPage RTS will facilitate recycling in the service area by expanding its service offerings and allowing additional investments in site infrastructure and operational improvements

56

Summary

- The West DuPage RTS will provide direct benefits to the City of West Chicago as detailed in the Host Community Benefit Agreement with West Chicago
- The West DuPage RTS will provide direct benefits to DuPage County as detailed in the Secondary Host Community Benefit Agreement with DuPage County
- Waste quantities in the service area are projected to increase in the future as a result of the continued population and employment growth

57

Opinion – Criterion 1

- It is my professional opinion that the West DuPage Recycling and Transfer Station meets the requirements of Criterion 1 as it is "necessary to accommodate the waste needs of the area it is intended to serve."

STATEMENT OF PROFESSIONAL QUALIFICATIONS

DALE J. KLESZYNSKI, MAI, SRA

Dale J. Kleszynski, MAI, SRA, is president and principal shareholder of Associated Property Counselors, Ltd. He has served as an expert witness in various areas of litigation and arbitration practice including zoning issues and disputes, legal malpractice, appraisal malpractice, dispute management, mediation, appraisal methodology, damages and eminent domain matters. As part of his service, he has prepared use impact studies, highest and best use studies, feasibility studies, cost estimates, estimates of just compensation, leasehold interests and leased fee interests. In addition to the above services, he has provided documented appraisals for financial institutions, corporations, developers, municipalities, governmental agencies, law firms, school districts and private individuals. Appraisal, arbitration and consulting assignments have been completed on a regional and nationwide basis.

Mr. Kleszynski has taught numerous appraisal and USPAP courses for professional organizations and specialized groups and he served as part of the development team that authored courses for the Appraisal Institute. He serves as a qualified instructor for the Appraisal Institute and is a certified USPAP instructor for the Appraisal Foundation. During the past 25 years, he has served on numerous national and local committees for the State of Illinois and the Appraisal Institute. Mr. Kleszynski is licensed and certified to complete appraisal and consulting assignments in the states of Illinois, Indiana, and Michigan.

Educational Background

Loyola University of Chicago, Bachelor of Arts, 1971

Completed all educational, admissions, demonstration report and comprehensive examination requirements to be awarded the MAI and SRA designations by the Appraisal Institute

Currently certified under the Appraisal Institute Continuing Education Program

Currently certified under the Continuing Education Requirements of the State of Illinois

Currently certified under the Continuing Education Requirements of the State of Indiana

Currently certified under the Continuing Education Requirements of the State of Michigan

STATEMENT OF PROFESSIONAL QUALIFICATIONS

DALE J. KLESZYNSKI, MAI, SRA

Professional Designations and Certification

Member of the Appraisal Institute - MAI No. 6747
Senior Residential Appraiser - SRA

Illinois State Certified Real Estate Appraiser- License No. 553.000213
Indiana Certified General Appraiser - License No. CG49300022
Michigan State Certified Appraiser - License No. 12-01-004591

Appraisal and Consultation Experience

Since 1979, various types of real estate, including:

- Office and commercial buildings
- Assisted living facilities
- Apartment structures and complexes
  - Including Low Income Housing Tax Credit complexes
- Industrial and warehouse properties
- Single-family and condominium residential properties
- Vacant land
  - Residential, multi-family, commercial, and industrial
- Special purpose properties
  - Including bulk petroleum storage facilities, steel fabricating plants, hotels, soccer arenas, golf courses, motels, chemical processing facilities, restaurants, bank facilities and ice arenas
- Eminent domain projects
  - McCormick Place expansion
  - Extension of Interstate 355 in Cook and Will Counties
  - City of Hammond v. Great Lakes Marina
  - Palwaukee Airport expansion
  - Lansing Municipal Airport expansion
  - Little Calumet River and Levee and Flood Abatement Project
  - Melvina Ditch Reservoir Project - MWRD
  - O'Hare International Airport expansion
  - Various road and municipal projects
- Various zoning and municipal projects
  - Adult use impact study - County of Cook
  - Impact study for group home zoning
  - Impact studies for cell tower development
  - School site selection
  - Commercial development impact studies
  - Real estate tax impact studies
- Arbitration
  - Sole arbitrator to determine just compensation for a fiber optic easement

STATEMENT OF PROFESSIONAL QUALIFICATIONS

DALE J. KLESZYNSKI, MAI, SRA

Service Offices

President - Chicago Chapter of the Appraisal Institute
Regional Representative - Appraisal Institute
Division of Faculty - Appraisal Institute
Regional Chairman - Ethics Administration
Assistant Regional Representative - Review and Counseling
National Board of Directors - Appraisal Institute
Vice Chairman - General Appraisal Board
Chairman - General Appraisal Board
Executive Committee - Appraisal Institute
National Nominating Committee - Appraisal Institute
General Appraisal Council

Professional Experience

President and Chief Appraiser, Associated Property Counselors, Ltd.
Staff Appraiser, Abacus Realty Appraisers, Inc., Chicago
Staff Appraiser, Property Assessment Advisors, Chicago
Staff Appraiser, Central Appraisal Company, Chicago
Mortgage Loan Officer, First Calumet City Savings and Loan, Calumet City, Illinois

Course and Seminar Development

Course 700 - Introduction to Litigation - Development Team
Course 710 - Eminent Domain - Part A - Development Team
Course 720 - Eminent Domain - Part B - Development Team
Individual seminars for the Cook County State's Attorney

STATEMENT OF PROFESSIONAL QUALIFICATIONS

DALE J. KLESZYNSKI, MAI, SRA

Qualified Instructor for the Appraisal Institute

Courses:

Basic Income Capitalization
General Applications
7-Hour National USPAP Update Course
General Appraiser Sales Comparison Approach
15-Hour National USPAP Course
Business Practices and Ethics
Advanced Income Capitalization
Advanced Applications
The Appraiser as an Expert Witness: Preparation & Testimony
Litigation Appraising: Specialized Topics and Applications
Condemnation Appraising: Basic Principles and Applications
Condemnation Appraising: Advanced Topics and Applications

Seminars:

Litigation Skills for the Appraiser
Partial Interest Valuation – Undivided
Case Studies in Commercial Highest and Best Use
Understanding and Testing DCF Valuation Models
Appraisal Review – General
Supporting Capitalization Rates
Scope of Work: Expanding Your Range of Services
The Road Less Traveled: Special Purpose Properties
Real Estate Finance, Value, and Investment Performance
Introduction to Income Capitalization

Criterion 3

415 ILCS 5/39.2(a)(iii)

"the facility is located so as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of the surrounding property"

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

3

Current Conditions

4

Area History

- Since 1988 – Consistent airport and manufacturing activity in the subject area.
  - DuPage Airport to the west
  - Closed landfill and industrial facilities to the south
  - Railroad rights of way to the east
  - Industrial facilities to the north
- Airport use and intensity of manufacturing activity has remained consistent or increased through the years.

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

10

Study Area Usage Map

11

Zoning Map

12

Area Development

- In summary, uses within the study area discussed above include the following:
  - Recycling facilities;
  - Numerous outside storage yards and truck farms;
  - Railroad rights of way;
  - Open land that is part of the airport district;
  - General industrial manufacturing and warehouse buildings; and
  - Open space- vacant land.

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

13

Highest and Best Use

- The following criteria must be met in determining Highest and Best Use:
  1. **Legal Permissibility**. A property use that is either currently allowed or most probably allowable under zoning codes, building codes, environmental regulations, and other applicable laws and regulations that govern land use restrictions.
  2. **Physical Possibility**. The land must be able to accommodate the size and shape of the ideal improvement.
  3. **Financial Feasibility**. The ability of a property to generate sufficient income to support the use for which it was designed.
  4. **Maximum Productivity**. The selected land use must yield the highest value of the possible uses.

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

14

Highest and Best Use (cont.)

- LEGAL PERMISSIBILITY
  - Subject site is zoned M-Manufacturing District with a Planned Use Development
  - Surrounding uses are compatible and similarly zoned

Highest and Best Use (cont.)

- PHYSICAL POSSIBILITY
  - No physical conditions exist that prohibit development
  - Adequate infrastructure is present
  - No obvious issues which would prevent the property from being developed in accordance with the proposed plan

Highest and Best Use (cont.)

- FINANCIAL FEASIBILITY
  - Properties in the immediate market area tend to be owner occupied and/or leased in third party transactions.
  - Total industrial space within West Chicago has remained generally consistent at approximately 17,000,000 square feet over the past five years.
  - The market condition for general industrial space is considered strong in the market area.

Highest and Best Use (cont.)

- FINANCIAL FEASIBILITY (cont.)
  - Sales data in the market area indicates that approximately 300 transactions occurred between 2013 and the present.
  - The greatest activity was found in the light industrial districts of West Chicago.
  - Few sales transactions were found in the "heavy industrial" portions of the study area.
  - Limited sales activity is evidence that the location of the subject property is stable and conducive to long term occupancy by users.

Highest and Best Use (cont.)

- MAXIMUM PRODUCTIVITY
  - Improved industrial properties, such as the subject property, have greater value than vacant land.
  - The subject achieves its highest value because:
    - The proposed use is a "special use";
    - The proposed use is compatible with the surrounding uses; and
    - The proposed use is located with good access to transportation amenities.

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

19

Conclusions

- West DuPage RTS is located in an area of historic and current industrial use and development.
- Man-made boundaries isolate and buffer the subject area which effectively minimizes any influences on outside areas.
- The City of West Chicago and DuPage County both encourage development to occur in consistent and defined areas and the proposed used is consistent with zoning classifications in the area.

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

20

Conclusions

- The proposed use will have minimal impact on adjacent and nearby property values.
- The West DuPage RTS will include significant infrastructure and improvements that will enhance to the property.
- The West DuPage RTS will be a long term stable use of this property.

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

21

Opinion

- Based on my analysis, APC concludes that the proposed West DuPage Recycling and Transfer Station is located to "so as to minimize incompatibility with the character of the surrounding area and to minimize the effect on the value of surrounding property" and meets the standards of "Criterion 3".

ASSOCIATED PROPERTY COUNSELORS, LTD.
Real Estate Appraisers and Consultants

Michael Werthmann, PE, PTOE

Principal

Mr. Werthmann is a traffic and transportation engineer with more than 25 years of experience and a founding Principal of Kenig, Lindgren, O'Hara, Aboona, Inc. Mr. Werthmann is currently responsible for traffic and transportation assignments and traffic signal design projects for the firm's private and public clients. He has served as project manager on a variety of public and private sector projects including site traffic impact analyses, parking demand analyses, traffic management, safety studies, traffic simulation models, transportation and planning studies, roadway planning and design, Intersection Design Studies (IDS) and Signal Design. Mr. Werthmann has also appeared as an expert witness at public hearings. Prior to the forming of Kenig, Lindgren, O'Hara, Aboona, Inc., Mr. Werthmann had been with Barton-Aschman Associates for six years.

EDUCATION

Bachelor of Science in Civil Engineering
Michigan State University

Masters of Management
Kellogg Graduate School of Management
Northwestern University

REGISTRATIONS

Professional Engineer in State of Illinois

Registered Professional Traffic Operations Engineer (PTOE)

PROFESSIONAL ASSOCIATIONS

Institute of Transportation Engineers

Traffic Impact Studies -
Residential, commercial, office, industrial, institutional, and mixed-use developments within the Chicago area and other states including Georgia, Indiana, Iowa, Michigan, Missouri, Pennsylvania, and Wisconsin.

Parking Needs and Feasibility Studies -
Residential, commercial, office, industrial, institutional, and mixed-use developments within the Chicago area and other states including Georgia, Indiana, Iowa, Michigan, Missouri, Pennsylvania, and Wisconsin.

Traffic, Parking, and Safety Studies -
Preschools, elementary, middle, and high schools and various school districts within the Chicago area.

Traffic Simulation and Traffic Signal Operational Analyses -
Various communities and developments within the Chicago and Wisconsin areas including Chicago, Mount Prospect, Oak Park, Schaumburg, and Will County, Illinois.

Corridor Studies and Pre-Phase 1 Studies -
Bloomingdale, Blue Island, Chicago, Elmwood Park, Evanston, Highwood, Lincolnshire, Mount Prospect, Palatine, Oak Park, Schaumburg, Villa Park, Wheaton, and Will County, Illinois.

Traffic Signal/Multiway Stop Sign Warrant Studies -
Along State, County, and local roadways at numerous locations within the Chicago area.

Intersection Design Studies and Traffic Signal Design -
New and modified intersections for various locations within Illinois.

Roadway/Site Access Geometric Concept Plans -
Various developments and municipalities.

Transportation and Planning Studies -
Various communities, downtowns/central business districts (CBDs), and roadway corridors within the Chicago area.

Neighborhood Traffic Studies -
Mount Prospect, Darien, Deer Park, Oak Park, Downers Grove, Naperville, Riverside, and Wheaton, Illinois.

University and College Traffic/ Parking Planning Studies -
Aurora University, Joliet Junior College, College of Lake County (Grayslake and Vernon Hills campuses), Harper College, University of Illinois at Chicago, Waubonsee Community College, Kishwaukee College, Benedictine University, Dominican University, and Roosevelt University.

Medical Campus Traffic/Parking Planning Studies -
Chicago, Oak Park, Geneva, Evergreen Park, Lindenhurst, Naperville, La Grange, Lake Forest, and Waukegan, Illinois; Munster, Indiana; and Iowa City, Iowa.

Traffic Impact Studies for Waste Management Facilities -
New and expanded landfills and transfer stations in various municipalities and counties in Illinois and Indiana.

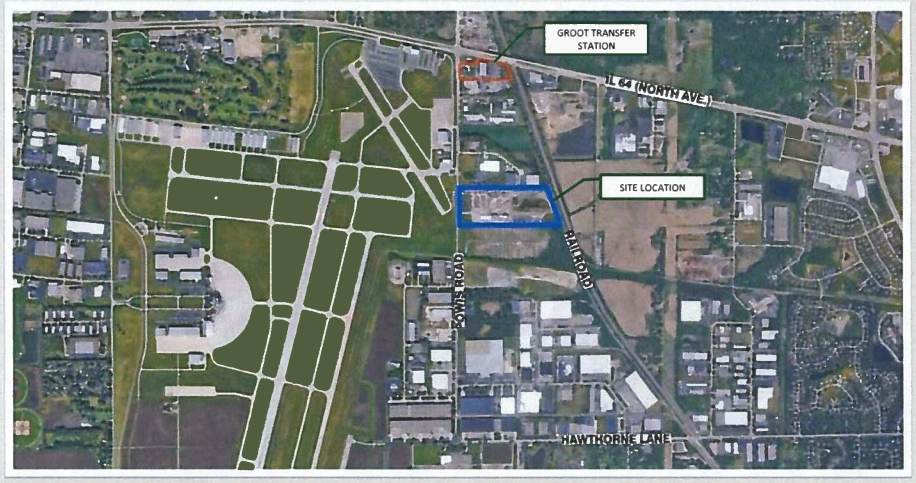
- 33 years of experience in traffic engineering for both the public and private sectors
- Provided testimony on over 25 solid waste related projects
- Member of the Institute of Transportation Engineers

2

EXHIBIT tabbies A-10

Section 39.2 - Criterion 6 - Traffic Impact

"...the traffic patterns to or from the facility are so designed as to minimize the impact on existing traffic flows."



3

Traffic Study Methodology

- Based on methodology accepted within the industry and with transportation and planning officials.
- Three phase study:
  - *Existing conditions*: Examined the existing physical and operating characteristics of the roadway system.
  - *Facility traffic characteristics*: Determined the type/volume of traffic generated by the facility and the travel routes.
  - *Evaluation:* Evaluated the impact the facility-generated traffic will have on the roadway system.

4

Site Location

5

Summary of Existing Site Operations

- A construction and demolition (C & D) recycling and transfer facility that is permitted to process 1,250 tons of materials per day.
- The processing of wood into mulch and other products (erosion control).
- The maintenance and storage of up to 95 vehicles made up of streetsweepers, portable restroom trucks, packer and roll-off single-unit trucks, and transfer trailers.
- The maintenance and storage of portable restrooms, containers, roll-off containers, and carts.

6

Existing Conditions – Tasks Completed

- Investigated/examined area traffic and roadway conditions
- Collected information and reviewed data
- Conducted traffic counts at critical intersections/roadways in the site vicinity

Area Roadways – IL 64 (North Ave.)

- East-west, major arterial road
- Six lane cross section
- Signalized intersection with Powis Road
- Classified as a Class II truck route, and as a Strategic Arterial Route (SRA) by IDOT.
- Daily traffic volume of over 31,400 to 33,400 vehicles (IDOT 2021)

Area Roadways – Powis Road

- North-south, collector road
- Two-lane cross section
- At-grade railroad crossing just north of Hawthorne Lane
- Under all-way stop sign control at Hawthorne Lane
- Classified as a Class II truck route
- Daily traffic volume of 5,550 vehicles (IDOT 2021)

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc.

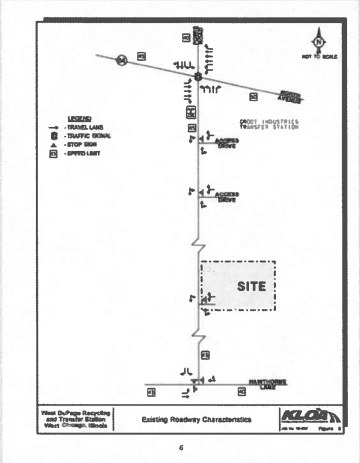
West DuPage RTS

LRS LAKESHORE Recycling Systems

9

Area Roadways – Hawthorne Lane

- East-west local roadway
- Two-lane cross section
- At grade railroad crossing just west of Carolina Drive
- Under all-way stop sign control at Powis Road
- Classified as a Class II truck route between Kress Road and Atlantic Drive
- Daily traffic volume of 3,450 vehicles (IDOT 2021)



KLOA Kenig, Lindgren, O'Hara, Aboona, Inc.

West DuPage RTS

LRS LAKESHORE Recycling Systems

10

Existing Roadway Characteristics

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc. West DuPage RTS LRS LAKESHORE Recycling Systems

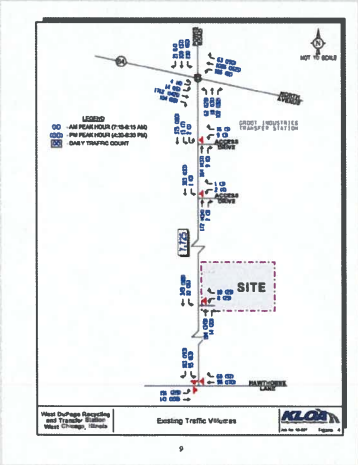
11

Traffic Counts

- Conducted weekday morning (6:00 A.M. to 9:00 A.M.) and evening (3:00 P.M. to 6:00 P.M.) peak period traffic counts at the following intersections:
  - Powis Road with IL 64
  - Powis Road with Hawthorne Lane
  - Powis Road with the LRS site access drive
  - Powis Road with the Groot/Waste Connections transfer station access drives
- Conducted daily traffic counts along Powis Road south of IL 64

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc. West DuPage RTS LRS LAKESHORE Recycling Systems

12



Traffic Counts (cont.)

- Traffic counts were performed in 2019 (pre-pandemic) and 2022 (post-pandemic).
- West DuPage RTS processed approximately 750 tons of material on the day of the 2019 traffic counts
- The 2019 traffic counts at Powis Road/ North Ave. and Powis Road/ Hawthorne Lane intersections were 20% to 43% higher than the 2022 traffic counts.
- To provide a worst-case analysis, the 2019 traffic counts were used.

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc. West DuPage RTS LRS LAKESHORE Recycling Systems

13

Existing Traffic Volumes

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc. West DuPage RTS LRS LAKESHORE Recycling Systems

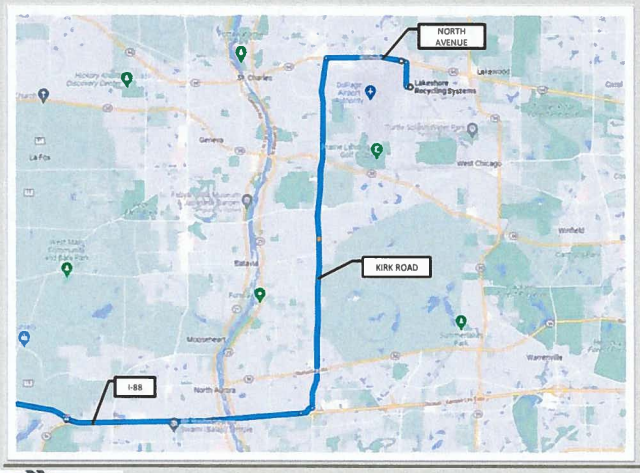
14

West DuPage RTS Characteristics – Tasks Completed

- Characteristics of West DuPage facility and operations
- Directional distribution analysis (travel routes)
- West DuPage RTS trip generation estimates
- Future traffic assignments

Summary of Proposed Facility Operations

- Accept up to 1,950 tons per day of materials of which:
  - Up to 650 tons per day may be MSW,
  - Up to 300 tons per day may be hydro excavation wastes,
  - Up to 750 tons per day may be C & D (reduced from currently allowable 1,250 tons per day), and
  - Up to 250 tons per day may be SSR.
- Convert the existing southern access drive to inbound only, and Powis Road will be widened to provide a southbound left-turn lane and a northbound right-turn lane serving the access drive.
- Convert the unused northern access drive to outbound only and stripe the access drive to provide separate left-turn and right-turn lanes. In addition, the radius will be increased to accommodate truck traffic.



Hauling Characteristics

- Inbound Waste
  - A large percentage of the traffic generated by the West DuPage RTS will consist of LRS trucks/containers that are already traversing the area roadway system.
  - LRS collection trucks/containers currently travel to an off-site transfer station before they return to the LRS site for storage and/or parking at the end of the day.
  - Since LRS collection trucks/containers will deliver waste/ recyclables to the proposed West DuPage RTS and remain for storage and/or parking at the end of the day, the West DuPage RTS will result in a reduction of (1) the traffic generated by the transfer station and (2) the miles traveled by the LRS collection trucks/containers

Hauling Characteristics (cont.)

- Outbound Waste
  - The waste will be transported from the West DuPage RTS to a landfill via transfer trailers that will be similar in size as the trucks currently serving the facility.
  - Transfer trailers will travel northbound Powis Road to westbound North Avenue to southbound Kirk Road/ to Interstate-88. Incoming transfer trailers will follow the same route in reverse.

Hauling Characteristics (cont.)

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc.

West DuPage RTS

LRS LAKESHORE Recycling Systems

19

Estimated Traffic Generation

	Morning Peak Hour		Evening Peak Hour	
	Inbound	Outbound	Inbound	Outbound
Existing LRS Site Traffic[1]				
Direct Haul (Single-Unit Truck)	8	10	25	0
Transfer Trailers (Semi-Trailers)	1	1	0	0
Passenger Vehicles	15	7	11	54
Total	**24**	**18**	**36**	**54**
Projected Increase in Traffic[2]				
Direct Haul (Single-Unit Truck)	4	4	27	27
Transfer Trailers (Semi-Trailers)	2	2	7	7
Passenger Vehicles	10	0	0	10
Total	**16**	**6**	**34**	**44**
Total Projected Traffic				
Direct Haul (Single-Unit Truck)	12	14	52	27
Transfer Trailers (Semi-Trailers)	3	3	7	7
Passenger Vehicles	25	7	11	64
Total	**40**	**24**	**70**	**98**

1. Existing C & D recycling and transfer facility processed 750 tons the day the traffic counts were completed.
2. Based on the proposed transfer station processing 650 tons of MSW per day, 250 tons of SSR per day, and 300 tons of hydro excavation waste per day.

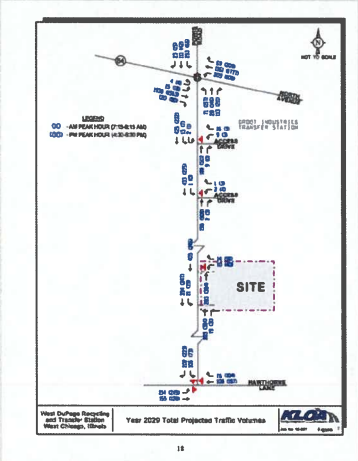
Table represents a worst-case analyses:

- Facility is projected to generate few new collection truck trips during the evening peak hour.
- However, table assumes the facility will generate all new (in and out) collection truck trips during the evening peak hour.

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc.

West DuPage RTS

LRS LAKESHORE Recycling Systems



20

Future Growth

- In addition to traffic generated by the proposed recycling and transfer operations at West DuPage RTS, the study also considered the following:
  - Increase in traffic from projected ambient growth in the area
  - Planned improvements to Powis Road
  - Planned use of the north access drive at the West DuPage RTS

21

2029 Traffic Volumes

22

Proposed Access System

- Inbound Access to the RTS
  - Existing RTS southern access drive will be converted to inbound access only.
  - Powis Road will be widened to provide separate left-turn and right-turn lanes serving the access drive.
- Outbound Access from the RTS
  - Existing RTS northern access drive will be reopened and converted to outbound access only.
  - The access drive will be striped for a left-turn lane and a right-turn lane.
  - A larger radius will be provided to accommodate the turning truck traffic.
- The location and design of the access drives and the Powis Road improvements have received initial engineering comments by the DuPage County Division of Transportation (DuDOT) .

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc. West DuPage RTS LRS LAKESHORE Recycling Systems

23

Proposed Access System

KLOA Kenig, Lindgren, O'Hara, Aboona, Inc. West DuPage RTS LRS LAKESHORE Recycling Systems

24

Evaluation - Traffic Analyses

- The traffic analyses were performed using the Highway Capacity Software.
- The ability of an intersection to accommodate traffic flow is expressed in terms of level of service, which is assigned a letter grade from A to F (a grade of D or above is considered acceptable in urban areas) based on the average control delay experienced by vehicles passing through the intersection.
  - Service Level A = Best traffic flow, least delay
  - Service Level B
  - Service Level C
  - Service Level D
  - Service Level E
  - Service Level F = Oversaturated conditions, extensive delays

25

Capacity Analysis and Gap Study Results

- Existing Condition - the signalized intersection of North/Powis and the critical movements at the stop sign controlled intersections currently operate at a good Level of Service (LOS) B or C.
- Projected Conditions - the signalized intersection of North/Powis and the critical movements at the stop sign controlled intersections are projected to continue to operate at a good LOS B or C.
- The existing roadway system has sufficient reserve capacity to accommodate the additional traffic to be generated by the RTS.
- The results of gap study show that the sufficient gaps are available in the Powis Road traffic stream to accommodate the traffic turning to and from the RTS.
- Other than the improvements at the access drives, no additional roadway improvements or traffic control modifications are required to accommodate the RTS traffic.

26

Opinion

It is my professional opinion that the traffic patterns to and from the Facility are so designed as to minimize the impact on existing traffic flows, satisfying Criterion 6, Section 39.2(a) of the Illinois Environmental Protection Act.

27

Basis of Opinion

- The West DuPage RTS is an existing recycling and waste transfer facility that is located adjacent to industrial uses.
- Improvements will be made to Powis Road and the West DuPage RTS access drives to accommodate additional vehicle traffic.
- The design and location of the access drives and the Powis Road improvements have been conceptually approved by DuDOT.

28

Basis of Opinion (cont)

- The volume of traffic generated in any one time period is limited as the RTS traffic will be distributed throughout the day.
- The roadway system has sufficient reserved capacity to accommodate the traffic to be generated by the RTS.
- Other than the improvements at the access drives, no additional roadway improvements or traffic control modifications are required to accommodate the RTS traffic.

Civil & Environmental Consultants, Inc.

West DuPage Recycling and Transfer Station Local Siting Hearing Evaluation of Criterion 2, 4, 5, 7, 8 and 9

Presented By
Civil & Environmental Consultants, Inc.

January 2023

1

Regulatory Approval for IL MSW Transfer Station: A two step process

- **Step One**: Application for Local Siting Approval demonstrating that the facility meets the nine siting criteria
- **Step Two**: Illinois Environmental Protection Agency (IEPA) permitting process
  - Development Permit
  - Local Building Permits and related approvals
  - Operating Permit
- The IEPA will only issue permits to develop and operate the transfer station if all provisions of the Act and all regulatory requirements are satisfied

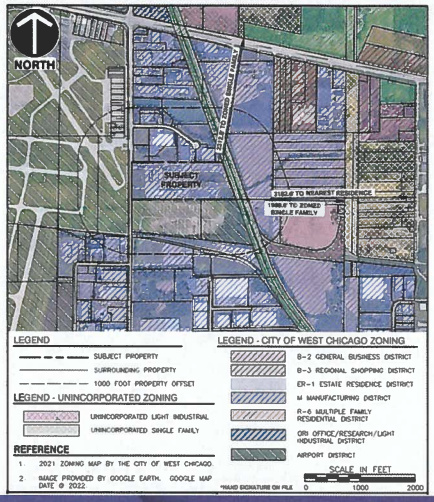
2

EXHIBIT
tabbies
A-11

Section 39.2 of the Act : Criterion 2

- *"The facility is so designed, located and proposed to be operated that the public health, safety and welfare will be protected"*

3



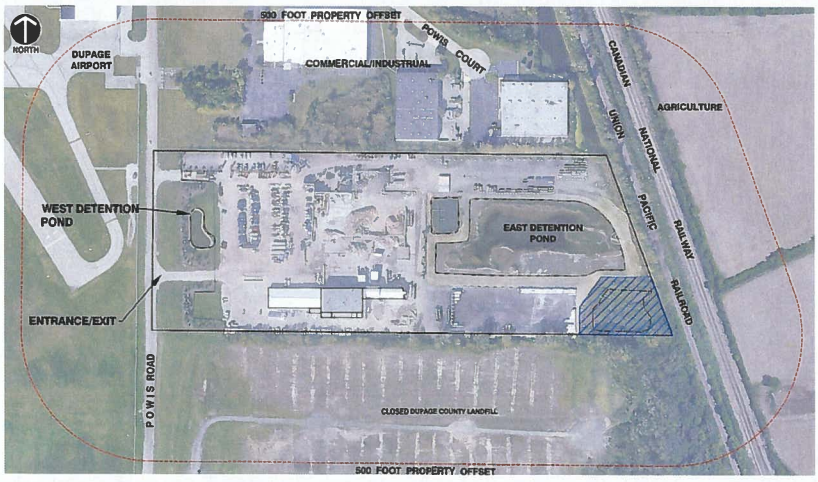
Location Standards

- Archaeological, Architectural or Historical Sites
- Threatened or Endangered Species
- Wild and Scenic Rivers
- Residential Setback
- Wetlands
- 100 Year Floodplain (Criterion 4)
- Regulated Recharge Area (Criterion 9)
- Airports

4

Residential Setback

- The nearest residence is located approximately 3,180 feet to the east along Atlantic Avenue
- The nearest residentially zoned property is located over 1,000 feet to the east or northeast
- The active railroad tracks east of the property have remnant zoning of Estate Residential. Because of the impossibility of current or future estate residential use, West Chicago has determined that the 1,000 foot residential setback does not apply to the railroad properties



5

HJ1
HJ2

Wetlands

- On-site study performed
- Jurisdictional wetlands present in southeast portion of property
- The on-site wetland area was confirmed by DuPage County through the approval of a stormwater certification
- The wetlands are well buffered from the proposed operations and no filling of jurisdictional wetlands are proposed

6

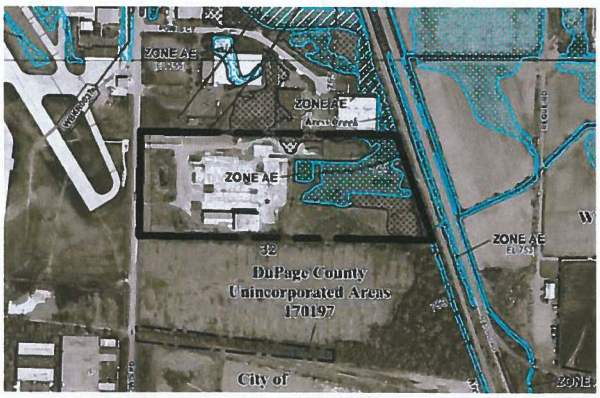
HJ2 INSERT S104 SHOWING SITE BOUNDARY AND OTHER LABELING
Hock, John, 7/19/2020

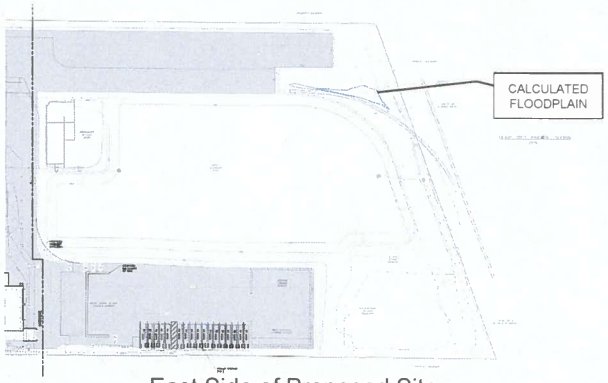


Section 39.2 of the Act : Criterion 4

- "for a facility other than a sanitary landfill or waste disposal site, the facility is located outside the boundary of the 100-year floodplain or the site is flood-proofed"

7

Floodplain Evaluation



- A Flood Insurance Rate Map provides a generalized floodplain location

8

Flood Insurance Rate Map

- A Flood Insurance Study specifies a Base Flood Elevation (BFE)
- The on-site floodplain area is only 0.05 acres based on the BFE (located along the northeast perimeter of the east pond)

East Side of Proposed Site

9

Floodplain Evaluation

- The calculated on-site floodplain area was confirmed by DuPage County through the approval of a stormwater certification
- The floors of the proposed buildings are approximately four feet higher than the Base Flood Elevation

10

Opinion – Criterion 4

- It is my professional opinion that the West DuPage RTS is located outside the boundary of the 100-year floodplain or is flood-proofed

11

Section 39.2 of the Act : Criterion 9

- "if the facility will be located within a regulated recharge area, any applicable requirements specified by the Board for such areas have been met"

12

Regulated Recharge Area (Criterion 9)

- "Regulated recharge area" means a compact geographic area whose geology renders a potable resource groundwater particularly susceptible to contamination
- Only one regulated recharge area has been established in Illinois, as of the date of this presentation, which is Pleasant Valley Public Water District (Pleasant Valley) located in Peoria County
- The West DuPage RTS is located over 100 miles northeast of Pleasant Valley

13

Opinion – Criterion 9

- It is my professional opinion that the West DuPage RTS is not located within or near a regulated recharge area

14

Airports

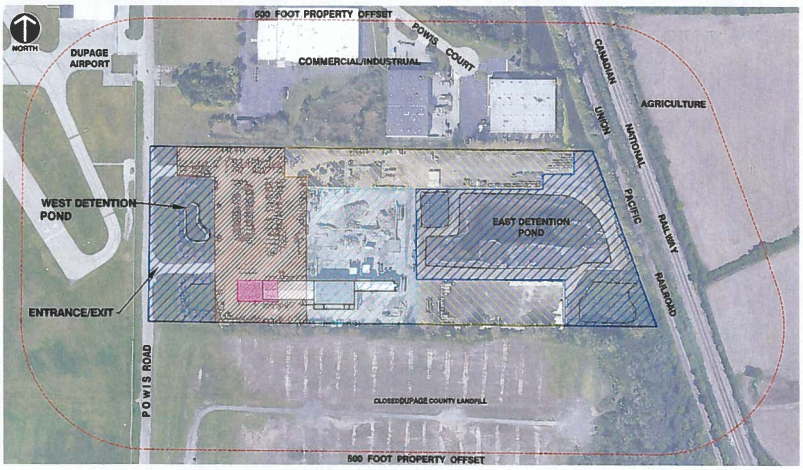
- The DuPage Airport is located directly west of the site.
- Transfer stations are not prohibited from being located nearby to airports.
- Federal Aviation Administration (FAA) Advisory Circular 15/5200-33B (Advisory Circular) provides guidance on certain land uses, including MSW transfer stations, that have the potential to attract hazardous wildlife on or near public-use airports.

15

Airports

- An agreement was executed between the DuPage Airport Authority (DAA), the property owner, and LRS, which, upon receiving the necessary approvals, requires the following:
  - Comply with certain design and operational features (that are same as those in this siting application)
  - Execute and grant to DAA a new avigation easement
  - Reduce the roof height of its existing transfer building to stay below the elevations in the new avigation easement
  - Pay the DAA a fee of $0.15 for each ton of municipal waste and/or hydro excavation waste received

16



Airports

- The DAA agrees that the proposed West DuPage RTS will not pose a threat to the safe operation of the DuPage Airport
- The DAA currently has no objection and will not object to the siting approval of the West DuPage RTS
- The DAA is not currently aware of any violations of or contradictions with the guidance set forth in the FAA Advisory Circulars by the proposed construction and operation of the West DuPage RTS

17

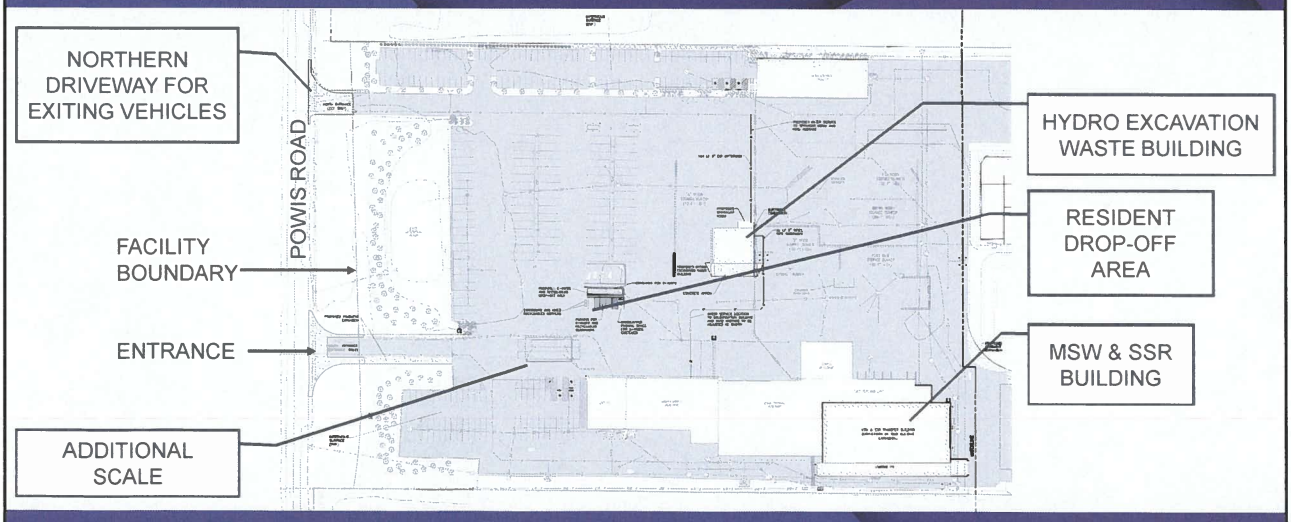
Existing Operations

- Recycling and transfer of C&D with 75% of incoming material recycled or re-purposed
- Parking and maintenance of vehicles
- Staging and maintenance of containers, totes, and portable restrooms
- Dispatch and customer service (call center).
- Stormwater controls and buffer

18

Slide 18

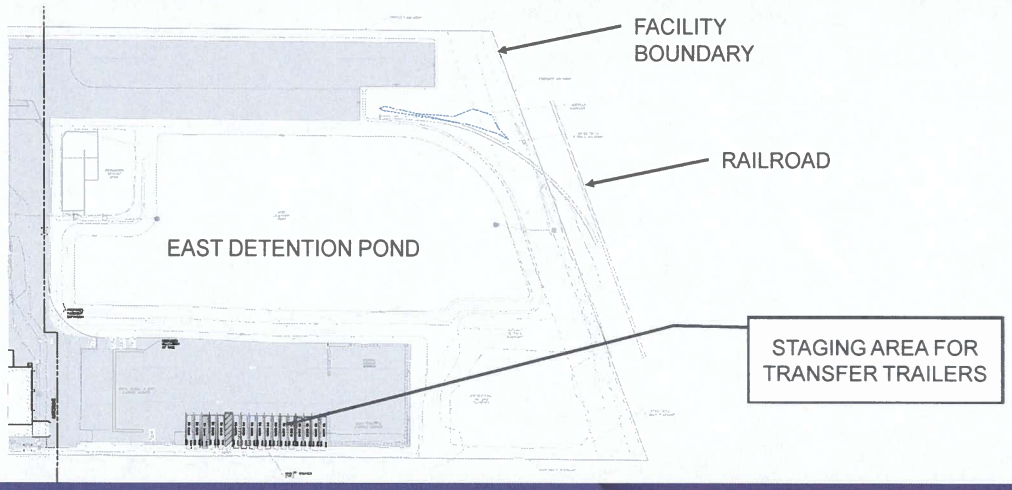
HJ1 Hock, John, 7/19/2020



HJ2 INSERT S104 SHOWING SITE BOUNDARY AND OTHER LABELING
Hock, John, 7/19/2020

Recycling Activities

- "A" wood (processed into mulch)
- "B" wood (hauled to landfills for use as road base)
- Asphalt shingles (hauled to beneficial re-use facilities)
- Metal such as iron, aluminum and nails (hauled to metal reclaimers)
- Concrete, brick, block, and various aggregates (hauled to recycling/crushing facilities)
- Cardboard (hauled to processing facility for baling and subsequent recycling)



19

Proposed Facility Improvements - West

20

Proposed Facility Improvements - East

21

The Operation

- All existing operations would continue (e.g., C&D recycling, vehicle parking, container storage, customer service and dispatch)
- Loads of MSW from collection vehicles will be consolidated into larger loads for transport to an area landfill for disposal
- Loads of hydro excavation wastes (a.k.a. "mud") will be solidified and then transported to an area landfill for disposal
- Electronic waste (e-waste) from local residents will be consolidated and transported to a recovery facility
- Loads of recyclables from collection vehicles (and recyclables from resident drop off area) will be consolidated into larger loads for transport to a material recovery facility (MRF), such as LRS's MRF in Forest View, for separation and re-use as a commodity

22

Acceptable Materials

- Construction and Demolition Debris (C&D) - Uncontaminated materials (e.g., wood, concrete, shingles, metal) resulting from the construction, remodeling, repair, and demolition of utilities, structures, and roads
- Municipal Solid Waste (MSW) - Garbage, general household and commercial waste
- Hydro excavation wastes – "mud" created through a combination of pressurized water and air vacuum system
- Single-stream recyclables (SSR) – Various recyclables (e.g., paper, cardboard, bottles, cans) that are mixed together in a single bin/ container (e.g., from a household)

23

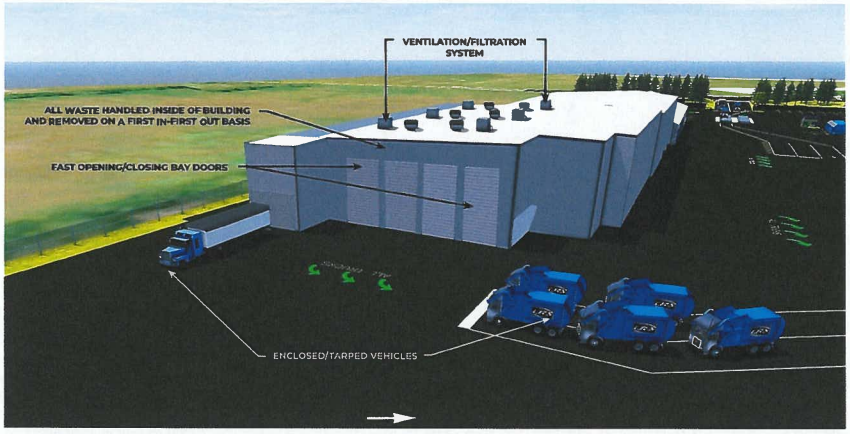
Unacceptable Wastes

- Hazardous Waste (as defined by Section 3.220 of the Act) – Criterion 7
- Potentially Infectious Medical Wastes (as defined by The Act in Section 3.84)
- Regulated Asbestos Containing Materials
- Polychlorinated biphenyls (PCB) Wastes
- Used Motor Oil, Liquid Wastes or Sludge
- White goods
- Lead-acid automotive batteries
- Used Tires
- Landscape Waste

24

Anticipated Acceptance Volumes – C&D

- The site is currently permitted to accept up to 1,250 tons per day of C&D
- LRS currently accepts an average of approximately 300 tons per day with peaks of approximately 750 tons per day, and these volumes are not anticipated to change if the acceptance of MSW is approved
- The 750-ton-per-day limit (which is reduced from the current limit of 1,250 tons per day) would accommodate the existing volume LRS accepts and a contingency for a peak day



25

Anticipated Acceptance Volumes – MSW and SSR

- LRS currently hauls approximately 250 tons per day of MSW an 90 tons of SSR from the Service Area
- The 650-ton-per-day limit for MSW and 250 tons per day limit for SSR would accommodate the existing volumes LRS hauls, a similar volume from other privately owned companies, reasonable growth, and a contingency for a peak day

26

MSW and SSR Transfer Building

27

Design Features of MSW and SSR Transfer Building

- Approximately 0.5 acre, 40 foot tall pre-engineered metal building
- Concrete tipping floor sloped to collect any wastewater
- Steel plate barrier walls around perimeter of interior to protect building, facilitate loading and provide temporary storage
- Transfer building has more than adequate capacity to temporarily stage MSW and SSR during peak hours at maximum volumes
- Setback approx. 800 feet from Powis Road, approx. 600 feet from the northern property boundary and approx. 900 feet from the eastern property boundary
- Building is essentially not visible from Powis Road

28

Design Features of MSW and SSR Transfer Building

- Four bay doors to allow multiple trucks to unload simultaneously
- Below floor level area for trucks being loaded to lessen time to transfer materials (Three to four incoming collection vehicles = one larger load)
- Fast opening/ closing doors at all egress locations to help control odors
- A ventilation and filtration system to help control any odors including:
  - Multiple blowers/ fans to remove air from the building
  - A duct system at the inlet of each blower/fan
  - Air treatment using ozone within each duct system to eliminate any odors from exhaust air

29

Design Features of MSW and SSR Transfer Building

- Walls between the C&D transfer/ screening building and the MSW/ SSR transfer building to separate the operations
- An access opening(s) between the buildings to facilitate the appropriate movement of applicable material from one operation to the other (e.g., non-recyclables to MSW/SSR building and recyclable C&D to the C&D building)
- A door for the access opening that will be closed when the opening is not in use

30

Litter Control

- Waste will be delivered primarily in enclosed vehicles, and tarps will be required on all non-enclosed loads
- Unloading, transferring and loading of all waste will be performed indoors
- Loaded transfer trailers will be tarped using auto tarpers prior to exiting the loading pit ramp
- The site is surrounded by fencing and will be patrolled to collect any litter
- The site has agreed that West Chicago may require the site to sweep or otherwise clean Powis Road, as needed

31

Cleaning Procedures

- No waste shall be left on the floor of the transfer station for more than twenty-four hours
- The tipping floor will be cleaned using a mechanical street sweeper with a water spray and vacuum system at least once per twenty-four-hour period
- The tipping floor and barrier walls will be cleaned with a pressure washer at least weekly to remove waste residue and further control odors
- A disinfectant may be used in the washwater to control odors
- The area behind the barrier walls will be routinely inspected and cleaned
- All excess washwaters from the tipping floor will be directed through the oil-water separator to the sanitary sewer system

32

Odor Control

- Unloading, transferring, and loading operations will be performed indoors
- Waste on-site for a only a short time (e.g., first-in, first-out)
- The cleaning procedures will help control odors
- The MSW and SSR transfer building will be equipped with:
  - A ventilation and filtration system
  - Fast opening/closing doors at all vehicle ingress/egress locations, which will open and close as vehicles enter and exit the MSW and SSR transfer building
  - The odor control procedures, including the ventilation and filtration system, was reviewed and agreed upon by the DuPage Airport Authority

33

Hydro Excavation Waste

- Hydro excavation wastes are a solid/liquid waste created through a combination of pressurized water and air vacuum system
- Generally used for construction or maintenance services, such as trenching near utilities, potholing to expose utilities, installation of utility poles, installation of piers/footings, and clean out of storm sewers
- The system cuts through soils/materials, breaks them up, and lifts the slurry from the excavation area into a debris tank

34

Hydro Excavation Equipment and Applications

35

Hydro Excavation Waste Processing

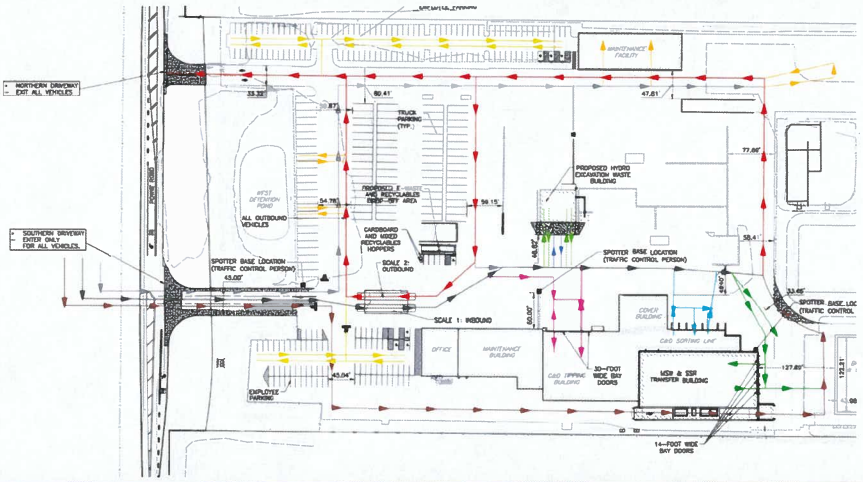
- Process will be similar as the existing operation at LRS's Heartland Recycling facility in Forest View
- Loads of hydro excavation wastes (a.k.a. "mud") will be solidified and then transported to an off-site permitted landfill for disposal
  - Absorption of excess water by solid material such as wood chips
  - Wood chips already generated by C&D recycling operations
  - Mixing performed mechanically using a hydraulic excavator or wheel loader
  - Two parts hydro excavation waste + one part wood chips = Properly solidified material for landfilling
- Acceptable wastes include hydro/vacuum excavation muds, storm sewer cleanout material, and other similar materials
- Well-established pre-approval, acceptance, inspection and record keeping protocols

36

Anticipated Acceptance Volumes – Hydro Excavation Wastes

- LRS currently accepts between 100 to 400 tons per day at its Heartland Recycling facility in Forest View
- Approximately half of this volume is anticipated to be diverted to the West DuPage RTS because customers have indicated that this approximate percentage is generated closer to West Chicago than Forest View (and they would want to take advantage of the reduced transportation costs)
- The proposed limit of 300 tons per day would accommodate the diversion of approximately 100 to 150 tons per day, reasonable growth, and a contingency for a peak day

37



Design Features of Hydro Excavation Waste Building

- Approximately 2,500 square foot, 29 foot tall pre-engineered metal building
- Two unloading/ mixing/ loading areas to allow simultaneous operations
- Sloped unloading/ mixing/ loading areas constructed of concrete with underlying geomembrane to contain all material
- Sized with than more than adequate capacity for peak hours at maximum volumes

38

On-Site Traffic Patterns

- Large property provides generous space for traffic movements
- On-site traffic will be directed by:
  - Signs
  - Pavement markings
  - Site staff (i.e., spotters)

39

Stormwater Improvements

- The current site stormwater management system:
  - Includes two detention ponds (east and west)
  - Contemplated the impervious nature of all of the improvements proposed in this siting application
  - Was approved by DuPage County and West Chicago as part of the recent PUD Amendment process
- The improvements approved by the PUD Amendment process on the east portion of the site have been completed and approved by West Chicago
- Thus, no additional improvements to the stormwater management system are proposed in this siting application

40

Wildlife Management

- Creation of site-specific wildlife management plan
- Trained staff
- Anti-perching devices on buildings
- Routine wildlife surveys including use of game cameras
- Odor controls
- Pond improvements including rip-rap and/or low grass height around perimeter, and grid-wire system over water areas
- Development of communication plan with DuPage Airport Authority
- All proposed protocols approved as part of agreement DuPage Airport Authority

41

Summary

- The proposed operations will allow for:
  - Improved recycling of C&D
  - More efficient management and transportation of recyclables to a MRF
  - Additional management of electronic wastes
  - Additional capacity and more efficient transportation of the management of hydro excavation wastes
  - Additional capacity and more efficient transportation of waste to a disposal facility (landfill)
- The West DuPage RTS will be a premier waste management and recycling facility in the State of Illinois

42

Opinions

- Criterion 2: It is my professional opinion that the West DuPage RTS is so designed, located and proposed to be operated that the public health, safety and welfare will be protected
- Criterion 7: It is my professional opinion that West DuPage RTS will not be treating, storing or disposing of hazardous waste, so Criterion 7 does not apply

43

Section 39.2 of the Act : Criterion 5

- "the plan of operations for the facility is designed to minimize the danger to the surrounding area from fire, spills, or other operational accidents"

44

Incident Prevention and Response Plan (Criterion 5)

Prevention

First, the Plan presents the actions to be taken to prevent fires, spills and other operation accidents from occurring.

Response

Second, the Plan presents an organized and coordinated course of action to be taken in responding to potential fires, spills or other operational accidents at West DuPage RTS, if any occur.

45

Safety Officer

- On-site at ALL Times
  - The Facility Manager (or duly designated equipment operator) will serve as the Safety Officer to ensure an identified Safety Officer is on-site at all times during operation
- Responsibilities
  - Implement procedures to prevent fires, spills and other operational accidents, and
  - Coordinate responses to incidents or emergencies, if any were to occur, consistent with this plan and with any government response to the incident, such as the Police and Fire District

46

Spill and Accident Prevention

- Training
- Systems and procedures to contain and collect any spilled liquids
- Personal Protective Equipment (PPE)

47

Fire Prevention

- All of the existing and proposed buildings are/will be equipped with wet or dry pipe fire suppression systems
- A second Fire Rover will be added for the MSW and SSR transfer building. The Fire Rover combines 24/7 remote thermal monitoring and an automated fire-fighting foam system that can be released quickly if a spike in temperature in the building is detected.
- A water source is located on-site (fed from a water main that loops through the site) with seven hydrants, including one just southwest of the MSW and SSR transfer building

48

Fire Prevention (cont.)

- On-site heavy equipment, such as the water truck or loaders, may also be used to help extinguish a fire
- Access has been designed to accommodate emergency vehicles, including fire trucks
- Fire extinguishers will be located in each piece of heavy equipment and the scale house

49

Opinion – Criterion 5

- It is my professional opinion that the plan of operations for the West DuPage RTS is designed to minimize the danger to the surrounding area from fire, spills or other operational accidents

50

Section 39.2 of the Act : Criterion 8

- "if the facility is to be located in a county where a county board has adopted a solid waste management plan consistent with the planning requirements of the Local Solid Waste Disposal Act or the Solid Waste Planning and Recycling Act, the facility is consistent with that plan"

51

County Solid Waste Planning

- Each county in the State must adopt a twenty-year plan for managing the MSW generated within its boundaries
- Required to include a recycling program designed to achieve a 25% recycling rate
- Plan is required to be updated and reviewed every five years

52

DuPage County Solid Waste Management Plan (SWMP)

- First approved in February 1991 and provides:
  - Estimate of DuPage County's waste generation and disposal needs
  - Recommendations regarding recycling, including C&D
  - Recommendations regarding transfer stations
- Updates to the SWMP were approved by the DuPage County Board in 1996, 2001, 2007, 2012 and 2017, and provided the status of the various recommendations

53

SWMP Summary

- The SWMP encourages recycling of C&D - The site currently is recycling C&D and the proposed West DuPage RTS would increase the amount of C&D that is recycled
- The SWMP recognizes the current challenges of implementing recycling programs for SSR - The West DuPage RTS would provide a facility for the economic transfer of SSR to a MRF(s) and serve as a drop-off location for residents
- The SWMP states that additional drop-off locations for electronics waste are needed - The West DuPage RTS would serve as a drop-off location for electronic wastes

54

SWMP Summary (cont.)

- The SWMP indicates that DuPage County has relied on transfer stations to transport non-recyclable waste and MSW to out-of-county landfills; at least half of DuPage County's waste is handled by out-of-county transfer stations; and new or expanded facilities for handling, treating, and recycling waste would be considered on a case-by-case basis - The West DuPage RTS would enhance the capability and capacity of DuPage County to handle, treat, and recycle a variety of wastes
- DuPage County provided correspondence concluding that the proposed West DuPage RTS appears to be consistent with the 2017 Update

55

Opinion – Criterion 8

- It is my professional opinion that the West DuPage Recycling and Transfer Station is consistent with the SWMP and all provisions in effect at the time of the submittal of this Siting Location Application

DRAFT – Attorney-Client Privilege

Mr. Daniel F. Hanlon, Esq.
Marquardt & Belmont, P.C.
311 S. County Farm Road, Suite I
Wheaton, IL 60187

Subject: Review of local siting application for proposed transfer station near West DuPage Airport

Dear Mr. Hanlon:

Geosyntec Consultants, Inc. (Geosyntec) has reviewed various applicable sections of a draft local siting application prepared by Civil Engineering Consultants, Inc. (CEC) for a new municipal solid waste (MSW) transfer station at the Lakeshore Recycling Systems, LLC (LRS) transfer facility. The new MSW transfer station at LRS facility, located at 1655 Powis Road, West Chicago, DuPage County, would accept municipal solid waste (MSW) and single stream recyclable (SSR) materials. Currently the LRS facility is permitted to accept only construction and demolition (C&D) waste and therefore is not required to have local siting approval under the Illinois Environmental Protection Act (Act). LRS are seeking both local siting and Illinois Environmental Protection Agency (IEPA) approvals prior to construction of the new MSW transfer station. The evaluation has been organized to include the following sections:

- Project Background
- Documents Reviewed
- Compliance with FAA Advisory Circular
- Proposed bird mitigation methods
- Industry standards for odor and bird mitigation
- Proposed conditions for airport and facility operating agreement

engineers | scientists | innovators

EXHIBIT
tabbies
A-12

PROJECT BACKGROUND

FAA Advisory Circular

FAA Advisory Circular (AC) 150/5200-33C provides guidance for land uses which may act as attractants to hazardous wildlife near airports. The primary goal is to minimize hazards to aircraft posed by birds and other wildlife. Hazardous wildlife (birds, deer, etc.) attractants include natural and constructed areas that provide suitable habitats and food odors.

Aircraft collisions with birds and other wildlife in recent decades may impact public health and safety and significant financial losses, especially in highly developed areas. The AC seeks to reduce the potential for collisions through strategic land-use planning at properties adjacent to airports. Properties near airports with ponds, wetlands, marshes, or tall grasses, including water management facilities, golf courses, and properties with surface water management infrastructure may attract wildlife seeking suitable habitat. Agricultural facilities, waste management operations, restaurants, and other facilities that create food odors near airport properties may also attract wildlife.

Hazardous wildlife attractants are recommended to be at least 5,000 feet from an airport serving piston-powered aircraft. This distance is based on flight patterns of aircraft, the altitude at which most strikes occur, and recommendations from the National Transportation Safety Board (NTSB).

Fully enclosed MSW transfer stations are considered compatible with safe airport operations as long as they are outside of the runway protection zone (RPZ). The RPZ is an area off the end of a runway established to enhance the protection of people and property on the ground.

Site Location

The LRS transfer station is within less than 5,000 feet of DuPage Airport Runway 28 and partially located within RPZ. The RPZ for the DuPage Airport is defined the as area within 1,000 feet of the end of a runway. The proposed MSW transfer facility is located adjacent to the southern property boundary, outside the RPZ. Per the AC, in order to be considered compatible with safe airport operations, the proposed facility must meet the FAA's definition of fully enclosed.

Key Definitions

Waste-handling facilities must meet the following criteria to be considered enclosed per the AC:

- Receive garbage behind closed doors for processing;
- Remove all residue by enclosed vehicles that do not leak or have waste clinging to the exterior;
- Neither handle nor store putrescible waste outside or in partially enclosed structures accessible to wildlife;
- Control odors by ventilation and filtration systems (odor masking is not considered acceptable).

Documents Reviewed

The following documents were reviewed as part of this evaluation:

- Request to DuPage Airport Authority, Lakeshore Recycling Systems, LLC, West Dupage Recycling & Transfer Facility, CEC Project 163-899, dated 8 September 2021, including the following attachments:
    - Draft Criterion 2 – Design, Location Standards, and Operating Plan, CEC, dated July 2021;
    - Appendix 2-I Ventilation and Odor Control System Design, CEC, dated 8 September 2021;
    - LRS West DuPage Recycling & Transfer Station Local Siting Application Design Drawings, CEC, dated July 2021;
- Lakeshore Recycling Services Wildlife Hazard Site Visit, Loomacres Wildlife Management, June 2019;
- United States Environmental Protection Agency (USEPA) Waste Transfer Stations Manual[1];
- Solid Waste Associate of North America (SWANA) Transfer Station Management Course Manual[2].

[1] USEPA Division Solid Waste and Emergency Response, Waste Transfer Stations: A Manual for Decision-Making, EPA530-D-01-001, April 2001
[2] SWANA, Transfer Station Management Course Manual, 2016.

COMPLIANCE WITH FAA ADVISORY CIRCULAR

The proposed LRS facility meets the AC's criteria for an enclosed transfer station. Overhead doors will be closed during normal operations except to allow ingress/egress of trucks for unloading and loading waste. Trucks carrying MSW to and from the facility will be required to be tarped, not leaking, and without waste clinging to the exterior. The MSW area will have an active ventilation and filtration system for odor control and wastes temporarily stored outside will be in tarped trucks. Based on the information provided to Geosyntec, the proposed new MSW transfer station will meet the definition of an enclosed transfer station.

OTHER BIRD MITIGATION METHODS

Applicants' Expert Recommendations

In June 2019, Loomacre Wildlife Management conducted a wildlife hazard evaluation at the LRS facility and made recommendations to minimize hazardous wildlife attractants. Most of Loomacre's recommendations, which focus on exterior conditions at the facility, were incorporated into the operating plan. Section 2.4.18 of the proposed facility operating plan discusses implementation of the following mitigation measures:

- Train staff to develop a wildlife hazard mitigation plan;
- Install anti-perching devices at the MSW and SSR buildings;
- Perform quarterly wildlife surveys at the MSW and SSR buildings;
- Use deterrents in misters;
- Install netting along roof structures;
- Focus ventilation on areas with high odor-causing potential;
- Place rip-rap around bank of west pond;
- Monitor wildlife with game cameras;
- Vary wildlife harassment techniques;
- Maintain grass height of one foot or less; and
- Install a wire grid system at both ponds.

REGULATORY AND INDUSTRY STANDARDS FOR ODOR AND BIRD MITIGATION

The USEPA manual for waste transfer station includes sixteen facility design and operating procedures for odor mitigation, as shown in **Table 1**. Several of these procedures are similar to the AC criteria for fully enclosed structures, including enclosed trucks, use of odor neutralizing systems, and keeping exterior doors closed. SWANA has also established industry standards that incorporate USEPA's procedure for odor control, including:

- Maintaining enclosed operations;
- Following a "first-in, first-out" policy;
- Rapid handling of odorous waste;
- Incorporating odor control agents into dust-control misting systems;
- Regular facility cleaning, and;
- Using active odor treatment systems.

Table 1 provides a comparison of the USEPA recommended procedures to the design and operating conditions proposed by LRS. The proposed facility design and operating plan incorporates the applicable USEPA and SWANA designs and operating procedures.

PROPOSED CONDITIONS FOR AIRPORT AND FACILITY OPERATING AGREEMENT

The draft agreement between the DuPage Airport Authority and LRS should include a reference to the draft final version of the September 8, 2021 letter, and include specific references to Attachment 4 in regard to the LRS Transfer Facility Operating Plan. The following modifications are recommended to the September 8, 2021 submittal:

- Section 2.0 – Design Features and Operational Procedures

- Attachment 3 – Design Drawings: Wildlife Hazard Mitigations are not shown in the design drawings. It is recommended that details regarding the type and location of mitigation measures be added for clarity.

- Attachment 4, Section 2.4.3: Repeated non-compliance with LRS's tarping policy is not defined. Section 2.4.3 should be modified to include a copy of the tarping policy as an attachment.

- Attachment 4, Section 2.4.11 – Odor Control: The current odor control system is designed to manage organic odors only. Should odors related to hydrogen sulfide or other reduced sulfur compounds be detected off-site, a filtration or treatment system designed for those compounds should be incorporated into the active odor mitigation system;

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: Addition of rip rap to the east pond is recommended for consideration by LRS and DAA. Rip rap placed around the east pond would serve the dual purposes of discouraging wildlife and eliminating or reducing the need for mowing along the steep bank between the paved area and the east pond. Reduced mowing requirements, especially when the soils along the bank are wet or saturated, would help prevent erosion caused by tire ruts and be safer for site employees.

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: Proposed quarterly wildlife surveys should be expanded from the MSW and SSR buildings to the entire facility, including ponds, storage areas, and inactive equipment, as recommended in the Loomacre report.

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: It is recommended that recordkeeping for quarterly wildlife surveys and wildlife camera footage be retained by LRS for a minimum period of time and submitted DAA on a quarterly basis.

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: It is recommended that LRS develop a communications plan with DAA to alert DAA staff of the presence of wildlife hazards if they are observed onsite, as recommended in the Loomacre report.

The agreement between the DAA and LRS should include the following:

- Item 5: (***In addition to current language***) Should LRS sell the Transfer Facility, Oscar, LLC, or the new Transfer Facility operator shall maintain quarterly payments to the DAA throughout the operating period of the Transfer Facility.

- Item 6: LRS shall comply will all design and operational features described in Section 2.0 of the letter (included as Exhibit B to the agreement) and the Operating Plan (included as Attachment 4 of Exhibit B).

- Item 7: (In addition to current language) If the DAA becomes aware of any concerns created by the construction or operation of the Transfer Station on the Subject Property

after issuance of the final non-appealable siting approval pursuant to ILCS 5/39.2 and DAA and LRS are unable to resolve the DAA's concern, then (***reference to conflict resolution clause***)

- Item 8 (NEW): LRS establish a line of communication with personnel at the DAA and make available all wildlife inspection records and video footage upon request. Further, LRS will allow DAA or their authorized representatives access to the LRS facility for wildlife hazard management/harassment upon request.

- Item 9 (NEW): Should LRS close its Powis Road operations and sell or surrender the site infrastructure (utilities, structures, all site improvements) to Oscar, LLC, or another entity, the New Avigation Easement shall not be modified or withdrawn.

If you have any questions on this evaluation, please reach out to either Regan Welch at (614) 468-0417 or Jesse Varsho at (630) 203-3349.

Sincerely,

Regan Welch
Senior Project Engineer

Jesse P. Varsho, P.E., P.G.
Principal Engineer

Table 1: Comparison of Proposed Facility Design to USEPA Recommendations

USEPA Facility Design and Operating Procedure Recommendation	LRS Proposed MSW Transfer Facility	Site Document Reference
Increase distance between the odor source and receiver	Doors to be kept closed, see next entry.	
Evaluate the prevailing wind direction to determine building orientation and setback to adjacent properties	The MSW receiving area of the building is located on the western side of the property. (Closed landfill)	Design drawings
Orient the building and doorways with respect to odor-sensitive neighboring properties and close doors as practical during operating hours	• The MSW receiving area of the building is located on the western side of the property, which is a closed landfill. The MSW and SSR transfer building will not have any open sides (doors will stay closed except for vehicle ingress and egress). Further, unloading and loading of the waste will be done only inside the transfer station building while the doors are closed. The loading ramp exit area will be equipped with an auto-tarping device for trucks to be tarped before they exit the building. • The MSW and SSR transfer building will be equipped with fast opening/closing door at all vehicle ingress/egress locations including openings for transfer trailers and waste collection vehicles. Doors will also be provided at vehicle access locations to the C&D Tipping Building and any storage bunkers under the sorting line. The doors are sized and will be operated to minimize the area open to the outside at any one time.	DuPage Airport Authority Submittal 090821 Section 2.4.5 of the Operating Plan Section 2.4.11 of the Operating Plan Drawing C302
Design floors for easy cleanup (concrete surfaces with positive slope drainage system). Eliminate crevices, corners, and flat surfaces to avoid waste reside accumulation.	Will be required as part of IEPA Operating Permit Provided in Design Drawings	Drawing C302
Seal concrete and other semiporous surface to prevent absorption of odor-producing residues.	Not Discussed	--
Minimize onsite waste storage, both in the facility and in the loaded trailers, by immediately loading odorous/potentially odorous wastes into transfer trailers and quickly transferring them to the disposal site.	• Waste may be kept temporarily outside in transfer trailers which are tarped/covered for no more than 24 hours except over holidays and weekends, when the time shall be extended by an additional 24 hours for holiday and 48 hours for a weekend. • Per the Host Agreement, MSW will be removed from the tipping floor with a frequency adequate to greatly minimize the generation of odors.	Section 2.4.5 of the Operating Plan Section 2.4.11 of the Operating Plan
Incorporate odor neutralizing systems.	• The MSW and SSR transfer building will be equipped with a ventilation and filtration system designed to provide the necessary air exchanges and effectively eliminate any odors from the exhaust. • Due to the Site's proximity to the DuPage Airport, the MSW and SSR transfer building will be equipped with a ventilation and filtration system. The ventilation system will remove air from the building and be designed to work in conjunction with the building design and operations to provide the necessary air exchanges within the building. The filtration system will be designed to effectively eliminate any odors from the exhaust. The ventilation and filtration system will include the following: o Ventilation fans mounted in the roof or outside the walls of the MSW and SSR transfer building; o A duct system at the inlet of each ventilation fan; o An ozone generating equipment and dispersion device installed within each duct system which will destroy any odorous compounds or bacteria; and o A particulate filter system at the inlet of each ventilation unit.	DuPage Airport Authority Submittal 090821 Section 2.4.11 of the Operating Plan Drawing C301 Equipment Specification (DuPage Airport Authority Submittal 090821, Appendix 2-I)

2021 Geosyntec

Table 1: Comparison of Proposed Facility Design to USEPA Recommendations

Remove all waste from the tipping floor or pit at the end of each operating day, then clean those areas to remove remaining residues.	• The West DuPage RTS shall have the tipping floor free of waste and cleaned with a mechanical street sweeper by the end of each operating day. Waste may be stored overnight temporarily in the event of an emergency. • The tipping floor will be cleaned using a mechanical street sweeper with a water spray and vacuum system at least once per 24-hour period. The tipping floor and barrier walls will be cleaned with a pressure washer after sweeping at least weekly to remove waste residue and further control odors. A disinfectant may be used in the wash water to control odors. The area behind the barrier walls will also be routinely inspected and cleaned. All excess wash waters from the tipping floor will be directed through the oil-water separator to the sanitary sewer system.	Section 2.4.5 of the Operating Plan Section 2.4.7 of the Operating Plan
Use enclosed trailers whenever possible when loaded trailers must sit on site temporarily before transfer.	Loaded trailers stored overnight will be covered with a tarp and staged at least 500 feet from the Powis Road right-of-way.	Section 2.4.5 of the Operating Plan
Practice "first-in, first-out" waste handling practices so wastes are not allowed to site on site for long periods of time.	The MSW transfer station addition has been designed as a "first in, first out" facility.	--
Collect and remove partially full containers at rural stations where accumulation of full loads could take several days.	NA	--
Keep building catch basins, floor drains and drainage systems clean so odor-causing residues to not build up.	Will be required as part of IEPA Operating Permit	--
Treat drainage systems periodically with odor-neutralizing and bacteria-inhibiting solutions.	Not Applicable since transfer station drainage system will discussed to sanitary sewer system	--
Divert odorous waste loads to facilities with less sensitive surroundings during adverse weather conditions.	NA	--
Refuse highly odorous wastes.	If malodors are detected off-site, the source of odor generation will be removed from the site, and the off-site condition will be monitored by site personnel to insure against reoccurrence. If a continuous source of odorous materials is identified, the generator will be contacted and advised that the materials must be effectively treated for odor control or the service will be discontinued and the materials no longer brought to the site.	Section 2.4.11 of the Operating Plan
Practice other "good housekeeping" measures, including regularly cleaning and disinfecting containers, equipment, and other surfaces that come into contact with waste.	Will be required as part of IEPA Operating Permit	Section 2.4.9 of the Operating Plan

Marquardt & Belmont, P.C.
311 S. County Farm Road, Suite I
Wheaton, IL 60187

Subject: Review of local siting application for proposed transfer station near West DuPage Airport

Dear Mr. Hanlon:

Geosyntec Consultants, Inc. (Geosyntec) has reviewed various applicable sections of a draft local siting application prepared by Civil Engineering Consultants, Inc. (CEC) for a new municipal solid waste (MSW) transfer station at the Lakeshore Recycling Systems, LLC (LRS) transfer facility. The new MSW transfer station at LRS facility, located at 1655 Powis Road, West Chicago, DuPage County, would accept municipal solid waste (MSW) and single stream recyclable (SSR) materials. Currently the LRS facility is permitted to accept only construction and demolition (C&D) waste and therefore is not required to have local siting approval under the Illinois Environmental Protection Act (Act). LRS are seeking both local siting and Illinois Environmental Protection Agency (IEPA) approvals prior to construction of the new MSW transfer station. The evaluation has been organized to include the following sections:

- Project Background
- Documents Reviewed
- Compliance with FAA Advisory Circular
- Proposed bird mitigation methods
- Industry standards for odor and bird mitigation
- Proposed conditions for airport and facility operating agreement

PROJECT BACKGROUND

FAA Advisory Circular

FAA Advisory Circular (AC) 150/5200-33C provides guidance for land uses which may act as attractants to hazardous wildlife near airports. The primary goal is to minimize hazards to aircraft posed by birds and other wildlife. Hazardous wildlife (birds, deer, etc.) attractants include natural and constructed areas that provide suitable habitats and food odors.

Aircraft collisions with birds and other wildlife in recent decades may impact public health and safety and significant financial losses, especially in highly developed areas. The AC seeks to reduce the potential for collisions through strategic land-use planning at properties adjacent to airports. Properties near airports with ponds, wetlands, marshes, or tall grasses, including water management facilities, golf courses, and properties with surface water management infrastructure may attract wildlife seeking suitable habitat. Agricultural facilities, waste management operations, restaurants, and other facilities that create food odors near airport properties may also attract wildlife.

Hazardous wildlife attractants are recommended to be at least 5,000 feet from an airport serving piston-powered aircraft. This distance is based on flight patterns of aircraft, the altitude at which most strikes occur, and recommendations from the National Transportation Safety Board (NTSB).

Fully enclosed MSW transfer stations are considered compatible with safe airport operations as long as they are outside of the runway protection zone (RPZ). The RPZ is an area off the end of a runway established to enhance the protection of people and property on the ground.

Site Location

The LRS transfer station is within less than 5,000 feet of DuPage Airport Runway 28 and partially located within RPZ. The RPZ for the DuPage Airport is defined the as area within 1,000 feet of the end of a runway. The proposed MSW transfer facility is located adjacent to the southern property boundary, outside the RPZ. Per the AC, in order to be considered compatible with safe airport operations, the proposed facility must meet the FAA's definition of fully enclosed.

Key Definitions

Waste-handling facilities must meet the following criteria to be considered enclosed per the AC:

- Receive garbage behind closed doors for processing;
- Remove all residue by enclosed vehicles that do not leak or have waste clinging to the exterior;
- Neither handle nor store putrescible waste outside or in partially enclosed structures accessible to wildlife;
- Control odors by ventilation and filtration systems (odor masking is not considered acceptable).

Documents Reviewed

The following documents were reviewed as part of this evaluation:

- Request to DuPage Airport Authority, Lakeshore Recycling Systems, LLC, West Dupage Recycling & Transfer Facility, CEC Project 163-899, dated 8 September 2021, including the following attachments:
    - Draft Criterion 2 – Design, Location Standards, and Operating Plan, CEC, dated July 2021;
    - Appendix 2-I Ventilation and Odor Control System Design, CEC, dated 8 September 2021;
    - LRS West DuPage Recycling & Transfer Station Local Siting Application Design Drawings, CEC, dated July 2021;
- Lakeshore Recycling Services Wildlife Hazard Site Visit, Loomacres Wildlife Management, June 2019;
- United States Environmental Protection Agency (USEPA) Waste Transfer Stations Manual[1];
- Solid Waste Associate of North America (SWANA) Transfer Station Management Course Manual[2].

[1] USEPA Division Solid Waste and Emergency Response, Waste Transfer Stations: A Manual for Decision-Making, EPA530-D-01-001, April 2001
[2] SWANA, Transfer Station Management Course Manual, 2016.

COMPLIANCE WITH FAA ADVISORY CIRCULAR

The proposed LRS facility meets the AC's criteria for an enclosed transfer station. Overhead doors will be closed during normal operations except to allow ingress/egress of trucks for unloading and loading waste. Trucks carrying MSW to and from the facility will be required to be tarped, not leaking, and without waste clinging to the exterior. The MSW area will have an active ventilation and filtration system for odor control and wastes temporarily stored outside will be in tarped trucks. Based on the information provided to Geosyntec, the proposed new MSW transfer station will meet the definition of an enclosed transfer station.

OTHER BIRD MITIGATION METHODS

Applicants' Expert Recommendations

In June 2019, Loomacre Wildlife Management conducted a wildlife hazard evaluation at the LRS facility and made recommendations to minimize hazardous wildlife attractants. Most of Loomacre's recommendations, which focus on exterior conditions at the facility, were incorporated into the operating plan. Section 2.4.18 of the proposed facility operating plan discusses implementation of the following mitigation measures:

- Train staff to develop a wildlife hazard mitigation plan;
- Install anti-perching devices at the MSW and SSR buildings;
- Perform quarterly wildlife surveys at the MSW and SSR buildings;
- Use deterrents in misters;
- Install netting along roof structures;
- Focus ventilation on areas with high odor-causing potential;
- Place rip-rap around bank of west pond;
- Monitor wildlife with game cameras;
- Vary wildlife harassment techniques;
- Maintain grass height of one foot or less; and
- Install a wire grid system at both ponds.

REGULATORY AND INDUSTRY STANDARDS FOR ODOR AND BIRD MITIGATION

The USEPA manual for waste transfer station includes sixteen facility design and operating procedures for odor mitigation, as shown in **Table 1**. Several of these procedures are similar to the AC criteria for fully enclosed structures, including enclosed trucks, use of odor neutralizing systems, and keeping exterior doors closed. SWANA has also established industry standards that incorporate USEPA's procedure for odor control, including:

- Maintaining enclosed operations;
- Following a "first-in, first-out" policy;
- Rapid handling of odorous waste;
- Incorporating odor control agents into dust-control misting systems;
- Regular facility cleaning, and;
- Using active odor treatment systems.

Table 1 provides a comparison of the USEPA recommended procedures to the design and operating conditions proposed by LRS. The proposed facility design and operating plan incorporates the applicable USEPA and SWANA designs and operating procedures.

PROPOSED CONDITIONS FOR AIRPORT AND FACILITY OPERATING AGREEMENT

The draft agreement between the DuPage Airport Authority and LRS should include a reference to the draft final version of the September 8, 2021 letter, and include specific references to Attachment 4 in regard to the LRS Transfer Facility Operating Plan. The following modifications are recommended to the September 8, 2021 submittal:

- Section 2.0 – Design Features and Operational Procedures

- Attachment 3 – Design Drawings: Wildlife Hazard Mitigations are not shown in the design drawings. It is recommended that details regarding the type and location of mitigation measures be added for clarity.

- Attachment 4, Section 2.4.3: Repeated non-compliance with LRS's tarping policy is not defined. Section 2.4.3 should be modified to include a copy of the tarping policy as an attachment.

- Attachment 4, Section 2.4.11 – Odor Control: The current odor control system is designed to manage organic odors only. Should odors related to hydrogen sulfide or other reduced sulfur compounds be detected off-site, a filtration or treatment system designed for those compounds should be incorporated into the active odor mitigation system;

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: Addition of rip rap to the east pond is recommended for consideration by LRS and DAA. Rip rap placed around the east pond would serve the dual purposes of discouraging wildlife and eliminating or reducing the need for mowing along the steep bank between the paved area and the east pond. Reduced mowing requirements, especially when the soils along the bank are wet or saturated, would help prevent erosion caused by tire ruts and be safer for site employees.

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: Proposed quarterly wildlife surveys should be expanded from the MSW and SSR buildings to the entire facility, including ponds, storage areas, and inactive equipment, as recommended in the Loomacre report.

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: It is recommended that recordkeeping for quarterly wildlife surveys and wildlife camera footage be retained by LRS for a minimum period of time and submitted DAA on a quarterly basis.

- Attachment 4, Section 2.4.18 – Wildlife Hazard Mitigation: It is recommended that LRS develop a communications plan with DAA to alert DAA staff of the presence of wildlife hazards if they are observed onsite, as recommended in the Loomacre report.

The agreement between the DAA and LRS should include the following:

- Item 5: (***In addition to current language***) Should LRS sell the Transfer Facility, Oscar, LLC, or the new Transfer Facility operator shall maintain quarterly payments to the DAA throughout the operating period of the Transfer Facility.

- Item 6: LRS shall comply will all design and operational features described in Section 2.0 of the letter (included as Exhibit B to the agreement) and the Operating Plan (included as Attachment 4 of Exhibit B).

- Item 7: (In addition to current language) If the DAA becomes aware of any concerns created by the construction or operation of the Transfer Station on the Subject Property

after issuance of the final non-appealable siting approval pursuant to ILCS 5/39.2 and DAA and LRS are unable to resolve the DAA's concern, then (***reference to conflict resolution clause***)

- Item 8 (NEW): LRS establish a line of communication with personnel at the DAA and make available all wildlife inspection records and video footage upon request. Further, LRS will allow DAA or their authorized representatives access to the LRS facility for wildlife hazard management/harassment upon request.

- Item 9 (NEW): Should LRS close its Powis Road operations and sell or surrender the site infrastructure (utilities, structures, all site improvements) to Oscar, LLC, or another entity, the New Avigation Easement shall not be modified or withdrawn.

If you have any questions on this evaluation, please reach out to either Regan Welch at (614) 468-0417 or Jesse Varsho at (630) 203-3349.

Sincerely,

Regan Welch

Above Space for Recorder's Use Only

INTERGOVERNMENTAL AGREEMENT

THIS INTERGOVERNMENTAL AGREEMENT (this "Agreement") is made and entered into this 22nd day of March, 2001, by and between the CITY OF WEST CHICAGO the ("CITY"), an Illinois municipal corporation situated in DuPage County, Illinois, and the DuPAGE AIRPORT AUTHORITY, an Illinois municipal corporation situated in DuPage County, Illinois, (the "AUTHORITY"); the CITY and the AUTHORITY being sometimes hereinafter individually referred to as "PARTY" and collectively referred to as the "PARTIES";

WHEREAS, the AUTHORITY is organized as a metropolitan airport authority pursuant to the Airport Authorities Act (70 ILCS 5/1 *et seq.*), exercising the powers conferred upon airport authorities under said Act, as well as other powers conferred under the statutes of the State of Illinois, including the powers conferred upon the AUTHORITY pursuant to the Airport Zoning Act (620 ILCS 25/1 *et seq.*); and,

WHEREAS, the CITY is a non-home rule unit of local government exercising the powers conferred upon such units of local government

RETURN TO:
Phillip A. Luetkehans
SCHIROTT & LUETKEHANS, P.C.
105 E. Irving Park Rd.
Itasca, IL 60143

pursuant to the Illinois Municipal Code (65 ILCS, Art. 5); and

WHEREAS, the PARTIES, as units of local government, are authorized to contract and otherwise associate amongst themselves and to obtain or share services and to exercise, combine or transfer any power or function that either unit of local government may have in any manner not prohibited by law or ordinance under the authority of Article VII, Section 10 (Intergovernmental Cooperation) of the Constitution of the State of Illinois; and,

WHEREAS, the AUTHORITY owns certain property which is presently within the CITY'S boundaries (the "PROPERTY"), a description of which is attached hereto and incorporated herein as Exhibit "A"; and

WHEREAS, the PARTIES agree that a legal description of the PROPERTY will be provided within a reasonable period of time by the AUTHORITY; and

WHEREAS, the PARTIES are "public agencies" within the meaning of the Intergovernmental Cooperation Act (5 ILCS 220/1 *et seq.*) and are further authorized to enter into this Agreement pursuant to the Intergovernmental Cooperation Act; and

WHEREAS, the PARTIES have determined that it is in their best interests to enter into this Agreement, pursuant to the lawful authority conferred upon the PARTIES as units of local government as specified in the preceding recitals and further pursuant to 65 ILCS 5/11-15.1-3; and

WHEREAS, following all necessary public hearings, the Corporate Authorities of the CITY, by a vote of not less than two-

thirds (2/3) of the Corporate Authorities then holding office, adopted a Resolution authorizing and directing the Mayor to execute, and the CITY Clerk to attest, this Agreement on behalf of the CITY; and

WHEREAS, the AUTHORITY'S Board of Commissioners has authorized the execution of this Agreement by the passage of an ordinance or resolution providing for such execution, passed or adopted upon the affirmative vote of the majority of the Commissioners.

NOW, THEREFORE, in consideration of the foregoing recitals, the mutual covenants and agreements hereinafter set forth, and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the PARTIES do hereby agree as follows:

ARTICLE I

INCORPORATION OF RECITALS

The PARTIES hereby confirm the truth and validity of the representations and recitations set forth in the foregoing recitals. Such recitals are hereby incorporated into and made a part of this Agreement as though fully set forth in this Article I.

ARTICLE II

EFFECTIVENESS OF PRIOR ANNEXATION

This Agreement shall supersede all prior annexation agreements, intergovernmental agreements and amendments thereto entered into by the CITY and the AUTHORITY and upon the execution of this Agreement, all such prior agreements shall be deemed terminated by the PARTIES (the "PRIOR DOCUMENTS"). However, all

actions taken under those prior annexation and intergovernmental agreements, including but not limited to the annexation of PROPERTY into the CITY, to the extent not modified herein, are hereby ratified by the PARTIES.

ARTICLE III

GENERAL PROVISIONS

A. APPLICABILITY OF THIS AGREEMENT: All construction and development upon the AUTHORITY'S PROPERTY shall be undertaken in conformance with the requirements of this Agreement. Subject to supervening law, the terms of this Agreement supersede any codes, ordinances, resolutions, rules, regulations and standards of the CITY. The codes, ordinances, resolutions, rules, regulations and standards generally in force, from time to time, within the CITY shall regulate those items not covered by this Agreement. The CITY shall not enact any ordinance which contravenes or limits the statutory powers of the AUTHORITY.

B. PRIVITY OF CONTRACT: The PARTIES agree that the terms of this Agreement are contractual provisions between the CITY and the AUTHORITY who enjoy privity of contract with respect thereto. The terms of this Agreement are not assignable to any successor in fee simple interest to the PROPERTY. If any portion of the PROPERTY is not owned in fee simple by the AUTHORITY or its successor governmental entity, that portion shall be governed by the codes, ordinances, resolutions, rules and regulations of the CITY then in effect without regard to the terms of this Agreement. Long-term, subordinate or any other leases or easements to third parties shall

not create or be considered a loss of the AUTHORITY'S fee simple interest under this Agreement.

C. PRIOR IMPROVEMENTS: To the extent that prior utility improvements for sewer and water have been constructed, in part or in full ("PRIOR UTILITY IMPROVEMENTS"), the AUTHORITY, within thirty (30) days of the full execution of this Agreement, will pay the CITY the sum of One Million Nine Thousand Dollars ($1,009,000.00). Said payment will completely discharge any and all amounts owed to the CITY for PRIOR UTILITY IMPROVEMENTS.

D. PRIOR BUILDING FEES: All fees for building permits or inspections owed by either PARTY as of the date of this Agreement are hereby waived.

E. The AUTHORITY has previously provided stormwater management facilities to accommodate existing and future development. The AUTHORITY shall, within one hundred eighty (180) days of execution of this Agreement, provide the CITY with a summary of the total capacity, capacity required for existing development and remaining capacity available for future development of the existing stormwater management facilities.

F. This Agreement shall expire on January 1, 2026. Afterwards, the PARTIES agree that the term will automatically be extended for five (5), twenty-five (25) year intervals unless one (1) PARTY terminates this Agreement in writing to the other PARTY at least one hundred eighty (180) days prior to the end of the term or any extension.

ARTICLE IV

ZONING

A. ZONING GRANT: The CITY will, concurrently with the execution of this Agreement, amend its General Development Plan to designate the PROPERTY as Airport District. The PROPERTY has heretofore been zoned and classified within the CITY'S Code of Ordinances (the "ZONING ORDINANCE"). The PARTIES have agreed that the pertinent provisions of the ZONING ORDINANCE require amendment and modification to make more complete and appropriate provision for the PROPERTY owned by the AUTHORITY. Attached hereto and incorporated herein as Exhibit "B" is a copy of an "An Ordinance Amending the Code of Ordinances of the City of West Chicago -- Appendix A -- Zoning Ordinance, Article X - Section 10.5 Airport District" (the "ZONING TEXT AMENDMENT"). The PARTIES have agreed that the CITY, as applicant, shall proceed as required by law to cause the CITY'S Code to be amended so as to incorporate into the CITY'S ZONING ORDINANCE the provisions of the ZONING TEXT AMENDMENT. Concurrent with the approval of this Agreement, the CITY shall pass and approve the ZONING TEXT AMENDMENT, which subsequent to its adoption may only be amended by an ordinance of the CITY adopted upon application and approval by the AUTHORITY.

All land presently owned or subsequently acquired by the AUTHORITY shall be annexed into the CITY and, upon annexation, shall be zoned by the CITY into the Airport District. The property located within the Airport District shall be designated by the AUTHORITY into one (1) of three (3) parcel designations as follows:

not more than one (1) AIRPORT PARCEL; not more than two (2) GOLF COURSE PARCELS; and as many COMMERCIAL PARCELS as may be designated by the AUTHORITY provided that each such parcel designation shall comply with the terms of this Agreement, including the ZONING TEXT AMENDMENT.

1 AIRPORT PARCEL: The AIRPORT PARCEL shall be considered to be a single zoning lot for all purposes under this Agreement and the CITY'S ZONING ORDINANCE, as amended by the ZONING TEXT AMENDMENT. The AIRPORT PARCEL has been and may, in the future, be further developed with a public airport together with all associated accessory uses and amenities, which are used for or useful as an aid to the landing, taking off, navigation, repair, maintenance or storage of aircraft, including but not limited to, air traffic control towers, hangars, terminals, fuel farms, ground maintenance buildings, administrative offices, flight instruction buildings or offices, automobile rentals, food service, aircraft repair or maintenance buildings or offices, roads, parking, runways, taxiways, ramp areas, clear zones, noise impact areas and air space requirement areas (the "AIRPORT FACILITIES").

The AUTHORITY shall exercise exclusive zoning jurisdictional control, in conformance with the terms of this Agreement, over the number, location, height and other typical bulk zoning requirements, including but not limited to height, size, location, landscaping, signage, architecture, parking, lighting and fencing (the "BULK ZONING REQUIREMENTS"), for all AIRPORT FACILITIES presently located, or to be located, upon the AIRPORT PARCEL, as the same may, from time to time, be configured by the AUTHORITY. For as long as the AUTHORITY, or its successor governmental entities, shall own the AIRPORT PARCEL in fee simple, the ZONING TEXT AMENDMENT shall not apply to the AIRPORT PARCEL, except for Section 10.5-3(A). Notwithstanding the foregoing, the zoning jurisdiction of the AUTHORITY over the AIRPORT PARCEL shall be subject to the following specific limitations and conditions:

(a) The AIRPORT PARCEL, as the same may from time to time be configured, is the only portion of the PROPERTY which may be developed with AIRPORT FACILITIES. The AIRPORT PARCEL shall consist of a single contiguous tract of land which shall not be separated by other PARCELS, except as to the

presently existing heliport located at 320 Kress Road, West Chicago, Illinois. Notwithstanding the above prohibition, navigational aids approved by the Federal Aviation Administration (the "FAA") shall be allowed anywhere on the PROPERTY. To the extent the location and construction of AIRPORT FACILITIES upon the AIRPORT PARCEL are regulated by Federal and State aviation and transportation authorities, including, but not by way of limitation, the FAA, the AUTHORITY shall cause all AIRPORT FACILITIES to be located and constructed in full compliance with the applicable regulations of all such authorities. Further, and specifically, the CITY shall exercise no regulatory control over the AIRPORT FACILITIES, which shall conflict with any lawful authority exercised by the FAA and other appropriate Federal and State agencies.

(b) The AIRPORT FACILITIES shall be located solely within the AIRPORT PARCEL, except as such uses are allowable within the other PARCELS. The AIRPORT PARCEL, and only the AIRPORT PARCEL, may be improved with the AIRPORT FACILITIES. No other use may be located within the AIRPORT PARCEL.

2. GOLF COURSE PARCELS: The GOLF COURSE PARCELS shall be considered to be single zoning lots for all purposes. The GOLF COURSE PARCELS may in the future be further developed with golf courses and all buildings, structures and improvements which are used or useful in the operation of the golf courses, including but not limited to, maintenance and storage facilities, practice facilities, driving range, clubhouse, food and beverage facilities, swimming pools, tennis courts, other recreational facilities, hotels, cottages and other lodging facilities (not intended for permanent occupancy), facilities for meetings, benefits, banquets and the like held at the golf courses (the "GOLF COURSE FACILITIES").

The CITY and the AUTHORITY agree that, subject to the hereinafter stated conditions, the AUTHORITY shall exercise exclusive zoning jurisdictional control in conformance with the terms of this Agreement and the BULK ZONING REQUIREMENTS for the GOLF COURSE FACILITIES presently located, or to be located, upon the GOLF COURSE PARCELS, as the same may, from time to time, be configured by the AUTHORITY. For as long as the AUTHORITY, or its successor governmental entities, owns the GOLF COURSE PARCELS in fee simple, the ZONING TEXT AMENDMENT shall not apply to the GOLF COURSE PARCELS, except for Section 10.5-3(B).

The GOLF COURSE PARCELS, as the same may from time to time be configured, are the only portions of the PROPERTY which may be developed with such GOLF COURSE FACILITIES as are reasonably accessory thereto, except as such uses may be allowed within the other PARCELS.

3. COMMERCIAL PARCELS: All development upon the COMMERCIAL PARCELS shall be undertaken in conformance with this Agreement, the ZONING TEXT AMENDMENT and the "PROCEDURES" set forth in Exhibit "C", attached hereto and incorporated herein.

There are existing structures which currently do not conform to the ZONING TEXT AMENDMENT. These structures shall be considered legal nonconforming uses and be regulated by the present terms of the CITY'S Code relating to nonconforming uses and structures.

4. SITE PLAN: The SITE PLAN, incorporated herein and attached hereto as Exhibit "D", depicts the AIRPORT PARCEL, the GOLF COURSE PARCELS and the COMMERCIAL PARCELS. An updated SITE PLAN shall be provided to the CITY contemporaneously with any zoning or building permit requests or the expansion or contraction of the PARCEL boundaries.

5. PARCEL ADJUSTMENTS: The AUTHORITY shall have the absolute right, subject to the conditions hereinafter provided, to adjust the boundaries of the respective PARCELS:

(a) All portions of the PROPERTY to be redesignated from one (1) PARCEL to another must be owned by the AUTHORITY.

(b) At the time of redesignation, all affected portions of the PROPERTY being redesignated must be vacant and unimproved provided, however, that improved portions of the PROPERTY may be redesignated if, and only if, the improvements located thereon are permitted uses within the PARCEL classification to which the affected portion of the PROPERTY is to be redesignated and comply with the terms of this Agreement, the ZONING TEXT AMENDMENT and the BULK ZONING REQUIREMENTS as the case may be.

(c) The redesignation of portions of the PROPERTY from one (1) PARCEL to another PARCEL shall be accomplished by filing with the CITY an amended SITE PLAN depicting the addition and deletion to and from the relevant portions of the affected PARCELS, together with revised legal descriptions

of the affected PARCELS and, if appropriate, suitable evidence that all portions of the PROPERTY affected by the proposed redesignation continue to be owned by the AUTHORITY.

6. CONSTRUCTION: All construction upon the PROPERTY shall be undertaken in conformance with this Agreement.

B. AIRPORT HAZARD ZONING RESTRICTIONS: The AUTHORITY'S current airport zoning regulations are encompassed in the AUTHORITY'S Ordinances No. 1988-21 and 1988-23 and the Illinois Department of Transportation DuPage Airport Hazard Zoning Regulations, 92 Ill. Adm. Code 37 (collectively the "AIRPORT HAZARD ZONING REGULATIONS") and are attached hereto and incorporated herein as Exhibit "E".

The AUTHORITY shall promptly provide the CITY with copies of all ordinances of the AUTHORITY which amend the AIRPORT HAZARD ZONING REGULATIONS.

In the interest of public safety, the CITY shall notify the AUTHORITY of any request for a building permit for any structure within the CITY that shall exceed seventy-five (75) feet in height. The CITY shall include in its development guides a general notification to all applicants advising them of the need to consider other aviation related regulations that may affect the applicant's right to build structures within the CITY. The notification shall specifically reference Part 77 of the FAA's regulations and the State of Illinois Airport Hazard Zoning Regulations. The form of the notification shall be subject to the reasonable approval of the AUTHORITY.

C. PROHIBITIONS: The PARTIES expressly agree that no

portion of the PROPERTY shall used for any of the following purposes:

1. a regional or non-regional pollution control facility as those terms are presently or will in the future be defined or discussed in 414 ILCS 5/3.32 or any other statute making provisions for such facilities;

2. storage of radioactive wastes;

3. except as provided hereinafter in Article IV.D, off-premises identification signs as presently defined in the CITY'S ZONING ORDINANCE, including signs otherwise permissible under 225 ILCS 4401, *et seq.*;

4. Landscape Waste Transfer Stations as presently defined in Section 9-276 of the CITY'S Code; or

5. adult uses.

D. AUTHORITY SIGNS: The AUTHORITY presently has two off-premises identification signs on the COMMERCIAL PARCELS which are hereby considered to be legal nonconforming uses. These current signs will be removed or replaced within the original term of this Agreement. The AUTHORITY is granted the ability to replace these signs at any time with two (2) new off-premises identification Ground Signs to direct people to the AIRPORT PARCEL and GOLF COURSE PARCELS. The new signs shall be located in the same general location as the existing signs. The exact location will be agreed to by the PARTIES upon consultation.

ARTICLE V

POLICE POWERS

A LIQUOR LICENSE: The CITY acknowledges that the proposed development of the PROPERTY may include uses that in order to offer the complete services necessary to their economic viability may require a liquor-pouring license and some retail uses will require

a package-liquor sales license. In addition, the CITY acknowledges that, from time to time, the AUTHORITY permits the use of its facilities for special events such as air shows and events organized by charitable organizations. The CITY confirms that it has, as a matter of principle and overall CITY planning, no objection to the issuance of liquor licenses for special events and qualified charitable organizations, and other events and entities requested by the AUTHORITY and to the development of establishments requiring liquor-pouring or package-liquor sales licenses on the PROPERTY. Irrespective of the limitation on the number of licenses available within any class of license provided for in the CITY'S Code, the CITY further agrees to give reasonable and prompt consideration to properly qualified applicants.

E. Except as this Agreement provides, the CITY agrees that it will not enact any ordinance which does any of the following as it affects the AUTHORITY or the PROPERTY:

1. Regulate the operation of the AIRPORT PARCEL.

2. Regulate the movement, use, storage, repair or fueling of aircraft on the AIRPORT PARCEL.

3. Require a license, tax or fee in connection with ownership or use of aircraft on the AIRPORT PARCEL.

4. Require a license, tax or fee to do aviation business on the AIRPORT PARCEL.

5. Impose any tax, charge or requirement not otherwise generally applicable to the entire CITY.

6. Impose a municipal tax, fee or charge in connection with AIRPORT operations, including but not limited to a tax on planes, fuel, cargo, passengers or crews, on the AIRPORT PARCEL.

However, nothing herein shall prevent the CITY from receiving

or retaining its portion of fees, taxes or charges which are imposed by a county, the State of Illinois or the federal government.

C. The CITY may impose a hotel/motel tax which would be applicable to such uses located upon businesses on the PROPERTY. However, one hundred percent (100%) of any such tax collected by the CITY shall be paid over to the AUTHORITY. The AUTHORITY must utilize any such tax proceeds in the manner required by the governing state statutes and further agrees to confer with the CITY as to how the hotel tax funds shall be spent. Any promotional materials paid for by said tax funds shall acknowledge that the AUTHORITY is located in the CITY.

D. No amusement tax pursuant to state statutes may be imposed upon the PROPERTY in an amount which exceeds three percent (3%). However, no amusement tax of any amount shall be assessed upon any activity on the AIRPORT PARCEL that is primarily aviation related, except for those events for which tickets are sold to the general public such as air shows.

E. The CITY and AUTHORITY agree that the AUTHORITY and CITY shall comply with DuPage County Stormwater Regulations, as amended by the CITY'S Ordinance No. 4229.

ARTICLE VI

MUTUAL ASSISTANCE

The PARTIES shall do all things necessary and appropriate to carry out the terms and provisions of this Agreement and to aid and assist each other in furthering the intent of the PARTIES as

reflected by the terms of this Agreement including, without limitation, the holding of such public hearings and the enactment by the PARTIES of such resolutions and ordinances, the execution of such permits, applications and agreements and the taking of such other actions as may be necessary to enable the PARTIES to comply with the terms and provisions of this Agreement.

ARTICLE VII

ANNEXATION

Upon acquisition by the AUTHORITY of any additional property which is contiguous to the corporate limits of the CITY, the AUTHORITY will petition the CITY to annex such additional property, and the CITY agrees to annex such additional property. All such additional property shall be deemed to be included in the PROPERTY hereunder and shall be subject to the terms of this Agreement. Upon annexation, the AUTHORITY shall provide a revised SITE PLAN to the CITY showing which PARCEL such additional property is to be included in.

ARTICLE VIII

APPLICABLE MUNICIPAL STANDARDS

A. BUILDING CODES, IMPROVEMENTS, BUILDING AND OCCUPANCY PERMITS AND INSPECTIONS: If any improvements are to be dedicated to the CITY, those improvements shall comply with the CITY'S standards and specifications. However, there is no requirement for any improvements on the AIRPORT PARCEL or the GOLF COURSE PARCELS to be dedicated to the CITY, except to the extent that any sewer and water improvements serve the COMMERCIAL PARCELS or any user off

the PROPERTY, in which case those sewer and water improvements shall be dedicated to the CITY. The following provision shall control the adoption of building codes, the review of plans for the construction of all structures and dedicated improvements, the issuance of building and occupancy permits and the inspection of all structures constructed on the PROPERTY.

1. The construction of structures on the PROPERTY shall only be governed by and subject to compliance with the codes set forth in Exhibit "F" (the "APPLICABLE CODES") and not any other codes or ordinances of the CITY.

2. The PARTIES hereby agree to hire one (1) or more independent third parties (the "DESIGNATED FIRM[S]") to supply the compliance review and inspection services required in this Agreement. If at any time either PARTY wishes to hire a different firm for these services, it shall notify the other in writing. Thereafter, within sixty (60) days, the PARTIES shall solicit proposals from, interview and select one or more firms providing compliance review and inspection services. The PARTIES shall, in all respects, comply with any statutory requirements in the solicitation and selection of the DESIGNATED FIRM[S].

3 The PARTIES, in consultation with the DESIGNATED FIRM[S], have, and in the future shall from time to time develop a mutually agreed upon fee structure, based upon the type and size of the building, sufficient in all cases to pay the full costs of such services together with an additional charge of ten percent (10%) to be added thereto for the purpose of compensating the CITY for its administrative costs in reviewing the work of the mutually DESIGNATED FIRM[S]. All fees related to the compliance review and inspection services shall be paid by the developer at the time the application for building permit is filed. All fees under this paragraph shall be agreed to by the PARTIES and shall be reviewed annually by the PARTIES.

4. Except as hereinafter provided in subparagraph 5 below, the AUTHORITY, or parties seeking to develop a portion of the PROPERTY with the approval of the AUTHORITY, shall submit to the CITY an application for a building permit. To the extent required, said building permit application shall include the following documents:

(a) building permit application;
(b) four (4) sets of building plans -- site plan building, plumbing, mechanical, electrical;
(c) structural calculations;
(d) soil investigation report;
(e) four (4) landscape plans (COMMERCIAL PARCELS only);
(f) four (4) sets of civil engineering plans;
(g) stormwater permit application;
(h) four (4) sets of sprinkler system plans;
(i) four (4) sets of fire alarm plans; and
(j) four (4) sets of specifications for HVAC and other equipment.

If the applicant is a person or party other than the AUTHORITY, the AUTHORITY'S Executive Director shall advise the CITY in writing that the AUTHORITY has authorized such person or party to make application for a building permit.

The engineering plans shall demonstrate how stormwater management shall be accommodated. If stormwater management facilities are to be provided off-site, the plans shall include details of how stormwater will be conveyed to the regional facility, the capacity of the facility, the amount of capacity already committed to existing or approved development, the capacity required for the proposed development and the remaining capacity available for future development. The DESIGNATED FIRM[S] shall evaluate the engineering plans for compliance with the applicable stormwater management regulations.

Upon receipt by the CITY of a complete building permit application or any revision thereto, the CITY shall within one (1) business day forward the entire building permit application to the DESIGNATED FIRM[S].

The DESIGNATED FIRM[S], if necessary, can request additional information, and then shall determine whether the submitted building permit application, together with any modifications thereto, complies with all APPLICABLE CODES, and the DESIGNATED FIRM[S] shall certify to the AUTHORITY, the CITY and the applicant (if other than the AUTHORITY) whether the building permit application complies with all APPLICABLE CODES and whether a building permit with respect thereto should be issued.

If the DESIGNATED FIRM[S] certify that a building permit should be issued, the CITY shall, within three (3) business days of said certification, either issue a building permit or forward objections thereto and reasons for said objections in writing to the AUTHORITY and the applicant (if other than the AUTHORITY).

The AUTHORITY and the CITY agree that they shall provide each other and shall require all applicants and the DESIGNATED FIRM[S] to provide to the AUTHORITY and the CITY copies of all correspondence relevant to each application, inspection or certification.

5. Notwithstanding the foregoing, the requirement of CITY permitting shall only apply to buildings, not to parking lots, runways, ramp areas, roads, taxiways, or navigational aids, etc. located on or for the benefit of the AIRPORT PARCEL.

6. Should the AUTHORITY believe that any denial of a building permit application fails to properly apply any provision of the APPLICABLE CODES, the AUTHORITY shall notify the CITY, the applicant (if other than the AUTHORITY) and the DESIGNATED FIRM[S] of the specific provision(s) of the APPLICABLE CODES deemed to have been misapplied or violated. The PARTIES shall within three (3) business days meet with the applicant and the appropriate DESIGNATED FIRM[S] to attempt to resolve any questions or concerns; however each PARTY shall retain all rights to litigate the dispute.

7. Within two (2) business days of request for final inspection, the CITY and/or the DESIGNATED FIRM[S] shall inspect the improvement. If the improvement is found to be completed in substantial conformance with the previously approved plans and specifications, the CITY and/or DESIGNATED FIRM[S] shall provide written notice that the buildings are in substantial compliance. Within twenty-four (24) hours therefrom, the CITY shall issue a certificate of occupancy.

8. The PARTIES acknowledge that they shall have the right, but not the obligation, to mutually agree to have the CITY perform code compliance and inspection services in place of the DESIGNATED FIRM[S] from time-to-time, on a case-by-case basis. Any such mutual agreement of the PARTIES shall (i) be in writing and executed by the staffs of both PARTIES, (ii) be limited to the specific development project referenced in such written agreement and (iii) not be deemed a waiver of the requirements of this Article VIII to otherwise have the DESIGNATED FIRM[S] perform code compliance and inspection services on all other projects.

9. The APPLICABLE CODES shall remain in full force and effect and shall only be amended, modified or otherwise altered or terminated upon the mutual written agreement of both PARTIES and passed by ordinance or resolution of each Board. Either PARTY may, at any time, request

consideration of amendments, modifications, alterations or substitution of the APPLICABLE CODES and the PARTIES agree to promptly meet for the purpose of considering such requests.

B. CHANGE OF OCCUPANCY INSPECTIONS: Changes of occupancy due to sale or lease within the COMMERCIAL PARCELS shall comply with the CITY'S Change of Occupancy regulations requiring an inspection and compliance with minimum property maintenance requirements prior to any change in occupancy.

ARTICLE IX

UTILITIES

A. WATER AND SEWER SERVICE.

1. The PARTIES agree that the availability of sewer and water to the COMMERCIAL PARCELS is necessary for the proper development of the COMMERCIAL PARCELS. Under the PRIOR DOCUMENTS, the AUTHORITY had an obligation to pay for certain sewer and water improvements.

In exchange for the provisions of paragraph A.2 below, the AUTHORITY shall pay the CITY for these sewer and water improvements in one (1) of the two (2) following manners:

(a) Five Million Dollars ($5,000,000.00) payable over a five (5) year period with five (5) annual payments of One Million Dollars ($1,000,000.00) each. Said payments are due on August 1 of each year. The first (1st) payment shall be due on August 1, 2002 with the final installment to be paid on or before August 1, 2006; or

(b) a lump sum payment of Four Million Two Hundred Fifty Thousand Dollars ($4,250,000.00) on or before December 31, 2001.

The decision as to which of the above payment methods shall be used shall be solely within the discretion of the AUTHORITY.

2. In exchange for the payments set forth in paragraph A.1 above, the CITY shall, in good faith, make all reasonable efforts to continue to own and operate sewer and water utilities in a manner intended to provide for all future

water supply and sewer treatment needs of the PROPERTY. Subject to the CITY'S duty to exercise good faith in the performance of the foregoing covenant, non-performance by the CITY shall be excused if said non-performance is occasioned by events generally considered to be in the nature of "force majeure". Without limiting the foregoing, force majeure shall be deemed to include labor disputes, fire, war, events of civil disobedience, unavoidable casualties, natural disasters or other causes deemed to be beyond the reasonable control of the CITY.

3. On the PROPERTY, the AUTHORITY shall be responsible for the design and construction of all sewer and water mains necessary or appropriate to serve the uses developed or to be developed on the PROPERTY. All water distribution system improvements and all waste water collection system improvements to be dedicated to the CITY, including lift stations and appurtenant facilities (the "REQUIRED UTILITY IMPROVEMENTS") shall be laid out and designed by engineering consultants employed by the AUTHORITY in accordance with the reasonable engineering standards of the CITY.

4. All REQUIRED UTILITY IMPROVEMENTS shall be constructed pursuant to design engineering and plans and specifications therefor approved by the CITY'S Engineer. Approval of such engineering shall be based upon its compliance with the CITY'S codes, ordinances, rules and regulations or generally accepted engineering practices and standards as appropriate. Construction of the REQUIRED UTILITY IMPROVEMENTS shall be inspected and approved by the CITY.

5. To the extent possible, the REQUIRED UTILITY IMPROVEMENTS shall be located within publicly dedicated rights-of-way or reasonable easements granted to the CITY, such improvements shall, upon the approval of the CITY, be dedicated to and accepted by the CITY.

The REQUIRED UTILITY IMPROVEMENTS shall, upon dedication to and acceptance by the CITY, become the property of the CITY. The CITY shall thereafter, at its sole cost and expense, repair, replace and maintain its facilities in good working order to the extent that such facilities are located within publicly dedicated rights-of-way or easements granted to the CITY as herein otherwise provided. Sewer and water utilities located outside of publicly dedicated rights-of-way and easements granted to the CITY therefore shall remain the property of the AUTHORITY.

To the extent the REQUIRED UTILITY IMPROVEMENTS are not

located in publicly dedicated rights-of-way, the AUTHORITY shall grant appropriate easements to the extent possible over the PROPERTY for the ownership, operation, maintenance, repair and replacement of the REQUIRED UTILITY IMPROVEMENTS by the CITY. Such easements shall, to the extent practicable, be not less than twenty feet (20 ft.) wide. The PARTIES agree to consider changing the width of the easements if appropriate.

All such easements shall be accompanied by Easement Agreements which shall contain terms and conditions customary to such agreements, including provisions requiring the CITY to restore the PROPERTY of the AUTHORITY disturbed by the CITY'S maintenance, repair or replacement within a reasonable period of time thereafter and shall further authorize the AUTHORITY to effect such restoration and to bill the cost thereof to the CITY should the CITY fail to restore the easement premises after reasonable notice and within a reasonable period of time after the CITY performs any such work within the easement.

The Easement Agreements shall make clear that the AUTHORITY shall retain the right to pave over and plant vegetation on portions of the easements for roads and parking lots as may be necessary. The Easement Agreements shall also permit the AUTHORITY to relocate, at its sole cost and expense, portions of the easements and the CITY'S improvements located therein, when such relocation is reasonably necessary to facilitate the construction of other improvements upon the PROPERTY. The location of the relocated easement and improvements shall be subject to the reasonable agreement of the PARTIES.

The easements to be granted to the CITY for its sewer and water utilities shall be recorded by the CITY, be perpetual and shall run solely to the CITY. Other utilities requesting easements from the AUTHORITY shall be required to separately negotiate such easements from the AUTHORITY. The easements to be granted to the CITY shall be exclusive except that the AUTHORITY may request and the CITY may agree to permit specifically designated utilities to locate their facilities within the CITY'S easements upon such terms as the PARTIES may mutually agree. Nothing within this paragraph shall be deemed to relieve the AUTHORITY of the obligation to provide suitable easements for all other utilities serving development within the PROPERTY as required by the CITY'S Code.

The Easement Agreements shall further make clear that the

easements granted to the CITY that benefit the AUTHORITY shall be without cost to the CITY and, further, that the construction, operation, maintenance, repair and replacement of the utilities authorized to be located therein may be performed by the CITY, its officers, agents, employees and contractors including the employees and contractors of third parties (i.e., developers) who are authorized by the CITY to perform such work on behalf of the CITY, provided proper insurance is provided. The performance of such work by parties other than the CITY shall not relieve the CITY of any of its obligations under the Easement Agreements.

6. Upon the request and with the cooperation of the AUTHORITY, the CITY agrees to exercise its statutory authority under 35 ILCS 200/27-5 *et seq.*, to provide for the reimbursement of the costs of constructing the REQUIRED UTILITY IMPROVEMENTS.

7. Water provided to the AUTHORITY by the CITY shall be measured through various meters at locations approved by the PARTIES. The AUTHORITY reserves the right to resell such water within an individual building to the tenants of that building. The charge for water and sewer service provided to the AUTHORITY and its lessees by the CITY shall at no time exceed the lowest rate charged by the CITY to any customer of the CITY.

8. From and after the execution of this Agreement, all structures and uses connected to the CITY'S utilities shall be subject to the CITY'S customary connection charges as the same may, from time to time, be established by ordinance of the CITY.

B. NON-POTABLE WATER: The AUTHORITY may construct water wells for non-potable purposes such as irrigation and landscape maintenance. The CITY agrees to grant all permits necessary for such installations upon request by the AUTHORITY. Such wells shall remain the property of the AUTHORITY and shall not conflict with potable water systems.

C. WELL AND SEPTIC: The CITY will permit any facilities located on the AIRPORT PARCEL and GOLF COURSE PARCELS to be served by well and septic or other reasonable on-site system. However, no

building shall be served by well and septic that is in excess of one thousand two hundred square feet (1,200 sq.ft.). Subject to the AUTHORITY'S ability to satisfy all applicable County of DuPage health regulations, the CITY shall issue permits for well and septic improvements to serve the AIRPORT PARCEL and GOLF COURSE PARCELS.

D. COMMERCIAL PARCELS: Notwithstanding any contrary provision of the Agreement, all improvements constructed upon the COMMERCIAL PARCELS shall be connected to the public sewer and water utilities of the CITY. The cost of extending water and sewer service to improvements located upon the COMMERCIAL PARCELS shall be the sole and exclusive expense of the AUTHORITY or, at the discretion of the AUTHORITY, any party developing improvements upon the COMMERCIAL PARCELS.

ARTICLE X

RECAPTURE

To the extent that any provision of this Agreement is subject to 65 ILCS 5/9-5-1 *et seq.*, the CITY agrees to enter into one (1) or more Recapture Agreements with the AUTHORITY subject to the following conditions:

A. The PARTIES shall first agree as to what portion of the actual expenses incurred by the AUTHORITY represents an improvement which may be used for the benefit of property other than the PROPERTY.

B. The PARTIES shall next identify the specific properties

deemed to be benefitted by the construction of the REQUIRED UTILITY IMPROVEMENTS, the cost of which is to be partially recaptured.

C. The PARTIES shall agree on a methodology for spreading that portion of the cost of the REQUIRED UTILITY IMPROVEMENTS that the PARTIES shall agree is eligible for recapture in a manner which shall be fair and equitable to the owners of the properties deemed benefitted.

D. The agreed-upon elements of recapture as identified in subparagraphs A, B and C shall be incorporated in a Recapture Agreement which shall, in all respects, comply with the requirements of 65 ILCS 5/9-5-1 *et seq.*, or any successor statute making provision for recapture, as the same may from time to time be amended.

E. Any Recapture Agreement entered into pursuant to the terms hereof shall contain an undertaking by the CITY to exercise its best efforts to collect agreed upon recapture fees and remit same to the AUTHORITY, its successors or assigns, in accordance with the terms of such Recapture Agreement. Said provisions shall further provide that the AUTHORITY shall hold the CITY harmless for any inadequate failure to collect recapture fees as might be required by the terms of such Recapture Agreement. The PARTIES agree that the sole and exclusive remedy for the AUTHORITY shall be to request the CITY to initiate litigation to collect any recapture fees which the CITY inadvertently failed to collect. The AUTHORITY shall cooperate in any such litigation.

F. The PARTIES acknowledge that the CITY is a party to an

agreement with the Oliver Hoffman Company which may have been assigned, in whole or in part, to Town and Country Builders, their successors and assigns are hereinafter described as the "DEVELOPERS". Pursuant to the terms of the Agreement, the DEVELOPERS constructed a segment of a sewer main identified as Segment 2 on the attached Exhibit "G" (the "SEWER MAIN"). The AUTHORITY acknowledges that it is or may lawfully become, subject to the recapture of a portion of the costs of the construction of the SEWER MAIN. The recapture exists, or may exist, for the benefit of the DEVELOPERS.

The PARTIES agree that the SEWER MAIN has a capacity equal to sixteen thousand six hundred thirty-nine (16,639) population equivalent or PE's. At such time as the DEVELOPERS provide the CITY with acceptable evidence documenting the cost of the SEWER MAIN, the CITY may enter into a recapture agreement with the DEVELOPERS which shall apply, in part, to those portions of the PROPERTY which may thereafter be connected to the SEWER MAIN. The amount of the recapture fee shall be calculated by dividing the cost of the SEWER MAIN by sixteen thousand six hundred thirty-nine (16,639) to determine the amount of recapture due per PE. An additional connection charge shall be collected for each new structure to be connected to the SEWER MAIN after the execution of the recapture agreement. The amount of the additional connection fee shall be calculated by multiplying the per PE cost, as determined above, by the number of PE's attributable to the new structure connected to the SEWER MAIN.

ARTICLE XI

MISCELLANEOUS PROVISIONS

A. COLLATERALIZATION OF REQUIRED IMPROVEMENTS: "Required Improvements" shall include all improvements to be dedicated to the CITY together with improvements located on separate zoning lots that constitute elements of the PROPERTY'S infrastructure. Except as otherwise specifically provided herein, such Required Improvements shall be deemed to include, but not by way of limitation, grading, stormwater detention and management structures, roads, curbs, gutters, street lighting, sewer and water improvements. No letters of credit, bonds or other collateralization shall be required to be posted by the AUTHORITY to the extent that the AUTHORITY constructs such Required Improvements. The AUTHORITY agrees, however, that all such Required Improvements shall be constructed in accordance with the CITY'S requirements and, in the case of improvements to be dedicated to the CITY, will thereafter be maintained, repaired or replaced by the AUTHORITY for the period of twelve (12) months after the date of acceptance by the CITY. Nothing herein shall be deemed to require the CITY to accept any Required Improvements that the CITY believes were not constructed in accordance with the CITY'S Ordinances. All such Required Improvements constructed by any party other than the AUTHORITY shall be constructed, collateralized and maintained in compliance with the requirements of the CITY'S Ordinances.

B. CONTRIBUTATIONS: Any required land or money

contributions or donations for any unit of local government, school district, park district or special tax district shall not be required for structures built on the AIRPORT PARCEL or the GOLF COURSE PARCELS.

C. EXPENSES: The AUTHORITY shall not be liable for reimbursement of any expenses incurred by the CITY for attorney's services in connection with this Agreement or the development of the PROPERTY. However, this subparagraph shall not restrict the CITY'S ability to charge third parties or the AUTHORITY'S lessees for reasonable legal fees incurred on the COMMERCIAL PARCELS.

D. RECORDATION: The PARTIES agree to do all things necessary to cause this Agreement to be recorded in the Office of the Recorder of Deeds, DuPage County, Illinois.

E. NOTICES: All notices hereunder shall be in writing and must be served either personally or by registered or certified mail to:

1. CITY at:

CITY OF WEST CHICAGO
c/o City Administrator
475 Main Street
West Chicago, Illinois 60185

with a copy to:

Gerald M. Gorski
GORSKI & GOOD
211 South Wheaton Avenue-Suite 305
Wheaton, Illinois 60187

2. AUTHORITY at:

DU PAGE AIRPORT AUTHORITY
c/o Executive Director
2700 International Drive, Suite 200
West Chicago, Illinois 60185-1658

of any PARTY hereto to seek specific performance of the terms hereof.

I. Upon the execution of this Agreement, the PARTIES shall execute and file a stipulation to dismiss the case with prejudice between the PARTIES entitled *City of West Chicago v. DuPage Airport Authority*, No. 98 CH 1314 in the Eighteenth Judicial Circuit.

J. While this Agreement is in effect, the AUTHORITY waives its right to apply for disconnection of the PROPERTY from the CITY.

IN WITNESS WHEREOF, the PARTIES hereto have hereunto set their hands and seals on the day and year first above written.

ORDINANCE NO. 4419

AN ORDINANCE AMENDING THE CODE OF ORDINANCES OF THE CITY OF WEST CHICAGO – APPENDIX A, SECTION 10.5 – ZONING ORDINANCE, AIRPORT DISTRICT,

WHEREAS, on or about February 1, 2001, the Zoning Administrator proposed an amendment to the Zoning Ordinance, Appendix A of the Code of Ordinances of the City of West Chicago (the "CITY"), so as to amend Section 10.5 thereof, being the City's Airport District regulations; and,

WHEREAS, Notice of Public Hearing on said application was published in the Daily Herald on or about February 24, 2001, all as required by the ordinances of the CITY and the statutes of the State of Illinois; and,

WHEREAS, all other notices required by law have been given; and,

WHEREAS, a Public Hearing was conducted by the Plan Commission of the CITY commencing on March 13, 2001, pursuant to said Notice; and,

WHEREAS, at the Public Hearing, the CITY'S staff provided testimony in support of said amendment, and all interested parties had an opportunity to be heard; and,

WHEREAS, the corporate authorities of the CITY have received the recommendations of the Plan Commission, including its findings of fact, pursuant to Recommendation 836, a copy of which is attached hereto as Exhibit "A" and which is, by this reference, incorporated herein; and,

NOW, THEREFORE, BE IT ORDAINED by the City Council of the City of West Chicago, DuPage County, Illinois, in regular session assembled, as follows:

Section 1. That Appendix A, Section 10.5 of the Code of Ordinances of the City of West Chicago entitled "Airport District", which includes Sections 10.5-1 through 10.5-5, is hereby deleted in its entirety and in lieu therefore, the following language shall be substituted:

See Exhibit "B" attached hereto and incorporated herein

Section 2. That all ordinances and resolutions, or parts thereof, in conflict with the provisions of this Ordinance are, to the extent of such conflict, expressly repealed.

Section 3. That this Ordinance shall be in full force and effect ten (10) days from and after its passage, approval and publication in pamphlet form as provided by law.

PASSED this 19th day of March, 2001.

LAKESHORE RECYCLING SERVICES

WILDLIFE HAZARD SITE VISIT

June 2019

Prepared by:
Clayton Faidley, Airport Wildlife Biologist
Cody Bacuiska, Airport Wildlife Biologist

DRAFT

LOOMACRES
Wildlife Management

Introduction

Loomacres Wildlife Management (Loomacres) was contracted by Lakeshore Recycling Systems to conduct a wildlife hazard evaluation at Lakeshore Recycling System's (LRS) West DuPage Recycling and Transfer facility located at 1655 Powis Road in West Chicago, IL (Site). A site visit was conducted from June 17th to June 19th 2019.

The operations at the Site include a construction and demolition (C&D) materials recycling and transfer station. The main building handling the C&D material is a steel structure approximately 40 feet tall with two main doors. The C&D material is sorted and recycled or is transferred onto a truck to be taken to another facility. We understand that LRS has plans to expand its services and incorporate a municipal solid waste (MSW) transfer building next to its C&D building. The MSW will be handled in the new building (Figure 1).

Federal Aviation Administration (FAA) guidance indicates that MSW transfer stations on or near public-use airports have the potential to attract hazardous wildlife. The Site is located near the DuPage Airport. A map of the facility in relation to the DuPage Airport is included below (Figure 1).

Figure 1: The star is the location of the future MSW transfer station building, inside the LRS boundary.

The wildlife hazard evaluation performed by Loomacres included observations of wildlife hazard attractants and surveying wildlife at multiple locations. The results of each are provided below. Recommendation to minimize wildlife hazard attractants and mitigate the presence of wildlife is also provided.

LOOMACRES
Wildlife Management

Observations of Wildlife Hazard Attractants

Buildings and Equipment

Inside the sorting building, rock pigeons were observed inside the building. Figure 2 shows the birds loafing around in the rafters of the building. Below is another photo of an invasive species, the European starling and a location where nesting activities were observed on the outside of the C&D transfer building (Figure 3).

Figure 2: In the main support beams, rock pigeons can be seen roosting.

Figure 3: The brown/white-wash coming down below the gutter, classic sign of European starling nest.

Water Bodies

Onsite wildlife attractants are primarily the two water bodies located on the property. There is a small pond at the front of the facility that is surrounded by manicured grass, small trees and shrubs (Figure 4).

Figure 4: Location of front pond and surrounding vegetation.

At the back of the property is another pond and drainage ditches. However, unlike the front pond this back pond is larger, has more cover vegetation, and large trees that can be used as perching or nesting locations for birds (Figure 5).

Figure 5: The tall vegetation surrounding the rear pond obstructs views easily

During the site visit, all drainage ditches and ponds contained water. The drainage ditch at the back of the property contained aquatic vegetation that can only be found if water can sit in an area for a long time (Figure 6). Ensuing proper water drainage will ensure limited water, food, and cover sources for wildlife.

Figure 6: The vegetation contained in the ditch easily can hide wading birds or even waterfowl

Brush and Trees

Trees and brush can provide wildlife a variety of habitats for perching, nesting and potential food sources. There are some large trees such as cottonwood, growing around the rear pond. Fruiting trees such as mulberry can also be found along the small road that leads to the back of the pond.Outside of a large cottonwood trees at the back pond, few trees are found within the LRS facility boundary. There are several trees that are located outside the fence line surrounding the LRS facility (Figure 7). The trees and associated brush provide cover and food sources for small mammals and perching locations for birds. Many of the trees surrounding the facility had small perching and blackbirds utilizing the trees. At the back of the facility there are some large cottonwood trees (Figure 8). During one of the observation times, great egrets flew out of the largest tree behind the pond. There are also a few trees on the property boundary between the pond and railroad tracks. If these are on LRS property, they should be removed to reduce preferred habitat/perching locations.

DRAFT

Figure 7: Trees along the LRS property line

Figure 8: Large cottonwood tree by the rear pond

Vegetation Management

The majority of the Site is paved and has no vegetation present. However, detention ponds with surrounding vegetation are present at the front (west) and back (east) of the Site. At the front of the Site, the vegetation is maintained towards an ornamental style surrounding a small pond (Figure 9). The grass is cut to a short height, the bushes and trees are pruned and well maintained. At the time of the site visit, maintained grasses surrounding the front pond were at an average height of three inches.

Figure 9: The front pond with well-manicured grass, shrubs, and trees.

DRAFT

The pond at the back of the Site is much larger than the front one. The vegetation around this pond is not as well maintained as the front pond (Figure 10). The grass has been allowed to grow very tall, obstructing many of the views of the pond.

Figure 10: The rear pond showing the tall grasses and other vegetation.

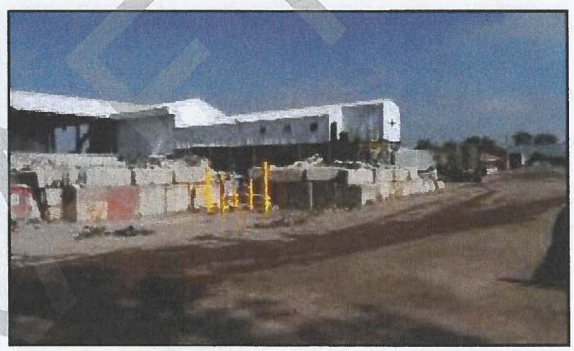
Wildlife Surveys

During the site visit, Loomacres staff conducted a total of four (4) onsite avian surveys. Surveys were conducted at four (4) varying times of the day (dawn, mid-morning, afternoon, and dusk), at three (3) different locations on the Site (Figure 11). Species were grouped into guilds that are based on taxonomical and behavioral characteristics. This approach allows species that are not related to be grouped based on traits most important to wildlife hazard management. Species that exhibit similar traits may respond to similar control methods.

DRAFT

Figure 11: Onsite survey points.

Survey Points



Survey point 1 is located at the front of the Site. The area has maintained grass, small bushes and trees. There is a small pond that is surrounded by gravel. The pond itself is difficult to see from the road as there is a berm on three sides and a fence between the pond and the Site operational areas. Small perching birds, columbids and blackbirds were the main wildlife observed at this point. There also appeared to be small fish in the pond. Employees had placed devices designed to scare wildlife around the pond. A coyote and two swan decoys are located around the pond.

Survey point 2 is located at the back of the Site. The area overlooks a large stormwater detention pond. The pond is surrounded with road millings and overgrown reed grass on all sides of the pond. There are some large cottonwood trees located at the back of the pond. There are railroad tracks east of the Site boundary. A drainage ditch extends north to south between the back fence and the maintenance road that goes towards the back of the pond. A few wading birds were seen here but it was dominated by blackbirds.

Survey point 3 is located on the southern edge of the Site between the C&D transfer building and the portable toilet storage area. The property fence on the south side has many trees, some of them are fruit-bearing trees. Many of the trees are taller than 30 feet. The small woodlot east of the survey point provided cover and perching locations for wildlife such as European starlings.

Results

A total of 14 species and 130 individual birds were observed during surveys at the Site. Blackbirds were the most commonly observed guild during surveys (37.5% of total observations); and the most individuals, accounting for 52% of the total individuals (67 individuals recorded) (Figures 5). Blackbirds were comprised mostly of European starlings (*Sturnus vulgaris*) and red-winged blackbirds (*Agelaius phoeniceus*) with the largest flock observed consisting of 10 and 20 respectively. Blackbirds can pose a significant hazard to aircraft due to their tendencies to form moderate to large sized flocks. Flock sizes are generally the greatest during the fall and winter months, as they concentrate in large numbers around abundant food sources. European starlings have a varied diet throughout the year. During the spring and summer, they often seek out insects due to the higher protein demands to raise young. In the fall and winter, they forage on seeds and grains that are rich in carbohydrates to help maintain energy for warmth. Blackbirds observed

DRAFT

during the site visit were relatively low in number; however, due to the presence of food sources and nesting sites, their numbers can be expected to increase into the future. The European starling is an invasive blackbird species commonly found in well maintained grass fields. Starlings are attracted to open fields to forage on seeds and insects and buildings because they provide excellent nesting locations. They are frequently observed creating nests within cavities inside hangars, warehouses, out-buildings and stagnant vehicles. Due to their body size and commonality on airfields, European starlings are ranked the 25th most hazardous species to aviation by the FAA (FAA AC 150/5200-32 current edition).

Flocking and small perching were the second and third most abundant guilds observed during onsite surveys (24% & 13% of observations, respectively). The flocking guild was comprised of mostly barn swallows (*Hirundo rusica,*) and American robins (*Turdus migratorius*). Both species can pose a significant hazard to aircraft due to their moderate body size and flocking tendencies. Flocking birds will form dense flocks during migration seasons which increase the chance for a strike. These birds are drawn to the airport for the insects living in the grass. Barn swallow is ranked 43rd most hazardous species to aircraft (FAA AC 150/5200-32 current edition).

The small perching guild (songbirds) had a total of 17 individuals, mostly house sparrows (*Passer domesticus*). There were more house sparrows seen during non-survey times. Many of them were seen loafing around the front pond in the grass or on the wooden security fence that separates the pond from the Site operational areas.

DRAFT

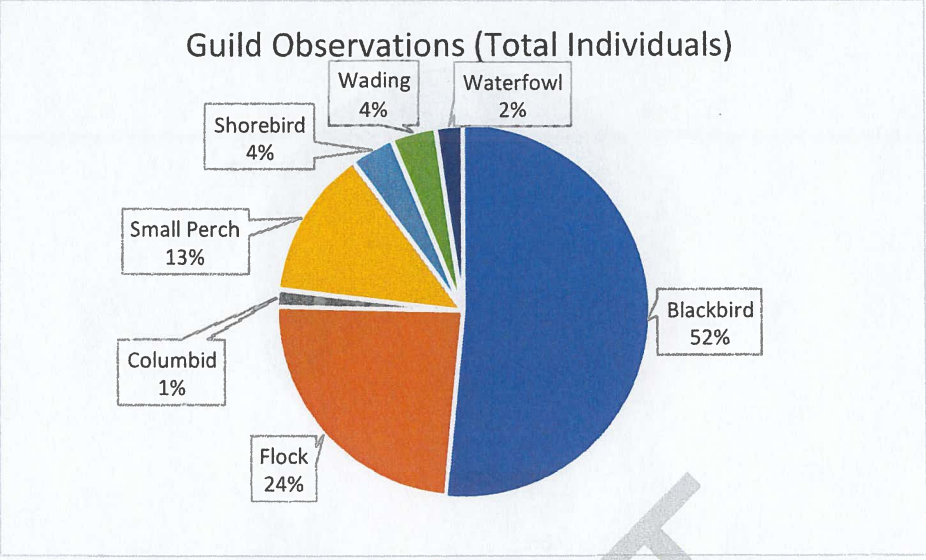


Figure 12: Total observations based on individuals during onsite surveys

Only three waterfowl species were documented during surveys at the Site. Waterfowl species such as Canada geese (*Branta canadensis*) have the potential to occur on and around the Site due to the large pond in the back of the property. During a meeting with an employee at LRS it was stated that Canada geese or some form of waterfowl can be periodically found on the large pond at the back of the Site. Canada geese are large bodied birds, weighing up to 18 pounds and can form large flocks during migration. Geese will undergo seasonal migrations during the fall, winter and spring. During the spring, geese will typically break their flock sizes as they begin to pair off for nesting season. Canada geese typically pair up around waterbodies and wetland complexes for nesting.

Bird counts varied around the Site. The greatest number of total individuals were observed near survey point #2 (Figure 13). Numbers at this location are most likely explained by the pond and the vegetation surrounding the pond. Blackbirds and small perching birds were commonly seen at this location and may be feeding, loafing, or nesting because of the tall vegetation. This location poses a higher hazard than the surrounding areas because of the easy access to water and the vegetation.

DRAFT

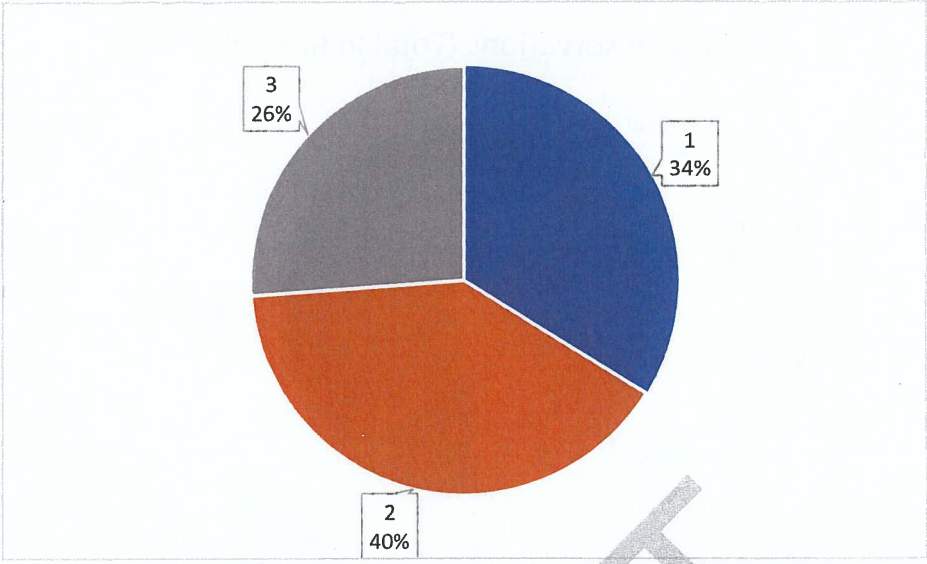

Figure 13: Onsite survey locations and total percentage of observations

Survey point 1 had the second greatest counts of individual birds during the site visit. House sparrows (15 individuals) were documented the most of any bird at this location. This location also had two of the three waterfowls observed during onsite surveys. Many of the birds at this location were loafing in the grass and feeding. This location provides a lot of foraging and loafing opportunities with the trees, shrubs and pond.

DRAFT

Recommendations to Minimize Potential Wildlife Hazards

In order to reduce the potential wildlife utilizing areas within the Site, Loomacres recommends the following.

Ponds

The following is recommended to reduce the amount of wildlife in the area of the front pond.

- Extend rip-rap - The rip-rap that is currently surrounding the pond is preventing birds such as waterfowl from walking into or out of the pond. However, this feature can be extended further into the grass, widening the buffer between the water and grass.
- Vary harassment - The coyote and swan decoys have both proven they can reduce the birds in the area, to a point. These features have been in place for an extended period of time and the birds in the area are accustomed to them. To keep the birds from becoming accustomed to harassment tactics, LRS must designate an employee or employees to periodically patrol the front pond and harass any birds observed.
- Monitor wildlife - An easy way to monitor wildlife at the front pond would be to install game cameras. This will capture any wildlife utilizing the pond and from there, LRS can mitigate the hazards as needed. Installation of game cameras will allow for monitoring when employees are unavailable. Checking the cameras periodically will give an idea of what and when wildlife are using the pond.

The rear stormwater detention pond is a much larger waterbody with a greater potential to attract wildlife. This pond is the highest priority based on current observations. The following is recommended to reduce the amount of wildlife in the area of the rear pond.

- Maintain grass height – The tall grass around the pond pose a high risk to hide wildlife. The tall grass must be maintained at a height that affords an easy sight picture. The FAA recommends that grass heights at airports be maintained between 6 and 12 inches. Grass maintenance at the back pond will allow for easy inspection of the pond so that any wildlife may be harassed to leave to area. Cutting the grass closer to 12 inches will deter many species from utilizing it such as Canada geese. This will also allow for LRS staff to visually inspect the pond for birds that may be attempting to hide. During the site visit, much of the grass surrounding the rear pond was over 5 feet in height. This is too tall and any wildlife that would have been in the grass would most likely avoid detection.
- Remove cottonwood tree – East of the large stormwater detention pond, near a small vehicle turn-around, there is a large cottonwood tree. While some of the trees on the eastern property edge can serve as a visual blocker, this large tree was being used as a roosting location for a few great egrets (*Ardea alba*). It is recommended that the large cottonwood tree standing

DRAFT

alone be removed.

- Install grid-wire system – Installation of a grid-wire system will prove to keep most waterfowl and wading birds from utilizing the pond. Before this can be installed, the current vegetation surrounding the pond must be kept short. If the vegetation is allowed to grow taller than the grid-wire, it will not work as intended. The grid-wire exclusion device can be installed easily with minimal tools. To keep larger birds from using the water, a checkerboard pattern is recommended. This involves running cables from one side to another in one direction (North to South) and then running a second set of wires perpendicular. Having the cables close together, approximately 8.3 meters apart greatly reduces the ability Canada geese to use as a water source. The following paper discusses the methods and installation of a grid-wire system as well as examples and building. (*Excluding Non-migratory Canada Geese With Overhead Wire Grids*, 1993, Lowney.)
- The installation of game cameras around the rear pond can also serve as a way to monitor wildlife around on the pond. However, unlike the front pond with one or two cameras, the rear pond must have more. Four to five cameras placed around the rear pond will help with monitoring the wildlife.

Buildings

- Regularly inspect buildings and equipment - During the site visit, the Loomacres biologist noted a few rock pigeons flying around the current transfer building (Figure 2). These birds are non-native invasive species. LRS can legally remove these birds without permit. There was also a location on the outside of the transfer building where European starlings were observed nesting. On the outside of the C&D building there is a white-wash from droppings by birds entering and exiting the building (Figure 3). Closing these locations will reduce the areas starlings can nest. Each building and piece of equipment that has not moved or been used in one months' time should be inspected once a month for any bird nest. Buildings and equipment at LRS can provide shelter and roosting/nesting habitat to European starlings and rock pigeons. LRS staff should inspect buildings and equipment on a regular basis.
- Remove observed nests - LRS management should request that employees maintain buildings and equipment to reduce potential nesting habitats. If nesting is occurring within buildings, LRS staff should assist with removal of the nests. Nests of invasive species, such as European starlings, rock pigeons, and house sparrows are not protected by the Migratory Bird Treaty Act and can be removed at any time. Migratory bird nests are protected by the Migratory Bird Treaty Act and cannot be removed when active (eggs or young present). A depredation permit is required to remove any active migratory bird nest. Old nests should be removed as soon as possible. Installation of hardware cloth or expanding foam can eliminate nesting areas for birds.
- Install exclusion devices - To prevent nesting within buildings, exclusion devices should be installed to limit access. Door seals and entry ways should be monitored and repaired as

DRAFT

necessary to limit access for birds. Building doors should be closed when possible to reduce the potential for wildlife to enter them. Anti-perching devices should be installed along building edges so no ledges are exposed. An example can be seen in Figure 15.

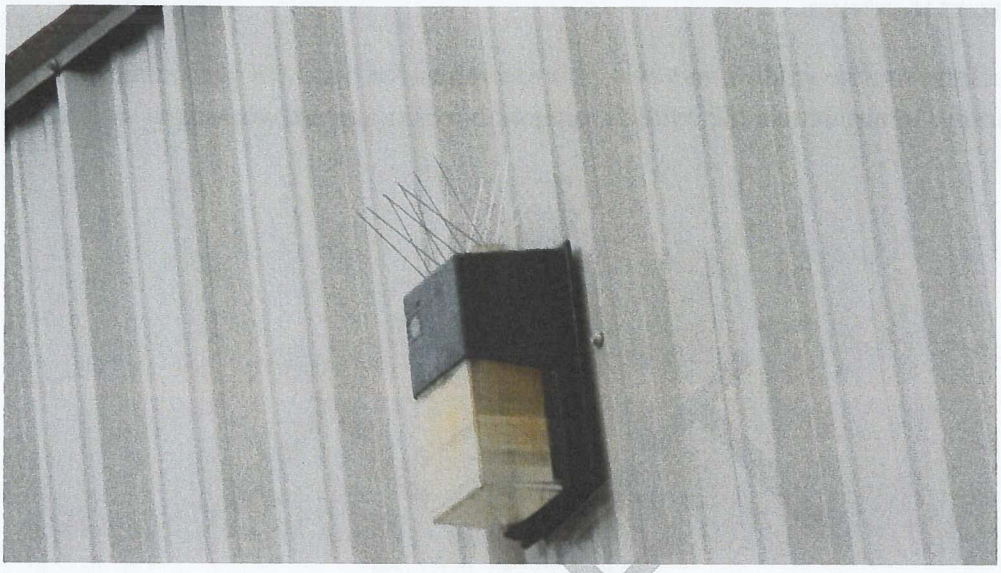

Figure 15: Anti-perching devices on top of a light. Bird spikes can be placed on top of any surface, glued/screwed into place.

- Another form of exclusion is the installation of Methyl anthranilate (MA) misters. These devices can be purchased and installed in locations inside the facility to deter birds from entering the buildings. The MA spray is an extract from Concord grapes and when applied to the air has a grape scent. It is approved for the use of bird harassment and is also an FDA approved food additive. The spray when applied to air, acts as an irritant to the birds and will cause them to seek out safer environments away from the source.

Personnel

- Create wildlife hazard management plan and train employees - LRS should create their own wildlife hazard management plan which will state how LRS will monitor and deter certain wildlife species and assign titles and responsibilities to individuals whom will be responsible for wildlife control activities. LRS management should train assigned facility employees on the role they will play to reduce wildlife hazards (e.g., use of pyrotechnic harassments). It will also be a guide for DuPage airport if they should have any questions about the activities LRS will be doing to discourage and prevent wildlife from using the facility. If any questions about the formation, implementation or general questions about the contents of the management plan ever occur, a qualified airport wildlife biologist will be consulted.

- Establish line of communication with DuPage Airport - DuPage Airport has a wildlife hazard management plan (WHMP) and operations staff. The WHMP and the staff present at the airport can assist with wildlife issues LRS may encounter. It is recommended that

LRS form a line of communication with DuPage Airport and inform them when wildlife (waterfowl, large flocks of birds) are present on the Site. LRS should also be open to the idea of allowing DuPage Airport staff access onsite to harass any wildlife that pose a hazard to aviation.

- Perform routine wildlife surveys - It is recommended that LRS perform quarterly wildlife surveys to ensure that the wildlife mitigation techniques are working as intended.

DRAFT

LOOMACRES Wildlife Management

General Recommendations for Wildlife Harassments

In addition to the above recommendations for wildlife exclusion and harassment, the following statements are a guideline for anyone conducting wildlife harassment.

- If anyone on the LRS facility needs to harass wildlife anywhere on the LRS facility, it is recommended that they survey their surroundings first. This will help them determine the level of harassment they need to conduct based on activity at the LRS facility and the DuPage Airport. The following is a list from least obtrusive to most obtrusive.
    - Walking towards wildlife
    - Clapping
    - Banging sticks together
    - Using a truck horn
    - Using an air horn
    - Using pyrotechnics (this requires training and proper storage)
        - Bird bangers/bombs, screamer sirens/whistlers
    - Lethal removal

Background Experience

.....

LOOMACRES COMPANY HISTORY& EXPERIENCE:

Loomacres Wildlife Management was the first private company to be approved by the FAA to perform Wildlife Hazard Management services on airports. For the past 11 years Loomacres Wildlife has been providing 14 C.F.R. Part 139 certificated airports with the highest quality of wildlife management services available. Loomacres Inc. was created by Airport Wildlife Biologists and thus focuses solely on Airport Wildlife Hazard Management.

-List of clients that Loomacres Inc. has provided Wildlife Management Services, Consulting and/or Training;

Fairchild Airforce Base, Ohio State University Airport, Holmes Airport, Miami University, Seneca County Airport, Lakefield Airport, Monroe County Airport, Madison County Airport, Philip Billard Municipal Airport, Tulsa International, Bartlesville Municipal, Stillwater Regional, Ponca City Regional, Lawton-Fort Sill Regional Airport, Enid-Woodring Regional Airport, Wiley Post Airport, Cannon Airforce Base, JFK International, Stewart International, LaGuardia International, Charlotte-Douglass International, Buffalo International, Niagara Falls International, Mahlon-Sweet Field Eugene, North Platte Regional Airport-Lee Bird Field, Nashville International, Mcghee Tyson International, Chennault International, Newport Airport, Canyonlands Airport, Joslin Field-Magic Valley Regional, Hagerstown Airport, Frederick Municipal Airport, Montgomery County Airpark, Trenton Mercer Municipal, Raleigh County Memorial Airport, North Central West Virginia Mid-Ohio Valley Regional, Salisbury-Ocean City Wicomico Regional, Delaware River and Bay Authority, Shenandoah Valley Regional, Columbia Metropolitan Airport, Anniston Metropolitan, Huntsville International, Little Rock International, Gulfport-Biloxi, Havre Municipal, Riverton Regional, Rogers Municipal, Mena Intermountain, Teterboro International, Middle Georgia Regional, Republic, Saranac Lake Regional, Hancock County Bar Harbor, Sullivan County Municipal, Princess Juliana International Airport-St. Maarten, Jamestown International, Poconos Regional, Plattsburgh International, Massena International, Ogdensburg International, Binghamton Regional, Elmira-Corning Regional, Ithaca-Tompkins Regional, Warren T. Eaton, Palm Beach County, Lantana, Lebanon Regional, Manchester-Boston International, South Lafouche Airport, Houma Terrebone Airport, Hammond Northshore Regional Airport, Searcy Municipal, Stuttgart Municipal, Russellville Municipal Guntersville Airport, Fort Worth-Meacham, Cleveland Municipal, Temple Airport, Northwest Alabama Airport, Syracuse International, Northwest Arkansas Regional Airport, Greenville-Spartanburg International Airport, Fayetteville-Drake Field Airport, Fort Smith Regional Airport, Owensboro-Daviess County Regional Airport, Dallas Love Field, Columbia Regional Airport, East Texas Regional Airport, Johnstown-Cambria County, Altoona Blair County, Erie International, Bradford Regional, Guam International Airport, Changi International Airport
and many more.

WILDLIFE HAZARD ASSESSMENT EXPERIENCE:

Loomacres' staff have experience conducting over 75 wildlife hazard assessments thought the US and worldwide. Our projects assess the wildlife threats to people and property. This includes providing airport wildlife mitigation services to private, general aviation, municipal, regional, international airfields and DOD installations, landfills, large corporations and municipalities. In addition to information gathered through onsite visits, surveys, personnel interviews and existing records, Loomacres reviews all historical operations, data, published research, area breeding bird survey and similar biological survey data, and other relevant documentation. This ensures accurate and site-specific recommendations are included in our hazard assessment reports. We also reach out to all federal, state, tribal, and local agencies that may have a role or effect on the wildlife populations and movement in the vicinity of the site. We ensure that our recommendations are in compliance with federal and state environmental laws including, but not limited; to the Endangered Species Act, Migratory Bird Treaty Act, Bald and Golden Eagle Act, Federal Insecticide Fungicide and Rodenticide Act, National Environmental Policy Act, **(NEPA)** Clean Water Act, and the SIKES Act.

We often find that our clients are able to implement many of the habitat and procedural changes recommended in our wildlife hazard assessments on their property with ease. However, the hazards that occur offsite are often much more difficult to address. When this happens, we are often relied upon to identify and coordinate with offsite property owners and stake holders to reduce the hazard of a particular location or prevent the introduction of new hazards. We have had success eliminating or reducing the encroachment of hazardous land uses around airfields for both military and civilian clients. We have successfully worked with federal agencies such as the ACE, USDA, and USFWS, State fish and game agencies and local municipalities to implement zoning regulations and policies that restrict hazardous land use policies.

DRAFT

Following the completion of our projects, whether the project is a one-week site assessment or a year-long hazard assessment, we are often required to brief managerial staff or high ranking military officials. Most often, the focus of the meetings pertains to the results of our wildlife hazard risk assessment and the recommended strategies to reduce any risks.

The following is a list of just some of the Airfields that we have conducted Wildlife Hazard Assessments projects for during the last 5 years that **have been FAA Approved**. These include both 139 certificated airports as well as GA airports. Additionally, all these projects included either the development or updating of the airport's Wildlife Hazard Management Plan/BASH Plan.

Charlotte-Douglass International, NC

Bloomsburg Airport, PA
Frederick Municipal Airport, MD
Montgomery County Airpark, MD
Quincy Regional, IL
North Platte Regional, NE
Guam International Airport, GU
Southwest Washington Regional Airport, WA

WILDLIFE HAZARD MANAGEMENT PLAN EXPERIENCE:

Nearly all the airfields for which we conducted Wildlife Hazard Assessments have had Loomacres complete Wildlife Hazard Management Plans. We have created or updated WHMPs for Commercial, General Aviation, and DOD airfields. All of our plans have been developed in accordance with relevant FAA/ICAO/DOD regulations and guidance. It is important to note that the plans we have developed have been accepted or approved by both the client and the agency overseeing the plan.

We take pride in our ability to develop a plan that not only meets current regulations but to develop a plan that is unique to the airport's specific conditions and resources. We ensure our plans our developed to fit seamlessly into and airport's SMS program. We feel the best plans are straightforward and easy to implement. We work with the airport to ensure that the goals and procedures that are outlined in the plan can be carried out with the resources and personnel that are available.

TRAINING EXPERIENCE:

Loomacres prides itself on its ability to train wildlife management personnel, airport personnel and consultants in the industry. In addition to conducting training for military and civilian personnel, Loomacres is currently the only private company provider of Wildlife Hazard Management Training that is acceptable to the FAA administrator for the training of biologists who wish to conduct Wildlife Hazard Assessments as per AC 150/5200-36A.

Furthermore, Loomacres offers an array of training courses including: live fire pyrotechnics training, NRA certified firearms training, and BAM/AHAS training. Loomacres staff trains over 950 aviation professionals on an annual basis. Please see the Appendix I for a letter from the FAA confirming Loomacres' training qualifications.

WILDLIFE MITIGATION EXPERIENCE:

What makes us stand out against our competitors, in addition to conducting research, analyzing data and providing guidance, we put our recommendations into action. Loomacres' staff is fully trained and experienced in wildlife mitigation methods. Our staff implements preventative, passive, and active methods encompassed in Integrated Wildlife Management. Loomacres' biologists are able to quickly identify and respond to wildlife hazards as they are identified. Loomacres has several on-call and full-time wildlife mitigation service contracts in which we are responsible for coordinating and carrying out all wildlife management activities and act as a liaison between local landowners, government entities and the client to ensure success. Our staff has experience with a vast range of mitigation techniques, including falconry, pyrotechnics, bioacoustics, trapping, firearms, trained dogs, RC boats and aircraft etc. We continually research new preventative measures, tools and techniques to be sure your facility will have access to the most current and innovative mitigation practices.

Many of our activities involve public relations and outreach including coordination with offsite property owners and media inquiries/interviews. We have successfully completed many projects that involve complex public relations and outreach programs. These have ranged from obtaining permission to conduct wildlife control to convincing property owners to implement their own wildlife mitigation programs.

EXHIBIT
PWC-10

Tom Dabareiner
Community Development Director
City of West Chicago
475 Main Street
West Chicago, Illinois 60185

Subject: **Planned Unit Development (PUD) Amendment and Site Development Permit Application**
West DuPage Recycling and Transfer Facility
1655 Powis Road, West Chicago, Illinois
CEC Project 163-899

Dear Mr. Dabareiner:

On behalf of Lakeshore Recycling Systems, LLC (LRS), Civil & Environmental Consultants, Inc. (CEC) respectfully submits the enclosed applications for the West DuPage Recycling and Transfer Facility located at 1655 Powis Road in West Chicago, DuPage County, Illinois (Site). The following items (and required copies of each) are attached:

- Completed Application for a Final Planned Unit Development form;
- Completed Site Development Permit Application form;
- Plat of PUD of the Site;
- Final Site Plan;
- Proposed architectural drawings (including elevations);
- Environmental Impact Statement;
- Statement of planning objectives and explanation of the character of the PUD;
- Covenants, conditions, restrictions, and easements;
- Fire truck turning movement plan;
- DuPage County Stormwater Report, including:
  - Final engineering plan set; including the following required drawings:
    - Site development plan;
    - Site grading plan;
    - Storm drainage plan;
    - Erosion control plan;
    - Landscape plan; and
    - Project phasing schedule;
  - Engineer's cost estimate;
- Authorization letter from the property owner;
- Statement of current and proposed ownership; and
- Check for $1,200, which incorporates the following:
  - Final PUD fee ($700)
  - PUD application fee ($500)

The following items are listed as requirements for a final PUD application, but are not applicable to the Site; therefore, they have not been included in this submittal:

- Land/cash donation calculation worksheet;
- Open space documents;
- List of any requested deviations;
- Residential component information;
- Photometric plan; and
- Trust/owner's disclosure certificate.

It is understood that the permit fees and required securities (bond or letter of credit), will be required following review.

Please contact Mr. Dave Kamano at (630) 541-0616 if you have questions about, or require clarifications to, our submittal.

Sincerely,

CIVIL & ENVIRONMENTAL CONSULTANTS, INC.

- ___ Bond or Letter of Credit
- ___ Fee

I hereby agree that issuance of a site development permit allows commencement of land movement activity prior to final engineering approval at my own risk. Land movement is not permitted within any special management area or required buffer. Approval of final engineering plans may require regrading of portions of the property.

City of West Chicago
Site Development Permit

A property owner may receive permission for land movement prior to final engineering approval upon issuance of site development permit in accordance with Section 14.52 through 14.55 of the City Code of Ordinances. The permit allows the owner to begin land movement at the owner's risk. If the final engineering design results in revisions to the elevations and site topography, the owner will be required to grade in accordance with the approved plans regardless of the site development permit.

Requirements for a site development permit are listed below.

Submittal Requirements

1. Application form: Each application for a site development permit shall be made by the owner of the property of his authorized agent to the city engineer on the attached form.

2. Stormwater management permit application.

3. Site development plan: A vicinity sketch, showing acreage of site, boundary line survey, zoning, type of proposed sewer and water facilities, location of existing utilities, buildings and drains on and within one hundred (100) feet of the site, together with a legend and scale.
    A. A soil map of the subject property showing the predominant soil types on the site.
    B. Information on those areas abutting or adjacent to the site required to show existing drainage patterns and the drainage course that may be affected by the development.
    C. The name and address of all developers or owners.
    D. The name and address of all consulting firms retained by the applicant, together with the name of applicant's principal contact at such firm.
    E. Limits of natural floodplains, if any.
    F. Areas to be sodded, seeded, mulched or paved.
    G. Acreage of area to be vegetatively stabilized, if any.
    H. Areas to be left undisturbed.

4. Site grading plan: A may showing existing topography of the site and a 100-foot adjacent peripheral strip, proposed contours and final grades, and street profiles; and, indication of what measures will be employed to protect cut and fill slopes form surface runoff.

5. Storm drainage plan: A plan based upon a competent storm drainage study, including a drainage area map and computations and indicating what conditions now prevail at proposed and natural outlets and a statement including, but not limited to;
   A. Whether the drainage course is bare earth or vegetated.
   B. Whether the constructed outlet will be in open sun, open shade or dense shade.
   C. Whether the natural or proposed outlet is subject to long term or continuous flow.
   D. Whether the existing outlet is actively eroding.
   E. Whether there is evidence of a high water table and, if so, is the same permanent or seasonal.
   F. Whether the area is subject to seepage or spring flow.
   G. The elevation of normal water level in all proposed and natural outlets.
   H. A profile below outlet for sufficient distance to indicate the natural gradient of the accepting natural outlet and/or stream channel.
   I. A cross-section and profile of existing stream channels where applicable.
   J. A ditch design and computations for all seeded, sodded, or bare earth outlets, ditches, and similar water conduction facilities.

6. Phasing plan: An estimate schedule and phasing of development of the site as follows:
   A. Phase I—Stripping and/or clearing
   B. Phase II—Rough grading and construction
   C. Phase III-Final grading and vegetative establishment.
   D. Phase IV-Maintenance

7. Erosion control plan: All erosion and sediment control plans submitted to the city engineer for approval shall show erosion and sediment control measures needed to provide protection throughout the construction listed above. These plans shall also include any off-site borrow and spoil areas, sewer lines, utility lines and haul and access roads, and shall further indicate:
   A. The start of clearing date;
   B. Duration of exposure of disturbed areas;
   C. Installation of temporary sediment control measures both vegetative and structural by phase and date;
   D. Installation of storm drainage by phase and date;
   E. Paving of streets and parking areas, if any, by phase and date;
   F. Establishment of permanent vegetative cover plans that show what will be done to shorten the duration of exposure of disturbed areas after grading, including seeding mixes and rates, type of sod, seedbed preparation, seeding dates, lime and fertilizer application, temporary seedings, if needed, mulching, or similar stabilization procedures;
   G. Details of all structural sediment control measures;
   H. Computations for sediment basins.

8. Bonds: The applicant shall be required to file with the city a performance bond, letter of credit, or other improvement security satisfactory to the city attorney in the amount deemed sufficient by the city engineer to cover all the costs of improvement, landscaping, maintenance of landscaping, engineering, inspection fees and incidental expenses.

9. Fees: The cost of plan review and inspections made by the city engineer shall be paid by the permittee to the city clerk as set forth in section 2-11 of this Code of Ordinances.

Inspections

The city engineer or designee shall make inspections as hereinafter required and shall either approve that portion of the work completed or shall notify the permittee wherein the same fails to comply with the site development plan. Where it is found by inspection that conditions are not substantially as stated or shown in the said plan, the city engineer may stop further work until approval is obtained for a revised grading plan conforming to the existing conditions. Plans for grading work, bearing the stamp of approval of the city engineer, shall be maintained at the site during progress of the grading. Until the final inspection is made, a sign issued by the city, indicating permission to grade has been granted by the city, shall be prominently displayed on the front property line of the property involved so as to be visible from the street on which the property fronts. In order to obtain inspections in accordance with the following schedule, the permittee shall notify the city engineer at least one full working day before the said inspection is to be made:

1. Rough grading. When all rough grading has been completed; and
2. Final inspection. When all work, including installation of all drainage and other structures and required planting, has been completed.

Special Precautions

If at any stage of the grading the city engineer determines by inspection that the nature of the formation is such that further work is authorized by an existing permit is likely to imperil any property, public way, watercourse or drainage structure, the city engineer may require, as a condition to allowing the work to be done, that such reasonable safety precautions be taken as he considers advisable to avoid the likelihood of such peril. "Special precautions" may include, but shall not be limited to, specifying a more level exposed slope, construction of additional drainage facilities, berms, terracing, compaction, or cribbing, installation of plant materials for erosion control, and reports of a registered soils engineer and/or of a registered engineering geologist whose recommendations may be made requirements for further work.

Where it appears that storm damage may result because the grading is not complete, work may be stopped and the permittee required to install temporary planting to control erosion, install temporary structures or take such other measures as may be required to protect adjoining property or the public safety. On large operations or where unusual site conditions prevail, the city engineer may specify the time of starting grading and time of completion, or may require that the operations be conducted in specific stages so as to insure completion of protective measures or devices prior to the advent of seasonal rains.

Special Management Areas

The site development permit does not include any grading within a special management area including, but not limited to a wetland, a 50 foot wetland buffer, floodplain or floodway. Erosion control measures shall be erected around such special management areas and no land movement or any disturbance shall occur within said area until such time as approval is granted by the City of West Chicago and Dupage County.

Expiration of Permit

Every site development permit shall expire by limitation and become null and void if the work authorized by such permit has not been commenced within one hundred and eighty (180) days and/or is not completed within one and one-half (1 ½) years from date of issue; except that the city engineer may, if the permit holder presents satisfactory evidence that unusual difficulties have prevented work being started or completed within the specified time limits, grant a reasonable extension date of the permit.

1.0 BACKGROUND

In November 1990, the United States Environmental Protection Agency (USEPA) published final regulations that established requirements for permitting stormwater discharges associated with certain industrial activities. These regulations are part of the National Pollutant Discharge Elimination System (NPDES) and are contained in Title 40 of the Code of Federal Regulations (40 CFR) Part 122. Applications for industries with Standard Industrial Classification (SIC) code 44 are regulated under 40 CFR 122.26. The regulations allowed states with NPDES authority to issue general or individual NPDES permits. Illinois, a state with NPDES authority, issued a NPDES General Permit, effective October 24, 1977, pursuant to Title 35 of the Illinois Administrative Code Subtitle C, Chapter I, Part 309, Subpart A. On June 1, 1998, the Illinois Stormwater Discharges from Industrial Activities General Permit No. ILR00 became effective. On April 5, 2017, the most recently re-issued Illinois Stormwater Discharges from Industrial Activities General Permit No. ILR00 became effective (Illinois General Permit). A copy of this permit is provided in Appendix A.

2.0 NARRATIVE DESCRIPTION

The following Stormwater Pollution Prevention Plan (SWPPP) has been prepared for Lakeshore Recycling Systems' (LRS) West DuPage Recycling & Transfer, Inc. facility (West DuPage) in compliance with Illinois General Permit requirements. The activities in the area covered by this plan have a SIC code of 4212. West DuPage has previously submitted a SWPPP and this submittal is updated to include new contact personnel, and additional information required by the new Illinois General Industrial Stormwater Permit, Section E. This plan is designed to meet these objectives and to ensure that a carefully documented record is kept of this facility's efforts to minimize the potential for stormwater contamination.

West DuPage is situated on 27.64 acres at 1655 Powis Road, West Chicago, Illinois. A single industrial building is being used for offices, vehicle maintenance and sorting of construction and demolition debris. The remainder of the west side of the subject property consists of concrete paved surfaces, gravel and recycled asphalt-covered surfaces and parking lots, and vegetated landscaping and drainage areas. On the east side of the property are a stormwater detention area, designated wetland areas in the northeast and southeast corners, and a closed sludge impoundment area that has been covered with several feet of concrete covered by recycled asphalt grindings. The facility is approximately 92% impervious. West DuPage operates under SIC 4212 - Local Trucking without Storage.

The plan is designed to meet three major objectives:

- The first objective is to identify potential sources of stormwater pollution at the facility. This is met by the significant materials inventory and the potential pollutant assessment. The significant materials inventory identifies materials at the site that have the potential to be released or come in contact with stormwater. The potential pollutant assessment identifies the potential for various sources at the site to pollute stormwater.

- The second objective is to describe stormwater control measures that are used to reduce or eliminate pollutants in stormwater discharges from the facility. This is met by the best management practices (BMPs) identification. The information on this form describes the management practices and structural controls that currently are, or will be, employed to minimize the contact of stormwater with materials or reduce pollutants in the stormwater runoff.

- The third objective is to identify procedures that West DuPage Recycling will use to comply with the terms and conditions of the Illinois General Permit. This is met through regular inspections of the facility and any follow-up maintenance or cleanup based on the findings of the inspections. The individuals listed on the following page will see to it that

all aspects of the plan are being implemented and maintained and will, if necessary, make revisions to the plan.

A location map of the facility is provided in Figure 1, identifying the following items:

- Stormwater conveyances and discharge structures;
- Catch basins;
- Buildings and structures;
- Areas used for outdoor storage of significant materials; and
- Vehicle maintenance area.

The operational areas of the West DuPage property are asphalt paved, compacted gravel, or covered by the existing buildings (100% impervious surfaces). The eastern half of the property contains unpaved equipment storage areas, detention ponds and wetland areas. The banks of the surface water areas are heavily vegetated, and erosion is well controlled. There are no potable water supply wells, or active rail lines within the site. No stormwater runs on to the site from adjacent properties that contains significant quantities of pollutants.

3.0 DRAINAGE AREAS AND RECEIVING STREAM

The layout of the West DuPage facility is depicted in Figure 2, identifying the following items:

- Stormwater conveyances and discharge structures;
- Catch basins;
- Buildings and structures;
- Areas used for outdoor storage of industrial materials; and
- Vehicle maintenance area.

There are two stormwater detention pond systems at the subject property. Stormwater that falls on the far western portion of the paved area and the grassy areas outside of the western fence line have runoff that drains into the west detention pond. The west detention pond discharges into a storm sewer along Powis Road. An area comprised mainly of the asphalt paved employee parking lot has runoff flowing to the north, into a drainage swale that carries it 1,000 feet to the east, and into Kress Creek.

The paved operational areas of the subject property have a system of storm sewers that discharge stormwater into a "distilling" detention pond to the east. This pond has a series of basins separated by a system of baffles that the water must flow underneath to settle and to trap any floating materials in the storm water. This distilling pond discharges into a larger east detention pond, and then discharges via Outfall 002 into Kress Creek at the eastern property line. The property is surrounded by a chain link fence.

3.1 IMPAIRED STREAM EVALUATION

A portion of Kress Creek is considered to be an impaired stream, per Section 303(d) of the Clean Water Act. It is listed in Illinois' General Permit as a medium priority stream, due to its levels of low levels of dissolved oxygen for support of aquatic life. There is no USEPA-approved total maximum daily load for Kress Creek; therefore, there is no waste load allocation applicable to the facility. Pollutants that reduce dissolved oxygen are not typically handled, treated, stored, or disposed of by the facility.

3.2 NON-STORMWATER DISCHARGE EVALUATION

The discharge from the West DuPage facility has been evaluated for the presence of unauthorized non-stormwater discharges on December 12, 2017. Non-stormwater discharges allowed under the general permit include the following:

- Fire-fighting activities;

- Fire hydrant flushing;
- Waterline flushing;
- Irrigation drainage;
- Lawn watering;
- Uncontaminated groundwater discharge;
- Drainage from foundations or footings;
- Non-detergent building wash down;
- Air conditioning condensate discharge; and
- Dust control spraying.

Prohibited non-stormwater discharges, according to Attachment 1 (Subpart U.2.1) to the Illinois General Permit, include the following:

- Boiler blowdown;
- Cooling tower overflow and blowdown;
- Ammonia refrigeration purging; and
- Vehicle washing and cleanout operations.

None of these prohibited activities are present on the site. Portable restrooms are cleaned on site with the wastewater discharged to sanitary sewers. West DuPage personnel will continue to verify the absence of other non-stormwater discharges as part of the annual inspection.

4.0 POLLUTANT SOURCE IDENTIFICATION AND EVALUATION

The goal of stormwater regulations is to reduce the contact between significant materials and stormwater. Stormwater that contacts significant materials has been identified as a major contributor of degraded water quality. The elimination or reduction of contact between stormwater and significant materials is a fundamental component of the Illinois stormwater program.

Significant materials may be located in the following areas: material handling areas, shipping and receiving, treatment areas, manufacturing areas, storage, and warehousing areas. From a stormwater perspective, almost any material stored outside could be identified as a significant material.

4.1 EMPTY CONTAINER AND EQUIPMENT OUTDOOR STORAGE AREAS

Empty containers and equipment, such as roll-off containers and smaller trash containers, portable toilets, and transport trailers are stored outdoors at West DuPage. There is potential for the stored equipment to impact stormwater discharged.

4.1.1 Potential Pollutants

Pollutants or pollutant constituents associated with empty containers and stored equipment at West DuPage, which could be exposed to stormwater or snowmelt and could be discharged from the facility would include total suspended solids, floating solids, rust, and oil and grease. These materials have not significantly changed over the past three years.

4.1.2 Best Management Practices

BMPs employed to mitigate contact of stormwater with pollutants in this area include:

- Equipment within the area is stored free of residual materials and is maintained in good condition;
- Equipment is drained of all fluids, solids are removed, and equipment is cleaned before long-term storage;
- The empty container and equipment storage areas are inspected daily on workdays;
- Employees have been trained to immediately clean up and properly dispose of waste materials or spilled material, or notify a supervisor to arrange for cleanup; and
- Inspections and maintenance of stormwater conveyance systems are inspected on a monthly basis, in accordance with this plan.

4.2 WASTE MATERIAL UNLOADING, STOCKPILES AND SORTED MATERIAL OUTDOOR STORAGE AREAS

The received construction and demolition (C&D) material is stockpiled for sorting inside of the building. Sorted materials are collected under the sorting building, and then moved to storage bins for accumulation prior to shipment off-site. Sorted wood is separated and stored outdoors until shredded, and sent off site for use as mulch.

4.2.1 Potential Pollutants

Pollutants associated with this material could include total suspended solids, biological oxygen demand (BOD), floating solids, rust, and oil and grease. These materials have not significantly changed over the past three years.

4.2.2 Best Management Practices

BMPs employed to mitigate contact of stormwater with pollutants in this area include:

- Maintain a written list of materials that are not accepted at the facility, posted at the scale house, and in company printed and online materials;
- Train employees engaged in the inspection and acceptance of inbound recyclable materials;
- Inspect incoming materials for items on the prohibited materials list. Have truck drivers picking up loads off site conduct preliminary inspections for items on the list before hauling;
- Ensure absorbent socks protect storm drains at all times to keep solids from entering the system.
- Check incoming scrap materials for potential fluid contents and batteries;
- Ship shredded wood as soon as possible to prevent exposure of large piles to stormwater;
- The distilling and detention ponds are fenced to keep windblown materials from getting into the water; and
- Perform inspections and maintenance of stormwater conveyance systems on a monthly basis, in accordance with this plan.

4.3 DIESEL AND OIL STORAGE AREAS

Two diesel aboveground storage tanks (ASTs) are stored at the northwest side of the facility. Two compactors with hydraulic oil and two shredders with hydraulic oils and diesel fuel tanks are located on the north side of the building. All equipment is on impervious surfaces. Oils and used oils are stored inside the maintenance building. There have been no significant releases in the past three years.

4.3.1 Potential Pollutants

Pollutants associated with this material include oil and grease. These materials have not significantly changed over the past three years.

4.3.2 Best Management Practices

BMPs employed to mitigate contact of stormwater with pollutants in this area include:

- The ASTs are double-walled, and stored on impervious pads.
- Tanks, piping, valves, and fittings are periodically inspected for integrity.
- A fuel-transfer procedure and a spill prevention, control, and countermeasures plan (SPCC) are in place.
- A spill kit is located near the oil storage areas, including absorbent socks to protect storm drains in the event of a spill. Used absorbent material is disposed of properly and promptly.
- Vehicles and equipment are regularly maintained and inspected daily for leakage. Maintenance of the vehicles and equipment occurs within the maintenance building or off-site.
- The areas are informally inspected daily on workdays. Employees have been trained to immediately clean up drips, leaks, or spilled material or notify a supervisor to arrange for cleanup.
- A roof protects the maintenance area and unsorted waste storage area.
- A street sweeper is present at the facility to clean outdoor surfaces regularly and as-needed.

Structural controls include containers equipped with lids, secondary containment, and stormwater diversion. The majority of the facility is designed to collect stormwater in containment systems consisting of concrete and asphalt paving and catch basins. Debris and sediment control is achieved by routing stormwater through the distillation pond prior to discharge to the main detention pond and then to Kress Creek. The following management practices were considered while developing this plan and were determined to be not applicable to facility activities or not practical, but may be considered in the future if there is a change in design, construction, operation, or maintenance at the facility; mercury switch removal and recycling; and stormwater reduction.

4.4 LIST OF POTENTIAL POLLUTANTS

The following table summarizes the potential pollutants for the West DuPage facility:

Table 1. Potential Stormwater Pollutants by Activity

Potential Pollutant	Potential Pollutant				
	Total Suspended Solids	Floating Solids	Metals	Oil and Grease	BOD or COD
Empty Container and Equipment Outdoor Storage Areas	x	x	x	x	
Scrap and Waste Material Unloading, Stockpiles and Sorted Material Outdoor Storage Areas	x	x	x	x	x
Diesel, Oils Storage Area	x	x		x	

5.0 HISTORY OF PAST SPILLS AND LEAKS

According to the facility operations manager, there have been no reportable spills or leaks in the past three years at the facility. If reportable spills or leaks occur, the facility will document the spill or leak in the Spill/Incident Reporting log. Additionally, the SWPPP will be revised.

6.0 STORMWATER POLLUTION PREVENTION PERSONNEL

In accordance with requirements of the Illinois General Permit, several individuals at the facility should be identified as stormwater pollution prevention personnel. These individuals, or their successors, are responsible for developing, implementing, and revising the SWPPP. The stormwater pollution prevention personnel may include persons who are (1) knowledgeable of operations at the facility, (2) from a variety of different departments, and (3) at the facility on a regular basis and available in case of an emergency. Refer to Appendix B for Stormwater Pollution Prevention Team Personnel.

7.0 PREVENTION OF STORMWATER CONTAMINATION

There are several ways to prevent stormwater from coming into contact with significant materials. These include both non-structural measures and structural measures. Measures employed at the facility are discussed herein.

7.1 GOOD HOUSEKEEPING

West DuPage maintains a clean, orderly facility, particularly in areas where significant materials may be exposed to stormwater. Spilled, dripped, or leaked materials are cleaned up in a timely manner. Equipment stored outside that is no longer needed is disposed of. The facility regularly inspects outside areas to check for the conditions of liquid containers and ASTs, leaks, and staining, as described in Section 7.5. As a part of its preventive maintenance program, West DuPage's inspection program includes inspection and maintenance of stormwater catch basins, as well as facility equipment and systems to uncover conditions that could cause breakdowns or failures resulting in discharges of pollutants to surface waters. West DuPage will continue good housekeeping practices indoors to prevent tracking of pollutants outside the enclosed structures.

7.2 SPILL PREVENTION AND RESPONSE PROGRAM

The Illinois General Permit requires each covered facility to have a spill prevention and response program that must include, at a minimum:

- Equipment and procedures for cleaning up spills;
- Internal and third-party notification procedures;
- Material handling and storage procedures and storage requirements; and
- Procedures for preventing spills that can contaminate stormwater.

The facility's emergency response actions are detailed in the facility's SPCC plan. A copy of the facility's emergency contacts is located in Appendix C. Included in the procedures are spill response procedures and reporting requirements. The SPCC plan is stored in the management office. The spill response team has been trained on how to (1) use spill equipment, (2) clean up a spill, and (3) properly dispose of used absorbent. A spill will be cleaned up in a timely manner. If it is not possible to clean up a spill within five minutes, emergency spill cleanup procedures will be implemented.

7.3 SEDIMENT AND EROSION PREVENTION

The facility does not have any areas with high potential for significant soil erosion.

7.4 EMPLOYEE TRAINING

Employee training, which is required by the Illinois General Permit, is another BMP that further reduces the potential for stormwater pollution. At least once per year, LRS employees working at West DuPage, and those responsible for implementing any portions of this plan, are provided training that covers the basic contents of this plan. This will include the following:

- Personnel who are responsible for the design, installation, maintenance, and/or repair of stormwater controls (including pollution prevention measures);
- Personnel responsible for the storage and handling of chemicals and materials that could become contaminants in stormwater discharges;
- Personnel who are responsible for conducting and documenting monitoring and inspections as required in Parts G and J; and
- Personnel who are responsible for performing and documenting corrective actions as required in the plan.

Specific topics to be included in the training are:

- The contents and goals of the SWPPP;
- Current BMPs, including material management practices, good housekeeping, spill prevention and response, preventive maintenance, monitoring, and inspections;
- Management of used oil, spent solvents and used batteries;
- Spill prevention and control;
- Fueling procedures;
- General good housekeeping practices; and
- Planning, reporting, and documentation requirements.

The training may be provided in one session or it may be incorporated into regular health and safety training throughout the year. Training sessions are documented on Worksheet 1, and completed employee training attendance worksheets are filed in Appendix D.

7.5 INSPECTION PROGRAM

Regular inspections are implemented as a BMP to further minimize the potential for stormwater pollution.

7.5.1 Monthly Inspections

Monthly inspections will be conducted by the team coordinator or team member identified in Appendix C, or a designated representative who has been trained on the contents of this SWPPP and the inspection checklist.

The inspections will be conducted on a monthly basis and documented on the checklist provided (see Worksheet 2). At least one of the routine inspections will be conducted during a period when a stormwater discharge is occurring, within seventy-two hours of the beginning of a storm event equal to or greater than 0.25 inches in twenty-four hours. Inspections occurring during a storm event will include observation of discharge points or of nearby downstream locations.

When planning the inspection, the inspector will consider the results of any visual and analytical monitoring for the past year. The inspection will include inspections of the detention pond, the empty container and equipment storage area, the C&D area, the solidification area, the AST areas, and the maintenance and storage area of the fleet vehicles. It will also include areas where industrial materials, residue, or trash may have or could come into contact with stormwater, or where off-site tracking of waste materials or sediment may occur. If an inspection indicates that corrective action is needed, the action is noted on the form, and the date the action is completed is recorded and initialed by the inspector. The completed worksheet will be filed in Appendix E of this plan and will be retained for at least three years after the date of the inspection. The annual facility inspection, which is described in Section 14.0, ensures that appropriate responses to monthly inspections are implemented (refer to Worksheet 4).

7.5.2 Quarterly Visual Observation of Discharges

Sample collection and visual observations of the stormwater discharge from the west detention pond to the storm sewers along Powis Road (Outfall #1) and from the east detention pond into Kress Creek (Outfall #2) are performed and documented on a quarterly basis. Discharges can be the result of either a storm event or snowmelt. The following is the protocol for sample collection and visual observation:

- Samples are taken during a storm event or snowmelt during daylight hours.
- Samples are collected from a storm event discharge that is greater than 0.25-inch in magnitude over twenty-four hours and that occurs at least seventy-two hours (three days) from the previously measurable (greater than 0.1-inch) storm event.
- Samples are collected during daylight hours, and as soon as practical, but not to exceed one-hour of when the runoff or snowmelt begins discharging from the facility.
- Samples are collected in a clean, clear glass or plastic container.

- Samples are examined in a well-lit area, or if necessary, illuminated with a strong flashlight. Visual observations document: unnatural color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, and other obvious indicators of stormwater pollution.
- If no storm event resulted in runoff during daylight hours from the facility during a monitoring quarter, or if snowmelt discharge from the facility does not occur, the facility is excused from the visual observation requirement for that quarter, provided that documentation that no runoff occurred is recorded, signed, and certified.
- If visual observations indicate any unnatural color, odor, turbidity, floatable material, oils sheen or other indicators of stormwater pollution, the facility will perform the following protocol:
    - Obtain a sample and analyze for the list of pollutants in Section 5.0. The analytical results will be included in the annual inspection report submitted to the Illinois Environmental Protection Agency (IEPA).
    - Backtrack upstream from the sample collection location to identify potential sources of the pollutants.
    - Inspect stormwater control BMPs to ensure they are functioning properly. If not, any deficiency or malfunction should be corrected, or new BMPs should be implemented to eliminate the source of the pollutant.

The Quarterly Visual Observation of Discharges Form is included as Worksheet 3. The completed worksheets will be filed in Appendix F of this SWPPP and will be retained for at least three years after the date of the inspection. It will be made available to the IEPA and general public upon written request.

8.0 ANNUAL FACILITY INSPECTION

The facility shall conduct an annual facility inspection to verify that all elements of the plan, including the site map, potential pollutant sources, and structural and non-structural controls to reduce pollutants in industrial stormwater discharges are accurate. The annual facility inspections provide a basis for evaluating the overall effectiveness of the SWPPP. These inspections are performed by a qualified person, who is familiar with the facility operations and the goals and requirements of the SWPPP, and with at least one member of the stormwater pollution prevention team, using the annual facility inspection form (Worksheet 4). The site inspections verify that all stormwater pollution prevention measures are accurately identified in the plan and that they are in place and working properly. When completed, a copy of the annual comprehensive inspection form is filed in Appendix G and will be retained for at least three years after the date of the inspection.

During the site inspections, the inspector(s):

- Review visual monitoring data and any analytical monitoring results collected each quarter of the previous year and the results of the routine monthly site inspections;
- Visually inspect exterior material handling and storage areas, stormwater drainage areas, areas where spills and leaks have been documented, and other potential sources of pollution for evidence of pollutants entering the drainage system;
- Confirm the accuracy of the site map, the description of potential pollutant sources, and the control measures contained in the SWPPP;
- Evaluate the effectiveness of control measures to reduce pollutant loading and determine whether additional measures are needed;
- Observe structural controls, sediment controls, and other stormwater BMPs to ensure that they are properly maintained and operated;
- Inspect any equipment needed to implement the plan, such as spill response equipment; and

The descriptions of potential pollutant sources and stormwater control measures may need to be revised, based on the results of the site inspections. If necessary, the SWPPP will be revised within two weeks of the date of the inspections. Changes in the control measures will be implemented within four weeks of the date of inspections.

9.0 ANNUAL REPORTING

An electronic copy of the completed Annual Facility Inspection Report form (WPC 691) will be submitted to the IEPA at one-year intervals, within sixty days of the anniversary date of the submittal of the notice of intent. The report will be on the form provided on the IEPA website, and will include results of facility monthly, quarterly and annual inspections, a review and update of this SWPPP document, documentation of any event that would require an inspection, results of the inspection, and any subsequent corrective maintenance activity. The report will be completed and signed by the authorized facility employee who conducted the inspection. It will be submitted to epa.indannualinsp@illinois.gov.

10.0 CORRECTIVE ACTIONS

As required by Section H of the Illinois General Permit, West DuPage will review and revise the SWPPP whenever a corrective action needs to be implemented. Corrective actions must be implemented whenever there is an unauthorized release or discharge at the facility; visual observations indicate signs of stormwater pollution; control measures are not stringent enough for the discharge to meet applicable water quality standards or the conditions of this permit; a required control measure was not installed, does not operate correctly, or is not properly maintained; or construction or other activity modifies the type, concentration, or quantity of pollutants discharged in the stormwater from the facility.

To minimize or prevent stormwater contamination in the event of a release or discharge at the facility, immediate steps must be taken, including cleaning contaminated surfaces. If additional changes are necessary, new or modified controls must be installed before the next storm event, when possible, and within fourteen calendar days from the date of release discovery.

The corrective action must be documented within twenty-four hours of release discovery. Although submittal of this documentation to the IEPA is not required, West DuPage will keep corrective action documentation on file, along with other SWPPP related documents, for at least three years. West DuPage will record the following information for any corrective action required as a result of the conditions listed in Part H.1 of the Illinois General Permit within fourteen days from the time of discovery of any of those conditions:

- Identify and describe the condition triggering the need for corrective action review, and the date the condition was identified.
- If corrective action was taken due to the occurrence of spills or leaks, include the following information: a description of the incident including; date/time of spill; material spilled; amount of material spilled; location of the spill; reason/cause for spill; response actions; the date/time cleanup was completed; notifications made; staff involved; and whether the release resulted in a discharge of pollutants to waters of the state, through stormwater or otherwise. Also include any measures taken to prevent the reoccurrence of such releases; and
- The dates when each corrective action was initiated and completed (or is expected to be completed) must be provided. If applicable, documentation must be provided why it is infeasible to complete necessary installations or repairs within the fourteen-day timeframe and document the permittee's schedule for installing the controls and making them operational as soon as practicable after the fourteen-day timeframe.

11.0 PLAN AVAILABILITY

The SWPPP will be retained on site and will be available for review by a representative of the IEPA upon request. An electronic copy of this plan shall also be submitted to the IEPA via email address epa.indilr00swppp@illinois.gov.

12.0 PLAN AMENDMENTS

The designated representative will amend this SWPPP (other than as described in Section 10) whenever:

- A procedure that is described in this plan is changed;
- A control measure described in this plan is modified;
- There is a change in the composition of the stormwater pollution prevention team or new responsible official; or
- An inspection or evaluation of the facility by an IEPA official determines that modifications to the control measures are necessary.

When plan amendments are needed, the designated representative will revise the plan within thirty days. If the plan requires modification to document corrective actions, a new certification statement must be signed and dated upon completion of the revision, the amended plan, signed by the designated representative, will be submitted electronically within thirty days to the IEPA via email address epa.indilr00swppp@illinois.gov in the following circumstances:

- When modifications include substantive changes to the plan;
- Modification is made to the plan for compliance with the permit;
- The facility is notified by IEPA that revisions to the plan are required; and
- When SWPPP revisions are made, pages of the SWPPP that are replaced by the revised pages will be filed in Appendix H, and the revisions will be recorded on the revision summary page, also in Appendix H.

APTIM

Memorandum

To: **Mr. Dennis G. Walsh - Klein, Thorpe, and Jenkins, Ltd.**

From: **Martin Fallon and Devin Moose - Aptim Environmental & Infrastructure, LLC**

Date: **January 20, 2020**

Re: **West DuPage Recycling and Transfer Station Siting Application – Criterion 2**

On behalf of the City of West Chicago, APTIM Environmental and Infrastructure LLC (Aptim) has begun review of Criterion 2 of the DuPage County Siting Application (Application) for Lakeshore Recycling System, LLC's (LRS) West DuPage Recycling and Transfer Station, prepared by Civil and Environmental Consultants, Inc. (CEC). Upon initial review of Criterion 2, notable concerns regarding the location, design, and operation of the proposed site were identified and are summarized below:

Issue: Residential Zoning Setback

Section 22.14(a) of the Illinois Environmental Protection Act states that "No person may establish any pollution control facility for use as a garbage transfer station, which is located less than 1,000 feet from the nearest property zoned for primarily residential uses or within 1,000 feet of any dwelling, except in counties of at least 3,000,000 inhabitants."

However, the railroad property directly adjacent to the east side of the site is zoned Estate Residence District which is designated for single family detached dwellings, home occupations, small community residences, forest preserves, and parks and recreational areas when publicly owned. Although the application includes extensive discussion that the physical features of that property, the lack of access, and the lot requirements make it physically impossible to construct a residence there, it is the opinion of Aptim that this issue poses significant risk to the project.

It is our understanding that the Applicant believes that the Pollution Control Board decision in the Caseyville transfer station case, along with the letter from West Chicago provided in Appendix 2-D exempts this project from the residential setback requirement. However, there are differences between this situation and that in Caseyville. In any event, even if siting approval is obtained in West Chicago, this is an issue that will ultimately have to be litigated in the event that the siting process has opposition that may file an appeal. Aptim recommends that the railroad property be rezoned prior to filing to eliminate this risk.

Issue: Stormwater

Although the 100-yr Base Flood Elevation (BFE) (752.25 ft. MSL) obtained from the new FEMA Flood Insurance Study data is not high enough to overflow into the East Pond (basin crest is 752.7 ft. MSL), it is high enough to inundate the East Pond outfall (749.1 ft. MSL) as well as the site's existing storm sewer network outlet (750.5 ft. MSL). In fact, both the East Pond outfall and existing storm sewer network outlet are lower than the 10-year storm flood elevation (751.50 ft. MSL).

DRAFT

Given the East Pond and attributing storm sewer outlet will be submerged during significant storm events, a tailwater analysis at both locations is necessary to determine if free-flowing conditions will exist. Additionally, the East Pond restrictor orifice (750.54 ft. MSL) should govern the East Pond NWL compared to the discharge culvert inlet elevation (749.50 ft. MSL). This increase in NWL would potentially raise the peak elevation in the East Pond and could result in additional discharge through the emergency weir spillway at a greater rate than allowable.

It is recommended that an analysis of the network be performed to evaluate and determine how the site's proposed stormwater management system performs during peak rainfall events. This is especially the case given that stormwater from the East Pond is expected to backflow into the existing storm sewer network for even the 10-year rainfall event. With no understanding of how stormwater runoff will move through the site conveyance and discharge features, it is impossible to anticipate if stormwater will be detained and released in a controlled manner.

Therefore, it is the opinion of APTIM that the Stormwater Report has not demonstrated adequate stormwater runoff design features in accordance with the DuPage County Countywide Stormwater and Flood Plain Ordinance.

Issue: Proximity to Airport (and litter)

FAA Advisory Circular 150/5200-33b (Hazardous Wildlife Attractants on or Near Airports) requires developers to establish convincingly on a case-by-case basis that proposed transfer stations will not pose a threat to aviation safety by attracting wildlife. According to the FAA, "trash transfer facilities that are open on one or more sides; that store uncovered quantities of municipal solid waste outside, even if only for a short time; that use semi-trailers that leak or have trash clinging to the outside; or that do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully enclosed trash transfer stations." The FAA considers these facilities incompatible with safe airport operations if they are located within 10,000 feet of airports serving turbine-powered aircrafts.

The proposed transfer station is within 10,000 feet of the DuPage Airport, which serves turbine-powered aircrafts, and is not proposed to be fully enclosed.

The application indicates that, "West DuPage RTS agrees to keep the truck doors to the transfer facility closed, except for emergencies and to allow trucks to enter and exit the facility, during regular business hours." However, there is no indication that these doors will operate automatically such that they will open/close before/after each truck enters/leaves the building. Further, the proposed throughput and operations are such that the bay doors for access to the tipping floor will not be able to be closed during operating hours and will need to remain open. In addition, the proposed transfer building is proposed to have a doorway on the west side connecting to the C&D building that currently operates with its doors open.

These conditions may provide a hazardous wildlife attractant. In fact, the bird study prepared by Loomacres that is provided in Appendix 2-G1 indicates that rock pigeons are loafing within the existing C&D sorting building and that European starlings nests are located on its exterior.

In addition to providing a food source, it is unknown how the air filtration and ventilation system will be capable of maintaining negative pressure throughout the entire building when openings are present. The applicant has not provided any filtration or ventilation evaluation, such as a computational fluid dynamics analysis of airflow, to prove that the proposed transfer building filtration system is adequately designed. Therefore, it is recommended that further information be provided as to how the proposed

transfer building will stay fully enclosed during hours of operation, as well as maintain negative pressure for the proposed air filtration and ventilation system. Further, it is suggested that the FAA and DuPage Airport be provided an opportunity to review the design and operations of the facility. However, it is noted that any potential mitigating measures that could be requested by the FAA, such as the implementation of actuated doors that would open and close each time a vehicle enters or leaves the building, would create significant issues relating to operations and storage capacity being proposed by the applicant.

Issue: Throughput and Tipping Floor Capacity

The proposed maximum throughput of 1,300 tons per day is too high for the facility design and operation.

The applicant claims there is approximately 1,333 cubic yards (L90'xW50'xH10'x0.8 slope loss factor) of storage capacity on the tipping floor. However, this volume assumes the stockpiling of material across the doorway area that will connect the C&D building to the proposed transfer building. As opposed to push walls, this overhead door and adjacent wall area is not designed to withstand the forces of a 10-foot high waste stockpile or the horizontal force of a wheel loader driving against it. Further, this is the same overhead door and area that is proposed to be used in order to move any non-recyclable C&D material from the C&D transfer building to the transfer building. And conversely, to move any loads of C&D material that are inadvertently deposited in the transfer building into the C&D building. As shown in Figure 1, keeping the overhead door and pathway between transfer buildings clear reduces the MSW stockpile capacity to approximately 814 cubic yards (about 30% less than stated by the Applicant).

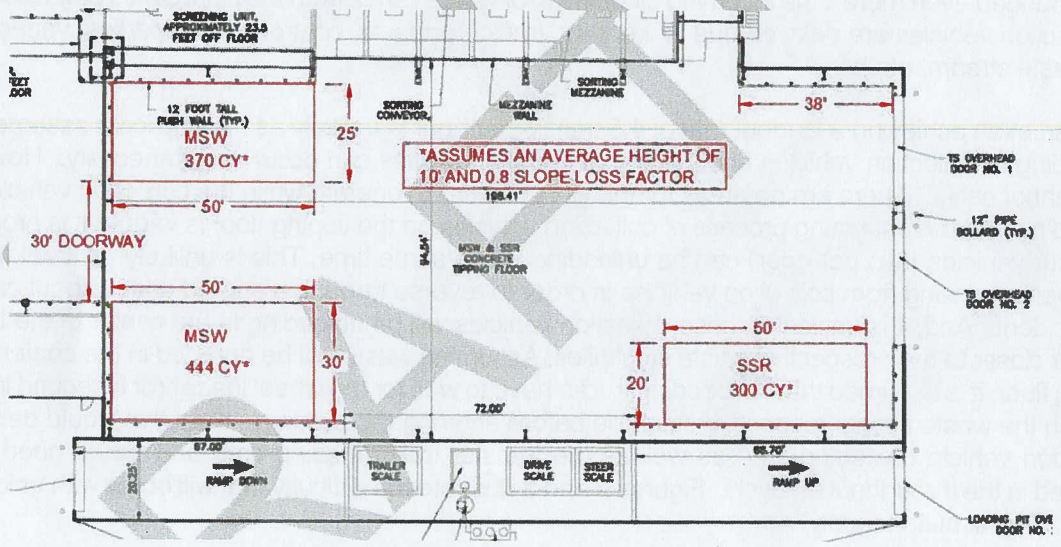

Figure 1

Similarly, the SSR storage capacity is estimated to be 600 cubic yards or 120 tons, but this quantity assumes two equally sized (L50' x W20' x H10' x 0.8 slope loss factor) stockpiles on the east side of the MSW transfer building. As shown in the figure above, there is clearly not enough room in the northeast corner of the MSW transfer building for a stockpile of this size without blocking the end waste area or overhead door no. 1. In fact, there is virtually no space at all to stockpile anything in that corner without blocking overhead door no. 1. This leaves a single 300 cubic yard or 60 ton stockpile in the southeast corner of the MSW transfer building for SSR storage.

The Applicant states that the typical time to load a transfer trailer with this front-end loader is approximately eight minutes, resulting in the ability to load-out 7.5 transfer trailers per hour. However, Aptim conducted a vehicle processing time analysis at the Glenview Transfer Facility and found that the average time to process a transfer trailer is 13 minutes and 26 seconds, using a grapple and not including tarping. The loading time using a front-end loader would be expected to be greater due to the need to cycle between the waste pile and loading area. With a loading time of 13 minutes and 26 seconds, only 4.5 trailers will be able to be processed per hour. Assuming this reduced loading rate, the necessary stockpile volume increases to 960 cubic yards, though only 814 cubic yards max will be available as described above.

Further, the applicant has assumed that one ton of waste is equal to four cubic yards on the tipping floor. Aptim has always used a more conservative density of one ton of waste is equal to five cubic yards. While the actual density is likely less than five cubic yards per ton than five, evidence exists that actual densities are greater than four which would further increase the amount of storage needed. Using a density of five cubic yards per ton, up to 1,200 cubic yards of storage will be required on the tipping floor. This is almost 50% more than the available stockpile capacity which could be compounded even more if the incoming distribution of waste varies from the Applicant's projection (e.g. if collection vehicles are delayed due to weather, traffic/accidents, control of third parties, variability of the waste stream, etc.).

Further, even achieving a loadout rate of 4.5 trailers per hour is unlikely as the applicant assumes that unloading of collection vehicles and loading of transfer vehicles can occur simultaneously. However, this cannot occur. There are no areas for the wheel loader to operate while the collection vehicles are unloading and the unloading process of collection vehicles on the tipping floor is vague. It is proposed that four vehicles (two per door) can be unloading at the same time. This is unlikely as it will require near perfect driving from collection vehicles in order to reverse through a shared door without causing an accident. And, it is unclear if these collection vehicles will be unloading in the center of the tipping floor or closer to their respective waste stockpiles. Assuming waste will be dumped in the center of the tipping floor, it is assumed that succeeding trucks have to wait for the wheel loader (or a second loader) to push the waste into its respective stockpile before entering the building. If so, this would delay the collection vehicle unloading time as well as the transfer trailer loading time and would need to be included in the throughput analysis. Figures 2 and 3 illustrate the difficulty that will occur with unloading and loading simultaneously.

Figure 2 shows the collection vehicles pulling far enough into the transfer building to unload waste near the stockpile areas, but in doing so, limit the area that the wheel loader can operate. This scenario makes it impossible for the wheel loader to work while waste is being unloaded, therefore resulting in the wheel loader having to operate between each wave of collection vehicles in order to consolidate the waste into its respective stockpile or load the waste into a transfer trailer. This would cause significant delays in the timing of incoming collection vehicles (as well as transfer trailer load-out) and, consequently, effect the proposed facility throughput.

DRAFT

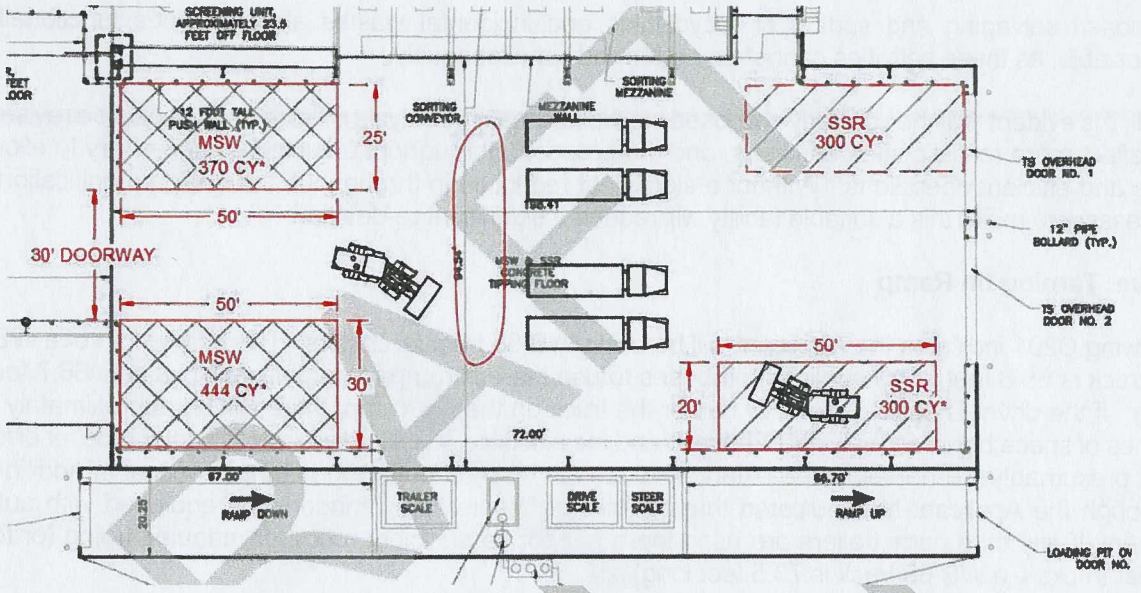

Figure 2

Figure 3 illustrates a scenario where the collection vehicles unload waste closer toward the doors, leaving enough room for the wheel loader to operate behind, but subsequently causing waste to build up and block the recyclable stockpile as well as the transfer building doors. This scenario would likely result in waste being tipped near the overhead doors leaving virtually no room for incoming collection vehicles to pull into the transfer building. Not to mention the inability to close the bay doors and the inherent increased likelihood for litter tracking and unwanted wildlife.

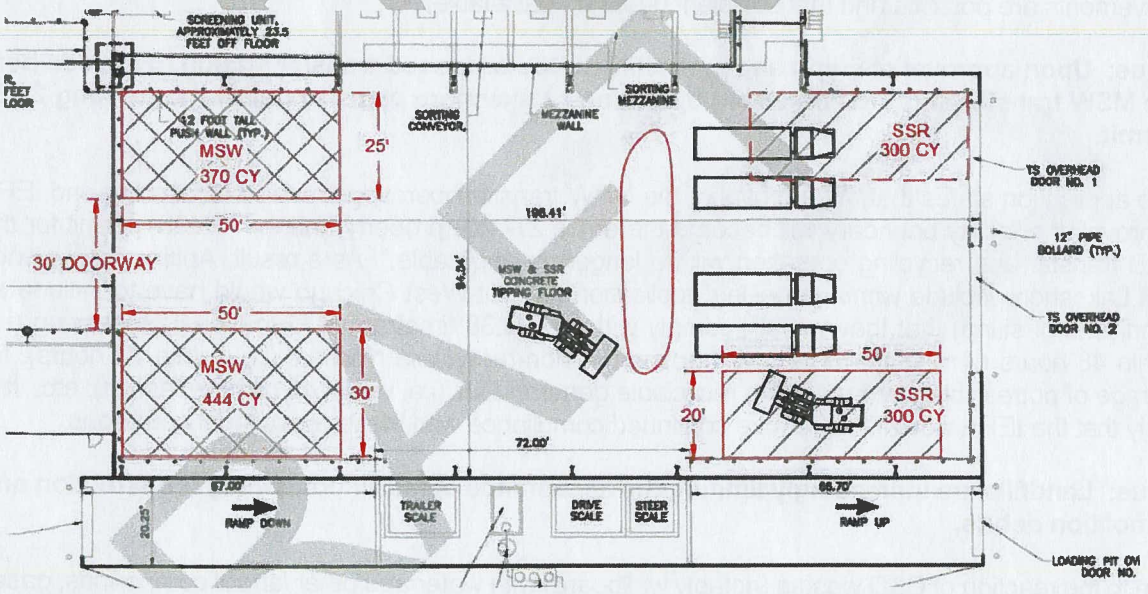

Figure 3

Finally, the applicant has proposed that salvaging of recyclable material from MSW loads may occur. Salvaging will require the loader operator to leave the transfer building with the salvaged materials and deliver them to the C&D tip floor, or directly to the storage bunkers as described in Section 2.4.5. The

proposed salvaging and sorting of recyclables and incidental wastes also becomes functionally impossible, as these activities cannot be performed simultaneously.

In all, it is evident that the currently proposed stockpile capacity analysis is flawed and should be revised to reflect more realistic site conditions, and the proposed throughput adjusted as necessary to allow safe and efficient operations. Without a significant reduction in throughput, the design modifications necessary to make this a suitable facility will require a significant re-design.

Issue: Tarping on Ramp

Drawing C201 indicates the Applicant will be using WB-55 transfer trailers. The total length of a WB-55 truck is 65.8 feet. The applicant proposes to use the exit ramp for tarping which is only 66.7 feet long. If the driver is able to perfectly center the truck on the exit ramp, there will be approximately 5 inches of space between the front of the cab and the exit door. This leaves very little tolerance for error and presumably will not allow the exit door to remain closed during the tarping process. In addition, although the Applicant has indicated that all transfer trailers are planned to be equipped with auto tarpers, if any third party trailers are used there will not be sufficient room for manual tarping (or for larger trucks – a WB-65 truck is 73.5 feet long).

Issue: Missing Drawing C400 (Site Traffic Flow and Queuing)

It is unclear how queuing for vehicles waiting to unload in the transfer building will be accomplished. Presumably, four trucks will need to be queued east of the bay doors awaiting vacation of the previous four vehicles. However, the design drawings show a storage bunker located east of the building (and a fence in some cases) and this area will need to remain clear for exiting transfer vehicles to exit. The Applicant references Drawing C400 while describing on-site traffic flow and queuing capacity. However, this drawing was not included with the Application to verify that proposed site flow movements are possible and that sufficient queuing is available.

Issue: Upon approval of siting and permitting of the proposed transfer station to include both the MSW transfer and C&D recycling operations, Lakeshore plans to nullify the existing 22.38 permit.

The application states that, "if approval of the MSW transfer operations receive local siting and IEPA approval, the facility boundary will become the entire 27-acre property and the "22.38" permit for the C&D transfer and recycling operation will no longer be applicable." As a result, Aptim recommends that Lakeshore include within the siting application (or that West Chicago would have to include as conditions of siting) that they will still comply with the 22.38 timeframes for material processing (i.e. within 48 hours of receipt), for off-site transport of non-recyclable material (i.e. within 72 hours), for storage of putrescible or combustible recyclable general C&D (i.e. within 45 days of receipt), etc. It is likely that the IEPA would also require continued compliance with these operational conditions.

Issue: Landfills are increasingly limiting the acceptance of sulfur containing construction and demolition debris.

Due to the reaction of C&D wastes (notably wallboard) with water and other landfill compounds, gases are generated that include high levels of sulfur compounds and resulting odors. For this reason, many landfills are limiting their acceptance of C&D residuals which generally contain high amounts of sulfur containing material.

DRAFT

For example, the Orchard Hills Landfill, historically a disposal outlet for Lakeshore wastes, has a permit condition that prevents the acceptance of C&D fines for subbase or base materials for interim access roads that contains greater than 5% sulfur by weight as determined by USEPA methods SW9056 and SW5050. It is our understanding that mixing the C&D residuals with MSW does not avoid this issue. Further, and it appears that Lakeshore is planning to mix the residuals from its C&D recycling operation into the proposed MSW stream within the proposed transfer station which may render all of the material unacceptable at certain landfills. Additionally, if Lakeshore intends to deliver the C&D residuals to a disposal facility as beneficial use to avoid the state surcharge, they will need to be tracked and handled separately. If this is the case, a separate area on the tipping floor should be identified for storage of these materials. It is recognized that Lakeshore has recently acquired its own Landfill located in Atkinson, Illinois and may have a greater tolerance for acceptance of C&D fines at that location.

Issue: Use of Lakeshore's landfill in Atkinson, Illinois may limit the number of landfill trips per day and may require storage of a significant amount of trailers on-site in West Chicago. The storage location of the total estimated number of transfer trailers should be designated on the site plan.

As indicated above, Aptim is aware that Lakeshore has recently acquired its own Landfill located in Atkinson, Illinois. However, the extensive travel time to Atkinson from West Chicago will likely limit the number of trips to one per day for each trailer (4 hours and 40 minutes round trip, plus 30 minutes on-site, plus loading and time to/from daily parking). As a result, discussion may be warranted to indicate that these residuals will not be mixed with incoming MSW and how segregation and storage will occur on the tipping floor. Alternatively, discussion may be warranted to demonstrate that Lakeshore can make two trips per day and/or that it will have a sufficient number of trailers or rotating drivers in circulation to allow for the loadout schedule provided in Tables 2-2 through 2-6 while transporting all of the daily throughput to Atkinson. Further, if Lakeshore plans to operate its own transfer trailers and will be storing the trailers at the West Chicago site, area should be designated on the site plan for where these trailers will be stored. There are 20 trailer storage locations shown on Drawing C201, though more may be necessary. The throughput table indicates that six trailers will be needed in the 11:00 hour, though it would appear that these trailers may not be available at that time of day in the event that the Atkinson landfill is the disposal destination.

In all, initial review of the proposed location, design, and operation reveals gaps in information and raises questions concerning the ability of the proposed facility to protect the environment as well as the health, safety, and welfare of the public.

APPENDIX 2-D

LETTER FROM WEST CHICAGO

DRAFT

CITY OF
WEST CHICAGO

WHERE HISTORY & PROGRESS MEET

October 15, 2019

RE: Residential-zoned property located east of 1655 Powis Road, West Chicago, Illinois

To Whom It May Concern:

The Union Pacific Railroad line runs east of the subject property within Union Pacific Right of Way (ROW). While the ROW is zoned ER, Estate Residential, as an active rail line there can be no residential development within this corridor. Furthermore, there is insufficient room for a legally-sized series of Estate Residential lots including access to those lots. Finally, the ER zoning designation for the corridor is a remnant classification from the time it was annexed to the City of West Chicago.

As such, the City believes Section 22.14(a) 1,000 foot setback requirement is not applicable.

Please contact me if you have any questions.

Sincerely,

Tom Dabareiner AICP
Community Development Director/Zoning Administrator

EXTERNAL SENDER

Hi Marty,

I hope you enjoyed your time away. CEC received video footage from June 18, 2020 of the California Transfer Station tipping floor operation. The footage was received in five video files. We have reviewed the videos and created five tables, one for each video file we received. The tables include details for each trailer loaded. In summary, it took 6 to 8 minutes to load a trailer, similar to our observation from the July 24, 2020 site visit.

I have also included a daily field report from our July 24, 2020 California Ave TS site visit.

Enjoy your weekend and contact us with any questions or concerns.

APTIM

To: Mr. Dennis G. Walsh - Klein, Thorpe, and Jenkins, Ltd.

From: Aptim Environmental and Infrastructure and Walter Willis

Date: August 27, 2020

Re: West DuPage Recycling and Transfer Station Draft Siting Application Review

On behalf of the City of West Chicago, APTIM Environmental and Infrastructure LLC (Aptim) and Walter Willis have completed a review of the updated Draft of the Siting Application (Application) for the Lakeshore Recycling System, LLC (Applicant) West DuPage Recycling and Transfer Station, prepared by Civil and Environmental Consultants, Inc. (CEC). Upon review of the updated Draft, concerns regarding the applicant content and several siting criteria were identified and are summarized below:

Issue: Missing Information Required by Siting Ordinance

- Sect. 14-93 (b)(1)(d) In case of a limited liability company, submit the names and addresses of all members and managers and attach a certificate of good standing for the LLC from the Secretary of State's office. THIS INFORMATION HAS BEEN ADDED TO CRITERION 2.
- Section 14-93 (b)(8) Proof of notice pursuant to Section 39.2(b) of the Act. (It is realized that this information is not able to be provided yet, but it should be included in the final draft). AS NOTED, WE WILL PROVIDE THIS INFORMATION ONCE COMPLETE
- Section 14-93 (b)(16) A statement setting forth a complete record of actual or alleged violations from the last ten (10) years.... THIS INFORMATION HAS BEEN ADDED TO CRITERION 2.

Issue: Need

Summary

- The Application identifies 8 factors supporting need. (Page 1-3). However, only 3 of the factors -- increased competition, needed capacity for hydro-excavation waste, and growth in service area population and waste quantities -- are directly related to a demonstration of need. The other 5 factors (such as host fees to West Chicago and DuPage County) are potential benefits but do not directly address the need for an MSW transfer station.
- Much of the information used in the Application is not sourced, and some of the conclusions are supported by opinion/argument and not facts or data. SOURCES ADDED
- The daily throughput at the facility is vague and potentially allows for greatly varying quantities of material to be received. DAILY THROUGHPUTS SPECIFIED

- The capacity analysis does not demonstrate an impending shortage of MSW transfer capacity and in fact concedes that service area transfer stations are operating at well below their permitted throughputs. CORRECT, NOT ARGUING CAPACITY ISSUE; WE BELIEVE we needed to do this as part of the basic expected components of a need evaluation. Could take it out but then someone could say our evaluation was incomplete because we did not look at capacity. WE ARE CHOOSING TO LEAVE THIS IN.
- Applicant attempts to address this by introducing the concept of "operational capacity" but that analysis is primarily based on opinion/argument and not data. OUR DATA IS PRICING FROM OTHER TRANSFER STATIONS This situation is different than the one in Rockdale where the transfer station down the road in that instance was easily shown to have been operating over operational capacity.
- The needs analysis (for MSW) relies heavily on competition. However, much of the analysis of competition is based on opinion/argument, and only one semi-quantitative data point is provided with respect to pricing. If "economic need" is going to be the primary driver of "facility need", then additional data and analysis is required. DATA ADDED
- On the other hand, other factors such as the need for transload of single-stream recyclables (because there are relatively few MRFs in the regional market) could support the overall case for need. LRS IS CURRENTLY TAKING THE SSR THEY COLLECT TO BATAVIA WHERE IT IS TRANSLOADED AND TAKEN TO THE LRS MRF IN FOREST VIEW; SEE 1.7.6 FOR ADDITIONAL LANGUAGE
- Generally, the needs analysis presents anecdotal information on various factors but does not synthesize that information into an overall case for need.

Throughput

- Applicant provides no information as to how much of each material the company currently hauls within the service area. ADDED THIS INFORMATION FOR MSW AND SSR. ADDED INFORMATION ABOUT EXISTING C&D TONNAGE AND NOT ANTICIPATED TO CHANGE Therefore, no assessment can be made of what percentage of incoming material (MSW, C&D, SSR) is internal company tonnage and what percentage is third-party tonnage. IThere should be some documentable relationship between the 1,000 tpd of MSW transfer capacity and the amounts of MSW hauled by Lakeshore and affiliates. ADDED CURRENT VOLUMES
- Furthermore, there is no analysis of the amount of third-party tonnage that is potentially available in the Service Area. WE TALK ABOUT WHICH MUNICIPALITIES FLOOD AND ROY STROM HAULS SO COULD INFER A VOLUME. ALSO MAKE THE POINT THEY COULD COMPETE AND WIN MORE. In fact, applicant states that the hauling market is "controlled" by 3 large companies -- Waste Management, Waste Connections and Advanced Disposal. (Page 1-25). Each of these companies has transfer stations in the Service Area and therefore, based on Applicant's own competition arguments, are not likely to be customers of the proposed facility. AGREED That, in turn, raises the question of how much third-party waste can be sourced from within the Service Area. THE POINT IS MORE THE FUTURE VOLUME AND THE ABILITY FOR THE PRIVATELY RUN COMPANIES TO COMPETE. ALSO PROVIDE LETTERS FROM SEVERAL OTHER PRIVATE HAULERS THAT COULD BRING VOLUME.
- Applicant does provide letters of support from one municipality and 9 smaller waste companies. However, the municipality -- the Village of Hinckley -- is located in DeKalb County and is not even in the Service Area. Of the 9 companies, no information is provided in the letters about

how much waste they haul, or whether they provide collection services within the Service Area. It appears that many of the companies providing letters (Tri-County Excavation & Construction, Construction Development Strategies Corp, MBL Recycling, D&P) are focused on C&D hauling as opposed to MSW hauling. No information is provided on Creekside Compost and what type of hauling services they provide. ADDED MANY MORE LETTERS; BROKE OUT SUPPORT LETTER; ADDED INFORMATON FOR ALL WASTE HAULERS

- In sum, there is no information presented on internal company waste or third-party waste tonnages in relation to the 1,000 tpd (or 1,500 tpd) of transfer capacity that is proposed in the Application. ADDED INFORMATION ABOUT CURRENT INTERNAL MSW AND SSR VOLUMES

Service Area

- Applicant has defined the service area to consist of townships in 4 counties: DuPage County (6 townships), Kane County (8 townships); Cook County (2 townships) and Will County (2 townships). CORRECT

- Applicant states that the Service Area is "generally" based on the current service area of the LRS hauling operations. The Application does not indicate, however, whether the current hauling service area is representative of MSW hauling or C&D debris hauling. BASED ON MSW AND SSR HAULING; C&D SERVICE AREA NOT DISCUSSED BUT WOULD BE THE SAME; NOR IS HYDRO EXCAVATION SERVICE AREA DEFINED; MSW IS THE FOCUS OF THE APPLICATION SO THIS IS THE FOCUS Further, the Application does not indicate whether all hauling operations in the Service Area are staged out of the West Chicago site or other LRS hauling yards. NOW STATES ALL CURRENT OPERATIONS IN THE SERVICE AREA BASED AT THE SITE

- Applicant lists Elburn, Geneva, Lisle, St. Charles, and Wheaton as LRS residential hauling communities. Page 1-4. However, Figure 1-2 shows other communities (e.g., Montgomery, Sugar Grove) as being hauled by LRS. THIS HAS BEEN CORRECTED

- Applicant states the Service Area is approximately 640 square miles in size, but presents no analysis of hauling costs to support such a large service area. THIS IS CORRECT, but is also not the point. This is about competition for disposal pricing, not really transportation costs getting MSW to the transfer station. Transfer stations could be closer but pricing could still be manipulated to make its USE IMPRACTICAL.

- This is also relevant given that Applicant identifies 10 transfer stations as being "proximate" to the service area. It appears that several more-densely population townships in the Service Area (e.g., Schaumburg Township in Cook County, DuPage Township in Will County) may be a shorter haul distance to the proximate transfer stations than the proposed Facility. AGAIN TRUE BUT THE POINT IS THAT THE PRICING IS NOT THE SAME FOR ALL TRANSFER STATION USERS TO THE DISTANCE CAN BE IRRELEVANT (EXAMPLE OF 30% HIGHER PRICING AT DUKANE)

- No analysis or explanation is provided to support the identification and designation of "proximate" transfer stations. MAKE STATEMENT THE ONES SHOWN ARE ABOUT 10 MILES OR LESS FROM THE SERVICE AREA Applicant's transfer station in Forest View, for instance, is omitted from the list of proximate transfer stations even though it is relatively close to the two transfer stations in McCook (Figure 1-1). ADDED FOREST VIEW BECAUSE IT IS DISCUSSED IN THE REPORT ERD's transfer station in Rockdale is not shown, even though ERD submitted a letter of support. NOW ALSO SHOW ERDS AND WMI JOLIET TRANSFER STATION

Service Area Demographics/Waste Quantities

- Applicant relies on waste generation and recycling data from County Solid Waste Management Plans, but states "It should be noted that many factors affect the accuracy and precision of this type of data including variability in exactly what materials are reported (e.g., what material is included or excluded) and the method of data collection (e.g., voluntary reporting, measurement)." DELETED THIS SENTENCE Applicant does not include any analysis to support the accuracy of the data upon which it relies to estimate Service Area waste quantities, a key variable in the needs analysis, nor does Applicant derive its own estimates of Service Area waste quantities that may be more accurate than the County Plan data. NOW INCLUDE BRIEF DISCUSSION OF DATA; SINCE THIS IS REALLY BASED ON COMPETITION, THE EXACT GENERATION NUMBERS ARE NOT AS IMPORTANT; NO ADDITIONAL DISCUSSION OR ESTIMATES OF DATA ARE INCLUDED

- Further, Applicant cites the Kane County Plan, which suggested that increased diversion of waste from landfill due to recycling and "light-weighting" of consumer products may be trends that are lowering disposal quantities. Applicant does not provide any analysis that such trends will not continue in the future, and yet Applicant projects future growth in disposal quantities from the Service Area. DELETED THE REFERENCED SECTION. THIS SECTION PRIMARILY PROVIDES THE PER CAPITA RATE FROM THE KANE COUNTY SWMP.

- Applicant assumes waste generation rates (pounds per capita per day) and recycling rates will remain constant between 2010 and 2040. Tables 1-3A and 1-3B. Applicant also notes that "Trends in pounds per capita per day rates were not evaluated in the Illinois DCEO Report", which was the source of the per capita rates used in Table 1-3B. Applicant provides no analysis of whether per capita generation rates and recycling rates will increase, decrease, or stay the same in the future. DELETED THE SENTENCE; ADDED A BRIEF DISCUSSION

- Applicant relies on CMAP population projections for the year 2040 and estimates that population within the Service Area will grow by 20% between 2010 and 2040. Applicant does not consider recent Census data which indicates much slower population growth in Illinois counties. ADDED 2020 DATA; DISCUSSED FACT THAT 2040 DATA REMAINS THE SAME BUT INCREASES COULD BE LOWER THAN PREVIOUSLY PROJECTED.

- Applicant states that "The Illinois DCEO Update estimated that the overall Illinois diversion rate is 37.3% by weight, assuming the difference between the generation quantities (estimated to be 19.3 million tons), and disposal quantities (estimated to be 12.1 million tons) is the quantity of materials recovered (approximately 7.2 million tons)." Page 1-9. Applicant utilizes the 37.3% recycling rate from the DCEO study to estimate Service Area recycling and disposal quantities in one forecast scenario. Table 1-3B. Applicant does not provide any analysis or opinion as to whether it agrees with the DCEO methodology or whether it is an accurate method for estimating recycling and disposal quantities. NOT CLEAR WHY WE NEED TO EVALUATE IT; THE REPORT IS PUBLICLY AVAILABLE AND USED BY MULTIPLE SOLID WASTE MANAGEMENT PLANS; SO SEEMS TO BE A REASONABLE DATA SOURCE

- In summary, accurate waste projections are a key component of the needs analysis. Applicant cites County Plan and DCEO data and CMAP population projections, but acknowledges such data may be inaccurate, and provides no independent analysis to support that the waste projections in the needs report are reliable and accurate. SEE ABOVE COMMENTS; WE DO NOT SEE THE VALUE IN GETTING INTO OUR OWN INDEPENDENT EVALUATION; IT IS NOT A PIVOTAL COMPONENT OF THIS NEED EVALUATION.

MSW Transfer Capacity

- Applicant identifies 4 transfer stations located in the Service Area. With respect to these transfer stations, Applicant states:

DuKane Transfer Station has been operating at less than half its maximum capacity since at least 2010. Page 1-12

Batavia Transfer Station operated at about 55% of its maximum capacity during 2019. Page 1-13.

Elburn Transfer Station received 688 tpd in 2007, 535 tpd in 2008, and 495 tpd in 2009. This is old data, but indicates a declining tonnage trend. Pages 1-13, 1-14.

Bluff City Transfer Station received 645-700 tpd between 2016 and 2019, which means it operated about 35% of its maximum capacity of 2,000 tpd for the last 3 years. Page 1-15. Further, these recent throughputs are down from prior levels. Bluff City handled 965 tpd in 2007, 893 tpd in 2008, and 846 tpd in 2009.

Applicant actually concludes that there is adequate design capacity in Service Area. Page 1-25. Applicant estimates the 4 transfer stations in the Service Area have a combined capacity of 7,000 tpd, compared to projected Service Area waste disposal of 3,700 tpd (current) and 4,400 tpd (2040, assuming population grows by 20 percent). This does not suggest an urgent need, either presently or in the future.

Furthermore, on a combined basis, Applicant estimates the 4 transfer stations accept 2,800 tpd, a throughput that has been relative stable over the years. Pages 1-25 and 1-26. Therefore, the 4 transfer stations are operating at about 40% of their design capacity on a combined basis.

Applicant also identifies 10 proximate transfer stations that are located outside the service area. Page 1-15. Applicant does not provide an explanation for why these 10 facilities were selected (nor why other transfer stations outside the Service Area were not also deemed to be "proximate"). Applicant provides no information on capacity and throughputs at the proximate transfer stations, and does not answer an obvious question: if these transfer stations are "proximate", why are they not reasonably available to meet the needs of the Service Area? In fact, the Applicant concedes that 900 tpd of waste from the Service Area is currently being managed by the proximate transfer stations. Page 1-26. WE ACKNOWLEDGE THAT THE PROXIMATE TRANSFER STATIONS ARE HANDLING THE WASTE NOT MANAGED BY THE TRANSFER STATIONS IN THE SERVICE AREA AND DO NOT ARGUE THEY COULD NOT IN THE FUTURE; THIS IS NOT THE POINT; WE ARE RELYING UPON THE COMPETITION ARGUMENT AND THE VALUE TO DUPAGE COUNTY OF KEEPING ITS OWN WASTE IN ITS OWN TRANSFER STATIONS

- Applicant argues that the export of 900 tpd from the Service Area is evidence of a 900 tpd "operational" shortfall of capacity in the Service Area. Page 1-26. Given that the 4 transfer stations are operating at 40% of design capacity, Applicant's conclusion is not supported by empirical data. Applicant concedes that "Given the number of transfer stations proximate to the Service Area, it is reasonable that the approximately 900-ton-per-day difference is currently being managed by transfer stations located outside of the Service Area." Page 1-26. The service areas for the proximate transfer stations may very well overlap with the Service Area of the proposed Facility, which is a more plausible explanation of why 900 tpd is exported from the Service Area rather than some alleged shortfall in "operational capacity". WE AGREE THAT THE 900 TPD IS EXPORTED AND ACKNOWLEDGE THIS.

- Applicant does no analysis of service area overlap. Moreover, Applicant does not provide any analysis as to why the proposed Facility is more economical compared to using proximate transfer stations to manage a portion of the Service Area's waste. Some townships in the Service Area are likely closer to the proximate transfer stations than the proposed Facility.

WE ARE NOT ARGUING WHETHER CERTAIN ONES ARE MORE ECONOMICAL BASED ON DISTANCE; EVALUATING THE DISTANCE ASSUMES SAME/ FAIR DISPOSAL RATES FOR ALL USERS; THE POINT IS THAT DISTANCE DOES NOT MATTER WHEN THE DISPOSAL RATES ARE NOT THE SAME FOR ALL USERS.

- Applicant states that the available operational capacity of a transfer station can vary based on:

  The type/amount of equipment used at the transfer station.

  Operating hours.

  - Labor.

  Optimization of operational capacity relative to anticipated acceptance volume.

  - Relative transportation distances and other operational factors considering other same-company operating facilities.

  Ability to solicit favorable agreements/pricing from transfer stations operated by other companies.

  Overall company business strategy.

  Positioning for winning municipal hauling contracts.

- All of these factors would apply equally to the proximate transfer stations as well as the proposed Facility. CORRECT, BUT ALSO EACH IS ABLE TO DECIDE FOR THEMSELVES TO NOT CONSISTENT FOR EACH TRANSER STATIONS Far from suggesting an "operational capacity" deficit, they instead more plausibly provide an explanation as to why 900 tpd of Service Area waste is currently exported. AGREED

- Because it will be a new transfer station, the proposed Facility will necessarily draw waste from existing transfer stations. AGREED Applicant could have provided an analysis to demonstrate that the proposed Facility would improve the regional handling of waste, for instance by evaluating the spatial distribution of population/waste within the Service Area to evaluate whether the proposed Facility provided transportation savings (to the entire Service Area, not just Applicant's hauling operations). DO NOT THINK WE CAN PROVE THIS BECAUSE DUKANE HAS SO MUCH ADDITIONAL CAPACITY; TRANSPORTATION SAVINGS IS NOT THE POINT BECAUSE UNEVEN PRICING CAN OVERBALANCE TRANSPORTATION COSTS.

  However, other than noting that the Facility is located near the geographic center of the Service Area and may provide some transport savings to Applicant, no such analysis was provided in the Application. The proposed Facility may provide business benefits to the Applicant, but the needs of the entire Service Area must be considered under Criterion 1. WE ARE CONSIDERING THE NEEDS OF ALL THE COMMUNITIES IN THE SERVICE AREA BY MAKING THE CASE THEY ALL NEED COMPETITION TO MAINTAIN THEIR RATES AND THEIR SERVICES. COMPETITION IS MAINTAINED BY GIVING THE PRIVATELY OWNED HAULERS AN OPTION OTHER THAN THE MAJORS.

- Applicant asserts that the Batavia Transfer Station, owned and operated by Advanced Disposal Services, has been the most aggressive transfer station in the Service Area in terms of soliciting third-party tonnage. Applicant bases this assertion on the observation that Advanced holds relatively few of the municipal (i.e., residential) hauling contracts within the Service Area. However, that observation does not consider that Advanced may collect larger amounts of commercial waste than residential waste, NOT SURE HOW WE COULD CONFIRM/

KNOW THIS BUT VERY DOUBTFUL BASED ON TYPICAL OPERATONS and ignores the fact that LRS has taken the St. Charles and Geneva municipal hauling contracts from Advanced since the Batavia Transfer Station started operating. ST. CHARLES AND GENEVA OBVIOUSLY BENEFITED FROM THIS; ALSO COULD ARGUE THAT THIS HELPS MAKE OUR POINT ABOUT WHY WANT PRIVATES IN THE MARKET AND THAT ADVANCED COULD TURN US UPSIDE DOWN BY RAISING THEIR PRICES IF THEY WANTED TO; DATA WOULD SUGGEST THE ARE OK WITH LETTING THE HAULING GO AND MAKING THEIR MONEY ON THE TRANSFER

- Applicant concludes "In summary, the available operational capacity in the Service Area can vary from the available design capacity to zero at the discretion of the companies which control the waste management network. Currently, based on the long-term relatively consistent volumes at the Service Area transfer stations, the available operational capacity to companies other than WMI, Advanced Disposal and Waste Connections is less than 560 tons per day (1,250 tons per day at Batavia Transfer Station - approximately 700 tons per day acceptance volumes)." Pages 1-26 and 1-27. Applicant therefore concedes that "operational capacity" may in fact be equal to design capacity. Applicant's contention that "operational capacity" may be zero at the discretion of the current owners is not supported by empirical data -- Applicant provides no data on third-party volumes at the 4 transfer stations in the Service Area (or proximate transfer stations) and, in fact, LRS is a third-party customer at the Batavia Transfer Station. Applicant is assuming its conclusion rather than demonstrating it through empirical evidence. THE FLAW WITH YOUR ARGUMENT IS THAT IT ASSUMES THE OTHER TRANSFER STATIONS ARE PROVIDING CONSISTENT PRICING NOW AND WILL BE IN THE FUTURE. EVEN IF THEY ARE NOW, DOES NOT MEAN THEY WILL IN THE FUTURE. THE POINT IS A COMPANY NEED FULL INTEGRATION TO HAVE A CHANCE TO MAINTAIN A LEVEL PLAYING FIELD. IF NOT, ALWAYS AT THE MERCY OF THOSE WHO DO AND THERE ARE SUBSTANTIAL BENEFITS TO THE SERVICE AREA IF LRS GETS THE TRANSFER STATION.

Hydro-Excavation Waste – SEE LANGUAGE CHANGES; CHANGED ARGUMENT TO MORE ECONOMICAL TRANSPORTAION VS CAPACITY ISSUE

- Applicant asserts there is a "desperate" need for hydro-excavation waste. Page 1-1 REMOVED THIS LANGUAGE

- Applicant states that "Publicly available information regarding the amount of hydro excavation wastes that are generated within Illinois and/or a geographic area within Illinois is not available. Information from customers and generators suggest that 50 tons per day to 200 tons per day of hydro excavation wastes are generated in the Service Area primarily depending on the time of year (larger amounts are generated during the construction season." Page 1-23. Applicant does not disclose which customers and generators provided "information" nor how many customers and generators were contacted. There is no way for West Chicago to independently verify these estimates of quantities (and the burden is on the Applicant to adequately document quantities). SEE ADDITIONAL LANGUAGE

- Applicant states "We understand that the only facility within the Service Area that accepts and processes hydro excavation wastes is the Woodridge-Green Valley Wastewater Facility." Page 1-24 Applicant provides no information on the capacity (in tpd) of that facility for hydro-excavation waste. SEE NEW LANGUAGE

- Applicant states "We understand that the only facility proximate to the Service Area that is permitted to accept and process hydro excavation wastes is LRF's facility in Forest View." Page 1-24 Applicant further states the Forest View facility handles 100-400 tpd of hydro-excavation waste, which is sourced from throughout northern Illinois (Wisconsin to the north, Iowa to the west, and Pontiac to the south). Given that the apparent service area for hydro-excavation waste at Forest View is all of northern Illinois, it is hard to resolve a proportionate estimate of generation within the Service Area of 50-200 tpd. SEE NEW LANGUAGE

- Applicant claims that the large service area at Forest View is evidence that there is a lack of available facilities to accept and process hydro-excavation waste. But Applicant also couches its identification of the Woodridge-Green Valley Wastewater Facility and Forest View Transfer Station as being the only facilities that manage hydro-excavation waste as "We understand that the only facility..." The Application does not disclose the source of that "understanding" Further, no survey of other wastewater treatment facilities, transfer stations or landfills was apparently performed by Applicant to document that there are *only two* existing facilities processing hydro-excavation waste. SEE NEW LANGUAGE

Competition

- Applicant is on stronger ground when it comes to competition; however, additional data and analysis would support that aspect of need.

- Applicant suggests that hauling in the Service Area is "controlled" by Waste Management, Waste Connections and Advanced Disposal, which own the 4 transfer stations in the Service Area. Page 1-25. However, Applicant has managed to secure at least 9 municipal (residential) hauling contracts in the Service Area, notwithstanding that it doesn't currently own a transfer station. Page 1-17. Presumably, Applicant also provides commercial waste collection within the service area. Page 1-4 CORRECT. LRS WAS SUCCESSFUL IN LARGE PART DUE TO DISPOSAL PRICING PROVIDED BY ADVANCED DISPOSAL.

- Applicant states that it currently delivers all of the waste it collects in the Service Area to the Advanced Disposal's Batavia Transfer Station. Page 1-21. Applicant states that Advanced has been aggressive about sourcing third-party tonnage at the Batavia Transfer Station, but suggests that may change after the completion of the pending acquisition of Advanced by Waste Management. Page 1-26. There is no analysis or evidence presented to document that the Batavia Transfer Station would not be available to Applicant post-acquisition. WE DISCUSS PRICING FROM OTHER WMI FACILITIES; SPECULATING INTO THE FUTURE SO NOT AWARE OF OTHER DATA THAT COULD BE PROVIDED.

- Applicant does not discuss the possibility that Waste Management may have to divest assets (including a transfer station) in the Service Area as part of the acquisition of Advanced Disposal. GFL has been identified in industry trade journals as the purchaser of assets that DOJ is requiring Waste Management to divest and would be a new entrant into the transfer/disposal market in the Chicago metro-area. ADDED LANGUAGE ABOUT THE STATUS OF THE ACQUISITION

- Applicant states that available design capacity is not necessarily available to third-party collection companies. Page 1-21 Applicant further states that it requested pricing from Waste Connections at the DuKane Transfer Station and was quoted a disposal price that is approximately 33% higher than "market". P. 1-21. Applicant provides no data on what the "market" disposal price is, however. Further, Applicant provides no information as to the terms under which the pricing was requested from Waste Connections (e.g., contract length, tonnage to be delivered, etc.) Further, Applicant apparently did not request pricing information from the other transfer stations in the Service Area nor from proximate transfer stations. CLARIFIED

AND ADDED SOME ADDITIONAL LANGUAGE.

Typos

- Page 1-3, 6th bullet, typo, "it" should be "its".
- Page 1-11, last sentence on the page, should state 2016 acceptance volume was the largest since 2010, not 2017, at least not based on the tonnage data listed in the previous sentence.
- Page 1-17, typo, middle paragraph, "includes" should be "include".
- Page 1-18, typo, first bullet, "serve" should be "serves".
- Page 1-23, typo last line, "its" not "their"

Issue: Residential Zoning Setback

Section 22.14(a) of the Illinois Environmental Protection Act states that "No person may establish any pollution control facility for use as a garbage transfer station, which is located less than 1,000 feet from the nearest property zoned for primarily residential uses or within 1,000 feet of any dwelling, except in counties of at least 3,000,000 inhabitants."

The railroad property directly adjacent to the east side of the site is zoned Estate Residence District which is designated for single family detached dwellings, home occupations, small community residences, forest preserves, and parks and recreational areas when publicly owned. Although the application includes extensive discussion that the physical features of that property, the lack of access, and the lot requirements make it physically impossible to construct a residence there, it is the opinion of Aptim that this issue poses significant risk to the project.

It is our understanding that the Applicant believes that the Pollution Control Board decision in the Caseyville transfer station case, along with the letter from West Chicago provided in Appendix 2-D exempts this project from the residential setback requirement. However, there are differences between this situation and that in Caseyville. In any event, even if siting approval is obtained in West Chicago, this is an issue that may be litigated in the event that the siting process has opposition that may file an appeal. Aptim recommends that the railroad property be rezoned prior to filing to eliminate this risk. WE UNDERSTAND AND APPRECIATE YOUR ENCOURAGEMENT OF WEST CHICAGO TO CHANGE THE ZONING, BUT WEST CHICAGO HAS DECLINED TO REZONE.

Issue: Plan Consistency

Beginning with the 2007 Plan Update the County began articulating the need for a transfer station in the "southern portion" of the county. UNDERSTOON. THE 2007 UPDATE INDICATES THE RESULTS OF THE EVALUATION "CONCLUDED THAT THE ONLY AREA THAT MIGHT BENEFIT FROM A WASTE TRANSFER ARE LOCATED IN THE SOUTHERN PORTION OF THE COUNTY." HOWEVER, THIS IS NOT REFLECTED IN THE RECOMMENDATION SECTION, WHICH INDICATES THE COUNTY IS CONSIDERING MULTIPLE ADDITIONAL TRANSFER STATIONS.

This finding was further supported by the study Shaw did and the figures from that study are in the 2012 Plan Update which again states that conditions may necessitate a transfer station in the southern portion of the county. This is a key issue that the opposition will focus on along with the maps in the 2012 update. WE UNDERSTAND AND APPRECIATE THE COMMENT; VARIOUS FIGURES ARE INCLUDED THAT DID NOT APPEAR TO HAVE BEEN INCLUDED IN THE 2007 UPDATE. THE RECOMMENDATION TABLE IS NO LONGER INCLUDED AND THE RECOMMENDATION SECTION OF THE 2012 UPDATE DOES NOT MENTION TRANSFER STATIONS. THE NEEDS ASSESSMENT INCLUDES THE ABOVE STATEMENT WHICH IS BASED ON CAPACITY, GENERATION AND DISTANCE, AND INFERS CONSISTENT PRICING AT TRANSFER STATOINS FOR VARIOUS USERS. WE BELIEVE THIS SECTION DOES NOT PRECLUDE THE POTENTIAL NEED FOR OTHER TRANSFER STATIONS AND SEEMS TO SUGGEST THIS

POSSIBILITY.

Compounding this is the DuPage County Plan Updates doesn't appear to clearly state that the past plan update recommendations are no longer applicable and that the 2017 Update controls as far as Plan consistency. NONE OF THE UPDATES MAKE THIS CLEAR STATEMENT. THE 2017 UPDATE MENTIONS SERVICE AREAS MUST BE CONSIDERED AS WELL AS MARKET FORCES AND MUCH MORE CLEARLY STATES THE COUNTY WILL CONSIDER NEW OR EXPANDED FACILITIES ON A CASE BY CASE BASIS, WHICH SEEMS TO OVER RIDE THE SIMILAR COMMENTS ON THE SAME TOPIC IN PREVIOUS UPDATES. THIS IS THE FIRST MENTION OF MARKET FORCES, WHICH IS ARGUMENT WE ARE MAKING.

LRS further complicates this by including all the plans in its proposed filing, opening up all the past plans to being applicable to the hearing. WE UNDERSTAND THE COMMENT BUT BELIEVE ALL SHOULD BE INCLUDED AND ADDRESSED.

The letter from the County is weakened by the fact it is from mid-level staff and it states the facility "appears" to be consistent with the plan. The opposition will wonder why the county held back from saying it is consistent with the plan, and that the letter is meaningless since the county did not offer a final determination. JOY HINZ IS RESPONSIBLE FOR OVERSEEING THE SWMP SO WE WOULD ARGUE SHE PROBABLY HAS THE BEST UNDERSTANDING AT THE COUNTY AND IS THUS THE BEST PERSON TO SIGN THE LETTER.

The opposition will likely muddy-up what the DuPage County Plan says about TSs and that the 2007 and 2012 preference for TSs in the southern portion of the county is still controlling policy in the plan. There is nothing in the 2017 plan that states the past language is no longer applicable. WE UNDERSTAND AND APPRECIATE ALL THE COMMENTS AS THEY HELP PREPARE FOR THE POTENTIAL ARGUMENTS AT THE HEARING. ALL OF THE ABOVE ITEMS ARE ADDRESSED IN OUR EVALUATION AND WE ARE NOT PROPOSING ANY MODIFICATIONS TO THE DRAFT CRITERION 8 EVALUATION.

Issue: Stormwater

Although the City issued a Stormwater Management Certification (No. SM2019-0061) on December 6th 2019 approving the site stormwater plan, Aptim has identified a number of issues during its review of the Stormwater Management Plan that may impact the health, safety and wellbeing of the general public. These issues were previously raised with the Applicant, but not addressed—likely because the City has approved of their plans. However, this issue may be raised by opposition during the siting hearing.

The 100-yr Base Flood Elevation (BFE) (752.25 ft. MSL) obtained from the new FEMA Flood Insurance Study data is greater than the East Pond outfall (749.1 ft. MSL) as well as the site's existing storm sewer network outlet (750.5 ft. MSL) which drains roughly half of the upstream paved site. In fact, both the East Pond outfall and existing storm sewer outlet are lower than the 10-year storm flood elevation (751.50 ft. MSL). CORRECT. 100-YEAR BASE FLOOD IS 752.25 AND 10-YEAR FLOOD IS 751.50 BASED ON FEMA FLOOD INSURANCE STUDY.

Given the East Pond and attributing storm sewer network will be submerged during significant storm events, a tailwater analysis at both locations is necessary to determine if free-flowing conditions will exist. THIS WAS COMPLETED Furthermore, no evaluation of the site's existing storm sewer network was performed. CORRECT Watersheds were generally delineated based on the site's paved surface boundaries with sheet-flow and shallow concentrated-flow assumed to occur across the site. In reality, stormwater runoff will sheet- flow across the site into the storm sewer inlets and then through the pipe network before discharging into the East Pond. It is noted that a lot of the storm sewer pipes' invert elevations are below the 100- yr BFE (752.25 ft. MSL) as well as the East Pond high-water elevation (754.16 ft. MSL). CORRECT A change to the stormwater model such as this would most likely change the peak flow, peak time, and high-water level exhibited at the East Pond. WE DISAGREE. THE EAST POND WAS MODELLED ASSUMING KRESS CREEK IS AT 100-YEAR FLOOD STAGE, WHICH IS A VERY CONSERVATIVE ASSUMPTION. NO DETENTION CREDIT IS TAKEN BELOW KRESS CREEK 100-YEAR FLOOD STAGE.

It is recommended that an analysis of the storm sewer network be performed to evaluate and determine how the site's proposed stormwater management system performs during peak rainfall events. This is especially the case given that stormwater from the East Pond is expected to backflow into the existing storm sewer network for even the 10-year rainfall event. With no understanding of how stormwater runoff will move through the site's conveyance and discharge features, it is impossible to anticipate if stormwater will be detained and released in a controlled manner. WE DISAGREE. WHILE FULL EXTENTS OF STORMWATER SYSTEM ARE NOT KNOWN (SEE PREVIOUS DISCUSSION ATTACHED) IT IS KNOWN THAT STORMWATER BACKUP WOULD ONLY OCCUR UNDERGROUND IN THE STORM SEWER SYSTEM (STORMWATER WILL NOT BACK UP ONTO THE PAVEMENT). WATER WILL CONTINUE TO DRAIN TO THE POND EVEN IN 10-YEAR EVENT SINCE POND LEVEL WILL BE BELOW PAVEMENT SURFACE (I.E. THERE WILL BE A HEAD DIFFERENCE BETWEEN WATER ENTERING STORM SEWER NETWORK WITH ELEVATIONS BETWEEN 755 AND 756 COMPARED TO 10-YEAR FLOOD STAGE AT 751.50).

Therefore, it is the opinion of Aptim that the Stormwater Report has not demonstrated adequate stormwater runoff design features in accordance with the DuPage County Countywide Stormwater and Flood Plain Ordinance. DUPAGE COUNTY ISSUED AN APPROVAL CONFIRMING THE PROPOSED DESIGN MEETS THE COUNTYWIDE STORMWATER AND FLOOD PLAIN ORDINANCE. WE RESPECTFULLY REQUEST THAT APTIM RECONSIDER THIS OPINION.

Issue: Push Wall Design

A typical push wall design includes a 12 to 18-inch reinforced concrete wall with, in some instances, a metal plate for abrasion resistance attached to the lower portion of the wall. However, Drawing C302

depicts a push wall design that includes a structural I beam attached to a "cover plate". Additionally, based on Figure 2-3, it appears that the pushwall will be attached directly to some of the building columns which will be wrapped instead of being constructed as a linear wall in front of the building structure. NO PORTIONS OF THE PUSHWALL WILL BE CONNECTED TO THE BUILDING COLUMNS; THE DRAWINGS WERE MODIFIED TO CLARIFY THIS.

APTIM believes that a structural engineering analysis be performed to demonstrate that the system can take an impact from a loader at 5 mph without shearing the beams. Although the Applicant has claimed that this is a proprietary design, it will need to be reviewed by the City prior to issuance of a building permit if they are unwilling to provide the information within their Siting Application. Aptimrecommends that this information is made available to the City prior to filing of the Siting Application to allow for review and to ensure that the sited design will ultimately be constructible. THE BARRIER WALL WILL BE DESIGNED TO WITHSTAND AN IMPACT FROM A LOADER AT 5 MPH. WE ADDED LANGUAGE TO THE APPLICATION REFLECTING OUR PAST EXPERIENCE WITH THIS DESIGN.

Further, the applicant should explain how waste is prevented from accumulating behind their proposed pushwall system (between the push wall and exterior building wall) and and/or how that area will be cleaned on a routine basis. APPROXIMATELY THREE FEET OF SPACE WILL BE PROVIDED BETWEEN THE BARRIER WALL AND THE BUILDING/ BUILDING COLUMNS TO ALLOW CLEANING. A THINNER SHEET OF METAL (ABOUT 3/16 INCH) WILL BE PLACED ON TOP OF THE WALL BETWEEN THE WALL AND THE BUILDING AT ABOUT A 45 DEGREE ANGLE (SLOPING BACK TO THE TIP FLOOR) TO PREVENT WASTE FROM OVER TOPPING. LANGUAGE WAS ADDED TO SECTION 2.4.7 TO CLARIFY THAT ROUTINE CLEANING BEHIND THE WALL WILL OCCUR. CLEANING HAS BEEN PERFORMED BY A COMBINATION OF SWEEPING, BLOWING OR HIGH PRESSURE WATER. FOR A LONGER RUN, A DOORWAY CAN BE PROVIDED TO THE OUTSIDE OF THE BUILDING IN BETWEEN THE ENDS OF THE BARRIER TO PROVIDE BETTER ACCESS. THIS WALL DESIGN HAS BEEN USED AT LRS'S 3152 S CALIFORNIA FACILTY FOR OVER 15 YEARS WITHOUT ANY SAFETY OR FIRE ISSUES. IT IS ALSO THE SAME AS THE BARRIER WALL INSTALLED IN THE C&D TIPPING BUILDING IN 2018.

Issue: Tipping Floor Capacity and Operation

The proposed maximum throughput is too high for the facility design and operation.

The wheel loaders that are depicted on Figure 2-3 are drawn at a smaller scale than actual size. The loader models being used at Lakeshore's California Ave facility are Caterpillar 980 and 950 for loading and consolidation, respectively. THE DIMENSIONS OF THE PLANNED LOADERS HAAVE BEEN ADDED TO FIGURE 2-3 The smallest loader recommended by Caterpillar for use in a transfer station that transfers 1,300 tons per day (MSW and SSR) is a 966 model with an 8.5 yd bucket, though an even larger 980 model may be necessary as it apparently is at the California Ave. facility. The 966 and 950 models have lengths of almost 27 feet (without a bucket) and widths of 9.83 and 10.83 feet over tires, respectively. THE DIMENSIONS ARE SHOWN ON FIGURE 2-3 The loaders shown appear to have length of only approximately 17 feet (without bucket) and a width of approximately 7 feet over tires. Figure 1 imposes more realistic loaders onto the Applicant's Figure 2-3.

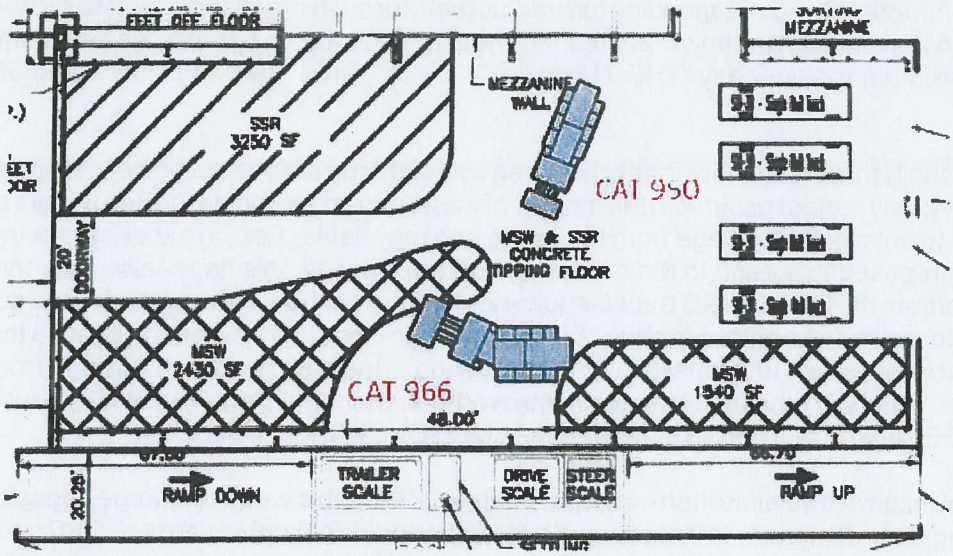

Figure 1

As shown, the sizes and locations of the stockpiles create a limited area where the wheel loaders can operate and will prevent a wheel loader from unloading and loading a transfer vehicle as efficiently as presented.

The applicant should provide analyses of the area required on the floor to allow movement of the appropriately sized wheel loaders to accommodate the corresponding turning radius (both for pushing unloaded waste into the pile and loading a transfer vehicle) and how that affects the area available on the floor to store waste. THE TURNING RADIUS OF THE 980 LOADER IS SHOWN ON FIGURE 2-3 TO DEMONSTRATE THE APPROXIMATELY WORKING ARE FOR THE LOADER. The current scenario appears not to allow these movements as depicted in Figure 2.

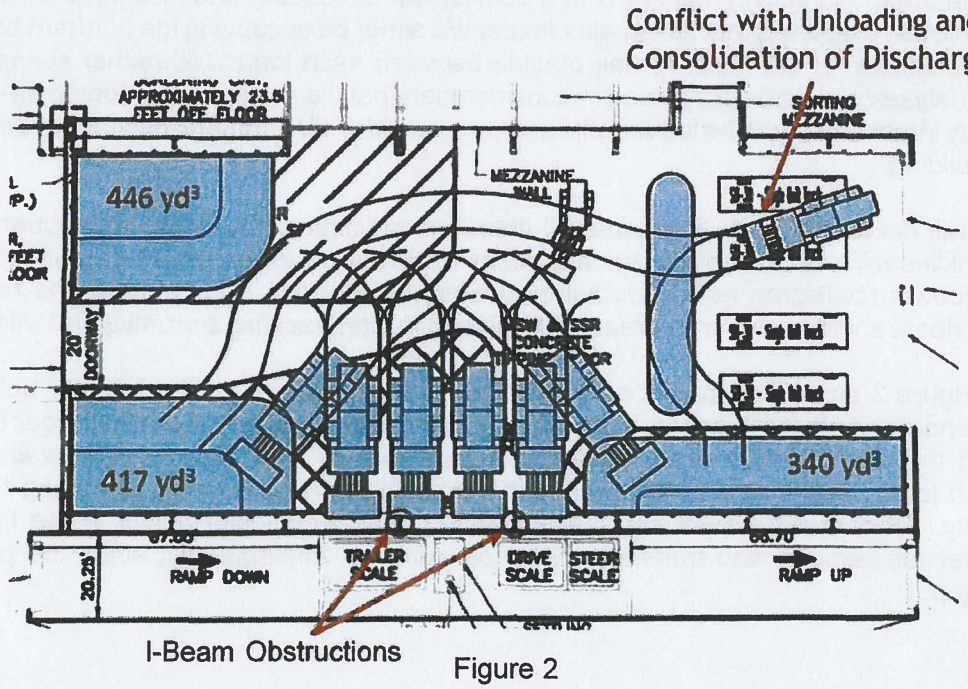

Figure 2

The applicant should provide an analyses of the area required on the floor to allow movement of the

wheel loader or accommodate the corresponding turn radius (both for pushing unloaded waste into the pile and loading a transfer vehicle) and how that will affect the area available on the floor to store waste and the required maximum tons per day. THE TURN RADIUS OF THE LOADER IS SHOWN ON FIGURE 2-3.

To compound this issue is that the primary loader will need a straight run at each section of the trailer as it is filled which obviously cannot occur with the "finger" of waste shown extending into the middle of the floor. In addition to anticipated spillage from the waste and recyclable piles on either side of the doorway which are proposed to extend to the exact edge of the doorway, this finger also prevents equipment access to/from the 20-foot C&D transfer building. It is unclear how or if equipment can get to that door in order to move any non-recyclable C&D material from the C&D transfer building to the transfer building, and vice versa. Additionally, overhead door no. 2 may be blocked by spillage from the smaller MSW pile. This will prevent full usage of the overhead door no. 2 bay and slow the truck acceptance rate. SEE UPDATED THROUGHPUT EVALUATION AND FIGURE 2-3

Further, the applicant incorrectly claims there is approximately 2,500 cubic yards of storage capacity on the revised tipping floor design (1,410 cubic yards of MSW and 1,090 cubic yards of SSR). As previously indicated, we believe that use of a more realistic density of 169 pounds per cubic yard results in a need to store 1,239 cubic yards of SSR material as proposed.

The applicant also used "average" pile heights of 12 feet. However, with such narrow stockpile areas, it will not be possible to store waste above maximum height of the pushwall since, at a 1:1 slope, the peak of the piles of already very near to the edge of the building, severely limiting the area above the pushwall that can be used for storage.

Figure 2 illustrates more realistic stockpile sizes, each showing a 1:1 working face up to the top of the pushwall (a height of 12 feet) while still allowing relatively free maneuvering of the loaders. It also shows more realistic stockpile sizes. Using the average areas of the pile bases and plateaus on this figure and multiplying by 12 feet, we estimate the total volume of MSW and SSR storage is only 757 cubic yards and 446 cubic yards, respectively.

Figure 2 also illustrates a previously mentioned issue of the need for waste to be consolidated from its discharge area to the southwest stockpile. In addition to the previously described need to reduce the SSR stockpile area, this activity will result in a conflict with unloading and discharge of waste by collection vehicles. It appears that the smaller loader will either be occupying the northern bay door, rendering it unusable, or will have to wait outside between each load. With either scenario, the throughput analyses should be performed in consideration that the northern bay door to be used for unloading only intermittently. If the loader will be waiting outside, it will impede the maneuvering area east of the building.

If the waste will not be routinely consolidated, then it is anticipated that each subsequent set of collection vehicles will need to dump closer and closer to the bay doors such that there will be virtually no room for incoming collection vehicles to pull into the transfer building. Not to mention the inability to close the bay doors and the inherent increased likelihood for litter tracking and unwanted wildlife.

In addition, Figure 3 shows the collection vehicle pulling far enough into the transfer building to unload waste near the stockpile areas, but in doing so, will also require the smaller loader to either be occupying the northern bay door, rendering it unusable, or that it will have to wait outside between each load. This scenario also makes it impossible for loading and unloading to occur simultaneously. All of these issues are anticipated to cause significant delays in the timing of incoming collection vehicles and transfer trailer load-out and, consequently, affect the proposal facility throughput.

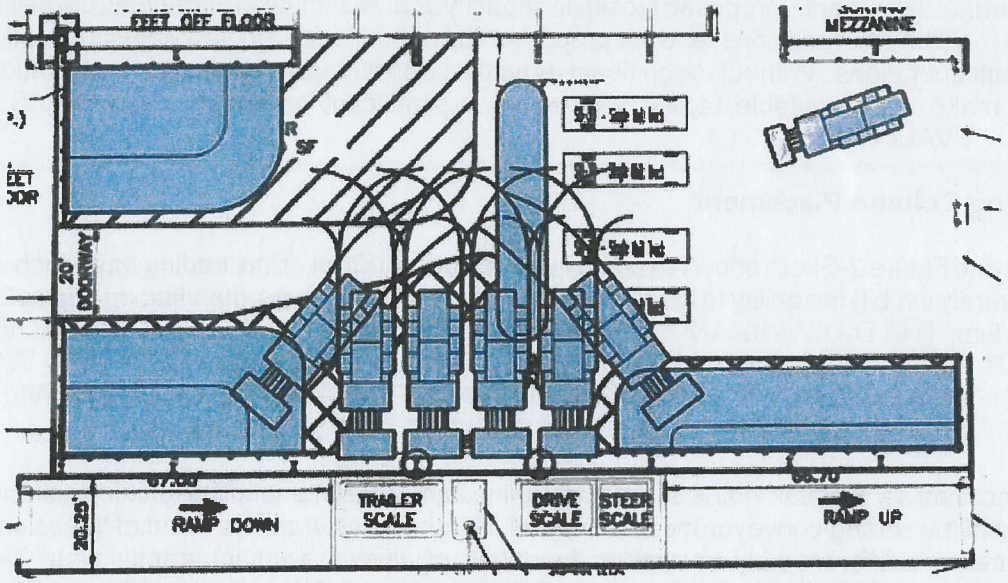

Figure 3

In addition to the apparent need for one of the loaders to be blocking one of the bay doors, it is proposed that four vehicles (two per door) can be unloading at the same time. The doors are specified to be 30 feet wide, each. Assuming a width of 10 feet for each truck, THE MAXIMUM LEGAL VEHICLE WIDTH IN ILLINOIS IS 8.5 FEET. there will only be approximately 3.3 feet of clearance between the doorjambs and/or adjacent truck in each bay. This is unlikely as it will require near perfect driving from collection vehicles in order to reverse through a shared door without causing an accident. At maximum throughput peak hour, the Applicant plans to dump 28 trucks in the building - 14 trucks through each bay in the busiest hour. This will not be possible if only one bay can be used and if two trucks cannot tip their loads simultaneously in each bay. With only one useable bay and one vehicle in that bay at a time, only 12 vehicles will be able to unload if the applicant's assumption of 5 minutes per dumped load is accurate. Aptim has used a range of unloading times of 4 to 9 minutes (average of 6.5 minutes) which would further reduce the number of vehicles that can dump. WE ARE USING 5 MINUTES AND BELIEVE THAT THIS IS AN APPROPRIATE AVERAGE TIME.

The applicant has indicated that they would segregate and store incidental white goods, lead-acid batteries, and used tires. It is unclear how much interior or exterior space has been dedicated to storage of each of these materials, CONTAINERS HAVE BEEN ADDED TO SHOW WHERE WHITE GOODS, TIRES AND BATTERIES WOULD BE STAGED how the salvaging may affect operations (e.g. tipping floor operations, traffic circulation, queuing, etc.). In addition, manual sorting on a tipping floor this small is dangerous. SALVAGING IS PROPOSED ONLY FOR PREDOMINANTLY RECYCLABLE LOADS BUT ARE ACCEPTED AS MSW. IT WILL NOT BE A ROUTINE OPERATION. LANGUAGE HAS ALSO BEEN ADDED TO CLARIFY SALVAGING WILL NOT OCCUR DURING PEAK TIMES

Finally, the applicant has proposed that salvaging of recyclable material from MSW loads may also occur. Salvaging will require the loader operator to leave the transfer building with the salvaged materials and deliver them to the C&D tip floor MATERIAL WOULD JUST BE PUSHED THROUGH THE OPENING, or directly to the storage bunkers as described in Section 2.4.5. The proposed salvaging and sorting of recyclables and incidental wastes also becomes functionally impossible, as these activities cannot be performed simultaneously. SALVAGING IS PROPOSED ONLY FOR PREDOMINANTLY RECYCLABLE LOADS BUT ARE ACCEPTED AS MSW. IT WILL NOT BE A ROUTINE OPERATION. LANGUAGE HAS ALSO BEEN ADDED TO CLARIFY SALVAGING WILL NOT OCCUR DURING PEAK TIMES

In all, it is evident that the currently proposed stockpile capacity analysis is flawed and should be revised to reflect more realistic site conditions, and the proposed throughput adjusted as necessary to allow safe and efficient operations. Without a significant reduction in throughput, the design modifications necessary to make this a suitable facility will require a significant re-design. SEE REVISED THROUGHPUT EVALUATION

Issue: Building Column Placement

Drawing C302 and Figure 2-3 both show I beam column supports in front of the loading bay which will prevent (or severely inhibit) the ability to load trailers. These obstructions are identified on Figure 2 of this memorandum. THE DRAWING AND FIGURES ARE CORRECT. THE COLUMNS SHOWN ARE PRESENT ABOVE THE LOADING PIT FRAMED OPENING. AN ELEVATION VIEW WAS ADDED TO THE DRAWING SET TO SHOW THE BUILDING FRAMING. THE COLUMNS WERE REMOVED FROM THIS LOCATION ON CERTAIN FIGURES TO AVOID CONFUSION.

In addition, in most areas, the push wall is shown extending across the interior of the building columns and, in the area of the sorting conveyor/mezzanine wall, it is shown to wrap in and out of the column bays with apparently a different support system, the details of which are not apparently clear. THE DRAWINGS WERE MODIFIED TO CLARIFY THAT THE BARRIER WALL DOES NOT WRAP IN AND OUT OF THE COLUMN BAYS.

In addition to posing a safety issue, it will be difficult to clean the waste or recyclables that will become wedged around these columns. SEE ABOVE COMMENTS ON THE BARRIER WALL.

Issue: Sensitivity of Throughput Analyses

The distribution and timing of transfer vehicle loadouts is speculative, and sensitive to minor variations in projected delivery and load-out assumptions, including weather, traffic/accidents, control of third parties, and variability of the waste stream. In fact, sensitivity analyses on the 1,000 ton per day MSW scenario provided by the applicant shows that shifting the arrival times of a handful of collection and transfer trucks (i.e. a driver is running early, late, etc.) would increase the required storage area from the reported 522 cubic yards to over 1,000 cubic yards (refer to Table 2).

Table 2 - MSW Throughput Sensitivity

As designed, the available floor storage for MSW is 757 cubic yards per Aptim's previously described and illustrated analysis, leaving very little maneuvering room on the tipping floor.
SEE REVISED THROUGHPUT EVALUATION

Issue: Required SSR Storage Quantity

The Applicant proposes to accept approximately 300 tons of SSR which they indicate is Source-Separated Recyclables. It is assumed that they intend to accept Single Stream Recyclables (commingled bottles, cans, paper, etc.), versus source separated loads of those materials which would require areas on the floor to be dedicated to each material. If source separated loads are to be accepted, the Applicant should indicate where the various materials will be stored until enough of each is available for loadout of a full truck. WE HAVE USED THE TERMS SOURCE-SEPARATED RECYCLABLES AND SINGLE STREAM RECYCLABLES SOMEWHAT INTERCHANGEABLY. THE NARRATIVE WAS MODIFED TO CONSISTENTLY USE THE TERM SINGLE STREAM RECYCLABLES TO AVOID CONFUSION.

In any event, the stockpile is shown as occupying 3,250 square feet of the tipping floor. This is more than double the area that will be actually be available, and will provide less stockpile *volume* that will actually be necessary as proposed as described further within subsequent comments.

The applicant proposes to stockpile material against a non-reinforced wall that supports the C&D sorting mezzanine, with material to be stored between and against building columns which we believe to be a safety hazard. We question whether there is even a push-wall proposed in this location as it appears to have a different design than the other push wall areas (refer to Figure 2-3). THE DRAWING WAS MODIFIED TO MORE CLEARLY SHOW THE BARRIER WALL IN THIS LOCATION.

In addition, the proposed stockpile as proposed does not allow for the consolidation of MSW from its tipped location near the building doors into the southwest stockpile which will reduce the area available for SSR stockpile.

This issue may be exacerbated since the Applicant used a density of 300 pounds per cubic yard for the SSR material when calculating the required tip floor storage. While it is recognized that, with compaction, densities of up to 18 tons per load may be achieved in a vehicle (300 pounds per cubic yard in a 120 cubic yard trailer), it is anticipated that the loose density on the tipping floor would be considerably less. Research done by Aptim indicates an average density on the floor of 169 pounds per cubic yard (refer to Table 1). THE USEPA AND MINNESOTA REFERENCES SEEM TO REFERENCE THE DENSITY OF LOOSE RECYCLABLES AS COLLECTED IN A HOUSEHOLD CONTAINER. AS A CLARIFICATION, THE WASHINGTON DOE REFERENCE ALSO APPEARS TO BE THE USEPA REFERENCE. THE COLLECTED RECYCLABLES AT THE WEST DUPAGE RTS WILL BE COMPACTED IN THE PACKER TRUCK (INCREASING DENSITY), WILL BE UNLOADED ON THE TIPPING FLOOR (EXPERIENCING SOME BUT NOT ALL REBOUND), AND THEN BE PUSHED UP WITH A LOADER. REGARDLESS, WE UNDERSTAND THE POINT AND MODIFIED THE THROUGHPUT EVALUATION TO USE 200 LBS/CY FOR RECYCLABLES.

TABLE 1. ESTIMATED DENSITY OF LOOSE RECYCLABLES

Source	Material	Reported Density
Colorado DPH&E	Single-stream (mixed recyclables)	177 lbs/yd°
Minnesota PCA	Single stream recycling (bottles, cans, containers, paper)	139 lbs / yd°
U S. EPA	Containers (plastic bottles, aluminum cans, steel cans, glass bottles) and Paper	262 lbs / yd°
U.S. EPA	Containers (plastic bottles, aluminum cans, steel cans, glass bottles), Corrugated Containers and Paper	111 lbs / yd°
Washington DOE	Commingled single family recyclables (food/beverage containers, glass, paper, cardboard)	126 lbs / yd°
CalRecycle		200 lbs / yd°
Average		169 lbs / yd°

Sources:

1. Colorado Department of Public Health and Environment, Recycling Rebate Application for Recycling Resources Economic Opportunity Fund, February 2, 2015.
2. Minnesota Pollution Control Agency, 2014 State Agency Recycling Data Input Form, January 13, 2015.
3 U.S. EPA, Volume-to-Weight Conversion Factors, April 2016.
4. Washington Department of Ecology, General Measurement Standards and Reporting Guidelines, March 2016.
5. California Department of Resources Recycling and Recovery FacIT Conversion Table 1 —Material Type Equivalency Factors.

With a density of 169 pounds per cubic yard, the necessary storage capacity for waste at the proposed throughput would be 77% higher (approximately 1,239 cubic yards per extrapolation of Table 2-3). However, as further described in subsequent comments, Aptim believes that there would only be available storage space for approximately 36% of this needed space (446 cubic yards).

The Applicant has also indicated that they plan to transfer-out 5% of the incoming SSR as MSW. However, it is unclear how the MSW will be extracted from the SSR. Typically, this is performed at a Material Recovery Facility and contamination levels within SSR are generally above 20% based on a recent market study performed by Aptim. THIS ASSUMPTION WAS BASED ON THE CONSERVATIVE ASSUMPTION THAT AN OCCASIONAL "BAD LOAD" MAY BE RECEIVED. THIS ASSUMPTION WAS REMOVED TO AVOID CONFUSION. ALL SSR IS NOW ASSUMED TO BE HAULED OFF-SITE TO A MRF. ANY INCOMPATIBLE ITEMS WOULD BE REMOVED AT THE MRF.

Issue: Tarping

The applicant has indicated that, after loading, the transfer trailers will exit the loading pit and move forward onto the exit ramp where the load will be tarped. However, as currently depicted, the length of the ramp is 66.7 feet. Drawing C201 indicates the Applicant will be using WB-55 transfer trailers. The total length of a WB-55 truck is 65.8 feet. If the driver is able to perfectly center the truck on the exit ramp, there will be approximately 5 inches of space between the front of the cab and the exit door. This leaves very little tolerance for error and presumably will not allow the exit door to remain closed during the tarping process. It is understood that the Applicant may extend the length of the ramp to allow additional room for tarping, but we have not yet seen that design. THE UPDATED DRAWINGS ARE PROVIDED.

In addition, according to the Applicant, all transfer trailers are planned to be equipped with auto tarpers and no interior tarping station has been provided. However, almost the entirety of waste transfer trailer fleet in the Chicago metropolitan area uses a bungee cord tie-down tarping system, including Lakeshore's fleet. Further, Lakeshore does not plan to restrict use of the facility to its own trucks. If any third-party trailers are used, there will not be sufficient room for manual tarping (or for larger trucks – a WB-65 truck is 73.5 feet long). LRS'S FLEET INCLUDES APPROXIMATELY 100 TRANSFER TRAILERS AND ABOUT 25 CURRENTLY HAVE THE AUTO TARPERS. THE REMAINDER OF THE FLEET IS PLANNED TO BE FULLY CONVERTED WITHIN THE NEXT TWO YEARS.

The Applicant indicated that, "if a situation occurs where a tarp cannot be secured within the building, a fall protection device will be provided along the east perimeter of the northbound exit road (adjacent to the west of the east detention basin) for the drivers use." This is not acceptable for a facility located adjacent to an airport. According to the FAA, trash transfer facilities that are open on one or more sides; that store uncovered quantities of municipal solid waste outside, even if only for a short time; that use semi-trailers that leak or have trash clinging to the outside; or that do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully enclosed trash transfer stations and are not compatible with safe airport operations. THIS IS INTENDED ONLY IN THE EVENT AN AUTO TARPER MALFUNCTIONS. WE BELIEVE THIS APPROACH IS STILL CONSISTENT WITH THE FAA CIRCULAR.

In the case that a tarping station is installed along the outbound exit road, it will require the movement of untarped trailers between the transfer station building and the tarping station which will result in exposed and blowing litter until that vehicle can be tarped.

If the Applicant fails to include a dedicated tarping station within the facility (e.g. with a catwalk and/or fall protection), the City of West Chicago should place a condition on any siting approval that requires all transfer vehicles that use the facility to tarp within the building and include auto tarping systems if a dedicated catwalk and fall arrest system is not proposed. WE ARE OK WITH THIS CONDITION.

Issue: Proximity to Airport and Inconsistency with Circular

It is understood that the DuPage Airport Authority has reviewed draft portions of the application THE DRAFT INFORMAITON PROVIDED TO THE DAA IS CONSISTENT WITH THE CURRENT DRAFT SITING APPLICATION and has executed an agreement with the property owner that, among other things, indicates that, "based upon its current knowledge of the proposed West DuPage RTS, agrees that the proposed West DuPage RTS will not pose a threat to the safe operation of the DuPage Airport."

However, Aptim believes that the DuPage Airport Authority may not fully understand the technical deficiencies with the proposal.

FAA Advisory Circular 150/5200-33b (Hazardous Wildlife Attractants on or Near Airports) requires developers to establish convincingly THE WORDING "TO ESTABLISH CONVINCINGLY" IS A BIT MISLEADING. IT IS TAKEN FROM 4-4(B) OF THE AC WHICH STATES "TO CLAIM SUCCESSFULLY THAT A WASTE-HANDLING FACILITY SITED WITHIN THE SEPARATIONS IDENTIFIED IN SECTION 1-2 THROUGH 1-4 DOES NOT ATTRACT HAZARDOUS WILDLIFE AND DOES NOT THREATEN AVIATION, THE DEVELOPER MUST ESTABLISH CONVINCINGLY THAT THE FACILITY WILL NOT HANDLE PUTRESCIBLE MATERIAL OTHER THAN THAT AS OUTLINED IN 2-2.D on a case-by-case basis that proposed transfer stations will not pose a threat to aviation safety by attracting wildlife. According to the FAA, "trash transfer facilities that are open on one or more sides; that store uncovered quantities of municipal solid waste outside, even if only for a short time; that use semi-trailers that leak or have trash clinging to the outside; or that do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully enclosed trash transfer stations." The FAA considers these facilities incompatible with safe airport operations if they are located within 10,000 feet of airports serving turbine-powered aircrafts.

The proposed transfer station is within 10,000 feet of the DuPage Airport, which serves turbine-powered aircrafts, and is <u>not proposed to be fully enclosed.</u> WHAT IS YOUR UNDERSTANDING OF THE DEFINITION OF "FULLY ENCLOSED"? WHY EXACTLY DO YOU BELIEVE THE PROPOSED FACILITY DOES NOT MEET THE DEFINITION OF FULLY ENCLOSED? DOT/FAA/AR-09/62 IS THE BEST REFERENCE FOR WHICH WE ARE AWARE. THIS REFERENCE STATES ONLY THAT "FULLY ENCLOSED TRASH-TRANSFER FACILITIES HAD FOUR WALLS WITH DOORS LARGE ENOUGH FOR TRASH TRUCKS TO ENTER OR EXIT THE FACILITY" AND HAS A PICTURE. THE DAA AGREEMENT ALSO STATES THAT THE DAA IS NOT AWARE OF ANY CONTRADICTIONS WITH THE ADVISORY CIRCULARS, WHICH INDICATES THEY BELIEVE THE PROPOSED WEST DUPAGE RTS DOES MEET THE DEFINITION OF A FULLY ENCLOSED TRANSFER STATION.

The application indicates that, "West DuPage RTS agrees to keep the truck doors to the transfer facility closed, except for emergencies and to allow trucks to enter and exit the facility, during regular business hours." However, there is no indication that these doors will operate automatically such that they will open/close before/after each truck enters/leaves the building. This should be corrected or clarified. THE BAY DOORS WILL BE OPENED AND CLOSED AFTER EACH VEHICLE ENTERS/ LEAVES. LANGUAGE WAS ADDED TO THE NARRATIVE TO CLARIFY THIS OPERATION.
Further, the proposed throughput and operations are such that the bay doors for access to the tipping floor will not be able to be closed during operating hours and will need to remain open. In addition, the proposed transfer building is proposed to have a doorway on the west side connecting to the C&D building that currently operates with its doors open. DOORS WILL BE PROVIDED FOR THE C&D TIPPING BUILDING.

These conditions may provide a hazardous wildlife attractant. In fact, the bird study prepared by Loomacres that is provided in Appendix 2-G1 indicates that rock pigeons are loafing within the existing C&D sorting building and that European starlings nests are located on its exterior.AS A CLARIFICATION, THE LOOMACRES REPORT WAS NOT INCLUDED IN THE DRAFT PROVIDED IN JUNE AND WILL NOT BE INCLUDED IN THE FINAL APPLICATION.

In addition to providing a food source, it is unknown how the proposed air filtration and ventilation system will be capable of maintaining negative pressure throughout the entire building when openings are present. THE CIRCULAR DOES NOT INDICATE THAT THE AIR FILTRATION AND VENTILATION SYSTEM BE CAPABLE OF MAINTAINING NEGATVE PRESSURE. ARE YOU AWARE OF INFORMATION WHICH INDICATES THE FILTRATION AND VENTILATION SYSTEM MUST MAINTAIN NEGATIVE AIR PRESSURE? Therefore, it is recommended that further information be provided as to how the proposed transfer building will stay fully enclosed during hours of operation, as well as maintain negative pressure for the proposed air filtration and ventilation system. Aptim recommends that the FAA and DuPage Airport be provided another opportunity to review the design and operations of the facility. THE DAA HAS EXECUTED AN AGREEMENT WHICH CLEARLY STATES THAT THEY NOT AWARE OF ANY CONTRADICTIONS WITH THE ADVISORY CIRCULARS. WE RESPECTFULLY REQUEST THAT APTIM RECONSIDER THIS OPINION.

It should be noted that any potential mitigating measures that could be requested by the FAA, such as the implementation of actuated doors that would open and close each time a vehicle enters or leaves the building, could create significant issues relating to operations and storage capacity being proposed by the applicant.

Issue: Criterion 5 and Fire Department Coordination

What has been the fire incident history at the existing C&D site, if any? TWO INCIDENTS: FIRST INCIDENT – SMOLDERING TRANSFER TRAILER OVER A WEEKEND DUE TO LED BATTERY; WAS TARPED AND STARTED SMOLDERING; TRAILER WAS PARKED IN A TRUCK SPOT IN NORTHWEST PORTION OF THE PARKING LOT; SECOND INCIDENT – INSIDE THE C&D BUIDLING AGAIN DUE TO LED BATTERY; JUST STARTED SMOLDERING; NO DISCHARGE OF SPRINKLER SYSTEM; PULLED HOT MATERIAL OUT OF BUILDING AND PUT OUT USING WATER FROM THE WATER TRUCK.

It does not appear that the West Chicago Fire Protection District has reviewed and provided any input on the proposed fire and emergency response plan to assure that the proposed design will not be a significant threat of fire or other risk to the community, and to assure efficient emergency coordination.

It is recommended that the West Chicago Fire Protection District be offered an opportunity for such a review. FIRE PROTECTION FOR THE SITE WAS REVIEWED AS PART OF THE PUD AMENDMENT; FOR THE SITING APPLICATION, THEY INDICATED WOULD BE PART OF THE INSPECTION PROCESS AND WILL NOT OFFER A LETTER.

The Applicant indicates that on-site equipment will include a fire rover located north of the MSW and SSR transfer building (location shown on Figure 5-1), which combines twenty-four hours per day, seven days per week remote thermal monitoring and an automated fire-fighting foam system that can be released as quickly if a spike in temperature in the building is detected. However, this system will not be able to serve the proposed transfer station based on our understanding of the technology. The nozzle needs to be located as close as possible to the supporting water tank and mechanicals. Does the Applicant propose for an additional Fire Rover system to serve the proposed transfer station? WE ARE PROPOSING A SECOND FIRE ROVER. LOCATION IS SHOWN ON FIGURE 5-1 AND VARIOUS DRAWINGS.

If so, it is suggested that the Applicant expand on the role and success of the Fire Rover in more detail. SEE ADDED LANGUAGE IN CRITERION 5

Issue: Parking

In an emailed response to an information request, the Applicant has indicated that it plans to store 105 trucks on-site (15 portable restroom trucks, 25 roll-off trucks, 40 collection trucks, and 25 street

sweepers. However, the site only has parking for 89 trucks. ALL OF THE PORTABLE RESTROOM TRUCKS WILL BE PARKED IN THE NEW MAINTENANCE BUILDING OR PARKED IN THAT AREA OF THE SITE UNTIL THE NEW MAINTENANCE BUILDING IS CONSTRUCTED. AT LEAST ONE OF THE COLLECTION TRUCKS, STREET SWEEPER OR ROLL OFF TRUCKS IN PARKED IN THE EXISTING MAINTENANCE BUILDING FOR REPAIRS.

In addition, the Applicant indicates that up to 20 transfer trailers may be parked on-site east of the transfer station building. However, those trailers do not appear that they will be able to be parked as shown. Without the ability to circle through that area of the site, it appears that the transfer vehicles would need to be backed-into the storage area and against the traffic flow east of the proposed transfer station and around the brick, block, and dirt storage bunker. A turning analysis should be conducted in this area to assess the viability of the proposed transfer trailer parking area and how many trailers could be parked there, and how. THE CONFIGURATION OF THE PARKING AREA WAS REVISED. SEE DRAWINGS. DESIGNATED SPACES ARE PROVIDED FOR 17 TRANSFER TRAILERS.

Further, the extensive travel time to Atkinson from West Chicago will likely limit the number of trips to one per day for each trailer (4 hours and 40 minutes round trip, plus 30 minutes on-site, plus loading and time to/from daily parking). The throughput table indicates that six trailers will be needed in the 11:00 a.m. hour, though it appears that these trailers may not be available at that time of day if the Atkinson landfill is the disposal destination. LRS HAS A FLEET OF APPROXIMATELY 100 TRAILERS; SOME WILL BE PARKED AT ATKINSON AND RETURNING TO THE WEST DUPAGE RTS IN THE MORNING. LRS MANAGES THE LOCATION AND DESTINATIONS OF ITS FLEET DAILY AND ENSURING ADEQUATE TRANSFER TRAILERS IS NOT AN ISSUE.

Issue: Traffic

The Applicant indicates that it has 175 employees, most of which start between 4:30 am and 6:30 am, and that they will add 10 employees for the proposed transfer operation for a total of 185. They also indicate that the majority of these employees start during the hours of 4:30 and 6:30 am.

However, the traffic counts used in the traffic report identified only 15 passenger vehicles accessing the site during what they have identified as the "morning peak hour." Further, the traffic analysis only appears to count passenger vehicles and direct haul and transfer vehicles associated with the C&D recycling operation. It is unclear whether traffic associated with the portable restroom business, roll-off business, street sweepers, material sales, visitors for e-waste drop-off, etc. has also been included. EXISTING CONDITIONS INCLUDE ALL VEHICLES, NOT JUST THOSE ASSOCIATED WITH THE C&D OPERATION. THE PROPOSED NUMBERS OF VEHICLES WILL BE UPDATED BASED ON THE REVISED THROUGHPUT, BUT THE CONCLUSIONS ARE NOT EXPECTED TO CHANGE.

The morning counts were also conducted between the hours of 6:00 to 9:00 am and showed that the peak hour occurred from 7:15 to 8:15 am. It is unclear whether this is the peak hour of traffic when considering all on-site activities. THIS REFERS TO THE PEAK HOUR OF TRAFFIC ON POWIS ROAD, NOT THE PEAK HOUR OF THE FACILITY The report adds 16 direct haul trucks from what was counted on that day to represent the projected increase in traffic from the MSW and SSR activities (and to account for additional C&D) for a total of 24 inbound haul trucks. However, it appears that the 10:00 hour will be the peak hour with 53 inbound haul trucks.
THE PROPOSED NUMBERS OF VEHICLES WILL BE UPDATED BASED ON THE REVISED THROUGHPUT, BUT THE CONCLUSIONS ARE NOT EXPECTED TO CHANGE.

It is also noted that traffic report indicates that incoming loads will be roll-off (4 tons) and packer (8 tons), and outgoing transfer loads will be 24 tons. The traffic report does not disclose the relative percentages of roll-off versus packer deliveries, nor whether payloads are appropriate for all materials (including C&D, SSR, and/or hydro-excavation waste). Similarly, the throughput analysis in Table 2-2 indicates that the payloads for incoming SSR is 8 tons. However, discussions with other regional haulers has led to a determination that SSR payloads range from 3.7 to 5 tons. This will increase the assumed traffic volumes.

Issue: Ceiling on Throughput

West DuPage RTS is "anticipated" to receive and efficiently manage up to 2,300 tons per day of MSW, hydro excavation wastes, C&D and SSR, of which up to 1,000 tons per day would be MSW. They state that the typical amount of material accepted is anticipated to be approximately 1,500 tons per day with an approximate breakdown of 650 tons per day MSW, 100 tons per day hydro excavation wastes, 600 tons per day general construction and demolition debris and 150 tons per day SSR (Page 2-31).

The traffic report indicates that the facility currently processes an average of 600 tons per day of C&D and is proposing to process an average of 750 tons of MSW (including hydro-excavation waste) and 150 tons of SSR. But then the traffic analysis was done assuming 2,300 tons of total material (1,000 tons of C&D, 1,000 tons of MSW per day and 300 tons of SSR, which is noted to be 50% greater than the projected average.

However, the Applicant currently handles "up to an average of 1,250 tons per day (tpd) of C&D" material at the site per Page 1-2. If 1,250 tpd of C&D debris is currently handled, the total anticipated throughput of 2,300 tpd is generally consistent with 1,000 tpd of MSW, provided that no hydro-excavation waste or SSR is accepted.

These numbers are difficult to interpret and no hard cap on total throughput appears to be proposed for each material. The host agreement caps MSW and hydro-excavation waste at 1,500 tpd on a rolling 12-month average. The host agreement, therefore, anticipates the handling of larger material quantities than identified in the siting application. However, even if MSW is capped at 1,000 tpd, there are no limitations placed on other material streams (C&D debris, SSR).

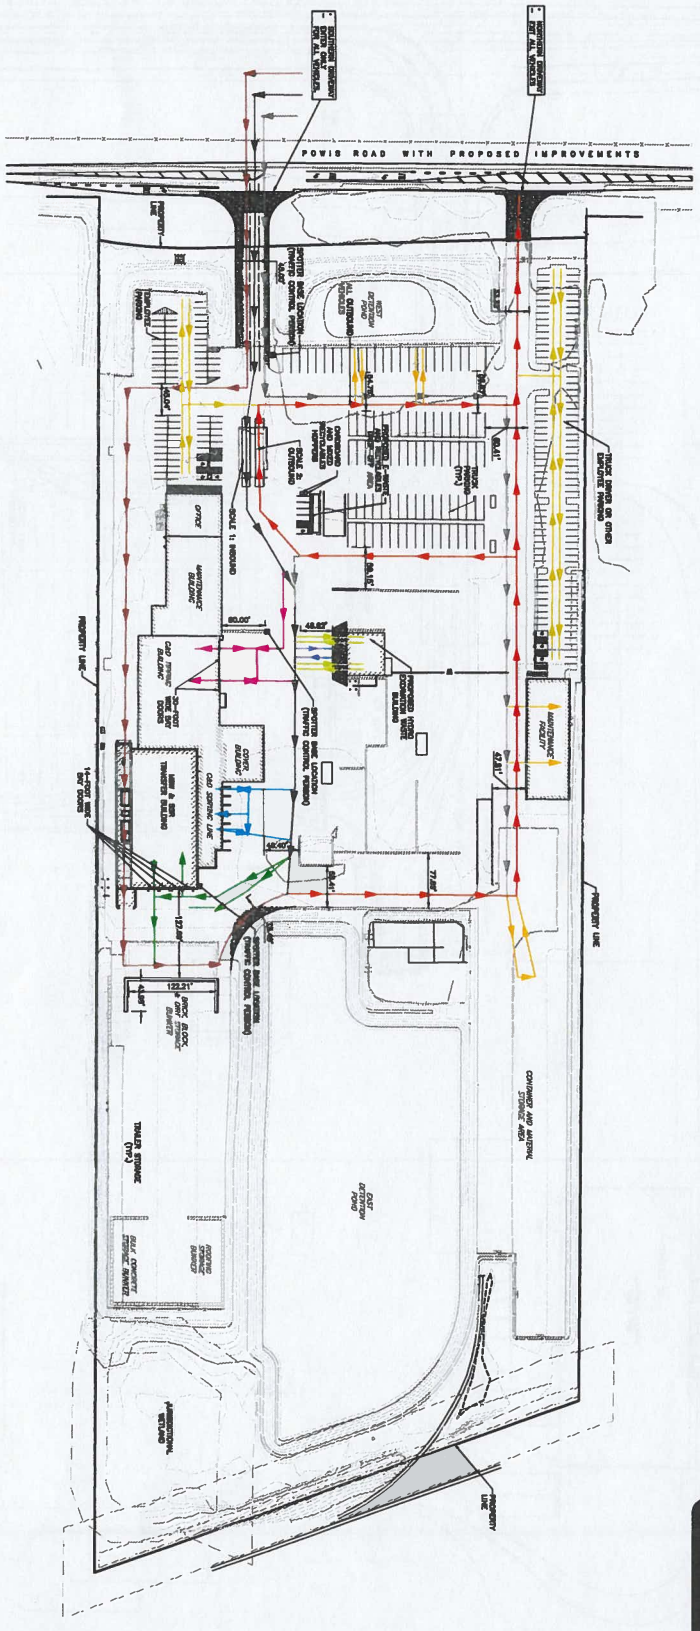
The Applicant should clarify the proposed throughput, propose hard caps for each of the materials in the application, and all analyses should be based on the worst-case scenario. THROUGHPUT CEILINGS ARE PROVIDED FOR ALL MATERIAL TYPES.

Issue: Queuing

Drawing C402 shows two queues in front of the scale for inbound vehicles — one in the middle lane and one in the northern lane. However, the northemmost lane is shown on Drawing C400 as being dedicated to inbound vehicles that need to turn left (e.g. employees to park in the north lot, vehicles that need to access the maintenance facility, or portable restroom operations). Queuing vehicles in the northernmost lane will block access to the site for those vehicles. Alternatively, they will apparently need to use the southernmost entrance lane and then dangerously pass through the middle of the scale queue. THE VEHICLES IN THE NORTHBOUND LANE WERE SHOWN FOR ILLUSTRATIVE PURPOSES; THEY HAVE BEEN REMOVED.

There is also a secondary queue shown just west of the proposed hydro excavation building for exiting vehicles awaiting an outbound ticket. Presumably these vehicles will be queued there to prevent blockage of the e-waste drop-off area. It is unlcear how these vehicles will know to stop in this are and how they will know to proceed to the primary queue/outbound ticket lane. THE VEHICLES IN THE NORTHBOUND LANE WERE SHOWN FOR ILLUSTRATIVE PURPOSES; THEY WILL BE REMOVED.

Discussion on how the outbound vehicles will obtain tickets is also warranted. LANGUAGE WAS ADDED TO SECTION 2.4.6.



The MSW/SSR transfer building queue also appears problematic as there is a line-of-sight problem with this process. As designed, the queued vehicles cannot see whether a tipping bay is available. If they are to pull forward or out in front of the transfer station bay doors, they will impede traffic flow. A SPOTTER WILL BE LOCATED AT THIS LOCATION; DRAWINGS 400 THROUGH 404 HAVE BEEN MODIFIED TO MORE CLEARLY SHOW THE SPOTTER LOCATION

Issue: Upon approval of siting and permitting of the proposed transfer station to include both the MSW transfer and C&D recycling operations, Lakeshore plans to nullify the existing 22.38 permit.

The application states that, "if approval of the MSW transfer operations receive local siting and IEPA approval, the facility boundary will become the entire 27-acre property and the "22.38" permit for the C&D transfer and recycling operation will no longer be applicable." As a result, Aptim recommends that Lakeshore include within the siting application (or that West Chicago would have to include as conditions of siting) that they will still comply with the 22.38 timeframes for material processing (i.e. within 48 hours of receipt), for off-site transport of non-recyclable material (i.e. within 72 hours), for storage of putrescible or combustible recyclable general C&D (i.e. within 45 days of receipt), etc. It is likely that the IEPA would also require continued compliance with these operational conditions. THIS IS ALREADY INCLUDED IN SECTION 2.3.4 OF CRITERION 2 (PAGE 2-23)

Issue: Land Use Compatibility and Property Value Impact

- Page 3-2 states that the effective date of the report is February 17, 2010. Shouldn't that be 2020? WILL CORRECT
- Page 3-32, it is unclear whether the property zoned residential along the east side of the site is shown as being within the 1,000 foot setback. Is it shown? IT IS SHOWN AND DESCRIBED AS RAILROAD RIGHT OF WAY BUT NOT CALLED OUT AS RESIDENTIAL ESTATE
- Page 3-33, when listing the zoning land uses within the subject area there is no mention of the property zoned residential. THE NEAREST PROPERTY ZONED RESIDENTIAL IS DISCUSSED IN DETAIL IN CRITERION 2. AS SUGGESTED BELOW, THIS REPORT WILL BE AMENDED TO REFERENCE THE NEAREST RESIDENCE
- This study relied solely on a highest and best use analysis, and no use of control vs. non-control sales data. Shouldn't this be done if possible regardless of if the property nearby is residential or commercial? WE BELIEVE THE HIGHEST AND BEST USE ANALYSIS IS SUFFICIENT FOR THIS APPLICATION.
- There is no mention of where the nearest homes are, that should at least be mentioned in the report. A REFERENCE TO NEAREST RESIDENCES WILL BE ADDED TO THE REPORT

WEST DUPAGE RTS TARPING POLICY

WEST DUPAGE RECYCLING AND TRANSFER STATION
TARPING POLICY

The Lakeshore Recycling System's (LRS) West DuPage Recycling and Transfer Station (RTS) is committed to being a good neighbor in the community, including maintaining the cleanliness of the facility and minimizing blowing litter. We recognize that the collection vehicles and transfer trailers which use the West DuPage RTS may contribute to these issues if they do not properly contain the waste in the vehicles.

The Illinois Department of Transportation requires that "No person shall operate or cause to be operated, on a highway, any second division vehicle loaded with dirt, aggregate, garbage, refuse or other similar material, when any portion of the load is falling, sifting, blowing dropping or in any way escaping from the vehicle." LRS will enforce a similar tarping policy for vehicles which use the West DuPage RTS.

Policy

All incoming and outgoing vehicles that are hauling waste will be fully enclosed or properly tarped to prevent the release of waste or material from the vehicle onto the grounds or the public roadways. Vehicles with tarps will untarp in the staging area only (after the scale and prior to unloading in the transfer building). After unloading, any remaining loose waste will be removed or contained in the vehicle prior to exiting the site.

Outgoing transfer trailers be will be properly tarped in the designated area after loading. A building extension is provided on the east (outbound) end of the loading pit such that the tractor will be on level ground while tarping. Loaded transfer trailers will be tarped using auto tarpers prior to exiting the loading pit ramp. No waste shall be hanging over the sides or remain outside the trailer, and the tarp must fully cover the trailer. Waste should not stick up above the height of the trailer. The tarp must be properly secured so that litter will not blow or spill during transport.

Drivers which are employed by LRS will be trained in the above procedures.

Enforcement

Employees at the West DuPage RTS will be trained to understand this tarping policy and recognize non-compliant actions. If a driver is observed to be non-compliant by an employee, the employee will immediately notify the driver and remind the driver of the tarping policy. The employee will also notify the West DuPage RTS operations manager, who will document the incident and notify the company representative who owns the vehicle. Multiple incidents of non-compliance may result in banning the driver and/or company from using the site in the future.

Advisory Circular

Subject: Hazardous Wildlife Attractants on or near Airports

Date: 02/21/2020
Initiated By: AAS-300

AC No: 150/5200-33C
Change:

1 **Purpose.**

This Advisory Circular (AC) provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports. It also discusses airport development projects (including airport construction, expansion, and renovation) affecting aircraft movement near hazardous wildlife attractants. Appendix 1 provides definitions of terms used in this AC.

2 **Cancellation.**

This AC cancels AC 150/5200-33B, *Hazardous Wildlife Attractants on or near Airports,* dated August 28, 2007.

3 **Application.**

The Federal Aviation Administration recommends the guidance in this AC for land uses that have the potential to attract hazardous wildlife on or near public-use airports. This AC does not constitute a regulation, is not mandatory, and is not legally binding in its own right. It will not be relied upon as a separate basis by the FAA for affirmative enforcement action or other administrative penalty. Conformity with this AC is voluntary, and nonconformity will not affect rights and obligations under existing statutes and regulations, except as follows:

1. Airports that hold Airport Operating Certificates issued under Title 14, Code of Federal Regulations (CFR), Part 139, Certification of Airports, Subpart D, may use the standards, practices and recommendations contained in this AC as one, but not the only, acceptable means of compliance with the wildlife hazard management requirements of Part 139.
2. The FAA recommends the guidance in this AC for airports that receive funding under Federal grant assistance programs, including the Airport Improvement Program. See Grant Assurance #34.

3. The FAA recommends the guidance in this AC for projects funded by the Passenger Facility Charge program. See PFC Assurance #9.
4. The FAA recommends the guidance in this AC for land-use planners and developers of projects, facilities, and activities on or near airports.

4 Principal Changes.

Changes are marked with vertical bars in the margin. Change in this AC include:

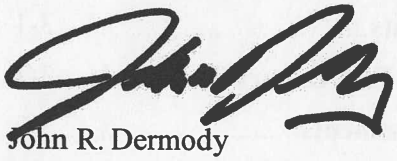
1. Clarification by the FAA that non-certificated airports are recommended to conduct a Wildlife Hazard Assessment (Assessment) or a Wildlife Hazard Site Visit (Site Visit);
2. Table 1, Ranking of Hazardous Species, has been moved to Advisory Circular 150/5200-32, *Reporting Wildlife Aircraft Strikes* (5/31/2013);
3. Consolidation and reorganization of discussion on land uses of concern; and updated procedures for evaluation and mitigation. Discussion addresses off-airport hazardous wildlife attractants, followed by discussion of on-airport attractants. It also clarifies language regarding the applicability of the AC.

5 Background.

1. Information about the risks posed to aircraft by certain wildlife species has increased a great deal in recent years. Improved reporting, studies, documentation, and statistics clearly show that aircraft collisions with birds and other wildlife are a serious economic and public safety problem. While many species of wildlife can pose a risk[1] to aircraft safety, they are not equally hazardous[2]. These hazard rankings can help focus hazardous wildlife management efforts on those species or groups that represent the greatest risk to safe air and ground operations in the airport environment. Used in conjunction with a site-specific Assessment that will determine the relative abundance and use patterns of wildlife species, these rankings combined with a systematic risk analysis can help airport operators better understand the general threat level (and consequences) of certain wildlife species. Also, the rankings can assist with the creation of a "high risk" list of hazardous species that warrant immediate attention.
2. Most public-use airports have large tracts of open, undeveloped land that provide added margins of safety and noise mitigation. These areas can also present potential hazards to aviation if they encourage wildlife to enter an airport's approach or departure airspace or aircraft operations area. Constructed or natural areas— such as

[1] Risk is the relationship between the severity and probability of a threat. It is the product of hazard level and abundance in the critical airspace, and is thus defined as the probability of a damaging strike with a given species.
[2] Hazardous wildlife are species of wildlife (birds, mammals, reptiles), including feral and domesticated animals, not under control that may pose a direct hazard to aviation (i.e., strike risk to aircraft) or an indirect hazard such as an attractant to other wildlife that pose a strike hazard or are causing structural damage to airport facilities (e.g., burrowing, nesting, perching).

poorly drained locations, detention/retention ponds, roosting habitats on buildings, landscaping, odor-causing rotting organic matter (putrescible waste) disposal operations, wastewater treatment plants, agricultural or aquaculture activities, surface mining, wetlands, or some conservation-based land uses — can provide wildlife with ideal locations for feeding, loafing, reproduction, and escape. Even small facilities, such as fast food restaurants, taxicab staging areas, rental car facilities, aircraft viewing areas, and public parks, can produce substantial attractions for hazardous wildlife.



3. During the past century, wildlife-aircraft strikes have resulted in the loss of hundreds of lives worldwide, as well as billions of dollars in aircraft damage. Hazardous wildlife attractants on and near airports can jeopardize future airport expansion, making proper community land-use planning essential. This AC provides airport operators and those parties with whom they cooperate with the guidance they need to assess and address potentially hazardous wildlife attractants when locating new facilities and implementing certain land-use practices on or near public-use airports.

6 **Memorandum of Agreement Between Federal Resource Agencies.**

The FAA, the U.S. Air Force, the U.S. Army Corps of Engineers, the U.S. Environmental Protection Agency, the U.S. Fish and Wildlife Service, and the U.S. Department of Agriculture - Wildlife Services signed a Memorandum of Agreement (MOA) to acknowledge their respective missions in protecting aviation from wildlife hazards. Through the MOA, the agencies established procedures necessary to coordinate their missions to address more effectively existing and future environmental conditions contributing to collisions between wildlife and aircraft (wildlife strikes) throughout the United States. These efforts are intended to minimize wildlife risks to aviation and human safety while protecting the Nation's valuable environmental resources.

7 **Feedback on this AC.**

If you have suggestions for improving this AC, you may use the Advisory Circular Feedback form at the end of this AC.

John R. Dermody
Director of Airport Safety and Standards

CHAPTER 1. GENERAL SEPARATION CRITERIA FOR HAZARDOUS WILDLIFE ATTRACTANTS ON OR NEAR AIRPORTS

1.1 Introduction.

1.1.1 Airport operators should maintain an appropriate environment for the safe and efficient operation of aircraft, which entails mitigating wildlife strike hazards by fencing, modifying the landscape in order to deter wildlife or by hazing or removing wildlife hazardous to aircraft from congregating on airports. When considering proposed land uses, operators and sponsors of airports certificated under Part 139, local planners, and developers must take into account whether the proposed land uses, including new development projects, will increase wildlife hazards. Land-use practices that attract or sustain hazardous wildlife populations on or near airports, specifically those listed in Chapter 2, can significantly increase the potential for wildlife strikes.

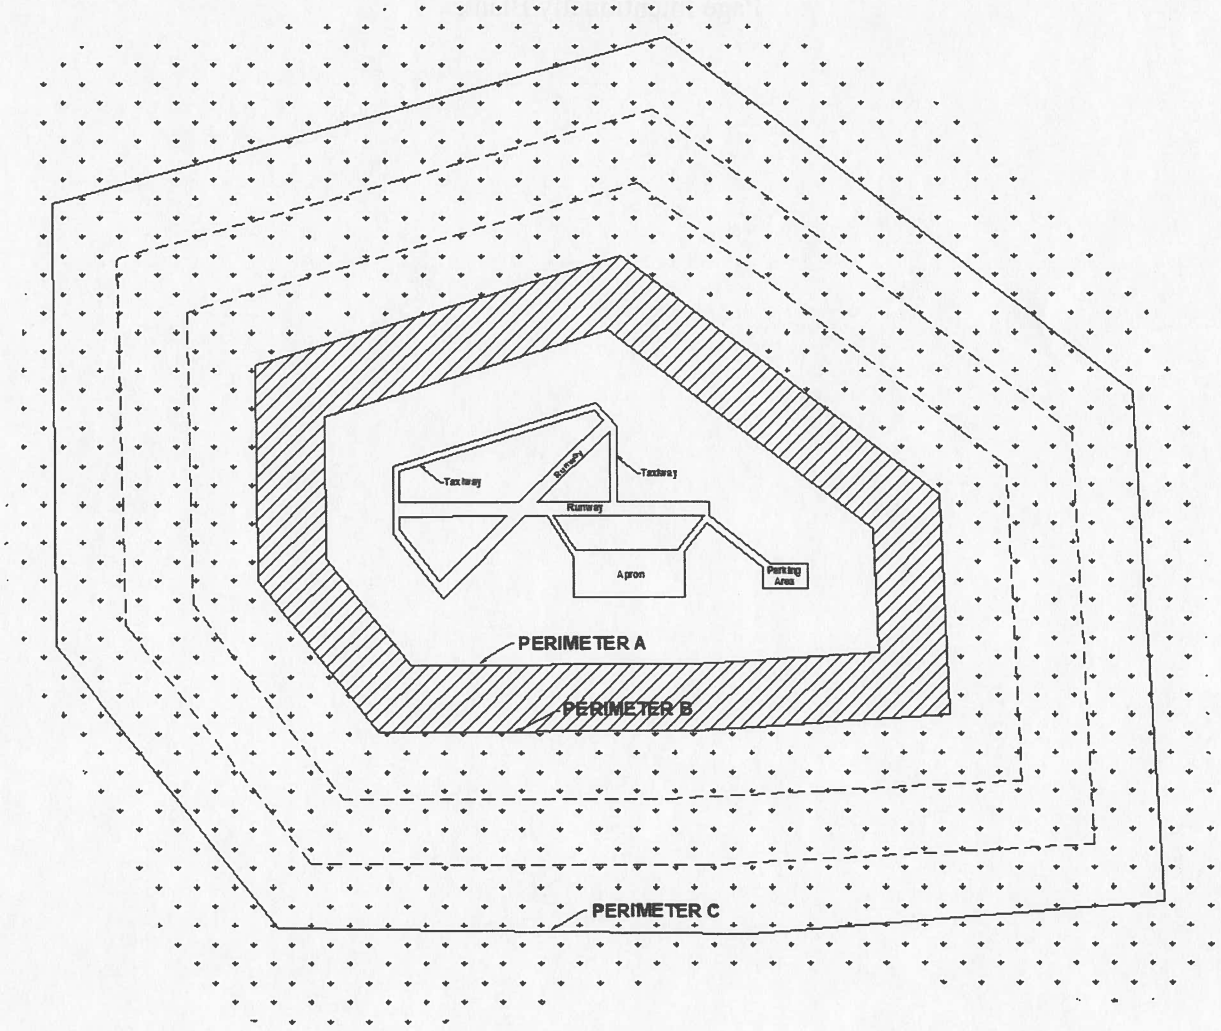
1.1.2 The FAA urges regulatory agencies and planning and zoning agencies to evaluate proposed new land uses within the separation criteria and prevent the creation of land uses that attract or sustain hazardous wildlife within the separation distances.

1.1.3 The FAA recommends the use of minimum separation criteria outlined below for land-use practices that attract hazardous wildlife to the vicinity of airports. Please note that FAA criteria include land uses that cause movement of hazardous wildlife onto, into, or across the airport's approach or departure airspace or aircraft operations area. (See the discussion of the synergistic effects of surrounding land uses in Paragraph 2.8 of this AC.). For the purpose of evaluating distance criteria, the delineation of the aircraft operations area may also consider future airport development plans depicted on the Airport Layout Plan (e.g., planned runway extension).

1.1.4 The separation distances are based on (1) flight patterns and performance criteria of piston-powered aircraft and turbine-powered aircraft, (2) the altitude at which most strikes happen (78 percent occur under 1,000 feet and 90 percent occur under 3,000 feet above ground level), and (3) National Transportation Safety Board recommendations.

1.2 Airports Serving Piston-Powered Aircraft.

Airports that do not sell Jet-A fuel normally serve piston-powered aircraft. Notwithstanding more stringent requirements for specific land uses, the FAA recommends a separation distance of 5,000 feet from these airports for any of the hazardous wildlife attractants discussed in Chapter 2 or for new airport development projects meant to accommodate aircraft movement. This distance is to be maintained between the closest point of the airport's aircraft operations area and the hazardous wildlife attractant. Figure 1 depicts an example of the 5,000-foot separation distance measured from the nearest aircraft operations area.



1.3 Airports Serving Turbine-Powered Aircraft.

For airports serving turbine-powered aircraft, the FAA recommends a separation distance of 10,000 feet from these airports for any of the hazardous wildlife attractants discussed in Chapter 2 or for new airport development projects meant to accommodate aircraft movement. This distance is to be maintained between the closest point of the airport's aircraft operations area and the hazardous wildlife attractant. Figure 1 depicts an example of the 10,000-foot separation distance from the nearest aircraft movement areas.

1.4 Protection of Approach, Departure, and Circling Airspace.

For all airports, the FAA recommends a distance of 5 miles between the closest point of the airport's aircraft operations area and the hazardous wildlife attractant. Special attention should be given to hazardous wildlife attractants that could cause hazardous wildlife movement into or across the approach or departure airspace. Figure 1 depicts an example of the 5-mile separation distance measured from the nearest aircraft operations area.

Figure 1. Example of recommended separation distances described in Chapter 1 within which hazardous wildlife attractants should be avoided, eliminated, or mitigated.

PERIMETER A: For airports serving piston-powered aircraft, it is recommended hazardous wildlife attractants be 5,000 feet from the nearest aircraft operations area.

PERIMETER B: For airports serving turbine-powered aircraft, it is recommended hazardous wildlife attractants be 10,000 feet from the nearest aircraft operations area.

PERIMETER C: Recommended for all airports, 5-mile range to protect approach, departure and circling airspace.

Page Intentionally Blank

CHAPTER 2. LAND-USE PRACTICES ON OR NEAR AIRPORTS THAT POTENTIALLY ATTRACT HAZARDOUS WILDLIFE

2.1 General.

2.1.1 Many types of vegetation, habitats and land use practices can provide an attractant to animals that pose a risk to aviation safety. Hazardous wildlife use the natural or artificial habitats on or near an airport for food, water or cover. The wildlife species and the size of the populations attracted to the airport environment vary considerably, depending on several factors, including land-use practices on or near the airport. In addition to the specific considerations outlined below, airport operators should refer to *Wildlife Hazard Management at Airports* manual, prepared by FAA and U.S. Department of Agriculture (USDA) staff. (This manual is available in English, Spanish, and French). This manual, as well as other helpful resources can be viewed and downloaded free of charge from the Wildlife Strike Resources section of the FAA's wildlife hazard mitigation web site: http://www.FAA.gov/airports/airport_safety/wildlife).

2.1.1.1 The USDA / Animal and Plant Health Inspection Service (APHIS) / Wildlife Services developed a new publication series on wildlife damage management and is available online. The Wildlife Damage Management Technical Series highlights wildlife species or groups of wildlife species that cause damage to agriculture, property and natural resources, and/or impact aviation and human health and safety. The publications can be found at: https://www.aphis.usda.gov/aphis/ourfocus/wildlifedamage/sa_reports/ct_wildlife+damage+management+technical+series.

2.1.1.2 Additional resources have been provided by the USDA / APHIS / Wildlife Services National Wildlife Research Center (NWRC) at: https://www.aphis.usda.gov/aphis/ourfocus/wildlifedamage/programs/nwrc/sa_publications/ct_research_gateway. The NWRC Research Gateway contains research articles, reports, factsheets, technical notes, data and other materials on wildlife hazard mitigation, risk reduction, animal ecology, habitats, and advanced technologies and methodologies.

2.1.2 This section discusses land-use practices having the potential to attract hazardous wildlife and threaten aviation safety. The FAA has determined that the land uses listed below are generally not compatible with safe airport operations when they are located within the separation distances provided in Paragraphs 1.2 through 1.4.

2.1.3 As a reminder, these types of land uses or facilities often require permits from the appropriate permitting agency. The FAA may work with the permitting agency to include conditions for monitoring and mitigation measures, if necessary. Ultimately, the permittee is responsible for compliance to these conditions and the permitting agency is responsible for tracking compliance.

2.2 Waste Disposal Operations.

Municipal solid waste landfills (municipal landfills) are known to attract large numbers of hazardous wildlife, particularly birds. Because of this, these operations, when located within the separations identified in the siting criteria in Paragraphs 1.2 through 1.4, are considered incompatible with safe airport operations.

2.2.1 Siting for New Municipal Solid Waste Landfills Subject to AIR 21.

2.2.1.1 Section 503 of the Wendell H. Ford Aviation Investment and Reform Act for the 21st Century (P. L. 106-181) (AIR 21), 49 U.S.C. § 44718(d), prohibits the construction or establishment of a new municipal landfill within 6 miles of certain public-use airports. Before these prohibitions apply, both the airport and the landfill must meet the very specific conditions described below. These restrictions do not apply to airports or landfills located within the state of Alaska.

2.2.1.2 The airport must (1) have received a Federal grant(s) under 49 U.S.C. § 47101, et. seq.; (2) be under control of a public agency; (3) serve some scheduled air carrier operations conducted in aircraft with less than 60 seats; and (4) have total annual enplanements consisting of at least 51 percent of scheduled air carrier enplanements conducted in aircraft with less than 60 passenger seats.

2.2.1.3 The proposed municipal landfill must (1) be within 6 miles of the airport, as measured from airport property line to the landfill property line, and (2) have started construction or establishment on or after April 5, 2001. Section 44718(d) only limits the construction or establishment of some new landfills. It does not limit the expansion, either vertical or horizontal, of existing landfills.

2.2.1.4 Regarding existing municipal landfills and lateral expansions of landfills, 40 CFR § 258.10 requires owners or operators of a landfill units located within the separation distances provided in Paragraphs 1.2 through 1.4 to demonstrate that the unit is designed and operated so that it does not pose a bird hazard to aircraft. To accomplish this, follow the instructions provided in Paragraphs 3.2 and 3.3, document the wildlife monitoring and mitigation procedures that are cooperatively developed, and place this documentation in the operating permit of the facility.

2.2.2 Siting for New Municipal Landfills Not Subject to AIR 21.

If an airport and a municipal landfill do not meet the criteria of § 44718(d), then FAA recommends against locating the landfill within the separation distances identified in Paragraphs 1.2 through 1.4. In determining this distance separation, measurements should be made from the closest point of the airport property boundary to the closest point of the landfill property boundary.

2.2.3 Considerations for Existing Waste Disposal Facilities Within the Limits of Separation Criteria.

The FAA recommends against airport development projects that would increase the number of aircraft operations or accommodate larger or faster aircraft near landfill operations located within the separations identified in Paragraphs 1.2 through 1.4. In addition, in accordance with 40 CFR § 258.10, owners or operators of existing landfill units that are located within the separations listed in Paragraphs 1.2 through 1.4 must demonstrate that the unit is designed and operated so it does not pose a bird hazard to aircraft. (See Paragraph 4.3.2 of this AC for a discussion of this demonstration requirement.)

2.2.4 Enclosed Trash Transfer Stations.

Enclosed waste-handling facilities that receive garbage behind closed doors; process it via compaction, incineration, or similar manner; and remove all residue by enclosed vehicles generally are compatible with safe airport operations, provided they are constructed and operated properly and are not located on airport property or within the Runway Protection Zone. These facilities should not handle or store putrescible waste outside or in a partially enclosed structure accessible to hazardous wildlife. Trash transfer facilities that are open on one or more sides; or store uncovered quantities of municipal solid waste outside, even if only for a short time; or use semi-trailers that leak or have trash clinging to the outside; or do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully enclosed trash transfer stations. The FAA considers fully enclosed waste-handling facilities constructed or operated incorrectly incompatible with safe airport operations if they are located closer than the separation distances specified in Paragraphs 1.2 through 1.4.

2.2.5 Composting Operations on or near Airport Property.

Composting operations that accept only yard waste (e.g., leaves, lawn clippings, or branches) generally do not attract hazardous wildlife. Sewage sludge, woodchips, and similar material are not municipal solid wastes and may be used as compost bulking agents. The compost, however, must never include food or other municipal solid waste. Composting operations should not be located on airport property unless effective, risk-reducing mitigations are in place. Off-airport property composting operations should be located no closer than the greater of the following distances: 1,200 feet from any aircraft operations area or the distance called for by airport design requirements (see AC 150/5300-13, *Airport Design*). This spacing should prevent material, personnel, or equipment from penetrating any Object Free Area, Obstacle Free Zone, Threshold Siting Surface, or Clearway. Airport operators should monitor composting operations located in proximity to the airport to ensure that steam or thermal rise does not adversely affect air traffic.

2.2.6 Underwater Waste Discharges.

The FAA recommends against the underwater discharge of any food waste (e.g., fish processing offal) within the separations identified in Paragraphs 1.2 through 1.4 because it could attract scavenging hazardous wildlife.

2.2.7 Recycling Centers.

Recycling centers that accept previously sorted non-food items, such as glass, newspaper, cardboard, aluminum, electronic, and household wastes such as paint, batteries, and oil, are, in most cases, not attractive to hazardous wildlife and are acceptable.

2.2.8 Construction and Demolition Debris Facilities.

2.2.8.1 Construction and demolition landfills generally do not attract hazardous wildlife and are acceptable if maintained in an orderly manner, admit no putrescible waste, and are not co-located with other waste disposal operations. However, construction and demolition landfills have similar visual and operational characteristics to putrescible waste disposal sites. When co-located with putrescible waste disposal operations, construction and demolition landfills are more likely to attract hazardous wildlife because of the similarities between these disposal facilities.

2.2.8.2 Therefore, a construction and demolition landfill co-located with another waste disposal operation should be located outside of the separations identified in Paragraphs 1.2 through 1.4.

2.2.8.3 Airport operators should be aware that on-site storage of construction and maintenance debris, as well as out-of-service aircraft or aircraft components, may provide an attractant for hazardous species (e.g., nesting or perching locations). The FAA recommends these on-site areas be monitored and/or mitigated, if necessary.

2.2.9 Fly Ash Disposal.

2.2.9.1 The incinerated residue from resource recovery power/heat-generating facilities that are fired by municipal solid waste, coal, or wood is generally not a wildlife attractant because it no longer contains putrescible matter. Landfills accepting only fly ash are generally not considered to be wildlife attractants and are acceptable as long as they admit no putrescible waste of any kind, and are not co-located with other disposal operations that attract hazardous wildlife.

2.2.9.2 Since varying degrees of waste consumption are associated with general incineration (not resource recovery power/heat-generating facilities), the FAA considers the ash from general incinerators a regular waste disposal by-product and, therefore, a hazardous wildlife attractant if disposed of within the separation criteria outlined in Paragraphs 1.2 through 1.4.

2.3 Water Management Facilities.

Drinking water intake and treatment facilities, storm water and wastewater treatment facilities, associated retention and settling ponds, ponds built for recreational use, ponds

and fountains for ornamental purposes, and ponds that result from mining activities often attract large numbers of potentially hazardous wildlife. Development of new open water facilities within the separation criteria identified in Paragraphs 1.2 through 1.4 should be avoided to prevent wildlife attractants. If necessary, land-use developers and airport operators may need to develop management plans, in compliance with local and state regulations, to support the operation of storm water management facilities on or near all public-use airports to ensure a safe airport environment. The FAA recommends these plans be developed in consultation with a Qualified Airport Wildlife Biologist[3], to minimize hazardous wildlife attractants.

2.3.1 Existing Stormwater Management Facilities.

2.3.1.1 On-airport stormwater management facilities allow the quick removal of surface water, including discharges related to aircraft deicing, from impervious surfaces, such as pavement and terminal/hangar building roofs. Existing on-airport detention ponds collect stormwater, protect water quality, and control runoff. Because they slowly release water after storms, they may create standing bodies of water that can attract hazardous wildlife. Where the airport has developed a Wildlife Hazard Management Plan, Part 139 regulations require the immediate correction of any wildlife hazards arising from existing stormwater facilities located on or near airports using appropriate wildlife hazard mitigation techniques. Airport operators should develop measures to minimize hazardous wildlife attraction in consultation with a Qualified Airport Wildlife Biologist.

2.3.1.2 Where possible, airport operators should modify stormwater detention ponds to allow a maximum 48-hour detention period for the design storm. The combination of open water and vegetation is particularly attractive to waterfowl and other hazardous wildlife. Water management facilities holding water longer than 48 hours should be maintained in a manner that keeps them free of both emergent and submergent vegetation. The FAA recommends that airport operators avoid or remove retention ponds and detention ponds featuring dead storage to eliminate standing water. Detention basins should remain totally dry between rainfalls. Where constant flow of water is anticipated through the basin, or where any portion of the basin bottom may remain wet, the detention facility should include a concrete or paved pad and/or ditch/swale in the bottom to prevent vegetation that may provide nesting habitat. Drainage basins with a concrete or paved pad should be maintained to prevent or remove any sediment build-up to prevent vegetation growth.

2.3.1.3 When it is not possible to drain a large detention pond completely, airport operators may use physical barriers, such as bird balls, wire grids, pillows,

[3] See Advisory Circular 150/5200-36, *Qualifications for Wildlife Biologist Conducting Wildlife Hazard Assessments and Training Curriculums for Airport Personnel Involved in Controlling Wildlife Hazards on Airports.*

or netting, to deter birds and other hazardous wildlife. When physical barriers are proposed, airport operators must evaluate their use, effectiveness and maintenance requirements. Airport operators must also ensure physical barriers will not adversely affect water rescue. Before installing any physical barriers over detention ponds on Part 139 airports, airport operators must get approval from the appropriate FAA Regional Airports Division Office.

2.3.1.4 The FAA recommends that airport operators encourage off-airport stormwater treatment facility operators to incorporate appropriate wildlife hazard mitigation techniques into stormwater treatment facility operating practices when their facility is located within the separation criteria specified in Paragraphs 1.2 through 1.4.

2.3.2 New Stormwater Management Facilities.

The FAA recommends that storm water management systems located within the separations identified in Paragraphs 1.2 through 1.4 be designed and operated so as not to create above-ground standing water. Stormwater detention ponds should be designed, engineered, constructed, and maintained for a maximum 48–hour detention period after the design storm and to remain completely dry between storms. To facilitate the control of hazardous wildlife, the FAA recommends the use of steep-sided, rip-rap or concrete lined, narrow, linear-shaped water detention basins. When it is not possible to place these ponds away from an airport's aircraft operations area (but still on airport property), airport operators may use physical barriers, such as bird balls, wire grids, floating covers, vegetation barriers (bottom liners), or netting, to prevent access of hazardous wildlife to open water and minimize aircraft-wildlife interactions. Caution is advised when nets or wire grids are used for deterring birds from attractants. Mesh size should be < 5 cm (2") to avoid entangling and killing birds and should not be made of a monofilament material. Grids installed above and across water to deter hazardous birds (e.g., waterfowl, cormorants, etc.) are different than using a small mesh covering but also provides an effective deterrent. Grid material, size, pattern and height above water may differ on a case-by-case basis. When physical barriers are used, airport operators must evaluate their use and ensure they will not adversely affect water rescue. Before installing any physical barriers over detention ponds on Part 139 airports, a review by a Qualified Airport Wildlife Biologist should be conducted, prior to approval from the appropriate FAA Regional Airports Division Office. All vegetation in or around detention basins that provide food or cover for hazardous wildlife should be eliminated. If soil conditions and other requirements allow, the FAA encourages the use of underground storm water infiltration systems because they are less attractive to wildlife.

2.3.3 Existing Wastewater Treatment Facilities.

2.3.3.1 The FAA recommends that airport operators immediately correct any wildlife hazards arising from existing wastewater treatment facilities located on or near the airport.

2.3.3.2 Where required, a wildlife management plan will outline appropriate wildlife hazard mitigation techniques. Accordingly, airport operators should encourage wastewater treatment facility operators to incorporate measures, developed in consultation with a Qualified Airport Wildlife Biologist, to minimize hazardous wildlife attractants. Airport operators should also encourage those wastewater treatment facility operators to incorporate these mitigation techniques into their standard operating practices. In addition, airport operators should consider the existence of wastewater treatment facilities when evaluating proposed sites for new airport development projects and avoid such sites when practicable.

2.3.4 New Wastewater Treatment Facilities.

The FAA recommends against the construction of new wastewater treatment facilities or associated settling ponds within the separations identified in Paragraphs 1.2 through 1.4. Appendix 1 defines wastewater treatment facility as "any devices and/or systems used to store, treat, recycle, or reclaim municipal sewage or liquid industrial wastes." The definition includes any pretreatment involving the reduction or elimination of pollutants prior to introducing such pollutants into a treatment facility. When a wastewater treatment facility is proposed within the separation criteria, the airport operator, project proponent, and local jurisdiction should discuss the proposed project location with regard to its location near the airport and the separation distances identified in Paragraphs 1.2 through 1.4. If possible, a more suitable location for the proposed facility should be identified. If no other suitable location exists, FAA recommends that the proposed facility plans be reviewed by a Qualified Airport Wildlife Biologist to identify measures to avoid or reduce the facility's potential to attract hazardous wildlife. If appropriate measures cannot be incorporated to reduce potential wildlife hazards, airport operators should document their opposition in a letter to the local jurisdiction.

2.3.5 Artificial Marshes.

In warmer climates, wastewater treatment facilities sometimes employ artificial marshes and use submergent and emergent aquatic vegetation as natural filters. These artificial marshes may be used by some species of flocking birds, such as blackbirds and waterfowl, for breeding or roosting activities. The FAA recommends against establishing artificial marshes within the separations identified in Paragraphs 1.2 through 1.4.

2.3.6 Wastewater Discharge and Sludge Disposal.

The FAA recommends careful consideration regarding the discharge of wastewater or biosolids (i.e., secondarily treated sewage sludge) on airport property. Such discharges might improve soil moisture and quality on unpaved areas and lead to improved turf growth. Depending on the airfield plant communities and habitats present, this can be an attractive food source for many species of animals or, conversely, could result in limited attractiveness to hazardous wildlife. Also, improved turf requires more frequent mowing and could attract geese. Airports should improve their turf with the goal of a monoculture of turf that is least attractive to wildlife. Wastewater or biosolids

applications might assist in achieving this goal. Caution should be exercised when discharges saturate airfield areas adjacent to paved surfaces. The resultant soft, muddy conditions could restrict or prevent emergency vehicles from reaching accident sites in a timely manner.

2.4 Wetlands.

Wetlands provide a variety of functions and can be regulated by local, state, and Federal laws. Wetlands can be attractive to many types of wildlife, including many which rank high on the list of hazardous wildlife species (Table 1 - AC 150/5200-32). Some types of wetlands are not as attractive to wildlife as others and they should be reviewed on a case-by-case basis to determine the likelihood of proposed wetlands increasing the numbers of hazardous wildlife at the airport. Factors such as size, shape, location, canopy cover and vegetative composition among other things should be considered when determining compatibility.

Note: If questions exist as to whether an area qualifies as a wetland, contact the District Office of the U.S. Army Corps of Engineers, the Natural Resources Conservation Service, or a wetland consultant qualified to delineate wetlands.

2.4.1 Existing Wetlands on or near Airport Property.

If wetlands are located on or near airport property, airport operators should be alert to any wildlife use or habitat changes in these areas that could affect safe aircraft operations. At public-use airports, the FAA recommends immediately correcting, in cooperation with local, state, and Federal regulatory agencies, any wildlife hazards arising from existing wetlands located on or near airports within 5 miles of the aircraft operations area. Where required, a wildlife management plan will outline appropriate wildlife hazard mitigation techniques. Accordingly, airport operators should develop measures to minimize hazardous wildlife attraction in consultation with a FAA Qualified Airport Wildlife Biologist.

2.4.2 New Airport Development.

Whenever possible, the FAA recommends locating new airports using the separations from wetlands identified in Paragraphs 1.2 through 1.4. Where alternative sites are not practicable, or when airport operators are expanding an existing airport into or near wetlands, a Qualified Airport Wildlife Biologist, in coordination with the U.S. Fish and Wildlife Service, the U.S. Army Corps of Engineers, and the state wildlife management agency should evaluate the wildlife hazards and prepare a wildlife management plan that indicates methods of minimizing the hazards.

2.4.3 Mitigation for Wetland Impacts from Airport Projects.

Wetland mitigation may be necessary when unavoidable wetland disturbances result from new airport development projects or projects required to correct wildlife hazards from wetlands. Wetland mitigation must be designed so it does not create a wildlife hazard. The FAA recommends that wetland mitigation projects that may attract hazardous wildlife be sited outside of the separations identified in Paragraphs 1.2 through 1.4.

2.4.3.1 **Onsite Mitigation of Wetland Functions.**

Wetland mitigation/conservation easements must not inhibit the airport operator's ability to effectively control hazardous wildlife on or near the mitigation site or effectively maintain other aspects of safe airport operations. Enhancing such mitigation areas to attract hazardous wildlife must be avoided. The FAA will review any onsite mitigation proposals to determine compatibility with safe airport operations and grant assurance compliance. Early coordination with the FAA is encouraged for any proposal to use airport land for wetland mitigation. A Qualified Airport Wildlife Biologist should evaluate any wetland mitigation projects that are needed to protect unique wetland functions and that must be located in the separation criteria in Paragraphs 1.2 through 1.4 before the mitigation is implemented. A wildlife management plan should be developed to reduce the wildlife hazards.

2.4.3.2 **Offsite Mitigation of Wetland Functions.**

2.4.3.2.1 The FAA recommends that wetland mitigation projects that may attract hazardous wildlife be sited outside of the separations identified in Paragraphs 1.2 through 1.4 unless they provide unique functions that must remain onsite (see 2.4.3.1). Agencies that regulate impacts to or around wetlands recognize that it may be necessary to split wetland functions in mitigation schemes. Therefore, regulatory agencies may, under certain circumstances, allow portions of mitigation to take place in different locations.

2.4.3.2.2 The FAA encourages landowners or communities supporting the restoration or enhancement of wetlands to do so only after critically analyzing how those activities would affect aviation safety. To do so, landowners or communities should contact the affected airport sponsor, FAA, and/or a Qualified Airport Wildlife Biologist.

2.4.3.2.3 Those parties should work cooperatively to develop restoration or enhancement plans that would not worsen existing wildlife hazards or create such hazards. See Paragraphs 4.1.1 – 4.1.3 for land-use modifications evaluation criteria.

2.4.3.2.4 If parties develop a mutually acceptable restoration or enhancement plan, the landowner or community proposing the restoration or enhancement must monitor the restored or enhanced site. This monitoring must verify that efforts have not worsened or created hazardous wildlife attraction or activity. If such attraction or activity occurs, the landowner or community should work with the airport sponsor, or a Qualified Airport Wildlife Biologist to reduce the hazard to aviation.

2.4.3.3 **Mitigation Banking.**

Wetland mitigation banking is the creation or restoration of wetlands in order to provide mitigation credits that can be used to offset permitted wetland losses. Mitigation banking benefits wetland resources by providing advance replacement for permitted wetland losses; consolidating small projects into larger, better-designed and managed units; and encouraging integration of wetland mitigation projects with watershed planning. This last benefit is most helpful for airport projects, as wetland impacts mitigated outside of the separations identified in Paragraphs 1.2 through 1.4 can still be located within the same watershed. Wetland mitigation banks meeting the separation criteria offer an ecologically sound approach to mitigation in these situations. Airport operators should work with local watershed management agencies or organizations to develop mitigation banking for wetland impacts on airport property.

2.5 Dredge Spoil Containment Areas.

The FAA recommends against locating dredge spoil containment areas (also known as Confined Disposal Facilities) within the separations identified in Paragraphs 1.2 through 1.4 if the containment area or the spoils contain material that would attract hazardous wildlife. Proposals for new dredge spoil containment areas located within the separation distances should be reviewed on a case-by-case basis to determine the likelihood of resulting in an increase in hazardous wildlife. The FAA recommends that airport sponsors work with a Qualified Airport Wildlife Biologist and/or the FAA to review proposals for dredge spoil containment areas located within separation criteria.

2.6 Agricultural Activities.

Many agricultural crops can attract hazardous wildlife and should not be planted within the separations identified in Paragraphs 1.2 through 1.4. Corn, wheat, and other small grains in particular should be avoided. If the airport has no financial alternative to agricultural crops to produce the income necessary to maintain the viability of the airport, then the airport should consider growing crops that hold little food value for hazardous wildlife, such as grass hay. Attractiveness to hazardous wildlife species during all phases of production, from planting through harvest and fallow periods, should be considered when contemplating the use of airport property for agricultural production. Where agriculture is present, crop residue (e.g., waste grain) should not be left in the field following harvest. Also, airports should consult AC 150/5300-13, *Airport Design,* to ensure that agricultural crops do not create airfield obstructions or other safety hazards. Before planning or initiating any agricultural practices on airport property, operators should get approval from the appropriate FAA regional Airports Division Office and demonstrate that the additional cost of wildlife control and potential accidents is offset by revenue generated by agricultural leases. Annual review of the Airport Certification Manual by the Certification Inspector does not constitute approval and is insufficient to meet this requirement.

2.6.1 Livestock Production.

Confined livestock operations (i.e., feedlots, dairy operations, hog or chicken production facilities, or egg laying operations) often attract flocking birds, such as blackbirds, starlings, or pigeons that pose a hazard to aviation. Therefore, the FAA recommends against such facilities within the separations identified in Paragraphs 1.2 through 1.4. The airport operator should be aware of any wildlife hazards that appear to be attracted to off-site livestock operations and consider working with a Qualified Airport Wildlife Biologist to identify reasonable and feasible measures that may be proposed to landowners to reduce the attractiveness of the site to the potentially hazardous wildlife species.

2.6.1.1 In exceptional circumstances, and following FAA review and approval, livestock may be grazed on airport property as long as they are off the airfield and separated behind fencing where they cannot pose a hazard to aircraft. The livestock should be fed and watered as far away from the airfield and approach/departure space as possible because the feed and water may attract birds. The wildlife management plan should include monitoring and wildlife mitigation for any areas where the livestock and their feed/water is located in case a wildlife hazard is detected. Airports without wildlife management plans should equally consider monitoring and mitigation protocols to identify and address any wildlife hazards associated with livestock and their feeding operations.

2.6.2 Alternative Uses of Agricultural Land.

2.6.2.1 Habitat modification both on and surrounding an airfield is one of the best and most economical long term mitigation strategies to decrease risk that wildlife pose to flight safety. Alternative land uses (e.g., solar and biofuel) at airports could help mitigate many of the challenges for the airport operator, developers, and conservationists. However, careful planning must first determine that proposed alternative energy production at airports does not create wildlife attractants or other hazards.

2.6.2.2 Some airports are surrounded by vast areas of farmed land within the distances specified in Paragraphs 1.2 through 1.4. Seasonal uses of agricultural land for activities such as hunting can create a hazardous wildlife situation. In some areas, farmers will rent their land for hunting purposes. Rice farmers, among others, flood their land to attract waterfowl or for conservation efforts. This is often done during waterfowl hunting season to obtain additional revenue by renting out duck blinds.

2.6.2.3 The waterfowl hunters then use decoys and call in hundreds, if not thousands, of birds, creating a threat to aircraft safety. It is recommended that a Qualified Airport Wildlife Biologist review, in coordination with local farmers and producers, these types of seasonal land uses and incorporate mitigating measures into the wildlife management plan, when possible.

2.7 Aquaculture.

Aquaculture is the breeding, rearing, and harvesting of fish, shellfish, and plants in all types of water environments including ponds, rivers, lakes, and the ocean. Aquaculture is used to produce food fish, sport fish, bait fish, ornamental fish, and to support restoration activities. Aquacultured species are grown in a range of facilities including tanks, cages, ponds, and raceways. When an aquaculture facility is proposed within the separation criteria, the airport operator, project proponent, and local jurisdiction should discuss the proposed project location with regard to its attraction to hazardous species, location near the airport and the separation distances identified in Paragraphs 1.2 through 1.4. If a facility is identified as a possible significant attraction, a more suitable location for the proposed facility should be identified. If no other suitable location exists, it is recommended that the proposed facility plans be reviewed by a Qualified Airport Wildlife Biologist to identify measures to avoid or reduce the facility's potential to attract hazardous wildlife.

2.7.1 Freshwater Aquaculture.

2.7.1.1 Freshwater aquaculture activities (e.g., catfish, tilapia, trout or bass production) are typically conducted outside of fully enclosed buildings in constructed ponds or tanks and are inherently attractive to a wide variety of birds and therefore pose a significant risk to airport safety when within the separation distances specified in Paragraphs 1.2 through 1.4. Freshwater aquaculture should only be considered if extensive mitigation measures have been incorporated to eliminate attraction to hazardous birds. Examples of such mitigation include:

1. Netting or other material to exclude hazardous birds (e.g., eagles, osprey, gulls, cormorants);
2. Acoustic hazing including pyrotechnics, propane cannons, directional sonic/hailing devices and other similar technologies;
3. Feeding procedure cleanliness, exclusion techniques prohibiting birds from perching or accessing food; efficiency of feeding operation procedures that reduce fish food attraction to hazardous birds;
4. Operation procedure efficiency transferring live fish to and from enclosures or removal of dead fish; maintenance and upkeep of facility;
5. Monitoring, mitigation and communication protocols with nearby airports as a proactive safety feature in response to specific hazardous species in the event they are identified at the facility in unacceptable numbers.

2.7.2 Marine Aquaculture.

Marine aquaculture (Mariculture) refers to the culturing of species that live in the ocean. When appropriately managed and mitigated as necessary, mariculture facilities do not pose a significant risk to airport safety.

2.7.2.1 **Finfish Mariculture.**

2.7.2.1.1 U.S. finfish mariculture primarily produces salmon and steelhead trout as well as lesser amounts of cod, moi, yellowtail, barramundi, seabass, and seabream. Maricultures use rigid and non-rigid enclosures (e.g., cages) at the surface or submerged in the water column. These enclosures may be fully enclosed, or be open at the top or covered with netted material to negate losses from depredation by birds or other predators. Different facilities employ different designs and operational protocols.

2.7.2.1.2 While mariculture operations typically do not pose a significant attractant to hazardous birds, design and operational features can be incorporated as permit conditions to mitigate attraction and effectively reduce this risk. Examples of such mitigation include:

1. Fully enclosed cages using netting or other material to exclude hazardous birds (e.g., gulls, cormorants, pelicans) and to insure retention of fish;
2. Submerged enclosures to reduce attraction to hazardous birds;
3. Feed barge cleanliness, exclusion techniques prohibiting birds from perching or accessing food; efficiency of feeding operation procedures that reduce fish food attraction to hazardous birds;
4. Operation procedure efficiency transferring live fish to and from enclosures or removal of dead fish; maintenance and upkeep of facility;
5. Monitoring, mitigation and communication protocols with nearby airports as a proactive safety feature in response to specific hazardous species in the event they are identified at the facility in unacceptable numbers.

2.7.2.2 **Shellfish Mariculture.**

U.S. shellfish mariculture primarily produces oysters, clams, mussels, lobster and shrimp. Shellfish may be grown directly on the bottom, in submerged cages or bags, or on suspended lines. These types of mariculture operations do not typically present a significant attractant to hazardous birds. For those operations that are found to pose a significant risk, design and operation features that diminish possible attraction to hazardous bird species (e.g., reducing areas for perching or feeding) can effectively reduce this risk.

2.7.2.3 **Plant Mariculture.**

2.7.2.3.1 Microalgae, also referred to as phytoplankton, microphytes, or planktonic algae constitute the majority of cultivated algae. Macroalgae, commonly known as seaweed, also have many commercial and industrial uses.

2.7.2.3.2 While few commercial seaweed farms exist, the sector is growing. These types of mariculture operations do not typically present an attractant to hazardous birds.

2.8 Golf Courses, Landscaping, Structures and Other Land-Use Considerations.

2.8.1 Golf Courses.

The large grassy areas and open water found on most golf courses are attractive to hazardous wildlife, particularly Canada geese and some species of gulls. These species can pose a threat to aviation safety. If golf courses are located on or near airport property, airport operators should be alert to any wildlife use or habitat changes in these areas that could affect safe aircraft operations. Accordingly, airport operators should develop, at a minimum, onsite measures to minimize hazardous wildlife attraction in consultation with a Qualified Airport Wildlife Biologist. Existing golf courses located within these separations that have been documented to attract hazardous wildlife are encouraged to develop a program to reduce the attractiveness of the sites to species that are hazardous to aviation safety. The FAA recommends against construction of new golf courses within the separations identified in Paragraphs 1.2 through 1.4 if determined that the new facility would create a significant wildlife hazard attractant by a Qualified Airport Wildlife Biologist. Airport operators should ensure these golf courses are monitored on a continuing basis for the presence of hazardous wildlife. If hazardous wildlife is detected, corrective actions should be immediately implemented.

2.8.2 Landscaping and Landscape Maintenance.

2.8.2.1 Depending on its geographic location, landscaping can attract hazardous wildlife. The FAA recommends that airport operators approach landscaping with caution and confine it to airport areas not associated with aircraft movements. Vegetation that produces seeds, fruits, or berries, or that provides dense roosting or nesting cover should not be used. Airports should develop a landscape plan to include approved and prohibited plants. The landscape plan should consider the watering needs of mature plants. A Qualified Airport Wildlife Biologist should review all landscaping plans. Airport operators should also monitor all landscaped areas on a continuing basis for the presence of hazardous wildlife. If hazardous wildlife is detected, corrective actions should be immediately implemented.

2.8.2.2 Turf grass areas on airports have the potential to be highly attractive to a variety of hazardous wildlife species. Research conducted by the USDA Wildlife Services' National Wildlife Research Center has shown that no one airfield vegetation management regimen will deter all species of hazardous wildlife in all situations. The composition and height of airfield grasslands should be properly managed to reduce their attractiveness to hazardous wildlife. In many situations, an intermediate height, monoculture turf grass might be most favorable. In cooperation with a

Qualified Airport Wildlife Biologist, airport operators should develop airport turf grass management plans on a prescription basis, including cultivar selection during reseeding efforts, that is specific to the airport's geographic location, climatic conditions, and the type of hazardous wildlife likely to frequent the airport.

2.8.2.3 Airport operators should ensure that plant varieties attractive to hazardous wildlife are not used on the airport. Disturbed areas or areas in need of re-vegetating should not be planted with seed mixtures containing millet or any other large-seed producing grass. For airport property already planted with seed mixtures containing millet, rye grass, or other large-seed producing grasses, the FAA recommends disking, plowing, or another suitable agricultural practice to prevent plant maturation and seed head production. Plantings should follow the specific recommendations for grass management and seed and plant selection made by the State University Cooperative Extension Service, the local office of Wildlife Services, or a Qualified Airport Wildlife Biologist. Airport operators should also consider developing and implementing a preferred/prohibited plant species list, reviewed by a Qualified Airport Wildlife Biologist, which has been designed for the geographic location to reduce the attractiveness to hazardous wildlife for landscaping airport property.

2.8.3 Structures.

2.8.3.1 Certain structures attract birds for loafing and nesting. Flat rooftops can be attractive to many species of gulls for nesting, hangars provide roosting / nesting opportunities for rock doves, towers, light posts and navigation aids can provide loafing / hunting perches for raptors and aircraft can provide loafing / nesting sites for European starlings, blackbirds and other species. These structures should be monitored and mitigated, if located on-site. Off-site structural attractions may require additional coordination to effectively mitigate their use by hazardous species.

2.8.3.2 Cellular communications towers are becoming increasingly more attractive to large birds (e.g., osprey, eagles, herons, vultures) for nesting and rearing their young. This problem is a growing concern because once the young fledge from nests built on manmade structures they are more likely to return to these kinds of sites to reproduce in future years.

2.8.4 Other Hazardous Wildlife Attractants.

Other land uses (e.g., conservation easements, parks, wildlife management areas) or activities not addressed in this AC may have the potential to attract hazardous wildlife. Regardless of the source of the attraction, when hazardous wildlife is noted on a public-use airport, each certificate holder must take prompt remedial action(s) to protect aviation safety and all non-certificated airports should take prompt remedial action(s) to protect aviation safety.

2.9 Habitat for State and Federally Listed Species on Airports.

An airport's air operations area is an artificial environment that has been created and maintained for aircraft operations. Because an aircraft operations area can be markedly different from the surrounding native landscapes, it may attract wildlife species that do not normally occur, or that occur only in low numbers in the area. Some of the grassland species attracted to an airport's aircraft operations area are at the edge of their natural ranges, but are attracted to habitat features found in the airport environment. Also, some wildlife species may occur on the airport in higher numbers than occur naturally in the region because the airport offers habitat features the species prefer. Some of these wildlife species are Federal or state-listed threatened and endangered species or have been designated by state resource agencies as species of special concern.

2.9.1 State-Listed Species Habitat Concerns.

2.9.1.1 Many state wildlife agencies have requested that airport operators facilitate and encourage habitat on airports for state-listed threatened and endangered species or species of special concern. Airport operators should exercise caution in adopting new management techniques because they may increase wildlife hazards and be inconsistent with safe airport operations. Managing the on-airport environment to facilitate or encourage the presence of hazardous wildlife species can create conditions that are incompatible with, or pose a threat to, aviation safety.

2.9.1.2 Not all state-listed threatened and endangered species or species of concern pose a direct threat to aviation safety. However, these species may pose an indirect threat and be hazardous because they attract other wildlife species or support prey species attractive to other species that are directly hazardous. Also, the habitat management practices that benefit these state-listed threatened and endangered species and species of special concern may attract other hazardous wildlife species. On-airport habitat and wildlife management practices designed to benefit wildlife that directly or indirectly create safety hazard where none existed before are incompatible with safe airport operations.

2.9.2 Federally Listed Species Habitat Concerns.

2.9.2.1 The FAA supports efforts to protect threatened and endangered species, as a matter of principle and consistent with the Endangered Species Act of 1973. The FAA must balance these requirements with our requirements and mission to maintain a safe and efficient airport system. Requests to enhance or create habitat for threatened and endangered species often conflict with the safety of the traveling public and may place the protected species at risk of mortality by aircraft collisions. The FAA does not support the creation, conservation or enhancement of habitat or refuges to attract endangered species on airports. If endangered species are present on an airport, specific obligations may apply under the Endangered

Species Act, 16 U.S.C. § 1531 et seq. and the airport operator should contact the Airports District Office Environmental Protection Specialist.

2.9.2.2 The designation of critical habitat for listed species under the Endangered Species Act on airport lands may be an incompatible land use in conflict with the intended and dedicated purpose of airport lands and may limit or preclude the ability of the airport to develop new infrastructure and growth capacity to meet future air carrier service demand. In addition, depending on the listed species (primarily but not limited to avian species), the designation of critical habitat within the separation distances provided in paragraphs 1.2 - 1.4 can represent a hazardous wildlife attractant in conflict with 14 CFR Part 139.337.

2.10 Synergistic Effects of Surrounding Land Uses.

There may be circumstances where two or more different land uses would not, by themselves, be considered hazardous wildlife attractants or are located outside of the separations identified in Paragraphs 1.2 through 1.4 but collectively may create a wildlife corridor directly through the airport and/or surrounding airspace. An example involves a lake located outside of the separation criteria on the east side of an airport and a large hayfield on the west side of an airport. These two land uses, taken together, could create a flyway for Canada geese directly across the airspace of the airport. Airport operators must consider the entire surrounding landscape and community when developing the wildlife management plan.

Page Intentionally Blank

CHAPTER 3. PROCEDURES FOR WILDLIFE HAZARD MANAGEMENT BY OPERATORS OF PUBLIC-USE AIRPORTS AND CONDITIONS FOR NON-CERTIFICATED AIRPORTS TO CONDUCT WILDLIFE HAZARD ASSESSMENTS AND WILDLIFE HAZARD SITE VISITS

3.1 Introduction.

In recognition of the increased risk of serious aircraft damage or the loss of human life that can result from a wildlife strike, the FAA recommends all airports conduct a Wildlife Hazard Site Visit or Wildlife Hazard Assessment unless otherwise mandated after an initial triggering events defined in Part 139 Section 139.337. After the airport has completed the site visit or assessment and implemented a wildlife management plan, investigations should be conducted following subsequent triggering events to determine if the original assessment and plan adequately address the situation or if conditions have changed that would warrant an update to the plan. In this section, airports that are certificated under 14 C.F.R. § 139.337 are referred to as "certificated airports" and all others are referred to as "non-certificated airports." When a statement refers to both certificated and non-certificated airports, "airport" or "all airports" is used.

3.2 Coordination with Qualified Airport Wildlife Biologists.

Hazardous wildlife management is a complex discipline and conditions vary widely across the United States. Therefore, only airport wildlife biologists meeting the qualification requirements in Advisory Circular 150/5200-36, *Qualifications for Wildlife Biologist Conducting Wildlife Hazard Assessments and Training Curriculums for Airport Personnel Involved in Controlling Wildlife Hazards on Airports,* can conduct Site Visits and Assessments. Airports must maintain documentation that the Qualified Airport Wildlife Biologist meets the qualification requirements in Advisory Circular 150/5200-36.

3.3 Wildlife Hazard Management at Airports: A Manual For Airport Personnel.

3.3.1 The Wildlife Hazard Management at Airports manual, prepared by FAA and USDA Wildlife Services staff, contains a compilation of information to assist airport personnel in the development, implementation, and evaluation of wildlife management plans at airports. The manual includes specific information on the nature of wildlife strikes, legal authority, regulations, wildlife management techniques, Assessments, Plans, and sources of help and information. The manual is available in three languages: English, Spanish, and French. It can be viewed and downloaded free of charge from the FAA's wildlife hazard mitigation web site: https://www.faa.gov/airports/airport_safety/wildlife. This manual only provides a starting point for addressing wildlife hazard issues at airports. FAA recommends that airports consult with a Qualified Airport Wildlife Biologists to assist with development of a wildlife management plan and the implementation of management actions by airport personnel.

3.3.2 There are many other resources complementary to this manual for use in developing and implementing wildlife management plans. Several are listed in the manual's bibliography or on the FAA Wildlife Mitigation website: https://www.faa.gov/airports/airport_safety/wildlife

3.4 Wildlife Hazard Site Visits and Wildlife Hazard Assessments.

3.4.1 Operators of certificated airports are encouraged to conduct an initial assessment regardless of whether the airport has experienced one of the triggering events. Doing so would allow the airport to take proactive action and mitigate the wildlife risk before experiencing an incident. All other airports are encouraged to conduct an assessment or site visit (as defined in FAA Advisory Circular 150/5200-38) conducted by a Qualified Airport Wildlife Biologist (as defined in FAA Advisory Circular 150/5200-36). Part 139 certificated airports are currently required to ensure that an assessment is conducted consistent with 14 C.F.R. § 139.337.

3.4.2 The intent of a site visit is to provide an abbreviated analysis of an airport's wildlife hazards and to provide timely information that allows the airport to expedite the mitigation of these hazards. The FAA also recommends that airports conduct an assessment or site visit as soon as practicable in order to identify any immediate wildlife hazards and/or mitigation measures.

3.4.3 Non-certificated airports should submit the results of the site visit or assessment to the FAA for review. The FAA will review the submitted site visit or assessment and make a recommendation regarding the development of a wildlife management plan. A wildlife management plan can be developed based on a site visit and will be required if the non-certificated airport is going to request federal grants for the purpose of mitigating wildlife hazards.

3.5 Wildlife Hazard Management Plan.

3.5.1 The FAA will consider the results of the assessment, along with the aeronautical activity at the airport and the views of the airport operator and airport users, in determining whether a wildlife management plan is needed for certificated airports, or recommended for non-certificated airports.

3.5.2 If the FAA determines that a wildlife management plan is needed for a certificated airport, the airport operator must formulate a plan, using the assessment as its basis and submit to the FAA for approval. If the FAA recommends that a non-certificated airport develop a plan, either an assessment or a site visit can be used as the basis for the wildlife management plan. Airports should consult AC 150/5200-38, *Protocol for the Conduct and Review of Wildlife Hazard Site Visits, Wildlife Hazard Assessments, and Wildlife Hazard Management Plans,* for further information on preparation and implementation requirements for their wildlife management plan.

3.5.3 The goal of an airport's wildlife management plan is to minimize the risk to aviation safety, airport structures or equipment, or human health posed by populations of hazardous wildlife on and around the airport. For wildlife management plans to effectively reduce wildlife hazards on and near airports, accurate and consistent wildlife strike reporting is essential. Airports should consult AC 150/5200-32, *Reporting Wildlife Aircraft Strikes,* for further information on responsibilities and recommendations concerning wildlife strikes.

3.5.4 The wildlife management plan must identify hazardous wildlife attractants on or near the airport and the appropriate wildlife management techniques to minimize the wildlife hazard. It must also prioritize the management measures.

3.6 Local Coordination.

The FAA recommends establishing a Wildlife Hazards Working Group to facilitate the communication, cooperation, and coordination of the airport and its surrounding community necessary to ensure the effectiveness of the wildlife management plan. The cooperation of the airport community is essential to prevent incompatible development in the airport vicinity. Whether on or off the airport, input from all involved parties must be considered when a potentially hazardous wildlife attractant is being proposed. Based on available resources, airport operators should undertake public education activities with the local planning agencies because some activities in the vicinity of an airport, while harmless under normal conditions, can attract wildlife and present a danger to aircraft (see Paragraphs 4.5 to 4.8). For example, if public trails are planned near wetlands or in parks adjoining airport property, the public should know that feeding birds and other wildlife in the area may pose a risk to aircraft.

3.7 Operational Notifications of Wildlife Hazards.

3.7.1 Operational notifications include active correspondence addressing wildlife issues on or near an airport, notifications and alerts. If an existing land-use practice creates a wildlife hazard and the land-use practice or wildlife hazard cannot be immediately eliminated, airport operators must issue a Notice to Airmen (NOTAM) and encourage the land owner or manager to take steps to control the wildlife hazard and minimize further attraction. Permanent attractions that cannot be eliminated or mitigated may be noted in the Airport/Facility Directory. NOTAMS and Airport/Facility Directory notifications are not appropriate for short-term or immediate advisories that can be relayed via Pilot Reports, direct air traffic control voice communications, or temporary Automated Terminal Advisory System alerts. Care should be given to avoid the continual broadcast of general warnings for extended periods of time. General warnings such as "birds in the vicinity of the aerodrome" offer little timely information to aid pilots and eventually may be ignored if not updated.

3.7.2 The Automated Terminal Advisory System (ATIS) is a continuous broadcast of recorded aeronautical information for aerodromes and their immediate surroundings. ATIS broadcasts contain essential information, such as current weather information,

active runways, available approaches, wildlife hazards and any other information required by the pilots. They indicate significant (moderate or severe) wildlife activity, as reported by an approved agency that presents temporary hazards on the ATIS broadcast. Pilots take notice of available ATIS broadcasts before contacting the local control unit, which reduces the controllers' workload and relieves frequency congestion. The recording is updated in fixed intervals or when there is a significant change in the information. Although ATIS broadcasts involving wildlife should be timely and specific, pilots do not need to know species-specific information. General descriptive information detailing size and number of animals, locations and timing of occurrence provides useful, actionable information for pilots.

3.7.3 A pilot report (PIREP) is reported by a pilot to indicate encounters of hazardous weather (e.g., icing or turbulence) and hazardous wildlife. Pilot reports are short-lived warnings providing immediate information on pilot observations that are transmitted in real-time to air traffic control. Large animals near active surfaces, soaring vultures and raptors within approach/ departure corridors and waterfowl such as geese feeding in grassy areas next to runways are all examples of pilot reports generated by pilots.

3.8 Federal and State Depredation Permits.

The FAA recommends that airports maintain federal and state depredation permits to allow mitigation and/ or removal of hazardous species. All protected species require special permits for lethal mitigation or capture and relocation procedures. Similarly, endangered or threatened species mitigation also requires special permits. The FAA recommends that airports work closely with a Qualified Airport Wildlife Biologist during the U.S. Fish and Wildlife Service consultation and permitting process. The following Orders can help airports reduce risks from hazardous species by allowing private citizens to control hazardous species off airport properties without the need for a Federal depredation permit.

3.8.1 Standing Depredation Orders.

3.8.1.1 Federal law allows people to protect themselves and their property from damage caused by migratory birds. Provided no effort is made to kill or capture the birds, a depredation permit is not required to merely scare or herd depredating migratory birds other than endangered or threatened species or bald or golden eagles (50 CFR 21.41).

3.8.1.2 In addition, certain species of migratory birds may be mitigated without a federal permit under specific circumstances, many of which relate to agricultural situations. The following Standing Depredation Orders have applicability near airports:

- 50 CFR § 21.49- Control Order for Resident Canada Geese at Airports and Military Airfields.
- 50 CFR § 21.50- Depredation Order for Resident Canada Geese Nests and Eggs.

- 50 CFR § 21.43 - Depredation Order for Blackbirds, Cowbirds, Crows, Grackles, and Magpies.
- 50 CFR § 21.54 - Control Order for Muscovy Ducks in the United States.
- 50 CFR § 21.55 - Control Order for Invasive Migratory Birds in Hawaii.

Page Intentionally Blank

CHAPTER 4. RECOMMENDED PROCEDURES FOR THE FAA, AIRPORT OPERATORS AND OTHER GOVERNMENT ENTITIES REGARDING OFF-AIRPORT ATTRACTANTS

4.1 FAA Notification and Review of Proposed Land-Use Practice Changes in the Vicinity of Public-Use Airports.

4.1.1 For projects that are located within 5 miles of the airport's aircraft operations area, the FAA may review development plans, proposed land-use changes, operational changes, major federal actions or wetland mitigation plans to determine if such changes increase risk to airport safety by attracting hazardous wildlife on and around airports. The FAA is not a permitting agency for land use modifications that occur off airport properties, therefore, such reviews are typically initiated by state or federal permitting agencies seeking FAA input on new or revised permits. Each of the land uses listed in Chapter 2 of this AC has the potential to pose a risk to airport operations when they are located within the separation distances provided in Paragraphs 1.2 through 1.4.

4.1.2 Off-site land use modifications near airports may include an assessment of risk for facilities and land-use changes and, if necessary, mitigation strategies that may reduce risk to an acceptable level. However, the FAA recognizes that individual facilities or land-use modifications may present a range of attractants to different species, resulting in varying levels of risk. Therefore, the FAA considers each proposal on a case-by-case basis.

4.1.3 The FAA analyzes each land-use modification or new facility proposal prior to its establishment or any significant planned changes to design or operations that may increase the risk level. As part of a review, the FAA considers several factors that include, but are not limited to:

1. Type of attractant;
2. Size of attractant;
3. Location/distance of attractant from airport;
4. Design (e.g., construction, material, mitigation techniques employed into design);
5. Operation (e.g., cleanliness, constancy/ volume of use, seasonality, time of day);
6. Monitoring protocols (e.g., frequency, documentation, evaluation, species identification and number thresholds that trigger actions of communication or mitigation, baseline wildlife data);
7. Mitigation protocols (e.g., responsibilities, methods, intensity, pre-determined objectives, documentation, evaluation); and
8. Communication protocols to airport and/ or air traffic control tower;

4.1.4 The review of these factors may result in FAA recommended additions or modifications to a conditional use permit that allows the permitting agency to track compliance with the permittee obligations. Such conditions placed within a permit

may involve a comprehensive outline and recognition of individuals responsible for monitoring, communication, and mitigation measures if certain action thresholds are met. Action thresholds are defined in this instance as those pre-determined parameters (e.g., number, location, behavior, time of day) of specific hazardous species that would trigger a mitigation response. Additionally, baseline data should be used to determine the effect, if any, on wildlife populations at the proposed off-site location and/or at the airport.

4.1.5 Baseline data may need to be collected, depending on the existence of useful data and timeline for site modification. If, after taking into account the factors above, FAA determines that a facility poses a significant risk to airport safety, FAA will object to its establishment or renewal.

4.1.6 For projects that are located within 5 miles of the airport's aircraft operations area, the FAA Airport District Office may review development plans, proposed land-use changes, operational changes, major federal actions or wetland mitigation plans to determine if such changes present potential wildlife hazards to aircraft operations. The FAA considers sensitive airport areas as those that lie under or next to approach or departure airspace. This brief examination should indicate if further investigation is warranted.

4.1.7 Where a Qualified Airport Wildlife Biologist has conducted a further study to evaluate a site's compatibility with airport operations, the FAA may use the study results to make a determination.

4.2 Waste Management Facilities.

4.2.1 Notification of New/Expanded Project Proposal.

4.2.1.1 49 U.S.C. § 44718(d), prohibits the construction or establishment of new municipal landfills within 6 miles of certain public-use airports, when both the airport and the landfill meet specific conditions. See Paragraph 2.2 of this guidance for a more detailed discussion of these restrictions.

4.2.1.2 The Environmental Protection Agency (EPA) requires any landfill operator proposing a new or expanded waste disposal operation within 5 miles of a runway end to notify the appropriate FAA Regional Airports Division Office and the airport operator of the proposal. See 40 CFR § 258, *Criteria for Municipal Solid Waste Landfills,* Section 258.10, *Airport Safety*. The EPA also requires owners or operators of new landfill units, or lateral expansions of existing MSWLF landfill units, that are located within 10,000 feet of any airport runway end used by turbine-powered aircraft, or within 5,000 feet of any airport runway end used only by piston-type aircraft, to demonstrate successfully that such units are not hazards to aircraft. (See 4.3.2 below.)

4.2.1.3 When new or expanded municipal landfills are being proposed near airports, landfill operators must notify the airport operator and the FAA of the proposal as early as possible pursuant to 40 CFR § 258.

4.2.1.4 The FAA discourages the development of waste disposal and other facilities, discussed in Chapter 2, located within the separation criteria specified in Paragraphs 1.2 through 1.4. To show that a waste-handling facility sited within the separations identified in Paragraphs 1.2 through 1.4 does not attract hazardous wildlife and does not threaten aviation, the developer must establish the facility will not handle putrescible material other than that as outlined in 2.2.4. The FAA recommends against any facility other than those outlined in 2.2.4 (enclosed transfer stations). The FAA will use this information to determine if the facility will be a hazard to aviation.

4.3 Other Land-Use Practice Changes.

4.3.1 The FAA encourages operators of public-use airports who become aware of proposed land use practice changes that may attract hazardous wildlife within 5 miles of their airports to notify their assigned Airport Certification Safety Inspector or Airports District Office Program Manager. The FAA also encourages proponents of such land use changes to notify the FAA as early in the planning process as possible. Advanced notice affords the FAA an opportunity (1) to evaluate the effect of a particular land-use change on aviation safety and (2) to support efforts by the airport sponsor to restrict the use of land next to or near the airport to uses that are compatible with the airport.

4.3.2 The airport operator, project proponent, or land-use operator may use FAA Form 7460-1, Notice of Proposed Construction or Alteration, or other suitable documents similar to FAA Form 7460-1 to notify the appropriate FAA Regional Airports Division Office. Project proponents can contact the appropriate FAA Regional Airports Division Office for assistance with the notification process prior to submitting Form 7460-1.

4.3.3 It is helpful if the notification includes a 15-minute quadrangle map of the area identifying the location of the proposed activity. The land-use operator or project proponent should also forward specific details of the proposed land-use change or operational change or expansion. In the case of solid waste landfills, the information should include the type of waste to be handled, how the waste will be processed, and final disposal methods.

4.3.4 Airports that have Received Federal Assistance.

Airports that have received Federal assistance are required under their grant assurances to take appropriate actions to restrict the use of land next to or near the airport to uses that are compatible with normal airport operations. See Grant Assurance 21. The FAA recommends that airport operators oppose off-airport land-use changes or practices, to

the extent practicable, within the separations identified in Paragraphs 1.2 through 1.4, which may attract hazardous wildlife. Failure to do so may lead to noncompliance with applicable grant assurances. The FAA will not approve the placement of airport development projects pertaining to aircraft movement in the vicinity of hazardous wildlife attractants without appropriate mitigating measures. Increasing the intensity of wildlife control efforts is not a substitute for preventing, eliminating or reducing a proposed wildlife hazard. Airport operators should identify hazardous wildlife attractants and any associated wildlife hazards during any planning process for airport development projects.

4.4 Coordination to Prevent Creation of New Off-Airport Hazardous Wildlife Attractants.

Airport operators should work with local and regional planning and zoning boards to be aware of proposed land-use changes, or modification of existing land uses, that could create hazardous wildlife attractants within the separations identified in Paragraphs 1.2 through 1.4. Pay particular attention to proposed land uses involving creation or expansion of wastewater treatment facilities, development of wetland mitigation sites, or development or expansion of dredge spoil containment areas. At the very least, it is recommended that airport operators are on the notification list of the local planning board or equivalent review entity for all communities located within 5 miles of the airport, so they will receive notification of any proposed project and have the opportunity to review it for attractiveness to hazardous wildlife. This may be accomplished through one or more of the following:

4.4.1 Site-specific Criteria.

The airport should establish site-specific criteria for assessment of land uses attractive to hazardous wildlife and locations that would be of concern based on wildlife strikes and on wildlife abundance and activity at the airport and in the local area. These criteria may be more selective, but should not be less restrictive than this guidance.

4.4.2 Outreach.

Airports should actively seek to provide educational information and/ or provide input regarding local development, natural resource modification or wildlife-related concerns that affect wildlife hazards and safe air travel.

4.4.2.1 External Outreach.

Airport operators and a Qualified Airport Wildlife Biologist should consider outreach to local planning and zoning organizations on land uses of concern or to local organizations responsible for natural resource management (including wildlife, wetlands, and parks.) Airports should also consider developing and distributing position letters and educational materials on airport-specific concerns regarding wildlife hazards, wildlife activity and attraction. Finally, airports should provide formal comments on local procedures, laws, ordinances, plans, and regulatory actions such as permits related to land uses of concern.

4.4.2.2 **Internal Outreach.**

Airports should consider developing and distributing position letters and educational materials on airport-specific concerns regarding species identification and mitigation procedures, wildlife hazards, wildlife activity and attraction to employees and personnel with access to the aircraft operations area.

4.5 Coordination on Existing Off-Airport Hazardous Wildlife Attractants.

Airports are encouraged to work with landowners and managers to cooperatively develop procedures to monitor and manage hazardous wildlife attraction. If applicable, these procedures may include:

1. Conducting a wildlife hazard site visit by a wildlife biologist meeting the qualification requirements of Advisory Circular 150/5200-36, *Qualifications for Wildlife Biologist Conducting Wildlife Hazard Assessments and Training Curriculums for Airport Personnel Involved in Controlling Wildlife Hazards on Airports*
2. Conducting regular, standardized, wildlife monitoring surveys;[4]
3. Establishing threshold numbers of wildlife which would trigger certain actions and/or communications;
4. Establishment of procedures to deter or remove hazardous wildlife.

4.6 Prompt Remedial Action.

For attractants found on and off airport property, and with landowner or manager cooperation, Part 139 certificated airports must take immediate action in accordance with their Airport Certification Manual and the requirements of Part 139.337, to alleviate wildlife hazards whenever they are detected. It is also recommended that non-certificated airports take immediate action to alleviate wildlife hazards whenever they are detected. In addition, airports should take prompt action to identify the source of attraction and cooperatively develop procedures to mitigate and monitor the attractant. **For Part 139 Certificated airports, immediate actions are required in accordance with 139.337(a).**

4.7 FAA Assistance.

If there is a question on the implementation of any of the guidance in this section, contact the FAA Regional Airports Division for assistance.

---

[4] Recommended survey protocols can be found in AC 150/5200-38, *Protocol for the Conduct and Review of Wildlife Hazard Site Visits, Wildlife Hazard Assessments, and Wildlife Hazard Management Plans,* and DeVault, T.L., B.F. Blackwell, and J.L. Belant, eds. 2013. *Wildlife in Airport Environments: Preventing Animal–Aircraft Collisions through Science-Based Management.* Johns Hopkins University Press, Baltimore, MD, USA. 181 pp.

4.7.1 Airport Documentation Procedures.

Airports should document on-site and off-site wildlife attractants as part of their "Wildlife Hazard Management Plan Annual Review," "Wildlife Hazard Management Plan Review Following a Triggering Event," and the airport's Continual Monitoring Annual Report (as outlined in FAA Advisory Circular 150/5200-38). As a best management practice, airports may choose to keep a log to track contacts from landowners or managers, permitting agencies, or other entities concerning land uses near the airport.

APPENDIX A. DEFINITIONS OF TERMS USED IN THIS ADVISORY CIRCULAR

A.1 **General.**

This appendix provides definitions of terms used throughout this AC.

1. **Air operations area.** Any area of an airport used or intended to be used for landing, takeoff, or surface maneuvering of aircraft. An air operations area includes such paved areas or unpaved areas that are used or intended to be used for the unobstructed movement of aircraft in addition to its associated runway, taxiways, or apron.
2. **Airport operator.** The operator (private or public) or sponsor of a public-use airport.
3. **Approach or departure airspace.** The airspace, within 5 statute miles of an airport, through which aircraft move during landing or takeoff.
4. **Bird balls.** High-density plastic floating balls that can be used to cover ponds and prevent birds from using the sites.
5. **Certificate holder.** The holder of an Airport Operating Certificate issued under 14 C.F.R. Part 139.
6. **Construct a new municipal landfill.** To begin to excavate, grade land, or raise structures to prepare a municipal solid waste landfill as permitted by the appropriate regulatory or permitting agency.
7. **Detention ponds.** Storm water management ponds that hold storm water for short periods of time, a few hours to a few days.
8. **Establish a new municipal landfill.** When the first load of putrescible waste is received on-site for placement in a prepared municipal solid waste landfill.
9. **Fly ash.** The fine, sand-like residue resulting from the complete incineration of an organic fuel source. Fly ash typically results from the combustion of coal or waste used to operate a power generating plant.
10. **General aviation aircraft.** Any civil aviation aircraft operating under 14 CFR Part 91.
11. **Hazardous wildlife.** Species of wildlife (birds, mammals, reptiles), including feral and domesticated animals, not under control that may pose a direct hazard to aviation (i.e., strike risk to aircraft) or an indirect hazard such as an attractant to other wildlife that pose a strike hazard or are causing structural damage to airport facilities (e.g., burrowing, nesting, perching).
12. **Municipal Landfill.** A publicly or privately owned discrete area of land or an excavation that receives household waste and that is not a land application unit, surface impoundment, injection well, or waste pile, as those terms are defined under 40 CFR § 257.2. A municipal landfill may receive other types wastes, such as commercial solid waste, non-hazardous sludge, small-quantity generator waste, and

industrial solid waste, as defined under 40 CFR § 258.2. A municipal landfill can consist of either a stand-alone unit or several cells that receive household waste.

13. **New municipal landfill.** A municipal solid waste landfill that was established or constructed after April 5, 2001.
14. **Piston-powered aircraft.** Fixed-wing aircraft powered by piston engines.
15. **Piston-use airport.** Any airport that does not sell Jet-A fuel for fixed-wing turbine-powered aircraft, and primarily serves fixed-wing, piston-powered aircraft. Incidental use of the airport by turbine-powered, fixed-wing aircraft would not affect this designation. However, such aircraft should not be based at the airport.
16. **Public agency.** A state or political subdivision of a state, a tax-supported organization, or an Indian tribe or pueblo (49 U.S.C. § 47102(19)).
17. **Public airport.** An airport used or intended to be used for public purposes that is under the control of a public agency; and of which the area used or intended to be used for landing, taking off, or surface maneuvering of aircraft is publicly owned (49 U.S.C. § 47102(20)).
18. **Public-use airport.** An airport used or intended to be used for public purposes where the area used or intended to be used for landing, taking off, or surface maneuvering of aircraft may be under the control of a public agency or privately owned and used for public purposes (49 U.S.C. § 47102(21)).
19. **Putrescible waste.** Solid waste that contains organic matter capable of being decomposed by micro-organisms and of such a character and proportion as to be capable of attracting or providing food for birds (40 CFR §257.3-8).
20. **Putrescible-waste disposal operation.** Landfills, garbage dumps, underwater waste discharges, or similar facilities where activities include processing, burying, storing, or otherwise disposing of putrescible material, trash, and refuse.
21. **Retention ponds.** Storm water management ponds that hold water for more than 48 hours.
22. **Risk**. Risk is the relationship between the severity and probability of a threat. It is the product of hazard level and abundance in the critical airspace, and is thus defined as the probability of a damaging strike with a given species.
23. **Runway protection zone.** An area off the runway end to enhance the protection of people and property on the ground (see AC 150/5300-13). The dimensions of this zone vary with the airport design, aircraft, type of operation, and visibility minimum.
24. **Scheduled air carrier operation.** Any common carriage passenger-carrying operation for compensation or hire conducted by an air carrier or commercial operator for which the air carrier, commercial operator, or their representative offers in advance the departure location, departure time, and arrival location. It does not include any operation that is conducted as a supplemental operation under 14 CFR Part 119 or as a public charter operation under 14 CFR Part 380 (14 CFR § 119.3).

25. **Sewage sludge.** Any solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage; scum or solids removed in primary, secondary, or advanced wastewater treatment process; and a material derived from sewage sludge. Sewage does not include ash generated during the firing of sewage sludge in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewage in a treatment works. (40 CFR § 257.2)
26. **Sludge.** Any solid, semi-solid, or liquid waste generated form a municipal, commercial or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility or any other such waste having similar characteristics and effect. (40 CFR § 257.2).
27. **Solid waste.** Any garbage, refuse, sludge, from a waste treatment plant, water supply treatment plant or air pollution control facility and other discarded material, including, solid liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, and agricultural operations, and from community activities, but does not include solid or dissolved materials in domestic sewage, or solid or dissolved material in irrigation return flows or industrial discharges which are point sources subject to permits under section 402 of the Clean Water Act, or source, special nuclear, or by product material as defined by the Atomic Energy Act of 1954.(40 CFR § 257.2).
28. **Turbine-powered aircraft.** Aircraft powered by turbine engines including turbojets and turboprops but excluding turbo-shaft rotary-wing aircraft.
29. **Turbine-use airport.** Any airport that sells fuel for fixed-wing turbine-powered aircraft.
30. **Wastewater treatment facility.** Any devices and/or systems used to store, treat, recycle, or reclaim municipal sewage or liquid industrial wastes, including publicly owned treatment works, as defined by Section 212 of the Clean Water Act. This definition includes any pretreatment involving the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a publicly owned treatment system. (See 40 CFR § 403.3 (q), (r), & (s)).
31. **Wildlife.** Any wild animal, including without limitation any wild mammal, bird, reptile, fish, amphibian, mollusk, crustacean, arthropod, coelenterate, or other invertebrate, including any part, product, egg, or offspring thereof. 50 CFR § 10.12. As used in this AC, wildlife includes feral animals and domestic animals out of the control of their owners (14 CFR Part 139, Certification of Airports).
32. **Wildlife attractants.** Any human-made structure, land-use practice, or human-made or natural geographic feature that can attract or sustain hazardous wildlife within the landing or departure airspace or the airport's aircraft operations area. These attractants can include architectural features, landscaping, waste disposal sites, wastewater treatment facilities, agricultural or aquaculture activities, surface mining, or wetlands.

33. **Wildlife hazard.** A potential for a damaging aircraft collision with wildlife on or near an airport.

34. **Wildlife strike.** A wildlife strike is deemed to have occurred when:

    a. A strike between wildlife and aircraft has been witnessed;

    b. Evidence or damage from a strike has been identified on an aircraft;

    c. Bird or other wildlife remains, whether in whole or in part, are found:

        i. Within 250 feet of a runway centerline or within 1,000 feet of a runway end unless another reason for the animal's death is identified or suspected, unless another reason for the animal's death is identified or;

        ii. On a taxiway or anywhere else on or off airport that there is reason to believe was the result of a strike with an aircraft.

    d. The presence of birds or other wildlife on or off the airport had a significant negative effect on a flight (i.e., aborted takeoff, aborted landing, high-speed emergency stop, aircraft left pavement area to avoid collision with animal).

16. Abstract

Wildlife collisions (wildlife strikes) with aircraft pose a serious risk to aircraft and cost civil aviation in the United States an estimated $490 million annually. Traditional putrescible-waste landfills are very attractive to and are used by many birds, especially gulls, creating a hazard to aircraft if located near airports. The Federal Aviation Administration currently recommends that the location of municipal solid waste landfills and trash-transfer facilities should not be within 5 statute miles of an airport. Little information is available regarding the attractiveness of trash-transfer facilities to wildlife and the potential risk to aviation, particularly on a national scale. The objectives of this study were to (1) document wildlife use of trash-transfer facilities and (2) determine if the building design or the on-site management characteristics of trash-transfer facilities influence their attractiveness to wildlife species. Twenty-nine trash-transfer facilities and four control sites, located in seven states (representative of various U.S. geographical regions) were studied. Wildlife (primarily birds) abundance and activity were quantified at each facility and control site twice per week for 1 year. Patterns of wildlife use at these facilities differed by building design, season, geographic location, and on-site management characteristics. Bird species that are hazardous to aviation commonly observed using trash-transfer facilities (e.g., feeding) included European starlings, gulls, rock pigeons, and crows.

Overall, the findings from this study demonstrate that wildlife use of trash-transfer facilities, particularly by bird species that are hazardous to aviation, can be significant and potentially increase the risk of bird strikes within airport environments. Consequently, trash-transfer facilities in close proximity to airport environments should be evaluated on an individual basis to determine whether or not they are attractive to or influence the movement patterns of wildlife and if the location of such a facility increases the risk to safe aircraft operations. Appropriate wildlife control activities could be conducted at trash-transfer facilities to reduce the wildlife attraction and thus decrease the risk of bird strikes associated with those facilities.

EXECUTIVE SUMMARY

Wildlife collisions (wildlife strikes) with aircraft pose a serious risk to aircraft and cost civil aviation in the United States an estimated $490 million annually. Traditional putrescible-waste landfills are very attractive to, and are used by, many birds (especially gulls) for feeding, creating a hazard to aircraft if located near airports. The Federal Aviation Administration currently recommends that the location of municipal solid waste landfills and trash-transfer facilities should not be within 5 statute miles of an airport. Little information is available regarding the attraction of trash-transfer facilities to wildlife and the potential risk to aviation, particularly on a national scale. The objectives of this study were to (1) document wildlife use of trash-transfer facilities and (2) determine if the building design or the on-site management characteristics of the trash-transfer facilities influenced the attractiveness to wildlife species. Twenty-nine trash-transfer facilities and four control sites, located in seven states (representative of various U.S. geographical regions), were studied. Wildlife (primarily birds) abundance and activity were quantified at each facility and control site twice per week for 1 year.

The movement patterns of wildlife use at these facilities differed by geographic location, building design, and on-site management characteristics. Bird species hazardous to aviation commonly observed using trash-transfer facilities for feeding included gulls, European starlings, rock pigeons, and crows.

Overall, the findings from this study demonstrate that wildlife use of trash-transfer facilities, particularly by bird species hazardous to aviation, can be significant. Thus, trash-transfer facilities represent potential wildlife attractants that should be evaluated during wildlife hazard assessments and other evaluations within airport environments. In addition, this study suggests that several factors, including building design, season, geographic location, and on-site management practices can influence wildlife use of trash-transfer facilities. Consequently, trash-transfer facilities in close proximity to airport environments should be evaluated on an individual basis to determine whether or not they attract wildlife and if the location of such a facility increases the risk to safe aircraft operations.

1. INTRODUCTION.

Collisions between aircraft and wildlife generally have been termed bird or wildlife strikes. Wildlife strikes to the civil aviation industry in the United States are both costly (estimated annual costs range from $101 to $503 million) and deadly (nine fatalities since 1990 [1]). Worldwide, wildlife strikes have caused more than 147 human fatalities and destroyed approximately 120 aircraft since 1990 [2 and 3]. Overall, it is estimated that the worldwide cost of wildlife strikes to the aviation industry is about $1.2 billion per year [4]. Most wildlife strikes occur near airports, with approximately 74% of all bird strikes occurring below 150 m above ground level (AGL) and 92% at or below 900 m AGL [1]. Gulls (Larus spp.); waterfowl, such as Canada geese (Branta canadensis); hawks (Falconiformes); and owls (Strigiformes); and blackbirds (Icteridae)/starlings (Sturnus vulgaris), in particular, are of great concern at airports [1, 5, and 6]. Habitat management techniques that reduce birds on and around airports are therefore critical for safe airport operations.

Traditional putrescible-waste landfills are very attractive to and are used by many birds, especially gulls, creating a hazard to aircraft if located near airports [7 and 8]. The Federal Aviation Administration (FAA) currently recommends that the location of municipal solid waste landfills and trash-transfer facilities should not be within 5 statute miles of an airport [9 and 10]. There has been an increase in the number of trash-transfer facilities, a trend that will likely continue into the future. Consequently, there is a concern that these facilities attract bird species hazardous to aviation. If trash-transfer facilities serve as attractants for gulls and other birds, as do landfills, the presence of these facilities near airports could increase the risk to aircraft operations [7, 11, 12, and 8]. Little information is available regarding how attractive trash-transfer facilities are to birds. Previous studies [4 and 13] compared two waste management facilities in one county in both Ohio and New Jersey, respectively, and found that birds used trash-transfer facilities less than landfills. Unfortunately, both studies involved only two facilities in each county.

Whether the design of an open-sided, fully enclosed trash-transfer facility is attractive to hazardous bird species, particularly at the national scale, is currently unknown. The objective of this study was to examine various designs of trash-transfer facilities located in different geographic regions of the country (northeast, midwest, southwest, and northwest) by comparing more than 20 facilities. This provided important information to the FAA concerning how attractive trash-transfer facilities are to bird species.

The specific objectives of this study were to (1) determine if trash-transfer facilities attract wildlife species (primarily birds) and (2) determine if the design characteristics of trash-transfer facilities influence the attractiveness to bird species. The null hypothesis is that bird use was not different among trash-transfer facilities of various designs. The information provided by this study will be useful in determining if and what type of trash-transfer facilities are compatible with safe aircraft operations. The National Wildlife Research Center (NWRC) Institutional Animal Care and Use Committee approved the procedures before beginning the study.

2. METHODS.

Trash-transfer facilities of various designs were inventoried in seven states (Arizona, Ohio, Massachusetts, Connecticut, Washington, California, and Missouri), representing different geographic regions of the United States. From these inventories, 29 trash-transfer facilities and four grocery stores were selected as control sites (table 1). Although there were considerable variations in building design, the trash-transfer facilities were categorized as either completely open, three-sided open, three-sided bays, semi-enclosed, or fully enclosed. Completely open trash-transfer facilities had no walls or were surrounded by a chain-link fence (figure 1). A three-sided open trash-transfer facility had three walls and a fourth side was completely open (figure 2). Three-sided bay facilities had three walls and a fourth side that had a series of bay doors that were left open (figure 3). Semi-enclosed facilities had four walls or chain-link-fenced sides with large openings on two sides of the building (figure 4). Fully enclosed trash-transfer facilities had four walls with doors large enough for trash trucks to enter or exit the facility (figure 5). Control sites (i.e., a grocery store) consisted of a building similar in size and shape to trash-transfer facility buildings, but refuse was typically not present.

Table 1. Trash-Transfer Facilties Summarized by Building Type and State

Building Type	States	Number
Control	Arizona, Connecticut, Ohio, Washington	4
Completely open	Massachusetts, Ohio, Washington	3
Three-sided open	Arizona, Washington	5
Three-sided bays	Arizona, Massachusetts, Missouri, Ohio, Washington	9
Semi-enclosed	Arizona, California, Washington	6
Fully enclosed	Arizona, Connecticut, Massachusetts, Washington	6
Total		33

Figure 3. Three-Sided, Trash-Transfer Facility With Bay Doors

Figure 4. Semi-Enclosed Trash-Transfer Facility

Figure 5. Fully Enclosed Trash-Transfer Facility

At each facility, Wildlife Services biologists and specialists, under the supervision of an NWRC research biologist, conducted 30 minutes of observation (point-counts) that consisted of two 15-minute counts at two predetermined observation locations. The two observation locations were selected to provide a complete view of the facility. Wildlife observations were conducted on two randomly chosen days per week (Monday through Friday) for 1 year at each control site and trash-transfer facility. In total, each facility was surveyed between 44 and 111 days (mean of 94 days) during this period, resulting in an average of 47 hours of observation per facility and a total of 1553 hours for the complete study. These surveys were randomly stratified so that the surveys were conducted evenly during morning (06:00-11:00), midday (11:00-16:00), and evening (16:00-21:00) periods each month at each facility. During each 15-minute survey, the presence, number, and behavior of all birds observed within 0.25 mile of the facility or control site were recorded. The behavior of birds using the site was recorded by species and categorized as (1) pass flying over the site and exhibiting no perceived interest in the site (e.g., soaring turkey vultures riding thermal currents); (2) locally flying over or around the site and exhibiting a perceived interest in the site (e.g., circular flight pattern with head movement suggesting the search for food); (3) loafing on the ground; (4) feeding on the ground; (5) loafing on a refuse transport vehicle; (6) feeding on a refuse transport vehicle; (7) loafing on or in the trash-transfer facility; and (8) feeding on or in the trash-transfer facility. If the birds exhibited different behaviors during the 15-minute period, each activity was recorded. Birds that left the area (i.e., flew out of the sight of the observer) and returned during the same 15-minute period were considered new birds.

During each 15-minute survey, wildlife biologists also counted the number of commercial (i.e., curbside refuse collection trucks) and private (e.g., pickup trucks and trailers) trucks that were present or arrived at the facility. Any instances when refuse "fell off or out of" trash trucks were also recorded. In addition, at the start of each survey, the observer assessed the amount of uncontained refuse that was outside the building (e.g., on the ground) and available to wildlife and recorded this information in four site-rating categories: "none," "slight," "moderate," or "heavy." The percentage of times the amount of uncontained refuse was categorized into each site-rating level was calculated for each facility.

Site-specific management information, including the average tons of refuse per day processed at the facility, the size of the building or work area, whether or not rodent control was used on-site, and whether or not odor control was used, was obtained from the onsite manager for each trash-transfer facility. In addition, the linear distance (in km) from the facility to the nearest major body of water (e.g., ocean, lake, or major river) was determined for each trash-transfer facility and control site.

For the purpose of data analyses and because these observations were not independent, the two 15-minute surveys conducted at each facility each day were summed to provide a single 30-minute survey. To limit consideration only to birds that were actually using the trash-transfer facilities, birds with the "pass flying," "locally flying," "loafing on the ground," and "feeding on the ground" activity codes were removed from the data prior to subsequent statistical analyses. The bird observation data were not normally distributed and could not be transformed satisfactorily. Therefore, bird use among trash-transfer facilities and control sites by all birds, gulls, and European starlings was compared using the Kruskal-Wallis tests [14]. Correlation analyses were used to determine if relationships existed between trash-transfer characteristics (e.g., building size, distance to major water body) and the mean number of all birds, gulls, and European starlings using trash-transfer facilities [14]. Differences were considered statistically significant according to a value of $P \leq 0.05$, where P is defined as the probability that the correlation observed in the data would have been observed by chance if in fact the correlation did not exist. All analyses were conducted using statistical analysis system (SAS) software version 9.1 (SAS Institute, Cary, NC). Data are presented as mean ±1 standard error.

3. RESULTS.

3.1 WILDLIFE OBSERVATIONS.

At the 29 trash-transfer facilities studied during the 1-year period, 771,586 birds, representing 108 species, were observed during 2,716 thirty-minute surveys, or on average, 284.1 birds per survey. At the four grocery stores (i.e., control sites) studied during the same time period, 37,115 birds, representing 40 species, were observed during 390 thirty-minute surveys, or on average, 95.2 birds per survey.

European starlings, gulls, rock pigeons, and crows were the bird species/groups most frequently observed near and using the trash-transfer facilities and control sites during this study (table 2).

Starlings and gulls accounted for 78.1% of all birds observed during the study and 78.8% of the birds observed actually using the trash-transfer facilities and control sites.

Table 2. Total Number of Birds Observed and Number of Birds Using Trash-Transfer Facilities by Species

Species/Group	Total Number Observed[a]	Percent of All Birds Observed[b]	Total Number Observed Using[c]	Percent of All Birds Using[d]
European starlings	448,044	55.4	195,340	50.2
Gulls	183,558	22.7	111,138	28.6
Rock pigeons	56,674	7.0	33,161	8.5
Corvids	40,641	5.0	22,839	5.9
House sparrows	33,911	4.2	12,998	3.3
Blackbirds	25,661	3.2	8,768	2.3
Egrets and Herons	5,989	0.7	3,756	1.0
Doves	5,116	0.6	392	0.1
Vultures	956	0.1	125	<0.1
Raptors	538	0.1	25	<0.1
Other species	7,570	0.9	370	0.1
Total	808,702		388,920	

[a] Total number of birds observed (includes all activities) at all facilities
[b] Percent of all birds observed (includes all activities) of each species/group
[c] Total number of birds observed using trash-transfer facilities and control buildings (includes only activities associated with trash-transfer buildings, trucks, and refuse piles)
[d] Percent of all birds observed using trash-transfer facilities and control buildings (includes only activities associated with trash-transfer buildings, trucks, and refuse piles) of each species/group

One fully enclosed trash-transfer facility had an average of 1344.6 birds using the facility per 30-minute survey, more than 4 times higher than the mean number of birds using any of the other fully enclosed facilities (figure 6). The mean number of birds using fully enclosed trash-transfer stations was 322.5 ±41.6 birds per survey. The average number of gulls and European starlings using fully enclosed trash-transfer stations were 51.4 ±7.0 per survey and 250.4 ±40.0 per survey, respectively. Because this facility likely had an overriding influence and biased the data, the bird observation data from this facility were removed for the "building type" analyses, and when the bird use data were reanalyzed, the mean number of birds using fully enclosed trash-transfer stations was 85.2 ±8.3 birds per survey. The average number of gulls and European starlings using fully enclosed trash-transfer stations were then 61.1 ±4.3 per survey and 20.3 ±4.3 per survey, respectively.

The mean number of birds using trash-transfer facilities of various building designs (ranging from 58.0 to 120.0 total birds observed per 30-minute survey) was 2.6 to 5.4 times higher than the average number of total birds observed using control sites (0 = 22.1 birds per survey; table 3). This frequency distribution suggests statistical significance with values of $\chi^2 = 286.8$ (where

χ^2 is a statistical calculation used to test how well the distribution of a set of observed data matches a theoretical probability distribution. The calculated value is equal to the sum of the squares of the differences divided by the expected values) and P <0.0001. Gulls were observed using trash-transfer facilities (ranging from 26.9 to 69.7 total gulls observed per 30-minute survey) more (χ^2 = 194.4, P <0.0001) than control sites (0 = 1.2 gulls per survey; see table 3). Starlings exhibited a similar pattern; starlings were observed using trash-transfer stations of different building designs (ranging from 9.5 to 46.3 total starlings observed per 30-minute survey) more (χ^2 = 485.2, P <0.0001) than control sites (0 = 0.6 starlings per survey; table 3).

Table 3. Mean Number of Birds Using Trash-Transfer Facilties and Control Sites

Building Type	All Birds[a] Mean ±SE	Gulls[b, c] Mean ±SE	European Starlings Mean ±SE
Control	22.1 ±3.2 A[d]	1.2 ±0.2 A	0.6 ±0.1 A
Completely open	89.0 ±6.7 C	26.9 ±3.5 B	46.3 ±5.3 D
Three-sided, open	58.0 ±4.5 B	37.7 ±4.6 C	9.5 ±1.7 B
Three-sided, bays	85.1 ±5.1 C	60.2 ±5.7 D	26.1 ±2.4 C
Semi-enclosed	120.0 ±13.1 C	69.7 ±11.4 D	12.7 ±1.1 B
Fully enclosed[e]	85.2 ±8.3 C	61.1 ±9.4 D	20.3 ±4.3 C

[a] Consists of the total number of birds of all species.
[b] Consists of the total number of gulls from 8 species.
[c] For analyses of gulls, trash-transfer stations in Arizona and Missouri were excluded as gulls were not observed at facilities in these states.
[d] Means within the same column with the same letter are not different (P >0.05) according to a Kruskal-Wallis test.
[e] One fully enclosed trash-transfer facility was excluded from these analyses due to its overwhelming influence on the data.

SE = Standard error of the mean.

Bird use of trash-transfer facilities varied considerably among those buildings that were of the same design (figure 6). The greatest amount of variation in the number of birds using trash-transfer facilities occurred among the fully enclosed trash-transfer facilities. The largest average number of birds using trash-transfer facilities were at the aforementioned fully enclosed facility (1344.6 ±189.9 birds per survey) and a semi-enclosed trash-transfer facility (630.0 ±63.1 birds per survey). In contrast, four trash-transfer facilities (two of the three-sided bays design and two of the fully enclosed design) had a mean number of birds using the facility less than 3.0 per survey (figure 6).

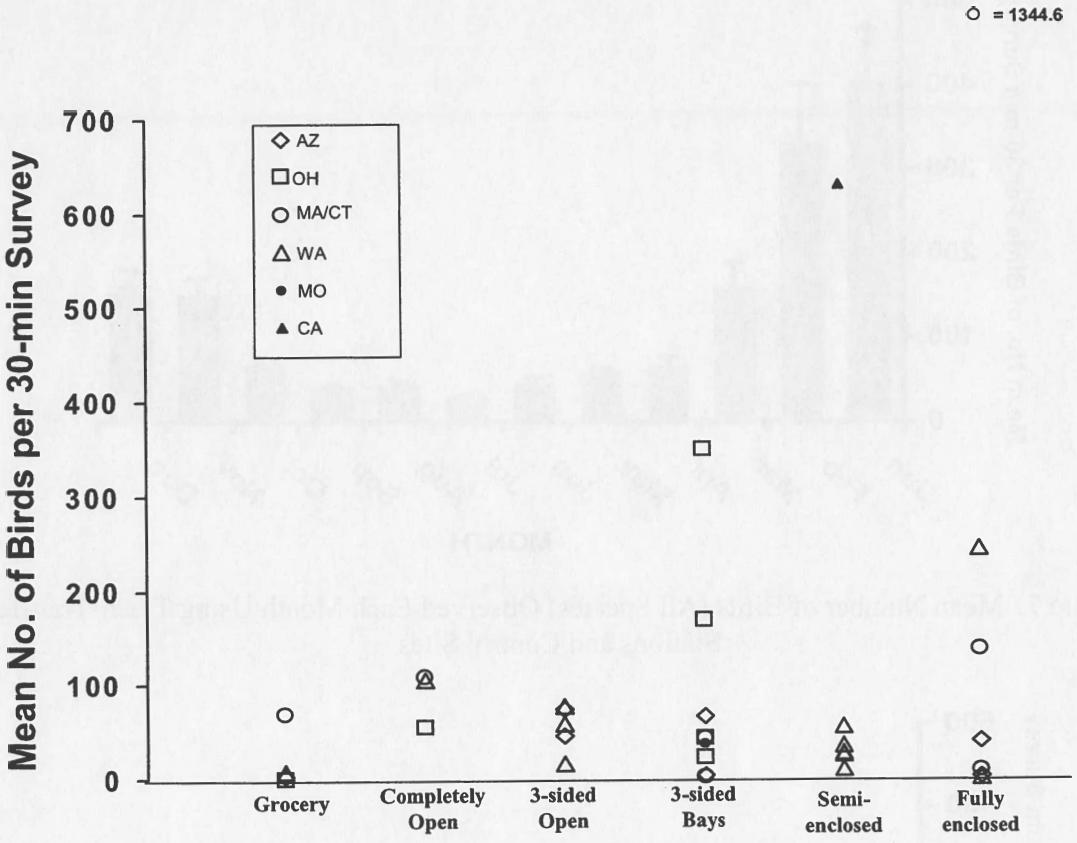

Figure 6. Mean Number of Birds (All Species) Observed Using Trash-Transfer Stations and Control Sites

The average number of birds (all species) observed using trash-transfer sites and control sites varied ($\chi^2 = 200.5$, $P < 0.0001$) seasonally (figure 7). Similarly, use of trash-transfer facilities and control sites by gulls ($\chi^2 = 211.8$, $P < 0.0001$) (figure 8) and European starlings ($\chi^2 = 142.3$, $P < 0.0001$) (figure 9) followed a similar trend. In general, bird use of trash-transfer facilities was highest during the winter months (December to February) and lowest during the summer months (May to August).

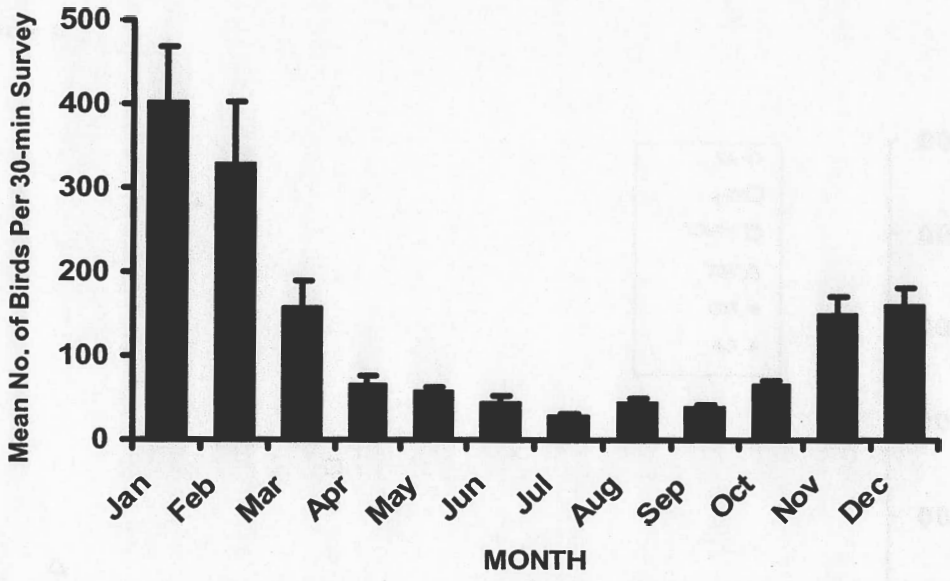

Figure 7. Mean Number of Birds (All Species) Observed Each Month Using Trash-Transfer Stations and Control Sites

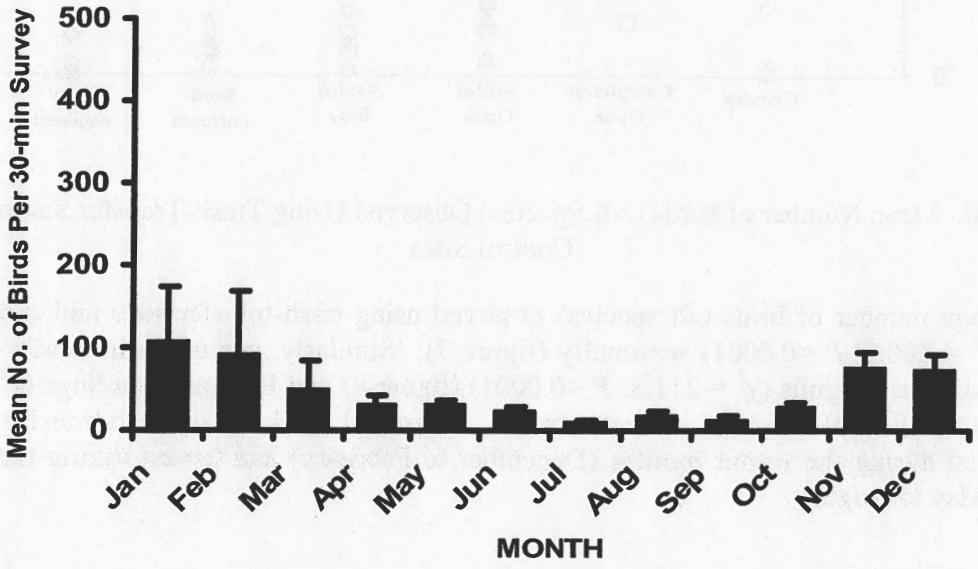

Figure 8. Mean Number of Gulls (Eight Species) Observed Each Month Using Trash-Transfer Stations and Control Sites

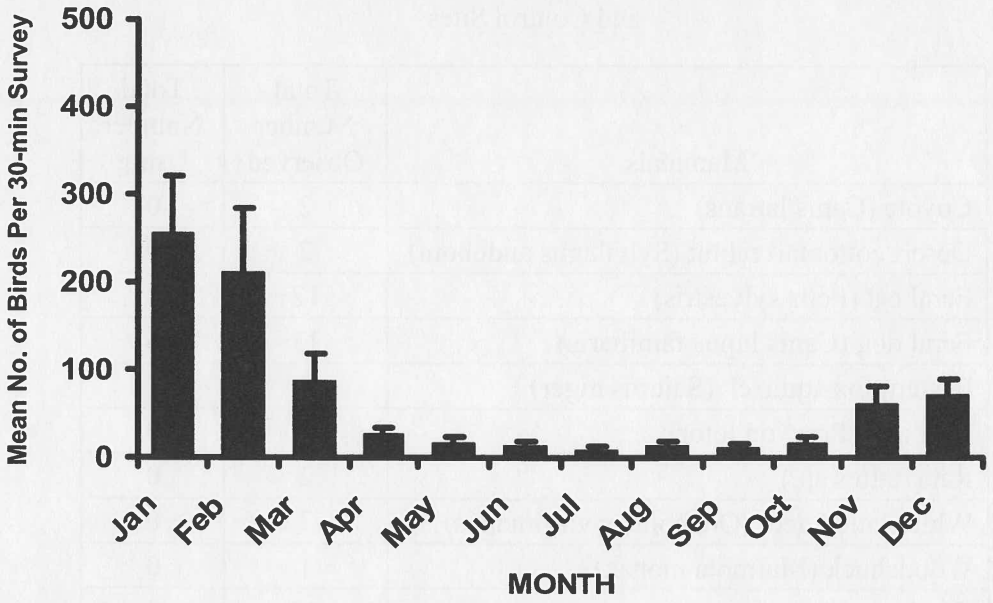

Figure 9. Mean Number of European Starlings Observed Each Month Using Trash-Transfer Stations and Control Sites

The geographic location of the trash-transfer facilities influenced the amount of bird use that was observed during the study. On average, more (χ^2 = 333.0, P <0.0001) birds per 30-minute survey were observed using trash-transfer facilities and control sites in California (630.0 ±2.6 birds per survey), Massachusetts and Connecticut (321.2 ±42.8 birds per survey), and Ohio (106.0 ±6.9 birds per survey) than in Arizona (33.0 ±2.7 birds per survey) and Missouri (36.8 ±9.0 birds per survey); bird use of Washington trash-transfer stations (58.4 ±3.6 birds per survey) was intermediate to other states. The average number of gulls at the California trash-transfer facility (462.7 ±60.7 gulls per survey) was greater (χ^2 = 222.9, P <0.0001) than gull use of trash-transfer facilities and control sites in Massachusetts and Connecticut (11.5 ±1.2 gulls per survey), Ohio (60.5 ±5.5 gulls per survey), and Washington (26.6 ±2.8 gulls per survey). No gulls were observed using trash-transfer stations in Arizona or Missouri.

Similarly, starling use of trash-transfer facilities and control sites differed (χ2 = 620.7, P <0.0001) among states. On average, the highest average number of starlings per survey using trash-transfer facilities was in Massachusetts and Connecticut (277.5 ±40.9 starlings per survey), whereas trash-transfer stations and control sites in Arizona (2.9 ±0.9 starlings per survey) and Washington (9.8 ±0.7 starlings per survey) had the lowest.

Birds accounted for over 99% of all wildlife observed near and using the trash-transfer facilities and control sites during this study. A total of 46 mammals, representing 9 species, were observed near or using the trash-transfer facilities or control sites (table 4). Of these 46 mammals, only 8 (17%) were actually observed using the trash-transfer facilities (e.g., foraging on or in the refuse).

Table 4. Total Number of Mammals Observed Near and Using the Trash-Transfer Facilities and Control Sites

Mammals	Total Number Observed	Total Number Using
Coyote (Canis latrans)	2	0
Desert cottontail rabbit (Sylvilagus auduboni)	2	0
Feral cat (Felis sylvestris)	12	1
Feral dog (Canis lupus familiaris)	13	6
Eastern fox squirrel (Sciurus niger)	4	1
Raccoon (Procyon lotor)	3	0
Rat (Rattus sp.)	2	0
White-tailed deer (Odocoileus virginianus)	7	0
Woodchuck (Marmota monax)	1	0
Total	46	8

3.2 TRASH-TRANSFER FACILITY CHARACTERISTICS.

At the 29 trash-transfer facilities studied during a 1-year period, a total of 27,113 trash trucks were counted. Those trucks included both commercial trash trucks (i.e., curbside refuse collection trucks) and private vehicles (e.g., pickup trucks and small trailers). There was an average of 10.0 trash trucks (commercial and private) per 30-minute survey. Overall, commercial trash trucks accounted for 58.2% of the trucks, whereas private vehicles accounted for 41.8%. The proportion of commercial versus private trash trucks differed among facilities; trash-transfer facilities in Arizona, Missouri, and Ohio had a high proportion of commercial trash trucks (82%-94%), whereas the proportion of private trucks was equal to commercial trucks in Massachusetts and Connecticut. At trash-transfer facilities in Washington, private vehicles accounted for 67.9% of the total trash trucks. Refuse was observed "falling off" from commercial or private trucks only 0.4% of the observations (a total of 129 occasions).

The average number of total birds using trash-transfer facilities was positively correlated with the building size using Pearson's correlation coefficient ($r = 0.445$, $P = 0.02$), tons of trash per day ($r = 0.602$, $P < 0.001$), and the percent of site ratings categorized as "moderate" amount of uncontained refuse on the ground ($r = 0.419$, $P = 0.02$). Similarly, the average number of gulls using trash-transfer facilities was positively correlated with building size ($r = 0.547$, $P = 0.01$) and the percent of site ratings categorized as "heavy" amounts of refuse on the ground ($r = 0.681$, $P < 0.001$). Trash-transfer facility use by European starlings was positively correlated with tons of trash per day ($r = 0.543$, $P = 0.002$) and the percent of site ratings categorized as "moderate" amounts of refuse on the ground ($r = 0.381$, $P = 0.04$). Distance to a major water body and the percent of site ratings categorized as "none" and "slight" amounts of refuse on the ground were not correlated ($P > 0.05$) with bird use of trash-transfer facilities.

The average number of total birds using trash-transfer facilities with an active rodent control program (n = 22; 128.9 ±60.7 birds per survey) was not different ($\chi^2 = 0.84$, $P = 0.36$) than the average number of total birds using trash-transfer facilities without an active rodent control program (n = 7; 139.3 ±82.7 birds per survey). Similarly, the average numbers of total birds using trash-transfer facilities with (n = 8; 214.5 ±163.1 birds per survey) and without (n = 21; 99.8 ±31.8 birds per survey) an odor control program were similar ($\chi^2 = 0.50$, $P = 0.48$).

4. DISCUSSION.

Trash-transfer stations are facilities where municipal solid waste is unloaded from small trucks (e.g., curbside refuse collection trucks) and reloaded into large vehicles (e.g., container trucks) for transport to a final disposal site, such as a landfill [15]. Trash-transfer facilities have the potential to attract wildlife, in particular species of birds that are hazardous to safe aircraft operations. Previous studies of the wildlife use of trash-transfer facilities have been very restricted geographically (i.e., within a single county) and in sample size [13, 8, and 16].

The number of birds using trash-transfer stations differed among facilities of different building type, but not in a consistent pattern. It was originally hypothesized that the number of birds actually using trash-transfer facilities would decrease as the trash-transfer buildings became more enclosed. Trash-transfer facilities with more open walls would be expected to have more bird use as the refuse would potentially be more exposed and available to the birds. However, the data from this study do not support that hypothesis.

The amount of bird use among the trash-transfer facilities varied considerably in this study. Bird use of trash-transfer stations was most variable among facilities of the "three-sided, bays," "semi-enclosed," and "fully enclosed" designs. There were several facilities of these designs that had little to no bird use, whereas other facilities of similar design were apparently very attractive to and thus heavily used by hazardous birds. Consequently, the findings from this study suggest that no one specific building design was associated with limited wildlife use.

Gulls, consisting of eight individual species, accounted for almost one-third of the birds observed using trash-transfer facilities; whereas very few gulls were observed at control sites (i.e., grocery stores). Ring-billed gulls (Larus delawarensis), herring gulls (Larus argentatus), California gulls (Larus californicus), and western gulls (Larus occidentalis) were the most abundant gulls at trash-transfer facilities. The specific gull species present at trash-transfer facilities was dependent on the geographic location of those facilities and the geographic distribution of the gull species themselves. In addition to loafing on trash-transfer station buildings and trash trucks, gulls were often observed actively foraging upon refuse piles within the trash-transfer buildings and amongst moving heavy equipment and trucks. About half of all the birds observed using trash-transfer facilities were European starlings. Starlings and rock pigeons not only loafed on or in trash-transfer buildings and trucks, foraged on refuse piles within trash-transfer buildings or on litter outside of the buildings, but they also nested within the buildings. Crows were frequently observed using trash-transfer facilities, often loafing or feeding on parked trash trucks at the facilities. All these species represent significant hazards to safe aircraft operations [1 and 5] and their use of trash-transfer facilities for loafing and foraging could increase the risk of bird strikes, particularly if these birds traverse critical airspace

frequently used by aircraft and across runways as they travel to and from trash-transfer facilities. This is especially true for gulls. Studies of herring and ring-billed gulls suggest these birds can travel 22 kilometers or more from nesting colonies to landfills and do so several times each day [7 and 12].

Birds comprised almost all of the wildlife observed at or near trash-transfer facilities during this study; few mammals were observed, most of these were feral dogs that fed upon refuse. Although the potential for populations of commensal rodents to exist within and around trash-transfer facilities exists, most trash-transfer facilities used a commercial rodent control program (e.g., poison baits). Because rodents are nocturnal, these observations probably underestimated the numbers present.

Bird use of trash-transfer facilities varied considerably among seasons during this study. Bird use of trash-transfer facilities was greatest during the winter months and least during the summer months. This trend was evident for both gulls and European starlings. During the summer months, gulls are more likely to exploit food resources from aquatic sources (e.g., fish from freshwater lakes or marine environments). Belant, et al. [12], found that breeding herring gulls used natural food resources (e.g., fish) rather than foraging on refuse at landfills; however, anthropogenic food sources (e.g., garbage at landfills) were found to be important to post-breeding herring gulls. European starlings are likely to be using insect and vegetation (e.g., seeds) food resources during the summer months. In contrast, during the winter months, food resources for gulls and starlings are more limited and thus anthropogenic food resources might be more important and used with greater frequency. Because bird use of trash-transfer facilities was clearly influenced by season, assessments (e.g., surveys) of the risk to safe aircraft operations associated with trash-transfer facilities should be conducted so that all seasons are represented within the assessment period. Minimally, evaluation of trash-transfer stations for their attractiveness to wildlife hazardous to aviation should be conducted during the winter months.

The geographic location of a trash-transfer station appears to have a strong influence on the amount of bird use of that facility, particularly in reference to birds that are hazardous to aviation. Not unexpectedly, gull use of trash-transfer facilities was highest at trash-transfer facilities that were near coastal areas or the Great Lakes (e.g., California, Massachusetts, Ohio) but nonexistent at trash-transfer facilities in inland areas (e.g., Arizona, Missouri). Crows were most abundant and used trash-transfer facilities in the Pacific Northwest and northeast, but observed far less frequently at trash-transfer stations in other areas. The total numbers of birds, in addition to the species involved, that use a trash-transfer facility for loafing and foraging is likely a consequence of the abundance and diversity of bird species present in that geographic location.

The abundance of gulls, European starlings, and all birds using trash-transfer facilities was positively related to the proportion of site ratings categorized as having "moderate" or "heavy" amounts of refuse on the ground, suggesting that the amount of litter (i.e., uncontained trash) outside of the trash-transfer buildings themselves influences the use of these facilities by birds. Greater amounts of litter around the facility grounds might be more visible to birds that are flying near the facility and thus potentially could attract them to the sites. On-site management

practices that increase the "cleanliness" of trash-transfer stations, such as periodically removing litter and uncontained trash, therefore reduce the use of these facilities by hazardous birds.

5. SUMMARY.

Traditional putrescible-waste landfills are very attractive to and are used by many birds, especially gulls, creating a hazard to aircraft if located near airports [7 and 8]. The FAA currently recommends that the location of municipal solid waste landfills and trash-transfer facilities should not be within 5 statute miles of an airport [9 and 10]. There has been an increase in the number of trash-transfer facilities, a trend that will likely continue into the future. Consequently, there is a concern regarding the probability of these facilities to attract bird species hazardous to aviation. If trash-transfer facilities serve as attractants for gulls and other birds, as do landfills, the presence of these facilities near airports could increase the risk to aircraft operations [7, 11, 12, and 8].

The objectives of this study were to (1) document wildlife use of trash-transfer facilities and (2) determine if the building design or the on-site management characteristics of the trash-transfer facilities influenced the attractiveness to wildlife species. Twenty-nine trash-transfer facilities and four control sites, located in seven states (representative of various U.S. geographical regions), were studied. Wildlife (primarily birds) abundance and activity were quantified at each facility and control site twice per week for 1 year.

Overall, the findings from this study demonstrate that wildlife use of trash-transfer facilities, particularly by bird species considered to be hazardous to aviation, can be significant. Trash-transfer facilities represent potential wildlife attractants that should be evaluated during wildlife hazard assessments and other evaluations of wildlife hazards within airport environments. In addition, findings from this study suggest that several factors, including building design, season, geographic location, and on-site management practices can be important and influence the wildlife use of trash-transfer facilities. Consequently, trash-transfer facilities within airport environments should be evaluated on an individual basis to determine whether they attract or influence the movement patterns of hazardous wildlife and if the location of such a facility increases the risk to safe aircraft operations. Appropriate wildlife control activities could be conducted at trash-transfer facilities to reduce their attractiveness to hazardous wildlife and thus decrease the risk of bird strikes associated with those facilities.

Introduction

This manual defines what a transfer station is and how it relates to municipal solid waste management in the context of a community's total waste management plan. The manual identifies issues and factors to consider when deciding to build a transfer station, planning and designing it, selecting a site, and involving the community.

In many communities, citizens have voiced concerns about solid waste transfer stations that are poorly sited, designed, or operated. In addition, some citizens might feel that transfer stations are disproportionately concentrated in or near their communities. Yet transfer stations play an important role in a community's waste management system.

In 1993, the National Environmental Justice Advisory Council (NEJAC) was formed to "provide independent advice, consultation, and recommendations to EPA on matters related to environmental justice." The Waste and Facility Siting Subcommittee, one of NEJAC's six subcommittees, received numerous comments from citizens of several major metropolitan areas concerning the negative impacts of waste transfer stations and their disproportionate siting in low-income communities and communities of color. The Subcommittee, with support from EPA, formed the Waste Transfer Station Working Group in 1998 to investigate these comments. The Working Group arranged two fact-finding sessions in New York City and Washington, DC, during November 1998 and February 1999 respectively. These sessions were each two-day events consisting of a day of tours of area waste transfer stations and a second day of public meetings. Based upon these two fact-finding sessions, the Working Group in March 2000 published the draft report, *A Regulatory Strategy for Siting and Operating Waste Transfer Stations.* This report made several recommendations to EPA concerning proper and equitable siting and operation of transfer stations.

In response in to this report, EPA has developed this manual and its companion publication *Waste Transfer Stations: Involved Citizens Make the Difference* (EPA530-K-01-003).

The intent of this manual is to promote the use of best practices in transfer station siting, design, and operation to maximize facilities' effectiveness and efficiency, while minimizing their impact on the community. It is designed to assist facility owners and operators; state, local, and tribal environmental managers; and the public evaluate and choose protective practices for siting, designing, and operation of municipal solid waste transfer stations. The manual is divided into the following chapters:

- Planning and Siting a Transfer Station
- Transfer Station Design and Operations
- Facility Oversight

What Are Waste Transfer Stations?

Waste transfer stations play an important role in a community's total waste management system, serving as the link between a commu-

Aerial view of a totally enclosed transfer station.

nity's solid waste collection program and a final waste disposal facility. While facility ownership, sizes, and services offered vary significantly among transfer stations, they all serve the same basic purpose—consolidating waste from multiple collection vehicles into larger, high-volume transfer vehicles for more economical shipment to distant disposal sites. In its simplest form, a transfer station is a facility with a designated receiving area where waste collection vehicles discharge their loads. The waste is often compacted, then loaded into larger vehicles (usually transfer trailers, but intermodal containers, railcars, and barges are also used) for long-haul shipment to a final disposal site—typically a landfill, waste-to-energy plant, or a composting facility. No long-term storage of waste occurs at a transfer station; waste is quickly consolidated and loaded into a larger vehicle and moved off site, usually in a matter of hours.

For purposes of this manual, facilities serving only as citizen drop-off stations or community convenience centers are not considered waste transfer stations. Only a facility that receives some portion of its waste directly from collection vehicles, then consolidates and reloads the waste onto larger vehicles for delivery to a final disposal facility, is considered a transfer station. A convenience center, on the other hand, is a designated area where residents manually discard waste and recyclables into dumpsters or collection containers. These containers are periodically removed or emptied, and the waste is transported to the appropriate disposal site (or possibly to a transfer station first). Convenience centers are not suitable for use as transfer stations because they cannot readily handle the large volume of waste that is discharged by a self-unloading collection truck. While these sites are not considered transfer stations within the context of this manual, it is important to note that heavily used convenience centers can face similar concerns as transfer stations (e.g., litter, road access, vehicle queuing, storm water run on and run off). Consequently, it may be appropriate to consider implementing some of the concepts and practices advocated in this manual at these sites. Many communities have installed full-service operations that provide public waste and recyclables drop-off accommodations on the same site as their transfer stations.

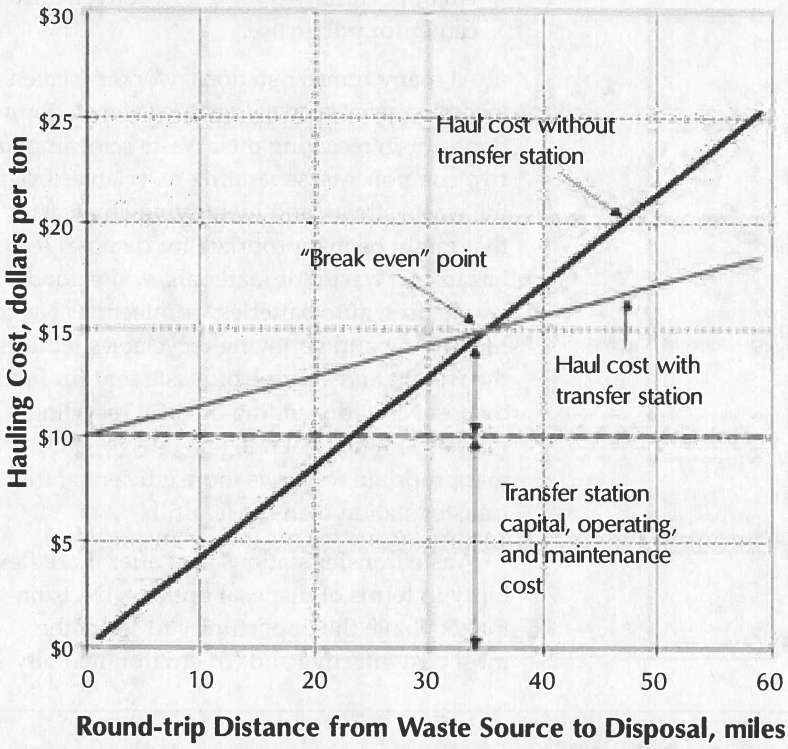
Source reduction and recycling also play an integral role in a community's total waste management system. These two activities can significantly reduce the weight and volume of waste materials requiring disposal, which reduces transportation, landfill, and incinerator costs. Source reduction consists of reducing waste at the source by changing product design, manufacturing processes, and purchasing and sales practices to reduce the quantity or toxicity of materials before they reach the waste stream. U.S. Environmental Protection Agency (EPA) policy promotes source reduction as the waste management technique of choice.

Recycling—the collection, processing, and manufacture of new products—likewise diverts materials from the landfill or incinerator. These recyclable materials are prepared for shipment to markets in a special facility called a MRF, which stands for materials recovery facility. A MRF is simply a special type of transfer station that separates, processes, and consolidates recyclable materials for shipment to one or more recovery facilities rather than a landfill or other disposal site. Consequently, the concepts and practices in this manual can be applied to MRFs as well.

Aggressive community source reduction and recycling programs can substantially reduce the amount of waste destined for long haul transfer and disposal. If these reductions are significant enough, a community may find that fewer or smaller transfer stations can meet its needs.

Why Are Waste Transfer Stations Needed?

The nationwide trend in solid waste disposal has been toward construction of larger, more remote, regional landfills. Economic considerations, heavily influenced by regulatory and social forces, are compelling factors leading to this result. The passage of federal criteria in 1991 established new design



requirements for municipal solid waste landfills. These new standards include design, operating, and monitoring requirements that significantly add to construction, operating, closure, and post-closure monitoring costs. As older landfills near urban centers reach capacity and begin closing, cities must decide whether to construct new landfills or to seek other disposal options. Many communities find the cost of upgrading existing facilities or constructing new landfills to be prohibitively high, and opt to close existing facilities. For these communities, transferring waste to a large regional landfill is an appealing alternative.

In addition to regulatory requirements, public opposition frequently makes siting new landfills near population centers difficult. The current atmosphere is such that gaining public and political approval for constructing new disposal capacity near population centers is challenging. Also, adequate land is often not available near densely populated or urban areas. These social, political, and geographical factors have further stimulated the rise in construction of large, remote, regional landfills.

Economic considerations, especially economies of scale, further promote development of large regional facilities. To offset the high cost of constructing and maintaining a modern landfill, facility owners construct large facilities that attract high volumes of waste from a greater geographic area. By maintaining a high volume of incoming waste, landfill owners can keep the per-ton tipping fees low, which subsequently attracts more business. Rural and urban communities alike are finding that the most economically viable solution to their waste disposal needs is shipping their waste to these facilities. In these circumstances, a transfer station serves as the critical consolidation link in making cost-effective shipments to these distant facilities.

Figure 1.

Sample Comparison of Hauling Costs With and Without a Transfer Station

The following assumptions were used to create this sample comparison:

Cost to build, own, and operate transfer station—dollars per ton	$10
Average payload of collection truck hauling directly to landfill—tons	7
Average payload of transfer truck hauling from transfer station to landfill—tons	21
Average trucking cost (direct or transfer hauling)—dollars per mile	$3

The comparison shows a break-even distance of about 35 miles (round-trip). In other words, for this example, using a transfer station is cost-effective when the round-trip distance exceeds 35 miles. When the round-trip distance is less than 35 miles, direct haul is more cost-effective. Although the same economic principles apply, break-even distances will vary in different situations based on the site-specific input data.

Why Use Waste Transfer Stations?

The primary reason for using a transfer station is to reduce the cost of transporting waste to disposal facilities. Consolidating smaller loads from collection vehicles into larger transfer vehicles reduces hauling costs by enabling collection crews to spend less time traveling to and from distant disposal sites and more time collecting waste. This also reduces fuel consumption and collection vehicle maintenance costs, plus produces less overall traffic, air emissions, and road wear.

In addition, a transfer station also provides:

- An opportunity to screen waste prior to disposal.

- Flexibility in selecting waste disposal options.
- An opportunity to serve as a convenience center for public use.

At many transfer stations, workers screen incoming wastes on conveyor systems, tipping floors, or in receiving pits. Waste screening has two components: separating recyclables from the waste stream and identifying any wastes that might be inappropriate for disposal (e.g., hazardous wastes or materials, white goods, whole tires, auto batteries, or infectious waste). Identifying and removing recyclables reduces the weight and volume of waste sent for final disposal and, depending on local recycling markets, might generate revenue. Screening for inappropriate wastes is more efficient at the transfer station than the landfill.

Waste transfer stations also offer more flexibility in terms of disposal options. Decision-makers have the opportunity to select the most cost-effective and/or environmentally protective disposal sites, even if they are more distant. They can consider multiple disposal facilities, secure competitive disposal fees, and choose a desired method of disposal (e.g., landfilling or incineration).

Finally, transfer stations often include convenience centers open to public use. These centers enable individual citizens to deliver waste directly to the transfer station facility for ultimate disposal. Some convenience centers offer programs to manage yard waste, bulky items, household hazardous waste, and recyclables. These multipurpose convenience centers are assets to the community because they assist in achieving recycling goals, increase the public's knowledge of proper materials management, and divert materials that would otherwise burden existing disposal capacity.

Is a Transfer Station Right for Your Community?

Deciding whether a transfer station is appropriate for an individual community is based on determining if the benefits outweigh the costs. Decision-makers need to weigh the planning, siting, designing, and operating costs against the savings the transfer station might generate from reduced hauling costs. To assist in making this determination, public and private decision-makers often employ third-party solid waste experts. These experts are familiar with both the technical and regulatory issues that must be addressed in developing a successful waste transfer station. It may be helpful to retain qualified consulting or engineering firms specializing in solid waste engineering. It is also important to note that in some areas, the regulatory agency might require that the transfer station plans be certified by a professional engineer. Again, this engineer should be an experienced solid waste professional. Complex projects might also require the assistance of architects, geotechnical engineers, lawyers, and other specialists.

Although cost-effectiveness will vary, transfer stations generally become economically viable when the hauling distance to the disposal facility is greater than 15 to 20 miles.

Calculating Transfer Station Break-Even Points

To calculate the break-even point for a specific facility, first determine the following values:

- **Transfer Station Cost** (cost to build, own, and operate transfer station, in dollars per ton)
- **Direct Haul Payload** (average payload of collection truck hauling directly to landfill, in tons)
- **Transfer Haul Payload** (average payload of transfer truck hauling from transfer station to landfill, in tons)
- **Trucking Cost** (average cost of direct or transfer hauling, in dollars per mile)

Once these values are known, use the following formulas to calculate cost at different distances:

Cost of Direct Haul (without the use of a waste transfer station)
Distance (miles) multiplied by Trucking Cost (dollars per mile) divided by Direct Haul Payload (tons)

Cost of Transfer Haul
Transfer Station Cost (dollars per ton) plus Distance (miles) multiplied by Trucking Cost (dollars per mile) divided by Transfer Haul Payload (tons)

Figure 1 demonstrates a representative "cost versus miles" relationship between direct hauling waste to disposal facilities in collection vehicles versus consolidation, transfer, and hauling in larger vehicles. Using the assumptions listed below Figure 1, we see that the average cost per ton to move the waste from the collection vehicle onto the transfer vehicle is $10 before the hauling vehicle leaves the transfer station. This is the cost per ton to build, operate, and maintain the station. Due to its economy of scale, however, the transfer trailer can move waste on a much lower "per mile" basis because it can carry the waste of several individual collection vehicles.

Using the assumptions listed, the cost per ton per mile (ton-mile) using a collection vehicle is $0.43 ($3/mile truck operating cost divided by 7 tons per average load). In this example, the transfer hauling vehicle's cost per ton-mile is much lower, at $0.14 ($3 divided by 21 tons per average load). Figure 1 shows how this cost per ton-mile advantage for the transfer hauling vehicle soon overcomes the initial cost of developing and operating the transfer station. In this case, based on the indicated assumptions, cost savings will start to be realized when the round-trip hauling distance exceeds 35 miles (17.5 miles one way). Because the cost to own, operate, and maintain collection vehicles, transfer stations, and transfer hauling vehicles will vary depending on local parameters, the break-even point indicated on Figure 1 will vary. The formulas used in generating Figure 1 are provided below to allow for site-specific calculations.

Electronic Filing: Received, Clerk's Office 04/19/2023 C003705

Planning and Siting a Transfer Station

A variety of issues must be taken into account during the planning and siting stages of transfer station development. This section discusses the types of waste transfer stations typically accept, factors affecting a transfer station's size and capacity, and issues regarding facility siting, including process issues and public involvement. While the planning and siting phases of facility development might involve a significant investment of resources, this initial investment is crucial to ensuring an appropriate project outcome sensitive to the host community.

Types of Waste Accepted

In addition to processing mixed municipal solid waste (MSW), some transfer stations offer programs that manage specific materials separately to divert waste from disposal and to achieve recycling objectives. These materials could include construction and demolition debris, yard waste, household hazardous waste, or recyclables. The types of materials processed often vary depending on where the facility is located (urban, suburban, rural) and who owns and operates the transfer station (public entity or private industry).

Types of waste that transfer stations commonly handle are described in the adjacent box.

If a community offers programs that manage parts of the waste stream separately, it might reduce expenses by locating the material management programs at the transfer station. Savings might result by:

- Using dual-collection vehicles for refuse and source-separated waste streams and delivering all waste to the transfer station in one vehicle.
- Continuing to use separate collections for refuse and source-separated waste streams, but having all processing facilities located at one site, thus minimizing the cost of multiple utility connections, traffic control systems, office space, and administration. This approach also eliminates the cost and complexity of multiple siting and permitting efforts.

Unacceptable Wastes

Certain wastes might be unacceptable at a transfer station for a variety of reasons, including:

- They are prohibited by state or federal regulations (e.g., PCBs, lead acid batteries, radioactive materials).

Wastes Commonly Handled at Transfer Stations

The following types of waste are commonly handled at transfer stations. Specific definitions of these wastes vary locally.

Municipal solid waste (MSW) is generated by households, businesses, institutions, and industry. MSW typically contains a wide variety of materials including discarded containers, packaging, food wastes, and paper products. MSW includes a mixture of putrescible (easily degradable) and nonputrescible (inert) materials. Three types of MSW are commonly diverted and handled separately:

Yard waste (green waste) commonly includes leaves, grass clippings, tree trimmings, and brush. Yard waste is often diverted so that it may be composted or mulched instead of going for disposal.

Household hazardous waste (HHW) includes hazardous materials generated by households, such as cleaning products; pesticides; herbicides; used automotive products such as motor oil, brake fluid, and antifreeze; and paint.

Recyclables include discarded materials that can be reprocessed for manufacture into new products. Common recyclables include paper, newsprint, ferrous metals, plastic, glass containers, aluminum cans, motor oil, and tires.

Construction and demolition (C&D) debris results from demolition or construction of buildings, roads, and other structures. It typically consists of concrete, brick, wood, masonry, roofing materials, sheetrock, plaster, metals, and tree stumps. Sometimes C&D debris is managed separately from MSW; other times it is mixed with MSW.

- They are difficult or costly to process (e.g., tires).
- They might pose a health or fire hazard.
- They might be prohibited at the disposal facility to which the transfer station delivers.
- They might be prohibited (within a mixed waste load destined for disposal) because local regulations require they be recycled.
- They might be so large that they could damage trucks or equipment during waste loading operations.

The following types of wastes are typically not accepted at transfer stations: large bulky objects such as tree stumps, mattresses, or furniture; infectious medical waste; hazardous waste; explosives; radioactive materials; fuel tanks (even if empty); appliances; dead animals; asbestos; liquids and sludges; and dust-prone materials. This is a general list; some transfer stations might be set up to process these wastes, while others might have a longer list of unacceptable materials. While these and other unacceptable wastes represent a small fraction of the solid waste stream, properly managing them can require significant effort by the transfer station operator and the local solid waste management authority. The section on waste screening in the Transfer Station Design and Operation chapter further discusses how to properly manage and reduce the frequency of unacceptable waste at a transfer station.

Public Versus Commercial Use

Some transfer stations provide public access to the facility rather than restricting access only to waste collection vehicles. The types of customers accommodated vary depending on where the facility is located and who owns and operates the transfer station. Publicly operated transfer stations are more likely to be open to public use. Private transfer stations might not be open to the public because residents deliver relatively small amounts of waste with each visit, require more direction for safe and efficient use of the transfer station, and generally pay relatively small fees for using the transfer station. The general public usually is allowed to use a transfer station for any of several reasons: waste collection is not universally provided in the area; some wastes, such as bulky items or remodeling debris, are not collected; or public access is part of a strategy to prevent illegal dumping by providing a convenient, cost-effective place for people to deposit waste. Public unloading areas and traffic patterns are usually kept separate from commercial vehicles for safety and efficiency.

Determining Transfer Station Size and Capacity

The physical size of a planned transfer station is typically determined based on the following factors:

- The definition of the service area. Sometimes this is relatively simple, such as "all waste generated by Anytown, USA," or "all waste collected by Acme Hauling Company." Other times, the service area is more difficult to define because of varying public and private roles in solid waste management and the changing availability of existing disposal facilities.
- The amount of waste generated within the service area, including projected changes such as population growth and recycling programs.
- The types of vehicles delivering waste (such as car or pickup truck versus a specially designed waste-hauling truck used by a waste collection company).
- The types of materials to be transferred (e.g., compacted versus loose MSW, yard waste, C&D), including seasonal variations.
- Daily and hourly arrival patterns of customers delivering waste. Hourly arrivals tend to cluster in the middle of the day, with typical peaks just before and after lunchtime. Peak hourly arrivals tend to dictate a facility's design more than average daily arrivals.
- The availability of transfer trailers, intermodal containers, barges, or railcars, and how fast these can be loaded.

- Expected increases in tonnage delivered during the life of the facility. For example, in a region with annual population growth of 3 to 4 percent, a facility anticipating a 20-year operating life would typically be designed for about twice the capacity that it uses in its first year of operation.
- The relationship to other existing and proposed solid waste management facilities such as landfills, recycling facilities, and waste-to-energy facilities.

The same factors are used to determine the size of the following transfer station features:

- Amount of off-street vehicle queuing (waiting) space. At peak times, vehicles must often wait to check in at a facility's "gatehouse" or "scale house." It is important that the queue (line) not block public streets or impede vehicular or pedestrian traffic.
- Number and size of unloading stalls, and corresponding number of transfer trailer loading positions.
- Short-term waste processing and storage areas (for holding waste until it can be reloaded into transfer vehicles).

Present and projected daily, weekly, and annual waste volumes (including seasonal variations) are important in planning facility size to accommodate waste deliveries. The maximum rate at which waste is delivered is a crucial consideration as well. In general, it is best to build a facility to accommodate present and projected maximum volumes and peak flows, with a preplanned footprint for facility expansion. A useful exercise is calculating how much tipping floor space a facility would require to store a full day's waste in case of extreme emergency. One approach to estimating the required tipping floor space is to begin with a base area of 4,000 square feet and add to it 20 square feet for each ton of waste received in a day (assuming the waste will be temporarily piled 6 feet high on the tipping floor).[1] For example, if the facility receives 100 tons of waste per day, a tipping floor space of 6,000 square feet would be required (i.e., 4,000 ft² + (100 TPD x 20 ft²/ton) = 6,000 ft²) "Chapter 4: Collection and Transfer" in EPA's *Decision Maker's Guide to Solid Waste Management* also provides a series of formulas for helping determine transfer station capacity These formulas are presented in the box below.

Formulas for Determining Transfer Station Capacity

Stations with Surge Pits

Based on rate at which wastes can be unloaded from collection vehicles:

$$C = P_C \times (L / W) \times (60 \times H_W / T_C) \times F$$

Based on rate at which transfer trailers are loaded:

$$C = (P_t \times N \times 60 \times H_t) / (T_t + B)$$

Direct Dump Stations

$$C = N_n \times P_t \times F \times 60 \times H_W / [(P_t/P_C) \times (W/L_n) \times T_C] + B$$

Hopper Compaction Stations

$$C = (N_n \times P_t \times F \times 60 \times H_W) / (P_t/P_C \times T_C) + B$$

Push Pit Compaction Stations

$$C = (N_p \times P_t \times F \times 60 \times H_W) / [(P_t/P_C) \times (W/L_p) \times T_C] + B_C + B$$

Where:

C	Station capacity (tons/day)
P_C	Collection vehicle payloads (tons)
L	Total length of dumping space (feet)
W	Width of each dumping space (feet)
H_W	Hours per day that waste is delivered
T_C	Time to unload each collection vehicle (minutes)
F	Peaking factor (ratio of number of collection vehicles received during an average 30-minute period to the number received during a peak 30-minute period)
P_t	Transfer trailer payload (tons)
N	Number of transfer trailers loading simultaneously
H_t	Hours per day used to load trailers (empty trailers must be available)
B	Time to remove and replace each loaded trailer (minutes)
T_t	Time to load each transfer trailer (minutes)
N_n	Number of hoppers
L_n	Length of each hopper
L_p	Length of each push pit (feet)
N_p	Number of push pits
B_C	Total cycle time for clearing each push pit and compacting waste into trailer

Electronic Filing: Received, Clerk's Office 04/19/2023 C003708

Queuing in Urban Areas

In extreme situations where adequate queuing space cannot be provided on the transfer station site, an additional offsite area can be provided as a holding area for waiting trucks. Transfer station staff can dispatch the waiting trucks via radio when the station is ready to receive them.

Number and Sizing of Transfer Stations

Design capacity is determined by the maximum distance from which waste can be economically delivered to the transfer station. The area that can efficiently reach the waste transfer station determines the volume of waste that must be managed, which is the facility's initial design capacity. Beyond a certain distance, another transfer station might be necessary, or it might become just as cost-effective to direct haul to the disposal facility.

Transfer stations serving rural or tribal areas tend to be small. They are optimally located within a reasonable driving time from the service area's largest concentration of homes and businesses. For example, a rural transfer station could be located near one of the service area's larger towns and sized to take waste from all waste generators within about 30 miles. As an example, two 50-ton-per-day transfer stations might each serve six small communities. Alternately, fewer transfer stations could be used, necessitating longer average travel distances. For example, one 100-ton-per-day transfer station could be used to serve the same 12 small communities, but it would be located farther from the outlying communities.

Addressing Site Size Limitations

When site size is not adequate to accommodate ideal designs and practices, additional engineering design features will be needed to mitigate the facility's potential negative impacts. For example, sound barriers might need to be incorporated into the site plan to reduce noise. Another approach is to select multiple, smaller capacity sites if a single parcel of land large enough to accommodate an ideal facility does not exist. These separate sites could be used to hold trucks awaiting delivery, or to store transfer trailers.

In urban or suburban areas, the same situations exist. A midsize city (population 500,000), for example, might decide that two 800-ton-per-day transfer stations would best serve its community. This same city could alternately decide that a single 1,600-ton-per-day transfer station is its best option, even when the longer driving distances are considered. When deciding which approach is best for a community, issues to consider include the impacts the transfer station(s) will have on the surrounding area, siting complications, and the cost to build and operate the transfer station(s). Each approach offers advantages and disadvantages that must be reconciled with local needs.

The biggest advantage of constructing large transfer stations is the economies of scale that can significantly reduce capital and operational costs. Centralizing waste transfer operations allows communities to reduce equipment, construction, waste handling, and transportation costs. The siting of a single facility may often prove easier than siting multiple facilities. Large facilities are also conducive to barge or rail operations that can further decrease traffic-related impacts on the community. Along related lines, however, a major drawback to building a single large facility is locating a tract of land that adequately meets facility requirements. Large facilities also tend to concentrate impacts to a single area, which can create the perception of inequity, especially when one neighborhood is shouldering the burden for the entire city. A single facility can result in longer travel times, which leads to increased down time for the collection crew and increased wear and tear on collection vehicles. Another consideration is that a single facility cannot divert waste to a backup facility if a need arises. The single facility must have additional equipment in case of equipment failure or other emergencies.

In other situations, multiple smaller sites might better address a community's waste management needs. Decentralizing waste transfer operations spreads lesser impacts over a wider area, which helps address equity issues. Although it is generally more expensive to build and operate several small transfer stations rather than one large station with the same total capacity, savings from reduced travel times might offset these capital costs and result in lower overall system costs. Multiple facilities also are better able to serve as backups for one another in case of scheduled or emergency shutdowns of facilities. The

major disadvantage to building multiple facilities is that the difficulties encountered in siting a single facility can become multiplied.

Future Expansion

Transfer stations are frequently designed to accommodate future expansion. Often, this is accomplished by siting the facility on a larger parcel of land than would otherwise be necessary and preplanning the site and buildings so expansion can occur without negatively affecting other functions on the site or the surrounding community. Although expansion of effective capacity can sometimes be accomplished simply by expanding the hours of operation, this approach is not always effective because the transfer station must accommodate the collection schedules of vehicles delivering waste to the facility. In addition, increased operating hours might not be compatible with the surrounding community.

Site Selection

Identifying a suitable site for a waste transfer station can be a challenging process. Site suitability depends on numerous technical, environmental, economic, social, and political criteria. When selecting a site, a balance needs to be achieved among the multiple criteria that might have competing objectives. For example, a site large enough to accommodate all required functions and possibly future expansion, might not be centrally located in the area where waste is generated. Likewise, in densely developed urban areas, ideal sites that include effective natural buffers simply might not be available. Less than ideal sites may still present the best option due to transportation, environmental, and economic considerations. Yet another set of issues that must be addressed relates to public concern or opposition, particularly from people living or working near the proposed site. The relative weight given to each criteria used in selecting a suitable site will vary by the community's needs and concerns. Whether the site is in an urban, suburban, or rural setting will also play a role in final site selection.

Environmental Justice Considerations

During the site selection process, steps should be taken to ensure that siting decisions are not imposing a disproportionate burden upon low-income or minority communities. Overburdening a community with negative impact facilities can create health, environmental, and quality of living concerns. It can also have a negative economic impact by lowering property values and hindering community revitalization plans. These are just a few of the reasons environmental justice concerns need to be addressed when selecting a site for a waste transfer station.

The Siting Process and Public Involvement

A siting process that includes continuous public participation is integral to developing a transfer station. The public must be a legitimate partner in the facility siting process to integrate community needs and concerns and to influence the decision-making process. Addressing public concerns is also essential to building integrity and instituting good communications with the community. Establishing credibility and trust with the public is as

Maximizing Public Committee Participation

Public committees are often convened to assist with developing public policy. To maximize participation, the process should:

- Give committee members a chance to be actively involved.
- Allow the committee to remove the selected facilitator if concerns about objectivity exist.
- Encourage members to discuss relevant concerns and to raise questions or objections freely. Criticisms or challenges should be directed toward the issues; the facilitator should swiftly mitigate personal criticisms.
- Agree on a means to resolve disagreements before they arise.
- Allow members to discuss the results of each meeting with their constituents.
- Provide technical experts to educate participants.
- Distribute literature about upcoming issues before meetings.

Informing the Community

When initiating a siting process, education must be extended beyond the siting committee and include a communitywide outreach initiative. Components of this type of public outreach typically include:

- Special public meetings.
- Interviews with local newspapers for feature stories.
- Interviews with media editorial boards.
- Interviews with broadcast media.
- News conferences, press releases, and press kits.
- Paid advertising.
- Internet sites.
- Informational literature.
- Direct mail with project updates.
- City council/county commission presentations.
- Presentations to civic, environmental, religious, and professional groups.
- Presentations to neighborhood groups.
- Community education programs and workshops.
- Reading files located in public libraries or community centers that document the process.

Beyond communitywide outreach, initiate specific and targeted contact with key members of potential host communities, and identify community-specific conditions that need to be considered. Individuals might become proponents of the proposed facility if contacted directly for input, rather than opposing it based on misleading secondhand information.

important as addressing environmental, social, and economic concerns about the solid waste facility.[2] A companion document to this manual, *Waste Transfer Stations: Involved Citizens Make the Difference* (EPA530-K-01-003), provides key information citizens require to be effectively involved in the siting and development process. Two other EPA documents, *Sites for Our Solid Waste: A Guidebook for Effective Public Involvement* (EPA 530-SW-90-019) and *RCRA Public Participation Manual* (EPA530-R-96-007), provide further information and examples of how to integrate public participation into the waste management facility siting and development process. Following are some general guidelines for developing and implementing a siting process that is open to and integrates meaningful public input.

For publicly developed transfer stations, a good first step by public officials in the site selection process is establishing a siting committee. The committee's main responsibility includes developing criteria to identify and evaluate potential sites. The committee should consist of key individuals who represent various stakeholder interests. These stakeholders might include:

- Community and neighborhood groups.
- Industry and business representatives.
- Civic and public interest groups.
- Environmental organizations.
- Local- and state-elected officials.
- Public officials, such as public works employees and solid waste professionals.
- Academic institutions.

Committee members should be selected to ensure broad geographical representation from across the area to be served by the transfer station. In addition, committee representation should seek gender balance and racial diversity. Volunteer participation should also be solicited.

The committee's meeting times and dates must be planned and scheduled to facilitate attendance by all committee members and other members of the public. Therefore, meeting schedules should avoid conflicts with other major community, cultural, or religious events. To encourage active public participation, meetings should be prominently advertised in the media in a timely manner and be held in facilities accessible to the disabled and located on public transportation routes. Frequently, a facilitator is hired or appointed to keep the meetings focused, to minimize the

Building Reuse: Weighing the Consequences

Adapting an existing building for reuse as a waste transfer station is usually done as a capital cost savings measure. Building reuse saves on new site construction and can avoid the permitting process if the existing site already has a permit allowing the waste transfer activity. Building reuse can have some benefits, including conserving construction materials required for new structures and facilities; reducing waste from the demolition of existing buildings; recycling unused property for which no other uses were found; and redeveloping contaminated property (brownfields redevelopment). But the negative aspects frequently outweigh the positives.

Pitfalls and problems associated with adaptation or retrofitting of buildings for waste transfer stations include:

- Transfer buildings have unique requirements rarely found in structures designed for other uses. These include the need for vertical clearances sufficient to accommodate the tipping height of commercial collection vehicles. New facilities are usually designed with at least 25 to 30 feet of vertical clearance from the tipping floor to the lowest overhead element.
- Busy transfer stations require adequate onsite space for vehicle parking and queuing, something reused buildings often lack. In fact, one of the most common problems with building reuse is inadequate queuing space, which leads to vehicles blocking neighborhood streets. Queuing trucks on city streets creates health and safety issues, and can be very disruptive for the surrounding neighborhood.
- Transfer stations need relatively large, open floor areas suitable for maneuvering large vehicles. Interior building columns and walls might not accommodate the kind of safe traffic movements that are needed, which could pose a hazard and reduce traffic efficiency.
- Enclosed transfer structures also require large, very tall access doors. Doors 24-feet high are not unusual in new transfer buildings. The design must assume that a collection truck will inadvertently exit the transfer station building with its tipping bed extended.
- Heavy-duty, skid-resistant floors are a necessity in transfer stations. Sloped floors with positive drainage are also important. Some buildings are not designed with floors that meet these essential criteria, and replacing the floors can be costly.
- Older structures, particularly older warehouse type structures, often fail to meet current structural design codes. In particular, modern seismic and fire code requirements have changed considerably in recent years. Retrofitting older structures might prove more costly than demolishing and replacing the structure.
- Transfer station structures can experience substantial vibrations from heavy equipment used to compact and load waste into the transfer vehicles. Concrete and steel floors, pillars, and other building reinforcements must be designed to accommodate these high levels of vibration. Older buildings not designed for this heavy use often can not meet these requirements.
- Most transfer stations require some amount of grade separation so waste can be loaded into open-topped vehicles to simplify the waste loading process. Since customer and transfer vehicles both need to access the structure, but at different levels, finding a building that offers this configuration might prove difficult. Installing additional levels or tunnels can be costly or impractical in some areas (i.e., shallow ground water or bedrock).
- Waste transfer stations include more than just the tipping area. While an existing building might be very adaptive to waste transfer, the overall building site needs to accommodate the supporting activities and requirements including traffic queuing, buffer zones, scale facility operations, etc.

Transfer station structures require tall access doors to accomodate collection vehicles.

Community Involvement in Privately Developed Facilities

In the past, privately developed facilities have not generally formed siting committees. When private facilities have been sited, the public's first—and sometimes only—opportunity for input has come when the permit application is put out for public comment. Most states do not require private developers to seek public involvement in the site selection or facility design and operation decisions. Private companies, however, should consider establishing siting committees and developing public outreach programs to establish credibility, build public trust, and develop sound avenues of communication. These programs should educate the community about the need for the facility, the facility's design and operations, and provide an opportunity for community input. A public outreach program helps the developer understand community concerns and address them early in the siting and design phases while changes are still readily incorporated. Adopting, with appropriate modifications, the public involvement process outlined above is one approach to addressing community concerns.

potential for certain individuals or interest groups to dominate the process, and to encourage active participation by all stakeholders throughout the process.

During the siting committee's first meeting, individual duties, group responsibilities, and process issues need to be addressed. Expectations and limitations of the committee need to be clearly communicated and might be summarized in mission statements. Rules for discourse, and a schedule and procedures for final decision-making, should be determined and agreed upon. Technical experts should be involved early in the process to respond to general questions and to resolve common misconceptions about waste transfer.

After establishing general procedures, committee members should be informed of all details to further ensure equal participation and a means of influencing the decision-making process. Committee members should understand why a transfer station is needed and the facility's role within the solid waste management system. In addition, committee members must be taught the numerous technical, environmental, and economic aspects associated with siting, designing, and operating a transfer station. This ensures that the siting criteria the committee develops will result in identifying potential sites feasible from engineering and operational perspectives, as well as acceptable to the public.

Educational materials for the siting committee should provide useful, objective information. Mistrust of technical information might develop among the committee members and should be anticipated. The credibility of the technical information might be enhanced by encouraging the committee to assist in selecting consultants and technical experts, by encouraging committee members to perform their own research, by using a third party to review technical studies, and by relying on experts who reside within the community to provide technical information. Information should be relayed in various formats and should consider language barriers, literacy levels, and preferred types of communications. For example, committee education might include presentations by technical experts and tours of existing transfer stations in addition to written materials.

Siting Criteria

Once the committee completes the education phase, criteria should be developed for identifying and evaluating potential sites. All siting criteria must be developed before identifying potential transfer station sites. This approach ensures siting decisions are based on objective criteria. Three categories or sets of criteria applied during various stages of the siting process are exclusionary, technical, and community-specific criteria. It is important to note that no site may meet all the criteria, in which case, each criterion's relative weight and importance must be considered.

Exclusionary Siting Criteria

Siting a waste transfer station, or any type of facility, in areas with preclusive siting criteria is often prohibited by federal, state, or local laws or regulations, or requires facilities to incorporate special engineering design and construction techniques. Even when siting in excluded

zones is allowed, the added engineering designs or strong public opposition can significantly increase construction costs. In general, it is best to avoid siting in these areas. Exclusionary criteria might include areas such as:

- Wetlands and floodplains.
- Endangered and protected flora and fauna habitats.
- Protected sites of historical, archeological, or cultural significance.
- Prime agricultural land.
- Parks and preserves.

Some examples of federal laws defining these areas include the Endangered Species Act; the Migratory Bird Conservation Act; the Coastal Zone Management Act; the Wild and Scenic Rivers Act; the Marine Protection, Research, and Sanctuaries Act; and the National Historic Preservation Act.

Technical Siting Criteria

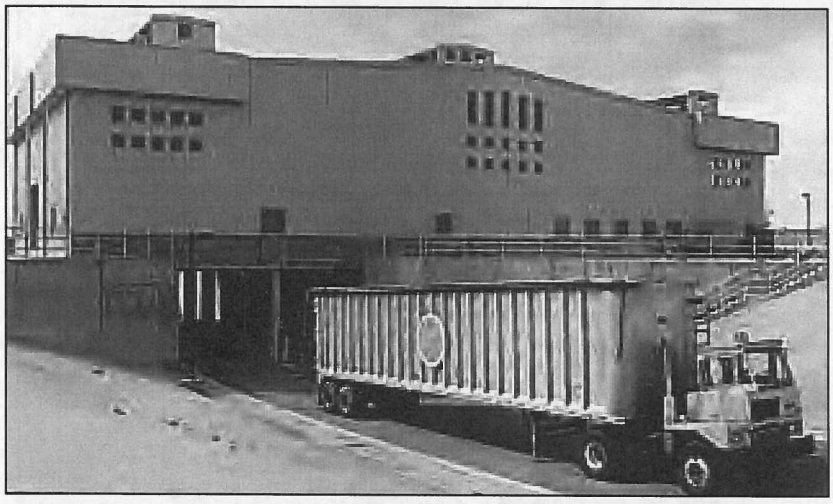
The second category of criteria to develop includes technical parameters that help define the best potential facility sites. These criteria provide guidance on specific engineering, operation, and transportation conditions that should be considered to ensure that potential sites are feasible from technical, environmental, and economic perspectives. These criteria address the following issues:

- **Central location to collection routes:** To maximize waste collection efficiency, transfer stations should be located centrally to waste collection routes. As a rule of thumb in urban and suburban areas, transfer stations should be no more than 10 miles away from the end of all collection routes. Beyond that distance, collection routes might need to be altered to enable refuse to be collected and deposited at the transfer station within one operating shift.
- **Access to major transportation routes:** The transfer station should have direct and convenient access to truck routes, major arterials, and highways (or rail or barge access, if appropriate). For large metropolitan areas, direct access to rail lines or barges will significantly reduce the number of large transfer trailers leaving the station and traveling area roads. It is preferable to avoid routing traffic through residential areas because traffic generated by transfer stations contributes to congestion; increased risk to pedestrians; increased air emissions, noise, and

Addressing Cluster Zoning

Siting waste transfer stations exclusively in areas zoned for industrial use can lead to a condition known as "cluster zoning." Especially restrictive zoning frequently forces transfer stations into a few areas. In general, siting transfer stations in industrial zones eliminates permitting agencies' discretion to deny such use because technically, the transfer station is permitted "as a matter of right." These types of zoning actions also prevent an impacted community from influencing the zoning decision. Such intensive clustering of industrial facilities may have negative impacts on neighboring residents, such as increased traffic, noise, odors, and litter. Communities need to address clustering and zoning issues at the local level through comprehensive planning that considers the aggregate effects of clustering certain activities and the equity in sharing community burdens. To avoid clustering when siting a new waste transfer station, establish a community stakeholder or advisory panel to participate in the siting process. This advisory panel should consist of representatives from all potentially affected communities; state, local, and/or tribal regulatory agencies; public and private waste trade groups; local community development organizations; and any other concerned community, environmental, or environmental justice organizations.

To prevent disproportionate facility siting:



- Zoning must not be presumed to prevent significant impacts on poor and minority communities.
- The potential for clustering should be examined.
- Other close or adjacent land uses should be examined to determine compatibility.
- Other close or adjacent land uses should be examined to analyze cumulative impacts.

Requiring Minimum Distance Between Transfer Stations

Communities with a waste transfer station clustering problem might consider requiring a minimum distance between facilities as one possible solution. Designating a minimum distance between waste transfer stations, or other industrial facilities, will limit clustering by forcing the siting of new facilities away from existing operations. The end effect can be a more equitable dispersion of facilities and their negative impacts. A community will need to determine what minimum distance is reasonable.

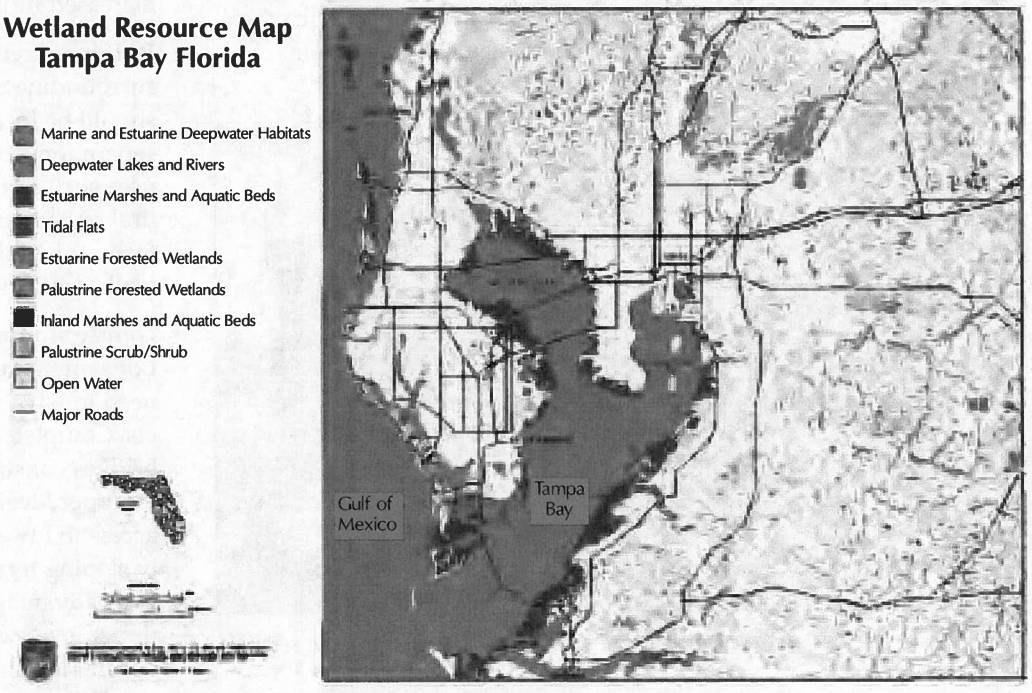
wear on roads; and might contribute to litter problems.

- **Site size requirements:** The area required for specific transfer stations varies significantly, depending on the volume of waste to be transferred, rates at which waste will be delivered, the functions to be carried out at the site, and the types of customers the facility is intended to serve. Locating a site of sufficient size is critical to operating efficiencies and minimizing impacts on the surrounding community. Engineering input can establish preliminary size criteria based on a conceptual design.
- **Sufficient space for onsite roadways, queuing, and parking:** Transfer stations typically have onsite roadways to move vehicles around various parts of the transfer site. Waste collection trucks can be up to 40 feet long. Transfer trailers that move waste to a disposal facility are typically 50 to 70 feet long. These vehicles need wide roadways with gradual slopes and curves to maneuver efficiently and safely. Also, the site will need space for parking transfer vehicles and to allow incoming and outgoing traffic to form lines without backing up onto public roads.
- **Truck and traffic compatibility:** Transfer stations often receive surges of traffic when collection vehicles have finished their routes. Transfer station traffic varies locally, but tends to peak twice a day. The first peak is often near the middle of the day or shift, and the second at the end of the day or shift. Therefore, the best sites for transfer stations are located away from areas that have midday traffic peaks and/or school bus and pedestrian traffic.
- **Ability for expansion:** When selecting a site, consider the potential for subsequent increase in the daily tonnage of waste the facility will be required to manage, or added processing capabilities for recycling and diversion. It is frequently less expensive to expand an existing transfer station than to develop a new site due to the ability to use existing operations staff, utility connections, traffic control systems, office space, and buildings.
- **Space for recycling, composting, and public education:** A transfer station could be sited in areas also conducive to recycling or composting activities. Many transfer stations are designed to enable residents and businesses to drop off recyclables and yard waste in addition to trash. Some transfer stations incorporate education centers or interpretive trails focusing on waste prevention. These types of facilities offer increased utility to the community.
- **Buffer space:** To mitigate impact on the surrounding community, a transfer station should be located in an area that provides separation from sensitive adjoining land uses such as residences. Buffers can be natural or constructed and can take many forms, including open spaces, fences, sound walls, trees, berms, and landscaping.
- **Gently sloping topography:** Transfer stations often are multilevel buildings that need to have vehicle access at several levels. Completely flat sites need ramps or bridges constructed to allow vehicle access to upper levels (or areas excavated to allow access to lower levels). Sites with moderately sloping terrain can use topography to their advantage, allowing access to the upper levels from the higher parts of the natural terrain and access to lower levels

Many transfer stations are multi-level facilities that allow vehicle access at several levels.

from the lower parts. Sites with steep slopes might require extra costs associated with earthmoving and retaining walls.

- **Access to utilities:** Transfer stations generally require electricity to operate equipment, such as balers and compactors; lighting; water for facility cleaning, restrooms, and drinking; and sanitary sewer systems for waste-water disposal. Some smaller transfer stations use wells for water supply, and some, especially in more rural settings, use septic systems or truck their waste water for offsite treatment.
- **Zoning Designations and Requirements:** Zoning ordinances frequently classify transfer stations as industrial uses, which limits their siting to areas zoned for industry usually in conjunction with a special use permit. Exclusive use of predetermined land use criteria, however, might result in locating transfer stations in areas already overburdened with industries or clustering of these types of facilities in areas adjacent to poor and minority communities. If local zoning ordinances are so restrictive that they disallow facility siting outside pre-established industrial zones, substantial engineering and architectural design must be incorporated into the facility to minimize impacts on the surrounding community.



Developing Community-Specific Criteria

The third category of criteria to consider are impacts that the facility will have on the surrounding community. These criteria are typically less technical in nature and incorporate local, social, and cultural factors. Examples of these criteria include:

- Environmental Justice considerations (e.g., clustering, cumulative impacts).
- Impact on air quality.
- Impact on the local infrastructure.
- Adjacent land uses, including other environmental stressors that might already exist.
- Proximity to schools, churches, recreation sites, and residences.

Using GIS to Narrow the Search

A geographic information system (GIS) is a computer system capable of assembling, storing, manipulating, and displaying geographically referenced information (data identified according to location). After the data are entered, each positive attribute or exclusionary criteria for siting transfer stations can be layered on top of municipal maps, as well as each other, to narrow down potential site locations. The maps show these variables in relationship to infrastructure and housing patterns.

- Prevailing winds.
- Number of residences impacted.
- Presence of natural buffers.
- Impacts on existing businesses.
- Expansion capability.
- Buffer zones and screening measures.
- Traffic compatibility.
- Impact on historic or cultural features.
- Impact on neighborhood character.

To maintain objectivity in the facility siting process, the community-specific criteria should be prioritized before potential sites are known. After potential sites are identified, the committee will apply these criteria to evaluate each potential site's suitability as a waste transfer station. These issues also factor into permitting decisions concerning private facilities and should not be ignored by the permitting agency or transfer station developer.

Applying the Committee's Criteria

After all three categories of siting criteria are agreed upon, it is time for the committee to apply the criteria and narrow down all possible sites. Keep in mind, however, that despite the best efforts, every site has some shortcomings that will need to be addressed.

First, the exclusionary criteria can be plotted on maps, which helps the committee visualize where the facility cannot be sited due to local, state, and federal regulations. Once unsuitable areas are eliminated, the committee's technical criteria and community-specific criteria are applied to all remaining options. Information for each potential site should be developed so the committee can rank the sites. Based on the committee's ranking, the top two to four sites should undergo more rigorous analysis to determine technical feasibility and compliance with the environmental and community objectives.

Host Community Agreements

Siting any type of solid waste management facility has often been met with strong community opposition. Whether the facility is publicly or privately owned, many residents may not be confident that the siting, permitting, and oversight process will be sufficiently rigorous to address their concerns and protect them from future impacts. When this type of opposition arises, it is often advantageous for the developer to enter into a separate agreement with the surrounding community, laying out all issues of concern and the developer's action plan in response. These "host community agreements" are most frequently used when private companies are developing a facility, but public agencies might also find them useful in satisfying community concerns. These agreements typically specify design requirements, operating restrictions, oversight provisions, and other services and benefits that the immediate community will receive. Provisions might include the following:

- Steps to reduce negative environmental impacts in the immediate area, such as committing to the use of low emission or alternative fueled vehicles, or retrofitting vehicles with particulate filters.
- Limitations on waste generation sources.
- Roadside cleanup of litter on access routes.
- Restrictions on facility operating hours.
- Restrictions on vehicle traffic routes.
- Financial support for regulatory agencies to assist with facility oversight.
- Independent third-party inspection of facilities, or the use of video monitoring.
- Assistance with recycling and waste diversion objectives.
- A fee paid to the local government for every ton of waste received at the facility.
- Free or reduced-cost use of the facility for the community's residents and businesses.
- Guaranteed preference to the community's residents for employment.

- Funding for road or utility improvements.
- Provisions for an environmental education center.
- Financial support for other community based activities.

These agreements can also require that community representatives have access to the facility during operating hours to monitor performance. Safety concerns must be addressed if this provision is included. Community representatives usually welcome an ongoing communication process between facility operators and an established citizen's committee to encourage proactive response to evolving issues. The provisions or amenities in a host community agreement generally are in addition to what state and local standards or regulations require, and thus should not be thought of as substitutes for adequate facility design and operation. The same is true for state, tribal or local government compliance enforcement. The government agency responsible for transfer station compliance also should make a commitment to the community concerning its role in actively and effectively enforcing all requirements.

Transfer Station Design and Operation

This section discusses the many factors that affect a transfer station design. The general design issues discussed in this section can typically be applied at a variety of facility sites and over a wide range of facility sizes. Specific design decisions and their costs, however, can only be finalized once a specific site is selected. After determining who will use the facility and how, a site design plan can be developed. A facility's design must accommodate its customers' vehicles and the technology used to consolidate and transfer waste, provide for employee and public safety, and address environmental concerns related to safeguarding health and being a good neighbor to the surrounding community.

Transfer Station Design

How Will the Transfer Station Be Used?

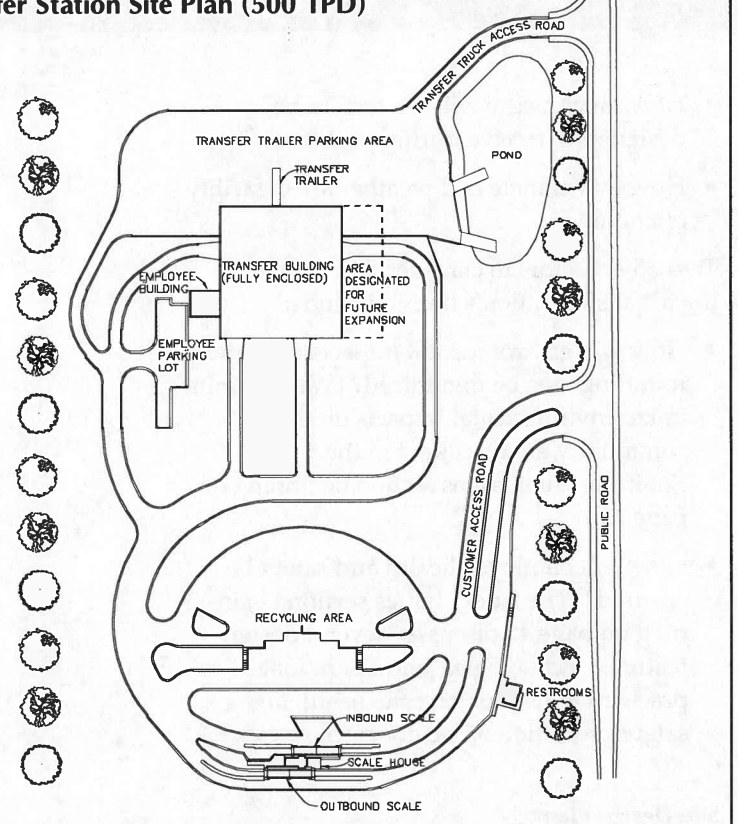
The most important factors to consider when designing a transfer station are:

- Will the transfer station receive waste from the general public or limit access to collection vehicles? If access will not be limited, how will citizen traffic be separated from commercial traffic to ensure safe and efficient unloading?
- What types of waste will the transfer station accept?
- What additional functions will be carried out at the transfer station (i.e., material recovery programs, vehicle maintenance)?
- What type of transfer technology will be used?
- How will waste be shipped? Truck, rail, or barge?
- What volume of material will the transfer station manage?
- How much waste will the facility be designed to receive during peak flows?
- How will climate and weather affect facility operations?

Two other factors to consider when developing a transfer station's design include:

- How will environmental impacts to the surrounding area be minimized? (Ways to minimize environmental impacts on the community are discussed in the Environmental Issues section beginning on page 33.)
- How will employee health and safety be ensured? (The Safety Issues section beginning on page 40 discusses several design features, technologies, and operational practices to help protect the health and safety protection of facility employees.)

Site Design Plan



Once a site is identified for the transfer station, planners, architects, and engineers use the factors described above to develop a site plan for the proposed facility.[2] A site plan shows the layout of the transfer station site's major features, including access points, roadways, buildings, parking lots, utilities, surface-water drainage features, fences, adjacent land uses, and landscaping.

Figure 2 shows a simplified example of a site design plan of a fully enclosed transfer station. This facility has a design capacity of 500 tons per day and occupies a 25-acre site. It serves both the general public and waste collection vehicles and has a citizen drop-off area for recyclables.

Site design plans typically show the following features:

2 Sometimes a "conceptual site plan" is developed before a site is identified. This can be helpful in identifying and assessing the size and suitability of candidate sites.

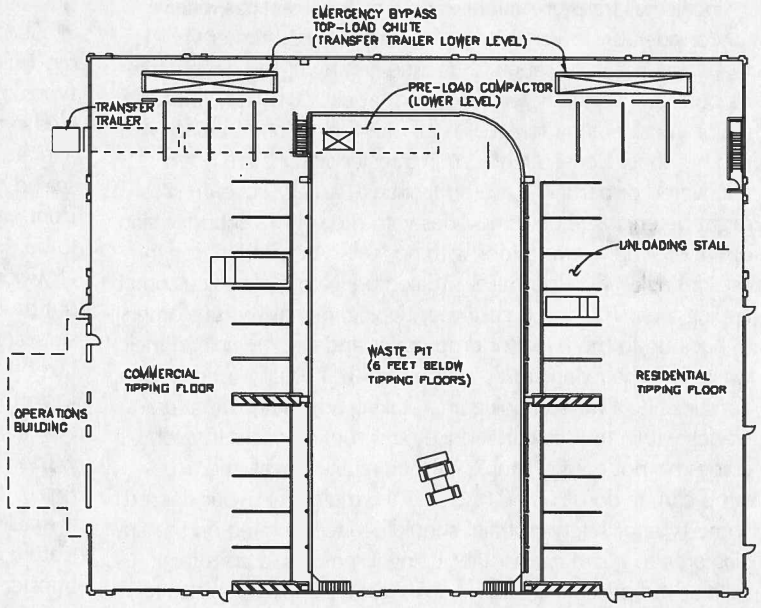
Figure 2
Transfer Station Site Plan (500 TPD)

- **Road entrances and exits.** Including acceleration/deceleration lanes on public streets, and access points for waste arriving and departing from the transfer station. Some facilities have separate access for visitors and employees so these vehicles do not have to compete with lines of vehicles using the facility.
- **Traffic flow routes on site.** Often, separate routes are established for public use and for heavy truck use. Designers work to eliminate sharp turns, intersections, and steep ramps.
- **Queuing areas.** Queues can develop at the inbound scales, the tipping area, and the outbound scales. Queuing space should be clearly identified, and queues should not extend across intersections.
- **The scale house.** Incoming and outgoing loads are weighed and fees are collected.
- **Primary functions at the transfer station building.** Including tipping floor, tunnels, ramps, etc.
- **Buildings.** Including entrances and exits for vehicles and people.
- **Parking areas.** Employees, visitors, and transfer vehicles.
- **Public conveniences.** Such as separate tipping areas for the general public, recycling dropoff areas, a public education center, and restrooms.
- **Space for future expansion of the main transfer building.** Often, this area is shown as a dotted line adjacent to the initial building location.
- **Buffer areas.** Open space, landscaping, trees, berms, and walls that reduce impacts on the community.
- **Holding area.** For inspecting incoming loads and holding inappropriate waste loads or materials for removal.

Main Transfer Area Design

Most activity at a transfer station occurs within the main transfer building. Here, cars and trucks unload their waste onto the floor, into a pit, or directly into a waiting transfer container or vehicle. Direct loading can simplify operations, but limits the opportunity to perform waste screening or sorting. When not loaded directly, waste deposited onto the floor or into a pit is stored temporarily, then loaded into a transfer trailer, intermodal container, railcar, or barge. Most modern transfer stations have enclosed buildings. Some older and smaller facilities are partly enclosed (e.g., a building with three sides) or only covered (e.g., a building with a roof but no sides). Small rural facilities might be entirely open but surrounded by fences that limit access and contain litter.

Figure 3 shows the main transfer building for the site plan depicted in Figure 2. It shows a 40,000-square-foot building with a pit, separate tipping areas for public versus large trucks on either side of the pit, and a preload compactor to compact the waste before it is loaded into transfer trailers.



Because the main transfer building is typically quite tall to accommodate several levels of traffic, it can often be seen easily from off-site locations. Therefore, the main transfer building should be designed to blend into or enhance the surrounding neighborhood.

Types of Vehicles That Use a Transfer Station

Traffic is frequently a transfer station's most significant community impact. Because the primary purpose of transfer stations is to provide more efficient movement of wastes, it is important to consider the following types of customers and vehicles that commonly use them.

- **Residents hauling their own wastes in cars and pickup trucks.** Residents regularly served by a waste collection service typically visit the transfer station less frequently than residents in unincorporated and rural areas not served by waste collection companies (or who elect not to subscribe to an available service). Residents typically deliver only a few pounds to a ton of waste per visit.
- **Businesses and industry hauling their own wastes in trucks.** Many small businesses such as remodeling contractors, roofers, and landscapers haul their own wastes to transfer stations. The vehicle type used and the waste amount delivered by businesses varies considerably.
- **Public or private waste hauling operations with packer trucks.** Packer trucks, which compact waste during the collection process, are commonly used on collection routes serving homes and businesses. Packer trucks typically visit many waste generators along their routes and unload when full, generally once or twice per day. Convenient access to a transfer station helps keep packer trucks on their collection routes. Packer trucks typically deliver 5 to 10 tons of waste per visit.
- **Public or private waste hauling operations with rolloff trucks.** Large rolloff containers are typically placed at businesses and industry and collected when they are full. A rolloff box is a large metal bin, often open at the top, that can be loaded onto a truck and hauled away to dispose of the waste. Rolloff boxes also are commonly used at transfer stations to receive yard waste, recyclables, and solid waste from the general public. A typical, large rolloff box measures 8 feet tall, 7 feet wide, and 22 feet long. Unlike packer trucks that operate on an extended route before traveling to the transfer station, rolloff trucks typically travel to one place, pick up a roll-off container, travel to and unload at the transfer station, and return the empty rolloff container to the place of origin. Because rolloff trucks handle many loads per day, convenient access to a transfer station is very important to their operations. Rolloff trucks typically deliver 2 to 8 tons per visit.
- **Transfer vehicles hauling waste from the transfer station.** Transfer trailers (similar to large interstate tractor-trailers) commonly haul consolidated waste from transfer stations to disposal facilities. Trains or barges are also used to haul waste from some large urban transfer stations (see text box). Transfer trailers typically haul 15 to 25 tons per trip, while trains and barges typically haul thousands of tons. Some stations

Rural Transfer Station Design

Since small transfer stations in rural or tribal settings receive considerably lower volumes of waste and customer vehicles than large urban or suburban facilities, many of the design criteria outlined previously will simply not apply. Cost frequently is a major consideration for small rural transfer stations, limiting what can be done. Consequently, rural transfer stations are often uncovered or partially covered facilities. Partially covered sites might be enclosed on three sides with the vehicle entrance side open, or simply have a roof with no walls. A common design uses a single open-top trailer situated beneath a raised customer tipping area. The raised customer tipping area allows customers to back up to the trailer or drop boxes and directly unload their waste into the rolloff trailer. A hopper is not usually used. When constructing a raised tipping area, taking advantage of natural grades within the site can reduce construction costs. If favorable grades do not exist, a simple earthen retaining wall and access ramp can be constructed to create the multilevel layout desired. Some type of safety restraint should be incorporated on the tipping area to guard against falls. Using a removable constraint, such as a rope, chain, gate, or posts, allows tipping vehicles to unload waste unimpeded and facilitates site cleaning.

Driving surfaces ideally are paved to minimize dust generation, but all-weather gravel surfacing is a cost-effective alternative to asphalt pavement. Another alternative is hosing down dirt areas during operating hours. The use of drop boxes requires a concrete or asphalt pad. Ideally, the facility is surrounded by a fence and gated. The gate should be locked during nonoperating hours to keep out large vectors, trespassers, and illegal dumpers. Fences also are helpful in containing windblown litter. It is not uncommon for remote sites to lack water, sewer, or electrical service.

Partially covered rural facility.

Another design approach utilizes a completely contained modular system, such as the system pictured below. These types of systems are prefabricated and can be quickly assembled in the field. The waste collection bins are completely sealed and are animal- and people-proof. Waste is deposited into the sealed bin by one of two methods. A small sliding door on the front panel can be opened by hand allowing small waste loads to be deposited, while the entire front panel can be raised to allow collection vehicles to unload. Raising the front panel cannot be done by hand and requires a power source. For isolated sites lacking electrical power, vehicle drivers can use a power takeoff or a hydraulic connection from their collection vehicles to lift the front panel. To unload the system, the transfer vehicle pulls along side the container which is tipped up, dumping the waste into the waiting vehicle (see the photograph below). Again, if power is not available on site to tip the container, hydraulic power from the transfer vehicle itself can be used. This feature makes such arrangements ideal for unmanned or remote transfer stations. If desired, or required by state, tribal, or local regulations, leachate collection tanks also can be installed onsite.

transfer materials by using intermodal systems, which combine short distance truck transport with longer distance rail or barge transport.

The following design issues should be considered for the various vehicle types:

- Packer trucks and rolloff trucks require a tall "clear height" inside buildings so they do not hit overhead lights, beams, or doorways when extended. When these vehicles unload, they typically require 25 to 30 feet of vertical clearance. Large transfer stations can more readily accommodate this requirement. Small and medium-sized transfer stations can provide this clearance, but doing so tends to make these buildings unusually tall for their size, particularly if they are multilevel facilities.

- Packer trucks and rolloff trucks need space on the tipping floor to pull forward as the load is deposited if they are unloading on a flat floor (rather than into a pit).
- Packer and rolloff trucks require large areas to turn, back up, and maneuver into the unloading area.
- Residential loads, particularly those pulling trailers, require additional time and space to back up into the unloading area. In the interest of safety and site efficiency, many transfer stations have a separate access road and receiving area for residential deliveries so that they do not tie up unloading space reserved for trucks. Residents typically unload materials by hand, which takes additional time.
- Curves and intersections along roads on or near the transfer station site need large turning radii so the rear wheels of trucks do not run over curbs or off the road when making moderate or sharp turns.
- Slopes on ramps should be limited to less than 8 percent, particularly for fully loaded transfer trailers.
- In colder climates, measures and equipment for seasonal or severe weather should be incorporated. Road sanders and snowplows for ice and snow removal are some examples.

A collection vehicle dumps its load onto the tipping floor.

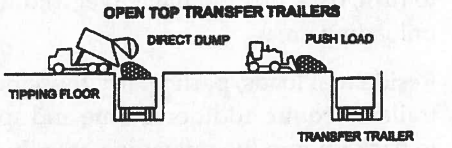
Transfer Technology

The method used to handle waste at the transfer station from the time it is unloaded by collection vehicles until it leaves the site is central to any transfer station's design. In the simplest cases, waste from collection vehicles is unloaded directly into the transfer container or vehicle. As this eliminates opportunities to inspect or sort the material, other floor tipping methods are more common.

This section describes the basic methods of handling waste at transfer stations, explains which methods are most appropriate for small and large transfer stations, and addresses the

Rail and Barge Transport

Rail Transport is suitable for high-volume transfer stations, particularly those that need to haul waste long distances. Using railcars for transport offers some advantages over long hauling via truck. Railcars have a very large capacity and offer an economical mode of long-haul transport. Rail transport also eliminates highway out-haul traffic and allows out-haul vehicles to avoid highway traffic delays. Similar to trucks, rail transport uses a range of waste transfer containers and loading methods. Rail operations typically use direct top loading of noncompacted waste, loading of precompacted waste into intermodal containers, or placement of bales in conventional boxcars. When intermodal containers have to travel public highways between the rail terminals and either the transfer station or the disposal site, the container load must stay within the highway weight limit. In some cases this may mean using several smaller containers per railcar rather than just one or two large containers. A single train can take more than two hundred truck trips off the highway and in many situations can move the waste at a lower cost per ton mile, with greater fuel efficiency and lower overall air emissions.



Rail transport is dependent upon the availability of adequate numbers of rail cars and containers and the ability of the railroad system to pickup and move the waste in a timely manner. Long delays before departure or along the route can result in odor problems.

Barges carrying sealed intermodal containers are even more efficient than train transport. A single barge can replace 350 truck trips. Barge transport is best suited for very large waste transfer operations because of the high capital cost of loading and unloading terminals and transport containers and marine vessels. Siting of marine terminals may also be more difficult than siting a conventional waste transfer station.

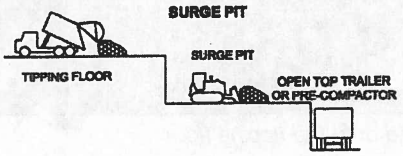


Figure 4
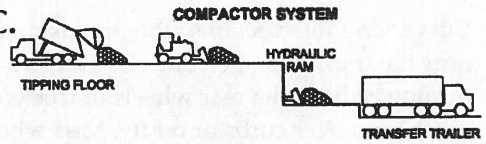
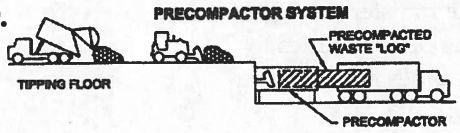
Basic Transfer Station Technologies

Waste can be unloaded directly into the "open top" of the trailer, but is most often unloaded on the tipping floor to allow for materials recovery and waste inspection before being pushed into the trailer. Large trailers, usually 100 cubic yards or more, are necessary to get a good payload because the waste is not compacted. This is a simple technology that does not rely on sophisticated equipment (e.g., compactor or baler). Its flexibility makes it the preferred option for low-volume operations.

A.



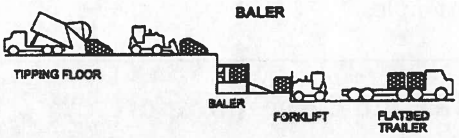
B.



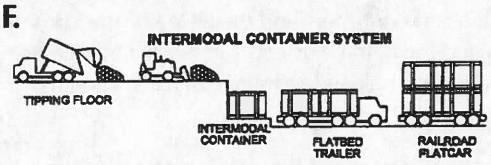
The surge pit is not a loading technology, but an intermediate step normally used with open-top or precompactor systems. The pit can store peak waste flow, thus reducing the number of transfer trailers needed. A tracked loader or bulldozer is used to compact the waste before loading, increasing payload. Because waste is often unloaded directly into the surge pit, this technology might deter materials recovery and waste screening efforts.

Stationary compactors use a hydraulic ram to compact waste into the transfer trailer. Because the trailer must be designed to resist the compactive force, it is usually made of reinforced steel. The heavy trailer and the weight of the onboard unloading ram reduce the payload available for waste. This technology is declining in popularity.

C.



D.



Precompactor systems use a hydraulic ram inside a cylinder to create a dense "log" of waste. The log is pushed into a trailer that uses "walking floor" technology to unload or relies on a tipper at the landfill to unload by gravity. Most precompactor installations have two units in case one unit requires repair. The capital cost is relatively high at more than $250,000 per unit, but the superior payload can offset these initial costs.

Balers are units that compress waste into dense, self-contained bales. Wire straps may be used to hold the bales intact. They are usually moved by forklifts and transported by flatbed trailers. The baler units can also be used for recyclables such as paper and metal. Payloads are very high, but so are capital costs. Most baling stations have at least two units in case one is down, and they cost more than $500,000 apiece. This high-technology option is normally used only in high-volume operations, and special equipment or accommodations might be required at the landfill (or balefill).

E.

F.

In this alternative, waste is tipped at a transfer station, then loaded into intermodal containers. These containers typically have moisture- and odor-control features and are designed to fit on both flatbed trailers and railroad flatcars. The containers may be loaded directly onto railcars or transferred by truck to a train terminal. The sealed containers can be stored on site for more than 24 hours until enough containers are filled to permit economic transport to the landfill. At the landfill, these containers are usually unloaded by tippers. This option allows for reduction of total truck traffic on local roads and can make distant disposal sites economically viable.

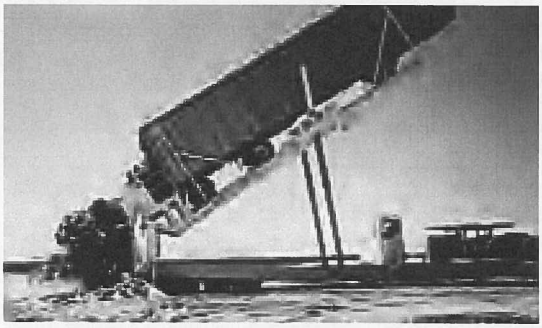
advantages and disadvantages of each method. Figure 4 shows simple diagrams of the various transfer methods described in this manual.

Options for unloading waste from collection or residential vehicles at the transfer station include:

- Directly unloading material into the top of a container or transfer trailer parked below the unloading vehicle, or onto a tipping floor at the same level as the unloading vehicle (Figure 4-A).
- Unloading into a surge pit located below the level of the unloading vehicle (Figure 4-B).



Waste can be moved and piled for short-term storage on the tipping floor or in a pit. Short-term storage allows waste to be received at the transfer station at a higher rate than it leaves the facility, increasing a transfer station's ability to handle peak waste delivery periods.

Options for reloading waste into a transfer container or vehicle include:

- Reloading directly from a tipping floor or pit into top-load containers or transfer trailers parked below the tipping floor or pit (Figures 4-A and 4-B).
- Reloading into a compactor that packs the waste into the end of a container or transfer trailer (Figure 4-C).
- Reloading into a preload compactor that compacts a truckload of material and then ejects the compacted "log" into the end of a container or transfer trailer (Figure 4-D).
- Reloading into a baler, which makes bales that can then be forklifted onto a flatbed truck (Figure 4-E).

Options for unloading waste at the disposal facility from transfer containers or vehicles include push-out blades, walking floors, and trailer tippers. With push-out blades and walking floors, the trailers unload themselves. A trailer tipper lifts one end of the trailer (or rotates the entire trailer) so that the load falls out due to gravity. Baled waste can be manipulated at the landfill using forklifts.

Table 1 summarizes the advantages and disadvantages of the various transfer technologies. Some transfer stations use a combination of technologies to mitigate some of the disadvantages of a particular design. For example, large transfer stations might have a top-loading system as a backup in case the preload compactor breaks down or in case of an electric power outage. It also illustrates that many interrelated factors need to be considered when deciding on the appropriate technology for a transfer station. The major factors include design capacity, distance to the disposal site, cost, reliability, safety, and method of unloading at the disposal site.

A trailer tipper emptying a transfer trailer at a waste disposal facility.

Transfer Station Operations

This section describes transfer station operations issues and suggests operational practices intended to minimize the facility's impact on its host community. Issues covered include:

- Operations and maintenance plans.
- Facility operating hours.
- Interacting with the public.
- Waste screening.
- Emergency situations.
- Recordkeeping.

Operations and Maintenance Plans

Although a transfer station's basic function as a waste consolidation and transfer facility is straightforward, operating a successful station involves properly executing many different tasks. Some tasks are routine and easily understood, while others occur infrequently and might be difficult to conduct properly without step-by-step directions. To help ensure proper operations, transfer stations should have written operations and maintenance plans. These plans are often required by

Table 1
Advantages and Disadvantages of Different Transfer Technologies

Waste Storage Alternatives			
Technology	**Advantages**	**Disadvantages**	**Application**
Direct dump into transfer vehicle or storage container	Simple arrangement; little potential for equipment breakdown. Low capital cost. Potentially less housekeeping: no tipping floor, pit, or compaction equipment to clean and maintain. Much smaller building footprint possible, but advantage might be decreased by need for large yard space for queuing.	Transfer station cannot accept waste unless a trailer is positioned to receive waste. (Shortage of empty trailers shuts down facility.) No short-term storage (surge capacity) to accommodate peak inflow periods. Unless many unloading stalls are provided, long customer queuing can be expected during peak inflow periods. Relatively low payloads in trailers. Fall hazard. Limited ability to screen and remove unacceptable wastes. No opportunity for waste diversion or materials recovery. Generally not suitable for receiving loads from large roll-offs or large packer trucks. Trailers can be damaged by direct dumping of heavy materials.	Most suitable for small transfer stations in rural and tribal settings with a relatively short haul distance to the waste disposal site. Frequently used in conjunction with bins for source-separated recyclables.
Tipping floor waste storage	Simple arrangement; little potential for equipment breakdown. Generally less expensive and provides more operational flexibility than pits. Storage provides "disconnect" between waste receipts and waste loading. (Shortage of empty trailers does not shut down facility.) Allows for easy screening and removal of unacceptable wastes.	Garbage on tipping floor can be messy and slippery (fall hazard). Potential for accidents between customers and transfer station mobile equipment (e.g., wheel loader) that moves/stacks waste (safety issue). Requires roll-out space for trucks to pull forward when discharging their loads. Equipment is needed to reload the waste into the transfer trailer.	Suitable for small and large transfer stations; can manage nearly all waste types.

	Allows for the breaking up of bulky items and the compacting of waste to increase density for more economical shipping.	Requires additional fire control equipment (e.g., fire hoses, water cannon) to control fires in waste piles on tipping floor	
Surge pit	Storage provides "disconnect" between waste receipts and waste loading. (Shortage of empty trailers does not shut down facility.) Allows for the breaking up of bulky items and the compacting of waste to increase density for more economical shipping. No roll-out space required for unloading vehicles; waste falls from back of truck into pit. Eliminates potential for collision between transfer station equipment and customers.	Expensive to construct. Fall hazard for people and vehicles. Hazards to equipment operator working in pit when waste is being unloaded by customers. Can be difficult to remove unacceptable waste found in the pit. Extra building level (three stories instead of two) might increase overall height of building above grade, increasing building profile. Equipment is needed to reload the waste into the transfer trailer. Requires additional fire control equipment (e.g., fire hoses, water cannon) to control fires in waste piles in surge pit.	Most suitable for large transfer stations with high peak flows.
Transfer Container and Vehicle Loading Alternatives			
Technology	**Advantages**	**Disadvantages**	**Application**
Top-loading trailers and containers	Simple, gravity-loaded method. Might be supplemented with compaction by using equipment that reaches into the top of the trailer to tamp down and level the load. Suitable for a wide range of waste types, including construction debris and bulky materials.	Generally involves imperfect, permeable closure (screen or tarp) on top of trailer. Odors and litter can escape, and precipitation can make the load heavier. Trailers can be damaged when dense or sharp materials fall into an empty trailer. Sound of waste falling into trailers can be noisy.	Suitable for small and large transfer stations.

Electronic Filing: Received, Clerk's Office 04/19/2023 C003727

Transfer Container and Vehicle Loading Alternatives (cont.)

Technology	Advantages	Disadvantages	Application
Compaction into trailer and container	A trailer or container can be completely closed to prevent rainwater entry and odor and liquid from escaping. Compaction usually achieves high densities.	A heavy trailer or container decreases effective payload. (Trailer must be structurally reinforced to withstand the pressure of the compactor.) Capital cost of trailer fleet is greater. Tail end of trailer or container (near compactor) tends to become overloaded. Front end of trailer tends to be light. Rear axle loading tends to limit effective payload. Hydraulic power equipment for compactor can be noisy.	Not commonly used for new transfer stations.
Preload compaction into rear-loading trailer or container	Allows use of lightweight trailer or container to increase effective payload. Trailer or container can be completely closed to prevent rainwater entry and odor and liquid from escaping. Payload can be measured as it is compacted, with ability to optimize each payload.	High capital costs (but can be offset by reduced transportation costs). Relatively complex equipment; when it breaks down, can shut down transfer station after short-term storage capacity is full. Redundancy (i.e., two compactor units) increases costs. Totally dependent on availability of electrical power. Large motor sizes generally preclude the use of a standby electrical generator to handle power outage. Less suitable for certain types of waste (oversize materials, concrete, wire, cable). Hydraulic power equipment for compactor can be noisy. A heavy electrical power consumption system.	Most suitable for high-volume transfer stations, particularly those that need to haul waste long distances. Container alternative ideally suited for intermodal transfer to rail system.

Baling	Allows for efficient transportation due to density of waste and ability to use light-weight trailers. Trailer can be completely closed to prevent rainwater entry, and odor and liquid from escaping. Compatible with balefills, which can landfill a large amount of waste in a small space; might be best in difficult (extreme weather or windy) environments. Baler can also be used to prepare recyclables for transport and sale.	High capital cost. Relatively complex equipment; when it breaks down, it can shut down transfer station after short-term storage capacity is full. Hydraulic power equipment for baler can be noisy. Special equipment needed at landfill.	Suitable for large transfer stations, particularly those that need to haul waste long distances. Required for delivering waste to a balefill.
Transfer Container and Vehicle Unloading Alternatives			
Technology	**Advantages**	**Disadvantages**	**Application**
Push-out blade transfer trailer	Allows for unloading anywhere (not just at a landfill with a trailer tipper).	Some trailer capacity (both volume and weight) used for the push-out blade, which reduces effective waste payload. Material can become stuck behind push-out blade. Blade can bind during extension or retraction.	Most suitable for short-distance, low-volume hauling.
Walking floor transfer trailer	Allows for unloading anywhere (not just at a landfill with a trailer tipper).	More prone to leak liquids from the bottom of the trailer. More prone to damage from dense or sharp objects that fall into an empty trailer.	Suitable for a range of volumes and distances.
Trailer tipper for transfers trailers and trailer-mounted containers	Allows use of lightweight trailers to maximize payloads. Ideal for rail-based container intermodal system.	High reliability or redundancy required—no way to unload trailers at the landfill if the tipper fails. Tippers can be unstable if placed over waste at landfill.	Most suitable for long-distance, high-volume hauls. Most suitable for hauls to large landfills (small to medium landfills not likely to have a tipper).
Open-top railcar tippers	Extremely rapid, large-volume unloading.	Fixed unloading point requires reloading and some other form of transport from unloading point to final destination.	Most suitable for a fixed-disposal method such as at a solid waste incinerator.

Solid waste baler compacts waste into dense, self-contained bales.

state, tribal, or local regulations. They should be written specifically for a particular facility and include the following elements:

- Facility operating schedule, including days of the week, hours each day, and holidays.
- Staffing plan that lists duties by job title, minimum staffing levels, and typical work schedules.
- Description of acceptable and unacceptable wastes, and procedures for diverting restricted waste before and after unloading.
- Operating methods for each component of the facility, including waste-screening methods, truck-weighing procedures, tipping floor operations, transfer vehicle loading, onsite and offsite litter cleanup, and wastewater collection system operations.
- Description of maintenance procedures for each component, including the building, mobile equipment, utilities, and landscaping.
- Employee training.
- Safety rules and regulations.
- Recordkeeping procedures.
- Contingency plans in the event of transfer vehicle or equipment failure, or if the disposal site is unavailable.
- Emergency procedures.

Facility Operating Hours

A transfer station's operating hours must accommodate the collection schedules of vehicles delivering waste to the facility. Operating hours need to consider the local setting of the transfer station, including neighboring land uses, as well as the operating hours of the disposal facility receiving waste from the transfer station.

Operating hours vary considerably depending on individual circumstances. Many large facilities located in urban industrial zones operate 24 hours, 7 days per week. Urban, suburban, and rural transfer stations of various sizes commonly open early in the morning (6 a.m. to 7 a.m.) and close in the late afternoon (4 p.m. to 5 p.m.). In many cases, the last trailer must be loaded with sufficient time to reach the disposal site before it closes (typically 4 p.m to 6 p.m.).

Transfer stations that serve both the general public and waste hauling companies typically operate 6 or 7 days per week. Facilities that are not open to the public typically operate 5 or 6 days per week because many waste hauling companies do not operate on Sundays and have limited operations on Saturdays. Many smaller and rural facilities operate only on certain days of the week and have limited hours.

The hours described above represent when the transfer station is open to receive waste from customers. Operations often extend beyond the "open for customers" hours, however, as workers load waste into transfer vehicles, clean the facility, and perform equipment maintenance. Depending on the nature of the operation, transfer trucks leaving the site can sometimes operate on a schedule somewhat independent of the rest of the operations. For example, some operations maintain an inventory of empty transfer containers and vehicles and loaded containers and vehicles at the transfer station site. Loaded containers and vehicles can be hauled off site according to the best schedule considering traffic on area roadways, neighborhood impacts of truck traffic, and the hours the disposal facility receives

waste from the transfer station. State, tribal, or local regulations might limit the overnight storage of waste in the transfer station or even in transfer trailers.

Interacting With the Public

Every transfer station has neighbors, whether they are industrial, commercial, residential, or merely vacant land. The term "neighbor" should be broadly interpreted, as some of those impacted might not be immediately adjacent to the transfer station. For example, vehicles traveling to and from a transfer station could significantly affect a residential neighborhood a mile away if those vehicles travel on residential streets.

An important part of successful transfer station operations is engaging in constructive dialogue with the surrounding community. The appropriate level of interaction between transfer station personnel or representatives and their neighbors varies depending on many factors. A transfer station in the middle of a warehouse district with direct access to expressways might find that joining the local business association and routinely picking up offsite litter are adequate community activities. While a transfer station located adjacent to homes and restaurants might find that monthly meetings with neighbors, landscaping improvements, commitments to employ local workers, an odor reporting hotline, and daily cleanup of litter are more appropriate.

When developing a community outreach plan, transfer station operators should consider the following:

- Develop a clear explanation of the need for the transfer station and the benefits it will provide to the immediate community and surrounding area.
- Develop a clear process for addressing community concerns that is communicated to the neighborhood even before the facility becomes operational.
- Designate one person as the official contact for neighborhood questions and concerns. Ideally, this person would regularly work at the transfer station and be available to respond quickly to questions and concerns. The person should also be good at listening carefully to community concerns before responding. Advertising an e-mail address or Web site is another way to provide information and allow community input.
- Organize periodic facility tours. Neighbors unfamiliar with the transfer station's operations are more likely to have misconceptions or misunderstand the facility's role.
- Establish positive relationships by working with community-based organizations, improvement districts, civic associations, business associations, youth employment bureaus, and other organizations. Interaction with the community should focus on positive issues, not just occasions when a neighbor is upset about odor, litter, or traffic.
- Offer support services such as newspaper drives, household hazardous waste (HHW) drop-off days, and spring cleaning disposal at the facility.

Waste Screening

As described in the section on Unacceptable Wastes in the Planning and Siting a Transfer Station chapter, some types of wastes are not appropriate for handling at a transfer station. These unacceptable wastes might be difficult to handle, dangerous, prohibited at the disposal facility where the waste is sent, or subject to a recycling mandate.[3] Transfer station operators should screen for unacceptable materials before, during, and after customers unload, and should tell customers where they can dispose of wastes inappropriate for that transfer station.

If their wastes are refused at a transfer station, some customers might illegally dispose of unacceptable materials or might try to hide these materials in a future delivery. When customers arrive with unacceptable materials, operators could give them a preprinted fact

3 For example, some states, tribes, or cities prohibit the disposal of yard wastes in landfills. Thus, grass clippings would be prohibited in a mixed waste load.

sheet that describes the issue and suggests alternative management methods. In addition, community programs dedicated to reducing the use of products that generate dangerous wastes can decrease unacceptable waste deliveries to transfer stations.

At the transfer station, screening for unacceptable wastes could start at the scale house (where customers first check in upon arrival at the facility). Employee training on identifying and managing suspect materials is the cornerstone in any waste-screening program. Operators could interview customers about types of waste they have and from where the waste was collected. A list of common unacceptable items could be posted, and operators could ask if any of the items are present in the load. Visual inspections can also help identify unacceptable wastes. Some facilities provide overhead cameras or walkways to facilitate a view of the top of uncovered loads (or loads that can easily be uncovered at the scale house). Walking around the truck to examine its contents and checking for smoke or suspicious odors might be appropriate. Sensors for detecting radioactive materials can be used at the scale house or at a point along the incoming truck route to the tipping area.

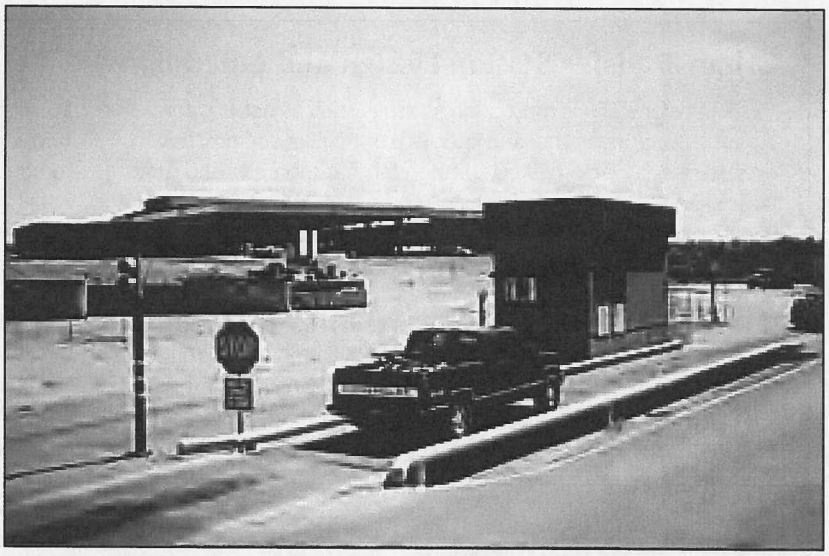
Fact Sheets About Unacceptable Waste

Consider developing simple fact sheets to inform customers why certain wastes are not accepted at the transfer station and where they can dispose of the unacceptable wastes. A typical fact sheet could include:

- A picture or graphic of unacceptable waste.
- A definition of what the unacceptable waste is and a brief description of why it is not accepted at the transfer station.
- The dangers, drawbacks, or penalties for improper disposal of unacceptable waste.
- Safe consumer alternatives.
- Where the waste can be appropriately managed, including driving directions, hours of facility operation, and contact information.
- Telephone numbers and Web sites of appropriate regulatory agencies that can provide more information.

Some unacceptable wastes might not become apparent until the unloading process. Operators should observe waste unloading and examine suspected unacceptable wastes. Waste unloaded onto the floor or into a pit is easier to monitor than waste unloaded directly into a transfer container or vehicle. Ideally, unacceptable wastes would be noticed before the delivery vehicle has left the site.

Regardless of screening efforts, transfer station operators should expect that some unacceptable wastes will be discovered after the responsible party is gone. Transfer stations should set aside an area for safe temporary storage of unacceptable wastes until appropriate disposal is feasible, and develop a step-by-step plan to follow. In some cases, the party that deposited the waste can be contacted to retrieve it. In other cases, the transfer station operator must properly manage the waste. Proper material management depends on the type of waste discovered. For example, management of hazardous wastes requires compliance with federal regulations issued under authority of the Resource Conservation and Recovery Act (RCRA) (40 CFR Parts 260 to 299) or the Toxic Substances Control Act (TSCA) (40 CFR Part 700 to 799), whereas recyclable materials screened from the waste stream can be collected and processed with similar materials.



Emergency Situations

Most days at a transfer station involve routine operations. Transfer station operators should prepare for emergencies, however, and include emergency procedures in their written operations plans. State regulatory agencies often require submission of a Plan of Operations and a Contingency Plan for review and approval. At minimum, the following emergency events should be anticipated:

- **Power failure.** The plan should address how to record customer information, collect fees, and load transfer trailers during a power outage. Many larger transfer stations have backup power generators so at least some operations can continue during a power failure.
- **Unavailability of transfer vehicles.** The plan should address what to do if poor weather, road closures, or strikes prevent empty transfer vehicles from arriving at the transfer station. The plan should also address when the transfer station should

stop accepting waste deliveries if the waste cannot be hauled out in a timely manner.

- **Unavailability of scales.** The plan should describe recordkeeping and fee assessment in the event that scales are inoperable. At facilities with both inbound and outbound scales, one scale can temporarily serve both purposes.
- **Fire.** Fire response and containment procedures should address fires found in incoming loads, temporary storage at the transfer station, compaction equipment, transfer vehicles, and other locations. Typically, fire procedures focus on protecting human health and calling professional fire departments. Ceiling sprinkler systems by themselves might not be completely effective in preventing small fires from spreading. Due to the high ceilings common in transfer stations, a fire could spread substantially before it gets hot enough at the ceiling level to activate sprinkler systems. Consequently, facilities should have fire hoses or other fire fighting equipment in the area, in addition to ceiling mounted sprinklers. A water cannon on a washer truck can also be used to contain small fires until the fire department arrives.
- **Spill containment.** Spills can occur from waste materials or from vehicles delivering waste. For example, hydraulic compaction system hoses on garbage trucks can break. Spill containment plans should address spill identification, location of spills, deployment of absorbent materials, and cleanup procedures. For large spills, the plan should also address preventing the spill from entering storm drains or sewers.
- **Discovery of hazardous materials.** Hazardous materials plans should include methods to identify and isolate hazardous materials, temporary storage locations and methods, and emergency phone numbers.
- **Injuries to employees or customers.** The plan should include first aid procedures, emergency phone numbers, and routes to nearby hospitals.
- **Robbery.** Some scale houses handle cash and include security provisions to deter robbery.

A transfer station scale house.

Emergency plans should include a list of emergency contacts, including daytime and evening phone numbers for facility management, facility staff, emergency response teams, frequent customers, and regulatory agencies.

Recordkeeping

Detailed operating records enable both facility managers and regulatory overseers to ensure that the transfer station is operating efficiently and in accordance with its permit requirements. Medium and large transfer stations typically record the following information as part of their routine operations:

- **Incoming loads:** date, time, company, driver name, truck number (i.e., company fleet number), weight (loaded), weight (empty),[4] origin of load, fee charged.
- **Outgoing loads** (typically transfer trucks): date, time, company, driver name, truck number (i.e., company fleet number), weight (loaded), weight (empty), type of

4 For repeat customers, the empty truck (tare) weight is often kept on file so trucks do not need to weigh out during each visit.

Urban Transfer Station Design and Operations

All transfer stations must address issues such as noise, odors, dust, vectors, traffic, and litter. Urban transfer stations, however, frequently lack the key component that suburban and rural facilities use to mitigate these problems: space. Where a suburban or rural facility can simply use large buffer zones between operations and receptor populations, urban sites are frequently unable to do so due to severe site size limitations. Urban transfer stations must employ a combination of planning, design, and operating practices to help minimize impacts upon the surrounding community. Listed below are several engineering designs, technologies, and operating practices that an urban transfer station should consider employing to mitigate facility impacts upon the neighboring community.

Noise

Structural and Site Layout Approaches

- Totally enclose all waste-handling operations to contain noise.
- Use concrete walls and structures, which absorb sound better than metal structures.
- Install double-glazed windows which contain noise better than single-glazed windows.
- Install shielding or barriers, such as trees, berms, or walls, around the facility to block and absorb noise. Size of the shielding, distance to receptors, and shielding materials all determine effectiveness. Walls can be made from concrete, stone, brick, wood, plastic, metal, or earth. Vegetate berms with grasses, shrubs, or trees to further mitigate noise and increase aesthetics. Barriers should be continuous, with no breaks, and long enough to protect the intended receptors.
- Wing walls, usually constructed of concrete, on transfer buildings can also block noise from trucks entering and exiting the building and noise from interior operations.
- Insulate transfer building walls with sound-absorbing materials.
- Locate administrative buildings between sources of noise and community.
- Orient transfer building openings (i.e., doors) away from receptors.

Operational Practices

- Keep doors closed during operating hours, except when vehicles are entering or exiting.
- Use the lowest allowable setting on vehicle backup alarms, or use visual warning devices if state and local regulations allow.
- Establish operating hours that avoid early morning or late-night operations.
- Set facility noise level limits (e.g., 55 decibels at the site boundary) and adhere to them.

Odors

- Remove all waste at the end of each operating day. Do not allow any waste to remain on site overnight.
- Frequently clean/wash down the tipping floor or surge pit.
- Install misting systems with deodorants to mask or neutralize odors. Be prepared to make seasonal adjustments as needed to control odors.
- Install ventilation systems with air filters or scrubbers.
- Plant vegetative barriers, such as trees, to absorb and disperse odors.
- Use odor vestibules on truck entrances and exits. Odor vestibules are 2-door systems in which the outer door closes before inner door opens to prevent odors from escaping.
- Install plastic curtains on entrances and exits to contain odors when doors are opened to allow vehicles to enter or exit.
- Use biofilters – which pass malodorous air through organic matter, such as wood chips, mulch, or soil – to capture odor molecules. Bacteria in biofilters consume and neutralize odor molecules.
- Set up a community "odor complaint" phone line, and respond to community complaints.

Dust

Dust from Vehicles

- Pave all roads on site, or lay gravel as a less expensive option.
- Clean facility roads frequently with street-sweeping equipment.
- Wash waste collection vehicles before they leave the transfer station to remove dust-generating dirt and debris.

Dust from Waste Handling Operations

- Align building openings to minimize exposure to prevailing winds.
- Install plastic curtains over building openings.
- Keep station doors closed during operating hours, except when trucks are entering or exiting.
- Install misting systems over tipping areas to "knock down" dust particles. Misting system operations should be adjusted seasonally or as the dryness of the waste dictates.

Vectors (e.g., rats, mice, cockroaches, and other insects)

- Hire a professional licensed pest control company with expertise and experience in controlling specific vector populations.
- Seal or screen openings that allow rodents and insects to enter the building, such as door and window frames, vents, and masonry cracks. Also check for and repair chewed insulation at points where utility structures, such as wires and pipes, enter the transfer building.
- Treat insect breading areas and eliminate as many of these breading areas as possible. Implement practices that do not create new breeding areas.
- Implement practices that reduce the likeliness of attracting vectors (e.g., remove all waste at the end of the operating

(continued next page)

(continued from previous page)

day, wash tipping areas daily, pick up litter and other debris daily).

- Some municipalities require transfer stations to pay neighbors' extermination/pest control costs if it can be proven that the facility is the source of the problem. Consider this policy even if it is not required by law.

Traffic

- Create acceleration, deceleration, or turning lanes at site entrances and exits as needed to maintain steady traffic flows around facility. This may require widening roads.
- Fund road improvements and upgrades around the facility to reduce congestion and prevent damage from additional truck traffic.
- Work with the community to designate inbound and outbound truck traffic routes and ensure that drivers follow these routes.
- Do not allow incoming trucks to queue on public streets. If inadequate space is available on site to accommodate waiting trucks, use a remote site as a waiting area for the trucks. Use radios to dispatch trucks from the waiting area to the transfer station.
- Where possible, schedule incoming traffic so that it does not coincide with local rush hours.

Litter

- Require all incoming and outgoing loads to be covered.
- Ensure that all incoming and outgoing trucks are leak-proof to avoid leachate spills on public streets.
- Implement daily litter inspections and pickup at the facility and on surrounding streets.
- Install a perimeter fence to prevent windblown litter from leaving the site.

material (e.g., waste, compostables, recyclables), destination of load.

- **Facility operating log:** noting any unusual events during the operating day.
- **Complaint log:** noting the date, time, complaining party, nature of the complaint, and followup activity to address the complaint.
- **Accidents or releases:** details any accidents or waste releases into the environment.
- **Testing results:** such as tests for suspected unacceptable waste.
- **Environmental test results:** such as surface water discharges, sewer discharges, air emissions, ground-water, or noise tests.
- **Maintenance records:** for mobile and fixed equipment.
- **Employee health and safety reports.**
- **Employee training and operator certification documentation.**

Some transfer station operators, particularly at smaller facilities, find it necessary to record only some of the above items. In order to avoid the cost of installing and operating a scale, some small and medium-size transfer stations substitute estimated load volume (as measured in cubic yards) instead of weighing loads (in tons). When loads cannot be easily viewed (such as with packer trucks), cubic yards are generally based on the vehicle's capacity. Loads in cars and pickup trucks are typically charged a minimal flat fee.

Environmental Issues

Developing transfer stations that minimize environmental impacts involves careful planning, designing, and operation. This section focuses on neighborhood quality or public nuisance issues and offers "good neighbor practices" to improve the public's perception of the transfer station. Design and operational issues regarding traffic, noise, odors, air emissions, water quality, vectors, and litter are discussed below. Proper facility siting, design, and operation can address and mitigate these potential impacts on the surrounding natural environment and the community.

Careful attention to these issues begins with the initial planning and siting of a facility and should continue with regular monitoring after operations begin. Transfer station design must account for environmental issues regardless of surrounding land use and zoning. Stations sited in industrial or manufacturing zones are subject to the same environmental concerns and issues as stations located in more populated zones. Minimizing the potentially negative aspects associated with these facilities requires thoughtful design choices. Identifying and

Electronic Filing: Received, Clerk's Office 04/19/2023 C003735

Depositing incoming waste on a tipping floor facilitates waste screening.

addressing these important issues can be a significant part of the overall cost to develop the waste transfer station.

Traffic

Traffic causes the most significant offsite environmental impacts associated with larger waste transfer stations. This is particularly true for stations in urban and suburban areas where traffic congestion is often already a significant problem for the local community. Although transportation routes serving rural stations typically receive less traffic, these routes might still be affected by limitations on gross vehicle weight or individual axle weights for certain roads or bridges.

By consolidating shipments to the disposal site, a waste transfer system will have net positive impacts in terms of reducing community-wide truck traffic, air emissions, noise, and highway wear. Some of these negative impacts, however, might be concentrated in the immediate vicinity of the transfer station as a result of increased local traffic generated by a transfer station, even though overall impacts are reduced.

Evaluating travel routes and the resulting traffic impacts should receive significant attention during facility siting and design to minimize the traffic's offsite environmental impacts. Furthermore, dependable access and smooth traffic flow are essential for good customer service and the operating efficiency of the facility. It is common, particularly in urban and suburban areas, for tribes and other local jurisdictions to require significant offsite improvements to mitigate traffic impacts or to assess traffic impact fees to offset improvements needed for traffic upgrades.

Typically, transfer stations can indirectly control when traffic arrives at the facility by adjusting operating hours. Relatively few transfer stations are able to schedule inbound traffic because collection vehicles need to unload when they are full so collection crews can resume their routes or end their working day. Also, many transfer stations are not operated by the same company delivering waste to the facility, so control over specific timing is difficult. Some transfer stations have the ability to schedule transfer vehicle traffic, however. These stations often schedule trips to avoid rush-hour traffic on area routes.

Any queuing should occur on the transfer station site so as not to inhibit the traffic flow on public streets. Queuing on streets creates public safety concerns, blocks traffic and access to adjacent properties, and in some cases, causes damage to streets not designed for heavy vehicles. Exhaust from idling truck engines queuing on public streets can also create air quality and health concerns. (See the Air Emissions section on page 37 for discussion of air emission issues.) If space on the site is insufficient, alternatives should be considered. These could include providing a separate tipping area for certain types of customers (such as self-haulers, who generate a lot of traffic, but not much waste) or establishing a remote holding lot for inbound vehicles to use before joining the onsite queue. Regulatory agencies sometimes can address and control queuing problems through the permitting process. Permitting agencies can incorporate provisions that require transfer stations to provide adequate queuing space on site or off site or that prohibit queuing on public streets.

As a result of community input, the operator might designate traffic routes to the facility. A simple "right turn only" at the exit can

relieve some traffic conflicts. If offsite routes are designated, clear authority for enforcement needs to be established (e.g., by local police or by the station operator refusing access to violators).

Some specific design and operation features that might be necessary to reduce the environmental impacts of station traffic are described below:

- Designating haul routes to and from the transfer station that avoid congested areas, residential areas, and other sensitive areas.
- Adding offsite directional signs, pavement markings, and intersection signals.
- Providing acceleration and deceleration lanes that allow vehicles to enter and leave the flow of offsite traffic smoothly, reducing congestion and the likelihood of accidents.
- Using right turns to enter and leave the station site and minimizing left turns to reduce congestion and the likelihood of accidents off site.
- Providing adequate onsite queuing space so lines of customers and transfer vehicles waiting to enter the facility do not interfere with offsite traffic.
- Installing and using compaction equipment to maximize the amount of waste hauled in each transfer trailer, thus reducing the number of loads leaving the site.
- Establishing operating hours, including restrictions, that encourage facility use during nonpeak traffic times on area roads.
- Schedule commercial waste deliveries to avoid rush-hour traffic.
- Providing or requiring the provision of residential waste collection service to reduce the number of people hauling their own wastes to the transfer station. Although the transfer station will handle the same amount of waste, more of it will arrive as combined collection vehicle loads, reducing the number of loads brought in by cars and pickup trucks. (One residential collection vehicle can haul as much as 15 to 30 cars and pickup trucks.)

Noise

Transfer stations can be a significant source of noise, which might be a nuisance to neighbors.[5] Heavy truck traffic and the operation of heavy-duty facility equipment are the primary sources of noise from a transfer station. Offsite traffic noise in the station's vicinity will be perceived as noise from the station itself. Equipment noise includes engines, backup alarms (beepers), hydraulic power units, and equipment buckets and blades banging and scraping on concrete and steel surfaces. The unloading of waste or recyclables (particularly glass) onto a tipping floor, pit, steel drop box, or trailer can also create substantial noise, depending on the type of waste, fall distance, and surface. Stations that use stationary solid waste compactors or engine-driven tamping equipment have additional sources of mechanical equipment noise with which to contend. Good facility design and operations can help reduce noise emanating from the station. This includes:

- Maximizing the utility of perimeter site buffers, particularly along site boundaries with sensitive adjoining properties. Increasing the distance between the noise source and the receiver, or providing natural or man-made barriers are the most effective ways of reducing noise when the sound generation level cannot be reduced.

Noise Abatement: Leon County, Florida

As part of its site selection process for a waste transfer station, Leon County, Florida, commissioned a study to evaluate and address noise concerns. Parcels adjacent to the site include residential, commercial, and light industrial. To the west is undeveloped residential land. The study used a 5-step procedure to determine the impact that noise from the transfer station would have on the adjoining community. It also assessed the effectiveness and feasibility of abatement. The study resulted in nine recommendations relating to building orientation, truck routing, operating hours, berm and wall construction, and vegetative plantings to buffer noise (Leon County, FL; February, 2000).

5 Although repeated exposure to high noise levels can lead to hearing impairment, noise levels associated with impairment are typically a concern only to employees; neighborhood impacts are typically a nuisance issue, not a health issue.

Electronic Filing: Received, Clerk's Office 04/19/2023 C003737

- Orienting buildings so the site topography and the structure's walls buffer adjacent noise-sensitive properties from direct exposure to noise sources.
- Providing sound-absorbent materials on building walls and ceilings.
- Shutting off idling equipment and queuing trucks.

Surge pit separating public and commercial vehicles. Water sprays along the walls of the pit are used to suppress dust.

- Avoiding traffic flows adjacent to noise-sensitive property.
- Arranging the facility layout to eliminate steep uphill grades for waste-hauling trucks, as driving uphill can significantly increase noise levels.
- Facing building openings such as entrances away from noise-sensitive adjoining property.
- Considering alternatives for beeping back-up alarms, such as strobe lights and proximity detectors (if state and local regulations allow).
- Confining noisy activities within specified buildings or other enclosures. In particular, enclose hydraulic power units associated with compactors and rams in areas with acoustic silencing materials. Quieter equipment options can also be selected during design.
- Properly maintaining mufflers and engine enclosures on mobile equipment operating within the transfer station. Also insist that operators of commercial hauling vehicles keep their equipment, including the muffler systems, in good repair.
- Keeping as many doors closed during station operating hours as practical.
- Conducting activities that generate the loudest noise during selected hours, such as the morning or afternoon commute hours, when adjoining properties are unoccupied or when offsite background noise is at its highest.

Odors

MSW, food waste, and certain yard wastes such as grass have a high potential for odor generation. Odors might increase during warm or wet weather. Thus, transfer stations handling these wastes need to address odor management based on current and projected adjacent land uses. Odors can be managed with proper facility design and operating procedures, including:

- As with noise mitigation, increasing the distance between the odor source and the receiver effectively reduces the impact of odors.
- Evaluating the prevailing wind direction to determine building orientation and setback to adjacent properties.
- Carefully orienting the building and its doorways with respect to odor-sensitive neighboring property and closing as many doors as practical during operating hours.
- Designing floors for easy cleanup, including a concrete surface with a positive slope to drainage systems. Eliminating crevices, corners, and flat surfaces, which are hard to keep clean and where waste residue can accumulate.
- Sealing concrete and other semiporous surfaces to prevent absorption of odor-producing residues.

- Minimizing onsite waste storage, both in the facility and in the loaded trailers, by immediately loading odorous or potentially odorous wastes into transfer trailers and quickly transferring them to the disposal site.
- Incorporating odor neutralizing systems.
- Removing all waste from the tipping floor or pit at the end of each operating day, then cleaning those areas to remove remaining residues.
- Using enclosed trailers whenever possible when loaded trailers must sit on site temporarily before transfer.
- Practicing "first-in, first-out" waste handling practices so wastes are not allowed to sit on site for long periods of time.
- Collecting and removing partially full containers at rural stations where accumulation of full loads could take several days.
- Keeping building catch basins, floor drains and drainage systems clean so odor-causing residues do not build up.
- Treating drainage systems periodically with odor-neutralizing and bacteria-inhibiting solutions.
- Diverting odorous waste loads to facilities with less sensitive surroundings during adverse weather conditions.
- Refusing to accept certain highly odorous wastes.
- Practicing other "good housekeeping" measures, including regularly cleaning and disinfecting containers, equipment, and other surfaces that come into contact with waste.

Air Emissions

Air emissions at transfer stations result from dusty wastes delivered to the transfer station, exhaust (particularly diesel) from mobile equipment such as trucks and loaders, driving on unpaved or dusty surfaces, and cleanup operations such as street sweeping. As with odor control, proper design and operating procedures help minimize air emissions, including:

- Paving all traffic carrying surfaces.
- Keeping paved surfaces and tipping floors clean, and ensuring any street sweeping operations use sufficient water to avoid stirring up dust.
- Restricting vehicles from using residential streets.
- Selecting alternative fuel or low-emission equipment or retrofitting facility equipment with oxidation catalysts and particulate traps.
- Working with truck fleet operators to reduce exhaust emissions through the retrofit of emission control devices, use of cleaner fuels, and use of alternative fuel vehicles (e.g., compressed natural gas)
- Installing misting systems to suppress dust inside the building or using a hose to spray dusty wastes as they are unloaded and moved to the receiving vehicles. (In rural areas, small stations might not have a readily available water supply, or might have to rely on a portable water supply for housekeeping needs.)
- Maintaining engines in proper operating condition by performing routine tune-ups.
- Considering the purchase of newer generation, low-emission diesel engines.
- Minimizing idling of equipment by turning off engines when not in use. Truck stop electrification technology can be installed at designated queuing areas to provide truck cabs with comforts such as climate controlled air, electricity, and phone lines while engines are shut off.
- Cleaning truck bodies and tires to reduce tracking of dirt onto streets.
- Maintaining building air filtering systems so that they perform effectively.

Storm Water Quality

Rainfall and wash-down water flows from roofs, roads, parking lots, and landscaped

Electronic Filing: Received, Clerk's Office 04/19/2023 C003739

Water Quality at Rural Transfer Stations

At stations in rural areas where water might not be available for sanitary uses, portable toilets might provide a solution. But even at these stations, there is likely some amount of potentially contaminated runoff that needs to be managed as sewage. In rural areas and other areas not served by a piped sanitary sewer system, it is common to connect building drains to underground holding tanks. The tanks are pumped as needed, and the leachate is trucked to a sewage treatment plant or other approved processing facility.

areas at a transfer station, eventually reaching natural or constructed storm water drainage systems. Runoff might also percolate into the ground-water system. Keeping surface water free of runoff contamination from waste, mud, and fuel and oil that drips from vehicles is important to maintaining the quality of both the surface and ground water systems. The quality and amount of runoff often is regulated by state, tribal, or local water management authorities. Transfer station development typically results in the addition of new impervious surfaces (i.e., paved surfaces) that increase the total quantity of runoff and can contribute to flooding potential.

When runoff contacts waste, it is considered potentially contaminated and is known as "leachate." Transfer station design and operation should ensure that contaminated water is collected separately, then properly managed on site or discharged to the sewer. Most transfer stations send some amount of waste water to sewer systems. In addition to leachate, waste water from daily cleaning of the waste handling areas and the facility's restrooms and support areas typically are discharged to the sewer. Local waste water treatment plants establish guidelines for pretreatment and analysis with which transfer stations must comply when discharging waste water into the sewer. To minimize impacts on sewer systems, transfer stations should consider:

- Covering waste handling and storage areas that drain to the sanitary sewer system. This reduces the amount of rainfall contributing to the total volume of sewer flow.
- Removing as much debris from the tipping floor as possible by mechanical means (e.g., scraping or sweeping) before hosing the floor down.
- Installing drain covers on floor drains. During normal operations, floor drains should be covered to prevent spilled liquid wastes from entering the sewer system. Covers can be opened or removed during floor cleaning.
- Installing low-flow toilets, showers, and faucets.
- Providing appropriate pretreatment of water that comes into contact with waste (leachate). Pretreatment requirements vary depending on the capabilities of the receiving sewer, but could include provisions allowing solids to settle out of the sewage, the use of oil/water separators, or the use of other treatment systems.

Other design and operation measures to consider in managing surface water quality include:

- Complying with all surface water management regulations applicable in the jurisdiction where the station is located. In jurisdictions with well-developed regulations, design and operation measures usually include development of surface water detention facilities (ponds, tanks, or large holding pipes) that limit the runoff rate to the predeveloped rate. In addition, water quality requirements might involve desilting facilities and applying various forms of biofiltration to remove contaminants. Some jurisdictions might require pH adjustment and other forms of pretreatment.
- Locating stations outside local flood zones.
- Minimizing impervious areas and maximizing landscape and vegetative cover areas to reduce total runoff.
- Limiting outside parking of loaded containers or alternatively using rain-tight, leak-tight containers. If loaded containers or transfer vehicles are parked or stored outside, providing catch basins connected to

the sanitary sewer system might be necessary.

- Maintaining all surface water management facilities in good operating condition. This includes periodic cleaning and removal of silt and debris from drainage structures and ponds, as well as removing collected oil from oil-water separators.
- Responding promptly to exterior spills to prevent waste materials from entering the surface water system.
- Cleaning up liquid spills such as oils, paints, and pesticides with absorbent material rather than hosing them into drains. Although transfer stations generally do not accept these liquids, they might find their way into the waste stream in small quantities.
- Using secondary containment around temporary storage areas for HHW, batteries, and suspect materials.

Vectors

Vectors are organisms that have the potential to transmit disease. Vectors of concern at transfer stations can include rodents, insects, and scavenging birds. Seagulls are particularly troublesome birds in coastal zones and certain inland areas. Much of the concern surrounding vectors is associated with general nuisance factors, but this issue justifies diligent attention. A few basic design elements and operational practices can greatly reduce the presence of vectors, including:

- Eliminating or screening cracks or openings in and around building foundations, waste containers, and holding areas at enclosed-type stations. This reduces opportunities for entry by terrestrial vectors (especially rodents).
- Installing bird-deterrent measures, such as suspended or hanging wires to keep birds out of structures, and eliminating horizontal surfaces where birds can congregate.
- Removing all waste delivered to the facility by the end of each day.
- Cleaning the tipping floor daily.
- Routinely inspecting the facility for potential vector habitat, and taking corrective action when needed.
- Using commercial vector control specialists as necessary.

Litter

In the normal course of facility operations, stray pieces of waste are likely to become litter in and around the facility. In jurisdictions that do not have or do not enforce regulations to cover customer vehicles, the litter problem is often most prevalent on routes leading to the station. Dry, light materials such as plastic grocery bags can be blown from the backs or tops of vehicles, or from the tipping area to the facility's outside areas.

Design and operation considerations that can reduce the litter problem include:

- Conducting all waste handling and processing activities in enclosed areas, if possible.
- Orienting the main transfer building with respect to the predominant wind direction so it is less likely to blow through the building (or tunnel) and carry litter out. Generally the "blank" side of the building should face into the prevailing wind.
- Strictly enforcing the load covering or tarping requirements will reduce litter from waste trucks. Some transfer station operators have the authority to decline uncovered loads and have instituted surcharges to provide incentives for customers to cover their loads.
- Providing windbreaks to deflect wind away from waste handling areas.
- Locating doors in areas that are less likely to have potentially litter-producing materi-

Vector Control at Rural Transfer Stations

In less densely populated areas, other vectors of concern could include bears, raccoons, and dogs, especially if waste is not tightly enclosed. The best way to keep large vectors out of the facility is to totally enclose the waste storage area or to fence and gate the site. Bird-scare devices, such as recordings of predatory birds or plastic decoys, can help alleviate scavenging. Baited traps can be used to control rodents, and humane traps can capture larger mammals such as raccoons and weasels.

als stored near them, regardless of building orientation.

- At small rural stations, providing containers with lifting lids that are normally closed.
- Minimizing horizontal ledges where litter can accumulate.

Facility Operating Plans

Many states (as well as some tribes and local governments) require waste transfer stations to prepare and maintain facility operating plans. Often, these plans must be submitted with the permit application. The operating plan format and the specific information it must contain can vary greatly. Some states may also require operating plans prepared or certified by a licensed or certified professional engineer. Operating plans might require the following information:

- Facility-specific information such as location and ownership. Some states require maps and diagrams of the site and facility as well.
- Facility capacity and expected operating life.
- Description of the type of waste the facility will handle, including waste origination, composition, and weight or volume.
- A list or description of unacceptable wastes, including procedures for storing and handling these materials if they do arrive at the facility.
- A description of daily operations, including waste handling techniques, vector controls, and hours of operation.
- Emergency or contingency plans and procedures.

- Providing skirts (usually wide rubber belting or strip brushes) that close the gap between the bottom of the chute and the top of the receiving container at stations that employ chutes and hoppers to contain waste as it is deposited in trailers and drop boxes.
- Installing fencing and netting systems to keep blowing litter from escaping the station site. This is particularly necessary at small rural facilities that are likely open-sided or that lack an enclosing building.
- Conducting routine litter patrols to collect trash on site, around the perimeter, on immediately adjacent properties, and on approach roads and the hauling route(s). Litter patrols, especially at unattended sites, can also detect any illegal dumping that has occurred along the site perimeter.
- Cleaning the tipping floor regularly and maintaining good housekeeping practices. This will minimize the amount of loose material that can be blown outside.

Safety Issues

Thoughtful facility design coupled with good operating practices help ensure transfer stations are safe places. Transfer stations should be designed and operated for the safety of employees, customers, and even persons illegally trespassing when the facility is closed. Designers need to consider that people might trespass on facility grounds during operating hours or after the facility is closed for the night. Most state regulations require security and access control measures such as fences and gates that can be closed and locked after hours. Signs should be posted around the perimeter, with warnings about potential risks due to falls and contact with waste. Signs should be posted in multiple languages in jurisdictions with high percentages of non-English-speaking residents.

Federal Occupational Safety and Health Administration (OSHA) regulations require facilities to provide safe working conditions for all employees. Although regulations specific to waste transfer stations do not currently exist, general OSHA regulations apply as they would to any other constructed facility. State, tribal, and local workplace safety regulations, which can be more stringent than federal regulations, also might apply.

Some state, tribal, or local governments might require a facility's development permit to directly address employee and customer safety. State and tribal solid waste regulations, for instance, often require development of operating plans and contingency plans to address basic health and safety issues. Transfer station safety issues are the facility operator's responsibility.

This section describes general safety concerns associated with solid waste transfer stations. A facility must take steps to eliminate or reduce risk of injury from many sources, including:

Exposure to Potentially Hazardous Equipment
Transfer station employees work in close proximity to a variety of hazards, including equipment with moving parts, such as conveyor belts, push blades, balers, and compactors. Facility operators should develop an employee equipment orientation program and establish safety programs to minimize the risk of injury from station equipment. Utilizing locks or tags that prevent equipment from operating until they are removed (lockout/tagout systems), for example, effectively minimize hazards associated with transfer station equipment. Transfer stations operators must implement and strictly enforce rules requiring children and pets to remain in the vehicle at all times. Posting signs and applying brightly colored paint or tape to hazards can alert customers to potential dangers.

Personal Protective Equipment
Transfer station employees coming in close contact with waste and heavy machinery should wear appropriate personal protective equipment. Common pieces of protective gear include hard hats, protective eye goggles, dust masks, steel tipped boots, and protective gloves. If working in close proximity to loud machinery, hearing protection should be used as well. Check state and local codes and regulations to see if any personal protective equipment standards exist. Ensure that all facility employees are using the appropriate equipment and are properly maintaining it.

Exposure to Extreme Temperatures
Facilities located in areas of extreme weather must account for potential impacts to employees from prolonged exposure to heat or cold. Heat exhaustion and heat stroke are addressed with proper facility operations, including good ventilation inside buildings, access to water and shade, and periodic work breaks. Cold weather is addressed by proper clothing, protection from wind and precipitation, and access to warming areas. Extreme temperatures typically should not pose problems for customers because their exposure times are much less than those of facility workers.

Traffic
Controlled, safe traffic flows in and around the facility are critical to ensuring employee and customer safety. Ideally, a transfer station is designed so traffic from large waste-collecting vehicles is kept separate from self-haulers, who typically use cars and pickup trucks. Facility designers should consider:

Well marked, color-coded traffic routes can help minimize contact between commercial and public vehicles.

- Directing traffic flow in a one-way loop through the main transfer building and around the entire site. Facilities with one-way traffic flow have buildings (and sometimes entire sites) with separate entrances and exits. The transfer trailers, in particular, are difficult to maneuver and require gentle slopes and sufficient turning radii. Ideally, these trailers should not have to back up.
- Arranging buildings and roads on the site to eliminate or minimize intersections, the need to back up vehicles, and sharp turns.
- Providing space for vehicles to queue when the incoming traffic flow is greater than the facility's tipping area can accommodate. Sufficient queuing areas should be located

after the scale house and before the tipping area. This is in addition to and separate from any queuing area required before the scale house to prevent traffic from backing up onto public roads.

- Providing easily understood and highly visible signs, pavement markings, and directions from transfer station staff to indicate proper traffic flow.
- Providing bright lighting, both artificial and natural, inside buildings. Using light-colored interior finishes that are easy to keep clean is also very helpful. When entering a building on a bright day, drivers' eyes need time to adjust to the building's darker interior. This adjustment period can be dangerous. Good interior lighting and light-colored surfaces can reduce the contrast and shorten adjustment time.
- Providing an area for self-haulers to unload separately from large trucks. Typically, self-haulers must manually unload the back of a pickup truck, car, or trailer. This process takes longer than the automated dumping of commercial waste collection vehicles and potentially exposes the driver to other traffic. It is often a good idea to provide staff to assist the public with safe unloading practices.
- Requiring facility staff to wear bright or conspicuous clothing. Personnel working in the tipping area especially must wear high visibility clothing at all times.
- Installing backup alarms on all moving facility equipment and training all vehicle operators in proper equipment operations safety. Backup alarms must be maintained in proper working condition at all times. Cameras and monitors can also be installed as an additional precaution.

Falls

Accidental falls are another concern for facility employees and customers, especially in facilities with pits or direct dump designs where the drop at the edge of the tipping area might be 5 to 15 feet deep. Facilities with flat tipping areas offer greater safety in terms of reducing the height of falls, but they present their own hazards. These include standing and walking on floor surfaces that could be slick from recent waste material and being close to station operating equipment that removes waste after each load is dumped. Depending on the station design (pit or flat floor), a number of safety measures should be considered to reduce the risk of falls.

- For direct gravity loading of containers by citizens, a moderate grade separation will reduce the fall distance. For example, some facilities place rolloff boxes 8 feet below grade to facilitate easy loading of waste into the container (so the top of the rolloff box is even with the surrounding ground). This approach, however, creates an 8-foot fall hazard into an empty rolloff box. Alternatively, the rolloff box can be set about 5 feet below grade, with the sides extending about 3 feet above the floor. This height allows for relatively easy lifting over the box's edge, yet is high enough to reduce the chance of accidental falls.
- For pit-type operations, the pit depth can be tapered to accommodate commercial unloading at the deep end (typically 8 to 12 feet) and public unloading at the shallow end (3 to 6 feet).
- Safety barriers, such as chains or ropes, can be placed around the pit edges at the end of the day or during cleaning periods to prevent falls. These barriers, however, should be removed during normal operating hours as they are a trip hazard and can interfere with the unloading of waste.
- Substantial wheel stops can be installed on the facility floor to prevent vehicles from backing into a pit or bin. Some curbs are removable to facilitate cleaning.
- Locating wheel stops a good distance from the edge of the unloading zone ensures that self-haul customers will not find themselves dangerously close to a ledge or the operating zone for station equipment.
- To prevent falls due to slipping, the floor should be cleaned regularly and designed with a skid-resistant surface. Designers

need to provide sufficient slope in floors and pavements so that they drain readily and eliminate standing water. This is especially crucial in cold climate areas where icing can cause an additional fall hazard. Because of transfer stations' large size and volume and the constant flow of vehicles, it is impractical to design and operate them as heated facilities.

- Use of colored floor coatings (such as bright red or yellow) in special hazard zones (including the area immediately next to a pit) can give customers a strong visual cue.
- Designing unloading stalls for self-haul customers with a generous width (at least 12 feet when possible) maximizes the separation between adjacent unloading operations and reduces the likelihood of injury from activity in the next stall. For commercial customers, stall widths of at least 15 feet are needed to provide a similar safety cushion. This is particularly necessary where self-haul and commercial stalls are located side-by-side.
- If backing movements are required, design the facility so vehicles back in from the driver's side (i.e., left to right) to increase visibility.

Noise

Unloading areas can have high noise levels due to the station's operating equipment, the unloading operation and waste movement, and customer vehicles. Backup safety alarms and beepers required on most commercial vehicles and operating equipment also can be particularly loud. The noise level also might cause customers not to hear instructions or warnings or the noise from an unseen approaching hazard.

Designers have limited options for dealing with the noise problem. The principal way to reduce the effects of high-decibel noise in enclosed tipping areas is to apply a sound-absorbing finish over some ceiling and wall surface areas. Typically, spray-on acoustical coatings are used. These finishes have a drawback, however. They tend to collect dirt and grime and are hard to keep clean and bright. Using a rubber shoe on the bottom of waste-moving equipment buckets and blades and avoiding use of track-type equipment that produce high mechanical noise also limits noise. These approaches, however, can affect the transfer system's operational efficiency. Regardless of which approaches are employed, transfer station employees exposed to high levels of noise for prolonged periods of time should use earplugs or other protective devices to guard against hearing damage.

Air Quality

Tipping areas often have localized air quality problems (dust and odor) that constitute a safety and health hazard. Dust in particular can be troublesome, especially where dusty, dry commercial loads (e.g., C&D wastes) are tipped. Prolonged exposure to air emissions from waste and motorized vehicles operating inside the building provides another potential health threat to facility employees. Facility air quality issues can be addressed through a number of design and operational practices. These include:

- Water-based dust suppression (misting or spray) systems used to "knock down" dust. Different types of systems are available. They typically involve a piping system with an array of nozzles aimed to deliver a fine spray to the area where dust is likely to be generated (e.g., over the surge pit). They typically are actuated by station staff "on demand" when dust is generated. Dust suppression systems can operate using water only or can have an injection system that mixes odor-neutralizing compounds (usually naturally occurring organic extracts) with the water. These dual purpose systems effectively control both dust and odors. Water-based dust suppression systems, however, can have adverse economic impacts. The additional moisture added to the waste increases the weight of outbound loads, potentially reducing truck capacity and increasing costs.

- Use of handheld hoses to wet down the waste where it is being moved or processed, typically in a pit. Designers need to consider using convenient reel-mount hoses for this purpose.
- Ventilation systems can control air quality inside enclosed transfer buildings. While the high roofs and large floor areas common in transfer stations put unique demands upon ventilation systems, it is still possible through engineering techniques to create the air velocities needed to entrain dust particles. One approach is to concentrate system fans and air removal equipment above the dustiest and most odor-prone area to create a positive air flow from cleaner areas. Often, the air-handling equipment is designed with multiple speed fans and separate fan units that can be activated during high dust or odor events. Filtering and scrubbing exhaust air from transfer stations is also possible.
- If employees' direct exposure to harmful emissions from vehicles and waste at the facility is not sufficiently minimized, respiratory aids such as masks might be necessary.

Hazardous Wastes and Materials

While MSW is generally nonhazardous, some potentially hazardous materials such as pesticides, bleach, and solvents could be delivered to a transfer station. Facility operators should ensure that employees are properly trained to identify and handle such materials. Some stations have a separate household hazardous waste (HHW) receiving and handling area. If the transfer station operates a program that manages HHW, the material is often collected by appointment only, during designated hours, or during special single or multiple day events.

All transfer stations need to be equipped to handle the occasional occurrence of hazardous waste, real or suspected, mixed with other wastes. Personal protective equipment such as goggles, gloves, body suits, and respirators should be on hand and easily accessible to employees. Because staff or customers might inadvertently come in contact with a hazardous substance, it is also good practice, and often required by code, to have special eyewash and shower units in the operating areas. Typically, the transfer station's operating plan will outline detailed procedures to guide station personnel in identifying and managing these kinds of wastes. Many stations have a secure area with primary and secondary containment barriers near the main tipping area where suspect wastes can be placed pending evaluation and analysis. Public education efforts can reduce the likelihood of hazardous materials showing up in solid waste.

Ergonomics

Improper body position, repetitive motion, and repeated or continuous exertion of force contribute to injuries. Both employers and employees should receive ergonomics training to reduce the likelihood of injury. Such training provides guidance on minimizing repetitive motions and heavy lifting and using proper body positions to perform tasks. At this time there are no federal ergonomic standards. A few states, however, do have such standards under their job safety and health programs. The Occupational Safety and Health Administration's Web site <www.osha-slc.gov/fso/osp/> includes a list of states with such programs and provides links to a number of these states' Web sites.

Facility Oversight

This section describes the types of regulations that generally apply to transfer stations and addresses typical regulatory compliance methods.

Applicable Regulations

Transfer stations are affected by a variety of federal, state, tribal, and local regulations, including those related to noise, traffic impact mitigation, land use, workplace safety, taxes, employee right-to-know, and equal employment opportunity that are applicable to any other business or public operation. Many jurisdictions also have regulations specifically applicable to transfer stations. These regulations typically emphasize the protection of public health and the environment.

Federal Regulations

No federal regulations exist that are specifically applicable to transfer stations. EPA, however, initiated a rulemaking process exclusively for marine waste transfer stations under authority of the Shore Protection Act in 1994. These rules would regulate vessels and marine transfer stations in the U.S. coastal waters. EPA is currently working with the U.S. Coast Guard on finalizing these rules.

State Regulations

State solid waste regulatory programs usually take primacy in transfer station permitting, although local zoning and land use requirements apply as well. State regulations vary widely. Some have no regulations specific to transfer stations; others mention them as a minor part of regulations that generally apply to solid waste management; and others have regulations specifically addressing transfer station issues such as design standards, operating standards, and the maximum amount of time that waste can be left on site. A few states also require transfer stations to have closure plans and to demonstrate financial assurance, while others require certification of key personnel. Some states also require compliance with regional solid waste planning efforts or demonstrations of "need."

Appendix A provides a state-by-state checklist of major transfer station regulatory issues. Appendix A shows that:

- All but five states require waste transfer stations to have some type of permit, permit-by-rule, or state license to operate.
- All 50 states have at least minimal operating standards for waste transfer stations either through regulations, statutes, operating plans, or construction permits.
- Some states require analysis of transfer station impacts under general environmental review procedures.

Local Regulations

Local regulation of transfer stations can take many forms. Typical regulatory bodies include counties, cities, regional solid waste manage-

The New Mexico Environment Department

hereby issues this

SOLID WASTE FACILITY PERMIT

Facility Type: *Transfer Station and Recycling Facility*

Facility ID No: *SWM-071307*

Facility Name & Location:
ACME Solid Waste Transfer & Recycling Albuquerque, NM

Owner's Name & Address:
ACME Solid Waste Authority 180 Yosemite Lane Albuquerque, New Mexico 88001

Permit Expiration Date: *November 2, 2015*

This permit is issued pursuant to Section 74-9-20 of the Solid Waste Act and is subject to the conditions of the Order of the Secretary, dated November 2, 19 95.

Given this 14 day of NOVEMBER, 1995.

John Q. Doe
Secretary of Environment

Example of a state issued transfer station facility permit.

ment authorities, health departments, and air pollution control authorities.

Counties, cities, and regional authorities often are required to prepare comprehensive solid waste management plans describing long-range plans for waste prevention, recycling, collection, processing (including transfer stations), and disposal. Other local regulations likely to apply to transfer stations include zoning ordinances, noise ordinances, and traffic impact analysis.

Public health departments are involved with transfer stations because of the potential health concerns if solid waste is improperly managed. In some states, the state environmental protection agency delegates authority to local health departments to oversee solid waste management facilities, including transfer stations. This typically includes overseeing general compliance with a facility's operating permit; regular cleaning of the tipping floor; limits on the amount of waste the facility can accept; and employment of adequate measures to prevent vectors such as rats, birds, and flies from contacting waste.

Local or regional air pollution control authorities often regulate odor, dust, and vehicle exhaust emissions at transfer stations. Air pollution control agencies might regulate chemicals used to control odor, exhaust from vents on the facility's roof or walls, and whether dusty loads can be delivered to the transfer station. The local sanitary district often establishes waste water standards and might be involved in storm water management and protection.

Common Regulatory Compliance Methods

Compliance Inspections

Many transfer stations are inspected periodically for compliance with the transfer station's operating permit and other applicable regulations. The entity responsible for performing inspections and the frequency and level of detail of inspections vary widely around the country. Some inspections are complaint driven, some occur on a regular frequency, and some occur on a random basis. A typical inspection involves a representative of the local health department or state or tribal solid waste regulatory program walking through the facility, looking for improper waste storage or handling methods and writing up a short notice of compliance or noncompliance.

Other inspections for specific issues are also conducted. Special inspections might target workplace safety, proper storm-water runoff management, and compliance with applicable roadway weight limits for transport vehicles.

Reporting

Some transfer station operators are required to compile monthly, quarterly, or annual reports for submission to regulatory agencies and host communities. These reports typically include the following information:

- Weight (tons) and loads (number of customers) received at the transfer station each month. This sometimes includes details such as day of the week, time of day, type of waste, name of hauler, and origin of waste.
- Weight (tons) and loads (number of transfer truck shipments) shipped from the transfer station each month. This sometimes includes a breakdown by time shipped, type of waste, and the final destination of the waste.
- A description of any unusual events that took place at the transfer station, including accidents and discoveries of unacceptable waste.
- A summary of complaints received and the actions taken to respond to the complaints.

Glossary of Terms and Acronyms

Baler: This technology compresses waste into high-density, self-contained units (bales) of either waste or recyclables. Baled waste is transported on flatbed trailers (as opposed to transfer trailers) and is most often sent to a "balefill" that has special equipment (e.g., forklifts).

Buffer zone (also setback): The distance between the transfer station or roadways and adjacent properties; often used for screening.

Collection vehicle: Residential collection vehicles include front-loading and rear-loading garbage trucks, as well as special trucks with compartments used to pickup source-separated recyclables. Commercial (businesses), institutional (hospitals and schools), and industrial (plants) waste, as well as C&D waste, is often discarded in rolloff boxes, which are dropped at the facility and then collected on schedule.

Construction and demolition debris (C&D): Includes broken concrete, wood waste, asphalt, rubble. This material can often be separated for beneficial use.

Convenience center (also citizen's dropoff or green box): Small transfer facilities used in low-volume or rural settings. These low-technology options often use rolloff boxes with an inclined ramp for cars and pickups. Bins can be included for recyclables that are source-separated.

Direct haul: The historic practice of sending collection vehicles (mostly garbage trucks) directly to the landfill without using transfer stations. When landfills were close to the waste sources, a residential collection vehicle customarily made two trips per day to the landfill.

Host community benefits: A transfer station or landfill operator can offer specific benefits to the community selected for a proposed facility. The benefits are listed in a Host Community Agreement. Benefits can include cash, free tipping, highway improvements, and tax reductions.

Household hazardous wastes (HHW): HHW come from residences, are generally produced in small quantities, and consist of common household discards such as paints, solvents, herbicides, pesticides, and batteries.

Loadout: The process of loading outbound transfer trailers with waste; or loading trucks with recyclables destined for the market.

Municipal solid waste (MSW): Generally defined as discards routinely collected from homes, businesses, and institutions, and the nonhazardous discards from industries.

Queuing distance: The space provided for incoming trucks to wait in line.

Source-separated: Recyclables discarded and collected in containers separate from non-recyclable waste. Bins or blue bags are used to separate residential recyclables; separate boxes or containers are used for commercial/industrial discards (e.g., corrugated cardboard packaging, wood pallets). Source-separated wastes usually are delivered to a material recovery facility.

Surge pit: A pit usually made of concrete that receives waste from the tipping floor. Surge pits provide more space for temporary storage at peak times and allow for additional compaction of waste before loadout.

Tipping fee: The unit price charged at the disposal site or transfer station to accept waste, usually expressed as dollars per ton or dollars per cubic yard.

Tipping floor: The floor of the transfer station where waste is unloaded (tipped) for inspection, sorting, and loading.

Tons per day (TPD): The most common unit of measurement for waste generation, transfer, and disposal. Accurate TPD measurements require a scale; conversion from "cubic yards" without a scale involves estimated density factors.

Walking floor: A technology built in to lightweight transfer trailers and used to unload waste at the disposal site. Moving panels "walk" the waste out of the trailer bed.

Waste diversion: The process of separating certain materials at the transfer station to avoid the cost of hauling and the tipping fee at the landfill.

Waste screening: Inspecting incoming wastes to preclude transport of hazardous wastes, dangerous substances, or materials that are incompatible with transfer station or landfill operations.

Electronic Filing: Received, Clerk's Office 04/19/2023 C003751

Appendix A: State Transfer Station Regulations

The table starting on page A-2 is designed to serve as a quick reference guide and comparative index of all state transfer station regulations. Almost all of these regulations are available over the Internet, and the URLs are provided at the end of this section.

Permit Requirements. Nearly all states require transfer facilities to obtain a permit before beginning operations. The vast majority of states issue standard permits after a transfer station's application has been reviewed and approved. A few states have permit-by-rule provisions, which allow transfer stations to forego the application process by demonstrating compliance with a set of designated standards. Of the states not requiring permits for transfer stations, about half require the facility to register with the state prior to beginning operation.

Siting Requirements. Siting requirements refer to any additional regulatory requirements beyond relevant and applicable state or local zoning requirements or conditions. Siting requirements could include prohibitions against siting in or near wetlands, flood plains, endangered species habitats, airports, or other protected sites.

Design Standards. Nearly all states have at least minimal design criteria for transfer stations. These requirements typically set standards for waste receiving areas and waste-storage areas that include building structural features, access control, vector control, and dust and odor controls.

Operational Standards. These standards establish how the transfer station will be run and how wastes will be handled. Standards often include hours of operation, safety issues, litter control, dust and odor control, disease vector control, facility cleaning/sanitation practices, waste removal, traffic control, and contingencies.

Operator Certification. Only five states have mandatory operator certification for transfer station operators (Arkansas, New Hampshire, New Mexico, New York, and Ohio). Other state regulations stipulate that a transfer station operator must be a "qualified solid waste manager" but do not have requirements for any specific type of certification.

Storage Restrictions. Many states have established time limits on how long waste may remain in a transfer station. Storage time restrictions vary from state to state, and sometimes even within a state, depending upon the size of the transfer station.

Recordkeeping Requirements. The majority of states require a transfer station to maintain onsite records of all incoming and outgoing waste as well as copies of the facility permit, operating plan, contingency plan, and proof of financial assurance, when such things are applicable.

Reporting Requirements. Many states require transfer stations to submit reports at least annually to the state environmental agency. These reports often include information such as the name and location of the transfer station, the amounts and types of waste accepted, and the source and final destination of this waste.

Monitoring Requirements. Monitoring refers to any surface water, soil, or air compliance monitoring that a transfer station may be required to perform by its state.

Closure Requirements. Closure requirements include standards or timetables for removing wastes and cleaning the transfer station site after the facility stops receiving waste and permanently ends operations. Most states with closure requirements require transfer stations to remove all wastes and close the facility in a manner that eliminates any threats to human health and the environment and minimizes the need for further maintenance.

Financial Assurance Requirements. Some states require transfer stations to demonstrate that they have sufficient funds to properly close the facility when it ceases operation. Financial assurance mechanisms often include trust funds, insurance policies, letters of credit, or other financial tests.

State Transfer Station Regulations

State	Regulation	Permit Requirements	Siting Requirements	Design Standards	Operational Standards	Operator Certification
Alabama	Chapter 420-3-5-.12	Yes	Yes	Yes	Yes	No
Alaska	18 AAC 60	No	No	No	Yes	No

Yes - Remove waste at end of work day	No	No	No	Yes	Yes
No	Yes	Yes - Annual, by March 1	No	Yes	No
Yes - Remove waste at end of day/not more than 24 hours	Yes	Yes - Monthly tonnage reports; and annual by January 31	No	Yes	Yes
Yes - 24 hours (with some exceptions)	No	No	Possible - At state's discretion	Yes	Possible - At state's discretion
No	Yes	No	Possible - At state's discretion	Yes	Yes

Notes

1. Arizona currently does not have regulations governing waste transfer stations, but the Arizona Revised Statutes (ARS) have requirements that govern these facilities. The information in this matrix reflects these statutory requirements found at ARS 49-762.
2. In Arizona transfer stations that receive greater than 180 cubic yards/day must self-certify and demonstrate that the facility is in compliance with state rules. Transfer stations receiving less than 180 cubic yards/day must notify the state prior to commencement of operations and operate in accordance with state BMPs.
3. California classifies a transfer station as a facility if it receives greater than 60 cubic yards or 15 tons of waste per day or as an operation if it receives less than 60 cubic yards or 15 tons of waste per day.
4. While Colorado does not require a permit for transfer stations, the local governing body (county or municipal government) may.
5. Idaho has proposed a three-tiered system based upon the type of waste handled at a facility. This matrix assumes a solid waste transfer station would be considered a Tier II facility.
6. Illinois does not have explicit design, operating, storage, recordkeeping, or reporting requirements in its regulations. The state establishes these standards for each facility by requiring a facility to demonstrate in its permit application that it will meet specific standards. The Illinois regulations require a facility to provide to the state all the information requested in its permit application and once the permit is approved to comply with the terms of its permit.
7. While no permit is required in Nevada, a facility must submit and have approved by the state an application to build or modify a transfer station prior to any action being taken.
8. In Tennessee transfer stations that compact or otherwise process waste are considered "processing facilities" and are subject to the permit-by-rule requirements. If no processing occurs at a transfer station, then the facility is not subject to permitting. Tennessee currently has rule amendments under review which would make all transfer stations subject to the permit-by-rule standards. The responses in this appendix apply to permit-by-rule facilities.
9. While Utah does not require a transfer station to obtain a permit, it does require a transfer station to get a plan approval. In a plan approval, the operator states how the facility will meet the transfer station guidelines found in the solid waste regulations.

Resumé JOHN LARDNER

TECHNICAL SPECIALIST AND PROJECT MANAGER

Providing a combination of technical expertise and demonstrated ability to support projects for small and medium size waste disposal, recycling and composting companies.

Education

M.S. Civil Engineering
University of Illinois, Champaign, Illinois

B.S. Civil Engineering
Michigan State University, East Lansing, Michigan

Certifications

SWANA Certified Composting Systems Manager
2012

Midwest Composting School, Bloomington, Illinois,
2011

LEED AP – 2009

Certified Professional in Erosion and Sediment Control,
2000 to Present

OSHA 40-hour HAZWOPER Training,
1987

Registered Professional Engineer in Indiana,
1985 to Present

Registered Professional Engineer in Illinois,
1980 to Present

Employment History

Illinois State Water Survey – Champaign, Illinois
Associate Engineer (1975 to 1983)

Developed a repository of technical information for Illinois rivers to use as a retrievable resource in order to assist municipalities, consultants, planners and developers with proper use of floodplain areas.

ATEC Associates – Indianapolis, Indiana
Project Engineer (1983 to 1987)

Spearheaded geotechnical and grading plan design plans for reclamation of abandoned coal mines. Increased department revenue by marketing permit work, along with established drilling services, to private and public landfill clients.

EMCON – Indianapolis, Indiana & Lisle, Illinois
Project Engineer and Department Manager (1987 to 1995)

Built engineering department of satellite offices into a full-service team capable of managing diverse projects for private and public solid waste clients in Indianapolis, Indiana and Chicago, Illinois.

Foth Associates – Lisle, Illinois
Senior Project Manager (1995 to 1998)

Satellite office manager and client liaison for key public sector solid waste clients who required engineering services for construction quality assurance and end use planning of closed landfills.

Andrews Environmental Engineering, Inc – Naperville, Illinois
Senior Project Manager/Office Director (1998 to 2007)

Managed satellite office and key clients for a medium size engineering company. Increased revenue from a large landfill disposal and compost recycling company in the Chicago metro region. Drove increase in sales and services provided to the largest disposal facility of a national solid waste company. Augmented company profile by serving as a board member and officer for the local chapter of a national solid waste association that promotes education and training for waste recycling and disposal alternatives. Participation in the organization has created relationships with public and private sector individuals who provide services to the waste disposal and recycling industry.

Golder Associates, Inc. – Woodridge, Illinois
Senior Consultant (2007 to 2009)

Added a Chicago metro presence for a national and global engineering firm by successfully marketing services to a network of industry contacts. Office grew from one person to seven in two years.

JPL Environmental Engineering, Inc. – Chicago, Illinois
President (2009 to present)

Project facilitator to assist clients initiating permits for facilities to manage municipal solid waste, construction and demolition debris, landscape waste and food scrap in Northeast Illinois. Optimize use of public and private sector network of industry contacts to identify and develop project opportunities. Recent projects include a permit application for; a leaf mulch compost facility; landscape waste compost facility; landscape waste transfer station; and a clean construction and demolition debris disposal facility.

PROJECT EXPERIENCE – LOCAL SITING AND TESTIMONY

4837 South Kedzie, LLC	Prepared the Facility Need Assessment Report for Criteria (a) of Chicago Zoning Ordinance Section 17-13-0905 for a municipal solid waste transfer station. Application was approved by the city zoning and building committee
Stockyard Materials Chicago, IL	Prepared the Facility Need Assessment Report for Criteria (a) of Chicago Zoning Ordinance Section 17-13-0905 for a re-processable construction and demolition material facility. Application approved by the city zoning and building committee.
Patriot Acres, LLC Glenview, IL	Special use application prepared for an organic materials recycling facility under the existing industrial zoning. Testimony provided before Cook County zoning and land use committee and project was unanimously approved.
Markham Transfer and Recycling Markham, Illinois	Prepared an application for local siting approval for each of the nine siting criteria to demonstrate need for the project and to explain the design and operation of a transfer station to process and recycle street sweepings for beneficial use.
Knox County Landfill Knox County, IL	A needs assessment report was prepared to support expansion of an existing landfill. Application was approved by the county board.
Plano Transfer Station Plano, IL	Completed the needs assessment study and provided testimony at the local siting hearing for a new transfer station. Application approved by city council.
McClean County Landfill Bloomington/McClean County, Illinois	Prepared the Needs Assessment, Land Use Compatibility, and Solid Waste Plan Consistency sections of a local siting application for a 10-acre horizontal and vertical expansion to an existing landfill that increased disposal capacity by 1.8 million cubic yards. Coordinated exhibits and testified at the public hearing for these three criteria.
Buster Sanitation/Area Disposal Jacksonville, Illinois	Needs Assessment and Solid Waste Plan Consistency sections of a local siting application were prepared, and testimony was provided, for a municipal solid waste transfer station in Jacksonville, Illinois. The proposed facility accepts approximately 100 tons per day from a primary service area covering three counties in central Illinois.
Upper Rock Island County Landfill East Moline, Illinois	Sections of a local siting approval application were prepared for all nine criteria to support of an expansion project that increased the disposal capacity of the facility by two million cubic yards. Testimony was provided for all nine criteria.
Greater Egypt Regional Landfill Perry County, Illinois	Prepared Needs Assessment and Floodplain sections of a local siting application for a greenfield landfill site. Testimony was provided at the public hearings before the county board to gain approval of the application.

Willowhill Landfill Kendall County, Illinois	Performed stormwater design plan for a proposed landfill as part of a local siting application. Prepared exhibits and provided testimony before county board members during the hearings.

PROJECT EXPERIENCE – ORGANIC WASTE FACILITIES

Kramer Tree Specialist, Leaf Mulch Facility West Chicago, Illinois	Prepared a leaf mulch production facility permit application following the Illinois Section 830 Composting Rules at the client's existing property.
Garden Prairie Organics, Landscape Waste Compost Facility Boone County, Illinois	Assisted client to obtain a special use permit from Boone County, and prepared a twenty-five acre landscape and garden waste compost facility permit application that was approved by the Illinois Environmental Protection Agency (EPA). Developed construction plans and specifications for facility construction.
Markham Transfer and Recycling Markham, Illinois	Prepared a permit application for a one acre landscape waste transfer station in order to allow the client to receive landscape waste and process it for sale to various end markets.
Landscape Waste Compost Facility and Transfer Station Lake County, Illinois	Successfully obtained special use and annexation agreements with the Village of Volo, and a permit from the Illinois EPA to construct and operate a six-acre landscape waste compost and transfer facility on a thirty-acre parcel owned by the client.
Menoni and Mocogni Landscape Waste Transfer Station Highland Park, Illinois	Prepared and submitted application for Special Use to the City of Highland Park, Illinois for a landscape waste transfer station on Skokie Highway. Obtained a permit from the Illinois EPA to develop and operate the facility in conjunction with their existing building materials sales yard.
Rivers Edge Landscape Waste Transfer Station Wheeling, Illinois	Permit application to construct and operate a landscape waste transfer station near Buffalo Grove, Illinois. Location within the 100-year flood plain required an operation and mitigation strategy that included monitoring of flood warnings along the Des Plaines River and a response plan to avoid flood damages.
138th Street Compost Facility Chicago, Illinois	Prepared a permit renewal for an operating landscape waste compost facility on the final grade surface of a closed landfill.
Willow Ranch and Quarry Landings Landscape Waste Compost Facilities Romeoville, Illinois	Successfully permitted landscape waste compost areas on a closed landfill and in an adjacent quarry owned by the client. Client was then able to expand their capacity to compost additional quantities of yard waste on property they controlled.

PROJECT EXPERIENCE – CONSTRUCTION QUALITY ASSURANCE

Willow Ranch Landfill Illinois/Will, USA	Prepared a closure certification report to document final cover construction and initiate the post-closure period. The project included a field investigation to establish fill boundaries and in-place waste volumes.

Scott Area Landfill Iowa/Scott, USA	Construction quality assurance and testing of a total of 15 acres of clay/geomembrane composite liner with leachate collection. Submitted certification reports to the Iowa Department of Natural Resources. Prepared bid packages for site engineer to distribute among selected contractors.
Lake County Landfill Indiana/Lake, USA	Construction quality assurance testing and certification for a 14-acre construction and demolition debris landfill with an in-situ clay liner with leachate collection system. Provided site layout, testing and oversight for appurtenant landfill facility development including a site entrance road, screening berm and scale house.
Newton County Landfill Indiana/Newton, USA	Managed the annual construction quality assurance testing and certification for a cumulative total of 80 acres of cell development with clay/geomembrane composite liner and leachate collection, and a cumulative total of 30 acres of composite final cover with drainage layer.
Upper Rock Island County Landfill Illinois/Rock Island, USA	Performed construction quality assurance oversight on a total of 40 acres of cell construction that included geosynthetic/clay composite liner with leachate collection, and 20 acres of composite final cover with drainage layer. Provided individual certification of completed component reports for each project to the Illinois EPA.

PROJECT EXPERIENCE – LANDFILL DESIGN AND PERMITTING

Clean Construction and Demolition Debris Fill Facility Village of Lynwood, IL	Prepared and application to reclaim a seven acres abandoned quarry with clean fill materials under the Illinois 35 IAC 1100 standards.
River Bend Prairie Landfill Illinois/Cook, USA	Base grade re-design permit application to increase air space and collect leachate from unlined pre-Subtitle D fill areas; operating permit renewal application to the Illinois EPA; storm water management re-design to allow better utilization of non-landfill property.
Upper Rock Island County Landfill Illinois/Rock Island, USA	Prepared semi-annual volume surveys to support annual budget model planning estimates. Managed construction bid packages to assist site engineer to obtain bids for cell and cap construction. Coordinated a local siting application for a vertical and horizontal expansion of the landfill to increase the disposal capacity by 2 million cubic yards. Provided testimony before the city council during hearings to obtain local siting approval.
Newton County Landfill Indiana/Newton, USA	Managed a permit application for a vertical expansion of the landfill. Prepared semi-annual volume capacity surveys to track landfill density and airspace utilization. Coordinated with the site engineer to prepared construction bid packages for cell and final cover construction.

THE PROPOSED FACILITY IS NECESSARY TO ACCOMMODATE THE WASTE NEEDS OF THE AREA IT IS INTENDED TO SERVE

1.1 Introduction

Criterion (i) of Section 39.2 of the Illinois Environmental Protection Act requires that an applicant for local siting approval of a pollution control facility demonstrate that "*the facility is necessary to accommodate the waste needs of the area it is intended to serve (415 ILCS 5/39.2).*

A Municipal Solid Waste transfer station (MSWTS) is designated as a pollution control facility in the Illinois Environmental Protection Act. This report analyzes whether additional waste transfer capacity provided by the West Chicago Recycling and Transfer Station (West Chicago RTS), to be located in West Chicago Road near the intersection of North Avenue and Powis Road, is necessary to meet the waste needs of the service area it is likely intended serve.

1.1.1 West DuPage Recycling and Transfer Station

Lakeshore Recycling Systems LLC (LRS) has applied to the City of West Chicago (West Chicago) for local siting approval of a MSWTS to be located near the intersection Powis Road and North Avenue, on the southeast side of West Chicago in Winfield Township. A report was prepared by Civil and Environmental Consultants (CEC) to demonstrate need for the West DuPage RTS facility in the service area it intends to serve (**Ref 1**). Data, illustration figures and conclusions from the CEC need report were evaluated in this assessment of need to review their claim that a MSWTS is necessary less than one-half mile from an existing MSWTS, and furthermore located within the service areas of nine other MSWTS's that overlap the CEC defined service area.

The proposed transfer station is a facility where loads from MSW collection vehicles will be consolidated into larger loads for transport to a permitted disposal facility. For MSW, the material will be disposed of at a permitted landfill or in the case of landscape yard waste to a permitted compost facility. The facility will also accept and process hydro-excavation slurry liquid that must be solidified prior to landfill disposal. The service area assumed for the proposed West DuPage RTS includes portions of DuPage, Kane, and Will counties.

The West DuPage RTS location is illustrated in relation to the City of West Chicago on **Figure 1B – 1 Transfer Station Service Area** from the CEC report. This figure is included with **Appendix 1**. The facility lies east of Powis Road and South of North Avenue (IL-64). The facility will be operated by Lakeshore Recycling Systems (LRS), an established privately owned local company that offers residential and commercial collection services for municipal solid waste, landscape yard waste, construction and demolition waste and recyclable materials. The anticipated new services proposed in the application include:

- Receipt and transfer of up to 650 tons per day of non-hazardous municipal solid wastes (referred to as municipal solid waste or "MSW" or more generally as solid waste)
- Receipt, solidification, and transfer of up to 300 tons per day of hydro excavation wastes (HEW)
- Receipt and transfer of up to 250 tons per day of single-stream recyclables (referred to as "SSR" or more generally as "recyclables")
- Drop-off area for West Chicago residents of electrical/electronic devices; and
- Drop-off area for recyclables generated by residents and small businesses.

The facility will transfer waste materials collected by LRS, and likely from third-party haulers.

1.1.2 Needs Assessment Demonstration Summary

JPL Environmental Engineering (JPLEE) has performed a separate needs analysis of the proposed facility service area to assess the need for another MSWTS in the City of West Chicago, according to criteria 1) of Section 39.2. The needs assessment uses current and projected population, waste generation and recycling information for the service area to determine the necessity of a transfer station facility in the CEC designated service area.

The proposed service area of the LRS West DuPage RTS includes the thirteen municipal townships listed below:

DuPage County	Kane County	Will County
Bloomingdale	Aurora	DuPage
Lisle	Batavia	Wheatland
Milton	Elgin	
Naperville	Geneva	
Wayne	St. Charles	
Winfield		

The service area shown in **Figure 1B** was intentional by CEC with the selection of the boundary lines drawn. These lines include just two existing MSWTS's in the service area to the exclusion of the service areas of seven other transfer stations whose service areas overlap that of the LRS MSWTS service area. When considering the capacity of all existing transfer station service areas that share the proposed CEC designated service area, there is sufficient existing capacity to meet the waste needs for MSW transfer from the service area. For purpose of this study, MSW means garbage, general household, institutional and commercial waste, industrial lunchroom or office waste, landscape waste, and construction and demolition debris.

There does, however, appear to be a need for another HEW facility due to lack of a similar facility located within or near the proposed West DuPage RTS facility.

The methodology used to calculate existing MSW capacity is summarized below:

- When a transfer station exists near the north, south, east, and west boundary of the CEC designated service area, the overlap in service areas diminishes the need for another transfer station
- The areas of overlap were calculated to allocate population from each service area and multiplied by waste generated for disposal (after recycling), to estimate the existing permitted transfer capacity within the CEC designated service area.
- The waste generated for disposal in the CEC designated service area was then compared with the summation of waste transfer capacity of existing transfer station service areas, to demonstrate that sufficient capacity exists to meet the current and future MSW transfer need.

The data used for the assessment has been compiled on tables and figures presented herein and in appendices following the report.

There are nine other similar transfer station facilities whose service area overlaps the designated service area of the proposed facility. As illustrated in **Figure 2 -Transfer Station Service Areas** these nine facilities are:

- Waste Connections, Inc. DuKane Transfer Station located on Powis Road approximately one-half mile south from the proposed facility in West Chicago
- LRS Elburn Transfer Station in Elburn, Illinois operated by Lakeshore Recycling Systems, Inc. approximately 16 miles west of the proposed LRS MSWTS
- Batavia Transfer Station located approximately 8 miles west in Batavia, Illinois and operated by Waste Management, Inc (WMI).
- Plano Transfer Station in Plano, IL operated by Waste Connections located approximately 32 miles southwest of the proposed LRS MSWTS.
- Bluff City Transfer Station, Elgin, IL operated by Waste Management, Inc, approximately 15 miles north in Elgin, Illinois.
- ERDS Moen Transfer Station operated by Environmental Recycling and Disposal Service, located near Rockdale, Illinois approximately 35 miles south from the proposed LRS MSWTS.
- WMI Joliet Transfer Station operated by Waste Management, Inc approximately 35 miles south from the proposed LRS MSWTS.
- Elk Grove (Chicago) Transfer Station operated by Waste Connections, Inc., located approximately 18 miles east from the proposed LRS MSWTS.
- Melrose Park Transfer Station operated by Waste Management, Inc. approximately 18 miles east from the proposed LRS MSWTS.

The overlaps of service areas for these nine transfer stations, with the service area proposed by CEC, are illustrated in **Figure 2 – Transfer Station Service Areas** in **Appendix 1**. The service areas of each transfer station were obtained from past siting applications and figures illustrated in county solid waste plans (**Ref.'s 2, 3 and 4**).

1.2 Existing Service Area Identification and Population

The service area for the West DuPage RTS represents the locations where LRS currently provides collection services to their customers. It also represents the geographic location whereby the distance to the transfer station is close for other haulers to use for disposal of municipal solid waste and construction and demolition debris. The service area boundary (boundary) for the LRS facility is illustrated on **Figure 1B**. The current population for townships in the service area from the CEC needs study were used in these analyses. They represent estimated population by township from the most recent Year 2020 census prepared by the United States Census Bureau. (**Ref.5**).

The following counties and their contributing resident populations for Year 2020 are summarized below for the service area of the LRS facility:

• Kane County (part of)	345,083
• DuPage County (part of)	566,180
• Will County (part of)	176,242
Total Population	1,087,505

The breakdown of population among township boundaries within each county is shown in **Table 1 – Service Area Population by Township**

Each of the township locations are illustrated on **Figure 1B**.

1.3 Estimated Waste Generation from Service Area

The amount of waste generated from the service area was calculated using information contained in a relatively recent study, completed specifically for Illinois by the Illinois Department of Commerce and Economic Opportunity, *Illinois Commodity/Waste Generation Study* (IDCEO, 2015.) (**Ref. 6**).

Waste generation information from the study is reported in pounds per person per day (lbs/pp/day). Reporting waste generation with these units allows projections of waste amounts where the population of a community and/or county is known. Likewise, the amounts of future expected waste generation can be calculated using future population projections. This methodology was used to prepare expected waste generation amounts for the assumed service area and relate these to the need for additional transfer capacity of the proposed LRS waste transfer station.

1.3.1 IDCEO, 2010 Report and 2015 Update

The IDCEO report was the result of an intensive sampling of waste at 19 solid waste facilities located throughout Illinois, consisting of 17 landfills and 2 transfer stations. Samples of waste were further segregated into two sectors, Industrial/Commercial/Institutional (ICI) and

Residential. A total of 315 samples from the ICI and residential sectors were physically characterized and 150 loads of construction and demolition debris were visually characterized to develop waste composition profiles that included the following 11 categories:

- Paper (newsprint, cardboard, etc.)
- Beverage Containers (milk, juice boxes etc.)
- Plastic (PET, HDPE containers, film etc.)
- Glass (bottles, jars etc.)
- Metal (ferrous and non-ferrous (aluminum beverage containers, ductwork, tin cans etc.)
- Organics (yard waste, food scrap, etc.)
- Inorganics (electronics, tires, appliances etc.)
- Textiles (carpet, clothing etc.)
- Household Hazardous Waste (paint, chemicals etc.)
- Construction and Demolition Debris (concrete, asphalt, soil etc.)

The composition of the waste, and the various sector quantity results from the waste sorting, were then used to adjust national per person waste generation rates to derive rates specific to Illinois. Factors such as economic indicators were used to adjust the national average rates within the categories.

The IDCEO report included waste generation data for each of the counties in Illinois. These tables for the three counties in the service area are included in **Appendix 3**, and are summarized below in **Table 2**:

Table 2 – Service Area Waste Generation by County

County	Waste Generation (lbs/pp/day)
DuPage	8.77
Kane	7.68
Will	7.56

The waste generation rate that was reported for each county represents *'the quantity of products considered municipal waste entering the waste management system from residential, commercial, industrial, institutional and construction and demolition debris sources before material recovery or disposal takes place".*

In their most recent Solid Waste Management Plan Update for Kane County, they reported a waste generation rate of 8.21 lbs./pp/day (**Ref. 9**).

1.3.2 Recycling Rates

Each county, or portion thereof, in the service area has established a recycling program to divert and recycle waste that is generated in their county before it is disposed of in a landfill. The percentage varies by county and is typically reported in a solid waste management plan (Plan) that each county in Illinois is required to prepare. The Plans are updated at five-year intervals. In some cases, information is available from a county on an annual basis. The most recent recycling percentages from these plans are listed below in **Table 3:**

Table 3 – Reported Recycling Rates for Service Area Counties

County	Recycling Rate (%)	Year Reported
DuPage	30%	2017 (DuPage County **Ref. 7**
Kane	37%	2015 (Kane County, **Ref. 8, 9**)
Will	43%	2016 (Will County, **Ref. 10**)

1.3.3 Waste Transfer Quantity Calculation

Waste Transfer from Service Area

The amount of waste generated from the service area was calculated by multiplying the population of the townships from each county in the LRS RTS proposed service area by their respective reported waste generation rate. The amount of waste that requires to be transferred for disposal was calculated by using the waste generated amount, and then reducing it by the recycling rate within each county. The calculation is shown below. For example, the annual amount of waste for disposal in Bloomingdale Township within DuPage County is:

Waste Generated

111,875 people x 8.7 lbs/pp/day x 365 days ÷ 2,000 lbs. per ton = 117,630 tons/year

Waste Recycled

117,630 tons/year x 0.30 = 53,289 tons/year

Waste for Transfer

117,630 tons/year – 53,289 tons/year = 64,341 tons/year

The population estimates from each township in the service area of the West DuPage RTS were multiplied by their respective waste generation rates and adjusted by the reported recycling rate of their county. This analysis was performed by CEC and listed in Table 1-2B in their report. This table is included with this report as **Attachment 4**. The Year 2020 waste generated for disposal was calculated to be 2,997 tons per day, or 1,093,905 tons per year.

The LRS West DuPage transfer station is expected to be operated Monday through Friday and for one-half day on Saturdays, equivalent to 6 operating days per week. The required daily transfer capacity (tons/day) for waste available in the service area to disposal, was determined by dividing the annual amount of waste from the service area by 306 working days per year (6 days x 52 weeks, less 6 holidays).

Daily Waste Transferred:

1,093,905 tons/year ÷ 306 days/year = 3,574 tons per day

The calculated waste amount for transfer for the combined townships of the three counties in the service area, were each calculated and are summarized in **Table 4**.

Table 4 – Service Area Waste Generation for Transfer and Recycling

LRS West Chicago Transfer Station Service Area Township Summary				
County	*Contributing Population*	*Waste Generation Including Recyclable Materials (Tons per day)*	*Waste Generation for Transfer to Landfill Disposal Facility (Tons per day)*	*Recycled Difference (Tons per Day)*
Will	176,242	**666**	**380**	**286**
DuPage	566,577	**2,465**	**1,725**	**739**
Kane	345,083	**1,416**	**892**	**525**
Total	1,087,902	**4,547**	**2,997**	**1,550**

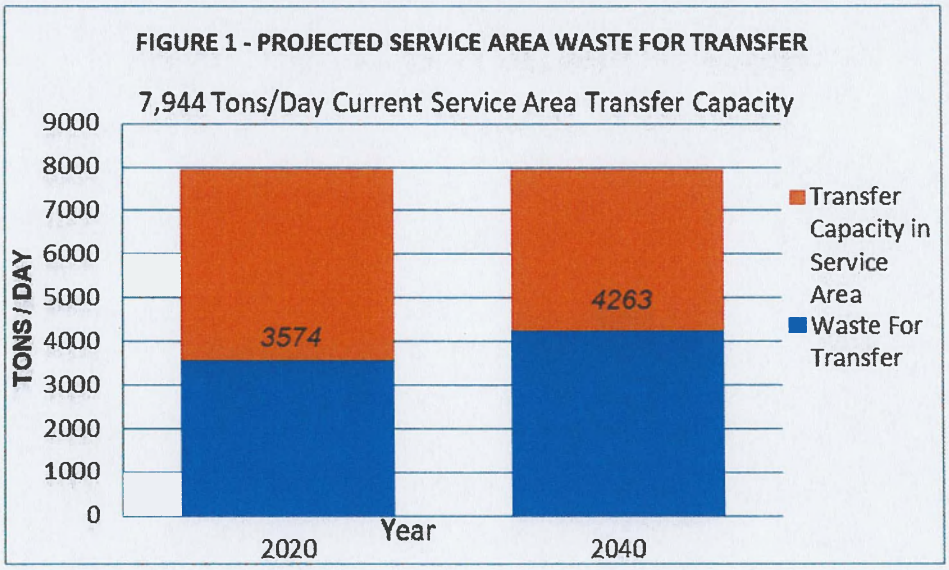
The calculated amount of waste generated in the service area is 4,547 tons per day, of which 2,997 tons per day remain after recycling that require transfer to disposal. The recyclable materials are collected separately and delivered to separate sorting and processing facilities or, for landscape waste, sent directly to compost facilities. The daily rate of waste generated is **2,997** tons per day, and the rate of waste generated for disposal per operating day is **3,574** tons per day.

1.4 Estimated Future Waste Generation for Transfer from Service Area

The LRS West Chicago transfer station is in a suburban area of metropolitan Chicago that has experienced population growth in the recent past, and it is expected to continue to grow. According to CMAP projections, each of the three counties in the service area will experience population growth in the future. A result of Increase population will be additional waste generation. This section of the report presents calculations for future waste generation in the service area and the additional amount to be transferred.

1.4.1 Future Population Increase and Waste Generation

The population increase for the portions of DuPage, Kane and Will counties in the service area were estimated for a twenty-year period from 2020 through 2040, using future projections published by CMAP (**Ref. 10**). From these population projections the amount of future waste that is generated and will require transfer was calculated. The calculations are also included in **Table 1-2B** and summarized below.



The estimated amount of waste generated for the twenty years period from 2020 through 2040 was calculated and is presented in **Table 5 – Future Waste Generation for Transfer** and illustrated in **Figure 3 – Service Area Projected Waste Generation for Transfer**. The current recycling rates used in this report were held constant to calculate the amount of future recyclable material to be removed from the generated waste amounts.

Table 5 - Waste Projections for Service Area

Service Area:	2020		2040		
Population	Waste Generated (tons/year)	Waste Generated (tons/day)	Population	Waste Generated (tons/year)	Waste Generated (tons/day)
1,087,902	1,093,905	2,997	1,303,450	1,304,460	3,574

As illustrated in **Figure 1**, the waste generated in the service area that will require transfer for disposal was calculated to increase from approximately 3,574 tons per operating day in year 2020 to 4,263 tons per operating day in year 2040. The present transfer capacity in the service area of 7,469 tons/day is also shown on the figure.

FIGURE 1 - PROJECTED SERVICE AREA WASTE FOR TRANSFER

The estimated current transfer capacity in the service area, equal to 7,944 tons per day, is approximately 3,681 tons per day more than what is required in Year 2040.

1.5 Transfer Capacity Need for Service Area

1.5.1 Current Population Overlap of Transfer Station Service Areas

The calculations of population for transfer stations whose service area overlaps that of the proposed service area of the West DuPage RTS are included in **Appendix 2** for the following transfer stations.

1.5.2 Elburn Transfer Station

The Elburn Transfer Station (ETS) is owned and operated by LRS. The service area for the ETS is illustrated with the proposed service area of the West DuPage RTS in **Figure 3 Transfer Station Service Areas 1 & 6** in **Appendix 1**. The service area for the ETS shown was obtained from Appendix F of the 2012 Solid Waste Management Plan for DuPage County. The townships that overlap the proposed service area are:

Kane – Aurora, Batavia, Elgin, Geneva, and St. Charles

The combined population of these townships within the service area overlap is 345,083. The permitted waste transfer capacity for the ETS is 1,000 tons per day.

1.5.3 Batavia Transfer Station

The Batavia Transfer Station (BTS) is owned and operated by Waste Management, Inc. Its service area is illustrated in **Figure 4 – Transfer Station Service Areas 2 & 6** in **Appendix 1.** The service area for the BTS shown was also obtained from Appendix F of the 2012 Solid Waste Management Plan for DuPage County. The townships served by BTS that entirely or partially overlap the proposed service area and their calculated proportional population are shown below:

Kane County	Population	Percent Overlap	Overlap Population
Aurora	126,929	100%	126,929
Batavia	35,363	100%	35,363
Elgin	104,493	86%	90,372
Geneva	26,396	100%	26,396
St. Charles	51,902	100%	51,902
DuPage County			
Bloomingdale	111,875	19%	21,753
Lisle	119,040	11%	13,227
Milton	120,237	36%	43,419
Naperville	104,765	89%	93,124
Wayne	64,427	100%	64,427
Winfield	46,233	100%	46,233
Will County			
Wheatland	88,894	25%	22,224
		Total	**635,369**

The combined population of the townships within the service area overlap is 635,369 and the permitted waste transfer capacity for the BTS is 1,500 tons per day (**Ref. 11).**

1.5.4 DuKane Transfer Station

The DuKane Transfer Station (DKTS) is owned and operated by Waste Connections, Inc. and its service area is illustrated in **Figure 5 Transfer Station Service Areas 3 and 6** in **Appendix 1**. The service area for the DKTS shown was also obtained from Appendix F of the 2012 Solid Waste Management Plan for DuPage County. The townships served by DKTS that overlap the proposed service area are:

Kane County - Aurora, Batavia, Elgin, Geneva, and St. Charles
DuPage County – Bloomingdale, Lisle, Milton, Naperville, Wayne, Winfield

The combined population of these townships within the service area overlap is 911,263 . The permitted waste transfer capacity for the DKTS is 3,000 tons per day.

1.5.5 Plano Transfer Station

The Plano Transfer Station (PTS) is owned and operated by Waste Connections, Inc. and its service area is illustrated in **Figure 6 Transfer Station Service Areas 4 and 6** in **Appendix 1**. The service area for the PTS shown was obtained from the siting application submitted by Plano Transfer Station LLC and Complete Sanitation, Inc. (**Ref 3**). The townships served by PTS that partially overlap the proposed service area and their calculated proportional population are shown below:

Kane County	Population	Percent Overlap	Overlap Population
Aurora	126,929	28%	35,258
Batavia	35,363	30%	10,609
Geneva	26,396	37%	9,899
		Total	**55,765**

The combined population of these townships within the service area overlap is 55,765. The permitted waste transfer capacity for the PTS is 650 tons per day.

1.5.6 Bluff City Transfer Station

The Bluff City Transfer Station (BCTS) is owned and operated by Waste Management, Inc. and its service area is illustrated in **Figure 7 Transfer Station Service Areas 5 and 6** in **Appendix 1**. The service area for the BCTS shown was also obtained from Appendix F of the 2012 Solid Waste Management Plan for DuPage County. The townships served by BCTS that partially overlaps the proposed service area are shown below.

Kane County	Population	Percent Overlap	Overlap Population
Aurora	126,929	100%	126,929
Batavia	35,363	100%	35,363
Elgin	104,493	100%	104,493
Geneva	26,396	100%	26,396
St. Charles	51,902	100%	51,902
DuPage County			
Naperville	104,765	100%	104,765
Wayne	64,427	100%	64,427
Winfield	46,233	100%	46,233
		Total	560,111

The combined population of these townships within the service area overlap is 560,111. The permitted waste transfer capacity for the BCTS is 2,000 tons per day.

1.5.7 Moen and Joliet Transfer Stations

The Moen Transfer Station (MTS) is owned and operated by Environmental Recycling and Disposal Service. Its service area is illustrated in **Figure 8 – Transfer Station Service Areas 6, 7 & 8** in **Appendix 1**. The service area for the MTS shown was obtained from its siting application prepared by CEC in 2014 (**Ref 4**). The Joliet Transfer Station (JTS) is owned and operated by Waste Management, Inc. The service area overlap of the JTS is identical to that of the Moen Transfer station because the overlap is within the allowed disposal service area of the Prairie View RDF Landfill located in Will County.

The townships served by MTS and JTS that entirely or partially overlap the proposed service area and their calculated proportional population are shown below:

Kane County	Population	Percent Overlap	Overlap Population
Aurora	126,929	75%	95,197
DuPage County			
Lisle	119,040	61%	72,747
Naperville	104,765	89%	93,124

Will County			
DuPage	87,348	100%	87,348
Wheatland	88,894	100%	88,894
		Total	**437,310**

The combined population of these townships within the service area overlap is 437,310. The permitted waste transfer capacity for the MTS is 1,080 tons per day and the permitted capacity of the JTS is 1,300 tons per day.

1.5.8 Elk Grove (Chicago) Transfer Station

The Elk Grove Transfer Station (EGTS) is owned and operated by Waste Connections, Inc. and its service area is illustrated in **Figure 9 - Transfer Station Service Areas 6 and 9** in **Appendix 1**. The service area for the EGTS shown was also obtained from Appendix I of the 2007 Solid Waste Management Plan for DuPage County. The townships served by EGTS that overlap the proposed service area are:

DuPage County – Bloomingdale, Milton, Wayne, Winfield

The combined population of these townships within the service area overlap is 215,685. The permitted waste transfer capacity for the EGTS is 1,000 tons per day.

1.5.9 Melrose Park Transfer Station

The Melrose Park Transfer Station (MPTS) is owned and operated by Waste Management, Inc. and its service area is illustrated in **Figure 10 - Transfer Station Service Areas 6,10 and 11** in **Appendix 1**. The service area for the MPTS shown was also obtained from Appendix G of the 2007 Solid Waste Management Plan for DuPage County. The townships served by MPTS that overlap the proposed service area are:

DuPage County – Bloomingdale, Lisle, Milton

The combined population of these townships within the service area overlap is 132,866. The permitted waste transfer capacity for the MPTS is 5,500 tons per day.

The nine (9) transfer stations whose service areas overlap the service area boundary of the West DuPage RTS are currently permitted to accept municipal solid waste (MSW). Facility information and the calculated population overlap is included in **Appendix 2** for each of the nine. Of these nine MSW transfer stations, two are in Kane County, two in Will County, three in Cook County and one each within DuPage and Kendall Counties. A map of their service areas, illustrating the number of transfer station overlaps with the LRS West Chicago Transfer Station service area, is included on **Figure 11 – Current Transfer Station Service Areas**. The amount of MSW transfer capacity for each of these nine facilities within the service area overlap of the LRS West DuPage facility was calculated. The capacity estimate was determined for each service area by using the population in the overlap area and dividing it by the total service area population of the individual waste transfer stations. The ratio of the overlap of service area population to that of the total population was then used as the percentage of the reported waste

transfer capacity of each transfer station within the intersecting portion of the DuPage RTS service area.

1.5.10 General Construction and Demolition Debris (GCDD) Recycling Facilities

There are two GCDD Recycling Facilities in the proposed Service Area. One is operated by LRS at the site of the proposed West DuPage RTSM transfer station on Powis Road. The permitted capacity per the CEC report for siting of the West DuPage RTS is 1, 250 tons per day of GCDD material. The second GCDD Recycling Facility is located approximately one-half mile north of the proposed West DuPage RTS, also on Powis Road. This facility is operated by Falcon Green Resources, Inc. and is permitted to accept up to 300 tons per day of GCDD material.

C&D recycling facilities are limited by regulations as to the amount of residual material that is generated by their operations that requires disposal in a landfill. Recent legislation (Senate Bill 1089) modified Section 22.38 of the Environmental Protection Act as follows:

> *"....ensure that no less than 40% of the total general construction or demolition debris received at the facility on a rolling 12-month average basis is recyclable."*

The amount of allowed residual GCDD generated by the LRS recycling facility for transfer was calculated by applying 40% of the 1,250 tons per day rate as residuals that will require transfer to a permitted landfill for disposal. Similarly, the amount of residual material that will require transfer from the Falcon Green Resources facility is estimated to be 40% of its allowed 300 tons per day rate. The amount of waste transfer from these two facilities is estimated to be 500 tons per day and 120 tons per day respectively.

1.5.11 Summary of Current Service Area Transfer Station Overlap Capacity

The calculations of service area population for each of the individual transfer stations are included in **Appendix 2.** The allocated MSW transfer capacities for each of the nine MSW transfer facilities and two GCDD residual transfer facilities within the overlap of service areas are presented in **Table 6**.

Table 6 – Current Transfer Station Capacity for Service Area Overlap Locations

Transfer Station/ Location	Total Capacity (Tons per Day)	2020 Service Area Population	2020 Service Area Overlap Population	Percent	2022 Available Capacity (Tons per Day)
Waste Management Bluff City Elgin, IL	2,000	845,947	560,111	66%	1320
Waste Connections Plano, IL	650	648,033	55,765	9%	59
Du Kane Transfer West Chicago, IL	3,000	984,311	911,263	93%	2790
Waste Management Transfer, Batavia, IL	1,500	1,134,573	635,369	56%	840
Lakeshore Recycling Systems Transfer, Elburn, IL	1,000	409,636	345,083	84%	840
Waste Management Transfer, Joliet, IL	1,300	1,181,254	437,310	37%	481
ERDS Transfer, Joliet, IL	1,080	1,181,254	437,310	37%	400
Waste Connections Transfer Elk Grove Village, IL	1,000	2,199,031	215,685	10%	100
Republic Services Transfer Melrose Park, IL	5,500	1,455,875	132,866	9%	495
LRS GCDD Recycling West Chicago, IL **(Note 1)**	1,250	N/A	N/A	40%	500
Falcon Green Resources GCDD Recycling, West Chicago, IL **(Note 2)**	300	N/A	N/A	40%	120
				Total	**7,944**

Note 1: 40% of 1,250 tons per day incoming General Construction and Demolition Debris Debris (GCDD) can be disposed of as waste

Note 2: 40% of 300 tons per day incoming CCDD can be disposed of as waste

5.12 Net Transfer Capacity Surplus

The combined capacity of transfer stations in the service area is 7,944 tons per day. The service area currently generates 3,574 tons per day of waste that requires transfer to disposal. The current net surplus is therefore calculated to be:

Available Transfer Capacity -	7,944 tons per operating day
Waste Materials for Transfer -	3,574 tons per operating day
Net Surplus:	***4,370 tons per day***

Currently there exists a 122% Surplus (4,370 tons per operating day ÷ 3,574 tons per operating day) in municipal solid waste transfer capacity in the service area.

The capacity surplus is expected to decrease as growth in the service area increases population and results in further amounts of waste generated. In the year 2040, the surplun waste transfer capacity for the service area is expected to be reduced to approximately 3,681 tons per operating day (7,944 tons/operating day less 4,263 tons per operating day for transfer) or 86% of the transfer capacity need in the service area (3,681 tons per operating day excess capacity ÷ 4,263 tons/per operating day capacity need = .86 (86%)). Based on future waste transfer capacity need in Year 2040 for the West DuPage RTS service area, there will remain a 86% surplus in municipal solid waste transfer capacity.

1.6 Conclusion

Based on the information presented in this assessment report, additional MSW waste transfer capacity is not necessary to serve the waste needs of the intended service area of the LRS West DuPage RTS transfer station. This conclusion is supported by the following facts:

- The LRS West DuPage RTS service area currently generates 2,977 tons per day of waste that requires transfer to landfills for disposal. This translates to 3,574 tons per oping day of the week. Present capacity in the service area for transfer of waste is 7,944 tons per day, representing a surplus in capacity of 4,380 tons per day, or a 122% surplus.

- Expected growth in population through Year 2040 is insufficient to create a need for additional waste transfer capacity in the service area because there will remain a 86% surplus of waste transfer capacity in year 2040

- Two waste transfer stations are located within the service area of the proposed LRS West DuPage RTS location and seven transfer stations have service areas spaced geographically in proximity such that they can provide service within the proposed LRS service area. One of the nine is operated by LRS and it currently overlaps 84% of the population of the service area presented for their proposed transfer station application.

- As illustrated on Figure 11 of this report, there is currently a minimum of two (2) transfer stations available to serve all portions of the proposed service area of the West DuPage RTS facility, and as many as six (6).

Based on current waste generation volume, present waste transfer capacity and the future demographic trends of the service area, all of which were obtained from reliable published sources, it is the opinion of JPL Environmental Engineering that the proposed LRS West DuPage Recycling and Transfer Station <u>is not necessary</u> to accommodate the waste needs of the area it is intended to serve.

					tons/day[4]	**2,997**		**tons/day[4]**	**3,574**

Notes:

1. Populations totals for 2020 and 2040 were taken from Table 1-2.
2. The values for pounds per capita per day and the recycling percentages were taken from each individual County Solid Waste Management Plan; pounds per capita and recycling rates.
3. Pounds per day was calculated by taking the Population Census * pound per capita day * (100% - recycling rate %).
4. Tons per a day was calculated by dividing the total pounds per a day by 2000 pounds per a ton.

PWC-157

Proposed West DuPage Recycling and Transfer Station
West Chicago, Illinois

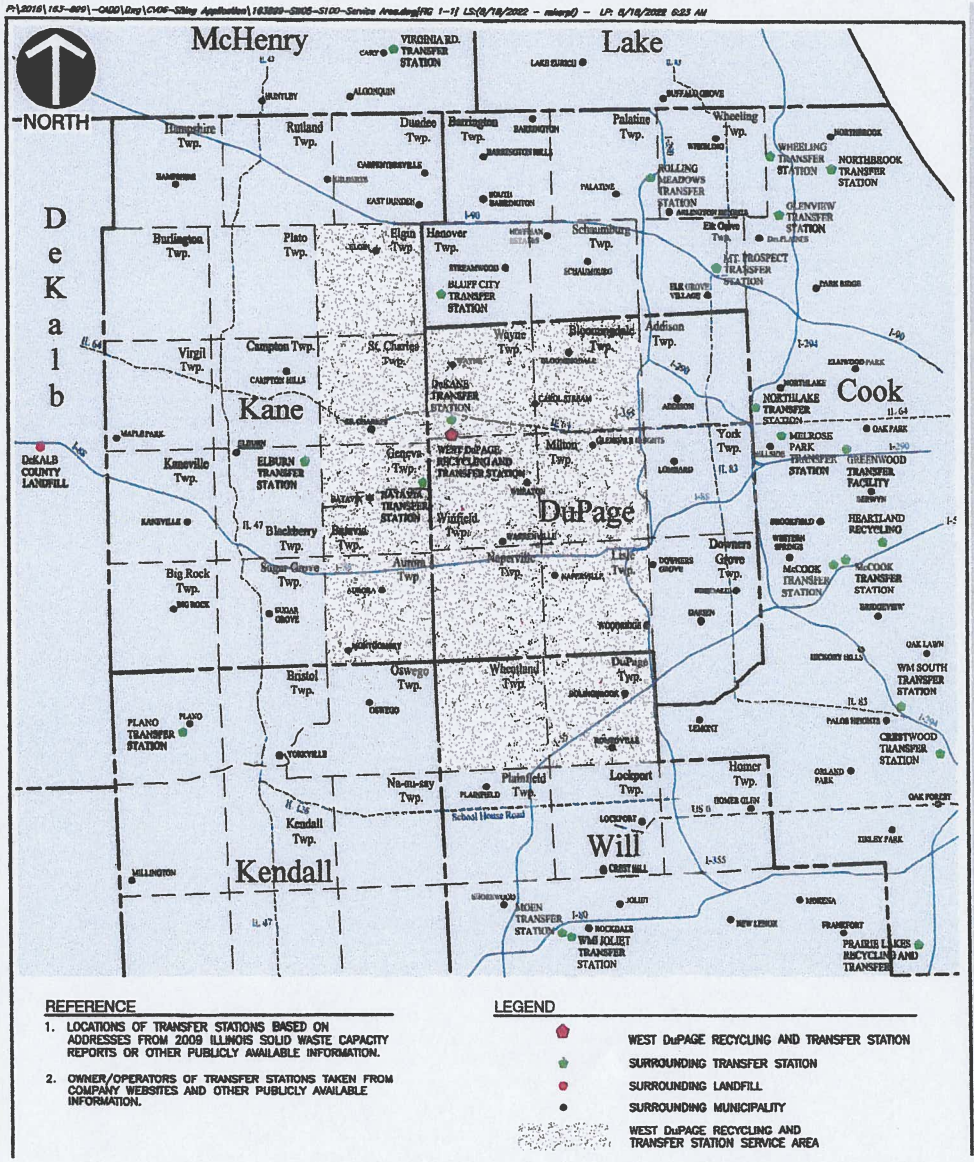
Criteria 1 -
Facility Need Assessment Review

"the facility is necessary to accommodate the waste needs of the area it is intended to serve (415 ILCS 5/39.2).

Prepared for:

Protect West Chicago

January 2023



John Lardner, PE

- Professional *Engineer* with over 35 years of experience in the solid waste field
- Registered Professional Engineer in Illinois and Indiana
- B.S. Civil Engineering, Michigan State University,
- M.S. Civil Engineering, University of Illinois
- Prepared need assessment studies and testimony for nine waste related facilities in Illinois, four of which were transfer stations
- Design engineer for over 22 solid waste projects in Illinois and Indiana
- Professional Associations
  - Solid Waste Association of North America, past Illinois Chapter President
  - U.S. Composting Council
  - American Society of Civil Engineers
  - Illinois Recycling Association – current board member
  - Illinois Food Scrap and Composting Coalition – current board member

OVERVIEW

- Review of West DuPage RTS Service Area
- Review of Waste Quantity Disposed in Service Area
- Current Transfer Stations Service Area Overlap
- Waste Transfer Capacity Available to Service Area

From Figure 1-1 of Siting application prepared by Civil and Environmental Consultants, Inc.

Townships

DuPage County	Kane County	Will County
Bloomingdale	Aurora	
Milton	Batavia	DuPage
Lisle	Elgin	Wheatland
Naperville	Geneva	
Wayne	St. Charles	
Winfield		

Population of Service Area Counties

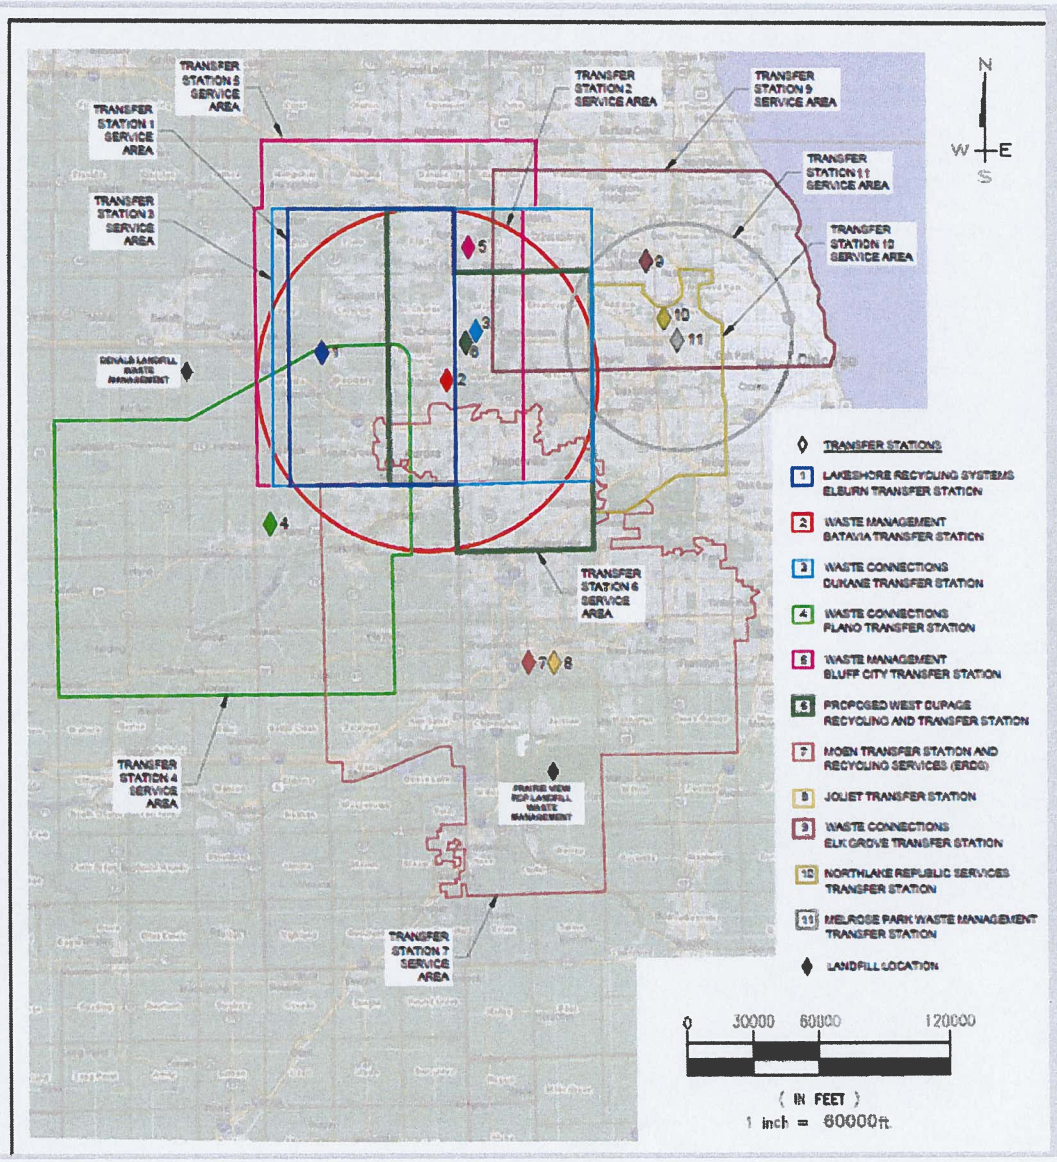
DuPage County	566,180
Kane County	345,083
Will County	176,242
Total	1,087,505

Ref. US Census Bureau 2020

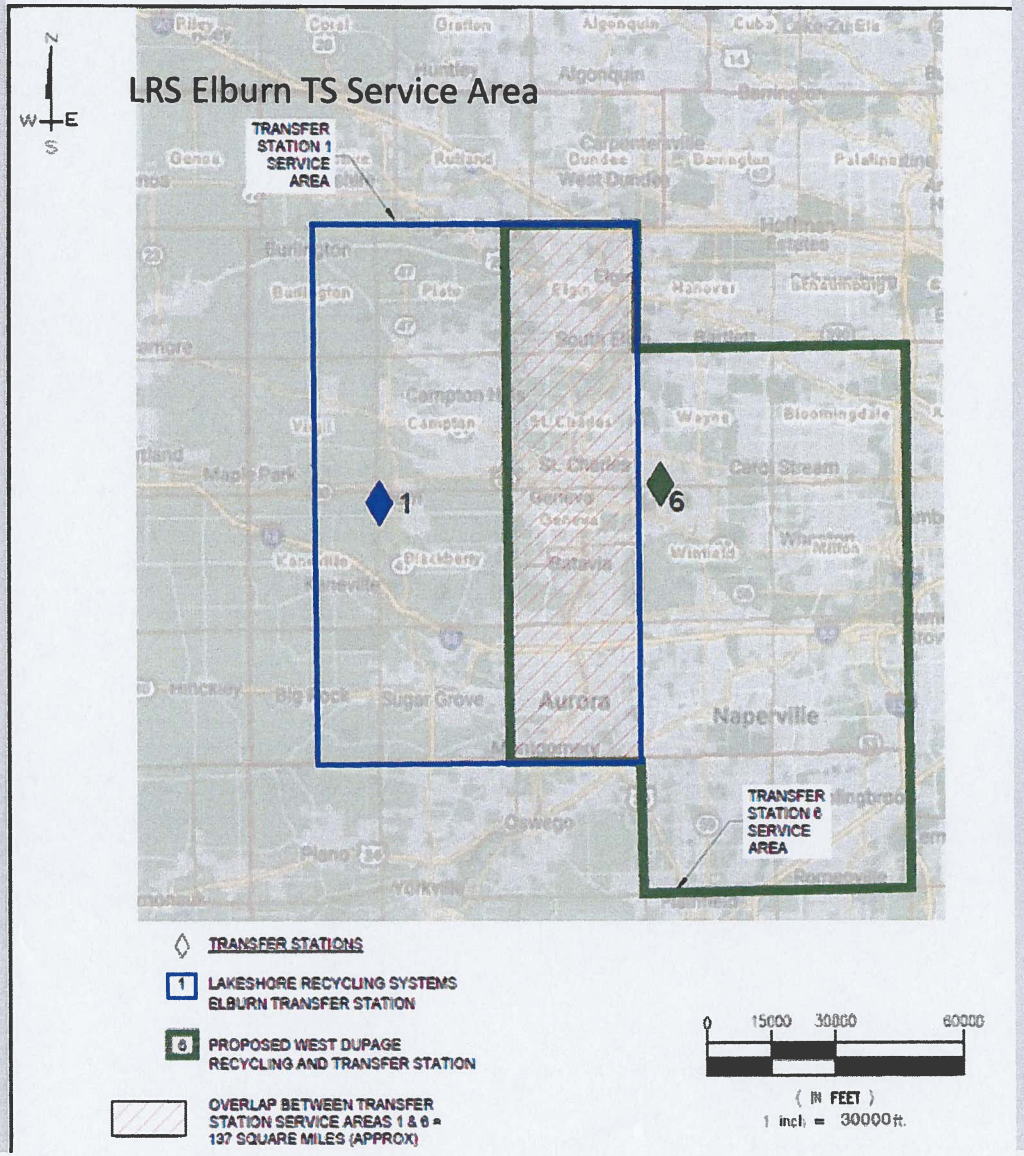
Waste Generation

DuPage County	8.77 pounds per person per day
Kane County	8.21 pounds per person per day
Will County	7.56 pounds per person per day

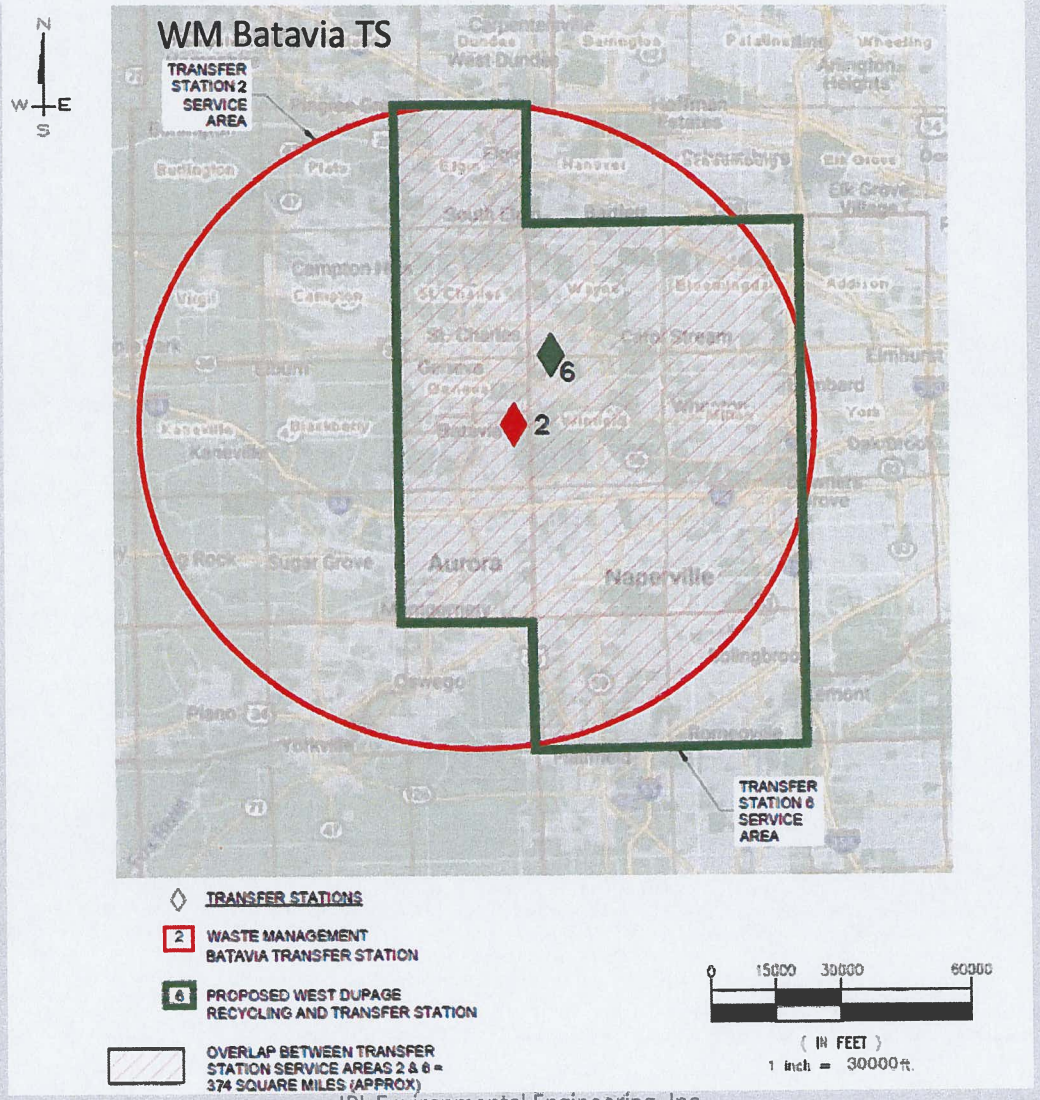
Recycling Rate (%)



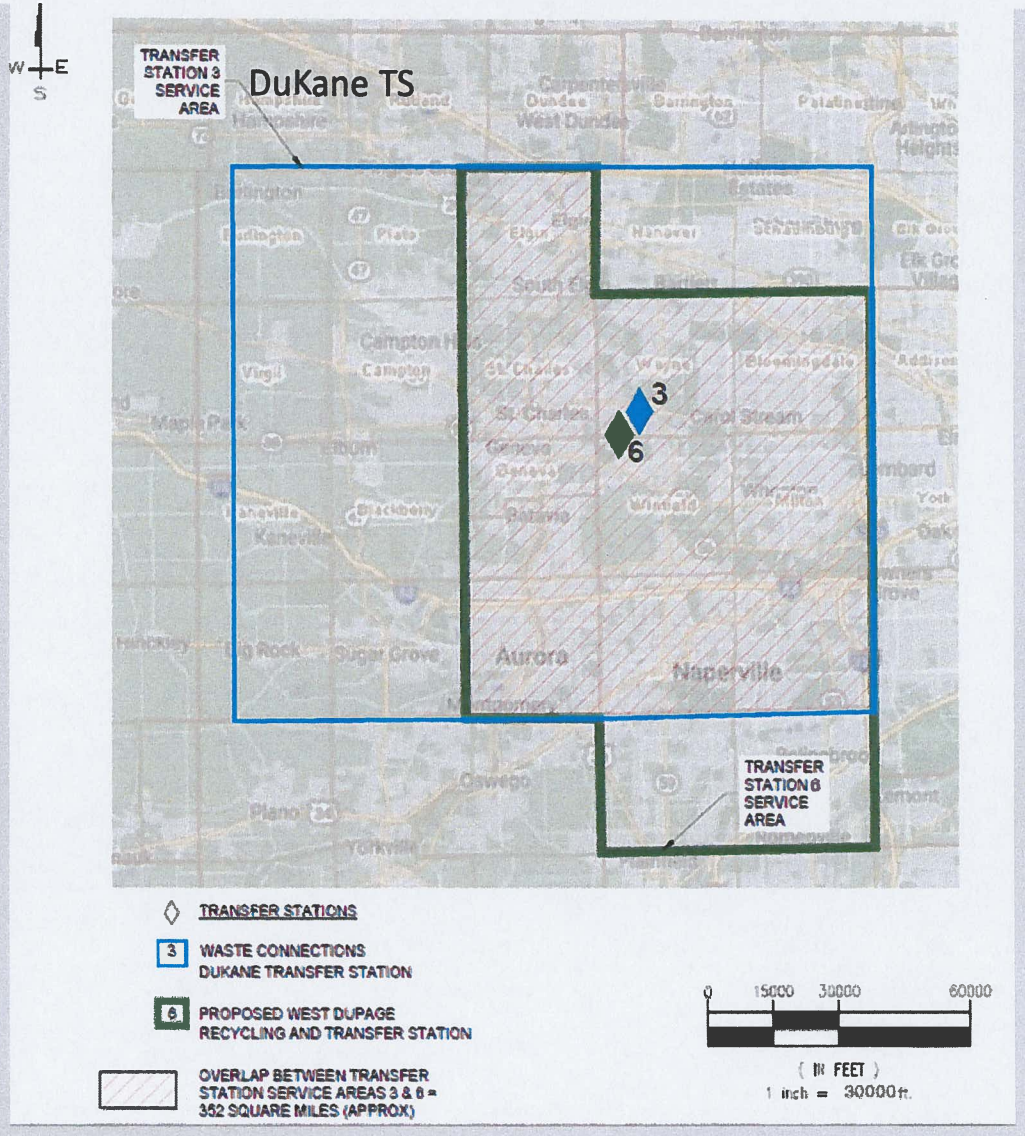
DuPage County	30%
Kane County	37%
Will County	43%



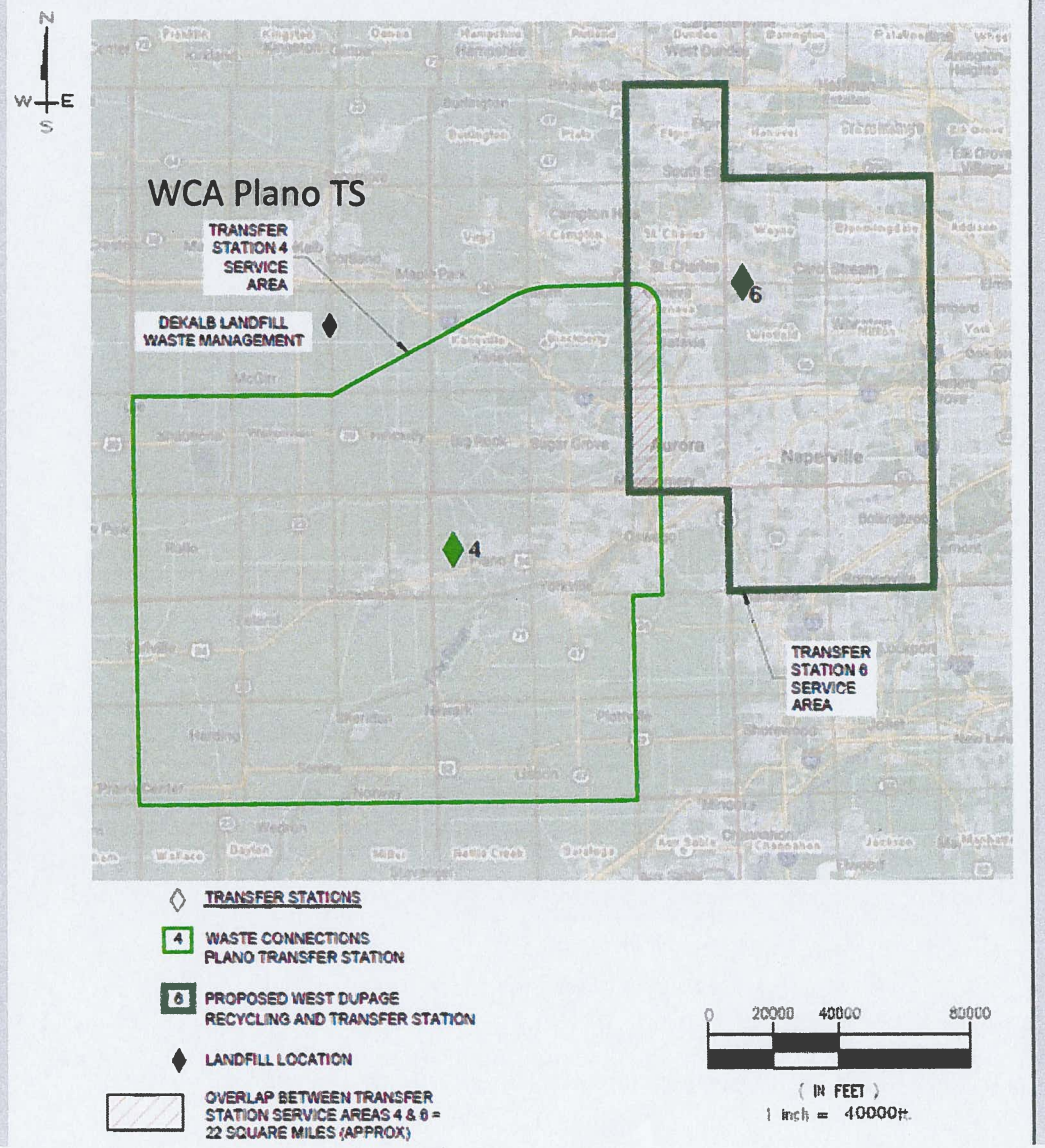
Waste Disposal Calculation



people x # lbs/pp/day – recycled x 365 days
÷ 2,000 lbs. per ton = tons/year



Waste Generated for Disposal in WDRTS Service Area is 2,997 tons/year



Waste generated per 6 days work week in WDRTS Service Area = 3,547 tons/year

Conclusion

Based on the information presented in this review, additional MSW waste transfer capacity is not necessary to serve the waste needs of the intended service area of the LRS West DuPage RTS transfer station. This conclusion is supported by the following facts:

- The LRS West DuPage RTS service area currently generates 2,977 tons per day of waste that requires transfer to landfills for disposal. This translates to 3,574 tons per operating day of the week. Present capacity in the service area for transfer of waste is 7,944 tons per day, representing a surplus in capacity of 4,370 tons per operating day, or a 122% surplus.

- Expected growth in population through Year 2040 is insufficient to create a need for additional waste transfer capacity in the service area because there will remain an 86% surplus of waste transfer capacity in year 2040

- Two waste transfer stations are located within the service area of the proposed LRS West DuPage RTS location and seven transfer stations have service areas spaced geographically in proximity to provide service within the proposed LRS service area. One of the nine is operated by LRS and it currently overlaps 84% of the population of the service West DuPage RTS service area.

- As illustrated on Figure 11 of this report, there is currently a minimum of two (2) transfer stations available to serve the proposed service area of the West DuPage RTS facility, and as many as six (6). Market conditions of waste volume, transfer capacity and travel distance do not necessitate a new waste transfer station in West Chicago to meet need in the service area.

EXHIBIT
PWC-200

CRITERION 2:

"the facility is so designed, located, and proposed to be operated that the public health, safety, and welfare will be protected"
415 ILCS 5/39.2(a)(ii)

DRAFT

- Receipt, solidification and transfer of hydro excavation wastes;
- Operation of a courtesy drop off for electronic wastes; and
- Receipt and transfer of source-separated recyclables (referred to as "SSR" or more generally as "recyclables").

Loads of MSW from collection vehicles will be consolidated into larger loads for transport to an area landfill for disposal. Loads of hydro excavation wastes will be solidified and then transported to an area landfill for disposal. Electronic waste from West Chicago citizens will be consolidated and transported to recovery facility. Loads of recyclables from collection vehicles will be consolidated into larger loads for transport to a material recovery facility (MRF), such as LRS's MRF in Forest View, for re-use as a commodity. The proposed operations at the West DuPage RTS will allow for more efficient processing and/or transportation of these materials to a MRF or disposal facility (landfill). In addition, the expanded operations at the facility will allow for more improved recycling of the C&D.

West DuPage RTS is a unique facility due its desirable location, relatively large size, and diversity of operations, and will be a premier waste management and recycling facility in the State of Illinois.

Subject to Illinois Environmental Protection Agency (IEPA) permitting, West DuPage RTS is anticipated to accept up to 2,300 tons per day of MSW, hydro excavation wastes, C&D and SSR, of which up to 1,000 tons per day may be MSW.

DRAFT

leak or have trash clinging to the outside; or that do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully enclosed trash transfer stations.

As discussed in the operating plan, the West DuPage RTS meets all of the above criteria so will be compatible with safe airport operations.

LRS contracted Loomacres Wildlife Management (Loomacres) to conduct a wildlife hazard evaluation at the Site. A site visit was conducted from June 17 to June 19, 2019. The wildlife hazard evaluation performed by Loomacres included observations of wildlife hazard attractants and surveying wildlife at multiple locations. Recommendation to minimize wildlife hazard attractants and mitigate the presence of wildlife is also provided. The Loomacres report is provided in Appendix 2-G1. The Site will perform various measures as recommended in the Loomacres report to minimize wildlife hazard attractants and mitigate the presence of birds and other wildlife on the West DuPage RTS. We believe the implementation of these measures will reduce the presence of birds and other wildlife compared to existing conditions.

As noted above, the Advisory Circular indicates that waste handling facilities should not be located within an RPZ. FAA Advisory Circular 150/5300-13A, Section 310 indicates the following regarding the RPZ:

- The RPZ's function is to enhance the protection of people and property on the ground through the airport ownership over RPZs.
- The RPZ is trapezoidal in shape and is centered about the extended runway centerline.
- The RPZ has two components with varying widths (central portion and controlled activity), and the approach RPZ may be different from the departure RPZ.
- The RPZ generally extends 1,000 feet from the end of the runway.

The runways at the DuPage Airport runways are either not orientated in the direction of the West DuPage RTS or are over 1,000 feet from West DuPage RTS operational areas. Thus, we believe the West DuPage RTS is not located within an RPZ.

The height of all buildings and structures at the West DuPage RTS are subject to a clear zone avigation easement (Avigation Easement). The Avigation Easement is provided in Appendix 2-G2 and indicates that a specified clear zone area be and remain free and clear of any structure, tree or other object which is or would constitute an obstruction or hazard to the flight of aircraft landing or taking off from the DuPage Airport. The clear zone area varies in elevation across the Site ranging from approximately elevation 785 feet mean sea level at the western property limit (closest to the DuPage Airport) to approximately elevation 825 feet mean sea level at the eastern property

Lights are installed at the site entrance, in parking areas and on the transfer station building to provide adequate lighting. A security camera system will also be installed at strategic locations around the Site. The Site currently has approximately fifty security cameras located inside and outside of buildings, which have twenty-four-hour local and remote viewing access.

Per the Host Agreement, any area used for the outdoor storage of any material or equipment will be fenced and visually screened from viewing from off the Site by means of said fence and appropriate landscaping as approved by the city.

2.4.13 VEHICLE FUELING PROCEDURES

Vehicles will be fueled using mobile equipment. Fuel tanks are also located on-site.

2.4.14 COMMUNICATIONS

All equipment operators at the facility will be equipped to communicate with the facility manager and other personnel via mobile phone at all times during operating hours. Emergency numbers will be clearly posted.

2.4.15 RECORDKEEPING

Accurate and up-to-date records documenting facility operations will be maintained at the Site. These records will include, but are not limited to, the following:

- Daily records of the amounts and description of the various types of materials received;
- Load inspection reports;
- Results of inspections (by IEPA, county, or local authorities);
- Copies of all submitted reports (to IEPA, county, or local authorities);
- Employee training records; and
- Employee personnel records.

The records will be maintained for a period of at least two years. The records of the amounts and description of the various types of materials received will include both waste receipts and scale weight on the disposal tickets and logs (electronic and/or hard copies), including, without limitation, those showing the amount in tons of all material received.

2.4.16 SITE THROUGHPUT CAPACITY

West DuPage RTS is anticipated to receive and efficiently manage up to 2,300 tons per day of MSW, hydro excavation wastes, C&D and SSR, of which up to 1,000 tons per day would be MSW.

Upon start-up of operations, smaller volumes will be received. The typical amount of material accepted is anticipated to be approximately 1,500 tons per day with an approximate breakdown of 650 tons per day MSW, 100 tons per day hydro excavation wastes, 600 tons per day general construction and demolition debris and 150 tons per day SSR.

The site and operating features that determine the daily throughput capacity of a transfer station are the following:

- Incoming waste flow;
- The available capacity to queue incoming waste vehicles;
- The time needed for collection vehicles to empty their loads and exit the facility;
- The time needed to load a transfer trailer;
- The tipping floor size and stockpiling capacity; and
- The operating hours of the facility.

2.4.17 DAILY OPERATING CAPACITY AND THROUGHPUT CAPACITY DESIGN

The following summarizes our evaluation of Site features that are determinative of daily operating capacity and throughput capacity, relative to the anticipated acceptance volumes. The assumptions discussed below are typical estimates and may vary.

2.4.17.1 Incoming Waste Flow

This evaluation utilizes a summary of the anticipated collection and transportation times based on the following:

- The current route schedules MSW and SSR collection vehicles of West DuPage RTS, which times are not expected to substantially change with the operation of West DuPage RTS.
- The current incoming C&D collection vehicle times at the Site.
- The incoming hydro excavation waste acceptance times at LRS's facility in Forest View.

The information indicates the following:

- Minor amounts of MSW and SSR will be accepted prior to 10:00 a.m.;
- The peak hours of MSW and SSR acceptance will be between 10:00 a.m. and 12:00 p.m., and then again between 2:00 p.m. and 4:00 p.m.;
- Waste and SSR acceptance volumes will decrease after 4:00 p.m.;

tons per eight minutes, MSW and/or SSR may not need to be stored on the tipping floor (assuming waste is being loaded during that time). If the MSW and/or SSR is being unloaded onto the tipping floor at a rate of greater than 24 tons per eight minutes, MSW and/or SSR will need to be stored on the tipping floor. If a longer time is taken to load the transfer trailer, additional waste will need to be stored. It should be noted that transfer trailer loading can occur simultaneously with unloading occurring.

Based on the above, the facility has the capacity to load up to 7.5 transfer trailers per hour of MSW and/or SSR (or approximately 192 tons per hour of MSW and/or SSR).

2.4.17.4 C&D Transfer and Processing Rate

The C&D transfer and processing procedures vary by the type of material accepted. Source separated materials (e.g., shingles, broken concrete) are not processed through the screener and sorting line. These types of loads are much heavier than mixed C&D loads so typically comprise a significant percentage of the general C&D accepted on a weight basis.

Mixed loads of C&D are processed through the screener and sorting line to remove as much recyclable material as practical. Materials separated by the screener are transported via conveyor to the cover building. Materials separated by the sorting line are dropped into storage bunkers. Non-recyclable materials from the sorting line proceed through the sorting line and are deposited in a separate storage bunker for subsequent transfer through the MSW and SSR transfer building loading pit.

Based on historical operations, the Site can manage (separate, transport and/or distribute into storage bays for subsequent recycling) approximately 60 tons per hour. The load out of recyclable material is not required every day so is not a limiting factor in the throughput evaluation. The amount of non-recyclable material required to be loaded out via the MSW and SSR transfer building loading pit is 250 tons per day (25% of 1,000 tons per day of C&D). The load out of the non-recyclable material is included in the evaluation of the load out of the MSW.

The storage capacity of the C&D transfer/screening building is at least 260 tons (100 feet long by 35 feet wide by 10 feet high by 0.8 slope factor) so provides ample storage capacity to accommodate processing.

2.4.17.5 Tipping Floor Size and Stockpiling Capacity

The tipping floor for the MSW and SSR transfer building is approximately 17,100 square feet (90 feet by 190 feet). Waste and SSR will be unloaded in separate locations so waste and SSR cannot

occupy the entire tipping floor as adequate maneuvering space is needed for the loader and the disposal vehicles. The MSW waste is anticipated to be staged on the west portion of the tipping floor, which has an area of approximately 90 feet by 50 feet. Assuming a 10-foot average height and 0.8 slope loss factor, the waste storage capacity in this area is approximately 1,333 cubic yards (or approximately 335 tons assuming a waste density of 500 pounds per cubic yard).

The SSR is anticipated to be primarily staged in the southeast corner of the tipping floor, which has an area of approximately 50 feet by 20 feet. Assuming a 10-foot average SSR height and 0.8 slope loss factor, the SSR storage capacity in this area is approximately 300 cubic yards (or approximately 60 tons assuming a waste density of 400 pounds per cubic yard). A similarly sized staging area is available along the north perimeter if needed so the total storage capacity for SSR is approximately 600 cubic yards or 120 tons.

2.4.17.6 Operating Hours

West DuPage RTS anticipates operating hours of up to 4:00 a.m. to 12:00 a.m. on weekdays and 4:00 a.m. to 12:00 p.m. on Saturdays, which is similar to LRS's current site operating hours. These hours will allow operational flexibility to accommodate specific customer or market needs. However, the transfer station facility will not be open all of these hours if the customer needs and market do not warrant those hours.

2.4.17.7 Evaluation of Maximum Amount

Tables 2-1, 2-2 and **2-3**, located in the tables section of this Criterion, provide an evaluation of the needed tipping floor storage volume for 2,300 tons per day of MSW, hydro excavation wastes, C&D and SSR, of which 1,000 tons per day would be MSW. To evaluate a "worst case" scenario, 1,000 tons per day is assumed to be C&D, 300 tons per day is assumed to be SSR, 1,000 tons per day is assumed to be MSW, and zero tons per day is assumed to be hydro excavation waste. The acceptance rate for C&D, SSR and MSW is based on current and anticipated LRS delivery times and relative amounts and percentage of collection vehicles (packer versus roll offs).

As shown in Tables 2-2 and 2-3, the MSW and SSR transfer building is anticipated to receive up to twenty-two MSW waste collection vehicles and six SSR vehicle in one hour (which is less than 60% of the unloading capacity of the MSW and SSR transfer building). Assuming that the transfer trailers are loaded at an average of 6.5 per hour during the peak hours (which is 87% of the loading capacity for both MSW and SSR), the amount of MSW needed to be stored on the tipping floor is approximately 31% of its storage capacity (104 tons of required floor storage/335 tons of storage capacity) and the amount of SSR needed to be stored on the tipping floor is approximately 42% of its storage capacity (51 tons of required floor storage/120 tons of storage capacity).

STORMWATER POLLUTION PREVENTION PLAN

DRAFT

CITY OF
WEST CHICAGO

WHERE HISTORY & PROGRESS MEET

October 15, 2019

RE: Residential-zoned property located east of 1655 Powis Road, West Chicago, Illinois

To Whom It May Concern:

The Union Pacific Railroad line runs east of the subject property within Union Pacific Right of Way (ROW). While the ROW is zoned ER, Estate Residential, as an active rail line there can be no residential development within this corridor. Furthermore, there is insufficient room for a legally-sized series of Estate Residential lots including access to those lots. Finally, the ER zoning designation for the corridor is a remnant classification from the time it was annexed to the City of West Chicago.

As such, the City believes Section 22.14(a) 1,000 foot setback requirement is not applicable.

Please contact me if you have any questions.

Sincerely,

Tom Dabareiner AICP

DRAFT

- Receipt, solidification and transfer of hydro excavation wastes;
- Receipt and transfer of source-separated recyclables (referred to as "SSR" or more generally as "recyclables"); and
- Drop-off area for West Chicago residents' electrical/electronic devices; and
- Drop-off area for recyclables generated by residents and small businesses.

Loads of MSW from collection vehicles will be consolidated into larger loads for transport to an area landfill for disposal. Loads of hydro excavation wastes will be solidified and then transported to an area landfill for disposal. Electronic waste from West Chicago citizens will be consolidated and transported to recovery facility. Loads of recyclables from collection vehicles (and recyclables from residents) will be consolidated into larger loads for transport to a material recovery facility (MRF), such as LRS's MRF in Forest View, for re-use as a commodity. The proposed operations at the West DuPage RTS will allow for more efficient processing and/or transportation of these materials to a MRF or disposal facility (landfill). In addition, the expanded operations at the facility will allow for more improved recycling of the C&D.

West DuPage RTS is a unique facility due its desirable location, relatively large size, and diversity of operations, and will be a premier waste management and recycling facility in the State of Illinois.

Subject to Illinois Environmental Protection Agency (IEPA) permitting, West DuPage RTS is anticipated to accept up to 2,300 tons per day of MSW, hydro excavation wastes, C&D and SSR, of which up to 1,000 tons per day may be MSW.

DRAFT

- Extend rip-rap around west pond - The rip-rap that is currently surrounding the west pond is preventing birds, such as waterfowl, from walking into or out of the pond. This feature will be extended further into the grass, widening the buffer between the water and grass.
- Monitor wildlife with game cameras - Wildlife at the ponds will be monitored with game cameras. This will capture any wildlife utilizing the ponds. Trained staff can mitigate the hazards as needed. Installation of game cameras will allow for monitoring when employees are unavailable. Checking the cameras periodically will give an idea of what and when wildlife are using the ponds.
- Vary harassment - To keep the birds from becoming accustomed to harassment tactics, the site will designate an employee or employees to periodically patrol the west and east ponds and harass any birds observed.
- Maintain grass height - The current tall grass around the east pond poses a high risk to hide wildlife. The grass around the east pond will be maintained at a height that affords an easy sight picture. Grass maintenance at the east pond will allow for easy inspection of the pond so that any wildlife may be harassed to leave the area. Grass will be maintained around 12 inches in height. The shortened grass height will deter many species from utilizing it, such as Canada geese. Trained facility staff will visually inspect the pond for birds that may be attempting to hide.
- Remove cottonwood tree - A large cottonwood tree is present to the east of the east pond. The tree is being used as a roosting location for a few great egrets (Ardea alba). While some of the trees on the eastern property edge will serve as a visual blocker, this large tree will be removed.
- Install grid-wire system - A grid-wire system will be installed on the east and west ponds to keep most waterfowl and wading birds from utilizing the pond. To keep larger birds from using the water, a checkerboard pattern is recommended. This involves running cables from one side to another in one direction (north to south) and then running a second set of wires perpendicular.

2.4.17 SITE THROUGHPUT CAPACITY

West DuPage RTS is anticipated to receive and efficiently manage up to 2,300 tons per day of MSW, hydro excavation wastes, C&D and SSR, of which up to 1,000 tons per day would be MSW. Smaller volumes area anticipated to be typically received. The typical amount of material accepted is anticipated to be approximately 1,500 tons per day with an approximate breakdown of 650 tons per day MSW, 100 tons per day hydro excavation wastes, 600 tons per day general construction and demolition debris and 150 tons per day SSR.

The site and operating features that determine the daily throughput capacity of a transfer station are the following:

- Incoming waste flow;
- The available capacity to queue incoming waste vehicles;
- The time needed for collection vehicles to empty their loads and exit the facility;
- The time needed to load a transfer trailer;
- The tipping floor size and stockpiling capacity; and
- The operating hours of the facility.

2.4.18 DAILY OPERATING CAPACITY AND THROUGHPUT CAPACITY DESIGN

The following summarizes our evaluation of site features that are determinative of daily operating capacity and throughput capacity, relative to the anticipated acceptance volumes. The assumptions discussed below are typical estimates and may vary.

2.4.18.1 Incoming Waste Flow

This evaluation utilizes a summary of the anticipated collection and transportation times based on the following:

- The current route schedules MSW and SSR collection vehicles of West DuPage RTS, which times are not expected to substantially change with the operation of West DuPage RTS.
- The current incoming C&D collection vehicle times at the site.
- The incoming hydro excavation waste acceptance times at LRS's facility in Forest View.

The information indicates the following:

- Minor amounts of MSW and SSR will be accepted prior to 9:00 a.m.
- The peak hours of MSW and SSR acceptance will be between 10:00 a.m. and 12:00 p.m., and then again between 2:00 p.m. and 4:00 p.m.
- Waste and SSR acceptance volumes will decrease after 5:00 p.m.
- The C&D waste acceptance is relatively evenly distributed throughout the day, but, to provide a conservative evaluation, peak C&D waste acceptance hours will be assumed to coincide with the peak waste acceptance hours as the MSW and SSR.
- The hydro excavation waste is unloaded in a separate building so the acceptance of these materials do not affect the throughput evaluation for the C&D, MSW and SSR.

DRAFT

Based on the above, the facility has the capacity to load up to 7.5 transfer trailers per hour of MSW and/or SSR (or approximately 192 tons per hour of MSW and/or SSR).

2.4.18.4 C&D Transfer and Processing Rate

The C&D transfer and processing procedures vary by the type of material accepted. Source separated materials (e.g., shingles, broken concrete) are not processed through the screener and sorting line. These types of loads are much heavier than mixed C&D loads so typically comprise a significant percentage of the general C&D accepted on a weight basis.

Mixed loads of C&D are processed through the screener and sorting line to remove as much recyclable material as practical. Materials separated by the screener are transported via conveyor to the cover building. Materials separated by the sorting line are dropped into storage bunkers. Non-recyclable materials from the sorting line proceed through the sorting line and are deposited in a separate storage bunker for subsequent transfer through the MSW and SSR transfer building loading pit.

Based on historical operations, the site can manage (separate, transport and/or distribute into storage bays for subsequent recycling) approximately 60 tons per hour. The load out of recyclable material is not required every day so is not a limiting factor in the throughput evaluation. The amount of non-recyclable material required to be loaded out via the MSW and SSR transfer building loading pit is 250 tons per day (25% of 1,000 tons per day of C&D). The load out of the non-recyclable material is included in the evaluation of the load out of the MSW.

The storage capacity of the C&D transfer/screening building is at least 250 tons (100 feet long by 35 feet wide by 12 feet high by 0.8 slope factor) so provides ample storage capacity to accommodate processing.

2.4.18.5 Tipping Floor Size and Stockpiling Capacity

The tipping floor for the MSW and SSR transfer building is approximately 17,100 square feet (90 feet by 190 feet). Waste and SSR will be unloaded in separate locations. Waste and SSR cannot occupy the entire tipping floor as adequate maneuvering space is needed for the loader and the disposal vehicles. The MSW waste is anticipated to be staged on the south portion of the tipping floor (both east and west of the loading pit), which have a combined area of approximately 3,970feet (2,430 square feet in southwest area + 1,540 square feet in southeast area). Assuming a 12-foot average height and 0.8 slope loss factor, the waste storage capacity in this area is approximately 1,410 cubic yards (or approximately 282 tons assuming a waste density of 400 pounds per cubic yard).

CRITERION 2:
DESIGN, LOCATION STANDARDS, AND OPERATING PLAN

The Illinois Environmental Protection Act, at 415 ILCS 5/39.2 (a)(ii), requires that an applicant for a transfer station siting demonstrate that the facility is so designed, located, and proposed to be operated so that the public health, safety, and welfare will be protected. This report demonstrates that the proposed Lakeshore Recycling Systems, LLC West DuPage Recycling and Transfer Station is designed, located, and proposed to be operated so that public health, safety, and welfare will be protected.

CIVIL & ENVIRONMENTAL CONSULTANTS, INC.
NAPERVILLE, ILLINOIS

CEC Project 163-899

SEPTEMBER 2020

- Receipt, solidification and transfer of hydro excavation wastes;
- Receipt and transfer of single-stream recyclables (referred to as "SSR" or more generally as "recyclables");
- Drop-off area for West Chicago residents' electrical/electronic devices; and
- Drop-off area for recyclables generated by residents and small businesses.

Loads of MSW from collection vehicles will be consolidated into larger loads for transport to an area landfill for disposal. Loads of hydro excavation wastes will be solidified and then transported to an area landfill for disposal. Electronic waste from West Chicago citizens will be consolidated and transported to a recovery facility. Loads of recyclables from collection vehicles (and recyclables from residents) will be consolidated into larger loads for transport to a material recovery facility (MRF), such as LRS's MRF in Forest View, for re-use as a commodity. The proposed operations at the West DuPage RTS will allow for more efficient processing and/or transportation of these materials to a MRF or disposal facility (landfill). In addition, the expanded operations at the facility will allow for more improved recycling of the C&D.

West DuPage RTS is a unique facility due its desirable location, relatively large size, and diversity of operations, and will be a premier waste management and recycling facility in the State of Illinois.

Subject to Illinois Environmental Protection Agency (IEPA) permitting, West DuPage RTS is anticipated to accept up to 2,525 tons per day of which up to 900 tons per day may be MSW, up to 300 tons per day may be hydro excavation wastes, up to 1,000 tons per day may be C&D and up to 325 tons per day may be SSR.

The C&D operations, MSW/ SSR operations and hydro excavation waste operations are separate business lines so the probability of the Site receiving peak amounts of waste from these three different business lines on the same day is highly unlikely. Regardless, the Site has been designed to manage the peak amounts of each material type on the same day.

species from utilizing it, such as Canada geese. Trained facility staff will visually inspect the pond for birds that may be attempting to hide.

- Remove cottonwood tree - A large cottonwood tree is present to the east of the east pond. The tree is being used as a roosting location for a few great egrets (Ardea alba). While some of the trees on the eastern property edge will serve as a visual blocker, this large tree will be removed.
- Install grid-wire system - A grid-wire system will be installed on the east and west ponds to keep most waterfowl and wading birds from utilizing the pond. To keep larger birds from using the water, a checkerboard pattern is recommended. This involves running cables from one side to another in one direction (north to south) and then running a second set of wires perpendicular.

2.4.18 SITE THROUGHPUT CAPACITY

Subject to Illinois Environmental Protection Agency (IEPA) permitting, West DuPage RTS is anticipated to accept up to 2,525 tons per day of which up to 900 tons per day may be MSW, up to 300 tons per day may be hydro excavation wastes, up to 1,000 tons per day may be C&D and up to 325 tons per day may be SSR. The maximum volumes are based on the following.

- MSW – LRS currently hauls approximately 250 tpd of MSW from the Service Area with trucks based out of the West DuPage RTS. The 900 tpd limit would accommodate the existing volume LRS hauls, a similar volume from other privately owned companies, reasonable growth and a contingency for a peak day.
- C&D – The Site is currently permitted to accept up to 1,250 tpd. LRS currently accepts an average of approximately 400 tpd with historic peaks of approximately 850 tpd. These volumes are not anticipated to change if the acceptance of MSW is approved. The 1,000 tpd limit (which is reduced from the current limit of 1,250 tpd) would accommodate the existing volume LRS hauls and a contingency for a peak day.
- Hydro Excavation Waste – LRS currently accepts between 100 to 400 tpd at its Heartland Recycling facility in Forest View. Approximately half of this volume is anticipated to be diverted to the West DuPage RTS if approved because customers have indicated that this approximate percentage of hydro excavation waste is generated closer to West Chicago than Forest View (and they would want to take advantage of the reduced transportation costs). The proposed limit of 300 tpd would accommodate the diversion of approximately 100 to 150 tpd, reasonable growth and a contingency for a peak day.
- SSR - LRS currently hauls approximately 90 tpd of SSR from the Service Area with trucks based out of the West DuPage RTS. The 325 tpd limit would accommodate the existing volume LRS hauls, a similar volume from other privately owned companies, reasonable growth and a contingency for a peak day.

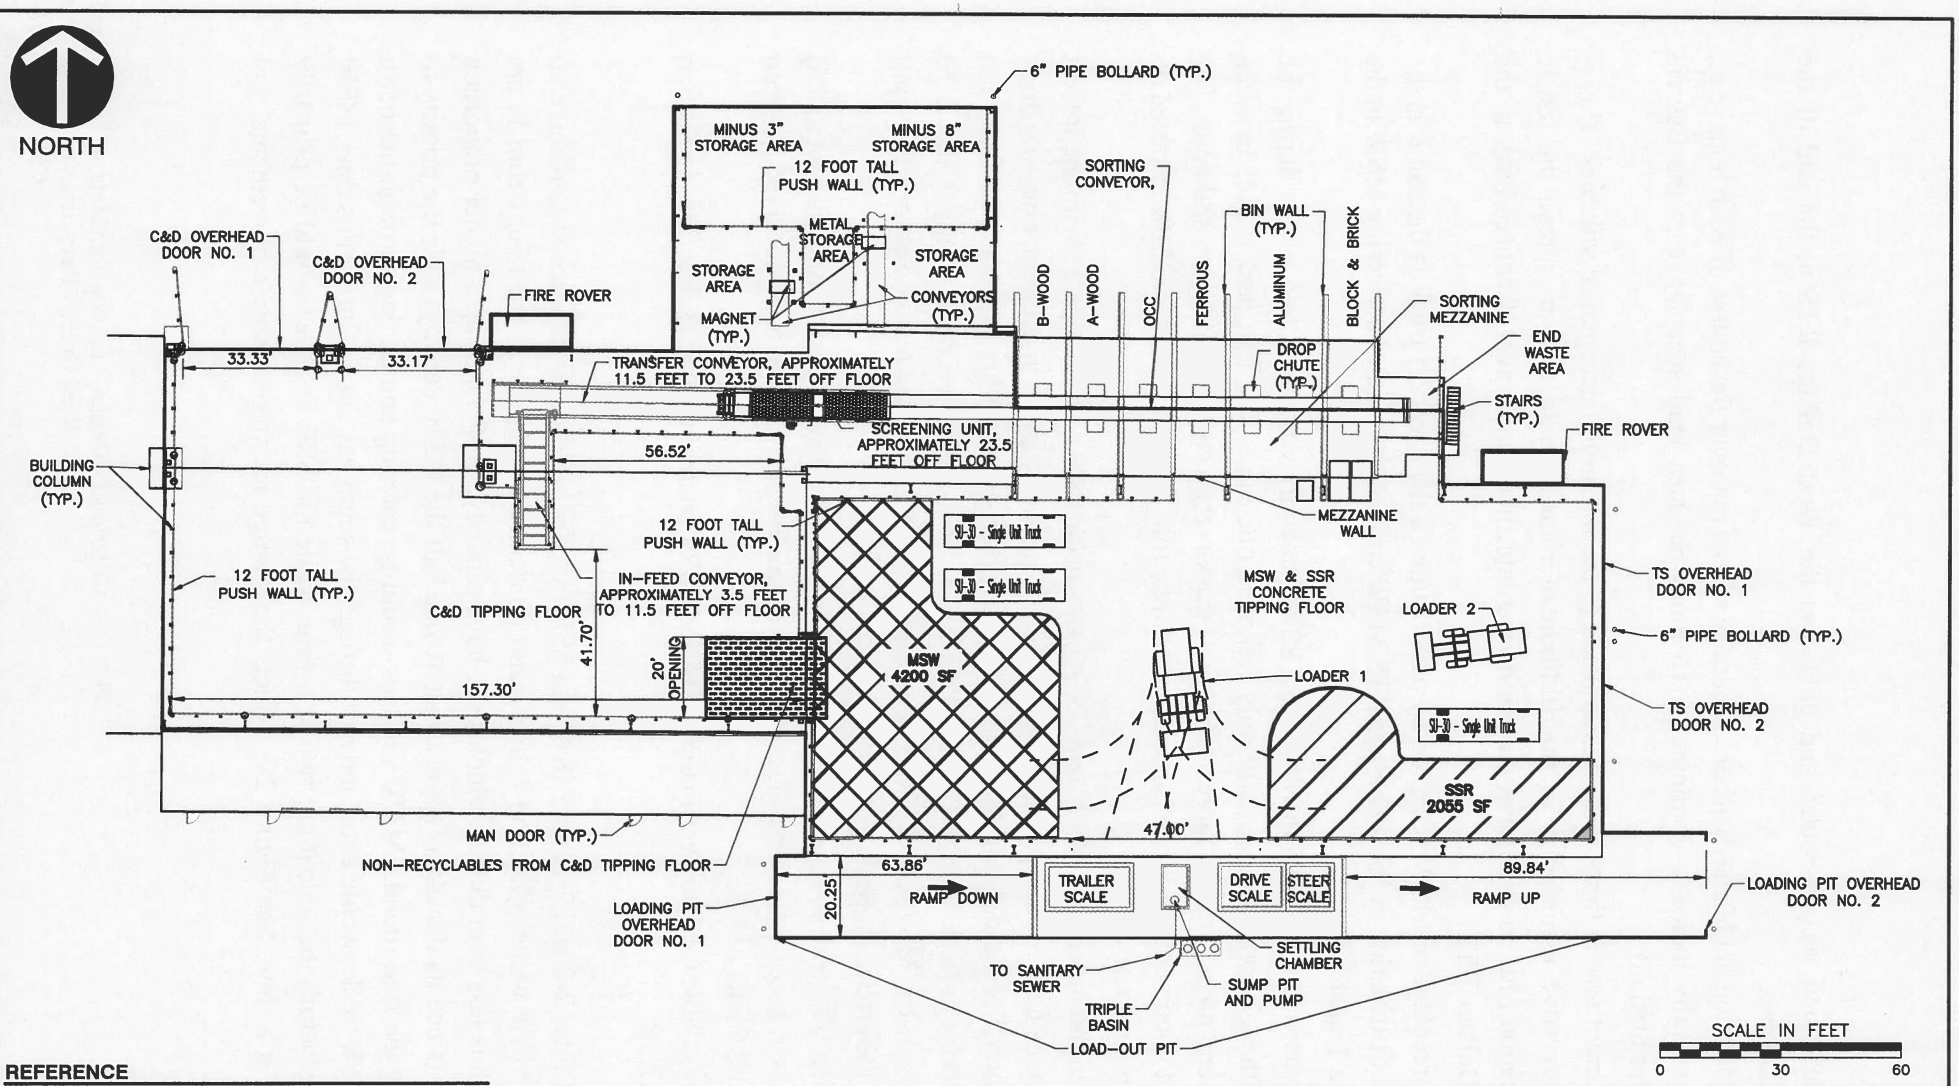
2.4.19.4 C&D Transfer and Processing Rate

The C&D transfer and processing procedures vary by the type of material accepted. Source separated materials (e.g., shingles, broken concrete) are not processed through the screener and sorting line. These types of loads are much heavier than mixed C&D loads so typically comprise a significant percentage of the general C&D accepted on a weight basis.

Mixed loads of C&D are processed through the screener and sorting line to remove as much recyclable material as practical. Materials separated by the screener are transported via conveyor to the cover building. Materials separated by the sorting line are dropped into storage bunkers. Non-recyclable materials from the sorting line proceed through the sorting line and are deposited in a separate storage bunker for subsequent transfer through the MSW and SSR transfer building loading pit.

Based on historical operations, the site can manage (separate, screen, sort, transport and/or distribute into storage bays for subsequent recycling) approximately 40 tons per hour. The load out of recyclable material is not required every day so is not a limiting factor in the throughput evaluation. The estimated maximum amount of non-recyclable material required to be loaded out via the MSW and SSR transfer building loading pit is 250 tons per day (25% of 1,000 tons per day of C&D). The load out of the non-recyclable material is included in the evaluation of the load out of the MSW. The portion of non-recyclables from the sorting line would be consistently brought to the MSW and SSR Transfer Building throughout the day. The other portion of non-recyclables (e.g., bulky items) are separated from loads prior to processing and can be moved to the MSW and SSR Transfer Building during the operating day or at the end of the operating day. During a maximum MSW and SSR acceptance day, the non-recyclable C&D would be staged in the opening between the buildings and loaded out from the MSW and SSR Transfer Building at the end of the day.

The storage capacity of the C&D transfer/screening building is at least 250 tons (100 feet long by 35 feet wide by 12 feet high by 0.8 slope factor) so provides ample storage capacity to accommodate processing and stage non-recyclables.



2.4.19.5 Tipping Floor Size and Stockpiling Capacity

The tipping floor for the MSW and SSR transfer building is approximately 17,100 square feet (90 feet by 190 feet). Waste and SSR will be unloaded in separate locations, which may vary based on actual daily acceptance volumes of each. Waste and SSR cannot occupy the entire tipping floor as adequate maneuvering space is needed for the loader and the disposal vehicles. During a

complete their second routes and unload at the West DuPage RTS at the end of the operating day.

- The collection vehicle arrivals are generally spread out over the course of each hour (e.g., data generally indicates 2 minute to 10 times between load acceptance at the Batavia Transfer Station).
- The current arrival times were extrapolated to the maximum acceptance volumes. This is a conservative assumption as the addition of routes would tend to spread the traffic distribution (due to additional variations in route times and travel distances back to the West DuPage RTS).
- The percentage of MSW accepted by packer truck versus roll off truck is the same as the current distribution of West DuPage RTS MSW collection vehicles delivering MSW to the Batavia Transfer Station.
- Each packer truck (for both MSW and SSR) generally completes two routes during the day, although some vehicles will only complete one route. The first peak occurs between 10 am and noon, with the largest amount of trucks received between 11 am and noon. The 11 am to noon hour thus corresponds to the time that the most MSW and SSR is stored on the tipping floor.
- A lull in the number of MSW and SSR trucks occurs after the first peak, with the lowest acceptance hour of the operating day between 1 pm and 2 pm. On average, only one truck at a time will be unloading in the building during this time period (versus up to three at a time during a peak hour). This time period of low waste acceptance allows the large majority of the MSW and SSR to be loaded out and the storage areas to be nearly empty before the afternoon peak.
- The afternoon peak starts after 3 pm (when the second round for each vehicle is completed) and goes to about 6 pm. The largest number of trucks is anticipated to be accepted between 5 pm and 6 pm.
- Non-recyclable C&D arrives in the MSW and SSR transfer building as described in Section 2.4.19.7.

As shown in Tables 2-2 and 2-3, the MSW and SSR transfer building is anticipated to receive up to twenty-one MSW waste collection vehicles and fourteen SSR vehicle in one hour (from 11 am to noon), which is less than the 36 vehicles per hour capacity. SSR takes up a higher proportion of the tip floor (since its density is approximately one half the MSW density) so is the priority to load out during the first round. MSW vehicles would be entering and exiting through the north bay door and SSR trucks would enter and exit through the south bay door. During this time, MSW trucks would generally be unloading two at a time while the SSR vehicles would be primarily unloading one at a time. See Figure 2.3 depicts the storage locations, vehicle movements, and

Assumptions:

119 Total Collection Vehicles per Day
1,000 Tons = Approximate Daily Throughput of Municipal Solid Waste (MSW)
8 tons = Average MSW Packer Truck Load
4 tons = Average MSW Roll-Off Truck Load
24 tons = Average MSW Transfer Trailer Load
1 ton MSW = 5 Cubic Yards on tipping floor (or 400 pounds/cubic yard)

H

habendum clause. A clause in a real estate document that specifies the extent of the interest (or interests) to be conveyed.

hard costs. *See* **direct costs**.

hard goods. A class of merchandise composed primarily of durable items, e.g., hardware, machines, heavy appliances, electrical and plumbing fixtures, farming machinery and supplies; also called *hardlines*.

hazard insurance. Insurance coverage that compensates for physical damage to a property from fire, wind, vandalism, or other hazards.

headship rate. The ratio between the number of households headed by a person of a particular subgroup (e.g., unmarried males, aged 25-29) and all the persons in that subgroup (e.g., 58.1% of unmarried males are heads of households). *See also* **household**.

health and fitness center. An exercise facility that features an assortment of weight and resistance training, aerobic activities, and locker room and shower facilities. The category encompasses a wide range of facilities. Lower-end facilities may only provide weight-training equipment while upper-end facilities may include court facilities, swimming pools, and areas for classes and spa treatments.

health spa resort. A lodging facility that caters almost exclusively to health-conscious leisure travelers. Health spas generally offer an all-inclusive program that includes accommodations, meals, a medical check-up, individually designed health-related activities, and various types of counseling. Guests normally stay for three days to two weeks. These properties are usually located in resort areas. Their facilities typically include those normally found in resort hotels, with heavy emphasis placed on fitness equipment, exercise rooms, and similar amenities.

heavy industry. Industries that are physically extensive or complex and usually require large tracts of land (e.g., steel mills, refineries, foundries, packing plants); also, industrial operations that produce hazards or nuisances (e.g., objectionable fumes, pollution, noise, vibration). Also called *heavy manufacturing*.

hedging. A strategy to offset business or financial risk, e.g., buying or selling commodity futures to protect against price swings.

hedonic pricing model. An econometric model that identifies price factors according to the premise that price is determined both by internal characteristics of the good being sold and external factors affecting it, i.e., the size, location, and other factors affecting the price of a house.

height limit. A zoning regulation that controls use or occupancy within a given area by designating the maximum height of structures; also determined by bulk plane restrictions as specified by the zoning code.

HEL. *See* **home equity loan**.

HELOC. *See* **home equity line of credit**.

heterogeneous. Being unlike; with varying attributes, e.g., a neighborhood or market area that exhibits a wide variety of improvements, land uses, or inhabitants. *See also* **homogeneous**.

highest and best use

1. The reasonably probable use of property that results in the highest value. The four criteria that the highest and best use must meet are legal permissibility, physical possibility, financial feasibility, and maximum productivity.
2. The use of an asset that maximizes its potential and that is possible, legally permissible, and financially feasible. The highest and best use may be for continuation of an asset's existing use or for some alternative use. This is determined by the use that a market participant would have in mind for the asset when formulating the price that it would be willing to bid. (IVS)
3. [The] highest and most profitable use for which the property is adaptable and needed or likely to be needed in the rea-

sonably near future. (Uniform Appraisal Standards for Federal Land Acquisitions)

4. [For fair value determination] The use of a nonfinancial asset by market participants that would maximize the value of the asset or the group of assets and liabilities (for example, a business) within which the asset would be used. (FASB Glossary) The highest and best use of a nonfinancial asset takes into account the use that is physically possible, legally permissible, and financially feasible. (FASB 820-10-35-10B). The highest and best use of a nonfinancial asset establishes the valuation premise used to measure the fair value of the asset, as follows: (a) The highest and best use of a nonfinancial asset might provide maximum value to market participants through its use in combination with other assets as a group (as installed or otherwise configured for use) or in combination with other assets and liabilities (for example, a business). (b) The highest and best use of the asset might provide maximum value to market participants on a standalone basis. (FASB 820-10-35-10E)

high rise

1. A multistory building with elevators. Though sometimes defined as a building with ten or more stories, the definition may vary depending on locale and property type. When used in regard to office buildings in an urban setting, a building containing forty or more stories. (IREM)
2. In a central business district, a building higher than twenty-five stories above ground level; in suburban submarkets, generally a building higher than seven or eight stories. (SIOR)

See also **high-rise office building**; **low-rise**; **mid-rise**.

high-rise apartment building. An imprecise term used since World War II to distinguish a modern elevator apartment building from its prewar counterpart; usually a tall building, but this standard varies in different areas.

high-rise office building

1. A multistory office building, usually having sixteen floors or more.
2. A building of higher than twenty-five stories above ground level. (BOMA/NAIOP)

See also **low-rise office building**; **mid-rise office building**.

high-tech manufacturing facility. An industrial complex designed to meet the needs of high technology fabrication processes; generally considered to have more demanding building standards than facilities housing heavy industry in terms of sophisticated clean rooms, vibration dampening, biohazard containment, and higher electrical capacity as well as security provisions, high-speed Internet connections, and building design and layout.

high technology. Commonly used to describe a real estate market segment that deals in or is related to technologically advanced products, e.g., computers, electronics, semiconductors. New variations include robotics, the use of computer-controlled robots to perform tasks once done by humans, and biotechnology in the life sciences, e.g., genetic engineering and the synthesis and manufacture of biological products; also called *high tech*.

highway capacity. The amount of traffic a roadway can accommodate; controlled by the types of vehicles using the highway, the number and width of travel lanes, the allowable speed, road curvature and topography, and the access limitations and development controls of adjacent real estate.

highway frontage. Land that is adjacent to and abuts a highway right of way.

highway line. The outside limits of a highway right of way, as distinguished from the limits of actual construction, e.g., curbs, shoulders, slopes; also called *right of way line*.

historical cost. The cost of a property when it was originally constructed.

historic district. An area officially recognized or designated by a unit of federal, state, or local government as containing structures or sites with historical, architectural, or cultural significance. Recognition or designation as a historic district is typically accompanied by a set of standards or regulations to protect or

Fundamental Demand Forecast for Other Property Types (Over and Above Analysis of Inferred Demand)

Property Type	Considerations in Analysis of Fundamental Demand
Single-unit residential subdivision	· Current and projected population and households within the defined market area · Current and forecasted future ratio of owner-occupied households · Household income and affordability limits to segment demand by price range · Housing-type preferences for segment households (ratio of households who choose detached housing versus townhouses, stacked condominiums, or other)
Apartment complex	· Current and projected population and households within the defined market area · Current and forecasted future ratio of renter-occupied households · Household income and affordability limits to segment demand by rent range · Housing-type preferences for segment households (ratio of households who choose apartment units over other types of rental units)
Office building	· Size of the workforce occupying office space · Proportion of demand in the subject property's competitive class (e.g., Class A, Class B, Class C) · Requisite space per worker · Normal (equilibrium) vacancy rate
Hotel	· Current demand (e.g., number of room nights) · Segmentation of demand (commercial, meetings and groups, leisure, etc.) · Statistics and forecasts for drivers of each demand segment (e.g., business statistics for commercial, tourism and travel statistics for leisure · Segmentation of demand by property type (e.g., full service, limited service, extended-stay.) · Segmentation of demand by room rates
Industrial property	· Employment in sectors using industrial space (e.g., manufacturing, wholesale, retail, transportation, communications, or public utilities) · Requisite space per worker · Patterns and directions of industrial growth and development, which often cluster along major highways and around intersections · Statistics and forecasts for other drivers of demand; for example, population growth and retail activity for warehouse demand

Residual Demand Analysis

In a Level C market analysis, the analysis of market conditions is facilitated by calculating residual demand, i.e., the demand that is not satisfied by available supply. In other words, residual demand is the amount of undersupply (i.e., a negative number in an oversupplied market). Residual demand is calculated by adjusting demand for equilibrium vacancy and then deducting supply:

$$\textit{Adjusted or Supportable Demand} = \frac{(\textit{Measured Demand})}{(1 - \textit{Equilibrium Vacancy Rate})}$$

This adjustment accounts for the fact that a market needs a certain amount of vacant space to operate in an orderly fashion.

The residual demand calculation in a fundamental analysis can be condensed to five lines as illustrated in Table 16.1. In the calculation of residual demand, existing and forecasted demand over the market cycle is compared with current and anticipated competitive supply to predict the amount of oversupply or undersupply at various points in time. Analysis of residual demand patterns allows appraisers to forecast the pattern of changes in the market cycle, to estimate when additional space will be needed in the market, and to determine the likely pattern of market rent. For example, the figures in Table 16.1 relate to a market with a current supply of 712,400 square feet and a current occupancy rate of 90.2%. A new shopping center of 90,000 square feet is expected to be completed within the next five years, which will significantly oversupply the market and push the market occupancy rate down to about 86% by Year 5. Due to a forecasted increase in demand, however, the oversupply will be filled by about Year 9 and the market will have a small undersupply by Year 10. With these calculations, an appraiser could reasonably conclude that market rents are likely to be flat or decreasing in the first five years but trend upward at some point in Years 5 to 10. Residual demand (the difference between supportable demand and the supply of existing and anticipated retail space) would be the estimate of additional space needed in the market.

Another useful calculation in Step 5 of the six-step process is the ratio of demand to supply, which is calculated simply as unadjusted demand divided by supply. When there is no pent-up demand and no artificial demand, the ratio of demand to supply is a measure of market occupancy.

Table 16.1 Residual Demand Calculations (Step 5)

Line		Current	Year 5	Year 10
1	Current and forecasted demand (sq. ft.)	642,300	689,200	749,600
2	Adjustment for equilibrium vacancy [1 minus equilibrium vacancy rate]	÷ 0.92	÷ 0.92	÷ 0.92
3	Adjusted (supportable) demand [Line 1 ÷ Line 2]	698,152	749,130	814,783
4	Current and forecasted supply (sq. ft.)	712,400	802,400	802,400
5	Residual demand [Line 3 – Line 4]	-14,248	-53,270	12,383
6	Ratio of demand to supply [Line 1 ÷ Line 4]	90.2%	85.9%	93.4%

Other inferred market condition tools include rent trend analysis, feasibility rent analysis, and analysis of sales per square foot for individual stores. Rent trend analysis investigates the direction of change in rent levels. For example, rents may be rising at similar amounts as previous years, or rents may be increasing but not at the same rate. Some real estate professionals believe that an increase in rent at a declining rate is a sign of the peak of the market.

Sales per square foot in individual retail stores may indicate the performance level of an existing shopping center, the center's share of the market, and whether there is opportunity for expansion. This data may be used to check the reasonableness of the estimate of additional space demanded.

Vacancy in Residual Demand Studies

All real estate markets need some vacant space to allow space users to move in and move out and to accommodate anticipated increases in demand in the short term. Equilibrium vacancy is the vacancy rate when a market is at equilibrium, with no upward or downward pressure on rents. The equilibrium vacancy rate, also known as *normal vacancy* or *natural vacancy*, varies from market to market based on construction costs, land availability, the rate of growth in demand, and other factors. If there is an undersupply in the market, residual demand is the amount of new construction that can be supported. If there is an oversupply, an analysis of residual demand at various points in time can provide a prediction of when the market will return to equilibrium.

Subject Capture Analysis (Marketability Analysis Conclusions)

Subject capture is the amount or ratio of market demand a subject property is expected to capture. Subject capture analysis generally begins with an estimate of pro rata share, which is then adjusted to account for the competitive strength of the subject property relative to competitive retail centers. For example, suppose that the subject property is a 90,000-square-foot retail center in the market outlined in Table 16.2.

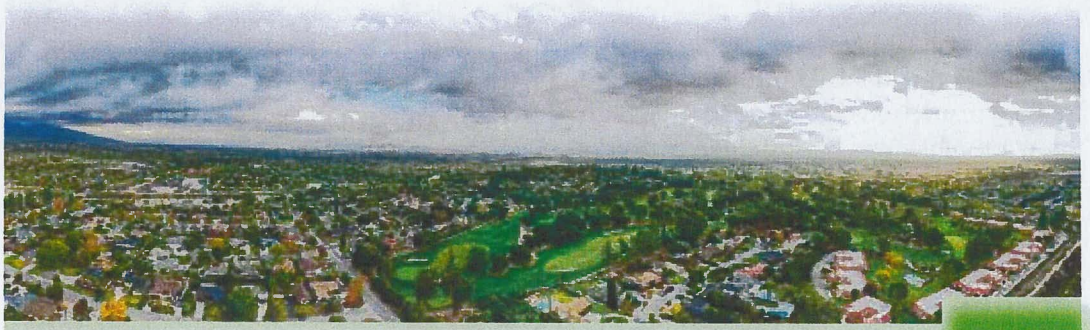

Table 16.2 Subject Capture

Forecasted market demand in Year 5	689,200
Subject capture rate (103% of pro rata share)	11.56%
Subject capture (occupied sq. ft.)	79,672
Subject leaseable sq. ft.	90,000
Subject occupancy ratio	88.5%

Because the subject property represents 11.22% of market supply in Year 5—90,000 sq. ft. in the subject property / 802,400 sq. ft. in the market—its pro rata share of demand in that year is also 11.22%. Suppose also that property productivity analysis (Step 1) and supply analysis (Step 4) show that the competitive characteristics of the subject property are above average, and the appraiser concludes that the property's appropriate capture rate is 3% above the property's pro rata share, or 11.56% (11.22% pro rata share × 1.03). The subject property's occupancy rate in Year 5 could therefore be forecast as indicated in Figure 16.1. Although the forecast of market occupancy in Year 5 was just 85.9%, the forecast of occupancy for the subject property specifically in Year 5 is 88.5% because of its superior competitive characteristics.

Because retail concepts can change quickly, subject capture is especially difficult to forecast for retail properties. Therefore, it is often appropriate for good marketability studies to include high-, mid-, and low-range forecasts to report the full range of likely outcomes.

Highest and Best Use Analysis 17

The analysis of highest and best use can be thought of as the logical end of a spectrum of market analysis procedures, running from the study of a property's market area, through more detailed marketability studies into the financial analysis of alternatives to determine the most profitable use, and finally to the reconciliation and formal conclusion of highest and best use, the timing of that use, and the most probable buyer. All these forms of analysis are interrelated processes that measure the economic potential of alternative uses of real estate.

The essential components of the analysis of *highest and best use* are contained in the following definition of the term:

> The reasonably probable use of property that results in the highest value.

This simple definition will serve as a point of departure for examining the concept in the rest of this chapter.

To be *reasonably probable*, traditionally a use must meet certain conditions:

- The use must be *physically possible* (or it is reasonably probable to render it so).
- The use must be *legally permissible* (or it is reasonably probable to render it so).
- The use must be *financially feasible*.

Uses that meet the three criteria of reasonably probable uses are tested for economic *productivity*, and the reasonably probable use with the highest value is the highest and best use.

Conceptually, the criteria of highest and best use are self-explanatory. That is, *physically possible* uses are land uses that are not unworkable because of some limiting physical characteristic of the land such as inadequate site size, odd shape, irregular topography, or poor soil quality. For example, a steeply sloped site may limit the use of the land to only a few possible alternatives. In contrast, a level plot of land with good drainage, soil with adequate bearing capacity, and other physical characteristics conducive to the construction of improvements would likely allow a developer to build many different types of facilities.

Based on similar logic, *legally permissible* uses would conform to the land's zoning classification and local building codes along with any other relevant regulatory or contractual restrictions on land use. The requirement for legally permissible uses eliminates many possible uses because they would not be allowed with the zoning laws, subdivision covenants, deed restrictions, leases, or other contractual obligations of the property owner. For example, the highest and best use of a site for development as a fast food restaurant with dine-in facilities might be eliminated because the site is smaller than the minimum size to meet the parking requirements of that use set by local regula-

The Difficulty of Defining *Highest and Best Use*

The definition of *highest and best use* has evolved over time to address the common understanding of the topic. Traditionally, the explanation of the term has been more elaborate than the definition introduced in the 14th edition of *The Appraisal of Real Estate*. For example, earlier definitions of the term included ambiguous language that has often been commented on but never defined, as seen in the entry for the term in the fifth edition of *The Dictionary of Real Estate Appraisal*:

> **highest and best use**
> The reasonably probable and legal use of vacant land or an improved property that is physically possible, appropriately supported, financially feasible, and that results in the highest value. The four criteria the highest and best use must meet are legal permissibility, physical possibility, financial feasibility, and maximum productivity. Alternatively, the probable use of land or improved property—specific with respect to the user and timing of the use—that is adequately supported and results in the highest present value.

The precise meaning of "appropriately supported" has been debated in the appraisal literature almost since the basic template of this definition of *highest and best use* was developed in the mid-1970s.

A streamlined definition was later developed for the Appraisal Institute course *General Appraiser Market Analysis and Highest & Best Use* (2008), reducing the ambiguous language while eliminating direct reference to the four traditional tests of highest and best use:

> **highest and best use**
> The reasonably probable use that produces the most benefits and highest land value at any given time.

In early editions, the International Valuation Standards had defined *highest and best use* in a similar fashion as *The Dictionary of Real Estate Appraisal*, fifth edition. However, the 2017 edition of the standards removed the definition and instead described highest and best use as "the use of an *asset* that maximises its potential and that is possible, legally permissible and financially feasible" in the standards document's discussion of bases of value. (Section 30.4, General Standards–IVS 104)

The *Uniform Appraisal Standards for Federal Land Acquisitions* (most recently updated in 2016) defines *highest and best use* as the "highest and most profitable use for which the property is adaptable and needed or likely to be needed in the reasonably near future," citing federal case law as a source. (Section 4.3)

Historically, other concepts have been championed as alternatives to the term *highest and best use* as a description of what use of vacant or improved land should be analyzed, depending on the nature of the appraisal assignment:

> **most probable use**
> 1. The use to which a property will most likely be put based on market analysis and the highest and best use conclusion. The most probable use is the basis for the most probable selling price of the property.
> 2. Highest and best use in the context of market value.
>
> (*The Dictionary of Real Estate Appraisal*, 6th ed.)

> **most profitable use**
> Highest and best use in the context of investment value.
>
> (*Real Estate Appraisal Terminology*, rev. ed.)

Usage of *most probable use* in the appraisal literature has dropped significantly in the last 20 years, while the alternative related to investment value, *most profitable use*, is now largely used in the context of valuation for litigation purposes.

Copyrighted material licensed by Michael S. MaRous on January 13, 2021
Electronic Filing: Received, Clerk's Office 04/19/2023 C003873

tions. However, as discussed later in this chapter, the reasonable probability of a zoning change can be a consideration of potential land uses not allowed by current zoning.

The analysis of *financial feasibility* narrows the number of legally permissible and physically possible uses down further through analysis of the economic characteristics of the potential alternative uses. Economic demand for the subject property is a requisite to the financial testing of alternative uses. Any uses that are not worth at least what they cost to produce would be eliminated in the test of financial feasibility.

The remaining options are candidates for the test of *maximum productivity*, which is the final—and deciding—criteria for the highest and best use of both the land as though vacant and the property as improved.

Traditionally, to test alternative uses of a property in highest and best use analysis, appraisers have analyzed the four criteria in the following order:

1. Legal permissibility
2. Physical possibility
3. Financial feasibility
4. Maximum productivity

The criteria of physical possibility and legal permissibility could be analyzed in either order, but as a practical matter they both must be analyzed before the criteria of financial feasibility and maximum productivity. A use may be financially feasible, but this is irrelevant if the land use is legally prohibited or physically impossible. Likewise, the analysis of financial feasibility filters out uses that lack enough demand in the marketplace to compete for consideration as the use with the highest value, and therefore the analysis of financial feasibility necessarily precedes the analysis of maximum productivity.

Land as Though Vacant and as Improved

A fundamental concept of highest and best use is the idea that highest and best use is viewed from two perspectives:

- The use of the real estate based on the presumption that the parcel of land is vacant or can be made vacant by demolishing any improvements (i.e., as vacant or as if vacant)
- The use that should be made of the real estate as it exists (i.e., as currently improved or as if improved as proposed)

The highest and best use of land as though vacant and the highest and best use of the real estate as improved are connected but distinctly different concepts.

The analysis of land as though vacant focuses on alternative uses of the land, with appraisers analyzing each reasonably probable use. In the analysis of highest and best use of land as though vacant, appraisers seek the answers to several questions:

- Should the land be developed or left vacant?
- If left vacant, when would future development be financially feasible?
- If developed, what kind of improvements should be built?

In contrast, when appraisers analyze the highest and best use of the real estate as improved, the focus on alternative uses considers three possible actions related to the current improvements:

1. Retain the improvements.
2. Modify the improvements in some way, such as conversion, renovation, or alteration.
3. Demolish the improvements and redevelop the land.

The analysis of the highest and best use of the real estate as improved answers a different question than the analysis of the land as though vacant:

- Should the existing improvements on the property be maintained in their current state, should they be altered in some manner to make them more functionally efficient, or should they be demolished to create a vacant site for a different use?
- If renovation or redevelopment is warranted, when should the renovations or redevelopment occur?

In some situations, a property may be subject to restrictions (e.g., historic preservation) that prevent the improvements from being demolished. In this case, the highest and best use is limited by the restriction. A lease of the property may also restrict highest and best use alternatives because the lease will allow the tenant to control the land use for the term of the lease.

Legally Permissible Uses of Land as Though Vacant

Zoning, building codes, private restrictions, historic district controls, and environmental regulations govern the uses to which land can be put, and those restrictions may preclude many potential land uses. To analyze legal permissibility, an appraiser determines which uses are permitted by current zoning, which uses could be permitted if a zoning change were reasonably probable, and which uses are precluded by private restrictions on the site, depending on the intended use of the appraisal.

Private restrictions and deed restrictions such as conservation and historic preservation easements as well as long-term leases are typically registered on the title, and those legal characteristics of the property may prohibit certain uses or specify building setbacks, heights, and types of materials. If deed restrictions conflict with zoning laws or building codes, the more restrictive guidelines usually prevail, but this may pose a legal question that must be obtained from a professional with the appropriate legal expertise.

A long-term land lease may affect the highest and best use because lease provisions can limit the type and duration of use over the remaining term of the lease. For example, if a property is subject to a land lease that has twelve years remaining on the term, it may not be economically feasible for the lessee to demolish the existing building and then construct and move into a new building with a longer remaining economic life because the right of possession of the building reverts to the lessor at the end of the lease. In that case, the determination of highest and best use of the property as leased is influenced by the lease's effect on the utility of the land over the remaining lease term. As another example, some medical office buildings that are built on hospital campuses have covenants that state that owners of the property are restricted to only doctors who have privileges at that hospital. This sort of private restriction can reduce the pool of possible buyers of this sort of property to a few or none. That is, the current owners may be the only possible users. In contrast, some legal issues can be positive influences that enhance a property. For example, a cross easement for access or parking may increase the marketability of some alternative use options of a given site.

In addition to analyzing zoning and private restrictions as part of the test of the legal permissibility of a land use, appraisers should investigate other applicable

Copyrighted material licensed by Michael S. MaRous on January 13, 2021
Electronic Filing: Received, Clerk's Office 04/19/2023 C003875

codes and ordinances, such as building codes, historic district ordinances, and environmental regulations. Building codes can prevent land from being developed to what would otherwise be its highest and best use by imposing burdensome restrictions that increase the cost of construction. For example, the additional cost of a water retention pond with excess capacity that is required by a local ordinance could affect the size of a proposed community shopping center. Less restrictive codes typically result in lower development costs and thereby encourage development, while more restrictive codes tend to increase development costs and discourage development. In some areas, restrictive building codes are used to slow new construction and limit

Probability of a Zoning Change

In investigating the reasonable probability of a zoning change, appraisers consider zoning trends and the history of rezoning requests in the market area as well as documents such as the community's comprehensive plan (or master plan). Appraisers can usually eliminate the following from consideration as potential highest and best uses:

- Uses that are not compatible with the existing land uses in the area, such as a gas station in the middle of an exclusive single-unit residential subdivision
- Uses for which zoning changes have been requested but denied in the past, such as an industrial use in an area where several industrial zoning changes have been turned down in the past two years

On the other hand, a zoning change from residential use to commercial use may be reasonable if other properties in the market area have received a similar zoning change recently or if a community's comprehensive plan designates the property for a use other than its current use. For example, consider a site zoned for single-unit residential use in a transitional neighborhood where the zoning on several similar sites has been changed recently to commercial. Also, the city's comprehensive plan designates the property as lying within a future commercial corridor. Both of these factors may support an appraiser's conclusion that there is a reasonable probability of rezoning the subject site for commercial use.

Market evidence supporting the possibility of new zoning can include rezoning applications, zoning hearings, actions by municipalities, and interviews with planning and zoning officials. Even if there is no current market evidence of a zoning change, documented interviews with officials and discussions of zoning practices and histories can be helpful in evaluating the possibility of a zoning change. These interviews, like any other market evidence, may, however, not be "proof" of a likely change or the denial of a change in zoning but rather only support the estimate of the probability of a change in zoning. Decisions on zoning ordinances are made by elected officials, and the processes are often heavily contested, costly, and time-consuming. The outcomes are not known for certain until official actions are taken.

The probability of a zoning change is never 100%, which presents appraisers with two challenges in highest and best use analysis:

- To determine if the economic demand for an alternative use of the property being appraised under a potential zoning change is greater than the economic demand for the real estate under the current zoning
- To provide market support for that conclusion

To manage their risk, most developers contract to buy property "subject to" rezoning approval rather than "as is." Many pending sales never close because they are subject to rezoning that could not be obtained within the developer's desired time frame or could not be obtained at all.

If appropriate for the intended use of the appraisal, a current opinion of market value may be based on the hypothetical condition that the property has already been rezoned as of the current date of value. (However, as stated earlier, some clients will not accept appraisals subject to that sort of hypothetical condition, instead requiring that the property be valued "as is" with the existing zoning and, if appropriate, reflecting any additional value due to the likelihood of a zoning change.) If the date of value is prospective, the opinion of value could be based on the extraordinary assumption that the rezoning will have occurred by the prospective date of value. A current opinion of market value that reflects the existing zoning but also reflects any premium that market participants would pay because of the likelihood of a future zoning change would be the "as is" value. This value would not be based on a hypothetical condition or extraordinary assumption relating to the zoning status.

Electronic Filing: Received, Clerk's Office 04/19/2023 C003876

growth. Historic ordinances and overlay districts may be so restrictive that they can significantly restrict new development.

Concerns over the long-range effects of certain land uses sometimes result in increased environmental regulation and stricter development controls. Appraisers should be familiar with environmental regulations pertaining to clean air, clean water, and wetlands, and they should be sensitive to the public's reaction to proposed development projects. When resistance from local residents and the general public (sometimes called *NIMBYism*, for "not in my backyard") occurs, it can pressure elected officials to stop or limit certain real estate developments or change the density or character of a specific plan.

Marketability analysis helps appraisers compare the maximum development potential of a site that is legally permissible with market norms. For example, legal restrictions and the size of a specific site may indicate a maximum of 100,000 square feet of building area for that site, but if buildings on sites with similar legal and physical characteristics are being developed with buildings of 60,000 to 80,000 square feet, the difference may need to be accounted for in the analysis of the maximum productivity of the site as though vacant and reconciled in the analysis of the highest and best use of the property as improved. When the market norms are more restrictive than the legal restrictions, the market norms prevail in market analysis and highest and best use analysis. For example, a local ordinance may require 4.5 parking spaces per 1,000 square feet of office space, but the developers in the market may all use 6.0 spaces per 1,000 square feet as a minimum.

Market norms can also influence a site's potential for division as a legally permissible option, i.e., the site could be used as is or subdivided. For example, the analysis of the highest and best use of a 20-acre industrial site might start with an investigation of any legal restrictions on development of the entirety or on division and development of smaller parcels.

As with zoning ordinances, if there are land use limitations inherent in any applicable codes, ordinances, and regulations, an appraiser should investigate whether there is a reasonable probability of a change relative to the subject property along with economic demand for change and any timing and cost considerations related to a potential change.

Physically Possible Uses of Land as Though Vacant

A parcel of vacant land (or an improved site analyzed as though vacant) is the blank canvas on which a real estate developer paints any number of pictures. The physical possibilities of the vacant land are quickly constrained by factors such as site size, shape, frontage, availability of utilities and other support services, topography, soil composition, and other site conditions and environmental and locational factors. As a simple example, an irregularly shaped parcel can cost more to develop and, after development, may have less utility than a regularly shaped parcel of the same size. In addition, if the irregular shape affects ease of access, certain land uses might not be probable or even physically possible. For some developers of commercial real estate, ease of access (e.g., number and placement of curb cuts) is the most important site factor, but others may consider visibility to be paramount. It is also possible to have too much traffic in front of a commercial site because that may cause too many cars backing up at an automatic signal, which prevents crossover traffic from accessing

Electronic Filing: Received, Clerk's Office 04/19/2023 C003877

the site. For developers of industrial property, the access of the site for large trucks may be the most significant physical attribute.

The information that appraisers use to analyze the physical possibility of a land use is often collected in the property productivity analysis step of the market analysis process, which also covers the legal and locational characteristics that connect the property with sources of economic demand and set it apart from its competition. These interconnected forces shape the use potential of the property. For a parcel of land analyzed as though vacant, the uses that are both legally permissible and physically possible make up the pool of alternative uses that can be analyzed for financial feasibility.

The location of real estate determines the type of land uses with the greatest economic demand in an area. For example, a housing development for seniors might be a permissible use for a specific site but, if most residents of the market area that such a facility would serve are under 40 years old, this use is most likely not reasonably probable and would not be analyzed further for financial feasibility. Because the attributes of a location changes over time, those dynamic features, such as land use growth patterns and the direction and rate of this growth, also need to be addressed. Location analysis addresses these major questions regarding the use potential and competitive position of the property:

- Where does the subject property fit in the overall growth pattern?
- Where does the market for the subject property come from (i.e., linkages to demand)?
- How does the location of the subject property compare to the competition at the present time and in the future, and what are the future implications for the marketability of the subject property?

Distinguishing the Physical Use of Real Estate from the Motivations of Users

The concept of highest and best use relates to what is done physically with real estate, and use of physical land should not be confused with the motivations of owners or users. For example, conservation and preservation are not uses of land. Rather, they are the motivations of individuals or groups for acquiring certain properties. The physical uses in these cases could generally be characterized as "leave the land vacant" or "do not change the historic improvements." A parcel of land encumbered by a conservation easement would have legal limits on use, leaving "continue the existing use unchanged" or "development to some limited degree as agreed upon by contract" as the only legally permissible use of the land.

Similarly, "assemblage with an adjacent parcel" is not a meaningful description of a property's highest and best use. While the process of assembling a site with other sites might make the most sense financially for the entity who would benefit from the combination of multiple parcels, assemblage is a motivation for acquiring a property, not a use of the real estate. In other words, an entity might be motivated to purchase a site so that it can be assembled with surrounding parcels to create one large parcel, for which the highest and best use might be, for example, development of a multistory residential condominium building. If the property being appraised is a single site, not a site whose use depends on assemblage with other sites, the highest and best use of the site alone is usually analyzed as it currently exists by itself. If the property being appraised consists of multiple sites as though sold in one transaction, the highest and best use analysis considers them as one large site.

Land that is held primarily for future sale, with or without an interim use, may be regarded as a speculative investment. (The concept of an interim use is discussed in Chapter 18.) In general usage, *speculation* may carry a negative implication of high risk or uncertainty, but in the language of real estate appraisal *speculation* refers to the acquisition of property motivated by the expectations of realizing a profit from a rise in price. That is, the term *speculation* describes a motivation rather than a use.

Financial Analysis of Alternative Uses of Land as Though Vacant

As mentioned earlier, appraisers eliminate uses that are not legally permissible and physically possible. As shown in more detail in Chapter 18, the financial analysis of the remaining alternatives builds on the analysis of physical, legal, and locational characteristics of a property, providing the estimates of economic demand and timing that support the highest and best use conclusion.

In the analysis of financial feasibility, the alternative uses that have a positive present residual land value for current development can proceed to the next step of highest and best use analysis. Timing of use is a critical consideration. Some alternative uses might not currently have a positive land residual value but could still have a land residual value in the future that is high enough to support an investor's decision to hold the land for that future use. For example, consider a plot of land with a current residual land value for apartment use of $6 per square foot. Currently, the area lacks economic demand to support development of a retail property at that location, but, if the land were held vacant for seven years for a future retail use, the land value in seven years would be $20 per square foot, according to marketability analysis conducted for the property. At a discount rate of 10% considering the forecast risk and holding costs among other factors, the present value of the land as if held for future retail use is $10.26, i.e., higher than the value of immediate development for apartment use. The possible future use for retail development might have been overlooked because of the lack of current demand for retail use, illustrating the importance of timing concerns in the development of highest and best use conclusions.

Maximum Productivity of Land as Though Vacant

Of the financially feasible uses of the land as though vacant, the highest and best use is the use that produces the highest residual land value. The comparison of the values of the financially feasible uses is usually straightforward.

To determine the highest and best use of land as though vacant, for each alternative use being tested, the cost to develop the requisite improvements is deducted from the value of the property as if complete to calculate the residual land value. The use that produces the highest land value on the effective date of the appraisal is the highest and best use.

As an alternative, rates of return that reflect the associated risks of alternative uses are often used to capitalize the residual income to the land from those uses into their respective values. The rates are developed from previous research (i.e., market and marketability analysis) and reflect the rates of return that are applied to the range of alternative uses being considered in the market.

As another alternative, land sales can be used to test which alternative is maximally productive when the comparable plots of land have the same or similar highest and best use conclusions as the subject property. For example, suppose a site is currently in demand for apartment use, and demand for retail space is estimated to arise five years in the future with projected population and income growth in the area. The highest and best use of the site can be tested by applying comparable sales data. Apartment land is currently selling for $3.50 per square foot, and retail land that is ready for development is forecast to sell for $7.50 per square foot in five years. If the retail land is held for five years at a discount rate of 20%, the present value of the retail land is $3.01 per square foot, which suggests that the highest and best use today is to develop apartments on the site.

Conclusion of Highest and Best Use of Land as Though Vacant

If an appraiser concludes that a building improvement is appropriate for the highest and best use of a parcel of vacant land, the appraiser then determines and describes the type and characteristics of the ideal improvement to be constructed. The use that is considered the *ideal improvement* should meet the following criteria:

- It is supported by market and marketability analysis and the financial analysis of alternative uses.
- It takes maximum advantage of the potential market demand for the site's highest and best use.
- It conforms to current market standards and the character of the market area.

If a new improvement is considered capable of supporting the highest and best use of the land as though vacant, it presumably will have no physical deterioration or functional obsolescence. The ideal improvement identified in highest and best use analysis helps appraisers estimate the effect of certain forms of depreciation in the application of the cost approach because any differences represent inconsistencies with market demands.

An appraiser's conclusion of the ideal improvement should be as specific as the market suggests through market analysis, e.g., to the level of the number of stories or number of units built. The first step—property productivity analysis—of the six-step process of market and marketability analysis determines the market segment that the subject property could serve based on its features. The market might recognize the use of the ideal improvement of a particular site as "community retail" or as "neighborhood shopping center." The specificity of the ideal improvement can test the reasonableness of the highest and best use conclusion and affects the comparable properties that might be analyzed in the application of the approaches to value.

Alternative Uses of the Real Estate as Improved

The theoretical focus of highest and best use analysis is on the potential uses of the land as though vacant. In practice, however, the contributory value of the existing improvements and any possible alteration of those improvements are just as important as the land as if vacant in determining highest and best use and, by extension, in developing an opinion of the market value of the property.

The concept of highest and best use of real estate as improved pertains to the use that should be made of an improved property in light of the existing improvements and the ideal improvement described at the conclusion of the analysis of highest and best use as though vacant. In market value appraisals of improved property, appraisers consider a number of alternative uses of the existing improvements:

- Retain the existing improvements and continue the current use as the highest and best use.
- Convert, renovate, or alter the existing improvements to enhance the current use or change the use of the property to a more productive use.
- Retain the existing improvements and continue the current use as an interim use.
- Demolish the existing improvements and redevelop the site.

In the case of continuing the current use as an interim use, the ongoing use of the existing improvements would be an interim use that helps defray the cost of carrying

the property and demolition costs until all approvals have been obtained and actual construction on a new use should begin.

All four criteria of highest and best use are relevant to the analysis of the property as improved and any alternative uses considered. It is generally self-evident that the current use of a property as improved is physically possible. That is, the existence of the improvements proves that they can be built on that site. Likewise, the legal permissibility of the current use is often nearly as obvious and easy to confirm. But an appraiser needs to test whether the existing improvements contribute value, rather than simply assume that the current use is the highest and best use because the improvements are already in place. In fact, the most persuasive analysis of the highest and best use of the property as improved often first tests whether the existing improvements should be demolished and the site redeveloped to the highest and best use as though vacant, instead of starting from the assumption that the current use will continue.

Demolition of the improvements can be considered the most extreme form of modification to the current use of the property as improved. If the value of the property as improved is greater than the value of the site as though vacant less demolition costs, then the existing improvements contribute value to the property's highest and best use and should not be demolished at that time. When the improvements no longer contribute positively to value net of demolition costs, then demolition and redevelopment of the ideal improvement would be economically supportable. Many buildings are torn down and their sites left vacant or left as improved for a variety of reasons, e.g., property taxes, liabilities, or avoidance of vandalism and criticism that the unused improvements are an "eyesore." In these cases, the land is worth more as vacant than as improved. (Interim uses will be discussed more fully in Chapter 18.) If demolition is ruled out, then changes to the existing improvements—which may include a change of use—should be tested. The recognized forms of modification are

- Conversion of the property to an alternative use
- Renovation of the improvements
- Alteration of the property

For any of these options to be financially feasible, the change must add at least as much value to the property as it costs. In other words, the value after conversion, renovation, or alteration less the costs of the modification (including entrepreneurial incentive) must be greater than or equal to the value of the property as is. The costs involved in any form of modification must include an appropriate estimate of entrepreneurial incentive.

Testing the feasibility of modification is a straightforward comparison of the contributory value of the change with the cost of making the change. However, any modification of the existing improvements must still meet all four tests of highest and best use for the modification to be considered the highest and best use. The study of property productivity in the market analysis process is likely to show what changes to the existing improvements are physically possible and legally permissible.

If all the alternative uses are eliminated and the current use remains financially feasible without modification of the improvements or redevelopment of the site and retains the highest value of the alternative uses, then the current use is the highest and best use of the property as improved. Deferred maintenance of the improvements may need to be addressed in the analysis of the financial feasibility of the current use.

Repairs may need to be made to the existing improvements for the current use to achieve the best competitive position in the marketplace. The costs of curing physical deterioration or functional obsolescence, redesigning a building, or converting the existing improvements into an alternative use (including a provision for entrepreneurial incentive) should be analyzed in light of the value created in the market. The effect on value of implementing any changes is more important than simply how much the changes will cost. If the changes will not be economically feasible, the expenditures would not be made—a point that an appraiser should incorporate into the highest and best use analysis.

Consistent Use

The principle of consistent use holds that land cannot be valued based on one use while improvements are valued based on another use. A site with existing improvements is valued as though vacant and available for its highest and best use. Existing improvements that do not conform with the ideal improvement may contribute some value or no value or even reduces value if the costs to remove the improvements are substantial. In the application of the cost approach, an adjustment for functional obsolescence may be needed for an improvement that is not consistent with the highest and best use as though vacant. In other words, if the improvements are not the highest and best use, any reduction or increase in value they create would be attributed to the improvements, not the land.

Consider a single-unit residence on a valuable site rezoned for commercial use. This house, if zoned for residential only, would be worth $450,000 and the land value with residential zoning would be $75,000. But the site is zoned for retail use, and the land value is $500,000 with the current zoning. It is incorrect to add the land value of $500,000 for use as a commercial site to the value of the building as a residence ($375,000) because the residence is in the way of commercial development and would be demolished by a commercial developer.

Even though a property was developed with one use in mind, alternative uses are almost always physically possible, just not always financially feasible or maximally productive. In the analysis of the highest and best use of a property as improved, an appraiser considers the alternative uses by applying the same tests applied in the analysis of the highest and best use of the land as though vacant. The future economic performance of the existing improvements is the core concern in analyzing the alternative uses of the property as improved.

Work Experience

As of January 2023, I have 39 years of experience in the appraisal field. During this tenure I have completed over 8,435 valuations totaling $13.18+ billion dollars.

As a practitioner, I entered the appraisal industry in 1984 employed by ValuPruf Valuation Service, Milwaukee, Wisconsin. Appraisal assignments through the years have included the following: single-family residential, multi-family residential, dairy farms, crop farms, horse ranches, cattle ranches, commercial properties, special use properties, tax assessment, ocean-front properties and islands, stigmatized properties, eminent domain, utility easements, valuation consulting, litigation support work and impact studies. I have provided appraisal services for properties located in Alaska, Colorado, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Mexico, North Dakota, Ohio, Pennsylvania, South Dakota, South Carolina, Tennessee, Virginia, Wisconsin, and Wyoming.

As a communicator, I have authored the book: *The Listing Appraisal Program* (ATI press, 1996) and three magazine articles: *Dead Body Appraisers* (The Appraisal Buzz, October 3, 2002), *Expert Testimony and Reports: Is Change Good?* (Working R.E. Magazine, February 2002), and *Rails to Trails Property Rights* (Right of Way Magazine, Nov/Dec 2012). I have been engaged in valuation related research projects on the impacts of high voltage transmission lines, natural gas pipelines, oil pipelines, wind farms and solar farms on property value. Related to the impact on property value of utility projects, wind, and solar farms, I have given testimony before the Wisconsin Senate Committee, Wisconsin Public Service Commission, Wisconsin Wind Farm Siting Council, Illinois Wind Farm Siting Councils, Missouri Public Service Commission, and the Wyoming Industrial Committee. Our research has been utilized by other appraisers, experts and property owners when arguing before government committees, public service counsels, courts and in reports.

As an expert witness, I have been an approved expert in several state courts, commissioner hearings in Wisconsin and Minnesota, mediation in Indiana and Illinois, and Federal Courts in Wisconsin, Kansas, Ohio, and Virginia. In the Wisconsin Supreme Court case of Spiegelberg vs. State of Wisconsin DOT (2004AP3384), I was the principal appraiser for Ms. Spiegelberg. This hearing resulted in a majority decision in favor of my client making a landmark decision relating to the proper valuation methodology when appraising property involved in eminent domain to obtain just compensation. In the Wisconsin Supreme Court decision of Waller vs. American Transmission Corporation, LLC (2012AP805 & 2012AP840) the high court overwhelming found in favor of my client and made a landmark decision involving relocation rights and an uneconomic remnant. I was the principal appraiser and expert witness for the Wallers.

As an educator, I taught appraisal pre-licensing and continuing education courses throughout a multi-state area from 1994 to 2000. During this time, I authored course curriculum for seven pre-licensing courses and twelve continuing education courses as well as the creation of a two-year professional appraiser training program. Since 2000, I have given presentations for professional continuing education (IRWA – Badger Chapter, The American Law Institute and CLE Annual Eminent Domain Conferences (2013, 2014, 2016), IRWA Annual Conference (2013) and for general information at many public meetings through the years.

EXPLANATION OF DESIGNATIONS

ASA- Real Property: The ASA designation is the senior designation granted by the American Society of Appraisers, which is the only multi-discipline international appraisal association in America. The ASA-Urban designation requires the passing of five advanced level commercial appraisal courses, the passing of a comprehensive exam, a passing grade on a demonstration narrative report, 5 years full-time appraisal experience, a Certified General appraisal license and the recommendation of the local and national membership committee. All ASA designated members must adhere to the Code of Ethics of the Association and keep up to date with continuing education (Source: www.appraisers.org).

IFAS (now retired): For this senior level designation from the International Fee Appraisal Association the appraiser must meet the requirements for the Member [IFA], successfully pass the Senior Member Examination, score a passing grade on a narrative demonstration report on an income-producing property conforming to prescribed guidelines and meet educational and experience requirements as outlined by the Association. In addition, the designation requires a minimum of 4 years appraisal experience in commercial type properties, a State Certified General Appraisal license, successful completion of over 200-hours of appraisal course work, completion of the current USPAP course, a college degree and the recommendation of the appraiser's peers and local chapter (Source: www.naifa.com). All IFAS members must adhere to the Code of Ethics of the Association and keep up to date with continuing education.

Senior Right of Way (SR/WA): This is the most prestigious professional designation granted by the International Right-of-Way Association to members who have achieved professional status through experience, education, and examination. The SR/WA designation requires training and examination in seven major right-of-way disciplines. The SR/WA designation says, "I have more than five years of right-of-way experience, plus I have had formal training in a wide variety of right-of-way areas." The SR/WA professional may be a specialist in one area such as appraisal, engineering, or law, but also must be familiar with the other seven disciplines associated with the right-of-way profession. Additional requirements for the SR/WA designation include: a bachelor's degree, 5 years right-of-way experience, successful completion of four core courses and four elective courses, passing the all-day comprehensive exam and recommendation from the designee's peers and local chapter. The SR/WA designation is the only designation reflecting evidence of professional attainment in the right-of-way field (Source: www.irwaonline.org). All SR/WA members must adhere to the Code of Ethics of the Association and keep up to date with continuing education.

Right of Way Appraisal Certified (R/W-AC): The Right of Way (R/W) Certification is an esteemed professional designation granted to members who have achieved professional status through experience, education, and examination in a specific discipline. Earning this certification demonstrates an unparalleled achievement in a single discipline and reinforces a standard of excellence in services provided to the public (Source: www.irwaonline.org). All R/W-AC members must adhere to the Code of Ethics of the Association and keep up to date with continuing education.

Criterion 3 Review

West DuPage Recycling & Transfer Station Proposal

AN EXAMINATION OF THE DALE J. KLESZYNSKI REPORT
LAND USE COMPATIBILITY AND REAL ESTATE IMPACT STUDY
BY KURT C. KIELISCH

EXHIBIT
PWC-352

Kurt C. Kielisch
ASA, SR/WA, R/W-AC

- 39 years of experience in the appraisal field as an appraiser, educator and writer
- Valued properties in 21 different states
- Valued over $13.18+ billion dollars of real estate & over 8,435 valuations
- Expert witness on valuation issues and complexities (state courts, federal court, government, public service commissions and county/city zoning & siting committees)
  - Two Wisconsin Supreme Court decisions that impacted eminent domain valuations
- Certified General Appraiser (currently, Wisconsin & Tennessee, past licenses in 13 states including IL)
- ASA designated member (urban real estate), American Society of Appraisers
- SR/WA designated member (senior member), International Right-of-Way Association
- Realtor member
- Approved appraisal instructor in six states
- Faculty: The American Law Institute- CLE & the Eminent Domain Institute CLE International seminars

Criterion 3

"The facility is to be located as to minimize incompatibility with character of surround area and minimize effect on the value of surrounding property." 415 ILCS 5/39.2(a)(iii)

This examination addresses whether the report completed by Dale J. Kleszynski adequately addressed this criterion as it relates to minimizing effect on the value of surrounding properties by providing factual evidence to support the conclusions of the report.

West DuPage Recycling & Transfer Station Proposal

22,500sf building expansion

Use will be to transfer municipal solid wastes (MSW) and single-stream recyclables.

Smaller building to be used for hydro excavation wastes including concrete mixing pits.

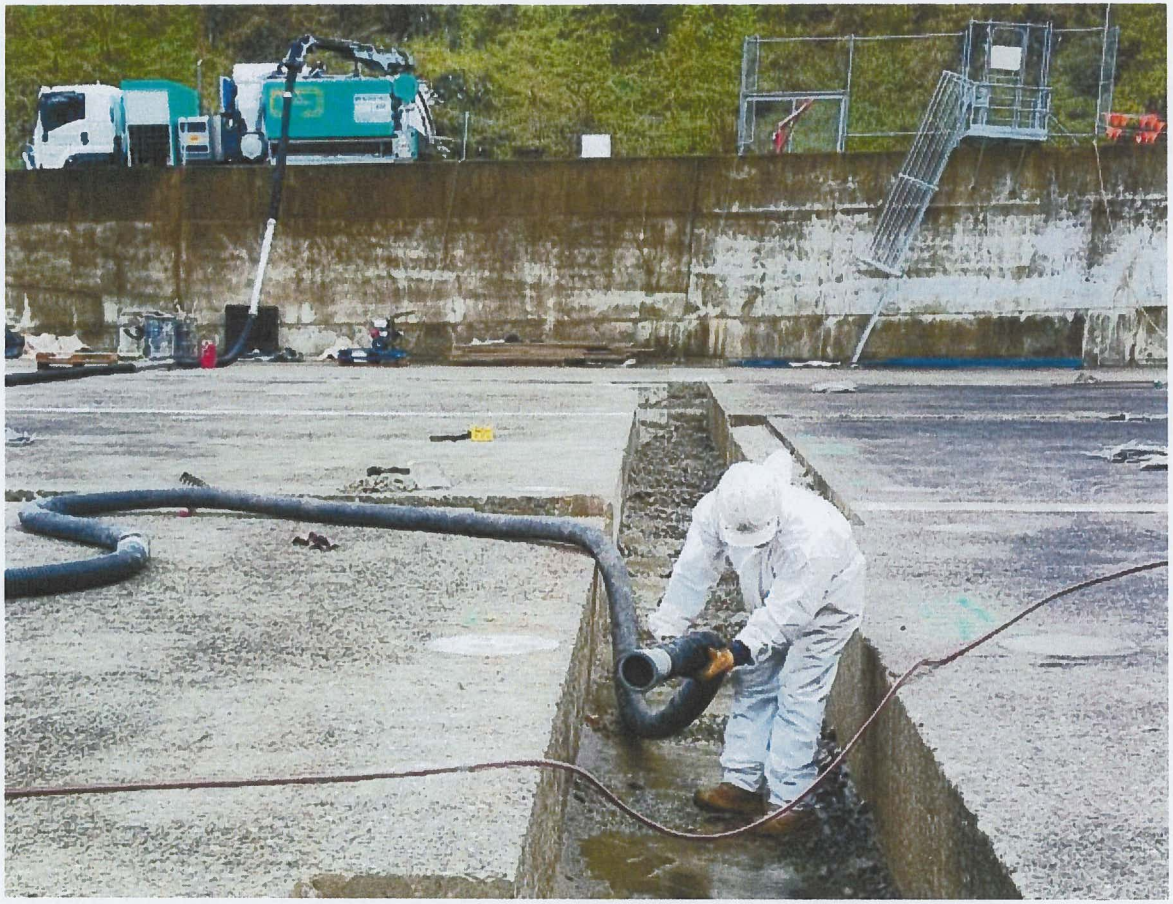
Access will be from Powis Road, linking North Avenue (IL Rt64) to the north and West Hawthorne Lane to the south.

Services defined

Municipal Solid Waste (MSW) defined

- Municipal solid waste (MSW), also called garbage or trash, is nonhazardous disposable materials generated by households, institutions, industries, agriculture, and sewage which is typically recycled or disposed of in landfills.

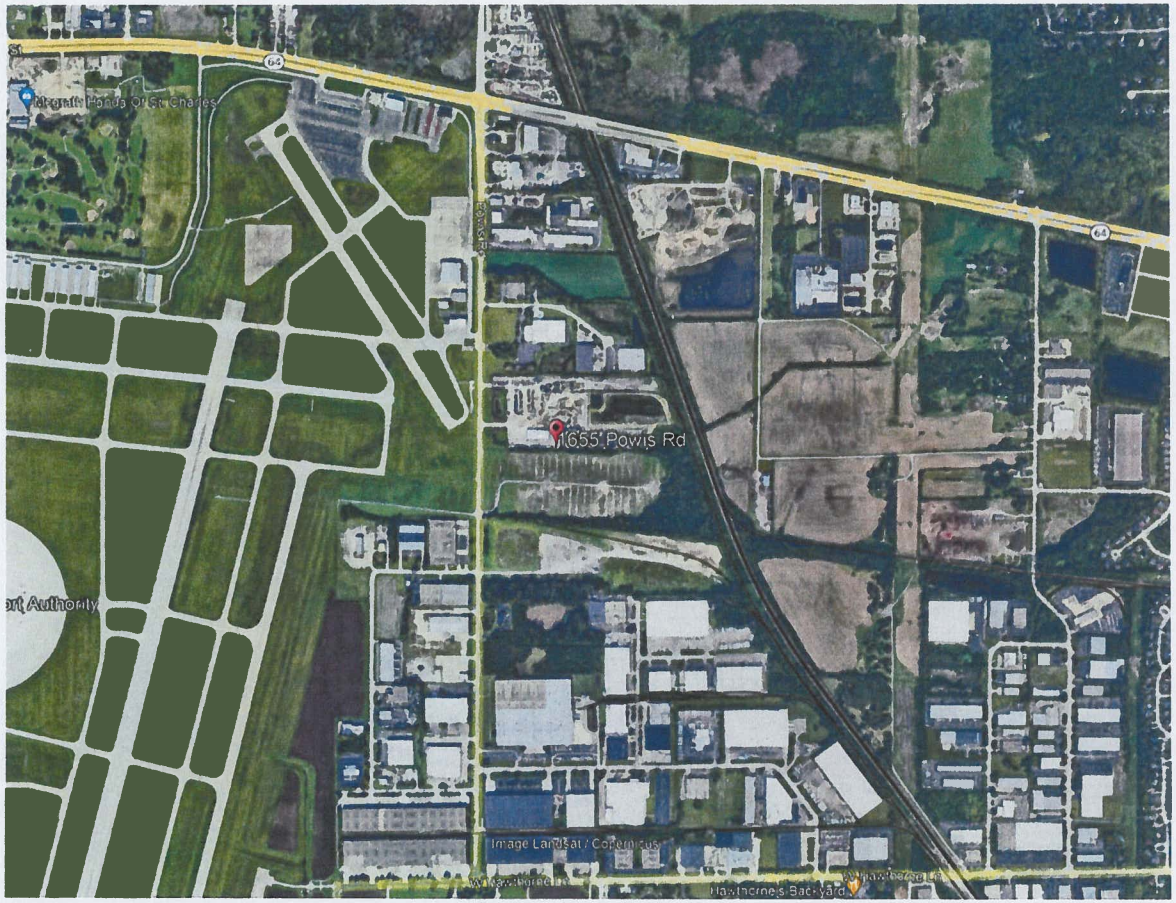
(NIU, Mahdi Vaezi, Ph.D, Asst Prof of Engineering Technology)



https://www.niu.edu/niccs/current-research/municipal-solid-waste.shtml

Single-Stream Recyclables defined

Single stream recycling refers to a system in which all recyclables are mixed together in a collection truck, instead of being sorted by material type (i.e. newspaper, plastic, glass, aluminum, etc.) by the resident.



Instead, the mixed or "commingled" recyclables are sorted at a processing center using technologies both old (magnets, screens, conveyor belts) and new (air jets, infrared readers). The individual commodities are then baled or bundled and sold to manufacturers, who reprocess or refine the materials and to make "new" products.

City of Chicago website
https://www.chicago.gov/city/en/depts/streets/supp_info/recycling1/what_is_single_streamrecycling.html

Hydro-excavation wastes

- Hydrovac excavation is a precise, non-mechanical, non-destructive process that uses pressurized water and an industrial strength vacuum to simultaneously excavate and evacuate soil. As the pressurized water breaks up the soil it creates a slurry that is removed by a powerful vacuum into a debris tank.

NEIGHBORHOOD

Airport to the west.

Railroad tracks to the east.

Office, manufacturing, industrial land use to the north and south.

Further to the east and south residential use.

the Kleszynski report

The purpose of the report was to determine if the propose West DuPage Recycling & Transfer Station "satisfies Illinois Environmental Protection Act, 415 ILCS 5/39.2" aka Criterion 3

The report focused on Highest & Best Use analysis to support the opinion that the proposed property use satisfies the impact analysis requirements of Criterion 3.

Highest & Best Use does not meet the impact analysis requirements of Criterion 3.

Observations

The report used the Highest & Best Use (HBU) as criteria to meeting the requirements of Criterion 3

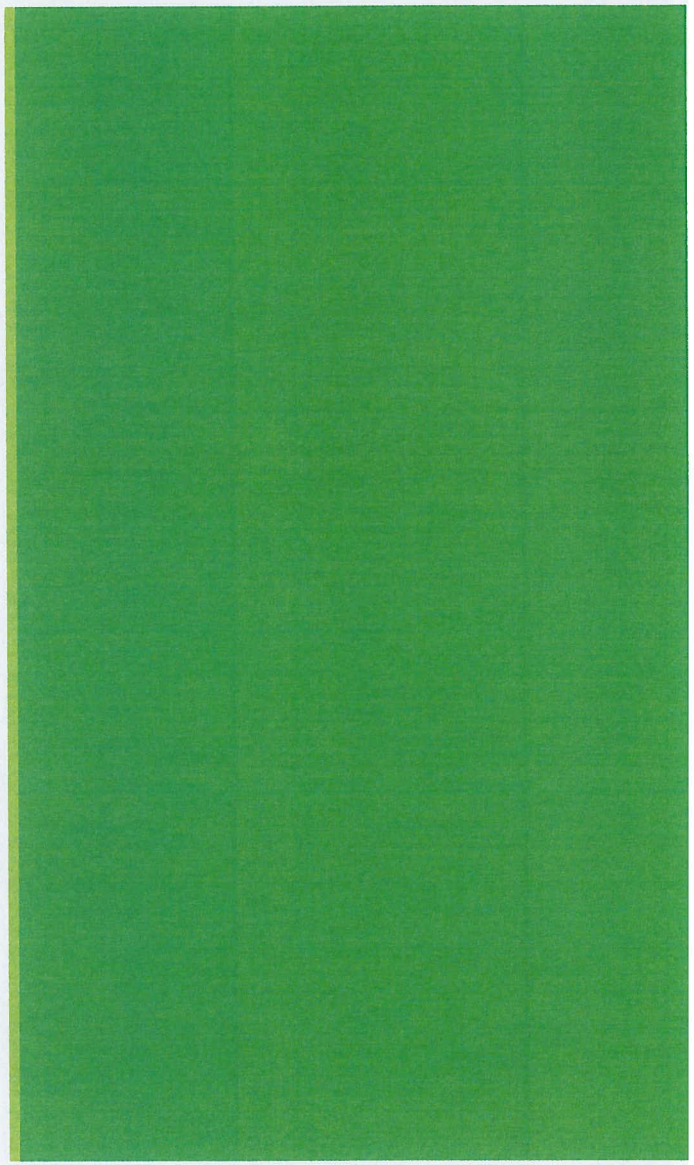
Unlike HBU, the Criterion 3 focus is not on the most profitable use of the Subject Property to its owner, but on minimizing impacts on the character of the community surrounding the proposed facility.

The requisite analysis of potential impacts was not included in the report.

Criterion 3 requires proof that the proposed use minimizes the effect on value of surrounding properties.

No analytical evidence was presented in the report that proved or disproved the proposed use would have a negative impact on surrounding property value.

Observations continued…



Just because a property use is physically and financially feasible and is within the initial zoning, it does not mean it does not negatively impact the surrounding property value.

- E.g. pig farm. In AG zoning it would meet all the HBU tests, but it would most likely have a negative impact on surrounding property values.

The proposed facility's use has the potential to create smells that would be negative to surrounding property use, lowering desirability and enjoyment of use.

The proposed facility has the potential to create noise, dust, dirt, and higher traffic use of heavy trucks that could create a negative impact on surrounding property use.

There was no qualitative or analytical analysis on impacts to surrounding property values.

Criterion 3 – two tests

Minimize incompatibility with character of surrounding area.

Minimize effect of the value of surrounding property value.

- The report did not adequately address this test.
- The report provided no qualitative or quantitative analysis to measure any impact positive or negative.
- The report failed this test.

Conclusions regarding the Kleszynski Report

The report failed to provide adequate analysis to arrive at a reasonable conclusion for the second prong of the Criterion 3- impact analysis.

The use of Highest & Best Use analysis is NOT a proper means of determining if a proposed use meets the requirements of Criterion 3.

Electronic Filing: Received, Clerk's Office 04/19/2023

BIOGRAPHICAL DATA - JOSEPH H. ABEL

(City and Regional Planner)
200 Forest Avenue, Glen Ellyn, Illinois 60137

EDUCATION

University of Illinois – BS City and Regional Planning (Minor Architecture)	1959
University of Chicago – Center for Urban Studies	1965 - 1966
University of Oklahoma – Economic Development Institute Graduate (Summer Program)	1981 - 1984

EXPERIENCE

- JOSEPH H. ABEL & ASSOCIATES
  GLEN ELLYN, ILLINOIS – PRESIDENT — 1992 - DATE

  Responsible for establishing a consulting firm specializing in Land Use Planning, Site Planning, Zoning, and Economic Development. Mr. Abel has 60 years of experience as a public planner and private consultant and has been in charge of comprehensive urban planning, central business district planning, park design, community development planning, land planning, park master planning, tax increment financing studies, health care facility planning, redevelopment studies, adaptive reuse studies, land use analyses, planning standards for zoning and subdivision regulations, space needs analyses, zoning and highest and best use expert testimony and strategic planning for economic development, to public and private clients.

- THE ECONOMIC DEVELOPMENT COMMISSION OF THE CITY OF CHICAGO
  CHICAGO, ILLINOIS – EXECUTIVE DIRECTOR — 1987 – 1992

  Responsible for establishing the City's public/private partnership program to advise the Mayor on economic development issues. Work program included: identifying and evaluating the development potential of industrial park sites, preparing the City's strategic plan for economic development, assisting in the preparation of the industrial land use component of the comprehensive plan, conducting an ombudsman program to assist business, developing the economic development advertising and marketing program, and establishing an International Trade Council to provide export assistance and foreign investments. Annual budget of 1.3 million, staff of 15.

- DUPAGE COUNTY, WHEATON, ILLINOIS
  DUPAGE COUNTY REGIONAL PLANNING COMMISSION – DIRECTOR — 1970 – 1987

  Responsible for establishing a new planning program in a rapidly growing county that increased in population from 492,000 in 1970 to 750,000 by 1987. Directed all phases of comprehensive land use and transportation planning, zoning enforcement and administration, economic development and Community Development Block Grant programs. Expert witness for County on zoning cases, staff of 40.

- CARL L. GARDNER & ASSOCIATES, INC.
  CHICAGO, ILLINOIS – PROJECT DIRECTOR 1962 – 1970

  Comprehensive planning for public and private clients. Included central business district plans, zoning and subdivision standards, and capital improvement programs.

  Municipalities
  Cary, Illinois
  Deerfield, Illinois
  Fox River Grove, Illinois
  Greendale, Wisconsin
  Indian Head Park, Illinois
  Morris, Illinois
  Oak Brook, Illinois
  Streamwood, Illinois
  Worth, Illinois

  Counties
  Grundy County, Illinois (incl. 13 municipalities)
  Iroquois County, Illinois
  Kankakee County, Illinois
  Kendall County, Illinois (incl. 3 municipalities)

  Urban Renewal Projects
  Waukegan, Illinois Community Renewal Program
  Elgin, Illinois Central Area Redevelopment Plan

  Expert Witness
  Zoning and condemnation cases – Public and private clients

  Feasibility Studies
  Public and private clients

  Site Planning
  Residential, Commercial and Industrial developments

- LAKE COUNTY REGIONAL PLANNING COMMISSION
  WAUKEGAN, ILLINOIS – PLANNER 1959 – 1962

  Long-range Planning Section. Use of land Report, Thoroughfare Plan, Population Projections, Land Use Plan and Zoning District Map.

- CITY OF CHICAGO COMMUNITY CONSERVATION BOARD SUMMER 1958

  Neighborhood conservation plans.

TEACHING

Northern Illinois University – DeKalb, Illinois 1982 – 1990
Adjunct Professor – Master of Public Administration Program

University of Illinois – Basic Economic Development Course 1985 – 1987
Department of Geography and Mid-America Economic Development Council

AWARDS

Distinguished Service Award – Illinois Chapter, America Planning Association

AFFILIATIONS

American Planning Association	1978 – DATE
American Institute of Certified Planners	1978 – DATE
Urban Land Institute (Sustaining Member)	1962 – 1993
Lambda Alpha – International Honorary Land Economic Society	1978 – 1993
Board of Directors (President), Illinois Development Council	1990 – 1991
Member, Curriculum Review Committee (Planning Council) University of Illinois, Urbana – Dept. City and Regional Planning	1982 – 1990
Member, Glen Ellyn Architectural Review Commission	1971 – 1982
Director, Chicago Metropolitan Section, Illinois Chapter American Institute of Planners	1975 – 1977
President, Illinois Chapter, American Planning Association	1979 – 1983

Summary of Environmental Experience

Mr. Powell has over 40 years of technical and project management experience in the energy, environmental and consulting service industries. His areas of expertise include air quality impact analysis using dispersion modeling and ambient monitoring, environmental engineering, due diligence, and EHS compliance auditing. Mr. Powell brings numerous positive client relationships, including contacts with medical equipment manufacturers, international power and water systems manufacturers, automotive manufacturers (such as General Motors, Ford Motor Company, Caterpillar), gravel mining operations, and clients such as Amtrak, BNSF, GE, CSX, Invenergy, Exelon, ExxonMobil, Tricor Pacific, Iberdrola, Gamesa, Navitas, Wind Energy America, Sears, Intel, Wal-Mart, Maytag, Kohler, Bridgestone Firestone, and Kmart.

Employment History

Mostardi Platt, 888 Industrial Drive, Elmhurst, IL 60126-1121. Phone: 630-993-2100 FAX: 630-993-9017. Director – Permitting Group. 4/1/2015 to Present. Manage day to day functions of the permitting group. Responsible for developing new customer relationship across all service lines.

Air & Waste Management Association, 420 Fort Duquesne Blvd, One Gateway Center, Suite 350 Pittsburgh, PA 15222. Phone 412.232.3444. Fax 412.232.3450. Executive Director, 2012 to 2015. Executive leadership and program development of 5,500 membership non-profit association.

AMEC Environment & Infrastructure, Inc., (now Wood) 650 Warrenville Road, Suite 100, Lisle, IL 60532 Phone 630.724.8517. Fax 630.724.8518. Senior Associate/Unit Manager, 2005 to 2012, P/L responsibility for team of 21 environmental engineers, geologists, and environmental scientist.

URS Corporation (now AECOM), 342 North Water Street, 7th Floor, Milwaukee, WI 53202 Phone 414.831.4100 Fax 414.831.4101 and 100 South Wacker Drive, Suite 500, Chicago Illinois, 60606-4014, Phone 312.939.1000 Fax 312.939.4198 Principal Environmental Engineer/Vice President, 2000 to 2005, 1994 to 1995. Managed all Project Managers and their performance metrics for the Chicago and Milwaukee Area.

Dynegy (formerly Illinova Energy Partners), Kensington Road, Oak Brook, IL, Senior Product and Services Manager, 1996 to 2000 (Office is no longer open therefore no phone or fax). Managed the development and sales support activities for "The Energy Manager™ software for the entire US market. Software was used to manage energy efficiency for various large box retail and manufacturing environments.

Chelsea Group, Itasca, IL, Vice President. 1995 to 1996. Consulting activities for indoor air quality impacts.

MAECORP (now Sevenson Environmental), Chicago, IL, Vice President of Marketing and Co-President. 1992 to 1993. (Office is no longer open therefore no phone or fax). Managed sales activities and developed an acquisition plan for the sale of assets and intellectual property to Sevenson Environmental.

Warzyn, Inc. (now Montgomery Watson Harza), Novi, MI and Addison, IL, Manager of Environmental Programs and Director of Marketing. 1989 to 1992. (Office is no longer open therefore no phone or fax). Developed and implemented a firm wide plan to develop the environmental market in a historical geotechnical organization. Implemented a new image and marketing campaign and managed the day to day sale function within the organization.

Giffels Associations Inc. (IBI Group) Business Development Manager – Federal Market, 1986 to 1989. 25200 Telegraph Rd, Suite 200, Southfield MI 48033 Tel 248.936.8000. Fax 248.936.8111. Managed the growth of the Federal Business market in an Architectural/Engineering environment.

Stanley Consultants, Inc. Environmental Engineer to Project Manager. 1975 to 1986. 225 Iowa Avenue, Muscatine, Iowa 52761, Ph. 563.264.6600 Fax 563.264.6658 First Air Quality Engineer hired by firm. Managed environmental permit development for power plants, industrial operations, and manufacturing facility. Took over as Project Manager in 1982 and managed the State and Local government projects in the Chicago market.

Project Experience

Prevention of Significant Deterioration (PSD)/Construction Permit Application. Invenergy, Rock Falls, IL. Preparation of permit application for 1000 MW peaking combustion turbine facility in downstate Illinois. Work included dispersion modeling of the existing area sources as well as the proposed new plant using AERMOD. Also, included ecological impact analysis on potential threatened and endangered species. Facility was issued a permit to construct in 2015.

Impact Analysis of Existing Air Emission Sources upon a Proposed Housing Development. Confidential Client, Chicago, IL. Evaluated noise and air quality impacts an existing steam plant and chilled water plant upon a proposed residential housing development and hotel. Work included modeling of the steam plant emissions and the air quality impact upon both new developments. Used AERMOD to determine downwind concentrations of NOx at the building exterior as well as along the building facade at elevations to 200 feet. Results indicated that a new building configuration was needed to resolve air quality impacts upon the building and its residence. The new configuration dropped the maximum building height to less than 160 feet.

Historical Odor Impact Analysis of a Landfill Operation upon nearby commercial and residences. Confidential Client, Chicago, IL. Modeled the odor emissions from a landfill using a surrogate for a mixture of odors and correlated the complaint log from the nearby city records and the same time meteorological data to validate the model results. Using AERMOD

and local meteorological data, we were able to validate the model and do predictive modeling to show the extent of odor impacts over time.

Permitting of Multi-Fuel Fired Peaking Turbines, LS Power, Rockford, IL and Aurora, IL. Conducted emissions analysis and dispersion analysis using AERMOD to determine the air quality impact of the proposed change in facility operations. Analysis also included the requisite Environmental Justice analysis on the neighboring population.

Phase I ESAs, Various Sites, WI and MN. Conducted Phase I ESAs on 75 sites in Wisconsin and Minnesota for the acquisition of the Turkey Store by Hormel. Managed and assisted in specific site due diligence for each site which contained growing barns containing various ages of turkeys prior to processing. Farm facilities included barns, waste litter piles for land application, manure ponds, and manure spreading operations, dead animal holding areas, diesel and gasoline fueling above ground storage tanks, and farm dumps. Work also included review of EHS related information contained within an electronic data room.

Radiopharmaceutical Waste Management Auditing and Regulatory Database Development, GE Health Care, Various US and Canadian Locations. Audited three sites in Illinois and Wisconsin to determine current methods for handling chemicals, hazardous waste, bio waste, and low-level radioactive waste. Researched for sites in 33 locations throughout the U.S. and Canada relative to ongoing compliance with Federal, State, and local waste management requirements.

Environmental Permitting, Midwest Powder Coatings, Saint Charles, IL. Services include: Air Permitting/Emission Calculation and Stormwater Permitting associated with the installation and operation of this plastic manufacturing facility. Provided compliance auditing for facilities in Mexico, California, Ontario, and Illinois.

EHS Audits as part of Due Diligence, Tricor Pacific, Lake Forest, IL. Manufacturing sites were in California, Texas, Georgia, Arkansas, Kansas, Mississippi, and Utah. Reviewed existing data room files as well as onsite permits and conditions.

Environmental Permitting and Zoning Approval, Great Point Energy, Chicago, IL. Evaluated alternative sites for the development of a pilot scale multi-feedstock gasification facility. Sites included Illinois, Texas, Ohio, Pennsylvania, and Massachusetts. AMEC was involved in the overall site selection process and the actual permitting process at the ultimate site in Somerset, Massachusetts. Services include: Air Permitting, FAA, Water Discharge, Zoning within the Town of Somerset, and Threatened and Endangered Species Analysis and Noise and Vibration mitigation.

Air Emission Testing Analysis for Bitumen Processing Facility, Calgary, Canada. Researched testing methods approved by US EPA for this type of material. Data assisted facility in determining appropriate testing methods and parameters.

Multiple-Site Environmental Audits, Bridgestone Firestone, Bloomingdale, IL. Managed multiple-site environmental audit projects for acquisition and divestiture of automotive repair facilities throughout the US. Included sites in California, North Carolina, Nevada, Tennessee, Alaska, Pennsylvania and Washington.

Multiple-Site Environmental Audits, GE Health Care, Pewaukee, WI. Exit assessments on facilities formerly leased to GE in various US locations.

Multiple-Site Environmental Audit, Equity Office Property, Chicago, IL. Managed multiple-site environmental audit project for a major US property management company.

Multiple-Site Environmental, Health & Safety and Compliance Auditing, GE Health Care, Pewaukee, WI. Managed multiple-site environmental, health & safety and compliance auditing for international medical equipment manufacturer. Services included acquisition due diligence, integration, and compliance.

Multiple-Site Environmental, Health & Safety and Compliance Auditing, GE Energy, Schenectady, NY. Managed multiple-site environmental, health & safety and compliance auditing for international power and water systems manufacturer. Services included acquisition due diligence, integration, and compliance.

Title V Permit Applications, General Motors and Ford Motor Company, Various Locations, U.S. Managed the project teams for the Title V permit applications for General Motors and Ford Motor Company projects. Facilities were located in Wisconsin, Delaware, Illinois, Michigan, Minnesota, and Missouri.

Odor Analysis and Remediation, Various Locations. Determined source and remediation for indoor air quality and odor issues at manufacturing and office facilities.

Director, Emerging Solutions
Mostardi Platt

Proposed LRS West DuPage Recycling and Transfer Station Project
Criterion 2

January 16, 2023

HQ - Elmhurst, IL | Chicago, IL | Crown Point, IN | Concord, NC | Mendota Heights, MN
702 W. 48th Avenue
Unit A
Denver, CO 80216
888-802-8858

1

Jim Powell, QEP Background

- MS Environmental Engineering – University of Florida
- Environmental Engineer – Over 40 Plus Years of Siting and Permitting Assistance
  - Current Position: Director, Emerging Solutions, Mostardi Platt
- Testified regarding Criterion 2 or similar before – IEPA, OEPA, IDNR
  - How many times -- three
- Evaluated Impact of Projects on Environmental Justice
  - Six times in the past five years

2

Criterion 2:

"the facility is so designed, located, and proposed to be operated that the public health, safety, and welfare will be protected"

3

LRS Website Information -- Proposed Waste Transfer Station

https://www.lrsrecycles.com/west-dupage-transfer-station/

	Reduced Miles (Per Year)	Reduced Miles (Over 20 year Operating period)	Reduced Fuel Usage (Gallons over 20 year operating period)	Reduced Emissions (Pound of CO2 over 20 year operating period)
LRS MSW Collection Vehicles	75,000	1.5 million	425,000	9.51 million
Other Collection Vehicles	40,000	800,000	230,000	5.15 million
Hydro Vehicles	685,000	13.7 million	3.914 million	87.60 million
Total	800,000	16 million	4.569 million	102.26 million

4

Public Health, Safety, and Welfare

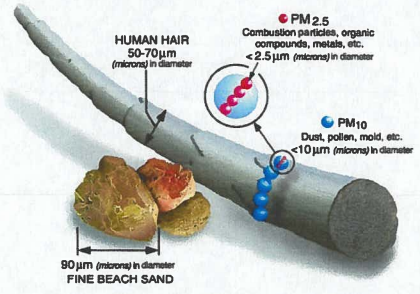
- EPA has established ambient air quality standards to protect the public health and welfare.
  - Modeling used to quantify project impacts on existing air quality throughout the potentially impacted region.
- Impacts on health and welfare have *not* been ***fully*** addressed in submittal for this site.
- Key component of health and welfare assessment include assessment of impacted areas.

5

Areas Evaluated

- As they relate to public health, safety and welfare protection:
  - Traffic Data,
  - Air quality (community and worker exposure), and
  - Impact of above on the community

6



Emissions Reduction Issue from Slide Four

- Apparently based upon Collection vehicles only.
- Does not take into account increase in Transfer vehicles.
- Apparently Looks only at reduction in emissions within DuPage County.
- No discussion about increase in emissions in Kane County.
- Only looks at CO_2 emissions not Particulate ($PM_{2.5}$, PM_{10}) or Nitrogen Oxides (NO_x).
- Could not find any supporting calculations to document slide four

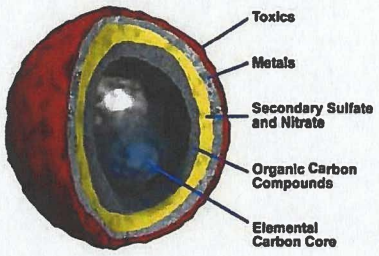
7

Air Quality Impact Related to Vehicle Traffic

- Are you aware of the specific particulate emission?
  - EPA has measured and estimated emissions of both $PM_{2.5}$ and PM_{10} from various trucks including those proposed for this project.
- $PM_{2.5}$ – particulate <2.5 microns, primarily produced by combusting fuel.
- PM_{10} – particulate <10 microns, produced by construction activities and roadway dust, brakes, and tire wear.

8

Health Impacts of Diesel Pollution

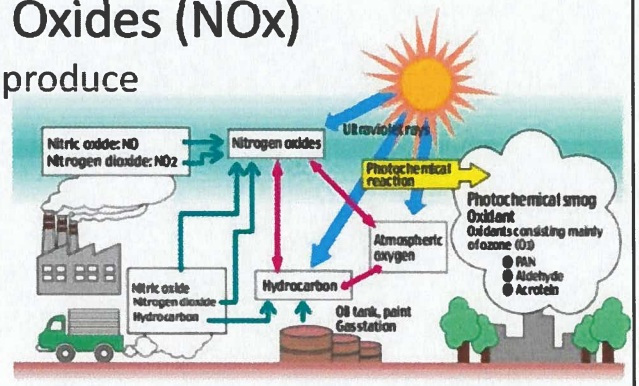


- Diesel-powered vehicles, vessels, locomotives, and equipment account for:
  - Over 60% of all nitrogen oxides (NOx), and
  - Over 70% of all fine particulate matter ($PM_{2.5}$) emissions from US transportation sources.
  - Over 80% of all ultra fine particulate matter ($PM_{<0.1}$)

Source: USEPA

Cancer-causing Pollutants in Diesel Exhaust

Pollutant	Diesel Emissions % of all Mobile 1996[52]	EPA Carcinogen Status	Cancer Risk (per million/microgram in 70-yr life)
Formaldehyde	52%	probable	1 in a million
Acetaldehyde	59%	probable	1 in a million
Butadiene	8%	probable	2 in a million
Acrolein	50%	possible	n/a
Benzene	5%	known	2-8 in a million
Diesel Particulate Matter	77%	probable[53]	EPA: 12 to 1210 in a million; CARB: 300 in a million[54]



Diesel particles are carbon at their core with toxics and carcinogenic substances attached to their surfaces.

9

Impacts from Nitrogen Oxides (NOx)

- Heavy duty diesel vehicles also produce significant NOx emissions.
- EPA regulates exposure to NOx emissions due to the potential of respiratory health impacts:
  - Both short- and long-term exposure

- Long-term/Short-term exposure to NOx directly linked to the development of asthma or asthmatic symptoms.

10

Key Features Being Evaluated

- Proximity of Proposed Site to Conflicting Neighboring Uses:
  - Residential Property, Traffic Related to Operations (Trucks)
- Impact upon Air Quality

11

Air Quality Impact Analysis Performed

- Used USEPA- and IEPA-approved model methodologies and input data.
- Traffic mix / peak and max hourly data from applicant.
- Resulting impacts upon people within LRS service area.

12

Trucks to and from Proposed Site

"Projected Material Processing and Traffic Volume"

- Sources of Traffic Data
- Criterion 2:
  - Table 2-1,
  - Table 2-2,
  - Table 2-3, and
  - Table 2-4

Table 2-1
West DuPage Recycling and Transfer Station
Projected Material Processing and Traffic Volume
750 Tons Per Day Construction or Demolition Debris

Assumptions:

211 is total collection vehicles per day.
750 tons = maximum daily throughput of C&D.
4.85 is average tons per load of those unloaded directly to outdoor bunkers (8 tons per load for concrete/ heavies and 4 tons per load for shingles).
3 is average tons per load to C&D tip floor building for separation and processing.
20 tons = average tons of outbound truck load.
1 ton C&D = 5 cubic yards on tipping floor (or 400 pounds/cubic yard).
75% = percentage of total incoming C&D that is recycled.
25% = percentage of total incoming C&D that is not recycled (and hauled off as MSW).
70% is percentage of vehicles unloaded in C&D tip floor
30% is percentage of clean loads unloaded directly in outdoor storgage bunkers.
17% is percentage of material unloaded on C&D tip floor that is separated and removed as MSW.
40 is rate of separation and feeding of C&D into screener and sorting line (in tons per hour).
30% is percentage of non-recyclables from screening and sorting system.

Traffic Estimates

Traffic Estimates	Hourly Collection truck trips[5]	Hourly Transfer truck trips[5]	Total Hourly	Daily Collection truck trips[5]	Daily Transfer truck trips[5]	Total Daily
Criteria 2 Tables 2-1, 2-2, 2-3, 2-4[1]	98	26	124	718	198	916
Criteria 2 Section 2.4.19 Site Throughput Capacity[2]	97	25	122	671	157	828
Criteria 2 Section 2.4.20.2 Unloading Time and Queuing Capacit	144	26	170	1728	624	2352
Related Traffic Study[4]	79	14	93	*Not given*	*Not given*	--

[1]Cumulative peak hour traffic for each waste type, at their respective peaks.

[2]Page 2-37; Calculated based on anticipated daily material throughput, average truck load, and anticipated hours of operation.

[3]Page 2-40; Maximum possible site traffic based on unloading time and vehicle queuing capacity (72 vehicles unloading at one time equals 144 trips); Daily assumes 24hr operation.

[4]Site-generated traffic at local (not site) evening peak hour, 4:30-5:30 PM, excluding passenger vehicles.

[5]Truck trips are equal to the number of trucks, doubled to account for entering and exiting the facility (with exception of KLOA traffic study, which provides in & out traffic).

19

Type of Fuel Being Used

- Assume that all trucks are using a form of Diesel
- Why is the type of fuel important
  - Diesel vs Bio-Diesel – Less particulate and more nitrogen dioxide
  - LNG/CNG – Less particulate and nitrogen dioxide
  - Electric – No vehicle emissions
- All inside plant vehicles are using diesel or LP gas
- Type of fuel determines the impact on workers, nearby residents and those in the route to the landfill

Environmental Justice – USEPA Definition

- Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.
- This goal will be achieved when everyone enjoys:
  - The same degree of protection from environmental and health hazards, and
  - Equal access to the decision-making process to have a healthy environment in which to live, learn, and work.

Traffic Impact Study
Proposed Pheasant Run Industrial Park
St. Charles, Illinois

Prepared For:

GRECO | DEROSA
INVESTMENT GROUP

KLOA
Kenig, Lindgren, O'Hara, Aboona, Inc.

October 12, 2021

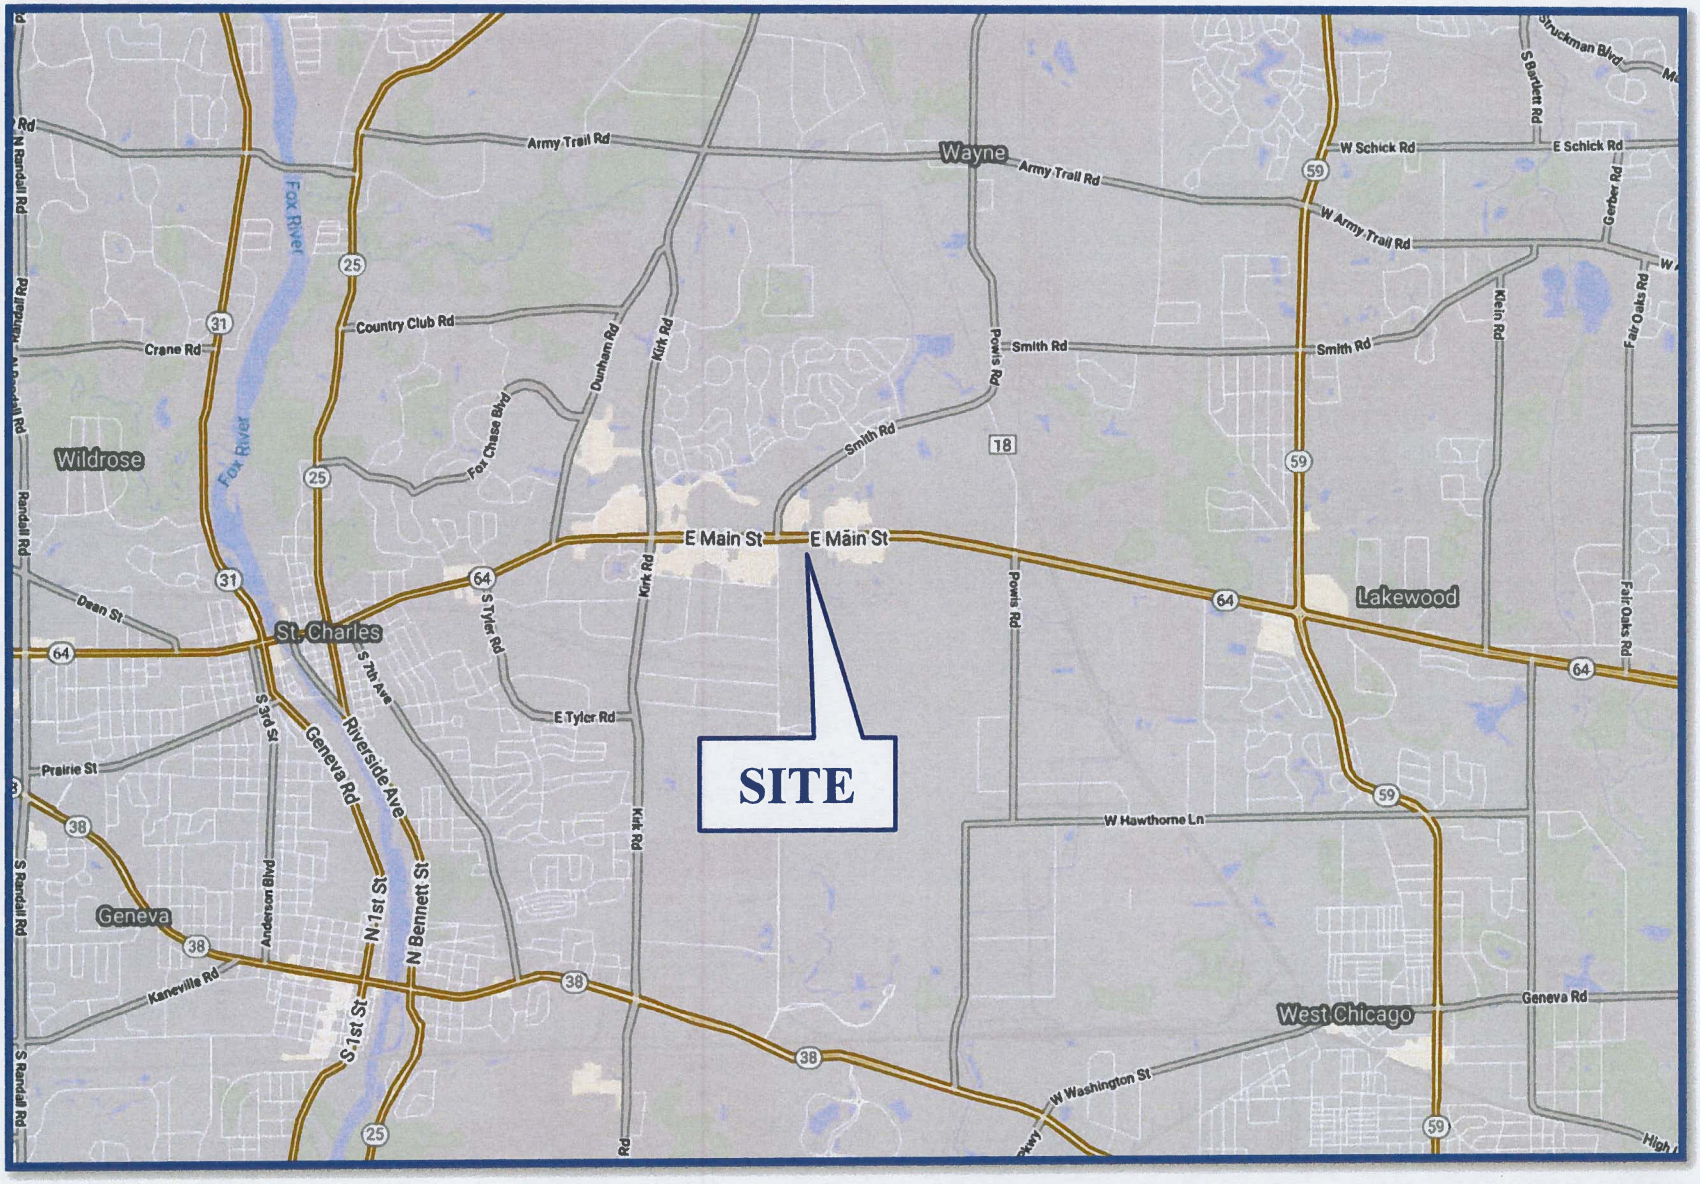
1. Introduction

This report summarizes the methodologies, results, and findings of a traffic impact study conducted by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA, Inc.) for the Pheasant Run Industrial Park, a proposed industrial development to be located in St. Charles, Illinois. The site is located in the southeast quadrant of the intersection of Illinois Route 64 (Main Street/North Avenue) with Kautz Road. As proposed, the site will be redeveloped with approximately 1,172,718 square feet of general light industrial space in four buildings. Access to the development will be provided off IL 64 via its existing signalized intersection with Pheasant Run Drive and via its unsignalized intersection with Keil Road and off Kautz Road via two full movement access drives.

The purpose of this study was to examine background traffic conditions, assess the impact that the proposed development will have on traffic conditions in the area, and determine if any roadway or access improvements are necessary to accommodate traffic generated by the proposed development.

Figure 1 shows the location of the site in relation to the area roadway system. **Figure 2** shows an aerial view of the site.

The sections of this report present the following:



- Existing roadway conditions
- A description of the proposed development
- Directional distribution of the development traffic
- Vehicle trip generation for the development
- Future traffic conditions including access to the development
- Traffic analyses for the weekday morning and evening peak hours
- Recommendations with respect to adequacy of the site access and adjacent roadway system

Traffic capacity analyses were conducted for the weekday morning and evening peak hours for the following conditions:

1. Year 2021 Base Conditions – Analyzes the capacity of the existing roadway system using peak hour traffic volumes conducted in 2021 adjusted to represent pre-pandemic conditions.

2. Year 2027 No-Build Conditions – Analyzes the capacity of the existing roadway system using Year 2020 base traffic volumes increased by the traffic projected to be generated by the under-construction McGrath Automotive Dealership and Brooke Toria Estates developments and an ambient area growth factor not attributable to any particular development.

3. Year 2027 Total Projected Conditions – Analyzes the capacity of the future roadway system using the projected traffic volumes that include the Year 2027 no-build traffic volumes and the traffic estimated to be generated by the proposed development.

Figure 2

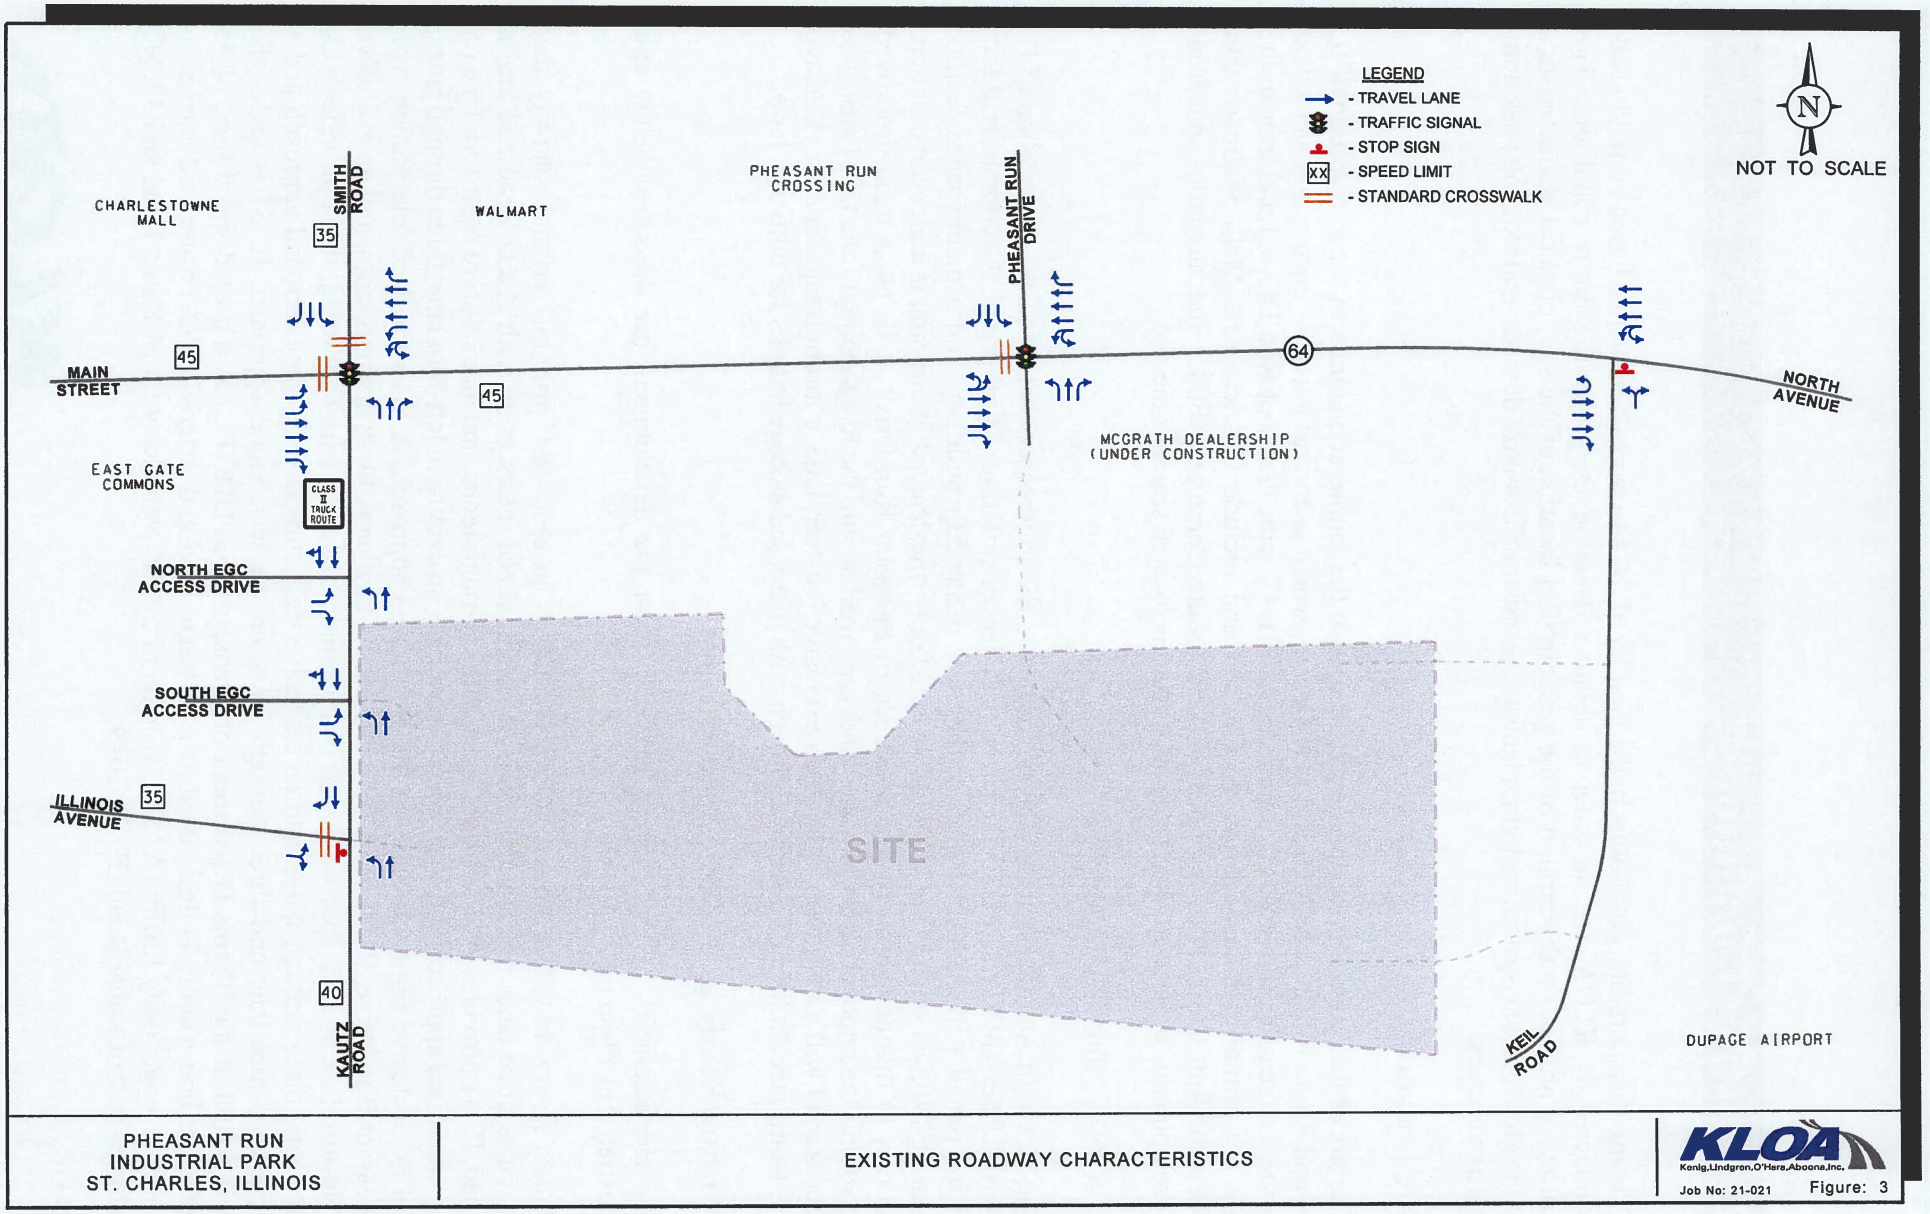
KLOA

2. Existing Conditions

Existing transportation conditions in the vicinity of the site were documented based on field visits conducted by KLOA, Inc. in order to obtain a database for projecting future conditions. The following provides a description of the geographical location of the site, physical characteristics of the area roadway system including lane usage and traffic control devices, and existing peak hour traffic volumes.

Site Location

The site of the proposed development is located in the southeast quadrant of the intersection of IL 64 and Kautz Road. McGrath Auto Dealership, which is currently under construction, is located in the southeast quadrant of the intersection of IL 64 with Pheasant Run Drive. Land uses in the site are primarily industrial and commercial and include Charlestowne Mall, Walmart, and Pheasant Run Crossing to the north and East Gate Commons (EGC) and numerous industrial developments to the west. The DuPage Airport is located south of the site.



McGrath Auto Dealership

The McGrath Auto Dealership is to be located in the southeast quadrant of the intersection of IL 64 with Pheasant Run Drive and is currently under construction. As proposed, the ultimate buildout of the parcel will consist of three automotive dealership buildings and a maintenance facility totaling 140,880 square feet. It should be noted only one dealership building is under construction. As part of this development, the south leg of Pheasant Run Drive at IL 64 is being improved including the removal of the existing landscape median and the lengthening of the turn lanes. The access road will continue to provide an exclusive left-turn lane, a through lane, and an exclusive right-turn lane on the northbound approach with increased storage lengths for both turn lanes.

Existing Roadway System Characteristics

The characteristics of the existing roadways near the development are described below and illustrated in **Figure 3**.

Illinois Route 64 (Main Street, North Avenue) is an east-west, principal arterial roadway that provides three lanes in each direction. At its signalized intersection with Kautz Road and Smith Road, IL 64 provides dual left-turn lanes, three through lanes, and an exclusive right-turn lane on the eastbound approach and a left-turn/U-turn lane, an exclusive left-turn lane, three through lanes, and an exclusive right-turn lane on the westbound approach. At its signalized intersection with Pheasant Run Drive, IL 64 provides a left-turn/U-turn lane, three through lanes, and an exclusive right-turn lane on both approaches. At its unsignalized access with Keil Road, IL 64 provides a U-turn lane, three through lanes, and an exclusive right-turn lane on the eastbound approach and a left-turn/U-turn lane and three through lanes on the westbound approach. IL 64 is under the jurisdiction of the Illinois Department of Transportation (IDOT), has a posted speed limit of 45 miles per hour (mph), is designated as a Strategic Regional Arterial (SRA) route, and carries an annual average daily traffic (AADT) volume of 32,900 vehicles west of Kautz Road and 32,400 vehicles east of Kautz Road (IDOT 2019).

PHEASANT RUN INDUSTRIAL PARK
ST. CHARLES, ILLINOIS

EXISTING ROADWAY CHARACTERISTICS

KLOA
Konig,Lindgren,O'Hara,Aboona,Inc.
Job No: 21-021 Figure: 3

Kautz Road is a north-south, major collector roadway that extends south from IL 64 and provides two southbound lanes and one northbound lane narrowing to one lane in each direction south of Illinois Avenue. At its signalized intersection with IL 64, Kautz Road provides an exclusive left-turn lane, a through lane, and an exclusive right-turn lane on the northbound approach and is aligned opposite Smith Road. At its unsignalized intersection with Illinois Road, Kautz Road provides an exclusive left-turn lane and a through lane on the northbound approach and a through lane and an exclusive right-turn lane on the southbound approach. At its unsignalized intersections with the EGC access drives, Kautz Road provides an exclusive left-turn lane and a through lane on the northbound approaches and a through lane and shared through lanes on the southbound approaches. Both access drives provide an exclusive left-turn lane and an exclusive right-turn lane and are under stop sign control. Kautz Road is under the jurisdiction of the City of St. Charles, has a posted speed limit of 40 mph, is designated as a Class II Truck Route, and carries an AADT volume of 8,150 vehicles (IDOT 2018).

Smith Road is a north-south, major collector roadway that extends north from IL 64 and provides two northbound lanes and one southbound lane narrowing to one lane in each direction north of the Charlestowne Mall access road. At its signalized intersection with IL 64, Smith Road provides an exclusive left-turn lane, a through lane, and an exclusive right-turn lane on the southbound approach and is aligned opposite Kautz Road. Smith Road is under the jurisdiction of the City of St. Charles, has a posted speed limit of 35 mph, and carries an AADT volume of 7,050 vehicles (IDOT 2016).

Keil Road is a north-south, private road that extends south from IL 64 and provides one lane in each direction. At its unsignalized intersection with IL 64, Keil Road provides a shared left-turn/right-turn lane on the northbound approach and is under stop sing control. Keil Road is signed for "Private Road Authorized Airport Use Only" and a speed table is provided approximately 1,500 feet south of IL 64. Keil Road is under the jurisdiction of the City of West Chicago.

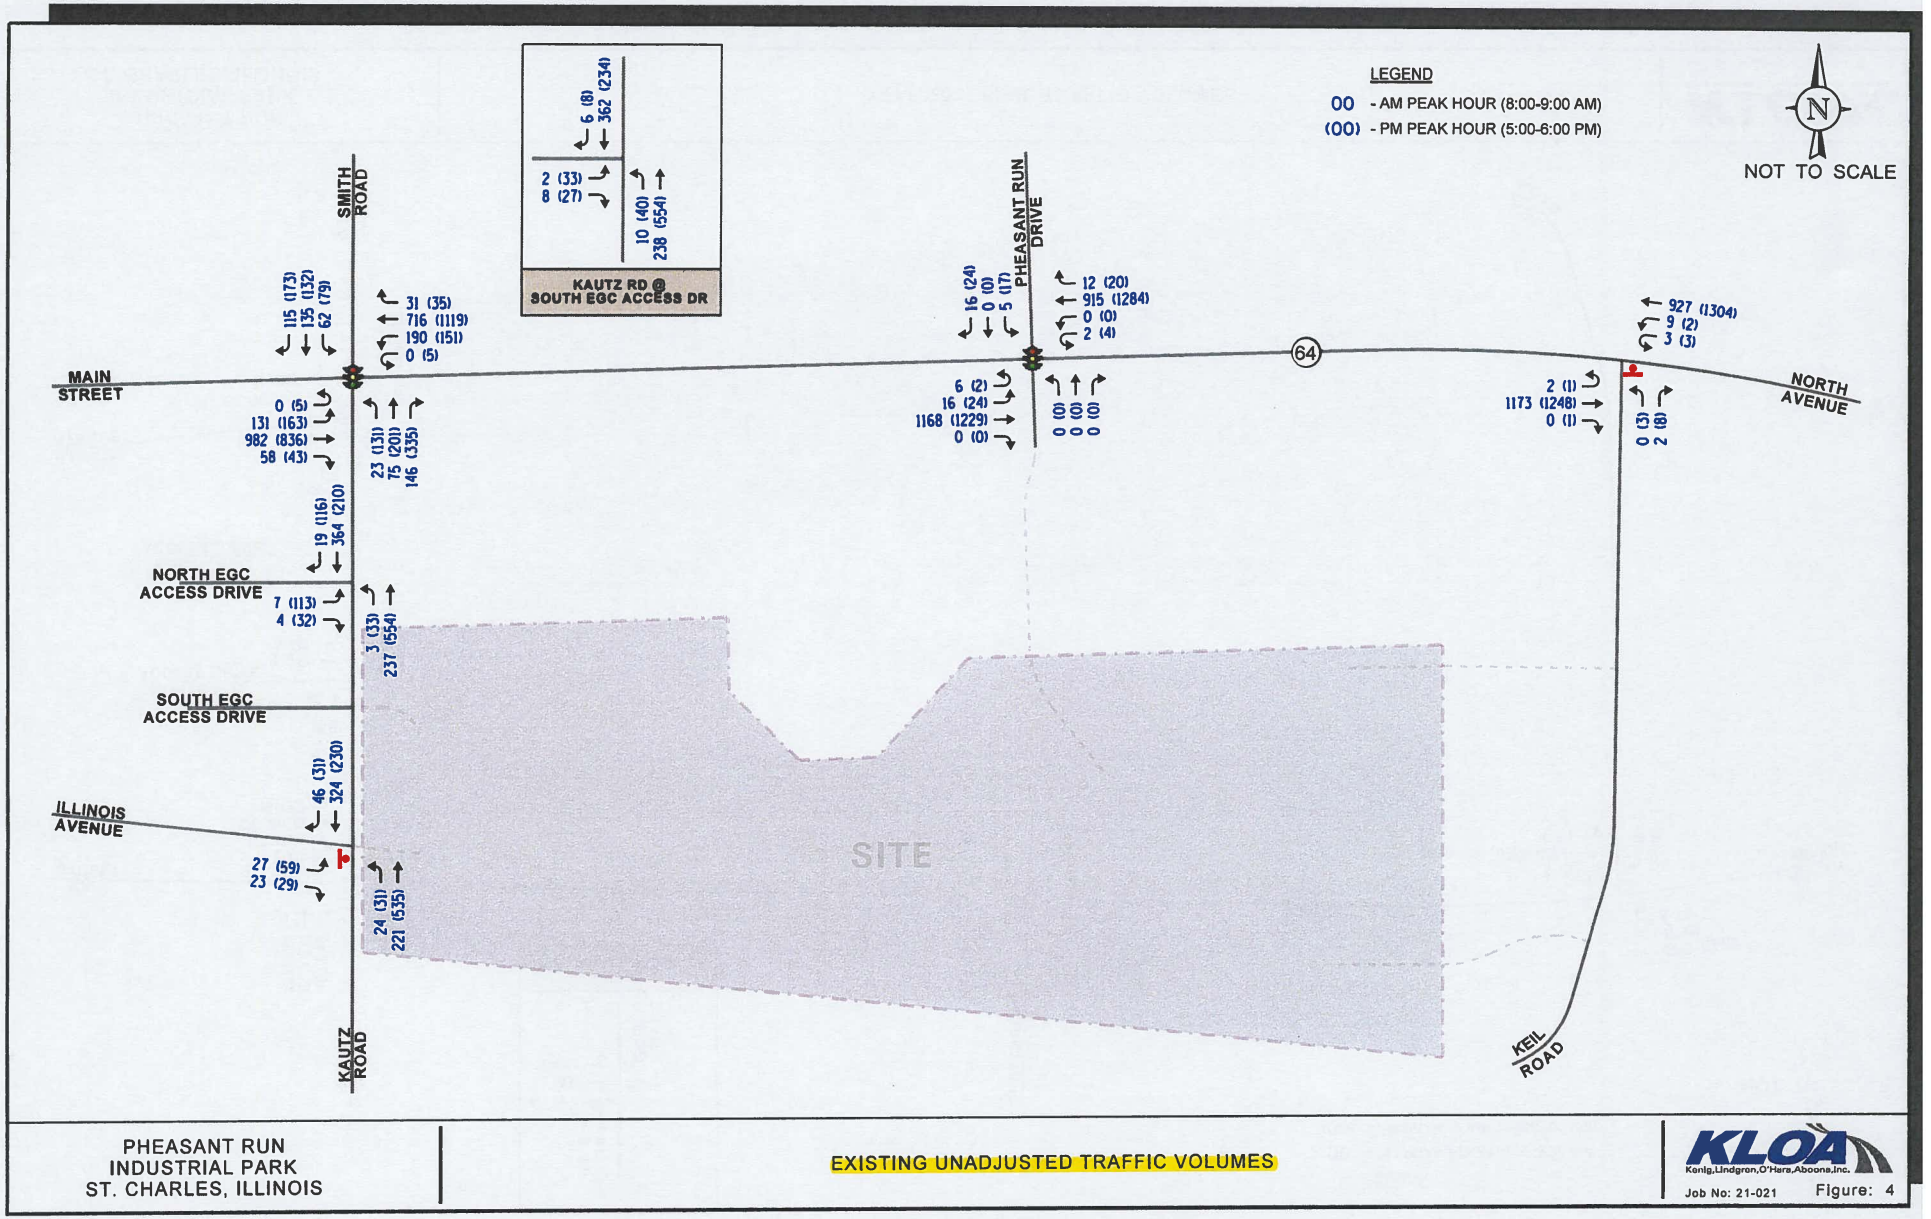
Illinois Avenue is an east-west, local roadway that extends west from Kautz Road and provides one lane in each direction. At its unsignalized intersection with Kautz Road, Illinois Avenue provides a shared left-turn/right-turn lane on the eastbound approach. Illinois Avenue is under the jurisdiction of the City of St. Charles.

Existing Traffic Volumes

In order to determine current traffic conditions within the study area, KLOA, Inc. conducted peak period traffic counts utilizing Miovision Scout Collection Units at the following intersections:

- IL 64 with Kautz Road and Smith Road
- IL 64 with Pheasant Run Drive
- IL 64 with Keil Road
- Kautz Road with Illinois Avenue
- Kautz Road with the EGC access drives

The traffic counts were conducted on Wednesday, January 27, 2021 during the weekday morning (6:00 A.M. to 9:00 A.M.) and weekday evening (4:00 P.M. to 6:00 P.M.) peak periods. The results of the traffic counts show that the peak hours of traffic generally occur between 7:15 A.M. and 8:15 A.M. during the weekday morning peak period and between 4:30 P.M. and 5:30 P.M. during the weekday evening peak period. Copies of the traffic count summary sheets are included in the Appendix. In order to accurately represent Year 2021 normal traffic conditions due to the ongoing pandemic, the traffic volumes were compared with counts previously conducted at the intersection of IL 64 with Kautz Road and Smith Road by KLOA, Inc. in 2017. The 2017 traffic counts, increased by an ambient growth factor as discussed later in the report, were found to be 35 percent higher during the weekday morning and 30 percent higher during the weekday evening. As such, all traffic volumes were increased accordingly to determine the Year 2021 base traffic volumes. The existing unadjusted traffic volumes are illustrated in **Figure 4.** The Year 2021 base traffic volumes, inclusive of heavy vehicles, are illustrated in **Figure 5**. The Year 2021 base heavy vehicle traffic volumes are illustrated in **Figure 6**.

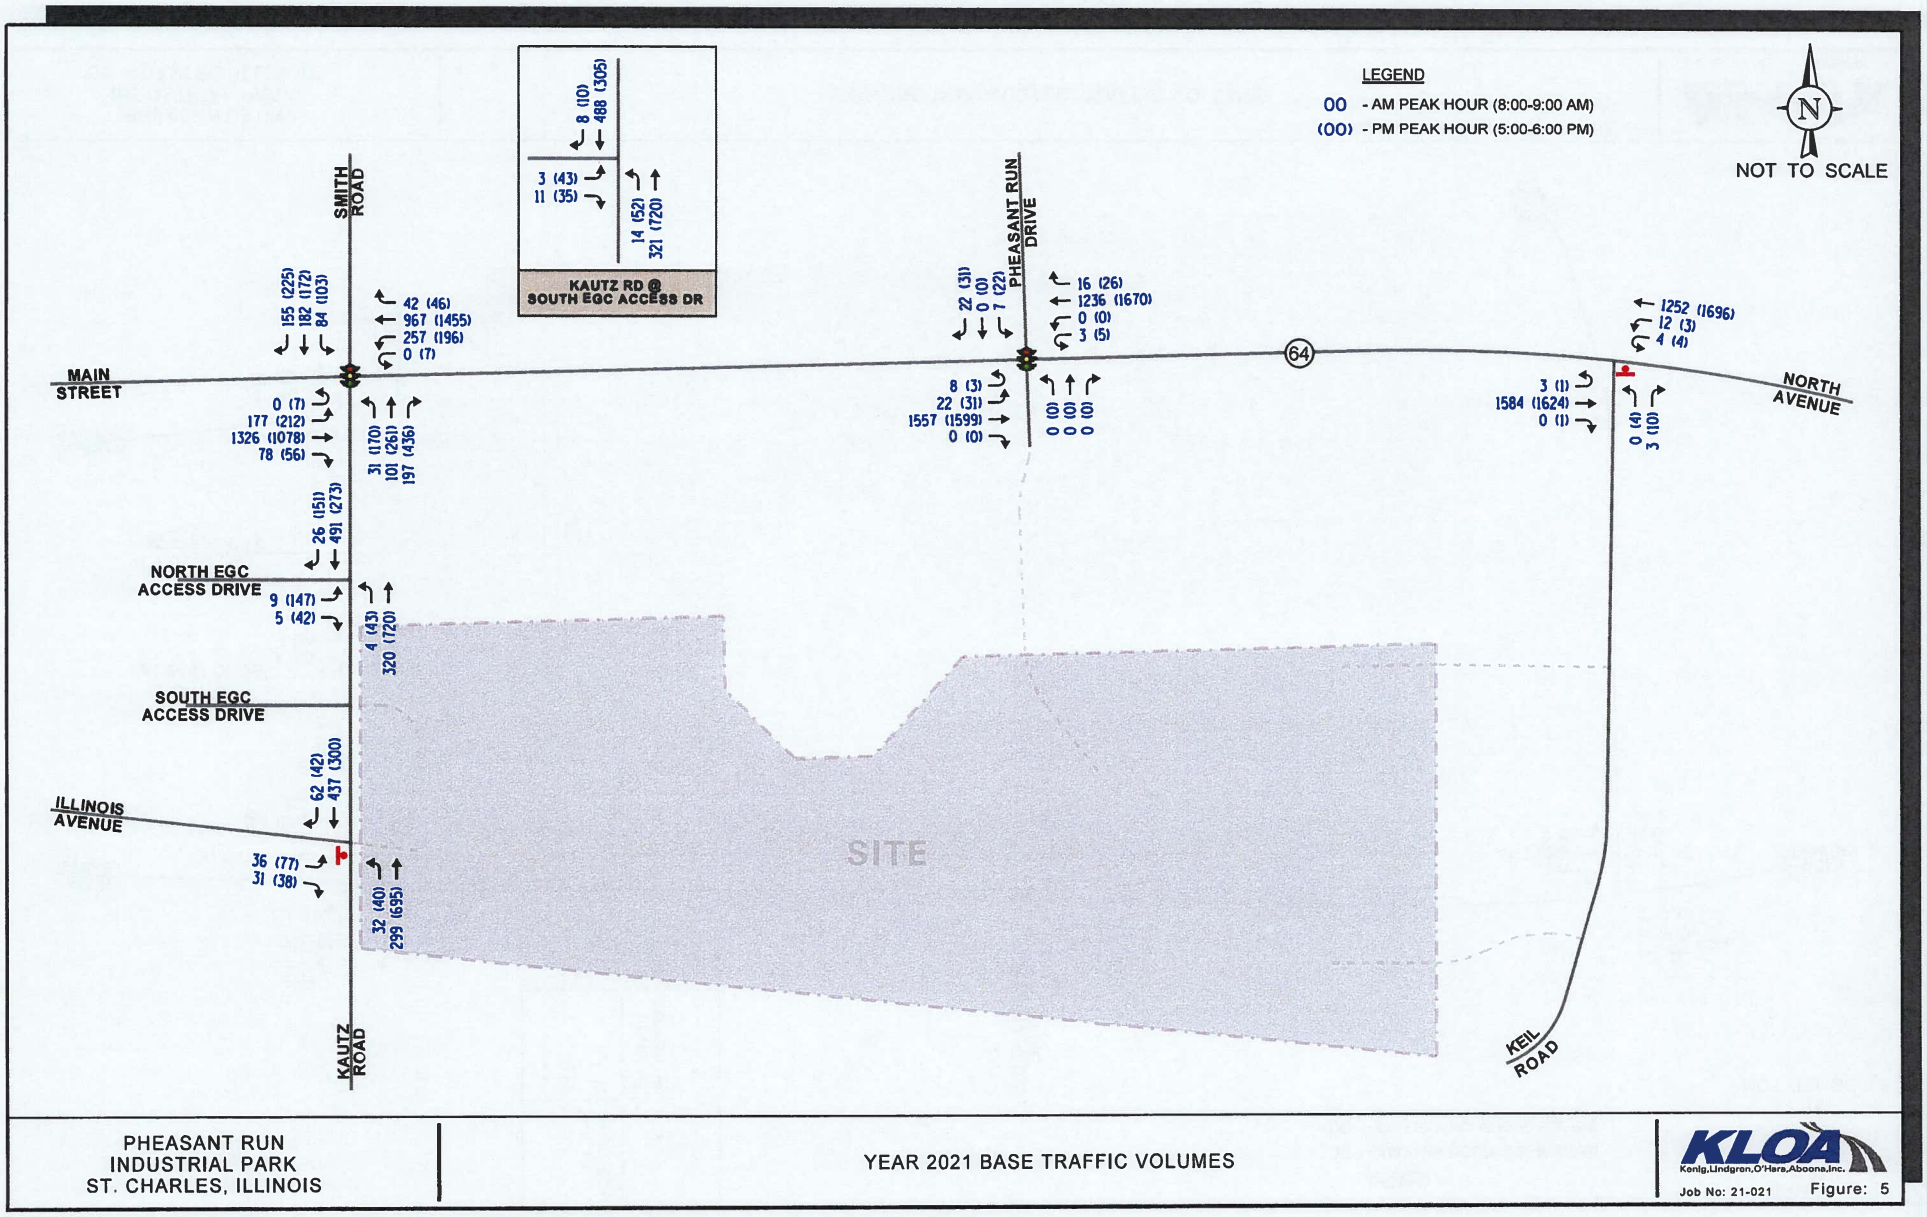


Crash Analysis

KLOA, Inc. obtained crash data for the most recent available past five years (2016 to 2020) at the following intersections:

- IL 64 with Kautz Road and Smith Road
- IL 64 with Pheasant Run Drive
- IL 64 with Keil Road
- Kautz Road with Illinois Avenue
- Kautz Road with the EGC access drives

A review of the crash data revealed two crashes were reported at the intersection of IL 64 with Keil Road, three crashes were reported at the intersection of Kautz Road with Illinois Avenue, two crashes were reported at the intersection of Kautz Road with the north EGC access drive, and one crash occurred at the intersection of Kautz Road with the south EGC access drive. Further, no fatalities were reported at any of the study area intersections during the review period. A summary of the crash data for the remaining intersections is shown in **Tables 1 and 2.** [1]



[1] IDOT DISCLAIMER: The motor vehicle crash data referenced herein was provided by the Illinois Department of Transportation. Any conclusions drawn from analysis of the aforementioned data are the sole responsibility of the data recipient(s). Additionally, for coding years 2015 to present,

3. Traffic Characteristics of the Proposed Development

In order to properly evaluate future traffic conditions in the surrounding area, it was necessary to determine the traffic characteristics of the proposed development, including the directional distribution and volumes of traffic that it will generate.

Proposed Site and Development Plan

As proposed, the site will be developed with approximately 1,172,718 square feet of general light industrial space in four buildings. Access to the site will be accommodated via the following:

- Pheasant Run Drive, which has a signalized intersection with IL 64 north of the site. As previously mentioned, this access road is being improved as part of the McGrath Dealership and will be extended south to the site. This access road will serve both passenger vehicles and truck traffic.

- A proposed full movement access drive on Kautz Road that will form the fourth (east) leg of the intersection of Kautz Road with the south EGC access drive. This access drive will provide one inbound lane and two outbound lanes striped to provide an exclusive left-turn lane and a shared through/right-turn lane. Outbound movements will be under stop sign control. As part of the development, the existing striped median on Kautz Road north of this access drive, which currently provides a northbound left-turn lane serving the north EGC access drive, will be restriped to provide a northbound (north EGC access drive) and a southbound (proposed site access drive) left-turn lane. These turn lanes will provide 100 feet of storage each and a 100-foot shared taper. This access drive will serve passenger vehicles and truck traffic.

- A proposed full movement access drive on Kautz Road that will form the fourth (east) leg of the intersection of Kautz Road with Illinois Avenue. This access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. As part of the development, the existing striped median on Kautz Road north of this access drive, which currently provides a northbound left-turn lane serving the south EGC access drive, will be restriped to provide a northbound (south EGC access drive) and a southbound (proposed site access drive) left-turn lane. These turn lanes will provide 130 feet of storage and a 100-foot shared taper. This access drive will serve passenger vehicles only.

- A proposed full movement access drive on Keil Road located approximately 800 feet south of IL 64. This access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. This access drive will serve passenger vehicles and truck traffic.

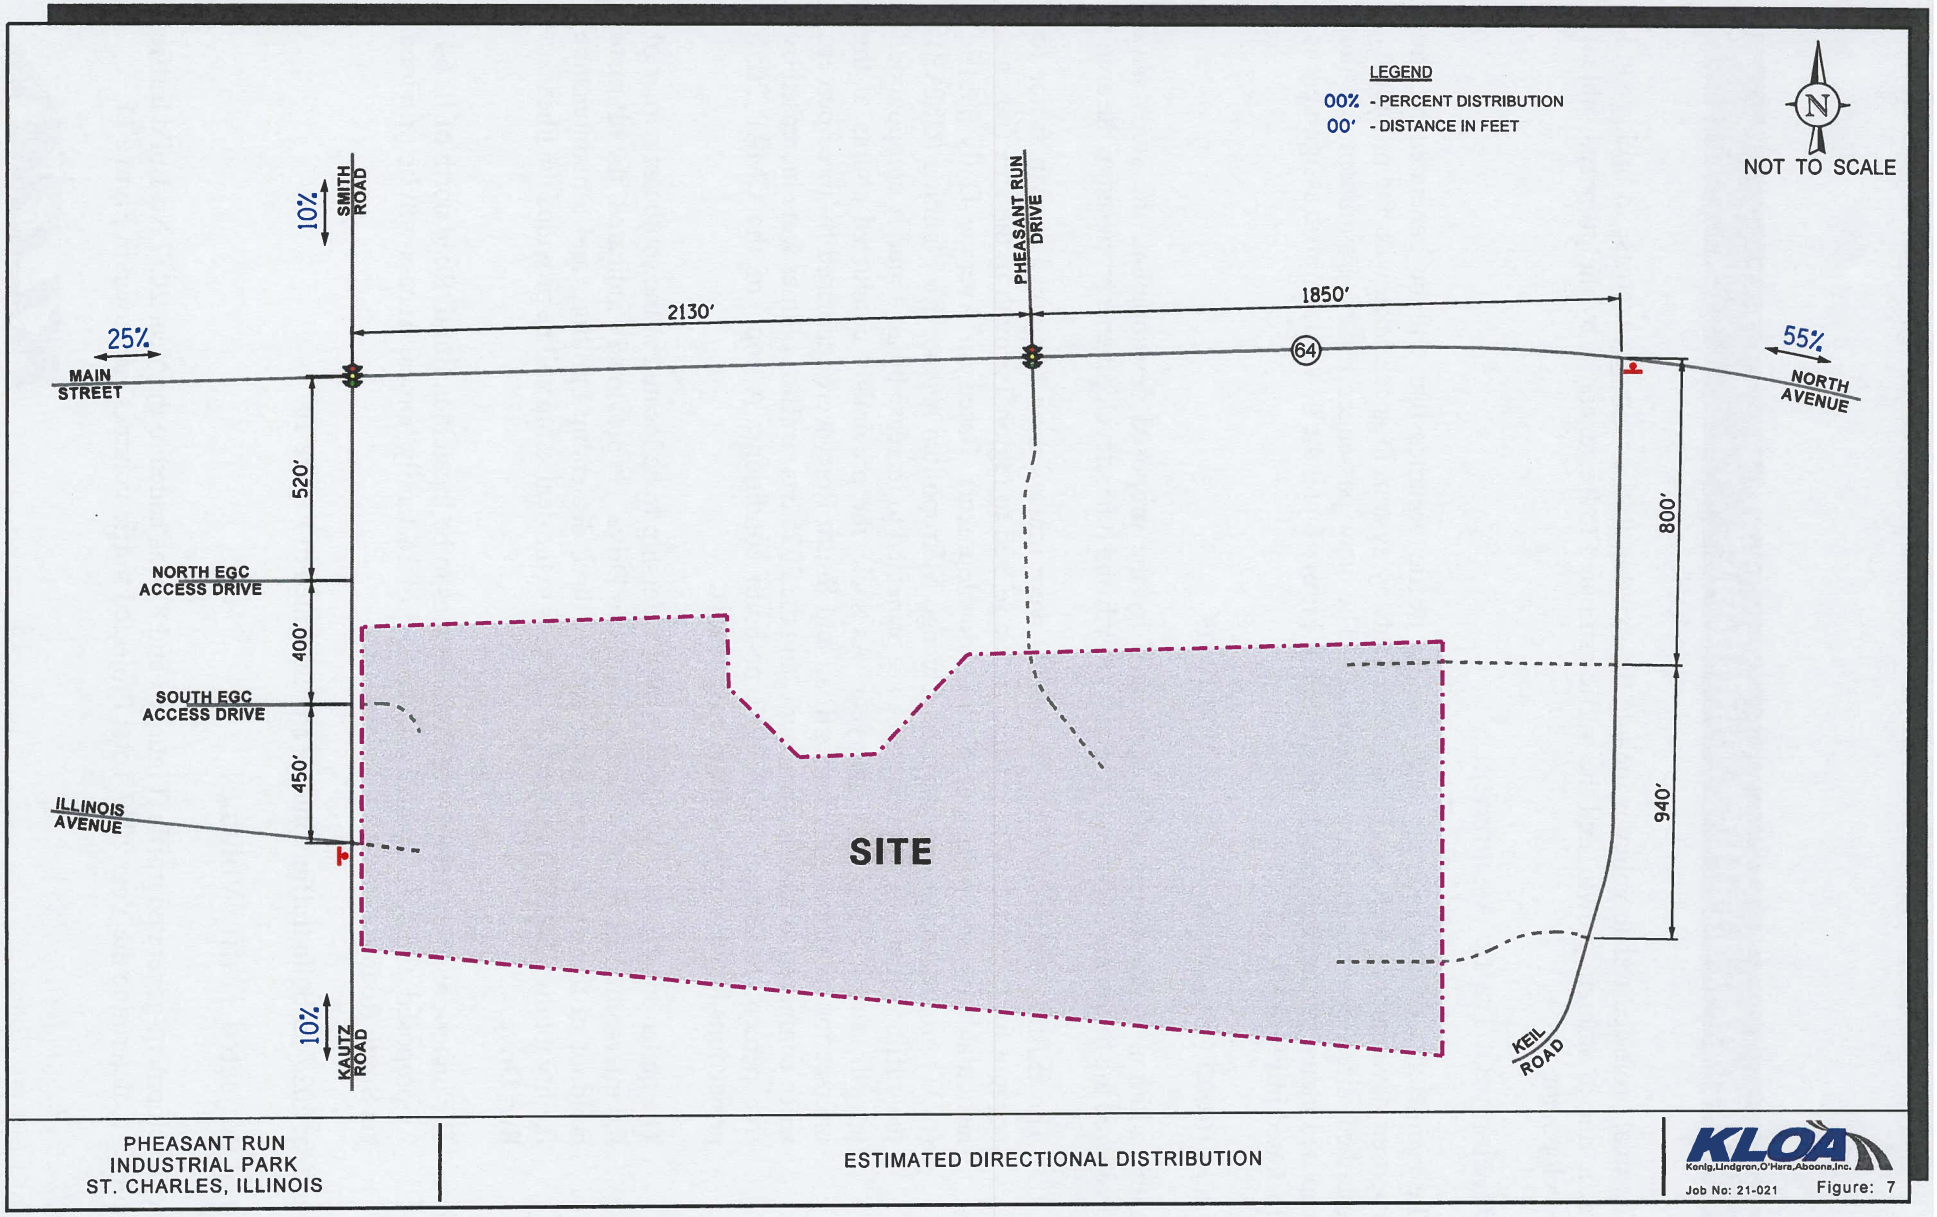
- A proposed full movement access drive on Keil Road located approximately 1,740 feet south of IL 64. This access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. This access drive will serve passenger vehicles and truck traffic.

As previously indicated, Keil Road is currently signed for authorized airport use only. It is recommended that the sign is moved to south of the southern Keil Road access drive. Furthermore, the design and location of the existing speed tables on Keil should be evaluated further to determine if they can be traversed by the projected truck traffic or need to be removed. A copy of the proposed site plan is included in the Appendix.

Directional Distribution

The directions from which employees and trucks will approach and depart the site were estimated based on existing travel patterns, as determined from the traffic counts. **Figure 7** illustrates the directional distribution of the site-generated traffic. Figure 7 also shows the distance, in feet, between the existing and proposed access intersections.

Truck Access



It is important to note that truck traffic from the two westernmost buildings (denoted as buildings C and D on the included site plan) will access the site primarily from Kautz Road while the truck traffic the two easternmost buildings (denoted as buildings A and B on the included site plan) will access the site primarily from Pheasant Run Drive and Keil Road. These routes will serve to reduce onsite conflicts and help improve on site circulation and safety. As part of the development the existing speed table on Keil Road should be investigated further to determine if they can be traversed by truck traffic or will need to be removed.

Development-Generated Traffic Volumes

The number of peak hour trips estimated to be generated by the proposed development was based on trip generation rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation Manual*, 10th Edition. The "General Light Industrial" (Land-Use Code 110) was used for the development. It is important to note that ITE rates indicate that general light industrial developments typically generate minimal truck trips during the peak hours. However, in order to provide a conservative analysis, it was assumed that 10 percent of traffic generated by the development during the peak hours was truck traffic. **Table 3** summarizes the trips projected to be generated by the development.

Table 3
ESTIMATED SITE GENERATED TRAFFIC

ITE Land-Use Code	Type/Size	Weekday Morning Peak Hour			Weekday Evening Peak Hour			Daily Two-Way Trips

4. Projected Traffic Conditions

The total projected traffic volumes include the existing traffic volumes, increase in background traffic due to ambient growth, and the traffic estimated to be generated by the proposed subject development.

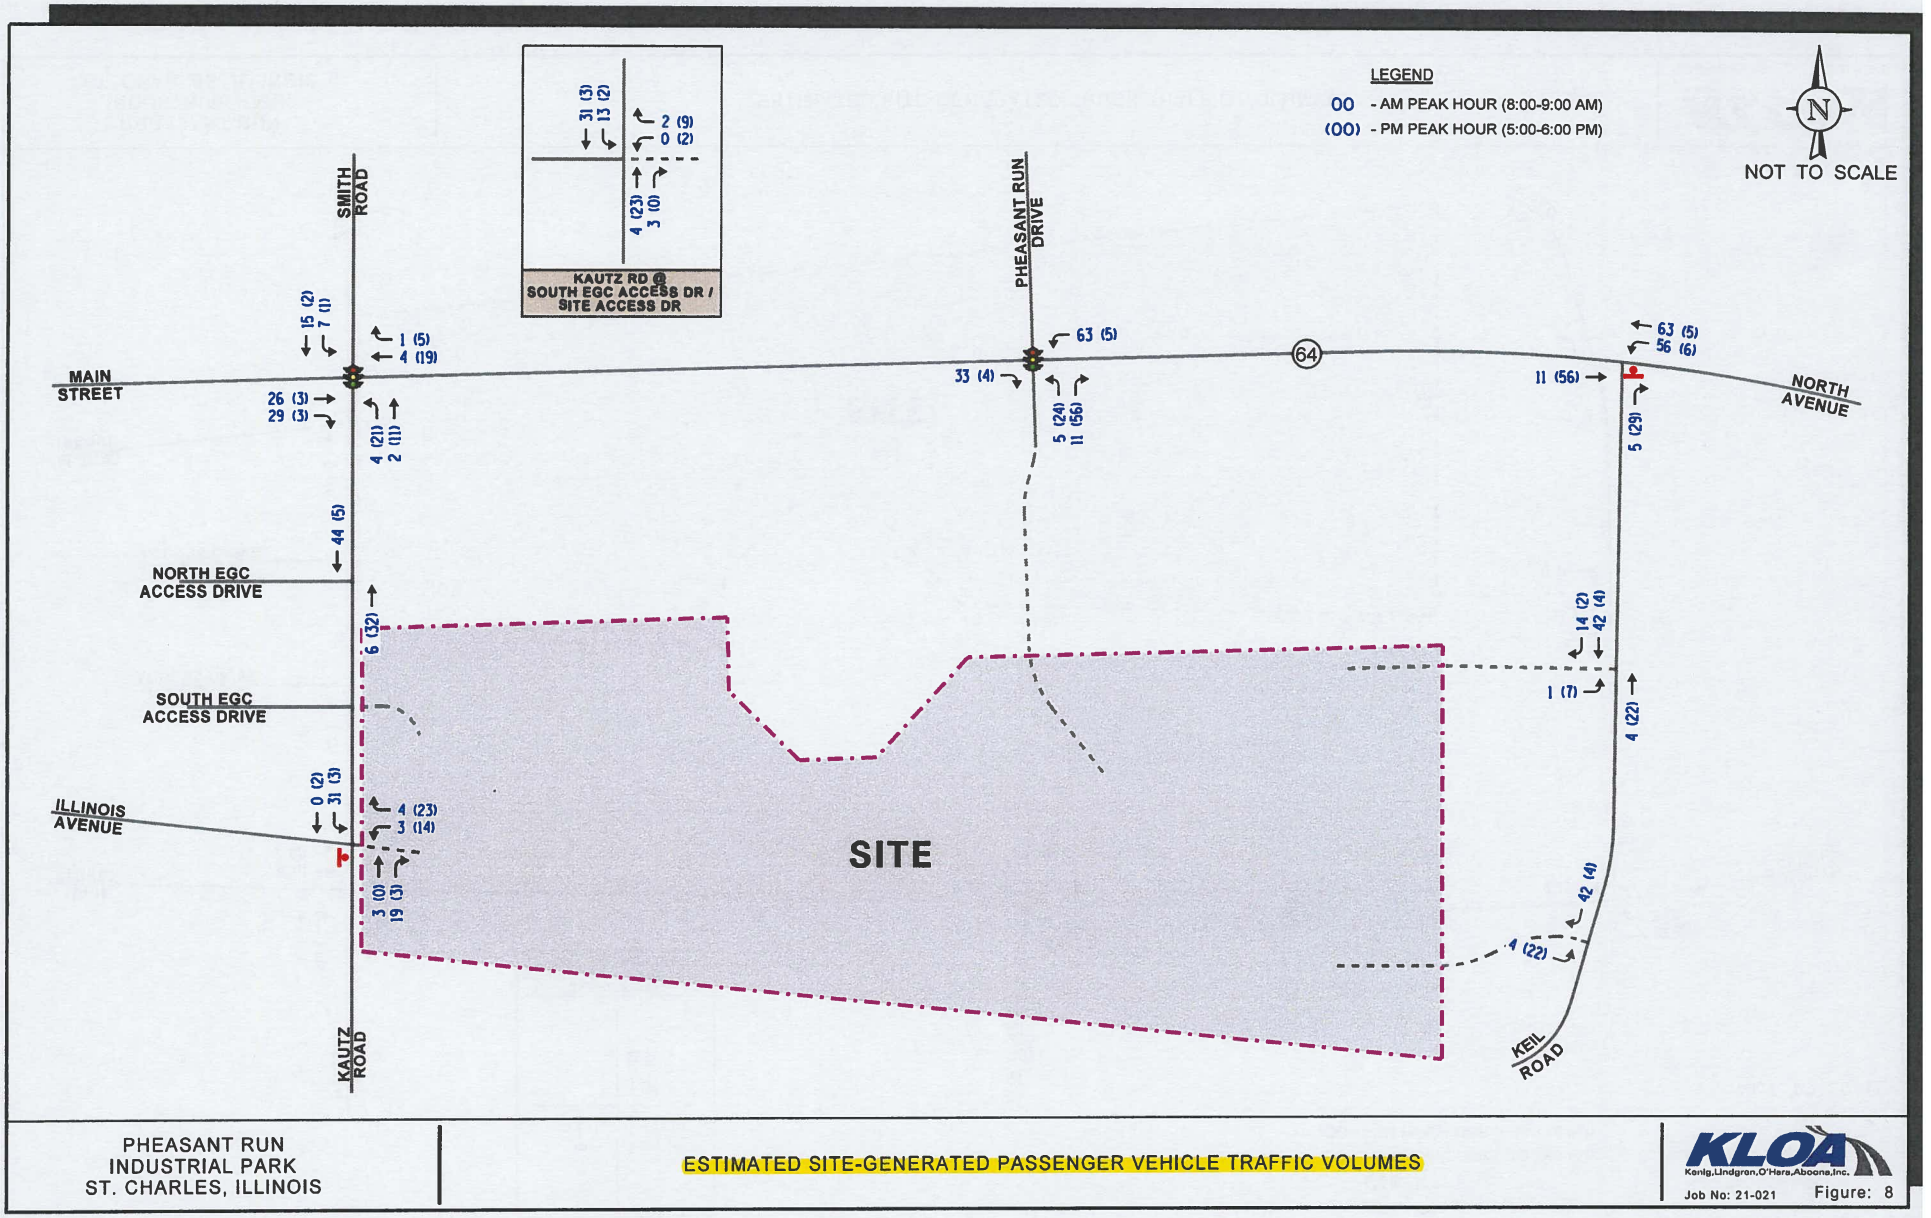
Development Traffic Assignment

The estimated weekday morning and evening traffic volumes that will be generated by the proposed development were assigned to the roadway system in accordance with the previously described directional distribution (Figure 7). The new passenger traffic assignment for the proposed industrial development is illustrated in **Figure 8** and the new truck traffic assignment is illustrated in **Figure 9.**

Background (No-Build) Traffic Conditions

In the addition to the traffic to be generated by the proposed development, the study also considered the following additional regional growth and other developments proposed in the area:

- The existing traffic volumes (Figure 4) were increased by a regional growth factor to account for the increase in existing traffic related to regional growth in the area (i.e., not attributable to any particular planned development). Based on Average Daily Traffic (ADT) projections provided by the Chicago Metropolitan Agency for Planning (CMAP), the traffic volumes in the study area are projected to increase by an annually compounded growth rate of 0.8 percent per year. As such, the previously conducted counts at the intersection of IL 64 with Kautz Road and Smith Road were increased by three percent when compared to 2021 traffic counts and the 2021 base traffic volumes were increased by five percent to project Year 2027 no-build conditions. A copy of the CMAP 2050 projections letter is included in the Appendix.

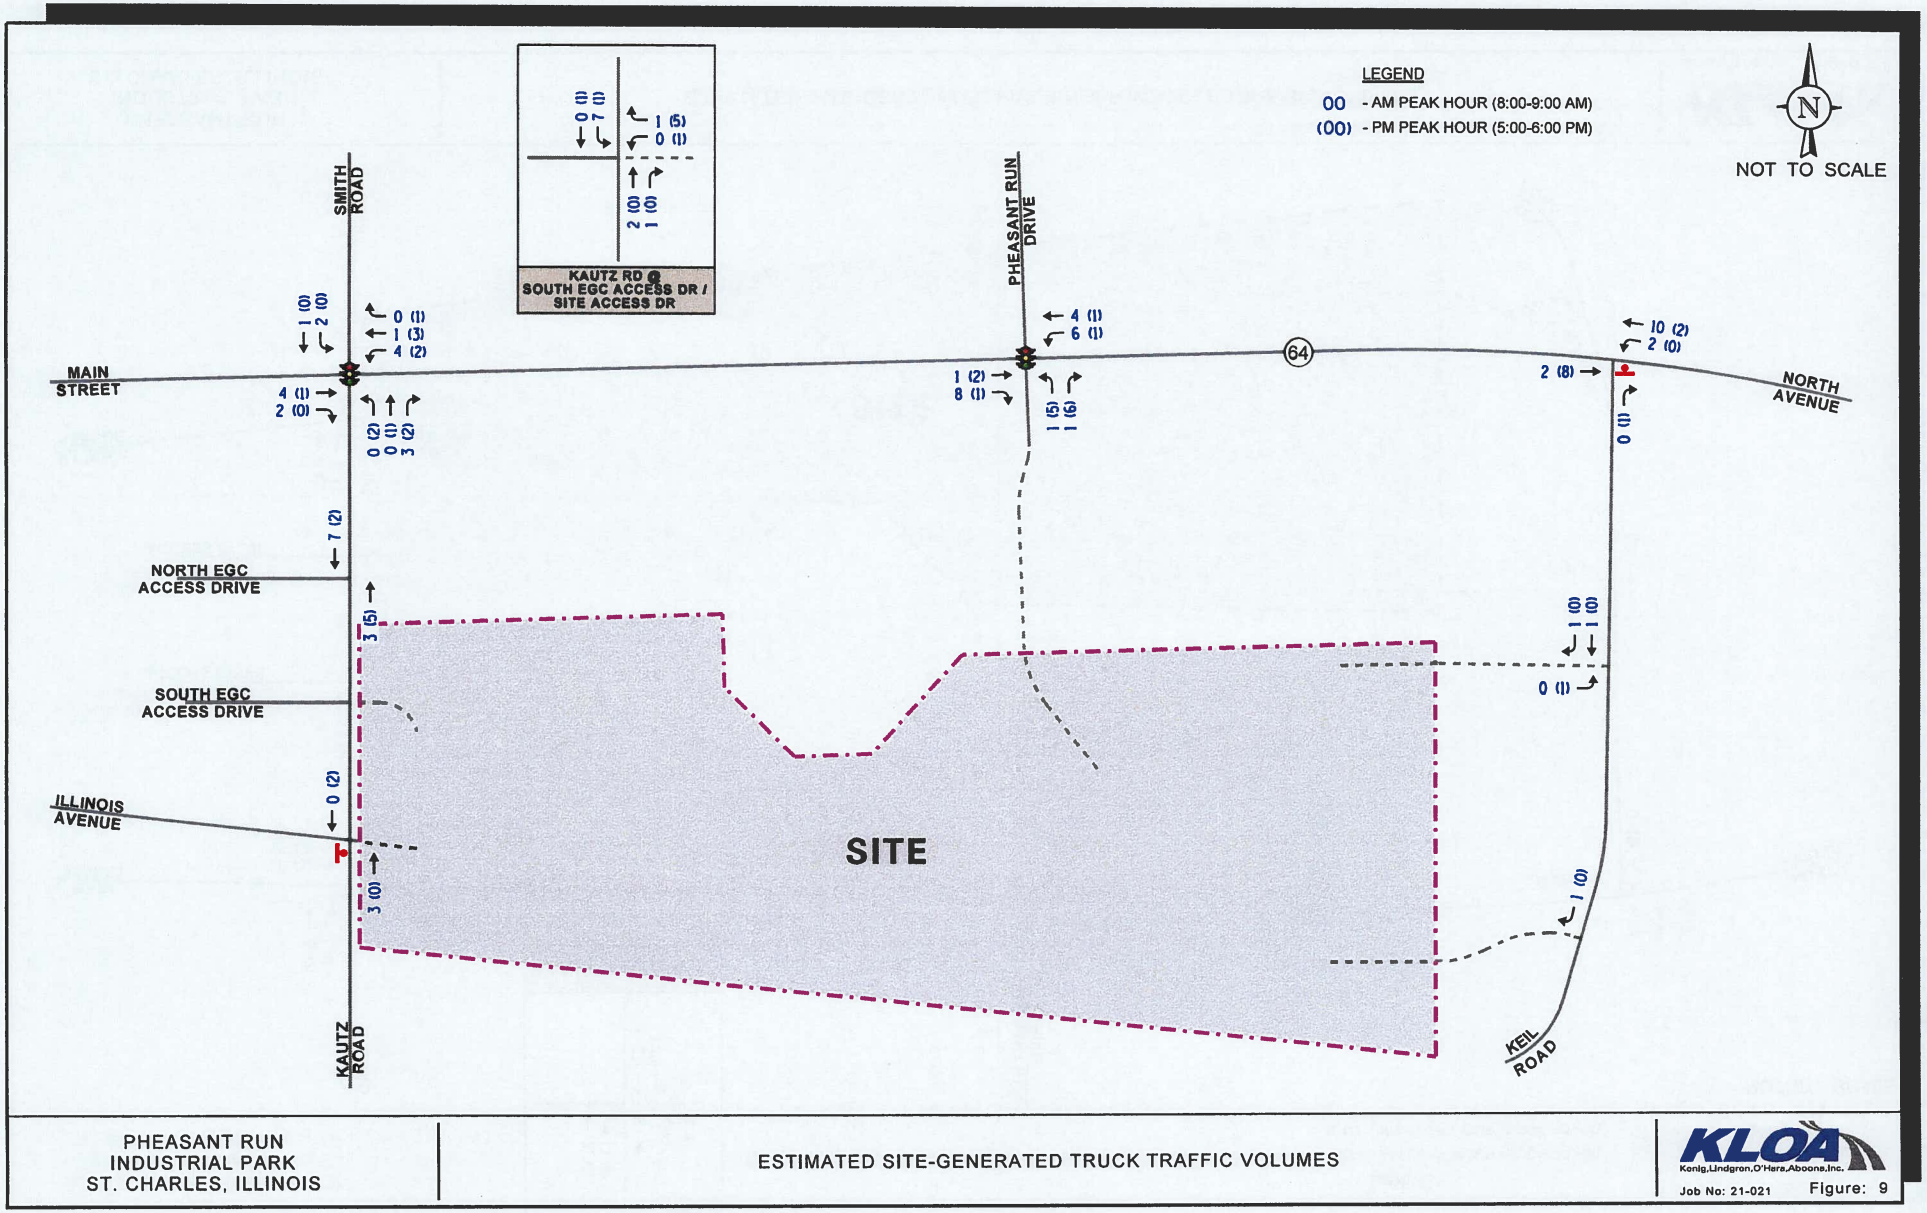


- The under-construction McGrath Auto Dealership to be located in the southeast corner of the intersection of IL 64 with Pheasant Run Drive. As previously indicated, the ultimate buildout of the dealership will consist of three dealership buildings and a maintenance facility totaling 140,880 square feet. Access to the dealership will be provided via Pheasant Run Drive.

- The under-construction Brooke Toria Estates to be located on Smith Road north of IL 64. As proposed, the development will consist of 16 family homes. Access will be provided via Smith Road.

The Year 2027 no-build traffic volumes are illustrated in **Figure 10**.

Total Projected Traffic Volumes



The development-generated traffic (Figures 7 and 8) was added to the Year 2027 No-Build traffic volumes to determine the Year 2027 Total Projected traffic volumes, as shown in **Figure 11**.

5. Traffic Analysis and Recommendations

The following provides an evaluation conducted for the weekday morning and evening peak hours. The analysis includes conducting capacity analyses to determine how well the roadway system and access drives are projected to operate and whether any roadway improvements or modifications are required.

Traffic Analyses

Roadway and adjacent or nearby intersection analyses were performed for the weekday morning and evening peak hours for the Year 2021 base, Year 2027 no-build, and Year 2027 Total Projected traffic volumes.

The traffic analyses were performed using the methodologies outlined in the Transportation Research Board's *Highway Capacity Manual (HCM),* 6th Edition and analyzed using Synchro/SimTraffic 11 software. The analysis for the traffic-signal controlled intersections were accomplished using field measured cycle lengths and phasings to determine the average overall vehicle delay and levels of service.

The analyses for the unsignalized intersections determine the average control delay to vehicles at an intersection. Control delay is the elapsed time from a vehicle joining the queue at a stop sign (includes the time required to decelerate to a stop) until its departure from the stop sign and resumption of free flow speed. The methodology analyzes each intersection approach controlled by a stop sign and considers traffic volumes on all approaches and lane characteristics.

The ability of an intersection to accommodate traffic flow is expressed in terms of level of service, which is assigned a letter from A to F based on the average control delay experienced by vehicles passing through the intersection. The *Highway Capacity Manual* definitions for levels of service and the corresponding control delay for signalized intersections and unsignalized intersections are included in the Appendix of this report.

Summaries of the traffic analysis results showing the level of service and overall intersection delay (measured in seconds) for the projected Year 2021 base, Year 2027 no-build, and Year 2027 total projected conditions are presented in **Tables 4** through **8**. A discussion of each intersection follows. Summary sheets for the capacity analyses are included in the Appendix.

Delay is measured in seconds.

Discussion and Recommendations

The following summarizes how the intersections are projected to operate and identifies any roadway and traffic control improvements necessary to accommodate the warehouse-generated traffic.

IL 64 with Kautz Road and Smith Road

The results of the capacity analysis indicate that overall, this intersection currently operates at Level of Service (LOS) D during the weekday morning peak hour and LOS E during the weekday evening peak hour. Further, eastbound, and westbound through movements on IL 64 operate at LOS C or better during both peak hours. It should be noted that left-turn movements and northbound and southbound through movements at this intersection operate at LOS D to E during both peak hours. This delay is the result of the long cycle length (130 to 150 seconds) and the fact that IL 64 is an SRA and through movements on IL 64 receive a majority of the green time. In addition, the northbound right-turn movement operates at LOS F during both hours. This delay is the result of limited green time and the fact that a northbound overlap phase cannot be provided as westbound U-turns are permitted on IL 64.

Under Year 2027 no-build traffic conditions, this intersection is projected to continue to operate at LOS D during the weekday morning peak hour and LOS E during the weekday evening peak hours.

Under Year 2027 total projected traffic conditions, this intersection is projected to continue to operate at LOS D during the weekday morning peak hour and LOS E during the weekday evening peak hour. Further, through movements on IL 64 are projected to operate at LOS C during both peak hours. Overall, the proposed development will increase the volume of traffic at this intersection by less two to four percent and the traffic estimated to be generated by the proposed development will have a limited impact on the operations of this intersection.

IL 64 with the Pheasant Run Drive

The results of the capacity analysis indicate that overall, this intersection currently operates at LOS A during the weekday morning and weekday evening peak hours. Further, eastbound and westbound through movements operate at LOS A during both peak hours. It should be noted that left-turn movements from the southbound approach at this intersection operate at LOS E to F during both peak hours. This delay is the result of the long cycle length (130 to 150 seconds) and the fact that IL 64 is an SRA and through movements on IL 64 receive a majority of the green time.

Under Year 2027 no-build traffic conditions, the south leg of this intersection will serve the McGarth Automotive Dealership and this intersection is projected to operate at LOS B during both peak hours. Further, eastbound and westbound through movements are projected to operate at LOS B or better during both peak hours and all approaches are projected to operate at the same LOS.

Under Year 2027 total projected conditions, the south leg of this intersection is projected to continue to operate at LOS B during both peak hours. Further, eastbound and westbound through movements are projected to continue to operate at LOS B or better during both peak hours. As with existing conditions, eastbound and westbound left-turn movements are projected to operate at LOS E to F during the peak hours. However, these movements are projected to operate with volume to capacity (v/c) ratios of less than one. In addition, the northbound and southbound approaches are projected to operate at an acceptable LOS D to E during both peak hours. As such, this intersection will be adequate in accommodating the traffic estimated to be generated by the proposed development and the addition of development-generated traffic will not have a significant impact on the operations of IL 64.

IL 64 with Keil Road

The results of the capacity analyses show that the northbound approach at this intersection operates at LOS C during the weekday morning peak hour and LOS D during the weekday evening peak hour. Further, eastbound and westbound left-turn/U-turn movements operate at LOS C or better.

Under Year 2027 no-build traffic conditions, the northbound approach at this intersection is projected to operate at LOS C during the weekday morning peak hour and LOS E during the weekday evening peak hour. Further, eastbound and westbound left-turn/U-turn movements operate at LOS D or better.

Under Year 2027 total projected conditions, Keil Road will carry traffic traveling to and from the site access drives south of this intersection. It should be noted that the development is not projected to increase the volume of northbound left-turn movements at this intersection. The northbound approach at this intersection is projected to operate at LOS C during the weekday morning peak hour and LOS E during the weekday evening peak hour. The westbound left turn is projected to operate at LOS F during the weekday morning peak hour and LOS D during the weekday evening peak hour. However, this movement is projected to operate with a volume to capacity (v/c) ratio of less than one and 95th percentile queues that can be accommodated within the existing turn lane. As such, this intersection will be adequate in accommodating the traffic estimated to be generated by the proposed development and the addition of development-generated will not have a significant impact on the operations of IL 64.

Kautz Road with Illinois Avenue and the South Site Access Drive

The results of the capacity analyses show that the eastbound approach at this intersection operates at LOS B during the weekday morning peak hour and LOS C during the weekday evening peak hour. Further, northbound left-turn movements operate at LOS A during both peak hours. Under Year 2027 no-build traffic conditions, all critical movements are projected to operate at the same LOS.

As proposed, a full movement access drive serving the site will form the fourth (east) leg of this intersection. This access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. As part of the development, the existing striped median on Kautz Road north of Illinois Avenue, which currently accommodates a northbound left-turn lane serving the south EGC access drive, will be restriped to provide a northbound (south EGC access drive) and a southbound (proposed south site access drive) left-turn lane. These turn lanes will provide 130 feet of storage and a 100-foot shared taper. This access drive will serve passenger vehicles only.

Under Year 2027 total projected conditions, westbound movements out of the site are projected to operate at LOS B during the weekday morning peak hour and LOS C during the weekday evening peak hour and eastbound movements from Illinois Avenue are projected to operate at LOS C during both peak hours. Further, the southbound and northbound left-turn movements at this intersection are projected to operate at LOS A during both peak hours with 95th percentile queues of one to two vehicles which can be accommodated within the left-turn lanes. As such, this intersection will be adequate in accommodating the traffic estimated to be generated by the proposed development and the addition of the proposed access drive and development-generated traffic will not have a significant impact on the operations of Kautz Road or Illinois Avenue.

Kautz Road with the North EGC Access Drive

The results of the capacity analyses show that all critical movements at this intersection operate at LOS C or better during the weekday morning and weekday evening peak hours. Under Year 2027 no-build and Year 2027 total projected traffic conditions, all critical movements are projected to continue to operate at LOS C or better. As part of the development the northbound left-turn lane serving this access drive will be shortened to provide 100 feet of storage. As the northbound left-turn movement is projected to operate at LOS A during both peak hours with 95th percentile queues of one to two vehicles, this turn lane will be adequate in accommodating left-turning traffic. As such, this intersection has sufficient reserve capacity to accommodate development-generated traffic.

Kautz Road with the South EGC Access Drive and the North Site Access Drive

The results of the capacity analyses show that the eastbound approach at this intersection operates at LOS B during the weekday morning peak hour and LOS C during the weekday evening peak hour. Further, northbound left-turn movements operate at LOS A during both peak hours. Under Year 2027 no-build traffic conditions, all critical movements are projected to operate at the same LOS.

As proposed, a full movement access drive serving the site will form the fourth (east) leg of this intersection. This access drive will provide one inbound lane and two outbound lanes striped to provide an exclusive left-turn lane and a shared through/right-turn lane. Outbound movements will be under stop sign control. As part of the development, the existing striped median on Kautz Road north of this access drive, which currently accommodates a northbound left-turn lane serving the north EGC access drive, will be restriped to provide a northbound (north EGC access drive) and a southbound (proposed site access drive) left-turn lane. These turn lanes will provide 100 feet of storage for each lane and a 100-foot shared taper. This access drive will serve passenger vehicles and truck traffic.

Under Year 2027 total projected conditions, westbound movements out of the site are projected to operate at LOS B during the weekday morning peak hour and LOS C during the weekday evening peak hour and eastbound movements from the south EGC access drive are projected to operate at LOS C or better during both peak hours. Further, southbound and northbound left-turn movements at this intersection are projected to operate at LOS A during both peak hours with 95th percentile queues of one to two vehicles which can be accommodated within the proposed left-turn lanes. As such, this intersection will be adequate in accommodating the traffic estimated to be generated by the proposed development and the addition of the proposed access drive and development-generated traffic will not have a significant impact on the operations of Kautz Road or the EGC access drive.

6. Conclusion

Based on the preceding analyses and recommendations, the following conclusions have been made:

- The roadway system has sufficient reserve capacity to accommodate the traffic projected to be generated by the proposed development.
- The proposed access system on IL 64, Kautz Road, and Keil Road will be adequate in accommodating the development-generated traffic and will ensure that efficient and flexible access is provided.
- The traffic entering the proposed development off IL 64 will be accommodated by the existing Pheasant Run Drive signalized intersection.
- As part of the development, the striped median on Kautz Road will be restriped to provide southbound left-turn lanes serving the site access drives.
- Outbound movements from the Kautz Road and Keil Road access drives should be under stop sign control.

SHEET 1

ITE Trip Generation Worksheets

Land Use: 110
General Light Industrial

Description

A light industrial facility is a free-standing facility devoted to a single use. The facility has an emphasis on activities other than manufacturing and typically has minimal office space. Typical light industrial activities include printing, material testing, and assembly of data processing equipment. Industrial park (Land Use 130) and manufacturing (Land Use 140) are related uses.

Additional Data

Time-of-day distribution data for this land use are presented in Appendix A. For the 30 general urban/ suburban sites with data, the overall highest vehicle volumes during the AM and PM on a weekday were counted between 7:30 and 8:30 a.m. and 4:30 and 5:30 p.m., respectively.

The sites were surveyed in the 1980s, the 2000s, and the 2010s in Colorado, Connecticut, Indiana, New Jersey, New York, Oregon, Pennsylvania, and Texas.

Source Numbers

July 12, 2021

Andrew Bowen
Traffic Engineer
Kenig, Lindgren, O'Hara and Aboona, Inc.
9575 West Higgins Road
Suite 400
Rosemont, IL 60018

Subject: IL 64 (Main Street) @ Kautz Road/Smith Road
IDOT

Dear Mr. Bowen:

In response to a request made on your behalf and dated July 8, 2021, we have developed year 2050 average daily traffic (ADT) projections for the subject location.

ROAD SEGMENT	Current ADT	Year 2050 ADT
IL 64 (Main St) east of Kautz Rd	32,400	42,000
IL 64 (Main St) west of Kautz Rd	32,900	40,000
Kautz Rd south of IL 64 (Main St)	8,150	11,700
Smith Rd north of IL 64 (Main St)	7,050	8,100

Traffic projections are developed using existing ADT data provided in the request letter and the results from the June 2021 CMAP Travel Demand Analysis. The regional travel model uses CMAP 2050 socioeconomic projections and assumes the implementation of the ON TO 2050 Comprehensive Regional Plan for the Northeastern Illinois area. The provision of this data in support of your request does not constitute a CMAP endorsement of the proposed development or any subsequent developments.

If you have any questions, please call me at (312) 386-8806.

Sincerely,

Jose Rodriguez, PTP, AICP
Senior Planner, Research & Analysis

Level of Service Criteria

LEVEL OF SERVICE CRITERIA

Signalized Intersections		
Level of Service	Interpretation	Average Control Delay (seconds per vehicle)
A	Favorable progression. Most vehicles arrive during the green indication and travel through the intersection without stopping.	≤10
B	Good progression, with more vehicles stopping than for Level of Service A.	>10 - 20
C	Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear. Number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.	>20 - 35
D	The volume-to-capacity ratio is high and either progression is ineffective or the cycle length is too long. Many vehicles stop and individual cycle failures are noticeable.	>35 - 55
E	Progression is unfavorable. The volume-to-capacity ratio is high and the cycle length is long. Individual cycle failures are frequent.	>55 - 80
F	The volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.	>80.0

Unsignalized Intersections	
Level of Service	Average Total Delay (SEC/VEH)
A	0 - 10
B	> 10 - 15
C	> 15 - 25
D	> 25 - 35
E	> 35 - 50
F	> 50

Intersection Summary

Area Type: Other
Cycle Length: 130
Actuated Cycle Length: 130
Offset: 32 (25%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 80
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.07
Intersection Signal Delay: 41.1 Intersection LOS: D
Intersection Capacity Utilization 71.9% ICU Level of Service C
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: Kautz Road/Smith Road & Il 64

Intersection Summary

Area Type: Other
Cycle Length: 130
Actuated Cycle Length: 130
Offset: 59 (45%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 60
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.56
Intersection Signal Delay: 11.7 Intersection LOS: B
Intersection Capacity Utilization 63.1% ICU Level of Service B
Analysis Period (min) 15
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: Pheasant Run & Il 64

Intersection Summary

Area Type: Other
Cycle Length: 130
Actuated Cycle Length: 130
Offset: 32 (25%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 80
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.09
Intersection Signal Delay: 42.0 Intersection LOS: D
Intersection Capacity Utilization 73.2% ICU Level of Service D
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other
Cycle Length: 150
Actuated Cycle Length: 150
Offset: 53 (35%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 1.50
Intersection Signal Delay: 64.6 Intersection LOS: E
Intersection Capacity Utilization 81.3% ICU Level of Service D
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

CITY OF CHICAGO
ECONOMIC DISCLOSURE STATEMENT and AFFIDAVIT
Related to Contract/Amendment/Solicitation
EDS # 172119

SECTION I -- GENERAL INFORMATION

A. Legal name of the Disclosing Party submitting the EDS:

Lakeshore Recycling Systems, LLC

Enter d/b/a if applicable:

Pitstop

The Disclosing Party submitting this EDS is:

the Applicant

B. Business address of the Disclosing Party:

6132 W. Oakton Avenue
Morton Grove, IL 60053
United States

C. Telephone:

847-779-7500

Fax:

D. Name of contact person:

Mr. Scott Jansen

F. Brief description of contract, transaction or other undertaking (referred to below as the "Matter") to which this EDS pertains:

ACCEPTANCE AND PROCESSING OF MUNICIPAL SOLID WASTE DELIVERED BY THE CITY OF CHICAGO AT PRIVATELY OWNED TRANSFER STATIONS

G. Which City agency or department is requesting this EDS?

DEPT OF PROCUREMENT SERVICES

Specification Number

1220861

Contract (PO) Number

151773

Revision Number

0

Release Number

0

User Department Project Number

SECTION II -- DISCLOSURE OF OWNERSHIP INTERESTS

A. NATURE OF THE DISCLOSING PARTY

1. Indicate the nature of the Disclosing Party:

Limited liability company

Is the Disclosing Party incorporated or organized in the State of Illinois?

No

State or foreign country of incorporation or organization:

Delaware

Registered to do business in the State of Illinois as a foreign entity?

Yes

B. DISCLOSING PARTY IS A LEGAL ENTITY:

1.a.2 Does the Disclosing Party have any officers?

Yes

1.a.4 List below the full names and titles of all executive officers of the entity.

Title:	Chief Executive Officer
Officer:	Mr. Alan Handley
Role:	Officer
Title:	Managing Officer
Officer:	Mr. Richard Golf
Role:	Officer
Title:	Managing Officer
Officer:	Mr. Jerry Golf
Role:	Officer
Title:	Managing Officer
Officer:	Mr. Joshua Connell
Role:	Officer

B. CERTIFICATION REGARDING CONTROLLING INTEREST

1.b.1 Are there any individuals who directly or indirectly control the day-to-day management of the Disclosing Party as a general partner, managing member, manager, or other capacity?

No

1.b.3 Are there any legal entities that directly or indirectly control the day-to-day management of the Disclosing Party as a general partner, managing member, manager, or other capacity?

Yes

1.b.4 List all legal entities that function as general partners, managing members, managers, and any others who directly or indirectly control the day-to-day management of the Disclosing Party. Each legal entity listed below must submit an EDS on its own behalf.

Name:	LRS Holdings, LLC
Title:	

Business Address: 6132 Oakton Street
Morton Grove, 60053 United States

---

2. Ownership Information

Please provide ownership information concerning each person or entity that holds, or is anticipated to hold (see next paragraph), a direct or indirect beneficial interest in excess of 7.5% of the Applicant. Examples of such an interest include shares in a corporation, partnership interest in a partnership or joint venture, interest of a member or manager in a limited liability company, or interest of a beneficiary of a trust, estate, or other similar entity. Note: Each legal entity below may be required to submit an EDS on its own behalf.

Please disclose present owners below. Please disclose anticipated owners in an attachment submitted through the "Additional Info" tab. "Anticipated owner" means an individual or entity in existence at the time application for City action is made, which is not an applicant or owner at such time, but which the applicant expects to assume a legal status, within six months of the time the City action occurs, that would render such individual or entity an applicant or owner if they had held such legal status at the time application was made.

SECTION III -- INCOME OR COMPENSATION TO, OR OWNERSHIP BY, CITY ELECTED OFFICIALS

A. Has the Disclosing Party provided any income or compensation to any City elected official during the 12-month period preceding the date of this EDS?

No

B. Does the Disclosing Party reasonably expect to provide any income or compensation to any City elected official during the 12-month period following the date of this EDS?

No

D. Does any City elected official or, to the best of the Disclosing Party's knowledge after reasonable inquiry, any City elected official's spouse or domestic partner, have a financial interest (as defined in Chapter 2-156 of the Municipal Code ("MCC")) in the Disclosing Party?

No

SECTION IV -- DISCLOSURE OF SUBCONTRACTORS AND OTHER RETAINED PARTIES

The Disclosing Party must disclose the name and business address of each subcontractor, attorney, lobbyist (as defined in MCC Chapter 2-156), accountant, consultant and any other person or entity whom the Disclosing Party has retained or

expects to retain in connection with the Matter, as well as the nature of the relationship, and the total amount of the fees paid or estimated to be paid. The Disclosing Party is not required to disclose employees who are paid solely through the Disclosing Party's regular payroll.

If the Disclosing Party is uncertain whether a disclosure is required under this Section, the Disclosing Party must either ask the City whether disclosure is required or make the disclosure.

1. Has the Disclosing Party retained or does it anticipate retaining any legal entities in connection with the Matter?

Yes

2. List below the names of all legal entities which are retained parties.

Name:	E King Construction
Anticipated/Retained:	Retained
Business Address:	3865 W Columbus Avenue 2nd Floor Chicago, IL 60652 United States
Relationship:	Subcontractor - MWDBE
Fees ($$ or %):	10.0%
Estimated/Paid:	Estimated

Name:	DisposAll Waste Services, LLC
Anticipated/Retained:	Retained
Business Address:	5817 W. Ogden Avenue Cicero, IL 60804 United States
Relationship:	Subcontractor - MWDBE
Fees ($$ or %):	5.0%
Estimated/Paid:	Estimated

Name:	Petromex, Inc.
Anticipated/Retained:	Retained
Business Address:	14702 S. Hamlin Avenue Midlothian, IL 60445 United States
Relationship:	Subcontractor - MWDBE
Fees ($$ or %):	7.0%

Estimated/Paid: Estimated

---

3. Has the Disclosing Party retained or does it anticipate retaining any persons in connection with the Matter?

No

SECTION V -- CERTIFICATIONS

A. COURT-ORDERED CHILD SUPPORT COMPLIANCE

Under MCC Section 2-92-415, substantial owners of business entities that contract with the City must remain in compliance with their child support obligations throughout the contract's term.

Has any person who directly or indirectly owns 10% or more of the Disclosing Party been declared in arrearage of any child support obligations by any Illinois court of competent jurisdiction?

No

B. FURTHER CERTIFICATIONS

1. [This certification applies only if the Matter is a contract being handled by the City's Department of Procurement Services.] In the 5-year period preceding the date of this EDS, neither the Disclosing Party nor any Affiliated Entity has engaged, in connection with the performance of any public contract, the services of an integrity monitor, independent private sector inspector general, or integrity compliance consultant (i.e. an individual or entity with legal, auditing, investigative, or other similar skills, designated by a public agency to help the agency monitor the activity of specified agency vendors as well as help the vendors reform their business practices so they can be considered for agency contracts in the future, or continue with a contract in progress).

I certify the above to be true

2. The Disclosing Party and its Affiliated Entities are not delinquent in the payment of any fine, fee, tax or other source of indebtedness owed to the City of Chicago, including, but not limited to, water and sewer charges, license fees, parking tickets, property taxes and sales taxes, nor is the Disclosing Party delinquent in the payment of any tax administered by the Illinois Department of Revenue.

I certify the above to be true

3. The Disclosing Party and, if the Disclosing Party is a legal entity, all of those persons or entities identified in Section II(B)(1) of this EDS:

a. are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from any transactions by any federal, state or local unit of government;
b. have not, during the 5 years before the date of this EDS, been convicted of a criminal offense, adjudged guilty, or had a civil judgment rendered against them in connection with: obtaining, attempting to obtain, or performing a public (federal, state or local) transaction or contract under a public transaction; a violation of federal or state antitrust statutes; fraud; embezzlement; theft; forgery; bribery; falsification or destruction of records; making false statements; or receiving stolen property;
c. are not presently indicted for, or criminally or civilly charged by, a governmental entity (federal, state or local) with committing any of the offenses set forth in subparagraph (b) above;
d. have not, during the 5 years before the date of this EDS, had one or more public transactions (federal, state or local) terminated for cause or default; and
e. have not, during the 5 years before the date of this EDS, been convicted, adjudged guilty, or found liable in a civil proceeding, or in any criminal or civil action, including actions concerning environmental violations, instituted by the City or by the federal government, any state, or any other unit of local government.

I certify the above to be true

4. The Disclosing Party understands and shall comply with the applicable requirements of MCC Chapter 2-56 (Inspector General) and Chapter 2-156 (Governmental Ethics).

I certify the above to be true

5. Neither the Disclosing Party, nor any Contractor, nor any Affiliated Entity of either the Disclosing Party or any Contractor, nor any Agents have, during the 5 years before the date of this EDS, or, with respect to a Contractor, an Affiliated Entity, or an Affiliated Entity of a Contractor during the 5 years before the date of such Contractor's or Affiliated Entity's contract or engagement in connection with the Matter:

a. bribed or attempted to bribe, or been convicted or adjudged guilty of bribery or attempting to bribe, a public officer or employee of the City, the State of Illinois, or any agency of the federal government or of any state or local government in the United States of America, in that officer's or employee's official capacity;
b. agreed or colluded with other bidders or prospective bidders, or been a party to any such agreement, or been convicted or adjudged guilty of agreement or collusion among bidders or prospective bidders, in restraint of freedom of competition by agreement to bid a fixed price or otherwise; or
c. made an admission of such conduct described in subparagraph (a) or (b) above that is a matter of record, but have not been prosecuted for such conduct; or

d. violated the provisions referenced in MCC Subsection 2-92-320(a)(4)(Contracts Requiring a Base Wage); (a)(5)(Debarment Regulations); or (a)(6)(Minimum Wage Ordinance).

I certify the above to be true

6. Neither the Disclosing Party, nor any Affiliated Entity or Contractor, or any of their employees, officials, agents or partners, is barred from contracting with any unit of state or local government as a result of engaging in or being convicted of

- bid-rigging in violation of 720 ILCS 5/33E-3;
- bid-rotating in violation of 720 ILCS 5/33E-4; or
- any similar offense of any state or of the United States of America that contains the same elements as the offense of bid-rigging or bid-rotating.

I certify the above to be true

7. Neither the Disclosing Party nor any Affiliated Entity is listed on a Sanctions List maintained by the United States Department of Commerce, State, or Treasury, or any successor federal agency.

I certify the above to be true

8. [FOR APPLICANT ONLY]

i. Neither the Applicant nor any "controlling person" [see MCC Chapter 1-23, Article I for applicability and defined terms] of the Applicant is currently indicted or charged with, or has admitted guilt of, or has ever been convicted of, or placed under supervision for, any criminal offense involving actual, attempted, or conspiracy to commit bribery, theft, fraud, forgery, perjury, dishonesty or deceit against an officer or employee of the City or any "sister agency" ; and
ii. the Applicant understands and acknowledges that compliance with Article I is a continuing requirement for doing business with the City.

NOTE: If MCC Chapter 1-23, Article I applies to the Applicant, that Article's permanent compliance timeframe supersedes 5-year compliance timeframes in this Section V.

I certify the above to be true

9. [FOR APPLICANT ONLY] The Applicant and its Affiliated Entities will not use, nor permit their subcontractors to use, any facility listed as having an active exclusion by the U.S. EPA on the federal System for Award Management ("SAM")

I certify the above to be true

10. [FOR APPLICANT ONLY] The Applicant will obtain from any contractors/ subcontractors hired or to be hired in connection with the Matter certifications equal in

form and substance to those in Certifications (2) and (9) above and will not, without the prior written consent of the City, use any such contractor/subcontractor that does not provide such certifications or that the Applicant has reason to believe has not provided or cannot provide truthful certifications.

I certify the above to be true

11. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all current employees of the Disclosing Party who were, at any time during the 12-month period preceding the date of this EDS, an employee, or elected or appointed official, of the City of Chicago.

None

12. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all gifts that the Disclosing Party has given or caused to be given, at any time during the 12-month period preceding the execution date of this EDS, to an employee, or elected or appointed official, of the City of Chicago. For purposes of this statement, a "gift" does not include: (i) anything made generally available to City employees or to the general public, or (ii) food or drink provided in the course of official City business and having a retail value of less than $25 per recipient, or (iii) a political contribution otherwise duly reported as required by law.

None

C. CERTIFICATION OF STATUS AS FINANCIAL INSTITUTION

The Disclosing Party certifies, as defined in MCC Section 2-32-455(b), the Disclosing Party

is not a "financial institution"

D. CERTIFICATION REGARDING FINANCIAL INTEREST IN CITY BUSINESS

Any words or terms defined in MCC Chapter 2-156 have the same meanings if used in this Part D.

1. In accordance with MCC Section 2-156-110: To the best of the Disclosing Party's knowledge after reasonable inquiry, does any official or employee of the City have a financial interest in his or her own name or in the name of any other person or entity in the Matter?

No

E. CERTIFICATION REGARDING SLAVERY ERA BUSINESS

If the Disclosing Party cannot make this verification, the Disclosing Party must disclose all required information in the space provided below or in an attachment in the "Additional Info" tab. Failure to comply with these disclosure requirements may make any contract entered into with the City in connection with the Matter voidable by the City.

The Disclosing Party verifies that the Disclosing Party has searched any and all records of the Disclosing Party and any and all predecessor entities regarding records of investments or profits from slavery or slaveholder insurance policies during the slavery era (including insurance policies issued to slaveholders that provided coverage for damage to or injury or death of their slaves), and the Disclosing Party has found no such records.

I can make the above verification

SECTION VI -- CERTIFICATIONS FOR FEDERALLY FUNDED MATTERS

Is the Matter federally funded? For the purposes of this Section VI, tax credits allocated by the City and proceeds of debt obligations of the City are not federal funding.

No

SECTION VII - FURTHER ACKNOWLEDGMENTS AND CERTIFICATION

The Disclosing Party understands and agrees that:

A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.

B. The City's Governmental Ethics Ordinance, MCC Chapter 2-156, imposes certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. The full text of this ordinance and a training program is available on line at www.cityofchicago.org/Ethics, and may also be obtained from the City's Board of Ethics, 740 N. Sedgwick St., Suite 500, Chicago, IL 60610, (312) 744-9660. The Disclosing Party must comply fully with this ordinance.

I acknowledge and consent to the above

The Disclosing Party understands and agrees that:

C. If the City determines that any information provided in this EDS is false, incomplete or inaccurate, any contract or other agreement in connection with which it is submitted may be rescinded or be void or voidable, and the City may pursue any remedies under the contract or agreement (if not rescinded or void), at law, or in equity, including terminating the Disclosing Party's participation in the Matter and/ or declining to allow the Disclosing Party to participate in other City transactions. Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.

D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided in, and appended to, this EDS may be made publicly available on the Internet, in response to a Freedom of Information Act request, or otherwise. By completing and signing this EDS, the Disclosing Party waives and releases any possible rights or claims which it may have against the City in connection with the public release of information contained in this EDS and also authorizes the City to verify the accuracy of any information submitted in this EDS.

E. The information provided in this EDS must be kept current. In the event of changes, the Disclosing Party must supplement this EDS up to the time the City takes action on the Matter. If the Matter is a contract being handled by the City's Department of Procurement Services, the Disclosing Party must update this EDS as the contract requires. NOTE: With respect to Matters subject to MCC Chapter 1-23, Article I (imposing PERMANENT INELIGIBILITY for certain specified offenses), the information provided herein regarding eligibility must be kept current for a longer period, as required by MCC Chapter 1-23 and Section 2-154-020.

I acknowledge and consent to the above

APPENDIX A - FAMILIAL RELATIONSHIPS WITH ELECTED CITY OFFICIALS AND DEPARTMENT HEADS

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5%. It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

Under MCC Section 2-154-015, the Disclosing Party must disclose whether such Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently has a "familial relationship" with any elected city official or department head. A "familial relationship" exists if, as of the date this EDS is signed, the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof is related to the mayor, any alderman, the city clerk, the city treasurer or any city department head as spouse or domestic partner or as any of the following, whether by blood or adoption: parent, child, brother or sister, aunt or uncle, niece or nephew, grandparent, grandchild,

father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather or stepmother, stepson or stepdaughter, stepbrother or stepsister or half-brother or half-sister.

"Applicable Party" means (1) all executive officers of the Disclosing Party listed in Section II.B.1.a, if the Disclosing Party is a corporation; all partners of the Disclosing Party, if the Disclosing Party is a general partnership; all general partners and limited partners of the Disclosing Party, if the Disclosing Party is a limited partnership; all managers, managing members and members of the Disclosing Party, if the Disclosing Party is a limited liability company; (2) all principal officers of the Disclosing Party; and (3) any person having more than a 7.5% ownership interest in the Disclosing Party. "Principal officers" means the president, chief operating officer, executive director, chief financial officer, treasurer or secretary of a legal entity or any person exercising similar authority.

Does the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently have a "familial relationship" with an elected city official or department head?

No

APPENDIX B - BUILDING CODE SCOFFLAW/PROBLEM LANDLORD CERTIFICATION

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5% (an "Owner"). It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

1. Pursuant to MCC Section 2-154-010, is the Applicant or any Owner identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

No

APPENDIX C-PROHIBITION ON WAGE & SALARY HISTORY SCREENING

This Appendix is to be completed only by an Applicant that is completing this EDS as a "contractor" as defined in MCC Section 2-92-385. That section, which should be consulted (www.amlegal.com), generally covers a party to any agreement pursuant to which they: (i) receive City of Chicago funds in consideration for services, work or goods provided (including for legal or other professional services), or (ii) pay the City money for a license, grant or concession allowing them to conduct a business on City premises.

On behalf of an Applicant that is a contractor pursuant to MCC Section 2-92-385, I hereby certify that the Applicant is in compliance with MCC Section 2-92-385(b)(1) and (2), which prohibit: (i) screening job applicants based on their wage or salary history, or (ii) seeking job applicants' wage or salary history from current or former employers. I also certify that the Applicant has adopted a policy that includes those prohibitions.

This certification shall serve as the affidavit required by MCC Section 2-92-385(c)(1).

Yes

ADDITIONAL INFO

Please add any additional explanatory information here. If explanation is longer than 1000 characters, you may add an attachment below. Please note that your EDS, including all attachments, becomes available for public viewing upon contract award. Your attachments will be viewable "as is" without manual redaction by the City. You are responsible for redacting any non-public information from your documents before uploading.

List of vendor attachments uploaded by City staff

None.

List of attachments uploaded by vendor

None.

CERTIFICATION

Under penalty of perjury, the person signing below: (1) warrants that he/she is authorized to execute this EDS, and all applicable appendices, on behalf of the Disclosing Party, and (2) warrants that all certifications and statements contained in this EDS, and all applicable appendices, are true, accurate and complete as of the date furnished to the City. Submission of this form constitutes making the oath associated with notarization.

MIP V Onion Parent, LLC	125 West 55th Street Level 15 New York City, NY United States
MIP V Onion-Blocker, LLC	125 W. 55th St. Level 15 New York, NY United States

SECTION III -- INCOME OR COMPENSATION TO, OR OWNERSHIP BY, CITY ELECTED OFFICIALS

A. Has the Disclosing Party provided any income or compensation to any City elected official during the 12-month period preceding the date of this EDS?

No

B. Does the Disclosing Party reasonably expect to provide any income or compensation to any City elected official during the 12-month period following the date of this EDS?

No

D. Does any City elected official or, to the best of the Disclosing Party's knowledge after reasonable inquiry, any City elected official's spouse or domestic partner, have a financial interest (as defined in Chapter 2-156 of the Municipal Code ("MCC")) in the Disclosing Party?

No

SECTION V -- CERTIFICATIONS

A. COURT-ORDERED CHILD SUPPORT COMPLIANCE

Under MCC Section 2-92-415, substantial owners of business entities that contract with the City must remain in compliance with their child support obligations throughout the contract's term.

Has any person who directly or indirectly owns 10% or more of the Disclosing Party been declared in arrearage of any child support obligations by any Illinois court of competent jurisdiction?

No

B. FURTHER CERTIFICATIONS

1. [This certification applies only if the Matter is a contract being handled by the City's Department of Procurement Services.] In the 5-year period preceding the date of this EDS, neither the Disclosing Party nor any Affiliated Entity has engaged, in connection with the performance of any public contract, the services of an integrity monitor, independent private sector inspector general, or integrity compliance consultant (i.e. an individual or entity with legal, auditing, investigative, or other similar skills, designated by a public agency to help the agency monitor the activity of specified agency vendors as well as help the vendors reform their business practices so they can be considered for agency contracts in the future, or continue with a contract in progress).

I certify the above to be true

2. The Disclosing Party and its Affiliated Entities are not delinquent in the payment of any fine, fee, tax or other source of indebtedness owed to the City of Chicago, including, but not limited to, water and sewer charges, license fees, parking tickets, property taxes and sales taxes, nor is the Disclosing Party delinquent in the payment of any tax administered by the Illinois Department of Revenue.

I certify the above to be true

3. The Disclosing Party and, if the Disclosing Party is a legal entity, all of those persons or entities identified in Section II(B)(1) of this EDS:

a. are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from any transactions by any federal, state or local unit of government;
b. have not, during the 5 years before the date of this EDS, been convicted of a criminal offense, adjudged guilty, or had a civil judgment rendered against them in connection with: obtaining, attempting to obtain, or performing a public (federal, state or local) transaction or contract under a public transaction; a violation of federal or state antitrust statutes; fraud; embezzlement; theft; forgery; bribery; falsification or destruction of records; making false statements; or receiving stolen property;
c. are not presently indicted for, or criminally or civilly charged by, a governmental entity (federal, state or local) with committing any of the offenses set forth in subparagraph (b) above;
d. have not, during the 5 years before the date of this EDS, had one or more public transactions (federal, state or local) terminated for cause or default; and
e. have not, during the 5 years before the date of this EDS, been convicted, adjudged guilty, or found liable in a civil proceeding, or in any criminal or civil action, including actions concerning environmental violations, instituted by the City or by the federal government, any state, or any other unit of local government.

I certify the above to be true

4. The Disclosing Party understands and shall comply with the applicable requirements of MCC Chapter 2-56 (Inspector General) and Chapter 2-156 (Governmental Ethics).

I certify the above to be true

5. Neither the Disclosing Party, nor any Contractor, nor any Affiliated Entity of either the Disclosing Party or any Contractor, nor any Agents have, during the 5 years before the date of this EDS, or, with respect to a Contractor, an Affiliated Entity, or an Affiliated Entity of a Contractor during the 5 years before the date of such Contractor's or Affiliated Entity's contract or engagement in connection with the Matter:

a. bribed or attempted to bribe, or been convicted or adjudged guilty of bribery or attempting to bribe, a public officer or employee of the City, the State of Illinois, or any agency of the federal government or of any state or local government in the United States of America, in that officer's or employee's official capacity;
b. agreed or colluded with other bidders or prospective bidders, or been a party to any such agreement, or been convicted or adjudged guilty of agreement or collusion among bidders or prospective bidders, in restraint of freedom of competition by agreement to bid a fixed price or otherwise; or
c. made an admission of such conduct described in subparagraph (a) or (b) above that is a matter of record, but have not been prosecuted for such conduct; or
d. violated the provisions referenced in MCC Subsection 2-92-320(a)(4)(Contracts Requiring a Base Wage); (a)(5)(Debarment Regulations); or (a)(6)(Minimum Wage Ordinance).

I certify the above to be true

6. Neither the Disclosing Party, nor any Affiliated Entity or Contractor, or any of their employees, officials, agents or partners, is barred from contracting with any unit of state or local government as a result of engaging in or being convicted of

- bid-rigging in violation of 720 ILCS 5/33E-3;
- bid-rotating in violation of 720 ILCS 5/33E-4; or
- any similar offense of any state or of the United States of America that contains the same elements as the offense of bid-rigging or bid-rotating.

I certify the above to be true

7. Neither the Disclosing Party nor any Affiliated Entity is listed on a Sanctions List maintained by the United States Department of Commerce, State, or Treasury, or any successor federal agency.

I certify the above to be true

11. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all current employees of the Disclosing Party who were, at

any time during the 12-month period preceding the date of this EDS, an employee, or elected or appointed official, of the City of Chicago.

None

12. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all gifts that the Disclosing Party has given or caused to be given, at any time during the 12-month period preceding the execution date of this EDS, to an employee, or elected or appointed official, of the City of Chicago. For purposes of this statement, a "gift" does not include: (i) anything made generally available to City employees or to the general public, or (ii) food or drink provided in the course of official City business and having a retail value of less than $25 per recipient, or (iii) a political contribution otherwise duly reported as required by law.

None

C. CERTIFICATION OF STATUS AS FINANCIAL INSTITUTION

The Disclosing Party certifies, as defined in MCC Section 2-32-455(b), the Disclosing Party

is not a "financial institution"

E. CERTIFICATION REGARDING SLAVERY ERA BUSINESS

If the Disclosing Party cannot make this verification, the Disclosing Party must disclose all required information in the space provided below or in an attachment in the "Additional Info" tab. Failure to comply with these disclosure requirements may make any contract entered into with the City in connection with the Matter voidable by the City.

The Disclosing Party verifies that the Disclosing Party has searched any and all records of the Disclosing Party and any and all predecessor entities regarding records of investments or profits from slavery or slaveholder insurance policies during the slavery era (including insurance policies issued to slaveholders that provided coverage for damage to or injury or death of their slaves), and the Disclosing Party has found no such records.

I can make the above verification

SECTION VII - FURTHER ACKNOWLEDGMENTS AND CERTIFICATION

The Disclosing Party understands and agrees that:

A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the

City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.

B. The City's Governmental Ethics Ordinance, MCC Chapter 2-156, imposes certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. The full text of this ordinance and a training program is available on line at www.cityofchicago.org/Ethics, and may also be obtained from the City's Board of Ethics, 740 N. Sedgwick St., Suite 500, Chicago, IL 60610, (312) 744-9660. The Disclosing Party must comply fully with this ordinance.

I acknowledge and consent to the above

The Disclosing Party understands and agrees that:

C. If the City determines that any information provided in this EDS is false, incomplete or inaccurate, any contract or other agreement in connection with which it is submitted may be rescinded or be void or voidable, and the City may pursue any remedies under the contract or agreement (if not rescinded or void), at law, or in equity, including terminating the Disclosing Party's participation in the Matter and/ or declining to allow the Disclosing Party to participate in other City transactions. Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.

D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided in, and appended to, this EDS may be made publicly available on the Internet, in response to a Freedom of Information Act request, or otherwise. By completing and signing this EDS, the Disclosing Party waives and releases any possible rights or claims which it may have against the City in connection with the public release of information contained in this EDS and also authorizes the City to verify the accuracy of any information submitted in this EDS.

E. The information provided in this EDS must be kept current. In the event of changes, the Disclosing Party must supplement this EDS up to the time the City takes action on the Matter. If the Matter is a contract being handled by the City's Department of Procurement Services, the Disclosing Party must update this EDS as the contract requires. NOTE: With respect to Matters subject to MCC Chapter 1-23, Article I (imposing PERMANENT INELIGIBILITY for certain specified offenses), the information provided herein regarding eligibility must be kept current for a longer period, as required by MCC Chapter 1-23 and Section 2-154-020.

I acknowledge and consent to the above

APPENDIX A - FAMILIAL RELATIONSHIPS WITH ELECTED CITY OFFICIALS AND DEPARTMENT HEADS

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5%. It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

Under MCC Section 2-154-015, the Disclosing Party must disclose whether such Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently has a "familial relationship" with any elected city official or department head. A "familial relationship" exists if, as of the date this EDS is signed, the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof is related to the mayor, any alderman, the city clerk, the city treasurer or any city department head as spouse or domestic partner or as any of the following, whether by blood or adoption: parent, child, brother or sister, aunt or uncle, niece or nephew, grandparent, grandchild, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather or stepmother, stepson or stepdaughter, stepbrother or stepsister or half-brother or half-sister.

"Applicable Party" means (1) all executive officers of the Disclosing Party listed in Section II.B.1.a, if the Disclosing Party is a corporation; all partners of the Disclosing Party, if the Disclosing Party is a general partnership; all general partners and limited partners of the Disclosing Party, if the Disclosing Party is a limited partnership; all managers, managing members and members of the Disclosing Party, if the Disclosing Party is a limited liability company; (2) all principal officers of the Disclosing Party; and (3) any person having more than a 7.5% ownership interest in the Disclosing Party. "Principal officers" means the president, chief operating officer, executive director, chief financial officer, treasurer or secretary of a legal entity or any person exercising similar authority.

Does the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently have a "familial relationship" with an elected city official or department head?

No

APPENDIX B - BUILDING CODE SCOFFLAW/PROBLEM LANDLORD CERTIFICATION

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5% (an "Owner"). It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

1. Pursuant to MCC Section 2-154-010, is the Applicant or any Owner identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

No

ADDITIONAL INFO

Please add any additional explanatory information here. If explanation is longer than 1000 characters, you may add an attachment below. Please note that your EDS, including all attachments, becomes available for public viewing upon contract award. Your attachments will be viewable "as is" without manual redaction by the City. You are responsible for redacting any non-public information from your documents before uploading.

List of attachments uploaded by vendor

None.

CERTIFICATION

Under penalty of perjury, the person signing below: (1) warrants that he/she is authorized to execute this EDS, and all applicable appendices, on behalf of the Disclosing Party, and (2) warrants that all certifications and statements contained in this EDS, and all applicable appendices, are true, accurate and complete as of the date furnished to the City. Submission of this form constitutes making the oath associated with notarization.

SECTION III -- INCOME OR COMPENSATION TO, OR OWNERSHIP BY, CITY ELECTED OFFICIALS

A. Has the Disclosing Party provided any income or compensation to any City elected official during the 12-month period preceding the date of this EDS?

No

B. Does the Disclosing Party reasonably expect to provide any income or compensation to any City elected official during the 12-month period following the date of this EDS?

No

D. Does any City elected official or, to the best of the Disclosing Party's knowledge after reasonable inquiry, any City elected official's spouse or domestic partner, have a financial interest (as defined in Chapter 2-156 of the Municipal Code ("MCC")) in the Disclosing Party?

No

SECTION V -- CERTIFICATIONS

A. COURT-ORDERED CHILD SUPPORT COMPLIANCE

Under MCC Section 2-92-415, substantial owners of business entities that contract with the City must remain in compliance with their child support obligations throughout the contract's term.

Has any person who directly or indirectly owns 10% or more of the Disclosing Party been declared in arrearage of any child support obligations by any Illinois court of competent jurisdiction?

No

B. FURTHER CERTIFICATIONS

1. [This certification applies only if the Matter is a contract being handled by the City's Department of Procurement Services.] In the 5-year period preceding the date of this EDS, neither the Disclosing Party nor any Affiliated Entity has engaged, in connection with the performance of any public contract, the services of an integrity monitor, independent private sector inspector general, or integrity compliance consultant (i.e. an individual or entity with legal, auditing, investigative, or other similar skills, designated by

a public agency to help the agency monitor the activity of specified agency vendors as well as help the vendors reform their business practices so they can be considered for agency contracts in the future, or continue with a contract in progress).

I certify the above to be true

2. The Disclosing Party and its Affiliated Entities are not delinquent in the payment of any fine, fee, tax or other source of indebtedness owed to the City of Chicago, including, but not limited to, water and sewer charges, license fees, parking tickets, property taxes and sales taxes, nor is the Disclosing Party delinquent in the payment of any tax administered by the Illinois Department of Revenue.

I certify the above to be true

3. The Disclosing Party and, if the Disclosing Party is a legal entity, all of those persons or entities identified in Section II(B)(1) of this EDS:

a. are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from any transactions by any federal, state or local unit of government;
b. have not, during the 5 years before the date of this EDS, been convicted of a criminal offense, adjudged guilty, or had a civil judgment rendered against them in connection with: obtaining, attempting to obtain, or performing a public (federal, state or local) transaction or contract under a public transaction; a violation of federal or state antitrust statutes; fraud; embezzlement; theft; forgery; bribery; falsification or destruction of records; making false statements; or receiving stolen property;
c. are not presently indicted for, or criminally or civilly charged by, a governmental entity (federal, state or local) with committing any of the offenses set forth in subparagraph (b) above;
d. have not, during the 5 years before the date of this EDS, had one or more public transactions (federal, state or local) terminated for cause or default; and
e. have not, during the 5 years before the date of this EDS, been convicted, adjudged guilty, or found liable in a civil proceeding, or in any criminal or civil action, including actions concerning environmental violations, instituted by the City or by the federal government, any state, or any other unit of local government.

I certify the above to be true

4. The Disclosing Party understands and shall comply with the applicable requirements of MCC Chapter 2-56 (Inspector General) and Chapter 2-156 (Governmental Ethics).

I certify the above to be true

5. Neither the Disclosing Party, nor any Contractor, nor any Affiliated Entity of either the Disclosing Party or any Contractor, nor any Agents have, during the 5 years

before the date of this EDS, or, with respect to a Contractor, an Affiliated Entity, or an Affiliated Entity of a Contractor during the 5 years before the date of such Contractor's or Affiliated Entity's contract or engagement in connection with the Matter:

a. bribed or attempted to bribe, or been convicted or adjudged guilty of bribery or attempting to bribe, a public officer or employee of the City, the State of Illinois, or any agency of the federal government or of any state or local government in the United States of America, in that officer's or employee's official capacity;
b. agreed or colluded with other bidders or prospective bidders, or been a party to any such agreement, or been convicted or adjudged guilty of agreement or collusion among bidders or prospective bidders, in restraint of freedom of competition by agreement to bid a fixed price or otherwise; or
c. made an admission of such conduct described in subparagraph (a) or (b) above that is a matter of record, but have not been prosecuted for such conduct; or
d. violated the provisions referenced in MCC Subsection 2-92-320(a)(4)(Contracts Requiring a Base Wage); (a)(5)(Debarment Regulations); or (a)(6)(Minimum Wage Ordinance).

I certify the above to be true

6. Neither the Disclosing Party, nor any Affiliated Entity or Contractor, or any of their employees, officials, agents or partners, is barred from contracting with any unit of state or local government as a result of engaging in or being convicted of

- bid-rigging in violation of 720 ILCS 5/33E-3;
- bid-rotating in violation of 720 ILCS 5/33E-4; or
- any similar offense of any state or of the United States of America that contains the same elements as the offense of bid-rigging or bid-rotating.

I certify the above to be true

7. Neither the Disclosing Party nor any Affiliated Entity is listed on a Sanctions List maintained by the United States Department of Commerce, State, or Treasury, or any successor federal agency.

I certify the above to be true

11. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all current employees of the Disclosing Party who were, at any time during the 12-month period preceding the date of this EDS, an employee, or elected or appointed official, of the City of Chicago.

None

12. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all gifts that the Disclosing Party has given or caused to be

given, at any time during the 12-month period preceding the execution date of this EDS, to an employee, or elected or appointed official, of the City of Chicago. For purposes of this statement, a "gift" does not include: (i) anything made generally available to City employees or to the general public, or (ii) food or drink provided in the course of official City business and having a retail value of less than $25 per recipient, or (iii) a political contribution otherwise duly reported as required by law.

None

C. CERTIFICATION OF STATUS AS FINANCIAL INSTITUTION

The Disclosing Party certifies, as defined in MCC Section 2-32-455(b), the Disclosing Party

is not a "financial institution"

E. CERTIFICATION REGARDING SLAVERY ERA BUSINESS

If the Disclosing Party cannot make this verification, the Disclosing Party must disclose all required information in the space provided below or in an attachment in the "Additional Info" tab. Failure to comply with these disclosure requirements may make any contract entered into with the City in connection with the Matter voidable by the City.

The Disclosing Party verifies that the Disclosing Party has searched any and all records of the Disclosing Party and any and all predecessor entities regarding records of investments or profits from slavery or slaveholder insurance policies during the slavery era (including insurance policies issued to slaveholders that provided coverage for damage to or injury or death of their slaves), and the Disclosing Party has found no such records.

I can make the above verification

SECTION VII - FURTHER ACKNOWLEDGMENTS AND CERTIFICATION

The Disclosing Party understands and agrees that:

A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.

B. The City's Governmental Ethics Ordinance, MCC Chapter 2-156, imposes certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. The full text of this ordinance and a training program is available on line at www.cityofchicago.org/Ethics, and may also be obtained from the City's Board of Ethics, 740 N. Sedgwick St., Suite 500, Chicago, IL 60610, (312) 744-9660. The Disclosing Party must comply fully with this ordinance.

I acknowledge and consent to the above

The Disclosing Party understands and agrees that:

C. If the City determines that any information provided in this EDS is false, incomplete or inaccurate, any contract or other agreement in connection with which it is submitted may be rescinded or be void or voidable, and the City may pursue any remedies under the contract or agreement (if not rescinded or void), at law, or in equity, including terminating the Disclosing Party's participation in the Matter and/ or declining to allow the Disclosing Party to participate in other City transactions. Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.

D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided in, and appended to, this EDS may be made publicly available on the Internet, in response to a Freedom of Information Act request, or otherwise. By completing and signing this EDS, the Disclosing Party waives and releases any possible rights or claims which it may have against the City in connection with the public release of information contained in this EDS and also authorizes the City to verify the accuracy of any information submitted in this EDS.

E. The information provided in this EDS must be kept current. In the event of changes, the Disclosing Party must supplement this EDS up to the time the City takes action on the Matter. If the Matter is a contract being handled by the City's Department of Procurement Services, the Disclosing Party must update this EDS as the contract requires. NOTE: With respect to Matters subject to MCC Chapter 1-23, Article I (imposing PERMANENT INELIGIBILITY for certain specified offenses), the information provided herein regarding eligibility must be kept current for a longer period, as required by MCC Chapter 1-23 and Section 2-154-020.

I acknowledge and consent to the above

APPENDIX A - FAMILIAL RELATIONSHIPS WITH ELECTED CITY OFFICIALS AND DEPARTMENT HEADS

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5%. It is not to

be completed by any legal entity which has only an indirect ownership interest in the Applicant.

Under MCC Section 2-154-015, the Disclosing Party must disclose whether such Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently has a "familial relationship" with any elected city official or department head. A "familial relationship" exists if, as of the date this EDS is signed, the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof is related to the mayor, any alderman, the city clerk, the city treasurer or any city department head as spouse or domestic partner or as any of the following, whether by blood or adoption: parent, child, brother or sister, aunt or uncle, niece or nephew, grandparent, grandchild, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather or stepmother, stepson or stepdaughter, stepbrother or stepsister or half-brother or half-sister.

"Applicable Party" means (1) all executive officers of the Disclosing Party listed in Section II.B.1.a, if the Disclosing Party is a corporation; all partners of the Disclosing Party, if the Disclosing Party is a general partnership; all general partners and limited partners of the Disclosing Party, if the Disclosing Party is a limited partnership; all managers, managing members and members of the Disclosing Party, if the Disclosing Party is a limited liability company; (2) all principal officers of the Disclosing Party; and (3) any person having more than a 7.5% ownership interest in the Disclosing Party. "Principal officers" means the president, chief operating officer, executive director, chief financial officer, treasurer or secretary of a legal entity or any person exercising similar authority.

Does the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently have a "familial relationship" with an elected city official or department head?

No

APPENDIX B - BUILDING CODE SCOFFLAW/PROBLEM LANDLORD CERTIFICATION

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5% (an "Owner"). It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

1. Pursuant to MCC Section 2-154-010, is the Applicant or any Owner identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

No

ADDITIONAL INFO

Please add any additional explanatory information here. If explanation is longer than 1000 characters, you may add an attachment below. Please note that your EDS, including all attachments, becomes available for public viewing upon contract award. Your attachments will be viewable "as is" without manual redaction by the City. You are responsible for redacting any non-public information from your documents before uploading.

No EIN # - entity is disregarded for tax purposes.

List of attachments uploaded by vendor

None.

CERTIFICATION

Under penalty of perjury, the person signing below: (1) warrants that he/she is authorized to execute this EDS, and all applicable appendices, on behalf of the Disclosing Party, and (2) warrants that all certifications and statements contained in this EDS, and all applicable appendices, are true, accurate and complete as of the date furnished to the City. Submission of this form constitutes making the oath associated with notarization.

Role: Officer

B. CERTIFICATION REGARDING CONTROLLING INTEREST

1.b.1 Are there any individuals who directly or indirectly control the day-to-day management of the Disclosing Party as a general partner, managing member, manager, or other capacity?

Yes

1.b.2 List all general partners, managing members, managers, and any others who directly or indirectly control the day-to-day management of the Disclosing Party. Don't include any legal entities in this answer- these will be named later:

Name: Paul Mitchener
Title: Manager

Name: Glen Roscoe
Title: Manager

Name: Joshua Connell
Title: Manager

Name:	Alan T. Handley
Title:	Manager
Name:	Martha Crawford
Title:	Manager

1.b.3 Are there any legal entities that directly or indirectly control the day-to-day management of the Disclosing Party as a general partner, managing member, manager, or other capacity?

No

2. Ownership Information

Please confirm ownership information concerning each person or entity that having a direct or indirect beneficial interest in excess of 7.5% of the Disclosing Party (your entity). Examples of such an interest include shares in a corporation, partnership interest in a partnership or joint venture, interest of a member or manager in a limited lability company, or interest of a beneficiary of a trust, estate, or other similar entity. Note: Each legal entity below may be required to submit an EDS on its own behalf.

As reported by the Disclosing Party, the immediate owner(s) of the Disclosing Party is/ are listed below:

- MIP V Onion Holdings, LLC - 92.83%
  - MIP V Direct-Partners, L.P. - 21.37%
  - MIP V Onion-Blocker, LLC - 64.47%

Owner Details

Name	Business Address
MIP V Direct-Partners, L.P.	125 W. 55th St. Level 15 New York, NY United States
MIP V Onion Holdings, LLC	125 West 55th Street Level 15 New York City, NY United States
MIP V Onion-Blocker, LLC	125 W. 55th St. Level 15

New York, NY
United States

SECTION III -- INCOME OR COMPENSATION TO, OR OWNERSHIP BY, CITY ELECTED OFFICIALS

A. Has the Disclosing Party provided any income or compensation to any City elected official during the 12-month period preceding the date of this EDS?

No

B. Does the Disclosing Party reasonably expect to provide any income or compensation to any City elected official during the 12-month period following the date of this EDS?

No

D. Does any City elected official or, to the best of the Disclosing Party's knowledge after reasonable inquiry, any City elected official's spouse or domestic partner, have a financial interest (as defined in Chapter 2-156 of the Municipal Code ("MCC")) in the Disclosing Party?

No

SECTION V -- CERTIFICATIONS

A. COURT-ORDERED CHILD SUPPORT COMPLIANCE

Under MCC Section 2-92-415, substantial owners of business entities that contract with the City must remain in compliance with their child support obligations throughout the contract's term.

Has any person who directly or indirectly owns 10% or more of the Disclosing Party been declared in arrearage of any child support obligations by any Illinois court of competent jurisdiction?

No

B. FURTHER CERTIFICATIONS

1. [This certification applies only if the Matter is a contract being handled by the City's Department of Procurement Services.] In the 5-year period preceding the date of this EDS, neither the Disclosing Party nor any Affiliated Entity has engaged, in connection with the performance of any public contract, the services of an integrity monitor, independent private sector inspector general, or integrity compliance consultant (i.e. an individual or entity with legal, auditing, investigative, or other similar skills, designated by

a public agency to help the agency monitor the activity of specified agency vendors as well as help the vendors reform their business practices so they can be considered for agency contracts in the future, or continue with a contract in progress).

I certify the above to be true

2. The Disclosing Party and its Affiliated Entities are not delinquent in the payment of any fine, fee, tax or other source of indebtedness owed to the City of Chicago, including, but not limited to, water and sewer charges, license fees, parking tickets, property taxes and sales taxes, nor is the Disclosing Party delinquent in the payment of any tax administered by the Illinois Department of Revenue.

I certify the above to be true

3. The Disclosing Party and, if the Disclosing Party is a legal entity, all of those persons or entities identified in Section II(B)(1) of this EDS:

a. are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from any transactions by any federal, state or local unit of government;
b. have not, during the 5 years before the date of this EDS, been convicted of a criminal offense, adjudged guilty, or had a civil judgment rendered against them in connection with: obtaining, attempting to obtain, or performing a public (federal, state or local) transaction or contract under a public transaction; a violation of federal or state antitrust statutes; fraud; embezzlement; theft; forgery; bribery; falsification or destruction of records; making false statements; or receiving stolen property;
c. are not presently indicted for, or criminally or civilly charged by, a governmental entity (federal, state or local) with committing any of the offenses set forth in subparagraph (b) above;
d. have not, during the 5 years before the date of this EDS, had one or more public transactions (federal, state or local) terminated for cause or default; and
e. have not, during the 5 years before the date of this EDS, been convicted, adjudged guilty, or found liable in a civil proceeding, or in any criminal or civil action, including actions concerning environmental violations, instituted by the City or by the federal government, any state, or any other unit of local government.

I certify the above to be true

4. The Disclosing Party understands and shall comply with the applicable requirements of MCC Chapter 2-56 (Inspector General) and Chapter 2-156 (Governmental Ethics).

I certify the above to be true

5. Neither the Disclosing Party, nor any Contractor, nor any Affiliated Entity of either the Disclosing Party or any Contractor, nor any Agents have, during the 5 years

before the date of this EDS, or, with respect to a Contractor, an Affiliated Entity, or an Affiliated Entity of a Contractor during the 5 years before the date of such Contractor's or Affiliated Entity's contract or engagement in connection with the Matter:

a. bribed or attempted to bribe, or been convicted or adjudged guilty of bribery or attempting to bribe, a public officer or employee of the City, the State of Illinois, or any agency of the federal government or of any state or local government in the United States of America, in that officer's or employee's official capacity;
b. agreed or colluded with other bidders or prospective bidders, or been a party to any such agreement, or been convicted or adjudged guilty of agreement or collusion among bidders or prospective bidders, in restraint of freedom of competition by agreement to bid a fixed price or otherwise; or
c. made an admission of such conduct described in subparagraph (a) or (b) above that is a matter of record, but have not been prosecuted for such conduct; or
d. violated the provisions referenced in MCC Subsection 2-92-320(a)(4)(Contracts Requiring a Base Wage); (a)(5)(Debarment Regulations); or (a)(6)(Minimum Wage Ordinance).

I certify the above to be true

6. Neither the Disclosing Party, nor any Affiliated Entity or Contractor, or any of their employees, officials, agents or partners, is barred from contracting with any unit of state or local government as a result of engaging in or being convicted of

- bid-rigging in violation of 720 ILCS 5/33E-3;
- bid-rotating in violation of 720 ILCS 5/33E-4; or
- any similar offense of any state or of the United States of America that contains the same elements as the offense of bid-rigging or bid-rotating.

I certify the above to be true

7. Neither the Disclosing Party nor any Affiliated Entity is listed on a Sanctions List maintained by the United States Department of Commerce, State, or Treasury, or any successor federal agency.

I certify the above to be true

11. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all current employees of the Disclosing Party who were, at any time during the 12-month period preceding the date of this EDS, an employee, or elected or appointed official, of the City of Chicago.

None

12. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all gifts that the Disclosing Party has given or caused to be

given, at any time during the 12-month period preceding the execution date of this EDS, to an employee, or elected or appointed official, of the City of Chicago. For purposes of this statement, a "gift" does not include: (i) anything made generally available to City employees or to the general public, or (ii) food or drink provided in the course of official City business and having a retail value of less than $25 per recipient, or (iii) a political contribution otherwise duly reported as required by law.

None

C. CERTIFICATION OF STATUS AS FINANCIAL INSTITUTION

The Disclosing Party certifies, as defined in MCC Section 2-32-455(b), the Disclosing Party

is not a "financial institution"

E. CERTIFICATION REGARDING SLAVERY ERA BUSINESS

If the Disclosing Party cannot make this verification, the Disclosing Party must disclose all required information in the space provided below or in an attachment in the "Additional Info" tab. Failure to comply with these disclosure requirements may make any contract entered into with the City in connection with the Matter voidable by the City.

The Disclosing Party verifies that the Disclosing Party has searched any and all records of the Disclosing Party and any and all predecessor entities regarding records of investments or profits from slavery or slaveholder insurance policies during the slavery era (including insurance policies issued to slaveholders that provided coverage for damage to or injury or death of their slaves), and the Disclosing Party has found no such records.

I can make the above verification

SECTION VII - FURTHER ACKNOWLEDGMENTS AND CERTIFICATION

The Disclosing Party understands and agrees that:

A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.

B. The City's Governmental Ethics Ordinance, MCC Chapter 2-156, imposes certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. The full text of this ordinance and a training program is available on line at www.cityofchicago.org/Ethics, and may also be obtained from the City's Board of Ethics, 740 N. Sedgwick St., Suite 500, Chicago, IL 60610, (312) 744-9660. The Disclosing Party must comply fully with this ordinance.

I acknowledge and consent to the above

The Disclosing Party understands and agrees that:

C. If the City determines that any information provided in this EDS is false, incomplete or inaccurate, any contract or other agreement in connection with which it is submitted may be rescinded or be void or voidable, and the City may pursue any remedies under the contract or agreement (if not rescinded or void), at law, or in equity, including terminating the Disclosing Party's participation in the Matter and/ or declining to allow the Disclosing Party to participate in other City transactions. Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.

D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided in, and appended to, this EDS may be made publicly available on the Internet, in response to a Freedom of Information Act request, or otherwise. By completing and signing this EDS, the Disclosing Party waives and releases any possible rights or claims which it may have against the City in connection with the public release of information contained in this EDS and also authorizes the City to verify the accuracy of any information submitted in this EDS.

E. The information provided in this EDS must be kept current. In the event of changes, the Disclosing Party must supplement this EDS up to the time the City takes action on the Matter. If the Matter is a contract being handled by the City's Department of Procurement Services, the Disclosing Party must update this EDS as the contract requires. NOTE: With respect to Matters subject to MCC Chapter 1-23, Article I (imposing PERMANENT INELIGIBILITY for certain specified offenses), the information provided herein regarding eligibility must be kept current for a longer period, as required by MCC Chapter 1-23 and Section 2-154-020.

I acknowledge and consent to the above

APPENDIX A - FAMILIAL RELATIONSHIPS WITH ELECTED CITY OFFICIALS AND DEPARTMENT HEADS

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5%. It is not to

be completed by any legal entity which has only an indirect ownership interest in the Applicant.

Under MCC Section 2-154-015, the Disclosing Party must disclose whether such Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently has a "familial relationship" with any elected city official or department head. A "familial relationship" exists if, as of the date this EDS is signed, the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof is related to the mayor, any alderman, the city clerk, the city treasurer or any city department head as spouse or domestic partner or as any of the following, whether by blood or adoption: parent, child, brother or sister, aunt or uncle, niece or nephew, grandparent, grandchild, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather or stepmother, stepson or stepdaughter, stepbrother or stepsister or half-brother or half-sister.

"Applicable Party" means (1) all executive officers of the Disclosing Party listed in Section II.B.1.a, if the Disclosing Party is a corporation; all partners of the Disclosing Party, if the Disclosing Party is a general partnership; all general partners and limited partners of the Disclosing Party, if the Disclosing Party is a limited partnership; all managers, managing members and members of the Disclosing Party, if the Disclosing Party is a limited liability company; (2) all principal officers of the Disclosing Party; and (3) any person having more than a 7.5% ownership interest in the Disclosing Party. "Principal officers" means the president, chief operating officer, executive director, chief financial officer, treasurer or secretary of a legal entity or any person exercising similar authority.

Does the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently have a "familial relationship" with an elected city official or department head?

No

APPENDIX B - BUILDING CODE SCOFFLAW/PROBLEM LANDLORD CERTIFICATION

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5% (an "Owner"). It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

1. Pursuant to MCC Section 2-154-010, is the Applicant or any Owner identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

No

ADDITIONAL INFO

Please add any additional explanatory information here. If explanation is longer than 1000 characters, you may add an attachment below. Please note that your EDS, including all attachments, becomes available for public viewing upon contract award. Your attachments will be viewable "as is" without manual redaction by the City. You are responsible for redacting any non-public information from your documents before uploading.

No EIN # - entity is disregarded for tax purposes.

List of attachments uploaded by vendor

None.

CERTIFICATION

Under penalty of perjury, the person signing below: (1) warrants that he/she is authorized to execute this EDS, and all applicable appendices, on behalf of the Disclosing Party, and (2) warrants that all certifications and statements contained in this EDS, and all applicable appendices, are true, accurate and complete as of the date furnished to the City. Submission of this form constitutes making the oath associated with notarization.

Role: Officer

B. CERTIFICATION REGARDING CONTROLLING INTEREST

1.b.1 Are there any individuals who directly or indirectly control the day-to-day management of the Disclosing Party as a general partner, managing member, manager, or other capacity?

Yes

1.b.2 List all general partners, managing members, managers, and any others who directly or indirectly control the day-to-day management of the Disclosing Party. Don't include any legal entities in this answer- these will be named later:

Name: Christopher Leslie
Title: Manager

Name: Karl Kuchel
Title: Manager

Name: Paul Mitchener
Title: Manager

1.b.3 Are there any legal entities that directly or indirectly control the day-to-day management of the Disclosing Party as a general partner, managing member, manager, or other capacity?

No

2. Ownership Information

Please confirm ownership information concerning each person or entity that having a direct or indirect beneficial interest in excess of 7.5% of the Disclosing Party (your entity). Examples of such an interest include shares in a corporation, partnership interest in a partnership or joint venture, interest of a member or manager in a limited lability company, or interest of a beneficiary of a trust, estate, or other similar entity. Note: Each legal entity below may be required to submit an EDS on its own behalf.

As reported by the Disclosing Party, the immediate owner(s) of the Disclosing Party is/ are listed below:

- MIP V Direct-Partners, L.P. - 21.37%
- MIP V Onion-Blocker, LLC - 64.47%

Owner Details

Name	Business Address
MIP V Direct-Partners, L.P.	125 W. 55th St. Level 15 New York, NY United States
MIP V Onion-Blocker, LLC	125 W. 55th St. Level 15 New York, NY United States

SECTION III -- INCOME OR COMPENSATION TO, OR OWNERSHIP BY, CITY ELECTED OFFICIALS

A. Has the Disclosing Party provided any income or compensation to any City elected official during the 12-month period preceding the date of this EDS?

No

B. Does the Disclosing Party reasonably expect to provide any income or compensation to any City elected official during the 12-month period following the date of this EDS?

No

D. Does any City elected official or, to the best of the Disclosing Party's knowledge after reasonable inquiry, any City elected official's spouse or domestic partner, have a financial interest (as defined in Chapter 2-156 of the Municipal Code ("MCC")) in the Disclosing Party?

No

SECTION V -- CERTIFICATIONS

A. COURT-ORDERED CHILD SUPPORT COMPLIANCE

Under MCC Section 2-92-415, substantial owners of business entities that contract with the City must remain in compliance with their child support obligations throughout the contract's term.

Has any person who directly or indirectly owns 10% or more of the Disclosing Party been declared in arrearage of any child support obligations by any Illinois court of competent jurisdiction?

No

B. FURTHER CERTIFICATIONS

1. [This certification applies only if the Matter is a contract being handled by the City's Department of Procurement Services.] In the 5-year period preceding the date of this EDS, neither the Disclosing Party nor any Affiliated Entity has engaged, in connection with the performance of any public contract, the services of an integrity monitor, independent private sector inspector general, or integrity compliance consultant (i.e. an individual or entity with legal, auditing, investigative, or other similar skills, designated by a public agency to help the agency monitor the activity of specified agency vendors as well as help the vendors reform their business practices so they can be considered for agency contracts in the future, or continue with a contract in progress).

I certify the above to be true

2. The Disclosing Party and its Affiliated Entities are not delinquent in the payment of any fine, fee, tax or other source of indebtedness owed to the City of Chicago, including, but not limited to, water and sewer charges, license fees, parking tickets, property taxes and sales taxes, nor is the Disclosing Party delinquent in the payment of any tax administered by the Illinois Department of Revenue.

I certify the above to be true

3. The Disclosing Party and, if the Disclosing Party is a legal entity, all of those persons or entities identified in Section II(B)(1) of this EDS:

a. are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from any transactions by any federal, state or local unit of government;
b. have not, during the 5 years before the date of this EDS, been convicted of a criminal offense, adjudged guilty, or had a civil judgment rendered against them in connection with: obtaining, attempting to obtain, or performing a public (federal, state or local) transaction or contract under a public transaction; a violation of federal or state antitrust statutes; fraud; embezzlement; theft; forgery; bribery; falsification or destruction of records; making false statements; or receiving stolen property;
c. are not presently indicted for, or criminally or civilly charged by, a governmental entity (federal, state or local) with committing any of the offenses set forth in subparagraph (b) above;
d. have not, during the 5 years before the date of this EDS, had one or more public transactions (federal, state or local) terminated for cause or default; and
e. have not, during the 5 years before the date of this EDS, been convicted, adjudged guilty, or found liable in a civil proceeding, or in any criminal or civil action, including actions concerning environmental violations, instituted by the City or by the federal government, any state, or any other unit of local government.

I certify the above to be true

4. The Disclosing Party understands and shall comply with the applicable requirements of MCC Chapter 2-56 (Inspector General) and Chapter 2-156 (Governmental Ethics).

I certify the above to be true

5. Neither the Disclosing Party, nor any Contractor, nor any Affiliated Entity of either the Disclosing Party or any Contractor, nor any Agents have, during the 5 years before the date of this EDS, or, with respect to a Contractor, an Affiliated Entity, or an Affiliated Entity of a Contractor during the 5 years before the date of such Contractor's or Affiliated Entity's contract or engagement in connection with the Matter:

a. bribed or attempted to bribe, or been convicted or adjudged guilty of bribery or attempting to bribe, a public officer or employee of the City, the State of Illinois, or any agency of the federal government or of any state or local government in the United States of America, in that officer's or employee's official capacity;
b. agreed or colluded with other bidders or prospective bidders, or been a party to any such agreement, or been convicted or adjudged guilty of agreement or collusion among bidders or prospective bidders, in restraint of freedom of competition by agreement to bid a fixed price or otherwise; or
c. made an admission of such conduct described in subparagraph (a) or (b) above that is a matter of record, but have not been prosecuted for such conduct; or

d. violated the provisions referenced in MCC Subsection 2-92-320(a)(4)(Contracts Requiring a Base Wage); (a)(5)(Debarment Regulations); or (a)(6)(Minimum Wage Ordinance).

I certify the above to be true

6. Neither the Disclosing Party, nor any Affiliated Entity or Contractor, or any of their employees, officials, agents or partners, is barred from contracting with any unit of state or local government as a result of engaging in or being convicted of

- bid-rigging in violation of 720 ILCS 5/33E-3;
- bid-rotating in violation of 720 ILCS 5/33E-4; or
- any similar offense of any state or of the United States of America that contains the same elements as the offense of bid-rigging or bid-rotating.

I certify the above to be true

7. Neither the Disclosing Party nor any Affiliated Entity is listed on a Sanctions List maintained by the United States Department of Commerce, State, or Treasury, or any successor federal agency.

I certify the above to be true

11. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all current employees of the Disclosing Party who were, at any time during the 12-month period preceding the date of this EDS, an employee, or elected or appointed official, of the City of Chicago.

None

12. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all gifts that the Disclosing Party has given or caused to be given, at any time during the 12-month period preceding the execution date of this EDS, to an employee, or elected or appointed official, of the City of Chicago. For purposes of this statement, a "gift" does not include: (i) anything made generally available to City employees or to the general public, or (ii) food or drink provided in the course of official City business and having a retail value of less than $25 per recipient, or (iii) a political contribution otherwise duly reported as required by law.

None

C. CERTIFICATION OF STATUS AS FINANCIAL INSTITUTION

The Disclosing Party certifies, as defined in MCC Section 2-32-455(b), the Disclosing Party

is not a "financial institution"

E. CERTIFICATION REGARDING SLAVERY ERA BUSINESS

If the Disclosing Party cannot make this verification, the Disclosing Party must disclose all required information in the space provided below or in an attachment in the "Additional Info" tab. Failure to comply with these disclosure requirements may make any contract entered into with the City in connection with the Matter voidable by the City.

The Disclosing Party verifies that the Disclosing Party has searched any and all records of the Disclosing Party and any and all predecessor entities regarding records of investments or profits from slavery or slaveholder insurance policies during the slavery era (including insurance policies issued to slaveholders that provided coverage for damage to or injury or death of their slaves), and the Disclosing Party has found no such records.

I can make the above verification

SECTION VII - FURTHER ACKNOWLEDGMENTS AND CERTIFICATION

The Disclosing Party understands and agrees that:

A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.

B. The City's Governmental Ethics Ordinance, MCC Chapter 2-156, imposes certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. The full text of this ordinance and a training program is available on line at www.cityofchicago.org/Ethics, and may also be obtained from the City's Board of Ethics, 740 N. Sedgwick St., Suite 500, Chicago, IL 60610, (312) 744-9660. The Disclosing Party must comply fully with this ordinance.

I acknowledge and consent to the above

The Disclosing Party understands and agrees that:

C. If the City determines that any information provided in this EDS is false, incomplete or inaccurate, any contract or other agreement in connection with which it is submitted may be rescinded or be void or voidable, and the City may pursue any remedies under the contract or agreement (if not rescinded or void), at law, or in equity, including terminating the Disclosing Party's participation in the Matter and/ or declining to allow the Disclosing Party to participate in other City transactions.

Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.

D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided in, and appended to, this EDS may be made publicly available on the Internet, in response to a Freedom of Information Act request, or otherwise. By completing and signing this EDS, the Disclosing Party waives and releases any possible rights or claims which it may have against the City in connection with the public release of information contained in this EDS and also authorizes the City to verify the accuracy of any information submitted in this EDS.

E. The information provided in this EDS must be kept current. In the event of changes, the Disclosing Party must supplement this EDS up to the time the City takes action on the Matter. If the Matter is a contract being handled by the City's Department of Procurement Services, the Disclosing Party must update this EDS as the contract requires. NOTE: With respect to Matters subject to MCC Chapter 1-23, Article I (imposing PERMANENT INELIGIBILITY for certain specified offenses), the information provided herein regarding eligibility must be kept current for a longer period, as required by MCC Chapter 1-23 and Section 2-154-020.

I acknowledge and consent to the above

APPENDIX A - FAMILIAL RELATIONSHIPS WITH ELECTED CITY OFFICIALS AND DEPARTMENT HEADS

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5%. It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

Under MCC Section 2-154-015, the Disclosing Party must disclose whether such Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently has a "familial relationship" with any elected city official or department head. A "familial relationship" exists if, as of the date this EDS is signed, the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof is related to the mayor, any alderman, the city clerk, the city treasurer or any city department head as spouse or domestic partner or as any of the following, whether by blood or adoption: parent, child, brother or sister, aunt or uncle, niece or nephew, grandparent, grandchild, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather or stepmother, stepson or stepdaughter, stepbrother or stepsister or half-brother or half-sister.

"Applicable Party" means (1) all executive officers of the Disclosing Party listed in Section II.B.1.a, if the Disclosing Party is a corporation; all partners of the Disclosing Party, if the Disclosing Party is a general partnership; all general partners and limited partners of the Disclosing Party, if the Disclosing Party is a limited partnership; all

managers, managing members and members of the Disclosing Party, if the Disclosing Party is a limited liability company; (2) all principal officers of the Disclosing Party; and (3) any person having more than a 7.5% ownership interest in the Disclosing Party. "Principal officers" means the president, chief operating officer, executive director, chief financial officer, treasurer or secretary of a legal entity or any person exercising similar authority.

Does the Disclosing Party or any "Applicable Party" or any Spouse or Domestic Partner thereof currently have a "familial relationship" with an elected city official or department head?

No

APPENDIX B - BUILDING CODE SCOFFLAW/PROBLEM LANDLORD CERTIFICATION

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5% (an "Owner"). It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

1. Pursuant to MCC Section 2-154-010, is the Applicant or any Owner identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

No

ADDITIONAL INFO

Please add any additional explanatory information here. If explanation is longer than 1000 characters, you may add an attachment below. Please note that your EDS, including all attachments, becomes available for public viewing upon contract award. Your attachments will be viewable "as is" without manual redaction by the City. You are responsible for redacting any non-public information from your documents before uploading.

- MIP V Onion (ECI) AIV, L.P. and its general partner, MIP V (ECI) GP, LLC, are exempt from making EDS filings per EDS rules, they are regulated by and required to make periodic filings with the SEC. See attached SEC Form D for reference. - MIP V Onion (ECI) AIV, L.P. and MIP V(ECI) GP, LLC are managed by Macquarie Infrastructure Partners Inc., which is a registered investment advisor and exempt from making an EDS filing. See SEC Form ADV for reference.

FORM ADV

UNIFORM APPLICATION FOR INVESTMENT ADVISER REGISTRATION AND REPORT BY EXEMPT REPORTING ADVISERS

Primary Business Name: MACQUARIE INFRASTRUCTURE PARTNERS **CRD Number: 146696**

Annual Amendment - All Sections **Rev. 03/2020**

6/29/2021 11:11:04 AM

WARNING: Complete this form truthfully. False statements or omissions may result in denial of your application, revocation of your registration, or criminal prosecution. You must keep this form updated by filing periodic amendments. See Form ADV General Instruction 4.

Item 1 Identifying Information

Responses to this Item tell us who you are, where you are doing business, and how we can contact you. If you are filing an *umbrella registration*, the information in Item 1 should be provided for the *filing adviser* only. General Instruction 5 provides information to assist you with filing an *umbrella registration*.

A. Your full legal name (if you are a sole proprietor, your last, first, and middle names):
MACQUARIE INFRASTRUCTURE PARTNERS INC.

B. (1) Name under which you primarily conduct your advisory business, if different from Item 1.A.
MACQUARIE INFRASTRUCTURE PARTNERS

List on Section 1.B. of Schedule D any additional names under which you conduct your advisory business.

(2) If you are using this Form ADV to register more than one investment adviser under an *umbrella registration*, check this box ☑

If you check this box, complete a Schedule R for each relying adviser.

C. If this filing is reporting a change in your legal name (Item 1.A.) or primary business name (Item 1.B.(1)), enter the new name and specify whether the name change is of ☐ your legal name or ☐ your primary business name:

D. (1) If you are registered with the SEC as an investment adviser, your SEC file number: **801-69049**

(2) If you report to the SEC as an *exempt reporting adviser*, your SEC file number:

(3) If you have one or more Central Index Key numbers assigned by the SEC ("CIK Numbers"), all of your CIK numbers:

No Information Filed

E. (1) If you have a number ("*CRD* Number") assigned by the *FINRA's CRD* system or by the IARD system, your *CRD* number: **146696**

If your firm does not have a CRD number, skip this Item 1.E. Do not provide the CRD number of one of your officers, employees, or affiliates.

(2) If you have additional *CRD* Numbers, your additional *CRD* numbers:

No Information Filed

F. *Principal Office and Place of Business*

(1) Address (do not use a P.O. Box):

Number and Street 1:		Number and Street 2:	
125 W. 55TH STREET		L15	
City:	State:	Country:	ZIP+4/Postal Code:
NEW YORK	New York	United States	10019

If this address is a private residence, check this box: ☐

List on Section 1.F. of Schedule D any office, other than your principal office and place of business, at which you conduct investment advisory business. If you are applying for registration, or are registered, with one or more state securities authorities, you must list all of your offices in the state or states to which you are applying for registration or with whom you are registered. If you are applying for SEC registration, if you are registered only with the SEC, or if you are reporting to the SEC as an exempt reporting adviser, list the largest twenty-five offices in terms of numbers of employees as of the end of your most recently completed fiscal year.

(2) Days of week that you normally conduct business at your *principal office and place of business*:
◉ Monday - Friday ○ Other:

Normal business hours at this location:
9:00 AM - 6:00 PM

(3) Telephone number at this location:
212-231-1000

(4) Facsimile number at this location, if any:
212-231-1828

(5) What is the total number of offices, other than your *principal office and place of business*, at which you conduct investment advisory business as of the end of your most recently completed fiscal year?
5

G. Mailing address, if different from your *principal office and place of business* address:

Number and Street 1: Number and Street 2:

City: State: Country: ZIP+4/Postal Code:

If this address is a private residence, check this box: ☐

H. If you are a sole proprietor, state your full residence address, if different from your *principal office and place of business* address in Item 1.F.:

Number and Street 1: Number and Street 2:

City: State: Country: ZIP+4/Postal Code:

	Yes	No
I. Do you have one or more websites or accounts on publicly available social media platforms (including, but not limited to, Twitter, Facebook and LinkedIn)?	○	◉

If "yes," list all firm website addresses and the address for each of the firm's accounts on publicly available social media platforms on Section 1.I. of Schedule D. If a website address serves as a portal through which to access other information you have published on the web, you may list the portal without listing addresses for all of the other information. You may need to list more than one portal address. Do not provide the addresses of websites or accounts on publicly available social media platforms where you do not control the content. Do not provide the individual electronic mail (e-mail) addresses of employees or the addresses of employee accounts on publicly available social media platforms.

J. Chief Compliance Officer

(1) Provide the name and contact information of your Chief Compliance Officer. If you are an *exempt reporting adviser*, you must provide the contact information for your Chief Compliance Officer, if you have one. If not, you must complete Item 1.K. below.

Name: Other titles, if any:

Telephone number: Facsimile number, if any:

Number and Street 1: Number and Street 2:

City: State: Country: ZIP+4/Postal Code:

Electronic mail (e-mail) address, if Chief Compliance Officer has one:

(2) If your Chief Compliance Officer is compensated or employed by any *person* other than you, a *related person* or an investment company registered under the Investment Company Act of 1940 that you advise for providing chief compliance officer services to you, provide the *person's* name and IRS Employer Identification Number (if any):

Name:

IRS Employer Identification Number:

K. Additional Regulatory Contact Person: If a person other than the Chief Compliance Officer is authorized to receive information and respond to questions about this Form ADV, you may provide that information here.

Name: Titles:

Telephone number: Facsimile number, if any:

Number and Street 1: Number and Street 2:

City: State: Country: ZIP+4/Postal Code:

Electronic mail (e-mail) address, if contact person has one:

	Yes	No
L. Do you maintain some or all of the books and records you are required to keep under Section 204 of the Advisers Act, or similar state law, somewhere other than your *principal office and place of business*?	◉	○

If "yes," complete Section 1.L. of Schedule D.

	Yes	No
M. Are you registered with a *foreign financial regulatory authority*?	◉	○

Answer "no" if you are not registered with a foreign financial regulatory authority, even if you have an affiliate that is registered with a foreign financial regulatory authority. If "yes," complete Section 1.M. of Schedule D.

	Yes	No
N. Are you a public reporting company under Sections 12 or 15(d) of the Securities Exchange Act of 1934?	○	◉

	Yes	No
O. Did you have $1 billion or more in assets on the last day of your most recent fiscal year?	○	◉

If yes, what is the approximate amount of your assets:

- ○ $1 billion to less than $10 billion
- ○ $10 billion to less than $50 billion
- ○ $50 billion or more

For purposes of Item 1.O. only, "assets" refers to your total assets, rather than the assets you manage on behalf of clients. Determine your total assets using the total assets shown on the balance sheet for your most recent fiscal year end.

P. Provide your *Legal Entity Identifier* if you have one:

A *legal entity identifier* is a unique number that companies use to identify each other in the financial marketplace. You may not have a *legal entity identifier*.

SECTION 1.B. Other Business Names

List your other business names and the jurisdictions in which you use them. You must complete a separate Schedule D Section 1.B. for each business name.

SECTION 1.M. Registration with Foreign Financial Regulatory Authorities

List the name and country, in English, of each *foreign financial regulatory authority* with which you are registered. You must complete a separate Schedule D Section 1.M. for each *foreign financial regulatory authority* with whom you are registered.

Name of Country/*Foreign Financial Regulatory Authority*:
Other

Other:
CHILE-COMISIÓN CLASIFICADORA DE RIESGO

Item 2 SEC Registration/Reporting

Responses to this Item help us (and you) determine whether you are eligible to register with the SEC. Complete this Item 2.A. only if you are applying for SEC registration or submitting

an *annual updating amendment* to your SEC registration. If you are filing an *umbrella registration*, the information in Item 2 should be provided for the *filing adviser* only.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004126

A. To register (or remain registered) with the SEC, you must check **at least one** of the Items 2.A.(1) through 2.A.(12), below. If you are submitting an *annual updating amendment* to your SEC registration and you are no longer eligible to register with the SEC, check Item 2.A.(13). Part 1A Instruction 2 provides information to help you determine whether you may affirmatively respond to each of these items.

You (the adviser):

☑ (1) are a **large advisory firm** that either:

(a) has regulatory assets under management of $100 million (in U.S. dollars) or more; or

(b) has regulatory assets under management of $90 million (in U.S. dollars) or more at the time of filing its most recent *annual updating amendment* and is registered with the SEC;

☐ (2) are a **mid-sized advisory firm** that has regulatory assets under management of $25 million (in U.S. dollars) or more but less than $100 million (in U.S. dollars) and you are either:

(a) not required to be registered as an adviser with the *state securities authority* of the state where you maintain your *principal office and place of business*; or

(b) not subject to examination by the *state securities authority* of the state where you maintain your *principal office and place of business*;

*Click **HERE** for a list of states in which an investment adviser, if registered, would not be subject to examination by the state securities authority.*

(3) Reserved

☐ (4) have your *principal office and place of business* **outside the United States**;

☐ (5) are **an investment adviser (or subadviser) to an investment company** registered under the Investment Company Act of 1940;

☐ (6) are **an investment adviser to a company which has elected to be a business development company** pursuant to section 54 of the Investment Company Act of 1940 and has not withdrawn the election, and you have at least $25 million of regulatory assets under management;

☐ (7) are a **pension consultant** with respect to assets of plans having an aggregate value of at least $200,000,000 that qualifies for the exemption in rule 203A-2(a);

☐ (8) are a **related adviser** under rule 203A-2(b) that *controls*, is *controlled* by, or is under common *control* with, an investment adviser that is registered with the SEC, and your *principal office and place of business* is the same as the registered adviser;

If you check this box, complete Section 2.A.(8) of Schedule D.

☐ (9) are an **adviser** relying on rule 203A-2(c) because you **expect to be eligible for SEC registration within 120 days;**

If you check this box, complete Section 2.A.(9) of Schedule D.

☐ (10) are a **multi-state adviser** that is required to register in 15 or more states and is relying on rule 203A-2(d);

If you check this box, complete Section 2.A.(10) of Schedule D.

☐ (11) are an **Internet adviser** relying on rule 203A-2(e);

☐ (12) have **received an SEC order** exempting you from the prohibition against registration with the SEC;

If you check this box, complete Section 2.A.(12) of Schedule D.

☐ (13) are **no longer eligible** to remain registered with the SEC.

State Securities Authority Notice Filings* and State Reporting by *Exempt Reporting Advisers

C. Under state laws, SEC-registered advisers may be required to provide to *state securities authorities* a copy of the Form ADV and any amendments they file with the SEC. These are called *notice filings*. In addition, *exempt reporting advisers* may be required to provide *state securities authorities* with a copy of reports and any amendments they file with the SEC. If this is an initial application or report, check the box(es) next to the state(s) that you would like to receive notice of this and all subsequent filings or reports you submit to the SEC. If this is an amendment to direct your *notice filings* or reports to additional state(s), check the box(es) next to the state(s) that you would like to receive notice of this and all subsequent filings or reports you submit to the SEC. If this is an amendment to your registration to stop your *notice filings* or reports from going to state(s) that currently receive them, uncheck the box(es) next to those state(s).

If you are amending your registration to stop your notice filings or reports from going to a state that currently receives them and you do not want to pay that state's notice filing or report filing fee for the coming year, your amendment must be filed between the end of the year (December 31) and

SECTION 2.A.(8) Related Adviser

If you are relying on the exemption in rule 203A-2(b) from the prohibition on registration because you *control*, are *controlled* by, or are under common *control* with an investment adviser that is registered with the SEC and your *principal office and place of business* is the same as that of the registered adviser, provide the following information:

Name of Registered Investment Adviser

CRD Number of Registered Investment Adviser

SEC Number of Registered Investment Adviser

-

SECTION 2.A.(9) Investment Adviser Expecting to be Eligible for Commission Registration within 120 Days

If you are relying on rule 203A-2(c), the exemption from the prohibition on registration available to an adviser that expects to be eligible for SEC registration within 120 days, you are required to make certain representations about your eligibility for SEC registration. By checking the appropriate boxes, you will be deemed to have made the required representations. You must make both of these representations:

☐ I am not registered or required to be registered with the SEC or a *state securities authority* and I have a reasonable expectation that I will be eligible to register with the SEC within 120 days after the date my registration with the SEC becomes effective.

☐ I undertake to withdraw from SEC registration if, on the 120th day after my registration with the SEC becomes effective, I would be prohibited by Section 203A(a) of the Advisers Act from registering with the SEC.

SECTION 2.A.(10) Multi-State Adviser

If you are relying on rule 203A-2(d), the multi-state adviser exemption from the prohibition on registration, you are required to make certain representations about your eligibility for SEC registration. By checking the appropriate boxes, you will be deemed to have made the required representations.

If you are applying for registration as an investment adviser with the SEC, you must make both of these representations:

☐ I have reviewed the applicable state and federal laws and have concluded that I am required by the laws of 15 or more states to register as an investment adviser with the *state securities authorities* in those states.

☐ I undertake to withdraw from SEC registration if I file an amendment to this registration indicating that I would be required by the laws of fewer than 15 states to register as an investment adviser with the *state securities authorities* of those states.

If you are submitting your *annual updating amendment*, you must make this representation:

☐ Within 90 days prior to the date of filing this amendment, I have reviewed the applicable state and federal laws and have concluded that I am required by the laws of at least 15 states to register as an investment adviser with the *state securities authorities* in those states.

SECTION 2.A.(12) SEC Exemptive *Order*

If you are relying upon an SEC *order* exempting you from the prohibition on registration, provide the following information:

Application Number:

803-

Date of *order*:

Item 3 Form of Organization

If you are filing an *umbrella registration*, the information in Item 3 should be provided for the *filing adviser* only.

A. How are you organized?

- (•) Corporation
- ( ) Sole Proprietorship
- ( ) Limited Liability Partnership (LLP)
- ( ) Partnership
- ( ) Limited Liability Company (LLC)
- ( ) Limited Partnership (LP)
- ( ) Other (specify):

If you are changing your response to this Item, see Part 1A Instruction 4.

B. In what month does your fiscal year end each year?
MARCH

C. Under the laws of what state or country are you organized?

State	Country
Delaware	United States

If you are a partnership, provide the name of the state or country under whose laws your partnership was formed. If you are a sole proprietor, provide the name of the state or country where you reside.

If you are changing your response to this Item, see Part 1A Instruction 4.

Item 4 Successions

	Yes	No
A. Are you, at the time of this filing, succeeding to the business of a registered investment adviser, including, for example, a change of your structure or legal status (e.g., form of organization or state of incorporation)?	○	◉

If "yes", complete Item 4.B. and Section 4 of Schedule D.

B. Date of Succession: (MM/DD/YYYY)

If you have already reported this succession on a previous Form ADV filing, do not report the succession again. Instead, check "No." See Part 1A Instruction 4.

SECTION 4 Successions

No Information Filed

Item 5 Information About Your Advisory Business - Employees, Clients, and Compensation

Responses to this Item help us understand your business, assist us in preparing for on-site examinations, and provide us with data we use when making regulatory policy. Part 1A Instruction 5.a. provides additional guidance to newly formed advisers for completing this Item 5.

Employees

If you are organized as a sole proprietorship, include yourself as an employee in your responses to Item 5.A. and Items 5.B.(1), (2), (3), (4), and (5). If an employee performs more than one function, you should count that employee in each of your responses to Items 5.B.(1), (2), (3), (4), and (5).

A. Approximately how many *employees* do you have? Include full- and part-time *employees* but do not include any clerical workers.
144

B. (1) Approximately how many of the *employees* reported in 5.A. perform investment advisory functions (including research)?
68

(2) Approximately how many of the *employees* reported in 5.A. are registered representatives of a broker-dealer?
19

(3) Approximately how many of the *employees* reported in 5.A. are registered with one or more *state securities authorities* as *investment adviser representatives*?
0

(4) Approximately how many of the *employees* reported in 5.A. are registered with one or more *state securities authorities* as *investment adviser representatives* for an investment adviser other than you?
0

(5) Approximately how many of the *employees* reported in 5.A. are licensed agents of an insurance company or agency?
0

(6) Approximately how many firms or other *persons* solicit advisory *clients* on your behalf?
0

In your response to Item 5.B.(6), do not count any of your employees and count a firm only once – do not count each of the firm's employees that solicit on your behalf.

Clients

In your responses to Items 5.C. and 5.D. do not include as "clients" the investors in a private fund you advise, unless you have a separate advisory relationship with those investors.

C. (1) To approximately how many *clients* for whom you do not have regulatory assets under management did you provide investment advisory services during your most recently completed fiscal year?

0

(2) Approximately what percentage of your *clients* are non-*United States persons*?

24%

D. *For purposes of this Item 5.D., the category "individuals" includes trusts, estates, and 401(k) plans and IRAs of individuals and their family members, but does not include businesses organized as sole proprietorships.*
The category "business development companies" consists of companies that have made an election pursuant to section 54 of the Investment Company Act of 1940. Unless you provide advisory services pursuant to an investment advisory contract to an investment company registered under the Investment Company Act of 1940, do not answer (d)(1) or (d)(3) below.

Indicate the approximate number of your *clients* and amount of your total regulatory assets under management (reported in Item 5.F. below) attributable to each of the following type of *client*. If you have fewer than 5 *clients* in a particular category (other than (d), (e), and (f)) you may check Item 5.D.(2) rather than respond to Item 5.D.(1).

The aggregate amount of regulatory assets under management reported in Item 5.D.(3) should equal the total amount of regulatory assets under management reported in Item 5.F.(2)(c) below.

If a *client* fits into more than one category, select one category that most accurately represents the *client* to avoid double counting *clients* and assets. If you advise a registered investment company, business development company, or pooled investment vehicle, report those assets in categories (d), (e), and (f) as applicable.

Type of *Client*	(1) Number of *Client(s)*	(2) Fewer than 5 *Clients*	(3) Amount of Regulatory Assets under Management
(a) Individuals (other than *high net worth individuals*)		☐	$
(b) *High net worth individuals*		☐	$
(c) Banking or thrift institutions		☐	$
(d) Investment companies			$
(e) Business development companies			$
(f) Pooled investment vehicles (other than investment companies and business development companies)	35		$ 17,585,213,748
(g) Pension and profit sharing plans (but not the plan participants or government pension plans)		☐	$
(h) Charitable organizations		☐	$
(i) State or municipal *government entities* (including government pension plans)		☐	$
(j) Other investment advisers		☐	$
(k) Insurance companies	2	☑	$ 479,866,820
(l) Sovereign wealth funds and foreign official institutions		☐	$
(m) Corporations or other businesses not listed above		☐	$
(n) Other:		☐	$

Compensation Arrangements

E. You are compensated for your investment advisory services by (check all that apply):

- ☑ (1) A percentage of assets under your management
- ☐ (2) Hourly charges
- ☐ (3) Subscription fees (for a newsletter or periodical)
- ☐ (4) Fixed fees (other than subscription fees)
- ☐ (5) Commissions
- ☑ (6) *Performance-based fees*
- ☐ (7) Other (specify):

Item 5 Information About Your Advisory Business - Regulatory Assets Under Management

Regulatory Assets Under Management

F. (1) Do you provide continuous and regular supervisory or management services to securities portfolios? Yes ◉ No ○

(2) If yes, what is the amount of your regulatory assets under management and total number of accounts?

	U.S. Dollar Amount	Total Number of Accounts
Discretionary:	(a) $ 17,259,181,993	(d) 34
Non-Discretionary:	(b) $ 805,898,575	(e) 3
Total:	(c) $ 18,065,080,568	(f) 37

Part 1A Instruction 5.b. explains how to calculate your regulatory assets under management. You must follow these instructions carefully when completing this Item.

(3) What is the approximate amount of your total regulatory assets under management (reported in Item 5.F.(2)(c) above) attributable to *clients* who are non-*United States*

(b) Legal name of custodian:
THE NORTHERN TRUST INTERNATIONAL BANKING CORPORATION

(c) Primary business name of custodian:
THE NORTHERN TRUST INTERNATIONAL BANKING CORPORATION

(d) The location of the custodian's office responsible for *custody* of the *private fund's* assets (city, state and country):

City:	State:	Country:
JERSEY CITY	New Jersey	United States

	Yes	No
(e) Is the custodian a *related person* of your firm?	○	◉

(f) If the custodian is a broker-dealer, provide its SEC registration number (if any):
-
CRD Number (if any):

(g) If the custodian is not a broker-dealer, or is a broker-dealer but does not have an SEC registration number, provide its *legal entity identifier* (if any)

Administrator

	Yes	No
26. (a) Does the *private fund* use an administrator other than your firm?	◉	○

If the answer to question 26.(a) is "yes," respond to questions (b) through (f) below. If the *private fund* uses more than one administrator, you must complete questions (b) through (f) separately for each administrator.

Additional Administrator Information : 1 Record(s) Filed.

If the answer to question 26.(a) is "yes," respond to questions (b) through (f) below. If the *private fund* uses more than one administrator, you must complete questions (b) through (f) separately for each administrator.

(b) Name of administrator:
APEX FUND SERVICES

(c) Location of administrator (city, state and country):

City:	State:	Country:
NEW YORK	New York	United States

	Yes	No
(d) Is the administrator a *related person* of your firm?	○	◉

(e) Does the administrator prepare and send investor account statements to the *private fund's* investors?
○ Yes (provided to all investors) ○ Some (provided to some but not all investors) ◉ No (provided to no investors)

(f) If the answer to question 26.(e) is "no" or "some," who sends the investor account statements to the (rest of the) *private fund's* investors? If investor account statements are not sent to the (rest of the) *private fund's* investors, respond "not applicable."
REGISTRANT

27. During your last fiscal year, what percentage of the *private fund's* assets (by value) was valued by a *person*, such as an administrator, that is not your *related person*?
0%
Include only those assets where (i) such *person* carried out the valuation procedure established for that asset, if any, including obtaining any relevant quotes, and (ii) the valuation used for purposes of investor subscriptions, redemptions or distributions, and fee calculations (including allocations) was the valuation determined by such *person*.

Marketers

	Yes	No
28. (a) Does the *private fund* use the services of someone other than you or your *employees* for marketing purposes?	○	◉

You must answer "yes" whether the *person* acts as a placement agent, consultant, finder, introducer, municipal advisor or other solicitor, or similar *person*. If the answer to question 28.(a) is "yes," respond to questions (b) through (g) below for each such marketer the *private fund* uses. If the *private fund* uses more than one marketer you must complete questions (b) through (g) separately for each marketer.

PWC-702

BEFORE THE CITY OF WEST CHICAGO CITY COUNCIL

In Re: THE APPLICATION OF)
LAKESHORE RECYCLING SYSTEMS,)
LLC, FOR SITING APPROVAL OF A)
TRANSFER STATION AT)
1655 POWIS ROAD,)
WEST CHICAGO, ILLINOIS 62418)

Protect West Chicago's Offer of Proof
Relating to the Testimony of James Powell

In light of the Hearing Officer's decision and/or ruling to exclude the testimony of James Powell relating to Environmental Justice concerns and in order to preserve its rights on appeal, Protect West Chicago hereby submits this offer of proof and specifically avers that if allowed to continue to testify, in addition to the testimony that has been admitted into the record, Mr. Powell would also testify that:

1) The Illinois Environmental Protection Act (the "Act") requires that a pollution control facility, such as the transfer station that is the subject of this Application, be so designed, located, and proposed to be operated that the public health, safety, and welfare will be protected, and the potential impacts associated with the proposed facility be minimized.

2) That according to the Environmental Justice Act and as set forth in **Exhibit PWC-405**, the Illinois General Assembly found that environmental justice requires that no segment of the population, regardless of race, national origin, age or income, should bear disproportionately high or adverse effects of environmental pollution and that certain communities in the state may suffer disproportionately from environmental hazards related to facilities with permits approved by the state.

3) That pursuant to Section 39 of the Act, a waste transfer station, including the proposed LRS facility, is a facility that requires a permit approved by the state.

4) That a Commission on Environmental Justice has been established in the state which includes individuals with varying backgrounds and expertise, including members of the general public who have an interest or expertise on environmental justice.

5) That as set forth in **Exhibit PWC-406**, the Illinois EPA Environmental Justice Public Participation Policy explains the methods by which the Illinois Environmental Protection Agency will engage with the public in communities located in identified areas of Environmental Justice (EJ) concern.

6) That the Illinois EPA defines "area of EJ concern" as a census block group or areas within one mile of a census block group with income below poverty and/or minority population greater than twice the statewide average.

7) That the Illinois EPA has developed a Geographic Information System (GIS) mapping tool call EJ START to identify census block groups and areas within one mile of census block groups meeting the EJ demographic screening criteria.

8) That EJ START is publicly available and can be found on the Illinois EPA's EJ webpage at the following location: http://epagisportal.illinois.gov/portal/apps/webappviewer /index.html?id=414d804241e94c51809f08f3644c37d9.

9) That I used EJ START to determine whether the proposed LRS waste transfer station facility is in or impacting an "area of EJ concern," and that based on my review of the EJ START, the proposed facility is approximately 1,300 feet from an area determined by the IEPA to have minority population greater than twice the statewide average, and therefore within an "area of EJ Concern."

10) That I also used EJ START to determine whether the proposed LRS waste transfer station's proposed trash transfer-trailer route travels through an "area of EJ concern," and that

based on my review of the EJ START, I found that if LRS transfer-trailers leaving the LRS facility on Powis Road travel North on Powis Road and then proceed West on North Avenue and then South on Kirk Road (as depicted by the yellow line on slide 25), all LRS transfer-trailers leaving the LRS facility would travel through numerous "areas of EJ concern," that are located along Kirk Road South from Batavia to I-88 and would include the area of West I-88 at Aurora and North Aurora communities, as depicted by the blue and red portions along the proposed route in slide 25, which I have also set forth below:

Transfer Trailer Route and Communities Impacted

Regional community impact along Kirk Road South from Batavia to I-88 and the Area of West I-88 at Aurora and North Aurora.

1/12/2023 Mostardi Platt 22

11) That environmental hazards can result in adverse health effects for the general population in West Chicago, a majority of which (namely 51.85%) is Latino based on United States census information

and as set forth below:

LRS Service Area
Burden on Latino Community
2.3 x's Greater on Latinos vs. Non-Latinos

	A	B	C	D	E	F	G	H
1	DuPage County Townships	#	%	#	%	#	%	#
2		Latino	Latino	African American	African American	White	White	Total
3	Bloomingdale	23,786	21.26%	5,736	5.13%	60,875	54.41%	111,875
4	Lisle	11,141	9.36%	6,582	5.53%	80,630	67.73%	119,040
5	Milton	10,993	9.14%	5,604	4.66%	87,153	72.48%	120,237
6	Naperville	12,098	11.55%	9,167	8.75%	54,932	52.43%	104,765
7	Wayne	9,506	14.75%	1,890	2.93%	39,097	60.68%	64,427
8	Winfield	17,502	38.18%	1,137	2.48%	23,936	52.22%	45,836
9	**Kane County**							
10	Aurora	74,474	58.67%	12,102	9.53%	34,152	26.91%	126,929
11	St. Charles	5,846	11.26%	975	1.88%	40,296	77.64%	51,902
12	Elgin	45,542	43.58%	6,296	6.03%	43,530	41.66%	104,493
13	Geneva	1,924	7.29%	189	0.72%	22,704	86.01%	26,396
14	Batavia	4,113	11.63%	1,285	3.63%	27,401	77.48%	35,363
15	**Will County**							
16	Du Page Township	24,011	27.49%	14,279	16.35%	36,414	41.69%	87,348
17	Wheatland	7,428	8.36%	5,798	6.52%	50,092	56.35%	88,894
18								
19	Total Service Area	248,364	22.8%	71,040	6.53%	601,212	55.28%	1,087,505
20								
21	West Chicago	13,282	51.85%	701	2.74%	8,906	34.77%	25,614
22								

12) That as set forth in **Exhibit PWC-48**, the National Environmental Justice Advisory Council – Waste and Facility Siting Subcommittee Waste Transfer Station Working Group found that the clustering and disproportionate siting of noxious facilities in low-income communities and communities of color led to the creation of the environmental justice movement and that the "siting and operation of waste transfer stations is such an example."

13) That the National Environmental Justice Advisory Council – Waste and Facility Siting Subcommittee Waste Transfer Station Working Group also found that waste transfer stations "can cause environmental concerns associated with poor air quality (from idling diesel-

fueled trucks and from particulate matter such as dust and glass) and disease-carrying vectors such as rodents and roaches."

14) That according to the EPA, and as set forth in **Exhibit PWC-49** titled: Waste Transfer Stations: A Manual for Decision Making (June 2002), steps should be taken "to ensure that siting decisions are not imposing a disproportionate burden upon low-income or minorities" and that therefore, it is appropriate to determine whether the siting of the proposed LRS facility in West Chicago, which is majority Latino, does or does not impose a disproportionate burden on the Latino community of West Chicago.

15) That based on my review of the EJ START map, as well as the information from the EPA and Illinois Environmental Protect Act, the proposed facility route for departing trash transfer-trailers does impose an adverse impact on various areas of EJ concern as depicted in slide 25 and the image above.

A REGULATORY STRATEGY FOR SITING AND OPERATING WASTE TRANSFER STATIONS

A Response to a Recurring Environmental Justice Circumstance: The Siting of Waste Transfer Stations in Low-Income Communities and Communities of Color

Prepared by the

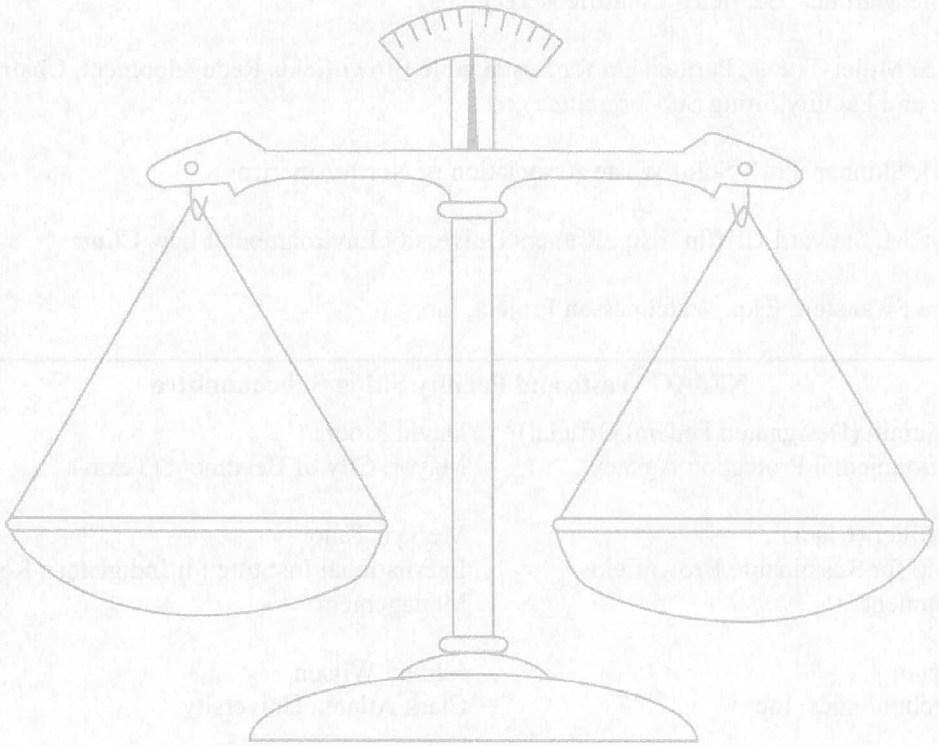
National Environmental Justice Advisory Council
Waste and Facility Siting Subcommittee
Waste Transfer Station Working Group

This report and recommendations have been written as a part of the activities of the National Environmental Justice Advisory Council, a public advisory committee providing extramural policy information and advice to the Administrator and other officials of the United States Environmental Protection Agency (EPA). The Council is structured to provide balanced, expert assessment of matters related to environmental justice.

This report has not been reviewed for approval by the EPA and, hence, its contents and recommendations do not necessarily represent the views and policies of the EPA, nor of other agencies in the Executive Branch of the federal government, nor does mention of trade names or commercial products constitute a recommendation for use.

This report is EPA Report number EPA 500-R-00-001. Additional copies of this report may be requested by contacting EPA's Office of Solid Waste and Emergency Response Outreach and Special Projects Staff at 202-260-4039 or via e-mail at benjamin.kent@epa.gov.

Comments or questions can be directed to EPA's Office of Environmental Justice (OEJ) through the Internet. OEJ's Internet e-mail address is environmental-justice-epa@epa.gov.



Executive summaries of the reports of the NEJAC meetings are available on the Internet at OEJ's World Wide Web homepage: http://www.epa.gov/oeca/main/ej.

EXECUTIVE SUMMARY

I. Background

The National Environmental Justice Advisory Council (NEJAC) is a Federal Advisory Committee established in 1993 to provide independent advice, consultation, and recommendations to the U.S. Environmental Protection Agency (EPA) on matters related to environmental justice. NEJAC has established six subcommittees which address various issues corresponding to EPA's areas of authority, responsibility, and structure. Among the subcommittees is the Waste and Facility Siting Subcommittee.

NEJAC and its subcommittees meet semiannually to plan their activities and address pressing issues raised by the public. During the December 1997 NEJAC meeting in Durham, North Carolina, the closing of New York City's Fresh Kills Landfill and the proliferation of waste transfer stations (WTSs) in low-income communities and communities of color in Brooklyn and the Bronx were raised to the Waste and Facility Siting Subcommittee. WTSs are facilities where municipal waste is unloaded from collection vehicles and subsequently re-loaded onto larger transport vehicles to be taken to a disposal site. Most of the waste comes from outside the communities that are home to the WTSs and, in part, from outside the local municipality. WTSs are part of regional waste streams and serve the economic needs of the region and the waste industry. The affected communities assert that WTSs, in combination

The clustering and disproportionate siting of noxious facilities in low-income communities and communities of color led to the creation of the environmental justice movement. The siting and operation of waste transfer stations is such an example. For several years, communities around the country have raised the issue of waste processing facilities that are disproportionately sited in and impact on environmental justice communities to the National Environmental Justice Advisory Committee (NEJAC).

NEJAC formed the Waste Transfer Station Working Group to conduct a factual examination of waste transfer station siting and operation, with a focus on alleviating the impacts of clustering, disproportionate siting, and unsafe operations in low-income communities and communities of color.

In deliberating on its recommendations, the Working Group was challenged with resolving the issue of the clustering of waste transfer stations with few environmental controls and the legitimate role that waste transfer stations play in providing an essential municipal service—the economical disposal of solid waste. The recommendations in this report are intended to identify areas that will allow for the sustainable management of waste transfer stations and promote equality in the distribution and siting of these facilities.

Some of the recommendations in this report focus on policy and regulatory changes, while other recommendations focus on voluntary standards and partnerships between local, state, and federal governments. The Working Group sought to implement NEJAC's mission to provide recommendations to EPA to achieve environmental justice. However, these recommendations also call on all levels of government, in the spirit of collaboration that existed among the Working Group, to work with their communities, the waste trade, environmental justice and environmental organizations, and all other stakeholders to implement these recommendations. It must be remembered, however, that these recommendations are merely a beginning. The realization of safe siting and operation of waste transfer stations and livable communities requires good-faith collaboration for its implementation.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004146

with historic patterns of other negative-impact facilities in their neighborhood, have resulted in degraded health and environmental conditions, as well as displacement of community revitalization plans and economic activity.

These concerns were consistent with concerns raised by citizens that have approached NEJAC and the Waste and Facility Siting Subcommittee about local conditions at WTSs and EPA's role in ensuring more consistent protection at these facilities. In tours conducted by NEJAC, public comments, calls to NEJAC members, and discussions during subcommittee meetings, citizens from New York City, Atlanta, San Francisco, Las Vegas, Philadelphia, Baton Rouge, Washington, DC, Los Angeles, Birmingham, and other cities asked NEJAC to examine EPA's authority under the Resource Conservation and Recovery Act (RCRA) to develop baseline standards for WTSs.

In response, the Waste and Facility Siting Subcommittee developed and approved a resolution that called for a number of EPA actions including examining the risks associated with the siting and operation of WTSs. In February 1998, NEJAC's executive committee approved the resolution and forwarded it to EPA Administrator Carol Browner. The resolution called upon EPA to support the formation of a NEJAC Working Group to evaluate issues such as: 1) the adequacy of current standards that address WTS emissions; 2) illegal commingling of hazardous and medical wastes; 3) the adequacy of regulatory standards to address the transport of waste from city, interstate; and 4) regional environmental and health impacts, and means to ensure public participation.

At the May 1998 meeting of the subcommittee in Oakland, California, the Office of Solid Waste and Emergency Response (OSWER) agreed to support the establishment of a NEJAC Working Group. The Waste Transfer Station Working Group was formed to conduct a factual examination of WTS siting and operation and to recommend actions to alleviate the impacts on communities and ensure safe operation of WTSs. The Working Group is made up of individuals with the diverse perspectives necessary to provide a thorough and fair examination of these difficult issues. They included representatives of community-based and environmental justice organizations, private and public waste trade associations, and local governments.

Given the significant budget constraints of the project, the subcommittee decided to conduct fact-findings in two cities in which citizens had expressed concerns representative of the issues associated with WTS siting and operation across the United States. New York City and Washington, DC, were known to have WTSs with considerable controversy and were accessible within a small travel budget. Although the subcommittee report focuses primarily on the concerns of these two urban environments, it was supplemented by members' experiences in other cities. The Working Group was mindful that the concerns raised by clustered facilities in New York City and Washington, DC, were serious, and similar situations in other parts of the country have been raised to NEJAC. However, the Working Group was also made aware that there existed well-designed and well-sited WTSs in parts of the country, and that its examination did not address differences in rural, tribal, and suburban communities. Therefore, the Working Group endeavored to outline a national baseline that would be consistent with good practices in place throughout the country, and that would upgrade standards in cities with the kinds of problems seen first hand in New York City and Washington, DC, in a manner that acknowledged the limitations of its examination.

In November 1998 and February 1999, the Working Group held fact-finding sessions in New York City and Washington, DC, respectively, to gather information regarding the operation of WTSs and their impact on surrounding communities. These sessions followed a two-day format. The first day the Working Group toured the WTSs in the area; the second day the Working Group hosted a public

meeting to which representatives from various stakeholder groups were invited to present information about WTSs. At both the New York and Washington meetings, the Working Group heard from residents and business owners, environmental justice and environmental groups, community representatives, waste industry representatives, technical organizations, and state and local government officials.

After the meetings, the Working Group began drafting this report based on the information gathered. The Working Group also researched the ways that other parts of the nation are managing WTSs. Even though the meetings were only held in New York City and Washington, DC, the Working Group sought to gain information on the perspectives of other areas of the nation. This information was gathered by Working Group members communicating directly with several stakeholders from across the nation, and by soliciting input and comments on a draft recommendations report issued October 7, 1999.

The draft report was sent to more than eighty people, representing state and local agencies, environmental, community, industry, and technical groups and associations. Following the distribution of the draft report, several of the reviewers pointed out that the cities of New York and Washington represent extreme and, perhaps, atypical urban settings. They indicated that other areas of the country have their own, unique set of challenges that can best be addressed at the state and local level. Reviewers' comments are summarized in a report appendix.

II. Waste Transfer Stations And Environmental Justice

WTSs are facilities where municipal waste is unloaded from collection vehicles and temporarily stored before being reloaded onto larger long-distance transport vehicles for shipment to landfills. Based on observations by the Working Group and information presented to it, WTSs are disproportionately clustered in low-income communities and communities of color. They are commonly found adjacent to high-density housing, recreational areas, food establishments, and small businesses.

These temporary storage areas for waste can bring many problems to a community if they are not managed correctly. In addition to quality of life issues such as noise, odor, litter, and traffic, WTSs can cause environmental concerns associated with poor air quality (from idling diesel-fueled trucks and from particulate matter such as dust and glass) and disease-carrying vectors such as rodents and roaches.

Currently, there are no national standards or regulations that apply directly to the management of WTSs. Because WTSs are managed mainly at the local level by local ordinances and enforcement agencies, the variance at which they are operated can be great. Moreover, many WTSs in urban areas are located in mixed zoned neighborhoods of color. WTSs in New York and Washington process waste that is generated not only within the municipality, but also from surrounding municipalities and states.

From the Working Group's perspective, the issues surrounding WTSs should be raised to EPA, states, and local governments. The recommendations provided in this report support the need for national standards, more community involvement in local land-use decisions, and tougher enforcement at the local level. The Working Group recognizes that the recommendations in this report are gathered from a limited number of meetings and with a limited amount of resources. It is the Working Group's desire to bring this important issue to light and challenge community groups and federal, state, and local governments to respond aggressively to a problem that will continue to grow with the population.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004148

III. Recommendations

The recommendations in this report call for actions that systematically address the issues associated with siting and operating WTSs. These recommendations range from regulatory actions and the development of a best practices manual to immediate actions in the communities suffering from the clustering and disproportionate siting of WTSs, WTSs in close proximity to residential uses, and the unsafe operation of WTSs. At the core of these recommendations is the direct and continuous participation of communities in every aspect of the development and implementation of these recommendations.

To ensure a thorough and fair examination of these difficult issues and to develop recommendations that could be implemented from a regulatory, technical, and political perspective, the Working Group consisted of individuals representing a variety of stakeholders such as nearby residents, business owners and employees, community groups, environmental justice organizations, the private and public waste trade, and local government. In conducting its work, the Working Group consulted with EPA and sought information and recommendations from individuals representing diverse perspectives.

With a focus on solution-building, the Working Group sought to develop recommendations using a consensus-based process to develop as much as unanimity as possible for its recommendations. This process required every member to understand the complexity of the issues, their representative positions, and to struggle with recommendations that would respond to the issues of WTS siting and operation. The Working Group did achieve consensus on all recommendations—a significant feat in light of the diversity of the Working Group. The achievement of agreement on these recommendations does not mean that the Working Group does not have concerns regarding their full implementation. Only through the full and complete implementation of these recommendations will the suffering of communities from the clustering, disproportionate siting, and unsafe siting and operations of WTSs be addressed, and all future WTSs be designed and operated in a safe manner. The full implementation of these recommendations will require the commitment of resources and the collaboration of EPA, state and local permitting agencies, with local communities.

The Working Group strongly urges EPA and state and local regulatory agencies to review these recommendations in the light of the good faith and hard work of the Working Group. Moreover, it must be noted that these recommendations are presented as a packaged, comprehensive strategy to fully address the issues of WTSs and should be viewed as an initial framework for further development and implementation. It is the view of the Working Group that the elimination of any of these recommendations would not fully respond to the conditions observed.

The following is an overview of the recommendations set forth in the report.

a. Resource Conservation Recovery Act (RCRA)—Solid Waste Management Planning

RCRA Sections 6942 and 6947 provide the authority to the EPA to issue regulations for the establishment of solid waste management plans by states. In developing these plans, this authority permits EPA to consider the "characteristics and conditions associated with solid waste management, including collection, storage, processing, and disposal methods and practices; location of facilities; reasonable protection of ambient air quality; population density; distribution and projected growth, type and location of transportation; constituents and generation of waste and the political, economic, organizational, financial, and management problems affecting comprehensive solid waste management." EPA is also provided the authority to review and approve solid waste management

plans and withdraw approval if they fail to comply with minimum requirements.

The Working Group believes that the above-noted provisions provide EPA with the authority to directly address the impacts of WTSs. Moreover, WTS siting and operations observed during the Working Group's fact-finding tours, as well as issues raised to NEJAC over several years, justifies EPA's use of such authority. There is unanimity for the issuance of federal siting and operation criteria to be included in state solid waste management plans. The Working Group also considered recommending the promulgation of federal standards for WTSs comparable to those EPA has published for municipal solid waste landfills. However, one member of the Working Group, representing a solid waste professional association, did not agree that EPA should establish enforceable federal regulations for WTSs; he did not believe that the Working Group's effort demonstrated the existence a nationwide problem of such severity to justify federal regulation, and he does not agree that RCRA provides EPA with the legal authority to do so.

Based on these considerations, the Working Group recommends that EPA:

- Issue federal criteria to revise solid waste management plans to address the safe and equitable siting and operation of WTSs;
- Review solid waste management plans of states where the presence of WTSs has been implicated as a threat to public health, the environment, and environmental justice;
- Convene a meeting of organizations that can provide resources to support the coordination of solid waste planning; and
- Convene regional planning workshops to address the clustering of WTSs and the siting of new facilities in an equitable fashion where solid waste handling involves multiple jurisdictions.

b. Facility Siting

The report includes recommendations that address the two fundamental challenges of siting new WTSs and the existing clustering of WTSs in a manner that reflects the principles of environmental justice. The basis for the recommendations to address these challenges is that local land uses have, in effect, predetermined the siting of negative land uses to low-income communities and communities of color. While WTS siting is "limited" to purportedly race- and class-neutral manufacturing zones, WTSs are sited disproportionately in areas adjacent to poor communities and communities of color. Among the reasons cited for this circumstance are that communities in such areas were grandfathered into industrial zones; such areas are adjacent to industrial zones; such areas permit a mixture of commercial, industrial, and residential uses; and rezoning decisions to eliminate such negative land uses come from affluent white communities. Therefore, the recommendations presume that local land-use decisions alone cannot ensure the prevention of clustering or disproportionate siting of WTSs in low-income communities or communities of color or the protection of public health.

Clustering and disproportionate siting of WTSs: With respect to existing circumstances of WTSs that are clustered, or disproportionately sited in communities, the Working Group recommends the following transition strategy to provide funding and technical assistance for a neighborhood-specific facilitated process to develop a "transition strategy" to reduce the total number and capacity of WTSs in such communities and to identify uses acceptable to the community. The transition strategy would be based on:

- Identifying the total number of WTS, total throughput, and capacity of waste processed with the community;

- Identifying WTSs that have a high degree of incompatibility with adjacent community land uses;
- Establishing fair goals for reducing total solid waste throughput in the community and consolidating and closing WTSs that have high degree of incompatibility with adjacent community land uses by working with facility owners;
- Establishing a mechanism to transition closed facilities to uses acceptable to impacted communities and in consideration of investments by facility owners;
- Establish a plan for WTSs continuing operation to implement best management practices, transportation impacts, and community complaint systems.

Future siting of WTSs: With respect to the future siting of facilities, the Working Group recommends that the siting of WTSs be based on an examination of the entire area or region that solid waste is handled, particularly because WTSs provide an essential municipal service. The Working Group recommends the following process for selection of such sites:

- Establish an advisory panel of representatives of communities (particular from communities with existing WTSs), municipalities, public and private waste trade groups, environmental justice and environmental organizations, local community development organizations, and permitting agencies.
- The advisory panel should establish site-selection criteria—to which all WTSs (public or private, small or large) would be subject—that prevent clustering and disproportionate siting and ensure the protection of public health and the environment.
- Subject the criteria to public review and finalize them based on the review.
- In consultation with the advisory panel, identify sites meeting the criteria and subject them to public review.
- Subject the sites identified to environmental and community impact analyses. Provide communities adjacent to each site with independent technical services to review the impacts from the proposed site.
- Select sites based on an affirmative demonstration that they will not result in clustering or disproportionate impacts.

Permitting: With respect to processing applications to site and operate WTSs, the Working Group recommends that EPA work with local permitting agencies to:

- Identify all neighborhoods potentially impacted by the proposed WTSs and their transportation routes;
- For all potentially impacted neighborhoods, establish a baseline of information needed to assess impacts for the proposed facility including demographics, sensitive receptors, health statistics, and impacts from similar facilities;
- Require the identification of the source and volume of waste to be processed;
- Require an affirmative demonstration that clustering and disproportionate impacts will not result from the proposed WTSs;
- Require the demonstration of the application of best management practices for the proposed WTS; and
- Require the submission of a transportation plan.

c. Best Management Practices

Separate from the recommendation for the federal regulation of WTSs, the Working Group unanimously recommends that EPA develop a manual of best management practices for WTSs. The

Working Group learned of methods used at some WTSs around the country and the world that are effective in eliminating or reducing impacts. A manual discussing such methods would serve as an information base for facility operators, government regulators, and the public of practices deemed best for addressing various types of facilities and impacts.

In developing a comprehensive best management practices manual, the Working Group recommends developing a baseline of impacts from WTSs. The Working Group recommends that the baseline consider the various types of settings (e.g., urban, suburban, rural, and tribal), location (e.g., waterfront, land-based), and proximity to human populations. The baseline also must the include the variability of impacts depending on the type of waste processed. The Working Group was made aware of various facilities that are functionally equivalent to WTSs but process such diverse wastes as asbestos, medical, and low-level radioactive wastes. The best management practices manual would be developed based on the baseline of impacts. The report provides an initial framework for the major areas that must be considered in the manual.

The Working Group recommends that EPA convene a diverse focus group to ensure that the best management practices consider all pertinent variables in siting, operation, geography, and government al structure. At a minimum, the focus group should include representatives from:

- State, tribal, and local regulatory agencies responsible for issuing design and operating permits for WTSs and for ensuring compliance;
- Public and private solid waste professionals with expertise in planning, designing, and operating WTS; and
- Community, environmental and environmental justice organizations that have been involved with solid waste and WTS issues.

d. Community Participation

The direct participation of community residents, particularly those that reside in the communities burdened by the clustering and disproportionate siting of WTSs, is critical to the development of solutions that are responsive to community needs and concerns. All the recommendations in this report call for meaningful and continuous community participation in every aspect of the development and implementation of these recommendations.

The Working Group recommends that the process of community outreach and consultation be guided by the "NEJAC Public Participation Model." In addition, because components of implementing these recommendations are inextricably linked to issues of local land use, the Working Group recommends that community consultation to identify community uses, plans, and environmental justice circumstances be based on the NEJAC Waste & Facility Siting Report: "Environmental Justice, Urban Revitalization, and Brownfields: The Search for Authentic Signs of Hope," and EPA's "Land Use Based Remedy Selection Guidance."

The Working Group also recommends providing of technical assistance to communities to promote meaningful participation.

e. Marine Waste Transfer Stations

The use of marine WTSs was identified by community residents during the Working Group's fact-finding sessions as an equitable method to process solid waste in a manner that would minimize

Electronic Filing: Received, Clerk's Office 04/19/2023 C004152

impacts to the community. EPA had initiated a rule-making process for such facilities under the authority of the Shore Protection Act, entitled: "Waste Handling Practices for Vessels and Waste Transfer Stations." The Working Group recommends that EPA finalize this rule.

f. Air Quality and Clean Air Act

The degradation of air quality by WTS operations was a consistent issue raised during the fact-finding sessions. The Working Group held preliminary discussions with EPA's Office of Air and Radiation on strategies to address air quality impacts. It should be noted that some Working Group members expressed the view that the topic of air quality was outside their area of expertise. However, the Working Group recommends that EPA move forward on a program to characterize air emissions from WTSs and to develop strategies to address them. The Working Group recommends EPA's further investigation of the following:

- Examine comprehensively air quality controls for inclusion in the best management practices manual such as air monitoring, odor elimination technologies, and negative air pressure designs for the types of air contaminants at WTSs.
- Issue guidance to calculate emissions from WTSs includes emissions from combustion engines within WTSs.
- Work with states to develop an indirect source review program pursuant to the authority of the Clean Air Act [42 U.S.C. 7401(a)(5)] to mitigate the effects of "any facility, building structure, installation, real property, road or highway which attracts, or may attract, mobile sources of pollution."
- Mitigate the emissions from heavy-duty diesel vehicles by establishing programs for converting older, high-emitting engines to cleaner engines; establishing a program to identify and monitor diesel trucks with pollution control systems that can be disabled and retrofit them with low-NO_x kits; and dedicating a portion of settlement funds in the settlement reached with truck engine manufacturers for clean air projects in communities clustered with WTSs.
- Examine the increase in vehicle miles traveled associated with the transport of solid waste.
- Foster the establishment of clean fuel fleet.

g. Waste Reduction

During the Working Group's fact-finding sessions, it was clear that part of the capacity needed for WTS was due the inadequate waste reduction programs. While waste reduction was not the focus of the Working Group's activities, the Working Group recommends that EPA examine and assess the effectiveness of waste reduction strategies and programs throughout the country. In particular, the Working Group recommends the following be examined:

- Effective technologies and techniques to reduce the total volume of solid waste generated and to maximize recycling levels;
- Incentives to encourage waste reduction and recycling; and
- Creation of local businesses involved in waste reduction and recycling.

h. Regulatory Review and Enforcement

Inadequate enforcement was commonly cited by participants in the Working Group's fact finding sessions as a key reason for the impacts from WTSs operations. Among the enforcement issues that they raised included confusion or conflict regarding the lead local enforcement agency; unclear

standards to undertake enforcement actions; unresponsiveness of local regulatory agencies in addressing patterns of non-compliance identified by community residents; inadequate enforcement staffs; and the hindrance of regulatory enforcement by court injunctions brought by facility owners.

To begin addressing these issues, the Working Group recommends that:

- Permitting agencies charge a fee as part of each WTS permit to fund adequate enforcement;
- Environmental monitors be required as part of every permit;
- Multi-jurisdiction enforcement agreements be developed where waste is processed and handled in more than one jurisdiction;
- The federal government exhibit leadership in implementing these recommendations in Washington, DC, since the federal government is a major generator of solid waste; and
- Independent third-party inspectors be hired for all municipally owned or operated facilities.

Because enforcement of WTS standards is primarily a local municipal function, these recommendations set forth a strategy for the local lead enforcement agency. The Working Group recommends the implementation of these recommendations by EPA and other federal enforcement agencies providing assistance to the local enforcement agencies.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004154

BACKGROUND

I. History of NEJAC and the Waste Transfer Station Working Group

The National Environmental Justice Advisory Council (NEJAC)[1] is a federal advisory committee established in 1994 to provide advice to the Administrator of the U.S. Environmental Protection Agency (EPA) on issues related to environmental justice. The Federal Advisory Committee Act (FACA) was passed in 1972 to achieve an open government through the establishment and operation of independent committees. These committees furnish advice and diverse opinions to government decision makers on essential objectives and public policy.

The NEJAC consists of members who are appointed in a balanced representation among the following areas: community-based groups; industry and business; academic and educational institutions; federal, state and local government agencies; federally recognized tribes and indigenous groups; and other non-governmental groups as deemed appropriate. The NEJAC is organized by six Subcommittees that represent various environmental issues. This report is a product of the Waste and Facility Siting Subcommittee, which covers issues associated with hazardous and solid waste.

> *Waste transfer stations* (WTSs) are facilities where municipal waste is unloaded from collection vehicles and subsequently re-loaded onto larger transport vehicles to be taken to a disposal site. WTSs allow communities to move waste economically over long distances.

For several years, citizens from across the country have been approaching the Subcommittee with concerns about local conditions at waste transfer stations and EPA's role in ensuring more consistent protection at the facilities. In December 1997 at a NEJAC meeting in Durham, North Carolina, the issue of waste transfer stations in poor communities and communities of color was raised to the Subcommittee. Since then, citizens from cities such as Atlanta, Baton Rouge, Birmingham, Las Vegas, Los Angeles, New York City, Philadelphia, and San Francisco have asked NEJAC to examine EPA's authority to develop baseline criteria for waste transfer stations.

In response to the citizens' requests, the NEJAC passed a resolution to investigate the impacts of waste transfer stations on adjoining poor and minority communities (see Appendix 1). The resolution passed by NEJAC established the Waste Transfer Station Working Group (hereinafter referred to as the "Working Group ") to lead the investigation. Its members bring diverse perspectives from environmental justice groups, community-based organizations, local government, and the waste industry (see Appendix 2 for a list of Working Group members). The Working Group has prepared this report as a basis for the EPA to implement a national strategy for addressing the impacts of waste transfer stations on poor and minority communities.

II. Investigation of Impacts

The Working Group began its investigation of the impacts of WTSs by convening fact-finding sessions in New York City and Washington, DC. These sessions included tours of the impacted communities and their facilities followed by public meetings. At both public meetings, representatives of various

[1] NEJAC was chartered in February 1994 under the Federal Advisory Committee Act and pursuant to the Executive Order No. 12898, "Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations," which is commonly referred to as the "Executive Order on Environmental Justice."

Electronic Filing: Received, Clerk's Office 04/19/2023 C004155

interests—community groups, technical experts, waste industry personnel, and local and state government officials—presented their perspective on WTSs. Agendas of these meetings are provided in Appendix 3.

The Working Group selected New York City and Washington, DC, to hold its fact-finding sessions because both cities are home WTSs with considerable controversy—and both were easily accessible within a small travel budget. Although the Working Group 's investigation focused primarily on the concerns of these two cities, this report also takes into consideration input the Working Group received from other cities. The Working Group acknowledges that many of the impacts caused by the clustering of WTSs in large urban environments are not typical concerns of rural and suburban communities. Therefore, the Working Group endeavored to outline national baseline criteria that are consistent with good practices already practiced in some parts of the country and that will upgrade criteria in cities with the kinds of problems seen in New York City and Washington, DC.

As part of its investigation, the Working Group also participated in a training course on state-of-the-art WTS design and operation. The training included a visit to a modern, WTS and recycling facility in suburban Virginia that has won awards for its design and operation. The training helped the Working Group learn about effective approaches for minimizing WTS impacts.

III. Drafting the Report

Following its investigation, the Working Group drafted this report for submission to EPA Administrator Carol Browner and the Assistant Administrator for Solid Waste and Emergency Response, Timothy Fields, Jr. Input from the New York and DC fact-finding sessions as well as input from residents of other communities formed the basis for the Working Group 's recommendations for national baseline criteria. The Working Group also solicited input on the draft report from additional municipalities and national organizations before submitting it to the full NEJAC in order to reflect a broader perspective of concerns and issues nationwide. After reviewing this input, the Working Group submitted the draft report to a variety of stakeholders for review and input (see Section IV below).

IV. Comments from Reviewers

In an effort to gain a nationwide perspective of WTS issues, the Working Group selected report reviewers from around the country and representing the broad spectrum of stakeholders and stakeholder groups concerned with WTSs (see Appendix 4 for a list of reviewers). Eighty-nine reviewers representing environmental justice organizations, tribal councils, solid waste associations, environmental groups, solid waste professionals (from both private companies and local governments), and local, state, and federal government agencies were asked to review the report. Written comments were received from 10 of the reviewers, and four additional reviewers provided written comments after the specified comment period.

A detailed listing of the comments received is contained in Appendix 5. In summary, many of the reviewers felt the report and the recommendations to EPA will be valuable in addressing the impacts of WTS clustering. However, general philosophical differences do exist. Several reviewers expressed concern that federal regulatory authority and the need for national criteria have not been demonstrated. They believe that existing state and local regulatory controls are adequate if properly enforced. Representatives of rural and suburban areas, in particular, do not feel the impacts associated with clustering in large urban settings are relevant to their communities.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004156

In addition, some reviewers cautioned against making recommendations based on public perceptions of the problem. They recommended further investigation to verify that the problems exist before drawing conclusions. Other reviewers suggested additional resources to include in the report and ways to clarify or strengthen the recommendations.

The Working Group tried to address review comments by acknowledging differences of opinion and by building a stronger foundation for the report recommendations. This report reflects the reviewers' comments to the furthest extent possible.

FACT-FINDING SESSIONS AND TRAINING

The Working Group convened two fact-finding sessions to investigate the problem of WTS clustering in poor and minority communities. The fact-finding sessions were held in the communities within New York City and Washington, DC, that most strongly feel the impact of clustering. Each session included a facility tour to get a first-hand look at the problem and a public meeting to listen to the varied perspectives of the communities, local government officials, and the waste trade industry. The fact-finding sessions are summarized in Sections I and II that follow. Section III summarizes the steps recommended to the Working Group by both the New York City and DC communities to address the problem of clustering. The Working Group 's training to learn about state-of-the-art WTS design and operation is summarized in Section IV.

I. New York City Session

a. Facility Tour and Public Meeting

The Working Group conducted their New York City fact-finding session in November 1998. The fact-finding session began with a tour of Red Hook, South Bronx, and Greenpoint/Williamsburg—three minority and low-income communities that are home to most of New York City's WTSs. The tour of these communities focused on visits to WTSs, recycling centers that perform WTS functions, and unpermitted waste handling facilities that create environmental and health concerns comparable to WTSs.[2]

The tour was followed by a public meeting at which the Working Group heard perspectives from residents of the three communities, non-governmental organizations with expertise in WTSs, a representative of the New York State Department of Environmental Conservation (NYSDEC), and a member of a waste industry trade association. Because of imminently pending litigation, the invited waste industry representatives chose not to attend.

The public meeting focused on the residents' concerns over the WTS operations clustered in their communities. The following section summarizes the feedback they provided to the Working Group .

b. Community Feedback

The residents of Red Hook, South Bronx, and Greenpoint/Williamsburg shared many similar concerns about the impacts of WTSs on their communities. It was apparent that WTSs impact many aspects of

[2] For purposes of this report, other facilities that perform waste transfer activities (e.g., recycling, construction and demolition, and processing facilities) are included in the term "WTS."

Electronic Filing: Received, Clerk's Office 04/19/2023 C004157

day-to-day life in these communities. Concerns ranged from impacts on health and safety to nuisance and quality of life, traffic, and the local economy. Residents raised further concern about the cumulative impact of WTSs together with many other industrial facilities in the communities. They also voiced concerns about how the city is managing the regulation of WTSs, such as the permitting of facilities and the enforcement of local ordinances and regulations.

The following sections summarize the concerns raised by the community at the public meeting held in Brooklyn. The types of issues listed below are very familiar to those who have worked with environmental justice concerned communities nationwide, especially as they relate to the siting and operation of facilities located in neighborhoods where people live and work. However, it is important to point out that although the residents' concerns are real, no data have been collected to support their claims.

***Health and Safety*:**

- The communities believe they experience unusually high asthma rates, as well as high numbers of fibroid tumors, miscarriages, respiratory problems, and nose bleeds.
- The communities see the large volume of truck traffic as a potential danger to pedestrians.
- Emissions from the large volume of trucks idling as they wait on residential streets to unload are a health concern to communities.
- Residents feel the potential impacts from air emissions are exacerbated by inadequate access to health care facilities and the high cost of health care in these areas.
- The proximity of the waste handling facilities to meat and produce handlers is a concern.

***Nuisance/Quality of Life*:**

- Dust and odor from WTSs are deemed intolerable by nearby residents.
- WTSs reportedly contribute to rat and other vermin problems, particularly because facility doors are often open.
- Noise levels of WTSs operating at night are said to deprive nearby residents of sleep.
- Facilities reportedly lack green buffer zones to enhance neighborhood aesthetics and to mitigate potential air emissions problems.
- Residents feel the exteriors of the facilities are poorly maintained. In the worst cases, trash falls from open doors and windows onto public streets.
- Residents of some communities are worried that the recommended marine transport facilities may cut off their access to the waterfront and mar their views.
- Dust-laden, unsightly "recycling" activities reportedly take place in open air. Piles of trash collect under bridges.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004158

***Traffic*:**

- Residents report that truck routing does not appear to be controlled or monitored by regulators to restrict trucks to designated truck routes.
- Trucks reportedly use residential streets for other than pickup purposes.
- Truck traffic is particularly a concern where there is only one access route.

***Local Economy*:**

- Residents are concerned that the poor appearance of WTSs depresses nearby property values and has contributed to the exodus of local businesses.
- Residents are concerned that WTSs drive out prospective new businesses that could bring new jobs and services into the neighborhood.
- The presence of WTSs may contribute to employee absenteeism.

***Cumulative Impacts*:**

- The communities believe that the cumulative impact on traffic, health, and the environment of having several WTSs in a community should be evaluated as should the cumulative impact of WTSs combined with other sources of similar concern (e.g., sewage facilities, hazardous waste transporters and treatment facilities, scrap yards, auto shops, and sludge plants).

***Permitting*:**

- Residents claim that permitting procedures lack early notification and public participation by residents and neighbors.
- According to representatives of community groups and non-governmental organizations, permits appear to be "grandfathered" without public review, and requests to increase permitted solid waste capacity are granted as a matter of course without public review.
- Spanish translations are desired.
- Residents feel that the New York State Department of Environmental Conservation (the state's regulatory agency) does not respond adequately to their requests for permit information.
- The residents would like to see a zoning review performed during the permitting process. The proximity of industrial properties to residential areas should be reviewed, as should conflicting land uses and impacts to residents living in areas zoned industrial.

***Enforcement*:**

- Although New York City has passed "fair share" legislation that should ensure that the WTSs are equitably distributed throughout the boroughs, residents feel this has not occurred.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004159

- Residents complained of many apparently unpermitted dump sites.
- "Recycling" facilities appear to be performing WTS functions with no regulatory controls.
- Residents believe that the city does not have a sufficient number of inspectors.
- Residents say the current air, noise, odor, and vibration restrictions do not seem to be enforced.
- The Department of Sanitation's WTS standards are written in very general terms (e.g., "adequate" loading area, or traffic managed in "a safe and efficient manner"). It is felt that this provides little guidance on good practices and little enforceability.
- Environmental impact studies reportedly are not conducted as required, either for individual facilities or for areas with multiple facilities.

Community-Specific Concerns:

In addition to shared concerns listed above, residents of Greenpoint/Williamsburg, Red Hook, and South Bronx expressed concerns specific to their own communities. The following paragraphs summarize these community-specific concerns.

Greenpoint/Williamsburg: Traffic and related health and environmental concerns are prominent in Greenpoint/Williamsburg because a large number of trucks are needed to transport waste to a large number of WTSs (reportedly 550 trucks and 15 WTSs). The high volume of truck traffic is aggravated by traffic on Brooklyn Queens Expressway and Williamsburg Bridge.

Red Hook: Red Hook residents are concerned that their community, which is made up largely of minority residents—more than half of which have incomes below the poverty level—are not zoned similarly to more affluent communities. They noted that permitted WTSs must be in industrial zones; however, more affluent communities have been rezoned to become exclusively residential, while low-income and minority communities are forced to live with industry. In Red Hook, one low-income housing development is located within *one block* of a WTS.

In addition to their concern about non-equitable zoning, Red Hook residents fear that they will continue to be cut off from access to the waterfront and views of the Verrazano Narrows Bridge, New Jersey, the Statute of Liberty, Ellis Island, and Manhattan because of WTSs and other industrial facilities.

South Bronx: Residents of Hunts Point, which is in the South Bronx, are very concerned with the apparent lack of regulation of its 32 WTSs. Some of these WTSs are within four blocks of schools and residences, and many reportedly do not have Department of Sanitation licenses. WTSs in Hunts Point often are backyard industries operating out of garages. Some of them appear to have been grand-fathered by the City, and their operations appear to be unregulated. Due to heavy truck traffic and the presence of three busy highways, the Hunts Point community is interested in marine WTSs as a means of reducing the traffic problem.[3]

[3] This statement should not be construed as an endorsement for the proposed American Marine Rail WTS for Hunts (continued...)

Electronic Filing: Received, Clerk's Office 04/19/2023 C004160

The Port Morris area of the South Bronx is particularly concerned with zoning and the impact WTSs have on their local economy. Port Morris has numerous permitted and unpermitted WTSs. Although the area is zoned for heavy industry, residents assert that light industry used the area for some time before the proliferation of WTSs drove them out. Moreover, residential zones border industrial zones.

c. Government Perspective

Council members representing Red Hook, South Bronx, and Greenpoint/Williamsburg were critical of the regulatory framework under which New York City's Department of Sanitation operates. They described the Department's regulations as vague and criticized their lack of siting criteria, the excessive grandfathering of existing uses, the use of interim operating authority pursuant to consent order rather than permit, and the failure to provide additional independent inspections of facilities operated by companies with "tainted" backgrounds. Council members also were concerned that the regulatory framework lacked provisions for public participation in the siting process.

The council members stressed the need for continuous and universal enforcement of WTS regulations. They deemed WTS environmental impact statements as inadequate, if performed at all. However, they did commend one permit that had incorporated an environmental impact statement and had rigorous restrictions on truck traffic.

The council members asserted that EPA clearly has jurisdiction over WTSs under Title V of the Clean Air Act. They urged EPA to proceed with its August 30, 1994, proposal to regulate the transport of garbage by barge, which would considerably relieve traffic in some communities. They also expressed interest in using railroads to reduce truck traffic. The council members requested a report from the New York City Department of Sanitation (which declined to participate in the fact-finding meeting) addressing its ability to use existing marine WTSs to export waste.

d. Waste Trade Perspective

The waste trade was represented at the public meeting by an environmental consultant in WTS design and construction. He explained that WTSs have emerged in the past 15 years as a necessary interim measure to transport waste economically to landfills. As solid waste landfills have become more stringently regulated, the trend has been to operate fewer, larger, regional landfills; thus, WTSs are increasingly important. He further explained that an additional role of WTSs is to serve as the location for substituting large capacity trailer trucks for much smaller packer trucks that pick up garbage at residences and businesses.

The consultant noted that a permittee must follow three steps when siting a WTS: 1) The permittee must find property that is zoned industrial and near transportation infrastructure (interstate highways, rail, or barge); 2) The permittee must plan the WTS so it is compatible with the neighborhood in terms of noise control, landscaping, and good external design; and 3) The permittee must satisfy all applicable permit conditions.

In response to questions from other meeting participants, the consultant indicated that state and local

[3](...continued)
Point. This report only endorses the use of marine WTSs where they are fully supported by the impacted community. Furthermore, the Working Group only endorses the use of marine WTSs if they mitigate negative impacts to the community, not exacerbate them.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004161

governments regulate WTSs, and therefore operation practices vary widely. There are no uniform requirements for the use of state-of-the-art WTS technologies.

II. Washington, DC, Session

a. Facility Tour and Public Meeting

In February 1999, the Working Group toured seven permitted WTSs in Washington, D.C.. At the public meeting the following day, the Working Group listened to two community panels, two city and local official panels, a waste industry panel, and a community technical organization panel. The meeting participants discussed concerns raised by residents and businesses near the WTSs, the roles the DC government plays as regulator and operator of these stations, and the market circumstances in which the solid waste industry operates.

b. Community Feedback

The residents of Washington, DC, voiced a number of concerns about the impact of WTSs on day-to-day life in their communities. Like New York City, these concerns encompassed impacts to health and safety concerns, nuisance and quality of life, traffic, local economy, and cumulative impacts of WTSs and other industrial facilities.

Several communities raised many site-specific regulatory issues regarding the legal status of certain facilities, their compliance with existing regulations, and in some cases their exemption from applicable requirements because they are municipally owned or sheltered by judicial consent decree. They frequently expressed concern about the siting of WTSs in communities of color and near residential areas. Recent DC legislation on WTS siting and operations was often referenced.

The following sections summarize the feedback the community provided to the Working Group at the public meeting.

***Health and Safety*:**

- Residents believe that their high rate of health problems are directly related to the numerous undesirable facilities located nearby, especially WTSs. Claims were made that 1990 census data show an unusually high rate of health problems for DC (e.g., the infant mortality rate was the highest in the country—four times the national rate; death rates from heart disease are one third higher than the national rate; death rates from cancer are two-thirds higher than the national rate; the birth rate is 16.8 percent lower that the national rate).
- No testing is being done to identify health problems in the vicinity of WTSs.
- Pervasive dust aggravates allergies. Deodorizers used to mitigate the odors also may be aggravating these allergies.
- Odors cause nausea among residents.
- The potential carcinogenic effect of breathing the emissions from trucks is a concern.
- Children at schools located near WTSs play right behind trucks as they enter and exit the station.

Electronic Filing: Received, Clerk's Office 04/19/2023 C004162

- Frustration with the failure to enforce adequate criteria for WTSs is causing "excessive anxiety and mental anguish."
- Residents are concerned that WTSs may be receiving biological, hazardous, and radioactive wastes.

***Nuisance/Quality of Life*:**

- Odors from the trucks and WTSs is a common problem, particularly during hot Washington summers. Residents reportedly must stay inside and incur the costs of running air conditioners to avoid the odors. Attempts by the facility operators to address the odor problem with deodorizers have been ineffective.
- Pervasive dust causes housekeeping problems.
- WTSs contribute to infestations by rodents and other vermin.
- Truck traffic produces excessive noise at early hours.
- Vibrations from the trucks deteriorate roads and the foundations of homes. Trucks also cause damage when turning corners on narrow streets.
- WTSs fail to wash trucks, creating an eyesore.
- Streets need better maintenance due to wear and tear from large trucks. Also, they often need cleaning due to trash that falls from the trucks.

***Traffic*:**

- There were several complaints about traffic congestion and noise, traffic violations, and accidents.

***Local Economy*:**

- Dust and other air emissions from the facilities have decreased property values and made homes difficult to sell.

***Cumulative Impacts*:**

- WTSs are clustered with other industrial facilities in minority and low-income communities. The city zoning process fails to fairly distribute such facilities. Large, primarily Caucasian areas of the city have no property allowable for WTS use.
- WTSs are located in neighborhoods with other, pre-existing environmental concerns.

***Permitting*:**

- Public participation in WTS siting and permitting was deemed inadequate, lacking advance notice and ignoring recycling facilities, which pose concerns comparable to WTSs.

- Residents consider the 500-foot buffer required by the DC Solid Waste Facilities Permit Act of 1995 inadequate. They would prefer a 1,000-foot buffer requirement.

***Enforcement*:**

- Residents perceive that the District of Columbia does not enforce existing law effectively, including permit requirements, certificate of occupancy requirements, or the 1995 Solid Waste Facilities Permit Act, which imposes a 500-foot buffer, traffic control plans, limits on the hours of operation, enclosed operating area standards with effective entry system requirements, rodent and disease controls, and private rights of action. For example, one facility has obtained a court injunction that bars implementation of existing regulatory standards and bars inspection and enforcement. Residents are particularly concerned because the federal government is a substantial customer for this facility.

- A number of residents have taken the initiative to encourage facility operators to take action on the issues of traffic control, hours of operation, street cleaning, and improvements to the exterior of facilities. Because these efforts were unsupported by a regulatory structure or enforcement, they could not be relied upon to ensure community protection over the long term.

- Enforcement of regulations governing toxic wastes and the lack of effective sewage facilities are concerns.

- The effect of pending litigation at many WTSs has been to immunize them from public accountability, as well as, in some cases, from regulatory enforcement.

c. Government Perspective

The panel of government officials from the District of Columbia described DC's regulatory structure, new regulations regarding WTSs, and new enforcement efforts to the Working Group . They followed up with a summary of resources they need to enhance their regulatory control of WTSs. They indicated that the District lacks funds to pay inspectors to evaluate WTSs. The District also needs additional federal funding to pay for the proper disposal of waste generated by the federal government, who is the principal landowner/tenant within DC.

DC officials also see a need for expert technical advice from EPA on best management practices for WTSs, federal air standards enforcement, federal financial assurance requirements for all facilities, and federal recycling standards.

Several panel members argued that DC is unique and should be exempt from waste handling and environmental and inspection requirements required in other jurisdictions and for all private sector activities. That view was rejected by other members of the panel and all Working Group members, who stressed the need for uniform, stringent criteria.

d. Waste Trade Perspective

The waste trade panel explained that WTSs are needed to move solid waste from the concentrated areas in which it is generated to a proper disposal site. Panel members stressed that these facilities help reduce the number of trucks on the road, save fuel, reduce vehicle emissions, lower residential and

ILLINIOS EPA
ENVIRONMENTAL JUSTICE
PUBLIC PARTICIPATION POLICY
APRIL 20, 2018

I. TITLE: Illinois EPA Environmental Justice Public Participation Policy

II. PURPOSE: This policy explains the methods by which the Illinois Environmental Protection Agency (Illinois EPA or Agency) will engage with the public in communities located in identified areas of Environmental Justice (EJ) concern by the Illinois EPA

Illinois EPA defines "area of EJ concern" as a census block group or areas within one mile of a census block group with income below poverty and/or minority population greater than twice the statewide average.

The Illinois EPA has developed a Geographic Information System (GIS) mapping tool call EJ START to identify census block groups and areas within one mile of census block groups meeting the EJ demographic screening criteria. EJ START is publicly available and can be found on the Illinois EPA's EJ webpage (http://epagisportal.illinois.gov/portal/apps/webappviewer/index.html?id=414d804241e94c51809f08f3644c37d9).

The Illinois EPA's EJ public participation policy focuses on public outreach in the context of permitting transactions but may be applied to additional Illinois EPA matters.

III. RESPONSIBLE PERSON: The Environmental Justice Officer (EJO) has primary responsibility for coordinating all EJ efforts on behalf of the Illinois EPA and will act as the spokesperson for the Illinois EPA on EJ.

The Office of Community Relations will have a lead role in preparing the public participation plans, establishing local information repositories and conducting community meetings. The Bureaus and the Office of Community Relations will coordinate on the preparation and issuance of public notices and fact sheets.

The EJO is the contact person for citizens and communities in areas of EJ concern. The EJO will serve as a liaison between the citizen or community and the relevant Illinois EPA personnel to seek resolution of any issues raising EJ concerns.

IV. ACTIVITIES SUPPORTED BY THE EJO:

A. Permitting transactions.

1. Illinois EPA's EJ public participation policy applies to permitting transactions likely to generate significant public interest.
2. If the source involved in the permitting transaction is a High Priority Violator per USEPA guidance or is the subject of an enforcement action (i.e., has been referred to a prosecutorial agency such as the Illinois Attorney General's Office), Illinois EPA will take additional outreach measures as discussed below.

B. Complaint Investigations

1. Illinois EPA will timely respond to complaints from areas of EJ concern received by the EJO.

2. EJO will apprise complainants of the results of the investigations.

C. Enforcement

1. The EJO will act as liaison for citizens and community groups located in areas of EJ concern to keep communities apprised of an enforcement action's status.
2. Illinois EPA will continue to solicit ideas for the Supplemental Environmental Project Bank.
3. Enforcement Orders may be viewed at: www.epa.state.il.us/enforcement/orders/.

V. COMMUNITY OUTREACH PROCEDURES

A. An effective public participation strategy emphasizes early and meaningful public involvement throughout the permitting process or other Illinois EPA activities.

B. Each Bureau will review permit applications and other actions identified herein to determine whether the action will take place in an area of EJ concern as determined by the Illinois EPA EJ Start tool.

C. For areas of EJ concern, the EJO will recommend the appropriate outreach, if any, based on, among other considerations, the type of permit, potential impact of the project or Agency action, type of source and level of interest.

D. Public participation options in areas of EJ concern

1. Community Outreach by Regulated Entity/Source/Permit Applicant

a. Illinois EPA will encourage the permit applicant to meet with community stakeholders to promote open dialogue early in the permitting process for permitting actions likely to be of significant public interest. Meaningful public outreach often occurs prior to the submission of a permit application to the Agency.

i. The applicant is encouraged to provide notice to residents located in an area of EJ concern of the proposed project and provide basic information about the project to interested community members.

ii. The applicant is also encouraged to develop a Community Relations Plan to structure ongoing dialogue with neighboring communities. Information concerning Community Relations Plans, including examples, may be found at 35 Ill. Adm. Code Part 1600, Appendix A.

2. Community Outreach by Illinois EPA

a. Notifications

i. Illinois EPA will provide the community with information regarding proposed projects via EJ notifications, which are mailed to community leaders, public officials, environmental groups, concerned citizens and the permit applicant.

ii. Public Notices will be written in terminology and languages easily understood by the majority of readers, except where specific public notice language is otherwise required. When required, notices will be placed in legal notice sections or other sections of local publications.

b. Public Meetings and Hearings

i. Informational meetings – The Illinois EPA and/or the source may hold an informational meeting or availability session.

ii. For permitting transactions, the purpose of the meeting is to inform the residents in areas of EJ concern of the scope and nature of the project in a timely, interactive manner and to explain the permitting process. Informational meetings may be held prior to a public hearing or may be held when a public hearing is not required.

iii. Informational meetings may also be held to explain enforcement related matters or other Illinois EPA activities that are of concern to the public.

iv. The Illinois EPA will make a good faith effort to provide a translator when it is known that residents do not speak English very well or when the Illinois EPA receives a request for a translator within two weeks of any public hearing or meeting

and when the need for a translator is adequately justified.

c. Fact Sheet and Project Summary

i. Illinois EPA will provide a plain language summary of the major aspects of the proposed project, including the purpose and location of the proposed activity and facility, any anticipated environmental impacts, and any controls or work practices that will limit those impacts.

ii. Illinois EPA will make fact sheets available on the Agency's webpage. Written fact sheets and other available information will be made available for persons without internet access when requested.

iii. As appropriate, the Illinois EPA will translate fact sheets into the predominate language of the community if it is not English.

d. Document Availability

i. Information is available from the Illinois EPA through document repositories, the Illinois EPA's webpage and the Illinois Freedom of Information Act (FOIA) (https://www2.illinois.gov/epa/foia/Pages/default.aspx)

ii. The EJO will assist citizens and groups in identifying available information relevant to EJ concerns.

STATE OF ILLINOIS - ENVIRONMENTAL JUSTICE ACT

(415 ILCS 155/1)
Sec. 1. Short title. This Act may be cited as the Environmental Justice Act.
(Source: P.A. 97-391, eff. 8-16-11.)

(415 ILCS 155/5)
Sec. 5. Legislative findings. The General Assembly finds that:

(i) the principle of environmental justice requires that no segment of the population, regardless of race, national origin, age, or income, should bear disproportionately high or adverse effects of environmental pollution;

(ii) certain communities in the State may suffer disproportionately from environmental hazards related to facilities with permits approved by the State; and

(iii) these environmental hazards can cause long-term health effects.

(Source: P.A. 97-391, eff. 8-16-11.)

(415 ILCS 155/10)
Sec. 10. Commission on Environmental Justice.
(a) The Commission on Environmental Justice is established and consists of the following 24 voting members:

(1) 2 members of the Senate, one appointed by the President of the Senate and the other by the Minority Leader of the Senate, each to serve at the pleasure of the appointing officer;

(2) 2 members of the House of Representatives, one appointed by the Speaker of the House of Representatives and the other by the Minority Leader of the House of Representatives, each to serve at the pleasure of the appointing officer;

(3) the following ex officio members: the Director of Commerce and Economic Opportunity or his or her designee, the Director of the Environmental Protection Agency or his or her designee, the Director of Natural Resources or his or her designee, the Director of Public Health or his or her designee, the Secretary of Transportation or his or her designee, and a representative of the housing office of the Department of Human Services appointed by the Secretary of Human Services; and

(4) 14 members appointed by the Governor who represent the following interests:

(i) at least 4 members of affected communities concerned with environmental justice;

(ii) at least 2 members of business organizations including one member representing a statewide organization representing manufacturers and one member

representing an organization representing the energy sector;

(iii) environmental organizations;

(iv) experts on environmental health and environmental justice;

(v) units of local government;

(vi) members of the general public who have an interest or expertise in environmental justice; and

(vii) at least 2 members of labor organizations including one member from a statewide labor federation representing more than one international union and one member from an organization representing workers in the energy sector.

(b) Of the initial members of the Commission appointed by the Governor, 5 shall serve for a 2-year term and 5 shall serve for a 1-year term, as designated by the Governor at the time of appointment. Thereafter, the members appointed by the Governor shall serve 2-year terms. Vacancies shall be filled in the same manner as appointments. Members of the Commission appointed by the Governor may not receive compensation for their service on the Commission and are not entitled to reimbursement for expenses.

(c) The Governor shall designate a Chairperson from among the Commission's members. The Commission shall meet at the call of the Chairperson, but no later than 90 days after the effective date of this Act and at least quarterly thereafter.

(d) The Commission shall:

(1) advise State entities on environmental justice and related community issues;

(2) review and analyze the impact of current State laws and policies on the issue of environmental justice and sustainable communities;

(3) assess the adequacy of State and local laws to address the issue of environmental justice and sustainable communities;

(4) develop criteria to assess whether communities in the State may be experiencing environmental justice issues; and

(5) recommend options to the Governor for addressing issues, concerns, or problems related to environmental justice that surface after reviewing State laws and policies, including prioritizing areas of the State that need immediate attention.

(e) On or before October 1, 2011 and each October 1 thereafter, the Commission shall report its findings and recommendations to the Governor and General Assembly.

(f) The Environmental Protection Agency shall provide administrative and other support to the Commission.

(Source: P.A. 99-541, eff. 1-1-17.)

(415 ILCS 155/99)

Sec. 99. Effective date. This Act takes effect upon becoming law.

Blachford
ACOUSTICS GROUP

January 11, 2023

To the council members, administrators, and other pertinent parties associated with the West DuPage Transfer Station siting process for Lakeshore Recycling Services:

As a corporate citizen in West Chicago since the 1980s, Blachford Incorporated has invested millions of dollars, developed three facilities very near the proposed transfer station site, and employed many people from the local population. We have endured many years of littering from the existing transfer station, as well as from the existing Lakeshore facility nearby. Large amounts of trash blow out of passing Lakeshore vehicles every day from full trucks, as well as smaller pieces of trash blowing out of emptied trucks. Developing this Lakeshore location into another waste transfer station will only exacerbate the current problems.

On multiple occasions, the City of West Chicago has attempted to impose fines on our property at 1445 Powis Road for loose trash on the ground. This location is our world-class R&D facility built by us in 2003, which also has a natural wetland area occupying a large amount of the property. When confronted with citations, Blachford Incorporated has presented evidence of the culprits, including Lakeshore Recycling Services garbage stickers. Blachford Incorporated was informed by the City of West Chicago that the source of the litter did not matter and that we were responsible for it anyway.

In addition to various sites throughout the US, Canada, and the United Kingdom, Blachford owns a large site in Milwaukee, which has much cleaner neighbors. If the City of West Chicago continues to fill our industrial park with waste transfer sites and their associated pollution, Blachford will choose to invest in this location in the future rather than in West Chicago. Our businesses, our properties, our natural areas, and our people must not be continually besieged by waste-handling companies with poorly executed waste-handling policies and a lack of accountability.

Blachford Incorporated stands firmly against the Lakeshore Recycling Systems waste transfer facility and demands that the city officials of West Chicago keep the sentiment of our well-established businesses and neighbors at the forefront of their minds throughout this decision-making process.

THE PLANTER'S PALETTE
NAME Taxus cuspidata 'Nana Aurescens'
COMMON NAME Japanese Yew
DESCRIPTION
A slow-growing dwarf-spreading cultivar that typically grows to only 2' tall with a spread of 3-4' over the first 10 years. New needles are golden yellow, turning dark green by the second year. This is a male cultivar.
CULTURE
Full sun to part shade in well-drained soil. Best coloring of needles in sun, and foliage is resistant to burning. Does not tolerate wet feet.
• Bright yellow new foliage on a sturdy low-growing yew
• Great for a north foundation or any shady spot
• Male yew will not form berries

3. FIGURE 1 – CURRENT TRANSFER STATION SERVICE AREAS
4. DuPAGE COUNTY RESOLUTION CB-0002-04
5. CITY OF WEST CHICAGO RESOLUTION NO. 03-R-0034

1.0 SOLID WASTE PLAN CONSISTENCY

Criterion (viii) of Section 39.2 a) of the Illinois Environmental Protection Act requires the applicant to demonstrate:

> *If the facility is to be located in a county where the county board has adopted a solid waste management plan consistent with the planning requirements of the Local Solid Waste Disposal Act or Solid Waste Planning and Recycling Act, the facility is consistent with that plan. 415 ILCS 5/39.2(a)(viii)*

All counties in Illinois have prepared a solid waste management plan as required by the Illinois Solid Waste Planning and Recycling Act.

The 2017 Solid Waste Management Plan (2017 Plan) reported the following population and demographic information

> *The 2010 DuPage County population was reported to be 916,925 from the U.S. Census Bureau. The Bureau projects the County growth to slow to 1.4% increase since 2010 with an average 2.72 persons/household. Current U.S. Census estimates put the population at 929,368 including 338,083 households. The State of Illinois has been experiencing a population decline starting in 2013 according to the U.S. Census Bureau estimates from 2016.* (**Ref.1**).

Current 2020 census results list the population of DuPage County at 932,877 a slight increase of 0.3%. This growth rate is consistent with the projections presented in the 2017 Plan.

1.1 West DuPage Recycling and Transfer Station

Lakeshore Recycling Systems LLC (LRS) has applied to the City of West Chicago (West Chicago) for local siting approval of a MSWTS to be located near the intersection Powis Road and North Avenue, on the southeast side of West Chicago in Winfield Township. A *Solid Waste Management Plan Analysis (SWMP Analysis)* was prepared by Civil and Environmental Consultants (CEC) to demonstrate consistency of the West DuPage RTS with the SWMP of DuPage County. Information and conclusions from the CEC SWMP Analysis report were evaluated by JPL Environmental Engineering to review their claim that a MSWTS is consistent with the DuPage County SWMP, given it location less than one-half mile from an existing MSWTS

The proposed transfer station is a facility where loads from MSW collection vehicles will be consolidated into larger loads for transport to a permitted disposal facility. For MSW, the material will be disposed of at a permitted landfill or in the case of landscape yard waste to a permitted compost facility. The facility will also accept and process hydro-excavation slurry liquid that must be solidified prior to landfill disposal.

The West DuPage RTS location is illustrated in relation to the City of West Chicago on **Figure 1B – 1 Transfer Station Service Area** from the CEC report. The facility lies east of Powis Road and

South of North Avenue (IL-64). The facility will be operated by Lakeshore Recycling Systems (LRS), an established privately owned local company that offers residential and commercial collection services for municipal solid waste, landscape yard waste, construction and demolition waste and recyclable materials. The anticipated new services proposed in the application include:

- Receipt and transfer of up to 650 tons per day of non-hazardous municipal solid wastes (referred to as municipal solid waste or "MSW" or more generally as solid waste)
- Receipt, solidification, and transfer of up to 300 tons per day of hydro excavation wastes (HEW)
- Receipt and transfer of up to 250 tons per day of single-stream recyclables (referred to as "SSR" or more generally as "recyclables")
- Drop-off area for West Chicago residents of electrical/electronic devices; and
- Drop-off area for recyclables generated by residents and small businesses.

The facility will transfer waste materials collected by LRS, and likely from third-party haulers.

2.0 SOLID WASTE MANAGEMENT PLAN WASTE TRANSFER AND DISPOSAL SUMMARY

The initial DuPage County Solid Waste Management Plan was adopted February 1991 with subsequent updates completed in 1996, 2001, 2007,2012 and 2017. A review was performed of the solid waste management plan and updates for DuPage County to determine past waste disposal recommendations for the County, and if the proposed West DuPage RTS meets the Plan recommendations put forth for recommendation for both waste transfer capacity and location within the County

2.1 1996 DuPage County SWMP Update (1996 Update)

The 1996 Plan update presented an analysis of waste disposal capacity in DuPage County, considering the dwindling disposal capacity of two large landfills in the County. The plan recommended that:

> *4.9.1 The County should encourage development of three to five waste transfer facilities throughout the County. The County should assist the private sector in determining the most appropriate and efficient locations for transfer facilities, and providing education and appropriate tours to municipalities, townships or any other people interested in knowing more about waste transfer stations. (NEW, Plan-1996)*

(**Ref. 1**).

2.2 2001 DuPage County SWMP Update (2001 Update)

Building upon the closure of the two operating landfills with DuPage County, the DuKane transfer station was sited in West Chicago by Browning Ferris Industries. This transfer station was originally permitted to accept a maximum of 1,950 tons of waste per day with an annual average amount not to exceed 1,500 tons per day. Approximately 50 per cent of the waste was to originate from DuPage County. The plan recommended that:

the permitted capacity of the DuKane transfer station be increased from 1,500 tons per day to 2,500 tons per day, with a proportionate increase in acceptance at the facility for waste generated in DuPage County.

The 2001 Update went further to recommend that

The second and/or third transfer station(s) should be sized to accommodate the 350,000 tons of waste per year and accommodate future population growth and subsequent waste generation. A second and/or third transfer station is expected to increase competition, reduce wear on roads, reduce overall truck miles traveled and decrease truck air emissions.

2.3 2007 DuPage County Solid Waste Management Plan Update (2007 Update)

The 2007 Plan Update examined closely the need for waste disposal capacity for DuPage County. The plan stated:

DuPage County is currently home to one municipal solid waste transfer station (1), one landscape waste transfer station and three construction and demolition debris recycling facilities. All waste intended for landfilling or incineration is shipped out of the County.

The 2001 Plan Update concluded that an additional one or 2 more transfer stations were necessary assuming that 50% of the capacity at the DuKane Transfer Station was for DuPage County waste. It also recommended that the capacity of the DuKane facility be increased.

In 2002, DuKane's capacity was increased to 3,000 tons per day. Three new transfer stations have been proposed since the last update, however, none were approved. Transfer facilities have been constructed outside the County border that are close enough to serve our needs.

To provide an accurate snapshot of the current waste disposal capacity, an evaluation was done of existing transfer stations and disposal facilities (Attachment A). The County was divided into quadrants and the consultant reviewed the nearest three transfer stations to each quadrant. The ideal transport distance is no more than 10 miles. Out of the ten stations that were analyzed, only two facilities serving southern DuPage County failed to meet this criterion (Attachment B). (**Ref.2**)

At the time, the County recognized that a waste transfer capacity shortage existed in southern DuPage County and that it was increasingly difficult to site new capacity in the County, with the recent unsuccessful attempts.

Their recommendations for disposal were:

Attachment A indicates that the northwestern portion of the County is being served by one in-county transfer station and three outside the county line. The northeastern portion is being and/or could be served by three transfer stations. The analysis concluded that the only areas that might benefit from a waste transfer station are located in the southern portion of the County. The distances exceed the ideal maximum of 10 miles, however, it

appears that current disposal costs are at a level that satisfies supply and demand. Regardless of this analysis, setback requirements and space limitations continue to challenge the private sector in locating new pollution control facilities. An additional hurdle is the current sentiment of local governments which makes the possibility of siting any additional waste transfer stations in DuPage County highly unlikely.

The position at this time is to rely on existing stations both inside and outside of the County borders. While this reliance comes at the cost of higher disposal rates, it is the preferred method. This method will serve the County's needs for the next 5 years.

The Appendices F, G, H, and I from the 2007 Shaw Environmental Report are included in **Appendix 2**.

2.4 2012 DuPage County Solid Waste Management Plan Update (2012 Update)

The 2012 Update recommendations for solid waste transfer capacity relied heavily on the information prepared by their consultant, Shaw Environmental in 2007. There were no additional transfer stations sited within the County, and it continued to rely on the DuKane transfer station as its sole in-county waste transfer option. Reliance on DuKane transfer station and those in adjacent counties were the solution at the time.

Appendices D and E are maps of permitted landfills and transfer stations in the region. Appendices F, G, H and I show transfer stations in adjacent counties which may provide service to residents and businesses within the County. Service areas were determined in a 2007 report completed by Shaw Environmental for DuPage County. They reflect actual services areas identified in siting documents or a 10-mile radius determined to be the maximum economical distance for a waste hauling company.
Disposal in landfills is not the preferred method of disposal but at this time, it is still preferred to incineration. The County currently has no operating landfills, and this Plan concludes that new landfills are not possible or needed within the County. The preferred method for disposal continues to be waste transfer. The above mentioned maps indicate that while solid waste is currently being handled at existing facilities, they may not be a long term solution for the County's disposal needs. Factors that contribute to the need for new facilities are an increasing population; rising waste generation rate and fuel/operating costs. Future conditions may necessitate a new facility in the southern portion of the County. The maps and table indicate that this area is somewhat underserved and that some areas are out of range for existing facilities. These conditions can result in less competitive waste hauling and higher costs especially in unincorporated areas where homeowners contract directly with waste haulers. There is a direct correlation with cost and distance to waste disposal facility.

Under the aforementioned conditions, it is potentially foreseeable that the out-of-county facilities may cease serving all, or parts, of the current DuPage area. In the event that occurs, there would be a service gap in the affected areas thereby creating a potential need for a new facility.

2.5 2017 DuPage County Solid Waste Management Plan Update (2017 Update)

The 2017 Update was heavily focused on the County's achievements to recycle various commodities in the waste stream. The plan summary is presented below.

> *This Plan evaluated the waste disposal capacity of the County, electronic recycling coverage, and identified food scrap collection and compost feasibility within the County. The initial Solid Waste Management Plan included multiple recommendations to reduce, recycle and handle solid waste. The County, along with many valuable local government and private sector partners successfully completed several goals including: construction and operation of a regional recycling center and a household hazardous waste facility; the establishment of several recycling drop-off locations; a latex paint recycling and reuse program; an environmental education program as well as supporting reduced requirements on construction and demolition debris recycling.*

In the 2017 Update the County touched briefly on waste disposal capacity in DuPage County as presented below.

> *As estimated in Section 2.4, DuPage County generates 1,475,604 tons of waste per year. The average of recent recycling data has estimated the recycling rate to be 37% which leaves approximately 929,431 tons of waste in need of disposal annually. The DuKane transfer facility is permitted to accept up to 3,000 tons per operating day so it can move 939,000 tons/year. However, service areas must be considered as well as the market forces of private sector waste hauling entities. Large regions of the County are not optimally served due to the lengthy transportation routes which lead to increased costs and air emissions. To address this the County of DuPage will consider new or expanded facilities handling, treating and recycling waste on a case by case basis. Any new proposed pollution control facilities located in unincorporated areas are subject to the siting criteria stipulated in 415 Illinois Compiled Statutes 5/39.2 as well as Chapter 25 of the County's Code.*

3.0 CURRENT WASTE TRANSFER STATION SERVING DuPAGE COUNTY

Since the adoption of the 1991 Solid Waste Management Plan, each 5-year update has recognized the need for another MSW transfer station in DuPage County. The County relies on the private sector to develop waste transfer capacity, and this was evident when BFI developed the DuKane Transfer Station in the late 1990's. The 2001 Update recommended additional transfer station capacity, and several were attempted unsuccessfully. Recognizing that additional MSW waste transfer capacity unlikely, the decision was made to increase the capacity of the DuKane Transfer Station to its current permitted capacity of 3,000 tons per day.

The difficulty to site new transfer stations was noted in the 2007 Update, and the County sought the assistance of a private consultant Shaw Environmental (Shaw) to assess the regional MSW disposal system that was serving it at the time. The report concluded that transfer stations outside of DuPage County were accommodating its waste transfer needs, except for the southern portion of the county. The 2012 SWMP Update built on the Shaw analysis to conclude that future conditions may necessitate a new facility there. The future conditions that were mentioned include fewer available transfer station options that were within range of the area, higher transport costs and associated air emissions, and lack of competition as compared to other parts of DuPage County.

Figure 1 – Current Transfer Station Service Areas in **Appendix 3** illustrates the current reflection of the Shaw analysis. The west and northeast portions of DuPage County have more options for waste transfer than the southeast. This is the result of the location of the DuKane transfer station in West Chicago, and others located in Kane, Kendall and Will County that are within the range of generally accepted travel distances for waste hauling trucks to reach a waste transfer facility. The DuKane Transfer Station could accommodate most of the waste for disposal for DuPage County if it were centrally located in the county. The northeast portion of the county is reasonably served by large waste transfer stations in the west central part of Cook County

DuPage County in the 2017 Update continued to recognize that portions of the county were underserved as evidenced in the 2012 Update. These are the southeast portions of the county where the recommendation was to consider new or expanding facilities on a case-by-case basis.

4.0 YEAR 2003 SITING DECISION WEST DuPAGE RECYCLING AND TRANSFER

On April 4, 2003, West DuPage Recycling and Transfer Inc. (WDRT) filed an application for siting approval for a waste transfer facility in unincorporated DuPage County. The intent was to expand a construction and demolition debris recycling operation in Wayne Township, approximately one quarter mile north of the DuKane Transfer Station at 3N551 Powis Road. The owner at the time was Ken Hoving, Inc., whose company was later purchased by LRS. The application sought to handle up to 1,000 tons per day of MSW. This amount was a net increase of 800 tons per day as the owner was already processing an average of 200 tons per day at his construction and demolition debris recycling facility. This facility was later re-located to south of Powis Road, its current location and the site of the proposed West DuPage RTS facility.

After holding hearings on July 8, 9, 15, 16, 17, 24 and August 11, 12, 13, 14, 25, 26, 27, 28 of 2003, the DuPage County board prepared Resolution CB-0002-04. A full copy is included as **Appendix 4.** It resolved that:

> *The application of West DuPage Recycling and Transfer. for Siting approval for the West DuPage Recycling and Transfer Facility is hereby denied*

The reasons set out in the record of the siting proceeding was that the Criteria numbers 1, 5 and 8 of Section 39.2 of the Environmental Protection Act (Act) were not met.

Specifically related to Criteria number 5, the board resolution stated:

> *The applicant has also failed to meet its burden in establishing criteria No. 8, in that the proposed facility is inconsistent with the solid waste disposal plan of DuPage County because the proposed facility location is within ¼ mile of another transfer station; and fails to reduce wear on roads, reduces overall truck miles traveled and decrease truck air emissions….*

The final decision of the board was approved on February 20, 2004.

This decision by the board clearly indicated that the recommendations of the SWMP to site additional transfer stations in the County were not met by siting a new MSW waste transfer station as close to the DuKane facility as was proposed. In addition it was acknowledge that it had not reached its permitted MSW transfer capacity. The SWMP recommendations for additional waste

transfer capacity were to serve portions of DuPage County that were underserved by existing waste transfer stations, and that these areas were in the southern portion of DuPage County. Because it was located very close to the existing DuKane transfer station, it concluded that it did not accomplish the intended goal of the SWMP to reduce wear on the road, overall truck miles traveled and air emissions from the underserved areas. Their reasoning was these areas did not have convenient access to a waste transfer station due to the distance from the DuKane facility and those in nearby counties

5.0 YEAR 2003 CITY OF WEST CHICAGO RESOLUTION No. 03-R-0034

The City of West Chicago (City) prepared resolution No. -3-R-0034 on April 7, 2003, to formally oppose the Siting of a transfer station along Powis Road. The resolution is included in **Appendix 6**. Among the many reasons for its opposition, the City recognized two that were relevant to consistency with the SWMP. These are:

> *WHEREAS the County of DuPage (the "County") has previously adopted a Solid Waste Management Plan (the "PLAN") that called for siting of five (5) waste transfer stations to located throughout the County; and….*
>
> *WHEREAS, granting of siting approval violated the terms of the PLAN by placing two transfer stations within the same community's planning area; and …*

The City acknowledged in 2003 that the SWMP plan did not intend for additional waste transfer stations in DuPage County to be in proximity to each other. Rather, the SWMP intended new waste transfer stations to be located throughout the County to provide better access to a waste transfer facility.

6.0 WEST DuPAGE RTS CONSISTENCY WITH SOLID WASTE MANAGEMENT PLAN

The proposed West DuPage RTS is not consistent with the DuPage County Solid Waste Management Plan for the following reasons.

- The SWMP Updates starting in 2007 all focus on the need for additional transfer capacity in the south portion of DuPage County
- Adding another transfer station in the Northwest portion of DuPage County will serve as a disincentive for other companies to develop transfer capacity because of the volume of waste it displaces in areas that otherwise could benefit from a transfer station in the south portion of DuPage County
- The 2007 Update was the last SWMP update to assess the progress on meeting recommendations of the 1991 SWMP. The recommendations in the plan regarding additional waste transfer capacity were:

  > *The County should encourage development of three to five waste Transfer facilities throughout the County. The County should assist the private sector in determining the most appropriate and*

> *efficient locations for transfer facilities, and providing education and more about waste transfer stations.*

There is no mention in the Siting Application that the assistance of DuPage County was requested by the applicant with determining the most appropriate location for transfer facilities.

- DuPage County stated in its determination letter of April 23, 2020, from the DuPage Building and Zoning Department that:

> *The document (2017 Update) finds that service areas of existing facilities be considered as well as market forces. It observes that the County lacks disposal capacity for the waste generated within the borders and that additional pollution control facilities may be needed but will be considered on a case-by-case basis. The proposed pollution control facility appears to be consistent with the aforementioned Solid Waste Management Plan Five Year Update (2017).*

The Siting Application for the West DuPage RTS did not consider service areas of other pollution control facilities, nor did it ask DuPage to consider it prior to filing the application.

- Consistency with the SWMP was one of several criteria that were not met during the Siting of a proposed waste transfer station in 2003 that was located less than one mile from the West DuPage RTS.

Based on review of the 1991 DuPage County Solid Waste Management Plan and subsequent updates in 1996, 2001, 2007, 2012 and 2017, it is the opinion of JPL Environmental Engineering that the proposed LRS West DuPage Recycling and Transfer Station is not consistent with the Plan.

DENIAL OF SITING APPLICATION FROM
WEST DU PAGE RECYCLING & TRANSFER, INC.
FOR THE WEST DU PAGE RECYCLING & TRANSFER FACILITY
IN UNINCORPORATED DU PAGE COUNTY

WHEREAS, West DuPage Recycling & Transfer, Inc., pursuant to the Illinois Environmental Protection Act (415 ILCS 5/39.2 *et seq.*) ("Act") and the DuPage County New Regional Pollution Control Facility Siting Ordinance (Chapter 25, DuPage County Code) ("Ordinance") filed an application on April 4, 2003 and amended said application on July 24, 2003, for siting approval for a waste transfer facility in unincorporated DuPage County; and

WHEREAS, pursuant to the aforesaid Ordinance, DuPage County Board Chairman Robert J. Schillerstrom appointed Phillip A. Luetkehans as Hearing Officer; and

WHEREAS, in compliance with the Act, a public hearing was held on July 8, 9, 15, 16, 17, 24 and August 11, 12, 13, 14, 25, 26, 27, 28, 2003; and

WHEREAS, after consideration of the public record in this matter, including but not limited to the hearing testimony, oral comment, evidence, and written comment timely submitted, and the criteria set forth in Section 39.2 of the Illinois Environmental Protection Act, 415 ILCS 5/39.2; and

WHEREAS, the applicant agreed to and extended the time by which DuPage County had, pursuant to Section 39.2 of the Act, to make a decision with respect to the application to February 28, 2004; and

NOW, THEREFORE, BE IT RESOLVED by the DuPage County Board that:

1. The application of West DuPage Recycling & Transfer, Inc. for Siting approval for the West DuPage Recycling & Transfer Facility is hereby denied; and

2. The DuPage County Board finds, for the reasons set out in the record of these proceedings, that the following Criteria, as set forth in Section 39.2 of the Act, were not met: Criteria numbers 1, 5 and 8; and

3. The certified transcription of the deliberations and decision on this siting application conducted by the County Board at their meeting held February 10, 2003, at which this Resolution was approved, be attached hereto as Exhibit A and repeated and incorporated herein as part of the written decision of the DuPage County Board on the subject application; and

4. The Motion to Deny is based on a review of the complete record of this case including the record of the public of hearing which was conducted on this matter as well as the nine criteria set out in Section 39.2 of Illinois Environmental Protection Act.

In particular, this request for siting should be denied because the applicant has failed to meet three of the statutory criteria in the following respects:

The applicant has failed to meet its burden in establishing criteria No. 1 that the facility is necessary to accommodate the waste needs of the area it is intended to serve. This criterion has not been met considering the location of other waste transfer stations in the relevant region; considering that the DuKane Facility has expanded its capacity but has not yet utilized its capacity limits; and that witness Burger's testimony is most credible on all factors related to criterion No. 1.

The applicant has also failed to meet its burden in establishing criteria No. 5, that the plan of operations for the facility is designed to minimize the danger to the surrounding area from fire, spills, or other operational accidents. There is insufficient evidence in the record to establish that this criteria has been satisfied by the applicant.

The applicant has also failed to meet its burden in establishing criteria No. 8, in that the proposed facility is inconsistent with the solid waste disposal plan of DuPage County because the proposed location is within ¼ mile of another transfer station; and fails to reduce wear on roads, reduces overall truck miles traveled and decrease truck air emissions; and that the proposed site of the this facility is on a tract of land less than five acres in total area; and

BE IT FURTHER RESOLVED that the County Clerk be directed to transmit certified copies of this Resolution and attached Exhibit A to West DuPage Recycling & Transfer, Inc., 3N551 Powis Road, West Chicago, IL 60185; Attached Service List; County Auditor, Finance Director, Treasurer; and two (2) copies to the Department of Development and Environmental Concerns.

Enacted and approved this 10th day of February, 2004 at Wheaton, Illinois.

RESOLUTION NO. 03-R-0034

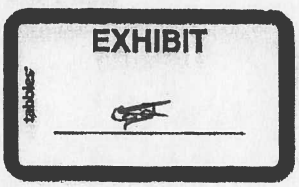
A RESOLUTION OPPOSING THE SITING OF A TRANSFER STATION ALONG POWIS ROAD – WEST DUPAGE RECYCLING AND TRANSFER

WHEREAS, the County of DuPage (the "COUNTY") has previously adopted a Solid Waste Management Plan (the "PLAN") that called for the siting of five (5) waste transfer stations to be located throughout the COUNTY; and,

WHEREAS, the DuKane Transfer Station was the first pollution control facility of its kind sited in accordance with the PLAN, over overwhelming community opposition; and,

WHEREAS, despite the annual tipping fees received from the facility, the residents and businesses in the CITY have had to live with the offensive odors emanating from the DuKane Transfer Station throughout the year and an average of 350 more trucks per day driving through the CITY using Powis Road; and,

WHEREAS, the CITY, having become the siting authority upon annexation of the DuKane Transfer Station, reluctantly approved an amendment to the siting application on October 15, 2001, to increase the annual daily average to 2,500 tons in an effort to meet the needs of the facility, address the wishes of the COUNTY and Chairman Schillerstrom and only after assurances from the owners that the problems with odors and uncontained garbage would be addressed; and,



WHEREAS, in October 2002, the CITY learned that an unknown property owner was researching the feasibility of operating a new waste transfer station within the City's planning area; and,

WHEREAS, in December 2002, the City administration was approached by Ken Hoving (the "OWNER") of West DuPage Recycling and Transfer (the "PROPOSED TRANSFER STATION") about a plan to apply for siting approval from the COUNTY for a transfer station which would run in conjunction with his construction and demolition debris recycling facility; and,

WHEREAS, on March 10, 2003, the OWNER presented computer-generated drawings and a site plan which are attached hereto as Exhibit "A" and clearly show that the visual impact on the adjoining neighborhood will be severe; and,

WHEREAS, the OWNER indicated that his siting application contemplates an annual daily average of 1,000 tons of waste, which is a net average of 800 tons per day as his present operation processes, on average, 200 tons of waste per day; and,

WHEREAS, the OWNER further indicated that his truck volume would increase from 50 to 200 trucks per day, which amounts to a daily increase of 300 vehicle trips, an increase of three hundred (300) percent; and,

WHEREAS, on March 12, 2003, the City of West Chicago received a certain Notice of Intent to File a Request for New Pollution Control Facility Siting Approval from the COUNTY from the OWNER of the PROPOSED TRANSFER STATION; and,

WHEREAS, the COUNTY is authorized by State of Illinois law, pursuant to Section 39.2 of the Illinois Environmental Protection Act (the "ACT") to, among other things, receive, hold hearings, and render a decision on an application for the site location of a pollution control facility proposed to be located in unincorporated DuPage County; and,

WHEREAS, the ACT specifically sets forth nine (9) criteria for the granting of such local siting approval with respect to each new pollution control facility, including waste transfer stations; four of those criteria are as follows:

> (1) The facility is necessary to accommodate the waste needs of the area it is intended to serve.
>
> (3) The facility is located so as to minimize incompatibility of the character of the surrounding area and to minimize the effect on the value of the surrounding property.
>
> (6) The traffic patterns to or from the facility are so designed as to minimize the impact on existing traffic.
>
> (8) The facility is to be located in the County where the County Board has adopted a Solid Waste Management Plan consistent with the planning requirements of the Local Solid Waste Disposal Act or the Solid Waste Planning and Recycling Act, the facility is consistent with the plan; and,

WHEREAS, the PROPOSED TRANSFER STATION is located at 3N551Powis Road which is adjacent to, but not within, the CITY'S corporate boundaries; and,

WHEREAS, the PROPOSED TRANSFER STATION is located less than 1,500 feet from the existing DuKane Transfer Station; and,

WHEREAS, the DuKane Transfer Station is the only waste transfer station in the entire 334 square miles of territory of the COUNTY; and,

WHEREAS, the DuKane Transfer Station is currently only operating at seventy-two (72) percent of capacity, processing only 1,900 of the permitted 2,500 average tons per day; and,

WHEREAS, the PROPOSED TRANSFER STATION is seeking to increase an average of 800 tons of day, of which there is already an available capacity of 600 tons per day at the DuKane Transfer Station, thereby clear evidence that there is not a need for a second transfer station in this area; and,

WHEREAS, another area solid waste collection company, Onyx, has filed a host agreement with the City of Batavia and is beginning the siting process for a transfer station on Hunter Road, east of Kirk Road which is only 6.6 miles from the PROPOSED TRANSFER STATION; and,

WHEREAS, Powis Road north of Illinois Route 64 is not constructed in a manner to accommodate the type and volume of truck traffic being proposed by the OWNER; and,

WHEREAS, Cornerstone Lakes, one of West Chicago's newest subdivisions containing 730 plus homes housing over 2,500 residents, is located less than 3,800 feet from the PROPOSED TRANSFER STATION and the Elm Road Neighborhood is located less than 3,200 feet from the PROPOSED TRANSFER STATION, and their children and families will be most impacted by the siting of such a facility; and,

WHEREAS, the vacant land immediately to the west is zoned either as Airport or ORI and depicted in the CITY's Comprehensive General Plan as business park, both of which are incompatible land uses with the PROPOSED TRANSFER STATION; and

WHEREAS, Community School District #303 is building an elementary school along Smith Road which is scheduled to open in August 2003 that is located less than 2,800 feet from the PROPOSED TRANSFER STATION which is being built for 600 children; and,

WHEREAS, the West Chicago Park District has invested over $100,000 in the Cornerstone Lakes Park that is located less than 3,200 feet from the PROPOPSED TRANSFER STATION; children and families living throughout the CITY use Powis Road to participate in and attend sporting events at this park and will be impacted by the truck traffic and environmental byproducts of such a facility; and

WHEREAS, granting of siting approval violates the terms of the PLAN by placing two transfer stations within the same community's planning area ; and,

WHEREAS, the granting of siting approval for the PROPOSED TRANSFER STATION by the COUNTY will have many serious and adverse consequences on the residents of the City of West Chicago for the reasons set forth above, and hence fails to meet the required criteria for siting approval as established by the ACT and as adopted by the COUNTY; and,

WHEREAS, the PROPOSED TRANSFER STATION will result in additional permanent, offensive odor permeating the area surrounding the PROPOSED TRANSFER STATION, including an elementary school, as well as all areas downwind of the proposed site, beyond those now associated with the DuKane Transfer Station; and,

WHEREAS, the PROPOSED TRANSFER STATION will increase the likelihood that insects, rodents, and other vermin will be attracted to the site and adjoining properties, beyond the risks now associated with the DuKane Transfer Station; and,

WHEREAS, the substantial and continuous traffic, offensive odors and other negative effects of locating the PROPOSED TRANSFER STATION so close to a residential area, elementary school and viable land zoned for office would seriously affect the health, safety and welfare of the residents, students and potential business people near the site; and,

WHEREAS, the quality of life of all of the residents of West Chicago and non-resident employees who work in this great CITY would be adversely affected by the additional PROPOSED TRANSFER STATION.

NOW, THEREFORE, BE IT RESOLVED by the Mayor and City Council of the City of West Chicago, DuPage County, Illinois, as follows:

Section 1. That the recitals set forth above are incorporated herein in their entirety.

Section 2. That all of the criteria necessary for the granting of siting approval for the PROPOSED TRANSFER STATION have clearly not been satisfactorily met as follows:

(1) The facility is not necessary to accommodate the waste needs of the area it is intended to serve.

(2) The facility's location is incompatible with the character of the surrounding area and to minimize the effect on the value of the surrounding property.

(3) The traffic patterns to or from the facility will severely impact on existing traffic.

(4) The facility is not consistent with the PLAN adopted by the COUNTY.

Section 3. That the Mayor and City Council stand in strong opposition to the siting of the PROPOSED TRANSFER STATION, and will join the residents of Cornerstone Lakes, Willow Creek and all other citizens of West Chicago and surrounding communities in their fight to have the COUNTY deny siting approval, and will lend what support it can to assist in lobbying efforts.

Section 4. That the Mayor and City Council strongly urge the COUNTY Board to deny the siting request for the PROPOSED TRANSFER STATION.

Section 5. That the Mayor and City Council demand that the COUNTY adhere to the PLAN and site such facilities throughout the COUNTY.

Section 6. That the Mayor and City Council authorize the City Administrator to spend up to twenty-five thousand dollars ($25,000.00) from the Public Benefit Fund to pursue all means necessary to oppose the PROPOSED TRANSFER STATION.

Section 7. That this Resolution shall be in full force and effect upon its passage and approval in accordance with law.

ADOPTED this 7th day of April, 2003.

Proposed West DuPage Recycling and Transfer Station
West Chicago, Illinois

Criteria 8 -
Solid Waste Management Plan Consistency Review

If the facility is to be located in a county where the county board has adopted a solid waste management plan consistent with the planning requirements of the Local Solid Waste Disposal Act or Solid Waste Planning and Recycling Act, the facility is consistent with that plan. 415 ILCS 5/39.2(a)(viii)

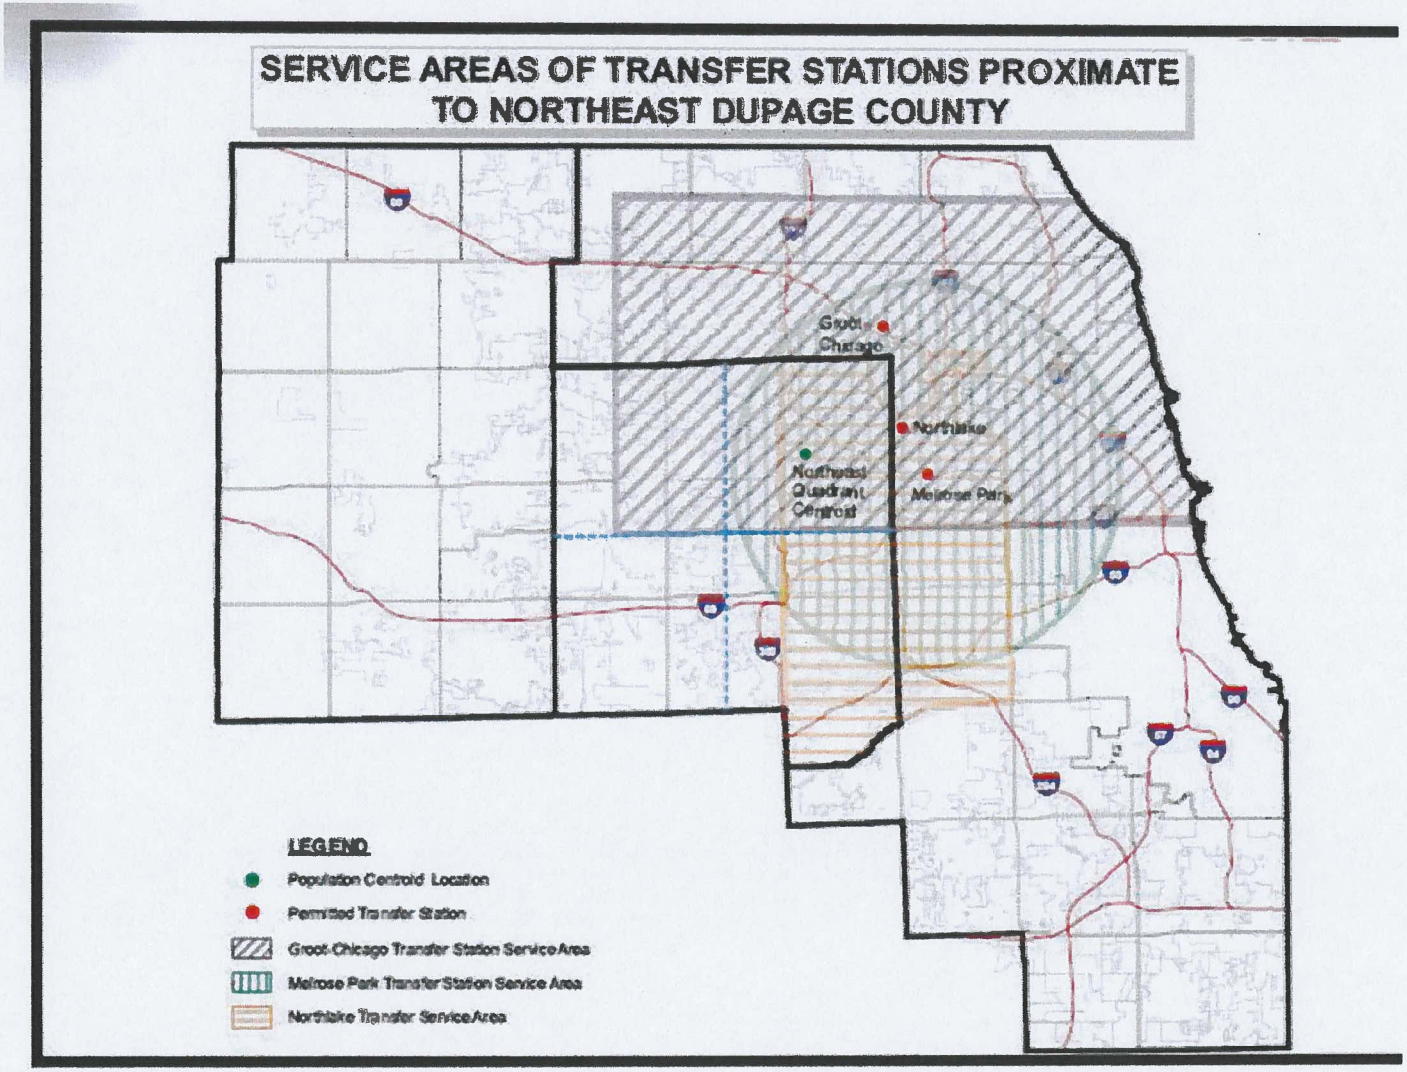
- Recommendations

1991 Solid Waste Management Plan Recommendation

4.9.1 The County should encourage development of three to five waste transfer facilities throughout the County. The County should assist the private sector in determining the most appropriate and efficient locations for transfer facilities, and providing education and appropriate tours to municipalities, townships or any other people interested in knowing more about waste transfer stations. (NEW, Plan-1996)

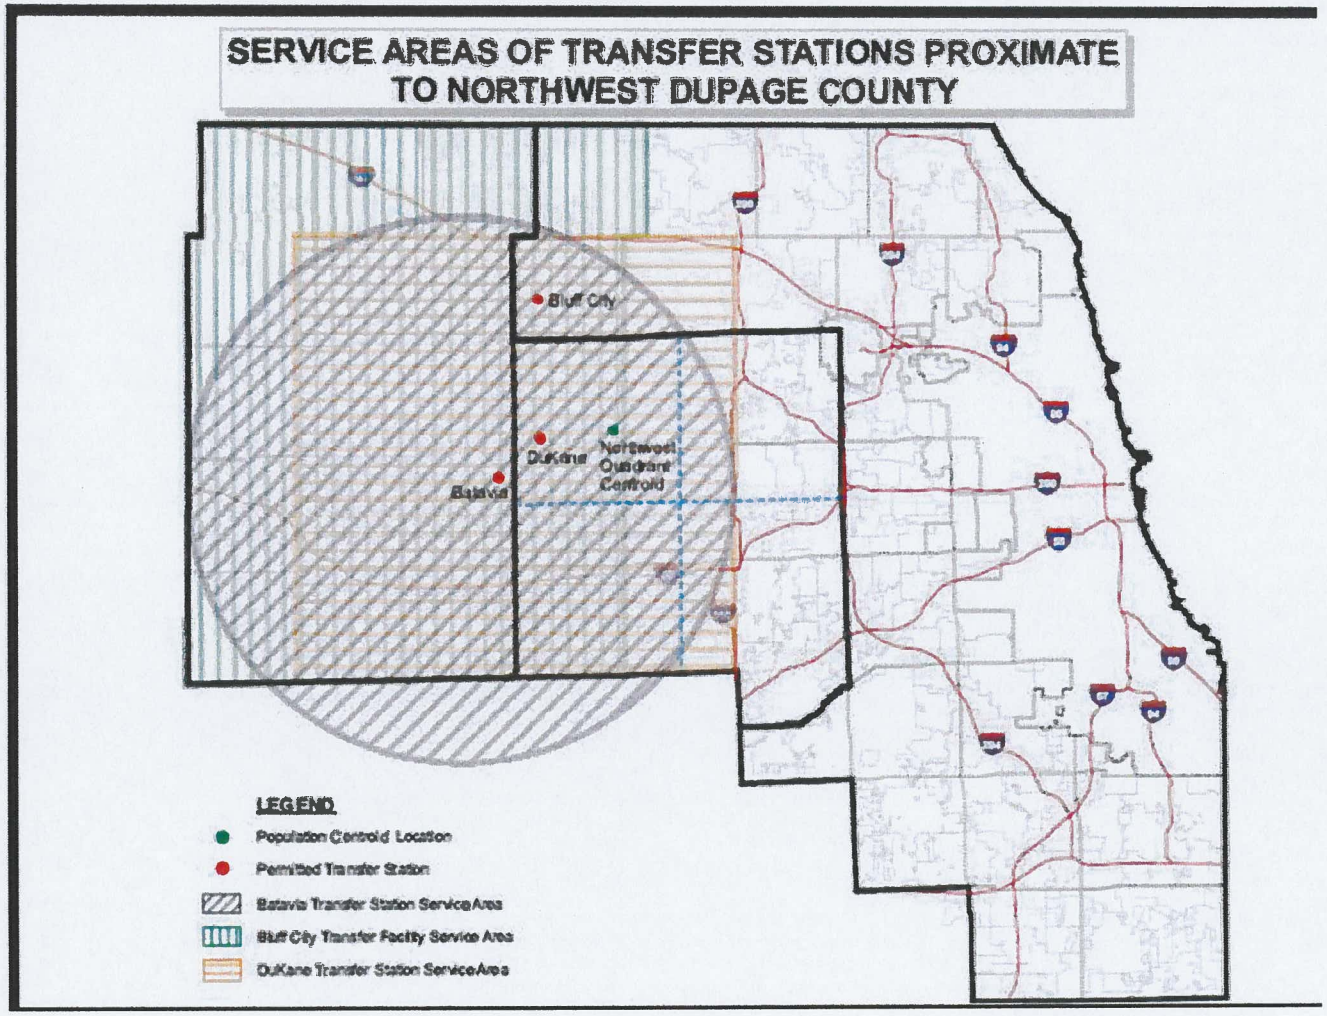
2001 Solid Waste Management Plan Update



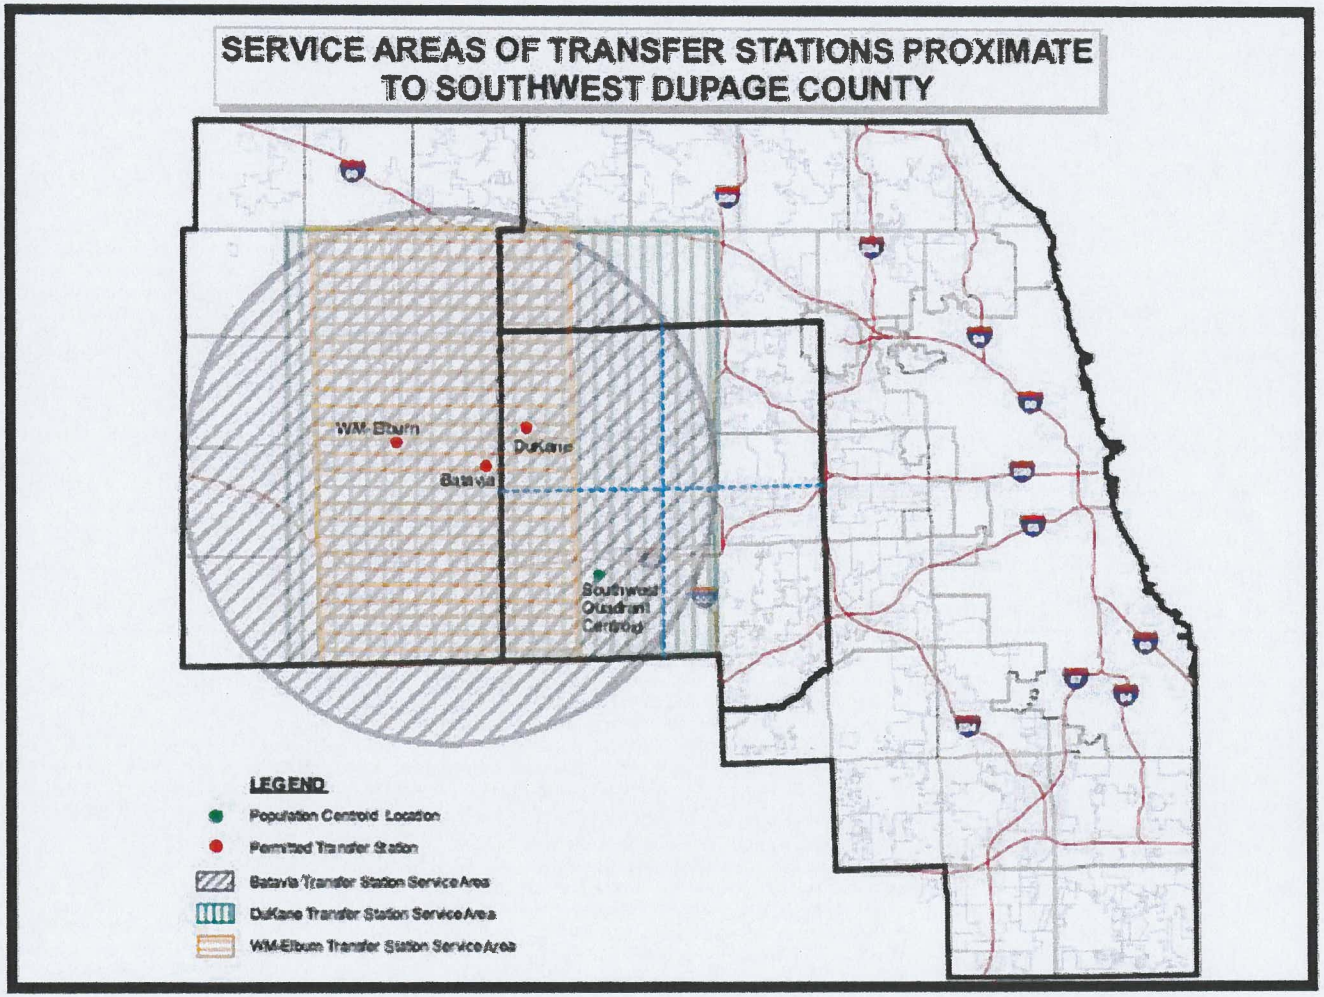
"the permitted capacity of the DuKane transfer station be increased from 1,500 tons per day to 2,500 tons per day, with a proportionate increase in acceptance at the facility for waste generated in DuPage County."

"The second and/or third transfer station(s) should be sized to accommodate the 350,000 tons of waste per year and accommodate future population growth and subsequent waste generation. A second and/or third transfer station is expected to increase competition, reduce wear on roads, reduce overall truck miles traveled and decrease truck air emissions."

2007 Solid Waste Management Plan Update



"In 2002, DuKane's capacity was increased to 3,000 tons per day. Three new transfer stations have been proposed since the last update, however, none were approved. Transfer facilities have been constructed outside the County border that are close enough to serve our needs."



"To provide an accurate snapshot of the current waste disposal capacity, an evaluation was done of existing transfer stations and disposal facilities (Attachment A). The County was divided into quadrants and the consultant reviewed the nearest three transfer stations to each quadrant. The ideal transport distance is no more than 10 miles. Out of the ten stations that were analyzed, only two facilities serving southern DuPage County failed to meet this criterion (Attachment B)."

2012 Solid Waste Management Plan Update

"Factors that contribute to the need for new facilities are an increasing population; rising waste generation rate and fuel/operating costs. Future conditions may necessitate a new facility in the southern portion of the County. The maps and table (from 2007 Plan) indicate that this area is somewhat underserved and that some areas are out of range for existing facilities. These conditions can result in less competitive waste hauling and higher costs especially in unincorporated areas"

"it is potentially foreseeable that the out-of-county facilities may cease serving all, or parts, of the current DuPage area. In the event that occurs, there would be a service gap in the affected areas thereby creating a potential need for a new facility."

2017 Solid Waste Management Plan Update

The DuKane transfer facility is permitted to accept up to 3,000 tons per operating day so it can move 939,000 tons/year. However, service areas must be considered as well as the market forces of private sector waste hauling entities. Large regions of the County are not optimally served due to the lengthy transportation routes which lead to increased costs and air emissions. To address this the County of DuPage will consider new or expanded facilities handling, treating and recycling waste on a case-by-case basis.

2003 West DuPage Recycling and Transfer Siting

DuPage County board prepared Resolution CB-0002-04.

> *"The application of West DuPage Recycling and Transfer for Siting approval for the West DuPage Recycling and Transfer Facility is hereby denied"*

> *"The applicant has also failed to meet its burden in establishing criteria No. 8, in that the proposed facility is inconsistent with the solid waste disposal plan of DuPage County because the proposed facility location is within ¼ mile of another transfer station; and fails to reduce wear on roads, reduces overall truck miles traveled and decrease truck air emissions…."*

City of West Chicago (City) Resolution No. -3-R-0034 on April 7, 2003

"WHEREAS the County of DuPage (the "County") has previously adopted a Solid Waste Management Plan (the "PLAN") that called for siting of five (5) waste transfer stations to be located throughout the County; and…."

"WHEREAS, granting of siting approval violated the terms of the PLAN by placing two transfer stations within the same community's planning area; and …"

DuPage Building and Zoning Letter, April 2020 to West Chicago

"The document finds that service areas of existing facilities be considered as well as market forces. It observes that the County lacks disposal capacity for the waste generated within the borders and that additional pollution control facilities may be needed but will be considered on a case-by-case basis. The proposed pollution control facility appears to be consistent with the aforementioned Solid Waste Management Plan Five Year Update (2017)."

The West DuPage Recycling and Transfer Station is Inconsistent with the DuPage County Solid Waste Management Plan for the Following Reasons:

- The SWMP Updates, starting in 2007, all focus on the need for additional transfer capacity in the south portion of DuPage County
- Adding another transfer station in the Northwest portion of DuPage County will serve as a disincentive to a south facility
- The Siting Application for the West DuPage RTS did not consider service areas of other pollution control facilities, nor did it ask DuPage to consider it prior to filing the application.
- There is no mention in the Siting Application that the assistance of DuPage County was requested by the applicant with determining the most appropriate location for transfer facilities.

Demographics of West Chicago and DuPage County

*Percent of persons age 5 years+, 2017-2021.

Demographic	West Chicago	DuPage County
Hispanic or Latino	48.9%	15.0%
White alone, not Hispanic or Latino	35.7%	65.0%
