PARTS 201, 202, AND 212	)	(Rulemaking – Air)

**PRE-FILED TESTIMONY OF DAVID WALL
IN SUPPORT OF IERG’S RULEMAKING PROPOSAL**

NOW COMES Petitioner, the ILLINOIS ENVIRONMENTAL REGULATORY GROUP (“IERG”), by and through its undersigned attorneys, and pursuant to 35 Ill. Adm. Code § 102.424 and the Illinois Pollution Control Board’s (“Board”) August 17, 2023 Notice of Hearing, submits the following Pre-Filed Testimony of David Wall in Support of IERG’s Rulemaking Proposal for presentation at the September 27, 2023 hearing scheduled in the above-referenced matter.

TESTIMONY OF DAVID WALL

I. INTRODUCTION

My name is David Wall and I am a Principal Consultant and Regional Manager at Trinity Consultants (“Trinity”). I am based in Trinity’s Oakbrook Terrace, Illinois office. I have been a Regional Manager at Trinity since 2015. In my role as a Regional Manager, I oversee Trinity’s environmental consulting operations in Chicago, Minneapolis, Indianapolis, Milwaukee, and Ann Arbor. Prior to becoming Regional Manager at Trinity, I managed Trinity’s suburban Chicago office. I have worked in Illinois for the past 18 years, assisting industrial clients with state and federal air regulatory compliance and air permitting.

I have more than 23 years of experience within the environmental consulting industry, having started with Trinity in 1999. I conduct project management and senior technical consulting for a number of air quality projects ranging from complex permitting projects such as

Prevention of Significant Deterioration (“PSD”) and Title V permits to regulatory reviews and compliance audits. I have personally worked with clients and regulatory agencies in many regions of the United States Environmental Protection Agency (“USEPA”).

My work has covered a wide range of industries. I have worked with electric utility, chemical and pharmaceutical manufacturing, petroleum refining, cement, stone and lime, rubber and tire manufacturing, and the agricultural products industry. I have managed a number of projects involving air dispersion modeling and am familiar with USEPA air dispersion models. I have also assisted a number of clients with determining Maximum Achievable Control Technology (“MACT”) and New Source Performance Standard (“NSPS”) applicability and strategizing for timely compliance. I have prepared or managed the preparation of hundreds of air permit applications.

A large portion of my career includes a particular focus on the petroleum refining industry where I have worked with more than forty refineries across the nation. I have managed permitting projects ranging from minor modifications to multi-million and billion-dollar capital projects. I have led negotiations with state and federal agencies to strategically develop permit language to allow for operational flexibility and other unique considerations. With respect to plant site expansions and construction activities, I have provided strategy and agency negotiation skills for a number of large refinery permitting projects including synthetic minor permits as well as PSD/Nonattainment NSR major permits in USEPA Region 5 and other locations nationwide.

In enforcement and litigation matters, I have provided strategy development, agency meeting support, and resolution for alleged violations at multiple petroleum refineries and chemical plants.

Many times, my work has also been of a proactive nature. I have completed many environmental audits and assessments, particularly related to petroleum refining sources and compliance with permits and state and federal air regulations. I have provided environmental auditing and compliance determinations to dozens of facilities. My areas of expertise include state and federal air regulations, historical PSD/NSR applicability, Toxic Release Inventory and annual emission reporting, as well as regulations specific to the refining and petrochemical industries.

As part of my career at Trinity I have also had the opportunity to teach numerous classes, provide many presentations at trade groups, and serve on several expert panels.

I hold a Bachelor of Science degree in Chemical Engineering from the Massachusetts Institute of Technology. I am a member of the American Fuels and Petrochemical Manufacturers (AFPM) association, where I serve on the environmental committee. I am also a licensed Professional Engineer. My *curriculum vitae* is attached hereto.

I will be providing testimony in support of IERG's proposal to amend 35 Ill. Adm. Code Part 216. The focus of my testimony will be providing technical support and justification for IERG's proposed amendments to 35 Ill. Adm. Code 216.103, 216.104, and 216.121. The Illinois Environmental Protection Agency's ("Illinois EPA") proposal in PCB R 23-18, adopted by the Board on July 20, 2023 and effective July 25, 2023, will adversely affect entities that have relied on the prior startup, malfunction, and breakdown ("SMB") provisions for compliance during SMB events. Particularly, the amendments will leave sources with fuel combustion emission sources with potential noncompliance with the carbon monoxide ("CO") standard in 35 Ill. Adm. Code 216.121 during startup and shutdown events. An alternative emission limitation ("AEL") to the Section 216.121 standard is needed for startup and shutdown periods.

II. Purpose of Proposal

After the amendments adopted by the Board in PCB R 23-18, the Board's regulations no longer provide Illinois EPA the authority to issue permits with conditions that authorize emissions in excess of emissions limitations or standards during startup and/or the continued operation of an emission source during malfunction or breakdown in violation of limits or standards. Prior to the recent amendments, Illinois EPA had used the provisions in 35 Ill. Adm. Code Part 201 as a basis to include broad SMB conditions in air construction and operating permits. Prior to the amendments, facilities with fuel combustion emission sources that had exceedances during SMB events could apply for and obtain such SMB conditions in their permits. While the permit condition language could vary, the condition would authorize a violation, or exceedance, of the generally applicable emission limit, such as Section 216.121, during periods of SMB. Facilities can no longer apply for such relief in their permits and the SMB conditions in existing permits will eventually be removed. Sources must now comply with generally applicable emission limitations, including Section 216.121, at all times including periods of SMB. However, removal of the SMB relief provisions does not change the fact that many facilities with fuel combustion emission sources have issues complying with Section 216.121 during periods of startup and shutdown.

As explained in IERG's Statement of Reasons and Technical Support Document, it is technically infeasible for many fuel combustion emission sources, such as boilers and process heaters, to achieve the conditions necessary to meet the CO standard in Section 216.121 during periods of startup and shutdown. CO is emitted from boilers and process heaters as a product of incomplete combustion. Factors that influence complete combustion include time, temperature, and turbulence. CO emissions can be minimized when boilers and process heaters operate at

sufficiently high combustion temperature and with sufficient time and turbulence (mixing) in the firebox to allow for more complete combustion to occur. These factors are not technically feasible to sufficiently achieve during startup conditions.

It can take significant time during a boiler or process heater startup to reach sufficient operating temperature for good combustion, particularly when startup occurs after a longer period of shutdown. The length of a startup can vary, depending on the shutdown that necessitated the startup. After a longer shutdown, the combustion temperatures must be raised slowly so as to not damage the boiler equipment including the refractory. Heating the boiler or process heater up too fast can result in refractory damage, with hot spots then forming in the boiler, degrading boiler performance. I am not aware of a technical means to control the excess CO emissions during these startup periods, other than to follow standard startup procedures to achieve normal operating conditions as quickly as possible while minimizing potential damage to the combustion device (i.e., minimizing the duration of startup while maintaining safe operation).

Excess CO emissions during boiler or process heater shutdown are primarily limited to coal-fired and solid fuel-fired boilers and process heaters. For natural gas-fired boilers and process heaters, combustion ceases once the natural gas is stopped. However, coal-fired and solid fuel-fired boilers and process heaters may have a longer residence time for fuel remaining in the combustor after fuel delivery is stopped. As a result, there can be a brief period of incomplete combustion as the fuel stops burning and bed temperature cools off, resulting in elevated CO emissions.

Additional discussions about the technical infeasibility of fuel combustion emission sources to comply with Section 216.121 during periods of startup and shutdown are contained in IERG's Statement of Reasons and Technical Support Document.

III. IERG's Proposal

IERG proposes to amend Part 216 of the Board's air regulations governing fuel combustion emission sources. Section 216.121 prohibits causing or allowing the emission of CO into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 mmbtu/hr) to exceed 200 ppm, corrected to 50 percent excess air. The CO standard in Section 216.121 for fuel combustion emission sources is likely unachievable for numerous entities in Illinois during periods of startup and shutdown. IERG therefore proposes an AEL to be applicable during periods of startup and shutdown.

In its proposed AEL, IERG proposes to incorporate by reference National Emission Standards for Hazardous Air Pollutants ("NESHAP") Subpart DDDDD provisions that contain work practice standards applicable during periods of startup and shutdown. Specifically, IERG proposes to incorporate by reference the following provisions from NESHAP Subpart DDDDD: 40 CFR 63, Subpart DDDDD, Table 3 Items 5 and 6, 40 CFR 63.7500(a)(3) and (f), 40 CFR 63.7505(e), 40 CFR 63.7535(b), and 40 CFR 63.7555(d)(9)-(12). Facilities with fuel combustion emission sources would have the option to comply with either the existing CO standard in Section 216.121 or with IERG's AEL during periods of startup and shutdown. IERG also proposes to amend Section 216.104 to add NESHAP Subpart DDDDD to the list of incorporations by reference. Lastly, IERG proposes to amend Section 216.103 to add the definitions of "startup" and "shutdown" from NESHAP Subpart DDDDD as the definitions applicable to Section 216.121. An explanation of each of the provisions IERG proposes to incorporate by reference is contained in IERG's Statement of Reasons. In adopting the work practice standards applicable during periods of startup and shutdown in NESHAP Subpart DDDDD, USEPA recognized the unique operating

conditions of boilers and process heaters during these periods. IERG's proposal also meets the seven AEL criteria outlined by USEPA, as explained in detail in the Technical Support Document.

IV. SOURCES IMPACTED

IERG's proposed amendments to Part 216 would impact facilities in Illinois with fuel combustion emission sources, i.e., boilers or process heaters, with actual heat input greater than 2.9 MW (10 mmbtu/hr) where such units cannot comply with the CO standard in Section 216.121 during periods of startup or shutdown. As referenced in its Statement of Reasons, IERG submitted a Freedom of Information Act ("FOIA") request to Illinois EPA, which requested a list of fuel combustion emission sources with actual heat input greater than 2.9 MW (10 mmbtu/hr) in Illinois. In response to the FOIA request, Illinois EPA provided a spreadsheet to IERG on July 18, 2023. In the Statement of Reasons, IERG included a summary table that IERG created from the large spreadsheet. Here, IERG is attaching as Exhibit A the entire spreadsheet received from Illinois EPA.

IERG acknowledges that its proposal has the potential to affect a large number of facilities and sources within the State. However, IERG's proposal does not impose additional requirements on these sources but only provides these facilities with the option to comply with the proposed AEL in lieu of the CO standard in Section 216.121 during periods of startup and shutdown.

V. CONCLUSION

The Board's removal of the SMB relief provisions in Parts 201, 202, and 212 will leave many sources with the potential for noncompliance during periods of SMB. In particular, facilities with fuel combustion emission sources will likely have issues complying with the CO standard in Section 216.121 during periods of startup and shutdown. IERG's proposed amendments to Part 216 provide an option to comply with an alternative emission limitation

during those periods. The proposed alternative incorporates provisions from the federal regulations for boilers and process heaters. In adopting such provisions, USEPA recognized the unique and important operating conditions that fuel combustion emission sources must follow during startup and shutdown to ensure operations and minimize emissions.

Thank you for the opportunity to testify. I am prepared to answer any questions from hearing participants regarding my testimony above as well as IERG's Statement of Reasons and Technical Support Document.

Respectfully submitted,

Regional Manager — Chicago Office

AREAS OF SPECIALIZATION

- ▶ Management of air permitting projects (state construction, PSD and Title V) for complex industries including power production, petrochemical and petroleum refining
- ▶ Environmental auditing and compliance and enforcement support
- ▶ Benzene Waste Operations NESHAP (BWON) applicability, enforcement and compliance support
- ▶ NSPS/MACT/NESHAP compliance support
- ▶ Regulatory training
- ▶ Emissions quantification and reporting
- ▶ Toxic Release Inventory (TRI)

EDUCATION

B.S. Chemical Engineering, Massachusetts Institute of Technology

AFFILIATIONS

American Fuel and Petrochemical Manufacturers
Chemical Industry Council of Illinois

CERTIFICATIONS

Professional Engineer
Certified Manager

TECHNICAL EXPERTISE

Project Management – Managed over 250 air permitting and environmental compliance projects for clients in the following industries: bulk terminals, cement and aggregate products, chemical manufacturing, electric/steam cogeneration, electric generation, food processing, pipelines, pulp and paper, hospitals/universities, and petroleum refining. Projects range from simple modifications to multi-billion-dollar capital investments.

Environmental Auditing/Compliance Determinations – Provided environmental auditing and compliance determinations to dozens of facilities. Areas of expertise include state and federal air regulations, historical PSD/NSR applicability, CEMS requirements (40 CFR 60 and 40 CFR 75), TRI and

SUMMARY OF EXPERIENCE

At Trinity, Mr. Wall serves as a Regional Manager supervising operations in Trinity's Midwest Region including offices in Chicago, Indianapolis, Ann Arbor, Milwaukee, and Minneapolis. He is involved in state, Title V, and Prevention of Significant Deterioration (PSD) permitting projects, CEMS compliance, the evaluation of control and monitoring technologies and NSPS/NESHAP Compliance assistance.

Mr. Wall has significant compliance support, permitting and auditing experience in the petroleum refining and petrochemical industries. He has managed permitting projects ranging from minor modifications to multi-billion-dollar capital projects. He has performed consent decree based and internally driven compliance audits at refineries and chemical plants with topics ranging from general Title V compliance to historical PSD applicability issues and U.S. EPA enforcement initiative "marquee" issues such as BWON, NSPS J/Ja, LDAR, and flaring, as well as compliance programs such as BWON and TRI. Mr. Wall also serves as the instructor for Trinity's *Clean Air Act Workshop for Petroleum Refineries* and *Benzene Waste Operations NESHAP* professional training courses.

Mr. Wall has experience working with electrical utilities and industrial cogeneration and powerhouse facilities to provide permitting services, auditing, and support with cap and trade programs such as the Acid Rain Program and associated CEMS and other monitoring requirements under 40 CFR 60 and 40 CFR 75.

annual emission reporting, as well as regulations specific to the refining and petrochemical industries (e.g., BWON, MACT CC, MACT UUU NSPS QQQ, NSPS J/Ja, HON/MON, etc.).

Emissions Quantification – Supervised the preparation of numerous emissions inventories for annual state inventory reporting requirements, U.S. EPA Toxic Release Inventory (TRI) reporting, and the federal GHG Mandatory Reporting Rule. Managed “deep dive” audits and compliance program revamps for TRI reporting at several refineries. Prepared emissions estimates for release, fire, and other emergency events including as part of enforcement proceedings.

Course Instructor/Speaker - Frequent instructor of educational courses focused on federal air quality regulations and the primary instructor of Trinity’s Clean Air Act for the Petroleum Refining Industry course and Benzene Waste Operations NESHAP workshop. In the past, he has served as the primary instructor for the following Trinity courses: Air Quality Regulations in Pennsylvania, Air Quality Regulations in Indiana, MACT Compliance for Petroleum Refineries, Combustion MACT, and Air Emissions Quantification. Mr. Wall has developed detailed custom training courses for a number of clients in complex industries with topics including industry-specific NSPS and NESHAPs as well as CEMS and the Acid Rain Program. Mr. Wall has also provided several custom training sessions to multi-site and corporate personnel in the refining industry on several occasions. In this capacity, Mr. Wall has taught dozens of air quality related courses to hundreds of representatives from industry, state environmental agencies, and the EPA. He has also been a presenter at a number of environmental conferences such as AFPM (formerly NPRA), API, CICI, and EUEC.

Expert Testimony/Litigation Support – Provided direct written and verbal testimony and other litigation support primarily for the petroleum refining and chemical industry. Included evaluation of air pollution control equipment, historical PSD applicability, BWON applicability, and permit appeal support. Provided support to facilities in responding to state and U.S. EPA inspections, non-compliance allegations, violation notices, and enforcement actions.

New Source Review and Title V Permitting – Involved in the successful completion of numerous federal NSR, Title V, and state permitting actions throughout the U.S. Managed the preparation of air permit applications in various states and EPA regions. Supervised detailed regulatory applicability assessments. Led negotiations with state and federal agencies to strategically develop permit language to allow for operational flexibility and other unique considerations.

Continuous Emissions Monitoring Systems – Supported facilities with respect to assessing compliance with regulatory requirements applicable to CEMS including QA/QC and certification requirements of 40 CFR 60 (Appendices B and F) and 40 CFR 75. Provided training on regulatory requirements and engaged in compliance auditing for facilities across various industries, with a particular focus on industrial boilers and process heaters and electric utilities. Provided support related to applicability determinations and ongoing compliance support for cap and trade programs including the Ozone Transport Commission NOx Budget Program, NOx SIP Call/Federal NOx Budget Program, the Acid Rain Program and CAIR.

Dispersion Modeling – Managed dispersion modeling projects ranging from NAAQS and PSD Increment analyses and Class I area analyses in support of PSD permit applications to risk based analysis of toxic pollutant emissions.
