

ILLINOIS POLLUTION CONTROL BOARD
April 16, 2026

IN THE MATTER OF:	)	
	)	
AMENDMENTS TO 35 ILL. ADM. CODE	)	R 18-21
SUBTITLE B	)	(Rulemaking – Air)

Proposed Rule. First Notice.

OPINION AND ORDER OF THE BOARD (by M.D. Mankowski)

On January 10, 2018, the Illinois Environmental Protection Agency (IEPA or Agency) filed a proposal to amend numerous Board rules, including Subtitle B air pollution regulations. IEPA’s proposal cited Executive Order 2016-13, which directed agencies to review rules to identify provisions that are outdated, repetitive, confusing, or unnecessary and then revise or repeal them as appropriate. In 2016, the Board had begun its own review with the same general purposes.

On June 6, 2024, the Board adopted a proposal for public comment. Today, the Board proposes amendments for first-notice publication in the *Illinois Register*, which begins a comment period of at least 45 days.¹ See 5 ILCS 100/5-40 (2024). The amendments consist of both IEPA’s original proposals and additional revisions by the Board. Both IEPA and the Board intend for the proposed amendments to be non-substantive.

GUIDE TO TODAY’S OPINION AND ORDER

In this opinion and order, the Board first provides the procedural history of this rulemaking docket at pages 2-4 before addressing the background of its proposal at page 4. The opinion at page 5 then addresses IEPA’s second comments to the Board before discussing its proposal Part by Part as follows:

Part 201	pages 5-13
Part 202	pages 13-14
Part 203	pages 14-15
Part 204	pages 15-16
Part 205	pages 16-17
Part 207	pages 17-18
Part 211	pages 18-31
Part 212	pages 31-37
Part 214	pages 37-43
Part 215	pages 43-57
Part 216	pages 57-58

¹ Because of the first-notice proposal’s length, the Board notes that publication in the *Illinois Register* may take time and appear in multiple issues.

Part 217	pages 58-65
Parts 218 and 219	pages 65-82
Part 220	pages 82-83
Part 223	pages 83-87
Part 225	pages 87-89
Part 226	page 90
Part 228	page 90
Part 229	pages 90-92
Part 230	page 92
Part 232	pages 92-93
Part 237	pages 93-94
Part 240	pages 94-95
Part 241	pages 95-96
Part 243	page 96
Part 244	pages 96-97
Part 245	pages 97-98
Part 249	page 98

During this proceeding, IEPA indicated that it would provide updated information, such as material incorporated by reference, if the Board advises IEPA that it intends to update it. Throughout this opinion, the Board states its intention to do so. For clarity and convenience, the Board at pages 98-106 lists the updated versions of this information that it intends to adopt and that it wishes IEPA to provide.

Next, the Board at page 107 addresses IEPA's anticipated revisions to the Illinois State Implementation Plan (SIP). The Board then discusses technical feasibility and economic reasonableness at pages 108-109. At pages 109-112 the Board addresses filing public comments and specifically requests comment on 18 matters. Finally, the Board concludes to propose amended rules for first-notice publication and issues its order at page 113. The proposed amendments follow this opinion.

PROCEDURAL HISTORY

On January 10, 2018, IEPA filed proposed non-substantive revisions to Board rules, including Subtitle B air pollution rules (IEPA Clean-Up). Clean-Up Amendments to 35 Ill. Adm. Code Parts 201, 211, 212, 214, 215, 216, 217, 218, 219, 225, 228, 232, 237, 301, 302, 303, 304, 306, 309, 401, 402, 403, 404, 405, 501, 611, 615, 616, 617, 722, 811, 813, 855, and 1000, R18- 21 (Jan. 10, 2018). IEPA's proposal included its Statement of Reasons (SR), Technical Support Document (TSD), and proposed revisions of Parts 201, 211, 212, 214-219, 225, 228, 232, and 237 (*e.g.*, Prop. 201). On February 8, 2018, the Board accepted IEPA's proposal for hearing.

On March 22, 2018, the Board concluded to consider in this docket only amendments to Subtitle B. Amendments to 35 Ill. Adm. Code Subtitle B: Air Pollution, R18-21 (Mar. 22, 2018). The Board opened eight additional rulemaking dockets, each of which addresses another

Subtitle of the Board's rules. *See, e.g., Amendments to 35 Ill. Adm. Code Subtitle C: Water Pollution*, R18-23 (Mar. 22, 2018).

On March 22, 2018, the Board docketed as public comments three emails from the staff of the Joint Committee on Administrative Rules (JCAR) to the Board. The first (PC 1) addressed Part 201, the second (PC 2) addressed Part 211, and the third (PC 3) addressed Part 212. On March 26, 2018, the Board docketed as PC 6 an email from JCAR staff intended to replace PC 3.

On March 23, 2018, the Board docketed as public comments two emails from JCAR staff to the Board. The first (PC 4) addressed Part 215, and the second (PC 5) addressed Part 217. On March 26, 2018, the Board docketed as a public comment an email from JCAR staff to the Board addressing Part 214 (PC 7). On April 2, 2018, the Board docketed as public comments two emails from JCAR staff to the Board. The first (PC 8) addressed Part 215 and intended to replace PC 4, and the second (PC 9) addressed Part 218.

On June 6, 2024, the Board adopted a proposal for public comment (Board Prop. or 2024 proposal).

In a letter dated June 6, 2024, Board Chair Barbara Flynn Currie requested that DCEO conduct an economic impact study of the rulemaking proposed in this subdocket and respond by September 30, 2024. *See* 415 ILCS 5/27(b) (2024). As of the date of this order, the Board has not received a response to this request.

On June 12, 2024, the hearing officer scheduled two hearings, the first on October 3, 2024, with pre-filed testimony due on September 26, 2024, and the second on November 7, 2024, with pre-filed testimony due on October 31, 2024.

On September 26, 2024, IEPA filed comments on the Board's proposal (PC 10).

The first hearing took place as scheduled on October 3, 2024, and the Board received the transcript (Tr.1) on October 10, 2024.

On November 4, 2024, IEPA filed its second comments on the Board's proposal (PC 11).

The second hearing took place as scheduled on November 7, 2024, and the Board received the transcript (Tr.2) on November 14, 2024.

On December 9, 2024, the Board received a post-hearing comment from Sung Do Kang (PC 12)².

² Although the Board encourages and appreciates participation in its rulemaking proceedings, PC 12 addresses proposed continuing education requirements under the Drycleaners Environmental Response Trust Fund Program, the subject of a separate rulemaking. *See Drycleaner Environmental Response Trust Fund Act Proposal to Add 35 Ill. Adm. Code Part 1501, Repeal 35 Ill. Adm. Code Part 1500, and Repeal 2 Ill. Adm. Code Part 3100*, R 21-19(A)

On March 25, March 30, and April 7, 2026, the Board docketed as public comments (PC 13, 14, 15, respectively) emails between JCAR staff and the Board discussing changes that would apply to the entire first-notice proposal.

BACKGROUND OF PROPOSAL

Subtitle B of the Board’s rules addresses air pollution and includes permitting provisions, emissions standards and limitations, and monitoring requirements. IEPA’s original proposal did not propose substantive changes to Subtitle B. SR at 3; TSD at 2. IEPA proposed to repeal specific portions of Board regulations which have over time become “obsolete, duplicative, or unnecessary.” SR at 2; *see also* TSD at 2. IEPA also proposed minor corrections or updates to other provisions “[f]or purposes of economy.” *Id.* The Board proposed additional amendments to remove redundant or unnecessary language, replace outdated language, update statutory references, and make other non-substantive revisions.

IEPA argued that its proposed amendments “are emissions-neutral and do not affect the overall plans or goals of attainment or nonattainment areas within the State.” SR at 3, citing TSD at 2. IEPA further argued that, “[a]s the amendments are administrative in nature they will not affect emission levels of any pollutant within the State, nor will the proposed amendments impact reasonable further progress toward any National Ambient Air Quality Standard (NAAQS).” SR at 3; *see also* TSD at 2. IEPA asserted that its proposal will not impact permitting programs. *Id.* IEPA added that the proposal also would not interfere with Section 193 of the Clean Air Act (CAA)³, the General Savings Clause, or other CAA requirements. TSD at 2.

IEPA proposed amending provisions that are part of the Illinois SIP. TSD at 2. To revise a SIP, IEPA must demonstrate that the revisions would not “interfere with any applicable requirement concerning attainment and reasonable further progress, or any other applicable requirement” of the CAA under Section 110(l) of the CAA. *Id.* IEPA provided this demonstration for amendments that require it. *Id.*

The Illinois Administrative Procedure Act (IAPA) requires rulemaking proposals to identify “any published study or research report used in developing the rule” and describe how the public may obtain a copy of it. SR at 34, citing 5 ILCS 100/5-40(b)(3.5) (2024). The Board’s procedural rules require the same information. SR at 34, citing 35 Ill. Adm. Code 102.202(e). IEPA stated that it did not consult with a published study or report when developing its proposal. SR at 34.

(May 16, 2024) (adopting proposal for public comment). Because the Board’s proposal in this docket does not address this subject or include drycleaner rules under Part 1501, the Board does not consider PC 12 in this opinion.

³ Section 193 pertains to “regulations, standards, rules, notices, orders, and guidance documents promulgated or issued prior to November 5, 1990.” TSD at 2, n.1.

IEPA’S SECOND COMMENTS (PC 11)

IEPA stated that its original rulemaking proposal was limited in scope to “removal of outdated, unnecessary, repetitive, or confusing provisions.” PC 11 at 8. IEPA noted that the Board’s 2024 proposal for public comment proposed additional revisions to Subtitle B. IEPA acknowledged that the Board has authority to do so. *Id.* Citing the length of the Subtitle B rules and the Board’s proposal, IEPA stated that it had not been able to comprehensively review the Board’s proposal. *Id.* at 2, 8. IEPA generally recommended that the rulemaking be pared back to the scope of its original proposal. PC 11 at 8.

Although the Board recognizes that it has proposed numerous revisions for IEPA and other participants to review, it respectfully declines to limit the scope of this proposal as IEPA requested. First, the Board intends that its proposed revisions are consistent with the scope of those adopted in recent similar dockets. *See, e.g., Amendment to 35 Ill. Adm. Code Subtitle C, R 18-23* (Mar. 2, 2023) (adopting revised water rules). Second, the Board notes that Executive Order 16-13 directed agencies to review rules to determine whether they are “drafted in such a way as to be understood by the general public. Regulations should be clear, concise, and drafted in readily understood language.” Executive Order 16-13, eff. Oct. 17, 2016. The Board intends to propose non-substantive amendments that clarify and simplify Subpart B. Third, with its limited resources, the Board does not expect to undertake frequent reviews of this nature and scope. Proceeding with its entire proposal allows the Board to clarify rules such as Part 218 (organic material emissions standards for the Chicago area) and Part 226 (lead emissions standards), as these Parts have not been amended for over 10 years.

However, the Board recognizes that IEPA has identified issues in the Board’s proposal for public comment. IEPA listed technical matters, such as spelling and capitalization (*see* PC 11 at 8), which the Board corrects in its order. IEPA also identified specific issues in various provisions, which the Board addresses in the following section of the opinion.

SUMMARY OF PROPOSED AMENDMENTS

In the following subsections, the Board addresses its proposed amendments Part by Part.

Part 201: Permits and General Provisions

Part 201 identifies actions that require a permit and provides the permit application process. SR at 3; 35 Ill. Adm. Code 201. It intends to satisfy CAA requirements to institute an emission-based permitting program. SR at 3.

In Part 201, IEPA originally proposed to repeal three sections and revise one. IEPA Clean-Up at 3-4; Prop. 201. In its 2024 proposal, the Board throughout Part 201 proposed additional revisions, including matters of capitalization, punctuation, abbreviations, organization, spelling, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, making the forms of temperatures more consistent with one another, making the forms of definitions more consistent with other Parts, and using “must” to be more clearly mandatory. The Board intended

that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

JCAR suggested approximately 20 additional changes to Part 201. PC 1. The Board considered these suggested changes consistent with its own proposed revisions and largely included those suggestions in its 2024 proposal without discussion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 201.102: Definitions

Section 201.102 defines the “Standard Industrial Classification Manual” as the 1972 version. Board Prop. at 42-43. Sections 201.104(a) and 211.101(a)(2) incorporate the 1972 version by reference. *Id.* The Board requested comment on whether this definition should refer to a more recent version of this manual or a different source. Board Prop. at 42-43. If so, the Board requested information to update this definition and a copy of the publication as required by Section 5-75 of the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version from 1987. PC 10 at 2. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this definition and the incorporations by reference in the provisions noted above. For clarity and convenience, the Board includes this manual below in the list of updates it intends to adopt.

Section 201.104: Incorporations by Reference

Subsection (a)

Section 201.104(a) incorporates by reference the 1972 version of the “Standard Industrial Classification Manual.” Board Prop. at 42-43. In Section 201.102 above, the Board updated the definition of this manual and the incorporations by reference and does the same for this subsection.

Subsection (b)

Section 201.104(b) incorporates by reference “ASAE Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers” by the American Society of Agricultural Engineers. Board Prop. at 43. Section 201.146(t) refers to ASAE Standard 248.2. Board Prop. at 43; 35 Ill. Adm. Code 201.146(t) (Exemptions from State Permit

Requirements). The Board requested comment on whether this incorporation should be revised. Board Prop. at 43. If so, the Board requested information to update the incorporation and a copy of the publication as required by Section 5-75 of the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASAE Standard: ASAE S248.3 – MAR1976 (R2020) Construction and Rating of Equipment for Drying Farm Crops. PC 10 at 2. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsections (c), (d), (e)

Sections 201.104(c), (d), and (e) incorporate by reference various provisions of the 2015 Code of Federal Regulations. Board Prop. at 43. The Board requested comment on whether any of the incorporations should be revised. *Id.* If so, the Board requested information to update them. *Id.*

IEPA commented that it does not object to the Board updating references to the most recent version of the CFR. PC 10 at 3. All CFRs are publicly available. *Id.*

After considering IEPA's comment and its own rules, the Board now updates these incorporations to the most recent version of the CFR.

Proposed Subsection (f)

Sections 201.401(b) and 201.406(b) refer to incorporating the 1987 version of 40 CFR 51.Appendix P, although it is not now incorporated by reference in either of those sections or in Section 201.104. Board Prop. at 43. The Board proposed to incorporate this provision by reference as a new subsection (f) and provide a cross reference to that incorporation in Sections 201.401(b) and 201.406(b). *Id.* The Board requested comment on whether to adopt this proposed incorporation and, if so, whether to update it from the 1987 version or revise it in any other way. *Id.*

IEPA commented that it does not object to the Board updating references to the most recent version of the CFR. PC 10 at 3.

After considering IEPA's comment and its own rules, the Board now adds a subsection (f) incorporating by reference the most recent version of 40 CFR 51.Appendix P, Minimum Emission Monitoring Requirements. The Board also clarifies the reference to this appendix at 35 Ill. Adm. Code 201.401(b) and 210.406(b).

Section 201.124: Annual Report

Section 201.124 requires IEPA to submit to the Board “an annual report that lists the emissions sources for which an operating permit is needed, the type and quantity of pollutants they emit, and the existing and planned controls these sources have, including when planned controls would be completed.” SR at 3; 35 Ill. Adm. Code 201.124; TSD at 2. The Board adopted this rule in 1972. TSD at 2, citing Emission Standards, R71-23 (Apr. 13, 1972) (adopting Rule 112). IEPA argued that the Board adopted this rule to allow it to assess the operation of the air program in the years after its initial inception. SR at 3; TSD at 2.

IEPA argued that the Act and Board rules clearly establish “the emission sources for which permits are required, as well as the type of permit required, based on the nature of the source and type and quantity of emissions.” SR at 3, citing 415 ILCS 5/9, 39 (2024); 35 Ill. Adm. Code 201.142 (Construction Permit Required), 201.143 (Operating Permits for New Sources), 201.144 (Operating Permits for Existing Sources), 201.146 (Exemptions from State Permit Requirements). Rules for source categories and processes generally require specified control measures. TSD at 2. IEPA argued that information in this annual report would serve no particular purpose and is not implemented by the Agency. TSD at 2. Based on these factors, IEPA asserted that Section 201.124 is no longer necessary and proposed to repeal it. SR at 3; TSD at 2; Prop. 201 at 5.

IEPA argued that adopting this repeal into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 3. It asserted that the proposed repeal is only administrative and will not affect the current emission levels or the air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 80-81. The Board did not receive comments and now proposes to repeal this section.

Section 201.144: Operating Permits for Existing Sources

IEPA commented that the Board proposed to revise “[n]o person shall cause or allow” to “[a] person must cause or allow.” PC 11 at 8; Board Prop. at 82. Because this would be a substantive change to permitting requirements, IEPA commented that the word “not” should be inserted after “must.” PC 11 at 8. The Board agrees with this correction and now includes it.

Section 201.146: Exemptions from State Permit Requirements

Subsection (gg). In the subsection (gg) permitting exemption for loading systems handling specified materials (35 Ill. Adm. Code 201.146(gg)), the Board proposed to revise “provided an organic solvent has not been mixed with such materials” with “if an organic solvent has not been mixed with such materials.” Board Prop. at 86.

IEPA commented that subsection (gg) establishes a requirement that must be met if a source wants to utilize the exemption. PC 11 at 9. IEPA added that the Board’s proposal could

be read as removing the “requirement” component and is at best ambiguous. *Id.* IEPA recommended retaining the current language. *Id.*

The Board acknowledges IEPA’s concerns. However, the Board is not persuaded that the proposed revision removes any requirements from the exemption. A primary definition of the term “if” is “on condition that” – a definition that the Board interprets to impose a requirement. <https://www.merriam-webster.com/dictionary/if> (last accessed on March 25, 2026). Moreover, the Board proposed similar changes in subsections (ff), (hh), and (oo), and IEPA did not raise concerns about those changes. Board Prop. at 86; 35 Ill. Adm. Code 201.146(ff), (hh), (oo). The Board also proposed to change numerous instances of “provided that” to “if” throughout Subtitle B, and IEPA did not raise concerns about those changes. *See, e.g.*, Board Prop. at 430 (35 Ill. Adm. Code 212.123(b)), 517 (35 Ill. Adm. Code 214.181), 585 (35 Ill. Adm. Code 215.206(a)(3), (b)). Thus, the Board now includes the revisions to subsection (gg) as proposed in 2024.

Subsection (iii). Subsection (iii) establishes a permitting exemption for replacing, adding, or modifying emission units with federally enforceable State operating permits limiting their potential to emit under specified circumstances. As one of those circumstances, subsection (4) refers to potential emissions that will not trigger “permitting requirements under Section 39.5, [or] permitting requirements under section 165 or 173 of the federal Clean Air Act.” 35 Ill. Adm. Code 201.146(iii)(4). The Board proposed to strike the second reference to “permitting requirements.” Board Prop. at 90.

IEPA commented that this proposed change makes it ambiguous what requirements of Sections 165 or 173 of the CAA must be triggered. PC 11 at 9. IEPA argued that the Board should either reinstate the current language or clarify that referring to “permitting requirements” extends to Sections 165 and 173. *Id.* The Board agrees and now retains the substance of the current language.

Section 201.147: Former Permits

IEPA proposed to repeal this section. SR at 3; TSD at 3; Prop. 201 at 5. Section 201.147 provides that all permits issued by IEPA or its predecessor are subject to Sections 201.121 and 201.142 through 201.146 and Subparts D through F and must be revised or revoked as needed to conform with the Board’s air pollution rules. SR at 3. The Board adopted Section 201.147 in 1972. TSD at 3, citing Emission Standards, R71-23 (Apr. 13, 1972) (adopting Rule 103(j)). IEPA argued that this provision intended to address the requirements applicable to pre-1971 permits. SR at 3. IEPA asserted that no source still holds a “former permit,” making this Section obsolete and unnecessary. SR at 3; TSD at 3.

IEPA argued that adopting this repeal into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 3. It asserted that the proposed repeal is only administrative and will not affect the current emission levels or the air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board's 2024 proposal included this repeal. Board Prop. at 91. The Board did not receive comments and now proposes to repeal this section.

Section 201.148: Operation without Compliance Program and Project Completion Schedule

IEPA's proposed revision of Section 201.207 continued to include a reference to Section 201.148. Board Prop. at 43. The Board requested comment on whether the reference reflected IEPA's intent. *Id.*

IEPA commented that, on further review, it recommended repealing Section 201.148 because this section is outdated and not used by sources or the Agency. PC 10 at 3. IEPA also questioned whether this section serves any purpose, as the Act "does not contemplate issuing lifetime operating permits or federally enforceable state operating permits to noncompliant sources." *Id.*

The Board did not receive additional comments on this section and now proposes to repeal it.

Section 201.164: Design Criteria

Section 201.164 authorizes IEPA "to establish design parameters for those wishing to know what was considered adequate to meet the standards for issuance of a permit." SR at 3; TSD at 3. The Board adopted this rule in 1972. TSD at 3, citing Emission Standards, R71-23 (Apr. 13, 1972) (adopting Rule 103(d)). Since the Board adopted this provision, design criteria or parameters have been included within regulations. SR at 3; *see also* TSD at 3. IEPA asserted that it has never implemented or published any procedures about specific criteria in the design, operation, or maintenance of any emission unit or control equipment. SR at 3-4; TSD at 3. Based on these factors, IEPA argued that this section is no longer necessary and should be repealed. SR at 3, 4; TSD at 3; Prop. 201 at 5.

IEPA argued that adopting this repeal into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 3. It asserted that the proposed repeal is only administrative and will not affect the current emission levels or the air quality status in Illinois. "This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA." *Id.*

The Board's 2024 proposal included this repeal. Board Prop. at 97-98. The Board did not receive comments and now proposes to repeal this section.

Section 201.207: Applicability

Section 201.207 provides in its entirety that

[t]his Subpart [F: CAAPP Permits] shall apply only to sources subject to Section 39.5 of the Act [Clean Air Act Permit Program]. The requirements of Sections 201.143 through 201.148 of Subpart C, Sections 201.157 through 201.165 and

201.169 of Subpart D, and Subparts G and H of this Part shall not apply to a source subject to the requirements of Section 39.5 of the Act. 35 Ill. Adm. Code 201.207.

After proposing to repeal Section 201.147 as obsolete and unnecessary (IEPA Prop. at 3), IEPA proposed to revise Section 201.207 by referring to the “requirements of Sections 201.143 through ~~201.146~~201.148 of Subpart C.” Prop. 201 at 6.

The Board’s 2024 proposal included IEPA’s revision. Board Prop. at 108. However, IEPA proposed to repeal only Section 201.147, while Section 201.148 would continue in effect. Board Prop. at 43. The Board requested comment on whether Section 201.148 would then apply to sources subject to Section 39.5 of the Act and, if so, whether applying it to those sources reflected IEPA’s intent. *Id.* If not, the Board requested that IEPA provide revised language reflecting its intent. *Id.*

Above, the Board noted that IEPA proposed to repeal Section 201.148. PC 10 at 3. IEPA commented that if the Board repeals both Sections 201.147 and 201.148, “the Agency recommends retaining its proposed amendments to Section 201.207. If the Board repeals only Section 201.147, the Agency recommends disregarding its proposed revisions to Section 201.207 and leaving the language as it currently exists.” PC 10 at 3.

Above, the Board proposed to repeal both Sections 201.147 and 201.148. After considering IEPA’s comment and its own rules, the Board now includes IEPA’s original proposed amendment.

Section 201.210: Categories of Insignificant Activities or Emission Levels

Subsection (b) lists activities that must be listed in a CAAPP permit application if present at a source. Subsection (b)(8) refers to specific equipment “processing clothing, bedding, and other fabric items used at the source that have been cleaned with water solutions of bleach or detergents.” 35 Ill. Adm. Code 201.210(b)(8). The Board proposed to revise “provided that any organic solvent present in such items before processing that is retained from clean-up operations shall be addressed as part of the VOM emission from use of cleaning materials” with “if any organic solvent present in the items before processing . . .” Board Prop. at 112.

IEPA commented that subsection (b)(8) establishes a requirement that must be met if a source wants to utilize the exemption. PC 11 at 9. IEPA added that the Board’s proposal could be read as removing the “requirement” component and is at best ambiguous. *Id.* IEPA recommended retaining the current language. *Id.*

As with Section 201.146(gg) above, the Board is not persuaded that the proposed revision removes any requirements from the exemption. IEPA did not raise concerns over the same proposed revisions to other provisions that use the “provided that” language. *See, e.g.*, Board Prop. at 430 (35 Ill. Adm. Code 212.123(b)), 517 (35 Ill. Adm. Code 214.181), 585 (35 Ill. Adm. Code 215.206(a)(3), (b)). For the same reasons discussed above for Section 201.146(gg), the Board now includes the revisions to Section 201.210 as proposed in 2024.

Section 201.211: Application for Classification as an Insignificant Activity

Subsection (d) provides in part that, if IEPA determines that it cannot treat an emission unit as an insignificant activity, it must request information required in a CAAPP permit application “within a reasonable time frame.” 35 Ill. Adm. Code 201.211(d). The Board’s proposal struck the word “frame.” Board Prop. at 117.

Subsection (d) also provides that the owner or operator must submit the requested information “within the time frame stated in the request.” 35 Ill. Adm. Code 201.211(d). The Board’s proposal struck the words “frame stated.” Board Prop. at 117.

In both cases, IEPA commented that “frame” is not extraneous and that the Board’s proposed changes would render the language potentially confusing. PC 11 at 10. IEPA favored retaining the current language because “‘time’ does not necessarily mean the same thing as ‘time frame.’” *Id.* The Board agrees and now retains the substance of the current language.

Section 201.301: Records

The preamble to this section lists three records that the owner or operator of an emission source or air pollution control equipment must maintain and requires that those records must be made available to the Agency. 35 Ill. Adm. Code 201.301. The Board proposed to reorganize this preamble into a subsection (a) with subsections, with the fourth requiring owners or operators to make records available. Board Prop. at 121.

IEPA commented that the proposed fourth subsection “does not correspond to the introductory language, as it does not set forth information or records that owners/operators must maintain.” PC 11 at 10. IEPA suggested that the Board could move that subsection to the introduction, which could then provide that “[t]he owner or operator of any emission source or air pollution control equipment must maintain the following records, which must be made available to the Agency at any reasonable time.” *Id.* The Board agrees and now includes this suggested language.

Section 201.406: Data Reduction

Section 210.406(a) refers to procedures in 35 Ill. Adm. Code 230, which has been repealed. Board Prop. at 43, citing Continuous Monitoring Rules and Repeal of New Source Performance Standards and Hazardous Air Pollutant Regulations, R89-7(B) (Aug. 8, 1991). The Board requested comment on whether this reference should be struck or whether this subsection should refer to another authority. Board Prop. at 43. If so, the Board requested proposed language. *Id.*

IEPA commented that the reference to Part 230 can be struck and does not need to be replaced by reference to any other authority. PC 10 at 4. The Board did not receive other comments and now proposes to strike this reference to the repealed Part 230.

Section 201.530: Recordkeeping and Reporting

Subsection (f) provides that an owner or operator must submit “copies of all required reports and Notifications” to IEPA through a specified post office box address. 35 Ill. Adm. Code 201.530(f). The Board proposed to revise this to the current street address of IEPA’s Springfield office. Board Prop. art 133.

IEPA commented that this proposed address “will not be the correct address by the time the Board adopts this rule, as the Agency is moving locations.” PC 11 at 10. It proposed instead to require submitting copies of reports and notifications to “the address of the Illinois EPA’s headquarters as designated on the Illinois EPA’s website.” *Id.*

In R25-23, IEPA proposed to revise the former address of its Springfield office in 15 Parts of the Board’s rules by referring to the address provided on its website. Amendments to 35 Ill. Adm. Code 101, 310, 502, 620, 704, 721, 733, 739, 742, 807, 811, 840, 848, 1010, and 1501, R25-23 (Mar. 10, 2025) (Statement of Reasons). The Board asked whether IEPA objected to replacing the former address with the current address and a reference to the address provided on its website. IEPA did not object to that proposed revision, and the Board included it in its second-notice proposal. *Id.* (July 10, 2025). Although Section 201.530(f) refers only to an IEPA post office box number, the Board now proposes revising it to be consistent with other Parts that provide an IEPA street address.

Section 201.Appendix C: Past Compliance Dates

In its proposal, the Board requested comment on whether to repeal Part 201.Appendix C, which is based on compliance dates that passed as long as 50 years ago. Board Prop. at 43.

IEPA agreed that Appendix C can be repealed in its entirety. PC 10 at 4. IEPA noted that Appendices A and B to Part 201 refer to Appendix C. *Id.* However, the Board proposed to repeal Appendices A and B, which would eliminate cross-references to the repealed Appendix C. See Board Prop. at 139-42.

The Board did not receive other comments and now proposes to repeal Appendix C.

Part 202: Alternative Control Strategies

Part 202 addresses alternative control strategies in place of requirements which would otherwise apply for emission sources. 35 Ill. Adm. Code 202.140. IEPA and JCAR did not propose revising Part 202.

In its 2024 proposal, the Board throughout Part 202 proposed revisions, including matters of punctuation, abbreviation, organization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Additionally, Section 202.302(c) refers to notifying IEPA “by telephone or telegram” of circumstances making compliance impossible. Board Prop. at 44. The Board requested comment on whether it should revise that subsection with different or additional means of communication. *Id.* If so, the Board requested appropriate language. *Id.*

IEPA commented that it “does not object to the Board suggestion that Section 202.302(c) be revised. The different or additional means of communication can be ‘by telephone, email, or fax.’” PC 10 at 4.

The Board did not receive other comments and now includes IEPA’s suggested revision.

Part 203: Major Stationary Sources Construction and Modification

Part 203 addresses construction and modification of major stationary sources. 35 Ill. Adm. Code 203.201. IEPA and JCAR did not propose revising Part 203.

Board Proposal

In its 2024 proposal, the Board throughout Part 203 proposed revisions, including matters of punctuation, spelling, organization, abbreviation, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

In its comments submitted to the Board on September 26, 2024 (PC 10), and its second comments submitted on November 4, 2024 (PC 11), IEPA responded to three Board requests for comment and commented on a revision proposed by the Board. IEPA did not object to revisions proposed by the Board in three sections, although in one case it favored retaining language that the Board had proposed to change.

PC 11

In its second comment, however, IEPA recommended that all proposed amendments to Part 203 be removed from this rulemaking. PC 11 at 11.

First, IEPA argued that the Board had pending before it a rulemaking that addressed Part 203 and had proceeded to first notice. PC 11 at 11, citing Amendments to 35 Ill. Adm. Code Part 203: Major Stationary Sources Construction and Modification, 35 Ill. Adm. Code Part 204: Prevention of Significant Deterioration, and Part 232: Toxic Air Contaminants, R22-17 (Apr. 18, 2024); 48 Ill. Reg. 6574 (May 3, 2024). IEPA argued that, “[t]o ensure that there are no inconsistencies between the proposed revisions in R 22-17 and this rulemaking, and to ensure

there is no confusion at the federal level when USEPA is asked to review and approve the amendments” in two rulemakings, IEPA recommended that the Board not change Part 203 in this proceeding. PC 11 at 11. IEPA recommended that the Board avoid inconsistency between current rules in Subparts A through H of Part 203 and corresponding new Subparts I through R proposed separately in R 22-17. See Amendments to 35 Ill. Adm. Code Part 203: Major Stationary Sources Construction and Modification, 35 Ill. Adm. Code Part 204: Prevention of Significant Deterioration, and Part 232: Toxic Air Contaminants, R22-17, (Apr. 18, 2024).

The statutory definition of “nonattainment new source review (NA NSR) permit” refers to permits issued under a program “that has been approved by the United States Environmental Protection Agency and incorporated into the Illinois State Implementation Plan to implement the requirements of Section 173 of the Clean Air Act and 40 CFR 51.165.” PC 11 at 11, citing 415 ILCS 5/3.298 (2024). As a practical consequence of this definition, IEPA asserted that proposed revisions would not take effect “until these new rules have been SIP-approved by the USEPA.” PC 11 at 11. IEPA reported that it “has not had an opportunity to perform a detailed review of the corresponding provisions in 40 CFR 51.165 [Permit requirements].” PC 11 at 11. Thus, “it is possible that some of the Board’s proposed changes are inconsistent with federal requirements.” *Id.* (citations omitted). IEPA concluded that, “[t]o ensure nothing hinders USEPA’s approval of any amendments adopted by the Board in R 22-17, no changes should be made to Part 203” in this docket. *Id.*

Since receiving IEPA’s comment, the Board has adopted revisions to Part 203. Amendments to 35 Ill. Adm. Code Part 203: Major Stationary Sources Construction and Modification, 35 Ill. Adm. Code Part 204: Prevention of Significant Deterioration, and Part 232: Toxic Air Contaminants, R22-17, (Apr. 17, 2025). The Board is persuaded by IEPA’s recommendations in PC 11. Thus, the Board now does not include Part 203 (and any proposed amendments) in its first-notice proposal.

IEPA had earlier commented in PC 10 that it did not object to a small number of specific amendments. The Board considers IEPA’s later comment in PC 11 as superseding that position. Thus, the Board now does not include those revisions.

Part 204: Prevention of Significant Deterioration

In 2020, the Board adopted rules based on an IEPA proposal for a new Part 204. The proposal intended to create a state Prevention of Significant Deterioration (PSD) permitting program allowing the state to assume responsibility for those permits and allowing the Board to decide appeals of them. Proposed New 35 Ill. Adm. Code 204, Prevention of Significant Deterioration, Amendments to 35 Ill. Adm. Code Parts 101, 105, 203, 211, and 215, R19-1 (Aug. 27, 2020).

In first-notice comments in R19-1, IEPA argued that the Act required the Board to adopt PSD rules that are the same as – and not merely consistent with – the federal PSD rules. Proposed New 35 Ill. Adm. Code 204, Prevention of Significant Deterioration, Amendments to 35 Ill. Adm. Code Parts 101, 105, 203, 211, and 215, R19-1, slip op. at 2 (June 18, 2020) (second-notice opinion), citing 42 U.S.C 7475; 415 ILCS 5/9.1(c) (2018). The first-notice

version of the proposed Part 204 published in the *Illinois Register* amended IEPA's proposal. IEPA argued that, although those amendments might appear to be non-substantive, they in many cases changed the proposal in ways that were not consistent with the federal PSD rules and jeopardized approval of Part 204 as a SIP revision. Proposed New 35 Ill. Adm. Code 204, Prevention of Significant Deterioration, Amendments to 35 Ill. Adm. Code Parts 101, 105, 203, 211, and 215, R19-1, slip op. at 3 (June 18, 2020).

In its second-notice opinion, the Board agreed with IEPA that the Act requires adopting state PSD rules that follow the federal rules and that USEPA will approve as a SIP revision. Proposed New 35 Ill. Adm. Code 204, Prevention of Significant Deterioration, Amendments to 35 Ill. Adm. Code Parts 101, 105, 203, 211, and 215, R19-1, slip op. at 5 (June 18, 2020). In its second-notice proposal, the Board in numerous cases revised Part 204 as IEPA had recommended and reinstated language originally proposed by IEPA. *Id.* at 12-58. When it adopted the rules, the Board made only a limited number of additional changes, many to conform to IEPA's first-notice comment. Proposed New 35 Ill. Adm. Code 204, Prevention of Significant Deterioration, Amendments to 35 Ill. Adm. Code Parts 101, 105, 203, 211, and 215, R19-1, slip op. at 2-3 (Aug. 27, 2020).

On September 9, 2021, USEPA approved revisions to the Illinois SIP that IEPA had submitted. The revisions implemented new permitting requirements under the PSD program. 86 Fed. Reg. 50459-70 (Sept. 9, 2021). USEPA also transferred to IEPA responsibility for administering PSD permits previously issued to sources in Illinois. *Id.*

IEPA and JCAR did not propose revising Part 204. In considering and adopting Part 204, the Board accepted IEPA's general position that state PSD rules must mirror the federal rules to comply with Section 9.1(c) of the Act and obtain USEPA approval as a SIP submission. As noted above, Illinois obtained this approval. Considering this background and the recent adoption of the rules, the Board did not include Part 204 when proposing non-substantive amendments for public comment in its 2024 proposal. Accordingly, the Board now does not include Part 204.

Part 205: Emissions Reduction Marketing System

Part 205 implements the Emissions Reduction Marketing System (ERMS) under Section 9.8 of the Act. *See* 415 ILCS 5/9.8 (2024); 35 Ill. Adm. Code 205.110. The Board notes that in 2018 it adopted a rule "sunsetting" Part 205. 35 Ill. Adm. Code 205.115; Amendment to 35 Ill. Adm. Code 205, Emissions Reduction Market System, R18-22 (Dec. 6, 2018). IEPA and JCAR did not propose revising Part 205.

In its 2024 proposal, the Board throughout Part 205 proposed revisions, including matters of punctuation, capitalization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, and using "must" to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

However, Part 205 does not apply after April 29, 2018. 35 Ill. Adm. Code 205.115. Although the Board proposed non-substantive changes to Part 205 (Board Prop. at 186-231), it requested comment on whether Part 205 should be repealed as obsolete or otherwise revised. Board Prop. at 44. IEPA agreed that Part 205 can be repealed in its entirety. PC 10 at 5.

In its second comments, IEPA recommended that “the proposed revisions to Part 205 be removed from the rulemaking. The Part has been sunset for many years so edits at this point have no effect or utility.” PC 11 at 12. Now that IEPA has responded to the Board’s request for comment and agrees that the entire Part can be repealed, the Board now proposes to withdraw the amendments it initially proposed and instead repeal Part 205.

Part 207: Vehicle Scrappage Activities

Part 207 establishes procedures and requirements that vehicle scrapping activities performed in Illinois must follow to obtain Creditable Emissions Reductions. 35 Ill. Adm. Code 207.100(a). IEPA and JCAR did not propose revising Part 207.

In its 2024 proposal, the Board throughout Part 207 proposed numerous revisions, including matters of punctuation, capitalization, abbreviation, organization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

In addition, Sections 207.304(i), 207.314(e), 207.404, and 207.410 cite Chapter 13B of the Illinois Vehicle Emissions Inspection Law of 1995, which was repealed effective July 1, 2007. Board Prop. at 44. The Board requested comment on whether this citation should be updated to refer to Chapter 13C of the Illinois Vehicle Code or any other provision or should be struck. *Id.*

IEPA agreed that the reference should be changed to the Illinois Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C]. PC 10 at 5. After considering IEPA’s comment and its own rules, the Board updates these statutory citations.

Part 207 twice lists IEPA’s mailing address. 35 Ill. Adm. Code 207.604(d), 207.802(b). Commenting on 35 Ill. Adm. Code 201.530(f), IEPA noted that it is “moving locations. The Agency recommends that the Board amend this and any similar language in the proposal to reference whatever address is noted on the Illinois EPA’s website.” PC 11 at 10-11.

As noted above, IEPA in R25-23 proposed to revise the former address of its Springfield office in 15 Parts of the Board’s rules by referring to the address provided on its website. Amendments to 35 Ill. Adm. Code 101, 310, 502, 620, 704, 721, 733, 739, 742, 807, 811, 840,

848, 1010, and 1501, R25-23 (Mar. 10, 2025) (Statement of Reasons). The Board asked whether IEPA objected to replacing the former address with the current address and a reference to the address provided on its website. IEPA did not object to that proposed revision, and the Board included it in its second-notice proposal. *Id* (July 10, 2025). Although Section 207.604 and 207.802 refer only to an IEPA post office box number, the Board now proposes revising it to be consistent with other Parts that provide an IEPA street address.

Part 211: Definitions and General Provisions

Part 211 provides definitions for the Board’s air pollution rules. 35 Ill. Adm. Code 211. IEPA proposed to amend a number of these definitions. SR at 4; TSD at 4-7; IEPA Clean-Up at 4-5; Prop. 211.

In addition, in its 2024 proposal, the Board throughout Part 211 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, spelling, organization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, updating statutory references, making the forms of temperatures more consistent with one another, making the form of definitions more consistent with one another, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

JCAR suggested approximately 50 additional changes. PC 2. The Board considered these suggested changes consistent with its own and largely included them in its 2024 proposal without discussion, if the Board had not already adopted them.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 211.101: Incorporated and Referenced Materials

Subsection (a)(1)

Section 211.101(a)(1) incorporates by reference a 1962 bulletin of the American Petroleum Institute. 35 Ill. Adm. Code 211.101(a)(1). The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board. Prop. at 44-45.

IEPA recommended that the Board update references to the most recent version of the API standards: API Manual of Petroleum Measurement Standards Chapter 91.2 Evaporative Loss from Floating-roof Tanks of August 2000. PC 10 at 5. IEPA stated that it will provide the

Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (a)(2)

Subsection (a)(2) incorporates by reference the 1972 version of the "Standard Industrial Classification Manual." 35 Ill. Adm. Code 211.101(a)(2). The Board requested comment on whether this subsection should incorporate a more recent version or a different source. Board Prop. at 42-43. If so, the Board requested information updating this incorporation and a copy of the publication as required by Section 5-75 of the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of 1987. PC 10 at 2. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

The Board concluded above to update a reference to this manual in 35 Ill. Adm. Code 201.102(a), and it also updates this incorporation.

Subsection (a)(3)

Section 211.101(a)(3) incorporates by reference 12 standards of the American Society for Testing and Materials (ASTM). 35 Ill. Adm. Code 211.101(a)(3). The Board requested comment on both specific standards and the organization of this subsection. Board Prop. at 45-46. The Board addresses these comments below.

ASTM D86. Subsection (a)(3) incorporates by reference ASTM D86. 35 Ill. Adm. Code 101(a)(3). The Board requested comment on whether this incorporation should refer to a specific version and, if so, requested appropriate language. Board Prop. at 45.

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D86-23a – Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure. PC 10 at 5. IEPA stated that "[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources." *Id.* IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

ASTM D240-64. Subsection (a)(3) incorporates by reference ASTM Standard D240-64, and the definition of "gross heating value" refers to the incorporation. 35 Ill. Adm. Code

211.101(a)(3), 211.2770. The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 45.

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D240-19 – Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter. PC 10 at 6. IEPA stated that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 6; PC 11 at 2. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

ASTM D323-08. The Board did not specifically request comment on the incorporation of this method or references to it in definitions of “heavy liquid” in Section 211.2870 and “Reid vapor pressure” in Section 211.5510. However, when it addressed the Board’s request for comment on the organization of this subsection, IEPA specifically named an updated version of the method. Thus, the Board now updates this incorporation. For clarity and convenience, it includes this standard below in the list of updates it intends to adopt.

ASTM D369-69 (1971). Subsection (a)(3) incorporates by reference ASTM D369-69 (1971), and the definition of “distillate fuel oil” refers to the incorporation. 35 Ill. Adm. Code 211.101(a)(3), 35 Ill. Adm. Code 211.1770. The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 45.

IEPA commented that ASTM confirmed that ASTM Standard D369-69 (1971) has never been published. PC 11 at 3. IEPA could obtain an earlier published version, ASTM standard D369-67(73): Standard Method of Test for Specific Gravity of Creosote Fractions and Residue. *Id.*

IEPA stated that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 6; PC 11 at 3. IEPA reported that it will provide the Board with copies of the newer version, ASTM D369-84 (2002) Standard Test Method for Specific Gravity of Creosote Fractions and Residue, if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

ASTM D396-69. Subsection (a)(3) incorporates by reference ASTM D396-69, and the definition of “residual fuel oil” refers to the incorporation. 35 Ill. Adm. Code 211.101(a)(3), 211.5590; *see also* 35 Ill. Adm. Code 211.4610 (defining “petroleum liquid”). The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 45.

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D396-24 – Standard Specification for Fuel Oils. PC 10 at 6. IEPA stated that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC10 at 6; PC 11 at 3. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

ASTM D523-80 and D523-89. Subsection (a)(3) incorporates by reference both ASTM D523-80 and D523-89, and the definitions of “extreme high-gloss coating” and “high gloss coating” refer to one or both of them. 35 Ill. Adm. Code 211.101(a)(3), 211.2200, 211.2958. The Board requested comment on whether these incorporations should be updated and, if so, requested appropriate language. Board Prop. at 45.

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D523-14 (2018) – Standard Test Method for Specular Gloss. PC 10 at 6. IEPA stated that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

ASTM D900-55. Subsection (a)(3) incorporates by reference ASTM D900-55, and the definition of “gross heating value” refers to it. 35 Ill. Adm. Code 211.101(a)(3), 211.2770. The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 45.

IEPA commented that this ASTM standard has been withdrawn, and no replacement was made by ASTM. PC 10 at 7. IEPA added that this reference can be deleted, as other standards are provided in Section 211.2770. *Id.*

After considering IEPA’s comment and its own rules, the Board now strikes this incorporation.

ASTM D975-68. Subsection (a)(3) incorporates by reference ASTM D 975-68. 35 Ill. Adm. Code 211.101(a)(3). The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 45.

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D975-24 – Standard Specification for Diesel Fuel. PC 10 at 7; *see also* PC 11 at 3. IEPA stated that “[i]t does not appear that updating this ASTM standard will result

in any substantive change for subject sources.” *Id.* IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

ASTM D1826-64. Subsection (a)(3) incorporates by reference ASTM D1826-64, and the definition of “gross heating value” refers to the incorporation. 35 Ill. Adm. Code 211.101(a)(3), 211.2770. The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 46.

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D1826-94 (2017) – Standard Test Method for Calorific (Heating) Value of Gases in Natural Gas Range by Continuous Reading Calorimeter. PC 10 at 7. IEPA stated that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 7; PC 11 at 3. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

ASTM D2015-66. Subsection (a)(3) incorporates by reference ASTM D2015-66. and the definitions of “gross heating value” refers to the incorporation. 35 Ill. Adm. Code 211.101(a)(3), 211.2770. The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 46.

IEPA commented that this ASTM standard has been withdrawn, and no replacement was made by ASTM. PC 10 at 7. IEPA added that this reference can be deleted, as other standards are provided in Section 211.2770. *Id.*

After considering IEPA’s comment and its own rules, the Board now strikes this incorporation.

ASTM D2880-71. Subsection (a)(3) incorporates by reference ASTM D 2880-71. 35 Ill. Adm. Code 211.101(a)(3). The Board requested comment on whether this incorporation should be updated and, if so, requested appropriate language. Board Prop. at 46.

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D2880-23 – Standard Specification for Gas Turbine Fuel Oils. PC 10 at 7. IEPA stated that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 7; *see also* PC 11 at 4. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Organization of Subsection (a)(3). Subsection (a)(3) incorporates ASTM standards without providing their titles. 35 Ill. Adm. Code 211.101(a)(3). The Board requested comment on whether providing the titles would clarify this subsection. Board Prop. at 46. If so, the Board requested the titles, particularly if the response to questions about the individual standards included an updated version. *Id.*

IEPA did not object to the Board updating references to the most recent versions of the ASTM standards with corresponding titles, which IEPA provided above. PC 10 at 8. After considering IEPA's comment and its own rules, the Board now updates these incorporations and includes their titles as provided by IEPA.

Subsection (b)

Under the heading "Referenced Materials," subsection (b) lists the "Federal Insecticide, Fungicide, and Rodenticide Act (7 USC 136)" (FIFRA). 35 Ill. Adm. Code 211.101(b). The Board requested comment on whether this statute should instead be included in the incorporations by reference under subsection (a), struck from this section, or revised in some other manner. Board Prop. at 46. If so, the Board requested appropriate language. *Id.*

IEPA commented that the IAPA provides for incorporating by reference the "rules, regulations, standards, and guidelines of any Agency of the United States or a nationally or state recognized organization or association." PC 10 at 8, citing 5 ILCS 100/5-75 (2024). IEPA stated that it was not aware of any requirement to incorporate federal or state statutes by reference and did not believe that it was necessary to incorporate FIFRA by reference. *Id.*

After considering IEPA's comment and its own rules and statutory authorities, the Board now retains the substance of this subsection without incorporating FIFRA by reference.

Section 211.481: Ammunition Sealant **Section 211.880: Cap Sealant**

IEPA proposed to amend these two definitions by striking the phrase "for the purposes of 35 Ill. Adm. Code 218.204(q)(1) and 219.204(q)(1)." SR at 4; TSD at 4. IEPA asserted that this phrase is unnecessary and possibly confusing because the definitions also affect other Board rules. *Id.*

IEPA argued that adopting these amendments into the SIP is consistent with Section 110(l) of the CAA. TSD at 4. It asserted that the proposed amendments are only administrative and will clarify the definitions. IEPA argued that these amendments will not affect the current emission levels or the air quality status in Illinois. "This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA." *Id.*

The Board's 2024 proposal included this revision. Board Prop. at 285. The Board did not receive any comments and now proposes to include it.

Section 211.970: Certified Investigation

This definition refers to a report that must include “a summary of the facts on which the signatory relies.” 35 Ill. Adm. Code 211.970. IEPA commented that the Board proposed to strike “signatory” but replaced it with only the letter “s.” PC 11 at 8; Board Prop. at 295-96. In the same sentence of this definition, the Board proposed to replace the term “signatory’s” with “signer’s.” Board Prop. at 296. The Board now adds the term “signer” to correct its inadvertent error.

Section 211.1000: Class II Finish

This definition refers to meeting “the specifications of Voluntary Product Standard PS-59-73, as approved by the American National Standards Institute.” 35 Ill. Adm. Code 211.1000. The Board requested comment on whether this reference should be updated or otherwise revised and, if so, requested appropriate language. Board Prop. at 46. The Board also requested comment on whether this or any revised standard should be included in the incorporations by reference at Section 211.101(a). *Id.*

IEPA did not object to the Board updating references to the most recent version of ANSI Standard A135.5 – Prefinished Hardboard Paneling 2020. PC 10 at 8. IEPA also did not object to this document being added to the incorporations by reference. *Id.* at 8-9. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to include this as an incorporation by reference. *Id.* at 9.

After considering IEPA's comment and its own rules, the Board now updates this incorporation and includes it in the incorporations by reference at 35 Ill. Adm. Code 211.101(a). For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Section 211.1270: Coil Coating

IEPA proposed to amend this definition by adding language clarifying that “protective oils which are used for the purpose of providing lubrication or protection from corrosion without forming a solid film are not subject the volatile organic material (VOM) limitations for coil coatings.” SR at 4; TSD at 4; Prop. 211 at 15-16. IEPA argued that this amendment is consistent with USEPA's definition of “protective oil” in the National Emission Standards for Hazardous Air Pollutants (NESHAP) for Surface Coating of Metal Coil. SR at 4; TSD at 4, citing 40 CFR 63.5110.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 4. It asserted that the proposed amendments are only administrative and will clarify the definition. IEPA argued that this amendment will not affect the current emission

levels or the air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 300-01. The Board did not receive any comments and now proposes to include it.

Section 211.1670: Daily-Weighted Average VOM Content

IEPA proposed to amend this definition to reflect that VOM emission limits are no longer expressed only in terms of weight of VOM per volume of coatings. TSD at 5. IEPA proposed to refer also to limits expressed in terms of “weight of VOM per weight of solids in the coating, weight of VOM per weight of coating, or weight of VOM per volume of solids in the coating.” SR at 4; TSD at 5. IEPA proposed to amend this definition by adding equations to determine daily weighted VOM content to match each type of VOM emission limit. SR at 4; TSD at 5; Prop. 211 at 16-20.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 5. It asserted that the proposed amendment is only administrative and will clarify the definition. IEPA argued that this amendment will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included these revisions. Board Prop. at 309-13. The Board did not receive any comments and now proposes to include them.

Section 211.2200: Extreme High-Gloss Coating

IEPA stated that, although this definition applies to sources in both the Chicago and Metro East nonattainment areas (NAAs), the references to the regulations applicable to the Metro East NAA were inadvertently omitted. SR at 4; TSD at 5. IEPA proposed to add references to Sections 219.204(q)(1) and (q)(5) to reflect that this definition applies to both NAAs. SR at 4-5; TSD at 5; Prop. 211 at 20.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 5. It asserted that the proposed amendment is only administrative and will clarify the definition. IEPA argued that this amendment will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 322-23. The Board did not receive any comments and now proposes to include it.

Section 211.2310: Final Repair Coat

IEPA proposed to revise this definition by correcting typographical errors. First, IEPA proposed to change “218.219(a)(1)” and “218.219(a)(2)” to “219.204(a)(1)” and

“219.204(a)(2),” respectively. TSD at 5; SR at 5. IEPA stated that these two corrections add references to Part 219, as the definition applies to both NAAs of the State. TSD at 5. Furthermore, the replaced Sections 218.219(a)(1) and (a)(2) address “closed container requirements under the work practice standards for automobile and light-duty truck and miscellaneous metal and plastic parts coatings.” *Id.*

IEPA also proposed to restore a reference to Section 215.204(a) that was mistakenly removed in a prior rulemaking. SR at 5; TSD at 5; Prop. 211 at 20.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 5. It asserted that the proposed amendment is only administrative and will clarify the definition. *Id.* at 6. IEPA argued that this amendment will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included these revisions. Board Prop. at 324-25. The Board did not receive any comments and now proposes to include them.

Section 211.2770: Gross Heating Value

This definition refers to four ASTM standards incorporated by reference in Section 211.101(a)(3): D2015-66, D900-55, D1826-64, and D240-64. 35 Ill. Adm. Code 211.101(a)(3), 211.2770.

Addressing these incorporations above, IEPA commented that standards D2015-66 and D900-55 both have been withdrawn, and ASTM did not replace them. PC 10 at 7. IEPA added that these references can be deleted, as other standards are provided in Section 211.2770. *Id.*

After considering IEPA’s comment and its own rules, the Board now proposes to strike reference to these two standards.

Addressing ASTM D1826-64 and D240-64 above, IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D1826-94 (2017) – Standard Test Method for Calorific (Heating) Value of Gases in Natural Gas Range by Continuous Reading Calorimeter; and ASTM D240-19 – Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter, respectively. PC 10 at 6-7.

Above, the Board concluded to update these incorporations and include them in the incorporations by reference at 35 Ill. Adm. Code 211.101(a). The Board included these standards in the list of updates it intends to adopt. The Board now revises Section 211.2770 to reflect the updates.

Section 211.3370: Liquid/Gas Method

This definition refers to “either of two methods for determining VOM capture efficiency which require both gas phase and liquid phase measurements and analysis.” 35 Ill. Adm. Code

211.3370. The Board proposed to revise this so it refers to “either of two methods both gas phase and liquid phase measurements and analysis to determine VOM capture efficiency.” Board Prop. at 343.

IEPA commented that this proposed re-phrasing “does not make sense.” PC 11 at 12. Although IEPA recommended retaining the current language, the Board believes that an additional change clarifies the sense and grammar of the sentence. The Board now proposes to refer to “either of two methods requiring both gas phase and liquid phase measurements and analysis to determine VOM capture efficiency.”

Section 211.3705: Medical Device

This definition refers to “the National Formulary or the United States Pharmacopeia, or any supplement to them.” 35 Ill. Adm. Code 211.3705(c). The Board requested comment on whether these materials should be described more specifically and whether they should be incorporated by reference in Section 211.101. Board Prop. at 46. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA commented that “medical device” is defined in part as “an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar article, including any component or accessory, that . . . is defined in the National Formulary or the United States Pharmacopeia.” PC 10 at 9, citing 35 Ill. Adm. Code 211.3705. This definition also includes a number of apparatuses and related tests, including those that are “intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease” and those “intended to affect the structure or any function of the body.” PC 10 at 9; 35 Ill. Adm. Code 211.3705(a), (b). IEPA added that the reference document in subsection (c) is updated annually. PC 10 at 9. IEPA did not believe it is necessary to revise this Section or include a more specific incorporation by reference in Section 211.101 at this time. *Id.*

The Board did not receive other comments in response to this request. After considering IEPA’s comment and its own rules, and without any comment proposing revision, the Board now retains the substance of this definition.

Section 211.3850: Miscellaneous Metal Parts and Products Coating

IEPA proposed to amend this definition by adding language clarifying that “protective oils which are used for the purpose of providing lubrication or protection from corrosion without forming a solid film are not subject the VOM limitations for miscellaneous metal parts and products coating.” SR at 5; TSD at 6; Prop. 211 at 21. IEPA argued that this amendment is consistent with USEPA’s definition of “coating” in the NESHAP for Surface Coating of Miscellaneous Metal Parts and Products. SR at 5; TSD at 6, citing 40 CFR 63.3981.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 6. It asserted that the proposed amendment is only administrative and will clarify the definition. IEPA argued that this amendment will not affect the current emission

levels or the air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 354-55. The Board did not receive any comments and now proposes to include it.

Section 211.3967: Mouth Waterproofing Sealant

IEPA proposed to amend this definition by striking the phrase “for the purposes of 35 Ill. Adm. Code 218.204(q)(1) and 219.204(q)(1).” SR at 5; TSD at 6. IEPA asserted that this phrase is unnecessary and possibly confusing since the definition also affects other rules. SR at 5; TSD at 6; *see also* Prop. 211 at 21.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 6. It asserted that the proposed amendment is only administrative and will clarify the definition. IEPA argued that this amendment will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 358. The Board did not receive any comments and now proposes to include it.

Section 211.4030: No Detectable Volatile Organic Material Emissions

The definition of “no detectable volatile organic material emissions” refers to “40 CFR 60.485(c) (incorporated by reference in 35 Ill. Adm. Code 215.105, 218.112 and 219.112).” 35 Ill. Adm. Code 211.4030. Additionally, Part 215 incorporates the 1989 version, and Parts 218 and 219 incorporate the 1991 version. Board Prop. at 47. The Board requested comment on whether these incorporations should be consistent with one another and, if so, requested appropriate language. *Id.* at 46-47.

IEPA did not object to the Board updating references to the most recent CFR, which would ensure consistency. PC 10 at 9. After considering IEPA’s comment and its own rules, the Board now updates these incorporations in Parts 215, 218, and 219.

Section 211.4250: Organic Material and Organic Materials

IEPA proposed to amend subsection (b) of this definition to clarify that it applies to Parts 201 and 211, as well as to Parts 215, 218, and 219. SR at 5; TSD at 6; *see also* Prop. 211 at 21-22.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 6. It asserted that the proposed amendment is only administrative and will clarify the definition. IEPA argued that this amendment will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board's 2024 proposal included this revision. Board Prop. at 363. The Board did not receive any comments and now proposes to include it.

Section 211.4990: Power Driven Fastener Coating

Federal Specification FF-N-105b. This definition refers to "Federal Specification FF-N-105b of the General Services Administration dated August 23, 1977." 35 Ill. Adm. Code 211.4990. The Board requested comment on whether this reference should be updated or revised and, if so, requested appropriate language. Board Prop. at 47. The Board also requested comment on whether this or any updated reference should be incorporated by reference at Section 211.101. *Id.* If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board changing the reference to the federal specification to the most recent version of the relevant ASTM standard: ASTM F1667/F1667M -21a – Standard Specification for Driven Fasteners: Nails, Spikes, and Staples for nails, brads, staples, and spikes. PC 10 at 9. IEPA added that "[i]t does not appear that this amendment will result in any substantive change for subject sources." *Id.*

IEPA also did not object to this document being added to the incorporations by reference. PC 10 at 9. It stated that it will provide the Board with copies of the ASTM if the Board intends to add this as an incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this reference and includes this standard in the incorporations by reference at 35 Ill. Adm. Code 211.101(a). For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Bulletin UM-25d. This definition refers to "Bulletin UM-25d of the U.S. Department of Housing and Urban Development – Federal Housing Administration dated September 5, 1973." 35 Ill. Adm. Code 211.4990. The Board requested comment on whether this reference should be updated and, if so, requested appropriate language. Board Prop. at 47. The Board also requested comment on whether this or any updated reference should be incorporated by reference at Section 211.101. *Id.* If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA could not obtain the current version nor any updated version of this reference. PC 10 at 10. IEPA recommended deleting the reference, as it has obtained other updated references for this definition. *Id.*

After considering IEPA's comment and its own rules, the Board now proposes to strike this reference.

Model Building Code. This definition refers to the "Model Building Code of the Council of American Building Officials." 35 Ill. Adm. Code 211.4990. The Board requested comment on whether this reference should be made more specific or should be updated and, if

so, requested appropriate language. Board Prop. at 47. The Board also requested comment on whether this or any updated specification should be incorporated by reference at Section 211.101. *Id.* If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA commented that this code has been updated to “The International Building Code (IBC)” and did not object to the Board updating references to the most recent version of the “IBC: 2024 International Building Code.” PC 10 at 10. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this reference and includes this code in the incorporations by reference at 35 Ill. Adm. Code 211.101. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Section 211.5500: Regulated Air Pollutant

IEPA noted that Section 39.5(l) of the Act includes “greenhouse gases” in the definition of “Regulated Air Pollutant.” SR at 5; TSD at 7, citing 415 ILCS 5/39.5(l) (2024). IEPA proposed to add “greenhouse gases” to this definition to be consistent with the definition in the Act. SR at 5; TSD at 7; Prop. 211 at 22.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 7. It asserted that the proposed amendment is only administrative and will clarify the definition. IEPA argued that this amendment will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 383-84. The Board did not receive any comments and now proposes to include it.

Section 211.5650: Ringelmann Chart

This definition refers to “the chart published and described in the Bureau of Mines, U.S. Department of Interior, Information Circular 8333 (Revision of IC7718) May 1, 1967, or any adaptation thereof which has been approved by the Agency.” 35 Ill. Adm. Code 211.5650. The Board requested comment on whether this reference should be updated or revised and, if so, requested appropriate language for it. Board Prop. at 47. The Board also requested comment on whether this material should be incorporated by reference at Section 211.101. *Id.* If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA commented that the reference to the Ringelmann chart has been removed from 35 Ill. Adm. Code 212. PC 10 at 10. It added that the reference has been updated to USEPA Method 9, which is already incorporated in Section 212.109. *Id.* IEPA recommended deleting this definition. *Id.*

After considering IEPA's comment and its own rules, the Board now proposes to repeal this section.

Section 211.6050: Smokeless Flare

Commenting on the definition of "Ringelmann chart" at 35 Ill. Adm. Code 211.5650, IEPA noted that this definition refers to it. PC 10 at 10. Since that reference had been updated to a USEPA Method, IEPA recommended updating this definition to provide that "smokeless flare" means

a combustion unit and the stack to which it is affixed in which organic material achieves combustion by burning in the atmosphere such that the smoke or other particulate matter emitted to the atmosphere from such combustion does not cause an opacity of greater than 20% as measured by USEPA Method 9~~have an appearance density or shade darker than No. 1 of the Ringelmann Chart.~~ PC 10 at 10-11.

After considering IEPA's comment and its own rules, the Board now includes this proposed revision.

Section 211.7150: Volatile Organic Material (VOM) or Volatile Organic Compound (VOC)

Subsection (b) of this definition refers to excluding from VOM negligibly reactive compounds "if the amount of those compounds is accurately quantified and the exclusion is approved by the Agency." 35 Ill. Adm. Code 211.7150(b). The Board proposed to revise this by referring to an exclusion "if the amount of those compounds is accurately quantified and the Agency approves the exclusion" but inadvertently struck the word "exclusion." Board Prop. at 414. IEPA commented that the term "exclusion" should be inserted at the end of this subsection. PC 11 at 8.

The Board agrees with IEPA's comment and now corrects this definition.

Part 212: Visible and Particulate Matter Emissions

Part 212 contains standards and limitations for visible and particulate matter emissions and discharges from stationary emission units. The Part is divided into various subparts based on the type of source producing the emissions. SR at 5. IEPA proposed three amendments to Part 212. SR at 5-6; TSD at 7-8.

In addition, the Board throughout Part 212 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, spelling, organization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, updating statutory references, making the forms of temperatures more consistent with one another, making the forms of definitions more consistent with one another, and using "must" to be more clearly mandatory. The Board

intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

JCAR suggested approximately 50 additional changes. PC 2. The Board considered these suggested changes consistent with its own and largely included them in its 2024 proposal without discussion, if the Board had not already adopted them.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 212.113: Incorporations by Reference

Subsection (a)

Subsection (a) incorporates by reference 14 methods from 40 CFR 60. Appendix A (1991). 35 Ill. Adm. Code 212.113. The Board requested comment on whether any of these incorporations should be updated or revised. Board Prop. at 48. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent CFR. PC 10 at 11. IEPA commented that the Board's proposal should reflect that USEPA has renumbered Appendix A. *Id.*

Appendix A-1 includes Method 1 through 2D, referenced in Section 212.113(a)(1) through (6).

Appendix A-2 includes Method 3, referenced in Section 212.113(a)(7).

Appendix A-3 includes Method 4 and 5 through 5E, referenced in Section 212.113(a)(8) through (12).

Appendix A-4 includes Method 9, referenced in Section 212.113(a)(13).

Appendix A-7 includes Method 22, referenced in Section 212.113(a)(14).

After considering IEPA's comment and its own rules, the Board now updates the reference to the CFR and revises and reorganizes references to the methods in Appendix A.

Subsection (b)

Subsection (b) incorporates by reference three methods from 40 CFR 51. Appendix M (1994). 35 Ill. Adm. Code 212.113(b). The Board requested comment on whether any of these incorporations should be updated or revised. Board Prop. at 48. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to updating the references to the most recent CFR. PC 10 at 11.

IEPA commented that the titles should be revised to be consistent with the current titles. *Id.* As one example, Method 201A should be titled “Determination of PM₁₀ and PM_{2.5} Emissions from Stationary Sources (Constant Sampling Rate Procedure),” as noted in Appendix M. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates the reference to the CFR and revises references to the methods in Appendix M.

Subsection (c) and (d)

Subsections (c) and (d) incorporate by reference provisions of 40 CFR 672 (1991) and 40 CFR 675 (1991), respectively. 35 Ill. Adm. Code 212.113(c), (d). The Board requested comment on whether any of these incorporations should be updated or revised. Board Prop. at 48. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating the references to the most recent CFR. PC 10 at 12.

After considering IEPA’s comment and its own rules, the Board now updates the reference to the CFR in these two subsections.

Subsection (e)

Subsection (e) incorporates by reference “ASAE Standard 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers, American Society of Agricultural Engineers.” 35 Ill. Adm. Code 212.113(e). Additionally, Section 212.463 (Grain Drying Operations) refers to this incorporation. 35 Ill. Adm. Code 212.463. The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 48. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASAE Standard: ASAE S248.3 – MAR1976 (R2020) Construction and Rating of Equipment for Drying Farm Crops. PC 10 at 12. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation by reference. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (f)

Subsection (f) incorporates by reference “U.S. Sieve Series, ASTM-E11, American Society of Testing Materials.” 35 Ill. Adm. Code 212.113(f). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 48. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM E11-24 – Standard Specification for Woven Wire Test Sieve Cloth and Test Sieves. PC 10 at 12. IEPA commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (g)

Subsection (g) incorporates by reference “Standard Methods for the Examination of Water and Wastewater, Section 209C, ‘Total Filtrable Residue Dried at 103 – 105° C,’ 15th Edition, 1980, American Public Health Association.” 35 Ill. Adm. Code 212.113(g). Additionally, Section 212.443(h) (Coke Plants) refers to this incorporation. 35 Ill. Adm. Code 212.443(h). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 48. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version, Standard Methods for the Examination of Water and Wastewater, Section 2540C, Total Dissolved Solids Dried at 180 °C, 24th Edition, 2020, American Public Health Association. PC 10 at 12. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (j)

Subsection (j) incorporates by reference 40 CFR 50.Appendix K (1992), Interpretation of the National Ambient Air Quality Standard for Particulate Matter. 35 Ill. Adm. Code 212.113(j). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 48. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. Board Prop. at 49.

IEPA did not object to the Board updating the references to the most recent CFR. PC 10 at 13. The title of Appendix K has changed slightly to reference “National Ambient Air Quality Standards.” *Id.* (emphasis in original).

After considering IEPA’s comment and its own rules, the Board now updates this incorporation by reference and the title of the incorporated material.

Section 212.423: Emission Limits for the Portland Cement Manufacturing Plant Located in LaSalle County, South of the Illinois River

The Board first adopted Section 212.423 in 1991 to control PM₁₀ emissions from a Portland cement manufacturing plant that operated in LaSalle County before September 1, 1990. SR at 6; TSD at 7, citing PM-10 Emission Limits for the Portland Cement Manufacturing Plant and Associated Quarry Operations Located South of the Illinois River in LaSalle County, R 91-6 (Sept. 26, 1991). The Board then amended this provision in 1996. TSD at 7, citing Visible and Particulate Matter Emissions - Conditional Approval and Clean Up: Amendments to 35 Ill. Code Parts 211 and 212, R96-5 (May 16, 1996).

IEPA reported that the only Portland cement manufacturer in that area ceased operation and withdrew its Title V permit on March 3, 2014. SR at 6; TSD at 7. IEPA concluded that Section 212.423 is obsolete and should be repealed. SR at 6; TSD at 7; Prop. 212 at 5-7.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 7. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 458-60. The Board did not receive any comments and now proposes to repeal this section.

Section 212.424: Fugitive Particulate Matter Control for the Portland Cement Manufacturing Plant and Associated Quarry Operations Located in LaSalle County, South of the Illinois River

As with Section 212.423, the Board adopted this provision in 1991 to control PM₁₀ emissions from a Portland cement manufacturing plant and associated quarries that operated in LaSalle County before September 1, 1990. SR at 6; TSD at 7, citing PM-10 Emission Limits for the Portland Cement Manufacturing Plant and Associated Quarry Operations Located South of the Illinois River in LaSalle County, R 91-6 (Sept. 26, 1991). The rule provides fugitive control measures and recordkeeping requirements for both the cement manufacturing plant and the quarries that transport limestone and other material to the manufacturing plant. TSD at 7.

IEPA reported that this manufacturer has ceased operation, and “the associated quarries have therefore ceased transporting materials to the Portland cement manufacturing plant.” SR at 6; TSD at 8. IEPA argued that Section 212.424 is obsolete and should be repealed. SR at 6; TSD at 8; Prop. 212 at 7-9.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 8. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board's 2024 proposal included this repeal. Board Prop. at 460-62. The Board did not receive any comments and now proposes to repeal this section.

Section 212.458: Emission Units in Certain Areas

IEPA proposed to amend this section by correcting a typographical error. TSD at 8. Subsection (b)(14) currently sets an emission limit of "0.05 kg/Mg (0.01 lb/T) of sand processed from molding sand forming systems at a steel foundry plant located in Granite City." 35 Ill. Adm. Code 212.458. IEPA asserted that the decimal point is misplaced and proposed to revise the limit to "0.10 lb/T." SR at 6; TSD at 8; Prop. 212 at 11.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 8. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. "This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA." *Id.*

The Board's 2024 proposal included this revision. Board Prop. at 475-78. The Board did not receive any comments and now proposes to include it.

Section 212.700: Applicability

This section addresses applicability of additional control measures and refers to Section 212.423(a), which IEPA proposed to repeal. IEPA proposed to amend this section by striking that reference. SR at 6; TSD at 8; Prop. 212 at 14.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 8. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. "This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA." *Id.*

The Board's 2024 proposal included this revision. Board Prop. at 487-88. The Board did not receive any comments and now proposes to include it.

Part 212.Appendix C: Past Compliance Dates

The Board requested comment on whether to repeal all or specific sections of Part 212.Appendix C, which includes dates that passed more than 50 years ago. Board Prop. at 49.

IEPA agreed that Appendix C can be repealed in its entirety. PC 10 at 13. IEPA noted that Appendices A and B to Part 212 refer to Appendix C. *Id.* The Board already proposed to repeal Appendices A and B, which would eliminate cross-references to a repealed Appendix C. *See* Board Prop. at 493-97.

After considering IEPA's comment and its own rules, the Board now proposal to repeal this appendix.

Part 214: Sulfur Limitations

Part 214 sets standards and limitations for emissions of sulfur from stationary sources. The Part is divided into various subparts based upon factors such as the location of sources or the type of industry grouping the facility belongs to (petroleum refining, glass and concrete manufacturing, etc.). SR at 6. IEPA proposed two amendments to Part 214. SR at 6; TSD at 8-9.

In addition, the Board throughout Part 214 proposed numerous revisions including matters of punctuation, abbreviation, organization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, and using "must" to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in its 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

JCAR suggested a small number of additional changes. PC 7. The Board considered these suggested changes consistent with its own and largely included them in its 2024 proposal without discussion, if the Board had not already adopted them.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 214.104: Incorporations by Reference

Subsection (a)

Subsection (a) incorporates by reference 10 methods from 40 CFR 60. Appendix A (2014). 35 Ill. Adm. Code 214.104(a). The Board requested comment on whether any of these incorporations should be updated or revised. Board Prop. at 49. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA cited its comment on 35 Ill. Adm. Code 212.113(a), indicating it did not object to the Board updating references to the most recent CFR. PC 10 at 13. IEPA commented that the Board's proposal should reflect that USEPA has renumbered Appendix A. PC 10 at 13-14.

Appendix A-1 to Part 60:	Test Methods 1 through 2F
Appendix A-2 to Part 60:	Test Methods 2G through 3C
Appendix A-3 to Part 60:	Test Methods 4 through 5I
Appendix A-4 to Part 60:	Test Methods 6 through 10B

Appendix A-5 to Part 60:	Test Methods 11 through 15A
Appendix A-6 to Part 60:	Test Methods 16 through 18
Appendix A-7 to Part 60:	Test Methods 19 through 25E
Appendix A-8 to Part 60:	Test Methods 26 through 30B

After considering IEPA's comment and its own rules, the Board now updates the reference to the CFR and revises references to the methods in Appendix A.

Subsection (b)

Subsection (b) incorporates by reference 40 CFR 60.8(b) (2014). 35 Ill. Adm. Code 214.104(b). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 49. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating the reference to the most recent CFR. PC 10 at 14.

After considering IEPA's comment and its own rules, the Board now updates the reference to the CFR.

Subsection (c)(1)

Subsection (c)(1) incorporates by reference ASTM standards D2234 (1989) and D2013 (1986) for solid fuel sampling. 35 Ill. Adm. Code 214.104(c)(1). The Board requested comment on whether these incorporations should be updated or revised. Board Prop. at 49. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASTM standards: ASTM D2234-20 – Standard Practice for Collection of a Gross Sample of Coal; and ASTM D2013-21 – Standard Practice for Preparing Coal Samples for Analysis. PC 10 at 14. IEPA further commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates these two incorporations by reference. For clarity and convenience, the Board includes these standards below in the list of updates it intends to adopt.

Subsection (c)(2)

Subsection (c)(2) incorporates by reference ASTM standards D3177 (1984), D2622 (1987), D3180 (1984), and D4239 (1985) for sulfur determinations. 35 Ill. Adm. Code 214.104(c)(2). The Board requested comment on whether these incorporations should be updated or revised. Board Prop. at 49. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

For ASTM standards D2622 (1987) and D3180 (1984), IEPA did not object to the Board updating reference to the most recent version of the ASTM standards: ASTM D2622-24 – Standard Practice for Preparing Coal Samples for Analysis; and ASTM D3180-15 (2023) – Standard Practice for Calculating Coal and Coke Analyses from As-Determined to Different Bases. PC 10 at 14-15. IEPA added that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* at 15. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates these two incorporations by reference. For clarity and convenience, the Board includes these standards below in the list of updates it intends to adopt.

For ASTM standards D3177 (1984) and D4239 (1985), IEPA commented that updating to the most recent standard, ASTM D4239-18e1: Standard Test Method for Sulfur in the Analysis Sample of Coal and Coke Using High Temperature Tube Furnace Combustion, may result in substantive changes affecting subject sources because the updated standard may require different or additional equipment. PC 10 at 14. IEPA deferred to the Board whether the standard should be updated in this rulemaking that intends to propose non-substantive amendments. *Id.*

After considering IEPA’s comment and its own rules, and to ensure this docket remains non-substantive, the Board retains the two current incorporations but adds the titles of those two standards.

Subsection (c)(3)

Subsection (c)(3) incorporates by reference ASTM standards D2015 (1985) and D3286 (1985) for heating value determinations. 35 Ill. Adm. Code 214.104(c)(3). The Board requested comment on whether these incorporations should be updated or revised. Board Prop. at 50. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

ASTM standard D2015-00 has been withdrawn, and ASTM did not replace it. PC 10 at 15. IEPA added that this standard can be deleted because this subsection provides another standard. *Id.*

After considering IEPA’s comment and its own rules, the Board now proposes to strike this incorporation by reference.

ASTM standard D-3286 (1985) has been withdrawn and replaced with ASTM standard D5865-19: Standard Test Method for Gross Calorific Value of Coal and Coke. PC 10 at 15. IEPA added that “[i]t does not appear that replacing this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA stated that it will provide the Board with copies of the updated version of the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation by reference. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (d)

Subsection (d) incorporates by reference the "Tutwiler Procedure for hydrogen sulfide, 40 CFR 60.648 (2014)." 35 Ill. Adm. Code 214.104(d). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 50. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the CFR. PC 10 at 15. After considering IEPA's comment and its own rules, the Board now updates this incorporation by reference.

Subsection (e)

Subsection (e) incorporates by reference 40 CFR 75 (2014). 35 Ill. Adm. Code 214.104(e). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 50. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating the references to the most recent CFR. PC 10 at 15. After considering IEPA's comment and its own rules, the Board now updates this incorporation by reference.

Section 214.120: Scope

Section 214.100 addresses the scope and organization of Part 214. 35 Ill. Adm. Code 214.100. The Board requested comment on whether to repeal Section 214.120 – the "Scope" section for Subpart B (New Fuel Combustion Emission Sources) – as redundant. Board Prop. at 49; 35 Ill. Adm. Code 214.120.

IEPA did not recommend repealing Section 214.120. PC 10 at 13. IEPA stated that, "[w]hile Section 214.100 sets forth the overall scope of Part 214 and describes the provisions contained in its various Subparts, the 'Scope' provisions within each Subpart provide additional, more specific information." *Id.* Section 214.120 clarifies that industry and site-specific rules in Subparts N *et seq.* may modify general sulfur emission rules in Subparts B through F. 35 Ill. Adm. Code 214.120; *see also* PC 10 at 13.

After considering IEPA's comment and its own rules, the Board retains the substance of this section without revision.

Section 214.121: Large Sources

This section includes a Board Note that states it was invalidated by several Illinois courts. 35 Ill. Adm. Code 214.121. Despite this apparent invalidity, the Board does not intend to amend

this section apart from the non-substantive revisions described above. The Board also does not intend to repeal this section as obsolete because that would be a substantive change beyond the scope of this rulemaking, and because Section 214.121 is part of the Illinois SIP. However, the Board invites IEPA to address the apparent invalidity in a separate rulemaking.

Section 214.140: Scope

Section 214.300: Scope

Section 214.380: Scope

Section 214.400: Scope

Section 214.420: Scope

The Board's 2024 proposal questioned whether to repeal these sections as redundant because Section 214.100 addresses the scope and organization of Part 214. Board Prop. at 49; 35 Ill. Adm. Code 214.100, 214.140, 214.300, 214.380, 214.400, 214.420. Each "Scope" section applies to the following Part 214 subparts, respectively: Subpart C (Existing Solid Fuel Combustion Emission Sources); Subpart K (Process Emission Sources); Subpart O (Petroleum Refining, Petrochemical and Chemical Manufacturing); Subpart P (Stone, Clay, Glass and Concrete Products); and Subpart Q (Primary and Secondary Metal Manufacturing). *Id.*

IEPA did not recommend repealing these "Scope" sections because "[w]hile Section 214.100 sets forth the overall scope of Part 214 and describes the provisions contained in its various Subparts, the 'Scope' provisions within each Subpart provide additional, more specific information." PC 10 at 13. Moreover, Section 214.140 clarifies that "industry and site-specific rules in Subparts N *et seq.*" may modify general sulfur emissions standards for existing solid fuel emission sources. 35 Ill. Adm. Code 214.140; *see also* PC 10 at 13. Similarly, Section 214.300 clarifies that "industry and site specific rules in other Subparts" may modify general rules for sulfur emissions from process sources under Subpart K. 35 Ill. Adm. Code 214.140; *see also* PC 10 at 13. IEPA added that "Section 214.300 also clarifies that the sulfur content limitations of Subpart K apply regardless of industry- and site-specific rules set forth in other Subparts." PC 10 at 13.

After considering IEPA's comment and its own rules, the Board retains the substance of these sections without revision.

Section 214.521: Winnetka Power Plant

This section sets a sulfur dioxide (SO₂) limit for the coal-fired boilers at the Village of Winnetka Electric Utility Plant. SR at 6. The Board adopted this site-specific rule in 1984 for the plant's source burning only solid fuel. TSD at 8, citing Sulfur Dioxide Emission Limitations: Village of Winnetka, R80-22(B) (Apr. 18, 1984). In 1989 and 1992, IEPA granted construction permits to convert these sources to use natural gas instead of coal. TSD at 8-9; *see also* SR at 6. Because all the boilers at the plant are now natural gas-fired, IEPA asserted that this rule is obsolete and should be repealed. SR at 6; TSD at 8; Prop. 214 at 3-4.

IEPA added that "[n]o federal considerations are implicated, as Section 214.521 is not part of Illinois' SIP." TSD at 9.

The Board's 2024 proposal included this repeal. Board Prop. at 532. The Board did not receive any comments and now proposes to repeal this section.

Section 214.560: Scope

The 2024 proposal questioned whether to repeal this section for Subpart X (Utilities) as redundant because Section 214.100 addresses the scope and organization of Part 214. Board Prop. at 49; 35 Ill. Adm. Code 214.100, 214.560.

IEPA did not recommend repealing Section 214.560 because “[w]hile Section 214.100 sets forth the overall scope of Part 214 and describes the provisions contained in its various Subparts, the ‘Scope’ provisions within each Subpart provide additional, more specific information.” PC 10 at 13.

In addition to this Section 214.560, however, Subpart X includes only two other sections, Sections 214.561 and 214.562. In its original proposal, IEPA recommended repealing Section 214.561 as obsolete. SR at 6; TSD at 9. In a later comment, IEPA proposed repealing Section 214.562 as obsolete. PC 10 at 15. Since the Board below follows IEPA's recommendations and now proposes to repeal both sections, Subpart X no longer contains substantive provisions for which this section would provide a scope or organization. Although the Board recognizes IEPA's general position about these scope provisions, it does not consider this position to apply to Subpart X as it did to previous provisions.

Based on these factors, the Board now proposes to repeal Section 214.560 as unnecessary.

Section 214.561: E.D. Edwards Electric Generating Station

This section sets SO₂ limits for the E.D. Edwards Electric Generating Plant in Bartonville. SR at 6. The Board adopted these limits in 1986 for coal-fired boilers 1 and 3 at the plant. SR at 6, citing Amendments to 35 Ill. Adm. Code 214, Sulfur Limitations, R84-28 (Apr. 24, 1986). In 2003, the Board amended this section to include coal-fired boiler 2 and revise the emission limitations. TSD at 9, citing Petition of Central Illinois Light Company (E.D. Edwards Generating Station) for a Site-Specific Air Regulation: 35 Ill. Adm. Code 214.561, R02-21 (June 5, 2003). IEPA stated that “[t]he purpose of this rulemaking was to ensure that the primary 1971 SO₂ NAAQS was being achieved and maintained in this area.” TSD at 9.

In 2015, the Board adopted 35 Ill. Adm. Code 214.Subpart AA, “which specifically limited SO₂ emission rates for certain sources in response to the one-hour 2010 SO₂ NAAQS of 75 ppb.” SR at 9, citing Amendments to 35 Ill. Adm. Code Part 214, Sulfur Limitations, Part 217, Nitrogen Oxides Emission, and Part 225, Control of Emissions from Large Combustion Sources, R15-21 (Nov. 19, 2015). IEPA argued that, because Subpart AA has SO₂ emission limits that are more stringent, Section 214.561 is obsolete and ripe for repeal. SR at 6; TSD at 9; Prop. 214 at 4.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(1) and 193 of the CAA. TSD at 9. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 533. The Board did not receive any comments and now proposes to repeal this section.

Section 214.562: Coffeen Generating Station

Section 214.562 addresses emissions from a specific generating station in Montgomery County. 35 Ill. Adm. Code 214.562. The Board requested comment on whether this section correctly identified the current owner and, if not, requested language identifying that owner. Board Prop. at 50.

IEPA recommended that the Board repeal this section as obsolete because the Coffeen Generating Station is permanently closed. PC 10 at 15. After considering IEPA’s comment and its own rules, the Board now proposes to repeal this section.

Part 214.Appendix D

Appendix D (Past Compliance Dates) includes dates that passed more than 50 years ago. 35 Ill. Adm. Code 214.Appendix D. The Board requested comment on whether this entire appendix or specific sections of it should be struck as obsolete or otherwise revised. Board Prop. at 50.

IEPA did not object to the Board repealing the past compliance dates as obsolete. PC 10 at 16. After considering IEPA’s comment and its own rules, the Board now proposes to repeal this appendix.

Part 215: Organic Material Emission Standards and Limitations

Part 215 contains standards and limitations for emission of organic material from stationary sources located in areas other than the Chicago and Metro East areas. The Part is divided into subparts based on categories of sources that emit VOMs. SR at 6. IEPA proposed numerous amendments to Part 215. SR at 6; TSD at 8-9.

In addition, the Board throughout Part 215 proposed numerous revisions including matters of capitalization, punctuation, abbreviation, spelling, organization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, updating statutory references, simplifying cross references, making the forms of temperatures more consistent with one another, making the forms of definitions more consistent with one another, replacing references to effective dates with specific dates, replacing double negatives with clear affirmative or mandatory language, and using “must” to be

more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

JCAR suggested approximately 60 additional changes. PC 7. The Board considered these suggested changes consistent with its own and largely included them in its 2024 proposal without discussion if the Board had not already adopted them.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Part 215. Subpart A: General Provisions

Section 215.105: Incorporations by Reference

Subsection (a): American Society for Testing and Materials

Subsection (a) incorporates by reference 17 ASTM standards in 13 subsections. 35 Ill. Adm. Code 215.105(a).

Subsections (a)(1), (a)(2), (a)(3), (a)(4), (a)(5), (a)(6), (a)(7), (a)(8), (a)(9), (a)(11), and (a)(13). These subsections incorporate by reference the following ASTM standards, respectively: D1644-59 Method A; D1475-60; D2369-81; D2879-83 (approved 1983) and D2879-86 (approved 1986); D86-82 (approved 1982); E260-73 (approved 1973), E168-67 (reapproved 1977), E169-63 (reapproved 1981), and E20 (approved 1985); D97-66; D1946-67; D2382-76; D2382-83; and D4457-85. 35 Ill. Adm. Code 215.105(a)(1)-(a)(9), (a)(11), (a)(13). The Board requested comment on whether these incorporations should be updated or revised. Board Prop. at 50. If so, the Board requested appropriate language and a copy of each publication as required by the IAPA. *Id.*

For each standard, IEPA commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 16-19; PC 11 at 4. IEPA provided the newer versions listed below. *Id.*

D1644-01(2023): Standard Test Methods for Nonvolatile Content of Varnishes
D1475-13 (2020) – Standard Test Method for Density of Liquid Coatings, Inks, and Related Products
D2369-24 – Standard Test Method for Volatile Content of Coatings
D2879-23 – Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope
D86-23a – Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure
E260-96 (2019) – Standard Practice for Packed Column Gas Chromatography

E168-16 (2022) – Standard Practices for General Techniques of Infrared Quantitative Analysis
E169-16 (2022) – Standard Practices for General Techniques of Ultraviolet-Visible Quantitative Analysis
D97-17b (2022): Standard Test Method for Pour Point of Petroleum Products
D1946-90 (2019) – Standard Practice for Analysis of Reformed Gas by Gas Chromatography
D4809-18 – Standard Test Method for Heat of Combustion of Hydrocarbon Fuels by Bomb Calorimeter (High-Precision Method)
D4457-02 (2014) – Standard Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph

IEPA stated that it will provide the Board with copies of these newer versions if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates these incorporations. For clarity and convenience, the Board includes these standards below in the list of updates it intends to adopt.

Subsection (a)(6). As noted above, this subsection incorporates by reference ASTM Standard E20. However, this standard has been withdrawn, and ASTM did not replace it. PC 10 at 18. IEPA stated that this reference can be deleted, as other standards are provided in Section 215.105(a)(6). *Id.*

After considering IEPA's comment and its own rules, the Board now proposes to strike this incorporation by reference.

Subsection (a)(10). Subsection (a)(10) incorporates by reference ASTM Standard D 2504-83. 35 Ill. Adm. Code 215.105(a)(10). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 52. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

This ASTM standard has been withdrawn, and ASTM did not replace it. PC 10 at 18. IEPA stated that this reference can be deleted, as other standards are provided in Section 215.438, which is the only Section that references this standard. *Id.*

After considering IEPA's comment and its own rules, the Board now proposes to strike this incorporation by reference.

Subsection (a)(12). Subsection (a)(12) incorporates by reference ASTM Standard D 4953-89. 35 Ill. Adm. Code 215.105(a)(12). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 52. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA could not locate ASTM Standard D 4953-89, although it obtained a subsequent version “ASTM standard D 4953-99a: Standard Test Method for Vapor Pressure of Gasoline and Gasoline-Oxygenate Blends (Dry Method)” and compared it to the most recent version ASTM D 4953-20. PC 11 at 6. IEPA reported that, based on this comparison, “it does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 11 at 6; *see also* PC 10 at 19. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. PC 10 at 19; *see also* PC 11 at 6.

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Organization of Subsection (a). Subsection (a) incorporates ASTM standards without providing their titles. 35 Ill. Adm. Code 215.105(a). The Board requested comment on whether it would clarify subsection (a) to include a title for these incorporations. Board Prop. at 50. If so, the Board requested those titles, particularly if the response to questions about the standards included an updated version. *Id.*

IEPA agreed with the Board’s suggestions to include and identify the ASTM standards with the current titles, which IEPA included in addressing updates in the previous subsections. PC 10 at 16. After considering IEPA’s comment and its own rules, the Board now clarifies the incorporations by reference in subsection (a) and includes their titles provided by IEPA.

Subsection (c)

Subsection (c) incorporates by reference “National Fire Codes, National Fire Protection Association, Battery March Park, Quincy, Massachusetts 02269 (1979).” 35 Ill. Adm. Code 215.105(c). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 52. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA commented that it does not object to the Board updating references to the most recent version of the “National Fire Codes, National Fire Protection Association . . . (2024).” PC 10 at 19. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.* at 19-20.

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (f)

Subsection (f), proposed to be re-designated as subsection (e), incorporates by reference the “Standards Industrial Classification Manual . . . 1972.” 35 Ill. Adm. Code 215.105(f). The

Board concluded above to update a reference to this manual in 35 Ill. Adm. Code 201.102(a), and it also updates the incorporation in this subsection.

Subsection (g)

Subsection (g), proposed to be re-designated as subsection (f), incorporates by reference “40 CFR 60 (1989).” 35 Ill. Adm. Code 215.105(g). Addressing the definition of “no detectable volatile organic material emissions” above, the Board’s 2024 proposal noted that the definition refers to “40 CFR 60.485(c) (incorporated by reference in 35 Ill. Adm. Code 215.105, 218.112 and 219.112).” Board Prop. at 46-47; 35 Ill. Adm. Code 211.4030. The Board also noted that Part 215 incorporates the 1989 version, and Parts 218 and 219 incorporate the 1991 version. Board Prop. at 47. The Board requested comment on whether these incorporations should be consistent with one another. *Id.* at 46-47.

IEPA did not object to the Board updating references to the most recent CFR, which would ensure consistency. PC 10 at 9. After considering IEPA’s comment and its own rules, the Board now updates this incorporation.

Subsection (i)

Subsection (i), proposed to be re-designated as subsection (g), incorporates by reference “‘The Vapor Pressure of Pure Substances’ (1973).” 35 Ill. Adm. Code 215.105(i). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 52. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA commented that a 1984 version is available at libraries but is not available for purchase. PC 10 at 20. IEPA is not able to obtain an updated version and does not recommend updating this incorporation. *Id.*

After considering IEPA’s comment and its own rules, the Board retains the current incorporation without revision.

Subsection (j)

Subsection (j), proposed to be re-designated as subsection (h), incorporates by reference “‘Perry’s Chemical Engineer’s Handbook’ (1984)” published by McGraw-Hill Book Company. 35 Ill. Adm. Code 215.105(j). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 52. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA recommended updating references to the most recent version of “Perry’s Chemical Engineer’s Handbook, 9th edition, published, McGraw-Hill Book (2018).” PC 10 at 20, 24 (Parts 218 and 219). IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (k)

Subsection (k), proposed to be re-designated as subsection (i), incorporates by reference the "CRC Handbook of Chemistry and Physics (1968-87)" published by Chemical Rubber Publishing Company. 35 Ill. Adm. Code 215.105(k). The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 53. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA recommended updating references to the most recent version of the "CRC Handbook of Chemistry and Physics – 104th edition, published in 2023." PC 10 at 20, 24 (Parts 218 and 219). IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Section 215.122: Loading Operations

IEPA commented that the abbreviation of liter in 946-liter threshold in subsection (b) appears as the number "1" instead of the letter "L." PC 11 at 12. The Board agrees and includes this correction in its first-notice proposal.

Part 215.Subpart E: Solvent Cleaning

Section 215.185: Compliance Plan. This section "required sources subject to the solvent cleaning and degreasing regulations to submit a compliance plan." TSD at 9, citing Emissions of Volatile Organic Material, R78-3, 78-4 (consol.) (July 12, 1979); 35 Ill. Adm. Code 215.185, citing 35 Ill. Adm. Code 215.Appendix C (Past Compliance Dates). Because the due date for submitting that plan passed in 1980, IEPA argued that this section is obsolete and ready for repeal. SR at 7; TSD at 9-10; Prop. 215 at 8. IEPA added that "[n]o federal considerations are implicated, as Section 215.185 is not part of Illinois' SIP." TSD at 10.

The Board's 2024 proposal included this repeal. Board Prop. at 580. The Board did not receive any comments and now proposes to repeal this section.

Part 215.Subpart F: Cleaning Operations

Section 215.202: Compliance Schedules. This section "required owners and operators of coating lines subject to [Section] 215.204(a) through (i) to develop compliance plans that contain a project completion schedule and periodic reporting requirements until the coating lines are in compliance with the VOM limits, unless the limits are met by the compliance date." TSD

at 10, citing Emissions of Volatile Organic Material, R78-3, 78-4 (consol.) (July 12, 1979); 35 Ill. Adm. Code 215.202, citing 35 Ill. Adm. Code 215.Appendix C (Past Compliance Dates). Because the latest date for compliance, even with a compliance plan, passed in 1982, IEPA argued that this section is obsolete and ready for repeal. SR at 7; TSD at 10.; Prop. 215 at 8.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 10. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 580-81. The Board did not receive any comments and now proposes to repeal this section.

Section 215.210: Alternative Compliance Schedules. This section “allowed sources with coating lines subject to Section 215.204(k)(2) for heavy off-highway vehicle products located in attainment counties for ozone, other than Macoupin County, to submit a compliance plan with a completion schedule and semi-annual progress reports.” TSD at 10, citing RACT II Rules, Chapter 2: Air Pollution, R 80-5 (Dec. 30, 1982). IEPA argued that this plan gave a source “more time to demonstrate compliance with the use of low solvent coating technology.” TSD at 10. Because the compliance date passed on December 31, 1986 (35 Ill. Adm. Code 215.210(b)(3)), IEPA argued that this section is obsolete and ready for repeal. SR at 7; TSD at 10; Prop. 215 at 8-9. IEPA added that “[n]o federal considerations are implicated, as Section 215.210 is not part of Illinois’ SIP.” TSD at 10.

The Board’s 2024 proposal included this repeal. Board Prop. at 588-89. The Board did not receive any comments and now proposes to repeal this section.

Section 215.211: Compliance Dates and Geographical Areas. IEPA proposed to strike subsection (a)(3), which sets a compliance date under Section 215.210 for the category of “extreme performance top coat – air dried.” 35 Ill. Adm. Code 215.211(a)(3). IEPA proposed to repeal Section 215.210 (TSD at 10; SR at 7) and thus proposed to repeal subsection (a)(3), which refers to it. Prop. 211 at 9.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 10. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 589-90. The Board did not receive any comments and now proposes to strike subsection (a)(3).

Section 215.212: Compliance Plan. This section requires sources with coating operations subject to compliance dates listed in 35 Ill. Adm. Code 215.211 to submit a compliance plan by a specified deadline. TSD at 11, citing RACT II Rules, Chapter 2: Air

Pollution, R80-5 (Dec. 30, 1982). Because the last of these deadlines passed in 1986, IEPA argued that this section is obsolete and ready for repeal. SR at 7; TSD at 11; Prop. 211 at 10.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 11. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 590-91. The Board did not receive any comments and now proposes to repeal this section.

Section 215.213: Special Requirements for Compliance Plan. This section lists “special requirements to be included within the compliance plan required for sources with coating operations subject to Section 215.204 through 215.209.” TSD at 11, citing Emissions of Volatile Organic Material, R78-3, 78-4 (consol.) (July 12, 1979). IEPA argued that, because deadlines to submit compliance plans have passed, this section is obsolete and ready for repeal. TSD at 11; SR at 7; Prop. 215 at 10-11.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 11. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 591. The Board did not receive any comments and now proposes to repeal this section.

Section 215.215: DMI Emissions Limitations. In 1992, the Board adopted site-specific VOM emission limitations for DMI, Inc. TSD at 11, citing Petition for DMI, Inc. for Site-Specific Air Regulation: 35 Ill. Adm. Code 215.215, R91-9 (Feb. 6, 1992). IEPA argued that, because this section expired no later than January 1, 2000 (35 Ill. Adm. Code 215.215(e)), it is obsolete and ready for repeal. TSD at 11; SR at 7; Prop. 215 at 11.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 12. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 591-92. The Board did not receive any comments and now proposes to repeal this section.

Part 215.Subpart I: Adjusted RACT Emissions Limitations

Subpart I “allows owners and operators of emission sources subject to Part 215 Subparts

PP [Miscellaneous Fabricated Product Manufacturing Processes], QQ [Miscellaneous Formulation Manufacturing Processes], or RR [Miscellaneous Organic Chemical Manufacturing Processes] to petition the Board for an Adjusted Reasonably Available Control Technology (RACT) Emissions Limitation, in lieu of compliance with certain other specified limitations.” TSD at 12, citing Organic Material Emission Standards and Limitations: Organic Emissions Generic Rule, R86-18 (Apr. 7, 1988); SR at 7.

IEPA argued that Subpart I is rarely used by sources and that the last Subpart I proceeding took place over 20 years ago. SR at 7; TSD at 12. IEPA further argued that, without Subpart I, a source may still request adjusted standards from Subparts PP, QQ, and RR under general criteria in the Act and Board rules. *Id.*, citing 415 ILCS 5/28 (2020); 35 Ill. Adm. Code 104. IEPA concluded that this Subpart is unnecessary and should be repealed. SR at 7; TSD at 12; Prop. 215 at 12-14. IEPA added that “[n]o federal considerations are implicated by repeal, as Subpart I is not part of Illinois’ SIP.” TSD at 12.

The Board’s 2024 proposal included this repeal. Board Prop. at 593-97. The Board did not receive any comments and now proposes to repeal this subpart.

Part 215.Subpart N: Vegetable Oil Processing

Subpart N applies to hexane extraction soybean crushing and hexane extraction corn oil processing sources “that would emit VOM in excess of 100 tons per year in the absence of pollution control equipment or enforceable operating permit limitations.” TSD at 12, citing Volatile Organic Material Emissions from Stationary Sources: RACT III, R82-14. IEPA stated that “[c]ommercially available hexane solvent consists of 64-100% n-hexane (VOM and HAP), and the remainder is either hexane isomers (VOM) or other isomers (VOM or OM). The solvents used to thin out the hexane to reduce HAP usage and cost are heavier solvents (*e.g.*, distillate oils), hence the increases in VOM emissions when reducing hexane.” TSD at 12.

IEPA proposed to repeal Subpart N because federal regulations are more stringent. In 2001, USEPA published the NESHAP for Vegetable Oil Production, which addresses controlling HAP emissions from new and existing processes. SR at 7; TSD at 12, citing 40 CFR 63, Subpart GGGG. The rules apply only to extracting oil from corn, soybeans, cottonseed, flax, peanuts, rapeseed, safflower, and sunflower. TSD at 12. An owner/operator of a vegetable oil production process is subject to this rule if it is a major source of HAP emissions or is collocated with other sources that are individually or collectively a major source of HAP emissions. *Id.* Under this rule, a major source of HAP emissions is defined as a source that emits or has the potential to emit at least 10 tons per year of any single HAP or at least 25 tons per year of any combination of HAPs. *Id.*

For corn oil processing, the state VOM emission limit is 2.2 gallons of VOM per ton of raw corn germ processed, and the comparable NESHAP allowable HAP loss factor is 0.3 to 0.7 gallons per ton of corn seed processed. TSD at 13. Converted, this HAP loss factor ranges between 0.70 gallons and 0.19 gallons of solvent loss per ton of corn germ processed, depending on the percentage of n-hexane contained in the extraction solvent. *Id.* IEPA noted that this “is

more than ten times as stringent as Section 215 Subpart N when using 100 percent n-hexane.” *Id.*

For conventional soybean oil processing, the state VOM emission limit is 0.0026 pound of VOM per pound of conventional soybean crush, and the comparable federal allowable HAP loss factor is 0.2 gallons per ton of soybean seed processed. TSD at 13. Converted, this HAP loss factor ranges between 0.0006 lb and 0.0004 lb solvent loss per lb of conventional soybean seed processed, depending on the percentage of n-hexane contained in the extraction solvent. *Id.* IEPA noted that this “is more than four times as stringent as Section 215 Subpart N at 100 percent n-hexane.” *Id.*

For specialty soybean oil processing, the state VOM emission limit is 0.0052 pound of VOM per pound of specialty soybean crush, and the comparable federal allowable HAP loss factor is 1.5 to 1.7 gallons per ton of specialty soybeans processed. TSD at 13. Converted, this HAP loss factor ranges between 0.0051 lb and 0.0029 lb of VOM per lb of specialty soybean seed processed depending on the percentage of n-hexane contained in the extraction solvent. *Id.*

IEPA asserted that the NESHAP Subpart GGGG has an applicability threshold and allowable HAP solvent loss factor more stringent than Part 215 Subpart N. TSD at 13. IEPA added that the NESHAP includes reporting and notification requirements and deviation reporting, which Subpart N does not include. *Id.* “All existing vegetable oil processing sources in the state are required to comply with this NESHAP,” while “[o]nly sources in attainment areas for the ozone NAAQS are required to comply with Part 215 Subpart N.” *Id.* IEPA stated that all Illinois sources that are currently covered under Part 215 Subpart N are also subject to the NESHAP. TSD at 13; SR at 7. IEPA concluded that, because the NESHAP more effectively controls VOM emissions including hexane emissions, Subpart N is no longer necessary and is ready for repeal. SR at 7; TSD at 12; Prop. 215 at 15-18. IEPA added that no federal considerations are implicated by repeal, as Part 215 Subpart N is not part of the Illinois SIP. TSD at 13.

The Board’s 2024 proposal included this repeal. Board Prop. at 598-600. The Board did not receive any comments and now proposes to repeal this subpart.

Part 215.Subpart P: Printing and Publishing

Section 215.406: Alternative Compliance Plan. This section “provided additional time for flexographic, rotogravure, and lithographic printing sources to come into compliance with the associated printing regulations.” TSD at 13, citing RACT II Rules, Chapter 2: Air Pollution, R80-5 (Dec. 30, 1982). The rule required submitting plans by 1983 to achieve compliance by 1987. TSD at 13-14; 35 Ill. Adm. Code 215.406(a). Because these dates have passed, IEPA argued that the rule is obsolete and ready for repeal. SR at 7; TSD at 14; Prop. 215 at 18. IEPA added that “[n]o federal considerations are implicated, as Section 215.406 is not part of Illinois’ SIP.” TSD at 14.

The Board’s 2024 proposal included this repeal. Board Prop. at 602-03. The Board did not receive any comments and now proposes to repeal this section.

Section 215.407: Compliance Plan. This section required sources with flexographic and rotogravure printing operations to submit a compliance plan by specified deadlines, the last of which was in 1986. TSD at 14, citing Volatile Organic Material Emissions from Stationary Sources: RACT III, R82-14. Because these dates have passed, IEPA argued that this section is obsolete and ripe for repeal. SR at 7; TSD at 14; Prop. 215 at 18-19. IEPA added that “[n]o federal considerations are implicated, as Section 215.407 is not part of Illinois’ SIP.” TSD at 14.

The Board’s 2024 proposal included this repeal. Board Prop. at 603-04. The Board did not receive any comments and now proposes to repeal this section.

Part 215.Subpart Q: Leaks from Synthetic Organic Chemical and Polymer Manufacturing Equipment

Section 215.420: Applicability. IEPA proposed to amend this section by striking a reference to Section 215.429, which it proposed to repeal. SR at 7; TSD at 14; Prop. 215 at 19.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 14. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 605. The Board did not receive any comments and now proposes to strike the reference.

Section 215.429: Compliance Plan. This section “required sources with a synthetic organic chemical or polymer manufacturing plant to submit a compliance plan by December 31, 1987.” SR at 14, citing Volatile Organic Material Emissions from Stationary Sources: RACT III, R82-14. Because that date has passed, IEPA argued that the section is obsolete and ripe for repeal. SR at 7; TSD at 14; Prop. 215 at 19.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 14. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 609. The Board did not receive any comments and now proposes to repeal this section.

Section 215.438: Standards for Control Devices

Subsection (c)(4) refers to determining the heat of combustion using “ASTM D 2382-83, incorporated by reference in Section 215.105, if published values are not available or cannot be calculated.” 35 Ill. Adm. Code 215.438(c)(4). Addressing that incorporation above, IEPA commented that “[t]his ASTM standard has been withdrawn, and no replacement was made by

ASTM. This reference can be deleted as other standards are provided in Section 215.438, which is the only Section that references this standard.” PC 10 at 18.

After considering IEPA’s comment and its own rules, the Board now proposes to strike this reference.

Part 215.Subpart S: Rubber and Miscellaneous Plastic Products

Section 215.466: Compliance Plan. This section “required pneumatic rubber tire manufacturers that were subject to the requirements in Sections 215.461 through 215.464 to submit a compliance plan” by a specified deadline, the last of which passed in 1986. TSD at 14-15, citing RACT II Rules, Chapter 2: Air Pollution, R80-5 (Dec. 30, 1982). Because these dates have passed, IEPA argued that this section is obsolete and ready for repeal. SR at 7; TSD at 15; Prop. 215 at 20.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 14. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 625. The Board did not receive any comments and now proposes to repeal this section.

Part 215.Subpart U: Coke Manufacture and By-Product Recovery

Section 215.517: Compliance Plan. This section “required sources with coke manufacture and by-product recovery processes to submit a compliance plan and project completion schedule by August 31, 1986, and a compliance plan for the leak detection and inspection reporting requirements by October 31, 1985.” TSD at 15, citing Volatile Organic Material Emissions from Stationary Sources: RACT III, R82-14. Because these dates have passed, IEPA argued that the section is obsolete and ready for repeal. SR at 7; TSD at 15; Prop. 215 at 20. IEPA added that “[n]o federal considerations are implicated, as Section 215.517 is not part of Illinois’ SIP.” TSD at 15.

The Board’s 2024 proposal included this repeal. Board Prop. at 636. The Board did not receive any comments and now proposes to repeal this section.

Part 215.Subpart Y: Gasoline Distribution

Section 215.581(a)(4) refers to materials, including “the guidelines of the National Fire Prevention Association.” Board Prop. at 53. The Board requested comment on whether this material is incorporated by reference in Section 215.105, and whether subsection (a)(4) should refer to it. *Id.* If not incorporated, the Board requested comment on whether Section 215.581 should provide a more specific reference to materials, and whether they should be incorporated by reference in Section 215.105. *Id.*

Addressing Section 215.105(c) above, IEPA commented that the reference should be updated in name and to a more recent version. PC 10 at 18-19. IEPA commented that this subsection needs to be amended to reflect the update and should refer to Section 215.105(c). PC 10 at 20.

After considering IEPA's comment and its own rules, the Board now updates this reference and refers to its incorporation.

Part 215.Subpart Z: Dry Cleaners

Section 215.610: Testing and Monitoring

Subsection (b). This subsection refers to determining compliance “by methods described in EPA-450/3-82-009 (1982)” and does not include any later amendments or editions. 35 Ill. Adm. Code 215.610(b); Board Prop. at 53. The Board requested comment on whether this reference should be updated or otherwise revised. Board Prop. at 53. If so, the Board requested language appropriate and a copy of the publication as required by the IAPA. *Id.*

IEPA did not recommend updating the reference because the methods described have not been updated. PC 10 at 21. IEPA agreed with the Board's suggestion to incorporate the document by reference in Section 215.105. *Id.* IEPA added that it will provide the Board with copies of the document if the Board intends to add this incorporation, and that it does not currently have a copy of the document. *Id.*

After considering IEPA's comment and its own rules, the Board now clarifies this reference with its title “Control of Volatile Organic Compound Emissions from Large Petroleum Dry Cleaners” and incorporates it by reference in Section 215.105(d). For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (c). This subsection refers to determining compliance “using 40 CFR 60 Appendix A, Method 25 (1984)” and does not include any later amendments or editions. 35 Ill. Adm. Code 215.610(c); Board Prop. at 53. The Board requested comment on whether this reference should be updated or otherwise revised. Board Prop. at 53. The Board also requested comment on whether it should be incorporated by reference in Section 215.105, noting that it now incorporates “40 CFR 60 (1989).” *Id.* If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating the references to the most recent CFR, noting that Method 25 is currently in 40 CFR 60.Appendix A-7. PC 10 at 21. Because Part 215 now incorporates 40 CFR 60, specifically incorporating Appendix A-7 should not be necessary. PC 10 at 21; 35 Ill. Adm. Code 215.105(g).

After considering IEPA's comment and its own rules, the Board now updates this incorporation.

Section 215.613: Compliance Plan. This section “required sources with petroleum dry cleaning operations to submit a compliance plan by May 31, 1987.” TSD at 15, citing Volatile Organic Material Emissions from Stationary Sources: RACT III, R82-14. Because this date has passed, IEPA argued that the section is obsolete and ready for repeal. SR at 7; TSD at 15; Prop. 215 at 21.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 15. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 651. The Board did not receive any comments and now proposes to repeal this section.

Part 215.Subpart BB: Polystyrene Plants

Section 215.881: Compliance Plan. This section “required sources with polystyrene manufacturing operations to submit a compliance plan and project completion schedule by December 1, 1987.” TSD at 15, citing Amendments to 35 Ill. Adm. Code 211 and 215, Organic Material Emissions Standards and Limitations for Polystyrene Plants, R86-12. Because that date has passed, IEPA argued that this section is obsolete and ready for repeal. SR at 7; TSD at 15; Prop. 215 at 21.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 16. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this repeal. Board Prop. at 656. The Board did not receive any comments and now proposes to repeal this section.

Section 215.883: Special Requirements for Compliance Plan. This section “listed specific requirements to be included in the compliance plan for polystyrene manufacturing plants.” TSD at 16, citing Amendments to 35 Ill. Adm. Code 211 and 215, Organic Material Emissions Standards and Limitations for Polystyrene Plants, R86-12. Because the deadline in Section 215.881 to submit that plan passed in 1987, IEPA argued that this section is obsolete and ready for repeal. SR at 7; TSD at 16; Prop. 215 at 21.

IEPA argued that adopting this amendment into the SIP is consistent with Sections 110(l) and 193 of the CAA. TSD at 16. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board's 2024 proposal included this repeal. Board Prop. at 656. The Board did not receive any comments and now proposes to repeal this section.

Part 216: Carbon Monoxide Emissions

Part 216 contains standards and limitations for carbon monoxide (CO) emissions from stationary sources. The Part is divided into subparts based upon the type of source which emits CO. SR at 7. IEPA proposed one amendment to Part 216. SR at 7-8; TSD at 16. JCAR did not suggest changes to Part 216.

In addition, the Board throughout Part 216 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, spelling, organization, and concision. The Board also proposed amendments such as changing passive to active voice, updating statutory references, simplifying cross references and incorporations by reference, making the forms of temperatures more consistent with one another, and using "must" to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 216.382: Exception, General Motor's Ferrous Foundry in Vermilion County

This section establishes a site-specific CO emission limit for General Motors' foundries in Vermilion County. SR at 8; TSD at 16, citing General Motors Corporation Site-Specific Exception to 35 Ill. Adm. Code 216.381 for Ferrous Foundries in Vermilion County, R90-23 (Oct. 1, 1992). The plant ceased operation and withdrew its operating permit on July 2, 1996. SR at 8; TSD at 16. IEPA argued that this section is obsolete and ready for repeal. SR at 8; TSD at 16; Prop. 216 at 2.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 16. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. "This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA." *Id.*

The Board's 2024 proposal included this repeal. Board Prop. at 693. The Board did not receive any comments and now proposes to repeal this section.

Part 216.Appendix C: Compliance Dates

This appendix includes two dates, the most recent of which is December 31, 1973. Board

Prop. at 53. The Board requested comment on whether this entire appendix or specific sections of it should be struck as obsolete or otherwise revised. *Id.*

IEPA agreed that Part 216.Appendix C can be repealed in its entirety. PC 10 at 21. IEPA added that both Appendices A and B refer to Appendix C. *Id.* The Board had already proposed to repeal Appendices A and B, which would eliminate cross-references to a repealed Appendix C. *See* Board Prop. at 693.

After considering IEPA’s comment and its own rules, the Board now proposes to repeal Appendices A, B, and C.

Part 217: Nitrogen Oxides Emissions

Part 217 “sets standards and limitations for emission of oxides of nitrogen from stationary sources.” 35 Ill. Adm. Code 217.100(a). The Part is divided into various subparts. IEPA proposed to repeal two subparts and an appendix to Part 217. SR at 8-9; TSD at 17.

In addition, the Board throughout Part 217 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, spelling, alphabetizing, organization, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

JCAR suggested a small number of additional changes. PC 5. The Board considered these suggested changes consistent with its own and largely included them in its 2024 proposal without discussion.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 217.104: Incorporations by Reference

Subsections (f) and (k)

Subsections (f) and (k), proposed for re-designation as subsections (c) and (e), incorporate by reference provisions of USEPA’s Compilation of Air Pollutant Emission Factors. 35 Ill. Adm. Code 217.104(f), (k). The Board requested comment on whether these references should be updated, revised, or merged. Board Prop. at 54. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of USEPA’s compilation: “AP-42, COMPILATION OF AIR POLLUTANT EMISSION FACTORS FOR STATIONARY SOURCES – Jan 24.” PC 10 at 22. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update the incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (i)

Subsection (i), proposed for re-designation as subsection (d), incorporates by reference “ASTM D6522-00, Standard Test Method for Determination of Nitrogen Oxides, Carbon Monoxide, and Oxygen Concentrations in Emissions from Natural Gas-Fired Reciprocating Engines, Combustion Turbines, Boilers, and Process Heaters Using Portable Analyzers (2000).” 35 Ill. Adm. Code 217.104(i). The Board requested comment on whether this reference should be updated or revised. Board Prop. at 53. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: “ASTM D6522-20 – Standard Test Method for Determination of Nitrogen Oxides, Carbon Monoxide, and Oxygen Concentrations in Emissions from Natural Gas Fired Reciprocating Engines, Combustion Turbines, Boilers, and Process Heaters Using Portable Analyzers.” PC 10 at 22. IEPA added that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

Since the Board issued its proposal for public comment, it updated this incorporation in Amendments to 35 Ill. Adm. Code 217, Nitrogen Oxide Emissions, R25-17 (Apr. 17, 2025). *See also* 49 Ill. Reg. 6375-76 (May 9, 2025). Thus, it is no longer necessary for the Board to update the incorporation in this docket, so it does not include this standard below in the list of updates it intends to adopt.

Section 217.156: Recordkeeping and Reporting

Subsection (j)(2)

Subsection (j)(2) refers to a report complying with “the requirements of 40 CFR 60.7(c) and (d) and 60.13, or 40 CFR 75. . . .” 35 Ill. Adm. Code 217.156(j)(2). The Board requested comment on whether the subsection should refer to a specific version of those requirements by year or other designation. Board Prop. at 54. If so, the Board requested comment on whether it should be incorporated by reference in Section 217.104 if it is not already incorporated. *Id.*

IEPA did not object to the Board updating references to the most recent CFR. PC 10 at 22. Both 40 CFR 60 and 75 are already included in Section 217.104 incorporations by reference, but Section 217.156 could reference the incorporation as well. *Id.*

Since the Board issued its proposal for public comment, it renumbered subsection (j)(2) to subsection (k)(2) as part of amendments to Part 217. Amendments to 35 Ill. Adm. Code 217, Nitrogen Oxide Emissions, R25-17 (Apr. 17, 2025). After considering IEPA's comment and its own rules, the Board now updates these references under the renumbered subsection (k)(2) and refers to their incorporation.

Subsection (k)

Subsection (k) refers to compliance with requirements, including "40 CFR 96." 35 Ill. Adm. Code 217.156(k). The Board requested comment on whether the subsection should refer to a specific version of those requirements by year or other designation. Board Prop. at 54. If so, the Board requested comment on whether it should be incorporated by reference in Section 217.104 if it is not already incorporated. *Id.*

IEPA did not object to the Board updating references to the most recent CFR. PC 10 at 22.

Since the Board issued its proposal for public comment, it renumbered subsection (k) to subsection (l) as part of amendments to Part 217. Amendments to 35 Ill. Adm. Code 217, Nitrogen Oxide Emissions, R25-17 (Apr. 17, 2025). After considering IEPA's comment and its own rules, the Board now updates this reference under the renumbered subsection (l).

Section 217.402: Control Requirements

Subsection (b) in italicized language cites language from Section 9.9(f) of the Act. 35 Ill. Adm. Code 217.402(b). However, Public Act 92-279 (effective August 7, 2001) struck Section 9.9(f) and replaced it with language providing that, "[n]otwithstanding any provisions in subparts T, U, and W of Section 217 of Title 35 of the Illinois Administrative Code to the contrary, compliance with the regulations promulgated by the Board pursuant to subsections (b) and (d) of this Section is required by May 31, 2004." Board Prop. at 54. The Board requested comment on whether subsection (b) should be updated or otherwise revised. *Id.* If so, the Board requested appropriate language. *Id.*

IEPA commented that the Board could update Section 217.402(b) to be consistent with the current language of Section 9.9(f) of the Act. PC 10 at 23. IEPA added that it "is unaware of any practical impact of this update, considering that the date has already passed but also considering that the compliance deadline set forth in Section 217.402(a) is already consistent with the compliance date set forth in the updated Section 9.9(f)." *Id.*

After considering IEPA's comment and its own rules, the Board now updates this section with the current language of the Act so that the statute and rules are consistent with each other.

Section 217.454: Applicability

Subsections (a)(2)

Subsection (a)(2)(D) refers to the applicability of Subpart W, which IEPA proposed to repeal. 35 Ill. Adm. Code 217.454(a)(2), (d). The Board requested comment on whether this subsection should be updated or revised and, if so, requested appropriate language. Board Prop. at 54.

IEPA did not object to the Board “striking Section 217.454(a)(2)(D) in its entirety as it regards Subpart W, which the Agency is proposing to repeal.” PC 10 at 23. After considering IEPA’s comment and its own rules, the Board now proposes to strike this subsection, as well as a similar reference in subsection (a)(2)(B).

Subsection (d)

Subsection (d) refers to the applicability of Subpart W, which IEPA proposed to repeal. 35 Ill. Adm. Code 217.454(d). The Board requested comment on whether this subsection should be updated or revised, and if so, requested appropriate language. Board Prop. at 54.

IEPA did not see the utility of updating the reference in Section 217.454(d) because it has been sunset and does not currently apply. PC 10 at 23; 35 Ill. Adm. Code 217.451 (Sunset Provisions).

After considering IEPA’s comment and its own rules, the Board recognizes that much of Subpart U and all of Subpart W were sunset in 2009. 35 Ill. Adm. Code 217.451, 217.751. Because Section 217.454(d) was included in the sunset, the Board now retains the substance of it without revision.

Subsection (e)

Subsection (e) in italicized language cites language from Section 9.9(f) of the Act. 35 Ill. Adm. Code 217.454(e). However, Public Act 92-279 (effective August 7, 2001) struck Section 9.9(f) and replaced it with language providing that “[n]otwithstanding any provisions in subparts T, U, and W of Section 217 of Title 35 of the Illinois Administrative Code to the contrary, compliance with the regulations promulgated by the Board pursuant to subsections (b) and (d) of this Section is required by May 31, 2004.” Board Prop. at 54. The Board requested comment on whether subsection (e) should be updated or revised and if so, requested appropriate language. *Id.*

IEPA did not see the utility of updating the reference in Section 217.454(e) because it has been sunset and does not currently apply. PC 10 at 23; 35 Ill. Adm. Code 217.451 (Sunset Provisions).

After considering IEPA’s comment and its own rules, that Board recognizes that much of Subpart U and all of Subpart W were sunset in 2009. 35 Ill. Adm. Code 217.451, 217.751.

Because Section 217.454(e) was included in the sunset, the Board now retains the substance of it without revision.

Section 217.462: Methodology for Obtaining NO_x Allocations

Subsection (b) refers to budget units subject to Subpart W, which IEPA proposed to repeal. 35 Ill. Adm. Code 217.462(b). The Board requested comment on whether this subsection should be updated or revised and if so, requested appropriate language. Board Prop. at 54.

IEPA did not see the utility of updating the reference in Section 217.462(b) because it has been sunset and does not currently apply. PC 10 at 23; 35 Ill. Adm. Code 217.451 (Sunset Provisions).

After considering IEPA's comment and its own rules, that Board recognizes that much of Subpart U and all of Subpart W were sunset in 2009. 35 Ill. Adm. Code 217.451, 217.751. Because Section 217.462 was included in the sunset, the Board now retains the substance of it without revision.

Section 217.472: Low-Emitter Requirements

Subsection (d) refers to "allowances issued for voluntary NO_x reductions meeting the requirements of Subpart X" and "allowances for NO_x reductions obtained in accordance with Subpart X," which IEPA proposed to repeal. 35 Ill. Adm. Code 217.472(d). The Board requested comment on whether this subsection should be updated or revised and, if so, requested appropriate language. Board Prop. at 54.

IEPA did not see the utility of updating the reference in Section 217.472(d) because it has been sunset and does not currently apply. PC 10 at 23; 35 Ill. Adm. Code 217.451 (Sunset Provisions).

After considering IEPA's comment and its own rules, that Board recognizes that much of Subpart U was sunset in 2009. 35 Ill. Adm. Code 217.451. Because Section 217.472 was included in the sunset, the Board now retains the substance of it without revision.

Section 217.474: Opt-In Units

Subsection (a)(1) refers to a budget EGU under Subpart W, which IEPA proposed to repeal. 35 Ill. Adm. Code 217.474(a)(1). The Board requested comment on whether this subsection should be updated or revised and, if so, requested appropriate language. Board Prop. at 55.

IEPA did not see the utility of updating the reference in Section 217.474(a)(1) because it has been sunset and is not currently applicable. PC 10 at 23; 35 Ill. Adm. Code 217.451 (Sunset Provisions).

After considering IEPA's comment and its own rules, that Board recognizes that much of Subpart U was sunset in 2009. 35 Ill. Adm. Code 217.451. Because Section 217.474 was included in the sunset, the Board now retains the substance of it without revision.

Part 217.Appendix C: Compliance Dates

Appendix C includes deadlines, and the most recent passed in 1975. 35 Ill. Adm. Code 217.Appendix C. The Board requested comment on whether this entire appendix or specific sections of it should be struck as obsolete or otherwise revised. Board Prop. at 55.

IEPA agreed that Part 217.Appendix C can be repealed in its entirety. PC 10 at 24. IEPA noted, however, that Appendices A and B refer to Appendix C. *Id.* The Board had already proposed to repeal Appendices A and B, which would eliminate cross-references to a repealed Appendix C. Board Prop. at 834-35.

After considering IEPA's comment and its own rules, the Board now proposes to repeal Appendices A, B, and C.

Part 217.Appendix D: Non-Electrical Generating Units

Appendix D has not been amended since it was adopted in 2000. 35 Ill. Adm. Code 217.Appendix D. The Board requested comment on whether any of the units should be struck as obsolete or otherwise revised. Board Prop. at 55.

IEPA commented that the following sources and associated units can be removed from Appendix D: "GREAT LAKES NAVAL STATION, INDIAN REFINING LIMITED PARTNERSHIP, JEFFERSON SMURFIT CORPORATION." PC 10 at 24.

After considering IEPA's comment and its own rules, the Board now proposes to strike these sources and units from Appendix D.

Part 217.Appendix E: Large Non-Electrical Generating Units

Appendix E has not been amended since it was adopted in 2001. 35 Ill. Adm. Code 217.Appendix E. The Board requested comment on whether any of the units should be struck as obsolete or otherwise revised. Board Prop. at 55.

IEPA did not recommend any changes to Appendix E because it identifies sources that continue to have monitoring and recordkeeping requirements. PC 10 at 24. After considering IEPA's comment, the Board retains the substance of Appendix E without revision.

Part 217.Appendix G: Existing Reciprocal Internal Combustion Engines Affected by the NO_x SIP Call

Appendix G has not been amended since it was adopted in 2007. 35 Ill. Adm. Code 217.Appendix G. The Board requested comment on whether any of the part of it should be

struck as obsolete or otherwise revised. Board Prop. at 55.

IEPA did not recommend any amendments because all sources included in Appendix G are still active. PC 10 at 24. After considering IEPA's comment, the Board retains the substance of Appendix G without revision.

Subpart W: NO_x Trading Program for Electrical Generating Units
Appendix F: Allowances for Electrical Generating Units

IEPA proposed to repeal Subpart W and Appendix F. These regulations “were adopted to assist the State in meeting the requirements under 40 CFR 96 [NO_x Budget Trading Program and CAIR NO_x and SO₂ Trading Programs for State Implementation Programs] as authorized under Section 9.9 of the Act.” TSD at 17.

The Board adopted Subpart W “as the State implementation regulations for the federal NO_x SIP Call trading program,” specifically to implement NO_x trading for electrical generating units in Illinois. TSD at 17; *see also* SR at 9, citing Proposed New 35 Ill. Adm. Code 217. Subpart W, The NO_x Trading Program for Electrical Generating Units, and Amendments to 35 Ill. Adm. Code 211 and 217, R01-9 (Dec. 21, 2000). Appendix F listed initial NO_x emission allowances for electrical generating units. TSD at 17. However, USEPA stopped administering the NO_x SIP Call trading program in Illinois as of 2009 with its implementation of the Clean Air Interstate Rule (CAIR). SR at 9; TSD at 17. Subpart W was sunset in November 2009, around the time CAIR was being implemented. SR at 9; TSD at 17; 35 Ill. Adm. Code 217.751 (Sunset Provisions); Nitrogen Oxide (NO_x) Trading Program Sunset Provisions for Electric Generating Units (EGUs): New 35 Ill. Adm. Code 217.751, R09-20 (Oct. 15, 2009). Based on these factors, IEPA argued that Subpart W and Appendix F can be repealed. SR at 9; SR at 17; Prop. 217 at 5-39, 54-60.

IEPA argued that adopting this repeal of Subpart W into the SIP is consistent with Section 110(l) of the CAA. TSD at 17. It asserted that the proposed repeal is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA since the NO_x SIP Call trading program was replaced by CAIR, which was more stringent.” *Id.* IEPA added that repealing Appendix F does not implicate federal considerations because it is not part of the Illinois SIP. TSD at 17.

The Board's 2024 proposal included these repeals. Board Prop. at 788-820, 840-45. The Board did not receive any comments and now proposes to repeal Subpart W and Appendix F.

Subpart X: Voluntary NO_x Emissions Reduction Program

After adopting Subpart W, the Board adopted Subpart X “to allow Illinois sources to voluntarily reduce NO_x emissions from any emission unit not affected by the NO_x SIP Call and which had not opted into the NO_x trading program.” TSD at 17. Subpart X implemented Section 9.9(d)(3) of the Act “by providing a method by which additional NO_x allowances may be generated for use by emission units subject to the requirements of the NO_x SIP Call.” SR at 9.

Since USEPA no longer administers the NO_x SIP Call, and Subpart W has been sunset, IEPA argued that Subpart X is obsolete and ready for repeal. SR at 9; TSD at 17; Prop. 217 at 39-54.

IEPA added that repealing Subpart X does not implicate federal considerations because it is not part of the Illinois SIP. TSD at 17. Subpart X was never approved by USEPA or implemented by the Illinois EPA. SR at 9.

The Board's 2024 proposal included this repeal. Board Prop. at 820-34. The Board did not receive any comments and now proposes to repeal Subpart X.

Part 218: Organic Material Emission Standards and Limitations for the Chicago Area
Part 219: Organic Material Emission Standards and Limitations for the Metro East Area

Parts 218 and 219 contain standards and limitations for emissions of organic material and VOM from stationary sources located in the Chicago and Metro East areas, respectively. These are divided into subparts based on the different source categories that may emit organic material. SR at 9, 11.

IEPA proposed numerous amendments to Parts 218 and 219. SR at 6; TSD at 8-9.

In addition, the Board throughout Parts 218 and 219 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, spelling, organization, and concision. The Board also proposed amendments such as avoiding unnecessary nominalizations, simplifying cross references, making the forms of temperatures more consistent with one another, and using "must" to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

JCAR suggested about 20 additional changes to Part 218. PC 9. The Board considered these suggested changes consistent with its own and largely included them in its 2024 proposal without discussion. JCAR did not suggest changes to Part 219, but the Board proposed in Part 219 some of the changes JCAR suggested in Part 218.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 218.109: Vapor Pressure of Volatile Organic Liquids

Section 218.110: Vapor Pressure of Organic Material or Solvent

Section 218.111: Vapor Pressure of Volatile Organic Material

Section 219.109: Vapor Pressure of Volatile Organic Liquids

Section 219.110: Vapor Pressure of Volatile Organic Material or Solvent

Section 219.111: Vapor Pressure of Volatile Organic Material

Subsection (a) of these six sections refers to “four publications from which vapor pressure may be obtained.” 35 Ill. Adm. Code 218.109(a), 218.110(a), 218.111(a), 219.109(a), 219.110(a), 219.111(a). The Board requested comment on whether any of these references should be updated or struck and, if so, requested appropriate language. Board Prop. at 55. The Board also requested comment on whether any of these four publications should be incorporated by reference in Section 218.112 or 219.112. *Id.* If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA recommended updating references to the most recent versions of “Perry’s Chemical Engineer’s Handbook, 9th edition, published, McGraw-Hill Book (2018); CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company (2024); [and] Lange’s Handbook of Chemistry, John A. Dean, editor, McGraw Hill Book Company (1998).” PC 10 at 24; *see also* PC 10 at 20 (Part 215).

IEPA did not believe that these documents must be added to the incorporations by reference but did not object. PC 10 at 24. IEPA added that it will provide the Board with copies of the newer version if the Board intends to add these as incorporations by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates these references. The Board also incorporates these materials by reference in 35 Ill. Adm. Code 218.112 and 219.112. For clarity and convenience, the Board includes these materials below in the list of updates it intends to adopt.

For the fourth publication, “The Vapor Pressure of Pure Substances” (1973), IEPA did not recommend updating this incorporation because it is not able to obtain an updated version. *Id.* A 1984 version is available at libraries but is not available for purchase. *Id.* After considering IEPA’s comment and its own rules, the Board retains the reference to “The Vapor Pressure of Pure Substances (1973)” without revision.

Subsection (a) also refers to determining vapor pressure by ASTM Method D2879-86, which is incorporated by reference at 35 Ill. Adm. Code 218.112(a)(1) and 219.112(a)(1). 35 Ill. Adm. Code 218.109(a), 218.110(a), 218.111(a), 219.109(a), 219.110(a), 219.111(a). The Board discusses this method below.

Section 218.112: Incorporations by Reference
Section 219.112: Incorporations by Reference

Subsection (a): American Society for Testing and Materials

Subsection (a)(1). Subsection (a)(1) incorporates by reference ASTM standard D2879-86. 35 Ill. Adm. Code 218.112(a)(1), 219.112(a)(1). The definitions of “heavy liquid” and “maximum true vapor pressure” refer to this incorporation. 35 Ill. Adm. Code 211.2870, 211.3695. Also, this method is cited in 35 Ill. Adm. Code 218.109(a), 218.110(a), 218.111(a), 219.109(a), 219.110(a), and 219.111(a). The Board requested comment on whether it should be updated or revised. Board Prop. at 55. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D2879-18 – Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope. PC 10 at 25. IEPA further commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation and the references to it in the definitions and other provisions noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

However, the Board notes that for Section 215.104(a)(4) above, IEPA did not object to updating the incorporation of ASTM D2879 to the most recent version, ASTM D2879-23. PC 10 at 17. Below, the Board specifically requests comment on whether subsection (a)(1) and these related citations should also refer to ASTM D2879-23.

Subsection (a)(2). Subsection (a)(2) incorporates by reference ASTM standard D323-08. 35 Ill. Adm. Code 218.112(a)(2), 219.112(a)(2). The definition of “heavy liquid” refers to this incorporation. 35 Ill. Adm. Code 211.2870. The Board requested comment on whether it should be updated or revised. Board Prop. at 55. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D323-20a – Standard Test Method for Vapor Pressure of Petroleum Products (Reid Method). PC 10 at 25. IEPA further commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation and the reference to it in the definition noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (a)(3). Subsection (a)(3) incorporates by reference ASTM standard D86-82. 35 Ill. Adm. Code 218.112(a)(3), 219.112(a)(3). The definition of "heavy liquid" refers to this incorporation. 35 Ill. Adm. Code 211.2870. The Board requested comment on whether it should be updated or revised. Board Prop. at 56. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D86-23a – Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure. PC 10 at 25. IEPA further commented that "[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources." *Id.* at 25-26. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.* at 26.

After considering IEPA's comment and its own rules, the Board now updates this incorporation and the reference to it in the definition noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (a)(4). Subsection (a)(4) incorporates by reference ASTM standard D369-69 (1971). 35 Ill. Adm. Code 218.112(a)(4), 219.112(a)(4). The definition of "distillate fuel oil" refers to this incorporation. 35 Ill. Adm. Code 211.1770. The Board requested comment on whether it should be updated or revised. Board Prop. at 56. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

According to IEPA, ASTM confirmed that ASTM D369-69 (1971) has never been published. PC 11 at 5. IEPA reported that it could obtain an earlier published version: ASTM D369-67(73): Standard Method of Test for Specific Gravity of Creosote Fractions and Residue. *Id.*

IEPA also stated that it will provide the Board with copies of the newer version, ASTM D369-84 (2002) Standard Test Method for Specific Gravity of Creosote Fractions and Residue, if the Board intends to update this incorporation by reference. PC 11 at 5. IEPA stated that "[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources." PC 10 at 26; PC 11 at 5.

Addressing 35 Ill. Adm. Code 211.101(a)(5) above, the Board concluded to update this incorporation. Having considered IEPA's comment and reviewed its rules, the Board now updates this incorporation as well and the reference to it in the definition noted above.

Subsection (a)(5). Subsection (a)(5) incorporates by reference ASTM D396-69. 35 Ill. Adm. Code 218.112(a)(5), 219.112(a)(5).

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D396-24 – Standard Specification for Fuel Oils. PC 10 at 6. IEPA stated that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 6; PC 11 at 5. IEPA added that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

Addressing 35 Ill. Adm. Code 211.101(a)(3) above, the Board concluded to update this incorporation. After considering IEPA’s comment and its own rules, the Board now updates this incorporation as well.

Subsections (a)(6) and (a)(7). Subsection (a)(6) incorporates by reference ASTM standard D2880-71 (1971). 35 Ill. Adm. Code 218.112(a)(6), 219.112(a)(6). Subsection (a)(7) incorporates by reference ASTM Method D 975-68. 35 Ill. Adm. Code 218.112(a)(7), 219.112(a)(7). The definition of “petroleum liquid” refers to these incorporations. 35 Ill. Adm. Code 211.4610. The Board requested comment on whether the incorporations should be updated or revised. Board Prop. at 56-57. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

In both cases, IEPA commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 26-27; PC 11 at 5-6. IEPA did not object to the Board updating references to the most recent version of the ASTM standards: ASTM D2880-23 – Standard Specification for Gas Turbine Fuel Oils” (for subsection (a)(6)) and ASTM D975-24 – Standard Specification for Diesel Fuel (for subsection (a)(7)). PC 10 at 26-27. IEPA stated that it will provide the Board with copies of the newer versions if the Board intends to update these incorporations by reference. PC 10 at 26-27; *see also* PC 11 at 5-6.

After considering IEPA’s comment and its own rules, the Board now updates these incorporations and the references to them in the definition noted above. For clarity and convenience, the Board includes these standards below in the list of updates it intends to adopt.

Subsections (a)(8), (a)(9), (a)(10), (a)(11), (a)(13), (a)(14), (a)(15), and (a)(17). These subsections incorporate by reference the following ASTM standards, respectively: D3925-81 (1985); E300-86; D1475-85; D2369-87; D4017-81 (1987); D4457-85; D2697-86; and E180-85. 35 Ill. Adm. Code 218.112(a)(8), 219.112(a)(8); 218.112(a)(9), 219.112(a)(9); 218.112(a)(10), 219.112(a)(10); 218.112(a)(11), 219.112(a)(11); 218.112(a)(13), 219.112(a)(13); 218.112(a)(14), 219.112(a)(14); 218.112(a)(15), 219.112(a)(15); 218.112(a)(17), 219.112(a)(17). Test methods and procedures for coatings, inks, and fountain solutions refer to these incorporations. 35 Ill. Adm. Code 218.105(a)(1), 218.105(a)(2)(C)(i)-(ii), (iv)-(vi), (viii), 219.105(a)(1), 219.105(a)(2)(C)(i)-(ii), (iv)-(vi), (viii). The Board requested comment on whether the incorporations should be updated or revised. Board Prop. at 57-59. If so, the Board requested appropriate language and copies of the publications as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent versions of the ASTM standards listed below. PC 10 at 27-30. In each case, IEPA further commented that “[i]t

does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA stated that it will provide the Board with copies of the newer versions if the Board intends to update these incorporations by reference. *Id.*

D3925-02 (2022) – Standard Practice for Sampling Liquid Paints and Related Pigmented Coatings

E300-03 (2022) – Standard Practice for Sampling Industrial Chemicals

D1475-13 (2020) – Standard Test Method for Density of Liquid Coatings, Inks, and Related Products

D2369-24 – Standard Test Method for Volatile Content of Coatings

D4017-22 – Standard Test Method for Water in Paints and Paint Materials by Karl Fischer Method

D4457-02 (2014) – Standard Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph

D2697-22 – Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings.”

E180-03 – Standard Practice for Determining the Precision of ASTM Methods for Analysis and Testing of Industrial and Specialty Chemicals

After considering IEPA’s comment and its own rules, the Board now updates these incorporations and the references to them in the provisions noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (a)(12). Subsection (a)(12) incorporates by reference ASTM standard D3792-86. 35 Ill. Adm. Code 218.112(a)(12), 219.112(a)(12). Test methods and procedures for coatings, inks, and fountain solutions refer to this incorporation. 35 Ill. Adm. Code 218.105(a)(2)(C)(iii), 219.105(a)(2)(C)(iii). The Board requested comment on whether it should be updated or revised. Board Prop. at 58. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA could not locate ASTM D3792-86, although it obtained ASTM D3792-79: Standard Test Method for Water Content of Water-Reducible Paints by Direct Injection into a Gas Chromatograph and compared it to ASTM D3792-16 (2002). PC 11 at 6-7. Based on this comparison, IEPA commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 11 at 6-7; *see also* PC 10 at 28. IEPA did not object to the Board updating references to the most recent version of the ASTM standard. PC 10 at 28. IEPA further stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. PC 10 at 28; PC 11 at 7.

After considering IEPA’s comment and its own rules, the Board now updates this incorporation and the reference to it in the provisions noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (a)(16). Subsection (a)(16) incorporates by reference ASTM standard D3980-87. 35 Ill. Adm. Code 218.112(a)(16), 219.112(a)(16). The Board also noted that test

methods and procedures for coatings, inks, and fountain solutions refer to this incorporation. Board Prop. at 58, citing 35 Ill. Adm. Code 218.105(a)(2)(C)(vii), 219.105(a)(2)(C)(vii). The Board requested comment on whether it should be updated or revised. Board Prop. at 58. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.* at 58-59.

IEPA commented that “[t]his ASTM standard has been withdrawn, and no replacement was made by ASTM. This reference can be deleted as other standards are provided in Section 218.105(a)(2)(C) and 219.105(a)(2)(C).” PC 10 at 30.

After considering IEPA’s comment and its own rules, the Board now proposes to strike this incorporation and the references to it in the provisions noted above.

Subsection (a)(18). Subsection (a)(18) incorporates by reference ASTM standard D2372-85. 35 Ill. Adm. Code 218.112(a)(18), 219.112(a)(18). Test methods and procedures for coatings, inks, and fountain solutions refer to this incorporation. 35 Ill. Adm. Code 218.105(a)(2)(C)(ix), 219.105(a)(2)(C)(ix). The Board requested comment on whether it should be updated or revised. Board Prop. at 59. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA could not locate ASTM D2372-85, but it did obtain a later version, ASTM D2372-85 (reapproved 1999): Standard Practice for Separation of Vehicle from Solvent-Reducible Paints, and compared it to the more recent version ASTM D2372-85 (2022). PC 11 at 7. Based on this comparison, IEPA commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 30; PC 11 at 7. IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D2372-85 (2022) – Standard Practice for Separation of Vehicle from Solvent-Reducible Parts. PC 10 at 30. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. PC 10 at 30; *see also* PC 11 at 7.

After considering IEPA’s comment and its own rules, the Board now updates this incorporation and the reference to it in the provisions noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (a)(19)-(a)(22). These subsections incorporate by reference the following ASTM standards, respectively: D97-66; E168-67 (1977); E169-87; and E260-91. 35 Ill. Adm. Code 218.112(a)(19), 219.112(a)(19); 218.112(a)(20), 219.112(a)(20); 218.112(a)(21), 219.112(a)(21); 218.112(a)(22), 219.112(a)(22). The Board requested comment on whether the incorporations should be updated or revised. Board Prop. at 59-50. If so, the Board requested appropriate language and copies of the publications as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent versions of the ASTM standards listed below. PC 10 at 30-31. In each case, IEPA commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 30-31; PC 11 at 6. IEPA stated that it will provide the Board with copies of

the newer version if the Board intends to update this incorporation by reference. PC 10 at 31; *see also* PC 11 at 6.

D97-17b (2022) – Standard Test Method for Pour Point of Petroleum Products
E168-16 (2023) – Standard Practices for General Techniques of Infrared Quantitative Analysis
E169-16 (2022) – Standard Practices for General Techniques of Ultraviolet-Visible Quantitative Analysis
E260-96 (2019) – Standard Practice for Packed Column Gas Chromatography

After considering IEPA’s comment and its own rules, the Board now updates these incorporations. For clarity and convenience, the Board includes these standards below in the list of updates it intends to adopt.

Subsection (a)(23). Subsection (a)(23) incorporates by reference ASTM standard D 2504-83. 35 Ill. Adm. Code 218.112(a)(23), 219.112(a)(23). The Board requested comment on whether it should be updated or revised. Board Prop. at 60-61. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.* at 61.

IEPA commented that “[t]his ASTM standard has been withdrawn, and no replacement was made by ASTM. This reference can be deleted as other standards are provided in Section 218.429(c)(4) and 219.429(c)(4).” PC 10 at 32.

After considering IEPA’s comment and its own rules, the Board now proposes to strike this incorporation.

Subsection (a)(24). Subsection (a)(24) incorporates by reference ASTM standard D 2382-83. 35 Ill. Adm. Code 218.112(a)(24), 219.112(a)(24). The Board requested comment on whether it should be updated or revised. Board Prop. at 60. If so, the Board requested language appropriate and a copy of the publication as required by the IAPA. *Id.*

This ASTM standard has been withdrawn and replaced with the new standard ASTM D4809-18 – Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter (Precision Method). PC 10 at 32. IEPA recommended updating references to the current standard in this subsection, Sections 218.429(c)(4) and 219.429(c)(4), and Appendices C and G of both Parts 218 and 219. *Id.* IEPA further commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* at 30-31. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.* at 31.

After considering IEPA’s comment and its own rules, the Board now updates this incorporation and the references to it in the provisions noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (a)(25). Section 218.112(a)(25) incorporates by reference ASTM standard D 2099-00, though 35 Ill. Adm. Code 219.112 does not incorporate it. 35 Ill. Adm. Code

218.112(a)(25). The Board requested comment on whether it should be updated or revised. Board Prop. at 60. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D2099-14 (2023) – Standard Test Method for Dynamic Water Resistance of Shoe Upper Leather by the Maeser Water Penetration Tester. PC 10 at 32. IEPA further commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* at 30-31. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.* at 31.

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (c)

Subsection (c) incorporates by reference “American Petroleum Institute Bulletin 2517, ‘Evaporation Loss from Floating Roof Tanks,’ Second ed., February 1980.” 35 Ill. Adm. Code 218.112(c), 219.112(c). The definitions of “maximum true vapor pressure” and “true vapor pressure” refer to this incorporation. 35 Ill. Adm. Code 211.3695(a), 211.6770. The Board requested comment on whether this incorporation should be updated or revised. Board Prop. at 60. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA recommended that the Board update all references to the most recent version of the API standards: “API Manual of Petroleum Measurement Standards Chapter 19.2 Evaporative Loss from Floating-roof Tanks of August 2000.” PC 10 at 33. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation and the references to it in the provisions noted above. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (d)

The definition of “no detectable volatile organic material emissions” at Section 211.3040 refers to “40 CFR 60.485(c) (incorporated by reference in 35 Ill. Adm. Code 215.105, 218.112 and 219.112).” 35 Ill. Adm. Code 211.4030. Part 215 incorporates the 1989 version, and Parts 218 and 219 incorporate the 1991 version. Board Prop. at 47. Specifically, Section 218.112(d) incorporates by reference “40 CFR 60 (July 1, 1991) and 40 CFR 60, appendix A, Method 24 (57 FR 30654, July 10, 1992),” while 35 Ill. Adm. Code 219.112(d) incorporates “40 CFR 60 (July 1, 1991).” 35 Ill. Adm. Code 218.112(d). The Board requested comment on whether these incorporations should be consistent with one another. Board Prop. at 46-47.

IEPA did not object to the Board updating references to the most recent CFR, which would ensure consistency. PC 10 at 9. After considering IEPA's comment and its own rules, the Board now updates these incorporations.

In addition, Section 218.105(a)(2)(B) refers to the incorporation of Method 24A in this section, and Section 218.105(f)(1) refers to the incorporation of Methods 18, 25, and 25A in this section. Board Prop. at 60-61. The Board requested comment on whether this subsection should be revised to specifically incorporate these four additional methods. *Id.* at 61.

IEPA commented that the current incorporation of 40 CFR 60 would encompass these four additional methods. PC 10 at 33. IEPA did not object to the Board listing each additional provision of Part 60 that is referenced. *Id.* However, Part 60 Appendix A has been renumbered, so any amendments should reflect that. PC 10 at 13-14 (providing current numbering), 30. As an example, IEPA noted that Method 24 is currently in Appendix A-7. *Id.* at 33.

After considering IEPA's comment and its own rules, the Board concludes that the updated incorporation to the entire Part encompasses these methods. Thus, the Board now lists specific methods in the re-designated appendix as examples of incorporated materials.

Subsections (d)-(h) and (cc)-(ee)

Sections 218.112(d) through (h) and (cc) through (ee) and Sections 219.112(d) through (h) and (z) through (cc) incorporate by reference CFR provisions. 35 Ill. Adm. Code 218.112(d)-(h), (cc)-(ee), 219.112(d)-(h), (z)-(cc). The Board requested comment on whether any of these should be updated with a more recent version of those regulations. Board Prop. at 59.

IEPA did not object to the Board updating the references to the most recent CFR. PC 10 at 33. After considering IEPA's comment and its own rules, the Board now updates these incorporations.

Subsections (i)-(v)

Sections 218.112(i) through (v) and 219.112(i) through (u) incorporate by reference various USEPA materials. 35 Ill. Adm. Code 218.112(i)-(v), 219.112(i)-(u). The Board requested comment on whether any of these should be updated. Board Prop. at 61.

IEPA did not recommend any amendments because the USEPA materials under reference have not been updated. PC 10 at 33. After considering IEPA's comment and its own rules, the Board retains the current incorporations without revision.

Section 218.122: Loading Operations

Section 219.122: Loading Operations

IEPA commented that the abbreviation of liter in the 946-liter threshold in subsection (b) appears as the number "1" instead of the letter "L." PC 11 at 12. The Board agrees and now includes this correction.

Section 218.204: Emission Limitations

Section 219.204: Emission Limitations

The preambles to Sections 218.204 and 219.204 require “compliance with the emission limitations marked with an asterisk . . . on and after March 15, 1996, and compliance with emission limitations not marked with an asterisk . . . until March 15, 1996.” 35 Ill. Adm. Code 218.204, 219.204. The Board requested comment on which standards not marked with an asterisk that were superseded in 1996 may be struck as obsolete or otherwise revised. Board Prop. at 61.

IEPA agreed that the previous emission limits not marked with an asterisk that were superseded on March 15, 1996, may be struck as obsolete. PC 10 at 33. After considering IEPA’s comment and its own rules, the Board now proposes to strike the limits not marked with an asterisk as obsolete.

In addition, several subsections establish an emissions limitation that applies before a date, and a limitation that applies on and after that date. Board Prop. at 61. As an example, the Board cited subsection (l), in which one wood furniture coating limitation applied before March 15, 1998, and a separate limit applies on and after that date. Board Prop. at 61; 35 Ill. Adm. Code 218.204(l), 219.204(l). The Board requested comment on which superseded standards should be struck as obsolete or otherwise revised with specific language. Board Prop. at 61.

IEPA agreed that all the superseded standards can be struck as obsolete. PC 10 at 34. After considering IEPA’s comment and its own rules, the Board now proposes to strike these superseded limits as obsolete.

Subsection (c): Paper Coating. Subsection (c)(2) sets VOM emission limits for paper coating “in terms of weight of VOM per weight of solids and weight of VOM per weight of coatings.” SR at 9, 11; TSD at 18, 22. IEPA proposed to add that “the owner or operator shall comply with either the limit in weight of VOM per weight of solids applied or weight of VOM per weight of coatings applied.” SR at 9, 11; TSD at 18, 22; Prop. 218 at 15; Prop. 219 at 15. IEPA asserted that this clarifies that sources do not have to comply with both limits but rather must comply with one or the other. SR at 9, 11; TSD at 18, 22.

IEPA also proposed to add “VOM limitations in terms of lb VOM/lb solids applied and lb VOM/lb of coatings applied in parentheses” to match the general format of the emission limitations of Section 218.204. SR at 9-10, 11; TSD at 18, 22; Prop. 218 at 15-16.; Prop. 219 at 15.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 18, 22. It asserted that the proposed revision is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board's 2024 proposal included these revisions. Board Prop. at 934-35, 1337. The Board did not receive any comments and now proposes to include the revisions.

Subsection (g): Metal Furniture Coating. Subsection (g)(2) sets VOM emission limits for metal furniture coating “in terms of weight of VOM per weight of coating and weight of VOM per volume of solids.” SR at 9, 11; TSD at 18, 22. IEPA proposed to add that “the owner or operator shall comply with either the limit in weight of VOM per weight of coating applied or weight of VOM per volume of solids applied.” SR at 9, 11; TSD at 18, 22; Prop. 218 at 16; Prop. 219 at 16. IEPA asserted that this clarifies that sources do not have to comply with both limits but rather must comply with one or the other. SR at 9, 11; TSD at 18, 22.

IEPA also proposed to clarify the column heading “kg/l (lb/gal)” by adding the phrase “coatings applied.” SR at 10, 11; TSD at 18, 22; Prop. 218 at 16; Prop. 219 at 16.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 18, 23. It asserted that the proposed revision is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board's 2024 proposal included these revisions. Board Prop. at 935-36 1338-39. The Board did not receive any comments and now proposes to include the revisions.

Subsection (h): Large Appliance Coating. Subsection (h)(2) sets VOM emission limits for large appliance coating “in terms of weight of VOM per volume of coating and weight of VOM per volume of solids.” SR at 9, 11; TSD at 18, 23. IEPA proposed to add that “the owner or operator shall comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied.” SR at 9, 11; TSD at 18, 23; Prop. 218 at 16; Prop. 219 at 17. IEPA asserted that this clarifies that sources do not have to comply with both limits but rather must comply with one or the other. SR at 9, 11; TSD at 18, 23.

IEPA also proposed to clarify the column heading “kg/l (lb/gal)” by adding the phrase “coatings applied.” SR at 10, 11; TSD at 18, 23; Prop. 218 at 18; Prop. 219 at 17.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 19, 23. It asserted that the proposed revision is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board's 2024 proposal included these revisions. Board Prop. at 936-38, 1339-40. The Board did not receive any comments and now proposes to include the revisions.

Subsection (n): Prior to May 1, 2012 Plastic Parts Coating Automotive and Transportation. IEPA asserted that the Board note to this subsection erroneously refers to

Section 218.240(q). SR at 10; TSD at 19. IEPA proposed to correct the reference to “218.204(q).” SR at 10; TSD at 19; Prop. 218 at 25.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 19. It asserted that the proposed revision is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 943-44, 1345. The Board did not receive any comments and now proposes to include it.

Subsection (q): Miscellaneous Metal Parts and Products Coatings and Plastic Parts and Products Coatings on and After May 1, 2012. This subsection provides in part that “[t]he limitations in this subsection (q) shall not apply to aerosol coating products, powder coatings, or primer sealants and ejection cartridge sealants used in ammunition manufacturing.” 35 Ill. Adm. Code 218.204(q). IEPA proposed to clarify this sentence by revising it to provide that “[t]he limitations in this subsection (q) shall not apply to primer sealants and ejection cartridge sealants used in ammunition manufacturing, aerosol coating products, or powder coatings.” SR at 10; TSD at 19, 23.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 19, 23. It asserted that the proposed revision is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 945-54, 1346-55. The Board did not receive any comments and now proposes to include it.

Subsection (q)(1): Metal Parts and Products. This subsection sets VOM emission limits for metal parts and products in terms of weight of VOM per volume of coating and weight of VOM per volume of solids. 35 Ill. Adm. Code 218.204(q)(1), 219.204(q)(1). IEPA proposed to add that “[t]he owner or operator shall comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied.” SR at 10; TSD at 19, 23; Prop. 218 at 26; Prop. 219 at 24. IEPA asserted that this revision clarifies that sources do not have to comply with both limits but rather must comply with either one or the other. TSD at 19, 23.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 19. It asserted that the proposed revision is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.* at 19-20.

The Board's 2024 proposal included this revision. Board Prop. at 945-49, 1346-50. The Board did not receive any comments and now proposes to include it.

Subsection (q)(1)(BB): All other coatings. IEPA proposed to strike this subsection adopted in 2011. TSD at 20, 24, citing Reasonably Available Control Technology (RACT) for Volatile Organic Material Emissions from Group II and Group IV Consumer & Commercial Products: Proposed Amendments to 35 Ill. Adm. Code 211, 218, and 219, R11-23 (July 21, 2011).

VOM limits at 35 Ill. Adm. Code 218.204(j)(4) ("All other coatings") apply before May 1, 2012. TSD at 20, 24. VOM limits for "General one component" and "General multi component" categories apply on and after May 1, 2012. 35 Ill. Adm. Code 218.204(q)(1)(A) and (B), 219.204(q)(1)(A) and (B). IEPA stated that these limits "are based on a federal Control Techniques Guideline (CTG) and encompass all coatings that previously fell into the 'All Other Coatings' category." SR at 10, 11; TSD at 20, 24. IEPA concluded that this subsection is no longer necessary and should be struck. SR at 10, 11; TSD at 20, 24; Prop. 218 at 30; Prop. 219 at 28.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 20, 24. It asserted that the VOM emission limits in Section 218.204(q)(1)(A) and (B) are more stringent than the VOM limits in Section 218.204(q)(1)(BB). *Id.* IEPA argued that this amendment will not affect current emission levels or air quality status in Illinois. "This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA." *Id.*

The Board's 2024 proposal struck this subsection. Board Prop. at 949, 1350. The Board did not receive any comments and now proposes to strike this subsection.

Subsections (q)(2): Plastic Parts and Products. This subsection sets VOM emission limits for plastic parts and products in terms of weight of VOM per volume of coating and weight of VOM per volume of solids. 35 Ill. Adm. Code 218.204(q)(2), 219.204(q)(2). IEPA proposed to add that "[t]he owner or operator shall comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied." SR at 10, 11; TSD at 19, 24; Prop. 218 at 30; Prop. 219 at 28. IEPA asserted that this revision clarifies that sources do not have to comply with both limits, but rather must comply with either one or the other. TSD at 20, 24.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 20, 24. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. "This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA." *Id.*

The Board's 2024 proposal included this revision. Board Prop. at 949-50, 1350-51. The Board did not receive any comments and now proposes to include it.

Subsections (q)(3): Plastic Parts and Products Automotive/Transportation. This subsection sets VOM emission limits for automotive and transportation plastic parts and products in terms of weight of VOM per volume of coating and weight of VOM per volume of solids. 35 Ill. Adm. Code 218.204(q)(3), 219.204(q)(3). IEPA proposed to add that “[t]he owner or operator shall comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied.” SR at 10, 11; TSD at 20, 25; Prop. 218 at 31; Prop. 219 at 29. IEPA asserted that this revision clarifies that sources do not have to comply with both limits but rather must comply with either one or the other. TSD at 20 25.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 21, 25. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 950-51, 1351-53. The Board did not receive any comments and now proposes to include it.

Subsections (q)(4): Plastic Parts and Products Business Machine. This subsection sets VOM emission limits for business machine plastic parts and products in terms of weight of VOM per volume of coating and weight of VOM per volume of solids. 35 Ill. Adm. Code 218.204(q)(4), 219.204(q)(4). IEPA proposed to add that “[t]he owner or operator shall comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied.” SR at 10, 11; TSD at 21, 25; Prop. 218 at 33; Prop. 219 at 31. IEPA asserted that this revision clarifies that sources do not have to comply with both limits but rather must comply with either one or the other. TSD at 21, 25.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 21, 25. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 952, 1353. The Board did not receive any comments and now proposes to include it.

Subsections (q)(5): Pleasure Craft Surface Coatings. This subsection sets VOM emission limits for pleasure craft surface coatings in terms of weight of VOM per volume of coating and weight of VOM per volume of solids. 35 Ill. Adm. Code 218.204(q)(5), 219.204(q)(5). IEPA proposed to add that “[t]he owner or operator shall comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied.” SR at 10, 11; TSD at 21, 25; Prop. 218 at 33; Prop. 219 at 32. IEPA asserted that this revision clarifies that sources do not have to comply with both limits but rather must comply with either one or the other. TSD at 21, 25.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 21, 25. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.*

The Board’s 2024 proposal included this revision. Board Prop. at 952-53, 1353-54. The Board did not receive any comments and now proposes to include it.

Section 218.205: Daily-Weighted Average Limitations

Section 219.205: Daily-Weighted Average Limitations

Subsection (e) refers to requirements specified in the note to Section 218.204(l)(1) or 219.204(l)(1), which refers to applying coatings “[p]rior to March 15, 1998.” 35 Ill. Adm. Code 218.204(l)(1), 218.205(e), 219.204(l)(1), 219.205(e). The Board requested comment on whether the Board Notes and references to them should be struck as obsolete or otherwise revised. Board Prop. at 61.

IEPA agreed that all the Board Notes and references to them which set limits “before March 15, 1998,” should be struck as obsolete. PC 10 at 34. After considering IEPA’s comment and its own rules, the Board now proposes to strike this language as obsolete.

Section 218.401: Flexographic and Rotogravure Printing

Section 219.401: Flexographic and Rotogravure Printing

Subsection (a)

These sections establish requirements that apply before a date and after it. The Board cited as one example subsection (a), which establishes limitations that apply “[p]rior to August 1, 2010” and separate limitations that apply “[o]n and after August 1, 2010.” Board Prop. at 61; 35 Ill. Adm. Code 218.401(a), 219.401(a). The Board requested comment on whether the superseded requirements should be struck as obsolete or otherwise revised. Board Prop. at 61.

IEPA agreed that all the superseded requirements can be struck as obsolete. PC 10 at 34. After considering IEPA’s comment and its own rules, the Board now proposes to strike these limits as obsolete.

Subsection (c)

Section 218.401(c)(1) includes a cross reference to “subsection (c)(1)(D).” 35 Ill. Adm. Code 218.401(c)(1). IEPA argued that this is a typographical error and that it should instead refer to “subsection (c)(1)(B).” SR at 10; TSD at 21. IEPA proposed to amend this subsection by correcting this reference. SR at 10; TSD at 21; Prop. 218 at 40.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 21. It asserted that the proposed amendment is only administrative and will

not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.* at 21-22.

The Board’s 2024 proposal included this revision. Board Prop. at 1006. The Board did not receive any comments. However, subsection (c)(1) applied “[p]rior to August 1, 2010.” Thus, the Board now proposes to strike it as obsolete. *See* PC 10 at 34.

Section 218.405: Lithographic Printing: Applicability

Section 219.405: Lithographic Printing: Applicability

Sections 218.405(b) and 219.405(b) apply “[p]rior to August 1, 2010,” and subsections (c) apply “[o]n and after August 1, 2010.” 35 Ill. Adm. Code 218.405(b)-(c), 219.405(b)-(c). The Board requested comment on whether the superseded requirements should be struck as obsolete or otherwise revised. Board Prop. at 61.

IEPA agreed that all the superseded requirements can be struck as obsolete. PC 10 at 34. After considering IEPA’s comment and its own rules, the Board now proposes to strike these requirements as obsolete.

Section 218.407: Emission Limitations and Control Requirements for Lithographic Printing Lines

Section 218.407: Emission Limitations and Control Requirements for Lithographic Printing Lines

Sections 218.407 and 219.407 establish limits that apply “[p]rior to August 1, 2010,” and separate limits that apply “[o]n and after August 1, 2010.” 35 Ill. Adm. Code 218.407, 219.407. The Board requested comment on whether the superseded requirements should be struck as obsolete or otherwise revised. Board Prop. at 62.

IEPA agreed that all the superseded requirements can be struck as obsolete. PC 10 at 34. After considering IEPA’s comment and its own rules, the Board now proposes to strike these limits as obsolete.

Section 218.411: Recordkeeping and Reporting for Lithographic Printing

Section 219.411: Recordkeeping and Reporting for Lithographic Printing

Sections 218.411 and 219.411 include limits that apply “prior to August 1, 2010,” and separate limits that apply “on and after August 1, 2010.” 35 Ill. Adm. Code 218.411(a, b), 219.411(a, b). The Board requested comment on whether the superseded requirements should be struck as obsolete or otherwise revised. Board Prop. at 62.

IEPA agreed that all the superseded requirements can be struck as obsolete. PC 10 at 34. After considering IEPA’s comment and its own rules, the Board now proposes to strike these requirements as obsolete.

Section 218.452: Compliance Schedule for Leaks

Section 219.452: Compliance Schedule for Leaks

Sections 218.452 and 219.452 include deadlines to submit a monitoring program and a first monitoring report “by 1990 and 1991, respectively.” 35 Ill. Adm. Code 218.452, 219.452. The Board requested comment on whether either or both of those requirements should be struck as obsolete or otherwise revised. Board Prop. at 62.

IEPA agreed that all the superseded requirements can be struck as obsolete. PC 10 at 35. After considering IEPA’s comment and its own rules, the Board now proposes to strike these requirements as obsolete.

Section 218.901: Emission Limitations and Control Requirements

Section 219.901: Emissions Limitations and Control Requirements

JCAR suggested amending the term “propylenediene” in subsection (b)(2)(N) to “propylene diene.” PC 9; 35 Ill. Adm Code 218.901(b)(2)(N), 219.901(b)(2)(N). The Board requested comment on whether the suggested amendment corrects or clarifies the subsection. Board Prop. at 62.

IEPA agreed with the amendment suggested by JCAR. PC 10 at 35. After considering IEPA’s comment and its own rules, the Board now proposes to include the revision.

Section 218.926: Control Requirements

Section 218.926(b)(2)(C)(ii) includes a limit expressed in terms of “0.42 Kg Vom/l (3.5lbs Vom/gal).” 35 Ill. Adm. Code 218.926(b)(2)(C)(ii). IEPA argued that the abbreviated units include typographical errors. SR at 10; TSD at 22. IEPA proposed to revise the limit to “0.42 kg VOM/l (3.5 lbs VOM/gal).” SR at 10; TSD at 22; Prop. 218 at 44. IEPA asserted that this revision is consistent with the abbreviation for kilograms in Section 211.102(a). SR at 10.

IEPA argued that adopting this amendment into the SIP is consistent with Section 110(l) of the CAA. TSD at 22. It asserted that the proposed amendment is only administrative and will not affect current emission levels or air quality status in Illinois. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA.” *Id.* at 22.

The Board’s 2024 proposal included this revision. Board Prop. at 1202-04. The Board did not receive any comments and now proposes to include it.

Part 220: Nonmethane Organic Compounds

Part 220 establishes emission control requirements for municipal solid waste landfills under the Clean Air Act. 35 Ill. Adm. Code 220.100. IEPA and JCAR did not suggest amendments to Part 220.

The Board throughout Part 220 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, and concision. The Board also proposed amendments such as changing passive to active voice, updating statutory references, simplifying cross references, making the forms of temperatures more consistent with one another, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Part 223: Standards and Limitations for Organic Material Emissions for Area Sources

Part 223 limits emissions of VOM by requiring reductions in the VOM content of consumer and commercial products in Subpart B and architectural and industrial maintenance coatings in Subpart C. 35 Ill. Adm. Code 223.200, 223.300. Subpart C also includes work practices to minimize VOM emissions during application of architectural and industrial maintenance coatings. 35 Ill. Adm. Code 223.300. IEPA and JCAR did not suggest amendments to Part 223.

The Board throughout Part 223 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, and concision. The Board also proposed amendments such as changing passive to active voice, simplifying cross references, making the forms of temperatures more consistent with one another, making the form of definitions more consistent with one another, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Below, the Board addresses amendments on which the 2024 proposal requested public comment.

Section 223.120: Incorporations by Reference

Subsection (f): American Society for Testing and Materials

Subsection (f)(1)-(f)(8), (f)(10), (f)(12)-(f)(13). These subsections incorporate by reference the following ASTM standards, respectively: E119-05a; D523-89 (1999); D1640-03 (1999); D3912-95 (2001); D4082-02; D4214-98; D1613-03; E84-07; E260-96 (2006); C836-06; and D86-07b. 35 Ill. Adm. Code 223.120(f)(1)-(f)(8), (f)(10), (f)(12)-(f)(13). The Board requested comment on whether these incorporations should be updated or revised. Board Prop. at 62-64. If so, the Board requested appropriate language and copies of the publications as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent versions of the ASTM standards listed below. PC 10 at 35-38. In each case, IEPA added that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” *Id.* IEPA stated that it will provide the Board with copies of the newer version if the Board to update this incorporation by reference. *Id.*

E119-24 – Standard Test Methods for Fire Tests of Building Construction and Materials
D523-14 (2018) – Standard Test Method for Specular Gloss
D1640/D 1640M-14 (2022) – Standard Test Methods for Drying, Curing, or Film
Formulation of Organic Coatings
D3912-10 (2023) – Standard Test Method for Chemical Resistance of Coatings and
Linings for Use in Nuclear Power Plants
D4082-10 (2023) – Standard Test Method for Effects of Gamma Radiation on Coatings
for Use in Nuclear Power Plants
D4214-23 – Standard Test Methods for Evaluating the Degree of Chalking of Exterior
Paint Films
D1613-17 – Standard Test Method for Acidity in Volatile Solvents and Chemical
Intermediaries Used in Paint, Varnish, Lacquer, and Related Products
E84-24 – Standard Test Method for Surface Burning Characteristics of Building
Materials
E260-96 (2019) – Standard Practice for Packed Column Gas Chromatography
C836/C836M-18 (2022) – Standard Specification for High Solids Content, Cold Liquid-
Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing
Course
D86-23a – Standard Test Method for Distillation of Petroleum Products and Liquid Fuels
at Atmospheric Pressure

After considering IEPA’s comment and its own rules, the Board now updates these incorporations. For clarity and convenience, the Board includes these standards below in the list of updates it intends to adopt.

Subsection (f)(9). Subsection (f)(9) incorporates by reference ASTM standard D4359-90 (2006). 35 Ill. Adm. Code 223.120(f)(9). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 63. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA could not locate ASTM D4359-90 (2006), but it obtained an earlier version, ASTM D4359-90 (reapproved 2000): Standard Test Method for Determining Whether a Material Is a Liquid or a Solid, and compared it to the more recent version ASTM D359-90(2024). PC 11 at 7. Based on this comparison, IEPA commented that “[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources.” PC 10 at 37; *see also* PC 11 at 7. IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D4359-90 (2024) – Standard Test Method for Determining Whether a Material Is a Liquid or a Solid. PC 10 at 37. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. PC 10 at 27; *see also* PC 11 at 7.

After considering IEPA's comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (f)(11). Subsection (f)(11) incorporates by reference ASTM standard E2167-01. 35 Ill. Adm. Code 223.120(f)(11). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 64. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

The most recent version of this standard is ASTM E2167-01 (2008) – Standard Guide for Selection and Use of Stone Consolidants, which was withdrawn in 2017 with no replacement by ASTM. PC 10 at 38. Because there are no other standards provided in Section 223.207, IEPA did not recommend revising or removing the reference. PC 10 at 38; 35 Ill. Adm. Code 223.307 (defining “stone consolidant” and citing standard).

After considering IEPA's comment and its own rules, the Board now retains the current incorporation without revision.

Subsection (h): Bay Area Air Quality Management District (BAAQMD)

Subsection (h)(1). Subsection (h)(1) incorporates by reference BAAQMD “Method 43, Determination of Volatile Methylsiloxanes in Solvent-Based Coatings, Inks, and Related Materials, proposed amendment February 4, 2004.” 35 Ill. Adm. Code 223.120(h)(1). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 64. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating the references to the most recent version of BAAQMD Method 43 (2005). PC 10 at 39. This method is publicly available. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation and will obtain a publicly available copy of it.

Subsection (h)(2). Subsection (h)(2) incorporates by reference BAAQMD “Method 41, Determination of Volatile Organic Compounds in Solvent-Based Coatings and Related Materials Containing Parachlorobenzotrifluoride, proposed amendment February 4, 2004.” 35 Ill. Adm. Code 223.120(h)(2). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 64. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating the references to the most recent version of BAAQMD Method 41 (2005). PC 10 at 39. This method is publicly available. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation and will obtain a publicly available copy of it.

Subsection (i): California Air Resources Board (CARB)

Subsection (i) incorporates by reference CARB “Method 310, Determination of Volatile Organic Compounds in Consumer Products and Reactive Organic Compounds in Aerosol Coating Products, amended May 5, 2005.” 35 Ill. Adm. Code 223.120(i). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 64. If so, the Board requested appropriate language and a copy of the publication as required by the IAPA. *Id.* at 64-65.

IEPA did not object to the Board updating the references to the most recent version of CARB Method 310 (2022). PC 10 at 39. This method is publicly available. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation and will obtain a publicly available copy of it.

Section 223.203: Definitions for Subpart B

Deodorant

Deodorant Body Spray

Hair Spray

These three terms are each defined separately based on whether the product is manufactured on and after July 1, 2009, or before that date. 35 Ill. Adm. Code 223.203. The Board requested comment on whether the definitions that applied before July 1, 2009, should be struck as obsolete or otherwise revised. Board Prop. at 65. If so, the Board requested appropriate language. *Id.*

IEPA agreed that the definitions for each term that applied before July 1, 2009, can be struck as obsolete. PC 10 at 39-40. After considering IEPA’s comment and its own rules, the Board now proposes to strike the portion of each definition that is now obsolete.

Hair Styling Gel

The definition of “hair styling gel” refers to a product manufactured before July 1, 2009. 35 Ill. Adm. Code 223.203. The Board requested comment on whether the definition should be struck as obsolete. Board Prop. at 65.

IEPA agreed that it can be struck as obsolete. PC 10 at 40. After considering IEPA’s comment and its own rules, the Board now proposes to strike this definition as obsolete.

Section 223.260: Most Restrictive Limit

Subsection (a) applies to products manufactured before July 1, 2009, and July 1, 2010. 35 Ill. Adm. Code 223.260(a). The Board requested comment on whether this subsection should be struck as obsolete. Board Prop. at 65.

IEPA agreed that it can be struck as obsolete. PC 10 at 40. After considering IEPA's comment and its own rules, the Board now proposes to strike this subsection as obsolete.

Part 225: Control of Emissions from Large Combustion Sources

In Part 225, IEPA proposed to sunset Subparts C, D, and E. SR at 8-9; TSD at 26. JCAR did not suggest revisions.

In addition, the Board throughout Part 225 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, and concision. The Board also proposed amendments such as changing passive to active voice, clarifying incorporations by reference, simplifying cross references, making the forms of temperatures more consistent with one another, and using "must" to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Below, the Board addresses amendments proposed by IEPA and those on which the 2024 proposal requested public comment.

Section 225.140: Incorporations by Reference

Subsections (h)(1)-(h)(2), (h)(4)-(h)(8), and (h)(10)

These subsections incorporate by reference the following ASTM standards, respectively: D388-77 (approved February 25, 1977), D388-90 (approved March 30, 1990), D388-91a (approved April 15, 1991), D388-95 (approved January 15, 1995), D388-98a (approved September 10, 1998), and D388-99 (approved September 10, 1999, reapproved in 2004), Classification of Coals by Rank; D3173-03; D4840-99e1; D5865/D5865M-19; D6414-01; D6722-01; D6784-02; and D7036-04. 35 Ill. Adm. Code 225.140(h)(1)-(h)(2), (h)(4)-(h)(8), (h)(10). The Board requested comment on whether these incorporations should be updated or revised. Board Prop. at 65-67. If so, the Board requested copies of the publications as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent versions of the ASTM standards listed below: PC 10 at 40-43. In each case, IEPA added that "[i]t does not appear that updating this ASTM standard will result in any substantive change for subject sources." *Id.* IEPA stated that it will provide the Board with copies of the newer versions if the Board intends to update these incorporations by reference. *Id.*

D388-23 – Standard Classification of Coals by Rank.

D3173/D3173M-17a – Standard Test Method for Moisture in the Analysis Sample of Coal and Coke

D4840-99 (2018)e1 – Standard Guide for Sample Chain-of-Custody Procedures
D5865/D5865M-19 – Standard Test Method for Gross Calorific Value of Coal and Coke
D6414-12 – Standard Test Methods for Total Mercury in Coal and Coal Combustion
Residues by Acid Extraction or Wet Oxidation/Cold Vapor Atomic Absorption
D6722-19 – Standard Test Method for Total Mercury in Coal and Coal Combustion
Residues by Direct Combustion Analysis
D6784-24 – Standard Test Method for Elemental, Oxidized, Particle-Bound and Total
Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario
Hydro Method).
D7036-16 – Standard Practice for Competence of Air Emission Testing Bodies

After considering IEPA's comment and its own rules, the Board now updates these incorporations. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (h)(3)

Subsection (h)(3) incorporates by reference ASTM standard D3684-01. 35 Ill. Adm. Code 225.140(h)(3). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 66. If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA commented that "[t]his ASTM standard has been withdrawn, and no replacement was made by ASTM. This reference can be deleted as other standards are provided in Section 225.202, 225.625(a)(2)(C), [and] 225.565(a)(1)." PC 10 at 41.

After considering IEPA's comment and its own rules, the Board now proposes to strike this incorporation.

Subsection (h)(9)

Subsection (h)(9) incorporates by reference ASTM standard D6911-03. 35 Ill. Adm. Code 225.140(h)(9). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 66. If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

The most recent version of this ASTM standard is ASTM D6911-15 – Standard Guide for Packaging and Shipping Environmental Samples for Laboratory Analysis, which was withdrawn in 2024 without ASTM replacing it. PC 10 at 42-43. Part 225.Exhibit D provides no other standards under "Sample Preservation, Storage, and Transport" under paragraph 7.2.8. *Id.* at 43. IEPA stated that it can provide the more recent version to the Board if it decides to update the reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation with the more recent version cited by IEPA. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subpart C: Clean Air Act Interstate Rule (CAIR) SO₂ Trading Program

Subpart D: CAIR NO_x Annual Trading Program

Subpart E: CAIR NO_x Ozone Season Trading Program

IEPA proposed to sunset Subparts C, D, and E of Part 225 on and after January 1, 2018. SR at 8; TSD at 26; Prop. 225 at 4. In 2005, USEPA adopted CAIR to replace the NO_x SIP Call Trading Program beginning with the 2009 control period. SR at 8, citing 70 Fed. Reg. 25162 (May 12, 2005). CAIR added two new trading programs addressing annual emissions of NO_x and SO₂ from electrical generating units at power plants. SR at 8. In 2007, the Board adopted rules implementing CAIR. TSD at 26, citing Proposed New Clean Air Interstate Rule (CAIR) SO₂, NO_x Annual and NO_x Ozone Season Trading Programs, 35 Ill. Adm. Code 225, Subparts A, C, D, E and F, R06-26 (Aug. 23, 2007). Subpart C and D of these rules include annual programs to control SO₂ and NO_x, respectively. SR at 8. Subpart E includes a trading program to control NO_x emissions “during the trading season (May 1 through September 30) of 2009 and thereafter.” *Id.*

On August 8, 2011, USEPA finalized the Cross-State Air Pollution Rule (CSAPR), which replaced CAIR. “CSAPR requires states to improve air quality by reducing power plant emissions that contribute to ozone and/or fine particle pollution in other states.” SR at 8 (emphasis in original), citing 76 Fed. Reg. 48208 (Aug. 8, 2011); *see also* TSD at 26. The program did not take effect until the 2015 control periods. SR at 8. CSAPR established budgets for SO₂ and NO_x emissions that are below the CAIR budgets established in Subparts C, D, and E of Part 225. TSD at 26. Emissions of NO_x and SO₂ are further reduced under CSAPR. *Id.* However, IEPA argued that “Illinois’ EGUs must now comply with duplicative administrative requirements (*e.g.*, recordkeeping and reporting) for the 2015 control periods and beyond” until Subparts C, D, and E are sunset. SR at 9.

Based on these factors, IEPA proposed sunset language in Section 225.307 for Subpart C, Section 225.407 for Subpart D, and Section 225.507 for Subpart E. TSD at 26; Prop. 225 at 4. IEPA argued that these provisions are consistent with 40 CFR 51.123(ff) and 51.124(s), which provide that USEPA will no longer administer CAIR for control periods after December 31, 2014. SR at 9. IEPA further argued that these provisions also relieve the sources from unnecessary reporting requirements under CAIR. TSD at 26.

IEPA argued that adopting the provisions into the SIP is consistent with Section 110(l) of the CAA. TSD at 26. It asserted that the proposed amendments are only administrative and will not affect current emission levels or air quality status in Illinois because CSAPR substitutes for CAIR. “This revision will not interfere with attainment, reasonable further progress, or any other applicable requirement of the CAA since the program has been replaced.” *Id.*

The Board’s 2024 proposal included these revisions. Board Prop. at 1831. The Board did not receive any comments and now proposes to include the revisions.

Part 226: Standards and Limitations for Certain Sources of Lead

Part 226 sets standards and limitations for emissions of lead from stationary sources. 35 Ill. Adm. Code 226.105(a). IEPA and JCAR did not suggest amendments to Part 226.

The Board throughout Part 226 proposed numerous revisions, including matters of capitalization and concision. The Board also proposed amendments such as changing passive to active voice and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Part 228: Asbestos

Part 228 regulates the construction or repair of sites with asbestos-containing material, the destruction of sites containing asbestos, and the manufacturing of asbestos. SR at 11. It also includes requirements for disposing of asbestos-containing materials. TSD at 26.

The Board adopted Part 228 in 1971. TSD at 26, citing Asbestos Regulations, R71-16 (Jan. 6, 1971). In 1978, the Board adopted rules identical-in-substance to federal rules, including asbestos NESHAP regulations. SR at 12; TSD at 27, citing Standards of Performance for New Stationary Sources and National Emission Standards for Hazardous Air Pollutants, R78-18 (Dec. 14, 1978). “The Board stated that these rules voided any prior regulations that impacted the same sources; in other words, these rules superseded Part 228 for asbestos.” TSD at 27; SR at 12. IEPA now implements the federal regulations through a delegation agreement with USEPA and does not implement Part 228. SR at 12; TSD at 27. IEPA concluded that Part 228 is obsolete and ready for repeal. SR at 12; TSD at 27; Prop. 228.

IEPA stated that repealing Part 228 does not implicate federal considerations because it is not part of the Illinois SIP. TSD at 27. JCAR did not suggest any revisions for Part 228.

The Board’s 2024 proposal included this repeal. Board Prop. at 2026. The Board did not receive any comments and now proposes to repeal this section.

Part 229: Hospital/Medical/Infectious Waste Incinerators

Part 229 addresses hospital/medical/infectious waste incinerators. 35 Ill. Adm. Code 229. IEPA and JCAR did not suggest revising Part 229.

The Board throughout Part 229 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, simplifying cross references, and using “must” to be more clearly mandatory. The Board intended that each

of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Below, the Board addresses amendments on which the 2024 proposal requested public comment.

Section 229.104: Incorporations by Reference

Subsection (b)

Subsection (b) incorporates by reference “‘Revised Statistical Definitions for Metropolitan Areas,’ OMB Bulletin No. 93-17, Office of Management and Budget, Washington, D.C. (June 30, 1993). Office of Management and Budget, National Technical Information Services.” 35 Ill. Adm. Code 229.104(b). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 67. If so, the Board requested copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of “Revised Delineations of Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Guidance on the Uses of the Delineations of These Areas: OMB BULLETIN NO. 23-01 dated July 21, 2023.” PC 10 at 43. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Subsection (h)

Subsection (h) incorporates by reference “ASTM Method D 6784-02.” 35 Ill. Adm. Code 229.140(h). The Board requested comment on whether the incorporation should be updated or revised. Board Prop. at 67. If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA commented that it does not object to the Board updating references to the most recent version of the ASTM standard: “ASTM D 6784-24 – Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method).” PC 10 at 43. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA's comment and its own rules, the Board now updates this incorporation and the reference to it at subsection (n) of 35 Ill. Adm. Code 229. Appendix C in the first-notice proposal. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Part 230: New Source Performance Standard

The Board repealed Part 230 in 1991. *See* Continuous Monitoring Rules and Repeal of New Source Performance Standards and Hazardous Air Pollutant Regulations, R 89-7(B) (Aug. 8, 1991). However, the repeal left in the rules a single Board Note addressing the applicability of federal standards of performance for new stationary sources. *Id.*, slip op. at 35.

The Board initially proposed only to strike this single Board Note and complete the repeal. Board Prop. at 2095. However, after considering its own rules, the Board acknowledges that Part 230 is in fact entirely repealed, even though the note remains. Thus, the Board now retains the Board Note without further action and does not include Part 230 in its first-notice proposal.

Part 232: Toxic Air Contaminants

Part 232 includes a list of toxic air contaminants, the procedures to determine a toxic air contaminant, and the procedures to amend the list. SR at 12. IEPA stated that Part 232 does not contain substantive provisions addressing toxins. TSD at 28. JCAR did not propose revisions to Part 232.

IEPA Proposal

Part 232 originates from amendments to Section 9.5 of the Act. SR at 12; TSD at 27; 415 ILCS 5/9.5 (2024); Toxic Air Contaminants List (35 Ill. Adm. Code 232), R90-1(C) (Sept. 3, 1992). Section 9.5(d) directed the Board to adopt rules “to control toxic contaminants released into the air in a manner to protect public health and the environment.” 415 ILCS 5/9.5(d) (2024); *see also* SR at 12; TSD at 27. IEPA asserted that this authority stemmed from the lack of federal programs to adequately protect the public. SR at 12; TSD at 27.

Part 232 allowed IEPA to gather information from Illinois sources. TSD at 27. Reports were first due on October 1, 1997, and “then by July 1 of the year following operation of a new applicable source or after an applicable change in emissions of one or more of the contaminants.” *Id.* IEPA may see one or two revised reports per year when it receives Annual Emissions Reports under 35 Ill. Adm. Code 205. *Id.*

Since the Board adopted Part 232, USEPA has fully developed programs to control emissions of toxic air contaminants, including NESHAPs under 40 CFR 61 and 63. SR at 12; TSD at 28. IEPA has been delegated authority to implement the NESHAPs. TSD at 28. IEPA concluded that Part 232 is obsolete and ready for repeal. SR at 12; TSD at 28; Prop. 232. Additionally, IEPA stated that repealing Part 232 does not implicate federal considerations, as it is not part of the Illinois SIP. TSD at 28.

Revision Adopted in R22-17

The Board recently revised Part 232 in Amendments to 35 Ill. Adm. Code 203: Major Stationary Sources Construction and Modification, 35 Ill. Adm. Code 204: Prevention of Significant Deterioration, and 35 Ill. Adm. Code 232: Toxic Air Constituents, R22-17 (Apr. 17, 2025). The Illinois Environmental Regulatory Group (IERG) proposed to amend Part 232 to update a cross-reference to Part 203. *Id.*, slip op. at 38 (Aug. 16, 2021) (Statement of Reasons). IERG explained that Section 232.120 provides definitions for Part 232 and defines “fugitive emissions” by referring to the definition in Section 203.124. *Id.*

IERG proposed to add to Part 203 a Subpart I that includes the existing definition of “fugitive emissions” at Section 203.1190. IERG also proposed to sunset Subparts A through H, including the definition at Section 203.124, when USEPA approved its amendments as SIP revisions. At that time, the definition in proposed Subpart I would take effect. Amendments to 35 Ill. Adm. Code 203: Major Stationary Sources Construction and Modification, 35 Ill. Adm. Code 204: Prevention of Significant Deterioration, and 35 Ill. Adm. Code 232: Toxic Air Constituents, R22-17, slip op. at 38-39 (Aug. 16, 2021). IERG proposed to amend the definition of “fugitive emissions” in Section 232.120 by updating the cross-reference to Part 203. *Id.* at 39.

IERG’s original proposal noted that this docket proposed “to repeal Part 232 as unnecessary given USEPA’s development of programs to control emissions of toxic air contaminants.” Amendments to 35 Ill. Adm. Code 203: Major Stationary Sources Construction and Modification, 35 Ill. Adm. Code 204: Prevention of Significant Deterioration, and 35 Ill. Adm. Code 232: Toxic Air Constituents, R22-17, slip op. at 39 (Aug. 16, 2021). IERG stated that, if the Board repeals Part 232, then its proposed revision to Part 232 would be unnecessary. *Id.*

IERG’s position appears to be based on repealing Part 232 in this docket before adopting rules in R22-17. Although the Board instead recently revised Section 232.120 in R 22-17, it is not persuaded that the revision described above requires keeping any of Part 232 in effect. The Board does not believe that the revision in any way diminishes IEPA’s rationale for repealing Part 232.

Public Comment

The Board’s 2024 proposal included this repeal. Board Prop. at 2096-2123. The Board did not receive any comments and now proposes to repeal this Part.

Part 237: Open Burning

Part 237 prohibits open burning or the burning of any refuse in any chamber or apparatus, unless the chamber or apparatus is designed for the purpose of the class of refuse being burned. SR at 12; 35 Ill. Adm. Code 237.102(b). JCAR did not suggest any revisions to Part 237.

IEPA proposed a single revision to 35 Ill. Adm. Code 237.130, a site-specific rule that allowed the City of Freeport to burn landscape waste and clean wood debris using an air curtain

destructor. TSD at 28; 35 Ill. Adm. Code 237.130; SR at 12. In 2004, the City of Freeport notified IEPA in writing that it no longer owns or operates an air curtain destructor and will no longer burn waste. SR at 12; TSD at 28. IEPA concluded that Section 237.130 is obsolete and ready for repeal. SR at 12; TSD at 28; Prop. 237 at 2. IEPA also stated that repealing Section 237.130 does not implicate federal considerations, as it is not part of the Illinois SIP. TSD at 28.

The Board's 2024 proposal included this repeal. Board Prop. at 2128. The Board did not receive comments and now proposes to repeal this section.

In addition, the Board throughout Part 237 proposed numerous revisions, including matters of punctuation, spelling, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, updating statutory references, simplifying cross references, making the form of definitions more consistent with one another, and using "must" to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Part 240: Mobile Sources

Part 240 addresses emissions from motor vehicles. 35 Ill. Adm. Code 240.101. IEPA and JCAR did not propose to revise Part 240.

The Board throughout Part 240 proposed numerous revisions, including matters of punctuation and concision. The Board also proposed amendments such as clarifying statutory references, simplifying cross references, making the form of definitions more consistent with one another, and using "must" to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Below, the Board addresses amendments on which the 2024 proposal requested public comment.

Section 240.107: Incorporations by Reference

This section incorporates by reference "Society of Automotive Engineers (SAE) . . . Report J1667 Snap-Acceleration Smoke Test Procedure for Heavy-Duty Diesel Powered Vehicles (February 1996)." 35 Ill. Adm. Code 240.107. The Board requested comment on

whether this incorporation should be updated or revised. Board Prop. at 67. If so, the Board requested a copy of the publication as required by the IAPA. *Id.*

IEPA did not object to the Board updating references to the most recent version of the “Society of Automotive Engineers test procedure SAE J1667: J1667_210802 – Snap-Acceleration Smoke Test Procedure for Heavy-Duty Diesel-Powered Vehicles: J1667_201802 (Feb 2018).” PC 10 at 44. IEPA stated that it will provide the Board with copies of the newer version if the Board intends to update this incorporation by reference. *Id.*

After considering IEPA’s comment and its own rules, the Board now updates this incorporation. For clarity and convenience, the Board includes this standard below in the list of updates it intends to adopt.

Section 240.151: Applicability

This section states that Subpart D (Steady-State Idle Mode Test Emission Standards) is effective through January 31, 2012. 35 Ill. Adm. Code 240.151. The Board requested comment on whether the subpart should be struck as obsolete or otherwise revised. Board Prop. at 67-68. If so, the Board requested appropriate language. *Id.* at 68.

IEPA agreed that Subpart D can be struck as obsolete. PC 10 at 44. After considering IEPA’s comment and its own rules, the Board now proposes to strike this subpart as obsolete.

Section 240.171: Applicability

This section states that Subpart F (Evaporative Test Standards) is effective through January 31, 2021. 35 Ill. Adm. Code 240.171. The Board requested comment on whether the subpart should be struck as obsolete or otherwise revised. Board Prop. at 68. If so, the Board requested appropriate language. *Id.*

IEPA agreed that Subpart F can be struck as obsolete. PC 10 at 44. After considering IEPA’s comment and its own rules, the Board now proposes to strike this subpart as obsolete.

Part 241: Clean Fuel Fleet Program

Part 241 applies to specified fleets of vehicles. 35 Ill. Adm. Code 241.110(a). IEPA and JCAR did not suggest revising Part 241.

The Board throughout Part 241 proposed numerous revisions, including matters of punctuation and concision. The Board also proposed amendments such as simplifying cross references, making the form of definitions more consistent with one another, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are

non-substantive and does not specifically discuss them in this opinion.

Part 243: Air Quality Standards

Part 243 establishes NAAQS, which are adopted by USEPA under the Clean Air Act. 35 Ill. Adm. Code 243.102, citing 42 USC 7409; 415 ILCS 5/7.2, 10H (2024). IEPA and JCAR did not suggest revising Part 243.

The Board throughout Part 243 proposed numerous revisions, including matters of capitalization, punctuation, abbreviation, and concision. The Board also proposed amendments such as making the form of definitions more consistent with one another and simplifying Board Notes. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. These changes also include amendments to make the state language more consistent across each section and with the CFR language, such as deleting references to the “Federal Register” and adding “designated by USEPA.” As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Finally, the Board acknowledges that Part 243 is an identical-in-substance (IIS) rulemaking. *See* 415 ILCS 5/7.2 (2024). Section 7.2 of the Act requires the Board to adopt IIS rules verbatim to the federal regulations but allows non-substantive technical edits “that in no way change the scope or meaning of any portion of the regulations.” 415 ILCS 5/7.2(a). As noted above, the Board intends for all amendments to Part 243 to be non-substantive. Nevertheless, the Board invites public comment on the proposed amendments to address any IIS concerns.

Part 244: Episodes

Part 244 provides rules for declaring the stages of air episodes. 35 Ill. Adm. Code 244. IEPA and JCAR did not suggest revising Part 244.

The Board throughout Part 244 proposed numerous revisions, including matters of punctuation, spelling, and concision. The Board also proposed amendments such as changing passive to active voice, avoiding unnecessary nominalizations, updating statutory references, simplifying cross references, making the forms of temperatures more consistent with one another, making the form of definitions more consistent with one another, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive and did not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Below, the Board addresses amendments on which the 2024 proposal requested public comment.

Section 244.121: Local Agency Responsibilities

Subsection (b) refers to reporting to IEPA “by either telephone or telemetry.” Board Prop. at 68; 35 Ill. Adm. Code 244.121(b). The Board requested comment on whether this reference should be revised to include different or additional means of reporting. Board Prop. at 68. If so, the Board requested appropriate language. *Id.*

IEPA recommended that “the term ‘telemetry’ be deleted as obsolete. Other notification methods could be added (such as email or mail or fax) to provide for alternate forms of communication/notification.” PC 10 at 44.

After considering IEPA’s comment and its own rules, the Board now proposes to revise this section as suggested by IEPA.

Section 244.143: Submission of Plans

Subsection (a)(2) refers to the “Cook County Department of Environmental Control.” 35 Ill. Adm. Code 244.143(a)(2). subsection (a)(3) refers to the “Chicago Department of Environmental Control.” 35 Ill. Adm. Code 244.143(a)(3). The Board requested comment on whether these names should be updated or revised and, if so, requested appropriate language. Board Prop. at 68.

IEPA did not object to the Board updating to the most recent names of “Cook County Department of Environment and Sustainability” and “Chicago Office of Sustainability,” respectively. PC 10 at 45. After considering IEPA’s comment and its own rules, the Board now proposes to revise this section as suggested by IEPA.

Part 245: Odors

Part 245 addresses specified odors. 35 Ill. Adm. Code 245. IEPA and JCAR did not suggest revising Part 245.

The Board throughout Part 245 proposed numerous revisions, including matters of spelling and concision. The Board also proposed amendments such as avoiding unnecessary nominalizations, updating statutory references, simplifying cross references, making the form of definitions more consistent with one another, and using “must” to be more clearly mandatory. The Board intended that each of its proposed revisions would be non-substantive, and the Board does not specifically discuss them in the 2024 opinion.

The Board now proposes additional revisions at first notice that build on the revisions in the 2024 proposal. As before, the Board intends that these additional proposed revisions are non-substantive and does not specifically discuss them in this opinion.

Section 245.120(b) refers to ASTM standard D1391-57. 35 Ill. Adm. Code 245.120(b). The Board requested comment on whether this reference should be updated or revised. Board Prop. at 68.

The most recent version of this standard is ASTM D1391 (1978 – Standard Method for Measurement of Odor in Atmospheres (Dilution Method), which was withdrawn without ASTM replacing it. PC 10 at 45. IEPA did not recommend revising or removing the reference because there are no other standards provided in Section 245.120(b). *Id.*

After considering IEPA’s comment and its own rules, the Board proposes to retain this reference without revision.

Part 249: Ethylene Oxide Ambient Air Monitoring

Part 249 addresses ambient air monitoring of ethylene oxide under the Act. 35 Ill. Adm. Code 249.100, citing 415 ILCS 5/9.16 (2024). IEPA and JCAR did not suggest revising Part 249.

Although the Board’s 2024 proposal included a small number of non-substantive revisions to Part 249 (Board Prop. at 2211-12), Section 249.120 sunsets this Part 24 months after January 25, 2021. 35 Ill. Adm. Code 249.120. The Board requested comment on whether it should repeal or revise the Part. Board Prop. at 68.

IEPA commented that it does not object to the Board repealing Part 249 according to the sunset provision. PC 10 at 45. After considering IEPA’s comment and its own rules, the Board now proposes to repeal Part 249.

UPDATED INFORMATION THE BOARD INTENDS TO ADOPT

During this proceeding, IEPA indicated that it would provide updated information, such as material incorporated by reference, if the Board advises IEPA that it intends to adopt it. Throughout this opinion, the Board states its intention to do so. For clarity and convenience, the Board lists below the updated versions it intends to adopt.

1. Standard Industrial Classification Manual (1987), incorporated by reference at 35 Ill. Adm. Code 201.104(a), 211.101(a)(2), and 215.105(f) and cited at 35 Ill. Adm. Code 201.102
2. ASAE S248.3 – MAR1976 (R2020) Construction and Rating of Equipment for Drying Farm Crops, incorporated by reference at 35 Ill. Adm. Code 201.104(b) and cited at 35 Ill. Adm. Code 201.146(t)
3. API Manual of Petroleum Measurement Standards Chapter 91.2 Evaporative Loss from Floating-roof Tanks of August 2000, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(1)

4. ASTM D86-23a – Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure, incorporated by reference at 35 Ill. Adm. Code 211.010(a)(3)
5. ASTM D240-19 – Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3) and cited at 35 Ill. Adm. Code 211.2770
6. ASTM D323-20a – Standard Test Method for Vapor Pressure of Petroleum Products (Reid Method), incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3), 218.112(a)(2) and 219.112(a)(2) and cited at 35 Ill. Adm. Code 211.2870 and 211.5510.
7. ASTM D369-84 (2002) – Standard Test Method for Specific Gravity of Creosote Fractions and Residue, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3), 218.112(a)(4), and 219.112(a)(4) and cited at 35 Ill. Adm. Code 211.1770.
8. ASTM D396-24 – Standard Specification for Fuel Oils, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3), 218.112(a)(5), and 219.112(a)(5) and cited at 35 Ill. Adm. Code 211.5590
9. ASTM D523-14 (2018) – Standard Test Method for Specular Gloss, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3) and 223.120(f)(2) and cited at 35 Ill. Adm. Code 211.2200 and 211.2958
10. ASTM D975-24 – Standard Specification for Diesel Fuel, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3)
11. ASTM D1826-94 (2017) – Standard Test Method for Calorific (Heating) Value of Gases in Natural Gas Range by Continuous Reading Calorimeter, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3) and cited at 35 Ill. Adm. Code 211.2770
12. ASTM D2880-23 – Standard Specification for Gas Turbine Fuel Oils, incorporated by reference at 35 Ill. Adm. Code 211.101(a)(3)
13. ANSI Standard A135.5 – Prefinished Hardboard Paneling 2020, incorporated by reference at 35 Ill. Adm. Code 211.101(a) and cited at 35 Ill. Adm. Code 211.1000
14. ASTM F1667/F1667M -21a – Standard Specification for Driven Fasteners: Nails, Spikes, and Staples for nails, brads, staples, and spikes, incorporated by reference at 35 Ill. Adm. Code 211.101 and cited at 35 Ill. Adm. Code 211.4990

15. IBC: 2024 International Building Code, incorporated by reference at 35 Ill. Adm. Code 211.101 and cited at 35 Ill. Adm. Code 211.4990
16. ASAE S248.3 – MAR1976 (R2020) Construction and Rating of Equipment for Drying Farm Crops, incorporated by reference at 35 Ill. Adm. Code 212.113(e) and cited at 35 Ill. Adm. Code 212.463
17. ASTM E11-24 – Standard Specification for Woven Wire Test Sieve Cloth and Test Sieves, incorporated by reference at 35 Ill. Adm. Code 212.113(f)
18. Standard Methods for the Examination of Water and Wastewater, Section 2540C, Total Dissolved Solids Dried at 180 °C, 24th Edition, 2020, American Public Health Association, incorporated by reference at 35 Ill. Adm. Code 212.113(g) and cited at 35 Ill. Adm. Code 212.443(h)
19. ASTM D2234-20 – Standard Practice for Collection of a Gross Sample of Coal, incorporated by reference at 35 Ill. Adm. Code 214.104(c)(1)
20. ASTM D2013-21 – Standard Practice for Preparing Coal Samples for Analysis, incorporated by reference at 35 Ill. Adm. Code 214.104(c)(1)
21. ASTM D2622-24 – Standard Practice for Preparing Coal Samples for Analysis, incorporated by reference at 35 Ill. Adm. Code 214.104(c)(2)
22. ASTM D3180-15 (2023) – Standard Practice for Calculating Coal and Coke Analyses from As-Determined to Different Bases, incorporated by reference at 35 Ill. Adm. Code 214.104(c)(2)
23. ASTM D5865-19 – Standard Test Method for Gross Calorific Value of Coal and Coke, incorporated by reference at 35 Ill. Adm. Code 214.104(c)(3)
24. ASTM D1644-01(2023): Standard Test Methods for Nonvolatile Content of Varnishes, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(1)
25. ASTM D1475-13 (2020) – Standard Test Method for Density of Liquid Coatings, Inks, and Related Products, incorporated by reference at 35 Ill. Ad. Code 215.105(a)(2)
26. ASTM D2369-24 – Standard Test Method for Volatile Content of Coatings, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(3)
27. ASTM D2879-23 – Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(4)

28. ASTM D86-23a – Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(5)
29. ASTM E260-96 (2019) – Standard Practice for Packed Column Gas Chromatography, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(6)
30. ASTM E168-16 (2022) – Standard Practices for General Techniques of Infrared Quantitative Analysis, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(6)
31. ASTM E169-16 (2022) – Standard Practices for General Techniques of Ultraviolet-Visible Quantitative Analysis, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(6)
32. ASTM D97-17b (2022): Standard Test Method for Pour Point of Petroleum Products, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(7)
33. ASTM D1946-90 (2019) – Standard Practice for Analysis of Reformed Gas by Gas Chromatography, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(8)
34. ASTM D4809-18 – Standard Test Method for Heat of Combustion of Hydrocarbon Fuels by Bomb Calorimeter (High-Precision Method), incorporated by reference at 35 Ill. Adm. Code 215.105(a)(9) and (a)(11)
35. ASTM D4953-20: Standard Test Method for Vapor Pressure of Gasoline and Gasoline-Oxygenate Blends (Dry Method), incorporated by reference at 35 Ill. Adm. Code 215.105(a)(12)
36. ASTM D4457-02 (2014) – Standard Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph, incorporated by reference at 35 Ill. Adm. Code 215.105(a)(13)
37. National Fire Codes, National Fire Protection Association, Battery March Park, Quincy, Massachusetts 02269 (2024), incorporated by reference at 35 Ill. Adm. Code 215.105(c)
38. Perry's Chemical Engineer's Handbook, 9th edition, McGraw-Hill Book (2018), incorporated by reference at 35 Ill. Adm. Code 215.105(j)
39. CRC Handbook of Chemistry and Physics – 104th edition (2023), incorporated by reference at 35 Ill. Adm. Code 215.105(k)

40. EPA-450/3-82-009 (1982) Control of Volatile Organic Compound Emissions from Large Petroleum Dry Cleaners, incorporated by reference at 35 Ill. Adm. Code 215.105(d) and cited at 35 Ill. Adm. Code 215.610(b)
41. AP-42, Compilation of Air Pollutant Emission Factors for Stationary Sources – Jan 24, USEPA, incorporated by reference at 35 Ill. Adm. Code 217.104(c) and (e)
42. Perry’s Chemical Engineer’s Handbook, 9th edition, McGraw-Hill Book (2018), incorporated by reference at 35 Ill. Adm. Code 218.112 and 219.112 and cited in 35 Ill. Adm. Code 218.109(a), 218.110(a), 218.111(a), 219.109(a), 219.110(a), and 219.111(a)
43. CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company (2024), incorporated by reference at 35 Ill. Adm. Code 218.112 and 219.112 and cited at 35 Ill. Adm. Code 218.109(a), 218.110(a), 218.111(a), 219.109(a), 219.110(a), and 219.111(a)
44. Lange’s Handbook of Chemistry, John A. Dean, editor, McGraw Hill Book Company (1998), incorporated by reference at 35 Ill. Adm. Code 218.112 and 219.112 and cited at 35 Ill. Adm. Code 218.109(a), 218.110(a), 218.111(a), 219.109(a), 219.110(a), and 219.111(a)
45. ASTM D2879-18 – Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(1) and 219.112(a)(1) and cited at 35 Ill. Adm. Code 211.2870, 211.3695, 218.109(a), 218.110(a), 218.111(a), 219.109(a), 219.110(a), and 219.111(a).
46. ASTM D323-20a – Standard Test Method for Vapor Pressure of Petroleum Products (Reid Method), incorporated by reference at 35 Ill. Adm. Code 218.112(a)(2) and 219.112(a)(2) and cited at 35 Ill. Adm. Code 211.2870
47. ASTM D86-23a – Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(3) and 219.112(a)(3) and cited at 35 Ill. Adm. Code 211.2870
48. ASTM D369-84 (2002) Standard Test Method for Specific Gravity of Creosote Fractions and Residue, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(4) and 219.112(a)(4) and cited at 35 Ill. Adm. Code 211.1770
49. ASTM D2880-23 – Standard Specification for Gas Turbine Fuel Oils, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(6) and 219.112(a)(6) and cited at 35 Ill. Adm. Code 211.4610

50. ASTM D975-24 – Standard Specification for Diesel Fuel, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(7) and 219.112(a)(7) and cited at 35 Ill. Adm. Code 211.4610
51. ASTM D3925-02 (2022) – Standard Practice for Sampling Liquid Paints and Related Pigmented Coatings, incorporated by reference in 35 Ill. Adm. Code 218.112(a)(8) and 219.112(a)(8) and cited in 35 Ill. Adm. Code 218.105(a)(1)(A) and 219.105(a)(1)(A)
52. ASTM E300-03 (2022) – Standard Practice for Sampling Industrial Chemicals, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(9) and 219.112(a)(9) and cited at 35 Ill. Adm. Code 218.105(a)(1)(B) and 219.105(a)(1)(B)
53. ASTM D1475-13 (2020) – Standard Test Method for Density of Liquid Coatings, Inks, and Related Products, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(10) and 219.112(a)(10) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(i) and 219.105(a)(2)(C)(i)
54. ASTM D2369-24 – Standard Test Method for Volatile Content of Coatings, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(11) and 219.112(a)(11) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(ii) and 219.105(a)(2)(C)(ii)
55. ASTM D3792-16 (2002) – Standard Test Method for Water Content of Water-Reducible Paints by Direct Injection into a Gas Chromatograph, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(12) and 219.112(a)(12) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(iii) and 219.105(a)(2)(C)(iii)
56. ASTM D4017-22 – Standard Test Method for Water in Paints and Paint Materials by Karl Fischer Method, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(13) and 219.112(a)(13) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(iv) and 219.105(a)(2)(C)(iv)
57. ASTM D4457-02 (2014) – Standard Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(14) and 219.112(a)(14) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(v) and 219.105(a)(2)(C)(v)
58. ASTM D2697-22 – Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(15) and 219.112(a)(15) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(vi) and 219.105(a)(2)(C)(vi)
59. ASTM E180-03 – Standard Practice for Determining the Precision of ASTM Methods for Analysis and Testing of Industrial and Specialty Chemicals,

incorporated by reference at 35 Ill. Adm. Code 218.112(a)(17) and 219.112(a)(17) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(viii) and 219.105(a)(2)(C)(viii)

60. ASTM D2372-85 (2022) – Standard Practice for Separation of Vehicle from Solvent-Reducible Parts, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(18) and 219.112(a)(18) and cited at 35 Ill. Adm. Code 218.105(a)(2)(C)(ix) and 219.105(a)(2)(C)(ix)
61. ASTM D97-17b (2022) – Standard Test Method for Pour Point of Petroleum Products, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(19) and 219.112(a)(19)
62. ASTM E168-16 (2023) – Standard Practices for General Techniques of Infrared Quantitative Analysis, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(20) and 219.112(a)(20)
63. ASTM E169-16 (2022) – Standard Practices for General Techniques of Ultraviolet-Visible Quantitative Analysis, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(21) and 219.112(a)(21)
64. ASTM E260-96 (2019) – Standard Practice for Packed Column Gas Chromatography, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(22) and 219.112(a)(22)
65. ASTM D4809-18 – Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter (Precision Method), incorporated by reference at 35 Ill. Adm. Code 218.112 and 219.112 and cited at 35 Ill. Adm. Code 218.429(c)(4) and 219.429(c)(4) and in Appendices C and G of Parts 218 and 219
66. ASTM D2099-14 (2023) – Standard Test Method for Dynamic Water Resistance of Shoe Upper Leather by the Maeser Water Penetration Tester, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(25)
67. API Manual of Petroleum Measurement Standards Chapter 19.2 Evaporative Loss from Floating-roof Tanks of August 2000, incorporated by reference at 35 Ill. Adm. Code 218.112(c) and 219.112(c) and cited at 35 Ill. Adm. Code 211.3695 and 211.6770
68. ASTM E119-24 – Standard Test Methods for Fire Tests of Building Construction and Materials, incorporated by reference at 35 Ill. Adm. Code 223.120(f)(1)

90. ASTM D6784-24 – Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method), incorporated by reference at 35 Ill. Adm. Code 229.104(h)
91. Society of Automotive Engineers test procedure SAE J1667: J1667_210802 – Snap-Acceleration Smoke Test Procedure for Heavy-Duty Diesel-Powered Vehicles: J1667_201802 (Feb 2018), incorporated by reference at 35 Ill. Adm. Code 240.107

SIP AMENDMENTS

IEPA stated that the scope of its rulemaking proposal implicates SIPs.⁴ IEPA argued that “[a]ll amendments are emissions-neutral and do not affect the overall plans or goals of attainment or nonattainment areas within the State.” SR at 3, citing TSD at 2. IEPA further argued that because the amendments are administrative in nature, “they will not affect emission levels of any pollutant within the State, nor will the proposed amendments impact reasonable further progress toward any National Ambient Air Quality Standard (NAAQS).” SR at 3; *see also* TSD at 2.

If adopted by the Board, IEPA intends to submit the following amendments to USEPA as SIP revisions:

Amendments as a general revision to the SIP: Sections 201.124, 201.147, and 201.164

Amendments to the fine particulate matter (PM_{2.5}) SIP: Sections 212.423, 212.424, 212.458, 212.700, and Section 225.307

Amendments to the SO₂ SIP: Section 214.561

Amendments to the ozone SIP: Sections 211.481, 211.880, 211.1270, 211.1670, 211.2200, 211.2310, 211.3850, 211.3967, 211.4250, and 211.5500; Sections 215.202, 215.211, 215.212, 215.213, 215.215, 215.420, 215.429, 215.466, 215.613, 215.881, and 215.883; Sections 217.750, 217.751, 217.752, 217.754, 217.756, 217.758, 217.760, 217.762, 217.764, 217.768, 217.770, 217.774, 217.776, 217.778, 217.780, and 217.782; Sections 218.204, 218.401, and 218.926; Section 219.204; and Sections 225.407 and 225.507

Amendments to the CO SIP: Section 216.382. TSD at 31.

As noted above, IEPA contends that its proposed revisions are consistent with Sections 110(l) and 193 of the CAA. IEPA asserted that these proposals repeal outdated requirements, clarify the meaning or intent of regulations, or correct typographical errors. TSD at 29. IEPA argued that they will not impact emissions from the current permitted emission units. *Id.*

Proposed SIP revisions must receive public notice and have an opportunity for hearing. TSD at 29. IEPA recommended language for the Board to provide notice of a public hearing on a proposal to amend its rules. *Id.* at 31-32, citing 35 Ill. Adm. Code 102.416.

⁴ IEPA also identifies its proposed amendments that are not part of a SIP and would not be submitted to USEPA as SIP revisions. TSD at 32.

TECHNICAL FEASIBILITY AND ECONOMIC REASONABLENESS

Request for Economic Impact Study

On June 6, 2024, the Board requested that DCEO conduct an economic impact study of that proposal and respond by September 30, 2024. *See* 415 ILCS 5/27(b) (2024). As of the date of this order, the Board has not received a response to this request. No participant at either hearing testified or commented on the Board's request or the absence of a response. Tr.1 at 14; Tr.2 at 7-8.

Regions and Sources Affected

The TSD includes three appendices. Appendix A lists sources subject to Part 225 under CAIR, Appendix B lists sources subject to Subpart N of Part 215, and Appendix C lists sources subject to Part 232. SR at 33; TSD at 29, citing TSD at 30-36.

IEPA stated that some of its proposed amendments apply statewide. SR at 32, citing 35 Ill. Adm. Code 201, 217. Other proposed revisions apply to different areas of the state. SR at 32, citing 35 Ill. Adm. Code 215, 218, 219. Some of the other proposed amendments are site-specific. SR at 33, citing 35 Ill. Adm. Code 212.423, 212.424, 214.521, 214.561, 216.382, 237.130.

However, IEPA argued that “[n]o source in Illinois will be adversely affected.” TSD at 29. It asserted that its proposed revisions “are administrative in nature and will clarify the meaning or intent of regulations, correct typos within the existing regulatory provisions and definitions, and delete obsolete provisions that are no longer applicable.” *Id.*

Projected Environmental Impact

IEPA argued that its proposed amendments will not adversely impact the air quality in Illinois. TSD at 28. It further argued that “[i]t will neither increase nor decrease current emissions levels and will not impact any of the State's future attainment or maintenance plans.” *Id.*

Technical Feasibility and Economic Reasonableness

IEPA stated that its proposed amendments repeal outdated or duplicative provisions or clarify or correct requirements. SR at 34. IEPA stressed that its proposed revisions do not add new emission limits or requirements for the sources in Illinois. SR at 34; TSD at 28. It argued that “[e]mission sources do not need to install any new controls or incur any costs to meet the requirements of the proposed rules.” *Id.* Because its proposal is not intended to have any substantive effect or economic impact on Illinois sources, IEPA concluded that its proposed revisions are both technically feasible and economically reasonable. *Id.*

The Board intended in this docket to propose only non-substantive amendments. The Board has carefully considered the record, particularly IEPA's comments on the Board's

proposal for public comment. As indicated above, the Board responded to those comments by amending numerous sections of its proposal. Based on the record now before it, the Board concludes that its first-notice proposal does not propose substantive revisions that affect compliance with existing rules. Accordingly, the Board finds that the proposal is both technically feasible and economically reasonable. *See* 415 ILCS 5/27(a) (2024). The Board further finds that these proposed amendments will not have any adverse economic impact on the people of the State of Illinois. *See* 415 ILCS 5/27(b) (2024).

FILING PUBLIC COMMENTS

The Board today proposes amendments to its air pollution rules for first-notice publication in the *Illinois Register*, which begins a comment period of at least 45 days. *See* 5 ILCS 100/5-40 (2024). The Board welcomes comment from any participant on any aspect of its proposal. The Board specifically requests comment on the matters listed below.

Public comments must be filed electronically through the Clerk's Office On-Line (COOL) at pcb.illinois.gov. The Board requests that comments indicate the docket number R18-21 of this rulemaking. Questions about electronic filing should be directed to the Board's Clerk at 312-814-3461.

1. Sections 211.5335 (Radiation Effect Coating) and 211.5336 (Radiation-Effect or Electric Coating) appear to use the same language to define their respective terms, except that Section 211.5335 applies only to Sections 218.187 and 219.187. The Board requests comment on whether these sections should be merged or otherwise revised, or if one section should be repealed.
2. Section 212.108(e) addresses the notification required before emissions testing for PM₁₀ or condensable PM₁₀. It requires the notification to state "the specific test methods from subsection (a) of this Section that will be used." Subsection (a) provides methods for testing only PM₁₀, while subsection (b) provides the method for testing condensable PM₁₀. The Board requests comment on whether Section 212.108(e) should reference test methods in "this Section" or specify "subsections (a) and (b)" instead of only subsection (a).
3. In Section 214.104(c)(3), the Board proposes to update an incorporation by reference from ASTM D3286 (1985) to ASTM D5865-19, based on IEPA's recommendation. PC 10 at 15. In Section 225.140(h)(5), the Board proposes to update an incorporation by reference from ASTM D5865-04 to ASTM D5865/D5865M-19, based on IEPA's recommendation. *Id.* at 41. These two incorporations are included in the full list of updated references above at #23 and #83, respectively. The Board requests comment on whether these ASTM standards should remain separate incorporations, or if they in fact reference the same material. If the latter, the Board requests appropriate language to update the incorporations.

4. Section 217.388(b)(2) provides how an owner or operator of an affected unit may change the method of compliance with certain control and maintenance requirements from subsection (a)(1) or (a)(2) to subsection (a)(3). The first sentence of subsection (b)(2)(B) refers to “changing the method of compliance to subsection (c),” which does not exist in this section. The Board requests comment on whether this sentence in Section 217.388(b)(2)(B) should instead refer to subsection (a)(3).
5. Sections 218.105(b)(1) and 219.105(b)(1) require separate procedures before May 1, 2012, and on and after May 1, 2012. The Board requests comment on whether the superseded requirement should be struck or whether these provisions should be otherwise revised.
6. Sections 218.112(a)(1) and 219.112(a)(1) incorporate by reference ASTM standard D2879-86. IEPA did not object to the Board updating references to the most recent version of the ASTM standard: ASTM D2879-18 – Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope. PC 10 at 25.

However, IEPA also addressed 35 Ill. Adm. Code 215.104(a)(4) by not objecting to updating the incorporation of ASTM D2879 to ASTM D2879-23, which has the same title as ASTM D2879-18. PC 10 at 17. The Board requests comment on whether Sections 218.112(a)(1) and 219.112(a)(1) should also incorporate ASTM D2879-23.

7. Sections 218.123(b) and 219.123(b) address requirements for petroleum liquid storage tanks. Section 218.123(b)(2) refers to “volatile petroleum liquid” (i.e., VPL), while Section 219.123(b)(2) refers to “VOL” (i.e., volatile organic liquid). The Board requests comment on whether both sections should refer to VPL, VOL, or both.
8. Based on IEPA’s comment that superseded standards such as Sections 218.204(a)(1) and 219.204(a)(1) can be struck as obsolete (PC 10 at 34), the Board proposed to delete those subsections and re-designate provisions in them.

Section 218.211(f) refers to an “owner or operator of a primer surfacer operation or topcoat operation, or a combined primer surfacer and topcoat operation, subject to the limitations of Section 218.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D).” Because it proposed to strike or re-designate those provisions, the Board proposed to refer instead to “the limitations of Section 218.204(a)(2), (a)(3), or (a)(4).”

Section 219.211(f), however, does not refer to subsection (a)(1)(C). It instead repeats one cross-reference, referring to “the limitations of Section 219.204(a)(1)(B), (a)(1)(B), (a)(2)(C), or (a)(2)(D).” To encompass limitations

that apply to “a primer surface operation or topcoat operation, or combined primer surfacer and topcoat operation” and to be consistent with the corresponding Section 218.211(f), the Board proposed to refer to “Section 219.204(a)(2), (a)(3), or (a)(4). The Board requests comment on these related revisions to Sections 218.204(a), 218.211(f), 219.204(a), and 219.211(f).

9. Sections 218.409 and 219.409 address testing requirements for lithographic printing. The Table of Contents for Part 218 titles Section 218.409 as “Testing for Lithographic Printing On and After March 15, 1996,” while the actual section is titled as only “Testing for Lithographic Printing.” The Table of Contents for Part 219 and the section title for Section 219.409 provide only “Testing for Lithographic Printing.” Furthermore, neither section refers to March 15, 1996, but instead March 15, 1995. The Board requests comment on whether one or both sections and Tables of Contents should be updated with the proper date, or if references to dates should be omitted in the section titles.
10. Section 218.411(b)(2)(B) refers to “eligibility for the exclusions set forth in Section 218.415(c)(3),” which that section does not include. The Board requests comment on whether Section 218.411(b)(2)(B) should instead refer to Section 218.405(c)(3), which addresses exclusions for lithographic printing lines and appears to align with corresponding Section 219.411(b)(2)(B).
11. Sections 218.960 and 219.960 address requirements that apply to Subpart RR (Miscellaneous Organic Chemical Manufacturing Processes). Section 218.960(a) refers to VOM emissions of “90.7 Mg (100 tons).” Section 219.960 refers to VOM emissions of “91 Mg (100 tons).” The Board notes that both sections include the equivalent measurement of 100 tons. The Board requests comment on whether each section should refer to 90.7 Mg, 91 Mg, or some other amount. Please also comment on any other provisions throughout Subpart B of the Board’s air regulations that may have this same apparent inconsistency.
12. Section 218.Appendix H(o)(5)(c) includes an asterisk after “(7.1)” in the lb/gal column. Appendix H does not contain language to explain the asterisk. The Board requests comment on whether the asterisk can be struck or serves a substantive purpose. If the latter, the Board requests appropriate language to include in Appendix H.
13. Section 220.100 refers to “section 111(d) and subpart B of the Clean Air Act.” However, the CAA does not contain a “subpart B.” The Board requests comment on whether this section should instead refer to 40 CFR 60, Subpart B (Standards of Performance for New Stationary Sources – Adoption and Submittal of State Plans for Designated Facilities).

14. Section 220.290(c)(1)(B) requires facilities to record and report certain exceedances from boilers and process heaters, “as required pursuant to subsection (b)(2)(A).” Subsection (b)(2)(A) addresses combustion temperature of devices other than boilers and process heaters, while subsection (b)(3) addresses boilers and process heaters. The Board requests comment on whether Section 220.290(c)(1)(B) should refer to subsection (b)(3) or another provision instead of subsection (b)(2)(A).
15. The definition of “VOM Content” in Section 223.203 refers to “South Coast Air Quality Management District Rule 1174, Ignition Method Compliance Certification Protocol (February 27, 1991), incorporated by reference at Section 223.120,” but Section 223.120 incorporates “SCAQMD Rule 1174, Ignition Method Compliance Certification Protocol (adopted October 5, 1990).” The Board requests comment on whether either or both sections should be revised to be consistent with one another. If so, the Board requests a copy of the publication as required by Section 5-75 of the IAPA.
16. Section 223.285(b)(4) provides a formula for calculating VOM content which includes dividing “by the total net weight of unit excluding container and packaging and the product.” Under the definitions in subsection (b)(3)(A), the “A” term in the formula means “the total net weight of unit excluding container and packaging.” The Board requests comment on whether “and the product” should be struck from subsection (b)(4) to be consistent with the definition in (b)(3)(A).
17. Section 226.175(l) provides requirements for testing lead emission units. Subsection (l)(4)(B) states that despite subsection (l)(4)(A), “if the owner or operator of a lead emission unit elects to perform more than 3 test runs, then the average must be calculated based upon the results of all valid test runs.” The rest of subsection (l), including subsection (l)(4)(A), refers to the “arithmetic average.” The Board requests comment on whether subsection (l)(4)(B) should also refer to the “arithmetic average.” Additionally, the Board requests comment on whether other sections or parts throughout Subpart B that may refer to an “average” should specify “arithmetic average” or should include a definition of that term to differentiate between the mean, medium, and mode.
18. Section 237.120(c)(1)(C) prohibits open burning in all municipalities “wholly within 40 air miles (64.5 kilometers) of Meigs Field, Chicago.” The Board requests comment on whether this provision can be struck as obsolete because the Meigs Field airfield no longer exists.

CONCLUSION

The Board concludes to propose non-substantive amendments to its Subtitle B air pollution rules for first-notice publication in the *Illinois Register*. The proposed amendments appear below with proposed additions underlined and proposed deletions struck through. The Board invites public comment on the entire proposal.

ORDER

The Board directs its Clerk to submit proposed non-substantive amendments to its Subtitle B air pollution rules to first-notice publication in the *Illinois Register*.

IT IS SO ORDERED.

I, Don A. Brown, Clerk of the Illinois Pollution Control Board, certify that the Board adopted the above opinion and order on April 16, 2026, by a vote of 4-0.

A handwritten signature in cursive script that reads "Don A. Brown". The signature is written in dark ink and is positioned above a horizontal line.

Don A. Brown, Clerk
Illinois Pollution Control Board

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER a: PERMITS AND GENERAL PROVISIONS

PART 201
PERMITS AND GENERAL PROVISIONS

SUBPART A: DEFINITIONS

Section	
201.101	Other Definitions
201.102	Definitions
201.103	Abbreviations and Units
201.104	Incorporations by Reference

SUBPART B: GENERAL PROVISIONS

Section	
201.121	Existence of Permit No Defense
201.122	Proof of Emissions
201.123	Burden of Persuasion Regarding Exceptions
201.124	Annual Report (Repealed)
201.125	Severability
201.126	Repealer

SUBPART C: PROHIBITIONS

Section	
201.141	Prohibition of Air Pollution
201.142	Construction Permit Required
201.143	Operating Permits for New Sources
201.144	Operating Permits for Existing Sources
201.146	Exemptions from State Permit Requirements
201.147	Former Permits (Repealed)
201.148	Operation Without Compliance Program and Project Completion Schedule (Repealed)
201.149	Operation During Malfunction, Breakdown or Startups
201.150	Circumvention
201.151	Design of Effluent Exhaust Systems

SUBPART D: PERMIT APPLICATIONS AND REVIEW PROCESS

Section	
201.152	Contents of Application for Construction Permit
201.153	Incomplete Applications (Repealed)

201.154	Signatures (Repealed)
201.155	Standards for Issuance (Repealed)
201.156	Conditions
201.157	Contents of Application for Operating Permit
201.158	Incomplete Applications
201.159	Signatures
201.160	Standards for Issuance
201.161	Conditions
201.162	Duration
201.163	Joint Construction and Operating Permits
201.164	Design Criteria (Repealed)
201.165	Hearings
201.166	Revocation
201.167	Revisions to Permits
201.168	Appeals from Conditions
201.169	Special Provisions for Certain Operating Permits
201.170	Portable Emission Units
201.175	Registration of Smaller Sources (ROSS)

SUBPART E: SPECIAL PROVISIONS FOR OPERATING PERMITS FOR CERTAIN SMALLER SOURCES

Section	
201.180	Applicability (Repealed)
201.181	Expiration and Renewal (Repealed)
201.187	Requirement for a Revised Permit (Repealed)

SUBPART F: CAAPP PERMITS

Section	
201.207	Applicability
201.208	Supplemental Information
201.209	Emissions of Hazardous Air Pollutants
201.210	Categories of Insignificant Activities or Emission Levels
201.211	Application for Classification as an Insignificant Activity
201.212	Revisions to Lists of Insignificant Activities or Emission Levels

SUBPART H: COMPLIANCE PROGRAMS AND PROJECT COMPLETION SCHEDULES

Section	
201.241	Contents of Compliance Program
201.242	Contents of Project Completion Schedule
201.243	Standards for Approval
201.244	Revisions
201.245	Effects of Approval
201.246	Records and Reports

201.247 Submission and Approval Dates

SUBPART I: MALFUNCTIONS, BREAKDOWNS OR STARTUPS

Section

201.261 Contents of Request for Permission to Operate During a Malfunction, Breakdown or Startup (Repealed)
201.262 Standards for Granting Permission to Operate During a Malfunction, Breakdown or Startup (Repealed)
201.263 Records and Reports (Repealed)
201.264 Continued Operation or Startup Prior to Granting of Operating Permit (Repealed)
201.265 Effect of Granting of Permission to Operate During a Malfunction, Breakdown or Startup (Repealed)

SUBPART J: MONITORING AND TESTING

Section

201.281 Permit Monitoring Equipment Requirements
201.282 Testing
201.283 Records and Reports

SUBPART K: RECORDS AND REPORTS

Section

201.301 Records
201.302 Reports

SUBPART L: CONTINUOUS MONITORING

Section

201.401 Continuous Monitoring Requirements
201.402 Alternative Monitoring
201.403 Exempt Sources
201.404 Monitoring System Malfunction
201.405 Excess Emission Reporting
201.406 Data Reduction
201.407 Retention of Information
201.408 Compliance Schedules

SUBPART M: PERMIT BY RULE (PBR) – GENERAL PROVISIONS

Section

201.500 Purpose
201.505 Applicability
201.510 Notice of Intent to Be Covered by a PBR (Notification)
201.515 Commencing Construction or Modification

201.520	Modification or Change in Status of an Emission Unit Covered by a PBR
201.525	Standard Conditions for PBR
201.530	Recordkeeping and Reporting
201.535	Authority to Operate
201.540	Enforcement Authority

SUBPART N: PERMIT BY RULE (PBR) – BOILERS LESS THAN OR EQUAL TO 100
MMBTU/HR

Section

201.600	Applicability
201.605	Boiler Notice of Intent to Be Covered by a PBR (Notification)
201.610	Federal NSPS and NESHAP Requirements

AUTHORITY: Implementing Sections 10, 39, and 39.5 and authorized by Section 27 of the Environmental Protection Act [415 ILCS 5/10, 27, 39, and 39.5].

SOURCE: Adopted as Chapter 2: Air Pollution, Part I: General Provisions, in R71-23, 4 PCB 191, filed and effective April 14, 1972; amended in R78-3 and 4, 35 PCB 75 and 243, at 3 Ill. Reg.30, p. 124, effective July 28, 1979; amended in R80-5, at 7 Ill. Reg. 1244, effective January 21, 1983; codified at 7 Ill. Reg. 13579; amended in R82-1 (Docket A) at 10 Ill. Reg. 12628, effective July 7, 1986; amended in R87-38 at 13 Ill. Reg. 2066, effective February 3, 1989; amended in R89-7(A) at 13 Ill. Reg. 19444, effective December 5, 1989; amended in R89-7(B) at 15 Ill. Reg. 17710, effective November 26, 1991; amended in R93-11 at 17 Ill. Reg. 21483, effective December 7, 1993; amended in R94-12 at 18 Ill. Reg. 15002, effective September 21, 1994; amended in R94-14 at 18 Ill. Reg. 15760, effective October 17, 1994; amended in R96-17 at 21 Ill. Reg. 7878, effective June 17, 1997; amended in R98-13 at 22 Ill. Reg. 11451, effective June 23, 1998; amended in R98-28 at 22 Ill. Reg. 11823, effective July 31, 1998; amended in R02-10 at 27 Ill. Reg. 5820, effective March 21, 2003; amended in R05-19 and R05-20 at 30 Ill. Reg. 4901, effective March 3, 2006; amended in R07-19 at 33 Ill. Reg. 11999, effective August 6, 2009; amended in R10-21 at 34 Ill. Reg. 19575, effective December 1, 2010; amended in R12-10 at 35 Ill. Reg. 19790, effective December 5, 2011, amended in R13-18 at 38 Ill. Reg. 1005, effective December 23, 2013; amended in R17-9 at 41 Ill. Reg. 4140, effective March 24, 2017; amended in R23-18 at 47 Ill. Reg. 12089, effective July 25, 2023; amended in R22-17 at 49 Ill. Reg. 6216, effective April 23, 2025; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

SUBPART A: DEFINITIONS

Section 201.101 Other Definitions

- a) Except as stated and unless a different meaning of a term is clear from its context, the definitions ~~of terms used~~ in this Part ~~are shall be~~ the same as those ~~used~~ in the Illinois Environmental Protection Act (~~[415 ILCS 5)]-(Act)~~.
- b) All terms in this Part defined in 35 Ill. Adm. Code 211 ~~which appear in this Part~~ have the definitions ~~inspecified by~~ 35 Ill. Adm. Code 211.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.102 Definitions

"Air Contaminant" ~~means:-~~ any solid, liquid, or gaseous matter, any odor, or any form of energy, that is capable of being released into the atmosphere from an emission source.

"Air Pollution Control Equipment" ~~means:-~~ any equipment or facility of a type intended to eliminate, prevent, reduce, or control the emission of specified air contaminants to the atmosphere.

"Air Pollution" ~~means:-~~ the presence in the atmosphere of one or more air contaminants in sufficient quantities and ~~with of such~~ characteristics and duration ~~as~~ to be injurious to human, plant, or animal life, to health, or to property, or to unreasonably interfere with the enjoyment of life or property.

"Ambient Air" ~~means:-~~ that portion of the atmosphere external to buildings comprising emission sources.

"Ambient Air Quality Standard" ~~means:- those~~ standards promulgated ~~from time to time~~ by the Pollution Control Board ~~under (Board) pursuant to authority contained in the Act and found~~ at 35 Ill. Adm. Code 243, or by the United States Environmental Protection Agency ~~under (USEPA) pursuant to authority contained in~~ 42 U.S.C. USC 7401 et seq., as amended from time to time.

"Clean Air Act" ~~or "CAA" means:-~~ the Clean Air Act of 1970, as amended, including the Clean Air Act Amendments of 1977, as amended (42 USCU.S.C. 7401 et seq.).

"Commence" ~~means:-~~ the act of entering into a binding agreement or contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction or modifications.

"Construction" ~~means commencing;—commencement of~~ on-site fabrication, erection, or installation of an emission source or ~~of~~ air pollution control equipment.

"Emission Source" ~~means:—~~ any equipment or facility of a type capable of emitting specified air contaminants to the atmosphere.

"Existing Air Pollution Control Equipment" ~~means:—~~ any air pollution control equipment, the construction or modification which ~~has~~ commenced ~~before prior to~~ April 14, 1972.

"Existing Emission Source" ~~means:—~~ any emission source, the construction or modification of which ~~has~~ commenced ~~before prior to~~ April 14, 1972.

"Modification" ~~means:—~~ any physical change in, or change in the method of operations of, an emission source or ~~of~~ air pollution control equipment which increases the amount of any specified air contaminant emitted by ~~the such~~ source or equipment or which results in the emission of any specified air contaminant not previously emitted. It ~~is shall be~~ presumed that an increase in the use of raw materials, the time of operation, or the rate of production will change the amount of any specified air contaminant emitted. ~~Despite Notwithstanding~~ any other provisions of this definition, for ~~purposes of~~ permits issued ~~under pursuant to~~ Subpart D, the Illinois Environmental Protection Agency (~~Agency~~) may specify conditions under which an emission source or air pollution control equipment may be operated without causing a modification ~~under this definition as herein defined~~, and normal cyclical variations, before the date operating permits are required ~~are shall~~ not be considered modifications.

"New Air Pollution Control Equipment" ~~means:—~~ any air pollution control equipment, the construction or modification of which is commenced on or after April 14, 1972.

"New Emission Source" ~~means:—~~ any emission source, the construction or modification of which is commenced on or after April 14, 1972.

"Owner or Operator" ~~means:—~~ any person who owns, leases, controls, or supervises an emission source or air pollution control equipment.

"Person" ~~means:—~~ any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, ~~or~~ agency; ~~any~~ political subdivision of this State; ~~any~~ other State or political subdivision or agency ~~of any other State thereof~~; or any legal successor, representative, agent, or agency of the foregoing.

"PSD Increment" ~~means:—~~ the maximum allowable increase over baseline concentration of any air contaminant as determined by Section 163 of the

~~CAA Clean Air Act~~ (42 ~~USC U.S.C.~~ 7473) and regulations adopted ~~under~~
~~it thereunder.~~

"Specified Air Contaminant" ~~means:—~~ any air contaminant ~~foras to~~ which this Subtitle contains emission standards or other specific limitations and any contaminant regulated in Illinois ~~underpursuant to~~ Section 9.1 of the Illinois Environmental Protection Act.

"Standard Industrial Classification Manual" ~~means:—~~ the Standard Industrial Classification Manual (~~1987~~)(1972), Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Section 201.103 Abbreviations and Units

a) This Part uses the ~~The~~ following abbreviations ~~have been used in this Part:~~

Act	Illinois Environmental Protection Act
<u>AER</u>	<u>Annual Emissions Report</u>
Agency	Illinois Environmental Protection Agency
~~btu or Btu~~	British thermal units
CAA	Clean Air Act
CAAPP	Clean Air Act Permit Program
CO	Carbon monoxide
<u>CO₂</u>	<u>Carbon dioxide</u>
CO ₂ e	Carbon dioxide equivalent
gal	gallons
HAPs	hazardous air pollutants
hp	horsepower
hr	hour
<u>gal/mo</u>	<u>gallons per month</u>
<u>gal/yr</u>	<u>gallons per year</u>
kPa	kilopascals
kPa absolute	kilopascals absolute
kW	kilowatts
l	liters
<u>lbs</u>	<u>pounds</u>
Mg	megagrams
m ³	cubic meters
MM	million
MW	megawatts; one million watts
NESHAP	National Emission Standards for Hazardous Air Pollutants
<u>NMOC</u>	<u>nonmethane organic compounds</u>
NO _x	nitrogen oxide
NSPS	New Source Performance Standards

NSR	New Source Review
PBR	permit by rule
PM	particulate matter
PM ₁₀	particulate matter with an aerodynamic diameter less than or equal to 10 micrometers
PM _{2.5}	particulate matter with an aerodynamic diameter less than or equal to 2.5 micrometers
PSD	Prevention of Significant Deterioration
psi	pounds per square inch
psia	pounds per square inch absolute
ROSS	Registration of Smaller Sources
SO ₂	sulfur dioxide
~~TPY~~	~~tons per year~~
USEPA	United States Environmental Protection Agency
VOM	volatile organic material
yr	year

- b) This Part uses the ~~The~~ following conversion factors ~~have been used in this Part:~~

English	Metric
1 gal	3.785 l
1000 gal	3.785 m ³
1 hp	0.7452 kW
1 MMbtu/hr	0.293 MW
1 psi	6.897 kPa

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.104 Incorporations by Reference

The following materials are incorporated by reference. These incorporations ~~by reference~~ do not include any later amendments or editions:

- a) Standard Industrial Classification Manual ~~(1987)~~(1972), Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.
- b) ASAE Standard S248.3-MAR1976 (R2020) Construction and Rating of Equipment for Drying Farm Crops~~248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous Flow Grain Dryers~~, American Society of Agricultural Engineers, 2950 Niles Road, St. Joseph, MI 49085.
- c) Prevention of Significant Deterioration of Air Quality, 40 CFR 52.21 ~~(2024)~~(2015).
- d) Standards of Performance for New Stationary Sources, 40 CFR 60:

- 1) Subpart A – General Provisions ~~(2024)(2015)~~;
 - 2) Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units, Subpart Dc ~~(2024)(2015)~~;
 - 3) Appendix A-4, Reference Method 10 – Determination of Carbon Monoxide Emissions from Stationary Sources ~~(2024)(2015)~~; and
 - 4) Subpart Ja – Standards of Performance for Petroleum Refineries for Which Construction, Reconstruction, or Modification Commenced After May 14, 2007 ~~(2024)(2015)~~.
- e) National Emission Standards for Hazardous Air Pollutants for Source Categories, 40 CFR 63:
- 1) Subpart A – General Provisions ~~(2024)(2015)~~;
 - 2) Subpart DDDDD – National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters ~~(2024)(2015)~~; and
 - 3) Subpart JJJJJ – National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers Area Sources ~~(2024)(2015)~~.
- f) Requirements for Preparation, Adoption, and Submittal of Implementation Plans, 40 CFR 51. Appendix P: Minimum Emissions Monitoring Requirements (2024).

SUBPART B: GENERAL PROVISIONS

Section 201.121 Existence of Permit No Defense

The existence of a permit under this Part ~~is~~shall not ~~constitute~~ a defense to a violation of the Act or any rule or regulation of this Chapter; except for construction or operation without a permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.122 Proof of Emissions

~~Despite~~Notwithstanding other provisions of this Chapter, evidence that specified air contaminant emissions, as calculated on the basis of standard emission factors or other factors generally accepted ~~as true~~ by ~~those~~ persons engaged in the field of air pollution control, exceed the limitations ~~underprescribed by~~ this Chapter ~~constitutesshall constitute~~ adequate proof of a violation; in the absence of ~~establishinga showing~~ that actual emissions are in compliance.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.123 Burden of Persuasion Regarding Exceptions

In any proceeding ~~underpursuant to~~ this Chapter, if an exception ~~stated~~ in this Chapter would limit an obligation, limit a liability, or eliminate ~~either~~ an obligation or a liability, the person who would benefit from ~~the application of~~ the exception ~~has~~shall have the burden of persuasion that the exception applies and that the terms of the exception have been met.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.124 Annual Report (Repealed)

~~The Agency shall annually prepare and submit to the Board an Air Contaminant Emission Report which lists the emission sources in the State for which an operating permit is required under this Part, describes the type, quantity and concentrations of the various specified contaminants being emitted and describes the existing and planned controls and the scheduled dates for completion of improvements.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 201.125 Severability

If any provision of ~~this Chapter these rules or regulations is adjudged invalid~~, or ~~its if the application thereof~~ to any person or in any circumstance is adjudged invalid, ~~does such invalidity shall~~ not affect the validity of this Chapter as a whole or ~~any portion of any part, subpart, sentence or clause thereof~~ not adjudged invalid.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.126 Repealer

Each provision of the Rules and Regulations Governing the ~~Control~~control of Air Pollution, as amended August 19, 1969, applying to an emission source ~~will~~ shall remain in full force and effect unless and until ~~that such~~ source is required to comply with a corresponding provision of this Chapter.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART C: PROHIBITIONS

Section 201.141 Prohibition of Air Pollution

~~A~~ No person ~~must not shall~~ cause or threaten or allow the discharge or emission of any contaminant into the environment in any State so as, either alone or in combination with

contaminants from other sources, to cause or tend to cause air pollution in Illinois, ~~or so as to~~ violate the provisions of this Chapter, or ~~so as to~~ prevent the attainment or maintenance of any applicable ambient air quality standard.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.142 Construction Permit Required

~~A No~~ person ~~must not shall~~ cause or allow the construction of any new emission source or any new air pollution control equipment, or cause or allow the modification of any existing emission source or air pollution control equipment, without first obtaining a construction permit from the Agency, except ~~under Section as provided in Sections~~ 201.146 or ~~Section~~ 201.170(b) ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.143 Operating Permits for New Sources

~~A No~~ person ~~must not shall~~ cause or allow the operation of any new emission source or new air pollution control equipment ~~of a type~~ for which a construction permit is required by Section 201.142 without first obtaining an operating permit from the Agency, except for ~~such~~ testing operations ~~as may be~~ authorized by the construction permit. Applications for operating permits ~~must shall~~ be made at ~~such~~ times and contain ~~such~~ information, ~~(in addition to the information~~ required by Section 201.157, as ~~shall be~~ specified in the construction permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.144 Operating Permits for Existing Sources

~~A No~~ person ~~must not shall~~ cause or allow the operation of any existing emission source or any existing air pollution control equipment without first obtaining an operating permit from the Agency, except as ~~exempted provided in~~ Section 201.146. ~~Appendix C lists dates~~ ~~Dates~~ on which permits were required ~~are shown in Appendix C~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.146 Exemptions from State Permit Requirements

Construction or operating permits ~~under, pursuant to~~ Sections 201.142, 201.143, and 201.144 ~~of this Part~~, are not required for the classes of equipment and activities ~~listed below~~ in this Section. The permitting exemptions in this Section do not relieve the owner or operator of any source from any obligation to comply with any other applicable requirements, including the obligation to obtain a permit ~~under, pursuant to~~ Sections 9.1(d) and 39.5 of the Act, ~~Sections~~ ~~sections~~ 165, 173, and 502 of the ~~CAA, Clean Air Act~~ or any other applicable permit or registration requirements.

- a) Air contaminant detectors or recorders, combustion controllers, or combustion

shutoffs;

- b) Air conditioning or ventilating equipment not designed to remove air contaminants generated by or released from associated equipment;
- c) Each fuel burning emission unit for indirect systems and for heating and reheating furnace systems used exclusively for residential, or commercial establishments using gas, ~~and/or~~ fuel oil, or both exclusively with a design heat input capacity of less than 14.6 MW (50 MMbtu/hr), except that a permit ~~is~~ shall be required for any such emission unit with a design heat input capacity of at least 2,930 kW (10 MMbtu/hr) that was constructed, reconstructed, or modified after June 9, 1989, and ~~that is~~ subject to 40 CFR 60, Subpart ~~subpart~~ D;
- d) Each fuel burning emission unit other than those ~~listed in subsection (c) of this Section~~ for direct systems used for comfort heating purposes and indirect heating systems with a design heat input capacity of less than 2,930 kW (10 MMbtu/hr);
- e) Internal combustion engines or boilers (including the fuel system) of motor vehicles, locomotives, aircraft ~~air-craft~~, watercraft, lift trucks, ~~lift trucks~~ and other vehicles powered by nonroad engines;
- f) Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including associated laboratory fume hoods, vacuum producing devices, and control devices installed primarily to address potential accidental releases;
- g) Coating operations located at a source up to not in excess of ~~14~~ 18,925 l (5,000 gal) of coating (including thinner) per year;
- h) Any emission unit acquired exclusively for domestic use, except that a permit ~~is~~ shall be required for any incinerator and for any fuel combustion emission unit using solid fuel with a design heat input capacity of 14.6 MW (50 MMbtu/hr) or more;
- i) Any stationary internal combustion engine with a rated power output of less than 1118 kW (1500 bhp) or stationary turbine, except that a permit ~~is~~ shall be required for ~~the following~~:
 - 1) Any internal combustion engine with a rating ~~at~~ equal to or greater than 500 bhp output that is subject to ~~the control requirements of~~ 35 Ill. Adm. Code 217.388(a) or (b); or
 - 2) Any stationary gas turbine engine with a rated heat input at peak load of 10.7 gigajoules/hr (10 MMbtu/hr) or more that is constructed, reconstructed, or modified after October 3, 1977, and ~~that is~~ subject to ~~requirements of~~ 40 CFR 60, Subpart ~~subpart~~ GG;

- j) Rest room facilities and associated cleanup operations, and stacks or vents used to prevent the escape of sewer gases through plumbing traps;
- k) Safety devices designed to protect life and limb, ~~if provided that~~ a permit is not otherwise required for the emission unit with which the safety device is associated;
- l) Storage tanks and fuel dispensing equipment that are both used ~~to dispense for the dispensing of~~ fuel to mobile sources, including on-road and off-road vehicles, for use in ~~the such~~ mobile sources;
- m) Printing operations with aggregate organic solvent usage that never exceeds 2,839 l (750 gal) per year from all printing lines at the source, including organic solvent from inks, ~~diluents~~ ~~dilutents~~, fountain solutions, and cleaning materials;
- n) Storage tanks of:
 - 1) Organic liquids with a capacity of less than 37,850 l (10,000 gal), ~~if provided~~ the storage tank is not used to store any amount of material or mixture of any material listed as a ~~HAP~~ ~~hazardous air pollutant~~ ~~under pursuant to Section~~ ~~section~~ 112(b) of the ~~CAA~~ ~~Clean Air Act~~;
 - 2) Any size containing exclusively soaps, detergents, surfactants, waxes, glycerin, vegetable oils, greases, animal fats, sweetener, corn syrup, aqueous salt solutions, or aqueous caustic solutions, ~~if provided~~ an organic solvent has not been mixed with ~~the such~~ materials; or
 - 3) Any size containing virgin or re-refined distillate oil (including kerosene and diesel fuel), hydrocarbon condensate from natural gas pipeline or storage systems, lubricating oil, or residual fuel oils;
- o) Threaded pipe connections, vessel manways, flanges, valves, pump seals, pressure relief valves, pressure relief devices, and pumps;
- p) Sampling connections used exclusively to withdraw materials for testing and ~~analysis~~ ~~analyses~~;
- q) All storage tanks of Illinois crude oil with capacity of less than 151,400 ~~l~~ (40,000 gal) located on oil field sites;
- r) All organic material-water single or multiple compartment effluent water separator facilities for Illinois crude oil of vapor pressure of less than 34.5 kPa absolute (5 psia);
- s) Grain-handling operations, ~~excluding~~ ~~exclusive of~~ grain-drying operations, with an

annual grain through-put not exceeding 300,000 bushels;

- t) Grain-drying operations with a total grain-drying capacity not exceeding 750 bushels per hour for 5% moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineers Standard [S248.3-MAR1976 \(R2020\), Construction and Rating of Equipment for Drying Farm Crops, incorporated by reference at Section 201.104\(b\)248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous Flow Grain Dryers](#);
- u) Portable grain-handling equipment and one-turn storage space;
- v) Cold cleaning degreasers that are not in-line cleaning machines, where the vapor pressure of the solvents used never exceeds 2 kPa (15 mmHg or 0.3 psi) measured at [38 °C 38°C \(100 °F\) \(100°F\)](#) or 0.7 kPa (5 mmHg or 0.1 psi) at [20 °C 20°C \(68 °F\) \(68°F\)](#);
- w) Coin-operated dry cleaning operations;
- x) Dry cleaning operations at a source that consume less than 30 [galgallons](#) per month of perchloroethylene;
- y) Brazing, soldering, wave soldering, or welding equipment, including associated ventilation hoods;
- z) Cafeterias, kitchens, and other similar facilities, including smokehouses, used for preparing food or beverages, but not including facilities used [for in the](#) manufacturing and wholesale distribution of food, beverages, food or beverage products, or food or beverage components;
- aa) Equipment for carving, cutting, routing, turning, drilling, machining, sawing, surface grinding, sanding, planing, buffing, sand blast cleaning, shot blasting, shot peening, or polishing ceramic artwork, leather, metals (other than beryllium), plastics, concrete, rubber, paper stock, wood, or wood products, where [this such](#) equipment is either:
 - 1) Used for maintenance activity;
 - 2) Manually operated;
 - 3) Exhausted inside a building; or
 - 4) Vented externally with emissions controlled by an appropriately operated cyclonic inertial separator (cyclone), filter, [electrostatic precipitator](#), [electro-static precipitator](#) or a scrubber;
- bb) Feed mills that produce no more than 10,000 tons of feed per calendar year,

- ~~if provided that~~ a permit is not otherwise required for the source ~~under~~pursuant to Section 201.142, 201.143, or 201.144;
- cc) Extruders used ~~to extrude for the extrusion of~~ metals, minerals, plastics, rubber, or wood, ~~but~~ excluding:
- 1) Extruders used ~~to manufacture in the manufacture of~~ polymers;
 - 2) Extruders using foaming agents or release agents that contain ~~VOM~~volatile organic materials or Class I or II substances subject to ~~the requirements of~~ Title VI of the ~~CAA~~Clean Air Act; and
 - 3) Extruders processing scrap material that was produced using foaming agents containing ~~VOM~~volatile organic materials or Class I or II substances subject to ~~the requirements of~~ Title VI of the ~~CAA~~Clean Air Act;
- dd) Furnaces used ~~to melt for melting~~ metals, other than beryllium, with a brim full capacity of less than 450 cubic inches by volume;
- ee) Equipment used ~~to melt or apply for the melting or application of~~ less than 22,767 kg/yr (50,000 lbs/yr) of wax to which no organic solvent has been added;
- ff) Equipment used ~~to fill for filling~~ drums, pails, or other packaging containers, ~~but~~ excluding aerosol cans, with soaps, detergents, surfactants, lubricating oils, waxes, vegetable oils, greases, animal fats, glycerin, sweeteners, corn syrup, aqueous salt solutions, or aqueous caustic solutions, ~~if provided~~ an organic solvent has not been mixed with ~~thesuch~~ materials;
- gg) Loading and unloading systems for railcars, tank trucks, or watercraft that handle only ~~the following liquid materials~~: soaps, detergents, surfactants, lubricating oils, waxes, glycerin, vegetable oils, greases, animal fats, sweetener, corn syrup, aqueous salt solutions, or aqueous caustic solutions, ~~if provided~~ an organic solvent has not been mixed with such materials;
- hh) Equipment used ~~to mix and blend for the mixing and blending of~~ materials at ambient temperatures to make ~~water-based~~ ~~water-based~~ adhesives, ~~if provided~~ each material mixed or blended contains less than 5% organic solvent by weight;
- ii) Die casting machines where a metal or plastic is formed under pressure in a die located at a source with a through-put of less than 2,000,000 lbs of metal or plastic per year, in the aggregate, from all die casting machines;
- jj) Air pollution control devices used exclusively with other equipment that is exempt from permitting ~~under, as provided in~~ this Section;

- kk) (Reserved);
- ll) Photographic process equipment by which an image is reproduced upon material sensitized to radiant energy;
- mm) Equipment used for hydraulic or hydrostatic testing;
- nn) General vehicle maintenance and servicing activities conducted at a source, motor vehicle repair shops, and motor vehicle body shops, but ~~excluding~~not including motor vehicle refinishing;
- oo) Equipment using water, water and soap, or detergent, or a suspension of abrasives in water for ~~purposes of~~ cleaning or finishing, ~~if provided~~ no organic solvent has been added to the water;
- pp) Administrative activities, including, ~~but not limited to,~~ paper shredding, copying, photographic activities, and blueprinting machines, ~~but excluding.~~ ~~This does not include~~ incinerators;
- qq) Laundry dryers, extractors, and tumblers processing that have been cleaned with water solutions of bleach or detergents that are:
 - 1) Located at a source and process clothing, bedding, and other fabric items used at the source, ~~if provided that~~ any organic solvent present in ~~the such~~ items before processing that is retained from cleanup operations ~~must shall~~ be addressed as part of the VOM emissions from use of cleaning materials;
 - 2) Located at a commercial laundry; or
 - 3) Coin operated;
- rr) Housekeeping activities for cleaning purposes, including collecting spilled and accumulated materials ~~and operating, including operation of~~ fixed vacuum cleaning systems specifically for ~~these such~~ purposes, but ~~excluding~~not including use of cleaning materials that contain organic solvent;
- ss) Refrigeration systems, including storage tanks used in refrigeration systems, but excluding any combustion equipment associated with ~~these such~~ systems;
- tt) Activities associated with the construction, on-site repair, maintenance, or dismantlement of buildings, utility lines, pipelines, wells, excavations, earthworks, and other structures that do not constitute emission units;
- uu) Piping and storage systems for natural gas, propane, and liquefied petroleum gas;

- vv) Water treatment or storage systems, as follows:
 - 1) Systems for potable water or boiler feedwater;
 - 2) Systems, including cooling towers, for process water, ~~if this provided that such~~ water has not been in direct or indirect contact with process streams that contain ~~VOM~~~~volatile organic material or materials~~ listed as ~~HAP~~~~hazardous air pollutants~~ ~~underpursuant to Section~~section 112(b) of the ~~CAA~~~~Clean Air Act~~;
- ww) Lawn care, landscape maintenance, and ~~groundskeeping~~~~grounds-keeping~~ activities;
- xx) Containers, reservoirs, or tanks used exclusively in dipping operations to coat objects with oils, waxes, or greases, ~~if provided~~ no organic solvent has been mixed with ~~these such~~ materials;
- yy) Use of consumer products, including hazardous substances as that term is defined in the Federal Hazardous Substances Act (15 USC 1261 et seq.), where the product is used at a source in the same manner as normal consumer use;
- zz) Activities directly used ~~to diagnose and treat~~ ~~in the diagnosis and treatment of~~ disease, injury, or other medical condition;
- aaa) Activities associated with the construction, repair, or maintenance of roads or other paved or open areas, including operation of street sweepers, vacuum trucks, spray trucks, and other vehicles related to the control of fugitive emissions of ~~these such~~ roads or other areas;
- bbb) Storage and handling of drums or other transportable containers, where the containers are sealed during storage and handling;
- ccc) Activities at a source associated with ~~maintaining~~~~the maintenance~~, ~~repairing~~, ~~repair~~ or ~~dismantling~~~~dismantlement of~~ an emission unit or other equipment installed at the source, ~~but excluding~~~~not including~~ the shutdown of the unit or equipment. ~~These activities include~~, ~~including~~ preparation for maintenance, repair, or dismantlement, and preparation for subsequent startup, including ~~preparing~~~~preparation of~~ a shutdown vessel for entry, ~~replacing~~~~replacement of~~ insulation, welding and cutting, and steam purging ~~of~~ a vessel ~~before~~~~prior to~~ startup;
- ddd) Equipment used for corona arc discharge surface treatment of plastic with a power rating of 5 kW or less or equipped with an ozone destruction device;
- eee) Equipment used to seal or cut plastic bags for commercial, industrial, or domestic use;

- fff) Each direct-fired gas dryer used for a washing, cleaning, coating, or printing line, but excluding:
- 1) Dryers with a rated heat input capacity of 2,930 kW (10 MMbtu/hr) or more; and
 - 2) Dryers for which emissions other than those attributable to combustion of fuel in the dryer, including emissions attributable to using or applying ~~use or application of~~ cleaning agents, washing materials, coatings, or inks or other process materials that contain VOM ~~volatile organic material~~ are not addressed as part of the permitting of the ~~such~~ line, if a permit is otherwise required for the line;
- ggg) Municipal solid waste landfills with a maximum total design capacity of less than 2.5 million Mg or 2.5 million m³ that are not required to install a gas collection and control system under ~~pursuant to~~ 35 Ill. Adm. Code 220 or 800 through 849 or Section 9.1 of the Act;
- hhh) Replacement or addition of air pollution control equipment for existing emission units in circumstances where:
- 1) The existing emission unit is permitted and has operated in compliance for the past year;
 - 2) The new control equipment will provide equal or better control of the target pollutants;
 - 3) The new control device will not be accompanied by a net increase in emissions of any non-targeted criteria air pollutant;
 - 4) Different State or federal regulatory requirements or newly proposed regulatory requirements will not apply to the unit; and

BOARD NOTE: All sources must comply with underlying federal regulations and future State regulations.

- 5) Where the existing air pollution control equipment had required monitoring equipment, the new air pollution control equipment will be equipped with the instrumentation and monitoring devices that are typically installed on the new equipment of that type.

BOARD NOTE: For major sources subject to Section 39.5 of the Act, where the new air pollution control equipment will require a different compliance determination method in the facility's CAAPP permit, the

facility may need a permit modification to address the changed compliance determination method;

- iii) Replacement, addition, or modification of emission units at facilities with federally enforceable State operating permits limiting their potential to emit in circumstances where:
 - 1) The potential to emit any regulated air pollutant in the absence of air pollution control equipment from the new emission unit, or the increase in the potential to emit resulting from the modification of any existing emission unit, is less than 0.1 ~~lb~~pound per hour or 0.44 tons per year;
 - 2) The raw materials and fuels used or present in the emission unit that cause or contribute to emissions, based on the information ~~contained~~ in Material Safety Data Sheets for those materials, ~~do not contain~~ lessequal to or greater than 0.01% ~~percent~~ by weight of any HAP~~hazardous air pollutant~~ as defined under ~~Section~~section 112(b) of the ~~CAA~~federal Clean Air Act;
 - 3) The emission unit or modification is not subject to an emission standard or other regulatory requirement ~~under~~pursuant to ~~Section~~section 111 of the ~~CAA~~federal Clean Air Act;
 - 4) Potential emissions of regulated air pollutants from the emission unit or modification will not, in combination with emissions from existing units or other proposed units, trigger permitting requirements under Section 39.5, permitting requirements under ~~Section~~section 165 or 173 of the ~~CAA~~federal Clean Air Act, or the requirement to obtain a revised federally enforceable State operating permit limiting the source's potential to emit; and
 - 5) The source is not currently the subject of a Non-compliance Advisory, ~~CAA~~Clean Air Act Section 114 Request, Violation Notice, Notice of Violation, Compliance Commitment Agreement, Administrative Order, or civil or criminal enforcement action, related to the air emissions of the source;
- jjj) Replacement, addition, or modification of emission units at permitted sources that are not major sources subject to Section 39.5 of the Act and that do not have a federally enforceable State operating permit limiting their potential to emit, in circumstances where:
 - 1) The potential to emit of any regulated air pollutant in the absence of air pollution control equipment from the new emission unit, or the increase in the potential to emit resulting from the modification of any existing emission unit is either:

- A) Less than 0.1 ~~lb~~pound per hour or 0.44 tons per year; or
 - B) Less than 0.5 ~~lb~~pound per hour, and the permittee provides prior notification to the Agency of the intent to construct or install the unit. The unit may be constructed, installed, or modified immediately after the notification is filed;
 - 2) The emission unit or modification is not subject to an emission standard or other regulatory requirement under ~~Section~~section 111 or 112 of the ~~CAA~~federal Clean Air Act;
 - 3) Potential emissions of regulated air pollutants from the emission unit or modification will not, in combination with the emissions from existing units or other proposed units, trigger permitting requirements under Section 39.5 of the Act or the requirement to obtain a federally enforceable permit limiting the source's potential to emit; and
 - 4) The source is not currently the subject of a Non-compliance Advisory, ~~CAA~~Clean Air Act Section 114 Request, Violation Notice, Notice of Violation, Compliance Commitment Agreement, Administrative Order, or civil or criminal enforcement action, related to the air emissions of the source;
- kkk) The owner or operator of a CAAPP source is not required to obtain an air pollution control construction permit for the construction or modification of an emission unit or activity that is an insignificant activity ~~underas addressed by~~ Section 201.210 or 201.211 of this Part. The owner or operator must still follow ~~Section 201.212 of this Part must still be followed~~, as applicable. Other than excusing the owner or operator of a CAAPP source from the requirement to obtain an air pollution control construction permit for the emission units or activities, nothing in this subsection ~~alters~~shall alter or ~~affects~~affect the liability of the CAAPP source for compliance with emission standards and other requirements that apply to the emission units or activities, either individually or in conjunction with other emission units or activities constructed, modified, or located at the source;
- lll) Plastic injection molding equipment with an annual through-put not exceeding 5,000 tons of plastic resin in the aggregate from all plastic injection molding equipment at the source, and all associated plastic resin loading, unloading, conveying, mixing, storage, grinding, and drying equipment and associated mold release and mold cleaning agents.
- mmm) Sources required to comply with Section 210.175 (Registration of Smaller Sources ~~(ROSS)~~).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.147 Former Permits (Repealed)

~~Any permit issued by the Agency, or any predecessor, is subject to the requirements of Sections 201.121, 201.142 through 201.146 and Subparts D through F, and shall be revised or revoked as necessary to conform to this Chapter.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 201.148 Operation Without Compliance Program and Project Completion Schedule (Repealed)

- a) ~~no person shall cause or allow the operation of an emission source which is not in compliance with the requirements of 35 Ill. Adm. Code 215 unless such person is in compliance with a compliance program as provided for in Subpart H and in the applicable provisions of 35 Ill. Adm. Code 215.~~
- b) ~~Any compliance plan or project completion schedule, where applicable, shall be a binding condition of the operating permit for the source.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____).

Section 201.149 Operation During Malfunction, Breakdown or Startups

A person must not cause or allow the continued operation of an emission source during malfunction or breakdown of the emission source or related air pollution control equipment if ~~that such~~ operation would cause a violation of the applicable standards or limitations ~~stated~~ in Subchapter c, except as specifically provided for by ~~the such~~ standard or limitation. A person must not cause or allow violation of the applicable standards or limitations ~~stated~~ in Subchapter c during startup, except as specifically provided for by ~~the such~~ standard or limitation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.150 Circumvention

Except ~~underas provided in~~ 35 Ill. Adm. Code 212.207, 214.162, and 214.182 through 214.185, and except as further provided by Section 201.151, ~~a no~~ person ~~must not shall~~ cause or allow the construction or operation of any device or any means, including the creation or use of any corporations or other business entities having interlocking directorships or substantially identical ownerships which, without resulting in a reduction in the total amount of any air contaminant emitted, conceals, dilutes, or permits air contaminant emissions which would otherwise violate these regulations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.151 Design of Effluent Exhaust Systems

- a) ~~A No~~ person ~~must not shall~~ cause or allow the operation of an emission source or ~~of~~ air pollution control equipment without providing one or more stacks or vents ~~that are~~ designed to prevent the concentration of any air contaminant from:
- 1) Exceeding any applicable ambient air quality standard, either alone or in combination with air contaminants from other sources; ~~or,~~
 - 2) Causing or tending to cause air pollution, either alone or in combination with air contaminants from other sources; or,
 - 3) Exceeding the emission standards and limitations of Subchapter ~~csubchapter (c) of this Chapter.~~
- b) Exception. This rule ~~doesshall~~ not apply to emission sources, such as stock piles of particulate matter, that cannot reasonably be expected to be emitted through a stack because of the disperse nature of the emission sources which, because of the disperse nature of the such emission sources, cannot reasonably be expected to be emitted through a stack.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART D: PERMIT APPLICATIONS AND REVIEW PROCESS

Section 201.152 Contents of Application for Construction Permit

- a) An application for a construction permit ~~must shall~~ contain, at as a minimum, ~~the following data and information:~~
- 1) the nature of the emission unit and air pollution control equipment, including the expected life and deterioration rate;
 - 2) information concerning processes to which the emission unit or air pollution control equipment is related;
 - 3) the quantities and types of raw materials to be used in the emission unit or air pollution control equipment;
 - 4) the nature, specific points of emission, and quantities of uncontrolled and controlled air contaminant emissions at the source that includes the emission unit or air pollution control equipment;
 - 5) the type, size, efficiency, and specifications (including engineering drawings, plans, and specifications certified ~~to~~ by a registered Illinois professional engineer) of the proposed emission unit or air pollution control equipment; and

- 6) maps, statistics, and other data reasonably sufficient to describe the location of the emission unit or air pollution control equipment.
- b) The Agency may waive the submission by the applicant of ~~such~~ engineering drawings, plans, specifications, or ~~such~~ other portions of the above data or information ~~it deems as it shall deem~~ inappropriate or unnecessary to the construction permit application.
- c) The Agency may adopt procedures that require data and information, in addition to ~~what subsection (a) requires and in amplification of the matters specified in the first sentence of this Section~~, that are reasonably designed to determine compliance with this Chapter and ambient air quality standards, or that ~~establish set forth~~ the format by which all data and information ~~must shall~~ be submitted.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.156 Conditions

The Agency may impose ~~in a construction permit~~ ~~such~~ conditions ~~in a construction permit as may be necessary~~ to accomplish the purposes of the Act, and ~~that as~~ are not inconsistent with the regulations promulgated by the Board ~~under the Act~~ ~~thereunder~~. Except as ~~herein~~ specified ~~in it~~, nothing in this Chapter ~~is meant shall be deemed~~ to limit the Agency's power ~~to impose condition of the Agency in this regard~~. ~~These~~ ~~Such~~ conditions may include conditions specifying any testing operations that may be conducted under the construction permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.157 Contents of Application for Operating Permit

- a) An application for an operating permit must contain the data and information ~~specified in~~ Section 201.152. Each application must list all individual emission units and air pollution equipment for which a permit is sought. Any applicant may seek to obtain from the Agency a permit for each emission unit, ~~multiple or~~ ~~such~~ emission units ~~that as~~ are similar in design or principle of operation or function, or ~~for~~ all emission units encompassed in an identifiable operating unit, unless ~~the applicant is~~ subject to the provisions of Section 201.169 ~~of this Subpart~~ or required to obtain an operating permit with ~~federally~~ ~~federal~~ enforceable conditions in compliance with Section 39.5 of the Act.
- b) To the extent that the ~~above specified~~ data and information ~~in subsection (a) have~~ ~~has~~ previously been submitted to the Agency in compliance with this Subpart, the data and information need not be resubmitted, but the applicant must certify that the data and information previously submitted ~~remain~~ ~~remains~~ true, correct, and current.

c) An application for an operating permit must contain a description of the startup procedure for each emission unit, the duration and frequency of startups, the types and quantities of emissions during startup, and the applicant's efforts to minimize ~~any such~~ startup emissions, duration of individual startups, and frequency of startups.

d) The Agency may adopt procedures that require data and information, in addition to ~~what subsection (a) requires and in amplification of the matters specified in the first sentence of this Section~~, that are reasonably designed to determine compliance with this Chapter, and ambient air quality standards, and that specify the format by which all data and information must be submitted.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.158 Incomplete Applications

An application ~~is not considered shall not be deemed to be~~ filed until the applicant has submitted all information and completed application forms required by Section 201.152 or 201.157 ~~of this Subpart~~, whichever is applicable, and procedures adopted and effective ~~under them pursuant hereto~~. ~~However, if~~ ~~Provided, however, that if~~ the Agency, ~~within 30 days after the filing of a purported application~~, fails to notify the applicant ~~within 30 days after the filing of a purported application~~ that the application is incomplete and ~~provide of~~ the reasons the Agency deems it incomplete, the application ~~is considered shall be deemed to have been~~ filed as of the date of ~~the such~~ purported filing. The applicant may treat the Agency's notification that an application is incomplete as a denial of the application for ~~purposes of~~ review ~~under, pursuant to~~ Section 40 of the Act (~~[415 ILCS 5/40]~~).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.159 Signatures

All applications and supplements ~~to them must thereto shall~~ be signed by the owner and operator of the source, or their authorized agent, and ~~must shall~~ be accompanied by evidence of authority to sign the application.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.160 Standards for Issuance

a) ~~A No~~ construction permit ~~must not shall~~ be granted unless the applicant submits proof to the Agency that:

- 1) The emission unit or air pollution control equipment will be constructed or modified to operate so as not to cause a violation of the Act or ~~of~~ this Chapter; and

- 2) If subject to a future compliance date, the applicant has an approved compliance program and project completion schedule in compliance ~~accordance with the provisions of~~ Subpart H. ~~of this Part~~
- b) ~~An~~ No operating permit ~~must not~~shall be granted unless the applicant submits proof to the Agency that:
- 1) The emission unit or air pollution control equipment has been constructed or modified to operate so as not to cause a violation of the Act or ~~of this~~ Chapter, or has been granted a variance from them ~~therefrom~~ by the Board and is in full compliance with the ~~such~~-variance; ~~and~~
 - 2) The emission unit or air pollution control equipment has been constructed or modified in compliance ~~accordance~~ with all conditions in the construction permit, where applicable; ~~and~~
 - 3) Tests show the ~~The~~ emission unit or air pollution control equipment is has ~~been shown by tests in~~ compliance ~~accordance~~ with the provisions of ~~the provisions of~~ Subpart J. ~~of this Part~~, applicable regulations, and permit conditions to operate in compliance ~~accordance~~ with the emission limitations set forth ~~in~~ this Chapter. However, ~~provided that~~ the Agency may waive the requirement for actual tests where sufficient standard testing information is available; ~~and~~
 - 4) The applicant has taken all technically feasible measures, including changes in work rules, to minimize the duration and frequency of startups and to reduce the quantity of emissions during startup; ~~and~~
 - 5) If subject to a future compliance date, the applicant has an approved compliance program and project completion schedule in compliance ~~accordance~~ with the provisions of ~~the provisions of~~ Subpart H. ~~of this Subpart~~; and
 - 6) If required, the applicant has an approved episode action plan in effect in compliance ~~accordance~~ with the provisions of ~~the provisions of~~ 35 Ill. Adm. Code 244.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.161 Conditions

The Agency may impose such ~~such~~ conditions in an operating permit as may be ~~as may be~~ necessary to accomplish the purposes of the Act; and as are ~~as are~~ not inconsistent with the regulations promulgated by the Board under it ~~thereunder~~. Except as herein ~~herein~~ specified in this Section, nothing in this Chapter is meant ~~shall be deemed~~ to limit the Agency's ~~Agency's~~ power to impose conditions ~~of the Agency~~ in this regard. When deemed appropriate as a condition to issuing ~~the issuance of~~ an operating permit, the Agency may require that the permittee adequately maintain the air pollution control

equipment covered by the permit. To assure that ~~such~~ a maintenance program is planned, the Agency may require that the permittee have a maintenance program and keep ~~such~~ maintenance records ~~as are~~ necessary to demonstrate compliance with this rule. ~~However, provided, however,~~ the Agency ~~doesshall~~ not have the authority to approve the maintenance programs required ~~under this Section~~thereunder.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.162 Duration

- a) ~~An~~ No operating permit ~~will shall~~ be valid ~~for only 10 longer than ten~~ years, or a ~~such~~ shorter period ~~specified by the Agency as the Agency may specify~~ in the operating permit as necessary to accomplish the purposes of the Act and this Chapter, unless the source is subject to:
 - 1) Section 201.169 ~~of this Subpart~~; or
 - 2) Section 39.5 of the Act, except for sources exempt ~~under~~pursuant to Section 39.5(1.1).
- b) Applications ~~to renew~~for renewal of an operating permit ~~must shall~~ be submitted to the Agency at least 90 days ~~before~~ prior to the expiration of the prior permit ~~expires~~ and ~~must shall~~ conform to Sections 201.157, 201.158, and 201.159. The standards for ~~issuing renewedissuance of renewal of~~ operating permits ~~are those shall be as set forth~~ in Section 201.160.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.163 Joint Construction and Operating Permits

~~WhenIn cases where~~ the Agency determines that an emission unit or air pollution control equipment is sufficiently standard ~~so as~~ to obviate the need for separate construction and operating permits, the Agency may issue a joint construction and operating permit. The Agency may adopt procedures that ~~establishset forth~~ the circumstances under which joint construction and operating permits may be issued; require data and information designed to determine compliance with this Chapter; and ambient air quality standards; and ~~establishset forth~~ the format by which all data and information ~~must shall~~ be submitted. The standards for ~~issuingissuance of~~ joint construction and operating permits ~~are those shall be as set forth~~ in Section 201.160. Except as ~~herein~~ provided in this Section, nothing in this Chapter ~~is meantshall be deemed~~ to limit the power of the Agency in this regard. The term "operating permit" as used elsewhere in this Chapter ~~includesshall be deemed to include~~ a joint construction and operating permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.164 Design Criteria (Repealed)

- a) ~~The Agency may adopt procedures that set forth criteria for the design, operation or maintenance of emission units and air pollution control equipment. These procedures shall be revised from time to time to reflect current engineering judgment and advances in the state of the art.~~
- b) ~~Before adopting new criteria or making substantive changes to any criteria adopted by the Agency, the Agency shall:~~
 - 1) ~~Publish a summary of the proposed changes in the Environmental Register or a comparable publication at the Agency's expense; and~~
 - 2) ~~Provide a copy of the full text of the proposed changes to any person who in writing so requests; and~~
 - 3) ~~Defer adoption of the changes for 45 days from the date of publication to allow submission and consideration of written comments on the proposed changes.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 201.165 Hearings

- a) The Agency may conduct hearings ~~before, prior to~~ issuing a permit ~~underpursuant to~~ this Chapter, to determine whether an applicant has submitted proof that the emission source or air pollution control equipment is or will be in compliance with every rule of this Chapter.
- b) The Agency ~~must shall~~ adopt procedural regulations for ~~conducting these the conduct of such~~ hearings.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.166 Revocation

Violation of any ~~permitof the conditions of a permit~~, or the failure to comply with any rule or regulation of this Chapter, ~~are shall be~~ grounds for ~~revoking revocation of~~ the permit; ~~and as well as for~~ other sanctions ~~underprovided in~~ the Act. ~~These Such~~ sanctions ~~may shall~~ be sought by filing a complaint with the Board.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.167 Revisions to Permits

The Agency may revise any permit issued ~~underpursuant to~~ Subpart D or any condition ~~contained in the such~~ permit, ~~as follows~~:

- a) Upon reapplication by the permittee; or
- b) Upon the revision of the Act or this Chapter.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.168 Appeals from Conditions

An applicant may consider any condition imposed by the Agency in a permit as a refusal by the Agency to grant a permit, which ~~entitle~~shall entitle the applicant to appeal the Agency's decision to the Board ~~underpursuant to~~ Section 40 of the Act [415 ILCS 5/40].

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.169 Special Provisions for Certain Operating Permits

- a) Applicability:
 - 1) Operating permits issued ~~underpursuant to~~ Section 39 of the Act for sources of air pollution that are not subject to ~~the requirements of~~ Section 39.5 of the Act and are not required to have a federally enforceable State operating permit are subject to ~~the provisions of~~ this Section.
 - 2) This Section ~~only~~ applies only to sources that meet the requirements of subsection (a)(1) and whose permit has not expired ~~underpursuant to~~ a renewal request under subsection (b)(2). If this Section no longer applies to a source and its permit has not expired ~~underpursuant to~~ a renewal request under subsection (b)(2), the terms and conditions of the permit ~~shall~~ remain in effect until the permit is superseded by a new or revised permit or is withdrawn.
 - 3) ~~This Subpart does not exempt~~Nothing in this Subpart must shall be construed as exempting persons with permits issued ~~underpursuant to~~ this Section from construction permit requirements under the requirements of Section 201.142 ~~of this Part requiring a construction permit~~ or from review under Part 203 or Part 204 procedures for new and modified emission units.
- b) Expiration and Renewal:
 - 1) The Agency may request the renewal of an operating permit subject to this Section for reasons including, ~~but not limited to,~~ a change in the requirements applicable to the source; an indication that the information on the source's application is inaccurate; or information that the source may not be ~~complying in compliance~~ with the Act, a Board regulation, or an existing permit condition.

- 2) ~~Despite Notwithstanding~~ Section 201.162 ~~of this Subpart~~, an operating permit subject to this Section ~~expires shall expire~~ 180 days after the Agency sends a written request for renewal of the permit. A permit ~~will shall~~ terminate if it is withdrawn upon written request by the permittee or is superseded by a revised permit issued for the source.
 - 3) In its request for renewal ~~underpursuant to~~ subsection (b)(2) ~~above~~, the Agency may include a request for any supplemental information that the Agency may need to determine the continued applicability of this Section or the source's ability ~~of the source~~ to comply with any requirement.
 - 4) An owner or operator may appeal to the Board only a final determination by the Agency to deny a permit or ~~to include~~ conditions as provided by Section 40 of the Act and Section 201.168 ~~of this Subpart~~, or a determination that a permit application is incomplete based upon insufficiencies such as ~~but not limited to~~, a failure to submit information requested under subsection (b)(3) or Section 201.158.
- c) Requirement for a Revised Permit:
- 1) Persons with operating permits subject to this Section must obtain a revised permit ~~before prior to~~ any of the following changes at the source:
 - A) An increase in emissions above the amount the emission unit or the source is permitted to emit;
 - B) A modification;
 - C) A change in operations that will result in the source's noncompliance with a condition in the existing permit; or
 - D) A change in ownership, company name, or address, so that the application or existing permit is no longer accurate.
 - 2) If changes in the source's emission units or control equipment remove a source from the applicability of this Section, an owner or operator must ~~shall~~ apply for a construction permit under Section 201.152 ~~of this Subpart~~, if applicable, and either a federally enforceable State operating permit or a Clean Air Act Permit Program (CAAPP) permit ~~underpursuant to~~ Section 39.5 of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.170 Portable Emission Units

- a) An emission unit is portable ~~if provided that~~ the emission unit meets the following criteria:
 - 1) Emissions from the emission unit are expected to occur for less than one year at any one site;
 - 2) The emission unit of air pollution is subject to ~~the requirements of~~ Section 201.169; ~~of this Subpart.~~
 - 3) The emission unit or group of emission units that will be changing sites is permitted to emit less than 25 tons per year of any combination of regulated air pollutants;
 - 4) The emission unit is mounted on a chassis or skids and is designed to be moveable; ~~and.~~
 - 5) The emission unit is not used as a thermal desorption system ~~underpursuant to~~ 35 Ill. Adm. Code 728. Table F or as an incinerator system.
- b) An owner or operator of a portable emission unit meeting the requirements of subsection (a) ~~of this Section~~ may change the site of the unit without obtaining a new construction or operating permit ~~underpursuant to~~ Section 201.142, 201.143, or 201.169 ~~if of this Part, provided that~~ the owner or operator meets the following requirements:
 - 1) The owner or operator has obtained a construction and operating permit containing special conditions as required by subsection (c) ~~of this Section~~ for the emission unit, or is exempt ~~underpursuant to~~ subsection (d); ~~of this Section.~~
 - 2) If a permit issued ~~underpursuant to~~ subsection (c) ~~of this Section~~ includes more than one emission unit, the owner or operator ~~must shall~~ move all emission units covered by the permit to the new site;
 - 3) The owner or operator does not locate the emission unit on a site with ~~a~~ ~~source:~~
 - A) ~~A source that~~ ~~That~~ is subject to ~~the requirements of~~ Section 39.5 of the Act; or
 - B) ~~A source that~~ ~~That~~ would become subject to ~~the requirements of~~ Section 39.5 of the Act if the emissions of all regulated pollutants from the portable emission unit were included in such source's potential to emit;

- 4) The owner or operator does not modify the operation of the emission unit ~~in such a way so as to~~:
 - A) Make the emission unit subject to ~~New Source Review (NSR)~~ requirements ~~underpursuant to~~ 35 Ill. Adm. Code 203 or ~~to Prevention of Significant Deterioration (PSD)~~ ~~underpursuant to~~ Section 9.1(a) of the Act; or
 - B) Make the emission unit a support facility of a source that is subject to Section 39.5 of the Act;~~;~~
 - 5) At least three days ~~before~~~~prior to~~ moving the emission unit to a new site, the owner or operator ~~notifies~~~~shall notify~~ the Agency by certified mail. The notification ~~must~~ ~~shall~~ include the items ~~listed~~ in this subsection (b)(5), unless the emission unit is exempt ~~underpursuant to~~ subsection (d) ~~of this Section~~:
 - A) The location of the new site;
 - B) The estimated emissions of all regulated air pollutants while located at the new site; and
 - C) ~~Confirmation that~~~~That~~ the operation for the emission unit will be consistent with its construction and operating permits; ~~and~~.
 - 6) The owner or operator ~~keep~~~~shall keep~~ a copy of the construction and operating permits for that emission unit on the site where the emission unit is in operation.
- c) Permit Requirements-
- 1) The owner or operator of an emission unit must obtain a new or amended construction and operating permit containing special conditions for changing the site of the portable emission unit ~~underpursuant to the requirements of~~ Sections 201.142, 201.143, and 201.169 ~~before of this Subpart prior to~~ an initial change in site of an emission unit. The permit application, in addition to the information required ~~underpursuant to~~ Section 201.152, 201.157, and 201.169 ~~of this Part~~, must contain the following information:
 - A) The initial site of the emission unit;
 - B) A permanent address where correspondence may be sent to the owner or operator; and
 - C) The permanent site of any required operating records.

- 2) If the portable emission unit has a permit ~~underpursuant to~~ this subsection (c), but has not changed sites within the prior ~~12~~twelve months at least once, the owner or operator ~~must shall~~ obtain a revised permit ~~beforeprior~~ ~~to~~ changing the site of the emission unit.
- d) The owner or operator of a portable emission unit that is included in more than one operating permit and meets the requirements of subsections (a)(2) through (a)(5), (b)(3), (b)(4), and (b)(6) ~~of this Section~~ may change the site of the unit without obtaining a new construction or operating permit ~~under pursuant~~ ~~to~~ Section 201.142, 201.143, or 201.169 ~~of this Part~~ when the unit is moved to a site covered by the permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.175 Registration of Smaller Sources (ROSS)

- a) An owner or operator of an eligible source ~~must shall~~ annually register with the Agency instead of complying with the requirement to obtain an air pollution construction or operating permit under the Act or complying with a permit issued under Section 201.169. The owner and operator of a ROSS source are still subject to all applicable environmental statutes and regulations. The source must meet all ~~of~~ the following criteria to be an eligible source:
 - 1) ~~Underpursuant to~~ Section 9.14 of the Act:
 - A) *The source must not be required to obtain a permit pursuant to the Clean Air Act Permit Program, or federally enforceable State operating permit program, or under regulations promulgated pursuant to Section 111 or 112 of the Clean Air Act;*
 - B) *USEPA has not otherwise determined that a permit is required;*
 - C) *The source emits less than an actual 5 tons per year of combined particulate matter, carbon monoxide, nitrogen oxides, sulfur dioxide, and volatile organic material air pollutant emissions;*
 - D) *The source emits less than an actual 0.5 tons per year of combined hazardous air pollutant emissions;*
 - E) *The source emits less than an actual 0.05 tons per year of lead air emissions;*
 - F) *The source emits less than an actual 0.05 tons per year of mercury air emissions; and*

- G) *The source does not have an emission unit or source subject to a standard pursuant to 40 CFR 61 (Maximum Achievable Control Technology) or 40 CFR 63 (National Emissions Standards for Hazardous Air Pollutants), other than those regulations that USEPA has categorized as "area source".*
- 2) Emission units at the source are not used as thermal desorption systems under ~~pursuant to~~ 35 Adm. Code 728. Table F or as incinerator systems.
- 3) The source or its emission units are not~~must not be~~ subject to local siting under Section 39.2 of the Act.
- b) To determine~~For the purposes of determining~~ whether the actual emissions from the source meet the criteria of subsections (a)(1)(C), (a)(1)(D), (a)(1)(E), and (a)(1)(F), the owner or operator of a source must ~~shall only~~ use emissions only from units that are not exempt under Section 201.146 from permitting requirements~~the requirement to obtain a permit under~~ pursuant to Section 201.146, as follows:
 - 1) Initial registration or reentry into ROSS. The~~the~~ owner or operator must sum the actual emissions from all units associated with the source for the previous~~prior~~ calendar year. If the source is new, or has been operating less than one calendar year, projected estimated emissions may be used for all or~~of~~ the remaining months in the previous~~prior~~ calendar year, respectively.
 - 2) Annual renewal of registration:
 - A) To determine~~For the purposes of determining~~ compliance with subsection (a)(1)(C) ~~of this Section~~, the owner or operator must:
 - i) Verify that the source still meets the eligibility criteria in subsection (a)(1)(C); or
 - ii) Calculate emissions by summing all actual emissions of combined PM~~particulate matter~~, CO~~carbon monoxide~~, NO_x~~nitrogen oxides~~, SO₂~~sulfur dioxide~~, and VOM~~volatile organic material air pollutant emissions~~ from all units associated with the source for the previous~~prior~~ calendar year. The total sum of these actual emissions ~~of combined particulate matter, carbon monoxide, nitrogen oxides, sulfur dioxide, and volatile organic material air pollutant emissions for the prior calendar year~~ must be less than or equal to 7 tons, or the total sum of these actual emissions ~~of combined particulate matter, carbon monoxide, nitrogen oxides, sulfur dioxide, and volatile organic material air~~

~~pollutant emissions~~ from the ~~previous~~^{prior} two calendar years must be less than or equal to 10 tons.

B) ~~To determine~~^{For the purposes of determining} compliance with subsections (a)(1)(D), (a)(1)(E), and (a)(1)(F), the owner or operator must:

- i) Verify that the source still meets the eligibility criteria in subsections (a)(1)(D), (a)(1)(E), and (a)(1)(F) ~~of this Section~~; or
- ii) Calculate emissions by summing all actual emissions from all units at the source for the ~~previous~~^{prior} calendar year. Summed emissions of HAPs, mercury, ~~and~~^{and} lead must be less than or equal to 0.5 tons per year, 0.05 tons per year, ~~and~~^{and} 0.05 tons per year, for the ~~previous~~^{prior} calendar year, respectively.

c) The following must be included in each initial registration and each re-entry registration:

- 1) The name, address, and telephone number of the source and of the person responsible for submitting and retaining copies of the registration information and the records;
- 2) A statement that the source meets the requirements of this Section;
- 3) A certification that the information submitted in subsections (c)(1) and (c)(2) is correct or a correction of the information; and
- 4) The applicable fee ~~under~~^{pursuant to} Section 9.14 of the Act.

d) The owner or operator of an eligible source ~~must~~^{shall} submit the registration required by subsection (c) ~~of this Section~~ as follows:

- 1) Initial registration:
 - A) The owner or operator of a source holding a permit may register after the effective date of this Section and ~~by no later than~~^{by no later than} their annual fee payment date in fiscal year 2013 (July 1, 2012, through June 30, 2013). The terms and conditions of a permit issued ~~under~~^{pursuant to} Section 201.169 do not apply during the period the source is registered. The owner and operator of a ROSS source are still subject to all applicable environmental statutes and regulations.

- B) The owner or operator of an operating source not holding a permit ~~must shall~~ register ~~by no later than~~ July 1, 2012.
 - C) The owner or operator of a new source ~~must shall~~ register at least 10 days before commencing construction or operation and may commence construction or operation 10 days after submittal to the Agency.
- 2) Annual registration. The owner or operator of a ROSS source must pay an annual fee on or before their annual fee payment date. Annual payment of the fee is verification by the owner or operator that the source continues to meet the criteria in subsection (a), as determined by subsection (b)(2), as applicable.
- 3) Re-entry into ROSS under subsection (h). The owner or operator of a source that re-enters ROSS based on the criteria in subsection (a), as determined by subsection (b)(1), must register and pay an annual fee on or before their annual fee payment date.
- e) The owner or operator ~~must shall~~ keep the following records and make them available for inspection by the Agency:
 - 1) A description of the emission units associated with the source and their associated control devices;
 - 2) A description of control efficiency or emission rates of any control devices that are relied upon to meet the criteria for ROSS in subsection (a), as determined by subsection (b)(1) or (b)(2), as applicable;
 - 3) Documentation of the source's actual emissions and calculations demonstrating that the source is eligible for ROSS ~~underpursuant to~~ the criteria in subsection (a), as determined by subsection (b)(1) or (b)(2), as applicable. This documentation may include, ~~but is not limited to~~, annual material usage or emission rates;
 - 4) A copy of the source's initial registration; and
 - 5) A copy of the owner's or operator's annual fee payment for at least the most recent ~~five~~5 calendar years.
- f) Changes to a ROSS source requiring notification. The owner or operator of the source must notify the Agency in writing within 45 days after the change to the source, if the information provided in subsection (c)(1) changes.

- g) Changes requiring a new or modified construction or operating permit, or compliance with conditions in an existing permit issued ~~underpursuant to~~ Section 201.169:
- 1) The owner or operator must apply for a permit by the date required by the new regulation or statute if there is a change in a ~~regulatory~~ regulation or statutory requirement or a new regulation or statutory requirement that makes a source ineligible for ROSS under the criteria in subsection (a), as determined in subsection (b)(2), as applicable.
 - 2) If the source no longer meets the criteria in subsection (a), as determined by subsection (b)(2), as applicable:
 - A) The owner or operator of a source that did not have a permit under Section 201.169 ~~beforeprior to~~ registration must apply and comply with the applicable requirements of the Act and 35 Ill. Adm. Code Parts 201, 203, and 204 as follows:
 - i) If the source is eligible for a permit under Section 201.169, the owner or operator must apply for a permit within 90 days ~~beforeef~~ the source's annual fee payment date.
 - ii) If the source is not eligible under Section 201.169, the owner or operator must apply for a permit ~~as provided for~~ under the Act and 35 Ill. Adm. Code Parts 201, 203, and 204.
 - iii) If the source was not constructed or operated at the time of initial registration and has actual emissions ~~exceedingin excess of~~ the eligibility levels during the first or second year of operations as determined in subsection (b)(2), the owner or operator must apply for an operating permit and pay construction permit application fees.
 - B) The owner or operator of a source that had a permit under Section 201.169 ~~beforeprior to~~ registration:
 - i) If the source is ~~complyingin compliance~~ with the terms and conditions of the permit, the owner or operator ~~must shall~~ notify the Agency ~~byno later than~~ the source's annual fee payment date of the calendar year following the change in status from a ROSS eligible source to a permitted source.
 - ii) If the source is not ~~complyingin compliance~~ with the terms and conditions of the permit, but is still eligible for a permit ~~underpursuant to~~ Section 201.169, the owner or operator

must apply for a new or revised permit within 90 days ~~before~~ the source's annual fee payment date.

- iii) If the source is not eligible for a permit ~~under~~pursuant to Section 201.169, the owner or operator must comply with the applicable permitting requirements under the Act and 35 Ill. Adm. Code Parts 201, 203, and 204.

- h) Reentry into ROSS. ~~The~~the owner or operator of a source that changed status to become a permitted source ~~under~~pursuant to subsection (g) ~~must~~shall submit a registration for ROSS if the source meets the criteria in subsection (a), as determined in subsection (b)(1), in the ~~previous~~prior calendar year.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART F: CAAPP PERMITS

Section 201.207 Applicability

This Subpart ~~applies~~shall apply only to sources subject to Section 39.5 of the Act. The requirements of Sections 201.143 through ~~201.146~~201.148 of Subpart C, Sections 201.157 through 201.165 and 201.169 ~~of Subpart D~~, and Subparts G and H ~~do of this Part~~shall not apply to a source subject to ~~the requirements of~~ Section 39.5 of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.208 Supplemental Information

~~Despite~~Notwithstanding Sections 201.210, 201.211, and 201.212, an applicant for a CAAPP permit ~~must~~shall supplement its application with any information for an emission unit of the source that is needed to determine ~~the applicability of~~ any applicable requirement or to ~~include~~set forth in a permit any applicable requirement, when ~~the such~~ information is requested by the Agency ~~under, pursuant to~~ Section 39.5(5)(g) of the Act, or when the applicant becomes aware that ~~the such~~ information has not been submitted or that incorrect information has been submitted ~~under Section, pursuant to~~ 39.5(5)(i) of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.209 Emissions of Hazardous Air Pollutants

- a) ~~To establish~~For the purposes of establishing whether an emission unit qualifies as an insignificant activity and ~~provide~~providing emission data for an emission unit in a CAAPP application, an applicant may presume that an emission unit does not emit an air pollutant listed as hazardous ~~under~~pursuant to Section 112(b) of the CAA~~Clean Air Act~~ if:

- 1) Raw material, other than fuel, for the emission unit contains a concentration by weight of ~~the such~~ pollutant that is equal to or less than the following:
 - A) 0.01%~~percent~~ by weight for the following pollutants if more than 1 ton of the raw material is used annually: alkylated lead compounds, polycyclic organic matter, ~~hexachlorobenzene~~ ~~hexachloro-benzene~~, mercury, polychlorinated biphenyls, 2,3,7,8-tetrachlorodibenzofurans, and 2,3,7,8-~~tetrachlorodibenzenetetrachloridibenzo~~-p-dioxin; ~~or~~
 - B) 0.01%~~percent~~ by weight for pollutants other than those in subsection (a)(1)(A) ~~above~~ if more than 1,000 tons of the raw material are used annually; or
 - C) 0.1%~~percent~~ by weight for pollutants other than those addressed in subsection (a)(1)(A) or (B)~~above~~.
 - 2) The fuel used in the emission unit does not qualify as a hazardous waste, and the emission unit is not subject to an applicable requirement for the pollutant.
- b) ~~Despite subsection (a)~~~~Notwithstanding the above~~, ~~underpursuant to~~ Section 39.5(5)(g) of the Act, the Agency may require an applicant to submit specific information for an emission unit concerning emissions of an air pollutant listed as hazardous ~~underpursuant to~~ Section 112(b) of the ~~CAA~~Clean Air Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.210 Categories of Insignificant Activities or Emission Levels

- a) The owner or operator of a CAAPP source, ~~underpursuant to~~ 35 Ill. Adm. Code 270, ~~must shall~~ submit to the Agency within its CAAPP application a list of the following activities or emission levels:
 - 1) Any emission unit determined to be an insignificant activity by the Agency ~~underpursuant to~~ Section 201.211~~of this Part~~;
 - 2) Emission units with emissions that never exceed 0.1 lbs/hr of any regulated air pollutant ~~withoutin the absence of~~ air pollution control equipment and that do not emit any air pollutant listed as hazardous ~~underpursuant to Section~~section 112(b) of the ~~CAA~~Clean Air Act;
 - 3) Emission units with emissions that never exceed 0.44 tons/year of any regulated air pollutant ~~withoutin the absence of~~ air pollution control

equipment and that do not emit any air pollutant listed as hazardous ~~underpursuant to Section~~ 112(b) of the ~~CAA~~Clean Air Act;

- 4) Direct combustion units designed and used for comfort heating purposes and fuel combustion emission units as follows:
 - A) Units with a rated heat input capacity of less than 2.5 ~~MMbtummbtu~~/hr that fire only natural gas, propane, or liquefied petroleum gas;
 - B) Units with a rated heat input capacity of less than 1.0 ~~MMbtummbtu~~/hr that fire only oil or oil in combination with only natural gas, propane, or liquefied petroleum gas;
 - C) Units with a rated capacity of less than 200,000 btu/hr which never burn refuse or treated or chemically contaminated wood;
- 5) Extruders used ~~to extrudefor the extrusion of~~ metals, minerals, plastics, rubber, or wood, excluding extruders used ~~to manufacturein the manufacture of~~ polymers, ~~if VOMprovided that volatile organic materials~~ or class I or II substances subject to ~~the requirements of~~ Title VI of the ~~CAA~~Clean Air Act are not used as foaming agents or release agents or were not used as foaming agents in the case of extruders processing scrap material;
- 6) Furnaces used ~~to meltfor melting~~ metals other than beryllium with a brim full capacity of less than 450 cubic inches by volume;
- 7) Equipment used ~~to melt or applyfor the melting or application of~~ less than 50,000 lbs/yr of wax to which no organic solvent has been added;
- 8) Equipment used for filling drums, pails, or other packaging containers, excluding aerosol cans, with soaps, detergents, surfactants, lubricating oils, waxes, vegetable oils, greases, animal fats, glycerin, sweeteners, corn syrup, aqueous salt solutions, or aqueous caustic solutions;
- 9) Equipment used ~~to mix and blendfor the mixing and blending of~~ materials at ambient temperature to make ~~water-basedwater-based~~ adhesives ~~if provided~~ each material contains less than 5% organic solvent by weight;
- 10) Storage tanks, as follows:
 - A) Storage tanks of organic liquids with a capacity of less than 10,000 gallons and an annual throughput of less than 100,000 gallons ~~if provided~~ the tank is not used ~~to storefor the storage of~~ any amount of gasoline, including gasoline/ethanol blend fuels, or any amount

of material or mixture of any material listed as a ~~HAP~~hazardous air pollutant ~~underpursuant to Section~~section 112(b) of the ~~CAA~~Clean Air Act;

B) Storage tanks of gasoline, including gasoline/ethanol blend fuels, with a capacity of less than ~~2,000~~2000 gallons;

- 11) Storage tanks of virgin or ~~re-refined~~re-refined distillate oil (including kerosene and diesel fuel), hydrocarbon condensate from natural gas pipeline or storage systems, lubricating oil, or residual fuel oils;
- 12) Die casting machines where a metal or plastic is formed under pressure in a die;
- 13) Coating operations (excluding powder, architectural, and industrial maintenance coating) with aggregate VOM usage that never exceeds 15 lbs/day from all coating lines at the source, including VOM from coating, ~~diluents~~dilutents, and cleaning materials;
- 14) Printing operations with aggregate organic solvent usage that never exceeds 750 ~~gal~~gallons per year from all printing lines at the source, including organic solvent from inks, ~~diluents~~dilutents, fountain solutions, and cleaning materials;
- 15) Gas turbines and stationary reciprocating internal combustion engines of less than 112 kW (150 horsepower) power output;
- 16) Gas turbines and stationary reciprocating internal combustion engines of between ~~1,118~~1,118 and 112 kW (~~1,500~~1500 and 150 horsepower) power output that are emergency or standby units;
- 17) Storage tanks of any size containing exclusively soaps, detergents, surfactants, waxes, glycerin, vegetable oils, greases, animal fats, sweetener, corn syrup, aqueous salt solutions, or aqueous caustic solutions ~~if provided~~ an organic solvent has not been mixed with ~~the such~~ materials;
- 18) Loading and unloading systems for railcars, tank trucks, or watercraft that handle only the following liquid materials ~~if provided~~ an organic solvent has not been mixed with ~~the such~~ materials: soaps, detergents, surfactants, lubricating oils, waxes, glycerin, vegetable oils, greases, animal fats, sweetener, corn syrup, aqueous salt solutions, or aqueous caustic solutions; and
- 19) Fuel dispensing operations and fuel dispensing equipment for the fuels ~~specified~~ in subsections (a)(19)(A) and (B), for mobile sources, including on-road and off-road vehicles, for use in those mobile sources. For

~~purposes of~~ this subsection (a)(19), fuel dispensing equipment means equipment for transferring fuel to a mobile source, including nozzles, hoses, swivels, breakaways, hose retractors, vapor valves, dispensers, vacuum-assist devices, vapor-return piping, and liquid collection points. Storage tanks and storage tank equipment are not included in fuel dispensing operations or fuel dispensing equipment and are addressed separately.

A) Gasoline, including gasoline/ethanol blend fuels, if the annual throughput of the fuel dispensed is less than 120,000 gallons (rolling ~~12-month~~12-month total).

B) Distillate oil (including kerosene and diesel fuel), biodiesel, and biodiesel/distillate oil blends.

b) The owner or operator of a CAAPP source is not required to individually list the following activities in a CAAPP application ~~under~~pursuant to 35 Ill. Adm. Code 270. The applicant ~~must~~ shall denote whether any of the following activities are present at the source in its CAAPP application:

- 1) Air conditioning or ventilating equipment not designed to remove air contaminants generated by or released from associated equipment;
- 2) Photographic process equipment by which an image is reproduced upon material sensitized to radiant energy;
- 3) Equipment used for hydraulic or hydrostatic testing;
- 4) General vehicle maintenance and servicing activities at the source, other than fuel handling or dispensing of gasoline (including gasoline/ethanol blend fuels), distillate oil (including kerosene and diesel fuel), biodiesel, or biodiesel/distillate oil blends;
- 5) Cafeterias, kitchens, and other facilities used for preparing food or beverages primarily for consumption at the source;
- 6) Equipment using water, water and soap or detergent, or a suspension of abrasives in water to clean or finish~~for purposes of cleaning or finishing if provided~~ no organic solvent has been added to the water;
- 7) Administrative activities, including, ~~but not limited to,~~ paper shredding, copying, photographic activities, and blueprinting machines, but excluding. This does not include incinerators;
- 8) Laundry dryers, extractors, and tumblers processing clothing, bedding, and other fabric items used at the source that have been cleaned with water

solutions of bleach or detergents; ~~however, provided that~~ any organic solvent present in ~~the such~~ items before processing that is retained from clean-up operations ~~must shall~~ be addressed as part of the VOM emissions from use of cleaning materials;

- 9) Housekeeping activities for cleaning purposes, including collecting spilled and accumulated materials at the source ~~and operating, including operation of~~ fixed vacuum cleaning systems specifically for ~~these such~~ purposes, but ~~excludingnot including~~ use of cleaning materials that contain organic solvent;
- 10) Refrigeration systems, including storage tanks used in refrigeration systems, but excluding any combustion equipment associated with ~~these such~~ systems;
- 11) Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including associated laboratory fume hoods, vacuum producing devices, and control devices installed primarily to address potential accidental releases;
- 12) Restroom facilities and associated clean-up operations, and stacks or vents used to prevent the escape of sewer gases through plumbing traps;
- 13) Activities associated with ~~constructing, repairing on-site, maintaining or dismantlingthe construction, on-site repair, maintenance or dismantlement of~~ buildings, utility lines, pipelines, wells, excavations, earthworks, and other structures that do not constitute emission units;
- 14) Storage tanks of organic liquids with a capacity of less than 500 ~~galgallons, if provided~~ the tank is not used ~~to storefor storage of~~ any amount of material or mixture of any material listed as a ~~HAPhazardous air pollutant underpursuant to Sectionsection~~ 112(b) of the ~~CAAClean Air Act~~;
- 15) Piping and storage systems for natural gas, propane, and liquefied petroleum gas;
- 16) Water treatment or storage systems, as follows:
 - A) Systems for potable water or boiler feedwater;
 - B) Systems, including cooling towers, for process water ~~if that provided that such~~ water has not been in direct or indirect contact with process streams that contain ~~VOMvolatile organic material~~ or materials listed as ~~HAPshazardous air pollutants underpursuant to Sectionsection~~ 112(b) of the ~~CAAClean Air Act~~;

- 17) Lawn care, landscape maintenance, and groundskeeping activities;
- 18) Containers, reservoirs, or tanks used exclusively in dipping operations to coat objects with oils, waxes, or greases, if provided no organic solvent has been mixed with those such materials;
- 19) Cold cleaning degreasers that are not in-line cleaning machines, where the vapor pressure of the solvents used never exceed 2 kPa (15 mmHg or 0.3 psi) measured at 38 °C 38°C (100 °F 100°F) or 0.7 kPa (5 mmHg or 0.1 psi) at 20 °C 20°C (68 °F 68°F);
- 20) Manually operated equipment used for buffing, polishing, carving, cutting, drilling, machining, routing, sanding, sawing, scarfing, surface grinding, or turning;
- 21) Use of consumer products, including hazardous substances as that term is defined in the Federal Hazardous Substances Act (15 USC 1261 et seq.), where the product is used at a source in the same manner as normal consumer use;
- 22) Activities directly used in the diagnosis and treatment of a disease, injury, or other medical condition;
- 23) Firefighting activities and training in preparation for fighting fires conducted at the source;

BOARD NOTE: Open burning permits may be required for certain training activities.

- 24) Internal combustion engine or boiler (including the fuel system) of motor vehicles, locomotives, aircraft, watercraft, lift trucks ~~lift trucks~~, and other vehicles powered by nonroad engines;
- 25) Activities associated with constructing, repairing, or maintaining the ~~construction, repair, or maintenance of~~ roads or other paved or open areas, including operating ~~operation of~~ street sweepers, vacuum trucks, spray trucks, and other vehicles related to the control of fugitive emissions of those such roads or other areas;
- 26) Storage and handling of drums or other transportable containers where the containers are sealed during storage and handling;
- 27) Individual points of emission or activities as follows:

- A) Individual flanges, valves, pump seals, pressure relief valves, and other individual components that have the potential for leaks;
- B) Individual sampling points, analyzers, and process instrumentation, whose operation may result in emissions;
- C) Individual features of an emission unit, such as each burner and sootblowers in a boiler or each use of cleaning materials on a coating or printing line;
- D) Individual equipment that is transportable or activities within a facility established for testing units ~~before~~^{prior to} sale or distribution or for ~~purposes of~~ research; and
- E) Individual equipment or activities within a pilot plant facility that is used for research or training;

BOARD NOTE: ~~Despite subsections (A) through (E), these~~^{Notwithstanding the foregoing, such} points of emissions or activities ~~must~~^{shall} be addressed in a CAAPP application in sufficient detail to identify applicable requirements and demonstrate compliance with ~~the such~~ requirements. Emission data for ~~these such~~ activities ~~must~~^{shall} be addressed in the aggregate for each emission unit or group of related emission units.

- 28) Activities at a source associated with the modification only or construction only of a facility, an emission unit, or other equipment at the source; and

BOARD NOTE: ~~Despite~~^{Notwithstanding} the status of this activity as insignificant, a particular activity that entails modification or construction of an emission unit or construction of air pollution control equipment may require a construction permit ~~under~~^{pursuant to} Section 201.142 ~~of this Part~~ and may subsequently require a revised CAAPP permit. A revised CAAPP permit may also be necessary ~~to operate~~^{for operation of} an emission unit after ~~completing~~^{completion of} a particular activity if the existing CAAPP permit does not accommodate the new state of the emission unit.

- 29) Activities at a source associated with ~~maintaining the maintenance, repairing~~^{repair}, or ~~dismantling~~^{dismantlement of} an emission unit or other equipment installed at the source, ~~but excluding~~^{not including} the shutdown of the unit or equipment. ~~This includes preparing, including preparation~~^{preparation} for maintenance, repair, or dismantlement, and ~~preparing~~^{preparation} for subsequent startup, including ~~preparing~~^{preparation of} a shutdown vessel for entry, ~~replacing~~^{replacement}

~~of~~ insulation, welding and cutting, and steam purging ~~of~~ a vessel
~~before prior to~~ startup.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.211 Application for Classification as an Insignificant Activity

- a) An owner or operator of a CAAPP source may propose to the Agency in its CAAPP application that an emission unit at the source be treated as an insignificant activity consistent with Section 201.210 ~~if of this Part, provided~~ the emission unit meets the following criteria and the owner or operator provides the information required in subsection (b) ~~below~~ regarding the emission unit:
 - 1) The emission unit would not emit more than 1.0 lb/hr of any regulated air pollutant not listed as hazardous ~~underpursuant to~~ Section 112(b) of the ~~CAA Clean Air Act without in the absence of~~ air pollution control equipment;
 - 2) The emission unit would not emit more than 0.1 lb/hr of any regulated air pollutant that is listed as hazardous ~~underpursuant to~~ Section 112(b) of the ~~CAA Clean Air Act without in the absence of~~ air pollution control equipment; and
 - 3) The emission unit is not a process unit.
- b) The owner or operator of ~~thesueh~~ emission unit ~~must shall~~ include the following information in its CAAPP application:
 - 1) A description of the emission unit including the function and expected operating schedule of the unit;
 - 2) A description of any air pollution control equipment or control measures associated with the emission unit;
 - 3) The emissions of regulated air pollutants in lb/hr and ton/yr;
 - 4) The means by which emissions were determined or estimated;
 - 5) The estimated number of ~~thesesueh~~ emission units at the source; and
 - 6) Other information upon which the applicant relies to support ~~treating the treatment of such~~ emission unit as an insignificant activity.
- c) The Agency ~~must shall~~ determine whether ~~the sueh~~ emission unit may be treated as an insignificant activity ~~by~~ considering factors including, ~~but not limited to,~~ the following:

- 1) The amount and nature of emissions;
 - 2) The basis by which emissions were determined;
 - 3) The expected consistency and reliability of operation of the emission unit;
 - 4) The operating schedule or intended use of the emission unit;
 - 5) The air pollution control equipment or control measures applied to the emission unit;
 - 6) The nature of applicable requirements;
 - 7) The environmental impact of ~~the such~~ emission unit; and
 - 8) The potential benefits to the environment if the emission unit were not treated as an insignificant activity.
- d) Unless the Agency notifies the applicant in writing that the emission unit cannot be treated as an insignificant activity following the Agency's determination in subsection (c) ~~above~~, the emission unit ~~will~~shall be deemed an insignificant activity for purposes of Section 201.210(a) ~~of this Part~~. If the Agency determines that an emission unit cannot be treated as an insignificant activity ~~under~~pursuant to this Section, the Agency ~~must~~shall notify the owner or operator in writing and request that ~~the such~~ owner or operator submit the information required in a CAAPP application ~~under~~pursuant to Agency procedures regarding the emission unit within a reasonable time frame. The owner or operator ~~must~~shall submit the requested information to the Agency within the time frame stated in the request.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.212 Revisions to Lists of Insignificant Activities or Emission Levels

- a) The owner or operator of a CAAPP source is not required to notify the Agency of additional insignificant activities present at the source of a type that were previously listed in its CAAPP application ~~under~~pursuant to Section 201.210(a) or 201.211 ~~of this Part~~, until it submits its renewal CAAPP application ~~is submitted~~.
- b) The owner or operator of a CAAPP source seeking to add a new insignificant activity of a type ~~provided~~ under Section 201.210(a) or 201.211 ~~of this Part~~ that was not previously listed in its CAAPP application must notify the Agency ~~under~~pursuant to Section 39.5(12)(b) of the Act.
- c) The owner or operator of a CAAPP source is not required to notify the Agency of additional insignificant activities present at the source of a type that were

previously listed in its CAAPP application ~~underpursuant to~~ Section 201.210(b) ~~of this Part~~ or any new insignificant activities of a type ~~provided~~ under Section 201.210(b) ~~of this Part~~ that were not previously listed in its CAAPP application, until it submits its renewal CAAPP application ~~is submitted~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART H: COMPLIANCE PROGRAMS AND PROJECT COMPLETION SCHEDULES

Section 201.241 Contents of Compliance Program

A compliance program ~~must shall~~ contain, as a minimum, the following data and information:

- a) the nature, ~~and/or~~ type, or both of the proposed air pollution control equipment or proposed air pollution control technique which has been chosen to achieve compliance;
- b) the cost, availability, and technical reasonableness of the proposed air pollution control equipment or proposed air pollution control technique, including detailed cost analyses and copies of engineering reports or studies sufficient to prove to the Agency that the compliance program will result in compliance with applicable standards and limitations of Subchapter c ~~of this Chapter~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.242 Contents of Project Completion Schedule

- a) A project completion schedule ~~must shall~~ contain, as a minimum, the following data and information:
 - 1) a final compliance date ~~that is, which date shall be~~ no later than the applicable date ~~prescribed~~ in Subchapter c ~~of this Chapter~~; and
 - 2) reasonable interim dates by which various increments of the proposed compliance program ~~will shall~~ be completed, such as ~~dates~~ when contracts will be awarded, ~~dates for~~ equipment delivery, and ~~dates for~~ construction of preliminary structural work.
- b) The Agency may adopt procedures which require data and information in addition to information ~~and in amplification of the matters specified~~ in subsection (a), and which ~~establish~~ set forth the format by which all data and information ~~must shall~~ be submitted.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.243 Standards for Approval

A ~~No~~ compliance program and project completion schedule ~~must not~~shall be approved unless the applicant submits proof to the Agency that:

- a) The compliance program will result in timely compliance with applicable standards and limitations of Subchapter ~~c of this Chapter~~; and
- b) The owner or operator has provided adequate proof that it is committed to the compliance program or project completion schedule, including, in the case of a corporation, certification by a duly authorized officer of ~~the such~~ corporation that ~~the such~~ corporation approves each ~~and every~~ provision of ~~the such~~ program and ~~of such~~ schedule.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.244 Revisions

The owner or operator of an emission source or air pollution control equipment subject to an approved compliance program and project completion schedule may request a revision of ~~the such~~ program or schedule at any time. In addition, the Agency may require a revision upon any change in the Act or this Chapter. The Agency ~~must shall~~ not approve any revision which contains a final compliance date later than the applicable date ~~prescribed~~ in Subchapter ~~c of this Chapter~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.245 Effects of Approval

The ~~Agency must approve approval of~~ a compliance program and project completion schedule ~~before it issues shall be a condition precedent to the issuance and effectiveness of~~ a permit ~~and before the permit becomes effective under pursuant to~~ Subpart D. An approved compliance program and project completion schedule, and full compliance ~~with them therewith~~, and a current operating permit, ~~are shall be~~ a prima facie defense to any enforcement action alleging a violation of the standards or limitations ~~set forth~~ in Subchapter ~~c of this Chapter~~ with respect to any air contaminant included in ~~the such~~ program and schedule during the period of the program. Failure to adhere to an approved compliance schedule ~~constitutes shall constitute~~ a violation of this Part for which appropriate sanctions may be sought ~~under in accordance with~~ the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.246 Records and Reports

Any person subject to this Subpart ~~must shall~~ maintain ~~such~~ records and make ~~such~~ reports as ~~may be~~ required in procedures adopted by the Agency ~~under pursuant to~~ Subpart K.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.247 Submission and Approval Dates

The owner or operator of an emission source required to have a compliance plan and project completion schedule ~~must shall~~ have a compliance plan and ~~a~~ project completion schedule, where applicable, approved by the Agency by the dates ~~indicated~~ in Subchapter c ~~of this Chapter~~. A compliance plan and project completion schedule, where applicable, ~~must shall~~ be submitted at least 90 days before the date required in Subchapter c ~~of this Chapter~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART J: MONITORING AND TESTING

Section 201.281 Permit Monitoring Equipment Requirements

Except as otherwise provided at Subpart L ~~of this Part~~, every emission source or air pollution control equipment ~~must shall~~ be equipped with ~~such~~ monitoring instruments as ~~may be~~ required as a condition to a permit issued by the Agency. The permit may require that ~~the such~~ monitoring instruments be continuous or intermittent. ~~The Such~~ monitoring instruments ~~must shall~~ be installed, maintained, and operated at the expense of the owner or operator of the emission source or air pollution control equipment. A permit condition to monitor is appealable to the Board ~~underpursuant to~~ Section 40 of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.282 Testing

Every emission source or air pollution control equipment ~~is shall be~~ subject to the following testing requirements ~~to determine for the purpose of determining~~ the nature and quantities of specified air contaminant emissions and ~~for the purpose of determining~~ ground level and ambient air concentrations of such air contaminants:

- a) Testing by Owner or Operator. The Agency may require the owner or operator of the emission source or air pollution control equipment to conduct ~~such~~ tests in ~~compliance accordance~~ with procedures adopted by the Agency, at ~~such~~ reasonable times ~~as may be~~ specified by the Agency, and at the expense of the owner or operator of the emission source or air pollution control equipment. The Agency may adopt procedures detailing methods of testing and formats for reporting results of testing. ~~These Such~~ procedures, and revisions ~~will thereto, shall~~ not become effective until filed with the Secretary of State, as required by the ~~Illinois Administrative Procedure APA~~ Act (5 ILCS 100). All such tests ~~must be shall by~~ made by or under the direction of a person qualified by training, ~~and/or~~ experience, ~~or both~~ in the field of air pollution testing. The Agency ~~has shall have~~ the right to observe all aspects of ~~these such~~ tests.

- b) Testing by the Agency. The Agency ~~has~~~~shall~~~~have~~ the right to conduct ~~these~~~~such~~ tests at any time at its own expense. Upon request of the Agency, the owner or operator of the emission source or air pollution control equipment ~~must~~ ~~shall~~ provide, without charge to the Agency, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.283 Records and Reports

Any person subject to this Subpart ~~must~~ ~~shall~~ maintain ~~such~~ records and make ~~such~~ reports as ~~may be~~ required in procedures adopted by the Agency ~~under~~~~pursuant to~~ Subpart K.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART K: RECORDS AND REPORTS

Section 201.301 Records

- a) The owner or operator of any emission source or air pollution control equipment must maintain the following records, which must be made available to the Agency at any reasonable time:
- 1) records detailing all activities under any compliance program and project completion schedule in compliance with Subpart H;
 - 2) records of all monitoring and testing conducted in compliance with Subpart J; ~~and, plus~~
 - 3+) records of all monitoring and testing of any type ~~whatsoever~~ conducted with respect to specified air contaminants.
- ba) The Agency may adopt procedures which:
- 1) Require maintaining additional records ~~be maintained~~ consistent with this Part; and
 - 2) Specify the format in which all records must be maintained.
- cb) The procedures and formats, and revisions, to them will not become effective until filed with the Secretary of State as required by the Illinois Administrative Procedure Act (5 ILCS 100).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.302 Reports

- a) The owner or operator of any emission unit or air pollution control equipment meeting the applicability criteria ~~contained~~ in 35 Ill. Adm. Code 254.102 ~~must~~ ~~shall~~ submit to the Agency, as a minimum, annual reports detailing the nature, specific emission units, and total annual quantities of all specified air contaminant emissions. ~~However, provided, however, that~~ the Agency may require more frequent reports when necessary to accomplish the purposes of the Act and this Chapter.
- b) The Agency may adopt procedures which require ~~submitting that~~ additional reports ~~be submitted~~, and which ~~establish set forth~~ the format in which all reports ~~must shall~~ be submitted. ~~These Such~~ procedures and formats, and revisions ~~to them will thereto, shall~~ not become effective until filed with the Secretary of State as required by the Illinois Administrative Procedure Act (5 ILCS 100).
- c) All emission data received by the Agency ~~must, shall~~ be available for public inspection at reasonable times and upon reasonable notice.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART L: CONTINUOUS MONITORING

Section 201.401 Continuous Monitoring Requirements

- a) Except as otherwise provided at ~~Sections Section~~ 201.402 and ~~Section~~ 201.403, the owners and operators of the following emission sources ~~must shall~~ install, operate, calibrate, and maintain continuous monitoring equipment for the indicated pollutants.
 - 1) Fossil fuel-fired steam generators with an annual average capacity factor greater than 30%, as reported to the Federal Power Commission for calendar year 1974, or as otherwise demonstrated to the Agency through ~~the use of~~ annual production data and equipment rating information representative of the facility's operations, ~~must shall~~ monitor for:
 - A) Opacity, when the steam generator is greater than 250 ~~MMbtu/hr~~ ~~million Btu per hour~~ heat input, unless:
 - i) Gas is the only fuel burned; or
 - ii) Oil or a mixture of gas and oil are the only fuels burned, ~~and~~ the source can comply with the limitations applicable to ~~the that~~ source for ~~PM~~ ~~particulate matter~~ and opacity without ~~using use of~~ collection equipment for ~~PM~~ ~~particulate matter~~, and the source has never been found to ~~violate be in~~

~~violation of~~ an applicable visible or particulate emission standard through any administrative or judicial proceedings.

B) Nitrogen oxides, when:

- i) The steam generator is greater than 1,000 MMbtu/hr~~1000 million Btu per hour~~ heat input;
- ii) The facility is located in an Air Quality Control Region where the Administrator ~~of the USEPA U.S. Environmental Protection Agency~~, has specifically determined ~~under pursuant to~~ Section 107 of the Clean Air Act (42 U.S.C 7407) that a control strategy for nitrogen dioxide is necessary to attain the national standards; and
- iii) The owner or operator has not demonstrated during compliance tests that the source emits NO_x~~nitrogen oxides~~ at levels less than 30% or more below the emissions standards applicable to that source. ~~These Such~~ compliance tests ~~must shall~~ be performed in compliance with pursuant to regulations promulgated by the ~~USEPA U.S. Environmental Protection Agency~~ under Section 111 of the CAA Clean Air Act (42 USC 7411), as amended. *The provisions of Section 111 of the Clean Air Act...relating to standards of performance for new stationary sources...are applicable in this state and are enforceable under the Act (415 ILCS 5/9.1(b)).* ~~[the Environmental Protection Act]. (Ill. Rev. State. Ch. 111 1/2, par. 1009.1(b))~~

C) Sulfur dioxide, when the steam generator is greater than 250 MMbtu/hr~~million Btu per hour~~ heat input and ~~which~~ has installed and operates SO₂~~sulfur dioxide~~ pollution control equipment.

D) Percent oxygen or CO₂~~carbon dioxide~~, when measurements of oxygen or CO₂~~carbon dioxide~~ in the flue gas are required in regulations adopted by the ~~USEPA U.S. Environmental Protection Agency~~ under Section 111 of the CAA Clean Air Act, (42 USC 7411), as amended, to convert SO₂~~sulfur dioxide~~ or NO_x~~nitrogen oxide~~ continuous emissions data to units of the emission standard applicable to that source. *The provisions of Section 111 of the Clean Air Act relating to standards of performance for new stationary sources are applicable in this state and are enforceable under the Act (415 ILCS 5/9.1(b)).* ~~[the Environmental Protection Act] (Ill. Rev. Stat. Ch. 111 1/2, par. 1009.1(b))~~

- 2) Sulfuric acid plants of greater than 300 tons per day production capacity, the production ~~being~~ expressed as 100% ~~percent~~ acid, ~~must shall~~ monitor for ~~SO₂sulfur dioxide~~ at each point of ~~SO₂sulfur dioxide~~ emission.
 - 3) Nitric acid plants of greater than 300 tons per day production capacity, the production capacity ~~being~~ expressed as 100% ~~percent~~ acid, located in an Air Quality Control Region where the Administrator ~~of the USEPA, U.S. Environmental Protection Agency,~~ has specifically determined ~~underpursuant to~~ Section 107 of the ~~CAAClean Air Act~~ that a control strategy for ~~NO_xnitrogen dioxide~~ is necessary to attain the national standard, ~~must shall~~ monitor for ~~NO_xnitrogen oxides~~ at each point of ~~NO_xnitrogen oxide~~ emission.
 - 4) Petroleum refineries ~~must shall~~ monitor for opacity at each catalyst regenerator for fluid bed catalytic cracking units of greater than 20,000 barrels per day fresh feed capacity.
- b) Except for sources permitted to use alternative monitoring ~~under pursuant to~~ Section 201.402, compliance with the Illinois emissions limitations by the owners and operators of emission sources required to monitor continuously ~~mustshall~~ be determined by ~~usingthe use of~~ equipment which meets the performance specifications ~~set forth~~ in paragraphs 3.1 through 3.8 of 40 CFR 51.5 Appendix P (2024), ~~incorporated by reference in Section 201.104(f)(1987) (this incorporation includes no later amendments or editions),~~ and relevant regulations promulgated by the ~~USEPAU.S. Environmental Protection Agency~~ under Section 111 of the ~~CAA Clean Air Act [(42 USC 7411)],~~ as amended. *The provisions of Section 111 of the Clean Air Act relating to standards of performance for new stationary sources . . . are applicable in this state and are enforceable under the Act [415 ILCS 5/9.1(b)].* ~~[the Environmental Protection Act]. (Ill. Rev. Stat. Ch. 111 1/2, par. 1009.1(b))~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.402 Alternative Monitoring

Alternative monitoring requirements for sources subject to Section 201.401(a) ~~willshall~~ be prescribed by permit ~~after the owner or operator demonstratesupon a demonstration by the owner or operator~~ that continuous monitoring is technically unreasonable or infeasible due to physical plant limitations or would impose an extreme economic burden. ~~The owner or operator must demonstrateIt shall be demonstrated~~ that the installation, location, or operation of a continuous monitoring system or device:

- a) Would not provide accurate determinations of ~~NO_xnitrogen dioxide~~, ~~SO₂sulfur dioxide~~, ~~CO₂carbon dioxide~~, percent oxygen, or opacity; ~~or~~

- b) Cannot be installed due to the facility's physical constraints, such as size, space, or strength of materials, or due to safety considerations; or
- c) Would impose an extreme economic burden in proportion to the significance of the monitoring information which would be provided, in that the cost of monitoring would exceed the norm for similar sources and those costs would have a significant adverse effect on the profitability of the operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.403 Exempt Sources

The following emission sources are exempt from the requirements of this Subpart:

- a) Any source subject to monitoring requirements which are part of a new source performance standard adopted by USEPA ~~underpursuant to~~ Section 111 of the ~~CAAClean Air Act~~ and made applicable in Illinois ~~underpursuant to~~ Section 9.1 of the Act; or
- b) Any source not subject to either the generally applicable emission limitation established ~~underpursuant to~~ the Act or Board regulation or an alternative, adjusted, or ~~site-specificsite specific~~ standard approved by the Board.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.404 Monitoring System Malfunction

The monitoring and recording requirements of this Subpart ~~do not applyshall not be applicable~~ during any period of a monitoring system or device malfunction if ~~demonstrated by~~ the owner or operator of the source ~~demonstrates~~ that the malfunction was unavoidable and is being repaired as expeditiously as practicable. This demonstration may include, ~~but is not limited to,~~ evidence that the device has been properly calibrated and maintained, adequate spare parts are on hand, and trained technicians are available to make repairs.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.405 Excess Emission Reporting

Owners and operators of sources subject to the continuous monitoring requirements of this Subpart ~~must shall~~ report the following information:

- a) For periods of emissions ~~exceedingin excess of~~ any emission limitation applicable to the source adopted by the Board:
 - 1) The starting date and time of the excess emissions;

- 2) The duration of the excess emissions;
 - 3) The magnitude of excess emissions;
 - 4) The cause of the excess emissions, if known;
 - 5) Corrective actions and actions taken to lessen the emissions;
 - 6) The operating status of the monitoring system, including the dates and times of any periods during which it was inoperative; and
 - 7) Other information, including ~~but not limited to,~~ monitoring location, monitoring maintenance records, and source operating hours, which the Agency may require by permit.
- b) For gaseous ~~SO₂sulfur dioxide~~, percent oxygen, or ~~CO₂carbon dioxide~~ measurements, the averaging period used for data reporting ~~must shall~~ correspond to the averaging period used to determine compliance with the emission limitation applicable to the source. The report ~~must shall~~ consist of emission averages in the units of the applicable limitation for each averaging period during which the limitation was exceeded.
 - c) For opacity measurements, the report ~~must shall~~ be based on ~~six-minute six minute~~ averages of opacity and contain:
 - 1) The percent opacity for each continuous opacity excess period; and
 - 2) The start and stop time in ~~six-minute six minute~~ increments of any opacity measurements ~~exceeding in excess of~~ the limitation.
 - d) If there were no excess emissions during the reporting period, the report ~~must shall so~~ state ~~this~~ and include information about the operating status of the monitoring equipment during that period.
 - e) Reports ~~must shall~~ be submitted within 45 days ~~after of~~ the end of every calendar quarter.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.406 Data Reduction

To convert monitoring data to the units of the emission limitation, owners and operators of sources subject to this Subpart ~~must shall~~ use:

- a) ~~Regulations~~The procedures specified in 35 Ill. Adm. code 230 or in regulations adopted by the ~~USEPA~~U.S. Environmental Protection Agency under Section 111

of the ~~CAA Clean Air Act~~ and made applicable in Illinois ~~underpursuant to~~ Section 9.1 of the ~~Illinois Environmental Protection Act~~; ~~or where necessary~~

- b) ~~Where necessary, the~~The procedures ~~specified~~ in 40 CFR 51.5, Appendix P, paragraph 5 (2024), ~~incorporated by reference in Section 201.104(f)(1987). This incorporation includes no later amendments or editions;~~ or
- c) Alternative measurement and data reduction methods, ~~may be utilized if demonstrated by~~ the owner or operator of the affected source ~~demonstrates~~ by means including, ~~but not limited to,~~ instrument accuracy tests that ~~the such~~ alternative methods will provide information equivalent to the information which would be provided by the ~~above~~ methods in subsections (a) and (b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.407 Retention of Information

Owners and operators of sources which are subject to the monitoring and recording requirements of this Subpart ~~must shall~~ maintain files of emission information at the facility and make the information available to the Agency upon request. This information ~~must shall~~ be retained for at least two years ~~after from~~ the date of collection; and ~~must shall~~ include:

- a) Emission measurements;
- b) Continuous monitoring system performance testing measurements;
- c) Performance evaluations;
- d) Calibration checks;
- e) Maintenance and adjustments performed;
- f) Quarterly reports submitted ~~under pursuant to~~ Section 201.405; and
- g) Data reduction information used ~~underpursuant to~~ Section 201.406.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.408 Compliance Schedules

Owners and operators of sources subject to Section 201.401 ~~must shall~~ install all necessary equipment and monitor in ~~compliance accordance~~ with the compliance schedule ~~contained~~ in the permit issued by the Agency. This schedule ~~must shall~~ provide that monitoring and recording begin within 18 months ~~after USEPA approves of this Subpart under being approved by the USEPA pursuant to~~ Section 110(a)(3)(A) of the ~~CAAClean Air Act~~ as a revision to the State

Implementation Plan, unless the owner or operator has been granted a variance ~~underpursuant to~~ Section 35(a) of the Act allowing a longer compliance schedule.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART M: PERMIT BY RULE (PBR) – GENERAL PROVISIONS

Section 201.500 Purpose

The purpose of this Subpart is to implement the PBR program ~~underprovided for in~~ Section 39.12 of the Act for classes of emission units described in this and following Subparts that address specific types of units covered by the PBR program. By fulfilling all the applicable requirements of this Subpart and the applicable Subpart for the specific type of emission unit, an owner or operator of a source seeking a PBR for an emission unit is considered to have met the requirement to submit an application for a construction permit and obtain ~~that such a~~ construction permit ~~underpursuant to~~ Section 9(b) of the Act and 35 Ill. Adm. Code 201.142, 201.152, and 201.160(a).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.505 Applicability

- a) An owner or operator of a source is eligible to obtain a PBR for a proposed new or modified emission unit if:
 - 1) The proposed emission unit will be located at a CAAPP source that has a CAAPP permit ~~underpursuant to~~ Section 39.5 of the Act;
 - 2) There is a PBR that has been adopted and become effective within this Part that is applicable to the proposed emission unit;
 - 3) The proposed emission unit, either alone or as part of a larger project, is not subject to any pre-construction permitting requirements for a major new source or major modification ~~underpursuant to~~ 40 CFR 52.21 or Section 9.1(c) of the Act, including 35 Ill. Adm. Code 203 and any other regulations adopted ~~underpursuant to~~ Section 9.1(c) of the Act; and
 - 4) The proposed emission unit is not an element in a larger project that otherwise requires a construction permit ~~underpursuant to~~ this Part or the Act.
- b) A PBR does not:
 - 1) Exempt any owner or operator from the requirements of the CAA or the Act, including determining whether construction or modification of an

emission unit, by itself or as part of a project, constitutes a major modification or major source;

- 2) Exempt any owner or operator from any requirement to notify the Agency or list insignificant activities and emissions levels for CAAPP permit purposes;
- 3) Relieve the owner or operator of a source from the requirement of including the emissions associated with the emission unit in any pre-construction permitting application for a major new source or major modification ~~underpursuant to~~ 40 CFR 52.21 or Section 9.1(c) of the Act, including 35 Ill. Adm. Code 203 and any other regulations adopted ~~underpursuant to~~ Section 9.1(c) of the Act;
- 4) Relieve the owner or operator of the emission unit from any applicable requirements of Section 39.5 of the Act for the emission unit, including any requirement to submit a timely application for a new or modified CAAPP permit that addresses the emission unit; or
- 5) Relieve the owner or operator of the source from compliance with other applicable statutes and regulations of the United States, or the State of Illinois, or with applicable local laws, ordinances, and regulations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.510 Notice of Intent to Be Covered by a PBR (Notification)

- a) An owner or operator of a source seeking to construct or modify an emission unit ~~underpursuant to~~ this Subpart ~~M~~ and the applicable PBR Subpart must submit a complete Notification, including fees, ~~beforeprior to~~ commencing construction or modification of the emission unit. A complete Notification containing the following information and fees must be submitted to the Agency's Permit Section at the address ~~provided~~ in Section 201.530(f)(1):
 - 1) The owner's or operator's name, the name of the source, and the applicable Agency Bureau of Air Identification Number;
 - 2) ~~The name~~Name, site address, mailing address (if different from site address), e-mail address, and telephone number of the source's contact;
 - 3) ~~A statement~~Statement ~~noting~~ whether the emission unit is a new emission unit or a modified emission unit (including a reconstructed emission unit);
 - 4) The location of the emission unit at the source;

- 5) The identity of the new emission unit or the identity of the current emission unit ~~before~~~~prior to~~ modification, applicable permit numbers, and the description of the modification or reconstruction of the emission unit;
- 6) A statement that indicates which PBR applies to the emission unit;
- 7) A statement ~~as to~~ whether the proposed emission unit will be an element in a larger project; if it is, all ~~of~~ the following information must also be included:
 - A) A description of the larger project;
 - B) A statement describing why a construction permit will not be required for any element of that project; and
 - C) A demonstration that the potential emissions of each regulated NSR pollutant, as defined in 40 CFR 52.21, as incorporated by reference in Section 201.104, from the project will be less than 80 percent of the relevant significant emission rates under 40 CFR 52.21, 35 Ill. Adm. Code 203, and any other regulations adopted ~~underpursuant to~~ Section 9.1(c) of the Act;
- 8) Identification of construction permits and PBRs received in the last two years and a demonstration that the requested PBR should not be aggregated with, and considered an element of, any of these projects that were addressed by the construction permits and PBRs identified;
- 9) The specific information required by the applicable PBR Subpart Notification requirement for this type of emission unit;
- 10) A statement ~~noting~~ whether the source is major or non-major for emissions of HAPs ~~underpursuant to~~ Section 39.5(2)(c)(i) of the Act. If the source is non-major, the Notification must include documentation for the determination;
- 11) A certification signed by the responsible official, as defined in Section 39.5 of the Act, that, under penalty of law, based on information and belief formed after reasonable inquiry, the statements and information ~~contained~~ in the Notification are true, accurate, and complete and that the emission unit is eligible for the PBR selected ~~underpursuant to~~ subsection (a)(6); and
- 12) Payment of the fee that applies to the owner or operator of the source ~~underpursuant to~~ Section 9.12 of the Act for the proposed construction or modification of a single emission unit.

- b) The Agency ~~must will~~ acknowledge receipt of the Notification within 30 days.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.515 Commencing Construction or Modification

- a) For the emission unit addressed by a complete Notification, the owner or operator of the source may commence construction or modification after submittal of a complete Notification in ~~compliance accordance~~ with Section 201.510.
- b) If the submitted Notification is incomplete, the emission unit is not covered by a PBR, and the owner or operator has not met the requirement to submit an application for a construction permit and to obtain the construction permit ~~underpursuant to~~ Section 9(b) of the Act and 35 Ill. Adm. Code 201.142, 201.152, and 201.160(a). The owner or operator of the source may not commence construction or modification of the emission unit until it has submitted a complete Notification to the Agency in ~~compliance accordance~~ with Section 201.510 or received a construction permit issued by the Agency.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.520 Modification or Change in Status of an Emission Unit Covered by a PBR

- a) If the owner or operator proposes to modify an emission unit covered by a PBR, the owner or operator of the source must submit a new Notification for a PBR or obtain a construction permit for the modification ~~underpursuant to~~ this Part and the Act, as applicable.
- b) If a proposed modification of the source at which an emission unit covered by a PBR is located will cause the source to become a major source of HAPs as defined in Section 39.5(2)(c)(i) of the Act, the owner or operator must submit a new Notification for a PBR for the emission unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.525 Standard Conditions for PBR

- a) ~~Duration.~~ A PBR ~~expireswill expire~~ one year ~~after from~~ the date of submittal of the complete Notification, unless a continuous program of construction on this project has commenced by that time.
- b) The construction covered by a PBR must be performed in compliance with applicable provisions of the PBR, the Act, and regulations adopted by the Board.
- c) The owner or operator of the emission unit must comply with all applicable requirements of ~~this~~ Subpart ~~M~~ and the applicable PBR Subpart.

- d) The owner or operator of the emission unit must submit an updated Fee Determination for CAAPP Permit form ~~before prior to~~ commencing operation of the proposed emission unit if there is an increase in allowable emissions over the existing permitted allowable emissions for fee purposes ~~because as a result~~ of the construction or modification of the emission unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.530 Recordkeeping and Reporting

The owner or operator of the emission unit must:

- a) Keep and maintain all records used to demonstrate initial compliance and ongoing compliance with the applicable requirements of ~~this~~ Subpart ~~M~~ and the applicable PBR Subpart ~~and, as well as~~ any additional records required by and reported ~~under pursuant to~~ those Subparts, for at least five years ~~after from~~ the date the document is created and make all records available to the Agency for inspection and copying upon request. These records include any records required by State or federal laws or regulations and any materials submitted to the Agency or USEPA pertaining to the emission unit. Any record retained in an electronic format must be capable of being retrieved and printed on paper during normal source office hours.
- b) Notify the Agency of the emission unit's actual start-up date ~~within no later than~~ 30 days after that date, unless an earlier date is specified in the applicable PBR.
- c) Except as otherwise provided in this Subpart ~~M~~ or the applicable PBR Subpart, submit a written report of any deviations from the applicable emission standards, emission limitations, operational restrictions, qualifying criteria, work practice requirements, or control equipment operating parameter limitations ~~set forth in~~ this Subpart ~~M~~ and the applicable PBR Subpart. The report must be submitted to the Agency within 30 days after the date the deviation occurred and must describe the deviation (including the date, time, and duration of the deviation), identify the specific requirement from which the deviation occurred and the total amount of excess emissions during the deviation, and describe the probable cause of the deviation and any corrective actions or preventive measures that have been or will be taken.
- d) If required to conduct a performance test:
 - 1) Submit to the Agency a testing protocol as required by the applicable PBR Subpart at least 45 days ~~before prior to~~ the scheduled performance test. Upon written request directed to the Bureau of Air's Compliance Section, the Agency may waive the 45-day requirement. A waiver is ~~only~~ effective

only if the Bureau of Air provides it ~~it is provided~~ in writing ~~by the Bureau of Air~~;

- 2) Notify the Agency in writing of the date of performance testing at least 30 days ~~before~~prior to testing and again 5 days ~~before~~prior to the testing, unless the emission unit is subject to other State or federal requirements that specify a longer notification period. Upon written request directed to the Bureau of Air's Compliance Section, the Agency may waive either or both of these requirements. ~~A Such~~ waiver is ~~only~~ effective only if the Bureau of Air provides it ~~it is provided~~ in writing ~~by the Bureau of Air~~;
 - 3) If, after the 30-day notice for an initially scheduled performance test is sent, there is a delay (e.g., due to operational problems) in conducting the test as scheduled, notify the Agency of the delay in the original test date, directed to the Bureau of Air's Compliance Section, as soon as practicable. This must be done either by providing at least a 7-day notice of the rescheduled date of the test or by arranging a new test date with the Agency by mutual agreement;
 - 4) ~~Within~~Not later than 60 days after ~~completing~~the completion of the performance test, submit the results of the test to the Agency.
- e) Submit any monitoring information required by the PBR as part of the Semi-Annual Monitoring Report required by the source's CAAPP permit.
- f) Provide copies of all required reports and Notifications as follows:
- 1) One copy of the new or amended Notification must be sent to:

Illinois Environmental Protection Agency
Bureau of Air
Permit Section (#11)
2520 West Iles Avenue

Section 201.535 Authority to Operate

For eligible emission units under Section 201.505, the owner or operator of a proposed emission unit must submit a complete application to the Agency for a minor modification to the CAAPP permit for the source to address the emission unit, ~~under pursuant to~~ Section 39.5(14) of the Act, before the emission unit begins operation. The application for minor permit modification must address all applicable requirements ~~contained in this Subpart M,~~ the applicable PBR Subpart, and Section 39.5(14) of the Act. ~~Under Pursuant to~~ Section 39.5(14)(a)(vi) of the Act, the owner or operator may begin operating the emission unit immediately after it files the application. Until the Agency takes any of the actions ~~specified in~~ Section 39.5(14)(a)(v)(A) through (C) of the Act, the owner or operator must comply with both the applicable requirements governing the emission unit and the proposed terms and conditions of the suggested draft of the modified CAAPP permit in the application, ~~underpursuant to~~ Section 39.5(14)(a)(iii)(B) of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.540 Enforcement Authority

Nothing in this Subpart limits the State's authority to seek penalties and injunctive relief for any violation of any applicable State law or regulation. Nothing in this Subpart limits the right of the federal government or any person to directly enforce against owners or operators due to actions or omissions that constitute violations of permits required by the CAA or applicable laws and regulations.

- a) Any owner or operator of a source that commences construction or modification of an emission unit and submits a Notification ~~underpursuant to~~ Section 201.510 that is incomplete, or fails to submit any Notification, is deemed to have constructed without the benefit of a permit under Section 9(b) of the Act and 35 Ill. Adm. Code 201.142, 201.152, and 201.160(a), unless the Agency has issued a construction permit other than a PBR for the emission unit ~~underpursuant to~~ Section 9(b) of the Act. A violation exists even if it is determined that the Notification was incomplete after construction or modification has already occurred.
- b) Any owner or operator of a source that submits a Notification and commences operation of an emission unit covered by a PBR, but fails to submit a complete application for a minor modification to the CAAPP permit in ~~compliance~~ ~~accordance~~ with Section 39.5(14) of the Act, is deemed to have operated without the benefit of a permit under Section 39.5(6)(b) of the Act. A violation exists even if it is determined that the application for a minor permit modification was incomplete after operation has already occurred.
- c) Any owner or operator of an emission unit covered by a PBR that violates any condition of this Subpart or the applicable PBR Subpart is deemed to have violated Sections 39.12(e) and 9(b) of the Act ~~and, as well as~~ any other applicable

State or federal regulation or portion of the Act. If ~~such~~ a violation occurs after the emission unit has commenced operation, the owner or operator is also deemed to have violated Section 39.5(6)(a) of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART N: PERMIT BY RULE (PBR) – BOILERS LESS THAN OR EQUAL TO 100 MMBTU/HR

Section 201.600 Applicability

An owner or operator of a source seeking a PBR for a new or modified boiler is eligible to obtain a PBR under this Subpart ~~N~~ if:

- a) The boiler has a maximum design heat input capacity of:
 - 1) Less than or equal to 50 ~~MMbtu/hr~~~~MMBtu/hr~~; or
 - 2) Greater than 50 ~~MMbtu/hr~~~~MMBtu/hr~~ and less than or equal to 100 ~~MMbtu/hr~~~~MMBtu/hr~~ and is equipped with low-NO_x burners designed by the manufacturer to meet a NO_x emission limit of not greater than 0.05 ~~lb/MMbtu~~~~lb/MMBtu~~;
- b) The boiler primarily burns pipeline natural gas, butane, propane, or refinery fuel gas;
- c) The only backup or reserve fuel burned in the boiler is diesel fuel, butane, or propane. If diesel fuel is the backup fuel, ~~the~~ burning ~~of~~ diesel fuel in the boiler must be such that, as appropriate, the boiler is a "unit designed to burn gas 1 subcategory," as defined by 40 CFR 63.7575, incorporated by reference in Section 201.104(e), or a "gas-fired boiler," as defined by 40 CFR 63.11237, as incorporated by reference in Section 201.104(e); and
- d) The emissions from the boiler consist entirely of the products of fuel combustion.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.605 Boiler Notice of Intent to Be Covered by a PBR (Notification)

The Notification for a PBR ~~underpursuant to~~ this Subpart must also include the following information, in addition to the information ~~inspecified by~~ Section 201.510:

- a) The primary fuel that will be burned by the boiler, along with the maximum rated heat input capacity of the boiler (~~MMbtu/hr~~~~MMBtu/hr~~) and a copy of the manufacturer's specifications for the boiler.

- b) Whether the boiler would be a temporary boiler as defined by 40 CFR 60.41c and 63.7575 or 63.11237, ~~as~~ incorporated by reference in Section 201.104, and, if it would be, a demonstration that the criteria ~~set forth~~ in the definition of a temporary boiler are met, and the expected period or periods in which the boiler would be at a location or locations at the source.
- c) The potential emissions of individual pollutants from the boiler in lb/hr, tons/month, and tons/year, including emissions of PM, PM₁₀ (including both filterable and condensable particulate), PM_{2.5} (including both filterable and condensable particulate), NO_x, CO, VOM, and SO₂, based on continuous operation of the boiler at its rated heat input capacity combusting its primary fuel, with supporting documentation and calculations.
- d) Whether the boiler will have the capability to burn diesel fuel, butane, propane, or refinery fuel gas, and, if so, the potential SO₂ emissions of the boiler from the use of such fuel.
- e) If the boiler or the source at which the boiler would be located does not meet the applicability criteria in 35 Ill. Adm. Code 217.150(a)(1)(A) or (a)(1)(B), an identification of the criteria that are not met, with explanation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.610 Federal NSPS and NESHAP Requirements

The owner or operator must comply with ~~the requirements of~~ all applicable federal regulations for the PBR boiler, including the following limits, work practice standards, testing, monitoring, recordkeeping, and reporting requirements:

- a) 40 CFR 60, subpart A, Standards of Performance for New Stationary Sources: General Provisions, ~~as~~ incorporated by reference in Section 201.104.
- b) 40 CFR 60, subpart Dc, Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units, ~~as~~ incorporated by reference in Section 201.104.
- c) 40 CFR 63, subpart A, National Emission Standards for Hazardous Air Pollutants for Source Categories: General Provisions, ~~as~~ incorporated by reference in Section 201.104.
- d) 40 CFR 63, subpart DDDDD, National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters, ~~as~~ incorporated by reference in Section 201.104.
- e) 40 CFR 63, subpart JJJJJ, National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers Area Sources, ~~as~~

incorporated by reference in Section 201.104.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.620 Requirements for Use of Diesel Fuel and Refinery Fuel Gas

- a) For a PBR boiler to burn diesel fuel as a backup fuel, the owner or operator must:
 - 1) Comply with the applicable provisions of 35 Ill. Adm. Code 214.Subpart B or D when burning diesel fuel;
 - 2) Comply with the particulate emission standard in 35 Ill. Adm. Code 212.206 when diesel fuel is burned;
 - 3) Maintain records that include the following information:
 - A) Date, time, and duration of any period when diesel fuel was fired in the boiler; the amount of diesel fuel that was fired; and the reason diesel fuel was fired, e.g., gas curtailment, gas supply interruption, or periodic operational testing;
 - B) The total duration of periodic operational testing or other activity while firing diesel fuel (number of hours of operation per calendar year); and
 - C) The actual SO₂ emissions of the boiler from use of diesel fuel (tons/month and tons/year), with supporting calculations.
- b) For a PBR boiler to burn refinery fuel gas, the owner or operator must use fuel gas at a petroleum refinery from a fuel gas system that is subject to and meeting the requirements for compliance with the limits for H₂S content of fuel gas in 40 CFR 60.102a(g)(l)(ii), ~~as~~ incorporated by reference in Section 201.104.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.625 Carbon Monoxide (CO) Requirements

~~UnderPursuant to~~ 35 Ill. Adm. Code 216.121, ~~an no~~ owner or operator of a PBR boiler must not ~~may~~ cause or allow the emission of CO into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 ~~MMBtu/hr~~ ~~MMBtu/hr~~) to exceed 200 ppm, corrected to 50% ~~percent~~ excess air.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 201.630 Nitrogen Oxide (NO_x) Requirements

The owner or operator of the PBR boiler must comply with the following, as applicable:

- a) If the PBR boiler is subject to ~~the requirements of~~ 35 Ill. Adm. Code 217.Subpart D, comply with all the applicable requirements of 35 Ill. Adm. Code 217.Subparts D and E;
- b) If the PBR boiler is subject to ~~the requirements of~~ 40 CFR 63.subpart DDDDD, comply with all applicable requirements, including the combustion tuning work practice requirements of 40 CFR 63.7440(a)(10), ~~as~~ incorporated by reference in Section 201.104; and
- c) For a boiler with a maximum design heat input capacity greater than 50 ~~MMbtu/hr~~MMBtu/hr, and not subject to either 35 Ill. Adm. Code 217.Subpart D or 40 CFR 63, subpart DDDDD, conduct combustion tuning for the boiler. This tuning must be conducted in each calendar year in which the boiler is operated, except for the calendar year in which the boiler first starts up and the calendar year in which the boiler is permanently removed from service. The combustion tuning must be conducted ~~underas specified by~~ 40 CFR 63.7540(a)(10)(i) through (vi), ~~as~~ incorporated by reference in Section 201.104, and must be conducted while burning the type of fuel that provided the majority of the heat input to the boiler over the 12 months ~~before~~prior to the tune-up.

Section 201.APPENDIX C Part Compliance Dates (Repealed)

Rule 103(b)(2)

Operating permits were required as follows:

<u>SOURCE CLASSIFICATION</u>	<u>DATE OPERATING PERMIT REQUIRED</u>
<u>Primary Metal Industry Operations as defined by code 33 of the "Standard Industrial Classification Manual"</u>	<u>By December 1, 1972</u>
<u>Rubber and Plastics Products Industry Operations as defined by code 30 of the "Standard Industrial Classification Manual"</u>	<u>By December 1, 1972</u>
<u>Chemicals and Allied Products Industry Operations as defined by code 28 of the "Standard Industrial Classification Manual"</u>	<u>By January 1, 1973</u>
<u>Food and Kindred Products Industry Operations as defined by code 20 and Printing and Publishing Industry Operations as defined by code 27 of the "Standard Industrial Classification Manual"</u>	<u>By February 1, 1973</u>
<u>Petroleum and Coal Products Industry Operations as defined by code 29 of the "Standard Industrial Classification Manual" and bituminous cement (asphalt) plants</u>	<u>By February 1, 1973</u>
<u>Stone, Clay and Glass Products and Paper and Allied Products Industry Operations as defined by code 32 and 26 of the "Standard Industrial Classification Manual" and all painting</u>	<u>By March 1, 1973</u>

~~operations using in excess of 5,000 gallons of paint (including thinner) per year~~

~~Incinerators~~

~~By April 1, 1973~~

~~Electric, Gas, and Sanitary Services as defined by code 49 of the "Standard Industrial Classification Manual" and coal fired boilers~~

~~By May 1, 1973~~

~~Gas and Oil fired boilers and all other emission sources or air pollution control equipment not listed previously in this paragraph except equipment excluded under paragraph (i) of this Rule~~

~~By June 1, 1973~~

~~Grain Handling and Conditioning Operations~~

~~By March 1, 1976~~

~~Grain Handling and Grain Drying Operations~~

~~By March 1, 1976~~

~~(B) All applications for Operating Permits shall be submitted to the Agency at least 90 days prior to the date on which an Operating Permit is required. Provided, however, the Agency may waive this 90 day requirement when appropriate. If necessary, to prevent an unmanageable workload as may be deemed appropriate, the Agency may extend the dates by which Operating Permits are required under Section 103(b)(2)(A) for a period not to exceed four months. The Agency shall notify the persons affected and the Board in writing of the extension at least four months before the dates set forth in Section 103(b)(2)(A).~~

~~(C) Nothing in this Rule shall preclude any person from applying for an Operating Permit earlier than the dates specified in part (b)(2)(A) of this Rule 103.~~

~~Rule 103(b)(6)(G)~~

~~No operating permit could be granted unless the applicant submitted proof to the Agency that: if subject to a future compliance date, the applicant was, on the effective date of this Chapter, and is at the time of application for an Operating Permit pursuant to Rule 103(b)(2), in compliance with any applicable emission standards of the Rules and Regulations Governing the Control of Air Pollution of the former State of Illinois Air Pollution Control Board; or was, on the effective date of this Chapter, in full compliance with any variance from those regulations granted by the Pollution Control Board; or has been, since the effective date of this Chapter, granted a variance from those regulations, and is in full compliance with such variance.~~

~~Rule 104(g)~~

~~**Submission and Approval Dates.** The owner or operator of an emission source subject to the following rules was required to have a Compliance Plan and a Project Completion Schedule, where applicable, approved by the Agency by the following dates. A Compliance Plan and a Project Completion Schedule, where applicable, shall be submitted at least 90 days before the following dates.~~

~~(1) By February 1, 1980. Gasoline Dispensing facilities subject to Rule 205(p) and degreasers subject to Rule 205(k) located in Cook, DuPage, Lake, Kane, McHenry and Will counties.~~

~~(2) By March 1, 1980. Petroleum refineries subject to Rule 205(l), except (l) (4) (10). Gasoline dispensing facilities subject to Rule 205(p) in Boone, Madison, St. Clair, Peoria, Tazewell, Rock Island and Winnebago counties.~~

~~(3) By April 1, 1980. Degreasers subject to Rule 205(k) located in counties other than Cook, DuPage, Lake, Kane, McHenry or Will. Bulk gasoline plants, bulk gasoline terminals and petroleum liquid storage tanks subject to Rule 205(o), except (o) (3), located in Cook, DuPage, Lake, Kane, McHenry and Will counties.~~

~~(4) By April 1, 1980. Coating lines subject to Rule 205(n), except (n)(1)(J), and (K). Bulk gasoline plants, bulk gasoline terminals and petroleum liquid storage tanks subject to Rule 205(o), except (o)(3), which are located in counties other than Cook, Lake, DuPage, Kane, McHenry or Will.~~

SUBPART A: GENERAL PROVISIONS

Section 202.101 Definitions

Unless a different meaning of a term is clear from its context, the definitions of terms used ~~infor~~ this Part ~~are shall be the same as~~ those used in ~~this Chapter,~~ 35 Ill. Adm. Code Subtitle B, Chapter I-~~(Chapter)~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.104 Actual Emissions

"Actual emissions" means the actual rate of annual emissions of a pollutant from an operational emission source for a particular date equal to the mean rate at which the emission source actually emitted the pollutant during the ~~two year~~~~two-year period~~ which immediately ~~precede~~~~precedes~~ the particular date and which is determined by the Illinois Environmental Protection Agency (Agency) to ~~represent~~~~be representative of~~ normal emission source operation; however:

- a) The Agency ~~must~~ allow the use of a different time period upon ~~determining a determination~~ that it is more representative of normal emission source operation. The burden ~~is~~ on the applicant to demonstrate that another time period is more representative. Actual emissions ~~must~~ be calculated using the emission source's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.
- b) If the Agency determines that there is inadequate information to determine actual emissions ~~under this Section as indicated in the preceding paragraphs~~, the Agency ~~must~~ use the potential to emit of the emission source.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.107 Allowable Emissions

- a) "Allowable emissions" means the emission rate of an emission source calculated using the maximum rated capacity of the emission source (unless the emission source is subject to permit conditions or other enforceable limits that restrict the operating rate, or hours of operation, or both) and the more stringent of the following:
 - 1) The applicable emission standard or limitation ~~contained~~ in this Chapter, including those with a future compliance date; or
 - 2) The ~~emissions~~ rate specified as a permit condition, including those with a future compliance date.
- b) The allowable emissions may be expressed as a permit condition limiting annual emissions or material or fuel throughput.
- c) If an emission source is not subject to an emission standard under subsection (a) and is not conditioned ~~under~~ pursuant to subsection (b), the allowable emissions will be the source's potential to emit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.110 Alternative Control Strategies (ACS)

"Alternative control strategy (~~ACS~~)" means a specific program of emissions limitations and requirements which is environmentally equivalent to ~~what that which~~ would otherwise be required by applicable statutes or regulations, and under which the owner or operator of an emission source increases emissions of a regulated pollutant beyond the emission baseline at one or more emission sources and correspondingly reduces emissions of the same pollutant below the emission baseline at other emission sources.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.113 Chapter

References to "this Chapter" or "Chapter 2" in this Part ~~means~~shall mean Pollution Control Board air pollution rules and regulations ~~as contained in Chapter 2: Air Pollution Regulations and as codified~~ under 35 Ill. Adm. Code: Subtitle B, Chapter I.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.116 Emission Baseline

"Emission baseline" means the starting point or reference level from which increases and decreases in emissions are measured. The rules governing determination of emission offsets, calculation of net emission increases, and evaluation of ACS strategies specify the ~~particular~~ emission baseline that applies for ~~those purposes~~that purpose.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.122 Potential to Emit

"Potential to emit" means the maximum capacity of an emission source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the emission source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, ~~will~~shall be treated as part of its design only if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.125 Abbreviations

This Part uses the following abbreviations:

"μg" ~~is an abbreviation for~~ _____ micrograms.

"m³" ~~is an abbreviation for~~ _____ cubic meter.

"SO₂" ~~is an abbreviation for~~ _____ sulfur dioxide.

"TSP" ~~is an abbreviation for~~ _____ total solid particulate matter.

"NO_x" ~~is an abbreviation for~~ _____ nitrogen oxides.

"CO" ~~is an abbreviation for~~ _____ carbon monoxide.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.140 Scope

~~UnderPursuant to~~ a permit issued by the Agency under this Part, a person ~~or persons~~ may use an ACS for emission sources, including fugitive emission sources, ~~instead in lieu of~~ ~~complying compliance~~ with conflicting requirements ~~which would~~ otherwise ~~be~~ applicable under this Chapter.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.142 Severability

~~DespiteNotwithstanding~~ 35 Ill. Adm. Code 201.125, if any provision of Part 202 is stayed or declared invalid by a final order ~~of any court of competent jurisdiction~~, no longer subject to appeal, ~~of any court of competent jurisdiction~~, then the ~~entire entirety of~~ Part 202 ~~mustshall~~ be deemed stayed or invalidated until the stay is lifted or the Pollution Control Board ~~revalidates~~ ~~(Board) acts to revalidate~~ the Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART B: PERMIT APPLICATION

Section 202.201 Emission Baseline for Alternative Control Strategies

- a) The baseline for reviewing decreases or increases of emissions from emission sources which are the subject of an ACS ~~ismustshall be~~ the lesser of the actual emissions or the allowable emissions prescribed by this Chapter.
- b) ~~DespiteNotwithstanding~~ subsection (a), an increment of emission reduction ~~ismustshall be~~ creditable under an ACS to the extent that it:
 - 1) Was achieved as a result of ~~installingthe installation of~~ pollution control equipment; ~~;~~ changes in process, procedures, or materials; ~~;~~ or the shutdown of an emission source which would not have occurred ~~except to createbut for the purpose of creating~~ an emission reduction;
 - 2) Reduced emissions beyond the requirements of Board regulations; and
 - 3) Was not relied upon in the State Implementation Plan (SIP) demonstration to demonstrate compliance with ambient air quality standards in the compliance year in nonattainment areas or maintenance of air quality in other areas.

- c) ~~Under~~For purposes of subsection (b), the burden ~~is~~mustshall generally ~~be~~ on the permit applicant. However, ~~under for the purpose of~~ subsection (b)(3), it ~~is the Agency's responsibility~~mustshall be the responsibility of the Agency to demonstrate that the SIP demonstration either did or did not rely upon the emission reduction in question, whether from the particular emission source or the category to which it belongs.
- d) ~~Despite~~Notwithstanding subsection (b)(3), if an emission source is located in an area for which the SIP does not demonstrate attainment of the air quality standards by the compliance year for the pollutant which is the subject of the ACS, it may ~~use~~utilize an emission reduction credit only to the extent that ~~the~~that reduction reduces its emissions below actual emissions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.210 Permit Application Information

In addition to other information which may be required under 35 Ill. Adm. Code 201, a permit application under this Subpart mustshall:

- a) List the emission sources to be included in the ACS, the emission baseline the applicant believes to be applicable to each emission source, and the remaining useful life of each emission source.
- b) Describe the proposed modifications to the emission sources and quantify the emission increases and decreases anticipated to occur ~~because as a result~~ of each modification.
- c) Identify the Board regulations and the terms of the Environmental Protection Act (Act) ~~(415 ILCS 5)(Ill. Rev. Stat. 1981, ch. 111 1/2, pars. 1001 et seq.)~~ to which the applicant believes the ACS provides an alternative.
- d) Describe the methods currently used to assure compliance and the methods proposed to be used under the ACS. ~~These~~Such methods may include, ~~but are not limited to~~ recordkeeping, equipment or emissions monitoring, source testing, and material or process specifications.
- e) Provide an analysis of the ACS ~~under~~pursuant to this Subpart.
- f) Contain a certification, signed by all ACS applicants, stating that a copy of the ACS application has been sent by certified mail to the United States Environmental Protection Agency (USEPA) if any of the emission sources included in the ACS are presently the subject of a federal notice of violation or federal enforcement action under the provisions of the ~~CAA~~Clean Air Act (42 U.S.C. -7401 et seq.), including civil actions filed under Section 113(b), criminal actions filed under Section 113(c), a notice imposing ~~noncompliance~~non-

~~compliance~~ penalties ~~issued~~ under Section 120, administrative orders ~~issued~~ under Section 113(a), or a citizen suit ~~filed~~ under Section 304 ~~in which~~ where the USEPA has intervened (42 U.S.C. 7413 and 7420).

- g) Provide ~~such~~ other information as the Agency demonstrates is ~~can demonstrate to be necessary to determine for the determination of~~ compliance with the standards of issuance in Section 202.306, including the results of any source tests or ambient air monitoring.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.211 Analysis of Emissions

- a) A permit application under this Subpart must provide a comparison of the baseline emissions and the emissions that would be permitted under the proposed ACS for each emission source involved in the ACS. Where appropriate, this analysis must address differences between the emission sources to be covered by the ACS regarding:
- 1) Methods of determining emissions;
 - 2) Consistency and reliability of the performance of the emission sources and any associated control devices;
 - 3) Frequency and duration of operating during malfunction or breakdown with excess emissions, or during start-up with excess emissions;
 - 4) Methods of operation, including operating schedules ~~and~~ and range of raw materials or products; and
 - 5) Other characteristics of the emission sources or their operation which may affect equivalence of emissions.
- b) The analysis must describe any increases in emissions from emission sources outside the ACS which may accompany the proposed ACS.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.212 Analysis of Environmental Quality

- a) A permit application under this Subpart mustshall provide a comparison of the ambient air quality under existing requirements and the ambient air quality ~~which would exist~~ under the proposed ACS. This analysis mustshall include dispersion modeling based on the best and most appropriate models for the pollutant and emission sources involved, unless the Agency finds that:

- 1) Due to the characteristics of the pollutant and emission source, dispersion modeling is inappropriate or unnecessary ~~to determine~~~~for determining~~ effects on air quality; or
- 2) The ~~location of~~ emission sources included in the ACS are ~~located not more than~~ 250 meters ~~or less~~ apart, the effective plume height of the emission increases and decreases are not significantly different, and the differences in the characteristics of the emission sources are not likely to affect ambient air quality; or
- 3) Differences in location, plume height, operating practice, and other characteristics of the emission sources subject to the ACS are not likely to significantly affect ambient air quality. An effect on ambient air quality is significant if it equals or exceeds the levels ~~specified~~ in the following table:

Pollutant	SIGNIFICANCE LEVELS				
	Annual	24- Hour	8- Hour	3- Hour	1- Hour
SO ₂	1.0 ~~µgug~~ /m ³	5 ~~µgug~~ /m ³		25 ~~µgug~~ /m ³	
TSP	1.0 ~~µgug~~ /m ³	5 ~~µgug~~ /m ³			
NO _x	1.0 ~~µgug~~ /m ³				
CO			0.5 mg/m ³		2 mg/m ³

- b) The applicant ~~mustshall~~ analyze the air quality impacts resulting from trades between emission sources, including the impact of emissions which differ in their qualitative impact on health or the environment.
- c) The analysis ~~mustshall~~ describe any other impacts on the environment which may accompany the proposed ACS.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.213 Analysis of Methods of Assuring Compliance

A permit application under this Subpart ~~mustshall~~ provide a comparison of the methods of assuring compliance under existing requirements and the methods of assuring compliance ~~which would be used~~ under the proposed ACS. As a minimum, the analysis ~~mustshall~~ address the effectiveness, reliability, and accessibility of these methods.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART C: PERMIT CONDITIONS AND ISSUANCE

Section 202.301 Permit Conditions

- a) The permit ~~must~~shall specify:
 - 1) All emission limits which apply to emission sources under the ACS~~;~~ and
 - 2) Any compliance procedures which ~~the permittee must follow~~shall be followed by the permittee.
- b) The permit may ~~include conditions~~be conditioned so that compliance with the terms of the ACS will continue ~~if in the event of change of~~ ownership of emission sources ~~changes~~, and ~~these~~such terms will ~~apply~~be made applicable to the new owner.
- c) The Agency may impose ~~such~~ other permit conditions ~~in a permit as are~~ necessary to accomplish the purposes of the Act or ~~of~~ this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.302 Records and Reports

- a) The Agency ~~must~~shall require that a permittee operating under an ACS maintain ~~such~~ records ~~as~~ necessary to determine compliance with the requirements of the ACS.
 - 1) These records ~~must~~shall include~~, but shall not be limited to~~ the actual and allowable emission rates, or the parameters from which these rates are determined, or related operational parameters of the equipment.
 - 2) The records ~~must~~shall be maintained as prescribed in the permit.
 - 3) These records ~~must~~shall be available to the Agency, and copies of these records ~~must~~shall be sent to the Agency upon written request. The Agency ~~must~~shall make ~~these~~such records available to the public ~~under~~pursuant to Sections 7 and 7.1 of the Act (~~Ill. Rev. Stat. 1981, ch. 111-1/2, pars. 1007 and 1007.1~~) and regulations promulgated ~~under~~them~~hereunder~~.
- b) A permittee operating under an ACS ~~must~~shall submit to the Agency reports containing ~~such~~ reasonable information and at ~~as~~such reasonable frequency as the Agency may specify ~~under~~pursuant to a ~~permit~~ condition ~~of a permit~~ or general procedures established by the Agency, to assure that the terms of the ACS are met.
- c) A permittee operating under an ACS ~~must~~shall notify the Agency within 72 hours by telephone, ~~email, or fax or telegram~~ of circumstances, which will make compliance with the requirements of the ACS impossible.

- 1) This notice ~~mustshall~~ be followed within ten days by written confirmation which describes the circumstances ~~which~~ preventing compliance with the requirements of the ACS and supplies a preliminary Compliance Program which will result in compliance with this Chapter.
- 2) The permittee ~~mustshall~~ take all reasonable steps to come into compliance with the ACS or this Chapter as expeditiously as possible.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.303 Monitoring and Testing

The Agency may require that equipment testing and monitoring, ~~as~~ authorized ~~elsewhere~~ in this Chapter, accompany the construction or operation of emission sources under a permit containing an ACS.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.304 Compliance Dates

- a) ~~An~~ No owner or operator subject to a permit utilizing an ACS is not relieved of the responsibility to achieve and maintain ~~for achieving and maintaining~~ a reduction of emissions as expeditiously as practicable, but not later than the compliance date required under other applicable regulations.
- b) ~~Despite~~ Notwithstanding subsection (a), an owner or operator may demonstrate compliance with 35 Ill. Adm. Code 215 ~~underpursuant to~~ an Agency- ~~approved~~ Agency-approved alternative compliance plan ~~contained~~ in a permit ~~usingutilizing~~ an ACS ~~the owner or operatorwhich is~~ applied for ~~beforeprior to~~ December 31, 1982. The Agency ~~mustshall~~ approve ~~thesuch an~~ alternative compliance plan if, and only if, the applicant demonstrates that:
 - 1) The alternative compliance plan extends the compliance date for each emission source subject to the ACS no longer than necessary to enable that emission source to useutilize the ACS, but in no case later than December 31, 1987;
 - 2) The emission source belongs to a category of emission sources having a compliance date of December 31, 1982, or later under 35 Ill. Adm. Code 215;
 - 3) Using ~~The use of~~ an ACS will result in either greater or faster overall emission reductions than would otherwise be achieved; and

- 4) ~~The Such~~ extension is consistent with the requirements of the ~~CAA Clean Air Act~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.305 Public Participation

The initial issuance of a permit containing an ACS ~~mustshall~~ be subject to applicable Agency public participation procedures (35 Ill. Adm. Code 166) ~~before the Agency issues the permit prior to issuance~~. At a minimum, the Agency ~~mustshall~~ provide an opportunity for public comment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.306 Standards for Issuance

The Agency ~~mustshall~~ issue a permit containing an ACS if, and only if, the permit applicant demonstrates that:

- a) The ACS provides, in the aggregate for each regulated pollutant, equivalent or less total emissions than would otherwise be required~~;~~
- b) The impact of the ACS is environmentally equivalent to ~~what that which~~ would otherwise be achieved and maintained under existing requirements~~;~~
- c) The methods for assuring compliance with the conditions and requirements of the permit under the ACS are equivalent to ~~the~~ those ~~that are~~ associated with otherwise applicable requirements~~;~~
- d) The ACS complies with any applicable requirements ~~contained~~ in 35 Ill. Adm. Code 203, 204, 230~~;~~ or 231~~;~~
- e) USEPA has not disapproved the proposed ACS or any compliance schedule it ~~contains because may contain due to the existence~~ of a federal enforcement action pending against a participant in the ACS~~; and~~
- f) The ACS does not permit an increase in emissions of any pollutant ~~which is~~ listed or regulated ~~under pursuant to~~ Section 112 of the ~~CAA Clean Air Act~~ (42 U.S.C. 7412 et seq.).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.307 Notification to USEPA

~~When it issues~~~~Upon issuance of~~ an ACS permit, the Agency ~~mustshall~~ notify USEPA of emission limitations, alternative compliance plans, and any other permit conditions applicable to emission sources under an ACS.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART D: PERMIT DURATION, REVISION AND RENEWAL

Section 202.401 Duration

- a) A permit containing an ACS ~~is effective formustshall be issued for no longer than~~ five years, or ~~a for such~~ shorter period ~~as~~ the Agency ~~specifiesmay specify~~ as necessary for periodic review of the ACS or to accomplish the purposes of the Act or ~~of~~ this Chapter. However, an ACS permit may not be issued for a period ~~of~~ ~~time which is~~ greater than the useful life of an emission source which contributes an emission reduction to the ACS. The burden of proving the useful life of the emission source is on the applicant.
- b) ~~When it issues or renews~~~~Upon the initial issuance or renewal of~~ an ACS permit, the Agency ~~mustshall~~ consider all factors which it reasonably construes as bearing upon the useful life of an emission source which contributes an emission reduction to the ACS. Where a shutdown emission source contributes an emission reduction to an ACS, the Agency ~~mustshall~~ specify the useful life of the shutdown emission source in a permit condition. ~~The Agency must consider factors including:~~~~Factors which the Agency considers mustshall include, as a minimum:~~
 - 1) The anticipated useful life of the principal components of the emission source upon purchase;
 - 2) The physical condition of the principal components of the emission source;
 - 3) The technological acceptability of the emission source;
 - 4) The economic viability of the emission source; and
 - 5) The demonstrated useful life of emission sources of the same category or functional type.
- c) The Agency ~~mustshall~~ make a record of the factors considered and the basis for its initial or modified determination of useful life made ~~underpursuant to~~ subsection (b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.402 Revision

- a) Timing

- 1) An application for revision of a permit containing an ACS ~~must~~ be submitted at least 180 days ~~before~~ the date on which the revision is required to go into effect.
 - 2) If the standard under this Chapter ~~changes~~ for an emission source included in the ACS ~~is changed~~ and ~~the permittee proposes~~ a revised ACS ~~is being proposed~~, an application ~~to revise~~ for revision of a permit containing the ACS ~~must~~ be submitted at least 90 days ~~before~~ the date a compliance plan must be submitted.
- b) The applicant ~~must~~ submit the information ~~specified~~ in Section 202.210 which is necessary to show that the revised ACS will meet the standards ~~to issue~~ of permit ~~under~~ ~~issuance specified in~~ Section 202.306.
 - c) Unless the Agency finds that the proposed revisions to the ACS are not substantive in nature and do not alter fundamental details of the ACS ~~which was~~ approved under the prior permit, ~~issuing~~ ~~issuance of~~ the revised permit ~~must~~ be subject to public participation ~~under~~ ~~pursuant to~~ Section 202.305.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.403 Renewal

- a) An application ~~to renew~~ ~~for renewal of~~ a permit containing an ACS ~~must~~ be submitted at least 180 days ~~before~~ ~~prior to the expiration of~~ the previous permit ~~expires~~.
- b) Applications for renewal ~~must~~ contain the information ~~specified~~ in Section 202.210. However, an analysis of the effect of the ACS on air quality ~~under~~ ~~pursuant to~~ Section 202.212 ~~must~~ ~~need~~ be provided only if:
 - 1) The other information submitted ~~under~~ ~~pursuant to~~ this subsection is different from the information upon which the ~~Agency previously issued~~ ~~the permit; was previously issued~~, and
 - 2) ~~The~~ differences include a change in the applicable emission limit or operation of the source or may otherwise significantly affect air quality.
- c) Unless the Agency finds that changes in the application are not substantive in nature and do not alter fundamental details of the ACS ~~which was~~ approved under the prior permit, renewal of the permit ~~must~~ be subject to public participation ~~under~~ ~~pursuant to~~ Section 202.305.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART E: ALTERNATIVE CONTROL STRATEGIES INVOLVING MORE THAN ONE PERSON

Section 202.501 Applicability

Persons who propose or participate in a multi-person ACS ~~are~~must~~shall be~~ subject to the rules ~~found~~ in this Subpart ~~and in addition to~~ the remainder of this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.502 Permit Application

In addition to ~~the~~ information required in Section 212.210, persons who propose a multi-person ACS ~~must~~shall:

- a) Identify the persons having ownership and control of the emission sources to be included in the ACS; ~~and~~
- b) Provide a written agreement showing the participants' intent to pursue the multi-person ACS and ~~to be~~ jointly bound by the terms and conditions of any permits ~~which are~~ issued ~~through~~pursuant to the application.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.503 Duration

All permits issued under a multi-person ACS ~~must~~shall have the same expiration date.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.504 Permit Conditions

Each participant in a multi-person ACS ~~must~~shall be issued an individual permit, which ~~must~~shall be conditioned on the continuing compliance of the other participants with the limitations in their permits.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.505 Records and Reports

All records and reports of the participants in a multi-person ACS which are not confidential in nature ~~must~~shall be available for inspection to the other participants upon reasonable notice of a request to inspect.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.506 Revocation

Permit revocation or other sanctions may be initiated before the Board against any and all persons in ~~at the~~ multi-person ACS, regardless of the ownership and control of the emission source at which the violations occurred or any contracts or other agreements between the participants.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 202.507 Termination

- a) If a participant in a multi-person ACS intends to terminate involvement in the ACS, it ~~must~~shall give written notice to the Agency and the other participants in the ACS at least 180 days ~~before~~prior to the anticipated termination date.
- b) If the ACS will not meet the standards of issuance with only the remaining participants, they may:
 - 1) Propose a revised ACS to include the remaining sources and persons. ~~;~~ This~~this~~ proposal ~~must~~shall be submitted to the Agency at least 120 days before new permits are required; or
 - 2) Apply for revised permits ~~under, pursuant to~~ the otherwise applicable regulations in this Chapter. ~~These; such~~ applications ~~must~~shall be submitted at least 90 days before the permits are required; or
- c) If the notice of termination of the multi-person ACS does not allow sufficient time to meet the ~~deadline~~time periods in ~~Section~~Subsection 202.507(b) ~~above~~, the participants may ~~petition~~seek variance relief from the Board for variance relief from the requirements of this Chapter and of the Act.

205.760 Market System Review Procedures

AUTHORITY: Implementing Section 9.8 and authorized by Sections 25 and 28 of the Environmental Protection Act [415 ILCS 5/9.8, 27 and 28].

SOURCE: Adopted in R97-13 at 21 Ill. Reg. 15777, effective November 27, 1997; amended in R05-11 at 29 Ill. Reg. 8848, effective June 13, 2005; amended in R18-22 at 43 Ill. Reg. 441, effective December 26, 2018; repealed in R18-21 at 50 Ill Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 205.100 Severability

If any Section, subsection, sentence or clause of this Part is judged invalid, such adjudication shall not affect the validity of this Part as a whole or of any Section, subsection, sentence or clause thereof not judged invalid.

Section 205.110 Purpose

The purpose of this Part is to implement the Emissions Reduction Market System (ERMS) regulatory program consistent with the assurances that are specified in Section 9.8 of the

Environmental Protection Act [415 ILCS 5/9.8]. The ERMS is designed, as further specified in this Part, to achieve the following:

- a) Implement innovative and cost-effective strategies to attain the national ambient air quality standard (NAAQS) for ozone and to meet the requirements of the Clean Air Act;
- b) Increase flexibility for participating sources and lessen the economic impacts associated with implementation of the Clean Air Act;
- c) Take into account the findings of the national ozone transport assessment coordinated by the Environmental Council of States with participation by the United States Environmental Protection Agency and by the Lake Michigan Air Directors Consortium; and
- d) Assure that sources subject to the ERMS regulatory program will not be required to reduce emissions to an extent that exceeds their proportionate share of the total emissions reductions required of all emission sources, including mobile and area sources.

Section 205.115 Sunset Provision

This Part does not apply after April 29, 2018. Subject sources must comply with this Part before April 30, 2018.

Section 205.120 Abbreviations and Acronyms

Unless otherwise specified within this Part, the abbreviations used in this Part shall be the same as those found in 35 Ill. Adm. Code 211. The following abbreviations and acronyms are used in this Part:

ACMA	Alternative Compliance Market Account
Act	Environmental Protection Act [415 ILCS 5]
ATU	Allotment Trading Unit
BAT	Best Available Technology
CAA	Clean Air Act as amended in 1990 [42 U.S.C. 7401 through 7671q]
CAAPP	Clean Air Act Permit Program
ERMS	Emissions Reduction Market System
FESOP	Federally Enforceable State Operating Permit
LAER	Lowest Achievable Emission Rate
MACT	Maximum Achievable Control Technology
NAAQS	National Ambient Air Quality Standard
NESHAP	National Emission Standards for Hazardous Air Pollutants
RFP	Reasonable Further Progress
ROP	Rate of Progress
USEPA	United States Environmental Protection Agency

VOM Volatile Organic Material

Section 205.130 Definitions

Unless otherwise specified within this Part, the definitions for the terms used in this Part shall be the same as those found in Section 39.5 of the Act [415 ILCS 5/39.5] and in 35 Ill. Adm. Code 211.

"Account officer" means a natural person who has been approved by the Agency, as specified in Section 205.620 of this Part, and is subsequently responsible for one or more Transaction Accounts to which he or she is designated.

"Allotment" means the number of allotment trading units (ATUs) allotted to a source by the Agency, as established in the source's CAAPP permit or FESOP.

"Allotment Trading Unit (ATU)" means a tradable unit that represents 200 lbs of VOM emissions and is a limited authorization to emit 200 lbs of VOM emissions during the seasonal allotment period.

"Annual Emissions Report" means the report submitted to the Agency annually pursuant to 35 Ill. Adm. Code 254.

"Baseline emissions" means a participating source's VOM emissions for the seasonal allotment period based on historical operations as determined under Subpart C of this Part. Baseline emissions shall be the basis of the allotment for each participating source.

"Best Available Technology (BAT)" means an emission level based on the maximum degree of reduction of VOM emitted from or which results from any emission unit, which the Agency, on a case-by-case basis, taking into account energy, environmental and economic impacts, determines is achievable for such unit through application of production processes and available methods, systems, and techniques for control of VOM, considering the features and production process and control methods, systems and techniques already used for the unit. BAT for an emission unit shall not be more stringent than Best Available Control Technology (BACT) as would be determined contemporaneously for such unit under the federal rules for Prevention of Significant Deterioration of Air Quality (PSD), 40 CFR 52.21 (1996). In no event shall application of "best available technology" result in emissions of VOM which exceed the emissions allowed by any standard established pursuant to Section 111 of the Clean Air Act, if such a standard is applicable to the category of emission unit.

"CAAPP" means the Clean Air Act Permit Program, pursuant to Section 39.5 of the Act [415 ILCS 5/39.5].

"Chicago area" means the area composed of Cook, DuPage, Kane, Lake, McHenry, and Will Counties and Aux Sable Township and Goose Lake Township in Grundy County and Oswego Township in Kendall County.

"Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, such as an act of God, that requires immediate corrective action to restore normal operation.

"Emissions excursion" refers to the event that occurs when a participating source or new participating source does not hold sufficient ATUs at the end of a reconciliation period to account for its VOM emissions from the preceding seasonal allotment period, in accordance with Section 205.150(c) or (d) of this Subpart.

"Excursion Compensation Notice" means an administrative notice issued by the Agency, pursuant to Section 205.720 of this Part, that notifies the owner or operator of a participating source or new participating source that the Agency has determined that the source has had an emissions excursion.

"General participant" means any person, other than a participating source or new participating source, that obtains a Transaction Account and is allowed to buy and sell ATUs.

"New participating source" means a source not operating prior to May 1, 1999, located in the Chicago area, that emits or has the potential to emit 25 tons per year or more of VOM or is required to obtain a CAAPP permit; and has or will have seasonal emissions of at least 10 tons of VOM.

"Participating source" means a source operating prior to May 1, 1999, located in the Chicago area, that emits or has the potential to emit 25 tons per year or more of VOM or is required to obtain a CAAPP permit; and has baseline emissions of at least 10 tons, as specified in Section 205.320(a) of this Part, or seasonal emissions of at least 10 tons in any seasonal allotment period beginning in 1999.

"Reconciliation period" means the period from October 1 through December 31 of each year during which the owner or operator of a participating source or new participating source must compile actual VOM emissions for the previous seasonal allotment period and may also buy or sell ATUs so that sufficient ATUs are held by the source by the conclusion of the reconciliation period.

"Seasonal allotment period" means the period from May 1 through September 30 of each year.

"Seasonal emissions" means actual VOM emissions at a source that occur during a seasonal allotment period.

"Sell" means to transfer ATUs to another person through sale, lease, trade or other means of transfer.

"Special participant" means any person that registers with the Agency and may purchase and retire ATUs but not sell ATUs, as specified in Section 205.610 of this Part.

"Throughput" means the activity of an emission unit during a particular period relevant to its generation of VOM emissions, including, but not limited to, the amount of material transferred for a liquid storage operation, the amount of material processed through or produced by the emission unit, fuel usage, or the weight or volume of coatings or inks.

"Transaction Account" means an account authorized by the Agency or its designee that allows an account officer to buy or sell ATUs.

Section 205.150 Emissions Management Periods

- a) The VOM emissions control period is the seasonal allotment period, which is from May 1 through September 30, annually.
- b) The reconciliation period is from October 1 to December 31, annually. During each reconciliation period, participating sources and new participating sources shall:
 - 1) Compile data of actual VOM emissions during the immediately preceding seasonal allotment period; and
 - 2) Submit its seasonal emissions component of its Annual Emissions Report, in accordance with Section 205.300 of this Part.
- c) At the end of each reconciliation period, on and after the dates specified in Section 205.200 of this Part, each participating source shall:
 - 1) Hold ATUs in an amount not less than its VOM emissions during the preceding seasonal allotment period, except as provided in Sections 205.220, 205.225, 205.315, 205.316, 205.320(e)(3) or (f) and 205.750 of this Part; or
 - 2) Except as provided in subsection (f) of this Section, hold ATUs in an amount not less than 1.3 times its emissions during the preceding seasonal allotment period that are attributable to a major modification, if a participating source commences operation of a major modification pursuant to 35 Ill. Adm. Code 203 on or after May 1, 1999. Additionally, such source must hold ATUs in accordance with subsection (c)(1) of this Section for VOM emissions during the preceding seasonal allotment period that are not attributable to this major modification.
- d) At the end of each reconciliation period, beginning with the reconciliation period immediately following the seasonal allotment period in which the source first

becomes a new participating source, as specified in Section 205.210 of this Part, each new participating source shall:

- 1) Except as provided in subsection (f) of this Section, if the new participating source is a new major source pursuant to 35 Ill. Adm. Code 203, hold ATUs in an amount not less than 1.3 times its VOM emissions during the preceding seasonal allotment period; or
 - 2) If the new participating source is not a new major source pursuant to 35 Ill. Adm. Code 203, hold ATUs in an amount not less than its VOM emissions during the preceding seasonal allotment period, except as provided in Sections 205.220, 205.225 and 205.750 of this Part.
- e) Except as provided in subsection (f) of this Section, any participating source that commences operation of a major modification on or after May 1, 1999, or any new participating source that is a new major source, which, at the end of each reconciliation period, holds ATUs in an amount not less than 1.3 times the VOM emissions during the preceding seasonal allotment period, in accordance with subsection (c)(2) or (d)(1) of this Section, as applicable, shall be deemed to have satisfied the VOM offset requirements of 35 Ill. Adm. Code 203.302(a), 203.602 and 203.701.
- f) Chicago area classification
- 1) If the nonattainment classification of the Chicago area for ozone is changed such that the required offset ratio is no longer 1.3 to 1 and a new offset ratio applies, as specified in 35 Ill. Adm. Code 203.302, that ratio shall then apply in lieu of the 1.3 to 1 ratio set forth in subsections (c)(2), (d)(1), and (e) of this Section. Such new ratio shall not apply to any part of a source or any modification already subject to the 1.3 to 1 ratio or other previously-effective offset ratio established prior to the effective date of the new ratio.
 - 2) If the Chicago area is designated as attainment for ozone, the 1.3 to 1 ratio set forth in subsections (c)(2), (d)(1), and (e) of this Section or any new ratio established pursuant to subsection (f)(1) of this Section shall cease to apply. However, such ratio shall continue to apply to any part of a source or any modification that is already subject to the ratio prior to such designation.

SUBPART B: APPLICABILITY

Section 205.200 Participating Source

- a) The requirements of this Part shall apply to any source operating prior to May 1, 1999, located in the Chicago area, that
 - 1) emits or has the potential to emit 25 tons per year or more of VOM or is required to obtain a CAAPP permit; and
 - 2) has baseline emissions of at least 10 tons, as specified in Section 205.320(a) of this Part, or seasonal emissions of at least 10 tons in any seasonal allotment period beginning in 1999.
- b) Each participating source shall hold ATUs, as specified in Section 205.150(c) of this Part, in accordance with the following schedule:
 - 1) For any participating source that has baseline emissions of at least 10 tons of VOM, as determined in accordance with Section 205.320(a) of this Part, beginning with the 1999 seasonal allotment period;
 - 2) For any source that first becomes a participating source because its VOM emissions increase to 10 tons per season or more in any seasonal allotment period beginning with 1999 and this emissions increase is not a major modification pursuant to 35 Ill. Adm. Code 203, beginning with the first seasonal allotment period after such increased emissions occurred; or
 - 3) For any source that will first be subject to the requirements of this Part because of a VOM emissions increase at any time on or after May 1, 1999 that constitutes a major modification pursuant to 35 Ill. Adm. Code 203, upon commencing operation of this modification.

Section 205.205 Exempt Source

- a) Any source that otherwise meets the criteria for participating sources shall be exempt from the requirements of this Part, except that any such source shall be required to obtain a CAAPP permit or FESOP and submit the seasonal emissions component of the Annual Emissions Report as specified in Section 205.300 of this Part, if the source accepts a 15 tons per seasonal allotment period limit on its VOM emissions in its CAAPP permit or FESOP for each seasonal allotment period in which the source would be required to participate in the ERMS in accordance with the following:
 - 1) If the source would be required to participate in the ERMS beginning with the 1999 seasonal allotment period in accordance with Section 205.200(b)(1) of this Subpart, such source shall apply for the applicable permit limitation by March 1, 1998; or

- 2) If the source is required to participate in the ERMS in any seasonal allotment period after 1999 because its VOM emissions increase to 10 tons or more in any seasonal allotment period beginning with 1999 in accordance with Section 205.200(b)(2) of this Subpart, such source shall apply for the applicable permit limitation by December 1 of the first year in which its seasonal emissions are at least 10 tons.
- b) Any source that otherwise meets the criteria for participating sources shall be exempt from the requirements of this Part, except that any such source shall be required to submit the seasonal emissions component of the Annual Emissions Report and an ERMS application as specified in Sections 205.300 and 205.310(d) of this Part, respectively, if such source reduces its seasonal emissions by at least 18 percent beginning in 1999. Any such source shall accept conditions in its CAAPP permit or FESOP limiting its seasonal emissions to at least 18 percent less than its baseline emissions, as determined in accordance with Section 205.320 of this Part. Any such source shall apply for the applicable permit limitation(s) by March 1, 1998. ATUs equivalent to any amount of VOM emissions reductions achieved by the source beyond 12 percent (at least six percent) shall be issued by the Agency to the ACMA.

Section 205.210 New Participating Source

- a) The requirements of this Part shall apply to any new participating source, a source not operating prior to May 1, 1999, located in the Chicago area, that
 - 1) emits or has the potential to emit 25 tons per year or more of VOM or is required to obtain a CAAPP permit; and
 - 2) has or will have seasonal emissions of at least 10 tons of VOM.
- b) Each new participating source shall hold ATUs, as specified in Section 205.150(d) of this Part.

Section 205.220 Insignificant Emission Units

- a) Emission units identified as insignificant activities pursuant to the CAAPP permit for a participating or new participating source are exempt from the requirements of this Part.
- b) Emission units that the Agency determines would qualify as insignificant activities under 35 Ill. Adm. Code 201.Subpart F if the source were a CAAPP source and for which a statement to this effect is contained in the FESOP for a participating or new participating source are exempt from the requirements of this Part.

Section 205.225 Startup, Malfunction or Breakdown

Participating or new participating sources permitted to operate during startup, malfunction or breakdown pursuant to 35 Ill. Adm. Code 201.262, 270.407 and 270.408 are not required to hold ATUs for excess VOM emission during startup, malfunction and breakdown as authorized in the source's permit.

SUBPART C: OPERATIONAL IMPLEMENTATION

Section 205.300 Seasonal Emissions Component of the Annual Emissions Report

- a) For each year in which the source is operational, the owner or operator of each participating source and new participating source shall submit, as a component of its Annual Emissions Report, seasonal emissions information to the Agency for each seasonal allotment period after the effective date of this Part in accordance with the following schedule:
 - 1) For each participating source or new participating source that generates VOM emissions from less than 10 emission units, by October 31 of each year; and
 - 2) For each participating source or new participating source that generates VOM emissions from 10 or more emission units, by November 30 of each year.
- b) In addition to any information required pursuant to 35 Ill. Adm. Code 254, the seasonal emissions component of the Annual Emissions Report shall contain the following information for the preceding seasonal allotment period for each emission unit emitting or capable of emitting VOM, except that such information is not required for emission units excluded pursuant to Section 205.220 of this Part or for VOM emissions attributable to startup, malfunction or breakdown, as specified in Section 205.225 of this Part:
 - 1) Actual seasonal emissions of VOM from the source;
 - 2) A description of the methods and practices used to determine VOM emissions, as required by the source's CAAPP permit or FESOP, including any supporting documentation and calculations;
 - 3) A detailed description of any monitoring methods that differ from the methods specified in the CAAPP permit or FESOP for the source, as provided in Section 205.337 of this Subpart;
 - 4) If a source has experienced an emergency, as provided in Section 205.750 of this Part, it shall reference the associated emergency conditions report that has been approved by the Agency;

- 5) If a source's baseline emissions have been adjusted because of a variance, consent order or CAAPP permit compliance schedule, as provided for in Section 205.320(e)(3) of this Subpart, it shall provide documentation quantifying the adjusted VOM emissions amount; and
- 6) If a source is operating a new or modified emission unit for which three years of operational data is not yet available, as specified in Section 205.320(f) of this Subpart, it shall specify seasonal emissions attributable to the new emission unit or the modification of the emission unit.

Section 205.310 ERMS Applications

- a) The owner or operator of each participating source or new participating source shall submit to the Agency an ERMS application in accordance with the following schedule:
 - 1) For a participating source with baseline emissions of at least 10 tons of VOM, as determined in accordance with Section 205.320(a) of this Subpart, by March 1, 1998;
 - 2) For any source that first becomes a participating source or new participating source because its VOM emissions increase to 10 tons or greater during any seasonal allotment period beginning with 1999, on or before December 1 of the year of the first seasonal allotment period in which its VOM emissions are at least 10 tons, provided that this emissions increase is not a major modification pursuant to 35 Ill. Adm. Code 203;
 - 3) For any source that first becomes a participating source or new participating source due to a major modification subject to 35 Ill. Adm. Code 203 based on VOM emissions, at the time a construction permit application is submitted or due for the modification, whichever occurs first; or
 - 4) For a source that will be a new participating source when it commences construction and that is also a major new source under 35 Ill. Adm. Code 203 based on VOM emissions, at the time a construction permit application is submitted or due for the source, whichever occurs first.
- b) Except as provided in subsection (d) of this Section, each ERMS application for participating sources shall contain all information required by the Agency pursuant to Section 39.5 of the Act [415 ILCS 5/39.5] or reference such information if previously submitted to the Agency, including the following information:

- 1) Data sufficient to establish the appropriate baseline emissions for the source in accordance with Section 205.320 of this Subpart, including but not limited to the following:
 - A) VOM emissions data and production types and levels from the baseline emissions year(s), as specified in Section 205.320(a)(1), (b) or (c) of this Subpart, as appropriate;
 - B) If the source is proposing a substitute baseline emissions year(s), as provided in Section 205.320(a)(2) of this Subpart, a justification that the year is more representative than 1994, 1995 or 1996, including data on production types and levels from the proposed substitute year(s) and historical production data, as needed to justify that the proposed substitute year(s) is representative; and
 - C) If the source is proposing a baseline emissions adjustment based on voluntary over-compliance, as provided in Section 205.320(d) of this Subpart, sufficient information for the Agency to determine the appropriate adjustment;
 - 2) A description of methods and practices used to determine baseline emissions and that will be used to determine seasonal emissions for purposes of demonstrating compliance with this Part, in accordance with Sections 205.330 and 205.335 of this Subpart;
 - 3) Identification of any emission unit for which exclusion from further reductions is sought pursuant to Section 205.405(b) of this Part and including all of the information required pursuant to Section 205.405(b) of this Part;
 - 4) Identification of any emission unit excluded from further reductions pursuant to Section 205.405(a) of this Part; and
 - 5) Identification of any new or modified emission unit for which a construction permit was issued prior to January 1, 1998, but for which three years of operational data is not available, and the permitted VOM emissions or the permitted increase in VOM emissions from such emission unit(s), adjusted for the seasonal allotment period.
- c) Except as provided in subsection (h) of this Section, the ERMS application submitted by each participating source shall also be an application for a significant modification of its CAAPP permit or a revision to its FESOP, or a revision to its CAAPP or FESOP application if a CAAPP permit or FESOP has not yet been issued for the source.

- d) The ERMS application for any source that elects to reduce its seasonal emissions by at least 18 percent from its baseline emissions, as provided in Section 205.205(b) of this Part, shall include:
 - 1) VOM emissions data sufficient to establish the appropriate baseline emissions for the source in accordance with Section 205.320 of this Subpart; and
 - 2) A description of methods and practices used to determine baseline emissions and that will be used to demonstrate that its seasonal emissions will be at least 18 percent less than its baseline emissions, in accordance with Sections 205.330 and 205.335 of this Subpart.
- e) Within 120 days after receipt of an ERMS application, the Agency shall provide written notification to the source of a preliminary baseline emissions determination. Public notice of a draft CAAPP permit or FESOP shall fulfill this requirement for a preliminary baseline emissions determination if issued within 120 days.
- f) The ERMS application for each source applying for a major modification, as provided in subsection (a)(3) of this Section, shall include the information specified in subsection (b) of this Section and a certification by the owner or operator recognizing that the source will be required to hold ATUs by the end of each reconciliation period in accordance with Section 205.150(c)(2) of this Part, and provide a plan explaining the means by which it will obtain ATUs for the VOM emissions attributable to the major modification for the first three seasonal allotment periods in which this major modification is operational.
- g) The ERMS application for each new participating source shall include:
 - 1) A description of methods and practices that will be used to determine seasonal emissions for purposes of demonstrating compliance with this Part, in accordance with Sections 205.330 and 205.335 of this Subpart;
 - 2) A certification by the owner or operator recognizing that the source will be required to hold ATUs by the end of each reconciliation period in accordance with Section 205.150(d) of this Part for each seasonal allotment period in which it is operational; and
 - 3) If the source is a new major source subject to 35 Ill. Adm. Code 203, a plan explaining means by which it will obtain such ATUs for the first three seasonal allotment periods in which it is operational.
- h) The owner or operator of any participating source that has identified a new or modified emission unit, as specified in subsection (b)(5) of this Section, shall submit a written request for, or an application for, a revised emissions baseline

and allotment. Such written request or application shall be submitted by December 1 of the year of the third complete seasonal allotment period in which such newly constructed emission unit is operational, which submittal shall include information on the seasonal emissions for these first three seasonal allotment periods.

Section 205.315 CAAPP Permits for ERMS Sources

- a) Except as provided in Section 205.316(c) of this Subpart, the Agency shall determine the baseline emissions for each participating source in accordance with Section 205.320 of this Subpart, through its final permit action on a new or modified CAAPP permit for the source. The Agency's baseline emissions determination may be appealed in accordance with the CAAPP appeal procedures specified in Section 40.2 of the Act [415 ILCS 5/40.2]. If the permit conditions establishing a source's baseline emissions are appealed, the baseline emissions for the source shall be as proposed in the source's ERMS application during the pendency of the appeal. During the pendency of the appeal, ATUs shall be allotted to the source pursuant to the part of the source's proposed baseline emissions that is not disputed in the appeal. If such source's seasonal VOM emissions exceed the ATUs it holds at the end of reconciliation periods during the pendency of the appeal, the source will not be deemed to have had an emissions excursion to the extent that such seasonal VOM emissions do not exceed the amount it proposed as its baseline in its ERMS application, less reductions required pursuant to Section 205.400(c) or (e) of this Part, if applicable. Such source shall not be allowed to sell ATUs during the pendency of the appeal.
- b) Except as provided in Section 205.316(c) of this Subpart, the Agency shall determine, in accordance with Sections 205.330 and 205.335 of this Subpart, the methods and practices applicable to each participating source and new participating source to determine seasonal emissions through its final permit action on a new or modified CAAPP permit for the source. The Agency's determination of the methods and practices applicable may be appealed in accordance with the CAAPP appeal procedures specified in Section 40.2 of the Act [415 ILCS 5/40.2].
- c) Except as provided in Section 205.316(c) of this Subpart, the Agency shall determine, in accordance with Section 205.405(b) of this Part, if an emission unit qualifies for exclusion from further reductions in its final permit action on a new or modified CAAPP permit for each such source. The Agency's determination may be appealed in accordance with the CAAPP appeal procedures specified in Section 40.2 of the Act [415 ILCS 5/40.2]. If the permit conditions establishing the Agency's BAT determination are appealed, ATUs shall be allotted to the source for any emission unit for which the Agency's BAT determination is being appealed with the emissions reduction required by Section 205.400(c) or (e) of this Part during the pendency of the appeal. If the seasonal VOM emissions for the subject emission unit(s) exceed the ATUs that are attributed to the unit(s)

during the pendency of the appeal, the source will not be deemed to have an emissions excursion to the extent that such seasonal VOM emissions do not exceed the amount of ATUs that would be attributed to this unit if the BAT exclusion was accepted. Such source shall not be allowed to sell ATUs during the pendency of the appeal.

- d) The CAAPP permit for a participating source shall specify the allotment for each seasonal allotment period.
- e) To the extent possible, the Agency shall initiate the procedures of 35 Ill. Adm. Code 252, as required by Section 39.5 of the Act [415 ILCS 5/39.5], by grouping the draft CAAPP permits and supporting documents for participating sources. Specifically, to the extent possible, the Agency shall issue a joint public notice and hold a joint hearing, as appropriate, addressing participating sources for which a hearing is requested.
- f) When a CAAPP permit for a participating source or new participating source is transferred from the current permittee to another person:
 - 1) In the case of a name change of the participating source or new participating source where ownership is not altered, appropriate documentation shall be submitted to revise the Transaction Account to reflect the name change; or
 - 2) In the case of an ownership change of the participating source or new participating source, the allotment shall also be transferred by the owner or operator of the permitted source to the new owner or operator, or the new owner or operator shall submit a statement to the Agency certifying that such transfer is not occurring and demonstrating that necessary ATUs are or will be available by other means for the intended operation of the source.
- g) Upon reopening or renewal of the CAAPP permit for any participating source or new participating source, any multiple season transfer agreement, as provided in Section 205.630(a)(2)(B) of this Part, that has three or more years of transfers remaining shall be identified in the renewed or reissued CAAPP permit for each such source.
- h) Upon reopening or renewal of the CAAPP permit for any participating source or new participating source, any ATUs that will be issued by the Agency for three years or more to any such source pursuant to Section 205.410, 205.500 or 205.510 of this Part shall be identified in the renewed or reissued CAAPP permit for each such source.

Section 205.316 Federally Enforceable State Operating Permits for ERMS Sources

- a) Any participating or new participating source shall not operate without a CAAPP permit or FESOP.
 - 1) If a source has a CAAPP permit containing ERMS provisions and the source elects to obtain a different permit in lieu of the CAAPP permit, the source shall apply for and obtain a FESOP that contains ERMS provisions including, but not limited to, emissions calculation methodologies, baseline emissions, and allotment for each seasonal allotment period, all of which are identical to those provisions contained in its CAAPP permit.
 - 2) If a participating or new participating source does not have a CAAPP permit containing ERMS provisions and the source elects to obtain a permit other than a CAAPP permit, the source shall apply for and obtain a FESOP that contains, in addition to other necessary provisions, federally enforceable ERMS provisions, including baseline emissions, allotment for each seasonal allotment period, identification of any units deemed to be insignificant activities for the purposes of the ERMS, emissions calculation methodologies, and provisions addressing all other applicable requirements of this Part.
- b) When determining the baseline emissions and allotment for a participating source as required under subsection (a)(2) of this Section:
 - 1) The Agency shall determine baseline emissions in accordance with Section 205.320 of this Subpart, through its final permit action on the new or modified FESOP for the source. The Agency's baseline emissions determination may be appealed in accordance with the appeal procedures specified in Section 40 of the Act [415 ILCS 5/40]. If the permit conditions establishing a source's baseline emissions are appealed, the baseline emissions for the source shall be as proposed in the source's ERMS application during the pendency of the appeal. During the pendency of the appeal, ATUs shall be allotted to the source pursuant to the part of the source's proposed baseline emissions that is not disputed in the appeal. If such source's seasonal VOM emissions exceed the ATUs it holds at the end of reconciliation periods during the pendency of the appeal, the source will not be deemed to have had an emissions excursion to the extent that such seasonal VOM emissions do not exceed the amount it proposed as its baseline in its ERMS application, less reductions required pursuant to Section 205.400(c) or (e) of this Part, if applicable. Such source shall not be allowed to sell ATUs during the pendency of the appeal.
 - 2) The Agency shall determine, in accordance with Section 205.405(b) of this Part, if an emission unit qualifies for exclusion from further reductions in its final permit action on a new or modified FESOP for the source. The

Agency's determination may be appealed in accordance with the appeal procedures specified in Section 40 of the Act [415 ILCS 5/40]. If the permit conditions establishing the Agency's BAT determination are appealed, ATUs shall be allotted to the source for any emission unit for which the Agency's BAT determination is being appealed with the emissions reduction required by Section 205.400(c) or (e) of this Part during the pendency of the appeal. If the seasonal VOM emissions for the subject emission unit(s) exceed the ATUs that are attributed to the unit(s) during the pendency of the appeal, the source will not be deemed to have an emissions excursion to the extent that such seasonal VOM emissions do not exceed the amount of ATUs that would be attributed to this unit if the BAT exclusion was accepted. Such source shall not be allowed to sell ATUs during the pendency of the appeal.

- c) The Agency shall determine, in accordance with Sections 205.330 and 205.335 of this Subpart, the methods and practices applicable to the participating source or new participating source to determine seasonal emissions through its final permit action on the new or modified FESOP for such source. The Agency's determination of the methods and practices applicable may be appealed in accordance with the appeal procedures specified in Section 40 of the Act [415 ILCS 5/40].
- d) When a FESOP for a participating source or new participating source is transferred from the current permittee to another person:
 - 1) In the case of a name change of the participating source or new participating source where ownership is not altered, appropriate documentation shall be submitted to revise the Transaction Account to reflect the name change; or
 - 2) In the case of an ownership change of the participating source or new participating source, the allotment shall also be transferred by the owner or operator of the permitted source to the new owner or operator, or the new owner or operator shall submit a statement to the Agency certifying that such transfer is not occurring and demonstrating that necessary ATUs are or will be available by other means for the intended operation of the source.
- e) Upon reopening or renewal of the FESOP for any participating source or new participating source, any multiple season transfer agreement, as provided in Section 205.630(a)(2)(B) of this Part, that has three or more years of transfers remaining shall be identified in the renewed or reissued FESOP for such source.
- f) Upon reopening or renewal of the FESOP for any participating source or new participating source, any ATUs that will be issued by the Agency for three years

or more to any such source pursuant to Section 205.410, 205.500 or 205.510 of this Part shall be identified in the renewed or reissued FESOP for such source.

Section 205.318 Certification for Exempt CAAPP Sources

The owner or operator of any source that is located in the Chicago area that is required to obtain a CAAPP permit, and has seasonal emissions, as determined in accordance with Section 205.320(a) of this Subpart, of less than 10 tons shall submit a written certification to the Agency by March 1, 1998, certifying that its VOM emissions are below 10 tons per season as specified in Section 205.320(a) of this Subpart. Such certification shall include the amount of VOM emissions at the source during the 1994, 1995, 1996 and 1997 seasonal allotment periods, and supporting calculations.

Section 205.320 Baseline Emissions

- a) Except as provided in subsection (b) or (c) of this Section, baseline emissions shall be determined by the Agency in accordance with the following, adjusted as specified in subsections (d), (e) and (f) of this Section:
 - 1) Baseline emissions shall be calculated using the average of the two seasonal allotment periods with the highest VOM emissions during 1994, 1995 or 1996.
 - 2) Any source may propose to substitute seasonal emissions on a year-for-year basis due to non-representative conditions in 1994, 1995 or 1996, but must stay within the period from 1990 through 1997, and must have accurate seasonal emissions data for the substitute year(s). When considering whether to substitute a seasonal baseline emission year(s), the Agency must consider the information submitted by the source pursuant to Section 205.310(b)(1)(B) of this Subpart, as well as the accuracy of that data. For the purposes of this subsection (a)(2), "non-representative conditions" include, but are not limited to, events such as strikes, fires, floods and market conditions.
- b) Except as provided below in subsection (c) of this Section, for any source that has seasonal emissions of less than 10 tons, as determined in accordance with subsection (a) of this Section, but becomes a participating source because its seasonal emissions increase to 10 tons or more in any seasonal allotment period beginning with 1999, baseline emissions shall be determined by the Agency based on actual VOM emissions from the first seasonal allotment period in which the source's emissions equaled or exceeded 10 tons, adjusted as specified in subsections (d), (e) and (f) of this Section, provided such emissions increase is not a major modification pursuant to 35 Ill. Adm. Code 203.
- c) For any source that has seasonal emissions of less than 10 tons, as determined in accordance with subsection (a) of this Section, but becomes a participating source

because its seasonal emissions increase to 10 tons or more in any seasonal allotment period beginning with 1999 and this emissions increase constitutes a major modification pursuant to 35 Ill. Adm. Code 203, baseline emissions shall be determined by the Agency based on the average of the actual seasonal emissions from the two seasonal periods prior to a timely submittal of its application for the major modification, adjusted as specified in subsections (d) and (e) of this Section. Any such source may substitute seasonal emissions on a year-for-year basis due to non-representative conditions in either of the two seasonal allotment periods prior to submittal of its application for the major modification but must stay within the five year period prior to submittal of such application. For the purposes of this subsection, "non-representative conditions" include, but are not limited to, conditions such as strikes, fires, floods and market conditions.

- d) The baseline emissions of any participating source shall be increased for voluntary over-compliance that occurred after October 31, 1990 and results in a VOM emissions level that is lower than the level required by applicable requirements effective in 1996, including limitations in the source's permit(s) based on such applicable requirements. Voluntary over-compliance shall be determined in accordance with the following:
 - 1) Determine the actual activity or production types and levels from the seasonal allotment period(s) selected for baseline emissions pursuant to subsection (a), (b) or (c) of this Section;
 - 2) Determine seasonal emissions for each emission unit as the product of the amount of activity or production, as determined in accordance with subsection (d)(1) of this Section, and the actual emissions level;
 - 3) Determine seasonal emissions for each emission unit as the product of the amount of activity or production, as determined in accordance with subsection (d)(1) of this Section, and the allowable emissions level pursuant to all applicable requirements effective through 1996, including limitations in the source's permit(s) based on such applicable requirements; and
 - 4) Determine the appropriate adjustment to baseline emissions by subtracting the seasonal emissions determined pursuant to subsection (d)(2) of this Section from the seasonal emissions determined pursuant to subsection (d)(3) of this Section.

- e) The baseline emissions of any participating source shall be decreased if any of the following circumstances exist:
- 1) If a source is out of compliance with any applicable requirements, including limitations in the source's permit(s) based on such applicable requirements, in any of the seasonal allotment periods used for baseline emissions, its baseline emissions shall be lowered to reflect the amount of VOM emissions that would be achieved if in compliance with such requirements.
 - 2) If any of the seasonal allotment periods selected for baseline emissions do not reflect compliance with requirements effective through 1996 that became applicable after any of the years selected as baseline years, the source's baseline emissions shall be lowered to reflect the amount of VOM emissions that would be achieved if in compliance with such requirements.
 - 3) If, in any of the years selected for baseline emissions, a source's VOM emissions are in excess of the amount of VOM emissions allowed by applicable rules because it has been granted a variance, has entered into a consent order, or is operating pursuant to a CAAPP permit compliance schedule, the baseline emissions for such source shall be lowered to reflect the VOM emissions amount that would be achieved if in compliance with such requirements, subject to the following:
 - A) Each such source shall be allowed to emit VOM emissions in excess of the ATUs it holds at the end of the reconciliation period each year until compliance with the applicable regulation is achieved, or upon expiration of the relief allowed for in the variance, consent order or CAAPP permit compliance schedule, whichever occurs first;
 - B) Such excess VOM emissions shall be allowed to the extent allowed in the variance, consent order or CAAPP permit compliance schedule; and
 - C) The seasonal component of the Annual Emissions Report for each such source shall be adjusted each year until compliance with the applicable requirement(s) is achieved, or upon expiration of the relief allowed for in the variance, consent order or CAAPP permit compliance schedule, whichever occurs first, as specified in subsection (e)(3)(B) of this Section.
 - 4) For any participating source that operated with excess emissions during startup, malfunction or breakdown during any year used to determine its baseline emissions, whether or not such operation was authorized pursuant

to the source's permit, excess VOM emissions attributable to startup, malfunction or breakdown shall be excluded from the baseline emissions.

- f) For new or modified emission units at a source for which a construction permit was issued prior to January 1, 1998, but for which three years of operational data is not available, the baseline emissions determination for the source shall include VOM emissions from such new emission unit or the increase in emissions from the modification of such emission unit based on the two seasonal allotment periods with the highest VOM emissions from the first three complete seasonal allotment periods in which any such new or modified emission unit is operational. ATUs shall only be issued in accordance with this subsection after the baseline emissions has been determined. Any such source shall not be required to hold ATUs for VOM emissions attributable to the new emission unit or the modification of the existing emission unit for the first three complete seasonal allotment periods in which it is operational.
- g) For any source which acquired emission reduction credits pursuant to a written agreement, entered into prior to January 1, 1998, and such emission reduction credits were acquired for use as emissions offsets, in accordance with 35 Ill. Adm. Code 203, such emission reduction credits, adjusted for the seasonal allotment period, and reduced by 24 percent, shall be included in the baseline emissions determination for the source, only to the extent that:
 - 1) The Agency has issued a federally enforceable permit, prior to January 1, 1998, to the source from which the emission reduction credits were acquired, and such federally enforceable permit recognized the creation of the VOM emission reduction credits by the cessation of all VOM-emitting activities and the withdrawal of the operating permits for VOM-emitting activities at such other sources; and
 - 2) The Agency has not relied upon the emission reduction credits to demonstrate attainment or reasonable further progress.

Section 205.330 Emissions Determination Methods

The owner or operator of a participating source or new participating source shall determine VOM emissions from the source during the seasonal allotment period using methods as necessary to demonstrate compliance with this Part. Such methods shall be, at a minimum, as stringent as those required by any applicable requirement and any permit condition. The Agency shall establish the emissions determination methods applicable to each such source in the source's CAAPP permit or FESOP. The following methods, in conjunction with relevant source-specific throughput and operating data, are acceptable methods a source may use to determine seasonal emissions, depending on the type of emission unit:

- a) Material balance calculation, based on the VOM content of raw materials and recovered materials, as is typically used for degreasers, coating lines, and printing

lines equipped with a carbon adsorption system (recovery-type control device) or without any control device;

- b) A standard engineering formula for estimation of emissions, as is typically used for storage and transfer of volatile organic liquids;
- c) A source-specific emission factor(s), based on representative testing and sampling data and appropriate analysis, as typically used for petroleum refining processes;
- d) A published USEPA emission factor(s), as is typically used for component leaks;
- e) A source-specific emission rate or VOM control efficiency, based on representative testing, as is typically used for chemical processes and afterburners (destruction-type control device), respectively;
- f) A method not listed above that is sufficient to demonstrate compliance with this Section; or
- g) An appropriate combination of the above methods, as typically used for a coating or printing line equipped with a control device, where the available emissions are determined by material balance and the control efficiency is determined by representative testing.

Section 205.335 Sampling, Testing, Monitoring and Recordkeeping Practices

The owner or operator of a participating source or new participating source shall conduct sampling, perform testing, conduct monitoring and maintain records as needed to support its method for determining seasonal emissions in accordance with Section 205.330 of this Subpart and to demonstrate compliance with this Part. Such sampling, testing, monitoring and recordkeeping shall be, at a minimum, as stringent as that required by any applicable requirement and any permit condition. The Agency shall establish the practices applicable to each such source in the source's CAAPP permit or FESOP.

Section 205.337 Changes in Emission Determination Methods and Sampling, Testing, Monitoring and Recordkeeping Practices

- a) The methods used for determining seasonal emissions from a source shall generally be consistent with the methods used to determine its baseline emissions unless the source's permit accommodates the use of alternate methods to determine VOM emissions.
- b) Modification of Methods and Practices
 - 1) If a source proposes new or revised methods to determine VOM emissions or new or revised supporting practices for sampling, testing, monitoring or recordkeeping that differ significantly from the methods and practices

specified by its current permit, the source shall obtain a revised CAAPP permit in accordance with the procedures specified in Section 39.5 of the Act [415 ILCS 5/39.5], or a revised FESOP, prior to relying on such methods and practices.

- 2) The Agency shall issue a revised permit if it finds, based upon submission of an appropriate permit application, that the proposed methods or practices are needed or appropriate to address changes in the operation of the source or emission units that were not considered when the current permit was issued, that the proposed methods and procedures will not significantly affect the determination of actual seasonal emissions, or that the proposed methods and procedures incorporate new or improved analytical techniques or estimation methods that will increase the accuracy with which actual seasonal emissions are determined, and other applicable requirements for issuance of a revised permit are met.
- 3) If the Agency approves the use of a modified method or practice, the Agency is authorized to determine a corrected baseline and thereafter issue ATUs in accordance with Section 205.400(c) of this Part pursuant to this corrected baseline.

SUBPART D: SEASONAL EMISSIONS MANAGEMENT

Section 205.400 Seasonal Emissions Allotment

- a) Each participating source shall receive an allotment which shall be issued by the Agency and distributed in ATUs.
- b) Except for ATUs issued pursuant to Sections 205.500 and 205.510 of this Part, ATUs issued for any seasonal allotment period are valid for use during the seasonal allotment period following issuance and the next succeeding seasonal allotment period. All ATUs shall be valid until such ATUs expire or are retired.
- c) The initial allotment for each participating source shall be based on the baseline emissions for such source, as determined in accordance with Section 205.320 of this Part, and shall be reduced by 12 percent in 1999 or in such other year that a source is issued its initial allotment, except as provided in Section 205.405 of this Subpart.
- d) Except as provided in Section 205.337(b)(3) of this Part and subsections (c) and (e) of this Section, allotments shall remain at 1999 or initial levels unless the Agency makes a demonstration to the Board, in accordance with the rulemaking provisions of Sections 9.8, 27 and 28 of the Act [415 ILCS 5/9.8, 27 and 28], that further reductions are needed. An allotment or a baseline under this Part does not constitute a property right. Nothing in this Part shall be construed to limit the authority of the Board to terminate or limit such allotment or baseline pursuant to

its rulemaking authority under Sections 9.8, 27 and 28 of the Act [415 ILCS 5/9.8, 27 and 28].

- e) If the baseline emissions for any participating source are increased in accordance with Section 205.320(f) of this Part, the allotment shall be increased by the modified portion of the baseline emissions amount, reduced by 12 percent, except as provided in Section 205.405 of this Subpart.
- f) Except as provided in subsection (h) of this Section, any new participating source shall not be issued ATUs by the Agency, but shall be required to hold ATUs at the end of the reconciliation period as specified in Section 205.150(d) of this Part.
- g) Any source existing as of May 1, 1999, which first becomes subject to the requirements of this Part because its seasonal emissions increase to 10 tons or more as a result of a major modification pursuant to 35 Ill. Adm. Code 203, in any seasonal allotment period beginning with 1999, shall not be allotted ATUs by the Agency for the VOM emissions attributable to this modification, except as provided in subsection (h) of this Section, but shall be allotted ATUs by the Agency based on its baseline emissions, as determined in accordance with Section 205.320 of this Part. Any such participating source shall be required to hold ATUs at the end of the reconciliation period as specified in Section 205.150(c) of this Part, for each seasonal allotment period in which it is subject to this Part.
- h) If a participating source or new participating source submits an ATU transfer agreement authorizing the transfer of ATUs for more than one year, as provided in Section 205.630(a)(2)(B) of this Part, the ATUs shall be automatically transferred by the Agency from the transferor's Transaction Account to the transferee's Transaction Account. Upon reopening or renewal of the CAAPP permit or FESOP for any such source, any multiple season transfer agreement that has three or more years of transfers remaining shall be identified in the renewed or reissued CAAPP permit or FESOP for each such source.

Section 205.405 Exclusions from Further Reductions

- a) VOM emissions from the following emission units, if satisfying subsection (a)(1), (a)(2) or (a)(3) of this Section prior to May 1, 1999, shall be excluded from the VOM emissions reductions requirements specified in Section 205.400(c) and (e) of this Subpart as long as such emission units continue to satisfy subsection (a)(1), (a)(2) or (a)(3) of this Section:
 - 1) Emission units that comply with any NESHAP or MACT standard promulgated pursuant to the CAA;
 - 2) Direct combustion emission units designed and used for comfort heating purposes, fuel combustion emission units and internal combustion engines; and

- 3) An emission unit for which a LAER demonstration has been approved by the Agency on or after November 15, 1990.
- b) When it is determined that an emission unit is using, prior to May 1, 1999, BAT for controlling VOM emissions, VOM emissions from such emission unit shall not be subject to the VOM emissions reductions requirement specified in Section 205.400(c) or (e) of this Subpart as long as such emission unit continues to use such BAT. The owner or operator of a source may request such exclusion from further reductions by providing the following information, in addition to the information required in Section 205.310 of this Part, in its ERMS application:
 - 1) Identification of each emission unit for which exclusion is requested, including the year of initial operation of such emission unit;
 - 2) Identification of all requirements applicable to the emission unit;
 - 3) A demonstration that the emission unit is using BAT for controlling VOM emissions;
 - 4) Identification of the permitted VOM emissions from the emission unit;
 - 5) VOM emissions from the emission unit for each seasonal allotment period used in the baseline emissions determination for the source; and
 - 6) A description and quantification of any reductions in VOM emissions that were achieved at the emission unit or source based on its use of BAT.
- c) As part of its review of an ERMS application or application for a modified allotment, the Agency may determine that any such emission unit qualifies for exclusion from further reductions under subsection (a) or (b) of this Section. The Agency shall make its proposed determination in a draft CAAPP permit or FESOP subject to public notice and participation, accompanied by an explanation of its proposed action.

Section 205.410 Participating Source Shutdowns

- a) If a participating source shuts down all operations at the source, and withdraws its permit or its permit is revoked or terminates, allotments issued to such a source for each seasonal allotment period after the shutdown occurred shall be subject to the following:
 - 1) 80 percent of all such ATUs shall continue to be allotted to the owner or operator of such source or its duly authorized recipient; and
 - 2) 20 percent of all such ATUs shall be issued to the ACMA.

- b) Except as provided in subsection (c) of this Section, the owner or operator of any participating source that shuts down all operations, in accordance with subsection (a) of this Section, shall submit a written request to have its status changed to a general participant, upon withdrawal, revocation or termination of its permit.
- c) The owner or operator of any participating source that shuts down all operations, in accordance with subsection (a) of this Section, may authorize the issuance of future ATUs to the Transaction Account of another participating source, new participating source or general participant by submitting a transfer agreement authorizing a permanent transfer of all future ATUs. The CAAPP permit or FESOP of any participating source or new participating source designated to receive future allotments of ATUs pursuant to such a transfer agreement shall be modified to reflect this transfer upon reopening or renewal. Any ATUs issued pursuant to a transfer agreement entered into under this subsection before shut down of all operations of the participating source shall not be subject to subsection (a) of this Section.

SUBPART E: ALTERNATIVE ATU GENERATION

Section 205.500 Emissions Reduction Generator

Any participating source, new participating source or general participant may submit a proposal for issuance of ATUs to it based on VOM emissions reductions, as specified in subsection (a) of this Section, achieved by any source or group of sources located in the Chicago area with an operating permit(s) other than a participating source or new participating source. The owner or operator of each source from which the VOM emissions reductions have been or will be achieved shall certify its acceptance of the terms of the proposal and that it has achieved or will achieve the emissions reductions specified in the proposal. An emissions reduction generator may apply for a modification to its operating permit to incorporate limitations that make the VOM emissions reductions specified in the relevant proposal enforceable.

- a) ATUs will only be issued pursuant to this Section if based on actual VOM emissions reductions that meet one or more of the following:
 - 1) If, based on the same actual production rate, VOM emissions at the source for any seasonal allotment period beginning in 1999 are or will be lower due to the use of technology or materials at the source than if operating at the same production rate at the emissions level allowed by applicable requirements effective in 1996 or any requirements included in the State Implementation Plan, provided such reductions occurred after 1990;
 - 2) The source shuts down a portion or all of its operation(s) after 1996 and withdraws the relevant operating permit(s), provided the VOM emissions from the shut down activity or activities will not be distributed elsewhere within the Chicago area;

- 3) The source(s) curtails its seasonal production activity resulting in an actual reduction in VOM emissions during any seasonal allotment period beginning in 1999, provided the VOM emissions from the curtailment will not be distributed elsewhere within the Chicago area. Such emissions reduction shall be based on the difference between the average production level for the two seasonal allotment periods prior to the year of curtailment and the curtailed production level, calculated at the VOM emission rate allowed by applicable requirements effective in 1996; or
 - 4) The source shuts down operations or curtails seasonal production activity as described in subsections (a)(2) and (a)(3) of this Section, respectively, and the VOM emissions from the shut down activity or activities or curtailment will be distributed to a participating or new participating source or sources within the Chicago area, and the proposal provides that all ATUs issued pursuant to this Section on account of such shut down or curtailment are to be issued to the corresponding participating or new participating source or sources.
- b) If any proposal is based on a shut down of operations, as specified in subsection (a)(2) of this Section, that results in seasonal emissions reductions of 10 tons or more, 20 percent of ATUs issued based on such an emissions reduction generator proposal shall be allocated to the ACMA.
 - c) Any proposal based on seasonal emissions reductions of 10 tons or more and the Agency's approval thereof shall be subject to the public notice requirements in accordance with the regulations governing CAAPP permit or FESOP issuance.
 - d) Any proposal submitted shall include the following:
 - 1) Information identifying the source(s) from which the VOM emissions reductions has been or will be achieved and its owner or operator;
 - 2) An explanation of the method used to achieve the VOM emissions reductions;
 - 3) Relevant information describing the nature of the underlying activity that generated the VOM emissions and the relationship of the units at which the VOM emissions reduction occurred to other units or sources performing the same or related activity in the Chicago area, if the VOM emissions reduction is attributable to a partial or complete source shutdown or a production curtailment, as specified in subsection (a)(2), (a)(3) or (a)(4) of this Section;
 - 4) The amount of VOM emissions for the two seasonal allotment periods prior to the year(s) of curtailment, including supporting calculations, if the

VOM emissions reduction is attributable to a production curtailment as specified in subsection (a)(3) or (a)(4) of this Section;

- 5) The amount of the VOM emissions reduction, including supporting calculations and documentation, such as material usage information;
 - 6) The name and address of the participating source(s), new participating source(s) or general participant(s) to which ATUs will be issued, including the name and telephone number of the account officer for such source or participant; and
 - 7) The owner or operator of each proposed emission reduction generator shall certify its acceptance of the terms of the proposal and certify that it has achieved or will achieve the emissions reductions specified in the proposal.
- e) The owner or operator of any emissions reduction generator may modify its operating permit to incorporate limitations that make the VOM emissions reductions specified in the relevant proposal enforceable.
 - f) If the emissions reduction generator does not modify its permit, as specified in subsection (e) of this Section, or experiences a shutdown, as specified in subsection (a)(2) or (a)(4) of this Section, and the proposal is submitted prior to the availability of actual VOM emissions data from the relevant seasonal allotment period, the Agency shall determine if the proposal is acceptable on a preliminary basis and provide notification of this determination. The Agency shall not issue final approval, in accordance with subsection (g) of this Section, of any such proposal until the actual VOM emissions data is submitted.
 - g) The Agency shall notify the participating source, new participating source or general participant in writing of its final decision with respect to the proposal within 45 days after receipt of such proposal or receipt of VOM emissions data to verify that the specified reductions occurred, whichever occurs later. If the Agency denies or conditionally approves a proposal, this written notice shall include a statement of the specific reasons for denying or modifying the proposal. The Agency's determination as to the approvability of any proposal submitted pursuant to this Section is subject to review by the Board as provided at 35 Ill. Adm. Code 105.102, provided the proposed emissions reduction generator is not requesting a permit revision. If such a permit revision is requested, the applicable permit review and appeal procedures shall apply.
 - h) If the Agency deems that the proposal is sufficient to receive final approval, the Agency shall issue ATUs in accordance with the following:

- 1) Any ATUs issued pursuant to this subsection shall be issued to the participating source(s), new participating source(s) or general participant identified in the proposal;
- 2) If the emissions reduction generator modifies its operating permit as specified in subsection (e) of this Section, to incorporate limitations that make the VOM emissions reductions specified in the relevant proposal enforceable, ATUs shall be issued on the date such source is required to comply with the limitations in the permit and for each seasonal allotment period thereafter in which the VOM emissions reductions are required by the source's permit;
- 3) If the proposal is based on a partial or complete shut down, as specified in subsection (a)(2) or (a)(4) of this Section, ATUs shall be issued before the seasonal allotment period for each year specified in the proposal;
- 4) If the emissions reduction generator does not modify its permit and the proposal is submitted prior to the availability of actual VOM emissions data from the relevant seasonal allotment period(s), the Agency shall issue ATUs upon final approval which shall occur after actual VOM emissions data is evaluated for the relevant seasonal allotment period;
- 5) If the emissions reduction generator includes information on actual VOM emissions reductions during the seasonal allotment period for which ATUs are sought, ATUs will be issued by the Agency upon final approval of the proposal;
- 6) Except as provided in subsection (h)(7) of this Section, ATUs issued pursuant to this subsection shall only be valid for the seasonal allotment period in which the emissions reductions were achieved;
- 7) If the VOM emissions reductions specified in a proposal are incorporated into the emissions reduction generator's permit or, if the emissions reduction generator shuts down all or a portion of its operations and withdraws all relevant operating permits, ATUs issued pursuant to this subsection shall be valid for the seasonal allotment period following issuance and for the next seasonal allotment period; and
- 8) The number of ATUs issued pursuant to subsection (h)(2) or (h)(3) of this Section based on a proposal under subsection (a)(4) of this Section shall be equal to the number of ATUs otherwise issuable under this Section reduced by 12 percent.

Section 205.510 Inter-Sector Transaction

Any person may submit a proposal to the Agency to have ATUs issued to the Transaction Account of a participating source, new participating source or general participant equivalent to VOM emissions reductions from mobile sources or area sources in the Chicago area. Any such proposal for the VOM emissions reduction project is subject to Agency review and approval, shall be consistent with laws and regulations and shall include all supporting documentation. The Agency shall review all such proposals in accordance with the following:

a) Regulatory Based Proposal

If the VOM emission reductions that have been generated or will be generated are pursuant to a regulation that provides the procedure to determine VOM emissions reductions and allows for such reductions to be converted to ATUs, the Agency shall approve the proposal if based on the provisions of the applicable regulation. The Agency shall approve, conditionally approve or deny any complete and adequately supported proposal within 45 days after the Agency's receipt thereof by sending written notification of its decision. If the Agency denies or conditionally approves a proposal, this written notice shall include a statement of the specific reasons for denying or modifying the proposal.

b) Other Proposals

If the proposal is based on VOM emissions reductions that have been generated or will be generated which are beyond VOM emissions reductions required by any mandatory applicable rules, the proposal shall include an explanation of the method(s) used to achieve the VOM emissions reductions and the method(s) used to quantify the VOM emissions reductions, including supporting documentation and calculations. The Agency shall evaluate the validity of VOM emission reductions that allegedly were generated or will be generated and approve, conditionally approve or deny any complete proposal within 90 days after the Agency's receipt by sending written notification of its decision to the source. If the Agency denies or conditionally approves a proposal, this written notice shall include a statement of the specific reasons for denying or modifying the proposal.

c) No ATUs shall be issued based on mobile or area source VOM emissions reductions unless a proposal, in accordance with this Section, has been approved by the Agency.

d) All ATUs issued pursuant to a proposal approved pursuant to this Section shall be issued to the Transaction Account identified in the proposal. Such ATUs shall only be valid for the seasonal allotment period in which the emissions reductions were achieved, unless the Agency specifies in its approval that such ATUs shall be valid for the seasonal allotment period following issuance and for the next seasonal allotment period.

- e) The Agency's determination that a proposal submitted pursuant to this Section is denied or conditionally approved is subject to review by the Board as provided at 35 Ill. Adm. Code 105.102.

SUBPART F: MARKET TRANSACTIONS

Section 205.600 ERMS Database

- a) The Agency or its designee shall maintain a bulletin board that shall be available for public access on which a listing of the status of ATUs will be posted. Other public information and notices will also be posted and participating sources, new participating sources and general participants may post ATUs available for purchase or wanted for purchase. The bulletin board shall include the following information on ATUs:
 - 1) Date issued and source issued to;
 - 2) Where applicable, date transferred and source or person transferred to;
 - 3) Status of ATUs in each account, i.e., available for use, or date retired or date expired; and
 - 4) Posted each week during the reconciliation period and no less than monthly at all other times, the average price paid for ATUs transferred the previous week or the previous month, as appropriate.
- b) The Agency or its designee shall maintain a Transaction Account database. Information contained on this database shall be considered the official record of the ERMS. Account officer(s) may request status updates for accounts for which they are designated. The database shall include information on all ATUs held in each account.
- c) The Agency or its designee shall separately maintain a listing of all ATUs expired or retired within the most recent five years, including the date of expiration or retirement.

Section 205.610 Application for Transaction Account

- a) Each participating source, new participating source and general participant shall apply for and obtain authorization for a Transaction Account from the Agency prior to conducting any market transactions. Each participating source shall submit to the Agency its completed application for a Transaction Account no later than 30 days prior to the beginning of the first seasonal allotment period in which the source is required to participate. Each new participating source shall submit to the Agency its completed application for a Transaction Account no later than

30 days prior to the beginning of the first seasonal allotment period in which it is operational.

- b) Each Transaction Account application shall include the following information:
 - 1) The name and address of the participating source, new participating source or general participant, and the name and address of its owner or operator;
 - 2) The names and addresses of all designated account officers;
 - 3) The certification specified in Section 205.620(a)(5) of this Subpart signed by each account officer; and
 - 4) For a participating source or new participating source, identification of the CAAPP permit or FESOP number for the source.
- c) Special Participants

Any person may purchase ATUs to retire for air quality benefit only. Such person shall be a special participant and shall register with the Agency prior to its first ATU purchase. Special participants will not have Transaction Accounts in the Transaction Account database. All ATUs purchased by special participants will be retired effective on the date of purchase and will be listed as retired in the appropriate database.
- d) Special participants will be given a registration number by the Agency so that their purchases of ATUs can be recorded.

Section 205.620 Account Officer

- a) Each participating source, new participating source or general participant must have at least one account officer designated for each of its Transaction Accounts. The account officer(s) shall be the only person(s) authorized to make ATU transactions involving such designated Transaction Account. At least one account officer must certify each official document that pertains to a designated Transaction Account or associated market transactions. Account officers may be employees or contractors of participating sources, new participating sources or general participants. No participating source, new participating source or general participant may engage in ATU transactions if it does not have an account officer approved by the Agency. Each account officer shall satisfy all of the following:
 - 1) Be at least 18 years of age;
 - 2) Be an American citizen or a legal alien;

- 3) Have not been convicted of or had a final judgment entered against him or her in any State or federal court for a violation of State or federal air pollution laws or regulations, or for fraud;
- 4) Be scheduled to attend the next scheduled training program or has already completed the program; and
- 5) Certify to the following statement as a part of the relevant Transaction Account application:

I certify that I satisfy all of the requirements for an account officer. I am aware that I may be disqualified from acting as an account officer in the State of Illinois, pursuant to 35 Ill. Adm. Code 205, if any information submitted in this application is determined to be false or misleading.

b) Account Officer Training Program

Except as provided in subsection (d) of this Section, each candidate must satisfactorily complete the training program for account officers conducted by the Agency or its designee prior to acting as an account officer.

- 1) To attend the account officer training program, a person must enroll with the Agency prior to the date for the next scheduled training program.
- 2) The training program shall cover, at a minimum, the following topics: an overview of the ERMS, forms for the ERMS, market transaction procedures, and operation of the ERMS databases.
- 3) The account officer training program will be offered at least once annually, and may be offered more frequently, depending upon demand. The Agency or its designee shall publish advance notice of the time, date and location for each training program.

c) Disclaimer

The Agency and the State of Illinois do not endorse or guarantee the conduct or quality of work by account officers who have been approved by the Agency, nor does it endorse or guarantee the validity of any representations or ERMS market transactions offered or made by account officers who have been approved by the Agency.

d) Expedited Approval of Account Officer

In the event that an account officer unexpectedly leaves that position, the participating source, new participating source or general participant may request permission from the Agency to allow for a new account officer for up to one year,

provided the participating source, new participating source or general participant submits a written certification in accordance with subsection (a)(5) of this Section and affirms that the candidate for expedited approval by the Agency shall complete the training program, in accordance with subsection (b) of this Section, no later than one year from the date the expedited approval is requested.

Section 205.630 ATU Transaction Procedures

Recognized sales and purchases of ATUs may be made between any two Transaction Accounts or from a Transaction Account to the ACMA. A sale of ATUs may also be made from a Transaction Account to a special participant. No sale of ATUs shall be recognized from a special participant to any other person.

- a) Transfer of ATUs shall be subject to the following requirements:
 - 1) Transfers between Transaction Accounts may only be made by the account officers for both accounts;
 - 2) All ATU transfers shall be duly authorized by the account officers for both Transaction Accounts, or, if the ATUs are being transferred to a special participant, the account officer of the Transaction Account of the transferor and a representative of the special participant;
 - A) Duly authorized ATU transfers shall identify the ATU(s) involved in the transaction;
 - B) Written ATU transfer agreements signed by the account officers for both Transaction Accounts may authorize the transfer of ATUs for more than one season. If a transfer agreement authorizes the future transfer of ATUs for any season for which ATUs have not yet been issued for use, the ATUs shall be automatically transferred to the buyer's Transaction Account for each year such transfer is authorized pursuant to the transfer agreement, in which case the account officers for each Transaction Account will be notified of this transfer;
 - 3) No transfer shall be considered official for purposes of the ERMS until entered into the Transaction Account database;
 - 4) The Agency or its designee shall enter ATU transfers into the Transaction Account database within one week of the Agency receiving notification of a duly authorized ATU transfer; and
 - 5) Any ATU transfer agreements entered into after December 31 of a given year may not be used by the buyer to cover emissions from the preceding seasonal allotment period, but may only be used prospectively.

- b) The account officers involved in ATU transfers shall report the purchase price for all ATU transfers to the Agency or its designee and shall indicate whether consideration other than the purchase price reported was involved in the transfer.
- c) Transaction Requirements
 - 1) Expired or retired ATUs may not be bought or sold;
 - 2) The Transaction Account database must show ATUs proposed for transfer as being held by the selling entity. After such transfer is official as specified in subsection (a)(3) of this Section, the transferee's Transaction Account will show the ATUs subject to such transfer as being held in this Transaction Account;
 - 3) The minimum sale allowed under the ERMS shall be one ATU; and
 - 4) No sale may include partial ATUs.
- d) Official Record of Transactions
 - 1) The official record of all ATU transactions and the current status of all ATUs shall be the Transaction Account database.
 - 2) Account officers shall be allowed to inspect their Transaction Account(s) in the Transaction Account database. Any discrepancies found by the account officer shall be reported to the Agency or its designee along with a request for correction. All data supporting such request shall be sent along with the request for correction. A request for correction may not be used to alter an allotment.
 - 3) After the end of each reconciliation period, the Agency shall retire ATUs in the Transaction Account of each participating source or new participating source in the amount specified in Section 205.150(c) or (d) of this Part. If the source does not have sufficient ATUs in its Transaction Account to account for its VOM emissions from the preceding seasonal allotment period, the source shall be subject to emissions excursion compensation in accordance with Section 205.720 of this Part. ATUs shall be retired in order of issuance, unless the account officer for the Transaction Account notifies the Agency in writing to specify which ATUs in the Transaction Account should be retired.

SUBPART G: PERFORMANCE ACCOUNTABILITY

Section 205.700 Compliance Accounting

- a) The owner or operator of each participating source or new participating source shall maintain and retain for five years at the source or at another location agreed to by the Agency, in conjunction with the records it maintains to demonstrate compliance with its CAAPP permit or FESOP, all of the following documents as its compliance master file:
 - 1) A copy of its seasonal component of its Annual Emissions Report;
 - 2) Information on actual VOM emissions, as recorded in accordance with Section 205.335 of this Part, and as required by the CAAPP permit or FESOP for the source; and
 - 3) Copies of any transfer agreements for the purchase or sale of ATUs and other documentation associated with the transfer of ATUs.
- b) Compliance Master File Review
 - 1) The owner or operator of each participating source or new participating source shall allow the Agency or an authorized representative to enter and inspect the premises as described by Section 39.5(7)(p)(ii) of the Act [415 ILCS 5/39.5(7)(p)(ii)] and to review its compliance master file.
 - 2) After the conclusion of each compliance master file review, a report shall be prepared by the Agency and issued to the inspected source that includes the following information:
 - A) An identification of any noncompliance with the requirements of this Part; and
 - B) An evaluation of increases and decreases in seasonal emissions of VOMs that are also hazardous air pollutants, as related to ATU transactions.
 - 3) Nothing in this Part shall affect any other obligations of a source to allow inspection(s) under State or federal laws or regulations.

Section 205.710 Alternative Compliance Market Account (ACMA)

- a) The Agency or its designee shall operate the ACMA. The purpose of the ACMA is to serve as a secondary source of ATUs that may be purchased by participating sources and new participating sources, as specified in this Section.
- b) The ATUs in the ACMA will have an indefinite life so long as they remain in the ACMA, but, once purchased, must be used either for the preceding or next seasonal allotment period. If these ATUs are not used for compliance in that seasonal allotment period, they will expire.

- c) ATUs in an amount equal to one percent of each year's allotment shall be issued to the ACMA, beginning in 1999. In addition, ATUs shall be deposited into the ACMA due to source shutdowns, as specified in Sections 205.410(a) and 205.500(b) of this Part. ATUs for the ACMA may also be obtained by the Agency in the following ways:
 - 1) The Agency or its designee is authorized to accept voluntary contributions of ATUs from participating sources or other persons for deposit into the ACMA.
 - 2) The Agency is authorized to deposit ATUs from its purchase of ATUs or to deposit ATUs created from emissions reductions it generates beyond reductions otherwise required by statute or regulation for attainment of the NAAQS for ozone.
- d) Regular Access to ACMA
 - 1) Regular access to the ACMA shall be available when there is sufficient positive balance of ATUs to supply the requesting source. Any participating source or new participating source may apply to the Agency during the reconciliation period for regular access to the ACMA to purchase ATUs for the preceding seasonal allotment period.
 - 2) Within 15 days after receipt of any request for regular access to the ACMA, the Agency shall notify the source if regular access to the ACMA is available or if there are insufficient ATUs in the ACMA for regular access. The Agency shall also advise any participating source that special access is available when regular access is unavailable.
 - 3) After being granted regular access to the ACMA by the Agency, a participating source or new participating source may purchase ATUs from the ACMA at the rate of \$1,000 per ATU or 1.5 times the average market price, as determined by the Agency, whichever is less. ATUs shall only be available at 1.5 times the market price if sufficient single season ATUs transfers have occurred with a purchase price that fully reflects the consideration involved in the transfer to establish an average market price. All payments for ATUs from the ACMA shall be made to the Agency or the Agency's designee for deposit into the Alternative Compliance Market Account Fund.
- e) Special Access to ACMA

Special access to the ACMA shall be available to participating sources, in accordance with this subsection, when the ACMA balance is not sufficient to meet the needs of requesting participating sources.

- 1) The Agency shall credit the ACMA with up to one percent of ATUs from the seasonal allotment for the next seasonal allotment period as an advance to provide assistance for special access to be granted, as provided in subsection (e)(2) of this Section. Special access to the ACMA shall only be allowed to the extent that such access does not exceed this one percent of the next seasonal allotment.
 - 2) To the extent allowed pursuant to subsection (e)(1) of this Section, the Agency shall grant special access to the ACMA to any participating source if the source submits a written request demonstrating that the following exist:
 - A) During the reconciliation period the source has not been able to obtain regular access to the ACMA and has not been able to obtain ATUs in the market; and
 - B) Actual seasonal emissions have exceeded ATUs held by the source for the applicable seasonal allotment period.
 - 3) After being granted special access to the ACMA, a participating source may purchase ATUs at the rate of \$1100 per ATU or 2 times the average market price, as determined by the Agency, whichever is less. ATUs shall only be available at 2 times the market price if sufficient single season ATUs transfers have occurred with a purchase price that fully reflects the consideration involved in the transfer to establish an average market price. All payments for ATUs from the ACMA shall be made payable to the Agency or the Agency's designee for deposit into the Alternative Compliance Market Account Fund.
 - 4) The Agency shall provide written notification, within 15 days after receipt of any request for special access to the ACMA, allowing or denying special access to the ACMA to any participating source requesting such access. If the Agency denies such access, this written notification shall include its reasons for denying access.
- f) Special access to the ACMA will create a need to generate sufficient VOM emissions reductions during the subsequent calendar year to offset the ATUs distributed; in this instance, the Agency shall:
- 1) Offset these ATUs by crediting any expired ATUs from the Transaction Accounts of all ERMS participants to the ACMA after the end of the reconciliation period;
 - 2) Seek to achieve an equivalent amount of VOM emissions reductions by the end of the subsequent year to offset these ATUs; or

- 3) Credit the ACMA with the one percent of ATUs, as needed, from the next seasonal allotment, as provided in subsection (e)(1) of this Section.
- g) The Agency is authorized to use moneys derived from the sale of ATUs from the ACMA to develop and implement additional VOM emissions reductions. If the ACMA is operating without a positive balance, the Agency shall endeavor to generate new emissions reductions whenever possible.
- h) Limitations on Operation of ACMA

The ability of new participating sources to obtain ATUs from the ACMA shall be limited through the seasonal allotment period of 2002, in the aggregate, to no more than 30 percent of the available ACMA balance at the start of each seasonal allotment period unless ATUs are available after access by all participating sources. In such case, new participating sources may obtain ATUs from the ACMA up to 50 percent of the available ACMA balance at the start of each seasonal allotment period.
- i) If the Agency denies special access to the ACMA to any participating source, such source may petition the Board for review of the Agency's denial in accordance with the procedures specified at 35 Ill. Adm. Code 105.102.

Section 205.720 Emissions Excursion Compensation

The Agency shall obtain emissions excursion compensation from any participating source or new participating source that does not hold ATUs in accordance with Section 205.150(c) or (d) of this Part by the conclusion of the reconciliation period. For any emissions excursion during 1999 by a participating or new participating source that was not issued a CAAPP permit before May 1, 1998, all references in subsections (b)(1) and (b)(3), (c) and (e) of this Section to 1.2 times the emissions excursion shall be 1.0 times the emissions excursion. The Agency shall obtain emissions excursion compensation pursuant to the following procedures.

- a) The Agency shall issue an Excursion Compensation Notice to any such source when an apparent emissions excursion is identified by the Agency.
- b) Except as provided in subsection (c) of this Section, the Excursion Compensation Notice shall require the source to provide compensation in the following manner:
 - 1) The participating source or new participating source shall purchase ATUs from the ACMA in an amount equivalent to 1.2 times the emissions excursion;
 - 2) For the second consecutive seasonal allotment period in which an emissions excursion occurred, the participating source or new

participating source shall purchase ATUs from the ACMA in an amount equivalent to 1.5 times the emissions excursion; or

- 3) If the ACMA balance is not adequate to cover 1.2 times or, when required, 1.5 times the total emissions excursion amount, the Agency shall deduct ATUs equivalent to 1.2 times or, when required, 1.5 times the total emissions excursion or any remaining portion thereof from the source's next allotment of ATUs.
- c) Within 15 days after receipt of an Excursion Compensation Notice, the owner or operator of the subject source may apply to the Agency to request that ATUs in an amount equivalent to 1.2 times or, when required, 1.5 times the emissions excursion be deducted from the source's next seasonal allotment, rather than acquired from the ACMA.
- d) Any source issued an Excursion Compensation Notice may contest the Agency's findings by filing a petition with the Board requesting review of the Emissions Excursion Compensation Notice in accordance with the procedures specified in 35 Ill. Adm. Code 105.102.
- e) If any source contests the Agency's findings in the Excursion Compensation Notice, the Agency shall withhold ATUs in an amount equivalent to 1.2 times or, when required, 1.5 times the amount of the alleged emissions excursion from the source's next seasonal allotment. These ATUs shall be withheld until the Board issues a final order resolving the source's petition contesting the Agency's Excursion Compensation Notice. If the source prevails before the Board, the ATUs withheld shall be transferred to the source's Transaction Account. If the Agency prevails before the Board, the ATUs withheld shall be retired to offset the emissions excursion.
- f) Sources that provide emissions excursion compensation pursuant to this Section shall not be subject to enforcement authority granted to the State or any person under applicable State or federal laws or regulations or any permit conditions. The enforcement authority of the State or any person is only limited by this subsection as it applies to an emissions excursion.

Section 205.730 Excursion Reporting

Upon issuance of each Excursion Compensation Notice to any source that has already had one previous admitted or adjudicated emissions excursion, the source shall submit to the Agency any additional reports required by the source's CAAPP permit or FESOP.

Section 205.740 Enforcement Authority

Except as provided in Section 205.720(f) of this Subpart, nothing in this Part limits the State's authority to seek penalties and injunctive relief for any violation of any applicable State law or

regulation or any permit condition, as otherwise provided in the Act. Nothing in this Part limits the right of the federal government or any person to directly enforce against actions or omissions which constitute violations of permits required by the Clean Air Act or applicable federal environmental laws and regulations.

Section 205.750 Emergency Conditions

VOM emissions that are a consequence of an emergency, and are in excess of the technology-based emission rates which are achieved during normal operating conditions, to the extent that such excess emissions are not caused by improperly designed equipment, lack of preventative maintenance, careless or improper operation, or operation error, shall be deducted from the calculation of actual VOM emissions during the seasonal allotment period in which the emergency occurred, subject to the following:

- a) The owner or operator of the participating source or new participating source shall submit an initial emergency conditions report to the Agency within two days after the time when such excess emissions occurred due to the emergency. The submittal of this initial emergency conditions report shall be sufficient to fulfill the notice requirements of Section 39.5(7)(k) of the Act [415 ILCS 5/39.5(7)(k)] as it relates to VOM emissions at the source if the report provides a detailed description of the emergency, any steps taken to mitigate emissions and corrective actions taken, to the extent practicable. The final report shall contain the following information:
 - 1) A description of the cause(s) of the emergency and the duration of the episode;
 - 2) Verification that the source was being operated properly at the time of the emergency;
 - 3) A demonstration that the source took all reasonable steps to minimize excess VOM emissions during the emergency period, including but not limited to the following actions, if technically and economically feasible:
 - A) The level of operation of the affected emission unit(s) was minimized;
 - B) The level of emissions from the affected emission units(s) was minimized by use of alternative raw materials or alternative control measures;
 - C) The duration of the excess emissions was minimized; and
- D) The amount of VOM emissions from other emission units at the source or other sources located in the Chicago area owned or operated by the person or entity were reduced;

- 4) A demonstration that appropriate corrective action(s) were taken promptly;
 - 5) A demonstration that the affected emission units were:
 - A) Being carefully and properly operated at the time of the emergency, including copies of appropriate records and other relevant evidence;
 - B) Properly designed; and
 - C) Properly maintained with appropriate preventative maintenance; and
 - 6) An estimate of the amount of VOM emissions that occurred during the emergency in excess of the technology-based emission factor achieved during normal operating conditions, including supporting data, the relevant emissions factor, and calculations.
- b) The owner or operator of any such source may supplement its initial emergency conditions report within 10 days after the conclusion of the emergency situation. If an initial emergency conditions report is not supplemented, such report is deemed the final emergency conditions report. If, however, an initial emergency conditions report is supplemented, the combination of such initial report plus the supplemental information is deemed the final emergency conditions report.
- c) The Agency must approve, conditionally approve or reject the findings in the final emergency conditions report, submitted by the source, in writing within 45 days after receipt of the initial emergency conditions report, subject to the following:
- 1) If the Agency concurs with the emergency conditions report, the source is not required to hold ATUs for the excess VOM emissions attributable to the emergency;
 - 2) If the Agency approves with conditions or rejects the emergency conditions report, the source shall be required to hold ATUs by the end of the reconciliation period in an amount not less than the emissions identified as excess in the emergency conditions report or provide emissions excursion compensation in accordance with Section 205.720 of this Subpart, if an emissions excursion occurred;
 - 3) If the Agency approves with conditions an emergency conditions report, the Agency must identify in its written notice the amount of VOM emissions that are not attributable to an emergency; and

- 4) If the Agency approves with conditions or rejects a source's emergency conditions report, the source may raise the emergency as an affirmative defense pursuant to Section 39.5(7)(k) of the Act [415 ILCS 5/39.5(7)(k)] in any action brought for noncompliance with this Part or an action brought to review the Agency's issuance of an Excursion Compensation Notice, as provided in Section 205.720(d) of this Subpart.
- d) Nothing in this Section relieves any source of any obligation to comply with other applicable requirements, permit conditions, or other provisions addressing emergency situations.

Section 205.760 Market System Review Procedures

Beginning in 2000, the Agency shall prepare an Annual Performance Review Report that addresses the effect of VOM emissions reductions in the Chicago area on progress toward meeting the RFP requirements and achieving attainment of the NAAQS for ozone by 2007.

- a) The Annual Performance Review Report will review trends and patterns which may have emerged in the operation of the ERMS, and shall include, but not be limited to, the following:
 - 1) Total aggregate VOM emissions during the previous seasonal allotment period;
 - 2) The number of ATUs retired for compliance purposes or for air quality benefit, currently being banked, or used by new participating sources for the previous seasonal allotment period;
 - 3) An evaluation of trading activities, including sources with no trading activity, sources that are net purchasers of ATUs and sources that are net sellers of ATUs;
 - 4) ACMA transactions since the preparation of the previous report and the account balance;
 - 5) A summary of emissions reduction generator and inter-sector proposals;
 - 6) Distribution of transactions by geographic area or character of source;
 - 7) Availability of ATUs for purchase;
 - 8) The average market price for ATU transactions from the previous seasonal allotment period; and
 - 9) Trends and spatial distributions of hazardous air pollutants.

- b) The Agency shall prepare the Report by June 30 of the year following the seasonal allotment period addressed by the Report. The Agency will make copies of its Report available to interested parties upon request.

207.902	Agency Right of Inspection
207.904	Agency Right to Revoke Approval of Plan

AUTHORITY: Implementing and authorized by the Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C] and the Illinois Environmental Protection Act [415 ILCS 5/5, 10, 27, 28 and 39].

SOURCE: Adopted in R00-16 at 24 Ill. Reg. 8979, effective June 14, 2000; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 207.100 Purpose

- a) This Part ~~establishes~~~~sets forth the~~ procedures and performance requirements ~~for~~~~to be followed when~~ conducting vehicle scrappage activities within the State of Illinois ~~to receive for the purpose of receiving~~ Creditable Emissions Reductions (CERs).
- b) This Part ~~intends to~~~~is designed to achieve the following objectives:~~
 - 1) Provide an option for regulated sources and interested parties to achieve emissions reductions;
 - 2) Ensure compatibility with applicable guidance for vehicle scrappage activities developed by the United States Environmental Protection Agency (USEPA);
 - 3) Provide vehicle scrappage training to help ensure that vehicle scrappage activities conducted to generate CERs are ~~only~~ managed ~~only~~ by qualified individuals; and
 - 4) Strike an equitable balance among various parties that may be interested in vehicle scrappage, including regulated sources, potential sponsors of scrappage activities, owners of vehicles eligible to be scrapped, vehicle collectors, automotive rebuilders, and other interest groups.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.102 Definitions

Unless otherwise specified in this Part and unless a different meaning of a term is clear from its context, the definitions for the terms ~~used~~ in this Part ~~are~~~~shall be~~ the same as those ~~found~~ in the Environmental Protection Act [415 ILCS 5] or ~~in~~ 35 Ill. Adm. Code 211 or 240. As used in this Part, the following terms have the meanings ~~set forth~~ below:

"Creditable Emissions Reductions" or "CER" means a unit of emissions reductions based on vehicle retirement activities ~~complying in accordance~~ with

~~an Agency-approved~~ vehicle scrappage plan approved by the Illinois Environmental Protection Agency (Agency).

"Eligible vehicle" means any vehicle that qualifies for retirement in a vehicle scrappage project or program ~~under as specified in~~ Section 207.304 ~~of this Part.~~

"Emissions-related parts" means the engine and other vehicle parts involved with fuel intake, combustion, exhaust, or ~~controlling the control of the~~ evaporation of fuel, which have a direct relation to the type or quantity of emissions produced by the vehicle.

"IM240 Test" means a transient loaded mode exhaust test procedure, ~~under as specified in~~ 35 Ill. Adm. Code 276, designed to measure mass quantities of vehicle exhaust emissions of hydrocarbons, carbon monoxide, carbon dioxide, and ~~oxides of~~ nitrogen oxides generated during vehicle operation on a chassis dynamometer.

"Light-duty truck 1" means a motor vehicle rated at 6,000 pounds maximum gross vehicle weight rate (GVWR) or less ~~with and which has~~ a vehicle frontal area of 45 square feet or less, and which is:

~~Designed designed~~ primarily ~~to transport for purposes of transportation of~~ property or ~~derives from is a derivation of~~ such a vehicle; ~~or is~~

~~Designed designed~~ primarily ~~to transport for transportation of~~ persons and has a capacity of more than 12 persons; ~~or is~~

~~Available available~~ with special features enabling off-street or off-highway operation and use.

"Light-duty truck 2" means a motor vehicle rated between 6,001 and 8,500 pounds maximum GVWR ~~with and which has~~ a vehicle frontal area of 45 square feet or less, and which is:

~~Designated designed~~ primarily ~~to transport for purposes of transportation of~~ property or ~~derives from is a derivation of~~ such a vehicle; ~~or is~~

~~Designated designed~~ primarily ~~to transport for transportation of~~ persons and has a capacity of more than 12 persons; ~~or is~~

~~Available available~~ with special features enabling off-street or off-highway operation and use.

"Light-duty vehicle" means a passenger car or passenger car derivative capable of seating ~~12~~ twelve passengers or fewer.

"Non-emissions-related parts" means vehicle parts not involved with fuel intake, combustion, ~~or~~ exhaust, or ~~controlling the control of~~ evaporation of fuel, and which do not have a direct relation to the type or quantity of emissions produced by the vehicle.

"Recognized repair technician" means a person who:

Is engaged in vehicle repair; ~~or,~~

Is employed by a going concern whose purpose is ~~repairing the repair of~~ vehicles; ~~or~~

Possesses ~~possessing a~~ nationally-recognized ~~nationally-recognized~~ certification for emissions-related diagnosis and repair.

"Vehicle retirement" means ~~the permanent~~ rendering of an eligible vehicle into a permanently an inoperable condition, in compliance ~~accordance~~ with this Part and a vehicle scrappage plan.

"Vehicle scrappage" means activities related to ~~retiring retirement of~~ eligible vehicles to receive ~~for the purpose of receiving~~ CERs under this Part.

"Vehicle scrappage manager" means a natural person who satisfies all qualification requirements ~~specified in~~ Section 207.700 ~~of this Part~~ and is eligible to conduct vehicle scrappage activities under ~~pursuant to~~ this Part.

"Vehicle scrappage plan" means a ~~type of plan that~~ satisfying ~~satisfies~~ all applicable requirements of Subpart F ~~of this Part~~, and ~~has been~~ approved or sponsored by the Agency, under which the vehicle scrappage activities for the applicable vehicle scrappage project or program must be conducted.

"Vehicle scrappage program" means periodic or ongoing vehicle scrappage activities conducted in compliance ~~accordance~~ with the applicable requirements of this Part and a vehicle scrappage plan.

"Vehicle scrappage project" means a one-time vehicle scrappage event conducted in compliance ~~accordance~~ with the applicable requirements of this Part and a vehicle scrappage plan.

"Vehicle scrappage sponsor" means any interested person or entity that satisfies all of the requirements of Section 207.702 of this Part and financially underwrites a vehicle scrappage project or program conducted under this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.104 Severability

If any Section, subsection, sentence, or clause of this Part is judged invalid, ~~that such~~ adjudication ~~does must shall~~ not affect the validity of this Part as a whole or any Section, subsection, sentence, or clause ~~thereof~~ not judged invalid.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART B: APPLICABILITY

Section 207.200 Applicability

This Part applies to vehicle scrappage activities conducted in the State of Illinois ~~conducted~~ to receive CERs and to all persons or entities that are, or desire to be, vehicle scrappage managers, sponsors, or other participants.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART C: REQUIREMENTS OF VEHICLE SCRAPPAGE PROJECTS AND PROGRAMS

Section 207.300 Scope

Each vehicle scrappage project or program conducted under ~~pursuant to the provisions of~~ this Part must satisfy ~~all of~~ the requirements ~~specified~~ in this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.302 Vehicle Scrappage Sponsors and Managers

Each vehicle scrappage project or program ~~must shall~~ be financially underwritten by a vehicle scrappage sponsor satisfying who satisfies all of the requirements of Section 207.702 ~~of this Part~~, and ~~must shall~~ be directed by a vehicle scrappage manager satisfying who satisfies all of the requirements of Section 207.700 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.304 Vehicle Eligibility

Each vehicle that is retired in a vehicle scrappage project or program must shall satisfy the following criteria:

- a) Be a light-duty vehicle, light-duty truck 1, or light-duty truck 2;
- b) Not Shall not be from a model year 25 years old or older;

- c) Have been continuously registered with the Illinois Secretary of State for the ~~12-month~~ 12-month period immediately ~~before~~ prior to the date of its sale for use in a vehicle scrappage project or program;
- d) If the vehicle will be used to claim CERs ~~that are~~ intended to address a specific pollution problem (e.g., ozone nonattainment), the vehicle must have been registered at an address within an area where emissions reductions are required for the applicable pollutant or pollutant precursor for the ~~12-month~~ 12-month period immediately ~~before~~ prior to the date of its sale for use in a vehicle scrappage project or program;
- e) Be legally driven to the collection site and have the applicable equipment required to drive the vehicle on any highway ~~under as specified in~~ Chapter 12 of the Illinois Vehicle Code [625 ILCS 5/12];
- f) Be powered by a spark ignition internal combustion engine;
- g) Have arrived at the place of sale under its own power;
- h) Have passed the operability check ~~specified in~~ Section 207.312 ~~of this Subpart~~; and
- i) ~~Comply~~ Be in compliance with the Illinois vehicle emissions testing program ~~under as specified by~~ the Illinois Vehicle Emissions Inspection Law of ~~2005-1995~~ [625 ILCS ~~5/13C~~ 5/13B] and regulations promulgated ~~under it~~ thereunder.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.306 Vehicle Ownership

- a) Each vehicle retired ~~under~~ pursuant to a vehicle scrappage project or program must have a valid, legally transferable title.
- b) An owner listed on the title, a legal representative of the owner or owners, or, if the owner is an entity, an agent of the entity must appear at the collection site with the vehicle at the time of its sale to a vehicle scrappage project or program.
- c) It ~~is~~ shall be the responsibility of the vehicle scrappage sponsor or manager to provide the Illinois Secretary of State with all vehicle transfer records necessary to document the proper transfer and retirement of vehicles that are scrapped. The Agency assumes no responsibility for documentation or legality of transfer of vehicle titles.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.308 Notification of Intent to Retire Vehicles

- a) If the vehicle scrappage plan targets certain vehicles ~~under, as provided in Subpart D-of this Part~~, the vehicle scrappage manager or sponsor may request that the Agency provide notice of the applicable vehicle scrappage activities to owners of vehicles that meet the specifications in the plan. This notice will provide information to allow the vehicle owners to contact the relevant vehicle scrappage sponsor or manager for more information about the proposed vehicle scrappage activities.
- b) If a vehicle scrappage manager or sponsor does not request ~~that~~ the Agency ~~to~~ provide notification ~~underas provided in subsection (a)-of this Section~~, the vehicle scrappage sponsor or manager must notify owners of vehicles that are prospective candidates for retirement of the proposed vehicle scrappage activities. Notification may be provided by general public notification methods.
- c) Any notification provided to vehicle owners by vehicle scrappage sponsors or managers must ~~convey~~, at a minimum, ~~convey the following information~~:
 - 1) That participation in the program or project is strictly voluntary;
 - 2) The name and address of the vehicle scrappage sponsor or manager;
 - 3) All conditions that the vehicle owner and the vehicle itself must satisfy ~~in order to participate in the vehicle scrappage project or program~~;
 - 4) The amount of money ~~that is being~~ offered to the owner by the vehicle scrappage sponsor or manager for the purchase of the owner's vehicle if all conditions of vehicle eligibility are met;
 - 5) That ~~identifying the identification of~~ the owner's vehicle as a candidate for retirement does not ~~allege constitute an allegation of~~ any environmental or other violation by that owner; and
 - 6) A clear statement that the notice is ~~being~~ provided by that sponsor or manager, not by the Agency or by any other governmental entity, unless the Agency is the vehicle scrappage sponsor.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.310 Notification to Vehicle Collectors and Automotive Rebuilders and Suppliers

- a) The Agency will make available to vehicle scrappage sponsors or managers a list of recognized vehicle collector associations and persons normally engaged in either the business of rebuilding vehicle parts or supplying ~~such~~ parts to rebuilders that may be interested in purchasing vehicles collected under projects and

programs. ~~To be included in the list, recognized~~ Recognized vehicle collector associations and persons normally engaged in either the business of rebuilding vehicle parts or supplying ~~such~~ parts to rebuilders must submit a written request to the Agency ~~for inclusion on the list~~.

- b) Vehicle scrappage sponsors or managers ~~must~~shall provide notification of the availability of vehicles to be retired by either posting notice on the Internet or providing written notice to ~~the~~ persons or entities identified by the Agency on the list ~~specified~~ in subsection (a) ~~of this Section~~. Vehicles may not be retired until 21 days after the notification required by this subsection is provided.
- c) A vehicle scrappage manager or sponsor may ~~use~~utilize Agency capabilities to provide the notification required under this Section on the Internet.

d) Vehicle scrappage sponsors and managers may sell vehicles to interested persons ~~instead in lieu~~ of retiring the vehicle for CERs. Vehicle scrappage managers and sponsors remain eligible for CERs if non-emissions-related parts are sold to interested persons or emissions-related parts are sold to either vehicle collectors or persons normally engaged in either the business of rebuilding vehicle parts or supplying ~~such~~ parts to rebuilders, ~~if provided that~~ disassembly of emissions-related parts has been performed ~~under as specified in~~ Section 207.316(e) ~~of this Subpart~~. If a vehicle or emissions-related parts from a vehicle are resold without disassembly ~~under as specified in~~ Section 207.316(e) ~~of this Subpart~~, CERs may not be claimed for the vehicle.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.312 Operability Check

Each vehicle ~~that is~~ to be retired ~~under~~pursuant to this Part ~~must~~shall pass an operability check ~~before prior to~~ purchase and collection. The operability check ~~must~~shall include, at a minimum:

- a) ~~Starting up~~Start-up of the vehicle;
- b) ~~Test-driving~~Test-drive of the vehicle for five or more feet in forward gear;
- c) ~~Test-driving~~Test-drive of the vehicle for five or more feet in reverse gear;
- d) ~~Shutting off~~Shut-off of the vehicle; and
- e) Visual inspection for fluid leakage or any malfunction or other damage that would render the vehicle unsuitable for normal operation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.314 Collection and Testing

- a) Each vehicle ~~that is~~ purchased and collected by a vehicle scrappage sponsor or manager ~~must~~shall be photographed at the collection site, ~~along~~ with all owners or representatives or agents of the owners of the vehicle that are present. Each vehicle ~~must~~shall also be marked with a unique identification number ~~that is~~ visible in the photograph.
- b) After ~~a vehicle arrives~~arrival at the collection site, a vehicle scrappage sponsor or manager ~~must~~shall take adequate measures to ensure that a vehicle ~~that is~~ to be retired is not adjusted, repaired, or tampered with in any way until any testing has been completed. If non-emissions-related parts are no longer in operable condition after the vehicle is collected and passes the operability requirements in Section 207.312 ~~of this Subpart~~, repairs to parts, such as batteries and tires, may be made if needed to allow testing ~~(e.g., batteries, tires)~~. No parts may be removed from any vehicle ~~before completing~~prior to the completion of any testing.
- c) The mileage indicated on the odometer must be recorded at the time of collection.
- d) If vehicles to be retired must undergo emissions testing ~~under~~pursuant to the applicable vehicle scrappage plan and are not tested within 45 calendar days after collection of the vehicle, any CERs claimed which are attributable to that vehicle will be discounted by ~~10%~~ten percent. If emissions testing is not conducted within 90 calendar days after collection of vehicles, vehicle scrappage managers and sponsors will be able to claim CERs based only on ~~the basis of~~ modeled emissions.
- e) ~~Instead~~In lieu of performing emissions testing on a vehicle, vehicle scrappage managers and sponsors may use the most recent emissions test results for that vehicle from an ~~Agency-administered~~Agency-administered IM240 Test conducted under the Illinois vehicle emissions test program ~~under established and operated pursuant to~~ the Vehicle Emissions Inspection Law of ~~2005~~1995 [625 ILCS ~~5/13C~~5/13B], ~~if the, provided that such~~ test was performed no more than 90 calendar days before collection of the vehicle.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.316 Disassembly, Recycling, and Disposal Based on Vehicle Scrappage Activities

- a) All vehicles for which CERs are claimed ~~must~~shall be crushed or otherwise recycled or ultimately disposed of in ~~compliance~~accordance with this Section, the applicable vehicle scrappage plan, and the schedule ~~specified~~ in that plan.
- b) Any residual materials or wastes ~~that are~~ derived from ~~permanently retiring~~the permanent retirement of vehicles, including all fluids, gases, and environmentally

sensitive materials, ~~must~~shall be recycled or disposed of in an environmentally sound manner, in conformity with the applicable vehicle scrappage plan, and in ~~compliance~~accordance with all federal and State laws and regulations.

- c) Used tires derived from ~~permanently retiring the permanent retirement of~~ vehicles ~~must~~shall be recycled or ultimately disposed of in ~~compliance~~ accordance with Title XIV of the Environmental Protection Act [415 ILCS 5/53-55.15] and regulations promulgated ~~under it~~thereunder.
- d) Non-emissions-related parts may be resold or recycled.
- e) Vehicle scrappage managers, sponsors, and scrap yards identified in vehicle scrappage plans may resell or recycle emissions-related parts (including engines) to vehicle collectors or to persons normally engaged in either the business of rebuilding vehicle parts or ~~normally engaged in~~ supplying ~~such~~ parts to rebuilders, ~~if provided~~ the following requirements are met:
 - 1) The engine ~~is~~must be disassembled into the cylinder head, block, crankshaft, and connecting rods; and
 - 2) All other emissions-related parts ~~are~~must be disassembled into their major components.
- f) Any recycling of emissions-related or non-emissions-related parts ~~must~~shall be conducted in ~~compliance~~conformity with a vehicle scrappage plan expressly providing for appropriate disassembly, rebuilding or reconditioning, if applicable, and sale.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.318 Documentation Requirements

- a) Each vehicle scrappage sponsor or manager ~~must~~shall maintain records for at least five years of all vehicle scrappage activities conducted ~~under as specified in~~ the applicable vehicle scrappage plan, including ~~the following information~~:
 - 1) Identification of eligible vehicles accepted in the vehicle scrappage project or program, including the vehicle identification number and documentation indicating that these vehicles meet the eligibility criteria ~~specified in Section 207.304 of this Subpart~~;
 - 2) Documentation to verify vehicle ownership and appropriate transfer of ownership for all eligible vehicles, as specified in Section 207.306 ~~of this Subpart~~;

- 3) Photographic documentation ~~of relative to~~ vehicle collection activities, as specified in Section 207.314(a) ~~of this Subpart~~;
- 4) Records verifying mileage for each vehicle, as specified in Section 207.314(c);
- 5) Documentation of all vehicle testing performed in ~~compliance accordance~~ with the applicable vehicle scrappage plan and ~~Sections~~Section 207.314 ~~of this Subpart~~ and ~~Section~~ 207.502 ~~of this Part~~;
- 6) All records and supporting documentation related to any calculations of emissions that are performed;
- 7) Documentation of all vehicle disassembly, recycling, and disposal activities ~~under, as specified in~~ Section 207.316 ~~of this Subpart~~, including any waste disposal manifests or receipts obtained from scrap yards, recyclers, or disposal facilities ~~documenting evidencing~~ recycling or disposal of all residual materials and wastes derived from vehicle scrappage;
- 8) If emissions-related parts are resold or recycled, documentation demonstrating that appropriate disassembly has occurred ~~under, as specified in~~ Section 207.316(e) ~~of this Subpart~~; and
- 9) Documentation supporting the use of any enhanced vehicle scrappage options such as the options ~~described~~ in Subpart D.

b) Vehicle scrappage sponsors or managers ~~must~~ shall:

- 1) Maintain all records required under this Part at one location within Illinois;
- 2) Maintain a copy of the applicable vehicle scrappage plan at the site of each vehicle scrappage activity;
- 3) Make a copy of all documentation required to be maintained ~~under pursuant to~~ this Part available to Agency representatives for inspection upon request; and
- 4) Submit to the Agency a copy of any of the documentation required to be maintained ~~under pursuant to~~ this Part, upon request by the Agency.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART D: OPTIONS FOR VEHICLE SCRAPPAGE PROJECTS AND PROGRAMS

Section 207.400 Optional Project or Program Enhancements

Vehicle scrappage sponsors and managers proposing to conduct vehicle scrappage projects or programs may include options in proposed plans that exceed the requirements of Subpart C ~~of this Part~~. The options ~~contained~~ in this Subpart are examples ~~of possible options~~. Vehicle scrappage sponsors and managers of proposed vehicle scrappage programs or projects mustshall identify any options in their proposed vehicle scrappage plans and mustshall specify the rationale and any supporting information which would indicate that the proposed options will generate greater emissions reductions or more reliable documentation of any claimed CERs.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.404 Targeting of High Emissions Vehicles

Vehicle scrappage plans may include only eligible vehicles with demonstrated high emissions. A certificate of waiver under 35 Ill. Adm. Code 276.403 or test results under, pursuant to the vehicle inspection and maintenance program administered under the Vehicle Emissions Inspection Law of 20051995 [625 ILCS 5/13C5/13B], may demonstrate that a vehicle has high emissions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.408 Use of Enhanced Prescreening Inspection

Vehicle scrappage plans may include operability inspections of vehicles which are to be retired but do not meet beyond the operability requirements specified in Section 207.312, ~~of this Part~~ with the intent to determine of determining the probable recent use patterns of a vehicle and the remaining useful life of that vehicle. TheseSuch inspections mustshall be conducted and certified by a recognized repair technician, as defined in Section 207.102 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.410 Use of Evaporative System Integrity Test

Vehicle scrappage plans may include an evaporative system integrity test to determine the ability of each vehicle's system to recycle vapors. The results of these tests may be used to characterize the functional status of the vehicle's evaporative control system for use as an input to USEPA's MOBILE model. If the applicable vehicle scrappage plan is for a vehicle scrappage project, the evaporative system integrity test administered at an official vehicle emissions test station of the Agency underpursuant to 625 ILCS 5/13C5/13B-10 must be used to measure evaporative emissions. Vehicle scrappage plans for programs may specify the use of the evaporative system test administered at an official test station of the Agency or ~~the use of~~ another test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART E: MEASUREMENT TECHNIQUES AND CER CALCULATION AND REVIEW

Section 207.500 Vehicle Scrappage as a Basis for CERs

Vehicle scrappage sponsors and managers may receive CERs for emissions reductions achieved based on vehicle scrappage activities conducted ~~underpursuant to~~ this Part in ~~complianceaccordance~~ with the requirements ~~ofspecified in~~ this Subpart. CERs may be used in conjunction with an emissions reduction program or as new source review offsets under 35 Ill. Adm. Code 203, to the extent that ~~recognizing or using~~~~the recognition or use of~~ CERs is allowed under and fulfills the requirements of the applicable rule.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.502 Methods for Determining Emissions Reductions

a) Emission rates from both retired and replacement vehicles must be either measured (measure/measure method), modeled (model/model method), or a combination of measurement and modeling (measure/model method). The vehicle scrappage sponsor or manager ~~mustshall~~ propose the ~~techniques for measuring or~~~~measurement and/or~~ modeling ~~or bothtechniques~~ to be used in the applicable vehicle scrappage plan.

b) Modeled emission rates for retired and replacement vehicles must be calculated using the USEPA MOBILE model, ~~as applied in~~ ~~complianceaccordance~~ with USEPA guidance for MOBILE model use for vehicle scrappage activities.

c) The IM240 Test ~~mustshall~~ be used for any measured ~~volatile organic materialVOM~~ emission rate determinations.

d) The remaining useful life of retired vehicles is limited to three years.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.504 CER Calculation Methodology

a) Except ~~underas provided in~~ subsection (b) ~~of this Section~~, the following formula ~~must shall~~ be used to calculate proposed CERs:

$$\text{CER} = [\text{sigma}] ([(\text{a})(\text{b})(\text{c})] - [(\text{d})(\text{e})(\text{c})]) (1 - (\text{f}/100)) / (1000)$$

Where:

- a ~~R~~ represents the retired vehicle emissions in grams/mile
- b ~~R~~ represents miles per year traveled by the retired vehicle based on recent usage, as established in ~~complianceaccordance~~ with Section 207.510(a)(2)(B)
- c ~~R~~ represents remaining life of the retired vehicle in years
- d ~~R~~ represents the replacement vehicle emissions in grams/mile

- e ~~R~~represents miles per year traveled by the replacement vehicle (which ~~must~~shall be equal to or greater than "b", unless demonstrated otherwise in a vehicle scrappage plan)
 - f ~~R~~represents the environmental discount factor that must be applied ~~under, pursuant to~~ Section 207.506 ~~of this Subpart~~, if applicable.
- CER ~~R~~represents a creditable emissions reduction unit in kilograms.
- b) Vehicle scrappage sponsors and managers may request Agency approval to deviate from the general formula in subsection (a) ~~of this Section~~ to calculate CERs in their proposed vehicle scrappage plan. This request must demonstrate that the deviation is necessary based on elements of the proposed vehicle scrappage project or program.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.506 CER Adjustments

- a) If the vehicle scrappage plan provides that the emissions of both retired and replacement vehicles are to be modeled (model/model method), the total value of CERs claimed will~~shall~~ be:
 - 1) Reduced by 20%~~percent~~ to account for the natural retirement of vehicles; and
 - 2) Discounted by an additional 5%~~percent~~.
- b) If the vehicle scrappage plan provides that emissions of vehicles to be retired are to be measured and emissions of replacement vehicles are to be modeled (measure/model method), the total value of CERs claimed will~~shall~~ be reduced by 10%~~percent~~ to account for the natural retirement of vehicles, unless enhanced prescreening inspection is conducted ~~under, as provided in~~ Section 207.408 ~~of this Part~~. If enhanced prescreening is conducted, no reduction to CERs claimed will~~shall~~ be assessed, except ~~under as provided in~~ Section 207.314(d) ~~of this Part~~.
- c) Except ~~under as provided in~~ Section 207.314(d) ~~of this Part~~, if the vehicle scrappage plan provides that emissions of both retired and replacement vehicles are to be measured (measure/measure method), no reduction to the value of CERs claimed will~~shall~~ be assessed.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.508 Remaining Useful Life of Vehicles and Lifetime of CERs

- a) If emissions from retired vehicles are modeled, the remaining useful life of retired vehicles will~~shall~~ be three years.

- b) If emissions from retired vehicles are measured, the remaining useful life of retired vehicles ~~will~~must be a minimum of two years. Vehicle scrappage sponsors and managers may demonstrate to the Agency that a remaining useful life of more than two years should apply to CERs generated using a measure/model or a measure/measure method. To make this demonstration, the vehicle scrappage sponsor or manager ~~must~~shall provide the Agency with sufficient information to substantiate that a greater remaining useful life of retired vehicles is justified.
- c) CERs are valid for the same period as the remaining useful life of the retired vehicle as specified in this Section.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.510 Submission and Agency Review of CER Claims

a) Except ~~underas provided in~~ Section 207.512 ~~of this Subpart~~, a vehicle scrappage sponsor or manager must submit a CER claim to the Agency for review within 120 days ~~after completing~~of completion of vehicle collection for vehicle scrappage projects or quarterly for a vehicle scrappage program. The following information must be included in each CER claim, in addition to any information required in the applicable vehicle scrappage plan:

- 1) The amount of CERs claimed to have been generated by vehicle retirement; and
- 2) Sufficient calculations and supporting documentation to substantiate ~~thesueh~~ claim, including:
 - A) Identification (i.e., make, model year, and vehicle identification number) of retired vehicles upon which the claim is based;
 - B) Estimates of recent mileage for each retired vehicle based on data recorded in the most recent two years or on established mileage estimation methods;
 - C) Mileage for each replacement vehicle, which may not be less than the mileage estimated for the retired vehicle unless demonstrated otherwise in a vehicle scrappage plan;
 - D) The method used to determine emissions from each retired and replacement vehicle;
 - E) The method used to identify replacement vehicles;
 - F) Any discounting of CERs required by this Part; and

- G) A log identifying for each returned vehicle whether enhanced options or disassembly and recycling were used.
- b) CERs may not be claimed for a vehicle until it has been acquired and retired by the vehicle scrappage sponsor or manager.
- c) CERs may be claimed on a lump sum basis for the total aggregate emissions reduction over the remaining useful life of the retired ~~vehicle or vehicles~~ vehicle(s), or allocated on an annual basis over the remaining useful life, not to exceed the total aggregate emissions reduction.
- d) Except for ~~Agency-sponsored~~ Agency-sponsored projects or programs, a vehicle scrappage manager, vehicle scrappage sponsor, or, if the vehicle scrappage sponsor is an entity, the responsible official of the entity submitting a CER claim for Agency review ~~underpursuant to~~ this Subpart ~~must~~shall make the following statement as part of the claim:

I certify that the information submitted in this CER claim is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that I may be subject to enforcement underpursuant to the Environmental Protection Act if any information submitted in this CER claim is determined to be false or misleading.

- e) Except ~~underas provided in~~ Section 207.512 ~~of this Subpart~~, the Agency ~~must~~will review each CER claim submitted and ~~must~~will issue its written determination ~~of regarding~~ how many CERs have been generated, if any, within 45 calendar days after the ~~Agency receives~~ Agency's receipt of a complete claim. CERs are not valid until the Agency ~~completeshas completed~~ its CER determination and ~~notifiesnotified~~ the vehicle scrappage sponsor or manager in writing of its determination ~~of the amount of CERs generated~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.512 CERs Based on ~~Agency-Sponsored~~ Agency-Sponsored Vehicle Scrappage Activities

If the Agency generates CERs based on vehicle scrappage activities it has sponsored, it ~~must~~shall develop and maintain documentation to substantiate the CERs generated, including the information ~~specified in~~ Section 207.510(a)(2) ~~of this Subpart~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART F: VEHICLE SCRAPPAGE PLAN CRITERIA, SUBMITTAL, REVIEW AND SUPPLEMENTAL NOTICE PROCEDURE

Section 207.600 Proposed Vehicle Scrappage Plans

~~A~~No vehicle scrappage project or program ~~must not~~may be conducted within Illinois ~~underpursuant to~~ this Part without Agency approval or sponsorship of a vehicle scrappage plan ~~coveringdesigned to cover~~ that specific vehicle scrappage project or program.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.602 Submittal of Proposed Vehicle Scrappage Plans

- a) A vehicle scrappage sponsor or manager may submit a proposed vehicle scrappage plan to the Agency. Each proposed vehicle scrappage plan ~~must~~shall ~~include~~, at a minimum,~~include~~:
- 1) The name and address of the vehicle scrappage sponsor and manager that will be responsible for the vehicle scrappage project or program;
 - 2) Proof that the vehicle scrappage sponsor identified in the plan meets the financial responsibility requirements of Section 207.702 ~~of this Part~~;
 - 3) Proof that the vehicle scrappage manager has fulfilled the applicable requirements in Section 207.700 ~~of this Part~~;
 - 4) The estimated number of vehicles to be retired during the ~~course of the~~ proposed project or program;
 - 5) The locations ~~to be used~~ for all proposed vehicle scrappage activities;
 - 6) The name and address of any person or entity ~~performingto be used to perform~~ any of the proposed activities, including, ~~but not limited to~~, any scrap yard ~~or~~ , recycling or disposal facility ~~proposed to be used~~;
 - 7) A schedule identifying ~~planned~~key dates of the proposed project or program, including ~~notifyingthe planned dates for: notification to~~ owners of vehicles; ~~purchasingpurchase of~~ vehicles; ~~measuringmeasurement of~~ emissions, if any; ~~retiringretirement of~~ vehicles; and ~~completingcompletion of~~ the project or program;
 - 8) Method ~~to notifyof notification to~~ owners of vehicles that are candidates to sell their vehicles in ~~complianceaccordance~~ with Section 207.308 ~~of this Part~~;
 - 9) Procedures ~~to be used~~ for collection and testing, if any, of vehicles to be retired in ~~complianceaccordance~~ with Section 207.314 ~~of this Part~~;
 - 10) Procedures, if any, for disassembly, rebuilding, or reconditioning, and resale of vehicle parts to eligible persons, in ~~complianceaccordance~~ with Section 207.316 ~~of this Part~~;

- 11) Procedures ~~to recycle~~^{for recycling} or ~~disposed~~^{disposal} of all residual materials and wastes generated from the permanent retirement of vehicles, in ~~compliance~~^{accordance} with Section 207.316(b) ~~of this Part~~;
 - 12) Method ~~to determine~~^{of determining} what replacement vehicles are obtained by owners whose vehicles have been retired;
 - 13) Method ~~to measure~~^{for measuring} or ~~model~~^{modeling} emissions of applicable pollutants for vehicles purchased for retirement and for replacement vehicles, in ~~compliance~~^{accordance} with Section 207.502 ~~of this Part~~;
 - 14) Method ~~to calculate~~^{for calculation of} any CERs that may be generated by the project or program, in ~~compliance~~^{accordance} with Section 207.504 ~~of this Part~~;
 - 15) If the vehicle scrappage plan is for a vehicle scrappage program, ~~identifying~~^{identification of} any options ~~that will be used~~ to generate greater emissions reductions or produce more reliable documentation ~~under, as provided in~~ Subpart D ~~of this Part~~, and sufficient justification that the options proposed will achieve these objectives. ~~If the plan proposes~~ Additionally, if the use of enhanced prescreening inspection ~~under is proposed, as specified in~~ Section 207.408 ~~of this Part~~, ~~it must identify~~ the recognized repair technician ~~who will be used must be identified~~ and ~~include~~ information verifying that the technician qualifies as a recognized repair technician ~~must be included~~;
 - 16) If the vehicle scrappage plan is for a vehicle scrappage project, the vehicle sponsor or manager is not required to obtain prior approval from the Agency ~~to for its use of the~~ options ~~described in~~ Subpart D ~~of this Part~~, but must maintain documentation to support its use of ~~these~~ such options.
- b) In addition to the information ~~specified in~~ subsection (a) ~~of this Section~~, the Agency may request additional information from the vehicle scrappage sponsor or manager ~~as needed~~ to determine ~~whether~~^{if} the vehicle scrappage plan meets the requirements of this Part.
 - c) Each vehicle scrappage manager and sponsor, or, if the vehicle scrappage sponsor is an entity, a responsible official of the entity, submitting a proposed plan for Agency approval ~~must~~^{shall} make the following statement as part of the submission to the Agency:

I certify that the information submitted in this proposed vehicle scrappage plan is, to the best of my knowledge and belief, true, accurate, and complete, based on reasonable inquiry. I am aware that I may be subject

to enforcement under the Environmental Protection Act and may be disqualified from conducting or sponsoring scrappage projects or programs in the State of Illinois ~~under, pursuant to~~ 35 Ill. Adm. Code Part 207, if any information submitted in this proposed vehicle scrappage plan is determined to be false or misleading.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.604 Notice of Proposed Vehicle Scrappage Plans

- a) Within 14 days after submitting a vehicle scrappage plan to the Agency, the vehicle scrappage manager or sponsor that submitted the plan ~~must~~ shall cause, at its own expense, the publication of notice by advertisement in a newspaper of general circulation in the area where the collection site for vehicles to be retired is located. ~~If or, if~~ the vehicle scrappage sponsor is a source, the notice ~~must~~ shall be in a newspaper of general circulation in the area the source is located.
- b) The notice ~~must~~ shall be titled "Notice of Proposed Vehicle Scrappage Plan Submission to the Illinois Environmental Protection Agency."
- c) The notice ~~must~~ shall contain the name and address of the proposed sponsor and the address of the proposed vehicle collection location.
- d) The notice ~~must~~ shall state ~~the following~~:

"Any person may review the proposed plan, to the extent allowed by applicable laws and regulations, by contacting the Illinois Environmental Protection Agency ([Illinois EPA](#)). Any person may submit comments to the Illinois ~~EPA~~ [Environmental Protection Agency](#) and request a hearing. Comments and requests for hearing must be submitted in writing to Illinois EPA at:

Public Information for the Bureau of Air
Illinois Environmental Protection Agency
[2520 West Iles Avenue](#)
P.O. Box 19276
Springfield, Illinois 62794-[9276](#)

These comments and requests for a hearing must be received by ~~the~~ Illinois EPA within 21 days after the date of publication."

- e) The Agency will determine whether to hold a hearing on any vehicle scrappage plan ~~under in accordance with~~ 35 Ill. Adm. Code 252.205. Any hearing on a proposed vehicle scrappage plan ~~must~~ shall be conducted in ~~compliance~~ accordance with ~~the Agency's "Procedures for Permit and Closure Plan Hearings"~~ (35 Ill. Adm. Code 166: ~~Subpart A, Informational Permit and Closure Plan Hearings~~).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.606 Agency Review of Proposed Vehicle Scrappage Plans

- a) The Agency ~~must~~will approve or disapprove the proposed vehicle scrappage plan within 90 calendar days after ~~it receives the Agency's receipt of~~ a complete proposed plan, except that this ~~deadlinetime period~~ is extended to 180 days when ~~the Agency holds~~ a hearing ~~underis held, as provided in~~ Section 207.604(e) ~~of this Subpart~~.
- b) A proposed plan ~~must~~will be deemed complete within 30 days after ~~receipt by~~ the Agency ~~receives it~~ unless the Agency provides written notification to the applicant of its determination that the plan is incomplete. A proposed plan ~~must~~will be deemed complete if it includes information addressing each of the applicable elements required under this Section. A notification of incompleteness ~~must~~shall specifically identify the deficiencies with the plan identified by the Agency. After a plan has been deemed complete, the Agency may request additional information ~~as needed~~ to complete its review of the proposed plan.
- c) ~~After receiving~~Upon receipt of a notice of approval from the Agency, the vehicle scrappage sponsor or manager who submitted the plan may ~~begin~~proceed to implementing it ~~under~~pursuant to the schedule ~~specified~~ in the plan.
- d) ~~After receiving~~Upon receipt of a notice of disapproval from the Agency, the person who submitted the plan may request that the Board review the Agency's determination ~~under~~. ~~Such review will be filed pursuant to~~ 35 Ill. Adm. Code 105.
- e) ~~The Agency may disapprove any~~Any plan that identifies ~~and intends to use~~ a scrap yard ~~or~~, recycling or disposal facility ~~for use in the applicable vehicle scrappage project or program~~ that has violated any requirement ~~specified in this Part~~ ~~may be disapproved by the Agency~~. ~~Before disapproving the plan, the~~The Agency ~~must~~will notify the vehicle scrappage plan applicant in writing of this deficiency with the plan and afford the applicant a reasonable period to identify another scrap yard ~~or~~, recycling or disposal facility to use for its vehicle scrappage activities ~~prior to disapproving the plan~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.608 Notice of Commencement of Vehicle Scrappage Activities

The vehicle scrappage manager or sponsor must submit ~~written notification~~ to the Agency at least 14 days ~~before~~prior to collecting vehicles for the project or program; written notification indicating the date and location of vehicle collection activities.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.610 Supplemental Notices ~~UnderPursuant to~~ Approved Vehicle Scrappage Plans

A vehicle scrappage plan may be renewed if the vehicle scrappage sponsor or manager submits to the Agency a written supplemental notice of ~~theirhis or her~~ intent to conduct more vehicle scrappage activities at least 60 days ~~beforein advance of~~ the intended date for ~~notifying vehicle ownersnotification to owners of vehicles~~ of the opportunity to sell ~~theirhis or her~~ vehicles. The supplemental notice ~~must refer to shall reference~~ the date and number of the ~~already~~ approved plan and ~~mustshall~~ update the dates and any changes in collection locations. If ~~the vehicle scrappage sponsor or manager plans~~ any deviation ~~is planned~~ from the terms and conditions of the approved plan, other than dates or collection locations, ~~theyhe or she must submit~~ a new proposed plan ~~must be submitted~~ to the Agency, which ~~must review itshall be reviewed~~ in the same manner and ~~by the deadlinetime frames provided~~ in Section 207.606 ~~of this Subpart~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.612 Plans for Agency Sponsored Projects or Programs

~~DespiteNotwithstanding~~ the requirements in this Subpart, if the Agency sponsors a vehicle scrappage project or program, it ~~mustshall~~ develop a vehicle scrappage plan that meets the requirements of Section 207.602 ~~of this Subpart~~ and provide public notice of its proposed plan ~~under, as specified in~~ Section 207.604 ~~of this Subpart~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART G: VEHICLE SCRAPPAGE SPONSOR AND MANAGER ELIGIBILITY, TRAINING, AND APPLICATION PROCEDURE

Section 207.700 Qualifications for Vehicle Scrappage Managers

- a) ~~A No~~ person or entity ~~must notmay~~ conduct a vehicle scrappage project or program without participation of a vehicle scrappage manager who meets the requirements of this Section ~~for~~ supervising vehicle scrappage activities.
- b) Any natural person may qualify to be a vehicle scrappage manager if ~~theyhe or she~~ meets the following criteria:
 - 1) ~~AreIs~~ at least ~~18eighteen~~ years old;
 - 2) ~~AreIs~~ an American citizen or legal alien; and
 - 3) ~~HaveHas~~ never been convicted of or had a final judgment entered against ~~themhim or her~~ in any State or federal court for a violation of State or federal air pollution laws or regulations, ~~for~~ fraud, or ~~for~~ felony theft.

- c) Each natural person who wishes to become a vehicle scrappage manager must successfully complete the training course offered by the Agency.
- 1) The Agency will offer the training program annually, based on need. The Agency will provide advance public notice of the time, date, and location for each training course.
 - 2) The curriculum for the Agency training course ~~must~~will include the following subjects:
 - A) ~~Developing~~The development of acceptable vehicle scrappage plans;
 - B) Methods for CER calculations;
 - C) Procedures ~~to model~~for modeling and ~~measure~~measurement of emissions;
 - D) Collector vehicle and vehicle parts rebuilder provisions;
 - E) Proper vehicle disassembly and recycling of vehicle parts; and
 - F) ~~For~~Methods for proper recycling and/or disposal of residual materials and wastes derived from ~~retiring~~the retirement of vehicles, ~~methods for proper recycling, disposal, or both.~~
 - 3) For the applicant to be authorized to manage a vehicle scrappage program, ~~they~~he or she must pass the examination administered by the Agency at the conclusion of each Agency training course, which will test each applicant's knowledge of the material covered in the training course.
 - 4) If an applicant fails the Agency-administered examination ~~specified~~in subsection (c)(3) ~~of this Section~~on the first attempt, ~~they will~~he or she ~~shall~~ have the opportunity to take and pass the examination one additional time. If an applicant fails the Agency-administered examination on the second attempt, ~~they~~he or she may reapply for approval to manage a vehicle scrappage program, subject to the same requirements as a ~~first-time~~first time applicant.
 - 5) The Agency will offer the examination biannually, if needed. When an Agency-administered examination is ~~to be~~offered at a different time than immediately ~~after~~following the Agency training course, the Agency ~~must~~will provide advance public notice of the time, date, and location for the examination.

- d) ~~Before~~~~Prior to~~ conducting any vehicle scrappage activities, each natural person who wishes to be a vehicle scrappage manager must submit to the Agency for its approval an application ~~demonstrating for the Agency's approval which demonstrates~~ that ~~they satisfy~~~~he or she satisfies~~ all of the qualifications ~~specified~~ in subsection (b) ~~of this Section~~. Applicants may indicate that they intend to satisfy the requirements ~~specified~~ in subsection (c) ~~of this Section~~ by attending the next Agency training course and taking the examination, if applicable, at that time.
- e) The Agency ~~must~~will approve or disapprove a vehicle scrappage manager application in writing within 30 calendar days after the Agency receives~~Agency's receipt of~~ an application or at the conclusion of the Agency training course the applicant is scheduled to attend, whichever occurs later. Approval will indicate whether ~~if~~ the applicant is authorized to manage both vehicle scrappage projects and programs or only vehicle scrappage projects.
- f) After receiving~~Upon receipt of a~~ notice of approval from the Agency, the applicant is considered a vehicle scrappage manager and may conduct a vehicle scrappage project or, if approved, a vehicle scrappage program in compliance~~accordance~~ with this Part. Only an approved vehicle scrappage manager may be identified as the vehicle scrappage manager in any proposed vehicle scrappage plan.
- g) Each natural person submitting an application under~~pursuant to~~ this Subpart must~~shall~~ sign and date the following statement as part of their~~his or her~~ application:
- I certify that I satisfy all ~~of~~ the qualification requirements for a vehicle scrappage manager and that the information submitted in this application is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that I may be subject to enforcement under the Environmental Protection Act and may be disqualified from conducting vehicle scrappage activities in the State of Illinois under~~pursuant to~~ 35 Ill. Adm. Code 207 if any information submitted in this application is determined to be false or misleading.
- h) To retain authorization to be a vehicle scrappage manager of a vehicle scrappage program, each person approved to manage a vehicle scrappage program must~~shall~~ submit a renewal application to the Agency every three years by~~on or before~~ the date on which ~~they~~~~he or she~~ received initial approval, and must~~shall~~ take a refresher training course at the next available course offered.
- i) If~~In the event~~ a vehicle scrappage manager unexpectedly leaves that position, the vehicle scrappage sponsor may submit the application ~~specified~~ in subsection (d) ~~of this Section~~ requesting permission from the Agency to allow substituting the substitution of a new manager for up to one year, if~~provided that~~ the candidate for

substitution meets the qualifications ~~contained~~ in subsection (b) ~~of this Section~~ and will fulfill the remaining requirements of this Section as soon as practicable, but ~~by in any event, no later than~~ one year ~~after from~~ the date on which the sponsor requests approval of the substitution ~~is requested~~.

j) ~~Despite~~Notwithstanding the requirements in this Section, if the Agency sponsors a vehicle scrappage project or program, it may obtain the services of a vehicle scrappage manager or designate an employee of the Agency to serve in this capacity. To qualify to manage an ~~Agency-sponsored~~Agency-sponsored vehicle scrappage project or program, an Agency employee must complete the training course ~~specified~~ in subsection (c)(2) ~~of this Section~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.702 Financial Responsibility of Vehicle Scrappage Sponsors

a) Any person or entity may qualify to be a vehicle scrappage sponsor if it ~~demonstrates~~can demonstrate to the Agency that it has the financial resources necessary to fully complete a project or program in ~~compliance~~accordance with this Part, including, ~~but not limited to~~, payment for all vehicles proposed to be retired, testing and analytical costs associated with the proposed project or program, and proper recycling or disposal of all residual materials and wastes generated from the scrappage process, in ~~compliance~~accordance with this Part.

b) ~~A~~The potential sponsor must demonstrate the sufficiency of ~~its~~the financial resources ~~when submitting of a potential sponsor must be demonstrated upon~~ ~~submittal of~~ a proposed vehicle scrappage plan in ~~compliance~~accordance with Subpart F ~~of this Part~~.

1) A corporate entity may provide the Agency with its most recent Section 10(k) filing submitted to the U.S. Securities and Exchange Commission ~~in~~ ~~order~~ to attempt to demonstrate financial resources sufficient to conduct and complete a scrappage project or program.

2) Corporations for which a Section 10(k) filing is not required and other entities or persons may provide the Agency with audited financial statements or other evidence of ~~a level of~~ capital sufficient to conduct and complete the applicable vehicle scrappage project or program, taking into account the proposed number of vehicles proposed for scrappage.

c) If the Agency sponsors a vehicle scrappage project or program, it is not required to make the demonstration ~~specified~~ in this Section.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART H: VEHICLE SCRAPPAGE PLAN FEES

Section 207.800 Vehicle Scrappage Plan and Plan Renewal Fees

Each vehicle scrappage sponsor or manager submitting a proposed vehicle scrappage plan or supplemental notice of renewal ~~underpursuant to~~ Subpart D ~~must of this Part shall~~ submit to the Agency the following fee ~~amount~~:

- a) If the plan is for a vehicle scrappage project, a ~~fee of \$250~~ fee must shall be submitted with the proposed vehicle scrappage plan and ~~with~~ any supplemental notification;
- b) If the plan is for a vehicle scrappage program, an initial ~~fee of \$250~~ fee must shall be submitted with the proposed vehicle scrappage plan and an annual ~~fee of \$175~~ fee must shall be submitted for each ~~subsequent 12-month~~ 12-month period or portion ~~of that period during which it operates~~ thereof it is in operation thereafter. The annual fee ~~must shall~~ be submitted to the Agency each year by the date on which the Agency approved the applicable program ~~was approved~~; or
- c) If the plan requests that the Agency ~~notify~~ provide notification to owners of vehicles for retirement ~~under as provided in~~ Section 207.308(a) ~~of this Part~~, the fees ~~listed~~ in subsection (a) or (b) ~~must of this Section shall be~~ increased by \$50 for the initial fee and \$25 for the annual fee, if applicable.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.802 Form of Payment

- a) All fees required under this Subpart must shall be paid by check or money order payable to "Treasurer, State of Illinois;" for deposit in the Environmental Protection Permit and Inspection Fund.
- b) Payment must shall identify the associated vehicle scrappage sponsor, vehicle scrappage manager, and proposed vehicle scrappage plan and be sent to:

Illinois Environmental Protection Agency
Fiscal Services Center
2520 West Iles Avenue
P.O. Box 19276
Springfield, Illinois 62794-9276

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.804 Non-Refundability of Fees and Credits for Overpayments

- a) Any fees received by the Agency ~~underpursuant to~~ this Subpart in a correct amount ~~under, as specified in~~ Section 207.800 ~~will must of this Subpart, shall be~~ not be refunded at any time or for any reason, either in part or in full.
- b) ~~If in the event that~~ the vehicle scrappage sponsor or manager submits payment in an incorrect amount that results in overpayment, the Agency ~~must will~~ return the overpaid amount within 90 days after discovering the overpayment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.806 Fee Exemption for ~~Agency-Sponsored~~ ~~Agency Sponsored~~ Vehicle Scrappage Projects or Programs

~~If in the event~~ the Agency sponsors a vehicle scrappage project or program, it ~~is shall~~ not be subject to fees ~~specified in~~ this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART I: ENFORCEMENT AND PENALTIES

Section 207.900 Enforcement

Any person or entity that violates any requirement of this Part ~~is shall be~~ subject to enforcement ~~under as provided in~~ Title XII of the Environmental Protection Act [415 ILCS 5/42-45].

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.902 Agency Right of Inspection

The Agency ~~under Section 4 of the Environmental Protection Act [415 ILCS 5/4]~~ ~~is must shall be~~ entitled to inspect any location used for any activity conducted ~~underpursuant to~~ any approved vehicle scrappage plan ~~in accordance with Section 4 of the Environmental Protection Act [415 ILCS 5/4]~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 207.904 Agency Right to Revoke Approval of Plan

If any authorized representative of the Agency determines that any vehicle scrappage project or program is not being conducted in ~~compliance~~ ~~accordance~~ with the applicable vehicle scrappage plan or this Part, the Agency may revoke its approval of the plan.

Reg. 7284, effective April 8, 1988; amended in R86-10 at 12 Ill. Reg. 7621, effective April 11, 1988; amended in R88-23 at 13 Ill. Reg. 10862, effective June 27, 1989; amended in R89-8 at 13 Ill. Reg. 17457, effective January 1, 1990; amended in R89-16(A) at 14 Ill. Reg. 9141, effective May 23, 1990; amended in R88-30(B) at 15 Ill. Reg. 5223, effective March 28, 1991; amended in R88-14 at 15 Ill. Reg. 7901, effective May 14, 1991; amended in R91-10 at 15 Ill. Reg. 15564, effective October 11, 1991; amended in R91-6 at 15 Ill. Reg. 15673, effective October 14, 1991; amended in R91-22 at 16 Ill. Reg. 7656, effective May 1, 1992; amended in R91-24 at 16 Ill. Reg. 13526, effective August 24, 1992; amended in R93-9 at 17 Ill. Reg. 16504, effective September 27, 1993; amended in R93-11 at 17 Ill. Reg. 21471, effective December 7, 1993; amended in R93-14 at 18 Ill. Reg. 1253, effective January 18, 1994; amended in R94-12 at 18 Ill. Reg. 14962, effective September 21, 1994; amended in R94-14 at 18 Ill. Reg. 15744, effective October 17, 1994; amended in R94-15 at 18 Ill. Reg. 16379, effective October 25, 1994; amended in R94-16 at 18 Ill. Reg. 16929, effective November 15, 1994; amended in R94-21, R94-31 and R94-32 at 19 Ill. Reg. 6823, effective May 9, 1995; amended in R94-33 at 19 Ill. Reg. 7344, effective May 22, 1995; amended in R95-2 at 19 Ill. Reg. 11066, effective July 12, 1995; amended in R95-16 at 19 Ill. Reg. 15176, effective October 19, 1995; amended in R96-5 at 20 Ill. Reg. 7590, effective May 22, 1996; amended in R96-16 at 21 Ill. Reg. 2641, effective February 7, 1997; amended in R97-17 at 21 Ill. Reg. 6489, effective May 16, 1997; amended in R97-24 at 21 Ill. Reg. 7695, effective June 9, 1997; amended in R96-17 at 21 Ill. Reg. 7856, effective June 17, 1997; amended in R97-31 at 22 Ill. Reg. 3497, effective February 2, 1998; amended in R98-17 at 22 Ill. Reg. 11405, effective June 22, 1998; amended in R01-9 at 25 Ill. Reg. 108, effective December 26, 2000; amended in R01-11 at 25 Ill. Reg. 4582, effective March 15, 2001; amended in R01-17 at 25 Ill. Reg. 5900, effective April 17, 2001; amended in R05-16 at 29 Ill. Reg. 8181, effective May 23, 2005; amended in R05-11 at 29 Ill. Reg. 8892, effective June 13, 2005; amended in R04-12/20 at 30 Ill. Reg. 9654, effective May 15, 2006; amended in R07-18 at 31 Ill. Reg. 14254, effective September 25, 2007; amended in R08-6 at 32 Ill. Reg. 1387, effective January 16, 2008; amended in R07-19 at 33 Ill. Reg. 11982, effective August 6, 2009; amended in R08-19 at 33 Ill. Reg. 13326, effective August 31, 2009; amended in R10-7 at 34 Ill. Reg. 1391, effective January 11, 2010; amended in R10-8 at 34 Ill. Reg. 9069, effective June 25, 2010; amended in R10-20 at 34 Ill. Reg. 14119, effective September 14, 2010; amended in R11-23 at

35 Ill. Reg. 13451, effective July 27, 2011; amended in R12-24 at 37 Ill. Reg. 1662, effective January 28, 2013; amended in R13-1 at 37 Ill. Reg. 1913, effective February 4, 2013; amended in R14-7 at 37 Ill. Reg. 19824, effective November 27, 2013; amended in R14-16 at 38 Ill. Reg. 12876, effective June 9, 2014; amended in R14-16 at 39 Ill. Reg. 5410, effective March 24, 2015; amended in R15-5 at 39 Ill. Reg. 5410, effective March 24, 2015; amended in R17-2 at 41 Ill. Reg. 1096, effective January 23, 2017; amended in R17-9 at 41 Ill. Reg. 4173, effective March 24, 2017; amended in R17-11 at 41 Ill. Reg. 13389, effective October 23, 2017; amended in R19-15 at 44 Ill. Reg. 14199, effective August 18, 2020; amended in R19-1 at 44 Ill. Reg. 15009, effective September 4, 2020; amended in R21-18 at 45 Ill. Reg. 3509, effective March 4, 2021; amended in R24-8 at 48 Ill. Reg. 1144, effective January 4, 2024; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 211.101 Incorporations by Reference

The following materials are incorporated by reference. These incorporations do not include any later amendments or editions.

a) Incorporations by Reference

- 1) [API Manual of Petroleum Measurement Standards Chapter 91.2 Evaporative Loss from Floating-roof Tanks, "Evaporation Loss from Floating-Roof Tanks," American Petroleum Institute Bulletin 2517 \(1962 August 2000\)](#)
- 2) Standard Industrial Classification Manual, Superintendent of Documents, Washington, D.C. 20402 ([1987](#)~~1972~~)
- 3) American Society for Testing and Materials, 100 Barr Harbor Dr., West Conshohocken, PA 19428-2959

Section 211.102 Abbreviations and Conversion Factors

- a) [This Part uses the following abbreviations.](#)~~Abbreviations used in this part include the following:~~

ABS	acrylonitrile butadiene styrene
ASTM	American Society for Testing and Materials
Bbl	barrels (42 gallons)
Btu	British thermal units (~~60 °F~~ 60°F)
btu/hr	btu per hour
~~° C~~ °C	degrees Celsius or Centigrade
CAAPP	Clean Air Act Permit Program
Cm	centimeters
cu in	cubic inches
EDP	electrodeposition primer
EMI/RFI	electromagnetic interference/radio frequency interference
EPDM	ethylene propylenediene monomer
EGU	Electrical Generating Unit
~~° F~~ °F	degrees Fahrenheit
FIP	Federal Implementation Plan
Ft	feet
ft ²	square feet
ft ³	cubic feet
G	grams
Gpm	gallons per minute
g/mole	grams per mole
Gal	gallons
Hp	horsepower
Hr	hours
In	inch
~~° K~~ °K	degrees Kelvin
kcal	kilocalories
Kg	kilograms
kg/hr	kilograms per hour
kPa	kilopascals; one thousand newtons per square meter
kW	kilowatt

<u>l or L or ℓ</u>	liters
l/sec	liters per second
Lbs	pounds
lbs/day	pounds per day
lbs/hr	pounds per hour
lbs/gal	pounds per gallon
lbs/yr	pounds per year
LEL	lower explosive limit
M	meters
m ²	square meters
m ³	cubic meters
Mg	milligrams
Mg	Megagrams; metric tons or tonnes
ml	milliliters
Min	minutes
MJ	megajoules
~~MMmm~~ btu/hr	million British thermal units per hour
mmHg	millimeters of mercury
MTE	maximum theoretical emissions
Mwe	megawatt of electricity
MW	megawatt; one million watts
MW-hr	megawatt per hour
NDO	natural draft opening
<u>NO_x</u>	nitrogen oxides
peoc	potential electrical output capacity
ppm (vol)	parts per million
ppmv	parts per million by volume
ppmvd	parts per million by volume dry
Psi	pounds per square inch
Psia	pounds per square inch absolute
Psig	pounds per square inch gauge
PTE	potential to emit
RACT	reasonably available control technology
R _T	solids turnover ratio
Scf	standard cubic feet
Scm	standard cubic meters
Sec	seconds
SIP	State Implementation Plan
TTE	temporary total enclosure
sq cm	square centimeters
sq in	square inches
T	short ton (2,000 lbs)
Ton	short ton (2,000 lbs)
TPY	tons per year
USEPA	United States Environmental Protection Agency
VOC	volatile organic compounds

VOL	volatile organic liquids
VOM	volatile organic materials

b) This Part uses the~~The~~ following conversion factors ~~have been used in this part:~~

English	Metric
1 gal	3.785 l
1,000 gal	3,785 l or 3.785 m ³
1 psia	6.897 kPA (51.71 mmHg)
2.205 lbs	1 kg
<u>32 °F</u> ~~32°~~	<u>0 °C (273.15 °K)</u> ~~0°C (273.15°K)~~
1 bbl	159.0 l
1 cu in	16.39 ml
1 lb/gal	119,800 mg/l
1	1.548 kg/MW-hr
lb/ ~~MMbtummb~~	
~~tu~~	
1 lb/T	0.500 kg/Mg
1 ton	0.907 Mg
1 T	0.907 Mg
<u>MMbtummbtu/</u>	0.293 MW
hr	

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART B: DEFINITIONS

Section 211.121 Other Definitions

All terms defined in 35 Ill. Adm. Code 201.102 have that definition~~in 35 Ill. Adm. Code 201~~
~~which appear~~ in 35 Ill. Adm. Code 211 through 219 ~~have the definitions specified by 35 Ill.~~
~~Adm. Code 201.102. Terms not defined in 35 Ill. Adm. Code 201.102 have~~ Otherwise, the
definitions in this Part ~~shall apply.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.170 Acid Gases

"Acid gases" means, for the purposes of Section 9.4 of the Environmental Protection Act (the
Act) ~~(Ill. Rev. Stat. 1991, ch. 111½, par. 1009.4)~~ [415 ILCS 5/9.4], hydrogen chloride, hydrogen
fluoride, and hydrogen bromide, which exist as gases, liquid mist, or any combination of
them~~thereof.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.200 Acrylonitrile Butadiene Styrene (ABS) Welding

"Acrylonitrile butadiene styrene welding" or "ABS Welding" means, for ~~purposes of~~ Subparts JJ of 35 Ill. Adm. Code 218 and 219, any process to weld acrylonitrile butadiene styrene pipe.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.233 Adhesion Primer

"Adhesion primer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating ~~that is~~ applied to a polyolefin part to promote the adhesion of a subsequent coating. An adhesion primer should be clearly identified as an adhesion primer or adhesion promoter on its accompanying material safety data sheet.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.234 Adhesive Bonding Primer

"Adhesive bonding primer" means a primer applied in a thin film to aerospace components for ~~the purpose of~~ corrosion inhibition and increased adhesive bond strength by attachment. There are two categories of adhesive bonding primers: primers with a design cure at 250 °F or below and primers with a design cure above 250 °F.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.235 Adhesive Primer

"Adhesive primer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any product applied to a substrate, ~~before applying prior to the application of~~ an adhesive, to provide a bonding surface.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.240 Adhesion Promoter

"Adhesion promoter" means a coating used to promote adhesion of a topcoat on surfaces, such as trim moldings, door locks, and door sills, where sanding is impractical.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.260 Aerosol Adhesive and Adhesive Primer

"Aerosol adhesive and adhesive primer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, an adhesive or adhesive primer packaged as an aerosol product in which the spray mechanism is permanently housed in a non-refillable can designed for handheld application without the need for ancillary hoses or spray equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.272 Aerospace Coating

"Aerospace coating" means a material ~~that is~~ applied to the surface of an aerospace vehicle or component to form a decorative, protective, or functional solid film, or the solid film itself.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.273 Aerospace Coating Operation

"Aerospace coating operation" means using a spray booth, tank, or other enclosure or any area, such as a hangar, ~~to apply for applying~~ a single type of aerospace coating at an aerospace facility. Using the same spray booth ~~to apply for applying~~ another type of coating (e.g., a topcoat after having previously applied a primer) constitutes a separate aerospace coating operation for which compliance determinations are performed separately.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.275 Aerospace Flexible Primer

"Aerospace flexible primer" means a primer for aerospace use that meets flexibility requirements, such as those needed for adhesive bond-primed fastener heads or on surfaces expected to contain fuel. The aerospace flexible coating is required because it provides a compatible, flexible substrate over bonded sheet rubber and rubber-type coatings ~~and, as well as~~ a flexible bridge between the fasteners, skin, and skin-to-skin joints on outer aircraft skins. This flexible bridge allows more topcoat flexibility around fasteners and decreases the chance of the topcoat cracking around the fasteners. The result is better corrosion resistance.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.278 Aerospace Pretreatment Coating

"Aerospace pretreatment coating" means an organic coating that contains at least 0.5% ~~percent~~ acids by weight and is applied directly to metal or composite surfaces to provide surface etching, corrosion resistance, adhesion, and ease of stripping.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.280 Aerospace Primer

"Aerospace primer" means the first layer and any subsequent layers of identically formulated coating applied to the surface of an aerospace vehicle or component. Primers are typically used for corrosion prevention, protection from the environment, functional fluid resistance, and adhesion of subsequent coatings. ~~This definition does not include primers. Primers that are listed as specialty coatings in 35 Ill. Adm. Code 219.204(r)(2) are not included under this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.284 Aerospace Specialty Coating

"Aerospace specialty coating" means a coating that, even though it meets the definition of a primer, topcoat, or self-priming topcoat, has additional performance criteria beyond those of primers, topcoats, and self-priming topcoats for specific applications. These performance criteria may include, ~~but are not limited to,~~ temperature or fire resistance, substrate compatibility, antireflection, temporary protection or marking, sealing, adhesively joining substrates, or enhanced corrosion protection. Aerospace specialty coatings are listed in 35 Ill. Adm. Code 219.204(r)(2).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.289 Aerospace Vehicle or Component

"Aerospace vehicle or component" means any fabricated part, processed part, assembly of parts, or completed unit, ~~except for with the exception of~~ electronic components, of any aircraft, including airplanes, helicopters, missiles, rockets, and space vehicles. This term includes any raw material, partial or completed fabricated part, assembly of parts, or completed unit of any aircraft, helicopter, missile, or space vehicle, including mockups and prototypes, models, molds, jigs, tooling, hardware jackets, and test coupons.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.300 Aircraft Fluid Systems

"Aircraft fluid systems" means ~~those~~ systems that handle hydraulic fluids, fuel, cooling fluids, or oils.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.303 Aircraft Transparencies

"Aircraft transparencies" means the aircraft windshield, canopy, passenger windows, lenses, and other components ~~that are~~ constructed of transparent materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.310 Air Contaminant

"Air contaminant" means any solid, liquid, or gaseous matter, any odor, or any form of energy; ~~that is~~ capable of being released into the atmosphere.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.330 Air Dried Coatings

"Air dried coatings" means any coatings that dry ~~using~~~~by use of~~ air or forced air at temperatures up to 363.15 °K (194 °F)~~363.15° K (194° F)~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.370 Air Pollutant

"Air pollutant" means an air pollution agent or combination of ~~such~~ agents, including any physical, chemical, biological, or radioactive (including source material, special nuclear material, and byproduct material) substance or matter which is emitted into or otherwise enters the atmosphere. "Air pollutant"~~Such term~~ includes any precursors to the formation of any air pollutant, to the extent that the relevant statute or rule has identified the ~~such~~ precursor or precursors for the particular purpose for which the term "air pollutant" is used.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.410 Air Pollution Control Equipment

"Air pollution control equipment" means any equipment or apparatus of a type intended to eliminate, prevent, reduce, or control the emission of air contaminants to the atmosphere.

BOARD NOTE~~(Board Note:~~ The requirements under 35 Ill. Adm. Code 201.Subpart C to obtain permits for air pollution control equipment, ~~in 35 Ill. Adm. Code 201.Subpart C,~~ apply to such equipment intended to eliminate, prevent, reduce, or control the emissions of specified air contaminants from stationary emission units.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.470 Air Assisted Airless Spray

"Air assisted airless spray" means a spray coating method which combines compressed air with hydraulic pressure to atomize the coating material into finer droplets than is achieved with pure airless spray. This method uses lower~~Lower~~ hydraulic pressure ~~is used~~ than ~~with~~ airless spray.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.474 Alcohol

"Alcohol," means, for ~~the purposes of~~ 35 Ill. Adm. Code 218.405 through 218.411 and 219.405 through 219.411, ~~means~~ isopropyl alcohol, normal propyl alcohol, or ethanol used in a fountain solution in a lithographic printing operation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.479 Allowance

"Allowance" means an authorization to emit up to one ton of NO_x during the control period of a specified year or any year ~~after it~~thereafter under 35 Ill. Adm. Code 217 and 40 CFR 96.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.481 Ammunition Sealant

"Ammunition ~~sealant~~Sealant" means, ~~for purposes of 35 Ill. Adm. Code 218.204(q)(1) and 219.204(q)(1),~~ a coating applied in the manufacture of ammunition, including cap sealants and mouth waterproofing sealants.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.484 Animal

"Animal" means any organism other than a human being of the kingdom, ~~Animalia,~~ distinguished from other multicellular organisms by certain typical characteristics such as the power of locomotion, fixed structure and limited growth, and non-photosynthetic metabolism.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.485 Animal Pathological Waste

"Animal pathological waste" means waste composed of whole or parts of animal carcasses and ~~also~~ noncarcass materials, such as plastic, paper wrapping, and animal collars. Noncarcass materials ~~must~~shall not exceed ~~10%~~ten percent by weight of the total weight of the carcass and noncarcass materials combined.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.490 Annual Grain Through-Put

"Annual grain through-put" ~~means, unless otherwise shown by the owner or operator, annual grain through-put~~ for grain-handling operations, which have been ~~operating in operation~~ for three consecutive years ~~before prior to~~ June 30, 1975, ~~the amount shall be~~ determined by adding grain receipts and shipments for the three previous fiscal years and dividing the total by ~~six~~6, ~~unless otherwise shown by the owner or operator.~~ "Annual ~~The annual~~ grain through-put" for grain-handling operations ~~operating in operation~~ for less than three consecutive years ~~before prior to~~ June 30, 1975, ~~means the amount shall be~~ determined by a reasonable three-year estimate, ~~for which~~; the owner or operator ~~must~~shall document the reasonableness ~~of his three-year estimate.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.492 Antifoulant Coating

"Antifoulant coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any coating applied to the underwater portion of a pleasure craft to prevent or reduce the attachment of biological organisms; and registered with USEPA as a pesticide under the Federal Insecticide, Fungicide, and Rodenticide Act (7 USC 136).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.493 Antifouling Sealer/Tie Coat

"Antifouling ~~sealer~~ ~~Sealer/tie coat~~ Tie Coat" means a coating applied over biocidal antifouling coating ~~to prevent for the purpose of preventing~~ release of biocides into the environment, ~~promote promoting and/or to promote~~ adhesion between an antifouling and a primer or other antifouling, or both.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.495 Anti-Glare/Safety Coating

"Anti-glare/safety coating" means a low gloss coating formulated to minimize glare for safety purposes on interior surfaces of a vehicle, ~~as specified under the~~ U.S. Department of Transportation Motor Vehicle Safety Standards.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.510 Application Area

"Application area" means an area where a coating is applied by dipping, spraying, or other techniques.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.520 Aqueous Cleaning Solvent

"Aqueous cleaning solvent" means a cleaning solvent in which water is the primary ingredient (at least ~~80% percent~~ of the cleaning solvent solution, as applied, must be water). Detergents, surfactants, and bioenzyme mixtures and nutrients may be combined with the water, along with a variety of additives, such as organic solvents (e.g., high boiling point alcohols), builders, saponifiers, inhibitors, emulsifiers, pH buffers, and antifoaming agents. Aqueous solutions must have a flash point greater than 93 °C (200 °F) (as reported by the manufacturer), and the solution must be miscible with water.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.540 Architectural Structure

"Architectural structure" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a free-standing, immobile outdoor construction, which may be permanent or temporary, including ~~but not limited to~~ buildings, bridges, dams, and electricity pylons.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.610 Automobile

"Automobile" means a motor vehicle which normally has four wheels, is used predominantly ~~predominantly~~ for carrying 12 or fewer passengers, and is not a light-duty truck.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.660 Automotive/Transportation Plastic Parts

"Automotive/transportation plastic parts" means the interior and exterior plastic components of automobiles, trucks, tractors, lawnmowers, and other similar ~~like~~ mobile equipment intended for primary use on land, with the exception of the following: plastic parts coated on the main (body) paint line in automobile and light-duty ~~light-duty~~ truck assembly plants; and plastic parts coated during refinishing of automobiles, trucks, tractors, lawnmowers, and other similar ~~like~~ mobile equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.665 Auxiliary Boiler

"Auxiliary boiler" means, for 35 Ill. Adm. Code ~~purposes of Part~~ 217, a boiler ~~that is~~ operated only when the main boiler or boilers at a source are not in service and is used either to maintain building heat or to assist in the startup of the main boiler or boilers. This term does not include emergency or standby units and load shaving units.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.670 Baked Coatings

"Baked coatings" means any coating which is cured or dried in an oven where the oven air temperature exceeds 90 °C (194 °F) ~~90°C (194°F)~~, or any coating which is cured in any manner that does not otherwise fit into the definition of "air dried coatings," as defined in Section 211.330 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.680 Bakery Oven

"Bakery oven" means an oven used at any time to bake ~~for the purpose of baking~~ yeast-leavened products, including, ~~but not limited to~~, breads, rolls, and buns.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.690 Batch Loading

"Batch loading" means, ~~for with respect to~~ solvent cleaning, the process of loading ~~a number of~~ individual parts at the same time for degreasing.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.695 Batch Operation

"Batch operation" means, for ~~purposes of~~ 35 Ill. Adm. Code ~~218 and 219, Sections~~ 218.500 through 218.506 and 219.500 through 219.506, a noncontinuous operation in which a discrete quantity or batch of feed is charged into a chemical manufacturing process unit and distilled or reacted, or otherwise used at one time, and may include, ~~but is not limited to,~~ reactors, filters, dryers, distillation columns, extractors, crystallizers, blend tanks, neutralizer tanks, digesters, surge tanks, and product separators. After each batch operation, the equipment is generally emptied before a fresh batch is started.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.696 Batch Process Train

"Batch process train" means, for ~~purposes of~~ 35 Ill. Adm. Code ~~218 and 219, Sections~~ 218.500 through 218.506 and 219.500 through 219.506, the collection of equipment (e.g., reactors, filters, dryers, distillation columns, extractors, crystallizers, blend tanks, neutralizer tanks, digesters, surge tanks, and product separators) configured to produce a specific product or intermediate by a batch operation. A batch process train terminates at the point of storage or product handling of the product or intermediate being produced in the batch process train. ~~Regardless~~ ~~Irrespective~~ of the product being produced, a batch process train ~~which is~~ independent of other processes ~~is shall~~ ~~be considered~~ a single batch process train for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.712 Bearing Coating

"Bearing coating" means a coating applied to an antifriction bearing, a bearing housing, or the area adjacent to ~~such~~ a bearing ~~in order to~~ facilitate bearing function or to protect base material from excessive wear. A material ~~will shall~~ not be classified as a bearing coating if it can also be classified as a dry lubricative material or a solid film lubricant.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.715 Bedliner

"Bedliner" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a multi-component coating applied to a cargo bed after the application of topcoat and outside of the topcoat operation to provide additional durability and chip resistance.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.735 Black Coating

"Black coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that meets ~~both of~~ the following criteria, based on Cielab color space, 0/45 geometry:

a) Maximum lightness of ~~either 23 units or, for spherical geometry with specular included, 33 units. For spherical geometry, specular included, maximum lightness of 33 units;~~ and

b) Saturation of less than 2.8, where saturation equals the square root of $A^2 + B^2$.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.750 British Thermal Unit

"British ~~thermal unit~~ Thermal Unit" means the quantity of heat required to raise one pound of water from ~~60 °F to 61 °F~~ 60 °F to 61 °F (~~abbreviated btu~~).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.790 Bulk Gasoline Plant

"Bulk gasoline plant" means:

a) ~~For "Bulk gasoline plant" means, for purposes of~~ 35 Ill. Adm. Code 215, any gasoline storage and distribution source that receives gasoline from bulk gasoline terminals by delivery vessels and distributes gasoline to gasoline dispensing operations.

b) ~~For "Bulk gasoline plant" means, for purposes of~~ 35 Ill. Adm. Code 218 and 219, a gasoline storage and distribution source with an average throughput of 76,000 ~~1+~~ (20,000 gal) or less on a 30-day rolling average that distributes gasoline to gasoline dispensing operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.810 Bulk Gasoline Terminal

"Bulk gasoline terminal" means any gasoline storage and distribution source that receives gasoline by pipeline, ship, or barge, and distributes gasoline to bulk gasoline plants or gasoline dispensing operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.820 Business Machine Plastic Parts

"Business machine plastic parts" means:

- a) ~~Before~~^{Prior to} May 1, 2012, the plastic housings and other exterior plastic components of electronic office equipment and ~~of~~ medical and musical equipment, including, ~~but not limited to the following:~~ computers, monitors, printers and keyboards, facsimile machines, copiers, microfiche readers, cellular and standard phones, and pencil sharpeners. This definition excludes internal electrical components of business machines.
- b) On and after May 1, 2012, a device that uses electronic or mechanical methods to process information, perform calculations, print or copy information, or convert sound into electrical impulses for transmission, including devices listed in ~~Standard Industrial Classification~~^{standard industrial classification} numbers 3572, 3573, 3574, 3579, and 3661, and photocopy machines, a subcategory of ~~Standard Industrial Classification~~^{standard industrial classification} number 3861.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.825 Camouflage Coating

"Camouflage coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating used, principally by the military, to conceal equipment from detection.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.830 Can

"Can" means any cylindrical ~~single-walled~~^{single-walled} metal container, with or without a top, cover, spout, or handles, with walls thinner than 29 gauge (0.0141 inch), into which solid or liquid materials may be packaged.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.850 Can Coating

"Can coating" means any protective, decorative, or functional coating applied onto the surface of a can or a metal sheet or metal part which is made into a can.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.880 Cap Sealant

"Cap sealant" means, ~~for purposes of 35 Ill. Adm. Code 218.204(q)(1) and 219.207(q)(1),~~ a coating applied in the manufacture of ammunition to seal the annular crevice between a primer cap and shellcase.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.890 Capture

"Capture" means the containment or recovery of emissions from an emission unit for direction into a duct which may be exhausted through a stack or vent to a control device. The overall abatement of emissions from an emission unit with an add-on control device is a function ~~of~~ both ~~of~~ the capture efficiency and ~~of~~ the control device efficiency.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.910 Capture Device

"Capture device" means a hood, enclosed room, floor sweep, or other means of collecting ~~VOM~~ ~~volatile organic material~~ or other air contaminants into a duct. The pollutant can then be directed to a pollution control device such as an afterburner, carbon adsorber, fabric filter, or scrubber. Sometimes the term is used loosely to include the control device.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.930 Capture Efficiency

"Capture efficiency" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, the weight of VOM entering a capture system and delivered to a control device divided by the weight of VOM generated by an emission unit, during a particular time period, expressed as a percentage.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.950 Capture System

"Capture system" means all equipment (including, ~~but not limited to,~~ hoods, ducts, fans, ovens, dryers, etc.) used to contain, collect, and transport an air contaminant to a control device.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.953 Carbon Adsorber

"Carbon ~~adsorber~~Adsorber" means a control device designed to remove and, if desired, recover ~~volatile organic material (VOM)~~ from process emissions where removal of VOM is accomplished through the adherence of ~~the~~ VOM onto the surface of highly porous adsorbent particles, such as activated carbon. The term "carbon adsorber" describes any adsorber technology used as a control device even though media other than carbon, such as oxides of silicon and aluminum, may be used as the adsorbent; ~~such as oxides of silieon and aluminum~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.954 Cavity Wax

"Cavity wax" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied into the cavities of the vehicle primarily to enhance~~for the purpose of enhancing~~ corrosion protection.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.955 Cement

"Cement" means, for ~~the purposes of~~ 35 Ill. Adm. Code 217, ~~Subpart T~~, a hydraulic cement produced by pulverizing clinker consisting primarily of hydraulic calcium silicates, usually containing one or more ~~of the~~ forms of calcium sulfate as an interground addition.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.960 Cement Kiln

"Cement kiln" means, for ~~the purposes of~~ 35 Ill. Adm. Code 217, ~~Subpart T~~, a system including any solid, gaseous, or liquid fuel combustion equipment, used to preheat, calcine, and react with raw materials, including limestone and clay, to produce cement clinker.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.965 Ceramic Tile Installation Adhesive

"Ceramic tile installation adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive used in the installation of ceramic tiles.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.970 Certified Investigation

"Certified investigation" means a report signed by Illinois Environmental Protection Agency (~~Agency~~) personnel certifying whether a grain-handling operation (or portion ~~of it~~thereof) or grain-drying operation is causing or tending to cause air pollution. ~~The~~Such report must describe the ~~signer's~~signatory's investigation, including a summary of ~~the~~these facts on which the ~~signers~~signatory relies to certify whether the grain-handling or grain-drying operation is

causing, ~~or threatening,~~ or allowing the discharge or emission of any contaminant into the environment so as to cause or tend to cause air pollution in Illinois, either alone or in combination with contaminants from other sources, or so as to violate regulations or standards adopted by the ~~Pollution Control Board (Board)~~ under the ~~Environmental Protection Act (Act)~~. The certified investigation ~~must~~shall be open to a reasonable public inspection and may be copied upon ~~paying payment of~~ the actual cost of reproducing the original.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.980 Chemical Manufacturing Process Unit

"Chemical manufacturing process unit" means the equipment assembled and connected by pipes or ducts to process raw materials and ~~to~~ manufacture an intended product. For ~~purposes of~~ 35 Ill. Adm. Code 218.431 through 218.436, and ~~Sections~~ 219.431 through 219.436, the chemical manufacturing process unit includes reactors and their associated product separators and recovery devices, distillation units and their associated distillate receivers, and recovery devices. A chemical manufacturing process unit includes, ~~but is not limited to,~~ any combination of pumps, compressors, agitators, pressure relief devices, sampling connection systems, ~~open-ended~~open-ended valves or lines, valves, connectors, instrumentation systems, and control devices or systems. A chemical manufacturing process unit is identified by its primary product, as defined in Section 211.5060 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.985 Chemical Milling Maskant

"Chemical milling maskant" means a coating ~~that is~~ applied directly to aluminum components to protect surface areas when chemical milling the component with a Type I or II etchant. Type I chemical milling maskants are used with a Type I etchant, and Type II chemical milling maskants are used with a Type II etchant. This definition does not include:

- a) ~~Bonding~~bonding maskants;
- b) ~~Critical~~critical use and line sealer maskants;
- c) ~~Seal~~seal coat maskants;
- d) ~~Maskants~~maskants that must be used with a combination of Type I or II etchants and any of these maskants (i.e., bonding, critical use and line sealer, and seal coat); or
- e) ~~Maskants~~maskants that are listed as aerospace specialty coatings in 35 Ill. Adm. Code 219.204(r)(2).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.990 Choke Loading

"Choke loading" means ~~at that~~ method of transferring grain from the grain-handling operation to any vehicle for shipment or delivery which precludes a ~~free-fall~~~~free fall~~ velocity of grain from a discharge spout into the receiving container.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.995 Circulating Fluidized Bed Combustor

"Circulating fluidized bed combustor" means, for ~~35 Ill. Adm. Code purposes of Part~~ 217, a fluidized bed combustor in which the majority of the fluidized bed material is carried out of the primary combustion zone and ~~is~~ transported back to the primary zone through a recirculation loop.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1000 Class II Finish

"Class II ~~finish~~~~Finish~~" means a finish that meets the specifications of ~~ANSI Standards A135.5 – Prefinished Hardwood Paneling 2020~~~~Voluntary Product Standard PS-59-73~~, as approved by the American National Standards Institute.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1010 Clean Air Act

"Clean Air Act" means the Clean Air Act Amendments of 1970 (42 ~~USCU.S.C.~~ §7401 et seq.), as amended in 1977 and 1990.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1050 Cleaning and Separating Operation

"Cleaning and separating operation" means ~~an that~~ operation ~~in which where~~ foreign and undesired substances are removed from the grain.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1070 Cleaning Materials

"Cleaning materials" ~~means:~~~~mean~~

a) ~~Any any~~ materials used ~~to clean~~~~for cleaning~~ an emission unit; ~~the cleaning~~ tools, equipment, or other items used with the emission unit; ~~or cleaning~~ the walls or area in which the emission unit is located;

b) ~~Cleaning or cleaning~~ personnel; ~~or~~

- c) ~~Materials~~materials used for other cleaning activity associated with an emission unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1090 Clear Coating

"Clear coating" means a coating~~coatings~~ that ~~lacks~~lack color and opacity or is~~are~~ transparent using the undercoat as a reflectant base or undertone color.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1128 Closed Molding

"Closed molding" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any molding process in which pressure is used to distribute the resin through the reinforcing fabric placed between two mold surfaces to either saturate the fabric or fill the mold cavity. The pressure may be clamping pressure, fluid pressure, atmospheric pressure, or vacuum pressure used ~~either~~ alone or in combination. The mold surfaces may be rigid or flexible. Closed molding includes, ~~but is not limited to,~~ compression molding with sheet molding compound, infusion molding, resin injection molding, vacuum assisted resin transfer molding, resin transfer molding, and vacuum assisted compression molding. Processes in which a closed mold is used only to compact saturated fabric or remove air or excess resin from the fabric (such as in vacuum bagging), are not considered closed molding. Open molding steps, such as application of a gel coat or skin coat layer by conventional open molding ~~before~~prior to a closed molding process, are also not closed molding.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1130 Closed Purge System

"Closed purge system" means a system that is not open to the atmosphere and ~~that~~ is composed of piping, connections, and, if necessary, flow-inducing~~flow-indueing~~ devices that transport liquid or vapor from a piece or pieces of equipment to a control device, or return the liquid or vapor to the process line.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1150 Closed Vent System

"Closed vent system" means a system that is not open to the atmosphere and is composed of piping, connections, and, if necessary, flow-inducing~~flow-indueing~~ devices that transport gas or vapor from a piece or pieces of equipment to a control device.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1170 Coal Refuse

"Coal refuse" means waste products of coal mining, cleaning, and coal preparation operations containing coal, matrix material, clay, and other organic and inorganic material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1190 Coating

"Coating" means:

- a) ~~For "Coating" means, for purposes of~~ 35 Ill. Adm. Code 215, a material applied to a substrate for decorative, protective, or other functional purposes. ~~This~~ Such material ~~includes~~ shall include, but are not limited to paints, varnishes, sealers, adhesives, diluents, and thinners.
- b) ~~For "Coating" means, for purposes of~~ 35 Ill. Adm. Code 218 and 219, a material applied onto or impregnated into a substrate for protective, decorative, or functional purposes. ~~This material includes~~ Such materials include, but are not limited to, paints, varnishes, sealers, adhesives, thinners, diluents, and inks.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1230 Coating Line

"Coating line" means:

- a) ~~For "Coating line" means, for purposes of~~ 35 Ill. Adm. Code 215, an operation in which ~~where~~ a surface coating is applied to a material and subsequently the coating is then dried, ~~and/or~~ cured, or both.
- b) ~~For "Coating line" means, for purposes of~~ 35 Ill. Adm. Code 218 and 219, an operation consisting of a series of one or more coating applicators and any associated flash-off areas, drying areas, and ovens in which ~~wherein~~ a coating is applied, dried, ~~and/or~~ cured, or a combination of these. A coating line ends at the point at which ~~where~~ the coating is dried or cured, or before ~~prior to~~ any subsequent application of a different coating. It is not necessary for an operation to have an oven or a flash-off area ~~in order~~ to be included in this definition.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1250 Coating Plant

"Coating plant" means any building, structure, or installation that contains a coating line, ~~and which~~ is located on one or more contiguous or adjacent properties, and ~~which~~ is owned or operated by the same person ~~(or by persons under common control)~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1270 Coil Coating

"Coil coating" means any protective, decorative, or functional coating which is applied onto any flat metal sheet or strip which is delivered to the coating line as a roll or coil, unwound, and coated as a continuous substrate.

For Subparts F of 35 Ill. Adm. Code 218 and 219, the definition does not include protective, decorative, or functional materials that consist only of protective oils for metal, acids, bases, or any combination of these substances. For this purpose, "protective oil" means an organic material that is applied to metal to provide lubrication or protection from corrosion without forming a solid film and includes lubricating oils, evaporative oils (including those that evaporate completely), and extrusion oils. Protective oils used on miscellaneous metal parts and products include magnet wire lubricants and soft temporary protective coatings that are removed before installation or further assembly of a part or component.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1290 Coil Coating Line

"Coil coating line" means a coating line in which any protective, decorative, or functional coating is applied onto any flat metal sheet or strip which is delivered to the coating line as a roll or coil, unwound, and coated as a continuous substrate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1310 Cold Cleaning

"Cold cleaning" means the process of cleaning and removing soils from surfaces by spraying, brushing, flushing, or immersion while maintaining the organic solvent below its boiling point. This definition does not include wipe ~~Wipe cleaning is not included in this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1312 Combined Cycle System

"Combined ~~cycle system~~Cycle System" means a system comprised of one or more combustion turbines, heat recovery steam generators, and steam turbines configured to improve overall efficiency of electricity generation or steam production.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1315 Combustion Tuning

"Combustion tuning" means, for ~~35 Ill. Adm. Code purposes of Part 217, reviewing and adjusting review and adjustment of~~ a combustion process to maintain combustion efficiency of an emission unit, as performed in ~~compliance accordance~~ with procedures provided by the manufacturer or by a trained technician.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1316 Combustion Turbine

"Combustion ~~turbine~~ **Turbine**" means an enclosed fossil or other fuel-fired device ~~that is~~ comprised of a compressor, a combustor, and a turbine, and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1320 Commence Commercial Operation

"Commence commercial operation" means, for ~~For allocating purposes of allocation of~~ allowances ~~under as described in~~ 35 Ill. Adm. Code 217 ~~for, "commence commercial operation" means, with regard to~~ an EGU that serves a generator, to ~~begin producing have begun to produce~~ steam, gas, or other heated medium used to generate electricity for sale or use, including test generation. ~~This~~ **Such** date ~~must~~ **shall** remain the unit's date of ~~commencing commencement of~~ operation even if the EGU is subsequently modified, reconstructed, or repowered.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1324 Commence Operation

"Commence operation" means, for ~~For allocating purposes of allocation of~~ allowances ~~under as described in~~ 35 Ill. Adm. Code 217 ~~for, "commence operation" means, with regard to~~ a stationary boiler, combustion turbine, or combined cycle system, to ~~begin have begun~~ any mechanical, chemical, or electronic process, including, start-up of the unit's combustion chamber. ~~This~~ **Such** date ~~must~~ **shall** remain the unit's date of ~~commencing commencement of~~ operation even if the unit is subsequently modified, reconstructed, or repowered.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1326 Commercial Exterior Aerodynamic Structure Primer

"Commercial exterior aerodynamic structure primer" means a primer used on aerodynamic components and structures that protrude from the fuselage, such as wings and attached components, control surfaces, horizontal stabilizers, vertical fins, wing-to-body fairings, antennae, and landing gear and doors, for ~~the purpose of~~ extended corrosion protection and enhanced adhesion.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1327 Commercial Interior Adhesive

"Commercial interior adhesive" means materials used ~~to bond in the bonding of~~ passenger cabin interior components that are subject to the Federal Aviation Administration fireworthiness requirements.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1329 Compatible Substrate Primer

"Compatible substrate primer" means either compatible epoxy primer or adhesive primer.

- a) Compatible epoxy primer is a primer ~~that is~~ compatible with the filled elastomeric coating and is epoxy-based. The compatible substrate primer is an epoxypolyamide primer used to promote adhesion of elastomeric coatings, such as impact-resistant coatings.
- b) Adhesive primer excludes fuel tank coatings. Adhesive primer is a coating that:
 - 1) Inhibits~~inhibits~~ corrosion and serves as a primer applied to bare metal surfaces or before~~prior to~~ adhesive application; or
 - 2) Is~~is~~ applied to surfaces that can be expected to contain fuel.

~~Fuel tank coatings are excluded from this category.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1350 Component

"Component" means any piece of equipment which has the potential to leak ~~volatile organic material (VOM)~~, including, ~~but not limited to~~, pump seals, compressor seals, seal oil degassing vents, pipeline valves, pressure relief devices, process drains and ~~open-ended~~open-ended valves and lines, and flanges. For ~~purposes of~~ Subparts Q and R in 35 Ill. Adm. Code 215, 218, and 219, this definition excludes valves which are not externally regulated, flanges, and equipment in heavy liquid service. For ~~purposes of~~ Subpart Q of 35 Ill. Adm. Code 215, 218, and 219, this definition also excludes bleed ports of gear pumps in polymer service.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1390 Concentrated Nitric Acid Manufacturing Process

"Concentrated nitric acid manufacturing process" means any ~~acid-producing~~acid-producing facility manufacturing nitric acid with a concentration of at least~~equal to or greater than~~ 70% ~~percent~~ by weight.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1410 Condensate

"Condensate" means ~~VOL~~~~volatile organic liquid~~ separated from its associated gases, which condenses due to changes in the temperature or pressure and remains liquid at standard conditions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1430 Condensible ~~PM₁₀~~~~PM-10~~

"Condensible ~~PM₁₀~~~~PM-10~~" means ~~PM₁₀~~~~PM-10~~ formed immediately or shortly after discharge to the atmosphere, as measured by the applicable test method ~~underspecified in~~ 35 Ill. Adm. Code 212.110. Condensible particulate matter exists in gaseous ~~or~~~~and/or~~ vapor form ~~or both~~ ~~before prior to~~ release to the atmosphere, ~~e.g., (such as in the stack),~~ and forms particulate matter upon condensation when subject to conditions of cooling and dilution in the atmosphere.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1435 Container Glass

"Container glass" means, for ~~35 Ill. Adm. Code purposes of Part~~ 217, glass made of soda-lime recipe, clear or colored, which is pressed, ~~or~~ blown, or both, into bottles, jars, ampoules, and other products listed in Standard Industrial Classification 3221.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1455 Contact Adhesive

"Contact adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, an adhesive that meets the ~~qualifying~~ criteria ~~in this Section. "Contact adhesive" does not include rubber cements that are primarily intended for use on paper substrates or vulcanizing fluids that are designed and labeled for tire repair only. The qualifying criteria are:~~

- ~~a)~~ The adhesive is designed for application to both surfaces to be bonded together;
- ~~b)~~ The adhesive is allowed to dry before the two surfaces are placed in contact with each other;
- ~~c)~~ The adhesive forms an immediate bond that is impossible, or difficult, to reposition after both adhesive-coated surfaces are placed in contact with each other; and

- d) The adhesive does not need sustained pressure or clamping of surfaces after the adhesive-coated surfaces have been brought together using sufficient momentary pressure to establish full contact between both surfaces.

"Contact adhesive" does not include rubber cements that are primarily intended for use on paper substrates or vulcanizing fluids that are designed and labeled for tire repair only.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1465 Continuous Automatic Stoking

"Continuous automatic stoking" means automatically moving ~~of~~ animal pathological waste during burning, by moving the hearth in a pulse cycle manner. This, which process is designed to provide a continuous burning rate in which the design charging rate per hour equals the burning rate every hour without limitation. This process results, and results in emission rates which are similar over any hour of the burning process.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1470 Continuous Process

"Continuous process" means, for with respect to manufacturing manufacture of polystyrene resin, a method ~~of manufacture~~ in which the styrene raw material is delivered on a continuous basis to the reactor in which the styrene is polymerized to polystyrene.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1490 Control Device

"Control device" means equipment, ~~(such as an afterburner, adsorber, fabric filter, or scrubber,)~~ used to remove or prevent the emission of an air contaminant from a contaminated exhaust stream.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1510 Control Device Efficiency

"Control device efficiency" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, the weight of VOM generated by an emission unit which is destroyed or removed by a control device, divided by the weight of VOM generated by ~~the such~~ unit entering the control device, during a particular time period, expressed as a percentage.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1515 Control Period

For ~~purposes of~~ 35 Ill. Adm. Code 217, "control period" means the period beginning May 1 of a year and ending ~~on~~ September 30 of the same year, inclusive, except that in 2004, "control period" means May 31 through September 30.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1520 Conventional Air Spray

"Conventional air spray" means a spray coating method in which the coating is atomized by mixing it with compressed air at an air pressure greater than 10 ~~psipounds per square inch~~ (gauge) at the point of atomization. Airless, air assisted airless, and electrostatic spray technologies are not conventional air spray.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1550 Conveyorized Degreasing

"Conveyorized degreasing" means the continuous process of cleaning and removing soils from surfaces ~~using~~utilizing either cold or vaporized solvents.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1560 Cove Base

"Cove base" means, for ~~purposes of~~ Subparts JJ of 35 Ill. Adm. Code 218 and 219, a flooring trim unit, generally made of vinyl or rubber, having a concave radius on one edge and a convex radius on the opposite edge, that is used ~~to join in forming a junction between~~ the bottom wall course and the floor or ~~to~~ form an inside corner.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1565 Cove Base Installation Adhesive

"Cove base installation adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive used ~~to install for the installation of~~ cove base or wall base on a wall or vertical surface at floor level.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1567 Critical Use and Line Sealer Maskant

"Critical use and line sealer maskant" means a temporary coating, not covered under other maskant categories, used to protect selected areas of aerospace parts from:

- a) ~~Strong~~strong acid or alkaline solutions, such as those used in anodizing, plating, chemical milling, and processing of magnesium, titanium, or ~~high-strength~~high strength steel;
- b) ~~High-precision~~high-precision aluminum chemical milling of deep cuts; and
- c) ~~Aluminum~~aluminum chemical milling of complex shapes.

~~This definition also includes materials~~Materials used for repairs or to bridge gaps left by scribing operations (i.e., line sealer)~~-are also included in this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1570 Crude Oil

"Crude oil" means a naturally occurring mixture ~~consisting~~which consists of hydrocarbons and sulfur, nitrogen, or oxygen derivatives of hydrocarbons and which is a liquid at standard conditions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1590 Crude Oil Gathering

"Crude oil gathering" means ~~transporting~~the transportation of crude oil or condensate after ~~transferring~~ custody ~~transfer~~ between a production site and a reception point.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1610 Crushing

"Crushing" means ~~fragmenting~~the fragmentation of non-metallic minerals by a machine, such as a jaw, gyratory, cone, roll, rod, mill, hammermill, ~~or~~and impactor.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1630 Custody Transfer

"Custody transfer" means ~~transferring~~the transfer of produced petroleum, ~~or~~and/or condensate, ~~or both~~ after processing, ~~or~~and/or treating, ~~or both~~ in the producing operations, from storage tanks or automatic transfer systems to pipelines or any other ~~form~~forms of transportation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1650 Cutback Asphalt

"Cutback asphalt" means any asphalt which has been ~~liquefied~~liquified by blending with petroleum solvents other than residual fuel oil and has not been emulsified with water.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1655 Cyanoacrylate Adhesive

"Cyanoacrylate adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive with a cyanoacrylate content of at least 95%~~percent~~ by weight.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1670 Daily-Weighted Average VOM Content

"Daily-weighted average VOM content" means the average VOM content of two or more coatings as applied on a coating line during any day, taking into account the fraction of total coating ~~volume~~ that each coating represents, determined by according to the following formulas:-

$$VOMw = \left[\sum_{i=1}^n V_i C_i \right] / VT$$

where: ~~VOMw =~~

~~The average VOM content of two or more coatings as applied each day on a coating line in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds which are specifically exempted from the definition of VOM),~~

~~n =~~

~~The number of different coatings as applied each day on a coating line;~~

~~V_i =~~

~~The volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on a coating line in units of l (gal).~~

~~C_i =~~

~~The VOM content of each coating as applied each day on a coating line in units of kg VOM/l (lbs VOM/gal) of coating~~

$\forall T \Rightarrow$.

(minus water and any compounds which are specifically exempted from the definition of VOM), and
The total volume of all coatings (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on a coating line in units of 1 (gal).

- a) Daily-weighted average VOM content in units of kg VOM/l (lbs VOM/gal) of coatings applied (minus water and any compounds which are specifically exempt from the definition of VOM) must be determined using the equation:

$$VOM_{DWA,Vc} = \frac{\sum_{i=1}^n (Vc_i)(VOMv_i)}{Vc_T}$$

where:

VOM_{DWA,Vc} = The daily weighted average VOM content, by volume of coating, of two or more coatings applied each day on the coating line in units of kg VOM/l (lbs VOM/gal) coatings as applied (minus water and any compounds which are specifically exempted from the definition of VOM);

i = Subscript denoting a coating, i;

n = The number of different coatings applied each day on the coating line;

Vc_i = The volume of a coating, i, (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on the coating line in units of 1 (gal);

VOMv_i = The VOM content, by volume of coating, of a coating, i, as applied each day on the coating line in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds which are specifically exempted from the definition of VOM);

V_{cT} = The total volume of all coatings (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day from all coatings applied on the coating line in units of l (gal), determined using the equation:

$$V_{cT} = \sum_{i=1}^n V_{c_i}$$

b) Daily-weighted average VOM content in units of kg VOM/kg solids (lbs VOM/lb solids) must be determined using the equation:

$$VOM_{DWA,Ms} = \frac{\sum_{i=1}^n M_{S_i} VOM_{S_i}}{M_{S_T}}$$

where:

$VOM_{DWA,Ms}$ The daily-weighted average VOM content, by mass of solids applied, of two or more coatings applied each day on the coating line in units of kg VOM/kg solids (lbs VOM/lb solids);

i = Subscript denoting a coating, i ;

n = The number of different coatings applied each day on the coating line;

M_{S_i} = The mass of solids of a coating, i , applied each day on the coating line in units of kg (lb);

VOM_{S_i} = The VOM content, by mass of solids applied, of a coating, i , applied each day on a coating line in units of kg VOM/kg solids (lbs VOM/lb solids) of each coating;

M_{S_T} = The total weight of solids in kg (lb) applied each day from all coatings applied on the coating line, determined using the equation:

$$M_{S_T} = \sum_{i=1}^n M_{S_i}$$

c) Daily-weighted average VOM content in units of kg VOM/kg coating (lbs VOM/lb coating) applied must be determined using the equation:

$$VOM_{DWA,Mc} = \frac{\sum_{i=1}^n (Mc_i)(VOMm_i)}{Mc_T}$$

where:

VOM_{DWA,Mc} = The average VOM content, by mass of coating, of two or more coatings applied each day on the coating line in units of kg VOM/kg coating (lbs VOM/lb coating) applied;

i = Subscript denoting a coating, i;

n = The number of different coatings -applied each day on the coating line;

Mc_i = The mass of each coating, i, applied each day on a coating line in units of kg (lb);

VOMm_i = The VOM content, by mass of coating, of a coating, i, applied each day on a coating line in units of kg VOM/kg coating (lbs VOM/lb coating)

Mc_T = The total mass of all coatings applied each day on the coating line in units of kg (lb), determined using the equation:

$$Mc_T = \sum_{i=1}^n Mc_i$$

d) Daily-weighted average VOM content in units of kg VOM/l solids (lbs VOM/gal solids) applied must be determined using the equation below:

$$VOM_{DWA,Vs} = \frac{\sum_{i=1}^n (Vs_i)(VOMvs_i)}{Vs_T}$$

where:

VOM_{DWA,vs} = The daily-weighted average VOM content, by volume of solids, of two or more coatings applied each day on the coating line in units of kg VOM/l solids (lbs VOM/gal solids);

i = Subscript denoting a coating, i;

$n =$	<u>The number of different coatings applied each day on the coating line;</u>
$V_{Si} =$	<u>The volume of solids of a coating, i, applied each day on a coating line in units of liter (gallon);</u>
$VOM_{vsi} =$	<u>The VOM content, by volume of solids, of a coating, i, applied each day on the coating line in units of kg VOM/lr solids (lbs VOM/gal solids);</u>
$V_{ST} =$	<u>The total volume of all solids applied each day on the coating line in units of liter (gallon), determined using the equation:-</u>

$$V_{ST} = \sum_{i=1}^n V_{Si}$$

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1690 Day

"Day" means, for ~~35 Ill. Adm. Code purposes of Part 218~~ and/or Part 219, the consecutive 24 hours beginning at 12:00 AM (midnight) local time ~~or beginning at a fixed time consistent with the source's operating schedule, as provided below.~~ A source may use a 24-hour day beginning at a fixed time other than midnight which is consistent with its operating schedule ~~if provided that the owner or operator of the source first notifies the Agency in writing of that such alternative, describing and describes~~ why it would be more reasonable to maintain records on this basis. ~~The owner or operator shall notify the Agency in writing prior to any change in the time at which a day begins.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1700 Deadener

"Deadener" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied to selected vehicle surfaces primarily to reduce ~~for the purpose of reducing~~ the sound of road noise in the passenger compartment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1730 Delivery Vessel

"Delivery vessel" means any tank truck or trailer equipped with a storage tank that is used to ~~for~~ the transport ~~of~~ gasoline to a stationary storage tank at a gasoline dispensing operation, bulk gasoline plant, or bulk gasoline terminal.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1735 Department of Defense Classified Coating

"Department of Defense classified coating" means a coating that has been determined ~~under~~^{pursuant to} federal Executive Order 13526, "Classified National Security Information," December 29, 2009, or any successor order to require protection against unauthorized disclosure and is marked in documentary form to indicate its classified status ~~when in documentary form~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1740 Diesel Engine

"Diesel engine" means, for ~~the purposes of~~ 35 Ill. Adm. Code 217.5 Subpart Q, a compression ignited two- or four-stroke engine in which liquid fuel injected into the combustion chamber ignites when the air charge is compressed to a temperature sufficiently high for auto-ignition.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1745 Digital Printing

"Digital ~~printing~~^{Printing}" means, ~~for for purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, ~~transferring the transfer of~~ electronic files directly from a computer to an electronically driven output device that prints the image directly on the selected media (substrate). This definition excludes printing~~Printing using home and office equipment is excluded from this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1770 Distillate Fuel Oil

"Distillate fuel oil" means fuel oils of grade No. 1 or 2 ~~under as specified in detailed~~ requirements for fuel oil under ASTM D369-84 (2002), ASTM D-369-69 (1971) incorporated by reference in 35 Ill. Adm. Code 211.101(a)(3), 218.112, and 219.112.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1780 Distillation Unit

"Distillation unit" means a device or vessel in which one or more feed streams are separated into two or more exit streams, each exit stream having component concentrations different from those in the feed stream(s). Separation is achieved by ~~redistributing a redistribution of the~~ components between the liquid and the vapor phases by vaporization and condensation as they approach equilibrium within the distillation unit. A distillation unit includes ~~but is not limited to~~, the distillate receiver, reboiler, vacuum pump, steam jet, and any associated recovery system.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1790 Drum

"Drum" means any cylindrical shipping container of 13- to 110-~~gal~~~~gallon~~ capacity.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1810 Dry Cleaning Operation or Dry Cleaning Facility

"Dry cleaning operation" or "Dry cleaning facility" means the cleaning of fabrics using an essentially nonaqueous solvent by means of one or more solvent washes, ~~extracting~~~~extraction-of~~ excess solvent by spinning, and drying by tumbling in an airstream. The dry cleaning operation or facility includes, ~~but is not limited to,~~ washers, dryers, filter and purification systems, waste disposal systems, holding tanks, pumps, and attendant piping and valves.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1850 Effective Grate Area

"Effective grate area" means ~~the~~~~that~~ area of a dump-pit grate through which air passes, or would pass, when aspirated.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1870 Effluent Water Separator

"Effluent water separator" means any tank, box, sump, or other apparatus in which any organic material floating on or entrained or contained in water entering ~~the~~~~such~~ tank, box, sump, or other apparatus is physically separated and removed from ~~the~~~~such~~ water ~~before~~~~prior to~~ outfall, drainage, or recovery of ~~the~~~~such~~ water.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1872 Ejection Cartridge Sealant

"Ejection cartridge sealant" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.204(q) and 219.204(q), a sealant applied during the assembly of an ejection cartridge to provide a waterproof barrier between a shellcase and primer, and between a shellcase and the wad.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1876 Electric Dissipating Coating

"Electric dissipating coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that rapidly dissipates a high-voltage electric charge.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1877 Electric-Insulating Varnish

"Electric-insulating varnish" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a non-convertible coating applied to electric motors, components of electric motors, or power transformers to provide electrical, mechanical, and environmental protection or resistance.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1878 Electrical Apparatus Component

"Electrical ~~apparatus component~~~~Apparatus Component~~" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, an internal component, such as wires, windings, stators, rotors, magnets, contacts, relays, energizers, and connections, in an apparatus that generates or transmits electrical energy, including, ~~but not limited to~~, alternators, generators, transformers, electric motors, cables, and circuit breakers, except for the actual cabinet in which the components are housed. This definition also includes electrical~~Electrical~~ components of graphic arts application equipment and hot-line tools ~~are also included in this category~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1882 Electrodeposition Primer (EDP)

"Electrodeposition primer" or "EDP" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a process of applying a protective, corrosion-resistant waterborne primer on exterior and interior surfaces that provides thorough coverage of recessed areas. It is a dip coating method that uses an electrical field to apply or deposit the conductive coating onto the part. The object being painted acts as an electrode that is oppositely charged from the particles of paint in the dip tank. Electrodeposition primer is also referred to as E-Coat, Uni-Prime, and ELPO Primer.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1883 Electromagnetic Interference/Radio Frequency Interference (EMI/RFI) Shielding Coatings

"Electromagnetic interference/radio frequency interference coatings" or "EMI/RFI coatings" means:

- a) ~~Before~~~~Prior to~~ May 1, 2012, coatings used on business machine plastic housings to attenuate electromagnetic and radio frequency interference signals that would otherwise pass through the plastic housing;
- b) On and after May 1, 2012, coatings used on electrical or electronic equipment to provide shielding against electromagnetic interference, radio frequency interference, or static discharge.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1885 Electronic Component

"Electronic ~~component~~Component" means, for ~~the purposes of~~ 35 Ill. Adm. Code 218.182(f), 219.182(f), 218.187, and 219.187, all portions of an electronic assembly, including, ~~but not limited to,~~ circuit board assemblies, printed wire assemblies, printed circuit boards, soldered joints, ground wires, bus bars, and associated electronic component manufacturing equipment such as screens and filters, except for the actual cabinet ~~housing in which~~ the components ~~are housed~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1890 Electrostatic Bell or Disc Spray

"Electrostatic bell or disc spray" means an electrostatic spray coating method in which a ~~rapidly spinning~~rapidly spinning bell- or disc-shaped applicator is used to create a fine mist and apply the coating with high transfer efficiency.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1900 Electrostatic Prep Coat

"Electrostatic prep coat" means a coating that is applied to a plastic part solely to provide conductivity for the subsequent application of a prime coat, a topcoat, or other coating ~~using through the use of~~ electrostatic application methods. An electrostatic prep coat is clearly identified as an electrostatic prep coat on its accompanying material safety data sheet.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1920 Emergency or Standby Unit

"Emergency or ~~standby unit~~Standby Unit" means, for a stationary gas turbine or a stationary reciprocating internal combustion engine, a unit that:

- a) Supplies power for the source at which it is located but operates only when the normal supply of power has been rendered unavailable by circumstances beyond the control of the owner or operator of the source and only as necessary to assure the availability of the engine or turbine. An emergency or standby unit may not be operated to supplement a primary power source when the load capacity or rating of the primary power source has been reached or exceeded~~;~~
- b) Operates exclusively for firefighting~~,~~ or flood control~~,~~ or both~~;~~
- c) Operates in response to and during the existence of any officially declared disaster

or state of emergency; ~~or-~~

- d) Operates for ~~the purpose of~~ testing, repair, or routine maintenance to verify its readiness for emergency or standby use.

~~e) Despite Notwithstanding~~ any other subsection in this Section, emergency or standby units may operate an additional 50 hours per year in non-emergency situations.

The term does not include equipment used for purposes other than emergencies, ~~as~~ described above, such as to supply power during high electric demand days.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1930 Emission Rate

"Emission rate" means, if not otherwise stated in a specific provision, the total quantity of a particular specified air contaminant discharged into the atmosphere in any one-hour period. For example, if not otherwise specified in 35 Ill. Adm. Code 218 or 219, emission rate means the total quantity of ~~VOM~~ ~~volatile organic material~~ discharged into the atmosphere in any one-hour period.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1970 Enamel

"Enamel" means a coating that cures by chemical cross-linking of its base resin. Enamels ~~can be distinguished~~ ~~from~~ lacquers because enamels are not readily resolvable in their original solvent.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.1990 Enclose

"Enclose" means, for ~~purpose of~~ 35 Ill. Adm. Code 215.481(c), 215.482(b), 218.481(c), 218.482(b), 219.481(c), and 219.482(b), to cover any ~~VOL~~ ~~volatile organic liquid~~ surface that is exposed to the atmosphere.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2030 Enhanced Under-the-Cup Fill

"Enhanced under-the-cup fill" means an improved under-the-cup technique, such as ~~using use of~~ Kartridg Pak Low Pressure Sequencing Springs ~~in conjunction~~ with process temperature gradient control, which forces most propellant which would otherwise remain in the headspace of the fill machine fitting into the aerosol can by using ~~either~~ a compressed non-VOM gas, such as nitrogen or ~~vaporizing~~ ~~vaporization of~~ the propellant itself. Enhanced under-the-cup fill may require

~~adjusting~~~~adjustment of~~ the fill machine to reduce the hold-down pressure on the cup during the period in the filling cycle when remaining propellant in the fitting is forced into the can.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2040 Etching Filler

"Etching filler" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that contains less than 23% ~~percent~~ solids by weight and at least 0.50% ~~percent~~ acid by weight, and is used instead of applying a pretreatment coating followed by a primer.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2055 Ethylene Propylenediene Monomer (EPDM) Roof Membrane

"Ethylene propylenediene monomer roof membrane" or "EPDM roof membrane" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a prefabricated single sheet of elastomeric material composed of ethylene propylenediene monomer and that is ~~field-applied~~~~field applied~~ to a building roof using one layer or membrane material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2070 Excess Air

"Excess air" means air supplied in addition to the theoretical quantity necessary for complete combustion of all fuel, ~~and/or~~ combustible waste material, ~~or both~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2090 Excessive Release

"Excessive release" means, for ~~purposes of~~ 35 Ill. Adm. Code 215.144, 218.144, and 219.144, a discharge of more than 295 g (0.65 lbs) of mercaptans, ~~and/or~~ hydrogen sulfide, ~~or both~~ into the atmosphere in any 5-~~min~~~~minute~~ period.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2180 Exterior Primer for Large Commercial Aircraft

"Exterior primer for large commercial aircraft" means an aerospace primer ~~manufactured for non-military use and~~, applied to an aircraft of more than 110,000 ~~lbs~~~~pounds~~ maximum certified take-off weight, ~~manufactured for non-military use~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2190 External Floating Roof

"External floating roof" means a cover over an ~~open-top~~~~open top~~ storage tank consisting of a double deck or pontoon single deck, which rests upon and is supported by the ~~VOL~~~~volatile~~ ~~organic liquid~~ being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank shell.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2200 Extreme High-Gloss Coating

"Extreme high-gloss coating" means:

- a) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q)(1) ~~and 219.204(q)(1) regarding metal parts and products coatings~~, a coating that, when tested by ~~ASTM D523-14 (2018)~~~~ASTM D 523-80~~, incorporated by reference in ~~35 Ill. Adm. Code~~~~Section~~ 211.101(a)(3) ~~of this Part~~, shows a reflectance of 75% or more on a 60° meter;
- b) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q)(5) ~~and 219.204(q)(5) regarding pleasure craft coatings~~, any coating that achieves greater than 90% ~~percent~~ reflectance on a 60° meter when tested using ~~ASTM D523-14 (2018)~~~~ASTM D 523-89~~, incorporated by reference in ~~35 Ill. Adm. Code~~~~Section~~ 211.101(a)(3) ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2210 Extreme Performance Coating

"Extreme performance coating" means:

- a) Except for ~~purposes of~~ 35 Ill. Adm. Code 218.204(q) or 219.204(q), any coating ~~that during intended use is~~ exposed during intended use to any or all of the following: ambient weather conditions, temperatures consistently above 95 °C (203 °F)~~95°C (203°F)~~, detergents, abrasive and scouring agents, solvents, or corrosive atmospheres.;
- b) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q) and 219.204(q), a coating used on a metal or plastic surface where the coated surface meets, in its intended use, one or more of the criteria ~~listed~~ below. Extreme performance coatings include, ~~but are not limited to~~, coatings applied to locomotives, railroad cars, farm machinery, and ~~heavy-duty~~~~heavy duty~~ trucks:
 - 1) Chronic exposure to corrosive, caustic, or acidic agents, chemicals, chemical fumes, chemical mixtures, or solutions;
 - 2) Repeated exposure to temperatures ~~exceeding in excess of~~ 121 °C (250 °F)~~121°C (250°F)~~; or

- 3) Repeated heavy abrasion, including mechanical wear and repeated scrubbing with industrial grade solvents, cleansers, or scouring agents.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2230 Fabric Coating

"Fabric coating" means any protective, decorative, or functional coating which is applied onto or impregnated into a textile fabric which is delivered to the coating line as a roll, unwound, and coated as a continuous substrate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2250 Fabric Coating Line

"Fabric coating line" means a coating line in which any protective, decorative, or functional coating is applied onto or impregnated into a textile fabric which is delivered to the coating line as a roll, unwound, and coated as a continuous substrate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2270 Federally Enforceable Limitations and Conditions

"Federally enforceable limitations and conditions" means all limitations and conditions ~~which are~~ enforceable by the Administrator of the USEPA, including ~~those~~ requirements developed ~~underpursuant to~~ 40 CFR Parts 60 and 61; requirements within any applicable implementation plan; and any permit requirements established ~~underpursuant to~~ 40 CFR 52.21 or 40 CFR 52.737 or under regulations approved ~~underpursuant to 40 CFR Part 51 Subpart I,~~ 40 CFR 51.166 and 40 CFR Part 70.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2285 Feed Mill

"Feed mill" means a source or equipment at a source that produces food, including premixes, supplements, and concentrates, for animal (non-human) consumption from grain, grain byproducts, or alfalfa and other ingredients, without cooking, but ~~excluding~~~~not including~~ wet or dry corn mills, soybean mills, flour mills, and ethanol plants.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2300 Fill

"Fill" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.119 through 218.129 and 219.119 through 219.129, ~~means introducing introduction of~~ VOL into a storage vessel but not necessarily to complete capacity.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2310 Final Repair Coat

"Final repair coat" means:

- a) ~~For~~ With respect to automobile or light-duty truck assembly or manufacturing underdescribed in 35 Ill. Adm. Code ~~215.204(a), 218.204(a)(1), and 219.204(a)(1)~~ 218.219(a)(1), a coating that is used to repaint topcoat that is damaged during vehicle assembly;
- b) ~~For~~ With respect to automobile or light-duty truck assembly or manufacturing underdescribed in 35 Ill. Adm. Code 218.204(a)(2) and ~~219.204(a)(2)~~ 218.219(a)(2), a coating applied to completely assembled motor vehicles or to parts that are not yet on a completely assembled vehicle to correct damage or imperfections in the coating. ~~Curing~~ The curing of the coatings applied in these operations is accomplished at a lower temperature than that used for curing primer surfacer and topcoat.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2320 Finish Primer Surfacer

"Finish primer surfacer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied with a wet film thickness of less than 10 mils ~~before prior to the application of~~ a topcoat ~~to provide for purposes of providing~~ corrosion resistance, adhesion of subsequent coatings, ~~or~~ a moisture barrier, ~~or promote promoting promotion of~~ a uniform surface necessary for filling in surface imperfections.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2340 Fire-Resistant Interior Coating

"Fire-resistant interior coating" means:

- a) ~~For~~ for civilian aircraft, fire-resistant interior coatings used on passenger cabin interior parts that are subject to the Federal Aviation Administration fireworthiness requirements. ~~;~~
- b) ~~For~~ for military aircraft, fire-resistant interior coatings used on parts subject to the flammability requirements of military specifications for aircraft. ~~;~~ and

- c) ~~For~~ space applications, fire-resistant interior coatings used on parts subject to NASA flammability requirements for space shuttles and space stations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2357 Flat Glass

"Flat glass" means, for ~~35 Ill. Adm. Code~~ purposes of Part 217, glass made of soda-lime recipe and produced into continuous flat sheets and other products listed in Standard Industrial Classification 3211.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2358 Flat Wood Paneling

"Flat ~~wood paneling~~ Wood Paneling" means natural finish hardwood plywood panels, hardwood panels with Class II finishes, tileboard, exterior siding, and printed interior panels made of hardwood plywood or thin particleboard.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2359 Flat Wood Paneling Coating Line

"Flat ~~wood paneling coating line~~ Wood Paneling Coating Line" means a coating line in which any protective, decorative, or functional coating is applied to flat wood paneling.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2360 Flexible Coating

"Flexible coating" means:

- a) ~~Before~~ Prior to May 1, 2012, a paint ~~able~~ with the ability to withstand dimensional changes.
- b) On and after May 1, 2012, a coating ~~that is~~ required to comply with engineering specifications for impact resistance, mandrel bend, or elongation as defined by the original manufacturer of the equipment being coated.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2368 Flexible Packaging

"Flexible ~~packaging~~ Packaging" means any package or part of a package, the shape of which can be readily changed. Flexible packaging includes, ~~but is not limited to~~, bags, pouches, liners, and wraps ~~using~~ utilizing paper, plastic, film, aluminum foil, metalized or coated paper or film, or any

combination of these materials. Shrink-wrap labels or wrappers (but not self-adhesive labels) printed on or in-line with a flexible packaging printing press are also considered to be flexible packaging. Flexible packaging does not include folding cartons, gift wraps, hot stamp foils, wall coverings, vinyl products, decorative laminates, floor coverings, or tissue products.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2369 Flexible Vinyl

"Flexible vinyl" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, non-rigid polyvinyl chloride plastic with a ~~5%-percent~~ by weight plasticizer content.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2400 Flight Test Coating

"Flight test coating" means a coating applied to aircraft other than missiles or single-use aircraft ~~before prior to~~ flight testing to protect the aircraft from corrosion and to provide required marking during flight test evaluation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2412 Flush Cleaning at Aerospace Facilities

"Flush cleaning at aerospace facilities" means removal of contaminants, such as dirt, grease, oil, and coatings, from an aerospace vehicle or component or from coating equipment by passing solvent over, into, or through the item being cleaned. The solvent may simply be poured into the item being cleaned and then drained, or assisted by air or hydraulic pressure, or by pumping. ~~This definition does not include hand-wipe~~ Hand-wipe cleaning operations ~~using in which~~ wiping, scrubbing, mopping, or other hand action ~~are used are not included in this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2415 Fog Coat

"Fog coat" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that is applied to a plastic part for ~~the purpose of~~ color matching without masking a molded-in texture. A fog coat ~~must shall~~ not be applied at a thickness of more than 0.5 ~~mm mils~~ of coating solids.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2425 Fossil Fuel-Fired

"Fossil fuel-fired" means the combustion of fossil fuel, alone or in combination with any other fuel, where fossil fuel actually combusted comprises or is projected to comprise more than ~~50%~~ ~~percent~~ of the annual heat input on a btu basis during any year.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2450 Freeboard Height

"Freeboard height" means:

- a) ~~For~~ open top vapor degreasers, the distance from the top of the vapor zone to the top of the degreaser tank, ~~and~~
- b) ~~For~~ cold cleaning degreasers, the distance from the solvent to the top of the degreaser tank.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2470 Fuel Combustion Emission Unit or Fuel Combustion Emission Source

"Fuel combustion emission unit" or "Fuel combustion emission source" means any furnace, boiler, or similar equipment used ~~primarily to produce for the primary purpose of producing~~ heat or power by indirect heat transfer.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2485 Fuel Tank Coating for Aerospace Applications

"Fuel tank coating for aerospace applications" means a coating applied to fuel tank components on an aerospace vehicle ~~to inhibit for the purpose of~~ corrosion, ~~and/or~~ bacterial growth, ~~or both inhibition~~ and to assure sealant adhesion in extreme environmental conditions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2490 Fugitive Particulate Matter

"Fugitive particulate matter" means any particulate matter emitted into the atmosphere other than through a stack. ~~However, provided that~~ nothing in this definition or in 35 Ill. Adm. Code 212.5 Subpart K ~~exempts shall exempt~~ any emission unit from ~~complying compliance~~ with ~~otherwise applicable~~ other provisions of 35 Ill. Adm. Code 212 ~~otherwise applicable~~ merely because of the absence of a stack.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2510 Full Operating Flowrate

"Full operating flowrate" means maximum operating capacity of the source, emission unit, or process unit, as applicable.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2525 Gasket/Gasket Sealing Material

"Gasket/gasket sealing material" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a fluid applied to coat a gasket or replace and perform the same function as a gasket, including room temperature vulcanization seal material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2530 Gas Service

"Gas service" means ~~that~~ the equipment or component ~~that~~ contains process fluid ~~that is~~ in the gaseous state at operating conditions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2550 Gas/Gas Method

"Gas/gas method" means either of two methods relying only on gas phase measurements to determine for determining VOM capture efficiency; ~~which rely only on gas phase measurements.~~

- a) Construction ~~The first method requires construction~~ of a temporary total enclosure (TTE) to ensure that all would-be fugitive emissions are measured; or,
- b) Using ~~The second method uses~~ the building or room which houses the coating line, printing line, or other emission unit as an enclosure. ~~This~~ The second method requires that all other VOM lines or emission units within the building or room be shut down while the test is performed, but all fans and blowers within the building or room must be operated according to normal procedures.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2610 Gel Coat

"Gel coat" means a resin coating, either pigmented or clear, applied to the surface of a mold; that becomes an integral part of a polyester resin product; and that provides a cosmetic enhancement and improves resistance to degradation from exposure to the elements.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2615 General Work Surface

"General work surface ~~Work Surface~~" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, an area of a medical device or pharmaceutical manufacturing facility where solvent cleaning is performed on work surfaces, but for which cleaning specifications are not required to

be maintained in ~~compliance~~ with criteria and procedures established to meet requirements of the United States Food and Drug Administration ~~and/or~~ other applicable regulatory agencies with authority over manufacturing operations for medical devices ~~and/or~~ pharmaceuticals. General work surfaces ~~do not~~ include items defined under "Janitorial Cleaning."

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2622 Glass Bonding Primer

"Glass bonding primer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a primer applied to windshield or other glass, or to body openings, to prepare the glass or body opening for ~~applying the application of~~ glass bonding adhesives or ~~installing the installation of~~ adhesive bonded glass, including glass bonding/cleaning primers that perform both functions (cleaning and priming of the windshield or other glass or body openings) ~~before applying prior to the application of~~ adhesive or ~~installing the installation of~~ adhesive bonded glass.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2625 Glass Melting Furnace

"Glass melting furnace" means, for ~~35 Ill. Adm. Code purposes of Part~~ 217, a unit comprising a refractory vessel in which raw materials are charged and melted at high temperature to produce molten glass.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2630 Gloss Reducers

"Gloss reducers" means a low-gloss coating formulated to eliminate glare ~~for safety purposes on~~ interior surfaces of a vehicle ~~for safety purposes under, as specified in the~~ U.S. Department of Transportation Motor Vehicle Safety Standards.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2650 Grain

"Grain" means the whole kernel or seed of corn, wheat, oats, soybeans, and any other cereal or oil seed plant and the normal fines, dust, and foreign matter which ~~result~~ results from harvesting, handling, or conditioning. The grain ~~must not~~ be unaltered by grinding or processing.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2690 Grain-Handling and Conditioning Operation

"Grain-handling and conditioning operation" means a grain storage facility and its associate grain transfer, cleaning, drying, grinding, and mixing operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2710 Grain-Handling Operation

"Grain-handling operation" means any operation where one or more of the following grain-related processes (other than grain-drying operation, portable grain-handling equipment, and one-turn storage space, and excluding flour mills and feed mills) are performed: receiving, shipping, transferring, storing, mixing, or treating of grain or other processes pursuant to under normal grain operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2730 Green-Tire Spraying

"Green tire spraying" means the spraying of green tires, both inside and outside, with release compounds which help remove air from the tire during molding and prevent the tire from sticking to the mold after curing.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2770 Gross Heating Value

"Gross heating value" means amount of heat produced when a unit quantity of fuel is burned to carbon dioxide and water vapor, and the water vapor condensed as described in ASTM D2015-66, D1826-94 (2017), D900-55, D1826-64 and D240-19, each D240-64 incorporated by reference in Section 211.101 (a)(3)-of this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2795 Hand-Wipe Cleaning Operation at Aerospace Facilities

"Hand-wipe cleaning at aerospace facilities" means removing contaminants, such as dirt, grease, oil, and coatings, from an aerospace vehicle or component by physically rubbing it with a material such as a rag, paper, or cotton swab that has been moistened with a cleaning solvent.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2800 Hardwood Plywood

"Hardwood plywood~~Plywood~~" means plywood whose surface layer is a veneer of hardwood.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2810 Heated Airless Spray

"Heated airless spray" means an airless spray coating method in which the coating is heated just ~~before~~prior to application.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2825 Heat-Resistant Coating

"Heat-resistant coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that must withstand a temperature of at least ~~204 °C (400 °F)~~204°C (400°F) during normal use.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2840 Heatset Web Letterpress Printing Line

"Heatset ~~web letterpress printing line~~Web Letterpress Printing Line" means a letterpress printing line in which a continuous roll of substrate is fed through the printing press and an oven is used to solidify the printing inks.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2870 Heavy Liquid

"Heavy liquid" means liquid that:

- a) ~~Has~~with a true vapor pressure of less than 0.3 kPa (0.04 psi) at ~~294.3 °K (70 °F)~~294.3°K (70°F) established in a standard reference text or as determined by ASTM method ~~D2879-18, D2879-86~~ (incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112);
- b) ~~Has or which has~~ 0.1 Reid Vapor Pressure as determined by ASTM method ~~D323-20a, D323-08~~ (incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112); or
- c) ~~When which when~~ distilled, requires a temperature of ~~421.95 °K (300 °F)~~421.95°K (300°F) or greater to recover 10 percent of the liquid as determined by ASTM method ~~D86-23a, D86-82~~ (incorporated by reference in 35 Ill. Adm. Code 215.105, 218.112, and 219.112).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2890 Heavy Metals

"Heavy metals" means, for ~~the purposes of~~ Section 9.4 of the Act, elemental, ionic, or combined forms of arsenic, cadmium, mercury, chromium, nickel, and lead.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2910 Heavy Off-Highway Vehicle Products

"Heavy off-highway vehicle products" means heavy construction, mining, farming, or material handling equipment; heavy industrial engines; diesel-electric locomotives and associated power generation equipment; and the constituent parts of ~~thesueh~~ equipment or engines.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2930 Heavy Off-Highway Vehicle Products Coating

"Heavy off-highway vehicle products coating" means any protective, decorative, or functional coating applied onto the surface of heavy off-highway vehicle products. ~~A~~~~However, a~~ high temperature aluminum coating ~~applied~~ to a diesel-electric locomotive in Cook County is not a heavy off-highway vehicle products coating.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2950 Heavy Off-Highway Vehicle Products Coating Line

"Heavy off-highway vehicle products coating line" means a coating line in which any protective, decorative, or functional coating is applied onto the surface of heavy off-highway vehicle products. ~~Applying~~~~However, application of~~ a high temperature aluminum coating to a diesel-electric locomotive in Cook County is not a heavy off-highway vehicle products coating line or part of a heavy off-highway vehicle products coating line.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2955 High Bake Coating

"High bake coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that is designed to cure only at temperatures of more than ~~90 °C (194 °F)~~. ~~90°C (194°F)~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2956 High Build Primer Surfacer

"High build primer surfacer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied with a wet film thickness of 10 ~~mm~~~~mils~~ or more ~~before prior to the application of~~ a topcoat ~~to provide for purposes of providing~~ corrosion resistance, adhesion of subsequent coatings, ~~or~~ a moisture barrier, or ~~promote promoting promotion of~~ a uniform surface necessary for filling in surface imperfections.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2958 High Gloss Coating

"High gloss coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any coating that achieves at least 85% ~~percent~~ reflectance on a 60° meter when tested using ASTM D523-14 ~~(2018) Method D 523-89~~, incorporated by reference in Section 211.101 ~~(a)(3) of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2960 High-Performance Architectural Coating

"High-performance architectural coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating used to protect architectural subsections and that meets the requirements of the American Architectural Manufacturers Association Architectural Aluminum Manufacturer Association's publication number AAMA 2604-05 (Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels), incorporated by reference in Section 211.101 ~~of this Part~~, or 2605-05 (Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels), incorporated by reference in Section 211.101 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2965 High Precision Optic

"High precision optic ~~Precision Optic~~" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, an optical element used in an electro-optical device that is designed to sense, detect, or transmit light energy, including specific wavelengths of light energy and changes in light energy levels.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2970 High Temperature Aluminum Coating

"High temperature aluminum coating" means a coating ~~that is~~ certified to withstand a temperature of 537.8 °C (1000 °F) ~~537.8°C (1000°F)~~ for 24 hours.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2980 High Temperature Coating

"High temperature coating" means:

- a) For ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, ~~"high temperature coating"~~ means a coating ~~that is~~ certified to withstand a temperature of 538 °C ~~°C~~ (1000 °F ~~°F~~) for 24 hours.

b) For ~~purposes of~~ 35 Ill. Adm. Code 219.204(r), ~~"high temperature coating"~~ means a coating designed to withstand temperatures ~~of~~ more than 177 °C (350 °F).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.2990 High Volume Low Pressure (HVLP) Spray

"High volume low pressure (HVLP) spray" means equipment used to apply coatings ~~with~~ by means of a spray gun which operates between 0.1 and 10 psig air pressure.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3010 Hood

"Hood" means a partial enclosure or canopy for capturing and exhausting ~~with~~ by means of a draft; the organic vapors or other fumes produced from a coating line, printing line, or other emission unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3050 Housekeeping Practices

"Housekeeping practices" means ~~the~~ those activities ~~specifically~~ defined in ~~the list of~~ housekeeping practices developed by the Joint EPA - Industry Task Force and ~~included herein~~ listed under 35 Ill. Adm. Code 212.461.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3090 Indirect Heat Transfer

"Indirect heat transfer" means transfer of heat in ~~such~~ a way that the source of heat does not come into direct contact with process materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3095 Indoor Floor Covering Installation Adhesive

"Indoor floor covering installation adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive intended by the manufacturer for ~~installing use in the installation of~~ wood flooring, carpet, resilient tile, vinyl tile, vinyl backed carpet, resilient sheet and roll, or artificial grass. This definition does not include adhesives ~~Adhesives~~ used to install ceramic tile and perimeter bonded sheet flooring with vinyl backing onto a non-porous substrate, such as flexible vinyl, ~~are excluded from this category~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3100 Industrial Boiler

"Industrial boiler" means, for ~~35 Ill. Adm. Code purposes of Part~~ 217, an enclosed vessel in which water is heated and circulated either as hot water or as steam for heating, ~~or~~ for power, or ~~for~~ both. This term does not include a heat recovery steam generator that captures waste heat from a combustion turbine and boilers serving a generator that has a nameplate capacity greater than 25 MWe and produces electricity for sale if ~~these~~ ~~such~~ boilers meet the applicability criteria under 35 Ill. Adm. Code 217. Subpart M ~~of Part 217~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3110 Ink

"Ink" means a coating used in printing, impressing, or transferring words, pictures, designs, or other images onto a substrate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3120 In-Line Repair

"In-line repair" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, the operation performed and coatings applied to correct damage or imperfections in the topcoat on parts that are not yet on a completely assembled vehicle. ~~Curing~~ ~~The curing~~ of the coatings applied in these operations is accomplished at essentially the same temperature as that used for curing the previously applied topcoat. "In-line repair" is also referred to as high bake repair or high bake reprocess. In-line repair is considered part of the topcoat operation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3130 In-Process Tank

"In-process tank" means, ~~for with respect to manufacturing~~ ~~manufacture of~~ pharmaceuticals, a container used for mixing, blending, heating, reacting, holding, crystallizing, evaporating, or cleaning operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3160 Insulation Covering

"Insulation covering" means material ~~that is~~ applied to foam insulation to protect the insulation from mechanical or environmental damage.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3190 Internal-Floating Roof

"Internal-floating roof" means a cover or roof in a fixed-roof tank which rests upon and is supported by the ~~VOL~~~~volatile organic liquid~~ being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank shell.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3215 Janitorial Cleaning

"Janitorial ~~cleaning~~~~Cleaning~~" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, ~~the cleaning of~~ building or facility components, including, ~~but not limited to,~~ floors, ceilings, walls, windows, doors, stairs, bathrooms, furnishings, and exterior surfaces of office equipment. ~~The definition, and~~ excludes ~~the cleaning of~~ work areas where manufacturing or repair activity is performed.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3230 Lacquers

"Lacquers" means:

- a) ~~For with respect to~~ coating ~~of~~ wood furniture, any clear wood finishes formulated with nitrocellulose or synthetic resins to dry by evaporation without chemical reaction, including clear lacquer sanding sealers.
- b) For ~~purposes of~~ 35 Ill. Adm. Code 219.204(r), ~~"lacquers" means~~ a clear or pigmented coating formulated, with a nitrocellulose or synthetic resin, to dry by evaporation without a chemical reaction.

Lacquers are resolvable in their original solvent.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3240 Laminate

"Laminate" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a product made by bonding together two or more layers of material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3270 Large Appliance Coating

"Large appliance coating" means any protective, decorative, or functional coating applied onto the surface of large appliances or to the constituent metal parts ~~of large appliances, (including, but not limited to,~~ doors, cases, lids, panels, and interior support parts) ~~of large appliances.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3290 Large Appliance Coating Line

"Large appliance coating line" means a coating line in which any protective, decorative, or functional coating is applied onto the surface of large appliances or to the constituent metal parts of large appliances, ~~(including but not limited to~~ doors, cases, lids, panels, and interior parts ~~) of large appliances.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3305 Letterpress Printing Line

"Letterpress Printing Line" means a web or sheetfed printing line that does not constitute a flexographic printing line, in which the image area is raised relative to the non-image area, and the ink is transferred to the substrate directly from the image surface.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3330 Light-Duty Truck

"Light-duty truck" means any motor vehicle with a gross vehicle weight rating of 3,850 kg or less, designed mainly to transport property.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3355 Lime Kiln

"Lime kiln" means, for 35 Ill. Adm. Code ~~purposes of Part 217~~, an enclosed combustion device used to calcine lime mud, which consists primarily of calcium carbonate, into calcium oxide.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3360 Limited Access Space

"Limited access space" means internal surfaces or passages of an aerospace vehicle or component that cannot be reached to apply coatings without the aid of an airbrush or a spray gun extension ~~for the application of coatings.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3370 Liquid/Gas Method

"Liquid/gas method" means either of two methods requiring for determining VOM capture efficiency which require both gas phase and liquid phase measurements and analysis to determine VOM capture efficiency:-

- a) ~~Constructing~~~~The first method requires construction of~~ a temporary total enclosure (TTE) to ensure that all would-be fugitive emissions are measured; ~~or-~~
- b) ~~Using the second method uses~~ the building or room ~~housing which houses~~ the coating line, printing line, or other emission unit as an enclosure. ~~This~~~~The second method requires that all other VOM lines or emission units within the~~ building or room be shut down while the test is performed, but all fans and blowers within the building or room must be operated according to normal procedures.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3410 Liquid Service

"Liquid service" means ~~that~~ the equipment or component contains process fluid ~~that is~~ in a liquid state at operating conditions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3430 Liquids Dripping

"Liquids dripping" means any visible leaking from a seal, including spraying, misting, clouding, and ice formation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3450 Lithographic Printing Line

"Lithographic printing line" means a web or ~~sheet-fed~~~~sheetfed~~ printing line in which each roll printer uses a roll ~~on which~~~~where~~ both the image and non-image areas are essentially in the same plane (planographic).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3475 Load Shaving Unit

"Load shaving unit" means, for ~~35 Ill. Adm. Code~~~~purposes of Part~~ 217, a device used to generate electricity for sale or use during high electric demand days, including ~~but not limited to~~ stationary reciprocating internal combustion engines or turbines.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3480 Loading Event

"Loading event" means an event that begins with ~~the~~ connecting ~~of~~ marine terminal storage tanks to a marine vessel by ~~means of~~ piping or hoses, ~~and~~ includes transferring~~the transfer of~~ liquid from the storage tank into the marine vessel, and ends with ~~the~~ disconnecting ~~of~~ the pipes or hoses.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3483 Long Dry Kiln

"Long dry kiln" means a kiln 14 feet or larger in outside diameter, ~~and~~ 400 feet or larger in length, which ~~does not preheat~~~~employs no preheating of~~ the feed in the cyclone chambers, ~~and~~ ~~has dry~~~~the~~ inlet feed to the kiln ~~is dry~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3485 Long Wet Kiln

"Long wet kiln" means a kiln 14 feet or larger in outside diameter, ~~and~~ 400 feet or greater in length, which ~~does not preheat~~~~employs no preheating of~~ the feed in the cyclone chambers, ~~and~~ ~~has slurry~~~~the~~ inlet feed to the kiln ~~is a slurry~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3487 Low-NO_x Burner

"Low-NO_x burner" means, for ~~the purpose of~~ 35 Ill. Adm. Code 217.5, Subpart T, a type of cement kiln burner system designed to lower NO_x formation by controlling flame turbulence, delaying fuel/air mixing, and establishing fuel-rich zones for initial combusting, which for firing of solid fuel by a kiln's main burner includes an indirect firing system or comparable technique for the main burner to lower the amount of primary combustion air supplied with the pulverized fuel. In an indirect firing system, one air stream is used to convey pulverized fuel from the grinding equipment, and another air stream is used to supply primary combustion air to the kiln burner with the pulverized fuel, with intermediate storage of the fuel. In contrast, in a direct firing system, the air stream used to convey pulverized coal is then directly used as primary combustion air without any intermediate storage of fuel, resulting in more primary combustion air than with an indirect system.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3490 Low Solvent Coating

"Low solvent coating" means a coating which contains less organic solvent than the conventional coatings used by the industry. Low solvent coatings include water-borne, higher solids, electro-deposition, and powder coatings.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3500 Lubricating Oil

"Lubricating oil" means an oil manufactured from petroleum or used oil for a use other than fuel, including engine oil, gear oil, transmission oil, turbine oil, hydraulic oil, aviation oil, and heat transfer oil, ~~as well as~~ This definition also includes synthetic oils manufactured to serve ~~such~~ these functions, base stock, and additive packages and individual additives for ~~such~~ lubricating oil including viscosity index improvers, dispersants, corrosion inhibitors, antioxidants, detergents, wear inhibitors, friction modifiers, and pour point depressants, ~~but not including~~ This definition does not include used oil.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3505 Lubricating Wax/Compound

"Lubricating wax/compound" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a protective lubricating material applied to vehicle hubs and hinges.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3510 Magnet Wire

"Magnet wire" means aluminum or copper wire which may ~~subsequently~~ be used in an electromagnetic device.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3530 Magnet Wire Coating

"Magnet wire coating" means any electrically insulating varnish or enamel or other protective, decorative, or functional coating applied onto the surface of magnet wire.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3550 Magnet Wire Coating Line

"Magnet wire coating line" means a coating line in which any electrically insulating varnish or enamel or other protective, decorative, or functional coating is applied onto the surface of magnet wire.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3555 Maintenance Cleaning

"Maintenance ~~cleaning~~ Cleaning" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, a solvent cleaning operation or activity carried out to ensure that general work areas where manufacturing or repair activity is performed remain clean, and to clean tools, machinery, molds, forms, jigs, and equipment. This definition does not include the cleaning of coatings, adhesives, or ink application equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3590 Major Metropolitan Area (MMA)

"Major Metropolitan Area (MMA)" means any county or group of counties listed in which is defined by the following Table:

MAJOR METROPOLITAN AREAS (MMAs) IN ILLINOIS (MMA's)

MMA	COUNTIES INCLUDED IN MMA
Champaign-Urbana	Champaign
Chicago	Cook, Lake, Will, DuPage, McHenry, Kane, Grundy, Kendall, Kankakee
Decatur	Macon
Peoria	Peoria, Tazewell
Rockford	Winnebago
Rock Island - Moline	Rock Island
Springfield	Sangamon
St. Louis (Illinois)	St. Clair, Madison
<u>Bloomington-Normal</u> ~~Bloomington-Normal~~	McLean

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3610 Major Population Area (MPA)

"Major Population Area (MPA)" means areas of major population concentration in Illinois, as described below:

The area within the counties of Cook, Lake, DuPage, and Will; the townships of Burton, Richmond, McHenry, Greenwood, Nunda, Door, Algonquin, and Grafton and the municipality of Woodstock, plus a zone extending two miles beyond the boundary of Woodstock~~said municipality located~~ in McHenry County; the townships of Dundee, Rutland, Elgin, Plato, St. Charles, Campton, Geneva, Blackberry, Batavia, Sugar Creek, and Aurora ~~located~~ in Kane County; and the municipalities of Kankakee, Bradley, and Bourbonnais, plus a zone extending two miles beyond the boundaries of those~~said~~ municipalities, in Kankakee County.

The area within the municipalities of Rockford and Loves Park, plus a zone extending two miles beyond the boundaries of those~~said~~ municipalities.

The area within the municipalities of Rock Island, Moline, East Moline, Carbon Cliff, Milan, Oak Grove, Silvis, Hampton, Greenwood, and Coal Valley, plus a zone extending two miles beyond the boundaries of ~~those said~~ municipalities.

The area within the municipalities of Galesburg and East Galesburg, plus a zone extending two miles beyond the boundaries of ~~thosesaid~~ municipalities.

The area within the municipalities of Bartonville, Peoria, and Peoria Heights, plus a zone extending two miles beyond the boundaries of ~~thosesaid~~ municipalities.

The area within the municipalities of Pekin, North Pekin, Marquette Heights, Creve Coeur, and East Peoria, plus a zone extending two miles beyond the boundaries of ~~thosesaid~~ municipalities.

The area within the municipalities of Bloomington and Normal, plus a zone extending two miles beyond the boundaries of ~~thosesaid~~ municipalities.

The area within the municipalities of Champaign, Urbana, and Savoy, plus a zone extending two miles beyond the boundaries of ~~thosesaid~~ municipalities.

The area within the municipalities of Decatur, Mt. Zion, Harristown, and Forsyth, plus a zone extending two miles beyond the boundaries of ~~thosesaid~~ municipalities.

The area within the municipalities of Springfield, Leland Grove, Jerome, Southern View, Grandview, Sherman, and Chatham, plus a zone extending two miles beyond the boundaries of ~~thosesaid~~ municipalities.

The area within the townships of Godfrey, Foster, Wood River, Fort Russell, Chouteau, Edwardsville, Venice, Nameoki, Alton, Granite City, and Collinsville ~~located~~ in Madison County; and the townships of Stites, Canteen, Centreville, Caseyville, St. Clair, Sugar Loaf, and Stookey ~~located~~ in St. Clair County.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3620 Manually Operated Equipment

"Manually operated equipment" means a machine or tool that is handheld, such as a handheld circular saw or compressed air chisel; a machine or tool where the workpiece is held or manipulated by hand, such as a bench grinder; a machine or tool where the tool or bit is

manipulated by hand, such as a lathe or drill press; and any dust collection system which is part of ~~thesuch~~ machine or tool. ~~This definition does not include; but not including~~ any machine or tool where the extent of manual operation is to control power to the machine or tool ~~and not includingor~~ any central dust collection system serving more than one machine or tool.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3630 Manufacturing Process

"Manufacturing process" means a method ~~through which whereby~~ a process emission unit or series of process emission units is used to convert raw materials, feed stocks, subassemblies, or other constituent parts into a product, either for sale or for use in a subsequent manufacturing process.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3665 Mask Coating

"Mask coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a thin film coating applied through a template to coat a small portion of a substrate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3670 Material Recovery Section

"Material recovery section" means, ~~for manufacturing with respect to manufacture of~~ polystyrene resin, any equipment designed to transport and recover styrene monomer and other impurities from other products and by-products in a polystyrene plant, including ~~but not limited to the~~ styrene ~~devolatilizer devolatilizer~~ unit and styrene recovery unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3690 Maximum Theoretical Emissions

"Maximum theoretical emissions" means the quantity of ~~VOM volatile organic material~~ emissions that theoretically could be emitted by a stationary source before add-on controls, based on the design capacity or maximum production capacity of the source and 8,760 hours per year. The design capacity or maximum production capacity includes use of coating(s) or ink(s) with the highest ~~VOM volatile organic material~~ content actually used in practice by the source, ~~provided;~~ however, the Agency ~~mustshall~~, when appropriate, and ~~when upon request by~~ the permit applicant ~~requests~~, limit the "maximum theoretical emissions" of a source by ~~imposing the imposition of~~ conditions in a federally enforceable operating permit for ~~thesuch~~ source. ~~TheseSuch~~ conditions ~~mustshall~~ not be inconsistent with requirements of the Clean Air Act, as amended, or any applicable requirements established by the Board. ~~TheseSuch~~ conditions ~~mustshall~~ be established in place of design capacity or maximum production capacity in calculating the "maximum theoretical emissions" for ~~thesuch~~ source and may include

~~establishing, among other things, the establishment of~~ production limitations, capacity limitations, or limitations on the ~~VOM~~~~volatile organic material~~ content of coatings or inks, or the ~~operating hours of operation~~ of any emission unit, or a combination of ~~these~~~~any such~~ limitations. Production or capacity limitations ~~must~~~~shall~~ be established ~~for on a basis of~~ no longer than one month except ~~when in those cases where a limit spanning~~ a longer period of time is appropriate. In ~~those~~~~such~~ cases, a limit or limitation must not exceed an annual limit rolled on a basis of at most a month. ~~For ; that is, for~~ example, a monthly production or a capacity level must be determined for each parameter subject to a production or capacity limitation and added to the ~~11~~~~eleven~~ prior monthly levels for monthly comparison with the annual limit. Any production or capacity limitations ~~must~~~~shall~~ be verified through appropriate recordkeeping.

BOARD NOTE (~~Board Note:~~ ~~The~~ USEPA may deem operating permits ~~not “federally enforceable” if they which~~ do not conform to the operating permit program requirements and ~~the requirements of~~ USEPA's underlying regulations, including the requirement that limitations be quantifiable and enforceable as a practical matter, ~~not “federally enforceable.”~~)

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3695 Maximum True Vapor Pressure

"Maximum true vapor pressure" means the equilibrium partial pressure exerted by stored VOL at the temperature equal to the highest calendar-month average of the VOL storage temperature for VOLs stored above or below the ambient temperature or at the local maximum monthly average temperature of ~~75 °F~~~~75°F~~ for the Chicago area, as defined at 35 Ill. Adm. Code 218.100, or ~~79 °F~~~~79°F~~ for the Metro-East area, as defined at 35 Ill. Adm. Code 219.100, for VOLs stored at the ambient temperature, as determined:

- a) In ~~compliance~~~~accordance~~ with methods ~~described~~ in American Petroleum Institute Manual of Petroleum Measurement Standards Chapter 19.2 Evaporative Loss from Floating-roof Tanks (August 2000)~~bulletin 2517, Evaporation Loss from External Floating-Roof Tanks~~, incorporated by reference at 35 Ill. Adm. Code 218.112 and 219.112; or
- b) By ASTM Method ~~D2879-18~~~~D2879-83~~, incorporated by reference at 35 Ill. Adm. Code 218.112(a)(1) and 219.112(a)(1).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3705 Medical Device

"Medical ~~device~~~~Device~~" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar article, including any component or accessory, that meets one or more of the following conditions:

- a) ~~It is~~ is intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease;
- b) ~~It is~~ is intended to affect the structure or any function of the body; or
- c) ~~It is~~ is defined in the National Formulary or the United States Pharmacopeia, or any supplement to them.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3707 Medical Device and Pharmaceutical Manufacturing

"Medical ~~device~~~~Device~~ and ~~pharmaceutical manufacturing~~ **Pharmaceutical Manufacturing**" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, the collection of equipment and activities to prepare, utilize, maintain, and repair work areas, ~~in order~~ to accomplish one or more steps in preparing a medical device or pharmaceutical for its intended use. Manufacturing is typically, but not always, conducted in ~~compliance~~~~accordance~~ with criteria and procedures established to meet requirements of the United States Food and Drug Administration ~~and/or~~ other applicable regulatory agencies with authority over manufacturing operations for global sales of medical devices ~~and/or~~ pharmaceuticals. Work areas and equipment ~~must~~~~shall~~ include all machinery, tools, equipment, rooms, tables, countertops, and facilities for maintaining employee health and safety that are subject to ~~those~~~~such~~ criteria and procedures.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3710 Metal Furniture

"Metal furniture" means a ~~piece of~~ furniture, ~~piece~~ including, ~~but not limited to~~, tables, chairs, waste baskets, beds, desks, lockers, benches, shelving, file cabinets, lamps, and room dividers, made in whole or in part of metal.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3730 Metal Furniture Coating

"Metal furniture coating" means any protective, decorative, or functional coating applied onto the surface of any metal furniture or any metal part which will be assembled with other metal, wood, fabric, plastic, or glass parts to form metal furniture. This definition does not include ~~However, an adhesive is not a metal furniture coating.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3750 Metal Furniture Coating Line

"Metal furniture coating line" means a coating line in which any protective, decorative, or functional coating is applied onto the surface of any metal furniture or any metal part which will

be assembled with other metal, wood, fabric, or glass parts to form metal furniture.
~~Applying~~However, application of an adhesive is not a metal furniture coating line or part of a metal furniture coating line.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3755 Metalized Epoxy Coating

"Metalized epoxy coating" means an epoxy coating that contains relatively large quantities of metallic pigmentation for appearance, ~~and/or~~ added protection, ~~or both~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3760 Metallic Coating

"Metallic coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that contains more than 5 ~~ggrams~~ of pure elemental metal, or a combination of elemental metals, per liter of coating as applied.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3770 Metallic Shoe-Type Seal

"Metallic shoe-type seal" means a primary or secondary seal constructed of metal sheets (shoes) ~~which are~~ joined together to form a ring, springs or levers which attach the shoes to the floating roof and hold the shoes against the tank wall, and a coated membrane ~~which is~~ suspended from the shoes to the floating roof.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3775 Metal to Urethane/Rubber Molding or Casting Adhesive

"Metal to urethane/rubber molding or casting adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive intended by the manufacturer to bond metal to high density or elastomeric urethane or molded rubber materials, in heater molding or casting processes, to fabricate products such as rollers for computer printers or other paper handling equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3780 Mid-Kiln Firing

"Mid-kiln firing" means, for ~~the purposes of~~ 35 Ill. Adm. Code 217, ~~Subpart T~~, a secondary firing in a kiln system by injecting fuel at an intermediate point in the kiln system using a specially designed fuel injection mechanism ~~to decrease for the purposes of decreasing~~ NO_x emissions through burning part of the fuel at a lower temperature, and reducing conditions at the fuel injection point that may destroy some of the NO_x formed upstream in the kiln system.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3785 Military Specification Coating

"Military specification coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that has a formulation approved by a United States military agency for use on military equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3790 Miscellaneous Fabricated Product Manufacturing Process

"Miscellaneous fabricated product manufacturing process" means a manufacturing process involving one or more of the following applications, including any drying and curing of formulations, and capable of emitting VOM:

- a) Adhesives to fabricate or assemble parts or products;
- b) Asphalt solutions to paper or fiberboard;
- c) Asphalt to paper or felt;
- d) Coatings or dye to leather;
- e) Coatings to plastic, rubber, or glass;
- f) Disinfectant material to manufactured items;
- g) Plastic foam scrap or "fluff" from the manufacture of foam containers and packaging material to form resin pellets;
- h) Resin solutions to fiber substances;
- i) Rubber solutions to molds; or
- j) Viscose solutions for food casings.

This definition includes storing and handling formulations and using and handling organic liquids and other substances for clean-up operations associated with a process described in this definition.

~~A manufacturing process involving one or more of the following applications, including any drying and curing of formulations, and capable of emitting VOM:~~

~~Adhesives to fabricate or assemble parts or products;~~

~~Asphalt solutions to paper or fiberboard;~~

~~Asphalt to paper or felt;~~

~~Coatings or dye to leather;~~

~~Coatings to plastic;~~

~~Coatings to rubber or glass;~~

~~Disinfectant material to manufactured items;~~

~~Plastic foam scrap or "fluff" from the manufacture of foam containers and packaging material to form resin pellets;~~

~~Resin solutions to fiber substances;~~

~~Rubber solutions to molds; or~~

~~Viscose solutions for food casings.~~

~~The storage and handling of formulations associated with the process described above and the use and handling of organic liquids and other substances for clean-up operations associated with the process described in this definition would be included.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3810 Miscellaneous Formulation Manufacturing Process~~Process~~

"Miscellaneous formulation manufacturing process" means a manufacturing process which compounds one or more of the following and is capable of emitting VOM:

- a) Adhesives;
- b) Asphalt solutions;
- c) Caulks, sealants, or waterproofing agents;
- d) Coatings other than paint and ink;
- e) Concrete-curing compounds;
- f) Dyes;

- g) Friction materials and compounds;
- h) Resin solutions;
- i) Rubber solutions; or
- j) Viscose solutions.

This definition includes storing and handling formulations and using and handling organic liquids and other substances for clean-up operations associated with a process described in this definition.

~~A manufacturing process which compounds one or more of the following and is capable of emitting VOM:~~

~~Adhesives;~~

~~Asphalt solutions;~~

~~Caulks, sealants, or waterproofing agents;~~

~~Coatings, other than paint and ink;~~

~~Concrete curing compounds;~~

~~Dyes;~~

~~Friction materials and compounds;~~

~~Resin solutions;~~

~~Rubber solutions; or~~

~~Viscose solutions.~~

~~The storage and handling of formulations associated with the process described above, and the use and handling of organic liquids and other substances for clean-up operations associated with the process described in this definition would be included.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3820 Miscellaneous Industrial Adhesive Application Operation

"Miscellaneous industrial adhesive application operation" means, for ~~purposes of~~ Subparts JJ of 35 Ill. Adm. Code 218 and 219, a regularly occurring industrial process consisting of one or more adhesive applicators and any associated drying area, ~~and/or~~ oven, or both in which an adhesive is applied, dried, ~~and/or~~ cured or any combination of these.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3830 Miscellaneous Metal Parts and Products

"Miscellaneous metal parts and products" means, for ~~the purpose of~~ 35 Ill. Adm. Code 215. Subpart F, ~~shall include~~ farm machinery, garden machinery, small appliances, commercial machinery, industrial machinery, fabricated metal products, and any other industrial category in which metal parts or products under the Standard Industrial Classification Code for Major Groups 33, 34, 35, 36, 37, 38, or 39 are coated, ~~with the exception of~~ except the following: coating lines subject to 35 Ill. Adm. Code 215.204(a) through (i) and (k); architectural coatings; automobile or light-duty truck refinishing; the exterior of marine vessels; and the customized top coating of automobiles and trucks if production is less than 35~~thirty-five~~ vehicles per day.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3850 Miscellaneous Metal Parts and Products Coating

"Miscellaneous metal parts and products coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any protective, decorative, or functional coating applied onto the surface of any metal part or metal product, even if attached to or combined with a nonmetal part or product.

- a) This definition includes~~including~~ underbody anti-chip (e.g., underbody plastisol) automobile and light-duty truck coatings.
- b) This definition does not include~~Not including~~ the following coatings, which are subject to separate regulations: can coatings; coil coatings; metal furniture coatings; large appliance coatings; magnet wire coatings; prime coat, primer surfacer coat, topcoat, and final repair coat for automobile and light-duty trucks; and aerospace coatings subject to ~~the requirements of~~ 35 Ill. Adm. Code 219.204(r); and
- c) This definition does not include~~Not including~~ the following coatings: architectural coatings; automobile or light-duty truck refinishing coatings; coatings applied to the exterior of marine vessels; coatings applied to the exterior of airplanes; customized topcoat for automobiles and trucks if production is less than 35 vehicles per day; and high temperature aluminum coating applied to diesel-electric locomotives in Cook County.
- d) For Subparts F of 35 Ill. Adm. Code Parts 218 and 219, the definition does not include decorative, protective, or functional materials that consist only of protective oils for metal, acids, bases, or any combination of these substances.

For this purpose, "protective oil" means an organic material that is applied to metal for providing lubrication or protection from corrosion without forming a solid film, and includes lubricating oils, evaporative oils (including those that evaporate completely), and extrusion oils. Protective oils used on miscellaneous metal parts and products include magnet wire lubricants and soft temporary protective coatings that are removed before installation or further assembly of a part or component.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3870 Miscellaneous Metal Parts or Products Coating Line

"Miscellaneous metal parts or products coating line" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating line in which any protective, decorative, or functional coating is applied onto the surface of any metal part or metal product, even if attached to or combined with a nonmetal part or product.;

- a) ~~This definition includes~~Including underbody anti-chip (e.g., underbody plastisol) automobile and light-duty truck coatings.;
- b) ~~This definition does not include~~Not including the following coatings, which are subject to separate regulations: can coatings; coil coatings; metal furniture coatings; large appliance coatings; magnet wire coatings; prime coat, primer surfacer coat, topcoat, and final repair coat for automobile and light-duty trucks; and aerospace coatings subject to ~~the requirements of~~ 35 Ill. Adm. Code 219.204(r).; and
- c) ~~This definition does not include~~Not including the following coatings: architectural coatings.;; automobile or light-duty truck refinishing coatings.;; coatings applied to the exterior of marine vessels.;; coatings applied to the exterior of airplanes.;; customized topcoat for automobiles and trucks if production is less than 35 vehicles per day.;; and high temperature aluminum coating applied to diesel-electric locomotives in Cook County.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3890 Miscellaneous Organic Chemical Manufacturing Process

"Miscellaneous organic chemical manufacturing process" means a manufacturing process which produces by chemical reaction one of more of the following organic compounds or mixtures of organic compounds and is capable of emitting VOM:

- a) Chemicals listed in Appendix A of 35 Ill. Adm. Code 215, 218, or 219, as applicable;
- b) Chlorinated and sulfonated compounds;

- c) Cosmetic, detergent, soap, or surfactant intermediaries or specialties and products;
- d) Disinfectants;
- e) Food additives;
- f) Oil and petroleum product additives;
- g) Plasticizers;
- h) Resins or polymers;
- i) Rubber additives;
- j) Sweeteners; or
- k) Varnishes.

This definition includes storing and handling formulations and using and handling organic liquids and other substances for clean-up operations associated with a process described in this definition.

~~A manufacturing process which produces, by chemical reaction, one or more of the following organic compounds or mixtures of organic compounds and which is capable of emitting volatile organic material (VOM):~~

~~Chemicals listed in Appendix A of 35 Ill. Adm. Code 215, 218, or 219, as applicable;~~

~~Chlorinated and sulfonated compounds;~~

~~Cosmetic, detergent, soap, or surfactant intermediaries or specialties and products;~~

~~Disinfectants;~~

~~Food additives;~~

~~Oil and petroleum product additives;~~

~~Plasticizers;~~

~~Resins or polymers;~~

~~Rubber additives;~~

~~Sweeteners; or~~

~~Varnishes.~~

~~The storage and handling of formulations associated with the process described above and the use and handling of organic liquids and other substances for clean up operations associated with the process described in this definition would be included.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3915 Mobile Equipment

"Mobile equipment" means any equipment which may be drawn or is capable of being driven on a roadway, other than motor vehicles, including, ~~but not limited to~~ truck or automobile trailers, farm machinery, construction equipment, street cleaners, and golf carts.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3925 Mold Seal Coating

"Mold seal coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, the initial coating applied to a new mold or a repaired mold to provide a smooth surface that, when coated with a mold release coating, prevents products from sticking to the mold.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3961 Motor Vehicle Adhesive

"Motor vehicle adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, an adhesive, including glass bonding adhesive, used at a facility that is not an automobile or light-duty truck assembly coating facility, applied ~~to bond for the purpose of bonding~~ two vehicle surfaces together without regard to the substrates involved.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3965 Motor Vehicle Refinishing

"Motor vehicle refinishing" means any application of coatings to motor vehicles, mobile equipment, or their parts and components ~~after, which is subsequent to~~ the original coating ~~application~~ applied at an original equipment manufacturing plant.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3966 Motor Vehicle Weatherstrip Adhesive

"Motor vehicle weatherstrip adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, an adhesive, used at a facility that is not an automobile or light-duty truck assembly coating facility, applied to weatherstripping materials to bond~~for the purpose of bonding~~ the weatherstrip material to the surface of the vehicle.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3967 Mouth Waterproofing Sealant

"Mouth waterproofing sealant" means, ~~for purposes of 35 Ill. Adm. Code 218.204(q)(1) and 219.204(q)(1);~~ a coating applied in the manufacture of ammunition to provide a waterproof barrier between a shellcase mouth and bullet.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3968 Multi-Colored Coating

"Multi-colored coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that exhibits more than one color when applied, and which is packaged in a single container and applied in a single coat.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3969 Multi-Component Coating

"Multi-component coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating requiring the addition of a separate reactive resin, commonly known as a catalyst or hardener, before application to form an acceptable dry film.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3970 Multiple Package Coating

"Multiple package coating" means a coating made from more than one different ingredient which must be mixed before prior to using and has a limited pot life due to the chemical reaction which occurs upon mixing.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3975 Multipurpose Construction Adhesive

"Multipurpose construction adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive used to install or repair~~in the installation or repair of~~ various construction materials,

including ~~but not limited to~~ drywall, subfloor, panel, fiberglass reinforced plastic (FRP), ceiling tile, and acoustical tile.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3980 Nameplate Capacity

"Nameplate capacity" means the maximum electrical generating output (in MWe) that a generator can sustain over a specified period of time when not restricted by seasonal or other deratings, as measured in ~~compliance~~ ~~accordance~~ with ~~the~~ United States Department of Energy standards.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.3985 Natural Finish Hardwood Plywood Panel

"Natural ~~finish hardwood plywood panel~~ ~~Finish Hardwood Plywood Panel~~" means a panel whose original grain pattern is enhanced by essentially transparent finishes frequently supplemented by filters and toners.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4030 No Detectable Volatile Organic Material Emissions

"No detectable volatile organic material emissions" means a discharge of ~~VOM~~ ~~volatile organic material~~ into the atmosphere ~~as~~ indicated by an instrument reading of less than 500 ppm above background, as determined in ~~compliance~~ ~~accordance~~ with 40 CFR 60.485(c), ~~(incorporated by reference in 35 Ill. Adm. Code 215.105, 218.112, and 219.112).~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4050 Non-Contact Process Water Cooling Tower

"Non-contact process water cooling tower" means a ~~tower-like~~ ~~towerlike~~ device in which water is cooled by contact with atmospheric air and evaporation, where ~~the~~ ~~such~~ water has been or will be used for cooling ~~of~~ a process stream where VOM is present without intentional direct contact of the cooling water and process stream.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4052 Non-Convertible Coating

"Non-convertible coating" means, for ~~purposes of~~ Section 211.1877, a coating that dries by solvent evaporation with no change in the chemical nature of the binder. The coating remains soluble in the original solvent after drying.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4066 Nonstructural Adhesive for Aerospace Applications

"Nonstructural adhesive for aerospace applications" means an adhesive that bonds ~~non-loadbearing~~~~nonload bearing~~ aerospace components in noncritical applications and is not ~~included~~~~covered~~ in any other specialty adhesive categories ~~listed~~ in 35 Ill. Adm. Code 219.204(r)(2).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4067 NO_x Trading Program

~~For the purposes of 35 Ill. Adm. Code 217, Subparts U and W, the "NO_x Trading Program" means shall mean, for 35 Ill. Adm. Code 217. Subpart U and W,~~ the requirements of 35 Ill. Adm. Code 217, Subparts U and W; and ~~the~~~~these~~ provisions of the federal NO_x Trading Program, 40 CFR 96, incorporated by reference ~~at 35 Ill. Adm. Code 217.104~~~~therein~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4070 Offset

"Offset" means, ~~for with respect to~~ printing, use of a blanket cylinder to transfer ink from the plate cylinder to the surface to be printed.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4080 One-Component Coating

"One-component coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that is ready for application as it comes out of its container to form an acceptable dry film. A thinner added to a coating to reduce the viscosity is not considered a component; and ~~therefore~~ does not ~~affect~~~~impact~~ the coating's classification as a one-component coating or multi-component coating.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4090 One Hundred Percent Acid

"One hundred percent acid" means, ~~for with respect to~~ sulfuric and nitric acids, acid with a specific gravity of 1.8205 at ~~30 °C~~~~30° C~~ ~~for in the case of~~ sulfuric acid and 1.4952 at ~~30 °C~~~~30° C~~ ~~for in the case of~~ nitric acid.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4110 One-Turn Storage Space

"One-turn storage space" means ~~that~~ space used to store grain with a total annual through-put not ~~exceeding in excess of~~ the total bushel storage of that space.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4130 Opacity

"Opacity" means ~~that the~~ fraction of light, expressed in percent, which, when transmitted from a source through a smoke-obscured path, is prevented from reaching the observer or instrument receiver.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4210 Operator of a Gasoline Dispensing Operation or Operator of a Gasoline Dispensing Facility

"Operator of gasoline dispensing operation" or "Operator of a gasoline dispensing facility" means any person who is the lessee of or operates, controls, or supervises a gasoline dispensing operation or a gasoline dispensing facility.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4220 Optical Coating

"Optical coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied to an optical lens.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4250 Organic Material and Organic Materials

- a) "Organic materials" means, for ~~the purposes of~~ Section 9.4 of the Act, any chemical compound of carbon, including diluents and thinners which are liquids at standard conditions and which are used as solvers, viscosity reducers, or cleaning agents, including polychlorinated dibenzo-p-dioxins, polychlorinated dibenzofurans, and polynuclear aromatic hydrocarbons, but excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbonic acid, metallic carbide, metallic carbonates, and ammonium carbonate ~~are not organic materials~~.
- b) "Organic material" means, for ~~the purposes of~~ 35 Ill. Adm. Code 201, 211, 215, 218, and 219, any chemical compound of carbon, including diluents and thinners which are liquids at standard conditions and which are used as solvers, viscosity reducers, or cleaning agents, but excluding methane, acetone, carbon monoxide, carbon dioxide, carbonic acid, metallic carbonic acid, metallic carbide, metallic carbonates, and ammonium carbonate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4260 Organic Solvent

"Organic solvent" means a solvent that consists of organic mineral spirits, methyl ethyl ketone, ethanol, ether, toluene, or other organic materials other than soap, detergent, surfactants, lubricating oil, wax, vegetable oil, grease, glycerin, or animal fat. For ~~purposes of~~ 35 Ill. Adm. Code 201.5-Subpart F, a solvent which is a mixture ~~is~~shall be an organic solvent if it contains more than 5%~~percent~~ by volume of ~~such~~ organic materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4280 Other Glass

"Other glass" means, for ~~35 Ill. Adm. Code~~purposes of Part 217, glass that is neither container glass, as ~~that term is~~ defined in Section 211.1435, nor flat glass, as ~~that term is~~ defined in Section 211.2357.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4285 Outdoor Floor Covering Installation Adhesive

"Outdoor floor covering installation adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive intended by the manufacturer for ~~installing use in the installation of~~ floor covering that is not in an enclosure and that is exposed to ambient weather conditions during normal use.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4290 Oven

"Oven" means, ~~for with respect to~~ a coating line or printing line, a chamber within which heat is used to dry, bake, cure, or polymerize a coating or ink, or any combination of these uses.~~for one or more of the following purposes_ dry, bake, cure, or polymerize a coating or ink.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4370 Owner or Operator

"Owner or operator" means any person who owns, operates, leases, controls, or supervises a source, an emission unit, or air pollution control equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4390 Packaging Rotogravure Printing

"Packaging rotogravure printing" means rotogravure printing upon paper, paper board, metal foil, plastic film, and other substrates; which are, in subsequent operations, formed into packaging products or labels for articles to be sold.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4430 Pail

"Pail" means any cylindrical shipping container of 1- to 12-gallon capacity and constructed of 29-gauge and heavier material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4455 Pan-Backing Coating

"Pan-backing coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied to the surface of pots, pans, or other cooking implements that are exposed directly to a flame or other heating elements.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4470 Paper Coating

"Paper coating" means any protective, decorative, or functional coating applied on paper, plastic film, or metallic foil to make certain products, including ~~but not limited to~~ adhesive tapes and labels, book covers, post cards, office copier paper, drafting paper, ~~and/or~~ pressure sensitive tapes. For ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, paper coating includes coatings applied by impregnation or saturation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4490 Paper Coating Line

"Paper coating line" means a coating line in which any protective, decorative, or functional coating is applied on, saturated into, or impregnated into paper, plastic film, or metallic foil to make certain products, including ~~but not limited to~~ adhesive tapes and labels, book covers, post cards, office copier paper, drafting paper, and pressure sensitive tapes. For ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a paper coating line includes impregnation or ~~saturation or impregnation.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4530 Parts Per Million (Volume) or PPM (Vol)

"Parts per million (volume)" or "PPM (vol)" means a volume/volume ratio which expresses the volumetric concentration of gaseous air contaminant in a ~~million-unit~~ million-unit volume of gas.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4535 Part Marking Aerospace Coating

"Part marking aerospace coating" means coatings or inks used to make identifying markings on aerospace materials, components, or assemblies. These markings may be ~~either~~ permanent or temporary.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4540 Perimeter Bonded Sheet Flooring

"Perimeter bonded sheet flooring" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, sheet flooring with vinyl backing installed onto a nonporous substrate using an adhesive designed to be applied only to a strip of up to four inches wide around the perimeter of the sheet flooring.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4550 Person

"Person" means:

- a) Any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, state, municipality, political subdivision of a state;
- b) Anyany agency, department, or instrumentality of the United States; and
- c) Anyany officer, agent, or employee of any of the above.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4610 Petroleum Liquid

"Petroleum liquid" means:

- a) Crude~~crude~~ oil, condensate, or any finished or intermediate product manufactured at a petroleum refinery, but not including acetone; ~~and~~
- b) Number 2 through Number 6 fuel oils ~~underas specified in~~ ASTM D396-24, D-396-69 (incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112);
- c) Gasgas turbine fuel oils Numbers 2-GT through 4-GT ~~underas specified in~~ ASTM D2880-23, D-2880-71 (incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112;) or

- d) ~~Diesel~~ diesel fuel oils Numbers 2-D and 4-D ~~under, as specified in~~ ASTM ~~D975-24, D 975-68~~ (incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4650 Pharmaceutical

"Pharmaceutical" means any compound or mixture, other than food, used to prevent, diagnose, alleviate, treat, or cure ~~in the prevention, diagnosis, alleviation, treatment, or cure of~~ disease in humans ~~human~~ and animals ~~animal~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4670 Pharmaceutical Coating Operation

"Pharmaceutical coating operation" means an operations ~~device~~ in which a coating is applied to a pharmaceutical, including air drying or curing ~~of the~~ coating.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4690 Photochemically Reactive Material

"Photochemically reactive material" means any organic material containing the chemical compounds below at more than 20% aggregate of its total volume, or containing an amount of a compound that exceeds the individual percentage limitation ~~with an aggregate of more than 20 percent of its total volume composed of the chemical compounds classified below or the composition of which exceeds any of the following individual percentage composition limitations. Whenever any photochemically reactive material or any constituent of any organic material may be classified from its chemical structure into more than one of the above groups of organic materials, it shall be considered as a member of the most reactive group, that is, the group having the least allowable percent of the total organic materials.~~

- a) A combination of hydrocarbons, alcohols, aldehydes, esters, ethers, or ketones having an olefinic or cyclo-olefinic types of unsaturation: 5%. This definition does not apply to perchloroethylene or trichloroethylene.
- b) A combination of aromatic compounds with eight or more carbon atoms to the molecule, excluding ethylbenzene: 8%.
- c) A combination of ethylbenzene, ketones having branched hydrocarbon structures, or toluene: 20%.

Whenever any photochemically reactive material or any constituent of any organic material may be classified from its chemical structure into more than one category of compounds defined as

"organic material" or "organic materials" at Section 211.4250, it will be considered a member of the group with the least allowable percent of total organic materials.

~~A combination of hydrocarbons, alcohols, aldehydes, esters, ethers, or ketones having an olefinic or cyclo-olefinic types of unsaturation: 5 percent. This definition does not apply to perchloroethylene or trichloroethylene.~~

~~A combination of aromatic compounds with eight or more carbon atoms to the molecule except ethylbenzene: 8 percent.~~

~~A combination of ethylbenzene, ketones having branched hydrocarbon structures, or toluene: 20 percent.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4720 Pipeline Natural Gas

"Pipeline natural gas" means a naturally occurring~~naturally occurring~~ fluid mixture of hydrocarbons (e.g., methane, ethane, or propane) produced in geological formations beneath the Earth's surface that maintains a gaseous state at standard atmospheric temperature and pressure under ordinary conditions, and that is provided by a supplier through a pipeline. Pipeline natural gas contains 0.5 grains or less of total sulfur per 100 ~~scf~~standard cubic feet. Additionally, pipeline natural gas must either be composed of at least 70 percent methane by volume or have a gross calorific value between 950 and 1100 ~~btu~~Btu per ~~scf~~standard cubic foot.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4730 Plant

"Plant" means, ~~for purposes~~ other than for 35 Ill. Adm. Code 215, 218, and 219, all ~~of~~ the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person ~~(or persons under common control)~~, except the activities of any marine vessel. Pollutant-emitting activities are~~shall be considered as~~ part of the same industrial grouping if they belong to the same major group, ~~(i.e., which have the same two-digit code,)~~ as described in the "Standard Industrial Classification Manual," 1987, ~~(incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112).~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4735 Plastic

"Plastic" means, for ~~purposes of~~ Subparts JJ of 35 Ill. Adm. Code 218 and 219, a synthetic material chemically formed by the polymerization of organic (carbon-based) substances. Plastics are usually compounded with modifiers, extenders, ~~and/or~~ reinforcers, or any combination of

them and are capable of being molded, extruded, cast into various shapes and films, or drawn into filaments.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4740 Plastic Part

"Plastic part" means a product₇ or piece of a product₇ made from a substance that has been formed from resin through applying~~the application of~~ pressure₁ ~~or~~ heat₁ or both.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4760 Plastic Solvent Welding Adhesive

"Plastic solvent welding adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive used to dissolve the surface of plastic to form a bond between mating surfaces.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4765 Plastic Solvent Welding Adhesive Primer

"Plastic solvent welding adhesive primer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any primer used to prepare plastic substrates before~~prior to~~ bonding or welding.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4768 Pleasure Craft

"Pleasure craft" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a vessel that is manufactured or operated primarily for recreational purposes, or leased, rented, or chartered to a person or business for recreational purposes.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4769 Pleasure Craft Surface Coating

"Pleasure craft surface coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any coating, except unsaturated polyester resin (fiberglass) coatings, containing VOM~~volatile organic materials~~ and applied by brush, spray, roller, or other means to a pleasure craft.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4770 PM₁₀~~PM-10~~

"PM~~10-10~~" means particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers, as measured by the applicable test methods specified by rule. Ambient air concentrations for PM~~10-10~~ are usually expressed in micrograms per cubic meter (~~ug~~ug/m³).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4790 Pneumatic Rubber Tire Manufacture

"Pneumatic rubber tire manufacture" means the production of pneumatic rubber tires with a bead diameter ~~under up to but not including~~ 20.0 inches and cross section dimension up to 12.8 inches, but not including specialty tires for antique or other vehicles when produced on equipment separate from normal production lines for passenger or truck type tires.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4810 Polybasic Organic Acid Partial Oxidation Manufacturing Process

"Polybasic organic acid partial oxidation manufacturing process" means any process involving partial oxidation of hydrocarbons with air to manufacture polybasic acids or their anhydrides, such as maleic anhydride, phthalic anhydride, terephthalic acid, isophthalic acid, ~~or trimellitic~~~~trimellitic~~ anhydride.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4830 Polyester Resin Material(s)

"Polyester resin material(s)" means gel coat and unsaturated polyester resin, such as isophthalic, orthophthalic, halogenated, bisphenol A, vinyl ester, or furan resins; cross-linking agents; catalysts; inhibitors; accelerators; promoters; and any other material containing VOM used in polyester resin operations, including ~~the following polyester resin materials~~:

- a) ~~Corrosion-resistant~~~~Corrosion-resistant~~ and ~~fire-retardant~~~~fire-retardant~~ polyester resin materials used to make products for corrosive and ~~fire-retardant~~~~fire-retardant~~ applications;
- b) High-strength polyester resin materials with a tensile strength of 10,000 psi or more; ~~and~~
- c) Gel coat.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4850 Polyester Resin Products Manufacturing Process

"Polyester resin products manufacturing process" means a manufacturing process that fabricates or reworks products for commercial, military, or industrial use by mixing, pouring, hand laying-

up, impregnating, injecting, pultruding, forming, winding, spraying, ~~and/or~~ curing, or any combination of these methods by using unsaturated polyester resin materials with fiberglass, filters, or any other reinforcement materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4895 Polyvinyl Chloride Plastic (PVC Plastic)

"Polyvinyl chloride plastic" or "PVC plastic" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a polymer of the chlorinated vinyl monomer that contains 57% ~~percent~~ or more chlorine.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4900 Porous Material

"Porous material" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a substance that has tiny openings, often microscopic, in which fluids may be absorbed or discharged, including, ~~but not limited to,~~ paper and corrugated paperboard. Porous material does not include wood.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4910 Portable Grain-Handling Equipment

"Portable grain-handling equipment" means any equipment (excluding portable grain dryers) that is designed and maintained to be movable primarily for use in a non-continuous operation for loading and unloading one-turn storage space and is not physically connected to the grain elevator, ~~if provided that~~ the manufacturer's rated capacity of the equipment does not exceed 10,000 bushels per hour.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4930 Portland Cement Manufacturing Process Emission Source

"Portland cement manufacturing process emission source" means any items of process equipment or manufacturing processes used in or associated with the production of portland cement, including, ~~but not limited to,~~ a kiln, clinker cooler, raw mill system, finish mill system, raw material dryer, material storage bin or system, material conveyor belt or other transfer system, material conveyor belt transfer point, bagging operation, bulk unloading station, or bulk loading station.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4960 Potential Electrical Output Capacity

"Potential electrical output capacity" means the MWe capacity rating for the units which ~~must~~shall be equal to 33% of the maximum design heat input capacity of the steam generating unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4970 Potential to Emit (PTE)

"Potential to emit (PTE)" means the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air pollutant, including air pollution control equipment and restriction on hours of operation or on the type or amount of material combusted, stored, or processed, ~~is~~shall be treated as part of its design if the limitation is federally enforceable.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.4990 Power Driven Fastener Coating

"Power driven fastener coating" means the coating of nail, staple, brad, and finish nail fasteners where ~~thesuch~~ fasteners are fabricated from wire or rod of ~~0.0254-inch~~0.0254 inch diameter or greater, ~~where such fasteners are~~ bonded into coils or strips, ~~such coils and strips~~ containing a number of ~~thesesuch~~ fasteners, ~~which fasteners are~~ manufactured for use in power tools, and ~~which fasteners~~ must conform with ~~formal~~ standards for specific uses established by ~~various~~ federal and national organizations, including ~~ASTM F1667/F1667M-21a Federal Specification FF-N-105b of the General Services Administration dated August 23, 1977 (does not include any later amendments or editions; U.S. Army Armament Research and Development Command, Attn: DRDAR-TST, Rock Island, IL 61201), Bulletin UM-25d of the U.S. Department of Housing and Urban Development—Federal Housing Administration dated September 5, 1973 (does not include any later amendments or editions; Department of HUD, 547 W. Jackson Blvd., Room 1005, Chicago, IL 60606), and the International Building Code (IBC) (2024), both incorporated by reference in Section 211.101, Model Building Code of the Council of American Building Officials~~ and similar standards. For ~~the purposes of~~ this definition, the terms "brad" and "finish nail" ~~mean~~refer to single leg fasteners fabricated in the same manner as staples. The application of coatings to staple, brad, and finish nail fasteners may be associated with the incremental forming of ~~thesueh~~ fasteners in a cyclic or repetitious manner (incremental fabrication) or with ~~the~~ forming ~~of~~ strips of ~~thesueh~~ fasteners as a unit from a band of wires (unit fabrication).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5012 Prefabricated Architectural Coatings

"Prefabricated architectural coatings" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, coatings applied to metal parts and products that are to be used as an architectural structure.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5015 Preheater Kiln

"Preheater kiln" means, for ~~the purposes of~~ 35 Ill. Adm. Code 217.5-Subpart T, a kiln where the feed to the kiln is preheated in cyclone chambers ~~before prior to~~ the final reactions in a kiln which forms clinker.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5020 Preheater/Precalciner Kiln

"Preheater/precalfiner kiln" means, for ~~the purposes of~~ 35 Ill. Adm. Code 217.5-Subpart T, a kiln where the feed to the kiln is preheated in cyclone chambers and ~~uses~~utilizes a second burner to calcine material in a separate vessel attached to the preheater ~~before prior to~~ the final fusion in a kiln which forms clinker.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5061 Pretreatment Coating

"Pretreatment coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that contains no more than 12%~~-percent~~ solids by weight and at least 0.50%~~-percent~~ acid by weight, is used to provide surface etching, and is applied directly to metal surfaces to provide corrosion resistance, adhesion, and ease of stripping.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5062 Pretreatment Wash Primer

"Pretreatment wash primer" means:

- a) For ~~purposes of~~ Subparts HH of 35 Ill. Adm. Code 218 and 219, the first coating applied to bare metal if ~~solvent-borne~~solventborne primers will be applied. This coating contains a minimum of 0.5%~~-percent~~ acid, by weight, is necessary to provide surface etching, and provides corrosion resistance and adhesion;
- b) For ~~purposes of~~ Subparts F of 35 Ill. Adm. Code 218 and 219, a coating that contains no more than 12%~~-percent~~ solids by weight and at least 0.50%~~-percent~~ acids by weight, is used to provide surface etching, and is applied directly to fiberglass and metal surfaces to provide corrosion resistance and adhesion of subsequent coatings.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5065 Primary Product

"Primary ~~product~~Product" means a product of a chemical manufacturing process unit ~~that shall~~
~~must be~~ determined according to the following procedures ~~specified as follows~~:

- a) If a chemical manufacturing process unit produces more than one intended chemical product, the product with the greatest annual design capacity on a mass basis ~~is determined~~ the primary product of the process.
- b) If a chemical manufacturing process unit has two more products that have the same maximum annual design capacity on a mass basis, and if one of those chemicals is listed in Appendix A of 35 Ill. Adm. Code 218 or 219, then the listed chemical is considered the primary product. If more than one of the products is listed in Appendix A of 35 Ill. Adm. Code 218 or 219, then the owner or operator may designate any of the listed chemicals as the primary product ~~any of the listed chemicals~~.
- c) For a chemical manufacturing process unit that is designed and operated as a flexible operation unit and is used predominantly to produce one or more of the listed chemicals in Appendix A of 35 Ill. Adm. Code 218 or 219, the primary product ~~is shall be~~ determined based on the expected production utilization for the five years after May 9, 1995, following promulgation for existing sources and based on the expected production utilization for the first five years after initial start-up for new sources.
 - 1) If the flexible operation unit produces one product for the greatest annual operating time, then that product represents~~shall represent~~ the primary product of the flexible operation unit.
 - 2) If the flexible operation unit produces multiple chemicals equally based on operating time, then the product with the greatest annual production on a mass basis represents~~shall represent~~ the primary product of the flexible operation unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5075 Primer Sealant

"Primer sealant" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.204(q) and 219.204(q), a sealant applied in the manufacture of ammunition to assembled primers to maintain the primer assembly and prevent explosive priming mix from dusting during the transfer of primers.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5090 Primer Surfacer Coat

"Primer surfacer coat" means;

- a) ~~For purposes of~~ 35 Ill. Adm. Code 215.204(a), 218.204(a)(1), and 219.204(a)(1), a coating used to touch up areas on the surface of automobile or light-duty truck bodies not adequately covered by the prime coat before application of the top-coat. The primer surfacer coat is applied between the prime coat and topcoat. An anti-chip coating applied to main body parts (e.g., rocker panels, bottom of doors and fenders, and leading edge of roof) is a primer surfacer~~primer/surfacer~~ coat. The primer surfacer coat is also referred to as a "guide coat."
- b) ~~For "Primer surfacer coat" means, for purposes of Subparts HH of~~ 35 Ill. Adm. Code 218,~~Subpart HH~~ and 219,~~Subpart HH~~, a coating applied to motor vehicles, mobile equipment, or their parts and components at motor vehicle refinishing operations that fills in surface imperfections and builds a thickness ~~in order to~~ allow sanding.
- c) ~~For "Primer surfacer coat" means, for purposes of~~ 35 Ill. Adm. Code 218.204(a)(2) and 219.204(a)(2), an intermediate protective coating applied over the electrodeposition primer and under the topcoat. Primer surfacer provides adhesion, protection, and appearance properties to the total finish. Primer surfacer may also be called guide coat or surfacer. Primer surfacer operations may include other coatings (e.g., anti-chip, lower-body anti-chip, chip-resistant edge primer, spot primer, blackout, deadener, interior color, basecoat replacement coating, etc.) that are applied in the same spray booths.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5110 Primer Surfacer Operation

"Primer surfacer operation" means the application ~~areas~~area(s), flashoff ~~areas~~area(s) and ~~oven~~oven(s) ~~that are~~ used to apply and dry or cure primer surfacer coat on a single assembly line.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5140 Printed Interior Panel

"Printed ~~interior panel~~Interior Panel" mean a panel whose grain or natural surface is obscured by fillers and basecoats upon which a simulated grain or decorative pattern is printed.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5170 Printing Line

"Printing line" means an operation consisting of a series of one or more roll printers and any associated roll coaters, drying areas, and ovens ~~in which~~wherein one or more coatings are applied, dried, ~~and/or~~ cured, or any combination of these activities.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5195 Process Heater

"Process heater" means, for ~~35 Ill. Adm. Code purposes of Part~~ 217, an enclosed combustion device that burns only gaseous or liquid fuels ~~only~~ and that indirectly transfers heat to a process fluid or a heat transfer medium other than water. This ~~definition term~~ does not include pipeline heaters and storage tank heaters that are primarily meant to maintain fluids at a certain temperature or viscosity.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5210 Process Unit

"Process unit" means equipment and components assembled to produce one or more chemicals; as intermediate or final products, ~~one or more chemicals~~. A process unit can operate independently if supplied with sufficient feed or raw materials and sufficient storage facilities for the product. For ~~purposes of~~ Subparts Q of ~~35 Ill. Adm. Code Parts~~ 215, 218, and 219, a process unit must produce one or more of the chemicals listed in Appendix A of 35 Ill. Adm. Code 215, 218, or 219, as applicable.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5245 Process Vent

"Process vent" means, for ~~purposes of~~ 35 Ill. Adm. Code ~~218 and 219, Sections~~ 218.500 through 218.506 and 219.500 through 219.506, any non-fugitive source of VOM emissions to the atmosphere resulting from non-combustion emission units. A process vent begins at the inlet to the control device, or, in the absence of a control device, at the point of discharge to the atmosphere. This definition includes all emission units vents and stacks. ~~This Not included in this definition does not include~~ exhaust streams from exhaust hoods and building ventilation fans which are used to provide ventilation for workers and not to collect and discharge emissions from specific emission units.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5250 Process Weight Rate

"Process weight rate" means the actual weight or engineering approximation of it thereof of all materials, except liquid and gaseous fuels and combustion air, introduced into any process per hour. For a cyclical or batch operation, the process weight rate ~~is the shall be determined by dividing such~~ actual weight or engineering approximation of it thereof divided by the number of hours of operation, excluding any time ~~during which~~ the equipment is idle. For continuous processes, the process weight rate ~~is the shall be determined by dividing such~~ actual weight or

engineering approximation ~~of it~~ thereof divided by the number of hours in one complete operation, excluding any time ~~during which~~ the equipment is idle.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5270 Production Equipment Exhaust System

"Production equipment exhaust system" means a system for collecting and directing into the atmosphere emissions of ~~VOM~~ volatile organic material from reactors, centrifuges, and other process emission units.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5310 Publication Rotogravure Printing Line

"Publication rotogravure printing line" means a rotogravure printing line printing upon paper ~~which is~~ subsequently formed into books, magazines, catalogues, brochures, directories, newspaper supplements, or other types of non-packaging printed materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5330 Purged Process Fluid

"Purged process fluid" means liquid or vapor from a process unit that contains ~~VOM~~ volatile organic material and that results from flushing or cleaning the sample ~~lines~~ line(s) of a process unit so that an uncontaminated sample may then be taken for testing or analysis.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5335 Radiation Effect Coating

"Radiation ~~effect coating~~ Effect Coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, a coating or coating system engineered to interact, through absorption or reflection, with specific regions of the electromagnetic energy spectrum, such as the ultraviolet, visible, infrared, or microwave regions. Uses include, ~~but are not limited to,~~ lightning strike protection, electromagnetic pulse protection, and radar avoidance. This definition does not include coatings ~~Coatings~~ that have been designated "classified" by the Department of Defense ~~are not included in this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5336 Radiation-Effect or Electric Coating

"Radiation-effect or electric coating" means a coating or coating system engineered to interact, through absorption or reflection, with specific regions of the electromagnetic energy spectrum, such as the ultraviolet, visible, infrared, or microwave regions. Uses include lightning strike

protection, electromagnetic pulse protection, and radar avoidance. This definition does not include coatings that have been designated as "classified" by the Department of Defense are exempt from this definition.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5338 Radome

"Radome" means, for purposes of the definitions of "electrostatic discharge and electromagnetic interference" and "rain erosion-resistant coating", the nonmetallic protective housing for electromagnetic transmitters and receivers (e.g., radar, electronic countermeasures, etc.).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5340 Rated Heat Input Capacity

"Rated heat input capacity" means the ability of an emission unit to combust a maximum amount of fuel on a steady state basis, as limited by a federally enforceable permit condition, or otherwise as stated by the manufacturer of the unit, based on the physical design and characteristics of the unit, or, if higher than the manufacturer's stated maximum amount, as demonstrated by the actual operation of the unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5370 Reasonably Available Control Technology (RACT)

"Reasonably available control technology (RACT)" means the lowest emission limitation that an emission unit is capable of meeting by the application of applying control technology that is reasonably available considering technological and economic feasibility.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5390 Reclamation System

"Reclamation system" means equipment which reclaims spent solvents, surplus propellants, waste materials, and other materials generated by an emission unit to produce solvent, propellant, or other materials which may be reused in the emission unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5400 Red Coating

"Red coating" means, for purposes of 35 Ill. Adm. Code 218 and 219, a coating that meets all of the following criteria:

a) Yellow limit: the hue of hostaperm scarlet;

- b) Blue limit: the hue of monastral red-violet;
- c) Lightness limit for metallics: 35%~~percent~~ aluminum flake;
- d) Lightness limit for solids: 50%~~percent~~ titanium dioxide white;
- e) Solid reds: hue angle of -11 to 38° and maximum lightness of 23 to 45 units; and
- f) Metallic reds: hue angle of -16 to 35° and maximum lightness of 28 to 45 units.

These criteria are based on Cielab color space, 0/45 geometry. For spherical geometry, specular included, the upper limit is 49 units.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5430 Refinery Fuel Gas

"Refinery fuel gas" means any gas ~~which is~~ generated by a petroleum refinery process unit and ~~which is~~ combusted at the refinery, including any gaseous mixture of natural gas and fuel gas.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5450 Refinery Fuel Gas System

"Refinery fuel gas system" means a system for ~~collecting~~~~collection of~~ refinery fuel gas, including, ~~but not limited to,~~ piping for collecting tail gas from various process units, mixing drums and controls, and distribution piping.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5470 Refinery Unit or Refinery Process Unit

"Refinery unit" or "Refinery process unit" means a set of equipment which ~~is are~~ a part of a basic process operation, such as ~~distilling~~~~distillation~~, hydrotreating, cracking, or reforming ~~of~~ hydrocarbons.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5490 Refrigerated Condenser

"Refrigerated condenser" means a surface condenser in which the coolant supplied to the condenser has been cooled by a mechanical device, other than ~~by~~ a cooling tower or evaporative spray cooling, such as ~~a~~ refrigeration unit or steam chiller unit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5500 Regulated Air Pollutant

- a) "Regulated air pollutant" means the following:
- 1) ~~NO_x~~ ~~Nitrogen oxides (NO_x)~~ or any ~~VOC~~ ~~volatile organic compound~~.
 - 2) Any pollutant for which a national ambient air quality standard has been promulgated.
 - 3) Any pollutant that is subject to any standard promulgated under Section 111 of the Clean Air Act.
 - 4) Any Class I or II substance subject to a standard promulgated under Section 112 of the Clean Air Act, including Sections 112(g), (j) and (r).
 - A) Any pollutant subject to requirements under Section 112(j) of the Clean Air Act. Any pollutant listed under Section 112(b) ~~is~~ ~~shall be~~ considered ~~to be~~ regulated 18 months after the date on which ~~United States Environmental Protection Agency ("USEPA")~~ was required to promulgate an applicable standard ~~under~~ ~~pursuant to~~ Section 112(e) of the Clean Air Act, if USEPA fails to promulgate such standard.
 - B) Any pollutant for which the requirements of Section 112(g)(2) of the Clean Air Act have been met, but only ~~for~~ ~~with respect to~~ the individual source subject to Section 112(g)(2) ~~requirement~~.
 - 5) Greenhouse Gases, which are the group of six long-lived and directly emitted greenhouse gases: carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.
- b) "Regulated air pollutant" ~~means~~ ~~shall~~, for ~~the purposes of~~ 35 Ill. Adm. Code 201.180(a), ~~mean~~ any air contaminant ~~for~~ ~~as to~~ which this Subtitle contains emission standards or other specific limitations and any contaminant regulated in Illinois ~~under~~ ~~pursuant to~~ Section 9.1 of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5510 Reid Vapor Pressure

"Reid vapor pressure" means the absolute vapor pressure of volatile crude oil and volatile nonviscous petroleum liquids except ~~liquefied~~ ~~liquified~~ petroleum gases, as determined by the method ~~referenced~~ in the Section where the term is used or, ~~if the Section where the term is used does not specify a method,~~ by ASTM ~~D323-20a~~ ~~D323-08~~ ~~(if not referenced in the Section where the term is used)~~, incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5520 Reinforced Plastic Composite

"Reinforced plastic composite" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a composite material consisting of plastic reinforced with fibers.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5530 Repair

"Repair" means, ~~for with respect to~~ polyester resin product manufacturing processes, a portion of the fabrication process that requires ~~adding the addition of~~ polyester resin materials to portions of a previously fabricated product ~~immediately after normal fabrication operations in order~~ to mend damage ~~immediately following normal fabrication operations~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5535 Repair Cleaning

"Repair ~~cleaning~~ Cleaning" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, a solvent cleaning operation or activity carried out during a repair process.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5550 Repair Coat

"Repair coat" means:

- a) ~~For With respect to~~ coating wood furniture, coatings used to correct imperfections or damage to furniture surface.;
- b) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q) and 219.204(q), a coat used to re-coat portions of a previously coated product that has sustained mechanical damage to the coating ~~after following~~ normal coating operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5570 Repaired

"Repaired" means, for ~~the purpose of~~ Subparts Q of 35 Ill. Adm. Code 215, 218, and 219, that equipment or a component has been adjusted, or otherwise altered, to eliminate a leak.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5580 Repowering

"Repowering" means, for purposes of 35 Ill. Adm. Code 217.5, Subpart W, "repowering" means converting or replacing the conversion or replacement of an existing budget EGU, as identified in Appendix F, with a technology capable of controlling NO_x and other combustion emissions simultaneously with improved boiler or generation efficiency and with waste reduction, or any other replacement generation technology, as determined by the Illinois Environmental Protection Agency. Repowering is ~~shall be considered~~ a control technology for ~~purposes of 35 Ill. Adm. Code 217.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5585 Research and Development Operation

"Research and development operation" means, for ~~purposes of 35 Ill. Adm. Code 218.187, 219.187, and 219.204(r),~~ an operation:

- a) Whose ~~whose~~ purpose is researching and developing ~~for research and development of~~ new processes and products;
- b) That ~~that~~ is conducted under the close supervision of technically trained personnel; and
- c) That ~~that~~ is not involved in manufacturing ~~the manufacture of~~ final or intermediate products for commercial purposes, except in a de minimis manner.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5590 Residual Fuel Oil

"Residual fuel oil" means fuel oils of grade No. 4, 5, and 6 under as specified in detailed requirements for fuel oils in ASTM D396-24, ASTM D-396-69 (1971) incorporated by reference in 35 Ill. Adm. Code 211.101(a)(3), 218.112, and 219.112.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5610 Restricted Area

"Restricted area" means the area within the boundaries of any "municipality" as defined in Section 1-1-2 of the Illinois Municipal Code [65 ILCS 5/1-1-2], plus a zone extending one mile beyond the boundaries of any such municipality having a population of 1,000 or more according to the latest federal census.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5640 Rich-Burn Engine

"Rich-burn engine" means a spark-ignited engine where the oxygen content in the exhaust stream of the engine before any dilutions is 1%~~percent~~ or less by volume measured on a dry basis.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5650 Ringelmann Chart (Repealed)

~~"Ringelmann chart" means the chart published and described in the Bureau of Mines, U.S. Department of Interior, Information Circular 8333 (Revision of IC7718) May 1, 1967, or any adaptation thereof which has been approved by the Agency.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 211.5670 Roadway

"Roadway" means any street, highway, road, alley, sidewalk, parking lot, airport, rail bed or terminal, bikeway, pedestrian mall, or other structure used for transportation purposes.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5710 Roll Coating

"Roll coating" means a method of applying a coating to a moving substrate by ~~means of~~ rotating hard rubber, elastomeric, or metal rolls.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5750 Roll Printing

"Roll printing" means ~~the~~ method of printing by ~~means of~~ a series of rolls, usually of hard rubber or metal, each with only partial coverage.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5800 Rubber

"Rubber" means, for ~~purposes of~~ Subparts JJ of 35 Ill. Adm. Code 218 and 219, any natural or manmade rubber substrate, including, ~~but not limited to~~, styrene-butadiene rubber, polychloroprene (neoprene), butyl rubber, nitrile rubber, chlorosulfonated polyethylene, and ethylene propylene diene terpolymer.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5805 Rubber-Based Adhesive

"Rubber-based adhesive" means a quick setting contact cement that provides a strong, yet flexible, bond between two mating surfaces that may be of dissimilar materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5810 Safety Relief Valve

"Safety relief valve" means a valve which is normally closed and ~~which is~~ designed to open ~~in order to~~ relieve excessive pressures within a vessel or pipe.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5830 Sandblasting

"Sandblasting" means the use of a mixture of sand and air at high pressures on any type of surface for cleaning, ~~and/or~~ polishing, or both any type of surface.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5850 Sanding Sealers

"Sanding sealers" means any coatings formulated for and applied to bare wood to sand for sanding and ~~to~~ seal the wood for subsequent application of varnish. To be considered a sanding sealer, a coating must be clearly labelled as onesuch.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5855 Scale Inhibitor

"Scale inhibitor" means, for ~~the purposes of~~ 35 Ill. Adm. Code 219.204(r), a coating that is applied to the surface of a part before prior to thermal processing to inhibit the formation of scale.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5860 Scientific Instrument

"Scientific ~~instrument~~ Instrument" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, an instrument, including the components, assemblies, and subassemblies used in their manufacture, and associated accessories and reagents that are used for the detection, measurement, analysis, separation, synthesis, or sequencing of various compounds.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5870 Screening

"Screening" means separating material according to size by pressing undersized material through one or more mesh surfaces (screens) in series, and retaining oversized material on the mesh surfaces ~~(screens)~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5875 Screen Printing

"Screen ~~printing~~**Printing**" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, a process in which the printing ink passes through a taut screen or fabric to which a refined form of stencil has been applied. The stencil openings determine the form and dimensions of the imprint.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5880 Screen Printing on Paper

"Screen ~~printing~~**Printing** on ~~paper~~**Paper**" means a process that would otherwise be paper coating as defined in Section 211.4470 ~~of this Part~~, except ink is passed through a taut screen or fabric to which a refined form of stencil has been applied. The stencil openings determine the form and dimensions of the imprint.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5883 Screen Print Ink for Aerospace Applications

"Screen print ink for aerospace applications" means, for ~~purposes of~~ 35 Ill. Adm. Code 219.204(r), an ink used in screen printing processes during fabrication of decorative laminates and decals at aerospace facilities.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5885 Screen Reclamation

"Screen ~~reclamation~~**Reclamation**" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, a solvent cleaning activity carried out in a screen printing operation in which the screen is completely cleaned and the stencil removed ~~to recycle~~**for recycling** or reuse ~~of~~ the screen for other production runs.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5890 Sealer

"Sealer" means:

- a) Except for ~~purposes of~~ 35 Ill. Adm. Code 218.204(a) and (q) and 219.204(a) and (q), ~~"sealer" means~~ a coating containing binders that seals wood ~~before~~**prior to** the

application of the subsequent coatings.

- b) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(a) and (q) and 219.204(a) and (q), ~~"sealer" means~~ a high viscosity material generally, but not always, applied in the paint shop after the body has received an electrodeposition primer coating and before the application of subsequent coatings (e.g., primer surfacer). The primary purpose of sealer is to fill body joints completely so that there is no intrusion of water, gases, or corrosive materials into the passenger area of the body compartment. These materials are also referred to as sealant, sealant primer, or caulk.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5900 Self-Priming Topcoat for Aerospace Applications

"Self-priming topcoat for aerospace applications" means a topcoat that is applied directly to an uncoated aerospace vehicle or component for ~~purposes of~~ corrosion prevention, environmental protection, and functional fluid resistance. More than one layer of identical coating formulation may be applied to the vehicle or component. ~~This definition does not include self-priming~~ Self-priming topcoats for general aviation rework facilities ~~are not included in this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5907 Semi-Aqueous Cleaning Solvent

"Semi-aqueous cleaning solvent" means a solution in which water is ~~the~~ primary ingredient. ~~At least 60% percent~~ of the solvent solution, as applied, must be water.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5910 Semi-Transparent Stains

"Semi-transparent stains" means stains containing dyes or semi-transparent pigments which are formulated to enhance wood grain and change the color of the surface but not to conceal the surface, including, ~~but not limited to,~~ sap stain, toner, non-grain raising stains, pad stain, or spatter stain.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5950 Set of Safety Relief Valves

"Set of safety relief valves" means one or more safety relief valves designed to open ~~in order~~ to relieve excessive pressures in the same vessel or pipe.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5985 Sheet Rubber Lining Installation

"Sheet rubber lining installation" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, the process of applying sheet rubber liners by hand to metal or plastic substrates to protect the underlying substrate from corrosion or abrasion. These operations also include laminating sheet rubber to fabric by hand.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5987 Shock-Free Coating

"Shock-free coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied to electrical components to protect the user from electric shock. The coating has characteristics of ~~being of~~ low capacitance, ~~and~~ high resistance, and ~~having~~ resistance to breaking down under high voltage.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.5990 Shotblasting

"Shotblasting" means ~~using the use of~~ a mixture of any metallic or non-metallic substance and air at high pressures on any type of surface for cleaning, ~~and/or~~ polishing, or both any type of surface.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6012 Silicone-Release Coating

"Silicone-release coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any coating that contains silicone resin and is intended to prevent food from sticking to metal surfaces such as baking pans.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6015 Single-Ply Roof Membrane

"Single-ply roof membrane" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a prefabricated single sheet of rubber, normally ethylene-propylenediene terpolymer, that is field applied ~~field applied~~ to a building roof using one layer of membrane material. Single-ply roof membrane does not include membranes prefabricated from EPDM.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6017 Single-Ply Roof Membrane Adhesive Primer

"Single-ply roof membrane adhesive primer" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any primer labeled for ~~cleaning use to clean~~ and ~~promoting~~ promote adhesion of the single-ply roof membrane seams or splices ~~before prior to~~ bonding.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6020 Single-Ply Roof Membrane Installation and Repair Adhesive

"Single-ply roof membrane installation and repair adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive labeled for ~~installing use in the installation~~ or ~~repairing~~ repair of single-ply roof membrane. Installation includes, as a minimum, attaching the edge of the membrane to the edge of the roof and applying flashings to vents, pipes, and ducts that protrude through the membrane. Repair includes gluing the edges of ~~A-4~~ torn membrane together, attaching a patch over a hole, and reapplying flashings to vents, pipes, or ducts installed through the membrane.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6025 Single Unit Operation

"Single unit operation" means, for ~~purposes of~~ 35 Ill. Adm. Code ~~218 and 219, Sections~~ 218.500 through 218.506 and 219.500 through 219.506, a distinct piece of equipment in a batch operation within which one or more discrete processing steps occur. ~~These~~ ~~Such~~ discrete processing steps include ~~preparing, but are not limited to, the preparation of~~ reactants, ~~facilitating~~ ~~facilitation of~~ reactions, ~~separating and purifying~~ ~~separation and purification of~~ products or intermediates, and recycling ~~of~~ materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6030 Smoke

"Smoke" means small gas-borne particles resulting from incomplete combustion; consisting predominantly but not exclusively of carbon, ash, and other combustible material; that form a visible plume in the air.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6050 Smokeless Flare

"Smokeless flare" means a combustion unit and the stack to which it is affixed in which organic material achieves combustion by burning in the atmosphere ~~so~~ ~~such~~ that the smoke or other particulate matter emitted to the atmosphere from ~~the~~ ~~such~~ combustion does not ~~cause an opacity of greater than 20% as measured by USEPA Method 9, incorporated by reference at 35 Ill. Adm. Code~~ ~~Section 212.109~~ ~~have an appearance density or shade darker than No. 1 of the Ringlemann Chart.~~

(Source: Amended at 50 Ill. Reg._____, effective _____)

Section 211.6055 Smoothing and Caulking Compounds

"Smoothing and caulking compounds" means semi-solid materials that are applied by hand application methods and ~~are~~ used to aerodynamically smooth exterior vehicle surfaces or fill cavities such as bolt hole accesses. A material ~~will~~shall not be classified as a smoothing and caulking compound if it can also be classified as a sealant.

(Source: Amended at 50 Ill. Reg._____, effective _____)

Section 211.6063 Solar-Absorbent Coating

"Solar-absorbent coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that has as its prime purpose ~~absorbing the absorption of~~ solar radiation.

(Source: Amended at 50 Ill. Reg._____, effective _____)

Section 211.6064 Solid Film Lubricant

"Solid film lubricant" means, for ~~purposes of~~ 35 Ill. Adm. Code 219.204(r), a very thin coating consisting of a binder system containing as its chief pigment material one or more of the following: molybdenum, graphite, polytetrafluoroethylene (PTFE), or other solids that act as a dry lubricant between faying (i.e., closely or tightly fitting) surfaces in aerospace applications.

(Source: Amended at 50 Ill. Reg._____, effective _____)

Section 211.6065 Solids Turnover Ratio (R_T)

"Solids turnover ratio" or "Solids R_T " means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, the ratio of total volume of coating solids that is added to the EDP system in a calendar month to the total volume design capacity of the EDP system.

(Source: Amended at 50 Ill. Reg._____, effective _____)

Section 211.6070 Solvent

"Solvent" means a liquid substance that is used to dissolve or dilute another substance. This term includes ~~but is not limited to~~ organic materials used as dissolvers, viscosity reducers, degreasing agents, or cleaning agents.

(Source: Amended at 50 Ill. Reg._____, effective _____)

Section 211.6110 Solvent Recovery System

"Solvent recovery system" means equipment which processes spent solvents, surplus propellants, and other ~~VOM-containing~~VOM-containing waste materials generated by an emission unit to recover VOM which can be productively used, either in the original unit or for another purpose, reducing the amount of ~~such~~ material which must be disposed of as waste.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6130 Source

"Source" means any stationary source (or any group of stationary sources) that ~~is are~~ located on one or more contiguous or adjacent properties that are under common control of the same person (or persons under common control) and that belongs to a single major industrial grouping. For the purposes of defining "source," a stationary source or group of stationary sources shall be considered part of a single major industrial grouping if all of the pollutant emitting activities at such source or group of sources located on contiguous or adjacent properties and under common control belong to the same Major Group (i.e., all have the same two-digit code) as described in the Standard Industrial Classification Manual, 1987 (incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112), or such pollutant emitting activities at a stationary source (or group of sources) located on contiguous or adjacent properties and under common control constitute a support facility as defined in Section 39.5 of the Environmental Protection Act [415 ILCS 5/39.5]. The determination as to whether any group of stationary sources ~~is are~~ located on contiguous or adjacent properties, and/or ~~is are~~ under common control, and/or whether the pollutant emitting activities at such group of stationary sources constitute a support facility shall be made on a case-by-case~~case-by-case~~ basis [415 ILCS 5/39.5].

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6133 Space Vehicle

"Space vehicle" means a man-made device, either manned or unmanned, designed for operation beyond earth's atmosphere. This definition includes integral equipment such as models, mockups, prototypes, molds, jigs, tooling, hardware jackets, and test coupons. This definition also includes~~Also included is~~ auxiliary equipment associated with testing~~test~~, transportation~~transport~~, and storage; that, through contamination, can compromise the space vehicle performance.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6137 Specialized Function Coating

"Specialized function coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 219.204(r), a coating that fulfills extremely specific engineering requirements in aerospace applications that are limited in use and are characterized by low volume usage. This category excludes coatings covered in other specialty coating categories in 35 Ill. Adm. Code 219.204(r)(2).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6140 Specialty Coatings

"Specialty coatings" means, for ~~the purposes of~~ 35 Ill. Adm. Code 218 and 219, plastic parts coatings used for unusual job performance requirements. These products include adhesion primers, resist coatings, soft coatings, reflective coatings, electrostatic prep coatings, headlamp lens coatings, ink pad printing coatings, stencil coatings, vacuum metalizing coatings, gloss reducers, plating resist coatings, and plating sensitizer coatings.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6145 Specialty Coatings for Motor Vehicles

"Specialty coatings for motor vehicles" means, for Subparts HH of ~~purposes of~~ 35 Ill. Adm. Code ~~Part~~ 218 and ~~Part~~ 219, ~~Subpart HH~~, a coating used for unusual job performance requirements, including, ~~but not limited to~~, adhesion promoters, uniform finish blenders, elastomeric materials, gloss flatteners, and bright metal trim repair.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6150 Specialty High Gloss Catalyzed Coating

"Specialty high gloss catalyzed coating" means commercial contract finishing of material prepared for printers and lithographers where the finishing process uses a solvent-borne coating, formulated with a catalyst, in a quantity of no more than 12,000 gallons/year as supplied; ~~where~~ the coating machines are ~~sheet-fed~~ sheet fed, and the coated sheets are brought to a minimum surface temperature of 190 °F; ~~190° F~~, and ~~where~~ the coated sheets are to achieve the minimum specular reflectance index of 65 measured at a 60° ~~60-degree~~ angle with a gloss meter.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6170 Specialty Leather

"Specialty leather" means leather in one of the following categories:

- a) "Specialty shoe leather," such as "CHROMEXCEL" (TM) leather, that is:
 - 1) A select grade of chrome tanned, bark retanned leather;
 - 2) Retanned to over 25% by weight grease, wax, and oils by direct contact with such materials in liquefied form at elevated temperature without the presence of water;

- 3) Finished with coating materials which adhere to the leather surface to provide color and a rich visual luster while allowing a surface that feels oily; and
 - 4) Used primarily for manufacture of shoes.
- b) ~~"-SpecialtySpeciality-~~ football leather," such as "TANNED IN TACK" (TM) leather, that is:
- 1) Top grade, chrome tanned, bark retanned, and fat liquored leather;
 - 2) Finished with coating materials which impregnate into the leather to produce a permanent non-slip "tacky" exterior surface on the leather. This "tacky" characteristic continues to exist with wear; and
 - 3) Used primarily for the manufacture of footballs.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6190 Specialty Soybean Crushing Source

"Specialty soybean crushing source" means any hexane extraction soybean crushing equipment using indirect steam heat in flash or vapor desolventizers as the primary method of desolventizing and producing specialty solvent extracted soy flakes, grits, or flour.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6270 Standard Conditions

"Standard conditions" means a temperature of ~~70 °F~~70°F and a pressure of 14.7 psia.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6310 Start-Up

"Start-up" means ~~the~~ setting an emission unit in operation ~~of an emission unit~~ for any purpose.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6355 Stationary Gas Turbine

"Stationary gas turbine" means any simple cycle gas turbine, regenerative cycle gas turbine, or any gas turbine portion of a combined cycle steam/electric generating system that is not self-propelled~~self-propelled~~. It may, however, be mounted on wheels for portability.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6400 Stencil Coat

"Stencil coat" means:

- a) ~~Before~~Prior to May 1, 2012, a coating ~~that is~~ applied over a stencil on a plastic part at a thickness of 1 ~~mm~~mil or less of coating solids. Stencil coats are most frequently letters, numbers, or decorative designs.
- b) On and after May 1, 2012, an ink or pigmented coating ~~that is~~ rolled or brushed onto a template or stamp ~~in order to~~ add identifying letters, symbols, ~~and/or~~ numbers, or any combination of these.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6405 Sterilization Indicating Ink

"Sterilization indicating ink ~~Indicating Ink~~" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, an ink that changes color to indicate that sterilization has occurred. ~~This~~Such ink is used to monitor the sterilization of medical instruments, autoclave efficiency, and the thermal processing of foods to prevent~~for prevention of~~ spoilage.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6410 Storage Tank or Storage Vessel

"Storage tank or storage vessel" means any tank, reservoir, or container used to store~~for the storage of~~ liquid or gaseous material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6425 Stripping

"Stripping" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, the removal of cured coatings, cured inks, or cured adhesives.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6427 Structural Glazing

"Structural glazing" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a process that includes applying~~the application of~~ adhesive to bond glass, ceramic, metal, stone, or composite panels to exterior building frames.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6428 Structural Nonautoclavable Adhesive for Aerospace Applications

"Structural nonautoclavable adhesive for aerospace applications" means an adhesive cured under ambient conditions that is used to bond load-carrying aerospace components or for other critical functions, such as nonstructural bonding in the proximity of engines.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6430 Styrene Devolatilizer Unit

"Styrene devolatilizer unit" means equipment which separates~~performing the function of separating~~ unreacted styrene monomer and other volatile components from polystyrene in a vacuum devolatilizer.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6450 Styrene Recovery Unit

"Styrene recovery unit" means equipment which separates~~performing the function of separating~~ styrene monomer from other less volatile components of the styrene devolatilizer unit's output. The separated styrene monomer may be reused as a raw material in the polystyrene plant.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6460 Subfloor

"Subfloor" means, for purposes of~~35 Ill. Adm. Code 218 and 219~~, subflooring material over floor joists, including any load bearing joists. Subflooring is covered by a finish surface material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6470 Submerged Loading Pipe

"Submerged loading pipe" means:

a) For~~"Submerged loading pipe" means, for purposes of~~ 35 Ill. Adm. Code 215, any loading pipe which meets any of the following conditions:

- 1) Where the tank is filled from the top, the end of the discharge pipe or nozzle is entirely submerged when the liquid level is 15 cm (6 in) above the bottom of the tank.~~the discharge opening of which is entirely submerged when the liquid level is 6 inches above the bottom of the tank.~~
- 2) Where the tank is filled from the side, the discharge pipe or nozzle~~When applied to a tank which is loaded from the side, "submerged loading pipe" means any loading pipe the discharge of which~~ is entirely submerged

when the liquid level is 46 cm (18 in)~~inches~~ or two times the loading pipe diameter, whichever is greater, above the bottom of the tank.

3) ~~Any~~~~The definition shall also apply to any~~ loading pipe which is continuously submerged during loading operations.

b) ~~For "Submerged loading pipe" means, for purposes of~~ 35 Ill. Adm. Code 218 and 219, any discharge pipe or nozzle which meets either of the following conditions:

- 1) Where the tank is filled from the top, the end of the discharge pipe or nozzle ~~is entirely~~~~must be totally~~ submerged when the liquid level is 15 cm (6 in-) above the bottom of the tank.
- 2) Where the tank is filled from the side, the discharge pipe or nozzle ~~is entirely~~~~must be totally~~ submerged when the liquid level is 46 cm (18 in-) above the bottom of the tank.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6510 Sulfuric Acid Mist

"Sulfuric acid mist" means sulfuric acid mist as measured according to the method ~~specified~~ in 35 Ill. Adm. Code 214.101(b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6530 Surface Condenser

"Surface condenser" means a device which removes a substance from a gas stream by reducing the temperature of the stream, without direct contact between the coolant and the stream.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6535 Surface Preparation

"Surface ~~preparation~~~~Preparation~~" means, for ~~purposes of~~ 35 Ill. Adm. Code 218.187 and 219.187, ~~removing the removal of~~ contaminants such as dust, soil, oil, and grease ~~before applying prior to~~ coating, adhesive, or ink ~~applications~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6540 Surface Preparation Materials

"Surface preparation materials" means materials that are used to remove foreign matter, such as wax, tar, grease, and silicone, from the surface to be coated.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6550 Synthetic Organic Chemical or Polymer Manufacturing Plant

"Synthetic organic chemical or polymer manufacturing plant" means a source that produces chemicals or polymer, as intermediates or final products, ~~chemicals or polymers~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6575 Temporary Protective Coating for Aerospace Applications

"Temporary protective coating for aerospace applications" means a coating applied to aerospace surfaces to provide scratch or corrosion protection during manufacturing, storage, or transportation. Two types include peelable protective coatings and alkaline removable coatings. These materials are not intended to protect against strong acid or alkaline solutions. This definition does not include coatings ~~Coatings~~ that provide this type of protection from chemical processing ~~are not included in this category~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6585 Thin Metal Laminating Adhesive

"Thin metal laminating adhesive" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, any adhesive intended by the manufacturer to bond for use in bonding multiple layers of metal to metal or metal to plastic to produce in the production of electronic or magnetic components in which the bond lines are less than 0.25 mm thick ~~thickness of the bond lines is less than 0.25 millimeters~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6587 Thin Particleboard

"Thin particleboard ~~Partieleboard~~" means a manufactured board ¼ inch or less in thickness made of individual wood particles that have been coated with a binder and formed into flat sheets by pressure.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6590 Thirty-Day ~~Thirty Day~~ Rolling Average

"Thirty-day ~~Thirty day~~ rolling average" or "30-day rolling average" means any value arithmetically averaged over any consecutive 30 ~~thirty~~ days.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6620 Three- ~~or~~ Four-Stage ~~Four Stage~~ Coating System

"Three- or ~~four-stage~~four stage coating system" means a topcoat system composed of a colored basecoat, one or two semi-transparent midcoats, and a transparent clearcoat.

(Source: Added at 50 Ill. Reg. _____, effective _____)

Section 211.6630 Through-the-Valve Fill

"Through-the-valve fill" means, ~~a method of~~with respect to filling ~~of~~ aerosol cans with propellant ~~by, a method of filling cans by~~ injecting propellant into the can through and around the outlet tube of the can and aerosol valve. Through-the-valve fill is a different method ~~of fill~~ than under-the-cup fill.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6640 Tire Repair

"Tire repair" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a process that includes expanding a hole, tear, fissure, or blemish in a tire casing by grinding or gouging; ~~;~~ applying adhesive; ~~;~~ and filling the hole or crevice with rubber.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6650 Tooling Resin

"Tooling resin" means resins used to fabricate molds and fixtures used ~~to manufacture in~~ manufacturing of fiberglass products.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6670 Topcoat

"Topcoat" means:

- a) Except as used in 35 Ill. Adm. Code 218.204(a)(2) and (q)(5) and 219.204(a)(2), (q)(5), and (r), a coating applied to a substrate in a multiple coat operation other than prime coat, primer surfacer coat, ~~;~~ or final repair coat. ~~;~~
- b) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(a)(2) and 219.204(a)(2), the final coating system applied to provide the final color, ~~and/or~~ a protective finish, ~~or both~~. The topcoat may be a monocoat color or basecoat/clearcoat system. In-line repair and two-tone are part of topcoat. ~~;~~
- c) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q)(5) and 219.204(q)(5), any final coating applied to the interior or exterior of a pleasure craft. ~~;~~

- d) For ~~the purposes of~~ 35 Ill. Adm. Code 219.204(r), a coating ~~that is~~ applied over a primer on an aerospace vehicle or component for appearance, identification, camouflage, or protection. ~~This definition does not include topcoats~~ ~~Topcoats that are listed as specialty coatings in 35 Ill. Adm. Code in 219.204(r)(2) are not included in this definition.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6695 Topcoat System

"Topcoat system" means the final film or series of films of coating applied to a motor vehicle refinishing surface; and includes basecoat/clearcoat systems and three- or ~~four-stage~~ ~~four stage~~ coating systems.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6710 Touch-Up

"Touch-up" means, ~~for with respect to~~ polyester resin product manufacturing processes, a portion of the fabrication process that is necessary to cover minor imperfections.

(Source: Amended at 50 Ill. Reg. _____, effective _____))

Section 211.6720 Touch-Up Coating

"Touch-up coating" means:

- a) Except as used in 35 Ill. Adm. Code 218.204(q), 219.204(q), and 219.204(r), a coating applied by brush or ~~hand-held~~ ~~hand held~~, non-refillable aerosol cans to repair minor surface damage and imperfections.;
- b) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q), 219.204(q), and 219.204(r), a coating used to cover minor coating imperfections appearing after the main coating operation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6730 Transfer Efficiency

"Transfer efficiency" means the ratio of the amount of coating solids deposited onto a part or product to the total amount of coating solids used; during a particular time period.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6740 Translucent Coating

"Translucent coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating that contains binders and pigment, and is formulated to form a colored, but not opaque, film.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6770 True Vapor Pressure

"True vapor pressure" means the equilibrium partial pressure exerted by a ~~VOL~~ volatile organic liquid as determined in ~~compliance~~ accordance with methods ~~described~~ in American Petroleum Institute Manual of Petroleum Measurement Standards Chapter 19.2 Evaporative Loss from Floating-roof Tanks (August 2000), Bulletin 2517, "Evaporation Loss From Floating Roof Tanks," second edition, February 1980 (incorporated by reference in 35 Ill. Adm. Code 218.112 and 219.112).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6780 Trunk Interior Coating

"Trunk interior coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating outside of the primer surfacer and topcoat operations applied to the trunk interior to provide chip protection.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6790 Turnaround

"Turnaround" means, ~~for with respect to~~ a refinery process unit, the procedure of shutting down an operating refinery unit, emptying gaseous and liquid contents to do inspection, maintenance, and repair work, and putting the unit back into production.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6825 Underbody Coating

"Underbody coating" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a coating applied to the undercarriage or firewall to prevent corrosion, ~~and/or~~ provide chip protection, or both.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6830 Under-the-Cup Fill

"Under-the-cup fill" means ~~a method of, with respect to~~ filling ~~of~~ aerosol cans with propellant, ~~a method in which of filling cans whereby~~ the propellant is introduced through the junction between the annular top of the can and the metal cup which holds the outlet tube and aerosol valve. Under-the-cup fill is a different method ~~of fill~~ than through-the-valve fill.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6860 Uniform Finish Blender

"Uniform finish blender" means a thinner or low solids clear solution ~~which is~~ used to melt overspray from a repaired area into the unrepaired color.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6870 Unregulated Safety Relief Valve

"Unregulated safety relief valve" means a safety relief valve which cannot be ~~activated~~~~actuated~~~~by a means~~ other than by high pressure in the pipe or vessel ~~which~~ it protects.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6880 Vacuum Metallizing

"Vacuum metallizing" means a process in which~~whereby~~ metal is vaporized and deposited on a substrate in a vacuum chamber.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6885 Vacuum Metalizing Coating

"Vacuum metalizing coating" means:

- a) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q)(1) and (q)(2) and 219.204(q)(1) and (q)(2), the undercoat applied to the substrate on which the metal is deposited or the overcoat applied directly to the metal film;
- b) For ~~purposes of~~ 35 Ill. Adm. Code 218.204(q)(3) and (q)(4) and 219.204(q)(3) and (q)(4), the topcoat and basecoat used in a vacuum-metalizing operation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6910 Vacuum Service

"Vacuum service" means, for ~~the purpose of~~ Subparts Q of ~~this~~ 35 Ill. Adm. Code 215, 218, and 219, equipment or a component ~~which is~~ operating at an internal pressure ~~that is~~ at least 5 kPa (0.73 psia) below ambient pressure.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6930 Valves Not Externally Regulated

"Valves not externally regulated" means valves, such as in-line check valves, that have no provision for external adjustment or governance during their operation, ~~such as in-line check valves~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6950 Vapor Balance System

"Vapor balance system" means any combination of pipes or hoses which creates a closed system between the vapor spaces of an unloading tank and a receiving tank ~~such~~ that vapors displaced from the receiving tank are transferred to the tank being unloaded.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6970 Vapor Collection System

"Vapor collection system" means all piping, seals, hoses, connections, pressure-vacuum vents, and other components between the gasoline delivery vessel or marine vessel and the vapor processing unit, ~~and/or~~ the storage tanks, or both.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.6990 Vapor Control System

"Vapor control system" means any system that limits or prevents release to the atmosphere of organic material in the vapors displaced from a tank or marine vessel during the transfer of gasoline or other VOL ~~volatile organic liquid~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7010 Vapor-Mounted Primary Seal

"Vapor-mounted primary seal" means a primary seal mounted with an air space bounded by the bottom of the primary seal, the tank wall, the liquid surface, and the floating roof.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7030 Vapor Recovery System

"Vapor recovery system" means, ~~for with respect to~~ a storage tank, storing VOL ~~a volatile organic liquid~~, a vapor gathering system capable of collecting all ~~volatile organic material (VOM)~~ vapors and gases discharged from the storage tank and a vapor disposal system capable of processing ~~these such~~ VOM vapors and gases ~~so as~~ to prevent their emission to the atmosphere.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7070 Vinyl Coating

"Vinyl coating" means any protective, decorative, or functional coating or ink applied to vinyl or urethane or vinyl- or ~~urethane-urethane~~-coated fabric ~~which is~~ delivered to a coating line or printing line as a roll, unwound, and coated as a continuous substrate. This definition does not include~~However, a plastisol is not a vinyl coating.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7090 Vinyl Coating Line

"Vinyl coating line" means a coating line in which any protective, decorative, or functional coating or ink is applied onto vinyl or urethane or vinyl- or ~~urethane-urethane~~-coated fabric ~~which is~~ delivered to a coating line or printing line as a roll, unwound, and coated as a continuous substrate. This definition does not include~~However, application of a plastisol to vinyl or urethane or vinyl- or urethane-urethane-coated fabric is not a vinyl coating line or part of a vinyl coating line.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7110 Volatile Organic Liquid (VOL)

"Volatile organic liquid (VOL)" means any substance which is liquid at storage conditions and ~~which~~ contains VOM~~volatile organic material~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7130 Volatile Organic Material Content (VOMC)

"Volatile organic material content (VOMC)" means, for ~~the purpose of~~ 35 Ill. Adm. Code 215, the emissions of VOM~~volatile organic material~~ which would result from ~~exposing~~the exposure of a coating, printing ink, fountain solution, tire spray, dry cleaning waste, or other similar material to the air, including any drying or curing, ~~without in the absence of~~ any control equipment. VOMC is typically expressed as kilogram (kg) VOM/liter (lb VOM/gallon) of coating or coating solids, or kg VOM/kg (lb VOM/lb) of coating solids, coating, or material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7150 Volatile Organic Material (VOM) or Volatile Organic Compound (VOC)

"Volatile organic material" ("VOM") or "volatile organic compound" ("VOC") means any compound of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, that participates in atmospheric photochemical reactions.

- a) This definition of VOM includes any organic compound that participates in atmospheric photochemical reactions, other than the compounds listed in this subsection (a). USEPA has determined that the compounds listed in this subsection (a) have negligible photochemical reactivity.

2-Amino-2-methylpropan-1-ol (CAS No. 124-68-5)
 Bis(difluoromethoxy)difluoromethane ([HFE-235ca12](#)~~HFE-236ca12~~, CAS No. 78522-47-1)
 1,2-Bis(difluoromethoxy)-1,1,2,2-tetrafluoroethane (HFE-338pcc13, CAS No. 188690-78-0)
 tertiary-Butyl acetate (1,1-dimethylethyl acetic acid ester, CAS No. 540-88-5)
 1-Chloro-1,1-difluoroethane (HCFC-142b, CAS No. 75-68-3)
 Chlorodifluoromethane (CFC-22, CAS No. 75-45-6)
 1-Chloro-1-fluoroethane (HCFC-151a, CAS No. 1615-75-4)
 Chlorofluoromethane (HCFC-31, CAS No. 593-70-4)
 Chloropentafluoroethane (CFC-115, CAS No. 76-15-3)
 2-Chloro-1,1,1,2-tetrafluoroethane (HCFC-124, CAS No. 2837-89-0)
 1-Chloro-4-(trifluoromethyl)-benzene (parachlorobenzotrifluoride (PCBTF), CAS No. 98-56-6)
 (1E)-1-Chloro-3,3,3-trifluoroprop-1-ene (trans-1-chloro-3,3,3-trifluoroprop-1-ene, CAS No. 102687-65-0)
 1,1,1,2,2,3,4,5,5,5-Decafluoro-3-methoxy-4-trifluoromethylpentane (HFE-7300, CAS No. 132182-92-4)
 1,1,1,2,3,4,4,5,5,5-Decafluoropentane (HFC 4310mee, CAS No. 138495-42-8)
 Dichlorodifluoromethane (CFC-12, CAS No. 75-71-8)
 1,1-Dichloro-1-fluoroethane (HCFC-141b, CAS No. 1717-00-6)
 Dichloromethane (methylene chloride, CAS No. 75-09-2)
 1,3-Dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb, CAS No. 507-55-1)
 3,3-Dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca, CAS No. 422-56-0)
 1,2-Dichloro-1,1,2,2-tetrafluoroethane (CFC-114, CAS No. 76-14-2)
 1,1-Dichloro-2,2,2-trifluoroethane (HCFC-123, CAS No. 306-83-2)
 1,2-Dichloro-1,1,2-trifluoroethane (HCFC-123a, CAS No. 354-23-4)
 1,1-Difluoroethane (HFC-152a, CAS No. 75-37-6)
 Difluoromethane (HFC-32, CAS No. 75-10-5)
 (Difluoromethoxy)difluoromethane (HFE-134, CAS No. 1691-17-4)
 1-(Difluoromethoxy)-2-[(difluoromethoxy)(difluoro)methoxy]-1,1,2,2-tetrafluoroethane (HFE-43-10pccc124, CAS No. 188690-77-9)
 2-(Difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane (CAS No. 163702-06-5)
 Dimethyl carbonate (CAS No. 616-38-6)
 Ethane (CAS No. 74-84-0)

2-(Ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane (CAS No. 163702-06-5)

3-Ethoxy-1,1,1,2,3,4,4,5,5,6,6,6-dodecafluoro-2-(trifluoromethyl)hexane (HFE-7500, CAS No. 297730-93-9)

1-Ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane (HFE-7200, CAS No. 163702-05-4)

Fluoroethane (ethyl fluoride, HFC-161, CAS No. 353-36-6)

1,1,1,2,2,3,3-Heptafluoro-3-methoxypropane (HFE-7000, CAS No. 375-03-1)

1,1,1,2,3,3,3-Heptafluoropropane (HFC-227ea, CAS No. 431-89-0)

(Z)-1,1,1,4,4,4-Hexafluorobut-2-ene (HFO-1336mzz-Z, CAS No. 692-49-9)

1,1,1,2,3,3,3-Hexafluoropropane (HFC-236ea, CAS No. 431-63-0)

1,1,1,3,3,3-Hexafluoropropane (HFC-236fa, CAS No. 690-39-1)

Methane (CAS No. 74-82-8)

Methyl acetate (methyl ethanoate, CAS No. 79-20-9)

4-Methyl-1,3-dioxolan-2-one (propylene carbonate, CAS No. 108-32-7)

Methyl formate (methyl methanoate, CAS No. 107-31-3)

1,1,1,2,2,3,3,4,4-Nonafluoro-4-methoxybutane (HFE-7100, CAS No. 163702-07-6)

1,1,1,3,3-Pentafluorobutane (HFC-365mfc, CAS No. 406-58-6)

Pentafluoroethane (HFC-125, CAS No. 354-33-6)

1,1,1,2,3-Pentafluoropropane (HFC-245eb, CAS No. 431-31-2)

1,1,1,3,3-Pentafluoropropane (HFC-245fa, CAS No. 460-73-1)

1,1,2,2,3-Pentafluoropropane (HFC-245ca, CAS No. 679-86-7)

1,1,2,3,3-Pentafluoropropane (HFC-245ea, CAS No. 24270-66-4)

Perfluorocarbon compounds that fall into the following classes:

- Cyclic, branched, or linear, completely fluorinated alkanes
- Cyclic, branched, or linear, completely fluorinated ethers with no unsaturations
- Cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations
- Sulfur-containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine

Propan-2-one (acetone or dimethylketone, CAS No. 67-64-1)

Siloxanes: cyclic, branched, or linear completely-methylated

Tetrachloroethene (perchloroethylene, CAS No. 127-18-4)

1,1,1,2-Tetrafluoroethane (HFC-134a, CAS No. 811-97-2)

1,1,2,2-Tetrafluoroethane (HFC-134, CAS No. 359-35-3)

(1E)-1,3,3,3-Tetrafluoropropene (trans-1,3,3,3-tetrafluoropropene, (HFO-1234ze, CAS No. 29118-24-9)

2,3,3,3-Tetrafluoroprop-1-ene (HFO-1234yf, CAS No. 754-12-1)

1,1,2,2-tetrafluoro-1-(2,2,2-trifluoroethoxy)ethane (HFE-347pcf2, CAS No. 406-78-0)

Trans-1,1,1,4,4,4-hexafluorobut-2-ene (also known as HFO-1336mzz(E); CAS number 66711-86-2))

1,1,1-Trichloroethane (methyl chloroform, CAS No. 71-55-6)
Trichlorofluoromethane (CFC-11, CAS No. 75-69-4)
1,1,2-Trichloro-1,2,2-trifluoroethane (CFC-113, CAS No. 76-13-1)
1,1,1-Trifluoroethane (HFC-143a, CAS No. 420-46-2)
Trifluoromethane (HFC-23, CAS No. 75-46-7)

- b) ~~To determine~~~~For purposes of determining~~ VOM emissions and compliance with emissions limits, VOM ~~must will~~ be measured by the test methods in the approved implementation plan or 40 CFR 60.~~,-Appendix~~~~appendix~~ A, incorporated by reference at 35 Ill. Adm. Code 215.105, 218.112, and 219.112, as applicable, or by source-specific test methods ~~that have been~~ established under a permit issued under a program approved or promulgated under Title V of the Clean Air Act; under 35 Ill. Adm. Code 203; or under Section 9.1(d) of the Act. If ~~that such a~~ method also measures compounds with negligible photochemical reactivity, these ~~negligibly reactive~~~~negligibly reactive~~ compounds may be excluded as VOM if the amount of those compounds is accurately quantified and ~~the Agency approves~~ the exclusion ~~is approved by the Agency~~.
- c) As a precondition to excluding these ~~negligibly reactive~~~~negligibly reactive~~ compounds as VOM, or at any time after exclusion, the Agency may require an owner or operator to provide monitoring or testing methods and results demonstrating, to the satisfaction of the Agency, the amount of negligibly reactive compounds in the source's emissions.
- d) ~~The~~USEPA will not be bound by any State determination ~~of as to~~ appropriate methods for testing or monitoring negligibly reactive compounds if the determination is not ~~reflected in~~ any of the test methods in subsection (b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7170 Volatile Petroleum Liquid

"Volatile petroleum liquid" means any petroleum liquid with a true vapor pressure ~~that is~~ greater than 1.5 psia (78 ~~mm~~~~millimeters~~ of mercury) at standard conditions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7190 Wash Coat

"Wash coat" means a coating containing binders which seals wood surfaces, prevents undesired staining, and controls penetration.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7200 Washoff Operations

"Washoff operations" means ~~those~~ operations in which organic solvent is used to remove coating from a substrate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7210 Wastewater (Oil/Water) Separator

"Wastewater (oil/water) separator" means any device or piece of equipment which ~~uses~~utilizes the difference in density between oil and water to remove oil and associated chemicals from water, or any device such as a flocculation tank or a clarifier which removes petroleum-derived~~petroleum-derived~~ compounds from waste water.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7220 Waterproof Resorcinol Glue

"Waterproof resorcinol glue" means, for ~~purposes of~~ 35 Ill. Adm. Code 218 and 219, a two-part resorcinol resin-based~~resorcinol resin-based~~ adhesive designed for applications where the bond line must be resistant to conditions of continuous immersion in fresh or salt water.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7230 Weak Nitric Acid Manufacturing Process

"Weak nitric acid manufacturing process" means any acid-producing~~acid-producing~~ facility manufacturing nitric acid with a concentration of less than 70% percent~~percent~~ by weight.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7240 Weatherstrip Adhesive

"Weatherstrip adhesive" means, for ~~purposes of~~ Subparts F of 35 Ill. Adm. Code 218 and 219, an adhesive, used at an automobile or light-duty truck assembly coating facility, applied to weatherstripping materials to bond~~for the purpose of bonding~~ the weatherstrip material to the surface of the vehicle.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7270 Wholesale Purchase - Consumer

"Wholesale purchase - consumer" means any person or organization that purchases or obtains gasoline from a supplier for ultimate consumption or use in motor vehicles and receives delivery of gasoline into a storage tank with a capacity of at least 2,082 liters (550 gallons) owned and controlled by that person.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7290 Wood Furniture

"Wood furniture" means room furnishings, including cabinets (kitchen, bath, and vanity), tables, chairs, beds, sofas, shutters, art objects, wood paneling other than flat wood paneling, wood flooring, and any other coated furnishings made of wood, wood composition, or fabricated wood materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7310 Wood Furniture Coating

"Wood furniture coating" means any protective, decorative, or functional coating applied to wood furniture or wood furniture parts.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7330 Wood Furniture Coating Line

"Wood furniture coating line" means a coating line in which any protective, decorative, or functional coating is applied to wood furniture or wood furniture parts.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 211.7350 Woodworking

"Woodworking" means the shaping, sawing, grinding, smoothing, polishing, and making into products of any form or shape of wood.

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER c: EMISSION STANDARDS AND LIMITATIONS FOR STATIONARY
SOURCES

PART 212
VISIBLE AND PARTICULATE MATTER EMISSIONS

SUBPART A: GENERAL

Section	
212.100	Scope and Organization
212.107	Measurement Method for Visible Emissions
212.108	Measurement Methods for PM ₁₀₋₁₀ Emissions and Condensable ~~Condensable~~ PM ₁₀₋₁₀ Emissions
212.109	Measurement Methods for Opacity
212.110	Measurement Methods for ~~For~~ Particulate Matter
212.111	Abbreviations and Units
212.112	Definitions
212.113	Incorporations by Reference

SUBPART B: VISIBLE EMISSIONS

Section	
212.121	Opacity Standards (Repealed)
212.122	Visible Emissions Limitations for Certain Emission Units For Which Construction or Modification Commenced On or After April 14, 1972
212.123	Visible Emissions Limitations for All Other Emission Units
212.124	Exceptions
212.125	Determination of Violations
212.126	Adjusted Opacity Standards Procedures

SUBPART D: PARTICULATE MATTER EMISSIONS FROM INCINERATORS

Section	
212.181	Limitations for Incinerators
212.182	Aqueous Waste Incinerators
212.183	Certain Wood Waste Incinerators
212.184	Explosive Waste Incinerators
212.185	Continuous Automatic Stoking Animal Pathological Waste Incinerators

SUBPART E: PARTICULATE MATTER EMISSIONS FROM FUEL COMBUSTION
EMISSION UNITS

Section

- 212.201 Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972, Using Only Solid Fuel ~~and~~Exclusively Located in the Chicago Area
- 212.202 Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972, Using Only Solid Fuel ~~and~~Exclusively Located Outside the Chicago Area
- 212.203 Controlled Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972, Using Only Solid Fuel ~~Exclusively~~
- 212.204 Emission Units For Which Construction or Modification Commenced On or After April 14, 1972, Using Only Solid Fuel ~~Exclusively~~
- 212.205 Coal-fired Industrial Boilers For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972, Equipped with Flue Gas Desulfurization Systems
- 212.206 Emission Units Using Only Liquid Fuel ~~Exclusively~~
- 212.207 Emission Units Using More Than One Type of Fuel
- 212.208 Aggregation of Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972
- 212.209 Village of Winnetka Generating Station (Repealed)
- 212.210 Emissions Limitations for Certain Fuel Combustion Emission Units Located in the Vicinity of Granite City

SUBPART K: FUGITIVE PARTICULATE MATTER

Section

- 212.301 Fugitive Particulate Matter
- 212.302 Geographical Areas of Application
- 212.304 Storage Piles
- 212.305 Conveyor Loading Operations
- 212.306 Traffic Areas
- 212.307 Materials Collected by Pollution Control Equipment
- 212.308 Spraying or Choke-Feeding Required
- 212.309 Operating Program
- 212.310 Minimum Operating Program
- 212.312 Amendment to Operating Program
- 212.313 Emission Standard for Particulate Collection Equipment
- 212.314 Exception for Excess Wind Speed
- 212.315 Covering for Vehicles
- 212.316 Emissions Limitations for Emission Units in Certain Areas

SUBPART L: PARTICULATE MATTER EMISSIONS FROM PROCESS EMISSION UNITS

Section

- 212.321 Process Emission Units For Which Construction or Modification Commenced On or After April 14, 1972
- 212.322 Process Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972

212.323 Stock Piles
212.324 Process Emission Units in Certain Areas

SUBPART N: FOOD MANUFACTURING

Section
212.361 Corn Wet Milling Processes
212.362 Emission Units in Certain Areas

SUBPART O: PETROLEUM REFINING, PETROCHEMICAL, AND CHEMICAL MANUFACTURING

Section
212.381 Catalyst Regenerators of Fluidized Catalytic Converters

SUBPART Q: STONE, CLAY, GLASS, AND CONCRETE MANUFACTURING

Section
212.421 Portland Cement Processes ~~for~~ For Which Construction or Modification
Commenced On or After April 14, 1972
212.422 Portland Cement Manufacturing Processes
212.423 Emission Limits for the Portland Cement Manufacturing Plant Located in LaSalle
County, South of the Illinois River [\(Repealed\)](#)
212.424 Fugitive Particulate Matter Control for the Portland Cement Manufacturing Plant
and Associated Quarry Operations Located in LaSalle County, South of the
Illinois River [\(Repealed\)](#)
212.425 Emission Units in Certain Areas

SUBPART R: PRIMARY AND FABRICATED METAL PRODUCTS AND MACHINERY MANUFACTURE

Section
212.441 Steel Manufacturing Processes
212.442 Beehive Coke Ovens
212.443 Coke Plants
212.444 Sinter Processes
212.445 Blast Furnace Cast Houses
212.446 Basic Oxygen Furnaces
212.447 Hot Metal Desulfurization Not Located in the BOF
212.448 Electric Arc Furnaces
212.449 Argon-Oxygen Decarburization Vessels
212.450 Liquid Steel Charging
212.451 Hot Scarfing Machines
212.452 Measurement Methods
212.455 Highlines on Steel Mills
212.456 Certain Small Foundries

212.457 Certain Small Iron-Melting Air Furnaces
212.458 Emission Units in Certain Areas
SUBPART S: AGRICULTURE

Section
212.461 Grain-Handling and Drying in General
212.462 Grain-Handling Operations
212.463 Grain Drying Operations
212.464 Sources in Certain Areas

SUBPART T: CONSTRUCTION AND WOOD PRODUCTS

Section
212.681 Grinding, Woodworking, Sandblasting, and Shotblasting

SUBPART U: ADDITIONAL CONTROL MEASURES

Section
212.700 Applicability
212.701 Contingency Measure Plans, Submittal, and Compliance Date
212.702 Determination of Contributing Sources
212.703 Contingency Measure Plan Elements
212.704 Implementation
212.705 Alternative Implementation

AUTHORITY: Implementing Section 10 and authorized by Section 27 and 28.5 of the Environmental Protection Act [415 ILCS 5/10, 27 and 28.5].

SOURCE: Adopted as Chapter 2: Air Pollution, Rules 202 and 203: Visual and Particulate Emission Standards and Limitations, R71-23, 4 PCB 191, filed and effective April 14, 1972; amended in R77-15, 32 PCB 403, at 3 Ill. Reg. 5, p. 798, effective February 3, 1979; amended in R78-10, 35 PCB 347, at 3 Ill. Reg. 39, p. 184, effective September 28, 1979; amended in R78-

11, 35 PCB 505, at 3 Ill. Reg. 45, p. 100, effective October 26, 1979; amended in R78-9, 38 PCB 411, at 4 Ill. Reg. 24, p. 514, effective June 4, 1980; amended in R79-11, 43 PCB 481, at 5 Ill. Reg. 11590, effective October 19, 1981; codified at 7 Ill. Reg. 13591; amended in R82-1 (Docket A), at 10 Ill. Reg. 12637, effective July 9, 1986; amended in R85-33 at 10 Ill. Reg. 18030, effective October 7, 1986; amended in R84-48 at 11 Ill. Reg. 691, effective December 18, 1986; amended in R84-42 at 11 Ill. Reg. 1410, effective December 30, 1986; amended in R82-1 (Docket B) at 12 Ill. Reg. 12492, effective July 13, 1988; amended in R91-6 at 15 Ill. Reg. 15708, effective October 4, 1991; amended in R89-7(B) at 15 Ill. Reg. 17710, effective November 26, 1991; amended in R91-22 at 16 Ill. Reg. 7880, effective May 11, 1992; amended in R91-35 at 16 Ill. Reg. 8204, effective May 15, 1992; amended in R93-30 at 18 Ill. Reg. 11587, effective July 11, 1994; amended in R96-5 at 20 Ill. Reg. 7605, effective May 22, 1996; amended in R23-18 at 47 Ill. Reg. 12107, effective July 25, 2023; amended in R23-18(A) at 48 Ill. Reg. 13711, effective August 30, 2024; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

BOARD NOTE: This Part implements the Illinois Environmental Protection Act as of July 1, 1994.

SUBPART A: GENERAL

Section 212.100 Scope and Organization

- a) This Part contains standards and limitations for visible and particulate matter emissions from stationary emission units.
- b) Permits for sources subject to this Part may be required ~~underpursuant to~~ 35 Ill. Adm. Code 201.
- c) ~~Despite~~Notwithstanding the provisions of this Part, the air quality standards ~~contained~~ in 35 Ill. Adm. Code 243 may not be violated.
- d) This Part includes the following Subparts ~~which are arranged as follows~~:
 - 1) Subpart A: General Provisions;
 - 2) Subpart B: Visible Emissions;
 - 3) Subparts C-J: Incinerators and Fuel Combustion Emission Units;
 - 4) Subparts K-M: Fugitive and Process Emission Units;
 - 5) Subparts N-T: Site-specific~~Site specific~~ and industry-specific~~industry specific~~ rules; and
 - 6) Subpart U: Additional control measures.

- e) ~~Rules have been grouped for the convenience of the public; the scope of each is determined by its language and history.~~

BOARD NOTE: While subsection (d) describes the organization of this Part, the rules themselves establish their applicability and effect.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.107 Measurement Method for Visible Emissions

For both fugitive and nonfugitive particulate matter emissions, ~~determininga determination as to~~ the presence or absence of visible emissions from emission units ~~mustshall~~ be conducted in ~~complianceaccordance~~ with Method 22, 40 CFR ~~part 60, Appendix A~~, incorporated by reference in Section 212.113 ~~of this Subpart~~, except that the length of the observing period ~~isshall be~~ at the discretion of the observer, but ~~must~~ not ~~be~~ less than one minute. This Subpart ~~doesshall~~ not apply to Section 212.301 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.108 Measurement Methods for PM₁₀₋₁₀ Emissions and Condensable ~~Condensible~~ PM₁₀₋₁₀ Emissions

- a) Emissions of PM₁₀₋₁₀ ~~mustshall~~ be measured by any of the following methods at the option of the owner or operator of an emission unit.
 - 1) Method 201, 40 CFR ~~part 51, Appendix M~~, incorporated by reference in Section 212.113 ~~of this Subpart~~.
 - 2) Method 201A, 40 CFR ~~part 51, Appendix M~~, incorporated by reference in Section 212.113 ~~of this Subpart~~.
 - 3) Method 5, 40 CFR ~~part 60, Appendix A~~, incorporated by reference in Section 212.113; ~~however, of this Subpart, provided that~~ all particulate matter measured by Method 5 ~~shall~~ must be considered to be PM₁₀₋₁₀.
- b) Emissions of ~~condensablecondensible~~ PM₁₀₋₁₀ ~~mustshall~~ be measured by Method 202, 40 CFR ~~part 51, Appendix M~~, incorporated by reference in Section 212.113 ~~of this Subpart~~.
- c) The volumetric flow rate and gas velocity for stack test methods ~~mustshall~~ be determined in ~~complianceaccordance~~ with Methods 1, 1A, 2, 2A, 2C, 2D, 3, or 4, 40 CFR ~~part 60, Appendix A~~, incorporated by reference in Section 212.113 ~~of this Subpart~~.
- d) After ~~Upon~~ a written notification by the Illinois Environmental Protection Agency (~~Agency~~), the owner or operator of a PM₁₀₋₁₀ emission unit subject to this

Section ~~mustshall~~ conduct the applicable testing for PM~~10-10~~ emissions, ~~condensablecondensible~~ PM~~10-10~~ emissions, opacity, or visible emissions at ~~the owner's or operator's~~ ~~such person's~~ own expense, to demonstrate compliance. ~~These~~ ~~Such~~ test results ~~mustshall~~ be submitted to the Agency within ~~thirty (30)~~ days after conducting the test unless ~~the Agency agrees to~~ an alternative time ~~to submit them~~ ~~for submittal is agreed to by the Agency~~.

- e) A person planning to conduct testing for PM~~10-10~~ or ~~condensablecondensible~~ PM~~10-10~~ emissions to demonstrate compliance ~~mustshall~~ give written notice ~~of that intent~~ to the Agency ~~of that intent. Such notification shall be given~~ at least ~~thirty (30)~~ days ~~before initiating~~ ~~prior to initiation of~~ the test, unless ~~the Agency agrees to~~ a shorter ~~period to submit notice~~ ~~pre-notification is agreed to by the Agency~~. ~~The~~ ~~Such~~ notification ~~mustshall~~ state the specific test methods from subsection (a) ~~of this Section~~ that will be used.
- f) The owner or operator of an emission unit subject to this Section ~~mustshall~~ retain records of all tests which are performed. These records ~~mustshall~~ be retained for at least three ~~(3)~~ years after the ~~owner or operator preforms~~ ~~date a test is performed~~.
- g) This Section ~~doesshall~~ not affect the authority of the United States Environmental Protection Agency (USEPA) under Section 114 of the Clean Air Act (CAA) (42 U.S.C. § 7414 (1990)).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.109 Measurement Methods for Opacity

Except as otherwise provided in this Part, and except for the methods of data reduction when applied to Sections 212.122 and 212.123 ~~of this Part~~, measurements of opacity ~~mustshall~~ be conducted in ~~complianceaceordance~~ with Method 9, 40 CFR ~~part 60.5~~ Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, incorporated by reference in Section 212.113 ~~of this Subpart~~, except that ~~for~~ roadways and parking areas ~~require three~~ ~~the number of~~ readings ~~taken at 5-second intervals~~ ~~required~~ for each vehicle pass ~~will be three taken at 5-second intervals~~. The first reading ~~mustshall~~ be at the point of maximum opacity, and second and third readings ~~mustshall~~ be made at the same point ~~with~~, the observer standing at right angles to the plume at least 15 feet away from the plume and observing ~~four~~ ~~4~~ feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.110 Measurement Methods ~~for~~ ~~For~~ Particulate Matter

- a) Measurement of particulate matter emissions from stationary emission units subject to this Part ~~mustshall~~ be conducted in ~~complianceaceordance~~ with 40 CFR

~~part 60.5~~ Appendix A, Methods 5, 5A, 5D, or 5E, ~~as~~ incorporated by reference in Section 212.113 ~~of this Subpart~~.

- b) The volumetric flow rate and gas velocity ~~must~~shall be determined in ~~compliance~~accordance with 40 CFR ~~part 60.5~~ Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4, incorporated by reference in Section 212.113 ~~of this Subpart~~.
- c) ~~After~~Upon a written notification by the Agency, the owner or operator of a particulate matter emission unit subject to this Part ~~must~~shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at ~~the owner's or operator's~~such person's own expense; to demonstrate compliance. ~~The~~Such test results ~~must~~shall be submitted to the Agency within ~~thirty~~(30) days after conducting the test unless the Agency agrees to an alternative time to submit them ~~for submittal is agreed to by the Agency~~.
- d) A person planning to conduct testing for particulate matter emissions to demonstrate compliance ~~must~~shall give written notice of that intent to the Agency ~~of that intent~~. ~~Such notification shall be given~~ at least ~~thirty~~(30) days before initiating ~~prior to the initiation of~~ the test unless the Agency agrees to a shorter period to submit notice ~~is agreed to by the Agency~~. ~~This~~Such notification ~~must~~shall state the specific test methods from this Section that will be used.
- e) The owner or operator of an emission unit subject to this Part ~~must~~shall retain records of all tests which are performed. ~~These records shall be retained~~ for at least three ~~(3)~~(3) years after the date the owner or operator performs a test ~~is performed~~.
- f) This Section ~~does~~shall not affect the authority of the USEPA under Section 114 of the CAA.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.111 Abbreviations and Units

- a) ~~This Part uses the~~The following abbreviations ~~are used in this Part~~:

btu	British thermal units (~~60~~ <u>60</u> °F)
dscf	dry standard cubic foot
ft	foot
ft ²	square feet
fpm	feet per minute
gal	gallon
gr	grains
gr/scf	grains per standard cubic foot
gr/dscf	grains per dry standard cubic foot
hr	hour

J	Joule
kg	kilogram
kg/MW-hr	kilograms per megawatt-hour
km	kilometer
L or l or ℓ	liter
lbs	pounds
lbs/hr	pounds per hour
lbs/MMBtu	pounds per million btu
m	meter
m ²	square meters
mph	miles per hour
mg	milligram
mg/scm	milligrams per standard cubic meter
mg/dscm	milligrams per dry standard cubic meter
mg/L	milligrams per liter
Mg	megagram, metric ton or tonne
mi	mile
MMBtu	million British thermal units
MMBtu/hr	million British thermal units per hour
MW	megawatt; one million watts
MW-hr	megawatt-hour
ng	nanogram; one billionth of a gram
ng/J	nanograms per Joule
scf	standard cubic foot
scfm	standard cubic feet per minute
scm	standard cubic meter
T	short ton (2000 lbs)
yd ²	square yards

b) ~~The~~ This Part uses the following conversion factors ~~have been used in this Part:~~

English	Metric
2.205 lb	1 kg
1 T	0.907 Mg
1 lb/T	0.500 kg/Mg
MMBtu/hr	0.293 MW
1 lb/MMBtu	1.548 kg/MW-hr or 430 ng/J
1 mi	1.61 km
1 gr	64.81 mg
1 gr/scf	2.289 mg/scm
1 ft ²	0.0929 m ²
1 ft	0.3048 m
1 gal	3.785 L

SUBPART B: VISIBLE EMISSIONS

Section 212.122 Visible Emissions Limitations for Certain Emission Units For Which Construction or Modification Commenced On or After April 14, 1972

- a) ~~A~~No person ~~must not~~shall cause or allow the emission of smoke or other particulate matter ~~with an opacity greater than 20%~~ into the atmosphere from any fuel combustion emission unit ~~with actual heat input greater than 73.2 MW (250 MMbtummbtu/hr)~~ for which construction or modification commenced on or after April 14, 1972, ~~with actual heat input greater than 73.2 MW (250 mmbtu/hr), having an opacity greater than 20 percent.~~
- b) The emissions of smoke or other particulate matter from ~~theseany such~~ emission units may have an opacity greater than 20% ~~percent~~ but not greater than 40% ~~percent~~ for a period or periods aggregating ~~three3~~ minutes in any ~~60-minute60~~ minute period, ~~if providing that such~~ opaque emissions permitted during any ~~60-minute60 minute~~ period shall occur from only one ~~such~~ emission unit located within a 305 m (1,000 ft) radius from the center point of any other ~~such~~ emission unit owned or operated by ~~thatsuch~~ person and ~~if provided further that such~~ opaque emissions permitted from each ~~such~~ fuel combustion emission unit ~~are~~shall be limited to ~~three3~~ times in any ~~24-hour24 hour~~ period.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.123 Visible Emissions Limitations for All Other Emission Units

- a) ~~A~~No person ~~must not~~shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30% ~~percent~~, into the atmosphere from any emission unit other than those ~~emission units~~ subject to Section 212.122 ~~of this Subpart.~~
- b) The emission of smoke or other particulate matter from ~~theseany such~~ emission units may have an opacity greater than 30% ~~percent~~ but not greater than 60% ~~percent~~ for a period or periods aggregating ~~eight8~~ minutes in any ~~60-minute60~~ minute period ~~if provided that such~~ opaque emissions permitted during any ~~60-minute60 minute~~ period shall occur from only one ~~such~~ emission unit located within a 305 m (1,000 ft) radius from the center point of any other ~~such~~ emission unit owned or operated by ~~thatsuch~~ person, and ~~if provided further that such~~ opaque emissions permitted from each ~~such~~ emission unit ~~are~~shall be limited to ~~three3~~ times in any ~~24-hour24 hour~~ period.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.124 Exceptions

- a) Sections 212.122 and 212.123 ~~do will~~ not apply to emissions of water or water vapor from an emission unit.
- b) An emission unit that has obtained an adjusted opacity standard in compliance with Section 212.126 ~~is will be~~ subject to that standard rather than the limitations of Section 212.122 or 212.123.
- c) Compliance with Particulate Emission Limitations as a Defense.
 - 1) For all emission units that are not subject to Section 111 or 112 of the CAA and Section 212.201, 212.202, 212.203, or 212.204 but are subject to Section 212.122 or 212.123, ~~the~~ opacity limitations of Sections 212.122 and 212.123 ~~do will~~ not apply if it is shown that the emission unit was ~~at~~ the time of emission ~~in compliance with the applicable particulate emissions limitations of Subparts D through T.~~
 - 2) For all emission units that are not subject to Section 111 or 112 of the CAA but are subject to Section 212.201, 212.202, 212.203, or 212.204:
 - A) ~~ExceedingAn exceedance of~~ the limitations of Section 212.122 or 212.123 ~~constituteswill constitute~~ a violation of the applicable particulate limitations of Subparts D through T. It ~~is will be~~ a defense to a violation of the applicable particulate limitations if, during a subsequent performance test conducted within a reasonable time not to exceed 60 days, under the same operating conditions for the unit and the control devices ~~and in complianceaccordance~~ with ~~Method 5,~~ 40 CFR 60, ~~Method 5,~~ incorporated by reference in Section 212.113, the owner or operator shows that the emission unit is ~~complyingin compliance~~ with the particulate emission limitations.
 - B) It ~~is will be~~ a defense to ~~exceedingan exceedance of~~ the opacity limit if, during a subsequent performance test conducted within a reasonable time not to exceed 60 days, under the same operating conditions of the emission unit and the control devices, and in ~~complianceaccordance~~ with Method 5, 40 CFR ~~part 60,~~ Appendix A, incorporated by reference in Section 212.113, the owner or operator shows that the emission unit is ~~complyingin compliance~~ with the allowable particulate emissions limitation while ~~simultaneously,~~ having visible emissions equal to or greater than the opacity exceedance as originally observed.

- d) During startup of coal-fired boiler 1 or 2 at the Baldwin Energy Complex, coal-fired boiler 1 or 2 at the Kincaid Power Station, coal-fired boiler 1 at Newton Power Station, or coal-fired boiler 51, 52, 61, or 62 at the Powerton Generating Station, or malfunction or breakdown of these boilers or the air pollution control equipment serving these boilers, when a six-minute average opacity exceeds the applicable limitation in Section 212.122(a) or 212.123(a), compliance with the limitation may alternatively be demonstrated as follows:
- 1) Alternative Averaging Period.
 - A) For Baldwin Energy Complex coal-fired boilers 1 and 2, compliance for that six-minute period may be determined based on opacity readings averaged over a period of up to one hour beginning with the six-minute period ~~exceeding in excess of~~ the applicable standard.
 - B) For Kincaid Power Station coal-fired boilers 1 and 2, Newton Power Station coal-fired boiler 1, and Powerton Generating Station coal-fired boilers 51, 52, 61, and 62, compliance for that six-minute period may be determined based on opacity readings averaged over a period of up to three hours beginning with the six-minute period ~~exceeding in excess of~~ the applicable standard.
 - 2) Recordkeeping and Reporting.
 - A) Any owner or operator complying with the alternative averaging period in subsection (d)(1) must maintain records of these average opacity calculations and report these calculations to the Agency as part of the next quarterly excess emissions report for the source.
 - B) For each startup, the report must include:
 - i) The date, time, and duration of the startup.
 - ii) A description of the startup.
 - iii) The reasons for the startup.
 - iv) An indication of whether written startup procedures were followed. If any were not, the report must describe all departures from established procedures and all reasons the procedures could not be followed.
 - v) A description of all actions taken to minimize the magnitude or duration of opacity requiring the use of the alternative averaging period in subsection (d)(1).

- vi) An explanation of whether similar incidents could be prevented in the future and, if so, a description of the actions taken or to be taken to prevent similar incidents in the future.
 - vii) Confirmation that the requirements of subsection (d)(3) have been fulfilled.
 - C) For each malfunction and breakdown, the report must include:
 - i) The date, time, and duration (i.e., the length of time during which operation continued with opacity exceeding the applicable limitation in Section 212.122(a) or 212.123(a) on a six-minute average basis) until corrective actions were taken or the boiler was taken out of service.
 - ii) A description of the incident.
 - iii) Any corrective actions used to reduce the magnitude or duration of opacity requiring the use of the alternative averaging period in subsection (d)(1).
 - iv) Confirmation that the requirements of subsections (d)(2)(D) and (d)(3) have been fulfilled.
 - D) Any person who causes or allows the continued operation of a coal-fired boiler during a malfunction or breakdown of the coal-fired boiler or related air pollution control equipment when that continued operation would require compliance with the alternative averaging period in subsection (d)(1) must immediately report the incident to the Agency by telephone at 217-782-3397 and as otherwise provided in the operating permit. After that, this person must comply with all lawful directives of the Agency regarding the incident.
- 3) Work Practices. Any person relying on the alternative averaging period in subsection (d)(1) must comply with the following work practices:-
- A) Operate the coal-fired boiler and related air pollution control equipment in a manner consistent with good engineering practice for minimizing opacity during startup, malfunction, or breakdown.
 - B) Use good engineering practices and best efforts to minimize the frequency and duration of operation in startup, malfunction, and breakdown.

- e) During startup of the emission unit designated Kiln 1 or Kiln 2 at the petroleum coke calcining facility located in Robinson, Illinois, when average opacity exceeds 30% ~~percent~~ for a six-minute period, under Section 212.123(a), compliance with Section 212.123(a) may alternatively be determined based on the average of opacity readings taken during a one-hour period using Test Method 9 (40 CFR 60.5-Appendix A-4, incorporated by reference in Section 212.113). However, compliance may be based on the average of up to three one-hour average periods if compliance is not demonstrated during the preceding hours. For this subsection (e), "startup" means the time from when green coke feed is introduced into the kiln until the temperature at the pyroscrubber inlet servicing the kiln achieves a minimum operating temperature of 1800 °F (based on a three-hour rolling average).
- f) Section 212.123 ~~does will~~ not apply to emission units subject to 35 Ill. Adm. Code 217.381(a).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.125 Determination of Violations

Violations of Sections 212.122 and 212.123 ~~are of this Subpart shall be~~ determined by:

- a) ~~Visual~~ By visual observations conducted in ~~compliance accordance~~ with Section 212.109 ~~of this Part; or~~
- b) ~~Use By the use~~ of a calibrated smoke evaluation device approved by the Agency ~~under as specified in Subpart J of~~ 35 Ill. Adm. Code 201. Subpart J; or
- c) ~~Use By the use~~ of a smoke monitor located in the stack and approved by the Agency ~~under as specified in Subpart J or L of~~ 35 Ill. Adm. Code 201. Subpart J or L.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.126 Adjusted Opacity Standards Procedures

- a) ~~Under Pursuant to~~ Section 28.1 of the Environmental Protection Act (Act) (~~415 ILCS 5/28.1~~); and in ~~compliance accordance~~ with 35 Ill. Adm. Code 106, Subpart E, ~~provisions for~~ adjusted standards for visible emissions for emission units subject to Sections 212.201, 212.202, 212.203, or 212.204 ~~may of this Part shall~~ be granted by the Board to the extent consistent with federal law, based upon a demonstration by ~~an such~~ owner or operator that the results of a performance test conducted ~~under pursuant to~~ this Section, Section 212.110 ~~of this Part~~, and Methods 5 and 9 of 40 CFR ~~part 60.5~~-Appendix A, incorporated by reference in Section 212.113 ~~of this Part~~, show that the emission unit meets the applicable

particulate emission limitations at the same time that the visible emissions exceed the otherwise applicable standards of Sections 212.121 through 212.125 ~~of this Subpart.~~ Adjusted~~Such adjusted~~ opacity limitations must:

- 1) ~~Be~~Shall be specified as a condition in operating permits issued ~~underpursuant to~~ 35 Ill. Adm. Code 201 and Section 39.5 of the Act;
 - 2) ~~Substitute~~Shall substitute for ~~thethat limitation~~ otherwise applicable limitation;
 - 3) ~~Not~~Shall not allow an opacity greater than 60%~~percent~~ at any time; and
 - 4) ~~Allow~~Shall allow opacity for one six-minute averaging period in any 60-minute~~60 minute~~ period to exceed the adjusted opacity standard.
- b) ~~To establish~~For the purpose of establishing an adjusted opacity standard, any owner or operator of an emission unit which meets the requirements of subsection (a) ~~of this Section,~~ may request the Agency to determine the average opacity of the emissions from the emission unit during any performance tests conducted ~~underpursuant to~~ Section 212.110 ~~of this Part~~ and Methods 5 and 9 of 40 CFR ~~part 60,~~ Appendix A, incorporated by reference in Section 212.113 ~~of this Part.~~ The Agency must~~shall~~ refuse to accept the results of emissions tests if not conducted in compliance with~~pursuant to~~ this Section.
- c) Any request ~~to determine for the determination of~~ the average opacity of emissions must~~shall~~ be made in writing, must~~shall~~ include the time and place of the performance test and test specifications and procedures, and must~~shall~~ be submitted to the Agency at least ~~thirty (30)~~ days before the proposed test date.
- d) The Agency must~~will~~ advise the owner or operator of an emission unit which has requested an opacity determination of any deficiencies in the proposed test specifications and procedures as expeditiously as practicable but by no later than ten (10) days before~~prior to~~ the proposed test date ~~so as to~~ minimize any disruption of the proposed testing schedule.
- e) The owner or operator must~~shall~~ allow Agency personnel to be present during the performance test.
- f) The method for determining an adjusted opacity standard is as follows:
- 1) A minimum of 60 consecutive minutes of opacity readings obtained in compliance~~accordance~~ with ~~Test~~ Method 9, 40 CFR ~~part 60,~~ Appendix A, incorporated by reference in Section 212.113, must~~of this Part, shall~~ be taken during each sampling run. ~~For~~Therefore, for each performance test, ~~(which normally consists of three sampling runs),~~ a total of three sets of opacity readings totaling three hours or more must~~shall~~ be obtained.

Concurrently, the particulate emissions data from three sampling runs obtained in ~~compliance~~accordance with ~~Test~~ Method 5, 40 CFR ~~part 60.5~~ Appendix A, incorporated by reference in Section 212.113 ~~of this Part~~, must~~shall~~ also be obtained.

- 2) After the results of the performance tests are received from the emission unit, the Agency must determine the status of compliance with the applicable particulate emissions limitation ~~shall be determined by the Agency~~. In ~~compliance~~accordance with ~~Test~~ Method 5, 40 CFR ~~part 60.5~~ Appendix A, incorporated by reference in Section 212.113 ~~of this Part~~, the average of the results of the three sampling runs must be less than the allowable particulate emission rate ~~in order~~ for the emission unit to be considered in compliance. If compliance is demonstrated, then only those test runs with results which are less than the allowable particulate emission rate will~~shall~~ be considered as acceptable test runs to establish ~~for the purpose of establishing~~ an adjusted opacity standard.
- 3) The opacity readings for each acceptable sampling run must~~shall~~ be divided into sets of 24 consecutive readings. The ~~six-minute~~six (6) minute average opacity for each set must~~shall~~ be determined by dividing the sum of the 24 readings within each set by 24.
- 4) The second highest ~~six-minute~~six (6) minute average opacity obtained ~~under~~in subsection (f)(3) ~~must~~of this Section shall be selected as the adjusted opacity standard.
- g) The owner or operator must~~shall~~ submit a written report of the results of the performance test to the Agency at least ~~thirty (30)~~ days ~~before~~prior to filing a petition for an adjusted standard with the Board.
- h) If, ~~after~~upon review of ~~the~~such owner's or operator's written report of the results of the performance tests, the Agency determines that the emission unit is in compliance with all applicable emission limitations for which the performance tests were conducted, but fails to comply with ~~the requirements of~~ Section 212.122 or 212.123 ~~of this Subpart~~, the Agency must~~shall~~ notify the owner or operator as expeditiously as practicable, but within ~~no later than twenty (20)~~ days after receiving the written report of any deficiencies in the results of the performance tests.
- i) The owner or operator may petition the Board for an adjusted visible emission standard under~~pursuant to~~ 35 Ill. Adm. Code 106.Subpart E. In addition to the requirements of 35 Ill. Adm. Code 106.Subpart E, the petition must~~shall~~ include the following information:
 - 1) A description of the business or activity of the petitioner, including its location and relevant pollution control equipment;

- 2) The quantity and type of materials discharged from the emission unit or control equipment for which the adjusted standard is requested;
 - 3) A copy of any correspondence between the petitioner and the Agency regarding the performance tests which form the basis of the adjusted standard request;
 - 4) A copy of the written report submitted to the Agency ~~underpursuant to~~ subsection (g) ~~of this Section~~;
 - 5) A statement that the performance tests were conducted in ~~compliance~~ ~~accordance~~ with this Section and the conditions and procedures accepted by the Agency ~~underpursuant to~~ Section 212.110 ~~of this Part~~;
 - 6) A statement regarding the specific limitation requested; and
 - 7) A statement ~~as to~~ whether the Agency has sent notice of deficiencies in the results of the performance test ~~underpursuant to~~ subsection (h) ~~of this Section~~ and, ~~if so~~, a copy of ~~that said~~ notice.
- j) ~~To~~ ~~In order to~~ qualify for an adjusted standard, the owner or operator must justify ~~as follows~~:
- 1) That the performance tests were conducted in ~~compliance~~ ~~accordance~~ with Test Methods 5 and 9, 40 CFR ~~part 60~~, Appendix A, incorporated by reference in Section 212.113 ~~of this Part~~, and the conditions and procedures accepted by the Agency ~~underpursuant to~~ Section 212.110 ~~of this Part~~;
 - 2) That the emission unit and associated air pollution control equipment were operated and maintained in a manner ~~so as~~ to minimize the opacity of the emissions during the performance tests; and
 - 3) That the proposed adjusted opacity standard was determined in ~~compliance~~ ~~accordance~~ with subsection (f) ~~of this Section~~.
- k) Nothing in this Section ~~prevents~~ ~~shall prevent~~ any person from initiating or participating in a rulemaking, variance, or permit appeal proceeding before the Board.

SUBPART D: PARTICULATE MATTER EMISSIONS FROM INCINERATORS

Section 212.181 Limitations for Incinerators

- a) ~~A~~No person ~~must not shall~~ cause or allow the emission of particulate matter into the atmosphere from any incinerator burning more than 27.2 Mg/hr (60,000 lbs/hr) of refuse to exceed 115 mg (0.05 gr/scf) of effluent gases corrected to 12%~~percent~~ carbon dioxide.
- b) ~~A~~No person ~~must not shall~~ cause or allow the emission of particulate matter into the atmosphere from any incinerator burning more than 0.907 Mg/hr (2000 lbs/hr) but less than 27.2 Mg/hr (60,000 lbs/hr) of refuse to exceed 183 mg/scm (0.08 gr/scf) of effluent gases corrected to 12%~~percent~~ carbon dioxide.
- c) ~~A~~No person ~~must not shall~~ cause or allow the emission of particulate matter into the atmosphere from all other incinerators for which construction or modification commenced ~~before prior to~~ April 14, 1972, to exceed 458 mg/scm (0.2 gr/scf) of effluent gases corrected to 12%~~percent~~ carbon dioxide.
- d) ~~A~~No person ~~must not shall~~ cause or allow the emission of particulate matter into the atmosphere from all other incinerators for which construction or modification commenced on or after April 14, 1972, to exceed 229 mg/scm (0.1 gr/scf) of effluent gases corrected to 12%~~percent~~ carbon dioxide.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.182 Aqueous Waste Incinerators

Section 212.181(d) ~~does of this Subpart shall~~ not apply to aqueous waste incinerators which, when corrected to 50%~~percent~~ excess air for combined fuel and charge incineration, produce stack gas containing carbon dioxide dry-basis volume concentrations of less than 1.2%~~percent~~ from the charge alone, if all the following conditions are met:

- a) The emission of particulate matter into the atmosphere from any such incinerator does not exceed 229 mg/scm (0.1 gr/scf), dry basis, when corrected to 50%~~percent~~ excess air for combined fuel and charge incineration; and
- b) The waste charge to the incinerator does not exceed 907 kg/hr (2,000 lbs/hr).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.183 Certain Wood Waste Incinerators

~~Exception:~~ Section 212.181(a), (b), and (d) ~~do of this Subpart shall~~ not apply to incinerators which burn only wood wastes ~~exclusively~~, if all the following conditions are met:

- a) The emission of particulate matter from ~~the such~~ incinerator does not exceed 458 mg (0.2 gr/scf) of effluent gases corrected to 12%~~percent~~ carbon dioxide;

- b) The location of ~~the such~~ incinerator is not in a restricted area, and is more than 305 m (1,000 ft) from residential or other populated areas; and
- c) ~~It When it~~ can be affirmatively demonstrated that no economically reasonable alternative method of disposal is available.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.184 Explosive Waste Incinerators

- a) Section 212.181 ~~does of this Subpart shall~~ not apply to certain existing small explosive waste incinerators if all the following conditions are met:
 - 1) The incinerator burns only explosives or explosive-contaminated explosive contaminated waste ~~exclusively~~;
 - 2) The incinerator burns 227 kg/hr (500 lbs/hr) or less of waste;
 - 3) All incinerators on the same site operate a total of six ~~(6)~~ hours or less in any day; and
 - 4) The incinerator existed before ~~was in existence prior to~~ December 6, 1976, and is located in Williamson County in Section 3, Township 9 South, Range 2 East of the Third Principal Meridian.
- b) ~~A No~~ person ~~must not shall~~ cause or allow the emission of particulate matter into the atmosphere from any such existing small explosive waste incinerator to exceed 7,140 mg/kg (50.0 gr/lb) of combined waste and auxiliary fuel burned.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.185 Continuous Automatic Stoking Animal Pathological Waste Incinerators

- a) Section 212.181 ~~does of this Subpart shall~~ not apply to continuous automatic stoking pathological waste incinerators if all ~~of~~ the following conditions are met.
 - 1) The incinerator burns only animal pathological waste ~~exclusively~~, except as otherwise prescribed by the Agency during specified test operation.
 - 2) The incinerator burns no more than 907 kg/hr (2,000 lbs/hr) of waste.
 - 3) The incinerator is a shall be multi-stage controlled air combustion incinerator having cyclical pulsed stoking hearth.

- b) ~~A~~~~No~~ person ~~must not shall~~ cause or allow the emission of particulate matter into the atmosphere from any continuous automatic stoking pathological waste incinerator to exceed 1 gram of emission per 1 kg of animal pathological waste charge (0.1 lb/100 lb).
- c) The particulate matter emissions produced when burning animal pathological waste using gaseous auxiliary fuel, such as natural gas, ~~mustshall~~ not exceed the lbs/hr emission rate equivalent to the maximum concentration rate ~~set forth in~~ Section 212.181(d) ~~of this Subpart,~~ when applied to burning a maximum of 2,000 lb of mixed charge animal pathological waste plus solid waste ~~to demonstrate for demonstration of~~ compliance. "Mixed charge" ~~mustshall~~ contain no more than ~~25%-percent~~ by weight of solid waste other than animal pathological waste.

SUBPART E: PARTICULATE MATTER EMISSIONS FROM FUEL COMBUSTION EMISSION UNITS

Section 212.201 Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972, Using Only Solid Fuel ~~and~~Exclusively Located in the Chicago Area

~~A~~~~No~~ person ~~must notshall~~ cause or allow the emission of particulate matter into the atmosphere from any fuel combustion emission unit for which construction or modification commenced ~~before~~prior to April 14, 1972, using only solid fuel ~~and~~exclusively, located in the Chicago major metropolitan area, to exceed 0.15 kg of particulate matter per MW-hr of actual heat input in any ~~one-hourone hour~~ period (0.10 lbs/~~MMbtummbtu~~/hr) except ~~underas provided in~~ Section 212.203 ~~of this Subpart~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.202 Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972, Using Only Solid Fuel ~~and~~Exclusively Located Outside the Chicago Area

~~A~~~~No~~ person ~~must notshall~~ cause or allow the emission of particulate matter into the atmosphere from any fuel combustion emission unit for which construction or modification commenced ~~before~~prior to April 14, 1972, using only solid fuel ~~and~~exclusively, which is located outside the Chicago major metropolitan area, to exceed the limitations ~~specified~~ in the table below in any ~~one-hourone hour~~ period, except ~~underas provided in~~ Section 212.203 ~~of this Subpart~~.

METRIC UNITS

H (Range)	S
MW	Kg/MW

Less than or equal to 2.93	1.55
Greater than 2.93 but ~~less~~ smaller than 73.2	$3.33 H^{-0.715}$
Greater than or equal to 73.2	0.155

ENGLISH UNITS

H (Range) ~~MMBtu~~ ~~mmBtu~~ /hr	S lbs/ ~~MMBtu~~ ~~mmBtu~~
Less than or equal to 10	1.0
Greater than 10 but ~~less~~ smaller than 250	$5.18 H^{-0.715}$
Greater than or equal to 250	0.1

where:

S = Allowable emission standard in lbs/~~MMBtu~~ ~~mmBtu~~/hr or kg/MW of actual heat input, and
H = Actual heat input in ~~MMBtu~~ ~~mmBtu~~/hr or MW-hr

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.203 Controlled Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972, Using Only Solid Fuel ~~Exclusively~~

~~Notwithstanding-Despite~~ Sections 212.201 and 212.202 ~~of this Subpart~~, any fuel combustion emission unit for which construction or modification commenced ~~before~~ prior to April 14, 1972, using only solid fuel ~~exclusively~~ may, in any ~~one-hour~~ one hour period, emit up to, but not exceed 0.31 kg/MW-hr (0.20 lbs/~~MMBtu~~ ~~mmBtu~~); if, as of April 14, 1972, any one of the following conditions was met:

- a) The emission unit had an hourly emission rate based on original design or equipment performance test conditions, whichever is stricter, which was less than 0.31 kg/MW-hr (0.20 lbs/~~MMBtu~~ ~~mmBtu~~) of actual heat input, and ~~the~~ emission control of ~~thesueh~~ emission unit is not allowed to degrade more than 0.077 kg/MW-hr (0.05 lbs/~~MMBtu~~ ~~mmBtu~~) from ~~thesueh~~ original design or acceptance performance test conditions; ~~or~~
- b) The emission unit was in full compliance with the terms and conditions of a variance granted by the ~~Pollution Control Board~~ (Board) sufficient to achieve an hourly emission rate less than 0.31 kg/MW-hr (0.20 lbs/~~MMBtu~~ ~~mmBtu~~), and construction has commenced on equipment or modifications prescribed under that program; and emission control of ~~thesueh~~ emission unit is not allowed to degrade

more than 0.077 kg/MW-hr (0.05 lbs/MMBtu) from original design or equipment performance test conditions, whichever is stricter; or

- c) The emission unit had an hourly emission rate based on original design or equipment performance test conditions, whichever is stricter, which was less than 0.31 kg/MW-hr (0.20 lbs/MMBtu) of actual heat input, and the emission control of ~~the~~^{such} emission unit is not allowed to degrade more than 0.077 kg/MW-hr (0.05 lbs/MMBtu) from ~~the~~^{that} rate demonstrated by the most recent stack test, submitted to and accepted by the Agency ~~before~~^{prior to} April 1, 1985, ~~if provided that~~:
- 1) Owners and operators of emission units subject to this subsection ~~shall have~~ applied for a new operating permit by January 9, 1987; and
 - 2) The application for a new operating permit ~~shall have~~ included a demonstration that the proposed emission rate, if greater than the emission rate allowed by subsections (a) or (b) ~~of this Section~~, will not under any foreseeable operating conditions and potential meteorological conditions cause or contribute to a violation of any applicable primary or secondary ambient air quality standard for particulate matter, or violate any applicable prevention of significant deterioration (PSD) increment, or violate 35 Ill. Adm. Code 201.141.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.204 Emission Units For Which Construction or Modification Commenced On or After April 14, 1972, Using Only Solid Fuel ~~Exclusively~~

~~A~~^{No} person ~~must not~~^{shall} cause or allow the emission of particulate matter into the atmosphere from any fuel combustion emission unit for which construction or modification commenced on or after April 14, 1972, using only solid fuel ~~exclusively~~ to exceed 0.15 kg of particulate matter per MW-hr of actual heat input (0.1 lbs/MMBtu) in any ~~one-hour~~^{one hour} period, unless Section 212.202, 212.203, or 212.205 applies.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.205 Coal-fired Industrial Boilers For Which Construction or Modification Commenced Before~~Prior to~~ April 14, 1972, Equipped with Flue Gas Desulfurization Systems

~~Despite~~^{Notwithstanding} Sections 212.201 through 212.204 ~~of this Subpart~~, ~~a~~^{no} person ~~must not~~^{shall} cause or allow the emission of particulate matter into the atmosphere from coal-fired industrial boilers equipped with flue gas desulfurization systems for which construction or modification commenced ~~before~~^{prior to} April 14, 1972, to exceed 0.39 kg of particulate matter per MW-hr of actual heat input in any one-hour period (0.25 lbs/MMBtu). This rule is not meant ~~Nothing in this rule shall be construed~~ to prevent compliance with applicable regulations

promulgated by the USEPA under Section 111 of the CAA as amended. *The provisions of Section 111 of the federal Clean Air Act (42 USC 7411), as amended, relating to standards of performance for new stationary sources . . . are applicable in this State and are enforceable under the Act* ~~(415 ILCS 5/9.1(b))~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.206 Emission Units Using Only Liquid Fuel ~~Exclusively~~

~~A~~No person ~~must not~~shall cause or allow the emission of particulate matter into the atmosphere in any ~~one-hour~~one-hour period to exceed 0.15 kg of particulate matter per MW-hr of actual heat input from any fuel combustion emission unit using only liquid fuel ~~exclusively~~ (0.10 lbs/~~MMbtummbtu~~).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.207 Emission Units Using More Than One Type of Fuel

- a) ~~A~~No person, while simultaneously burning more than one type of fuel in a fuel combustion emission unit, ~~must not~~shall cause or allow the emission of particulate matter into the atmosphere in any ~~one-hour~~one-hour period ~~exceed in excess of~~ the rate established by following equation:

$$E = AS + BL$$

where

E = Allowable emission rate;

A = Applicable solid~~Solid~~ fuel particulate emission standard ~~which is applicable~~;

B = Constant ~~determined from the table in~~ subsection (b);

S = Actual heat input from solid fuel;

L = Actual heat input from liquid fuel.

- b) The following metric and English units ~~must~~be used in the equation of subsection (a) ~~of this Section are as follows~~:

Parameter	Metric	English
E	kg/hr	lbs/hr
A	kg/MW-hr	lbs/ ~~MMbtummbtu~~
B	0.155	0.10
S	MW	~~MMbtummbtu~~ /hr
L	MW	~~MMbtummbtu~~ /hr

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.208 Aggregation of Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972

Section 212.207 ~~of this Subpart~~ may be applied to the aggregate of all fuel combustion emission units for which construction or modification commenced ~~before~~prior to April 14, 1972, vented to a common stack, ~~if, provided that~~ after January 26, 1972:

- a) Ductwork has not been modified ~~so as~~ to interconnect fuel combustion emission units;
- b) The actual heat input to any ~~such~~ fuel combustion emission units is not increased; and
- c) No new fuel combustion emission unit is added to reduce the degree of control of emissions of particulate matter required by this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.210 Emissions Limitations for Certain Fuel Combustion Emission Units Located in the Vicinity of Granite City

- a) ~~A~~No person ~~must not~~shall cause or allow emissions of PM₁₀₋₁₀ into the atmosphere to exceed 12.9 ng/J (0.03 lbs/~~MMbtu~~mmbtu) of heat input from fuels other than natural gas during any ~~one-hour~~one hour period from any industrial fuel combustion emission units, other than in an integrated iron and steel plant, located in the ~~vicinity of Granite City, which~~ area ~~is~~ defined in Section 212.324(a)(1)(C) ~~-of this Subpart~~.
- b) Emission units ~~must~~shall comply with the emissions limitations of this Section by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART K: FUGITIVE PARTICULATE MATTER

Section 212.301 Fugitive Particulate Matter

~~A~~No person ~~must not~~shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the source.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.302 Geographical Areas of Application

- a) Sections 212.304 through 212.310 and 212.312 ~~of this Subpart shall~~ apply to all mining operations (Standard Industrial Classification (SIC) major groups 10 through 14), manufacturing operations (SIC major groups 20 through 39, except for grain-handling and grain-drying those operations subject to Subpart S ~~of this Part (Grain Handling and Grain Drying Operations)~~ that are outside the areas defined in Section 212.324(a)(1) ~~of this Part~~), and electric generating operations (SIC group 491), ~~which are~~ located in ~~the areas defined by the boundaries of the~~ following townships in the following counties, ~~despite notwithstanding~~ any political subdivisions within them contained therein, as the township boundaries were defined on October 1, 1979, ~~in the following counties~~:

Cook:	All townships
Lake:	Shields, Waukegan, Warren
DuPage:	Addison, Winfield, York
Will:	DuPage, Plainfield, Lockport, Channahon, Peotone, Florence, Joliet
Peoria:	Richwoods, Limestone, Hollis, Peoria, City of Peoria
Tazewell:	Fondulac, Pekin, Cincinnati, Groveland, Washington
Macon:	Decatur, Hickory Point
Rock Island:	Blackhawk, Coal Valley, Hampton, Moline, South Moline, Rock Island, South Rock Island
LaSalle:	LaSalle, Utica
Madison:	Alton, Chouteau, Collinsville, Edwardsville, Fort Russell, Godfrey, Granite City, Nameoki, Venice, Wood River
St. Clair	Canteen, Caseyville, Centerville, St. Clair, Stites, Stookey, Sugar Loaf, Millstadt.

- b) In ~~the geographical~~ areas listed defined in Section 212.324(a)(1) ~~of this Part~~, Sections 212.304 through 212.310, 212.312, and 212.316 ~~of this Subpart shall~~ apply to all emission units identified in subsection (a) ~~at of this Section, and shall further apply to~~ the following operations: grain-handling and grain-drying (Subpart S-); ~~and of this Part~~; transportation, communications, electric, gas, and sanitary services (SIC major groups 40 through 49). Additionally, Sections 212.304 through 212.310, 212.312, and 212.316 ~~also of this Subpart shall~~ apply to wholesale trade-farm supplies (SIC Industry No. 5191) located in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~.
- c) Emission units must comply with subsection (b) ~~of this Section~~ by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.304 Storage Piles

- a) All storage piles of materials with uncontrolled emissions of fugitive particulate matter exceeding in excess of 45.4 Mg per year (50 T/yr) which are located within

a source whose potential particulate emissions from all emission units exceed 90.8 Mg/yr (100 T/yr) ~~must~~ be protected by a cover or sprayed with a surfactant solution or water on a regular basis, as needed, or treated by an equivalent method, in ~~compliance~~ with the operating program required by Sections 212.309, 212.310, and 212.312 ~~of this Subpart~~.

- b) Subsection (a) ~~does of this Section shall~~ not apply to a specific storage pile if the owner or operator of that pile proves to the Agency that fugitive particulate emissions from that pile do not cross the property line either by direct wind action or reentrainment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.305 Conveyor Loading Operations

All conveyor loading operations to storage piles specified in Section 212.304 ~~must use of this Subpart shall utilize~~ spray systems, telescopic chutes, stone ladders, or other equivalent methods in ~~compliance~~ with the operating program required by Sections 212.309, 212.310, and 212.312 ~~of this Subpart~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.306 Traffic Areas

All normal traffic pattern access areas surrounding storage piles specified in Section 212.304 ~~of this Subpart~~ and all normal traffic pattern roads and parking facilities ~~which are~~ located on mining or manufacturing property ~~must~~ be paved or treated with water, oils, or chemical dust suppressants. All paved areas ~~must~~ be cleaned on a regular basis. All areas treated with water, oils, or chemical dust suppressants ~~must~~ have the treatment applied on a regular basis, as needed, in ~~compliance~~ with the operating program required by Sections 212.309, 212.310, and 212.312 ~~of this Subpart~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.307 Materials Collected by Pollution Control Equipment

All ~~operations~~ unloading and transporting ~~operations of~~ materials collected by pollution control equipment ~~must~~ be enclosed or ~~must use shall utilize~~ spraying, pelletizing, screw conveying, or other equivalent methods.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.308 Spraying or Choke-Feeding Required

Crushers, grinding mills, screening operations, bucket elevators, conveyor transfer points, conveyors, bagging operations, storage bins, and fine product truck and railcar loading

operations ~~must~~shall be sprayed with water or a surfactant solution, utilize choke-feeding, or be treated by an equivalent method, in ~~compliance~~accordance with an operating program.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.309 Operating Program

- a) The emission units described in Sections 212.304 through 212.308 and Section 212.316 ~~must of this Subpart shall~~ be operated under ~~the provisions of an~~ operating program, consistent with the requirements ~~set forth~~ in Sections 212.310 and 212.312 ~~of this Subpart~~, and prepared by the owner or operator and submitted to the Agency for its review. ~~This~~Such operating program ~~must~~shall be designed to significantly reduce fugitive particulate matter emissions.
- b) The amendment to this Section incorporating the applicability of Section 212.316 ~~will~~shall apply by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.310 Minimum Operating Program

As a minimum, the operating program ~~must~~shall include ~~the following~~:

- a) The name and address of the source;
- b) The name and address of the owner or operator responsible for ~~executing~~execution of the operating program;
- c) A map or diagram of the source showing approximate locations of storage piles, conveyor loading operations, normal traffic pattern access areas surrounding storage piles, and all normal traffic patterns within the source;
- d) Location of unloading and transporting operations with pollution control equipment;
- e) A detailed description of the best management practices ~~used~~utilized to ~~comply~~achieve compliance with this Subpart, including an engineering specification of particulate collection equipment; application systems for water, oil, chemicals, and dust suppressants ~~used~~utilized and equivalent methods ~~used~~utilized;
- f) Estimated frequency of application of dust suppressants by location of materials; and
- g) ~~Other~~Such other information ~~as may be~~ necessary to facilitate the Agency's review of the operating program,

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.312 Amendment to Operating Program

The operating program ~~must~~shall be amended from time to time by the owner or operator so that the operating program is current. ~~These~~Such amendments ~~must~~shall be consistent with this Subpart and ~~must~~shall be submitted to the Agency for its review.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.313 Emission Standard for Particulate Collection Equipment

If particulate collection equipment is operated ~~under~~pursuant to Sections 212.304 through 212.310 and 212.312 ~~of this Subpart~~, emissions from ~~that~~such equipment ~~must~~shall not exceed 68 mg/dscm (0.03 gr/dscf).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.314 Exception for Excess Wind Speed

Section 212.301 ~~does of this Subpart shall~~ not apply and spraying ~~under~~pursuant to Sections 212.304 through 212.310 and 212.312 ~~is of this Subpart shall~~ not ~~be~~ required when the wind speed is greater than 40.2 km/hr (25 mph). ~~Determining~~Determination of wind speed for ~~the purposes of~~ this rule ~~must~~shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. ~~When in cases where~~ the duration of operations subject to this rule is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.315 Covering for Vehicles

~~A~~No person ~~must not~~shall cause or allow the operation of a vehicle of the second division, as defined by 625 ILCS 5/1-217, or a semi-trailer, as defined by 625 ILCS 5/1-187, without a covering sufficient to prevent the release of particulate matter into the atmosphere. ~~This, provided that this rule does~~shall not ~~apply~~pertain to automotive exhaust emissions.

BOARD NOTE: ~~Under (Board Note: Pursuant to~~ Section 10(E) of the Act, Section 212.315 cannot be more strict than Section 15-109 of the Vehicle Code (~~{~~625 ILCS 5/15-109.1~~}~~).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.316 Emission Limitations for Emission Units in Certain Areas

- a) Applicability. This Section ~~applies~~~~shall apply~~ to ~~those~~ operations specified in Section 212.302 ~~of this Subpart~~ and ~~that are~~ located in areas defined in Section 212.324(a)(1) ~~of this Part~~.
- b) Emission Limitation for Crushing and Screening Operations. ~~A~~~~No~~ person ~~must~~ ~~not~~~~shall~~ cause or allow fugitive particulate matter emissions generated by the crushing or screening of slag, stone, coke, or coal to exceed an opacity of 10% ~~percent~~.
- c) Emission Limitations for Roadways or Parking Areas. ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow fugitive particulate matter emissions from any roadway or parking area to exceed an opacity of 10% ~~percent~~, except that the opacity ~~must~~~~shall~~ not exceed 5% ~~percent~~ at quarries with a capacity to produce more than 1 million T/yr of aggregate.
- d) Emission Limitations for Storage Piles. ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow fugitive particulate matter emissions from any storage pile to exceed an opacity of 10% ~~percent~~, ~~to be~~ measured four ~~feet~~~~ft~~ from the pile surface.
- e) Additional Emissions Limitations for the Granite City Vicinity as Defined in Section 212.324(a)(1)(C) ~~of this Part~~.
 - 1) Emissions Limitations for Roadways or Parking Areas Located at Slag Processing Facilities or Integrated Iron and Steel Manufacturing Plants. ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow fugitive particulate matter emissions from any roadway or parking area located at a slag processing facility or integrated iron and steel manufacturing plant to exceed an opacity of 5% ~~percent~~.
 - 2) Emissions Limitations for Marine Terminals.
 - A) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow fugitive particulate matter emissions from any loading spouts for truck or railcar to exceed an opacity of 10% ~~percent~~; and
 - B) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow fugitive particulate matter emissions generated at barge unloading, dump pits, or conveyor transfer points, including ~~but not limited to~~, transfer onto and off of a conveyor, to exceed an opacity of 5% ~~percent~~.
- f) Emission Limitation for All Other Emission Units. Unless an emission unit has been assigned a particulate matter, PM₁₀₋₁₀, or fugitive particulate matter emissions limitation elsewhere in this Section or in Subparts R or S ~~of this Part~~, ~~a~~~~ne~~ person ~~must not~~~~shall~~ cause or allow fugitive particulate matter emissions from any emission unit to exceed an opacity of 20% ~~percent~~.

g) Recordkeeping and Reporting

- 1) The owner or operator of any fugitive particulate matter emission unit subject to this Section ~~must~~ keep written records of the application of control measures ~~as may be needed to comply for compliance~~ with the opacity limitations of this Section and ~~must~~ submit to the Agency an annual report ~~summarizing that containing a summary of such~~ information.
- 2) The records required under this subsection ~~must~~ include, ~~at a minimum at least the following~~:
 - A) The name and address of the source;
 - B) The name and address of the ~~source's~~ owner, ~~and/or operator, or both of the source~~;
 - C) A map or diagram showing the location of all emission units controlled, including the location, identification, length, and width of roadways;
 - D) For each application of water or chemical solution to roadways by truck: the name and location of the roadway controlled, application rate of each truck, frequency of each application, width of each application, identification of each truck used, total quantity of water or chemical used for each application, ~~and~~ for each application of chemical solution, the concentration and identity of the chemical;
 - E) For application of physical or chemical control agents: the name of the agent, application rate and frequency, and total quantity of agent, ~~and~~, if diluted, percent of concentration, ~~used each day~~; and
 - F) A log recording incidents when control measures were not used and a statement of explanation.
- 3) Copies of all records required by this Section ~~must~~ be submitted to the Agency within ~~ten (10)~~ working days after a written request by the Agency and ~~must~~ be transmitted to the Agency by a company-designated person with authority to release ~~these~~ records.
- 4) The records required under this Section ~~must~~ be kept and maintained for at least three ~~(3)~~ years and ~~must~~ be available for inspection and copying by Agency representatives during working hours.

5) A quarterly report ~~must~~shall be submitted to the Agency stating the following: the dates any necessary control measures were not implemented, a listing of those control measures, the reasons that the control measures were not implemented, and any corrective actions taken. This information includes, ~~but is not limited to, those~~ dates when controls were not applied based on a belief that ~~applying the~~application of such control measures would have been unreasonable given prevailing atmospheric conditions, which ~~shall constitute~~constitutes a defense to the requirements of this Section. This report ~~must~~shall be submitted to the Agency ~~within thirty (30)~~ calendar days ~~after~~from the end of a quarter. Quarters end March 31, June 30, September 30, and December 31.

h) Compliance Date. Emission units ~~must~~shall comply with the emissions limitations and recordkeeping and reporting requirements of this Section by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART L: PARTICULATE MATTER EMISSIONS FROM PROCESS EMISSION UNITS

Section 212.321 Process Emission Units For Which Construction or Modification Commenced On or After April 14, 1972

- a) Except as further provided in this Part, ~~any~~ person ~~must not~~shall cause or allow the emission of particulate matter into the atmosphere in any ~~one-hour~~one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates ~~specified~~ in subsection (c) ~~of this Section~~.
- b) Interpolated and extrapolated values of the data in subsection (c) ~~must of this~~Section shall be determined by using the equation:

$$E = A(P)^B$$

where

P = Process weight rate; and
E = Allowable emission rate; and,

- 1) Up to process weight rates of 408 MG/hr (450 T/hr):

Metric

English

P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.214	2.54
B	0.534	0.534

2) For process weight rate greater than or equal to 408 Mg/hr (450 T/hr):

	Metric	English
P	Mg/hr	T/hr

Section 212.322 Process Emission Units For Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972

- a) Except as further provided in this Part, a person must not cause or allow the emission of particulate matter into the atmosphere in any one-hour period from any process emission unit for which construction or modification commenced ~~before~~prior to April 14, 1972, that, either alone or in combination with the emission of particulate matter from all other similar process emission units at a source or premises, exceeds the allowable emission rates ~~specified~~ in subsection (c).
- b) Interpolated and extrapolated values of the data in subsection (c) must be determined using the following equation:

$$E = C + A(P)^{B^{10}}$$

where:

P = process weight rate; and,
E = allowable emission rate; and,

- 1) For process weight rates up to 27.2 Mg/hr (30 T/hr):

	Metric	English
P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	1.985	4.10
B	0.67	0.67
C	0	0

- 2) For process weight rates above 27.2 Mg/hr (30 T/hr):

Metric	English

P	Mg/hr	T/hr
E	kg/hr	lbs/hr
A	25.21	55.0
B	0.11	0.11
C	-18.4	-40.0

- c) Limits for Process Emission Units for Which Construction or Modification Commenced ~~Before~~Prior to April 14, 1972

360.0	30.0	400.00	66.20
400.0	30.6	450.00	67.70
454.0	31.3	500.00	69.00

where:

P = Process weight rate in Mg/hr or T/hr, and

E = Allowable emission rate in kg/hr or lbs/hr.

d) Alternative Standard

- 1) The owner or operator of the petroleum coke calcining facility located in Robinson, Illinois, may emit particulate matter into the atmosphere from Kiln 1 or Kiln 2 exceeding the allowable emission rates ~~specified~~ in subsection (c) while the temperature of the inlet to the pyroscrubber servicing Kiln 1 or Kiln 2 does not achieve a minimum operating temperature of 1800 °F during startup, malfunction, or breakdown (based on a three-hour rolling average). During this period of time, the owner or operator must comply with subsection (d)(3). For ~~purposes of~~ this subsection, "startup" is defined as the duration from when green coke feed is first introduced into the kiln until the temperature at the pyroscrubber inlet servicing the kiln achieves a minimum operating temperature of 1800 °F (based on a three-hour rolling average).
- 2) Use of the alternative standard in subsection (d)(1) must not exceed a total of 300 hours per kiln in a calendar year.
- 3) During any time that Kiln 1 or Kiln 2 is operated while the pyroscrubber servicing the emission unit is not achieving the minimum operating temperature of 1800 °F, the owner or operator must:
 - A) ~~Minimize~~ ~~minimize~~ emissions to the extent practicable;
 - B) ~~Not~~ ~~not~~ introduce green coke into the kiln unless or until a minimum operating temperature of 400 °F measured at the inlet to the pyroscrubber is achieved; and
 - C) ~~Operate~~ ~~operate~~ the natural gas-fired burners to minimize the time that a kiln operates below 1800 °F, consistent with technological limitations, manufacturer specifications, and good air pollution control practices for minimizing emissions.
- 4) The owner or operator must keep and maintain all records necessary to demonstrate compliance with this subsection (d), including records of each hour that the pyroscrubber operated below 1800 °F. The owner or operator must provide these records to the Agency upon request.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.323 Stock Piles

Sections 212.321 and 212.322 ~~do of this Subpart shall~~ not apply to emission units, such as stock piles of particulate matter, to which, ~~those rules cannot reasonably apply~~ because of the disperse nature of ~~thosesuch~~ emission units, ~~such rules cannot reasonably be applied~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.324 Process Emission Units in Certain Areas

a) Applicability

- 1) This Section applies to any process emission unit located in any of the following areas:
 - A) That area bounded by lines from Universal ~~Transm~~Transverse Mercator (UTM) coordinate 428000mE, 4631000mN, east to 435000mE, 4631000mN, south to 435000mE, 4623000mN, west to 428000mE, 4623000mN, north to 428000mE, 4631000mN, in the vicinity of McCook in Cook County, as shown in Illustration D-~~of this Part~~;
 - B) That area bounded by lines from Universal ~~Transm~~Transverse Mercator (UTM) coordinate 445000mE, 4622180mN, east to 456265mE, 4622180mN, south to 456265E, 4609020N, west to 445000mE, 4609020mN, north to 445000mE, 4622180mN, in the vicinity of Lake Calumet in Cook County, as shown in Illustration E-~~of this Part~~; and
 - C) That area bounded by lines from Universal ~~Transm~~Transverse Mercator (UTM) coordinate 744000mE, 4290000mN, east to 753000mE, 4290000mN, south to 753000mE, 4283000mN, west to 744000mE, 4283000mN, north to 744000mE, 4290000mN, in the vicinity of Granite City in Madison County, as shown in Illustration F-~~of this Part~~.
- 2) This Section does not alter the applicability of Sections 212.321 and 212.322.
- 3) The emission limitations of this Section ~~do not apply~~are not applicable to any emission unit subject to a specific emissions standard or limitation ~~contained in any of~~ the following Subparts:
 - A) Subpart N, Food Manufacturing;
 - B) Subpart Q, Stone, Clay, Glass, and Concrete Manufacturing;

C) Subpart R, Primary and Fabricated Metal Products and Machinery Manufacture; and

D) Subpart S, Agriculture.

b) General Emission Limitation. Except as otherwise provided in this Section, a person must not cause or allow the emission into the atmosphere of PM₁₀₋₁₀ from any process emission unit to exceed 68.7 mg/scm (0.03 gr/scf) during any one-hour period.

c) Alternative Emission Limitation. In lieu of the emission limit of 68.7 mg/scm (0.03 gr/scf) ~~contained~~ in subsection (b), a person must not cause or allow the emissions from the following emission units to exceed the corresponding limitations:

Emissions Units		Emissions Limit	
		Metric	English
1)	Shotblasting emission units in the Village of McCook equipped with fabric filters as of June 1, 1991	22.9 mg/scm	0.01 gr/scf
2)	All process emission units at manufacturers of steel wool with soap pads located in the Village of McCook	5% opacity	5% opacity

d) Exceptions. The mass emission limits ~~contained~~ in subsections (b) and (c) will not apply to ~~those~~ emission units with no visible emissions other than fugitive particulate matter. ~~However; however~~, if a stack test is performed, this subsection is not a defense to a finding of a violation of the mass emission limits ~~contained~~ in subsections (b) and (c).

e) Special Emissions Limitation for Fuel-Burning Process Emission Units in the Vicinity of Granite City. A person must not cause or allow emissions of PM₁₀₋₁₀ into the atmosphere to exceed 12.9 ng/J (0.03 lbs/~~MMbtuMMBtu~~) of heat input from ~~the~~ burning ~~of~~ fuel other than natural gas at any process emission unit located in the vicinity of Granite City, as defined in subsection (a)(1)(C).

f) Maintenance and Repair. For any process emission unit subject to subsection (a), the owner or operator must maintain and repair all air pollution control equipment in a manner that assures that the emission limits and standards in this Section will be met at all times. Proper maintenance must include ~~the following requirements~~:

- 1) Visual inspections of air pollution control equipment;
- 2) Maintenance of an adequate inventory of spare parts; and

- 3) Expeditious repairs, unless the emission unit is shutdown.
- g) Recordkeeping of Maintenance and Repair.
- 1) Written records of inventory and documentation of inspections, maintenance, and repairs of all air pollution control equipment must be kept in compliance with subsection (f).
 - 2) The owner or operator must document any period during which any process emission unit was ~~operating in operation~~ when the air pollution control equipment was not ~~operating in operation~~ or was malfunctioning so as to cause an emissions level ~~in excess of exceeding~~ the emissions limitation. These records must include documentation of causes for pollution control equipment not operating or ~~such malfunction malfunctioning~~ and state what corrective actions were taken and what repairs were made.
 - 3) A written record of the inventory of all spare parts not readily available from local suppliers must be kept and updated.
 - 4) Copies of all records required by this Section must be submitted to the Agency within ~~10 ten~~ working days after a written request by the Agency.
 - 5) The records required under this Section must be kept and maintained for at least three years and must be available for inspection and copying by Agency representatives during working hours.
 - 6) Upon written request by the Agency, a report must be submitted to the Agency for any period specified in the request stating the following: the dates during which any process emission unit was ~~operating in operation~~ when the air pollution control equipment was not ~~operating in operation~~ or was ~~malfunctioning not operating properly~~, documentation of causes for pollution control equipment ~~malfunctioning or not operating or not operating properly~~, and a statement of what corrective actions were taken and what repairs were made.
- h) Compliance Date. Emission units must comply with the emissions limitations and recordkeeping and reporting requirements of this Section by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART N: FOOD MANUFACTURING

Section 212.361 Corn Wet Milling Processes

Sections 212.321 and 212.322 ~~do of this Part shall~~ not apply to feed and gluten dryers in corn wet milling processes, where the exit gases have a dew point higher than the ambient temperature and the specific gravity of the material processed is less than 2.0. ~~A~~ No person must not shall cause or allow the emission of particulate matter into the atmosphere from any such process ~~so as~~ to exceed the emission standards and limitations specified in Section 212.322 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.362 Emission Units in Certain Areas

a) Applicability.

- 1) Subsections (b)(1) through (b)(4) ~~must of this Section shall~~ apply to ~~those~~ emission units engaged in food manufacturing and located in the Village of Bedford Park west of Archer Avenue and in the area defined in Section 212.324(a)(1)(A) ~~of this Part~~.
- 2) Subsection (b)(5) ~~of this Section~~ applies to an instant tea manufacturing plant in Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~.

b) Emission Limitation. ~~A~~ No person must not shall cause or allow the emission of PM₁₀₋₁₀, other than ~~that of~~ fugitive particulate matter, into the atmosphere to exceed the following limits during any one-hour ~~one hour~~ period:

- 1) 22.9 mg/scm (0.01 gr/scf) for dextrose dryers, dextrose melt tank systems, bulk dextrose loading systems, house dry dextrose dust systems, ~~dextrose dextorse~~ bagging machine dust systems, dextrose expansion dryer/cooler and packing systems, and 2034 dextrose dryer/cooler dust collecting systems;
- 2) 34.3 mg/scm (0.015 gr/scf) for feed dryers, gluten dryers, germ dryers, and heat recovery scrubbers;
- 3) 68.7 mg/scm (0.03 gr/scf) for germ cake transport systems, spent flake transport/cooling systems, bleaching clay systems, dust pickup bin systems in Building 26, and pellet cooler systems;
- 4) 45.8 mg/scm (0.02 gr/scf) for germ transport systems, starch dust collection systems, dicalite systems, starch processing/transport systems, starch dryers, starch transport systems, calcium carbonate storage systems, starch loading systems, corn unloading systems, germ transfer towers, dextrose transport systems, soda ash unloading systems, corn silo systems, filter aid systems, spent flake storage systems, corn cleaning transport systems, feed transport cooling systems, gluten cooling systems, gluten transport systems, feed dust systems, gluten dust systems, pellet dust

systems, spent flake transport systems, rail car maintenance system buildings, and dextrose expansion milling and storage systems;

- 5) 22.9 mg/scm (0.01 gr/scf) for any process emission unit at an instant tea manufacturing plant in Granite City, except the spray dryer, raw tea storage silo, and instant tea filling machines.

- c) Exceptions. The mass emission limits ~~contained~~ in subsection (b) ~~do of this Section shall~~ not apply to ~~those~~ emission units with no visible emissions other than fugitive matter. ~~However; however~~, if a stack test is performed, this subsection is not a defense to a finding of a violation of the mass emission limits ~~contained~~ in subsection (b) ~~of this Section~~.
- d) Maintenance, Repair, and Recordkeeping. ~~The requirements of~~ Sections 212.324(f) and (g) ~~of this Part shall also~~ apply to this Section.
- e) Compliance Date. Emission units ~~must shall~~ comply with the emissions limitations and recordkeeping and reporting requirements of this Section by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART O: PETROLEUM REFINING, PETROCHEMICAL, AND CHEMICAL MANUFACTURING

Section 212.381 Catalyst Regenerators of Fluidized Catalytic Converters

Sections 212.321 and 212.322 ~~do of this Part shall~~ not apply to catalyst regenerators of fluidized catalytic converters. ~~A~~ No person ~~must not shall~~ cause or allow the emission rate from catalyst regenerators of fluidized catalytic converters to exceed in any ~~one-hour one hour~~ period the rate determined ~~by using~~ the following equations:

$$E = 4.10 (P)^{0.67} \quad \text{for } P \text{ less than or equal to } 30 \text{ T/hr}$$

$$E = (55.0 (P)^{0.11}) - 40.0 \quad \text{for } P \text{ greater than } 30 \text{ T/hr.}$$

where:

E = allowable emission rate in lbs/hr, and

P = catalyst recycle rate, including the amount of fresh catalyst added, in T/hr.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART Q: STONE, CLAY, GLASS, AND CONCRETE MANUFACTURING

Section 212.421 Portland Cement Processes ~~for~~ Which Construction or Modification Commenced On or After April 14, 1972

~~A~~No person ~~must not~~shall cause or allow the emission of smoke or other particulate matter from any portland cement process for which construction or modification commenced on or after April 14, 1972, into the atmosphere having an opacity greater than 10% ~~percent~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.422 Portland Cement Manufacturing Processes

Section 212.321 ~~does of this Part shall~~ not apply to the kilns and coolers of portland cement manufacturing processes.

- a) The kilns and clinker coolers of portland cement manufacturing processes for which construction or modification commenced ~~before~~prior to April 14, 1972, ~~must~~shall comply with the emission standards and limitations of Section 212.322 ~~of this Part~~.
- b) The kilns and clinker coolers of portland cement manufacturing processes for which construction or modification commenced on or after April 14, 1972, ~~must~~shall comply with the following emission standards and limitations:
 - 1) ~~A~~No person ~~must not~~shall cause or allow the emission of particulate matter into the atmosphere from any such kiln to exceed 0.3 lbs/T of feed to the kiln.
 - 2) ~~A~~No person ~~must not~~shall cause or allow the emission of particulate matter into the atmosphere from any such clinker cooler to exceed 0.1 lbs/T of feed to the kiln.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.423 Emission Limits for the Portland Cement Manufacturing Plant Located in LaSalle County, South of the Illinois River (Repealed)

- a) ~~this Section shall apply to the portland cement manufacturing plant in operation before September 1, 1990, located in LaSalle County, south of the Illinois River. This Section shall not alter the applicability of Sections 212.321 and 212.322 of this Part to portland cement manufacturing processes other than those for which alternate emission limits are specified in subsection (b) of this Section. This Section shall not become effective until April 30, 1992.~~
- b) ~~No person shall cause or allow emissions to exceed the emission limits set forth below for each process.~~

1)		PM-10 Emission Limits	
		Rate	Concentration
		kg/hr (lbs/hr)	mg/scm (gr/scf)
A)	Clinker Cooler	4.67 (10.3)	28.147 (0.012)
B)	Finish Mill High Efficiency Air Separator	2.68 (5.90)	26.087 (0.011)

2)		PM-10 Emissions Limits Including Condensible PM-10	
		Rate kg/hr	Concentration
		kg/hr (lbs/hr)	mg/scm (gr/scf)
A)	Raw Mill Roller Mill(RMRM)	6.08 (13.4)	27.5 (0.012)
B)	Kiln without RMRM Operating	19.19 (42.3)	91.5 (0.040)
C)	Kiln with RMRM	11.43 (25.2)	89.2 (0.039)

- e) ~~No person shall cause or allow any visible emissions from any portland~~453~~ortland~~
~~cement manufacturing process emission unit not listed in subsection (b) of this~~
~~Section.~~
- d) ~~The owner or operator of any process emission unit subject to subsection (b) or~~
~~(c) of this Section shall maintain and repair all air pollution control equipment in a~~
~~manner that assures that the applicable emission limits and standards in~~
~~subsection (b) or (c) of this Section shall be met at all times. Proper maintenance~~
~~shall include at least the following requirements:~~
- 1) ~~Visual inspections of air pollution control equipment shall be conducted;~~
 - 2) ~~An adequate inventory of spare parts shall be maintained;~~
 - 3) ~~Prompt and immediate repairs shall be made upon identification of the~~
~~need; and~~
 - 4) ~~Written records of inventory and documentation of inspections,~~
~~maintenance, and repairs of all air pollution control equipment shall be~~
~~kept in accordance with subsection (c) of this Section.~~

- e) ~~Recordkeeping of Maintenance and Repair.~~
- 1) ~~Written records shall be kept documenting inspections, maintenance, and repairs of all air pollution control equipment. All such records required under this Section shall be kept and maintained for at least three (3) years; shall be available for inspection by the Agency, and, upon request, shall be copied and furnished to Agency representatives during working hours.~~
 - 2) ~~The owner or operator shall document any period during which any process emission unit was in operation when the air pollution control equipment was not in operation or was not operating properly. These records shall include documentation of causes for pollution control equipment not operating or not operating properly, and shall state what corrective actions were taken and what repairs were made. In any quarter during which such a malfunction should occur, the owner or operator shall mail one copy of the documentation to the Agency.~~
 - 3) ~~A written record of the inventory of all spare parts not readily available from local suppliers shall be kept and updated.~~
 - 4) ~~Upon written request by the Agency, the owner or operator shall submit any information required pursuant to this Subpart, for any period of time specified in the request. Such information shall be submitted within ten (10) working days from the date on which the request is received.~~
- f) ~~Testing to determine compliance with the emission limits specified for PM-10, condensible PM-10, and detection of visible emissions shall be in accordance with the measurement methods specified in Sections 212.107 and 212.108 (a) and (b) of this Part. Ammonium chloride shall be excluded from the measurement of condensible PM-10.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 212.424 Fugitive Particulate Matter Control for the Portland Cement Manufacturing Plant and Associated Quarry Operations Located in LaSalle County, South of the Illinois River. (Repealed)

- a) ~~Applicability. This Section shall apply to the portland cement manufacturing plant in operation before September 1, 1990, and associated quarry operations located in LaSalle County, south of the Illinois River. Associated quarry operations are those operations involving the removal and disposal of overburden, and the extraction, crushing, sizing, and transport of limestone and shale for usage at the portland cement manufacturing plant. This Section shall not become effective until April 30, 1992.~~

- b) ~~Applicability of Subpart K of this Part. This Section shall not alter the applicability of Subpart K: Fugitive Particulate Matter.~~
- e) ~~Fugitive Particulate Matter Control Measures For Roadways at the Plant.~~
 - 1) ~~For the unpaved access roadway to the Illinois Central Silos Loadout, the owner or operator shall spray a 30 percent solution of calcium chloride once every 16 weeks at an application rate of at least 1.58 L/m⁽²⁾ (0.35 gal/yd⁽²⁾) followed by weekly application of water at a rate of at least 1.58 L/m⁽²⁾ (0.35 gal/yd⁽²⁾). This subsection shall not apply after the roadway is paved.~~
 - 2) ~~The owner or operator of the portland cement manufacturing plant shall keep written records in accordance with subsection (e) of this Section.~~
- d) ~~Fugitive Particulate Matter Control Measures for Associated Quarry Operations.~~
 - 1) ~~For the primary crusher, the primary screen, the #3 conveyor from the primary screen to the surge pile, and the surge pile feeders to the #4 conveyor, the owner or operator shall spray a chemical foam spray of at least 1 percent solution of chemical foaming agent in water continuously during operations at a rate of at least 1.25 L/Mg (0.30 gal/T) of rock processed.~~
 - 2) ~~The owner or operator shall water all roadways traveled by trucks to and from the primary crusher in the process of transporting raw limestone and shale to the crusher at an application rate of at least 0.50 L/m² (0.10 gal/yd²) applied once every eight hours of operation except under conditions specified in subsection (d)(3) of this Section. Watering shall begin within one hour of commencement of truck traffic each day.~~
 - 3) ~~Subsection (d)(2) of this Section shall be followed at all times except under the following circumstances:~~
 - A) ~~Precipitation is occurring such that there are no visible emissions or if precipitation occurred during the previous 2 hours such that there are no visible emissions;~~
 - B) ~~If the ambient temperature is less than or equal to 0°C (32° F); or~~
 - C) ~~If ice or snow build up has occurred on roadways such that there are no visible emissions.~~
 - 4) ~~The owner or operator of the associated quarry operations shall keep written records in accordance with subsection (e) of this Section.~~

e) Recordkeeping and Reporting

- 1) ~~The owner or operator of any portland cement manufacturing plant and/or associated quarry operations subject to this Section shall keep written daily records relating to the application of each of the fugitive particulate matter control measures required by this Section.~~
- 2) ~~The records required under this Section shall include at least the following:~~
 - A) ~~The name and address of the plant;~~
 - B) ~~The name and address of the owner or operator of the plant and associated quarry operations;~~
 - C) ~~A map or diagram showing the location of all fugitive particulate matter emission units controlled including the location, identification, length, and width of roadways;~~
 - D) ~~For each application of water or calcium chloride solution, the name and location of the roadway controlled, the water capacity of each truck, application rate of each truck, frequency of each application, width of each application, start and stop time of each application, identification of each water truck used, total quantity of water or calcium chloride used for each application, including the concentration of calcium chloride used for each application;~~
 - E) ~~For application of chemical foam spray solution, the application rate and frequency of application, name of foaming agent, and total quantity of solution used each day;~~
 - F) ~~Name and designation of the person applying control measures; and~~
 - G) ~~A log recording all failures to use control measures required by this Section with a statement explaining the reasons for each failure and, in the case of a failure to comply with the roadway watering requirements of subsection (d)(2) of this Section, a record showing that one of the circumstances for exceptions listed in subsection (d)(3) of this Section existed during the period of the failure. Such record shall include, for example, the periods of time when the measured temperature was less than or equal to 0°C (32°F).~~

- 3) ~~Copies of all records required by this Section shall be submitted to the Agency within ten (10) working days after a written request by the Agency.~~
- 4) ~~The records required under this Section shall be kept and maintained for at least three (3) years and shall be available for inspection and copying by Agency representatives during working hours.~~
- 5) ~~A quarterly report shall be submitted to the Agency stating the following: the dates required control measures were not implemented, the required control measures, the reasons that the control measures were not implemented, and the corrective actions taken. This report shall include those times when subsection (d) of this Section is involved. This report shall be submitted to the Agency thirty (30) calendar days from the end of a quarter. Quarters end March 31, June 30, September 30, and December 31.~~

Section 212.425 Emission Units in Certain Areas

- a) This Section ~~applies~~~~shall apply~~ to ~~those~~ emission units located in ~~those~~ areas defined in Section 212.324(a)(1) ~~of this Part~~.
- b) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the emission of PM₁₀₋₁₀, other than ~~that~~ ~~of~~ fugitive particulate matter, into the atmosphere to exceed the following limits during any ~~one-hour~~~~one hour~~ period:
 - 1) 57.2 mg/scm (0.025 gr/scf) for coater and cooling loop ventilator at a roofing asphalt manufacturing plant located in the Village of Summit;
 - 2) 34.3 mg/scm (0.015 gr/scf) for mineral filler handling emission units at a roofing asphalt manufacturing plant located in the Village of Summit;
 - 3) 0.03 kg/Mg (0.06 lb/T) of asphalt mixed for asphalt mixer at a roofing asphalt manufacturing plant located in the Village of Summit
 - 4) 91.6 mg/scm (0.04 gr/scf) for roofing asphalt blowing stills, except stills Nos. 1 and 2, at a roofing asphalt manufacturing plant located in the Village of Summit;
 - 5) 45.8 mg/scm (0.02 gr/scf) for kilns in the lime manufacturing industry;
 - 6) 22.9 mg/scm (0.01 gr/scf) for all other process emission units in the lime manufacturing industry;

7) 0.325 kg/Mg (0.65 lb/T) of glass produced for all glass melting furnaces.

- c) The mass emission limits ~~contained~~ in subsection (b) ~~do of this Section shall~~ not apply to ~~those~~ emission units with no visible emissions other than fugitive particulate matter. ~~However, however~~, if a stack test is performed, this subsection is not a defense to a finding of a violation of the mass emission limits ~~contained~~ in subsection (b) ~~of this Section~~.
- d) ~~The requirements of~~ Section 212.324(f) and (g) ~~of this Part shall also~~ apply to this Section.
- e) Emission units ~~must shall~~ comply with the emissions limitations and recordkeeping and reporting requirements of this Section by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART R: PRIMARY AND FABRICATED METAL PRODUCTS AND MACHINERY MANUFACTURE

Section 212.441 Steel Manufacturing Processes

Except where noted, Sections 212.321 and 212.322 ~~do of this Part shall~~ not apply to the steel manufacturing processes subject to Sections 212.442 through 212.452 ~~of this Subpart~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.442 Beehive Coke Ovens

~~A~~ No person ~~must not shall~~ cause or allow the use of beehive ovens in any coke manufacturing process.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.443 Coke Plants

- a) Subpart B ~~does of this Part shall~~ not apply to coke plants.
- b) Charging.
 - 1) Uncaptured Emissions:
 - A) ~~A~~ No person ~~must not shall~~ cause or allow the emission of visible particulate matter from any coke oven charging operation, from the introduction of coal into the first charge port, as indicated by the first mechanical movement of the coal feeding mechanism on the

larry car, to the replacement of the final charge port lid, for more than a total of 125 seconds over ~~five~~ consecutive charges; ~~provided however that 1.~~ However, one charge out of any 20 consecutive charges may be deemed an uncountable charge at the option of the operator.

B) Compliance with the limitation ~~set forth~~ in subsection (b)(1)(A) ~~must of this Section shall~~ be determined in the following manner:

- i) Observation of charging emissions ~~must~~ shall be made from any point or points on the topside of a coke oven battery from which a qualified observer can obtain an unobstructed view of the charging operation.
- ii) The qualified observer ~~must~~ shall time the visible emissions with a stopwatch while observing the charging operation ~~and must time only. Only~~ emissions from the charge port and any part of the larry car ~~shall be timed~~. The observation ~~must~~ shall commence as soon as coal is introduced into the first charge port as indicated by the first mechanical movement of the coal feeding mechanism on the larry car and ~~must~~ shall terminate when the last charge port lid has been replaced. Simultaneous emissions from more than one emission point ~~must~~ shall be timed and recorded as one emission and ~~must~~ shall not be added individually to the total time.
- iii) The qualified observer ~~must~~ shall determine and record the total number of seconds that charging emissions are visible during the charging of coal to the coke oven.
- iv) For each charge observed, the qualified observer ~~must~~ shall record the total number of seconds of visible emissions, the clock time for the initiation and completion of the charging operation, and the battery identification and oven number.
- v) The qualified observer ~~must~~ shall not record any emissions observed after all charging port lids have been firmly seated ~~after following~~ removal of the larry car, such as emissions occurring when a lid has been temporarily removed to permit spilled coal to be swept into the oven.
- vi) ~~If in the event that~~ observations from a charge are interrupted, the data from the charge ~~must~~ shall be invalidated and the qualified observer ~~must~~ shall note on ~~their~~ his observation sheet the reason for invalidating the

data. The qualified observer ~~must~~ then resume observation of the next consecutive charge or charges and continue until a set of five charges has been recorded. Charges immediately preceding and following interrupted observations ~~must~~ be considered consecutive.

2) Emissions from Control Equipment

- A) Emissions of particulate matter from control equipment used to capture emissions during charging ~~must~~ not exceed 0.046 g/dscm (0.020 gr/dscf). Compliance ~~must~~ be determined in ~~compliance~~ with the procedures ~~set forth~~ in 40 CFR ~~part 60,~~ Appendix A, Methods 1 through 5, incorporated by reference in Section 212.113 ~~of this Part~~. *The provisions of Section 111 of the federal Clean Air Act (42 USC 7411), as amended, . . . relating to standards of performance for new stationary sources . . . are applicable in this State and are enforceable under the Act (415 ILCS 5/9.1(b)).*
- B) The opacity of emissions from control equipment ~~must~~ not exceed an average of 20% ~~percent~~, averaging the total number of readings taken. Opacity readings ~~must~~ be taken at 15-second intervals from the introduction of coal into the first charge port as indicated by the first mechanical movement of the coal feeding mechanism on the larry car to the replacement of the final charge port lid. Compliance, except for the number of readings required, ~~must~~ be determined in ~~compliance~~ with 40 CFR ~~part 60,~~ Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~. *The provisions of Section 111 of the federal Clean Air Act (42 USC 7411), as amended, . . . relating to standards of performance for new stationary sources . . . are applicable in this State and are enforceable under the Act (- 415 ILCS 5/9.1(b)).*
- C) Opacity readings of emissions from control equipment ~~must~~ be taken concurrently with observations of fugitive particulate matter. Two qualified observers ~~are~~ be required.
- 3) Qualified observers ~~underreferenced in~~ subsection (b) ~~must~~ ~~of this Section~~ be certified ~~underpursuant to~~ 40 CFR ~~part 60,~~ Appendix A, Method 9, incorporated by reference in Section 212.113. *The provisions of Section 111 of the federal Clean Air Act (42 USC 7411), as amended, . . . relating to standards of performance for new stationary sources . . . are applicable in this State and are enforceable under the Act (415 ILCS 5/9.1(b)).*

c) Pushing:

1) Uncaptured Emissions:

- A) Emissions of uncaptured particulate matter from pushing operations ~~must~~ shall not exceed an average of 20% ~~percent~~ opacity for ~~four~~ 4 consecutive pushes considering the highest average of six consecutive readings in each push. Opacity readings ~~must~~ shall be taken at 15-second intervals, beginning from the time the coke falls into the receiving car or is first visible as it emerges from the coke guide, whichever occurs earlier, until the receiving car enters the quench tower or quenching device. For a push of less than 90 seconds duration, the actual number of 15-second readings ~~must~~ shall be averaged.
- B) Opacity readings ~~must~~ shall be taken by a qualified observer located in a position where the oven being pushed, the coke receiving car, and the path to the quench tower are visible. The opacity ~~must~~ shall be read as the emissions rise and clear the top of the coke battery gas mains. The qualified observer ~~must~~ shall record opacity readings of emissions originating at the receiving car and associated equipment and the coke oven, including the standpipe on the coke side of the oven being pushed. Opacity readings ~~must~~ shall be taken in ~~compliance~~ accordance with ~~the procedures set forth in~~ 40 CFR ~~part 60,~~ Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~, except that Section 2.5 for date reduction ~~must~~ shall not be used. The qualified observer ~~underreferenced in~~ this subsection ~~must~~ shall be certified ~~underpursuant to~~ 40 CFR ~~part 60,~~ Appendix A, Method 9, incorporated by reference in Section 212.113. *The provisions of Section 111 of the federal Clean Air Act (42 USC 7411), as amended, . . . relating to standards of performance for new stationary sources . . . are applicable in this State and are enforceable under ~~the~~ this Act ([415 ILCS 5/9.1(b))].*

2) Emissions from Control Equipment

- A) The particulate emissions from control equipment used to control emissions during pushing operations ~~must~~ shall not exceed 0.040 ~~lbs/T pounds per ton~~ of coke pushed. Compliance ~~must~~ shall be determined in ~~compliance~~ accordance with ~~the procedures set forth in~~ 40 CFR ~~part 60,~~ Appendix A, Methods 1 ~~through~~ -5, incorporated by reference in Section 212.113 ~~of this Part~~. *The provisions of Section 111 of the federal Clean Air Act (42 USC 7411), as amended, . . . relating to standards of performance for new stationary sources . . . are applicable in this State and are enforceable under ~~the~~ this Act ([415 ILCS 5/9.1(b))].* Compliance

mustshall be based on an arithmetic average of three runs (stack tests), and the calculations mustshall be based on the duration of a push as defined in subsection (c)(1)(A) ~~of this Section~~.

- B) The opacity of emissions from control equipment used to control emissions during pushing operations mustshall not exceed 20%. For a push of less than six minutes duration, the actual number of 15-second readings taken mustshall be averaged. Compliance mustshall be determined in ~~complianceaccordance~~ with 40 CFR ~~part 60,~~ Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~. *The provisions of Section 111 of the federal Clean Air Act (42 USC 7411), as amended, . . . are applicable in this State and are enforceable under ~~the~~this Act. ([415 ILCS 5/9.1(b))].* Method 9, Section 2.5 for data reduction of 40 CFR part 60, Appendix A, Method 9, incorporated by reference in Section 212.113 of this Part, for data reduction mustshall not be used for pushes of less than six minutes duration.

d) Coke Oven Doors.

- 1) ~~A~~No person must notshall cause or allow visible emissions from more than 10% ~~percent~~ of all coke oven doors at any time. Compliance mustshall be determined by a one pass observation of all coke oven doors on any one battery.
- 2) ~~A~~No person must notshall cause or allow the operation of a coke oven unless there is on the plant premises at all times an adequate inventory of spare coke oven doors and seals, and unless there is a readily available coke oven door repair facility.

e) Coke Oven Lids. ~~A~~No person must notshall cause or allow visible emission from more than 5% ~~percent~~ of all coke oven lids at any time. Compliance mustshall be determined by a one pass observation of all coke oven lids.

f) Coke Oven Offtake Piping. ~~A~~No person must notshall cause or allow visible emissions from more than 10% ~~percent~~ of all coke oven offtake piping at any time. Compliance mustshall be determined by a one pass observation of all coke oven offtake piping.

g) Coke Oven Combustion Stack.

- 1) ~~A~~No person must notshall cause or allow the emissions of particulate matter from a coke oven combustion stack to exceed 110 mg/dscm (0.05 gr/dscf); and

- 2) ~~A~~No person ~~must not~~shall cause or allow the emission of particulate matter from a coke oven combustion stack to exceed 30% opacity. Compliance ~~must~~shall be determined in ~~compliance~~accordance with 40 CFR ~~part 60,~~Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~. However, the opacity limit ~~does~~shall not apply to a coke oven combustion stack when a leak between any coke oven and the oven's vertical or crossover flues is being repaired, after pushing coke from the oven is completed but before ~~resuming~~resumption of charging. The exemption from the opacity limit ~~must~~shall not exceed three (3) hours per oven repaired. The owner of operator ~~must~~shall keep written records identifying the oven repaired, and the date, time, and duration of all repair periods. These records ~~are~~shall be subject to ~~the requirements of~~ Section 212.324(g)(4) and (g)(5) ~~of this Part~~.

h) Quenching.

- 1) All coke oven quench towers ~~must~~shall be equipped with grit arrestors or equipment of comparable effectiveness. Baffles ~~must~~shall cover 95% ~~percent~~ or more of the cross sectional area of the exhaust vent or stack and must be maintained. Quench water ~~must~~shall not include untreated coke by-product plant effluent. All water placed on the coke being quenched ~~must~~shall be quench water.
- 2) Total dissolved solids concentrations in the quench water ~~must~~shall not exceed a weekly average of 1,200 mg/L.
- 3) The quench water ~~must~~shall be sampled for total dissolved solids concentrations in ~~compliance~~accordance with the methods ~~specified in~~ Standard Methods for the Examination of Water and Wastewater, Section ~~2540C, Total Dissolved Solids Dried at 180 °C, 24th~~209C, "~~Total Filtrable Residue Dried at 103-105°C~~" 15th Edition, ~~2020~~1980, incorporated by reference in Section 212.113 ~~of this Part~~. Analyses ~~must~~shall be performed on grab samples of the quench water as applied to the coke. Samples ~~must~~shall be collected a minimum of five days per week per quench tower and analyzed to report a weekly concentration. The samples for each week ~~must~~shall be analyzed either:
 - i) Separately, with the average of the individual daily concentrations determined; or
 - ii) As one composite sample, with equal volumes of the individual daily samples combined to form the composite sample.
- 4) The records required under this subsection ~~must~~shall be kept and maintained for at least three (3) years and upon ~~prior~~notice ~~must~~shall be

available for inspection and copying by Agency representatives during work hours.

- i) Work Rules: ~~A~~No person ~~must not~~shall cause or allow the operation of a by-product coke plant except in ~~compliance~~accordance with operating and maintenance work rules approved by the Agency.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.444 Sinter Processes

Emissions of particulate matter from sinter processes ~~shall~~must be controlled as follows:

- a) Breaker Box. ~~A~~No person ~~must not~~shall cause or allow the emission of particulate matter into the atmosphere from the breaker stack of any sinter process to exceed the allowable emission rate ~~underspecified by~~ Section 212.321 ~~of this Part~~.
- b) Main Windbox. ~~A~~No person ~~must not~~shall cause or allow the emission of particulate matter into the atmosphere from the main windbox of any existing sinter process to exceed 1.2 times the allowable emission rate ~~underspecified by~~ Section 212.321 ~~of this Part~~.
- c) Balling Mill Drum, Mixing Drum, Pug Mill, and Cooler. ~~A~~No person ~~must not~~shall cause or allow the emission of visible particulate matter into the atmosphere from any balling mill drum, mixing drum, pug mill, or cooler to exceed 30% ~~percent~~ opacity.
- d) Hot and Cold Screens.
 - 1) Particulate matter emissions from all hot and cold screens ~~must~~shall be controlled by air pollution control equipment or an equivalent dust suppression system. Emissions from ~~that said~~ air pollution control equipment ~~must~~shall not exceed 69 mg/dscm (0.03 gr/dscf).
 - 2) If the owner or operator can establish that the particulate matter emissions from the hot screens and cold screens do not exceed the aggregate of the allowable emissions ~~under as specified by~~ Section 212.321 ~~of this Part~~ or ~~Section~~ 212.322 ~~of this Part~~, whichever is applicable, then subsection (d)(1) ~~does of this Section shall~~ not apply.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.445 Blast Furnace Cast Houses

- a) Uncaptured Emissions

- 1) Emissions of uncaptured particulate matter from any opening in a blast furnace cast house mustshall not exceed 20%~~percent~~ opacity on a six-minute~~six (6) minute~~ rolling average basis beginning from initiation of the opening of the tap hole ~~up~~ to the point where the iron and slag stops flowing in the trough.
 - 2) Opacity readings mustshall be taken in compliance~~accordance~~ with the observation procedures ~~set out~~ in 40 CFR part 60.5~~part 60.5~~, Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~.
- b) Emissions from Control Equipment
- 1) Particulate matter emissions from control equipment used to collect any of the emissions from the tap hole, trough, iron or slag runners, or iron or slag spouts mustshall not exceed 0.023 g/dscm (0.010 gr/dscf). Compliance mustshall be determined in compliance~~accordance~~ with the procedures set out in 40 CFR part 60.5~~part 60.5~~, Appendix A, Methods 1 through 5, incorporated by reference in Section 212.113 ~~of this Part~~, and mustshall be based on the arithmetic average of three runs. Calculations mustshall be based on the duration of a cast defined in subsection (a)(1) ~~of this Section~~.
 - 2) The opacity of emissions from control equipment used to collect any of the particulate matter emissions from the tap hole, trough, iron or slag runners, or iron or slag spouts mustshall not exceed 10%~~percent~~ on a six-minute~~six (6) minute~~ rolling average basis. Opacity readings mustshall be taken in compliance~~accordance~~ with the observation procedures ~~set out~~ in 40 CFR part 60.5~~part 60.5~~, Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.446 Basic Oxygen Furnaces

Emissions of particulate matter from basic oxygen processes mustshall be controlled as follows:

- a) Charging, Refining and Tapping. Particulate matter emissions from all basic oxygen furnaces (BOF) mustshall be collected and ducted to pollution control equipment. Unless subsection (c) ~~of this Section~~ applies, emissions from BOF~~basic oxygen furnace~~ operations during the entire cycle (operations from the beginning of the charging process through the end of the tapping process) mustshall not exceed the allowable emission rate underspecified by Section 212.321 or Section 212.322 of this Part, whichever applies~~is applicable~~. To compute~~For purposes of computing~~ the process weight rate for this subsection, nongaseous material charged to the furnace and process oxygen mustshall be

included. ~~The computation must not include any~~ ~~No~~ material ~~shall be included~~ more than once.

b) Hot Metal Transfer, Hot Metal Desulfurization, and Ladle Lancing.

1) Particulate matter emissions from hot metal transfers to a mixer or ladle, hot metal desulfurization operations, and ladle lancing ~~must~~ ~~shall~~ be collected and ducted to pollution control equipment, and emissions from the pollution control equipment ~~must~~ ~~shall~~ not exceed 69 mg/dscm (0.03 gr/dscf).

2) If the owner or operator can establish that the total particulate matter emissions from hot metal transfers, hot metal desulfurization operations, and ladle lancing operations combined do not exceed the allowable emissions ~~under as specified by~~ Section 212.321 or ~~Section~~ 212.322, whichever ~~applies is applicable~~, where the process weight rate (P) is the hot metal charged to the BOF vessel, then subsection (b)(1) ~~does above~~ ~~shall~~ not apply.

c) ~~A~~ ~~No~~ person ~~must not~~ ~~shall~~ cause or allow uncaptured emissions from any opening in the building housing the BOF shop to exceed an opacity of 20% ~~percent~~ at integrated iron and steel plants in the vicinity of Granite City, as described in Section 212.324(a)(1)(C) ~~of this Part~~. Compliance with this subsection ~~must~~ ~~shall~~ be determined in ~~compliance accordance~~ with 40 CFR ~~part~~ 60.5, Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~, except that compliance ~~must~~ ~~shall~~ be determined by averaging any 12 consecutive observations taken at ~~15-second~~ ~~15-second~~ intervals.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.447 Hot Metal Desulfurization Not Located in the BOF

The particulate matter emissions from hot metal desulfurization ~~must~~ ~~shall~~ be collected and ducted to pollution control equipment, and emissions from the pollution control equipment ~~must~~ ~~shall~~ not exceed 69 mg/dscm (0.03 gr/dscf).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.448 Electric Arc Furnaces

The total particulate emissions from meltdown and refining, charging, tapping, slagging, electrode port leakage, and ladle lancing ~~must~~ ~~shall~~ not exceed the allowable emission rate ~~under specified by~~ Section 212.321 or 212.322 ~~of this Part~~, whichever ~~applies is applicable~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.449 Argon-Oxygen Decarburization Vessels

The total particulate matter emissions from all charging, refining, alloy addition, and tapping operations ~~must~~ not exceed the allowable emission rate ~~underspecified by~~ Section 212.321 or ~~Section 212.322 of this Part~~, whichever ~~applies is applicable~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.450 Liquid Steel Charging

Particulate matter emissions from liquid steel charging in continuous casting operations ~~must~~ be controlled by chemical or mechanical shrouds or methods of comparable effectiveness.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.451 Hot Scarfing Machines

All hot scarfing machines ~~must~~ be controlled by pollution control equipment. Emissions from ~~that said~~ pollution control equipment ~~must~~ not exceed 69 mg/dscm (0.03 gr/dscf) during hot scarfing operations. ~~The~~ Provided, however, that the hot scarfing machine existing on January 1, 1987, and operated by the LTV Steel Company, Inc., at its Chicago Works, which employs wet scrubbers, may emit particulate matter in amounts not exceeding 138 mg/dscm (0.06 gr/dscf) during hot scarfing operations so long as emissions do not exceed 23 mg/dscm (0.01 gr/dscf) as an hourly average, as measured per hour.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.452 Measurement Methods

Particulate matter emissions from emission units subject to Sections 212.441 through 212.451 ~~must of this Subpart shall~~ be determined in ~~compliance~~ accordance with procedures ~~published in~~ 40 CFR ~~part 60,~~ Appendix A, Methods 1 through 5, front one-half of the sampling train, incorporated by reference in Section 212.113 ~~of this Part~~. Visible emission evaluation ~~to determine for determining~~ compliance ~~must~~ be conducted in ~~compliance~~ accordance with procedures ~~published in~~ 40 CFR ~~part 60,~~ Appendix A, Method 9, incorporated by reference in Section 212.113 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.455 Highlines on Steel Mills

Section 212.308 ~~does of this Part shall~~ not apply to highlines at steel mills.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.456 Certain Small Foundries

Sections 212.321 and 212.322 ~~do of this Part shall~~ not apply to foundry cupolas if all the following conditions are met:

- a) The cupola ~~was existed in existence before prior to~~ April 15, 1967;
- b) The cupola process weight rate is less than or equal to 20,000 lbs/hr;
- c) The cupola as of April 14, 1972, either:
 - 1) ~~Complies~~~~Is in compliance~~ with the following allowable emissions from small foundries ~~underecovered by~~ this Section:

Process Weight Rate lbs/hr	Allowable Emission Rate lbs/hr
1,000	3.05
2,000	4.70
3,000	6.35
4,000	8.00
5,000	9.58
6,000	11.30
7,000	12.90
8,000	14.30
9,000	15.50
10,000	16.65
12,000	18.70
16,000	21.60
18,000	23.40
20,000	25.10

~~(BOARD NOTE~~~~Board Note~~: For process weight rates not listed, straight line interpolation between two consecutive process weight rates ~~must~~~~shall~~ be used to determine allowable emission rates.); or

- 2) ~~Complies~~~~Is in compliance~~ with the terms and conditions of a variance granted by the ~~Pollution Control Board~~ (Board); and construction has commenced on equipment or modifications sufficient to achieve compliance with subsection (c)(1) ~~of this Section~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.457 Certain Small Iron-Melting Air Furnaces

Section 212.322 ~~does of this Part shall~~ not apply to iron-melting air furnaces if all the following conditions are met:

- a) The air furnace ~~existed was in existence before prior to~~ April 15, 1967, and is located in Hoopeston, Vermilion County, Illinois;
- b) The air furnace process weight rate is less than or equal to 5,000 lbs/hr;
- c) The air furnace as of November 23, 1977, either:
 - 1) ~~Complies Is in compliance~~ with the following allowable emissions from small iron-melting air furnaces ~~underecovered by~~ this Section:

Process Weight Rate lbs/hr	Allowable Average Emission Rate lbs/hr
1,000	6.10
2,000	9.40
3,000	12.70
4,000	16.00
5,000	19.16

(~~BOARD NOTE~~~~Board Note~~: The average emission rate is computed by dividing the sum of the emissions during operation by the number of hours of operation, excluding any time during which the equipment is idle. For process weight rates not listed, straight line interpolation between two consecutive process weight rates ~~mustshall~~ be used to determine allowable average emission rates.); or

- 2) ~~Complies Is in compliance~~ with the terms and conditions of a variance granted by the Board; and construction has commenced on equipment or modifications sufficient to achieve compliance with subsection (c)(1) ~~of this Section~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.458 Emission Units in Certain Areas

- a) Applicability. This Section ~~applies shall apply~~ to ~~those~~ emission units located in ~~the these~~ areas defined in Section 212.324(a)(1) ~~of this Part~~.
- b) Emission Limitation. ~~A~~ No person ~~must not shall~~ cause or allow emissions of PM₁₀₋₁₀, other than ~~that of~~ fugitive particulate matter, into the atmosphere to exceed the following limits during any ~~one-hour one hour~~ period:

- 1) 15.9 ng/J (0.037 lbs/~~MMbtummbtu~~) of heat input from any fuel combustion emission unit located at the steel plant between 106th and 111th Streets in City of Chicago;
- 2) 22.9 mg/scm (0.01 gr/scf) for the ~~BOFbasic oxygen furnace~~ additive systems in the Village of Riverdale;
- 3) 4.3 ng/J (0.01 lbs/~~MMbtummbtu~~) of heat input from ~~the~~ burning ~~of~~ fuel in the soaking pits in the Village of Riverdale;
- 4) 64.08 mg/scm (0.028 gr/scf) from the electrostatic precipitator discharge of the basic oxygen process in the Village of Riverdale;
- 5) 45.8 mg/scm (0.02 gr/scf) from the pickling process at a steel plant in the Village of Riverdale;
- 6) ~~5%-percent~~ opacity for coal handling systems equipped with fabric filters at a steel plant located in the City of Chicago;
- 7) 22.9 mg/scm (0.01 gr/scf) from any process emissions unit located at integrated iron and steel plants in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~, except as otherwise provided in this Section or in Sections 212.443 and 212.446 ~~of this Subpart~~;
- 8) ~~5%-percent~~ opacity for continuous caster spray chambers or continuous casting operations at steel plants in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Subpart~~;
- 9) 32.25ng/J (0.075 lbs/~~MMbtummbtu~~) of heat input from ~~the~~ burning ~~of~~ coke oven gas at all emission units, other than coke oven combustion stacks, at steel plants in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Subpart~~;
- 10) 38.7 ng/J (0.09 lbs/~~MMbtummbtu~~) of heat input from the slab furnaces at steel plants in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Subpart~~;
- 11) 22.9 mg/scm (0.01 gr/scf) for all process emission units at secondary lead processing plant located in Granite City, except the salt flux crusher;
- 12) 22.9mg/scm (0.01 gr/scf) for any melting furnace at a secondary aluminum smelting and refining plant in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~;
- 13) 45.8 mg/scm (0.02 gr/scf) from ~~the~~ No. 6 mill brusher, and metal chip handling system at a secondary aluminum smelting and refining plant

located in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~;

- 14) 0.05 kg/Mg (~~0.10 lb/T~~0.01 lb/T) of sand processed from molding sand forming systems at a steel foundry plant located in Granite City;
- 15) 0.01 kg/Mg (0.02 lbs/T) of sand processed from recycle sand shakeouts at a steel foundry plant located in Granite City;
- 16) At a steel foundry plant located in Granite City:
 - A) ~~20% percent~~ opacity for all emission units; and
 - B) 22.9 mg/scm (0.01 gr/scf) for all other process emission units, except the sand dryer, sand cooler, chill tumbler, paint booth, chromite reclamation, core baking ovens, electric arc shop roof ventilators, and emission units listed in subsections (b)(14) and (b)(15) ~~of this Section~~;
- 17) 41.2 mg/scm (0.018 gr/scf) for cold rolling mill emission units at a metal finishing plant located in the Village of McCook;
- 18) 2.15 ng/J (0.005 lbs/~~MMbtummbtu~~) of heat input from ~~the burning of~~ fuel in any process emission unit at a secondary aluminum smelting and refining plant, ~~and/or~~ aluminum finishing plant, or both;
- 19) 22.9 mg/scm (0.01 gr/scf) from dross pad, dross cooling, and dross mixing units at a secondary aluminum smelting and refining plant, ~~and/or~~ aluminum finishing plant, or both;
- 20) 12.9 ng/J (0.03 lbs/~~MMbtummbtu~~) of heat input from any fuel combustion emission unit that heats air for space heating purposes at a secondary aluminum smelting and refining plant located in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~;
- 21) 68.7 mg/scm (0.03 gr/scf) for any holding furnace at a secondary aluminum smelting and refining plant in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~;
- 22) 2.15 ng/J (0.005 lb/~~MMbtummbtu~~) of heat input from the steel works boilers located at the steel making facilities at a steel plant in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C);
- 23) 27.24 kg/hr (60 lbs/hr) and 0.1125 kg/Mg (.225 lbs/T) of total steel in process, whichever limit is more stringent, for the total of all BOF basic oxygen furnace processes described in Section 212.446(a) ~~of this Subpart~~

and measured at the BOF stack located at a steel plant in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~;

- 24) North and south melting furnaces at a secondary aluminum smelting and refining plant located in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~, cannot be operated simultaneously;
- 25) Magnesium pot furnaces at a secondary aluminum smelting and refining plant located in the vicinity of Granite City, as defined in Section 212.324(a)(1)(C) ~~of this Part~~, can be operated no more than two lines at a time;
- 26) 2.15 ng/J (0.005 lbs/~~MMbtummbtu~~) of heat input from any fuel combustion emission unit at a secondary aluminum smelting and refining plant, ~~and/or~~ aluminum finishing plant, or both, except underas provided in subsection (b)(20) ~~of this Section~~;
- 27) 91.6 mg/scm (0.040 gr/scf) and 0.45 kg/hr (1 lb/hr) for melting furnaces Nos. 6, 7, and 8 at a metal finishing plant in the Village of McCook, with operation limited to no more than two of these furnaces at one time;
- 28) 183 mg/scm (0.080 gr/scf) and 0.91 kg/hr (2 lbs/hr) for holding furnaces Nos. 6, 7, and 8 at a metal finishing plant in the Village of McCook, with operation limited to no more than two of these furnaces at one time;
- 29) 54.9 mg/scm (0.024 gr/scf) and 1.81 kg/hr (4 lbs/hr) for melting furnaces Nos. 24, 25, and 26 at a metal finishing plant in the Village of McCook;
- 30) 34.3 mg/scm (0.015 gr/scf) and 1.81 kg/hr (4 lbs/hr) for melting furnaces Nos. 27, 28, 29, and 30 at a metal finishing plant in the Village of McCook;
- 31) 32.0 mg/scm (0.014 gr/scf) and 0.45 kg/hr (1 lb/hr) for holding furnaces Nos. 24, 25, and 26 at a metal finishing plant in the Village of McCook, except that during fluxing operation those furnaces may emit 195 mg/scm (0.085 gr/scf) and 2.72 kg/hr (6 lbs/hr);
- 32) 34.3 mg/scm (0.015 gr/scf) and 0.45 kg/hr (1 lb/hr) for holding furnaces Nos. 27, 28, 29, and 30 at a metal finishing plant in the Village of McCook, except that during fluxing operation those furnaces may emit 217 mg/scm (0.095 gr/scf) and 2.72 kg/hr (6 lbs/hr);
- 33) Fluxing operations at holding furnaces Nos. 24, 25, 26, 27, 28, 29, and 30 at a metal finishing plant in the Village of McCook mustshall be limited to no more than three at any one time.

- c) Exceptions. The mass emission limits ~~contained~~ in subsection (b) ~~do of this Section shall~~ not apply to ~~those~~ emission units with no visible emissions other than ~~that of~~ fugitive particulate matter. ~~However; however,~~ if a stack test is performed, this subsection is not a defense to a finding of a violation of the mass emission limits ~~contained~~ in subsection (b) ~~of this Section~~.
- d) Maintenance, Repair, and Recordkeeping. ~~The requirements of~~ Section 212.324 (f) and (g) ~~of this Part shall also~~ apply to this Section.
- e) Compliance with this Section is required by December 10, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART S: AGRICULTURE

Section 212.461 Grain-Handling and Drying in General

- a) Sections 212.302(a), 212.321, and 212.322 ~~do of this Part shall~~ not apply to grain-handling and grain-drying operations, portable grain-handling equipment, and one-turn storage space.
- b) Housekeeping Practices. All grain-handling and grain-drying operations, regardless of size, must implement and use the following housekeeping practices:
 - 1) Air pollution control devices ~~must shall~~ be checked daily and cleaned as necessary to insure proper operation.
 - 2) Cleaning and Maintenance.
 - A) Floors ~~must shall~~ be kept swept and cleaned from boot pit to cupola floor. Roof or bin decks and other exposed flat surfaces ~~must shall~~ be kept clean of grain and dust that would tend to rot or become airborne.
 - B) Cleaning ~~must shall~~ be ~~performed in~~ ~~handled in such~~ a manner ~~preventing as not to permit~~ dust ~~from escaping to escape~~ to the atmosphere.
 - C) The yard and surrounding open area, including ~~but not limited to~~ ditches and curbs, ~~must shall~~ be cleaned to prevent ~~the~~ accumulation of rotting grain.
 - 3) Dump Pit.
 - A) Aspiration equipment ~~must shall~~ be maintained and operated.

- B) Dust control devices ~~must~~shall be maintained and operated.
- 4) Head House. The head house ~~must~~shall be maintained in such a fashion that visible quantities of dust or dirt are not allowed to escape to the atmosphere.
- 5) Property. The yard and driveway of any source ~~must~~shall be asphalted, oiled, or equivalently treated to control dust.
- 6) Housekeeping Check List. Housekeeping check lists to be developed by the Agency ~~must~~shall be completed by the manager and maintained on the premises for inspection by Agency personnel.
- c) Exemptions. Any grain-handling operation for which construction or modification commenced ~~before prior to~~ June 30, 1975, ~~with having~~ a grain through-put of ~~up to two not more than 2~~ million bushels per year and located inside a major population area, and any grain-handling operation or grain-drying operation for which construction or modification commenced ~~before prior to~~ June 30, 1975, located outside of a major population area ~~and which is~~ required to apply for a permit ~~under pursuant to~~ Sections 212.462 and 212.463 ~~of this Subpart~~, respectively, ~~must~~shall receive ~~that such~~ permit ~~despite notwithstanding~~ the control requirements of those respective rules, ~~if the provided said~~ operation can demonstrate that the following conditions exist upon application for, or renewal of, an operating permit:
 - 1) The requirements of subsection (b) ~~of this Section~~ are being met; and
 - 2) No certified investigation is on file with the Agency indicating ~~that there is~~ an alleged violation ~~before prior to issuance of~~ the permit ~~is issued~~.
 - A) If a certified investigation is on file with the Agency indicating an alleged violation, any applicant may obtain an exemption for certain operations if ~~the said~~ applicant can prove to the Agency that those parts of ~~the his~~ operation for which ~~they seek he seeks~~ exemption are not the probable cause of the alleged violation.
 - B) Applicants requesting an exemption in ~~compliance accordance~~ with ~~the provisions of~~ subsection (c)(2)(A) ~~of this Section~~ may be granted an operating permit for ~~up to a limited time, not to exceed twelve (12)~~ months in duration, if an objection is on file with the Agency on which a certified investigation has not been made ~~before prior to issuance of~~ the permit ~~is issued~~.
 - C) An applicant may consider denial of an exemption under this rule as a refusal by the Agency to issue a permit. This ~~denial~~

~~entitled shall entitle~~ the applicant to appeal the Agency's decision to the Board ~~underpursuant to~~ Section 40 of the Act (~~{~~415 ILCS 5/40~~}~~).

- d) Loss of Exemption. Any grain-handling operation or grain-drying operation for which construction or modification commenced ~~before prior to~~ June 30, 1975, that has received an operating permit ~~underpursuant to the provisions of~~ subsection (c) ~~must of this Section shall~~ apply for an operating ~~permit, and/or~~ construction permit, ~~or both underpursuant to~~ 35 Ill. Adm. Code 201 within ~~sixty (60)~~ days after ~~receiving receipt of~~ written notice from the Agency that a certified investigation is on file with the Agency indicating ~~that there is~~ an alleged violation against the operation. The construction permit application ~~must shall~~ include a compliance plan and project completion schedule showing the grain-handling operation's program or grain-drying operation's program for complying with the standards and limitations of Section 212.462 or 212.463 ~~of this Subpart as the case may be,~~ within a reasonable time after the date on which ~~the operation received~~ notice of a certified investigation indicating alleged pollution ~~was received by said operation; provided, however,~~. ~~However, the any such~~ operation ~~will shall~~ not be required to reduce emissions from ~~the those~~ parts of the operation that the applicant can prove to the Agency are not the probable cause of the pollution alleged in the certified investigation.
- 1) The written notice of loss of exemption is not a final action of the Agency appealable to the Board.
 - 2) Denial of a permit requested ~~underpursuant to~~ this subsection is a final action appealable to the Board under Section 40 of the Act (~~{~~415 ILCS 5/40~~}~~).
- e) Circumvention. It ~~is shall be~~ a violation of this regulation for any person ~~or persons~~ to attempt to circumvent the requirements of this regulation by establishing a pattern of ownership or source development which, except for ~~that such~~ pattern ~~of ownership or source development~~, would otherwise require application of Section 212.462 or 212.463 ~~of this Subpart~~.
- f) Standard on Appeal to Board. In ruling on any appeal of a permit denial under subsection (c) or (d) ~~of this Section~~, the Board ~~must shall~~ not order the permit to be issued by the Agency unless the applicant who has appealed the permit denial has proved to the Board that the grain-handling operation or grain-drying operation which is the subject of the denied application is not injurious to human, plant, or animal life; ~~to health;~~ or to property, and does not unreasonably interfere with the enjoyment of life or property.
- g) Alternate Control of Particulate Emissions.

- 1) Grain-handling or grain-drying operations, which were in numerical compliance with Section 212.322 ~~of this Part~~, as of April 14, 1972, and continue to ~~comply be in compliance~~ with Section 212.322 ~~of this Part~~ need not comply with the provisions under this Subpart, except the housekeeping practices in this subsection and subsection (b) ~~of this Section~~.
 - 2) Grain-handling or grain-drying operations, which were not in numerical compliance with Section 212.322 ~~of this Part~~, as of April 14, 1972, but which came into compliance with Section 212.321 ~~before of this Part prior to~~ April 14, 1972, and continue to ~~comply be in compliance~~ with Section 212.321 ~~of this Part~~ need not comply with ~~the provisions under this~~ Subpart, except the housekeeping practices in this subsection and in subsection (b) ~~of this Section~~.
 - 3) Proof of compliance with ~~this said~~ rule ~~must shall~~ be made by ~~results from~~ stack sampling, ~~and/or~~ material balance, ~~results or both~~ obtained from actual testing of the subject emission unit or process and be submitted at the time of an application for, or renewal of, an operating permit.
- h) Severability. If any provision of these rules and regulations is adjudged invalid, ~~that such~~ invalidity ~~does shall~~ not affect the validity of ~~this~~ 35 Ill. Adm. Code, Subtitle B, Chapter I as a whole or of any Part, Subpart, sentence, or clause ~~of it thereof~~ not adjudged invalid.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.462 Grain-Handling Operations

Unless otherwise exempted ~~under pursuant to~~ Section 212.461(c) or (d) ~~of this Subpart~~, or allowed to use alternate control ~~under according to~~ Section 212.461(g) ~~of this Subpart~~, existing grain-handling operations with a total annual grain through-put of 300,000 bushels or more ~~must shall~~ apply for an operating permit ~~under pursuant to~~ 35 Ill. Adm. Code 201, and ~~must shall~~ demonstrate compliance with the following:

- a) Cleaning and Separating Operations.
 - 1) Particulate matter generated during cleaning and separating operations ~~must shall~~ be captured to the extent necessary to prevent visible particulate matter emissions directly into the atmosphere.
 - 2) For grain-handling sources ~~with having~~ a grain through-put of ~~two not more than 2~~ million bushels ~~or less~~ per year or located outside a major population area, air contaminants collected from cleaning and separating operations ~~must shall~~ be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of ~~at least not~~

~~less than 90%-percent~~ by weight ~~before prior to~~ release into the atmosphere.

- 3) For grain-handling sources ~~with having~~ a grain through-put exceeding ~~two~~2 million bushels per year and located within a major population area, air contaminants collected from cleaning and separating operations ~~must shall~~ be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of ~~at least not less than~~ 98%~~-percent~~ by weight ~~before prior to~~ release into the atmosphere.

- b) Major Dump-Pit Area. The major dump pit area must comply with either the induced draft requirements in subsection (b)(1) or the requirements in (b)(2).

- 1) Induced Draft-

- A) Induced draft ~~must shall~~ be applied to major dump pits and their associated equipment, ~~(including, but not limited to, boots, hoppers, and legs,)~~ to such an extent that a minimum face velocity is maintained; at the effective grate surface; sufficient to contain particulate emissions generated in unloading operations. The minimum face velocity at the effective grate surface ~~must shall~~ be at least 200 fpm, which ~~must shall~~ be determined by ~~using the~~ equation:

$$V = Q/A$$

where:

V = face velocity; ~~and~~

Q = induced draft volume in scfm; ~~and~~

A = effective grate area in ft²; ~~and~~

- B) The induced draft air stream for grain-handling sources ~~with having~~ a grain through-put of ~~two not more than 2~~ million bushels ~~or less~~ per year or located outside a major population area ~~must shall~~ be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of ~~at least not less than~~ 90%~~-percent~~ by weight; ~~and~~
- C) The induced draft air stream for grain-handling sources ~~with having~~ a grain through-put exceeding ~~two~~2 million bushels per year and located in a major population area ~~must shall~~ be confined and conveyed through air pollution control equipment which has an overall rated and actual particulate collection efficiency of ~~at least not less than~~ 98%~~-percent~~ by weight; ~~and~~

D) Means or devices, ~~(including, but not limited to,~~ quick-closing doors, air curtains, or wind deflectors, ~~must)~~ shall be employed to prevent a wind velocity ~~exceeding in excess of 50% percent~~ of the induced draft face velocity at the pit. ~~However; provided,~~ however, that such means or devices do not have to achieve the same degree of prevention when the ambient air wind exceeds 25 mph. The wind velocity ~~must~~ shall be measured, with the induced draft system not operating, at a point midway between the dump-pit area walls at the point where the wind exits the dump-pit area, and at a height above the dump-pit area floor of approximately ~~two~~ 2 feet; or

2) Any equivalent method, technique, system, or combination ~~of them thereof~~ adequate to achieve, at a minimum, a particulate matter emission reduction equal to the reduction which could be achieved by compliance with subsection (b)(1) ~~of this Section.~~

(~~BOARD NOTE~~ Board Note: Pursuant to Section 9 of the Act, ~~certain~~ certain country grain elevators meeting specified conditions and “located outside of a major population area, as defined in Section 211.3610 of Title 35 of the Illinois Administrative Code, shall be exempt from the requirements of Section 212.462 of Title 35 of the Illinois Administrative Code.” ~~are exempt from subsection (b) of this Section.~~)

c) Internal Transferring Area-

- 1) ~~The internal~~ Internal transferring area ~~must~~ shall be enclosed to the extent necessary to prohibit visible particulate matter emissions directly into the atmosphere.
- 2) Air contaminants collected from internal transfer operations for grain-handling sources ~~with having~~ with having a grain through-put of ~~up to two~~ not more than 2 million bushels per year or located outside a major population area ~~must~~ shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of ~~at least~~ not less than 90% ~~percent~~ by weight ~~before prior to~~ release into the atmosphere.
- 3) Air contaminants collected from internal transfer operations for grain-handling sources ~~with having~~ with having a grain through-put exceeding ~~two~~ 2 million bushels per year and located in a major population area ~~must~~ shall be conveyed through air pollution control equipment which has a rated and actual particulate removal efficiency of ~~at least~~ not less than 98% ~~percent~~ by weight ~~before prior to~~ release into the atmosphere.

d) Load-Out Area-

- 1) Truck and hopper car loading ~~must~~ employ socks, sleeves, or equivalent devices which extend ~~six~~6 inches below the sides of the receiving vehicle, except for topping off. Choke loading ~~must~~ be considered an equivalent method as long as the discharge is no more than 12 inches above the sides of the receiving vehicle.
- 2) Box car loading ~~must~~ employ means or devices to prevent ~~the~~ emission of particulate matter into the atmosphere to the fullest extent ~~which is~~ technologically and economically feasible.
- 3) Watercraft Loading-
 - A) Particulate matter emissions generated during loading for grain-handling sources ~~with having~~ a grain through-put of ~~up to two~~~~not more than 2~~ million bushels per year or located outside a major population area ~~must~~ be captured in an induced draft air stream, which ~~must~~ be ducted through air pollution control equipment that has a rated and actual particulate matter removal efficiency of ~~at least~~~~not less than~~ 90%~~-percent~~ by weight ~~before~~~~prior to~~ release into the atmosphere.
 - B) Particulate matter emissions generated during loading for grain-handling sources ~~with having~~ a grain through-put exceeding ~~two~~2 million bushels per year and located in a major population area ~~must~~ be captured in an induced draft air stream, which ~~must~~ be ducted through air pollution control equipment that has a rated and actual particulate removal efficiency of ~~at least~~~~not less than~~ 98%~~-percent~~ by weight ~~before~~~~prior to~~ release into the atmosphere. ~~However, except~~ for the portion of grain loaded by trimming machines, ~~for which~~ particulate matter emission reductions ~~must~~, at a minimum, ~~shall~~ equal the reduction achieved by compliance with subsection (d)(3)(A) ~~of this Section~~.
- e) New and Modified Grain-Handling Operations. Grain-handling operations for which construction or modification commenced on or after June 30, 1975, ~~must~~ file applications for construction and operating permits ~~under~~~~pursuant to~~ 35 Ill. Adm. Code 201, and ~~must~~ comply with the control equipment requirements of this Section, except for grain-handling operations for which construction or modification commenced on or after June 30, 1975, ~~and~~ which will handle an annual grain through-put of less than 300,000 bushels. ~~However, provided, however, that~~ for the purpose of this Subpart, an increase in the annual grain through-put, without physical alterations or additions to the grain-handling operation ~~is, shall~~ not ~~be~~ considered a modification unless ~~the~~~~such~~ increase exceeds 30%~~-percent~~ of the annual grain through-put on which the operation's original construction ~~or~~~~and/or~~ operating permit was granted. If the grain-handling operation has been operating lawfully without a permit, its annual grain through-

put ~~must~~ shall be determined ~~under as set forth in~~ the definition of the term "annual grain through-put" at 35 Ill. Adm. Code 211.490."

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.463 Grain Drying Operations

Unless otherwise exempted ~~underpursuant to~~ Section 212.461(c) or (d) ~~of this Subpart~~ or allowed to use alternate control ~~under according to~~ Section 212.461(g) ~~of this Subpart~~, grain-drying operations for which construction or modification commenced ~~before prior to~~ June 30, 1975, with a total grain-drying capacity ~~exceeding in excess of~~ 750 bushels per hour for ~~5%-percent~~ moisture extraction at manufacturer's rated capacity, (using the American Society of Agricultural Engineers Standard ~~S248.3-MAR1976 (R2020) Construction and Rating of Equipment for Drying Farm Crops~~ 248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers, incorporated by reference in Section 212.113 ~~of this Part~~), ~~must~~ shall be operated in ~~a manner precluding such a fashion as to preclude the~~ emission of particulate matter larger than 300 microns mean particle diameter; ~~must~~ shall apply for an operating permit ~~underpursuant to~~ 35 Ill. Adm. Code 201; and ~~must~~ shall comply with the following:

- a) Column Dryers. The largest effective circular diameter of transverse perforations in the external sheeting of a column dryer ~~must~~ shall not exceed 0.094 inch, and the grain inlet and outlet ~~must~~ shall be enclosed.
- b) Rack Dryers. No portion of the exhaust air of rack dryers ~~may~~ shall be emitted to the ambient atmosphere without having passed through a particulate collection screen having a maximum opening of 50 mesh, U.S. Sieve Series. All screens must have adequate self-cleaning mechanisms.
 - 1) ~~For All such screens must will have adequate self-cleaning mechanisms, the exhaust gas of which for~~ grain-handling facilities ~~with having~~ a grain through-put of ~~up to two not more than 2~~ million bushels per year or located outside a major population area, ~~the exhaust gas from these mechanisms must~~ shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of ~~90%-percent~~ by weight ~~before prior to~~ release into the atmosphere.
 - 2) ~~For All such screens must will have adequate self-cleaning mechanisms, the exhaust gas of which for~~ grain-handling sources ~~with having~~ a grain through-put exceeding ~~two 2~~ million bushels per year and located in a major population area, ~~the exhaust gas from these mechanisms must~~ shall be ducted through air pollution control equipment which has a rated and actual particulate removal efficiency of ~~98%-percent~~ by weight ~~before prior to~~ release into the atmosphere.

- c) Other Types of Dryers. All other types of dryers ~~must~~ be controlled in a manner ~~achieving which shall result in~~ the same degree of control required for rack dryers ~~underpursuant to~~ subsection (b) ~~of this Section~~.
- d) New and Modified Grain-Drying Operations. Grain-drying operations constructed or modified on or after June 30, 1975, ~~must~~ file applications for construction and operating permits ~~underpursuant to~~ 35 Ill. Adm. Code 201, and ~~must~~ comply with the control equipment requirements of this Section, except for new and modified grain-drying operations which do not result in a total grain-drying capacity ~~exceeding in excess of~~ 750 bushels per hour for ~~5%-percent~~ moisture extraction at manufacturer's rated capacity, using the American Society of Agricultural Engineer Standard S248.3-MAR1976 (R2020) Construction and Rating of Equipment for Drying Farm Crops, incorporated by reference at Section 212.113248.2, Section 9, Basis for Stating Drying Capacity of Batch and Continuous-Flow Grain Dryers.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.464 Sources in Certain Areas

- a) Applicability. ~~Despite Notwithstanding~~ Section 212.461 ~~of this Subpart~~, this Section ~~applies shall apply~~ to ~~those~~ sources located in the Lake Calumet area as defined in Section 212.324(a)(1)(B) ~~of this Part~~.
- b) Emission Limitations
 - 1) ~~A~~ No person ~~must not~~ shall cause or allow the emission of PM₁₀₋₁₀, other than ~~that of~~ fugitive particulate matter, into the atmosphere to exceed 22.9 mg/scm (0.01 gr/scf) during any ~~one-hour one hour~~ period from any process emission unit engaged in the drying, storing, mixing, or treating of grain except for column grain dryers. ~~In ; in~~ addition, ~~no~~ person ~~must not~~ shall cause or allow visible emissions of PM₁₀₋₁₀ other than fugitive particulate matter from grain conveying, transferring, loading, or unloading operations, including garners, scales, and cleaners.
 - 2) ~~A~~ No person ~~must not~~ shall cause or allow the emission of fugitive particulate matter into the atmosphere from barges and other watercraft ~~or~~, truck or rail loading or unloading systems to exceed the limits ~~specified in~~ Section 212.123 ~~of this Part~~.
 - 3) Column grain dryers ~~are~~ shall not be eligible for the exemptions ~~under as~~ provided in Section 212.461(g) ~~of this Part~~.
- c) Exceptions. The mass emission limits ~~contained in~~ subsection (b) ~~must of this Section shall~~ apply to ~~those~~ sources with no visible emissions other than that of fugitive particulate matter. ~~;~~ ~~however~~ However, if a stack test is performed, this

subsection is not a defense to a finding of a violation of the mass emission limits ~~contained~~ in subsection (b) ~~of this Section~~.

- d) Maintenance, Repair, and Recordkeeping. ~~The requirements of~~ Section 212.324 (f) and (g) ~~of this Part shall also~~ apply to this Section.
- e) Compliance Date. Emission units ~~must~~shall comply with the emission limitations and recordkeeping and reporting requirements of this Section by May 11, 1993, or upon initial start-up, whichever occurs later.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART T: CONSTRUCTION AND WOOD PRODUCTS

Section 212.681 Grinding, Woodworking, Sandblasting, and Shotblasting

Sections 212.321 and 212.322 ~~do of this Part shall~~ not apply to the following industries, which ~~are~~shall be subject to Subpart K ~~of this Part~~:

- a) Grinding;
- b) Woodworking; and
- c) Sandblasting or shotblasting.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART U: ADDITIONAL CONTROL MEASURES

Section 212.700 Applicability

- a) This Subpart ~~applies~~shall apply to ~~those~~ sources in the areas designated in and subject to ~~Section~~Sections 212.324(a)(1) ~~or 212.423(a)~~ and that have actual annual source-wide emissions of PM₁₀₋₁₀ of at least ~~fifteen~~ ~~(15)~~ tons per year.
- b) A source's actual annual source-wide emissions of PM₁₀₋₁₀ ~~is~~shall be the total of its fugitive emissions and its stack emissions from process emission units and fuel combustion emission units, as provided ~~and as set forth~~ in the source's Annual Emissions Report submitted under~~pursuant to~~ 35 Ill. Adm. Code 254, or, for a newly-constructed source or emission unit, the estimated emissions included in the permit application.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.701 Contingency Measure Plans, Submittal, and Compliance Date

- a) ~~Sources~~ ~~Those sources~~ subject to this Subpart ~~must~~ shall prepare contingency measure plans reflecting the PM~~10-10~~ emission reductions ~~set forth~~ in Section 212.703 ~~of this Subpart~~. These plans ~~must~~ shall become federally enforceable permit conditions. ~~These~~ Such plans ~~must~~ shall be submitted to the Agency by November 15, 1994. ~~Despite these requirements~~ Notwithstanding the foregoing, sources that become subject to ~~the provisions of~~ this Subpart after July 1, 1994, ~~must~~ shall submit a contingency measure plan to the Agency for review and approval within ~~ninety (90)~~ days after the date on which the ~~such~~ source or sources became subject to ~~the provisions of~~ this Subpart or by November 15, 1994, whichever is later. The Agency ~~must~~ shall notify ~~those~~ sources requiring contingency measure plans, based on the Agency's current information. ~~However; however~~, the Agency's failure to notify any source of its requirement to submit contingency measure plans ~~is~~ shall not ~~be~~ a defense to a violation of this Subpart and ~~does~~ shall not relieve the source of its obligation to timely submit a contingency measure plan.
- b) If the Agency disapproves the initial submittal of a contingency measure plan or a source fails to revise a plan so that it is approvable, the Agency ~~must~~ shall so notify the source in writing, and the source may treat ~~that~~ such notice as a permit denial.
- c) A source with ~~Sources having~~ operational changes subject to Sections 212.304, 212.305, 212.306, 212.308, 212.316(a) through (e), 212.424, or 212.464 which require either a new permit or a revision to an existing permit ~~must~~ shall, within 30 days after ~~those~~ such changes, submit a request to modify its permit ~~in order to~~ include a new, appropriate contingency measure plan. ~~The~~ Such new plan ~~must~~ shall be subject to the requirements of this Subpart.
- d) A source may, ~~consistent with the requirements of this Subpart and any applicable permitting requirements~~, propose revisions consistent with the requirements of this Subpart and any applicable permitting requirements to its contingency measure plan.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.702 Determination of Contributing Sources

- a) If the review of monitoring data reveals an ~~exceedance~~ exceedence of the 24-hour ambient air quality standard for PM~~10-10~~ ~~found~~ at 35 Ill. Adm. Code 243.120, the Agency ~~must~~ shall attempt to determine the source or sources causing or contributing to the ~~exceedance~~ exceedence.
- b) In determining whether a source has caused or contributed to an ~~exceedance~~ exceedence of the 24-hour ambient air quality standard for PM~~10-10~~, the Agency may take whatever steps are necessary to determine which source or sources are culpable for the ~~exceedance~~ exceedence, including, ~~but not limited to~~:

- 1) Evaluating whether the ~~exceedance~~ can be classified as an "exceptional event" ~~underpursuant to~~ the "Guideline on the Identification and Use of Air Quality Data Affected by Exceptional Events," incorporated by reference in Section 212.113 ~~of this Part~~;
 - 2) Reviewing operating records of ~~each~~ source ~~or sources~~ identified ~~underpursuant to~~ subsections (b)(3) and (b)(4) ~~below~~ to determine whether ~~each identified any~~ source ~~or sources so identified~~ experienced a malfunction or breakdown or violated any term or condition of its operating permit which contributed to the ~~exceedance~~;
 - 3) Evaluating the monitoring equipment filter evidencing the ~~exceedance~~ to determine the types of sources that contributed to the ~~exceedance~~; and
 - 4) Evaluating meteorological data and conducting dispersion analyses ~~underpursuant to~~ the "Guideline on Air Quality Models (Revised)," incorporated by reference in Section 212.113 ~~of this Part~~, to determine which ~~source or~~ sources caused or contributed to the ~~exceedance~~.
- c) If the Agency determines that the ~~exceedance~~ can be classified as an exceptional event, the Agency ~~must~~ make a written request to USEPA to void the ~~exceedance~~. If the ~~exceedance~~ has been caused by an "exceptional event," the Agency ~~must~~ make no requests upon any source for Level I or Level II controls ~~underpursuant to~~ Section 212.704(a) or (b) ~~of this Subpart~~ until ~~such time as~~ USEPA has denied the Agency's request to void the ~~exceedance~~ or until an additional ~~exceedance~~ of the 24-hour ambient air quality standard which is not due to an exceptional event, as determined by the Agency, has been monitored for the same area.
 - d) If the Agency determines that the ~~exceedance~~ was due to a malfunction or breakdown or violation of any term or condition of a source's operating permit, the Agency ~~must~~ contact ~~the~~ such source and may pursue appropriate action under 35 Ill. Adm. Code 103.
 - e) The Agency's determination of culpability of a source is appealable to the Board ~~underpursuant to the procedures set forth at~~ 35 Ill. Adm. Code 106.5, Subpart J.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.703 Contingency Measure Plan Elements

- a) All sources subject to this Subpart ~~must~~ submit a contingency measure plan. The contingency measure plan ~~must~~ contain two levels of control measures:

- 1) Level I measures ~~are measures that will~~ reduce total actual annual source-wide fugitive emissions of PM₁₀₋₁₀ subject to control under Sections 212.304, 212.305, 212.306, 212.308, 212.316(a) through (e), 212.424₂ or 212.464 by at least 15%.
 - 2) Level II measures ~~are measures that will~~ reduce total actual annual source-wide fugitive emissions of PM₁₀₋₁₀ subject to control under Sections 212.304, 212.305, 212.306, 212.308, 212.316(a) through (e), 212.424₂ or 212.464 by at least 25%.
- b) A source may comply with this Subpart through an alternative compliance plan that provides for reductions in emissions equal to the level of reduction of fugitive emissions as required at subsection (a) ~~above~~ and which has been approved by the Agency and USEPA as federally enforceable permit conditions. If a source elects to include controls on process emission units, fuel combustion emission units, or other fugitive emissions of PM₁₀₋₁₀ not subject to Sections 212.304, 212.305, 212.306, 212.308, 212.316(a) through (e), 212.424₂ or 212.464 at the source in its alternative control plan, the plan must include a reasonable schedule ~~to implement for implementation of the such~~ controls, not to exceed two ~~(2)~~ years. This implementation schedule is subject to Agency review and approval.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.704 Implementation

- a) Following any ~~exceedance~~ of the 24-hour ambient air quality standard for PM₁₀₋₁₀, the Agency ~~must~~ shall notify ~~each the~~ source ~~or sources~~ the Agency has identified as likely to be causing or contributing to an ~~exceedance~~ detected by monitoring. Within ~~ninety (90)~~ days after ~~receiving this receipt of such~~ notification, each source ~~so notified~~ may implement Level I or Level II measures, as determined ~~under pursuant to~~ subsection (d) ~~below~~.
- b) If there is a violation of the ambient air quality standard for PM₁₀₋₁₀ as determined in ~~compliance~~ accordance with 40 CFR ~~Part 50.5~~ Appendix K, incorporated by reference in Section 212.113 ~~of this Part~~, the Agency ~~must~~ shall notify ~~each the~~ source ~~or sources~~ the Agency has identified as likely to be causing or contributing to one or more of the ~~exceedance~~ leading to ~~the such~~ violation, and ~~each such~~ source ~~or sources~~ ~~must~~ shall implement Level I or Level II measures, as determined ~~under pursuant to~~ subsection (e) ~~below~~. ~~Each The~~ notified source ~~or sources~~ ~~must~~ so identified shall implement ~~the such~~ measures corresponding to fugitive emissions within ~~ninety (90)~~ days after ~~receiving receipt of such~~ notification and ~~must~~ shall implement ~~such~~ measures corresponding to any nonfugitive emissions according to the approved schedule ~~set forth in the such~~ source's alternative control plan. Any source identified as causing or contributing to a violation of the ambient air quality standard for PM₁₀₋₁₀ may appeal any

finding of culpability by the Agency to the Board ~~underpursuant to~~ 35 Ill. Adm. Code 106, Subpart J.

- c) ~~After Upon~~ the finding of a failure to attain by the ~~USEPA~~ Administrator ~~of USEPA~~, the Agency ~~mustshall~~ notify all sources in the applicable area required to submit contingency measure plans ~~underpursuant to~~ Section 212.700 ~~of this Subpart of the Administrator's such~~ finding. ~~However by the Administrator; however,~~ the Agency's failure to notify a source of its requirement to implement its contingency measure plan because of the Administrator's finding ~~is of a failure to attain shall~~ not ~~be~~ a defense to a violation of this Subpart and ~~doesshall~~ not relieve the source of its obligation to timely comply with this Section. All ~~such~~ sources subject to this Subpart ~~mustshall~~, within ~~sixty (60)~~ days after ~~receiving receipt of such~~ notification, implement any Level II measures corresponding to fugitive emissions subject to control under Sections 212.304, 212.305, 212.306, 212.308, 212.316(a) through (e), 212.424, or 212.464 and ~~mustshall~~ implement any Level II measures corresponding to any nonfugitive emissions of PM₁₀₋₁₀ according to the approved schedule ~~set forth in the such~~ source's alternative control plan, unless ~~the such~~ corresponding Level II controls have been previously implemented by ~~the such source or sources underpursuant to~~ subsection (a) or (b) ~~above~~.
- d) The Agency ~~mustshall~~ request that sources comply with the Level I or Level II measures of their contingency measure plans ~~under, pursuant to~~ subsection (a) ~~above~~, as follows:
- 1) Level I measures ~~mustshall~~ be requested when the magnitude of the monitored ~~exceedance exceedence~~ at a given air quality monitor is less than or equal to 170 ~~ugug~~/m³(3).
 - 2) Level II measures ~~mustshall~~ be requested when the magnitude of the monitored ~~exceedance exceedence~~ at a given air quality monitor exceeds 170 ~~ugug~~/m³(3).
- e) The Agency ~~mustshall~~ require that sources comply with the Level I or Level II measures of their contingency measure plans ~~under, pursuant to~~ subsection (b) ~~above~~, as follows:
- 1) Level I measures ~~mustshall~~ be required when the design value of a violation of the 24-hour ambient air quality standard, as computed ~~underpursuant to~~ 40 CFR 50.5-Appendix K, incorporated by reference in Section 212.113 ~~of this Part~~, is less than or equal to 170 ~~ugug~~/m³.
 - 2) Level II measures ~~mustshall~~ be required when the design value of a violation of the 24-hour ambient air quality standard, as computed ~~underpursuant to~~ 40 CFR 50.5-Appendix K, incorporated by reference in Section 212.113 ~~of this Part~~, exceeds 170 ~~ugug~~/m³.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 212.705 Alternative Implementation

~~If~~Should the Agency ~~determines~~determine that more than one source is a contributing source ~~underpursuant to~~ Section 212.702 ~~of this Subpart~~, the Agency may accept controls from fewer than all of the sources identified as culpable, where some of the culpable sources achieve levels of control greater than required for all culpable sources~~greater than the required levels of control for all culpable sources are achieved at some of the culpable sources.~~

- a) For ~~the purposes of~~ this Section, an "identified source" is a source determined to be culpable for an ~~exceedance~~exceedence of the 24-hour ambient air quality standard.
- b) For ~~the purposes of~~ this Section, a "participating source" is another source that is also identified as culpable by the Agency for the monitored ~~exceedance~~exceedence.
- c) For ~~the purposes of~~ this Section, "equivalent air quality benefits" ~~must~~shall be determined by conducting one or more dispersion analyses in ~~compliance~~accordance with the "Guideline on Air Quality Models (revised)," incorporated by reference in Section 212.113 ~~of this Part~~.
- d) An identified source may elect to achieve compliance with ~~the provisions of~~ this Subpart by obtaining equivalent air quality benefits from PM₁₀₋₁₀ emissions reductions ~~at~~by a participating source as the identified source would achieve~~would be achieved at the identified source if, provided, however, that~~ the PM₁₀₋₁₀ emissions reductions to be achieved by the participating source under this Section are in addition to any other obligation it may have under this Subpart to reduce PM₁₀₋₁₀ emissions.
- e) If an identified source elects to rely on this Section to demonstrate compliance with this Subpart, ~~the identified source must:~~
 - 1) The identified source must demonstrate~~Demonstrate~~ to the Agency that it will achieve equivalent air quality benefits from PM₁₀₋₁₀ emission reductions at the participating source as ~~would be achieved from the identified source subject to this Subpart~~ would achieve;
 - 2) The PM₁₀₋₁₀ emissions reductions from the participating source that the identified source is relying upon to demonstrate compliance with this Subpart must be reflected as federally enforceable permit conditions of the participating source's permit;

- 3) The participating source ~~must implement~~^{implements} any emissions reductions for fugitive emissions of PM₁₀₋₁₀ within ~~ninety~~ (90) days after the identified source would have been required to implement Level I or Level II measures ~~underpursuant to~~ this Subpart; and
- 4) The participating source ~~must submit~~^{submits} a reasonable schedule ~~to implement for implementation of~~ any PM₁₀₋₁₀ emission reductions from controls on process emission units, fuel combustion emission units, or other fugitive emissions of PM₁₀₋₁₀ at the participating source not subject to control under Sections 212.304, 212.305, 212.306, 212.308, 212.316(a) through (e), 212.424, or 212.464, not to exceed two ~~(2)~~ years from the date of notification to the identified source that Level I or Level II measures, as appropriate, are required.

Section 212.APPENDIX C Past Compliance Dates (Repealed)

Rule 202(e)

~~Owners or operators of new emission sources were required to comply with the emission standards and limitations of Rule 202 by April 14, 1972.~~

~~Owners or operators of existing emission sources were required to comply with the emission standards and limitations of Rule 202 by December 31, 1972; except that owners or operators of emission sources subject to Rule 203(g) were required to comply with the emission standards and limitations of Rule 203 by May 30, 1975.~~

Rule 203(e)

~~Except as otherwise provided in Rule 203, every existing process emission source which was not in compliance with Rule 203(b) as of April 14, 1972, was required to comply with Rule 203(a), unless both of the following conditions were met:~~

- ~~a) The source was in compliance, as of April 14, 1972, with the terms and conditions of a variance granted by the Board, or, by June 13, 1972, the source was the subject of a variance petition filed with the Board, which variance was subsequently granted; and~~
- ~~b) As of April 14, 1972, construction was commenced on equipment or modifications sufficient to achieve compliance with Rule 203(b).~~

Rule 203(d)(3)(A) and (B)

~~Corn wet milling processes subject to Rule 203(d)(3) were subject to a standard of 0.3 gr/scf of effluent gas from April 14, 1972 to May 30, 1975.~~

Rule 203(d)(5)(L) and (M)

~~Every owner or operator of an emission source the construction or modification of which was commenced after September 6, 1979 was required to comply with the emission standards and limitations of Rule 203(d)(5) upon commencement of operation.~~

~~Every owner or operator of an emission source the construction or operation of which was commenced prior to September 6, 1979 was required to comply with the emission standards and limitations of Rule 203(d)(5) no later than December 31, 1982.~~

~~From the effective date of this Rule 203(d)(5) through December 31, 1982, full compliance with an approved compliance program and project completion schedule pursuant to Rule 104 for all sources of particulate emissions subject to Rule 203(d)(5) and 203(f), as amended, under common ownership or control in the same air quality control region constituted compliance with the emission standards and limitations contained in Part II if such Compliance Program and Project Completion Schedule;~~

- ~~a) provided for compliance by all sources of particulate matter subject to Rules 203(d)(5) and 203(f), as amended, under common ownership or control in the same air quality region, as expeditiously as practicable considering what was economically reasonable and technically feasible, and~~
- ~~b) provided for reasonable further progress in achieving the reductions in particulate emissions required by Rule 203(d)(5) and 203(f), as amended, including annual increments of reductions such that at least one third of the total reductions were achieved by December 31, 1980 and at least two thirds of the total reduction were achieved by December 31, 1981, unless the owner or operator demonstrated in a hearing before the Board that such increments were technically infeasible or economically unreasonable or unless the owner or operator demonstrated in a hearing before the Board that some alternate schedule represents reasonable further progress within the meaning of Section 172(b) of the Clean Air Act, 42 U.S.C. Section 7502(b).~~

~~The provisions of Rule 203(d)(5)(L)(iii) did not apply to any facility subject to a rule which was not in full force and effect as a matter of state law because of judicial action, and in such event the facility shall remain subject to the regulations in effect at the time these amendments were adopted.~~

~~The Provision of Rule 203(d)(5)(L) were not severable. Should any portion thereof have been found invalid or been disapproved by USEPA as a revision of the state implementation plan pursuant to the Clean Air Act, then the entire Rule 203(d)(5)(L) would have been null and void, the provisions of Rule 203(d)(5)(A) and (B) were to have become immediately effective, and the provisions of existing Rules 203(a), (b), and (c) and prior Rule 203(d)(2) (in effect from April 14, 1972 to the effective date of this Rule) were to have been reinstated.~~

Rule 203(d)(8)(J)

~~Existing grain handling and grain drying operations subject to Rule 203(d)(8)(B), (C) and (D) were required to achieve compliance on or before April 30, 1977, except that all such operations were required to achieve compliance with Rule 203(d)(8)(A) by June 30, 1975.~~

~~New grain handling and grain drying operations were required to comply with Rule 203(d)(8) by June 30, 1975.~~

Rule 203(f)(3) (Preamble)

~~Potential sources of fugitive particulate matter were required to be maintained and operated in accordance with Rule 203(f)(3) on or after December 31, 1982.~~

Rule 203(i)

~~Every owner or operator of a new emission source was required to comply with the standards and limitations of Rule 203 by April 14, 1972.~~

~~Except as otherwise provided in Rule 203(d)(4), (d)(6), (i)(3), (i)(4), and (i)(5), every owner or operator of an existing emission source was required to comply with the standards and limitations of Rule 203 by December 31, 1973.~~

~~Every owner or operator of an existing emission source subject to Rule 203(f) was required to comply with the standards and limitations of Rule 203:~~

- ~~a) by October 14, 1972 when the emissions from such source were caused by the stockpiling of materials;~~
- ~~b) by October 14, 1972 for emission sources subject to Rule 203(f)(4); and~~
- ~~c) by April 14, 1973 for all other emission sources subject to Rule 203(f).~~

~~Every owner or operator of an existing emission source subject to Rule 203(g) was required to comply with the standards and limitations of Rule 203 by May 30, 1975.~~

~~Notwithstanding any other provisions of Rule 203, every owner or operator of an existing emission source which:~~

- ~~a) was required to comply with Rules 2-2.51, 2-2.52, 2-2.54, 3-3.111, 3-3.2110, 3-3.2130 and 3-3.220 of Rules and Regulations Governing the Control of Air Pollution as amended August 19, 1969; and~~

- b) ~~which was in compliance with such rules, as of April 14, 1972, or is in compliance with Rules 203(c)(1) and (2);~~

~~was required to comply with the applicable emission standards and limitations of Rule 203 by May 30, 1975.~~

~~Notwithstanding the other dates specified in this Rule, grain handling and conditioning operations were required to comply with the requirements of Rule 203 by May 30, 1975.~~

Reg. 16174, effective December 7, 2015; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 214.100 Scope and Organization

- a) This Part sets standards and limitations for emission of sulfur from stationary sources.
- b) ~~Sources~~Permit for sources subject to this Part may be required to obtain a permit underpursuant to 35 Ill. Adm. Code 201.
- c) ~~Despite~~Notwithstanding the provisions of this Part, the air quality standards ~~contained~~ in 35 Ill. Adm. Code 243 may not be violated.
- d) This Part ~~includesis divided into~~ Subparts ~~organizedwhich are grouped~~ as follows:
 - 1) Subpart A: General Provisions
 - 2) Subparts B - J: Fuel Combustion Emission Sources and Incinerators
 - 3) Subparts K - M: Process Emission Sources
 - 4) Subparts N - End: Industry and ~~site-specificsite specific~~ rules.
- e) ~~These rules have been grouped for the convenience of the public; the scope of each is determined by its language and history.~~

BOARD NOTE: While subsection (d) describes the organization of this Part, the rules themselves establish their applicability and effect.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.101 Measurement Methods

A determination of ~~noncompliance~~non-compliance based on any subsection of this Section is shall not be refuted by evidence of compliance with any other subsection.

- a) Sulfur Dioxide Measurement. Measurement of sulfur dioxide emissions from stationary sources ~~mustshall~~ be made according to an applicable method ~~specified~~ in 40 CFR 60.~~Appendix, appendix~~ A, Method 6, 6A, 6B, or 6C, incorporated by reference in Section 214.104(a), or by measurement procedures ~~underestablished pursuant to~~ 40 CFR 60.8(b), incorporated by reference in Section 214.104(b), or by an installed certified continuous emissions monitoring system; or ~~by~~ an alternative monitoring method available under 40 CFR 75, incorporated by reference in Section 214.104(e).
- b) Sulfuric Acid Mist and Sulfur Trioxide Measurement. Measurement of sulfuric

acid mist and sulfur trioxide mustshall be according to the barium-thorin titration method specified in 40 CFR 60. ~~Appendix, appendix~~ A, Method 8, incorporated by reference in Section 214.104(a), or a controlled condensate method approved in writing by the Illinois Environmental Protection Agency (Agency).

- c) Solid Fuel Averaging Measurement Daily Analysis Method. This subsection applies to sources at plants with total solid fuel-fired heat input capacity exceeding 439.5 MW (1,500 ~~MMbtummmBtu~~/hr). If daily fuel analysis is used to demonstrate compliance or ~~noncompliance~~non-compliance with Sections 214.122, 214.141, 214.142(a), 214.162, 214.186, and 214.421, the sulfur dioxide emission rate to be compared to the emission limit mustshall be ~~considered to be~~ the result of averaging daily samples taken over any consecutive two-month period if provided no more than 5% ~~percent~~ of the sample values are greater than 20% ~~percent~~ above the sample average. If samples from a source cannot meet this statistical criterion, each individual daily sample analysis for ~~thesuch~~ source mustshall be compared to the source's emission limit to determine compliance. The specific ASTM procedures incorporated by reference in Section 214.104(c) must, shall be used for solid fuel sampling, sulfur, and heating value determinations.
- d) Weekly Analysis Method. This subsection applies to sources at plants with total solid fuel-fired heat input capacity exceeding 146.5 MW (500 ~~MMbtummmBtu~~/hr) but not exceeding 439.5 MW (1,500 ~~MMbtummmBtu~~/hr). These plants mustshall demonstrate compliance or ~~noncompliance~~non-compliance with Sections 214.122, 214.141, 214.142(a), 214.162, 214.186, and 214.421 by either an analysis of calendar weekly composites of daily fuel samples or by compliance with subsection (c), at the option of the plant. The specific ASTM procedures incorporated by reference in Section 214.104(c) must, shall be used for sulfur and heating value determinations.
- e) Monthly Analysis Method. This subsection applies to sources at plants with total fuel-fired heat input capacity exceeding 14.65 MW (50 ~~MMbtummmBtu~~/hr) but not exceeding 146.5 MW (500 ~~MMbtummmBtu~~/hr). These plants mustshall demonstrate compliance or ~~noncompliance~~non-compliance with Sections 214.122, 214.141, 214.142(a), 214.162, 214.186, and 214.421 by either an analysis of calendar monthly composites of daily fuel samples or by compliance with subsection (c), at the option of the plant. ASTM procedures incorporated by reference in Section 214.104(c) must, shall be used for sulfur and heating value determinations.
- f) Small Source Alternative Method. This subsection applies to sources at plants with total solid fuel-fired heat input capacity not exceeding 14.65 MW (50 ~~MMbtummmBtu~~/hr). Compliance or ~~noncompliance~~non-compliance with Sections 214.122, 214.141, 214.142(a), 214.162, 214.186, and 214.421 mustshall be demonstrated by a calendar month average sulfur dioxide emission rate.

- g) Exemptions. Subsections (c) through (f) ~~do shall~~ not apply to sources controlling sulfur dioxide emissions by flue gas desulfurization equipment or by sorbent injection.
- h) Hydrogen Sulfide Measurement. ~~To determine~~For purposes of determining compliance with Section 214.382(c), the concentration of hydrogen sulfide in petroleum refinery fuel gas ~~must shall~~ be measured using the Tutwiler Procedure ~~specified~~ in 40 CFR 60.648, incorporated by reference in Section 214.104(d).

SUBPART B: NEW FUEL COMBUSTION EMISSION SOURCES

Section 214.120 Scope

Subparts B through F contain general rules for sulfur emissions from fuel combustion emission sources. These may be modified by industry and [site-specific](#) rules in Subparts N et seq.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.121 Large Sources

This Section applies to new fuel combustion emission sources with actual heat input greater than 73.2 MW (250 [MMbtummmBtu](#)/hr).

- a) [Only](#) Solid Fuel Burned ~~Exclusively~~. [No](#) person ~~must not~~ [shall](#) cause or allow the emission of [SO₂sulfur dioxide](#) into the atmosphere in any ~~one-hour~~ [one hour](#) period from any new fuel combustion emission source greater than 73.2 MW (250 [MMbtummmBtu](#)/hr), burning [only](#) solid fuel ~~exclusively~~, to exceed 1.86 kg of [SO₂sulfur dioxide](#) per MW-hr of actual heat input (1.2 lbs/[MMbtummmBtu](#)).

~~(BOARD NOTE: This Section was invalidated in [Commonwealth Edison v. PCB](#), 25 Ill. App. 3d 271, 62 Ill. 2d 494, 43 N.E.2d 459, 323 N.E.2d 84 (1st Dist. 1974), [Ashland Chemical Corp. v. PCB](#), 64 Ill. App. 3d 169, 381 N.E.2d 56 (3rd Dist. 1978), and [Illinois State Chamber of Commerce v. PCB](#), 67 Ill. App. 3d 839, 384 N.E.2d 922, 78 Ill. 2d 1, 398 N.E.2d 9 (Ill. 1979).~~)

- b) [Only](#) Liquid Fuel Burned ~~Exclusively~~.
 - 1) ~~Before~~ [Prior to](#) January 1, 2017, ~~no~~ person ~~must not~~ [shall](#) cause or allow the emission of [SO₂sulfur dioxide](#) into the atmosphere in any ~~one-hour~~ [one hour](#) period from any new fuel combustion emission source with actual heat input greater than 73.2 MW (250 [MMbtummmBtu](#)/hr), burning [only](#) liquid fuel ~~exclusively~~, to exceed the following:
 - A) 1.2 kg of [SO₂sulfur dioxide](#) per MW-hr of actual heat input when residual fuel oil is burned (0.8 lbs/[MMbtummmBtu](#)); and

- B) 0.46 kg of ~~SO₂sulfur dioxide~~ per MW-hr of actual heat input when distillate fuel oil is burned (0.3 lbs/~~MMbtummmBtu~~);
- 2) On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input greater than 73.2 MW (250 ~~MMbtummmBtu~~/hr), burning only liquid fuel~~-exclusively~~, must comply with the following:
 - A) The sulfur content of all residual fuel oil used by the fuel combustion emission source must not exceed 1,000 ppm;
 - B) The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm; and
 - C) The owner or operator must:
 - i) Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with ~~the requirements in~~ subsections (b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - ii) Retain the records for at least ~~five~~5 years, and provide copies of the records to the Agency within 30 days after ~~receiving receipt of~~ a request by the Agency; and
 - iii) Notify the Agency within 30 days after ~~discovering discovery of~~ deviations from any of the requirements in this subsection (b)(2). In addition to information required by the source's permit~~At minimum, and in addition to any permitting obligations,~~ the notification must ~~describe include a description of~~ the deviations and discuss~~, a discussion of~~ the possible cause of the deviations and~~, any corrective actions taken, and any~~ preventative measures taken.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.122 Small Sources

This Section applies to new fuel combustion emission sources with actual heat input ~~less~~smaller than~~, or equal to,~~ 73.2 MW (250 ~~MMbtummmBtu~~/hr).

- a) Only Solid Fuel Burned~~-Exclusively~~. A~~No~~ person must not~~shall~~ cause or allow the emission of ~~SO₂sulfur dioxide~~ into the atmosphere in any ~~one-hour~~one-hour period from any new fuel combustion source with actual heat input ~~less~~smaller

than, or equal to, 73.2 MW (250 ~~MMBtu~~mmBtu/hr), burning only solid fuel exclusively, to exceed 2.79 kg of sulfur dioxide per MW-hr of actual heat input (1.8 lbs/~~MMBtu~~mmBtu).

b) Only Liquid Fuel Burned~~Exclusively~~.

1) ~~Before~~Prior to January 1, 2017, a ~~no~~person ~~must not~~shall cause or allow the emission of ~~SO₂~~sulfur dioxide into the atmosphere in any ~~one-hour~~one hour period from any new fuel combustion emission source with actual heat input ~~less~~smaller than, or equal to, 73.2 MW (250 ~~MMBtu~~mmBtu/hr), burning only liquid fuel~~exclusively~~, to exceed the following:

A) 1.55 kg of ~~SO₂~~sulfur dioxide per MW-hr of actual heat input when residential fuel oil is burned (1.0 lbs/~~MMBtu~~mmBtu); and

B) 0.46 kg of ~~SO₂~~sulfur dioxide per MW-hr of actual heat input when distillate fuel oil is burned (0.3 lbs/~~MMBtu~~mmBtu);

2) On and after January 1, 2017, the owner or operator of a new fuel combustion emission source with actual heat input ~~less~~smaller than, or equal to, 73.2 MW (250 ~~MMBtu~~mmBtu/hr), burning only liquid fuel exclusively, must comply with the following:

A) The sulfur content of all residual fuel oil used by the fuel combustion emission source must not exceed 1,000 ppm;

B) The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm; and

C) The owner or operator must:

i) Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with ~~the requirements in~~ subsections (b)(2)(A) and (b)(2)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil;

ii) Retain the records for at least ~~five~~5 years, and provide copies of the records to the Agency within 30 days after ~~receiving~~receipt of a request by the Agency; and

iii) Notify the Agency within 30 days after ~~discovering~~discovery of deviations from any of the requirements in this subsection (b)(2). In addition to information required by the source's permit~~At minimum, and in addition to any permitting obligations~~, the

notification must ~~describe~~~~include a description of~~ the deviations, ~~and discuss a discussion of~~ the possible cause of the deviations ~~and~~, any corrective actions ~~taken~~, and ~~any~~ preventative measures taken.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART C: EXISTING SOLID FUEL COMBUSTION EMISSION SOURCES

Section 214.140 Scope

This Subpart contains rules which establish general sulfur emission standards for existing solid fuel emission sources. These may be modified by the industry and site-specific rules in Subparts N, et seq.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.141 Sources Located in Metropolitan Areas

Except as otherwise provided in this Part, ~~any~~ person ~~must not~~~~shall~~ cause or allow the emission of ~~SO₂sulfur dioxide~~ into the atmosphere in any ~~one-hour~~~~one hour~~ period from any existing fuel combustion source, burning ~~only~~ solid fuel ~~exclusively, and~~ located in the Chicago, St. Louis (Illinois), or Peoria major metropolitan areas, to exceed 1.8 ~~lbspounds~~ of ~~SO₂sulfur dioxide~~ per ~~MMbtummmBtu~~ of actual heat input (774 ~~ng/J~~~~nanograms per joule~~).

- a) Sources ~~located~~ in Kankakee or McHenry Counties ~~must~~~~shall~~ not exceed 6.8 pounds of ~~SO₂sulfur dioxide~~ per ~~MMbtummmBtu~~ of actual heat input (2,924 ~~ng/J~~~~nanograms per joule~~) in any ~~one-hour~~~~one hour~~ period.
- b) Existing industrial sources, not equipped with flue gas desulfurization systems as of December 1, 1980, ~~and~~ located in the Peoria major metropolitan area ~~must~~~~shall~~ not exceed 5.5 ~~lbspounds~~ of ~~SO₂sulfur dioxide~~ per ~~MMbtummmBtu~~ of actual heat input (2,365 ~~ng/J~~~~nanograms per joule~~) in any ~~one-hour~~~~one hour~~ period ~~if, provided~~ the emissions from any such source ~~located~~ in the City of Peoria exit from a stack which is at least 154 ~~ft~~~~feet~~ (47 ~~m~~~~meters~~) in height.
- c) Sections 214.122 and 214.101(c) ~~do~~~~shall~~ not apply to any fuel combustion emission sources equipped with flue gas desulfurization systems as of December 1, 1980, and located in the City of East Peoria as the city boundaries were then defined. ~~A No~~ person ~~must not~~~~shall~~ cause or allow the emission of ~~SO₂sulfur dioxide~~ into the atmosphere in any ~~one-hour~~~~one hour~~ period from any such sources to exceed 1.4 ~~lbspounds~~ of ~~SO₂sulfur dioxide~~ per ~~MMbtummmBtu~~ of actual heat input (602 ~~ng/J~~~~nanograms per joule~~).
- d) Sections 214.122 and 214.101(c) ~~do~~~~shall~~ not apply to any fuel combustion emission sources which are capable of firing solid fuel at a heat input of more

than 125 ~~MMBtu~~ per hour (36.6 ~~MW~~); ~~and which~~ as of December 1, 1980, ~~are~~ equipped with flue gas desulfurization systems; ~~and are~~ located in Hollis Township, Peoria County, as the township boundaries were then defined. ~~A~~ person ~~must not~~ cause or allow the emission of ~~SO₂ sulfur dioxide~~ into the atmosphere in any ~~one-hour~~ period from any such sources to exceed 1.1 ~~lbs~~ of ~~SO₂ sulfur dioxide~~ per ~~MMBtu~~ of actual heat input (473 ~~ng~~).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.142 Small Sources Located Outside Metropolitan Areas

This section applies to existing fuel combustion sources with actual heat input less than, or equal to, 73.2 MW (250 ~~MMBtu~~/hr) ~~and~~ located outside the Chicago, St. Louis (Illinois), or Peoria major metropolitan areas. ~~A~~ person ~~must not~~ cause or allow the emission of ~~SO₂ sulfur dioxide~~ into the atmosphere in any ~~one-hour~~ period from any existing fuel combustion source with actual heat input less than, or equal to, 73.2 MW (250 ~~MMBtu~~/hr), burning ~~only~~ solid fuel ~~exclusively~~, ~~and~~ located outside the Chicago, St. Louis (Illinois), or Peoria major metropolitan areas; to exceed either of the following, whichever ~~the~~ person determines ~~will~~ apply:

- a) 10.5 kg of ~~SO₂ sulfur dioxide~~ per MW-hr of actual heat input (6.8 ~~lbs~~), ~~if the~~ owner or operator complies with all applicable provisions of Section 214.186, or
- b) The emission limit ~~underprovided by~~ Subpart E.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.143 Large Sources Located Outside Metropolitan Areas

This section applies to existing fuel combustion sources with actual heat input greater than 73.2 MW (250 ~~MMBtu~~/hr) ~~and~~ located outside the Chicago, St. Louis (Illinois), or Peoria major metropolitan areas. ~~A~~ person ~~must not~~ cause or allow the emission of ~~SO₂ sulfur dioxide~~ into the atmosphere in any ~~one-hour~~ period from any existing fuel combustion source with actual heat input greater than 73.2 MW (250 ~~MMBtu~~/hr), burning ~~only~~ solid fuel ~~exclusively~~, ~~and~~ located outside the Chicago, St. Louis (Illinois), or Peoria major metropolitan areas; to exceed the emission limit ~~underprovided by~~ Subpart E.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART D: EXISTING LIQUID OR MIXED FUEL COMBUSTION EMISSION SOURCES

Section 214.161 Only Liquid Fuel Burned ~~Exclusively~~

- a) ~~Before~~~~Prior to~~ January 1, 2017, ~~a~~ ~~no~~ ~~person~~ ~~must not~~~~shall~~ cause or allow the emission of ~~SO₂~~~~sulfur dioxide~~ into the atmosphere in any ~~one-hour~~~~one hour~~ period from any existing fuel combustion emission source, burning only liquid fuel ~~exclusively~~, to exceed the following:
- 1) 1.55 kg of ~~SO₂~~~~sulfur dioxide~~ per MW-hr of actual heat input when residual fuel oil is burned (1.0 lbs/~~MMbtu~~~~mmBtu~~); and
 - 2) 0.46 kg of ~~SO₂~~~~sulfur dioxide~~ per MW-hr of actual heat input when distillate fuel oil is burned (0.3 lbs/~~MMbtu~~~~mmBtu~~).
- b) Except ~~under~~~~as provided in~~ subsections (c) and (d), on and after January 1, 2017, the owner or operator of an existing fuel combustion emission source, burning only liquid fuel ~~exclusively~~, must comply with the following:
- 1) The sulfur content of all residual fuel oil used by the fuel combustion emission source must not exceed 1,000 ppm;
 - 2) The sulfur content of all distillate fuel oil used by the fuel combustion emission source must not exceed 15 ppm; and
 - 3) The owner or operator must:
 - A) Maintain records demonstrating that the fuel oil used by the fuel combustion emission source complies with ~~the requirements in~~ subsections (b)(1) and (b)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - B) Retain the records for at least ~~five~~~~5~~ years, and provide copies of the records to the Agency within 30 days after ~~receiving~~~~receipt of~~ a request by the Agency; and
 - C) Notify the Agency within 30 days after ~~discovering~~~~discovery of~~ deviations from any of the requirements in this subsection (b). In addition to information required by the source's permit~~At minimum, and in addition to any permitting obligations~~, the notification must ~~describe~~~~include a description of~~ the deviations ~~and discuss~~~~a discussion of~~ the possible cause of the deviations; and any corrective actions ~~taken~~, and ~~any~~ preventative measures taken.
- c) The sulfur content limitation for distillate fuel oil in subsection (b)(2) does not apply to existing electric generating units at Midwest Generation's Joliet station (~~located~~ at or near 1800 Channahon Road, Joliet ~~IL~~), Powerton station (~~located~~ at or near 13082 E. Manito Road, Pekin ~~IL~~), Waukegan station (~~located~~ at or near 401 E. Greenwood Avenue, Waukegan ~~IL~~), and Will County station (~~located~~ at or

near 529 E. 135th, Romeoville-~~H~~). The owner or operator of ~~thesesueh~~ electric generating units must instead comply with the following:

- 1) From January 1, 2016, through December 31, 2018, the sulfur content of all distillate fuel oil purchased for use by ~~thesesueh~~ electric generating units must not exceed 15 ppm;
- 2) From January 1, 2017, through December 31, 2018, the sulfur content of all distillate fuel oil used by ~~thesesueh~~ electric generating units must not exceed 500 ppm;
- 3) On and after January 1, 2019, the sulfur content of all distillate fuel oil used by ~~thesesueh~~ electric generating units must not exceed 15 ppm;
- 4) The owner or operator must:
 - A) Maintain records demonstrating that the distillate fuel oil purchased from January 1, 2016, through December 31, 2018, for use by the electric generating units complies with ~~the requirements in~~ subsection (c)(1), such as records from the fuel supplier indicating the sulfur content of the fuel oil, and maintain records indicating the date of purchase of the fuel oil;
 - B) Maintain records demonstrating that the distillate fuel oil used from January 1, 2017, through December 31, 2018, by the electric generating units; complies with ~~the requirements in~~ subsection (c)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - C) On and after January 1, 2019, maintain records demonstrating that the distillate fuel oil used by the electric generating units complies with ~~the requirements in~~ subsection (c)(3), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - D) Retain all records required by this subsection (c) for at least ~~five~~5 years, and provide copies of the records to the Agency within 30 days after ~~receiving receipt of~~ a request by the Agency; and
 - E) Notify the Agency within 30 days after ~~discovering discovery of~~ deviations from any of the requirements in this subsection (c). In addition to information required by the source's permit~~At minimum, and in addition to any permitting obligations,~~ the notification must ~~describe include a description of~~ the deviations ~~and discuss, a discussion of~~ the possible cause of the deviations ~~and,~~ any corrective actions ~~taken,~~ and ~~any~~ preventative measures taken.

- d) The sulfur content limitation for distillate fuel oil in subsection (b)(2) does not apply to existing fuel combustion emission sources at Caterpillar's Montgomery facility (~~located~~ at or near 325 South Route 31, Montgomery~~IL~~). The owner or operator of the fuel combustion emission sources must instead comply with the following:
- 1) On and after January 1, 2016:
 - A) The sulfur content of all distillate fuel oil purchased for use by the fuel combustion emission sources must not exceed 15 ppm; and
 - B) The sulfur content of all distillate fuel oil used by the fuel combustion emission sources must not exceed 500 ppm;
 - 2) The owner or operator must:
 - A) Maintain records demonstrating that the distillate fuel oil purchased on and after January 1, 2016, for use by the fuel combustion emission sources complies with ~~the requirements in~~ subsection (d)(1)(A), such as records from the fuel supplier indicating the sulfur content of the fuel oil, and maintain records indicating the date of purchase of the fuel oil;
 - B) Maintain records demonstrating that the distillate fuel oil used on and after January 1, 2016, by the fuel combustion emission sources complies with ~~the requirements in~~ subsection (d)(1)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - C) Retain all records required by this subsection (d) for at least ~~five~~5 years, and provide copies of the records to the Agency within 30 days after ~~receiving receipt of~~ a request by the Agency; and
 - D) Notify the Agency within 30 days after ~~discovering~~discovery of deviations from any of the requirements in this subsection (d). ~~In addition to information required by the source's permit. At minimum, and in addition to permitting obligations,~~ the notification must ~~describe~~include a description of the deviations ~~and discuss, a discussion of~~ the possible cause of the deviations ~~and,~~ any corrective actions ~~taken,~~ and ~~any~~ preventative measures taken.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.162 Combination of Fuels

- a) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the emission of ~~SO₂~~~~sulfur dioxide~~ into the atmosphere in any ~~one-hour~~~~one hour~~ period from any fuel combustion emission source burning simultaneously any combination of solid, liquid, and gaseous fuels to exceed the allowable emission rate determined by the following equation:

$$E = S_S H_S + S_d H_d + S_R H_R$$

- b) Symbols in the equation mean ~~the following~~:

E = allowable ~~SO₂~~~~sulfur dioxide~~ emission rate;
 S_S = solid fuel ~~SO₂~~~~sulfur dioxide~~ emission standard which is applicable;
 S_d = distillate oil ~~SO₂~~~~sulfur dioxide~~ emission standard determined from the table in subsection (d);
 S_R = residual fuel oil ~~SO₂~~~~sulfur dioxide~~ emission standard;
 H_S = actual heat input from solid fuel;
 H_d = actual heat input from distillate fuel oil;
 H_R = actual heat input from residual fuel oil.

- c) ~~The~~~~That~~ portion of the actual heat input that is derived ~~from~~:

- 1) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of solid fuels ~~must~~~~shall~~ be included in H_S;
- 2) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of distillate fuel oil ~~must~~~~shall~~ be included in H_d;
- 3) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of residual fuel oil ~~must~~~~shall~~ be included in H_R;
- 4) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of any other liquid fuel ~~must~~~~shall~~ be included in H_R; and
- 5) ~~The~~~~From the~~ burning of by-product gases, such as those produced from a blast furnace or a catalyst regeneration unit in a petroleum refinery, ~~must~~~~shall~~ be included in H_R.

- d) Metric or English units may be used in the equation of subsection (a) as follows:

<u>Parameter</u>	<u>Metric</u>	<u>English</u>
E	kg/hr	lbs/hr
S _S , S _R	kg/MW-hr	lbs/ ~~MMbtu~~ ~~mmBtu~~
S _d ~~before~~ ~~prior to~~ January 1, 2017	0.46 kg/MW-hr	0.3 lbs/ ~~MMbtu~~ ~~mmBtu~~

S _d on and after January 1, 2017	0.0023 kg/MW-hr	0.0015 lb/MMBtu
H _S , H _d , H _R	MW	MMBtu

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART E: AGGREGATION OF SOURCES OUTSIDE METROPOLITAN AREAS

Section 214.181 Dispersion Enhancement Techniques

~~An~~ owner or operator of an existing fuel combustion emission source ~~must~~ shall comply with the emission standards of this Subpart by ~~using the use of~~ dispersion enhancement techniques. Dispersion enhancement techniques ~~shall include, but not be limited to,~~ an intermittent control system or an increase of: stack height in excess of good engineering practice necessary to prevent downwash or fumigation conditions, stack diameter, exit gas velocity, or exit gas temperature, except ~~under as provided by~~ Section 123 of the Clean Air Act (42 ~~USC~~ U.S.C. 7423) and regulations promulgated ~~under it thereunder~~. Flue gas may be reheated where air pollution control equipment results in ~~reducing a reduction of~~ flue gas temperature, ~~if provided that~~ the degree of reheat does not exceed the temperature drop across ~~that such~~ air pollution control equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.182 Prohibition

~~A~~ person ~~must not~~ shall cause or allow the total emissions of ~~SO₂ sulfur dioxide~~ into the atmosphere in any ~~one-hour one hour~~ period from all fuel combustion emission sources, located outside of the Chicago, St. Louis (Illinois), or Peoria major metropolitan areas, owned or operated by that person, and located within a ~~one-mile one mile~~ (1.6 km) radius ~~(1.6 km)~~ from the center point of any such fuel combustion emission source to exceed the emissions determined by ~~the following~~ Sections 214.183 through 214.185, whichever ~~applies is applicable~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.183 General Formula

- a) The general formula is:

$$E = \frac{(H_A)^{0.11} (H_E)^2}{128} \quad (\text{in English units})$$

$$E = 0.04347 (H_A)^{0.11} (H_E)^2 \quad (\text{in Metric units})$$

- b) Symbols used in the general formula mean ~~the following~~:

- E = Total allowable emission of ~~SO₂~~~~sulfur dioxide~~ (in lbs/hr or kg/hr) into the atmosphere in any one-hour period from all fuel combustion emission sources owned or operated by ~~asuch~~ person and located within a ~~one-mile~~ (1.6 km)~~(1-mile)~~ radius from the center point of any such emission source~~;~~
- H_A = Average actual stack height as determined by ~~method outlined in~~ Appendix C~~;~~
- H_E = Effective height of effluent release as determined by ~~method outlined in~~ Appendix C.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.184 Special Formula

- a) If the maximum total emissions of ~~SO₂~~~~sulfur dioxide~~ into the atmosphere in any ~~one-hour~~~~one hour~~ period from all fuel combustion emission sources owned or operated by any person and located within a ~~one-mile~~~~1-mile~~ (1.6 km) radius from the center point of any such fuel combustion emission sources exceed, during normal cyclical variations in firing rate and fuel, the emissions allowed under Section 214.183 but, as of April 1, 1978, were in compliance with either the formula ~~in subsection (b)~~~~detailed below~~ or a Pollution Control Board ~~(Board)~~ order, then the owner or operator of the emission sources ~~must~~~~shall~~ not cause or allow ~~thesuch~~ emissions to exceed the emissions allowed under Section 214.183 or the formula ~~in subsection (b)~~~~detailed below~~, whichever the owner or operator of the emission sources determines ~~will~~~~shall~~ apply.

b)

$$E = 20,000 \left(\frac{H_s}{300} \right)^2 \text{ } \cancel{E = 20,000 \left(\frac{H_s}{300} \right)^2} \text{ (in English units)}$$

$$E = 4.8824 \times 20,000 \left(\frac{H_s}{300} \right)^2 \text{ (in Metric units)}$$

$$H = P_1 H_1 + P_2 H_2 + \dots P_n H_n$$

(Note: $P_1 + P_2 \dots P_n = 1$)

- c) As used in these equations, symbols mean ~~the following~~:

E = total emission of ~~SO₂~~~~sulfur dioxide~~ (in lbs/hr or kg/hr) into the atmosphere in any ~~one-hour~~~~one hour~~ period from all fuel combustion emission sources owned or operated by ~~asuch~~ person and located within a

~~one-mile~~^{1-mile} (1.6 km) radius from the center point of any such emission source;

P_i = (for $i=1, 2, \dots, n$) percentage of total emissions E emitted from source i expressed as decimal equivalents (e.g., $21\% = 0.21$); ~~and~~

H_i = (for $i=1, 2, \dots, n$) physical height (in feet or meters) above grade of stack i .

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.185 Alternative Emission Rate

Any owner or operator of a fuel combustion emission source may petition the Board for approval of an emission rate applicable to any ~~one-hour~~^{one hour} period for all fuel combustion emission sources owned or operated by ~~that~~^{such} person and located within a ~~one-mile~~^{one mile} (1.6 km) radius from the center point of any such fuel combustion emission source. ~~That~~^{Such} person ~~must~~^{shall} prove in an adjudicative hearing before the Board that the proposed emission rate will not under any ~~foreseeable~~^{forseeable} operating conditions and potential meteorological conditions cause or contribute to a violation of any applicable primary or secondary ~~SO₂~~^{sulfur dioxide} ambient air quality standard or violate any applicable prevention of significant deterioration (PSD) increment. An emission rate approved ~~under~~^{pursuant to} this Section ~~substitutes~~^{shall be a substitute} for ~~the~~^{that} standard determined by Section 214.183 or 214.184.

- a) Every owner or operator of a fuel combustion emission source petitioning the Board for approval of an emission standard ~~under~~^{pursuant to} this Section ~~must~~^{shall} follow the applicable procedures ~~described~~ in 35 Ill. Adm. Code Subtitle A, Chapter I.
- b) Any emission standard approved ~~under~~^{pursuant to} this Section ~~must~~^{shall} be included as a condition ~~into~~ operating permits issued ~~under~~^{pursuant to} 35 Ill. Adm. Code 201. Any owner or operator of a fuel combustion emission source who receives Board approval of an emission standard ~~under~~^{pursuant to} this Section ~~must~~^{shall} apply to the ~~Illinois Environmental Agency~~ (Agency) within 30 days of approval of ~~the~~^{such} standard ~~to revise~~^{for a revision of} its operating permit for ~~the~~^{such} source.
- c) The Agency ~~must~~^{shall} impose as a condition ~~into~~ a permit to operate a source ~~under~~^{pursuant to} an emission standard approved ~~under~~^{pursuant to} this Section an ambient ~~SO₂~~^{sulfur dioxide} monitoring and dispersion modeling program designed to verify that ~~the~~^{such} emission standard will not cause or contribute to violations of any applicable primary or secondary ~~SO₂~~^{sulfur dioxide} ambient air quality standard. ~~The~~^{Such} ambient monitoring and dispersion modeling program ~~must~~^{shall} be operated for at least one year, ~~beginning within~~^{commencing no later than six} 6 months after the date ~~of approval of~~ an emission rate ~~is approved~~^{under} ~~under~~^{pursuant to} this Section.

- d) No more than 15 months after ~~beginning the commencement of~~ the ambient monitoring and dispersion modeling program ~~under of~~ subsection (c), the owner or operator ~~must shall~~ apply for a new operating permit. The owner or operator ~~must shall~~ submit, at the time of the application, a report containing the results of the ambient monitoring and dispersion modeling program.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.186 New Operating Permits

~~An~~ owner or operator of a fuel combustion emission source whose ~~SO₂sulfur dioxide~~ emission limitation is determined by Section 214.142, 214.183, or 214.184 ~~must not shall~~ cause or allow the total emissions of ~~SO₂sulfur dioxide~~ into the atmosphere from all fuel combustion emission sources owned or operated by ~~that such~~ person and located within ~~a one-mile 1-mile (1.6 km)~~ radius ~~(1.6 km)~~ from the center point of any such fuel combustion source to exceed the level of ~~SO₂sulfur dioxide~~ emission allowed under the previous Rule 204 (effective April 14, 1972, until December 14, 1978) without first obtaining a new operating permit from the Agency. The application for a new operating permit ~~must shall demonstrate include a demonstration~~ that ~~the such~~ total emissions will not violate any applicable PSD increment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART F: ALTERNATIVE STANDARDS FOR SOURCES INSIDE METROPOLITAN AREAS

Section 214.201 Alternative Standards for Sources in Metropolitan Areas

Any owner or operator of an existing fuel combustion emission source located in the Chicago, St. Louis (Illinois), or Peoria major metropolitan areas may petition the Board ~~to approve for approval of~~ an alternate emission rate ~~specified in~~ emissions of pounds of ~~SO₂sulfur dioxide~~ per ~~MMbtummmBtu~~ of actual heat input for any such fuel combustion emission source, up to a maximum ~~of or~~ 6.8 pounds of ~~SO₂sulfur dioxide~~ per ~~MMbtummmBtu~~ of actual heat input (10.5 kg/MW-hr). ~~The owner or operator must~~ ~~Such person shall~~ prove in an adjudicative hearing before the Board that the proposed emission rate will not, under predictable ~~worst-case worst case~~ conditions cause or contribute to a violation of any applicable primary or secondary ~~SO₂sulfur dioxide~~ ambient air quality standard or ~~of any applicable PSD prevention of significant deterioration~~ increment. An emission rate approved ~~under pursuant to~~ this Section ~~substitutesshall be a substitute~~ for ~~thethat~~ standard otherwise required by this Part. Nothing in this Section, however, excuses a source subject to Subpart AA from complying with ~~the requirements set forth in~~ that Subpart.

- a) Every owner or operator of an existing fuel combustion emission source ~~so~~ petitioning the Board ~~to approve for approval of~~ an emission standard ~~must shall~~ follow the applicable procedures ~~described in~~ 35 Ill. Adm. Code, Subtitle A, Chapter I.

- b) Any emission standard so approved ~~must~~shall be included as a condition in operating permits issued ~~under~~pursuant to 35 Ill. Adm. Code 201. Any owner or operator of a fuel combustion emission source who receives Board approval of ~~the such an~~ emission standard ~~must~~shall apply to the Agency within 30 days after approval of that standard ~~to revise for a revision of~~ its operating permit for the source.
- c) ~~An~~No owner or operator of an existing fuel combustion emission source ~~must not~~shall seek an alternate emission rate under this Section, or comply with an alternate emission rate granted under this Section, by ~~using the use of~~ dispersion enhancement techniques ~~under~~referred to in Section 214.202.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.202 Dispersion Enhancement Techniques

~~An~~No owner or operator of an existing fuel combustion emission source ~~must not~~shall comply with the emission standards of this Subpart by ~~using the use of~~ dispersion enhancement techniques. Dispersion enhancement techniques ~~shall include, but not be limited to,~~ an intermittent control system or an increase of: stack height in excess of good engineering practice necessary to prevent downwash or fumigation conditions, stack diameter, exit gas velocity, or exit gas temperature, except ~~under as provided by~~ Section 123 of the Clean Air Act (42 ~~USC U.S.C.A.~~ 7423) and regulations promulgated ~~under it~~thereunder. Flue gas may be reheated where air pollution control equipment results in ~~reducing a reduction of~~ flue gas temperature ~~if, provided that~~ the degree of reheat does not exceed the temperature drop across ~~that such~~ air pollution control equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART K: PROCESS EMISSION SOURCES

Section 214.300 Scope

Subpart K contains general rules for sulfur emissions from process sources. These may be modified by industry and ~~site-specific~~site specific rules in other Subparts of this Part. Subpart K also contains sulfur content limitations for fuel oil used by process emissions sources. These sulfur content limitations apply regardless of industry and ~~site-specific~~site specific rules set forth in other Subparts of this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.301 General Limitation

Except ~~underas further provided by~~ this Part, ~~ane~~ person ~~must notshall~~ cause or allow the emission of ~~SO₂sulfur dioxide~~ into the atmosphere from any process emission source to exceed 2,000 ppm.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.302 Exception for Air Pollution Control Equipment

Section 214.301 ~~doesshall~~ not apply to processes designed to remove sulfur compounds from the flue gases of fuel combustion emission sources.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.303 Use of Sulfuric Acid

~~Except for~~~~With the exception of~~ fuel combustion emission sources and acid manufacturing, ~~ane~~ person using sulfuric acid ~~must notshall~~ cause or allow the emission of sulfuric acid, ~~orand/or~~ sulfur trioxide, ~~or both~~ from all other similar emission sources at a plant or premises to exceed:

- a) 45.4 grams in any ~~one-hourone hour~~ period for sulfuric acid usage less than 1,180 Mg/yr (100%~~percent~~ acid basis) (0.10 lbs/hr up to 1,300 T/yr);
- b) 250 grams per metric ton of acid used for sulfuric acid usage greater than or equal to 1,180 Mg/yr (100%~~percent~~ acid basis) (0.50 lbs/T over 1,300 T/yr).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.304 Fuel Burning Process Emission Source

~~EmissionsThe emissions~~ from ~~the~~ burning ~~of~~ fuel at process emission sources located in the Chicago or St. Louis (Illinois) major metropolitan areas ~~mustshall~~ comply with applicable Subparts B through F. ~~However, a, except as follows: No~~ person ~~must notshall~~ cause or allow the emissions of sulfur into the atmosphere in any ~~one-hourone hour~~ period from burning tea leaves as fuel to exceed 0.70 pounds of ~~SO₂sulfur dioxide~~ per ~~MMbtummbtu~~ of actual heat input.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.305 Fuel Sulfur Content Limitations

- a) Except ~~underas provided in~~ subsections (b), (c), and (d), on and after January 1, 2017, the owner or operator of a process emission source must comply with the following:
 - 1) The sulfur content of all residual fuel oil used by the process emission source must not exceed 1,000 ppm;

- 2) The sulfur content of all distillate fuel oil used by the process emission source must not exceed 15 ppm; and
 - 3) The owner or operator must:
 - A) Maintain records demonstrating that the fuel oil used by the process emission source complies with ~~the requirements in~~ subsections (a)(1) and (a)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - B) Retain the records for at least ~~five~~5 years, and provide copies of the records to the Agency within 30 days after ~~receiving receipt of~~ a request by the Agency; and
 - C) Notify the Agency within 30 days after ~~discovering discovery of~~ deviations from any of the requirements in this subsection (a). ~~In At minimum, and in~~ addition to any ~~information required by the source's permit permitting obligations, the such~~ notification must ~~describe include a description of~~ the deviations ~~and discuss, a discussion of~~ the possible cause of the deviations ~~and, any~~ corrective actions ~~taken, and any~~ preventative measures taken.
- b) The sulfur content limitation for distillate fuel oil in subsection (a)(2) does not apply to distillate fuel oil used by "TC-F/TC-L/TCL Wing 5" and "TC-F/TC-L Alternative" at Caterpillar Technical Center (located at ~~or near~~ 1311 E. Cedar Hills Dr., Mossville, ~~IL,~~) for ~~purposes of~~ research and development ~~of~~ or testing ~~of~~ equipment intended for sale outside of Illinois. This exemption is limited to a combined total of 150,000 gallons of distillate fuel oil per calendar year. The sulfur content of the fuel oil must not exceed 500 ppm. The owner or operator of the process emission sources described in this subsection must also comply with the following:
- 1) Maintain records indicating the amount of distillate fuel oil used by the process emission sources each calendar year for ~~purposes of~~ research and development ~~of~~ or testing ~~of~~ equipment for sale outside of Illinois ~~and, as well as~~ records demonstrating that the fuel oil complies with ~~the requirements in this~~ subsection (b), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - 2) Retain the records for at least ~~five~~5 years, and provide copies of the records to the Agency within 30 days after ~~receiving receipt of~~ a request by the Agency; and
 - 3) Notify the Agency within 30 days after ~~discovering discovery of~~ deviations from any of the requirements in this subsection (b). ~~In At minimum, and in~~ addition to any ~~information required by the source's permit permitting~~

~~obligations~~, the notification must ~~describe~~~~include a description of~~ the deviations ~~and discuss, a discussion of~~ the possible cause of the deviations ~~and~~, any corrective actions ~~taken~~, and ~~any~~ preventative measures taken.

- c) The sulfur content limitation for distillate fuel oil in subsection (a)(2) does not apply to existing process emission sources at Caterpillar's Montgomery facility (~~located at or near~~ 325 South Route 31, Montgomery, ~~IL~~). The owner or operator of these process emission sources must instead comply with the following:
- 1) On and after January 1, 2016:
 - A) The sulfur content of all distillate fuel oil purchased for use by the process emission sources must not exceed 15 ppm; and
 - B) The sulfur content of all distillate fuel oil used by the process emission sources must not exceed 500 ppm;
 - 2) The owner or operator must:
 - A) Maintain records demonstrating that the distillate fuel oil purchased on and after January 1, 2016, for use by the process emission sources, complies with ~~the requirements in~~ subsection (c)(1)(A), such as records from the fuel supplier indicating the sulfur content of the fuel oil, and ~~maintain records~~ indicating the date of purchase of the fuel oil;
 - B) Maintain records demonstrating that the distillate fuel oil used on and after January 1, 2016, by the process emission sources, complies with ~~the requirements in~~ subsection (c)(1)(B), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - C) Retain all records required by this subsection (c) for at least ~~five~~5 years, and provide copies of the records to the Agency within 30 days after ~~receiving receipt of~~ a request by the Agency; and
 - D) Notify the Agency within 30 days after ~~discovering~~~~discovery of~~ deviations from any of the requirements in this subsection (c). ~~In~~~~At minimum, and in~~ addition to any ~~information required by the source's permit~~~~permitting obligations~~, the notification must ~~describe~~~~include a description of~~ the deviations ~~and discuss, a discussion of~~ the possible cause of the deviations ~~and~~, any corrective actions ~~taken~~, and ~~any~~ preventative measures taken.
- d) The sulfur content limitation for distillate fuel oil in subsection (a)(2) does not apply to existing electric generating units at Midwest Generation's Fisk station

(located at ~~or near~~ 1111 W. Cermak Road, Chicago, ~~IL~~) or Waukegan station (located at ~~or near~~ 401 E. Greenwood Avenue, Waukegan, ~~IL~~). The owner or operator of these electric generating units must instead comply with the following:

- 1) From January 1, 2016, through December 31, 2018, the sulfur content of all distillate fuel oil purchased for use by these electric generating units must not exceed 15 ppm;
- 2) From January 1, 2017, through December 31, 2018, the sulfur content of all distillate fuel oil used by these electric generating units must not exceed 500 ppm;
- 3) On and after January 1, 2019, the sulfur content of all distillate fuel oil used by these electric generating units must not exceed 15 ppm;
- 4) The owner or operator must:
 - A) Maintain records demonstrating that the distillate fuel oil purchased from January 1, 2016, through December 31, 2018, for use by the electric generating units, complies with ~~the requirements in~~ subsection (d)(1), such as records from the fuel supplier indicating the sulfur content of the fuel oil, and ~~maintain records~~ indicating the date of purchase of the fuel oil;
 - B) Maintain records demonstrating that the distillate fuel oil used from January 1, 2017, through December 31, 2018, by the electric generating units, complies with ~~the requirements in~~ subsection (d)(2), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - C) On and after January 1, 2019, maintain records demonstrating that the distillate fuel oil used by the electric generating units complies with ~~the requirements in~~ subsection (d)(3), such as records from the fuel supplier indicating the sulfur content of the fuel oil;
 - D) Retain all records required by this subsection (d) for at least ~~five~~ 5 years, and provide copies of the records to the Agency within 30 days after ~~receiving receipt of~~ a request by the Agency; and
 - E) Notify the Agency within 30 days after ~~discovering discovery of~~ deviations from any of the requirements in this subsection (d). ~~In At minimum, and in~~ addition to any ~~information required by the source's permit permitting obligations~~, the notification must ~~describe include a description of~~ the deviations ~~and discuss, a~~

~~discussion of~~ the possible cause of the deviations ~~and~~; any corrective actions ~~taken~~, and ~~any~~ preventative measures taken.

SUBPART O: PETROLEUM REFINING, PETROCHEMICAL AND CHEMICAL MANUFACTURING

Section 214.381 Sulfuric Acid Manufacturing

- a) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the emission of ~~SO₂sulfur dioxide~~ into the atmosphere from any new sulfuric acid manufacturing plant to exceed 4.0 ~~lbs~~~~pounds~~ of ~~SO₂sulfur dioxide~~ per ton of acid produced (2.0 kg/Mg).
- b) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the emission of sulfuric acid mist into the atmosphere from any process emission source to exceed 0.15 ~~lbs~~~~pounds~~ of acid mist per ton of acid manufactured (75 g/Mg).
- c) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the emission of ~~SO₂sulfur dioxide~~ into the atmosphere from any sulfuric acid manufacturing process in the City of Chicago to exceed 500 ppm.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.382 Petroleum and Petrochemical Processes

- a) Section 214.301 ~~does~~~~shall~~ not apply to existing processes designed to remove sulfur compounds from the flue gases of petroleum and petrochemical processes.
- b) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the emission of more than 1,000 ppm of ~~SO₂sulfur dioxide~~ into the atmosphere from any process emission source in the St. Louis (Illinois) major metropolitan area designed to remove sulfur compounds from the flue gases of petroleum and petrochemical processes.
- c) The following limitations apply to any petroleum refinery in the Village of Roxana:
 - 1) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the combustion of refinery flasher pitch containing more than ~~3%~~~~3.0%~~ (~~three percent~~) sulfur by weight. This ~~must~~~~shall~~ be demonstrated by daily sampling of refinery flasher pitch.
 - 2) ~~A~~~~No~~ person ~~must not~~~~shall~~ burn petroleum refinery fuel gas in any fuel gas combustion device if that refinery fuel gas contains more than 39 grains hydrogen sulfide per 100 dry ~~scf~~~~standard cubic feet~~ (893 mg/scm). This ~~must~~~~shall~~ be demonstrated by sampling the refinery fuel gas once every

eight hours ~~under, pursuant to~~ the Tutwiler Procedure, ~~incorporated by reference at~~ (Section ~~214.104(d)~~214.104(e)).

- 3) ~~A~~No person ~~must not~~~~shall~~ cause or allow the total emission of ~~SO₂sulfur dioxide~~ into the atmosphere from the following source groupings to exceed the following amounts:
- A) All process heaters at distilling unit No. 1: - 459 lbs/hr (208 kg/hr).
 - B) All process heaters at distilling unit No. 2: - 1,260 lbs/hr (571 kg/hr).
 - C) All gas plant process heaters: - 159 lbs/hr (72.1 kg/hr).
 - D) All vacuum flasher unit heaters: - 378 lbs/hr (171 kg/hr).
 - E) All process heaters at the alkylation, benzene extraction unit and catalytic feed hydrotreating units: - 346 lbs/hr (157 kg/hr).
 - F) All boilers generating steam for general plant use: - 2,400 lbs/hr (1,090 kg/hr).
 - G) All heaters serving the hydrocracker unit catalytic reformer No. 1, and the saturates gas plant: - 1,660 lbs/hr (753 kg/hr).
 - H) All process heaters at the aromatics east process: - 768 lbs/hr (348 kg/hr).
 - I) All catalytic cracking units: - 3,430 lbs/hr (1,560 kg/hr).
 - J) All asphalt converters, distilling unit No. 1, the aromatics east process, all boilers generating steam for general plant use, and all gas plant process heaters: - 2,710 lbs/hr (1,230 kg/hr).
- d) Compliance with the emission limitations of subsections (b) and (c)(3) ~~must of this Section shall~~ be demonstrated on a three-hour block average basis. ~~These Such~~ demonstrations ~~must shall~~ require, as a permit condition, that data ~~as~~ required by the ~~Illinois Environmental Protection~~ Agency (~~under~~ 35 Ill. Adm. Code 201.161) ~~must~~ be maintained ~~in order to~~ adequately determine the ~~SO₂sulfur dioxide~~ emission rate from each source operations group.
- e) Sources in the Village of Roxana are not subject to the emission limitations of Section 214.162 when burning refinery flasher pitch or refinery fuel gas.

- f) Individual process emission sources in the Village of Roxana are ~~still~~ subject to the emission limitation of Section 214.301 ~~despite notwithstanding~~ their inclusion in a source operations group.
- g) ~~Despite Notwithstanding the provisions of~~ 35 Ill. Adm. Code 201.102 ~~of this Chapter~~, any physical change in any emission source subject to subsection (b), (c), (d), or (e) ~~of this Section~~ which alters the height of release, temperature, or volumetric flow rate of the effluent gases of ~~thesuch~~ source, or alters the diameter of the exit stack ~~must ; shall~~ be deemed a modification ~~under for the purposes of~~ 35 Ill. Adm. Code 201.142 ~~of this Chapter~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.383 Chemical Manufacturing

Section 214.301 ~~doesshall~~ not apply to existing hydrogen sulfide flares at a chemical manufacturing plant ~~if provided~~:

- a) ~~The Said~~ flares ~~operate are operative~~ on existing batch type processes; ~~and~~
- b) The hydrogen sulfide emissions being flared are not, as of September 11, 1975, passed through existing processes designed to remove sulfur compounds from the flue gases ~~under as provided in~~ Section 214.382(a); and
- c) The emission of ~~SO₂ sulfur dioxide~~ into the atmosphere from ~~thesaid~~ flares does not exceed 500 ~~lbs/hr pounds per hour~~ and 3,500 ~~lbs pounds~~ per eight-hour period (230 kg/hr and 1590 kg/8 hrs); ~~and~~

~~However, d) — Provided, however, that~~ if emission controls for ~~thesaid~~ flares become economically reasonable and technically feasible, the owner/operator of ~~thesuch~~ hydrogen sulfide flares ~~must shall~~ install ~~thesuch~~ controls.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.384 Sulfate and Sulfite Manufacturing

Section 214.301 ~~doesshall~~ not apply to sodium aluminum sulfate and sodium sulfite manufacturing process emission sources in the St. Louis (Illinois) major metropolitan area.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART P: STONE, CLAY, GLASS, AND CONCRETE PRODUCTS

Section 214.401 Glass Melting and Heat Treating

Section 214.301 ~~doesshall~~ not apply to:

- a) Glass melting furnaces in the Chicago or St. Louis (Illinois) major metropolitan areas.
- b) Glass heat treating with SO₂sulfur dioxide in the St. Louis (Illinois) major metropolitan area.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.402 Lime Kilns

Despite Section 214.304 ~~notwithstanding~~, lime kilns (Standard Industrial Code 32) are not subject to limitations for SO₂sulfur dioxide emission.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART Q: PRIMARY AND SECONDARY METAL MANUFACTURING

Section 214.421 Combination of Fuels at Steel Mills in Metropolitan Areas

- a) Despite Section 214.162 ~~notwithstanding~~, and person must not shall cause or allow the emission of SO₂sulfur dioxide into the atmosphere in any one-hour one hour period from any existing fuel combustion emission source at a steel mill located in the Chicago or St. Louis (Illinois) major metropolitan area burning any solid, liquid, or gaseous fuel, or any combination of them thereof, to exceed the allowable emission rate determined by the following equation:

$$E = S_S H_S + S_d H_d + S_R H_R + S_G H_G$$

- b) Symbols in the equation mean ~~the following~~:

- E = allowable SO₂sulfur dioxide emission rate;
- S_S = applicable solid fuel SO₂sulfur dioxide emission standard ~~which is applicable~~;
- S_d = distillate oil SO₂sulfur dioxide emission standard determined from the table in subsection (d);
- S_R = applicable residual oil SO₂sulfur dioxide emission standard ~~which is applicable~~;
- S_G = maximum by-product gas SO₂sulfur dioxide emissions which would result if the applicable by-product gas which was burned had been burned alone at any time during the 12 months preceding the latest operation, on or before March 28, 1983, of an emission source using any by-product gas;
- H_S = actual heat input from solid fuel;
- H_d = actual heat input from distillate fuel oil;
- H_R = actual heat input from residual fuel oil;

H_G = actual heat input from by-product gases, such as those produced from a blast furnace.

- c) ~~The~~~~That~~ portion of the actual heat input ~~that is~~ derived from:
- 1) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of solid fuels must~~shall~~ be included in H_S;
 - 2) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of distillate fuel oil must~~shall~~ be included in H_d;
 - 3) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of residual fuel oil must~~shall~~ be included in H_R; and
 - 4) ~~The~~~~From the~~ burning of gaseous fuels produced by the gasification of any other liquid fuel must~~shall~~ be included in H_G.
- d) The equation in subsection (a) may use the following metric~~Metric~~ or English units may be used in the equation of subsection (a) as follows:

<u>Parameter</u>	<u>Metric</u>	<u>English</u>
E	kg/hr	lbs/hr
S _S , S _R , S _G	kg/MW-hr	lbs/ ~~MMbtum~~ ~~mmBtu~~
S _d ~~before~~ ~~prior to~~ January 1, 2017	0.46 kg/MW-hr	0.3 lbs/ ~~MMbtum~~ ~~mmBtu~~
S _d on and after January 1, 2017	0.0023 kg/MW-hr	0.0015 lb/ ~~MMbtum~~ ~~mmBtu~~
H _S , H _d , H _R , H _G	MW	~~MMbtum~~ ~~mmBtu~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.422 Secondary Lead Smelting in Metropolitan Areas

Section 214.301 ~~does~~~~shall~~ not apply to secondary lead smelting process emission sources in the Chicago or St. Louis (Illinois) major metropolitan areas.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.423 Slab Reheat Furnaces in St. Louis Area

Despite Section 214.304 ~~notwithstanding~~, slab reheat furnaces in the St. Louis (Illinois) major metropolitan area with fuel burning capacities ~~exceeding in excess of~~ 650 ~~MMbtum~~~~mmBtu~~/hr and burning any residual fuel are~~shall~~ not be subject to the applicable Subpart B through F ~~if so long as~~ the total ~~SO₂ sulfur dioxide~~ emissions ~~resulting from the burning of~~ residual fuel oil in all ~~these~~~~such~~ furnaces at any one steel mill do not exceed 730 lbs/hr.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART V: ELECTRIC POWER PLANTS

Section 214.521 Winnetka Power Plant (Repealed)

~~Notwithstanding Sections 214.101 and 214.141, the Village of Winnetka Electric Utility Plant shall not cause or allow the emission of sulfur dioxide into the atmosphere in any one hour period from its existing fuel combustion sources, burning solid fuel exclusively, to exceed 5.7 pounds of sulfur dioxide per mmbtu of actual heat input (8.8 kg/MW-hour). Compliance with this limitation shall be demonstrated on the basis of a daily average.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

SUBPART X: UTILITIES

Section 214.560 Scope (Repealed)

- a) ~~This Subpart contains rules which modify the general sulfur emission rules of Subparts A through M as applied to a given industry or a given site. General rules include:~~
 - 1) ~~Subparts B through I: Fuel Combustion emissions sources and incinerators;~~
 - 2) ~~Subpart K through M: Process emission sources.~~
- b) ~~These rules have been grouped for the convenience of the public; the scope of each is determined by its language and history. Rules placed in this Subpart include those which appear to be primarily directed at the following major industry groups: electric, gas and sanitary services.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 214.561 E.D. Edwards Electric Generating Station (Repealed)

~~Sulfur dioxide emissions from Boiler Nos. 1, 2, and 3 at the Edwards Station may not exceed the limits listed in this Section. CILCO must determine compliance with these limits on a daily basis using the sulfur dioxide methodology of the Phase II Acid Rain Program set forth in 40 CFR 75.~~

- a) ~~The average sulfur dioxide emissions from Boiler Nos. 1, 2, and 3, as a group may not exceed 4.71 pounds per million British thermal units (lb/mmBtu) of actual heat input;~~

- b) ~~The average sulfur dioxide emissions from any one boiler may not exceed 6.6 lb/mmBtu of actual heat input; and~~
- e) ~~Sulfur dioxide emissions for all three boilers, as a group, may not exceed 34,613 pounds per hour, on a 24-hour average basis.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 214.562 Coffeen Generating Station (Repealed)

- a) ~~The emission standards of this subsection apply only if subsections (b), (c), and (d) are fulfilled. Notwithstanding any other limitation contained in this Part, whenever the coal burned is mined exclusively from the mine that is presently known as Monterey Coal Company's No. 1 Mine located south of Carlinville, emission of sulfur dioxide from Units 1 and 2 at the Central Illinois Public Service Company's (CIPS) Coffeen Generating Station (Coffeen), located in Montgomery County, shall not exceed either of the following emission standards:~~
 - 1) ~~29,572 kilograms of sulfur dioxide in any one hour (65,194 lbs/hr); and~~
 - 2) ~~11.29 kilograms of sulfur dioxide per megawatt-hour of heat input (7.29 lbs/mmBtu).~~
- b) ~~CIPS shall conduct an ambient sulfur dioxide monitoring and dispersion modeling program designed to demonstrate that the emission standards of subsection (a) will not cause or contribute to violations of any applicable primary or secondary sulfur dioxide ambient air quality standard as set forth in Section 243.122. Such ambient monitoring and dispersion modeling program shall be operated for at least one year commencing no later than 6 months after Coffeen is legally able and begins to operate at an emission rate greater than 55,555 pounds of sulfur dioxide per hour.~~
- e) ~~No more than 15 months after the commencement of the ambient monitoring and dispersion modeling program of subsection (b), CIPS shall apply for a new operating permit. CIPS shall submit to the Environmental Protection Agency (Agency), at the time of the application, a report containing the results of the ambient monitoring and dispersion modeling program of subsection (b) and the results of all relevant stack tests conducted prior to the report's submission.~~
- d) ~~No later than six months after Coffeen is legally able and begins to operate at an emission rate greater than 55,555 pounds of sulfur dioxide per hour, a stack test shall be conducted in accordance with Section 214.101(a), in order to determine compliance with emission standards set forth in subsection (a). After the stack test is conducted, the results shall be submitted to the Agency within 90 days. The requirements of this subsection do not preclude the Agency from requiring additional stack tests.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

SUBPART AA: REQUIREMENTS FOR CERTAIN SO₂ SOURCES

Section 214.600 Definitions

~~The~~For purposes of this Subpart, the following definitions apply for this Subpart. Unless a different meaning for a term is clear from its context, all terms not defined in this Section have the meanings ~~given to them~~ in the Illinois Environmental Protection Act and in 35 Ill. Adm. Code 201 and 211.

"Agency" means the Illinois Environmental Protection Agency.

"Aventine Renewable Energy" means the ethanol production source located at ~~or near~~ 1300 S. 2nd Street, Pekin, ~~IL~~.

"Illinois Power Resources Generating E.D. Edwards" means the electrical power generation source located at ~~or near~~ 7800 S. Cilco Lane, Bartonville, ~~IL~~.

"Ingredion Bedford Park" means the corn wet milling source located at ~~or near~~ 6400 S. Archer Road, Bedford Park, ~~IL~~.

"Midwest Generation Joliet" means the electrical power generation source located at ~~or near~~ 1800 Channahon Road, Joliet, ~~IL~~.

"Midwest Generation Powerton" means the electrical power generation source located at ~~or near~~ 13082 E. Manito Road, Pekin, ~~IL~~.

"Midwest Generation Will County" means the electrical power generation source located at ~~or near~~ 529 E. 135th, Romeoville, ~~IL~~.

"Owens Corning" means the asphalt and roofing products manufacturing source located at ~~or near~~ 5824 S. Archer Road, Summit, ~~IL~~.

"Oxbow Midwest Calcining" means the petroleum coke product source located at ~~or near~~ 12308 S. New Avenue, Lemont, ~~IL~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.601 Applicability

- a) This Subpart applies to the following sources:
 - 1) Aventine Renewable Energy;

- 2) Illinois Power Resources Generating E.D. Edwards;
 - 3) Ingredion Bedford Park;
 - 4) Midwest Generation Joliet;
 - 5) Midwest Generation Powerton;
 - 6) Midwest Generation Will County;
 - 7) Owens Corning; and
 - 8) Oxbow Midwest Calcining.
- b) Once a source is subject to this Subpart, it is always subject to this Subpart, regardless of change in ownership or unit designation, or any other modification at the source.
 - c) Nothing in this Subpart relieves a source of the obligation to comply with the air quality standards ~~set forth~~ in 35 Ill. Adm. Code 243, or with any other applicable requirement ~~set forth~~ in this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.602 Compliance Deadline

On and after January 1, 2017, the owner or operator of a source identified in Section 214.601(a) must comply with ~~the provisions in~~ this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.603 Emission Limitations

The owner or operator of a source must comply with the following emission limitations, as applicable, expressed in terms of pounds of SO₂ emitted per clock hour.

a)	Aventine Renewable Energy	lb/hr
1)	Cyclone East controlling First Germ Drying System	0.27
2)	Cyclone West controlling First Germ Drying System	0.37
3)	Second Germ Drying System	0.01

4)	Gluten Dryer 4	3.12
5)	Gluten Dryer 9	10.50
6)	Germ Dryer 1	4.98
7)	Germ Dryer 3	4.26
8)	Yeast Dryer	1.50
9)	Scrubber controlling Steep Acid Tower	1.79
10)	Biogas Flare	0.001
11)	Boiler A	0.00
12)	Boiler B	0.00
13)	Boiler C	0.00
b)	Illinois Power Resources Generating E.D. Edwards	lb/hr
1)	Units 1 and 2 combined	2100.00
2)	Unit 3	2756.00
3)	Unit 3, if both Units 1 and 2 permanently shut down	4000.00
c)	Ingredion Bedford Park	lb/hr
1)	Feed Transport System	24.38
2)	Wet Milling: Inside In-Process Tanks	107.26
3)	Wet Milling: Molten Sulfur Burner and Absorption System	7.01
4)	Wet Milling: Outside In-Process Tanks	2.69
5)	Germ Processing Facility Channel 1 System	13.36

6)	Germ Processing Facility Channel 2 System	7.07
7)	Germ Processing Facility Channel 3 System	7.07
8)	Germ Processing Facility Channel 4 System	7.07
d)	Midwest Generation Joliet	lb/hr
1)	Joliet 9: Unit 6	189.82
2)	Joliet 29: Unit 7	323.29
3)	Joliet 29: Unit 8	342.15
e)	Midwest Generation Powerton	lb/hr
1)	Boilers 51, 52 (Unit 5) and 61, 62 (Unit 6) combined	3452.00
2)	The owner or operator must comply with the emission limitation <u>underset forth in</u> subsection (e)(1) on a 30-operating day rolling average basis. For <u>purposes of</u> this Subpart, an operating day is a calendar day in which any emission unit <u>addressed</u> in subsection (e)(1) combusts any fuel;	
3)	Within 24 hours after the end of each averaging period, the owner or operator must use the following equation to determine the combined SO ₂ emission rate of the emission units <u>addressed</u> in subsection (e)(1) for each averaging period, which concludes at the end of each operating day. The SO ₂ emission rate must not exceed the limitation <u>set forth</u> in subsection (e)(1):	

$$E_{avg} = \frac{\sum_{h=1}^n E_h}{n}$$

Where:

E_{avg} = SO₂ emission rate for the averaging period, in lb/hr.

E_h = SO₂ emission rate for stack operating hour "h" in the averaging period. For purposes of this Subpart, a stack operating hour is a clock hour in which valid data is obtained, and in which

gases flow through the monitored stack or duct for the emission units ~~addressed~~ in subsection (e)(1) ~~for either~~~~(either for~~ part of the hour or for the entire hour) while at least one of the units is combusting fuel.

n = Number of stack operating hours in the averaging period in which valid data is obtained.

- 4) The SO₂ emission rate for the emission units ~~addressed~~ in subsection (e)(1) must not exceed 6,000 lb/hr in more than 5% of the stack operating hours ("n" in the equation in subsection (e)(3)) in any averaging period.

f)	Midwest Generation Will County	lb/hr
1)	Unit 3	145.14
2)	Unit 4	5000.00
g)	Owens Corning	lb/hr
1)	Preheater Incinerator System 1, including emissions from: Storage Tanks 9, 9A, 10, 10A, 11, 17, 18, 19, 20, 40, 41, 42, and 43; Loading Racks 1, 2, and 9; and Convertors 10 and 11	44.69
2)	Preheater Incinerator System 3, including emissions from: Converters 8, 9, 12, 13, 14, and 15; and Loading Racks 1, 2, and 9	27.23
3)	Regenerative Thermal Oxidizer 3 controlling: Storage Tanks 27, 28, 31, 32, 33, 34, 35, and 36	4.33
4)	Regenerative Thermal Oxidizer 4 controlling: Storage Tank 98; Loading Rack PV1	6.38
5)	Coating Operations combined	0.15
h)	Oxbow Midwest Calcining	lb/hr
	All Calcining Units combined	187.00

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.604 Monitoring and Testing

- a) The owner or operator of a source must, for each emission unit at the source ~~that is addressed~~ in Section 214.603, demonstrate compliance with the applicable emission limitations in Section 214.603 ~~through~~ via the monitoring and testing requirements ~~of~~ ~~set forth in~~ this Section.
- b) The owners or operators of the following sources must, for each emission unit at the source ~~that is addressed~~ in Section 214.603, install, calibrate, maintain, and operate a continuous emissions monitoring system for the measurement of SO₂ emissions in ~~compliance~~ ~~accordance~~ with 40 CFR 75 (except 40 CFR 75.31 through 34), incorporated by reference in Section 214.104, and subsection (d), or ~~use~~ ~~utilize~~ an alternative monitoring method available to the emission unit under 40 CFR 75:
 - 1) Illinois Power Resources Generating E.D. Edwards;
 - 2) Midwest Generation Joliet;
 - 3) Midwest Generation Powerton; and
 - 4) Midwest Generation Will County.
- c) The owner or operator of all sources not ~~addressed~~ in subsection (b) must, for each emission unit at the source ~~that is addressed~~ in Section 214.603, either conduct performance testing in ~~compliance~~ ~~accordance~~ with subsection (e) or install, calibrate, maintain, and operate a continuous emissions monitoring system for the measurement of SO₂ emissions in ~~compliance~~ ~~accordance~~ with 40 CFR 60 or 40 CFR 75 (except 40 CFR 75.31 through 34), incorporated by reference in Section 214.104, and subsection (d) ~~of this Section~~.
- d) The owner or operator of a source with an emission unit demonstrating compliance ~~with~~ ~~through the use of~~ a continuous emissions monitoring system must comply with the following for each unit:
 - 1) If two or more of the emission units ~~addressed~~ in Section 214.603 are served by a common stack, the owner or operator may ~~use~~ ~~utilize~~ a single continuous emissions monitoring system for those units;
 - 2) If the owner or operator of an emission unit subject to Section 214.604(c) changes the method of demonstrating compliance for that unit from performance testing to ~~use of~~ a continuous emissions monitoring system, the owner or operator must install, calibrate, and begin operating the continuous emissions monitoring system on or before the performance

testing deadline ~~underdetermined in accordance with~~ subsection (e)(2); and

- 3) ~~Missing data substitution under~~The provisions in 40 CFR 75.31 through 34 ~~regarding missing data substitution~~ must not be used ~~to demonstrate for purposes of demonstrating~~ compliance with ~~the requirements set forth in~~ this Subpart.

e) The owner or operator of a source with an emission unit demonstrating compliance through performance testing must comply with the following for each unit. All testing done ~~underpursuant to~~ this Section must be conducted at the owner's or operator's own expense:

- 1) Conduct an initial performance test after January 1, 2015, and ~~beforeprior to~~ January 1, 2017. If the owner or operator of an emission unit subject to Section 214.604(c) changes the method of demonstrating compliance for that unit from ~~use of~~ a continuous emissions monitoring system to performance testing, the owner or operator must demonstrate compliance by conducting an initial performance test ~~beforeprior to~~ discontinuing the continuous emissions monitoring system;
- 2) Conduct subsequent performance tests at least once every ~~five~~5 years from the date of the last performance test. The date of the initial performance test conducted ~~underpursuant to~~ subsection (e)(1) begins the ~~five-year~~5-year period;
- 3) Conduct additional performance testing when, in the opinion of the Agency or USEPA, that testing is necessary to demonstrate compliance with ~~the requirements in~~ Section 214.603. The test must be conducted within 90 days after ~~receivingreceipt of~~ a notice to test from the Agency or USEPA, unless the notice specifies an alternative testing deadline;
- 4) Submit a testing protocol as described in USEPA's Emission Measurement Center Guideline Document (GD-042), incorporated by reference in Section 214.104, to the Agency at least 45 days ~~beforeprior to~~ a scheduled emissions test, unless ~~the Agency waives~~ that deadline ~~is waived~~ in writing ~~by the Agency~~;
- 5) Submit ~~a~~-written notification of a scheduled emissions test to the Agency at least 30 days ~~beforeprior to~~ the test date and again ~~five~~5 days ~~beforeprior to~~ testing, unless ~~the Agency waives~~ those deadlines ~~are waived~~ in writing ~~by the Agency~~. If, after ~~sending~~ the 30 days' notice of a test ~~is sent~~, there is a delay in conducting the test as scheduled (e.g., due to operational problems), the owner or operator must notify the Agency as soon as practicable of the delay, either by providing at least ~~seven~~7 days'

notice of the rescheduled test date or by arranging a new test date with the Agency by mutual agreement;

- 6) Conduct each performance test using Method 1, 2, 3, 4, 6, 6A, 6B, 6C, or 19, incorporated by reference in Section 214.104, or other alternative USEPA methods approved by the Agency. Each test must consist of at least ~~three~~3 separate runs, each lasting a minimum of 60 minutes, and must be conducted during conditions representative of maximum SO₂ emissions. Compliance with the applicable limitation in Section 214.603 must be determined in ~~compliance~~~~accordance~~ with 35 Ill. Adm. Code 283;
- 7) Conduct a separate performance test for each fuel if~~if~~ the unit has combusted more than one type of fuel in the prior year;~~a separate performance test is required for each fuel~~; and
- 8) ~~After~~Subsequent to each performance test used to demonstrate compliance, continue operating the emission unit within the parameters enumerated in the testing results submitted to the Agency for each test, and monitor the parameters regularly to ensure ongoing compliance.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 214.605 Recordkeeping and Reporting

- a) By January 1, 2017, the owner or operator of a source must submit to the Agency the following:
 - 1) A certification that the source will be in compliance with ~~the provisions in~~ this Subpart by January 1, 2017;
 - 2) For a source with an emission unit demonstrating compliance through performance testing:
 - A) The results of the initial performance test conducted ~~under~~pursuant to Section 214.604(e)(1);
 - B) The calculations necessary to demonstrate that the emission unit will be in initial compliance; and
 - C) A description of the measures the source will take to ensure the emission unit continues to operate within the parameters ~~enumerated~~ in the testing results submitted to the Agency for each test used to demonstrate compliance, including how those parameters will ensure ongoing compliance with the applicable limitation in Section 214.603 and the specific monitoring procedures that will be implemented for each parameter;

- 3) For a source with an emission unit demonstrating compliance ~~with~~through ~~the use of~~ a continuous emissions monitoring system, a certification of the installation and operation of the continuous emissions monitoring system and the monitoring data necessary to demonstrate that the emission unit will be in initial compliance;
 - 4) For a source with an emission unit demonstrating compliance ~~with~~through ~~the use of~~ an alternative monitoring method under 40 CFR 75, a description of the alternative monitoring method being used and the monitoring data necessary to demonstrate that the emission unit will be in initial compliance; and
 - 5) A description of the method or methods the source will use to comply with all applicable emission limitations in Section 214.603, including a description of all control devices used and, for sources with emission units demonstrating compliance through performance testing, the operating parameters for those devices.
- b) The owner or operator of a source must keep and maintain records that demonstrate ongoing compliance with ~~the requirements of~~ this Subpart. The records must include the following:
- 1) The calendar date of the record;
 - 2) Reports for all performance tests conducted ~~under~~pursuant to Section 214.604(e), including the date of the test and the results;
 - 3) A log of the date, time, nature, and results of all parametric monitoring conducted ~~under~~pursuant to Section 214.604(e)(8);
 - 4) For each SO₂ continuous emissions monitoring system, a log indicating any periods when the device was not in service, maintenance and inspection activities performed on the device, and all information necessary to demonstrate compliance with the monitoring requirements in Section 214.604;
 - 5) The date, time, and duration of any malfunction in the operation of an emission unit ~~addressed~~ in Section 214.603 or any SO₂ control equipment for that unit, if the malfunction causes an exceedance of any applicable emission limitation in Section 214.603, and the date, time, and duration of any malfunction in the operation of any SO₂ emissions monitoring equipment for that unit. The records must include a description of the malfunction, the probable cause of the malfunction, the date and nature of the corrective action taken, and any preventative action taken to avoid future malfunctions;

- 6) A log of all inspections, cleaning, maintenance, and repair activities performed on SO₂ control equipment for an emission unit ~~addressed in~~ Section 214.603, including the date and nature of those activities. The log must indicate any changes made to the control equipment, including removal or replacement of the equipment; and
 - 7) For emission units subject to ~~the emission limitation in~~ Section 214.603(e), the SO₂ emission rate of the units for each averaging period and supporting calculations.
- c) Except as otherwise indicated in this Subpart, the owner or operator of a source with an emission unit demonstrating compliance through performance testing must submit the results of all tests conducted ~~underpursuant to~~ Section 214.604(e) within 60 days after ~~completing completion of~~ the test.
 - d) The owner or operator of a source must notify the Agency at least 30 days ~~before prior to~~ changing the method of demonstrating compliance for an emission unit ~~addressed in~~ Section 214.603. The owner or operator must also comply with the following, as applicable:
 - 1) For an emission unit changing the method of demonstrating compliance from performance testing to ~~use of~~ a continuous emissions monitoring system, submit to the Agency a certification of the installation and operation of the continuous emissions monitoring system and the monitoring data necessary to demonstrate compliance. The submittal must be made within 30 days after beginning operation of the continuous emissions monitoring system, and on or before the performance testing deadline determined ~~under in accordance with~~ Section 214.604(e)(2);
 - 2) For an emission unit changing the method of demonstrating compliance from ~~use of~~ a continuous emissions monitoring system to performance testing, submit to the Agency before discontinuing operation of the continuous emissions monitoring system the following. ~~The submittal must be made prior to discontinuing operation of the continuous emissions monitoring system:~~
 - A) The results of the initial performance test conducted ~~underpursuant to~~ Section 214.604(e)(1);
 - B) The calculations necessary to demonstrate compliance; and
 - C) A description of the measures the source will take to ensure the emission unit continues to operate within the parameters ~~enumerated in~~ the testing results submitted to the Agency for each test used to demonstrate compliance, including how the parameters

will ensure ongoing compliance with the applicable limitation in Section 214.603 and the specific monitoring procedures that will be implemented for each parameter;

- 3) For an emission unit changing the method of demonstrating compliance from ~~use of~~ a continuous emissions monitoring system to an alternative monitoring method under 40 CFR 75, submit to the Agency before discontinuing operation of the continuous emissions monitoring system a description of the alternative monitoring method ~~being used~~ and the monitoring data necessary to demonstrate compliance. ~~The submittal must be made prior to discontinuing operation of the continuous emissions monitoring system.~~
- e) The owner or operator of a source must notify the Agency within 30 days after ~~discovering~~~~discovery of~~ deviations from any of the requirements in this Subpart or any exceedance of an applicable emission limitation in Section 214.603. ~~In At minimum, and in~~ addition to any information required by a source's permit~~permitting obligations~~, the notification must describe~~include a description of~~ the deviations or exceedances and discuss~~exceedances, a discussion of~~ the possible cause of the deviations or exceedances and, any corrective actions ~~taken~~, and ~~any~~ preventative measures taken.
- f) The owner or operator of a source must maintain all records required by this Section at the source for a minimum of five~~5~~ years; and provide copies of the records to the Agency within 30 days after receiving~~receipt of~~ a request by the Agency.

Section 214.APPENDIX C Method ~~Used~~ ~~used~~to Determine Average Actual Stack Height and Effective Height of Effluent Release

Q_H = Heat emission rate (in btu/sec or Kcal/sec) as determined by method outlined below.

ΔH = Plume rise (in feet or meters).

H = Physical height (in feet or meters) above grade of each stack, except that for ~~purposes of~~ this calculation, the value used for ~~such~~ stack height ~~must~~~~shall~~ not exceed good engineering practice as defined by Section 123 of the Clean Air Act and ~~regulations~~ ~~Regulations~~ promulgated ~~under it~~~~thereunder~~, unless the owner or operator of the source demonstrates to the Agency that a greater height is necessary to prevent downwash or fumigation conditions.

T = Exit temperature of stack gases (in degrees Rankine or degrees Kelvin) from each source during operating conditions which would cause maximum emissions.

V = Exit velocity of stack gases (in feet/sec or meters/sec) from each source under operating conditions which would cause maximum emissions.

D = Diameter of stack (in feet or meters).

P = Percentage of total emissions expressed as decimal equivalents emitted from each source. (Example: 21% = 0.21.)

NOTE: The sum of $P_1 + P_2 + \dots + P_n = 1$. The emission values to be used are those which occur during operating conditions which would cause maximum emissions.

H_A = Average actual stack height (in feet or meters).

H_E = Effective height of effluent release (in feet or meters).

STEP 1: Determine weighted average stack parameters ~~using~~utilizing the following formulae:

$$D = P_1 D_1 + P_2 D_2 + \dots + P_n D_n$$

$$V = P_1 V_1 + P_2 V_2 + \dots + P_n V_n$$

$$T = P_1 T_1 + P_2 T_2 + \dots + P_n T_n$$

$$H_A = P_1 H_1 + P_2 H_2 + \dots + P_n H_n$$

NOTE: P_1 , D_1 , V_1 , T_1 , and H_1 are the percentage of total emissions, stack diameter, exit velocity of gases, exit temperature of stack gases, and physical stack height, respectively, for the first source; P_2 , D_2 , V_2 , T_2 , and H_2 are the respective values for the second source; similarly, P_n , D_n , V_n , T_n , and H_n are the respective values for the nth source, where n is the number of the last source.

STEP 2: Calculate heat emission rate ~~using~~utilizing the following formula and the weighted average stack parameters obtained in Step 1:

$$Q_H = 7.54 D^2 V \frac{(T - 515)}{T} \text{ (in English units)}$$

$$Q_H = 66.8 D^2 V \frac{(T - 286)}{T} \text{ (in Metric units)}$$

STEP 3: Calculate plume rise ~~using~~utilizing the appropriate formula ~~given~~below and the total heat emission rate obtained in Step 2:

$$\Delta H = \frac{2.58(Q_H)^{0.6}}{(H_A)^{0.11}} \text{ (in English Units for } Q_H \geq 6000 \text{ btu/sec)}$$

$$\Delta H = \frac{1.58(Q_H)^{0.6}}{(H_A)^{0.11}} \text{ (in Metric Units for } Q_H \geq 1500 \text{ kcal/sec)}$$

$$\Delta H = \frac{0.718(Q_H)^{0.75}}{(H_A)^{0.11}} \text{ (in English Units for } Q_H < 6000 \text{ btu/sec)}$$

$$\Delta H = \frac{0.54(Q_H)^{0.75}}{(H_A)^{0.11}} \text{ (in Metric Units for } Q_H < 1500 \text{ kcal/sec)}$$

STEP 4: Calculate the weighted average facility effective height of effluent release ~~using~~utilizing the plume rise obtained in Step 3, the average stack height obtained in Step 1, and the formula ~~given below~~:

$$H_E = H_A + \Delta H$$

STEP 5: Calculate the total facility hourly emission limitation ~~using~~utilizing the weighted actual stack height obtained in Step 1, the effective stack height given in Step 4, and the following formula:

$$E = \frac{(H_A)^{0.11}(H_E)^2}{128} \text{ (in English units)}$$

$$E = 0.04347(H_A)^{0.11}(H_E)^2 \text{ (in Metric units)}$$

SUBPART A: GENERAL PROVISIONS

Section 215.100 Introduction

- a) This Part contains standards and limitations for emissions of organic material from stationary sources located in areas other than the Chicago area counties of Cook, DuPage, Kane, Lake, McHenry, and Will; ~~the Townships of Aux Sable and Goose Lake in Grundy County; and the Township of Oswego in Kendall County;~~ and the Metro East area counties of Madison, Monroe, and St. Clair. Standards and limitations applying in the Chicago area are ~~set forth~~ in 35 Ill. Adm. Code 218. Standards and limitations applying in the Metro East area are ~~set forth~~ in 35 Ill. Adm. Code 219.
 - 1) ~~Despite Notwithstanding~~ any other provision of this Part, ~~the provisions of this Part does shall~~ not apply to sources located in the Chicago area counties ~~in subsection (a) of Cook, DuPage, Kane, Lake, McHenry, and Will, the Townships of Aux Sable and Goose Lake in Grundy County, and the Township of Oswego in Kendall County;~~ unless the provisions of 35 Ill. Adm. Code Part 218 applicable to ~~such those~~ sources are voided or otherwise made ineffective ~~under 35 Ill. Adm. Code pursuant to Section 218.100 of 35 Ill. Adm. Code Part 218.~~
 - 2) ~~Despite Notwithstanding~~ any other provision of this Part, ~~the provisions of this Part does shall~~ not apply to sources in the Metro East area counties ~~in subsection (a) of Madison, Monroe and St. Clair~~ unless the provisions of 35 Ill. Adm. Code Part 219 applicable to ~~those such~~ sources are voided or

otherwise made ineffective under 35 Ill. Adm. Code pursuant to Section 219.100 of 35 Ill. Adm. Code Part 219.

- b) Sources subject to this Part may be subject to the following:
- 1) Permits required under 35 Ill. Adm. Code 201; and
 - 2) Air quality standards under 35 Ill. Adm. Code 243.
- c) This Part is organized~~divided~~ into Subparts ~~which are grouped~~ as follows:
- 1) Subpart A: General Provisions;
 - 2) Subpart B - J: Emissions from equipment and operations ~~in~~ common to more than one industry;
 - 3) Subparts K - M: Emissions from use of organic material; and
 - 4) Subpart N - end: Special rules for ~~various~~ industry groups.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.101 Clean-up and Disposal Operations

Emission of organic material released during clean-up operations and disposal must~~shall~~ be included with other emissions of organic material from the related emission source or air pollution control equipment to determine~~in determining~~ total emissions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.102 Testing Methods

Volatile organic material or organic material concentrations in a stream must be~~is~~ measured by Method 18, at 40 CFR 60, Appendix A, incorporated by reference in Section 215.105, Mearurement of Gaseous Organic Compounds, incorporated by reference in 215.105 except as follows. ASTM D4457-02 (2014)~~d-4457~~, incorporated by reference in Section 215.105, may be used for halogenated organic compounds. Method 25, 25A, or 25B, at 40 CFR 60, Appendix A, incorporated by reference in 215.105, may be substituted for Method 18 if provided the source owner or operator submits calibration data and other proof that this method provides the information in the emission units of the applicable standard. The volumetric flow rate and gas velocity must be~~is~~ determined in compliance~~accordance~~ with Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4, at 40 CFR~~CF Part~~ 60, Appendix A, incorporated by reference in 215.105. Any other alternate test method must be approved by the Agency, which must~~shall~~ consider data comparing the performance of the proposed alternative to the performance of the approved test method or methods~~method(s)~~. If the Agency determines that thesuch data demonstrated~~demonstrates~~ that the

proposed alternative will achieve results equivalent to the approved test method or methods~~method(s)~~, the Agency ~~must~~shall approve the proposed alternative.

Section 215.103 Abbreviations and Conversion Factors

a) This Part uses the~~The~~ following abbreviations ~~are used in this Part:~~

bbl	barrels (42 gal)
<u>° C</u> ~~° C~~	degrees Celsius or centigrade
cu in	cubic inches
<u>° F</u> ~~° F~~	degrees Fahrenheit
ft	foot
g	gram
g/mole	grams per mole
gal	gallon
hr	hour
in	inch
<u>° K</u> ~~° K~~	degrees Kelvin
kcal	kilocalorie
kg	kilogram
kg/hr	kilograms per hour
kPa	kilopascals; one thousand newtons per square meter
<u>l or L or ℓ</u> ~~l~~	liter
lb	pound
lbs/hr	pounds per hour
lbs/gal	pounds per gallon
m	meter
<u>m³</u> ~~m³~~	<u>cubic meters</u>
Mg	megagram, metric ton or tonne
min	minute
MJ	megajoules
mm Hg	millimeters of mercury
ml	milliliter
ppm	parts per million
ppmv	parts per million by volume
psi	pounds per square inch
psia	pounds per square inch absolute
psig	pounds per square inch <u>gauge</u> ~~gauge~~
scm	standard cubic meters
T	English ton
<u>VOM</u>	<u>volatile organic material</u>

b) This Part uses the~~The~~ following conversion factors ~~have been used in this Part:~~

English	Metric
1 gal	3.785 l
1000 gal	3,785 l or 3.785 m³cubic meters
1 psia	6.897 kPa (51.71 mm Hg)
2.205 lbs	1 kg
1 bbl	159.01 l
1 cu in	16.39 ml
1 lb/gal	119,800 mg/l
1T	0.907 mg

Section 215.104 Definitions

The definitions [in this section and in](#) 35 Ill. Adm. Code 201 and 211 apply to this Part, ~~as well as the definitions contained in this Section.~~ When the definition ~~contained~~ in this Section is more specific than [the corresponding definition that found](#) in 35 Ill. Adm. Code 201 or 211, [then the more specific definition in this section applies it shall take precedence in application of this Part.](#)

"Furniture [coating application line](#) ~~Coating Application Line~~" ~~means the:~~ The combination of coating application equipment, flash-off area, spray booths, ovens, conveyors, and other equipment operated in a predetermined sequence for [purpose of](#) applying coating to wood furniture.

"In [vacuum service](#) ~~Vacuum Service~~" ~~means, for:~~ ~~For the purposes of Subpart Q,~~ Sections 215.430 through 215.438, equipment that is operating at an internal pressure ~~that is~~ at least 5 kPa (0.73 psia) below ambient pressure.

"Opaque [stains](#) ~~Stains~~" ~~means all:~~ ~~All~~ stains containing pigments not classified as semi-transparent stains, including stains, glazes, and other opaque material to give character to wood.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.105 Incorporation by Reference

The following materials are incorporated by reference. [These incorporations do not include any later amendments or additions.](#)

Section 215.106 Afterburners

The operation of any ~~oil-fired~~ oil fired or natural ~~gas-fired~~ gas fired after-burner and capture system ~~used~~ to comply with this Part ~~of any section thereof~~ is not required ~~between~~ during the period of November 1 of any year ~~and to~~ April 1 of the following year, ~~if provided that:~~

- a) The operation of ~~thesuch~~ devices is not required for ~~purposes of~~ occupational safety or health, or ~~to for the~~ control ~~of~~ toxic substances, odor nuisances, or other regulated pollutants; and
- b) ~~TheSuch~~ devices are operated for the duration of any period for which an ozone advisory, alert, or emergency has been declared ~~underpursuant to~~ 35 Ill. Adm. Code 244.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.107 Determination of Applicability

- a) ~~To determine~~ In determining the applicability of regulations in this Part which are qualified by "when averaged over the preceding three calendar years," the "preceding three calendar years" ~~means~~ shall mean:
 - 1) The three years preceding the date by which compliance is required to determine ~~for purposes of determining~~ initial applicability to existing sources; and
 - 2) Any consecutive ~~three-year~~ three year period to determine ~~for purposes of determining~~ applicability to sources not previously subject to the regulation on the date by which compliance is required.
- b) Sources to which the regulation has ~~applied~~ been applicable at any time remain ~~shall continue to be~~ subject to the applicable limitations, even if operations change ~~so as to~~ result in an average ~~which is~~ below ~~what that which~~ initially made the ~~regulation applicable to those~~ sources' operations subject to the regulation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.108 Measurement of Vapor Pressures

a) Vapor Pressure of Volatile Organic Liquids

- 1) If the volatile organic liquid (VOL) consists of only a single compound, the vapor pressure mustshall be determined by ASTM Method D2879-23, incorporated by reference in Section 215.105~~D-2879-86~~, or the vapor pressure may be obtained from a published source such as "The Vapor Pressure of Pure Substances," "Perry's Chemical Engineer's Handbook," "CRC Handbook of Chemistry and Physics," or "Lange's Handbook of Chemistry," each source incorporated by reference at Section 215.105.
- 2) If the VOL~~volatile organic liquid~~ is a mixture, the vapor pressure mustshall be determined by ASTM Method D2879-23, incorporated by reference in Section 215.105,~~D-2879-86~~ or by the following equation:

$$P_{vol} = \sum_{i=1}^n P_i X_i$$

where:

P_{vol} = Total vapor pressure of the mixture~~;~~

n = Number of components in the mixture~~;~~

i = Subscript denoting an individual component~~;~~

P_i = Vapor pressure of a component determined in compliance~~accordance~~ with subsection (a)(1)~~;~~

X_i = Mole fraction of the component in the total mixture~~;~~

b) Vapor Pressure of Organic Material or Solvent

- 1) If the organic material or solvent consists of only a single compound, the vapor pressure mustshall be determined by ASTM Method D2879-23, incorporated by reference in Section 215.105~~D2879-86~~, or the vapor pressure may be obtained from a published source such as "The Vapor Pressure of Pure Substances," "Perry's Chemical Engineer's Handbook," "CRC Handbook of Chemistry and Physics," or "Lange's Handbook of Chemistry," each source incorporated by reference at Section 215.105.
- 2) If the organic material or solvent is a mixture made-up of both organic material compounds and compounds which are not organic material, the vapor pressure mustshall be determined by the following equation:

$$P_{om} = \frac{\sum_{i=1}^n P_i X_i}{\sum_{i=1}^n X_i}$$

where:

P_{om} = Total vapor pressure of the portion of the mixture which is composed of organic material.

n = Number of organic material components in the mixture.

i = Subscript denoting an individual component.

P_i = Vapor pressure of an organic material component determined in accordance with subsection (b)(1).

X_i = Mole fraction of the organic material component of the total mixture.

- 3) If the organic material or solvent is a mixture made up of only organic material compounds, the vapor pressure ~~must~~ shall be determined by ASTM Method D2879-23, incorporated by reference in Section 215.105, ~~D2879-86~~ or by the ~~above~~ equation in subsection (b)(2).

c) Vapor Pressure of ~~VOM~~ Volatile Organic Material

- 1) If the ~~VOM~~ volatile organic material consists of only a single compound, the vapor pressure ~~must~~ shall be determined by ASTM Method D2879-23, incorporated by reference in Section 215.105, ~~D2879-86~~, or the vapor pressure may be obtained from a published source such as "The Vapor Pressure of Pure Substances," "Perry's Chemical Engineer's Handbook," "CRC Handbook of Chemistry and Physics," or "Lange's Handbook of Chemistry," each source incorporated by reference at Section 215.105.
- (2) If the ~~VOM~~ volatile organic material is a mixture made up of both ~~VOM~~ volatile organic material compounds and compounds which are not ~~VOM~~ volatile organic material, the vapor pressure ~~must~~ shall be determined by the ~~following~~ equation:

$$P_{vom} = \frac{\sum_{i=1}^n P_i X_i}{\sum_{i=1}^n X_i}$$

$$\sum_{i=1} X_i$$

where:

P_{vom} = Total vapor pressure of the portion of the mixture which is composed of volatile organic material.

n = Number of ~~VOM~~volatile organic material components in the mixture.

i = Subscript denoting an individual component.

P_i = Vapor pressure of a ~~VOM~~volatile organic material component determined in ~~compliance~~accordance with subsection (c)(1).

X_i = Mole fraction of the ~~VOM~~volatile organic material component of the total mixture.

- 3) If the ~~VOM~~volatile organic material is a mixture made up of only ~~VOM~~volatile organic material compounds, the vapor pressure ~~must~~shall be determined by ASTM ~~D2879-23, incorporated by reference in Section 215.105, D2879-86~~ or by the ~~above~~equation ~~in subsection (c)(2)~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.109 Monitoring for ~~Negligibly Reactive~~~~Negligibly Reactive~~ Compounds

~~Despite any~~Any provision of 35 Ill. Adm. Code 211-~~notwithstanding~~, the Agency may require an owner or operator to submit, ~~for any compound listed at 35 Ill. Adm. Code 211.7150 as exempt from the definition of "volatile organic material,"~~ monitoring or testing methods and results ~~to demonstrate for any of the compounds listed at 35 Ill. Adm. Code 211.7150 as exempted from the definition of "volatile organic material"~~ demonstrating the amount of exempted compounds in the source's emissions, as a precondition to ~~these~~such exemption, where direct quantification of ~~VOM~~volatile organic material emissions is not possible due to any of the following circumstances which make it necessary to quantify the ~~emissions of exempt compound~~emissions in order to quantify ~~VOM~~volatile organic material emissions:

- a) VOMs and exempted compounds are mixed together in the same emissions;
- b) There ~~is~~are a large number of exempted compounds in the same emissions; or
- c) The chemical composition of the exempted compounds in the emissions is not known.

~~BOARD NOTE~~Board Note: Derived from the USEPA "Recommended Policy on the Control of Volatile Organic Compounds," as amended at 56 Fed. Reg. 11418,

March 18, 1991, and ~~subsequently~~ codified as 40 CFR 51.100(s), as added at 57 Fed. Reg. 3941 (Feb. 3, 1992). See also 35 Ill. Adm. Code 211.7150 for the ~~basic~~ definition of “volatile organic material.” USEPA is not bound by any state determination ~~for as to~~ monitoring. 40 CFR 51.100(s)(4).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART B: ORGANIC EMISSIONS FROM STORAGE AND LOADING OPERATIONS

Section 215.121 Storage Containers

~~A~~No person ~~must not~~shall cause or allow the storage of any ~~VOL~~volatile organic liquid with a vapor pressure of 17.24 kPa (2.5 psia) or greater at 294.3 K (~~70 °F~~)(70° F) or any gaseous organic material in any stationary tank, reservoir, or other container of more than 151 ~~m³ cubic meters~~ (40,000 gal) capacity, unless ~~the~~such tank, reservoir, or other container:

- a) Is a pressure tank capable of withstanding the vapor pressure of ~~the~~such liquid or the pressure of the gas, ~~so as to~~ prevent vapor or gas loss to the atmosphere at all times; or,
- b) Is designed and equipped with one of the following vapor loss control devices:
 - 1) A floating roof which rests on the surface of the ~~VOL~~volatile organic liquid and is equipped with a closure seal or seals between the roof edge and the tank wall. ~~The~~Such floating roof ~~must~~shall not be permitted if the ~~VOL~~volatile organic liquid has a vapor pressure of 86.19 kPa (12.5 psia) or greater at 294.3 K (~~70 °F~~)(70° F). ~~A~~No person ~~must not~~shall cause or allow the emission of air contaminants into the atmosphere from any gauging or sampling devices attached to ~~the~~such tanks, except during sampling or maintenance operations.
 - 2) A vapor recovery system consisting of:
 - A) A vapor gathering system capable of collecting 85% or more of the uncontrolled ~~VOM~~volatile organic material that would be otherwise emitted to the atmosphere; and,
 - B) A vapor disposal system capable of processing ~~the~~such ~~VOM~~volatile organic material ~~so as to~~ prevent its emission to the atmosphere. ~~A~~No person ~~must not~~shall cause or allow the emission of air contaminants into the atmosphere from any gauging or sampling devices attached to ~~the~~such tank, reservoir, or other container except during sampling.
 - 3) Other equipment or means of equal efficiency approved by the Agency ~~under~~according to the provisions of 35 Ill. Adm. Code 201.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.122 Loading Operations

- a) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere during the loading of any organic material from the aggregate loading pipes of any loading facility ~~with~~ ~~ahaving~~ through-put ~~of~~ greater than 151 ~~m³-cubic meters~~ per day (40,000 gal/day) into any railroad tank car, tank truck, or trailer, unless ~~thesueh~~ loading facility is equipped with submerged loading pipes, submerged fill, or a device that is equally effective ~~to control~~~~in controlling~~ emissions and is approved by the Agency ~~under~~~~according~~ ~~to the provisions of~~ 35 Ill. Adm. Code 201.
- b) ~~A~~~~No~~ person ~~must not~~~~shall~~ cause or allow the loading of any organic material into any stationary tank ~~with~~~~having~~ a storage capacity ~~of~~ greater than 946 ~~lt~~ (250 gal), unless ~~thesueh~~ tank is equipped with a permanent submerged loading pipe, submerged fill, or an equivalent device approved by the ~~under~~~~Agency according~~ ~~to the provisions of~~ 35 Ill. Adm. Code 201, or unless ~~thesueh~~ tank is a pressure tank ~~underas described in~~ Section 215.121(a) or is fitted with a recovery system ~~underas described in~~ Section 215.121(b)(2).
- c) ~~Exception:~~ If no odor nuisance exists, the limitations of this Section ~~shall only~~ apply ~~only~~ ~~to the loading of~~ ~~VOL~~~~volatile organic liquid~~ with a vapor pressure of 17.24 kPa (2.5 psia) or greater at 294.3 K ~~(70 °F)~~~~(70° F)~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.123 Petroleum Liquid Storage Tanks

- a) The requirements of subsection (b) ~~do~~~~below shall~~ not apply to any stationary storage tank:
 - 1) Equipped before January 1, 1979, with one of the vapor loss control devices ~~underspecified in~~ Section 215.121(b) ~~of this Part~~, except Section 215.121(b)(1) ~~of this Part~~;
 - 2) With a capacity ~~of~~ less than 151.42 ~~m³-cubic meters~~;
 - 3) With a capacity ~~of~~ less than 1,600 ~~m³-cubic meters~~ (422,400 gallons) and used to store produced crude oil and condensate ~~before~~~~prior to~~ custody transfer;
 - 4) With a capacity ~~of~~ less than 1,430 ~~m³-cubic meters~~ (378,000 gallons) and used to store produced oil or condensate in crude oil gathering;

- 5) Subject to new source performance standards for storage vessels of petroleum liquid, 40 CFR 60, incorporated by reference in Section 215.105 of this Part. *The provisions of Section 111 of the federal Clean Air Act . . . relating to standards of performance for new stationary sources . . . are applicable in this State and are enforceable under the Environmental Protection Act*~~*The Environmental Protection Act*~~. [415 ILCS 5/9.1(b)]~~(Ill. Rev. Stat., ch. 111 1/2, par. 1009.1(b))~~.
 - 6) In which volatile petroleum liquid is not stored; or
 - 7) Which is a pressure tank ~~underas described in~~ Section 215.121(a) ~~of this Part~~.
- b) Subject to subsection (a), ~~an above no~~ owner or operator of a stationary storage tank ~~must not shall~~ cause or allow the storage of any volatile petroleum liquid in the tank, unless:
- 1) The tank is equipped with one of the vapor loss control devices ~~underspecified in~~ Section 215.121(b) ~~of this Part~~;
 - 2) There are no visible holes, tears, or other defects in the seal or any seal fabric or material of any floating roof;
 - 3) All openings of any floating roof deck, except stub drains, are equipped with covers, lids, or seals ~~so such~~ that:
 - A) The cover, lid, or seal is in the closed position at all times except when petroleum liquid is transferred to or from the tank;
 - B) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports; and
 - C) Rim vents, if provided, are set to open when the roof is being floated off the roof leg supports or at the manufacturer's recommended setting;
 - 4) Routine inspections of floating roof seals are conducted through roof hatches once every six months;
 - 5) A complete inspection of the cover and seal of any floating roof tank is made whenever the tank is emptied for reasons other than ~~transferring the transfer of~~ petroleum liquid during the normal operation of the tank, or whenever repairs are made ~~because as a result~~ of any semi-annual inspection or incidence of roof damage or defect; and

- 6) A record of the results of each inspection conducted under subsection (b)(4) or (b)(5) ~~above~~ is maintained.
- c) Owners and operators of petroleum liquid storage tanks were required to have compliance schedules ~~underas summarized in~~ Appendix C ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.124 External Floating Roofs

- a) In addition to meeting the requirements of Section 215.123(b), ~~an~~ owner or operator of a stationary storage tank equipped with an external floating roof ~~must not~~ shall cause or allow the storage of any volatile petroleum liquid in the tank, unless:
 - 1) The tank has been fitted with a continuous secondary seal extending from the floating roof to the tank wall (~~rim-mounted~~ rim-mounted secondary seal) or any other device which controls ~~VOM~~ volatile organic material emissions with an effectiveness equal to or greater than a rim-mounted ~~rim-mounted~~ secondary seal;
 - 2) Each seal closure device meets the following requirements:
 - A) The seal is intact and uniformly in place around the circumference of the floating roof between the floating roof and tank wall; and
 - B) The accumulated area of gaps exceeding 0.32 centimeter (1/8 inch) in width between the secondary seal and the tank wall ~~must~~ shall not exceed 21.2 square centimeters per meter of tank diameter (1.0 square inches per foot of tank diameter);
 - 3) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers across at least 90% ~~percent~~ of the area of the opening;
 - 4) Openings are equipped with projections into the tank which remain below the liquid surface at all times;
 - 5) Inspections are conducted ~~before~~ prior to May 1 of each year to ~~ensure~~ insure compliance with subsection (a);
 - 6) The secondary seal gap is measured ~~before~~ prior to May 1 of each year;
 - 7) Records of the types of volatile petroleum liquid stored, the maximum true vapor pressure of the liquid as stored, the results of the inspections, and the results of the secondary seal gap measurements are maintained and available to the Agency ~~after, upon~~ verbal or written request, at any

reasonable time for ~~at least a minimum of~~ two years after the date on which the record was made.

- b) Subsection (a) does not apply to any stationary storage tank equipped with an external floating roof:
- 1) Exempted under Section 215.123(a)(2) through 215.123(a)(6);
 - 2) Of welded construction equipped with a metallic-type shoe seal ~~with having~~ a secondary seal from the top of the shoe seal to the tank wall (shoe-mounted secondary seal);
 - 3) Of welded construction equipped with a metallic-type shoe seal, a liquid-mounted foam seal, or a liquid-mounted liquid-filled-type seal, or other closure device of equivalent control efficiency approved by the Agency in which a petroleum liquid with a true vapor pressure less than 27.6 kPa (4.0 psia) at 294.3 K (~~70 °F~~)(70°F) is stored; or
 - 4) Used to store crude oil.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.125 Compliance Dates and Geographical Areas

- a) Except as otherwise stated in subsection (b), every owner or operator of an emission source subject to Sections 215.123 or 215.124 ~~or both~~ ~~must~~shall comply with its standards and limitations by December 31, 1983.
- b) If an emission source is not located in one of the counties ~~listed~~ below and is also not located in any county contiguous ~~to one of them~~thereto, the owner or operator of the emission source ~~must~~shall comply with ~~the requirements of~~ Sections 215.123 and 215.124 ~~by no later than~~ December 31, 1987:

Cook	Macoupin
DuPage	Madison
Kane	Monroe
Lake	Saint Clair

(BOARD NOTE: These counties are proposed to be designated as nonattainment by ~~USEPA~~the United States Environmental Protection Agency at 47 Fed. Reg. 31588, July 21, 1982).

- c) ~~Despite~~Notwithstanding subsection (b), if any county is designated as nonattainment by ~~the United States Environmental Protection Agency (USEPA)~~ at any time ~~after January 21, 1983~~subsequent to the effective date of this Section, the owner or operator of an emission source located in that county or any county

contiguous to that county who would otherwise be subject to the compliance date in subsection (b) ~~mustshall~~ comply with the requirements of Sections 215.123 and 215.124 within one year ~~afterfrom~~ the date of redesignation but ~~byin no case later than~~ December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.126 Compliance Plan

- a) The owner or operator of an emission source subject to Section 215.125(a) ~~mustshall~~ submit to the Agency a compliance plan ~~underas required by~~ 35 Ill. Adm. Code 201.241, including a project completion schedule where applicable, ~~byno later than~~ April 21, 1983.
- b) The owner or operator of an emission source subject to Section 215.125(b) ~~mustshall~~ submit to the Agency a compliance plan, including a project completion schedule where applicable, ~~byno later than~~ December 31, 1986.
- c) The owner or operator of an emission source subject to Section 215.125(c) ~~mustshall~~ submit a compliance plan, including a project completion schedule, within 90 days after the date of redesignation, but ~~byin no case later than~~ December 31, 1986.
- d) Unless the submitted compliance plan or schedule is disapproved by the Agency, the owner or operator of a facility or emission source subject to ~~subsectionthe rules specified in subsections~~ (a), (b), or (c) may operate the emission source according to the plan and schedule as submitted.
- e) The plan and schedule ~~mustshall~~ meet the requirements of 35 Ill. Adm. Code 201.241, including specific interim dates ~~underas required in~~ 35 Ill. Adm. Code 201.242.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.127 Emissions Testing

- a) Any tests of organic material emissions, including tests conducted to determine control equipment efficiency, ~~mustshall~~ be conducted in ~~complianceaceordance~~ with the methods and procedures ~~specified in~~ Section 215.102.
- b) ~~AfterUpon~~ a reasonable request by the Agency, the owner or operator of an organic material emission source required to comply with this Subpart ~~mustshall~~ conduct emissions testing; at ~~its such person's~~ own expense; to demonstrate compliance.

- c) A person planning to conduct an organic material emission test to demonstrate compliance with this Subpart ~~must~~shall notify the Agency of that intent ~~at least~~not less than 30 days before the planned initiation of the ~~test~~tests so the Agency may observe the test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.128 Measurement of Seal Gaps

- a) Any measurements of secondary seal gaps ~~must~~shall be conducted in ~~compliance~~accordance with the methods and procedures ~~specified~~ in 40 CFR 60, Subpart Kb, incorporated by reference in Section 215.105.
- b) A person planning to ~~measure~~conduct a measurement of seal gaps to demonstrate compliance with this Subpart ~~shall~~must notify the Agency of that intent ~~at least~~not less than 30 days before the planned performance of the ~~measurement~~tests so the Agency may observe the ~~measurement~~test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART C: ORGANIC EMISSIONS FROM MISCELLANEOUS EQUIPMENT

Section 215.141 Separation Operations

- a) ~~A~~No person ~~must not~~shall use any single or multiple compartment effluent water separator which receives effluent water containing 757 ~~l~~+/day (200 gal/day) or more of organic material from any equipment processing, refining, treating, storing, or handling organic material, unless ~~the~~such effluent water separator is equipped with air pollution control equipment capable of reducing by 85% ~~percent~~ or more the uncontrolled organic material emitted to the atmosphere. ~~Exception:~~ If no odor nuisance exists, ~~this subsection does~~the limitations of this subparagraph shall not apply if the vapor pressure of the organic material is below 17.24 kPa (2.5 psia) at 294.3 K ~~(70 °F)~~(70 F).
- b) Subsection (a) ~~does~~shall not apply to water and crude oil separation in the production of Illinois crude oil; if the vapor pressure of ~~the~~such crude oil is less than 34.5 kPa (5 psia).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.142 Pumps and Compressors

~~A~~No person ~~must not~~shall cause or allow the discharge of more than 32.8 ml (2 cu in) of ~~VOL~~volatile organic liquid with vapor pressure of 17.24 kPa (2.5 psia) or greater at 294.3 K ~~(70 °F)~~(70 F) into the atmosphere from any pump or compressor in any ~~15-minute~~15 minute period at standard conditions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.143 Vapor Blowdown

~~A~~No person ~~must not~~shall cause or allow the emission of organic material into the atmosphere from any vapor blowdown system or any safety relief valve, except ~~such~~ safety relief valves not capable of causing an excessive release, unless ~~the~~such emission is controlled:

- a) To 10 ppm equivalent methane (molecular weight 16.0) or less; ~~or,~~
- b) By combustion in a smokeless flare; ~~or,~~
- c) By other air pollution control equipment approved by the Agency ~~under~~according ~~to the provisions of~~ 35 Ill. Adm. Code 201.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.144 Safety Relief Valves

Section 215.143 ~~must~~shall not apply to any set of unregulated safety relief valves capable of causing excessive releases ~~if, provided~~ the owner or operator ~~of the set of valves thereof,~~ by October 1, 1972, provides the Agency with ~~the following~~:

- a) A historical record of each ~~such~~ set (or, if ~~the~~such records are unavailable, of similar sets which ~~operate, by virtue of operation~~ under similar circumstances ~~and,~~ may reasonably be presumed to have the same or greater frequency of excessive releases) for a three-year period immediately preceding October 1, 1972, indicating:
 - 1) Dates on which excessive releases occurred from each ~~such~~ set; ~~and,~~
 - 2) Duration in minutes of each ~~such~~ excessive release; ~~and,~~
 - 3) Quantities (in pounds) of mercaptans, ~~and/or~~ hydrogen sulfide, or both emitted into the atmosphere during each ~~such~~ excessive release; ~~and,~~
- b) Proof, using ~~such~~ three-year historical records, that no excessive release is likely to occur from any ~~such~~ set, either alone or in combination with ~~such~~ excessive releases from other sets owned or operated by the same person and located within a ~~10-mile~~ten-mile radius from the center point of any ~~such~~ set, more frequently than ~~three~~3 times in any ~~12-month~~12-month period; ~~and,~~
- c) Accurate maintenance records ~~under~~pursuant to the requirements of subsection (a); ~~and,~~

- d) Proof, at three-year intervals and, using ~~such~~ three-year historical records, that ~~such the~~ set conforms to ~~the requirements of~~ subsection (c).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART E: SOLVENT CLEANING

Section 215.181 Solvent Cleaning in General

~~The requirements of~~ Sections 215.182 through 215.184 ~~doshall~~ not apply to sources:

- a) ~~Whose VOM~~~~To sources whose~~ emissions ~~of volatile organic material~~ do not exceed 6.8 kg (15 lbs) in any one day ~~or, nor~~ 1.4 kg (3 lbs) in any one hour; or
- b) ~~Used~~~~To sources used~~ exclusively for chemical or physical analysis or to ~~determined~~~~determination of~~ product quality and commercial acceptance, ~~if provided that:~~
- 1) The operation of the sources is not an integral part of the production process;
 - 2) The emissions from the source do not exceed 363 kg (800 lbs) in any calendar month; and,
 - 3) The Agency approves the exemption ~~is approved~~ in writing ~~by the Agency~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.182 Cold Cleaning

- a) Operating Procedures: ~~A~~~~No~~ person ~~must not shall~~ operate a cold cleaning degreaser unless:
- 1) Waste solvent is stored only in covered containers ~~only~~ and ~~not~~ disposed of so that only 20% or less by weight~~in such a manner that more than 20 percent~~ of the waste solvent (~~by weight~~) is allowed to evaporate into the atmosphere;
 - 2) The cover of the degreaser is closed when the degreaser is not handling parts ~~are not being handled~~; and
 - 3) Parts are drained until dripping ceases.
- b) Equipment Requirements: ~~A~~~~No~~ person ~~must not shall~~ operate a cold cleaning degreaser unless:

- 1) The degreaser is equipped with a cover which is closed whenever the degreaser is not handling parts ~~are not being handled in the cleaner~~. The cover must~~shall~~ be designed to be easily operated with one hand or with the mechanical assistance of springs, counterweights, or a powered system if:
 - A) The solvent vapor pressure is greater than 2 kPa (15 mmHg or 0.3 psi) measured at 38 °C (100 °F)~~38° C (100° F)~~;
 - B) The solvent is agitated; or
 - C) The solvent is heated above ambient room temperature;
- 2) The degreaser is equipped with a facility for draining cleaned parts. The drainage facility must~~shall~~ be constructed so that parts are enclosed under the cover while draining unless:
 - A) The solvent vapor pressure is less than 4.3 kPa (32 mmHg or 0.6 psi) measured at 38 °C (100 °F)~~38° C (100° F)~~; or
 - B) An internal drainage facility cannot be fitted into the cleaning system, in which case the drainage facility may be external.
- 3) The degreaser is equipped with one of the following control devices if the vapor pressure of the solvent is greater than 4.3 kPa (32 mmHg or 0.6 psi) measured at (38 °C (100 1/4 °F), 38 °C (100 1/4 °F))~~38 °C (100 1/4 °F)~~ or if the solvent is heated above 50 °C (120 °F)~~50° C (120° F)~~ or its boiling point:
 - A) A freeboard height of 7/10 of the inside width of the tank or 91 cm (36 in), whichever is less; or
 - B) Any other equipment or system of equivalent emission control as approved by the Agency. The~~Such a~~ system may include a water cover, refrigerated chiller, or carbon adsorber;
- 4) A permanent conspicuous label summarizing the operating procedure is affixed to the degreaser; and
- 5) If a solvent spray is used, the degreaser is equipped with a solid fluid stream spray, rather than a fine, atomized, or shower spray.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.183 Open Top Vapor Degreasing

- a) Operating Requirements: ~~A~~No person ~~must not~~shall operate an open top vapor degreaser unless:
- 1) The cover of the degreaser is closed when the degreaser is not processing workloads ~~are not being processed through the degreaser~~;
 - 2) Solvent carryout emissions are minimized by:
 - A) Racking parts to allow complete drainage;
 - B) Moving parts in and out of the degreaser at less than 3.3 m/min (11 ft/min);
 - C) Holding the parts in the vapor zone until condensation ceases;
 - D) Tipping out any pools of solvent on the cleaned parts before removal from the vapor zone; and,
 - E) Allowing parts to dry within the degreaser until visually dry.
 - 3) Porous or absorbent materials, such as cloth, leather, wood, or rope, are not degreased;
 - 4) Less than half of the degreaser's open top area is occupied with a workload;
 - 5) The degreaser is not loaded to the point where the vapor level would drop more than 10 cm (4 in) when the workload is removed from the vapor zone;
 - 6) Spraying is done below the vapor level only;
 - 7) Solvent leaks are repaired immediately;
 - 8) Waste solvent is stored only in covered containers ~~only~~ and ~~not~~ disposed of so that only in such a manner that more than 20% or less by weight of the waste solvent (~~by weight~~) is allowed to evaporate into the atmosphere;
 - 9) Water is not visually detectable in solvent exiting from the water separator; and
 - 10) Exhaust ventilation ~~exceeding~~ 20 m³ cubic meters or less per minute per square meter (65 cubic feet per minute per square foot) of degreaser open area is ~~not~~ used, unless a greater rate is necessary to meet the requirements of the Occupational Safety and Health Act [(29 U.S.C. ~~Section~~ 651 et seq.)].

- b) Equipment Requirements: ~~A~~No person ~~must not~~shall operate an open top vapor degreaser unless:
- 1) The degreaser is equipped with a cover designed to open and close easily without disturbing the vapor zone;
 - 2) The degreaser is equipped with the following switches:
 - A) A device which shuts off the sump heat source if the amount of condenser coolant is not sufficient to maintain the designed vapor level;~~and~~
 - B) A device which shuts off the spray pump if the vapor level drops more than 10 cm (4 in) below the bottom condenser coil; and
 - C) A device which shuts off the sump heat source when the vapor level exceeds the design level.
 - 3) A permanent conspicuous label summarizing the operating procedure is affixed to the degreaser;
 - 4) The degreaser is equipped with one of the following devices:
 - A) A freeboard height of 3/4 of the inside width of the degreaser tank or 91 cm (36 in), whichever is less; and if the degreaser opening is greater than 1 square meter (10.8 square feet), a powered or mechanically assisted cover; or
 - B) Any other equipment or system of equivalent emission control ~~as~~ approved by the Agency. ~~This~~~~Such~~ equipment or system may include a refrigerated chiller, an enclosed design, or a carbon adsorption system.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.184 Conveyorized Degreasing

- a) Operating Requirements: ~~A~~No person ~~must not~~shall operate a conveyorized degreaser unless:
- 1) Exhaust ventilation ~~exceeding~~ 20 ~~m³ cubic meters~~ or less per minute per square meter (65 cubic feet per minute per square foot) of area of loading and unloading opening is ~~not~~used, unless a greater rate is necessary to meet the requirements of the Occupational Safety and Health Act [(29 U.S.C. ~~Section~~ 651 et seq.)]

- 2) Solvent carryout emissions are minimized by:
 - A) Racking parts for best drainage; and
 - B) Maintaining the vertical conveyor speed at less than 3.3 m/min (11 ft/min);
 - 3) Waste solvent is stored only in covered containers only and ~~not~~ disposed of so that only in such a manner that more than 20% or less by weight of the waste solvent (~~by weight~~) is allowed to evaporate into the atmosphere;
 - 4) Solvent leaks are repaired immediately;
 - 5) Water is not visually detectable in solvent exiting from the water separator; and
 - 6) Downtime covers are placed over entrances and exits of conveyORIZED degreasers immediately after the conveyors and exhausts are shut down and not removed until just before startup.
- b) Equipment Requirements: ~~A~~No person must not shall operate a conveyORIZED degreaser unless:
- 1) The degreaser is equipped with a drying tunnel, rotating (tumbling) basket, or other equipment sufficient to prevent cleaned parts from carrying out solvent liquid or vapor;
 - 2) The degreaser is equipped with the following switches:
 - A) A device which shuts off the sump heat source if the amount of condenser coolant is not sufficient to maintain the designed vapor level;
 - B) A device which shuts off the spray pump or the conveyor if the vapor level drops more than 10 cm (4 in) below the bottom condenser coil; and
 - C) A device which shuts off the sump heat source when the vapor level exceeds the design level;
 - 3) The degreaser is equipped with openings for entrances and exits that silhouette workloads so that the average clearance between the parts and the edge of the degreaser opening is less than 10 cm (4 in) or less than 10% percent of the width of the opening;

- 4) The degreaser is equipped with downtime covers for closing ~~off~~ entrances and exits when the degreaser is shut down; and
- 5) The degreaser is equipped with one of the following control devices, if the air/vapor interface is larger than 2.0 square meters (21.6 square feet):
 - A) A carbon adsorption system with ventilation greater than or equal to 15 ~~m³cubic meters~~ per minute per square meter (50 cubic feet per minute per square foot) of air/vapor area ~~(when downtime covers are open and exhausting less than 25 ppm of solvent by volume averaged over a complete adsorption cycle; or~~
 - B) Any other equipment or system of equivalent emission control ~~as~~ approved by the Agency. ~~ThisSuch~~ equipment or system may include a refrigerated chiller.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.185 Compliance Plan (Repealed)

- ~~a) — Solvent cleaning and degreasing were subject to certain compliance dates which are summarized in Appendix C. Compliance programs were required under 35 Ill. Adm. Code 201, Subpart H.~~
- ~~b) — Cold cleaning degreasers were not required to submit a compliance plan or project completion schedule under 35 Ill. Adm. Code 201, Subpart H.~~

SUBPART F: COATING OPERATIONS

Section 215.202 Compliance Schedules (Repealed)

~~Owners or operators of coating lines were required to take certain actions to achieve compliance which are set forth in Appendix C.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.204 Emission Limitations for Manufacturing Plants

~~An~~ owner or operator of a coating line ~~must not~~~~shall~~ cause or allow the emission of ~~VOM~~~~volatile organic material~~ to exceed the following limitations on coating materials, excluding water and any compounds which are specifically exempted from the definition of ~~VOM~~~~volatile organic material~~ ~~underpursuant to~~ this Part, delivered to the coating applicator:

- a) Automobile or Light-Duty~~Light-Duty~~ Truck Manufacturing Plants

1)	In Boone County	<u>kg/l</u>	<u>lb/gal</u>
	Prime coat	0.14	(1.2)
	Prime surfacer coat	0.34	(2.8)
	Top coat	0.34	(2.8)

(BOARD NOTE: The top coat limitation ~~does~~shall not apply if by December 31, 1984, a limitation of 0.43 kg/l (3.6 lb/gal) is achieved and the top coat is applied with a transfer efficiency of at least 55%~~not less than 55 percent~~, and by December 31, 1986, the top coat is applied with a transfer efficiency of at least 65%~~not less than 65 percent~~).

Final repair coat	0.58	(4.8)

2)	In the remaining counties	<u>kg/l</u>	<u>lb/gal</u>
	Prime coat	0.14	(1.2)
	Prime surfacer coat	0.34	(2.8)
	Top coat	0.34	(2.8)
	Final repair coat	0.58	(4.8)

b) Can Coating kg/l lb/gal

1)	Sheet basecoat and <u>overvarnish</u> ~~Overvarnish~~	0.34	(2.8)
2)	Exterior basecoat and overvarnish	0.34	(2.8)
3)	Interior body spray coat	0.51	(4.2)
4)	Exterior end coat	0.51	(4.2)
5)	Side seam spray coat	0.66	(5.5)
6)	End sealing compound coat	0.44	(3.7)

c) Paper Coating kg/l lb/gal

1)	All paper coating except <u>under</u> ~~as provided in~~ subsection (c)(2)	0.35	(2.9)
2)	Specialty <u>high-gloss catalyzed coating</u> ~~High Gloss Catalyzed Coating~~	0.42	(3.5)

(BOARD NOTE: These limitations ~~do~~shall not apply to equipment used for both printing and paper coating.)

d)	Coil Coating	0.31	(2.6)
e)	Fabric Coating	0.35	(2.9)
f)	Vinyl Coating	0.45	(3.8)
g)	Metal Furniture Coating	0.36	(3.0)
h)	Large Appliance Coating	0.34	(2.8)

(BOARD NOTE: The limitation ~~does~~shall not apply to the use of quick-drying lacquers to repair~~for repair of~~ scratches and nicks that occur during assembly if~~provided that~~ the volume of coating does not exceed 0.95 liters (1 quart) in any one eight-hour period.)

		<u>Kg/l</u>	<u>lb/gal</u>
i)	Magnet Wire Coating	0.20	(1.7)
j)	Miscellaneous Metal Parts and Products Coating		
1)	Clear coating	0.52	(4.3)
2)	Air dried coating	0.42	(3.5)
3)	Extreme performance coating	0.42	(3.5)
4)	Power driven fastener coating		
	A) Nail Coating	Refer to limits in (j) (1), (2), (3), and (5)	
	B) Staple, brad, and finish nail unit fabrication bonding coating	0.64	(5.3)
	C) Staple, brad, and finish nail incremental fabrication lubricity coating	0.64	(5.3)
	D) Staple, brad, and finish nail incremental fabrication withdrawal resistance coating	0.60	(5.0)

E)	Staple, brad, and finish nail unit fabrication coating	0.64	(5.3)
5)	All other coatings	0.36	(3.0)

(BOARD NOTE: The least restrictive limitation ~~applies~~ shall apply if more than one limitation pertains to a specific coating.)

k)	Heavy Off-highway Vehicle Products	<u>kg/l</u>	<u>lb/gal</u>
1)	In Macoupin County		
	Extreme performance prime coat	0.42	(3.5)
	Extreme performance top coat - air dried	0.42	(3.5)
	Final repair coat - air dried	0.42	(3.5)
	High-temperature aluminum coating used at existing diesel-electric locomotive manufacturing plants	0.72	(6.0)
2)	In the remaining counties		
	Extreme performance prime coat	0.42	(3.5)
	Extreme performance top coat - air dried	0.52	(4.3)
	Final repair coat - air dried	0.58	(4.8)
l)	Wood Furniture Coating	<u>kg/l</u>	<u>lb/gal</u>
1)	Clear topcoat	0.67	(5.6)
2)	Opaque stain	0.56	(4.7)
3)	Pigmented coat	0.60	(5.0)
4)	Repair coat	0.67	(5.6)
5)	Sealer	0.67	(5.6)
6)	Semi-transparent stain	0.79	(6.6)
7)	Wash coat	0.73	(6.1)

(BOARD NOTE: The repair coat has overall transfer efficiency of 30% ~~percent~~; all others have an overall transfer efficiency of 65% ~~percent~~.)

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.205 Alternative Emission Limitations

Owners or operators of coating lines subject to Section 215.204 may comply with this Section, rather than ~~with~~ Section 215.204. The methods or procedures used to determine emissions of organic material under this Section ~~must~~shall be approved by the Agency. Emissions of ~~VOM~~volatile organic material from emission units subject to Section 215.204, are allowable, ~~despite~~notwithstanding the limitations in Section 215.204, if:

- a) For ~~those~~ emission units subject to Section 215.204(b), the emissions are controlled by an afterburner system which provides:
 - 1) 75% reduction in the overall emissions of ~~VOM~~volatile organic material from the coating line, and
 - 2) Oxidation to carbon dioxide and water of 90% of the nonmethane ~~VOM~~volatile organic material (measured as total combustible carbon) which enters the afterburner.
- b) For all other emission units subject to Section 215.204, the emissions are controlled by an afterburner system which provides:
 - 1) 81% reduction in the overall emissions of ~~VOM~~volatile organic material from the coating line, and
 - 2) Oxidation to carbon dioxide and water of 90% of the nonmethane ~~VOM~~volatile organic material (measured at total combustible carbon) which enters the afterburner.
- c) The system used to control ~~these~~such emissions is demonstrated to have control efficiency ~~equal~~equivalent to or greater than that ~~provided~~ under the applicable provision of Section 215.204 or subsection (a) or (b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.206 Exemptions from Emission Limitations

- a) The limitations of this Subpart ~~do~~shall not apply to:
 - 1) Coating plants in which emissions of ~~VOM~~volatile organic material as limited by the operating permit will not exceed 22.7 Mg/year (25 T/year); in the absence of air pollution control equipment; ~~or~~
 - 2) Coating plants in which the total coating usage does not exceed 9,463 l/yr (2,500 gal/yr); or
 - 3) Sources used exclusively for chemical or physical analysis or to ~~determined~~determination of product quality and commercial acceptance ~~if provided that:~~

- A) The operation of the source is not an integral part of the production process;
 - B) The emissions from the source do not exceed 363 kg (800 lbs) in any calendar month; and
 - C) The Agency approves the exemption ~~is approved~~ in writing ~~by the Agency~~.
- b) The limitations of this Subpart ~~do shall~~ not apply to touch-up and repair coatings used by a coating source described in Sections 215.204(b), (d), (f), (g), (i), and (j) ~~if of this Subpart; provided that~~ the source-wide volume of ~~those such~~ coatings does not exceed 0.95 l (1 quart) per eight-hour period or exceed 209 l/yr (55 gal/yr) for any rolling ~~12-month~~twelve-month period. Recordkeeping and reporting for touch-up and repair coatings ~~must shall~~ be consistent with subsection (c) ~~of this Section~~.
- c) The owner or operator of a coating line or a group of coating lines using touch-up and repair coatings ~~that are~~ exempted from the limitations of Sections 215.204(b), (d), (f), (g), (i), and (j) ~~of this Subpart~~ because of ~~the provisions of~~ subsection (b) ~~must of this Section shall~~:
- 1) Collect and record the name, identification number, and volume of each touch-up and repair coating, as applied on each coating line, per eight-hour period and per month;
 - 2) Perform calculations on a daily basis~~;~~ and maintain at the source~~;~~ records of ~~such~~ calculations of the combined volume of touch-up and repair coatings used source-wide for each eight-hour period;
 - 3) Perform calculations on a monthly basis~~;~~ and maintain at the source~~;~~ records of ~~such~~ calculations of the combined volume of touch-up and repair coatings used source-wide for the month and the rolling ~~12-month~~twelve-month period;
 - 4) Prepare and maintain at the source an annual summary of the information required to be compiled ~~under pursuant to~~ subsection (b) ~~of this Section~~ on or before January 31 of the following year;
 - 5) Maintain at the source for ~~at least a minimum of~~ three years all records required to be kept under this subsection (c)~~;~~ and make ~~the such~~ records available to the Agency upon request; and
 - 6) Notify the Agency in writing if the use of touch-up and repair coatings at the source ever exceeds a volume of 0.95 l (1 quart) per eight-hour period

or exceeds 209 l/yr (55 gal/yr) for any rolling ~~12-month~~twelve-month period within 30 days after ~~the exceedance~~any such exceedence. ~~The~~Such notification ~~must~~shall include ~~a copy of~~any records of ~~the exceedances~~such exceedence.

- d) “Touch-up and repair coatings” means, for ~~purposes of~~this Section, any coating used to cover minor scratches and nicks that occur during manufacturing and assembly processes.
- e) ~~Despite~~Notwithstanding the limitations of Section 215.204(k)(2), the John Deere Harvester-Moline Works of Deere & Company, Moline, Illinois, ~~must~~shall not cause or permit the emission of ~~VOM~~volatile organic material from its existing green and yellow ~~flow~~coating~~flee~~coating operations to exceed a weekly average of 6.2 lb/gal.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.207 Compliance by Aggregation of Emission Units

- a) Owners or operators of coating lines subject to Section 215.204 may comply with this Section rather than ~~with~~Section 215.204. The methods or procedures used to determine emissions of ~~VOM~~volatile organic material under this Section ~~must~~shall be approved by the Agency in ~~compliance~~accordance with 35 Ill. Adm. Code 201. Emissions of ~~VOM from~~volatile organic material form sources subject to Section 215.204 are allowable, ~~despite~~notwithstanding the limitations in Section 215.204, if the combined actual emissions from selected coating lines at the coating plant, but not including coating lines or other emission sources constructed or modified after July 1, 1979, ~~are~~is less than or equal to the combined allowable emissions ~~as~~determined by the following equations:

$$E_{ALL} = \sum_{j=1}^m \sum_{i=1}^n (A_i B_i)_j$$

$$E_{ACT} = \sum_{j=1}^m \sum_{i=1}^n (C_i B_i (1 - D_i))_j$$

- b) A_i ~~must~~shall be determined by the ~~following~~ formula:

$$A_i = \frac{R_i}{1 - \frac{R_i}{S_i}}$$

- c) As used in subsection (a) and (b), symbols mean ~~the following~~:

E_{ALL} = the allowable ~~VOM~~~~volatile organic material~~ emissions from the coating plant, in kg/day (lb/day);

A_i = the allowable emission limit for a coating ~~underpursuant to~~ Section 215.204, expressed in kg/~~l~~ (lb/gal) of coating solids;

B_i = the volume of coating solids, in ~~l~~/day (gal/day), in a coating as delivered to the coating line;

m = the number of coating lines included in the combined emission rate;

n = the number of different coatings delivered to a coating line;

E_{ACT} = the actual ~~VOM~~~~volatile organic material~~ emissions from the coating plant, in kg/day (lb/day);

C_i = the weight of ~~VOM~~~~volatile organic material~~ per volume of solids, in kg/l (lb/gal), for a coating;

D_i = the control efficiency by which ~~VOM~~ emissions ~~of volatile organic material~~ from a coating are reduced through ~~the use of~~ control equipment;

R_i = the applicable ~~VOM~~~~volatile organic material~~ emission limit ~~underpursuant to~~ Section 215.204, for a coating, in kg/~~l~~ (lb/gal);

S_i = the density of the ~~VOM~~~~volatile organic material~~ in a coating, in kg/~~l~~ (lb/gal);

- d) The owner or operator of the coating plant ~~must~~~~shall~~ maintain records of the density of the ~~VOM~~~~volatile organic material~~ in each coating, the quantity and ~~VOM~~~~volatile organic material~~ and solids content of each coating applied, and the line to which coating is applied, ~~in such a manner so as~~ to demonstrate continuing compliance with the combined allowable emissions.
- e) Except for emission units subject to Section 215.301 or 215.302, credits from emission units at the coating plant that are subject to this Part, other than coating lines, may be given to the extent that emissions are reduced from the allowable emission limits for ~~such~~ emission units ~~contained~~ in either this Part or any existing operating permit, whichever limit is less.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.208 Testing Methods for Volatile Organic Material Content

- a) The VOM content of coatings ~~must~~~~shall~~ be determined by Method 24 ~~at~~, 40 CFR ~~Part 60,~~ Appendix A, incorporated by reference in Section 215.105. ~~This~~

~~requirement does not apply to-except for~~ glues and adhesive coatings, ~~two-component~~~~two-component~~ reactive coatings forming volatile reaction products, coatings requiring energy other than heat to initiate curing, and coatings requiring high temperature catalysis for curing, ~~if providing~~ the person proposing testing of the material submits to the Agency proof that the Method 24 results would not be representative and ~~proof~~ that a proposed alternative test method gives representative, accurate test results. For printing inks, the ~~VOM~~~~volatile organic material~~ content ~~mustshall~~ be determined by Method 24A ~~at~~, 40 CFR ~~Part~~ 60, Appendix A, incorporated by reference in Section 215.105. Any alternate test method must be approved by the Agency, which ~~mustshall~~ consider data comparing the performance of the proposed alternative to the performance of the approved test ~~method or methods~~ ~~method(s)~~. If the Agency determines that ~~thesesuch~~ data ~~demonstratedemonstrates~~ that the proposed alternative will achieve results equivalent to the approved test ~~method or methods~~ ~~method(s)~~, the Agency ~~mustshall~~ approve the proposed alternative.

- b) Transfer efficiency ~~mustshall~~ be determined by a method, procedure, or standard approved by ~~the~~ USEPA, under the applicable new source performance standard or, until ~~such time as~~ USEPA has approved and published ~~thatsuch a~~ method, procedure, or standard, by any appropriate method, procedure, or standard approved by the Agency.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.209 Exemption from General Rule on Use of Organic Material

~~A~~~~No~~ coating line subject to ~~the limitations of~~ Section 215.204 is ~~not~~ required to meet Sections 215.301 or 215.302 after the date by which the coating line is required to meet Section 215.204.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.210 Alternative Compliance Schedule (Repealed)

~~The owner or operator of coating lines subject to Section 215.204(d)(2) may in lieu of compliance with Section 215.211 demonstrate compliance through the use of a low solvent coating technology by taking the following actions:~~

- ~~a) — Submit to the Agency a compliance plan, including a project completion schedule, that meets the requirements of Section 201.241 on or before August 19, 1983; and~~
- ~~b) — Meet the following increments of progress:~~
- ~~1) — Submit to the Agency by July 1, 1984 and every six months thereafter a report describing in detail the progress made in the development, application testing, product quality, customer acceptance and United~~

~~States Food and Drug Administration or government agency approval of the low solvent coating technology;~~

- ~~2) Initiate process modifications to allow the use of low solvent coatings as soon as coatings meeting Board requirements become commercially available for production use; and~~
- ~~3) Achieve final compliance as expeditiously as possible but no later than December 31, 1986.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.211 Compliance Dates and Geographical Areas

- a) Except as otherwise stated in subsection (b), every owner or operator of an emission unit subject to Section 215.204(j), (k), (l), or (m) ~~must~~shall comply with those subsections ~~by in accordance with~~ the following dates:
 - 1) For Section 215.204(j) and (k)(2) ~~Extreme performance prime coat and Final repair coat—air dried~~, by December 31, 1983.
 - 2) For Section 215.204(k)(l) and (m), by December 31, 1987.
 - 3) ~~For Section 215.204(k)(2) Extreme performance top coat—air dried, in accordance with Section 215.210.~~
 - ~~4) For Section 215.204(l), by December 31, 1985.~~
- b) If an emission unit is not located in one of the nonattainment counties or counties contiguous to nonattainment counties ~~listed~~ below, the owner or operator of the emission unit ~~must~~shall comply with ~~the requirements of~~ Section 215.204(j), (k), or (l) ~~by no later than~~ December 31, 1987:

Bond	Madison
Clinton	McHenry
Cook	Monroe
DeKalb	Montgomery
DuPage	Morgan
Franklin	Pope
Greene	Randolph
Jackson	Saline
Jersey	Sangamon
Johnson	St. Clair
Kane	Union
Kendall	Washington
Lake	Will

(BOARD NOTE: Counties are designated as attainment or nonattainment for ozone by ~~the United States Environmental Protection Agency (USEPA)~~. The USEPA noted ~~in its redesignation rulemaking~~, that it will publish a rulemaking notice on Williamson County's attainment status. (45 Fed. Reg. 21949; (May 16, 1983-). ~~If Should~~ Williamson County ~~is be~~ redesignated as attainment ~~before prior to~~ October 31, 1985, it and the counties contiguous to it will be considered deleted from the above list.)

- c) ~~Despite Notwithstanding~~ subsection (b), if any county is designated as nonattainment by ~~the~~ USEPA at any time ~~after subsequent to~~ the effective date of this rule, the owner or operator of an emission source located in that county or any county contiguous to that county who would otherwise be subject to the compliance date in subsection (b) ~~must shall~~ comply with ~~the requirements of~~ Section 215.204(j), (k), or (l) within one year ~~after from~~ the date of redesignation but ~~by in no case later than~~ December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.212 Compliance Plan (Repealed)

- a) ~~The owner or operator of an emission unit subject to Section 215.211(a) (1) or (3) shall submit to the Agency a compliance plan on or before August 19, 1983.~~
- b) ~~The owner or operator of an emission unit subject to Section 215.211(a)(4) shall submit to the Agency a compliance plan on or before October 31, 1985.~~
- c) ~~The owner or operator of an emission unit subject to Section 215.211(b) shall submit to the Agency a compliance plan, no later than December 31, 1986.~~
- d) ~~The owner or operator of an emission unit subject to Section 215.211(c) shall submit a compliance plan within 90 days after the date of redesignation, but in no case later than December 31, 1986.~~
- e) ~~The owner or operator of an emission unit subject to Section 215.211(c) shall not be required to submit a compliance plan if redesignation occurs after December 31, 1986.~~
- f) ~~The plan and schedule shall meet the requirements of 35 Ill. Adm. Code 201.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.213 Special Requirements for Compliance Plan (Repealed)

~~For sources subject to Sections 215.204 through 215.209, an approvable compliance plan shall include:~~

- ~~a) — A complete description of each coating line which is subject to an emission limitation in Sections 215.204 through 215.209;~~
- ~~b) — Quantification of the allowable emissions from the coating plant determined under Section 215.207 where applicable; and,~~
- ~~c) — A description of the procedures and methods used to determine the emissions of volatile organic material including a method of inventory, record keeping and emission calculation or measurement which will be used to demonstrate compliance with the allowable plant wide emission limitation.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.215 DMI Emissions Limitations (Repealed)

~~Notwithstanding the limitation of Section 215.204(j)(3), the DMI, Inc., Goodfield, Illinois plant shall not cause or permit the emission of volatile organic material from its existing dip tank and bake oven as part of the paint deck operations, to exceed a daily average of 4.2 lb/gal in the dip top coat application tank, and a 30-day rolling average of 61 lb/day for the dip tank make-up solvent addition; DMI, Inc. shall fulfill all of the following conditions:~~

- ~~a) — DMI, Inc. shall contact at least three (3) paint vendors each year in a continuing search for a compliant coating that it can successfully use in its existing paint deck operations, including any paint vendors suggested by the Agency in a writing delivered to DMI, Inc. by certified mail;~~
- ~~b) — If any vendor provides DMI, Inc. with laboratory test results which demonstrate that DMI, Inc. may be able to use the vendor's paint in its existing paint deck operations as a substitute for the existing paint, DMI, Inc. will conduct production tests of that paint;~~
- ~~c) — DMI, Inc. will submit a report to the Agency by March 1 of each year that includes a summary of its efforts during the preceding calendar year, as those efforts relate to DMI, Inc.'s compliance with the foregoing conditions contained in subsections (a) and (b), above;~~
- ~~d) — If DMI, Inc. locates a compliant paint that it can successfully use in its existing paint deck operations, and the net annual expense of using the compliant paint is not more than ten percent (10%) greater than the then current net annual expense incurred in the existing painting process, DMI, Inc. shall convert its present paint deck operations to the use of that paint within 180 days after the final successful testing of such a paint; and~~

- e) ~~This Section shall expire within 180 days after final successful testing of a compliant paint in accordance with subsection (d) above, or on January 1, 2000, whichever is earlier, at which time DMI, Inc. shall comply with the provisions that generally apply to VOM emissions.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

SUBPART H: SPECIAL LIMITATIONS FOR SOURCES IN MAJOR URBANIZED AREAS WHICH ARE NONATTAINMENT FOR OZONE

Section 215.240 Applicability

~~Despite~~Notwithstanding any other limitations or exceptions in this Part ~~215~~, the ~~special~~ requirements of this Subpart ~~shall~~ apply to the affected sources in ~~the following counties~~; Cook, DuPage, Kane, Lake, Macoupin, Madison, McHenry, Monroe, St. Clair, and Will Counties.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.241 External Floating Roofs

~~Section~~The requirements of subsection 215.124(a) ~~doesshall~~ not apply to any stationary storage tank equipped with an external floating roof:

- a) Exempted under Section 215.123(a)(2) through (a)(6);
- b) Of welded construction equipped with a metallic-type shoe seal ~~with~~having a secondary seal from the top of the shoe seal to the tank wall (shoe-mounted secondary seal);
- c) Of welded construction equipped with a metallic type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid-filled-type seal, or other closure device of equivalent control efficiency approved by the Agency, in which a petroleum liquid with a true vapor pressure less than 27.6 kPa (4.0 psia) at 294.3 K (70 °F)~~(70 F)~~ is stored; or
- d) Used to store crude oil with a pour point of (50 °F)~~50 F~~ or higher as determined by ASTM Standard D97-17b (2022),~~D97-66~~ incorporated by reference in Section 215.105.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.245 Flexographic and Rotogravure Printing

- a) ~~The limitations of~~ Subpart P ~~applies~~shall apply unless the facility's aggregate uncontrolled VOM emissions from a rotogravure ~~and/or~~ flexographic printing press, ~~or both, emissions of volatile organic material~~ are limited by operating

permit conditions to 90.7 Mg (100 ~~T~~tons) per year or less in the absence of air pollution control equipment, or whose actual emissions in the absence of air pollution control equipment would be less than or equal to 90.7 Mg (100 ~~T~~tons) per year when averaged over the preceding three calendar years.

- b) If an owner or operator of a packaging rotogravure printing press proposes to comply with ~~the limitations of~~ Section 215.401 ~~underpursuant to~~ subsection (d) of that Section, then the combined capture and control system must overall reduce VOM~~provide an overall reduction in volatile organic material~~ emissions by~~at~~ least 65%~~percent~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.249 Compliance Dates

Sources subject to this Subpart H ~~must~~shall comply with the applicable limitations within one year ~~of after June 29, 1987, the effective date of the subpart~~ or by December 31, 1987, whichever is sooner.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART I: ADJUSTED RACT EMISSIONS LIMITATIONS

Section 215.260 Applicability (Repealed)

~~Owners and operators of emission sources subject to Subparts PP, QQ, or RR may petition the Illinois Pollution Control Board for an Adjusted Reasonably Available Control Technology (RACT) Emissions Limitation for such emission sources. Owners and operators of emissions sources which are in existence on the effective date of this Subpart shall submit to the Illinois Pollution Control Board a Notice of Intent to Petition for an Adjusted RACT Emissions Limitation within 60 days after the effective date of this Subpart. Petitions for an Adjusted RACT Emissions Limitation shall be filed within 120 days after the effective date of this Subpart or at the time a construction permit is applied for from the Agency for the emission source, or 60 days after the time an emission source meets the applicability criteria set forth in such Subparts. For the purposes of this Subpart, uncontrolled volatile organic material emissions are the emissions of volatile organic material which would result if no air pollution control equipment were used.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.261 Petition (Repealed)

~~A petition for an Adjusted RACT Emission Limitation shall contain:~~

- a) ~~A specific proposal of, and support for, an Adjusted RACT Emissions Limitation which would apply to the emission source that is the subject of the petition as well~~

~~as a showing at a hearing held pursuant to Section 28,1 of the Environmental protection Act (Act) that the application of the applicable limits of Section 215.926(a)(1) and (2), 215.946(a)(1) or 215.966(a)(1) would be technically infeasible or economically unreasonable for that emission source.~~

- ~~b) Information on the technical feasibility of reducing emissions of volatile organic material from the emission source including, but not limited to:
 - ~~1) A complete description of the operations of the emission source.~~
 - ~~2) A discussion of all available compliance strategies for achieving the emissions reduction prescribed by the applicable section and the technical feasibility of each compliance strategy.~~
 - ~~3) Comparisons of the nature and quantity of uncontrolled emissions to:
 - ~~A) Emissions reductions which would be achieved pursuant to the applicable Section for each compliance strategy listed in Section 215.261(b)(2); and~~
 - ~~B) Emissions reduction which would be achieved pursuant to the proposed Adjusted RACT Emissions Limitation.~~~~
 - ~~4) The basis for determining that the proposed method of emissions reduction is RACT for the that emission source and all information supporting that determination.~~~~
- ~~e) Information on the economic reasonableness of reducing emissions of volatile organic material from the emission source including, but not limited to:
 - ~~1) A comparison of the relative costs of achieving the emissions reduction pursuant to Section 215.926(a)(9) and (2), 215.946(a)(1) or 215.966(a)(1) and pursuant to the proposed Adjusted RACT Emissions Limitation including for each compliance strategy:
 - ~~A) Capital costs;~~
 - ~~B) Operating costs;~~
 - ~~C) Any economic benefits, such as material recovery; and~~
 - ~~D) Other costs and benefits.~~~~
 - ~~2) An evaluation of the cost effectiveness in terms of annualized net cost per ton of volatile organic material reduction for each compliance strategy. Volatile organic material reduction is the amount of uncontrolled volatile~~~~

~~organic material emissions less the amount of volatile organic material emissions after controls.~~

- ~~3) — An evaluation of the effects of the cost of achieving emissions reduction in relation to:
 - ~~A) — The annualized capital and operating budgets of the emission source over the most recent five year period; and~~
 - ~~B) — Such other costs and economic information as the petitioner believes may assist the Board in reaching a decision.~~~~
- ~~4) — A discussion of other factors the petitioner may consider relevant such as:
 - ~~A) — Age of facility;~~
 - ~~B) — Quantity of emissions;~~
 - ~~C) — Nature of emissions;~~
 - ~~D) — Severity of existing air quality problems;~~
 - ~~E) — Extent of controls present;~~
 - ~~F) — Comparability to standard industry practice in related industries;~~
 - ~~G) — Cross media impacts; or~~
 - ~~H) — Potential for operational modifications~~~~
- ~~5) — The basis for determining that the proposed method of emissions reduction is RACT for the emission source and all information supporting that determination.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.263 Public Hearing (Repealed)

~~In a public hearing before the Board noticed and held pursuant to the requirements of Section 28.1 of th Act, the petitioner for an Adjusted RACT Emissions Limitation shall prove:~~

- ~~a) — That the emissions limitation prescribed pursuant to Section 215.926(a)(1) and (2), 215.946(a)(1) or 215.966(a)(1) does not constitute RACT for the specific emission source; and~~
- ~~b) — That compliance with the proposed Adjusted RACT Emissions Limitation:~~

- 1) ~~Is RACT for that emission source based on the information provided in the petition and at the hearing addressing subject described in Sections 215.261 and~~
- 2) ~~Will not cause or contribute to an increase in emissions so as to prevent or interfere with the State's attainment of the air quality standards set forth in 35 Ill. Adm. Code 243.123 and 243.125.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.264 Board Action (Repealed)

~~The Board shall issue and maintain opinions and orders pursuant to the requirements of Section 28.1 of the Act. In addition, the Board shall publish a list of its determinations in accordance with Section 28.1 of the Act. If an owner or operator of an emission source meets the requirements of Sections 215.261 and 215.263 the Board may establish an Adjusted RACT Emissions Limitation. Such Adjusted RACT Emissions Limitation:~~

- a) ~~Shall substitute for that limitation otherwise prescribed by Section 215.926(a)(1) and (2), 215.946(a)(1) or 215.966(a)(1) and~~
- b) ~~Shall require compliance by a date certain as established by the Board for an existing source or prior to the operation of a new emission source.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.267 Agency Petition (Repealed)

~~The Agency may petition the Board for an Adjusted RACT Emission Limitation for an emission source subject to this Subpart at any time after the effective date of this Subpart. The provisions of Sections 215.261, 215.263, and 215.264 shall apply to such petitions.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

SUBPART K: USE OF ORGANIC MATERIAL

Section 215.301 Use of Organic Material

~~A~~No person ~~must not~~shall cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission source, except under as provided in Sections 215.302, 215.303, 215.304, ~~and the following exception:~~ If no odor nuisance exists, then the ~~limitations~~limitation of this Subpart ~~shall~~ apply only to photochemically reactive material.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.302 Alternative Standard

- a) Emissions of organic material exceeding those permitted by Section 215.301 are allowable if the emissions are controlled by one of the following methods:
- 1) Flame, thermal, or catalytic incineration ~~that reduces so as to either reduce~~ the emissions to 10 ppm equivalent methane (molecular weight 16) or less or ~~convert~~ ~~convert~~ 85% ~~percent~~ of the hydrocarbons to carbon dioxide and water;
 - 2) A vapor recovery system that adsorbs or condenses at least 85% ~~percent~~ of the total uncontrolled organic material that would otherwise be emitted to the atmosphere; or,
 - 3) Any other air pollution control equipment approved by the Agency capable of reducing by ~~at least~~ 85% ~~percent or more~~ the uncontrolled organic material that would otherwise be emitted to the atmosphere.
- b) Compliance with the emissions standard in Section 215.301 during startup of the emission unit designated Kiln 1 or Kiln 2 at the petroleum coke calcining facility ~~located~~ in Robinson, Illinois, must be determined by the average of hourly emissions of organic material during startup of Kiln 1 or Kiln 2 over an averaging period of ~~up to no more than~~ 12 hours. For the alternative standard in this subsection (b), "startup" means the time from when green coke feed is first introduced into the kiln until the temperature at the pyroscrubber inlet servicing the kiln achieves a minimum operating temperature of 1,800 °F (based on a ~~three-hour~~ ~~3-hour~~ rolling average). During startup, the owner or operator must:
- 1) ~~Minimize~~ ~~minimize~~ emissions to the extent practicable;
 - 2) ~~Not~~ ~~not~~ introduce green coke into the kiln until a minimum operating temperature of 400 °F measured at the inlet to the pyroscrubber is achieved; and
 - 3) ~~Operate~~ ~~operate~~ the natural gas-fired burners to minimize the duration of startup, consistent with technological limitations, manufacturer specifications, and good air pollution control practices for minimizing emissions.
- c) The owner or operator that is subject to subsection (b) must keep and maintain all records necessary to demonstrate compliance with that subsection, including records of the duration and frequency of each startup.

(Source: Amended at 50 Ill. Reg. 13729, effective August 30, 2024)

Section 215.303 Fuel Combustion Emission Sources

~~The provisions of~~ Sections 215.301 and 215.302 ~~do~~shall not apply to fuel combustion emission sources.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.304 Operations with Compliance Program

~~Sections~~~~The provisions of Section~~ 215.301 and 215.302 ~~do~~shall not apply to any owner, operator, user, or manufacturer of paint, varnish, lacquer, coatings, or printing ink whose compliance program and project completion schedule, as required by 35 Ill. Adm. Code 201, provides for ~~reducing the reduction of~~ organic material used in ~~that such~~ process to 20% ~~percent~~ or less of total volume by May 30, 1975.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART N: VEGETABLE OIL PROCESSING

Section 215.340 Hexane Extraction Soybean Crushing (Repealed)

~~The owner or operator of a hexane extraction soybean crushing source, which would emit volatile organic material in excess of 100 tons per year in the absence of pollution control equipment or enforceable operating permit limitation, shall not cause or allow emissions to exceed:~~

- ~~a) — 0.0026 lbs of volatile organic material per pound of conventional soybean crush, and~~
- ~~b) — 0.0052 lbs of volatile organic material per pound of specialty soybean crush.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.342 Hexane Extraction Corn Oil Processing (Repealed)

~~The owner or operator of a hexane extraction corn oil source, which would emit volatile organic material in excess of 100 tons per year in the absence of control equipment or enforceable operating permit limitation, shall not cause or allow emissions to exceed more than 2.2 gals of volatile organic material per ton of raw corn germ processed.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.344 Recordkeeping For Vegetable Oil Processes (Repealed)

- ~~a) — The owner or operator of sources subject to Section 215.340 and 215.342 shall maintain daily records of solvent storage inventory, and conventional and specialty soybean crush or raw corn germ. Each day the total decrease in solvent~~

~~storage inventory, and total conventional and specialty soybean crush or raw corn germ for the previous 180 days shall be calculated.~~

- ~~b) The Agency shall have access to records required under this Section upon reasonable notice.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.345 Compliance Determination (Repealed)

- ~~a) Each day, the owner or operator of sources subject to Section 215.340 shall calculate the sum of:~~
- ~~1) total conventional soybean crush for the previous 180 days, in pounds, multiplied by 0.0026, plus~~
 - ~~2) total specialty soybean crush for the previous 180 days, in pounds, multiplied by 0.0052.~~
- ~~b) Each day, the owner or operator of sources subject to Section 215.342 shall calculate the sum of the total raw corn germ processed for the previous 180 days, in tons multiplied by 2.2.~~
- ~~c) If such sum is less than the total decrease in solvent storage inventory over the previous 180 days, then the provisions of Section 215.340 or 215.342, whichever is applicable, shall be deemed to have been exceeded.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.346 Compliance Dates and Geographical Areas (Repealed)

- ~~a) Except as otherwise stated in subsection (b), every owner or operator of an emission source subject to Sections 215.340 through 215.345 shall comply with the standards and limitations of those Sections by December 31, 1985.~~
- ~~b) If an emission source is not located in one of the counties listed below, the owner or operator of the emission source shall comply with the requirements of Sections 215.340 through 215.345 no later than December 31, 1987:~~

~~Bond~~	~~Madison~~
~~Clinton~~	~~McHenry~~
~~Cook~~	~~Monroe~~
~~DeKalb~~	~~Montgomery~~
~~DuPage~~	~~Morgan~~
~~Franklin~~	~~Pope~~
~~Greene~~	~~Randolph~~

Jackson	Saline
Jersey	Sangamon
Johnson	St. Clair
Kane	Union
Kendall	Washington
Lake	Will
Macoupin	Williamson

(BOARD NOTE: The USEPA noted in its redesignation rulemaking, that it will publish a rulemaking notice on Williamson County's attainment status. (45 Fed. Reg. 21949, May 16, 1983) Should Williamson County be re-designated as attainment prior to December 31, 1984, it and the counties contiguous to it will be considered deleted from the above list.)

- e) ~~Notwithstanding subsection (b), if any county is redesignated as nonattainment by the USEPA at any time subsequent to the effective date of this Section, the owner or operator of an emission source located in that county or any county contiguous to that county who would otherwise be subject to the compliance date in subsection (b) shall comply with the requirements of Sections 215.340 through 215.345 within one year from the date of redesignation but in no case later than December 31, 1987.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.347 Compliance Plan (Repealed)

- a) ~~The owner or operator of an emission source subject to Section 215.346(a) or (b) shall submit to the Agency a compliance plan, no later than December 31, 1984.~~
- b) ~~The owner or operator of an emission source subject to Section 215.346(c) shall submit a compliance plan within 90 days after the date of redesignation, but in no case later than December 31, 1986.~~
- c) ~~The owner or operator of an emission source subject to Section 215.346(c) shall not be required to submit a compliance plan if redesignation occurs after December 31, 1986.~~
- d) ~~The plan and schedule shall meet the requirements of 35 Ill. Adm. Code 201, Subpart H.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

SUBPART P: PRINTING AND PUBLISHING

Section 215.401 Flexographic and Rotogravure Printing

~~An~~No owner or operator of a packaging rotogravure, publication rotogravure, or flexographic printing press subject to this rule and employing solvent-containing ink ~~must not~~may cause or allow the operation of such press unless:

- a) The volatile fraction of ink as ~~it is~~ applied to the substrate contains 25%~~percent~~ or less by volume of organic solvent and 75%~~percent~~ or more by volume of water; or
- b) The volatile fraction of an ink as ~~it is~~ applied to the substrate, excluding less water, is 40%~~percent~~ or less by volume; or
- c) The owner or operator installs and operates an emission control system and uses a capture system with it, as follows:
 - 1) The emission control system must be:
 - i) A carbon adsorption system which reduces the volatile organic emissions from the capture system by at least 90%~~percent~~ by weight; ~~or~~
 - ii)2) An afterburning system which oxidizes at least 90%~~percent~~ of the captured nonmethane ~~VOMsvolatile organic materials,~~ (measured as total combustible carbon,) to carbon dioxide and water; or
 - iii)3) An alternative ~~VOMvolatile organic material~~ emission reduction system demonstrated to have at least a 90%~~percent~~ overall reduction efficiency and approved by the Agency; ~~and~~
 - 2)d) ~~A capture system is used in conjunction with any of the emission control systems in subsection (c).~~ The design and operation of the capture system used with the emission control system in subsection (c)(1) must be consistent with good engineering practice and ~~must~~shall provide, in combination with the control equipment, an overall reduction in ~~VOMvolatile organic material~~ emissions of at least:
 - i)4) 75%~~percent~~ where a publication rotogravure process is employed; or
 - ii)2) 65%~~percent~~ or the maximum reduction achievable using good engineering design where a packaging rotogravure process is employed; or
 - iii)3) 60%~~percent~~ where a flexographic printing process is employed.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.402 Exemptions

The limitations of this Subpart ~~do shall~~ not apply to any facility whose aggregate uncontrolled VOM emissions from a rotogravure ~~or and/or~~ flexographic printing press, ~~or both, emissions of volatile organic material~~ are limited by operating permit conditions to 907 Mg (1,000 ~~T tons~~) per year or less in the absence of air pollution control equipment, or whose actual emissions in the absence of air pollution control equipment would be less than or equal to 907 Mg (1,000 ~~T tons~~) per year when averaged over the preceding three calendar years.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.403 Applicability of Subpart K

Upon achieving compliance with this Subpart, the emission source is not required to ~~comply with meet~~ Subpart K. Emission sources exempted from this Subpart are subject to Subpart K. ~~Rotogravure Roto-gravure~~ or flexographic equipment used for both roll printing and paper coating are subject to this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.405 Compliance Dates and Geographical Areas

- a) Except as otherwise stated in subsection (b), every owner or operator of an emission source subject to:
 - 1) Section 215.401 ~~must shall~~ comply with its standards and limitations by December 31, 1983; and
 - 2) Section 215.408 ~~must shall~~ comply with its standards and limitations by December 31, 1987.
- b) If an emission source subject to Section 215.401 is not located in one of the counties ~~listed below~~ ~~or and is also not located~~ in any county contiguous ~~to one of them thereto~~, ~~then~~ the owner or operator of the emission source ~~must shall~~ comply with ~~the requirements of~~ this Subpart ~~by no later than~~ December 31, 1987:

Cook	Macoupin
DuPage	Madison
Kane	Monroe
Lake	St. Clair
- c) ~~Despite Notwithstanding~~ subsection (b), if any county is designated as nonattainment by ~~the~~ USEPA at any time ~~after January 21, 1983~~ ~~subsequent to the effective date of this Subpart~~, the owner or operator of an emission source located in that county or any county contiguous to that county who would otherwise be subject to the compliance date in subsection (b) ~~must shall~~ comply with the

requirements of this Subpart within one year from the date of redesignation but ~~by in no case later than~~ December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.406 Alternative Compliance Plan (Repealed)

~~The owner or operator of an emission source subject to this Subpart may in lieu of compliance with Sections 215.405 and 215.407 demonstrate compliance through the use of a low solvent ink program by taking the following actions:~~

- ~~a) — Submit to the Agency a compliance plan, including a compliance completion schedule, by December 31, 1983 which demonstrates:~~
 - ~~1) — Substantial emission reductions early in the compliance schedule;~~
 - ~~2) — Greater reductions in emissions than would have occurred without a low solvent ink program; and~~
 - ~~3) — Final compliance as expeditiously as possible but no later than December 31, 1987; and~~
- ~~b) — Certify to the Agency that:~~
 - ~~1) — A low solvent ink compliance strategy is not technically available which would enable the emission source to achieve compliance by the date specified in Section 215.405; and~~
 - ~~2) — An unreasonable economic burden would be incurred if the owner or operator were required to demonstrate compliance by the date specified in Section 215.405; and~~
- ~~c) — Agree to install one of the control alternatives specified in Section 215.401(e) by June 31, 1986 if the specified low solvent ink strategy fails to achieve scheduled reductions by December 31, 1985.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.407 Compliance Plan (Repealed)

- ~~a) — The owner or operator of an emission source subject to Section 215.405(a)(1) shall submit to the Agency a compliance plan, pursuant to 35 Ill. Adm. Code 201, Subpart H, including a project completion schedule where applicable, no later than April 21, 1983.~~

- b) ~~The owner or operator of an emission source subject to Section 215.405(b) shall submit to the Agency a compliance plan, including a project completion schedule where applicable, no later than December 31, 1986.~~
- c) ~~The owner or operator of an emission source subject to Section 215.405(c) shall submit a compliance plan, including a project completion schedule within 90 days after the date of redesignation, but in no case later than December 31, 1986.~~
- d) ~~Unless the submitted compliance plan or schedule is disapproved by the Agency, the owner or operator of a facility or emission source subject to the rules specified in subsections (a), (b) or (c) may operate the emission source according to the plan and schedule as submitted.~~
- e) ~~The plan and schedule shall meet the requirements of 35 Ill. Adm. Code 201, Subpart H, including specific interim dates as required in 35 Ill. Adm. Code 201.242.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.408 Heatset Web Offset Lithographic Printing

- a) ~~An~~ owner or operator of a heatset web offset lithographic printing facility, located in Cook, DuPage, Kane, Lake, Macoupin, Madison, McHenry, Monroe, St. Clair, or Will County, ~~that emit~~emitting over 100 ~~T~~tons/year of organic material, in the absence of pollution control equipment must not, ~~may~~ cause or allow the operation of a heatset web offset press unless:
 - 1) An incinerator system is installed and operated that oxidizes at least 90% ~~percent~~ of the organic materials, ~~(measured as total combustible carbon,~~ in the dryer exhaust airstream to carbon dioxide and water; or
 - 2) The fountain solution contains no more than 8%~~eight (8) percent~~, by weight, of VOM~~volatile organic material~~, and a condensation recovery system is installed and operated that removes at least 75% ~~percent~~ of the non-isopropyl alcohol organic materials from the dryer exhaust airstream.
- b) ~~An~~ owner or operator of a heatset web offset lithographic printing facility, located in a county other than Cook, DuPage, Kane, Lake, Macoupin, Madison, McHenry, Monroe, St. Clair, or Will ~~County~~, ~~that emit~~emitting over 100 ~~T~~tons/year of organic material, in the absence of pollution control equipment, must not~~may~~ cause or allow the operation of a heatset web offset press unless the fountain solution contains no more than 8%~~eight (8) percent~~, by weight, of VOM~~volatile organic material~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.409 Testing Methods for Volatile Organic Material Content

The ~~VOM~~~~volatile organic material~~ content of fountain solution and all coatings ~~must~~~~shall~~ be determined by Method 24 ~~at~~~~;~~ 40 CFR 60.~~;~~ Appendix A, incorporated by reference in Section 215.105. The ~~VOM~~~~volatile organic material~~ content of printing inks ~~must~~~~shall~~ be determined by Method 24A ~~at~~~~;~~ 40 CFR ~~Part~~~~60~~~~;~~ Appendix A, incorporated by reference in Section 215.105. Any alternate test method must be approved by the Agency, which ~~must~~~~shall~~ consider data comparing the performance of the proposed alternative to the performance of the approved test ~~method or methods~~~~method(s)~~. If the Agency determines that ~~thesesuch~~ data ~~demonstratedemonstrates~~ that the proposed alternative will achieve results equivalent to the approved test ~~method or methods~~~~method(s)~~, the Agency ~~must~~~~shall~~ approve the proposed alternative.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.410 Emissions Testing

- a) Any tests of ~~VOM~~~~volatile organic material~~ emissions, including tests conducted to determine control equipment efficiency or control device destruction efficiency, ~~must~~~~shall~~ be conducted in ~~compliance~~~~accordance~~ with the methods and procedures ~~specified~~ in Section 215.102.
- b) ~~After~~~~Upon~~ a reasonable request by the Agency, the owner or operator of a ~~VOM~~~~volatile organic material~~ emission source required to comply with ~~the limits~~ of this Subpart ~~must~~~~shall~~ conduct emissions testing, at ~~its~~~~his~~ own expense, to demonstrate compliance.
- c) A person planning to conduct a ~~VOM~~~~volatile organic material~~ emissions test to demonstrate compliance with this Subpart ~~must~~~~shall~~ notify the Agency of that intent ~~at least~~~~not less than~~ 30 days before the planned initiation of the ~~test~~~~tests~~ so the Agency may observe the test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART Q: LEAKS FROM SYNTHETIC ORGANIC CHEMICAL AND POLYMER MANUFACTURING EQUIPMENT

Section 215.420 Applicability

~~The provisions of~~ Sections 215.421 through ~~215.428~~~~215.429 of this subpart shall~~ apply to all plants in ~~the State of~~ Illinois which manufacture synthetic organic chemicals and polymers, except those located in ~~any of the following counties:~~ Will, McHenry, Cook, DuPage, Lake, Kane, Madison, St. Clair, Macoupin, and Monroe ~~Counties, to which Sections 215.428 through 215.429 of this subpart shall apply.~~ ~~The provisions of Section 215.430 through 215.439 shall apply to the counties specifically enumerated above.~~ ~~If in addition, if~~ any county is redesignated as ~~nonattainment~~~~non-attainment~~ by the USEPA ~~after~~~~subsequent to~~ December 31, 1987, the owner or operator of a plant located in that county

~~mustshall~~ comply with ~~the requirements of~~ Sections 215.430 through 215.439 upon the effective date of the redesignation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.421 General Requirements

- a) The owner or operator of a plant which has more than 1,500 components in gas or light liquid service ~~that, which components~~ are used to manufacture the synthetic organic chemicals or polymers ~~listed~~ in Appendix D; ~~mustshall~~ conduct leak inspection and repair programs in ~~compliance~~ with this Subpart for ~~that~~ component containing more than 10% VOM ~~percent volatile organic material~~ as determined by ASTM ~~Methods E260-96 (2019), E168-16 (2023), and E169-16 (2022)~~ ~~method E-260, E-168, and E-169~~, incorporated by reference in Section 215.105. The provisions of this Subpart ~~do not apply~~ ~~are not applicable~~ if the products ~~listed~~ in Appendix D are made from natural fatty acids ~~to produce~~ ~~for the production of~~ hexadecyl alcohol.
- b) A component ~~mustshall~~ be considered to be leaking if the ~~VOM~~ ~~volatile organic material~~ concentration exceeds 10,000 ~~parts per million~~ ppm when measured at a distance of 0 ~~centimeters~~ cm from the component as determined by Method 21 ~~at~~ 40 CFR ~~Part 60,~~ Appendix A, incorporated by reference in Section 215.105.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.422 Inspection Program Plan for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 215.421 ~~mustshall~~ prepare an inspection program plan which contains, at a minimum:

- a) An identification of all components and the period in which each will be monitored ~~under~~ ~~pursuant to~~ Section 215.423;
- b) The format for the monitoring log required by Section 215.424;
- c) A description of the monitoring equipment to be used ~~under~~ ~~pursuant to~~ Section 215.423; and
- d) A description of the methods to be used to identify all pipeline valves, pressure relief valves in gaseous service, all leaking components, and the ball and plug valves and pumps exempted under Section 215.423(h) ~~so~~ ~~such that~~ they are obvious and can be located by ~~both~~ plant personnel performing monitoring and Agency personnel performing inspections.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.423 Inspection Program for Leaks

- a) The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 215.420 ~~must~~shall, to detect~~for the purposes of detecting~~ leaks, conduct a component inspection program consistent with the following provisions:-
- 1)a) ~~Annually test~~Test annually those components operated near extreme temperature or pressure ~~that~~such that they would be unsafe to routinely monitor; and ~~those~~ components located more than two meters above or away from permanent worker access structures or surfaces;
- 2)b) Test all other pressure relief valves in gaseous service, pump seals, pipelines valves, process drains, and compressor seals ~~between~~not earlier than March 1 ~~and~~later than June 1 of each year;
- 3)e) If more than 2% ~~percent~~ of the components tested ~~under~~pursuant to subsection (b) are found to leak, re-test between June 1 and September 1 of each year, with methods and procedures approved by the Agency, again ~~test~~ all pressure relief valves in gaseous service, pipeline valves in gaseous service, and compressor seals ~~by methods and procedures approved by the Agency not earlier than June 1 or later than September 1 of each year;~~
- 4)d) Visually observe~~Observe visually~~ all pump seals weekly;
- 5)e) Immediately test~~Test immediately~~ any pump seal from which liquids are observed dripping;
- 6)f) Test any relief valve within 24 hours after it has vented to the atmosphere; and
- 7)g) Immediately test~~Test immediately~~ after repairing~~repair~~ any component that was found leaking.
- b)h) Ball and plug valves, inaccessible valves, storage tank valves, pumps equipped with mechanical seals, and pressure relief devices connected to an operating flare header or vapor recovery device are exempt from the monitoring requirements in this Section.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.424 Repairing Leaks

All leaking components must be repaired and retested as soon as practicable but within~~no later than~~ 21 days after the leak is found, unless the leaking component cannot be repaired until the

process ~~unit~~ is shutdown or the repair part is received. Records of repairing and retesting must be maintained in ~~compliance~~ accordance with Sections 215.424 and 215.425.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.425 Recordkeeping for Leaks

- a) The owner or operator of a synthetic organic chemical or polymer manufacturing plant ~~must~~ shall maintain a monitoring log for leaking components that contains ~~monitoring log which shall contain~~, at a minimum, ~~the following information~~:
 - 1) The name of the process unit where the component is located;
 - 2) The type of component (e.g., valve, seal);
 - 3) The identification number of the component;
 - 4) The date on which a leaking component is discovered;
 - 5) The date on which a leaking component is repaired;
 - 6) The date and instrument reading of the recheck procedure after a leaking component is repaired;
 - 7) A record of calibrating ~~the calibration of~~ the monitoring instrument;
 - 8) The identification number of leaking components which cannot be repaired until process unit shutdown; and
 - 9) The total number of components inspected and the total number of components found leaking during that monitoring period.
- b) Copies of the monitoring log ~~must~~ shall be retained by the owner or operator for at least ~~a minimum of~~ two years after the date on which the record was made or the report prepared.
- c) Copies of the monitoring log ~~must~~ shall be made available to the Agency, upon verbal or written request, at any reasonable time.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.426 Report for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 215.420 ~~must~~ shall:

- a) Submit ~~a report~~ to the Agency ~~before prior to July 1 and October 1~~ the 1st day of July and October a report listing all leaking components identified ~~under pursuant to~~ Section 215.423 but not repaired within 21 days, all leaking components awaiting process unit shutdown, the total number of components inspected, and the total number of components found leaking.
- b) Submit a signed statement with the report attesting that all monitoring and repairs were performed as required under Sections 215.421 through 215.427.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.427 Alternative Program for Leaks

The Agency mustshall approve an alternative program of monitoring, recordkeeping, orand/or reporting, or any combination of them, to that ~~required by~~prescribed in Sections 215.421 through 215.426, ~~after upon a demonstration by~~ the owner or operator of ~~thesuch~~ plant demonstrates that the alternative program will provide plant ~~personnel~~ and Agency personnel with an equivalent ability to identify and repair leaking components. The owner or operator usingutilizing an alternative monitoring program mustshall submit to the Agency an alternative monitoring program plan consistent with ~~the provisions of~~ Section 215.422.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.428 Compliance Dates

Every owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Sections 215.421 through 215.427 mustshall comply with ~~the standards and limitations of~~ those Sections beginning December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.429 Compliance Plan (Repealed)

~~a) — The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 215.428 shall submit to the Agency a compliance plan, no later than December 31, 1987.~~

~~b) — The plan and schedule shall meet the requirements of 35 Ill. Adm. Code 201.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.430 General Requirements

The owner or operator of a plant which processes more than 3,660 Mgmg/yr (4,033 Ttons/year) gaseous and light liquid VOM~~volatile organic material~~, and whose components are used to

manufacture the synthetic organic chemicals or polymers ~~listed~~ in Appendix D, ~~must~~shall comply with Sections 215.430 to 215.439. ~~The provisions of~~ Sections 215.430 to 215.439 ~~apply~~are applicable to components containing 10% ~~percent~~ or more by weight ~~VOM~~volatile organic material as determined by ASTM ~~Methods E 168-16 (2023), E 169-16 (2022), and E 260-96 (2019)~~method E 168, E 169 and E 260, incorporated by reference in Section 215.105. ~~Components~~These components that are not process unit components are exempt from Sections 215.430 to 215.439. A component ~~must~~shall be considered to be leaking if the ~~VOM~~volatile organic material is equal to, ~~or is~~ greater than 10,000 ppmv as methane or hexane as determined by USEPA Reference Method 21 ~~at, as specified at~~ 40 CFR 60, Appendix A, incorporated by reference in Section 215.105, ~~and there is an~~ indication of liquids dripping, ~~or indication by a~~ sensor that a seal or barrier fluid system has failed. The provisions of this Subpart ~~do not apply~~are not applicable if the equipment components are used to produce heavy liquid chemicals only from heavy liquid feed or raw materials.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.431 Inspection Program Plan for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 215.430 ~~must~~shall prepare an inspection program plan which contains, at a minimum:

- a) An identification of all components and the period in which each will be monitored ~~under~~pursuant to Section 215.432.
- b) The format for the monitoring log required by Section 215.434.
- c) A description of the monitoring equipment to be used when complying with Section 215.432, and
- d) A description of the methods to be used to identify all pipeline valves, pressure relief valves in gaseous service, all leaking components, and components exempted under Section 215.432(i) ~~so~~such that they are obvious and can be located by both plant personnel performing monitoring and Agency personnel performing inspections.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.432 Inspection Program for Leaks

- a) _____ The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to ~~Sections~~Section 215.430 through 215.439 ~~must, to detect~~shall for the purpose of detecting leaks, conduct a component inspection program ~~using~~utilizing the test methods ~~specified~~ in USEPA Reference Method 21 ~~at~~, 40 CFR 60, Appendix A ~~(1986)~~, incorporated by reference in Section 215.105, consistent with the following ~~provisions~~:

- 1)a) ~~Annually test~~Test annually these components operated near extreme temperature or pressure ~~that such that they~~ would be unsafe to routinely monitor; and ~~these~~ components located more than two meters above permanent worker access structures or surfaces;
 - 2)b) ~~Quarterly test~~Test quarterly all other pressure relief valves in gas service, pumps in light liquid service, valves in light liquid service and in gas service, and compressors;-
 - 3)e) If ~~testing under subsection (b) shows that, for five consecutive quarters, 2% or less less than or equal to 2 percent~~ of the valves in light liquid service and in gas service ~~tested under pursuant to subsection (b) are found leaking not to leak for 5 consecutive quarters, then no~~ leak tests ~~are shall be not~~ required for three consecutive quarters. ~~Afterwards~~Thereafter, leak tests ~~must shall~~ resume for the next quarter. If ~~this next that~~ test shows ~~that 2% or less less than or equal to 2 percent~~ of the valves in light liquid service and in gas service are leaking, then ~~no~~ tests are ~~not~~ required for the next ~~three 3~~ quarters. If more than ~~2% percent~~ are leaking, then tests are required for the next ~~five 5~~ quarters;-
 - 4)d) ~~Visually observe~~Observe visually all pump seals weekly;-
 - 5)e) ~~Immediately test~~Test immediately any pump seal in light liquid service from which liquids are observed dripping;-
 - 6)f) Test any relief valve within 24 hours after it has vented to the atmosphere;-
 - 7)g) Routine instrument monitoring of valves which are not externally regulated, flanges, and components in heavy liquid service; is not required. However, any valve which is not externally regulated, flange, or component in heavy liquid service that is found to be leaking ~~based on~~~~the basis of~~ sight, smell, or sound ~~must shall~~ be repaired as soon as practicable but ~~within no later than~~ 30 days after the leak is found;-
 - 8)h) ~~Immediately test~~Test immediately after ~~repairing~~repair any component that was found leaking; and-
 - 9)i) Within ~~one 1~~ hour of its detection, a weatherproof, readily visible tag, in bright colors such as red or yellow, bearing an identification number and the date on which the leak was detected, must be affixed on the leaking component and remain in place until the leaking component is repaired.
- b)j) Any component ~~that is~~ in vacuum service or any pressure relief devices connected to an operating flare header or ~~to a~~ vapor recovery devices is exempt from the monitoring requirements in this Section.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.433 Repairing Leaks

All leaking components must be repaired and retested as soon as practicable but ~~within no later than~~ 15 days after the leak is found, unless the leaking component cannot be repaired until the process unit is shut down. Records of repairing and retesting must be maintained in ~~compliance~~~~accordance~~ with ~~Sections~~~~Section~~ 215.434 and 215.435.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.434 Recordkeeping for Leaks

- a) The owner or operator of a synthetic organic chemical or polymer manufacturing plant ~~must~~~~shall~~ maintain a monitoring log for leaking components which contains ~~monitoring log, which shall contain~~, at a minimum, ~~the following information~~:
 - 1) The name of the process unit where the component is located;
 - 2) The type of component (e.g., valve, seal);
 - 3) The identification number of the component;
 - 4) The date on which a leaking component is discovered;
 - 5) The date on which a leaking component is repaired;
 - 6) The date and instrument reading of the recheck procedure after a leaking component is repaired;
 - 7) A record of the calibration of the monitoring instrument;
 - 8) The identification number of leaking components which cannot be repaired until process unit shutdown; and
 - 9) The total number of valves in light liquid service and in gas service inspected and; the total number and ~~the~~ percentage of these valves found leaking during the monitoring period.
- b) Copies of the monitoring log ~~must~~~~shall~~ be retained by the owner or operator for at least a minimum of two years after the date on which the record was made or the report was prepared.
- c) Copies of the monitoring log ~~must~~~~shall~~ be made available to the Agency upon verbal or written request ~~before~~~~prior to~~ or at the time of inspection ~~under~~~~pursuant~~

~~to~~ Section 4(d) of the Environmental Protection Act ~~[415 ILCS 5/4(d)](Act) (Ill. Rev. Stat. 1985, ch. 111 1/2, pars. 1001 et seq.,~~ at any reasonable time.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.435 Report for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to ~~Sections~~Section 215.430 through 215.439 ~~must~~shall:

- a) Submit quarterly reports to the Agency on or before March 31, June 30, September 30, and December 31 of each year; listing all leaking components identified ~~under~~pursuant to Section 215.432 but not repaired within 15 days, all leaking components awaiting process unit shutdown, the total number of components inspected, the type of components inspected, ~~and~~ the total number of components found leaking, the total number of valves in light liquid service and in gas service inspected, and the number and percentage of valves in light liquid service and in gas service found leaking.
- B) Submit a signed statement with the report attesting that all monitoring and repairs were ~~performed~~performed as required under ~~Sections~~Section 215.430 through 215.436.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.436 Alternative Program for Leaks

The Agency ~~must~~shall approve an alternative program of monitoring, recordkeeping, or reporting to that ~~underprescribed in~~ Sections 215.430 through 215.438, ~~after the owner or operator of a plant demonstrates upon a demonstration by the owner or operator of such plant~~ that the alternative program will provide plant ~~personnel~~ and Agency personnel with ~~thean~~ ability ~~to identify and repair leaking components~~ equivalent to the monitoring, recordkeeping, or reporting requirements of this Part ~~to identify and repair leaking components~~. The owner or operator ~~using~~utilizing an alternative monitoring program ~~must~~shall submit to the Agency an alternative monitoring program plan consistent with ~~the provisions of~~ Section 215.431.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.437 Open-Ended Valves

- a) Each open-ended valve ~~must~~shall be equipped with a cap, blind flange, plug, or a second valve, except during operations requiring fluid flow through the open-ended valve.

- b) Each open-ended valve equipped with a second valve mustshall be operated so in a manner such that the valve on the process fluid end is closed before the second valve is closed.
- c) Components which are open-ended valves and which serve as a sampling connection mustshall be controlled so such that:
 - 1) A closed purge system or closed vent system returnsshall return purged process fluid to the process line with no detectable VOMvolatile organic material emissions to the atmosphere; or
 - 2) A closed purge system or closed vent system collectsshall collect and recyclesrecycle purged process fluid to the process line with no detectable VOMvolatile organic material emissions to the atmosphere; or
 - 3) Purged process fluid issshall be transported to a control device that complies with the requirements of Section 215.438.
- d) In-situ sampling systems are exempt from subsection (c).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.438 Standards for Control Devices

Control devices used to comply with Section 215.437(c) mustshall comply with following:

- a) If the control device is a vapor recovery system (for example, condensers and adsorbers) it mustshall be designed and operated to recover the VOMvolatile organic material emissions vented to it with a 95%an efficiency of 95 percent or greater efficiency.
- b) If the control device is an enclosed combustion device, it mustshall be designed and operated to reduce the VOMvolatile organic material emissions vented to it with a 95%an efficiency of 95 percent or greater efficiency, or to provide a minimum residence time of 0.75 seconds at a minimum temperature of (816 °C)816°C.
- c) If the control device is a flare, it mustshall:
 - 1) Be designed for and operated with no visible emissions as determined by USEPA Reference Method 22 at, 40 CFR 60.5-Appendix A, 1986, incorporated by reference in Section 215.105, except for periods up to not to exceed a total of five5 minutes during any two2 consecutive hours.

- 2) Be operated with a pilot flame present at all times and ~~shall~~ be monitored with a thermocouple or any other equivalent device to detect the presence of the pilot flame.
- 3) Be steam-assisted, air assisted, or nonassisted.
- 4) Be used only with the net heating value of the gas being combusted being 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam-assisted or air-assisted; or with the net heating value of the gas being combusted being 7.45 MJ/scm or greater if the flare is nonassisted. The net heating value of the gas being combusted ~~must~~ be calculated using the following equation:

$$H_r = K \sum_{i=1}^n C_i H_i$$

Where:

H_r = Net heating value of the sample, MJ/scm: where the net enthalpy per mole of offgas is based on combustion at ~~25 °C~~ ~~25° C~~ and 760 mm Hg, but the standard temperature ~~to determine for determining~~ the value corresponding to one mole is ~~20 °C~~ ~~20° C~~.

K = Constant,

1.740×10^{-7} (1/ppm)(~~(g/mole)/scm~~ ~~g/mole/scm~~)(MJ/kcal)

where

standard temperature for (g mole/scm) is ~~20 °C~~ ~~20° C~~.

C_i = Concentration of sample component i , in ppm, as measured by USEPA Reference Method 18 ~~at~~, 40 CFR 60.5, Appendix A ~~(1986)~~, and ASTM D 2504-83, ~~both~~ incorporated by reference in Section 215.105.

H_i = Net heat of combustion of sample component i , kcal/g mole. ~~The heats of combustion may be determined using ASTM D 2382-83, incorporated by reference in Section 215.105, if published values are not available or cannot be calculated.~~

- 5) Steam-assisted and nonassisted flares ~~must~~ be designed and operated with an exit velocity, as determined by dividing the volumetric flowrate (in units of standard temperature and pressure), as determined by USEPA Reference Method 2 or 2A ~~at~~, 40 CFR 60.5, Appendix A ~~(1986)~~,

incorporated by reference in Section 215.105, as appropriate; by the unobstructed (free) ~~cross-sectional~~ cross-sectional area of the flare tip, less than 18 m/sec (60 ft/sec.).

- 6) Air-assisted flares must~~shall~~ be designed and operated with an exit velocity less than the maximum permitted velocity, $V_{\max}$, as determined by the following equation:

$$V_{\max} = 8.706 + 0.7084(H_r)$$

$V_{\max}$ = Maximum permitted velocity, m/sec.

8.706 = Constant.

0.7084 = Constant.

H_r = The net heating value as determined in subsection (c)(4) ~~of this section.~~

- d) If the control device is a closed container, it must~~shall~~ be designed and operated to reduce the ~~VOM~~volatile organic material emissions, vented from purged process fluid after transfer, to no detectable ~~VOM~~volatile organic material emissions as determined by USEPA Reference Method 21 ~~at as specified at~~ 40 CFR 60. ~~Appendix A (1986)~~, incorporated by reference in Section 215.105. For ~~purposes of~~ this Section, the phrase "after transfer" ~~means~~shall refer to the time at which the entire amount of purged process fluid resulting from ~~a~~ flushing or clearing ~~of~~ the sample line enters the closed container or containers, including the final container or containers, before~~container(s) prior to~~ disposal.
- e) The owner or operator of a control device must~~shall~~ monitor the control device to ensure ~~that~~ it is operated and maintained in ~~compliance~~conformance with the manufacturer's specifications, modified to the particular process design.
- f) The control device must~~shall~~ be operated at all times when emissions may be vented to it.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.439 Compliance Date

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Sections 215.430 through 215.439 must~~shall~~ comply with ~~the standards and limitations of~~ those Sections ~~by no later than~~ December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART R: PETROLEUM REFINING AND RELATED INDUSTRIES; ASPHALT MATERIALS

Section 215.441 Petroleum Refinery Waste Gas Disposal

- a) Except ~~under as provided in subsections~~ (b) or (c), ~~an~~ person must not ~~shall~~ cause or allow the discharge of organic materials ~~exceeding in excess of~~ 100 ppm equivalent methane (molecular weight 16.0) into the atmosphere from:
- 1) Any catalyst regenerator of a petroleum cracking system; ~~or~~
 - 2) Any petroleum fluid coker; or
 - 3) Any other waste gas stream from any petroleum or petrochemical manufacturing process.
- b) Exception. Existing sources subject to subsection (a)(3) may, ~~alternatively, at their election,~~ comply with the organic material emission limitations ~~under imposed by~~ Section 215.301 or 215.302. ~~However, provided, however, that~~ there must not ~~shall~~ be no increase in emissions from ~~those such~~ sources above the level of emissions in existence on May 3, 1979.
- c) New Sources. Sources subject to subsection (a)(3), construction of which commenced on or after January 1, 1977, may, ~~at their election,~~ comply with the following emission limitations:
- 1) A maximum of 8 lbs/h~~eight pounds per hour~~ of organic material; or
 - 2) Emission of organic material ~~exceeding in excess of~~ the limitation of subsection (c)(1) is allowable ~~if those is such~~ emissions are controlled by air pollution control methods or equipment approved by the Agency capable of reducing by at least 85%~~percent or more~~ the uncontrolled organic material that would otherwise be emitted to the atmosphere.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.442 Vacuum Producing Systems

~~An~~ owner or operator of a petroleum refinery must not ~~shall~~ cause or allow the operation of any vacuum producing system unless the condensers, hot wells, and accumulators of ~~the any such~~ system are equipped with vapor loss control equipment, including, ~~but not limited to,~~ piping, valves, flame arrestors, and hot well covers, to vent any VOM~~volatile organic material~~ with a vapor pressure of 10.34 kPa (1.5 psia) or greater at 294.3 K (70 °F)~~(70 F)~~ to a heater, fire box, flare, refinery fuel gas system, or other equipment or system of equal emission control as approved by the Agency. This Section does not ~~shall~~ apply to vacuum producing systems on lube units.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.443 Wastewater (Oil/Water) Separator

~~An~~No owner or operator of a petroleum refinery ~~must not~~shall operate any wastewater (oil/water) separator at a petroleum refinery unless the separator is equipped with air pollution control equipment capable of reducing by at least 85%~~percent or more~~ the uncontrolled organic material emitted to the atmosphere. If no odor nuisance exists, ~~the limitation of~~ this Section ~~does~~shall not apply if the vapor pressure of the organic material is below 10.34 kPa (1.5 psia) at 204.3 K ~~(70 °F)~~(70 F) at all times.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.444 Process Unit Turnarounds

- a) ~~An~~No owner or operator of a petroleum refinery ~~must not~~shall cause or allow a refinery process unit turnaround except in compliance with an operating procedure ~~as~~ approved by the Agency.
- b) Unless a procedure is already on file with the Agency as part of an approved operating permit ~~by no later than~~ November 1, 1979, the owner or operator of a petroleum refinery ~~must~~shall submit to the Agency for approval a detailed procedure to reduce VOM~~for reducing emissions of volatile organic material~~ during refinery process unit turnarounds from organic material with a vapor pressure of 10.34 kPa (1.5 psia) or greater at 294.3 K ~~(70 °F)~~(70 F). The Agency ~~must~~shall not approve the procedure unless it provides for:
 - 1) Depressurization of the refinery process unit or vessel to a flare, refinery fuel gas system, or other equipment or system of equal emission control; ~~as~~ approved by the Agency, until the internal pressure from the vessel or unit is less than 5.0 psig before allowing the vessel to be vented to the atmosphere;
 - 2) Recordkeeping of the following items:
 - A) Each date that a refinery unit or vessel is shut down; and
 - B) The total estimated quantity of VOM~~volatile organic material~~ emitted to the atmosphere and the duration of the emission in hours.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.445 Leaks: General Requirements

- a) The owner or operator of a petroleum refinery ~~must~~shall:

- 1) Develop a monitoring program plan consistent with ~~the provisions of~~ Section 215.446;
 - 2) Conduct a monitoring program consistent with ~~the provisions of~~ Section 215.447;
 - 3) Conduct all tests for leaks in ~~compliance~~ ~~accordance~~ with Method 21 ~~at~~, 40 CFR 60.5, Appendix A, incorporated by reference in Section 215.105;
 - 4) Record all leaking components which have a ~~VOM~~ ~~volatile organic material~~ concentration exceeding 10,000 ppm consistent with ~~the provisions of~~ Section 215.448;
 - 5) Identify each component consistent with the monitoring program plan submitted ~~under~~ ~~pursuant to~~ Section 215.446;
 - 6) Repair and retest the leaking components as soon as possible within 22 days after the leak is found, but ~~by no later than~~ June 1 for ~~the purposes of~~ Section 215.447(a)(1), unless the leaking components cannot be repaired until the unit is shut down for turnaround; and
 - 7) Report to the Agency consistent with ~~the provisions of~~ Section 215.449.
- b) A component ~~is~~ ~~shall be~~ considered to be leaking if the ~~VOM~~ ~~volatile organic material~~ concentration exceeds 10,000 ppm when measured at a distance of 0 cm from the component ~~under~~ ~~as determined by~~ Method 21 ~~at~~, 40 CFR 60.5, Appendix A, incorporated by reference in Section 215.105.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.446 Monitoring Program Plan for Leaks

The owner or operator of a petroleum refinery ~~must~~ ~~shall~~ prepare a monitoring program plan which contains, at a minimum:

- a) An identification of all refinery components and the period in which each will be monitored ~~under~~ ~~pursuant to~~ Section 215.447;
- b) The format for the monitoring log required by Section 215.448;
- c) A description of the monitoring equipment to be used ~~under~~ ~~pursuant to~~ Section 215.447; and
- d) A description of the methods to be used to identify all pipeline valves, pressure relief valves in gaseous service, and all leaking components ~~so~~ ~~such that~~ they are

obvious to ~~both~~ refinery personnel performing monitoring and Agency personnel performing inspections.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.447 Monitoring Program for Leaks

- a) The owner or operator of a petroleum refinery subject to Section 215.445 ~~must~~shall, to detect~~for the purpose of detecting~~ leaks, conduct a component monitoring program consistent with the following ~~provisions~~:
- 1) Test all pressure relief valves in gaseous service, pump seals, pipeline valves, process drains, and compressor seals between March 1 and June 1 of each year by methods and procedures approved by the Agency ~~not earlier than March 1 or later than June 1 of each year~~;
 - 2) ~~Re-test~~Again test all pressure relief valves in gaseous service, pipeline valves in gaseous service, and compressor seals between June 1 and August 1 of each year by methods and procedures approved by the Agency ~~not earlier than June 1 or later than August 1 of each year~~;
 - 3) Visually observe~~Observe visually~~ all pump seals weekly;
 - 4) Immediately test~~Test immediately~~ any pump seal from which liquids are observed dripping;
 - 5) Test any relief valve within 24 hours after it has vented to the atmosphere; and
 - 6) Immediately test~~Test immediately~~ after repairing~~repair~~ any component that was found leaking.
- b) Inaccessible valves, storage tank valves, and pressure relief devices connected to an operating flare header or vapor recovery device are exempt from the monitoring requirements in Subsection (a).
- c) The Agency may require more frequent monitoring than ~~would otherwise be~~ required by subsection~~Subsection~~ (a) for components with a ~~which are~~ demonstrated ~~to have a~~ history of leaking.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.448 Recordkeeping for Leaks

- a) The owner or operator of a petroleum refinery ~~must~~ maintain a monitoring log for leaking components ~~which contains, monitoring log which must~~ contain, at a minimum, ~~the following information~~:
 - 1) The name of the process unit where the component is located;
 - 2) The type of component (e.g., valve, seal);
 - 3) The identification number of the component;
 - 4) The date on which a leaking component is discovered;
 - 5) The date on which a leaking component is repaired;
 - 6) The date and instrument reading of the recheck procedure after a leaking component is repaired;
 - 7) A record of the calibration of the monitoring instrument;
 - 8) The identification number of leaking components which cannot be repaired until turnaround~~turn-around~~; and
 - 9) The total number of components inspected and the total number of components found leaking during that monitoring period.
- b) Copies of the monitoring log ~~must~~ be retained by the owner or operator for at least a minimum of two years after the date on which the record was made or the report prepared.
- c) Copies of the monitoring log ~~must~~ be made available to the Agency, upon verbal or written request, at any reasonable time.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.449 Reporting for Leaks

The owner or operator of a petroleum refinery ~~must~~:

- a) Submit ~~a report~~ to the Agency ~~before~~prior to July 1 and September 1~~the 1st day of both July and September~~ a report listing all leaking components identified ~~under~~pursuant to Section 215.447 but not repaired within 22 days, all leaking components awaiting unit turnaround, the total number of components inspected, and the total number of components found leaking.;
- b) Submit a signed statement with the report attesting that all monitoring and repairs were performed as required under Sections 215.445 through 215.448.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.450 Alternative Program for Leaks

The Agency may approve an alternative program of monitoring, recordkeeping, ~~or and/or~~ reporting, ~~or any combination of them~~ to that ~~required by~~ ~~prescribed in~~ Sections 215.446 through 215.449, ~~after the owner or operator~~ ~~upon a demonstration by the owner or operator~~ of a petroleum refinery ~~demonstrates~~ that the alternative program will provide refinery and Agency personnel with an equivalent ability to identify and repair leaking components. The owner or operator ~~using~~ ~~utilizing~~ an alternative monitoring program ~~must~~ ~~shall~~ submit to the Agency an alternative monitoring program plan consistent with ~~the provisions of~~ Section 215.446.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.451 Sealing Device Requirements

Except for safety pressure relief valves, ~~an~~ ~~no~~ owner or operator of a petroleum refinery ~~must~~ ~~not~~ ~~shall~~ install or operate a valve at the end of a pipe or line containing ~~VOM~~ ~~volatile organic materials~~ unless the pipe or line is sealed with a second valve, blind flange, plug, cap, or other sealing device. The sealing device may be removed only when a sample is being taken or during maintenance operations.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.452 Compliance Schedule for Leaks

The owner or operator of a petroleum refinery ~~must~~ ~~shall~~ adhere to the increments of progress ~~contained~~ in the following schedule:

- a) Submit to the Agency a monitoring program plan consistent with Section 215.446 ~~before~~ ~~prior to~~ June 1, 1983.
- b) Submit the first monitoring report ~~under~~ ~~pursuant to~~ Section 215.449 to the Agency ~~before~~ ~~prior to~~ July 1, 1983.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.453 Compliance Dates and Geographical Areas

- a) Except as otherwise stated in subsection (b), every owner or operator of an emission source subject to Sections 215.445 through 215.451 ~~must~~ ~~shall~~ comply with those standards and limitations ~~and the requirements of~~ ~~in accordance with~~ Section 215.452.

- b) If an emission source is not located in one of the counties ~~listed~~ below and is also not located in any county contiguous ~~to one of them~~~~thereto~~, the owner or operator of the emission source ~~must~~~~shall~~ comply with ~~the requirements of~~ Sections 215.445 through 215.451 ~~by no later than~~ December 31, 1987:

Cook	Macoupin
DuPage	Madison
Kane	Monroe
Lake	Saint Clair

(BOARD NOTE: These counties are proposed to be designated as nonattainment by ~~the~~ USEPA, ~~at~~ 47 Fed. Reg. 31588, (July 21, 1982).

- c) ~~Despite Notwithstanding~~ subsection (b), if any county is designated as nonattainment by ~~the~~ USEPA at any time ~~after July 28, 1979~~~~subsequent to the effective date of this Section~~, the owner or operator of an emission source located in that county or any county contiguous to that county who would otherwise be subject to the compliance date in subsection (b) ~~must~~~~shall~~ comply with ~~the requirements of~~ Sections 215.445 through 215.451 within one year ~~after from~~ the date of redesignation but ~~by in no case later than~~ December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART S: RUBBER AND MISCELLANEOUS PLASTIC PRODUCTS

Section 215.461 Manufacture of Pneumatic Rubber Tires

The owner or operator of an undertread cementing, tread~~end~~ cementing, or bead dipping operation at a pneumatic rubber tire manufacturing facility ~~must~~~~shall~~ install and operate:

- a) A capture system, with a 65% by weight minimum capture efficiency ~~of 65 percent by weight~~ of VOM~~volatile organic material~~ for tread~~end~~ cementing or bead dipping operations and a capture system with a 55.5% by weight minimum capture efficiency ~~of 55.5 percent by weight~~ of VOM~~volatile organic material~~ for undertread cementing; and
- b) A control device that meets the requirements of one of the following:
- 1) A carbon adsorption system designed and operated in a manner such so that there is at least a 90% percent removal of VOM~~volatile organic material~~ by weight from the gases ducted to the control device;
 - 2) An afterburning system that oxidizes at least 90% percent of the captured nonmethane VOM~~volatile organic materials~~ (VOM measured as total combustible carbon) to carbon dioxide and water; and

- 3) An alternative ~~VOM~~~~volatile organic material~~ emission reduction system demonstrated to have at least a ~~90%-percent~~ overall reduction efficiency and approved by the Agency.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.462 Green Tire Spraying Operations

The owner or operator of a green tire spraying operation at a pneumatic rubber tire manufacturing facility ~~must~~~~shall~~:

- a) Install and operate:
 - 1) A capture system with a ~~90% by weight~~ minimum capture efficiency ~~of 90 percent by weight~~ of ~~VOM~~~~volatile organic material~~; and
 - 2) A control device that meets the requirements of one of the following:
 - A) A carbon adsorption system designed and operated ~~so in a manner such that~~ there is at least ~~90%-percent~~ removal of ~~VOM~~~~volatile organic material~~ by weight from the bases ducted to the control device;
 - B) An afterburning system that oxidizes at least ~~90%-percent~~ of the captured non-methane ~~VOM~~~~volatile organic material~~ (measured as total combustible carbon) to carbon dioxide and water; or
 - C) An alternative ~~VOM~~~~volatile organic material~~ emission reduction system demonstrated to have at least a ~~90%-percent~~ overall reduction efficiency and approved by the Agency.
- b) Substitute for the normal solvent-based mold release compound water-based sprays containing:
 - 1) ~~5%~~~~No more than five percent or less~~ by volume of ~~VOM~~~~volatile organic material~~ as applied for the inside of tires;
 - 2) ~~10%~~~~No more than ten percent or less~~ by volume of ~~VOM~~~~volatile organic material~~ as applied for the outside of tires.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.463 Alternative Emission Reduction Systems

In lieu of complying with Section 215.461 or 215.462, the owner or operator of an emission source may ~~use~~~~utilize~~ an alternative volatile organic emission reduction system, including an

alternative production process, which is demonstrated to be equivalent to Section 215.461 or 215.462 ~~based on VOM~~~~on the basis of~~ emissions ~~of volatile organic matter~~. A tread end cementing operation ~~must~~~~shall~~ be considered equivalent to Section 215.461 or 215.462 for ~~the purposes of~~ this Section if the total volatile organic emission from ~~the~~~~such~~ operation is 10 grams or less per tire.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.464 Emissions Testing

- a) Any tests of ~~VOM~~~~volatile organic material~~ emissions, including tests conducted to determine control equipment efficiency or control device destruction efficiency, ~~must~~~~shall~~ be conducted in ~~compliance~~~~accordance~~ with the methods and procedures ~~specified~~ in Section 215.102.
- b) Upon a reasonable request by the Agency, the owner or operator of a ~~VOM~~~~volatile organic material~~ emission source required to comply with a limit ~~under~~~~of~~ Sections 215.461 through 215.464 ~~must~~~~shall~~ conduct emissions testing, at ~~that~~~~such~~ person's own expense, to demonstrate compliance.
- c) A person planning to conduct a ~~VOM~~~~volatile organic material~~ emission test to demonstrate compliance ~~must~~~~shall~~ notify the Agency of that intent ~~at least~~~~not less than~~ 30 days before ~~initiating~~ the planned ~~test~~~~initiation of the tests~~ so the Agency may observe the test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.465 Compliance Dates and Geographical Areas

- a) Except as otherwise stated in subsection (b), every owner or operator of an emission source subject to Sections 215.461 through 215.464 ~~must~~~~shall~~ comply with the standards and limitations of this Part by December 31, 1983.
- b) If an emission source is not located in one of the counties ~~listed~~ below and is also not located in any county contiguous ~~those counties~~~~thereto~~, the owner or operator of the emission source ~~must~~~~shall~~ comply with ~~the requirements of~~ Sections 215.461 through 215.464 ~~by~~~~no later than~~ December 31, 1987:

Cook	Macoupin
DuPage	Madison
Kane	Monroe
Lake	Saint Clair

(BOARD NOTE: These counties are proposed to be designated as nonattainment by ~~the~~ USEPA, ~~at~~ 47 Fed. Reg. 31588; (July 21, 1982).)

- c) ~~Despite~~Notwithstanding subsection (b), if any county is designated as nonattainment by ~~the~~USEPA at any time ~~after January 21, 1983~~subsequent to the effective date of this Section, the owner or operator of an emission source located in that county or any county contiguous to that county who would otherwise be subject to the compliance date in subsection (b) ~~must~~shall comply with ~~the requirements of~~ Sections 215.461 through 215.464 within one year ~~after~~from the date of redesignation but ~~by in no case later than~~ December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.466 Compliance Plan (Repealed)

- a) ~~—The owner or operator of an emission source subject to Section 215.465(a) shall submit to the Agency a compliance plan, pursuant to 35 Ill. Adm. Code 201, Subpart H, including a project completion schedule where applicable, no later than April 21, 1983.~~
- b) ~~—The owner or operator of an emission source subject to Section 215.465(b) shall submit to the Agency a compliance plan, including a project completion schedule where applicable, no later than December 31, 1986.~~
- c) ~~—The owner or operator of an emission source subject to Section 215.465(c) shall submit a compliance plan, including a project completion schedule within 90 days after the date of redesignation, but in no case later than December 31, 1986.~~
- d) ~~—Unless the submitted compliance plan or schedule is disapproved by the Agency, the owner or operator of a facility or emission source subject to the rules specified in subsections (a), (b) or (c) may operate the emission source according to the plan and schedule as submitted.~~
- e) ~~—The plan and schedule shall meet the requirements of 35 Ill. Adm. Code 201, Subpart H, including specific interim dates as required in 35 Ill. Adm. Code 201.242.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.467 Testing Methods for Volatile Organic Material Content

The ~~VOM~~volatile organic material content for all ~~VOM-emitting~~VOM-emitting materials except printing inks ~~must~~shall be determined by Method 24 ~~at~~, 40 CFR 60.5, Appendix A, incorporated by reference in Section 215.105. ~~The Agency must approve any~~Any alternate test method ~~and must be approved by the Agency, which shall~~ consider data comparing the performance of the proposed alternative to the performance of the approved test ~~method or methods~~method(s). If the Agency determines that ~~thesesuch~~ data ~~demonstrate~~demonstrates that the proposed alternative will achieve results equivalent to the approved test ~~method or methods~~method(s), the Agency ~~must approve~~shall approved the proposed alternative.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART T: PHARMACEUTICAL MANUFACTURING

Section 215.480 Applicability of Subpart T

- a) ~~This~~The rules of this Subpart, except for Sections 215.483 through 215.485, ~~applies~~apply to all VOM emission sources ~~of volatile organic material~~, including ~~but not limited to~~ reactors, distillation units, dryers, storage tanks for VOL~~volatile organic liquids~~, equipment ~~to for the~~ transfer VOL~~of volatile organic liquids~~, filters, crystallizers, washers, laboratory hoods, pharmaceutical coating operations, and mixing operations and centrifuges used in manufacturing, including packaging, of pharmaceuticals which emit, and emitting more than 6.8 kg/day (15 lbs/day) ~~of volatile organic material~~ and more than 2268 kg/year (2.5 Ttons/year) of VOM~~volatile organic material~~. If an emission source emits less than 2,268 kg/year (2.5 Ttons/year) of VOM~~volatile organic material~~, ~~the requirements of~~ this Subpart, except for Sections 215.483 through 215.485, still ~~applies~~apply to the emission source if VOM~~volatile organic material~~ emissions from the emission source exceed 45.4 kg/day (100 lbs/day).
- b) ~~Despite~~Notwithstanding subsection (a), the air suspension coater/dryer, fluid bed dryers, tunnel dryers, and Accelacotas ~~located~~ in Libertyville Township, Lake County, Illinois, ~~are~~shall be exempt from ~~the rules of~~ this Subpart, except for Sections 215.483 through 215.485, if VOM emissions ~~of volatile organic material~~ not vented to air pollution control equipment ~~remain at or below~~do not exceed the following levels: for the air suspension coater/dryer, ~~2,268 kg/year (2.5 Ttons per year)~~; for each fluid bed dryer, ~~4,535 kg per year (5.0 Ttons per year)~~; ~~and~~ for each tunnel driver, ~~6,803 kg per year (7.5 Ttons per year)~~; and for each Accelacota, ~~6,803 kg per year (7.5 Ttons per year)~~.
- c) Sections 215.483 through 215.485 apply to a plant ~~with~~having one or more emission sources that:
- 1) ~~Are~~are used to manufacture pharmaceuticals; and
 - 2) ~~Emit~~emit more than 6.8 kg/day (15 lbs/day) of VOM~~volatile organic material~~ and more than 2,268 kg/year (2.5 Ttons/year) of VOM~~volatile organic material~~. If these emission sources at a plant emit, or, if less than 2.5 Ttons/year, these sections still apply if emissions from one or more emission sources exceed 45.4 kg/day (100 lbs/day).
- d) ~~A~~No person ~~must not~~shall violate any condition in a permit when the condition ~~excludes~~results in exclusion of an emission source from this Subpart.

- e) Emissions subject to this Subpart ~~must~~shall be controlled at all times, consistent with the requirements ~~of set forth in~~ this Subpart.
- f) Control devices required ~~underpursuant to~~ Section 215.483 ~~must~~shall be operated at all times.
- g) If a pharmaceutical manufacturing emission source becomes subject to ~~the provisions of~~ Section 215.481, 215.482, or 215.486 on or after the compliance date ~~specified in~~ Section 215.490(a), ~~that the requirements of such~~ section ~~continues~~shall continue to apply to the emission source even if ~~emissions are reduced~~there is a reduction in emissions as to be below the applicability criteria of this Section.
- h) Determinations of daily ~~or and/or~~ annual emissions, or both
 - 1) Determinations of daily ~~or and/or~~ annual emissions, or both for ~~purposes of~~ this Section ~~must~~shall be made using:
 - (A) ~~Data~~data on the hourly emission rate or the emission per unit of throughput; ~~and~~
 - (B) ~~Appropriate~~appropriate daily and annual data from records of emission source operation, ~~or~~ material throughput, or material consumption.
 - 2) In the absence of representative test data ~~underpursuant to~~ Section 215.487 for the hourly emission rate or emission rate per unit of throughput, ~~these data must~~such items shall be determined using engineering calculations, including the methods ~~described in~~ Appendix B of "Control of Volatile Organic Emissions from Manufacture of Synthesized Pharmaceutical Products," ~~incorporated by reference at~~ Section 215.105.
 - 3) This subsection ~~does~~shall not affect the Agency's authority to require emissions tests to be performed ~~underpursuant to~~ Section 215.487.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.481 Control of Reactors, Distillation Units, Crystallizers, Centrifuges, and Vacuum Dryers

- a) The owner or operator ~~must~~shall equip all reactors, distillation units, crystallizers, centrifuges, and vacuum dryers that are used to manufacture pharmaceuticals with surface condensers or other air pollution control equipment ~~listed in~~ subsection (a)(2).

- 1) If a surface condenser is used, it ~~must~~shall be operated ~~such~~so that the condenser outlet gas temperature does not exceed:
 - A) 248.2 K ~~(-13 °F)~~(-13 °F) when condensing ~~VOM~~volatile organic material of vapor pressure greater than 40.0 kPa (5.8 psi) at 294.3 K ~~(70 °F)~~(70 °F); ~~or~~
 - B) 258.2 K ~~(5 °F)~~(5 °F) when condensing ~~VOM~~volatile organic material of vapor pressure greater than 20.0 kPa (2.9 psi) at 294.3 K ~~(70 °F)~~(70 °F); ~~or~~
 - C) 273.2 K ~~(32 °F)~~(32 °F) when condensing ~~VOM~~volatile organic material of vapor pressure greater than 10.0 kPa (1.5 psi) at 294.3 K ~~(70 °F)~~(70 °F); ~~or~~
 - D) 283.2 K ~~(50 °F)~~(50 °F) when condensing ~~VOM~~volatile organic material of vapor pressure greater than 7.0 kPa (1.0 psi) at 294.3 K ~~(70 °F)~~(70 °F); or
 - E) 298.2 K ~~(77 °F)~~(77 °F) when condensing ~~VOM~~volatile organic material of vapor pressure greater than 3.45 kPa (0.5 psi) at 294.3 K ~~(70 °F)~~(70 °F).
- 2) If a scrubber, carbon adsorber, thermal incinerator, catalytic incinerator, or other air pollution control equipment other than a surface condenser is used, ~~that~~such equipment ~~must~~shall ~~reduce VOM emissions by at least 90%~~reduce VOM emissions by at least 90%~~provide a reduction in the emissions of volatile organic material of 90 percent or more.~~
- b) The owner or operator ~~must~~shall enclose all centrifuges used to manufacture pharmaceuticals and that have an exposed ~~VOL~~volatile organic liquid surface, where the ~~VOM~~volatile organic material in the ~~VOL~~volatile organic liquid has a vapor pressure of 3.45 kPa (0.5 psi) or more at 294.3 K ~~(70 °F)~~(70 °F), except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.482 Control of Air Dryers, Production Equipment Exhaust Systems, and Filters

- a) The owner or operator of an air dryer or production equipment exhaust system used to manufacture pharmaceuticals ~~must~~shall control ~~the VOM emissions of volatile organic material~~the VOM emissions from ~~these~~such emission sources ~~with~~by air pollution control equipment which reduces by ~~at least 90% the VOM~~at least 90% the VOM~~90 percent or more the volatile organic material~~ that would otherwise be emitted into the atmosphere.

- b) The owner or operator ~~must~~shall enclose all rotary vacuum filters and other filters used to manufacture pharmaceuticals and that have an exposed ~~VOL~~volatile ~~organic liquid~~ surface, where the ~~VOM~~volatile organic material in the ~~VOL~~volatile organic liquid has a vapor pressure of 3.45 kPa (0.5 psi) or more at 294.3 K (~~70 °F~~)(70 F), except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.483 Material Storage and Transfer

The owner or operator of a pharmaceutical manufacturing plant ~~must~~shall:

- a) Provide a vapor balance system that is at least 90.0%~~percent~~ effective in reducing ~~VOM~~volatile organic material emissions from truck or railcar deliveries to storage tanks with capacities ~~of at least~~equal to or greater than 7.57m (2,000 gallons) that store ~~VOL~~volatile organic liquids with vapor pressures greater than 28.0 kPa (4.1 psi) at 294.3 K (~~70 °F~~)(70 F); and
- b) Install, operate, and maintain pressure/vacuum conservation vents set at 0.2 kPa (0.03 psi) or greater on all storage tanks that store ~~VOL~~volatile organic liquids with vapor pressures greater than 10 kPa (1.5 psi) at 294.3 K (~~70 °F~~)(70 F).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.484 In-Process Tanks

The owner or operator ~~must~~shall install covers on all in-process tanks used to manufacture pharmaceuticals and containing a ~~VOL~~volatile organic liquid at any time. These covers must remain closed, except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.485 Leaks

The owner or operator of a pharmaceutical manufacturing plant ~~must~~shall repair any component from which a leak of ~~VOL~~volatile organic liquid can be observed. The repair ~~must~~shall be completed as soon as practicable but ~~within no later than~~ 15 days after the leak is found, ~~in which case and~~ the leaking component must ~~then~~ be repaired before the unit is restarted.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.486 Other Emission Sources

The owner or operator of a washer, laboratory hood, tablet coating operation, mixing operation, or any other process emission source not subject to ~~Sections~~Section 215.491 through 215.495 ~~of this Subpart,~~ and used to manufacture pharmaceuticals ~~must~~shall control ~~the VOM emissions of volatile organic material~~ from ~~thosesuch~~ emission sources ~~with~~by:

- a) Air pollution control equipment which reduces by ~~at least 81%~~81 percent or more the ~~VOMvolatile organic material~~ that would otherwise be emitted to the atmosphere;~~;~~ or
- b) A surface condenser which captures all the ~~VOMvolatile organic material~~ which would otherwise be emitted to the atmosphere and which meets the requirements of Section 215.481(a)~~of this Subpart.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.487 Testing

- a) ~~After~~Upon reasonable request by the Agency, the owner or operator of any ~~VOMvolatile organic material~~ emission source subject to this Subpart or exempted from this Subpart by ~~provisions of~~Section 215.480(a), (b), or (c) ~~must~~shall, at ~~its~~his own expense, demonstrate compliance to the Agency by methods or procedures ~~listed in~~Section 215.487(c)~~;~~ and
- b) A person planning to conduct a ~~VOMvolatile organic material~~ emissions test to demonstrate compliance with or determine applicability of ~~provisions of~~this Subpart ~~must~~shall notify the Agency of that ~~plan~~intent to test ~~at least~~not less than 30 calendar days ~~before~~prior to the planned initiation of the test.
- c) Test procedures to determine compliance with and applicability of this Subpart are in 40 CFR ~~Part 60,~~Appendix A, incorporated by reference at Section 215.105, and ~~must~~shall be used as ~~follows~~delineated below:
 - 1) 40 CFR 60,~~;~~Appendix A, Methods 18, 25, or 25A, as appropriate to the conditions at the site, ~~must~~shall be used to determine VOM concentration. Method selection ~~must consider~~shall be based on consideration of the diversity of organic species present and their total concentration and ~~on consideration of~~the potential presence of interfering gases. Except as indicated in subsections (c)(1)(A) and (c)(1)(B), the test ~~must~~shall consist of three separate runs, each lasting ~~at least a minimum of~~ 60 minutes, unless the Agency determines that process variables dictate shorter sampling times.
 - A) When the method is to be used to determine the efficiency of a fixed-bed carbon adsorption system with a common exhaust stack for all the individual adsorber vessels, the test ~~must~~shall consist of

three separate runs, each coinciding with one or more complete sequences through the adsorption cycles of all the individual adsorber vessels.

- B) When the method is to be used to determine the efficiency of a fixed-bed carbon adsorption system with individual exhaust stacks for each adsorber vessel, each adsorber vessel mustshall be tested individually. The test for each adsorber vessel mustshall consist of three separate runs. Each run mustshall coincide with one or more complete adsorption cycles.
- 2) 40 CFR ~~Part-60,~~Appendix A, Method 1 or 1A, mustshall be used for sample and velocity traverses.
- 3) 40 CFR ~~Part-60,~~Appendix A, Method 2, 2A, 2C, or 2D, mustshall be used for velocity and volumetric flow rates.
- 4) 40 CFR ~~Part-60,~~Appendix A, Method 3, mustshall be used for gas analysis.
- 5) 40 CFR ~~Part-60,~~Appendix A, Method 4, mustshall be used for stack gas moisture.
- 6) 40 CFR ~~Part-60,~~Appendix A, Methods 2, 2A, 2C, 2D, 3, and 4, mustshall be performed, as applicable, at least twice during each test run.
- d) This section doesshall not affect the authority of ~~USEPA~~the U.S. Environmental Protection Agency under Section 114 of the Clean Air Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.488 Monitors for Air Pollution Control Equipment

- a) At a minimum, continuous monitors for the following parameters mustshall be installed on air pollution control equipment subject to this Subpart:
- 1) Destruction device combustion temperature;
- 2) Temperature rise across a catalytic afterburner bed;
- 3) Breakthrough of ~~VOM~~volatile organic material on a carbon adsorption unit;
- 4) Outlet gas temperature of a refrigerated condenser; and
- 5) Temperature of a non-refrigerated condenser coolant supply system.

- b) Each monitor ~~must~~shall be equipped with a recording device.
- c) Each monitor ~~must~~shall be calibrated quarterly.
- d) Each monitor ~~must~~shall operate at all times while the associated control equipment is operating.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.489 Recordkeeping (Renumbered)

- a) The owner or operator of a pharmaceutical manufacturing plant ~~must~~shall maintain the following records:
 - 1) The parameters ~~listed~~ in Section 215.488; ~~and shall be recorded.~~
 - 2) For sources subject to Section 215.482, the vapor pressure of the ~~VOM~~volatile organic material being controlled ~~shall be recorded~~ for every process.
- b) For any leak subject to Section 215.485 which cannot be readily repaired within one hour after detection, the following records ~~must~~shall be kept:
 - 1) The name of the leaking equipment;~~;~~
 - 2) The date and time the leak is detected;~~;~~
 - 3) The action taken to repair the leak; ~~and.~~
 - 4) The date and time the leak is repaired.
- c) The following records ~~must~~shall be kept for emission sources subject to Section 215.484 which contain ~~VOL~~volatile organic liquid:
 - 1) For maintenance and inspection:
 - A) The date and time each cover is opened;~~;~~
 - B) The length of time the cover remains open;~~;~~
 - C) The reason why the cover is opened; ~~and.~~
 - 2) For production and sampling, written procedures or manufacturing directions specifying the circumstances under which covers may be opened and the procedures for opening covers.

- d) For each emission source used in manufacture of pharmaceuticals for which the owner or operator of a pharmaceutical manufacturing plant claims emission standards are not applicable because the emissions are below the applicability cutoff in Section 215.480(a) or (b), the owner or operator mustshall:
 - 1) Maintain a demonstration, including detailed engineering calculations, of the maximum daily and annual emissions for each ~~such~~ emission source showing that the emissions are below the applicability cutoffs in Section 215.480(a) or (b), as appropriate, for the current and prior calendar years;
 - 2) Maintain operating records for each emission source to identify whether the cutoffs in Section 215.480(a) or (b), as appropriate, are ever exceeded; and
 - 3) Provide written notification to the Agency within 30 days ~~after~~ a determination that ~~such~~ an emissionemissions source has exceeded the applicability cutoff of Section 215.480(a) or (b), as appropriate.
- e) Records required under this section mustshall be maintained by the owner or operator for at leasta minimum of two years after the date on which they are made.
- f) Copies of the records mustshall be made available to the Agency upon verbal or written request.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.490 Compliance Schedule (Renumbered)

- a) The owner or operator of an emission source subject to this Subpart, the construction or modification of which ~~has~~ commenced before April 11, 1988prior to (the effective date of these amendments), must complete on-site construction, modification, or installation of the emission control orand/or process equipment, or both, or complete any necessary production process changes ~~so as~~ to operate in compliance with this Subpart by April 30, 1991.
- b) The owner and operator of any emission source subject to this Subpart, the construction or modification of which ~~has not~~ commenced after April 11, 1988prior to (the effective date of these amendments), mustshall construct ~~thesuch~~ source so that it will operate in compliance with this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART U: COKE MANUFACTURE AND BY-PRODUCT RECOVERY

Section 215.500 Exceptions

~~The provisions of~~ Subpart K ~~doesshall~~ not apply to coke by-product recovery ~~plantsplant~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.510 Coke By-Product Recovery Plants

The owner or operator of a coke by-product recovery plant ~~mustshall~~ reduce ~~the~~ uncontrolled VOM emissions ~~of volatile organic materials~~ by at least 85% ~~percent~~ from the following sources, as defined:

- a) Tar decanter, which is a rectangular vessel used to separate tar and flushing liquor ~~throughby means of~~ gravity;
- b) Light oil sump, which receives wastewater from process equipment from the light oil recovery portion of a coke by-product recovery plant;
- c) Light oil condensor/separator, which is a device used to condense or separate light oil from which the non-condensable constituents are vented; and
- d) Tar condensate sump, which receives water condensate streams from the tar recovery process equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.512 Coke By-Product Recovery Plant Leaks

- a) The owner or operator of a coke by-product recovery plant ~~mustshall~~ conduct a visual inspection program designed to detect, identify, and facilitate repair of leaks from components in light oil liquid service. Components servicing coke oven gas lines, operating flare headers, or vapor recovery devices (including pressure relief devices) are exempt from the inspection program.
- b) In conducting ~~thissuch a~~ program, the owner or operator of a coke by-product recovery plant ~~mustshall~~:
 - 1) Develop and conduct a weekly inspection program consistent with ~~the provisions of~~ Section 215.513;
 - 2) Record all visible leaking components in light oil liquid service, and identify ~~consistent with Section 215.513~~ each component observed leaking ~~consistent with the provisions of Section 215.513; and~~
 - 3) Repair the leaking components as soon as practicable, but ~~withinno later than~~ 21 days after the leak is discovered, unless the leaking component

cannot be required until the unit is shut down or until parts needed to correct the leak are available.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.513 Inspection Program

The owner or operator ~~must~~shall prepare and conduct an inspection program which, at a minimum, ~~require~~shall require the owner or operator to:

- a) ~~Visually observe~~Observe visually for leaks from all components subject to Section 215.512 on a weekly basis;
- b) Identify all leaking components so that they are obvious and can be located by plant personnel performing visual inspections and Agency personnel performing inspections; and
- c) Record in the monitoring log, the information for each leaking component ~~as required by the provisions of~~ Sections 215.514

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.514 Recordkeeping Requirements

- a) The owner or operator of a coke by-product recovery plant ~~must~~shall maintain a monitoring log ~~for leaking components which contains that shall contain~~, at a minimum, ~~the following information for each component found leaking:~~
 - 1) The name of the process unit where the observed leaking component is located;
 - 2) Identification of the type of component (e.g., valve, seal);
 - 3) The date on which the leaking component is first observed;
 - 4) The date on which a leaking component is repaired;
 - 5) Identification of the type of leaking components which cannot be repaired until unit shutdown; and
 - 6) Identification of component leaks which are not repaired within 21 days after discovery because of the unavailability of replacement parts, including the date the repair part was ordered and the date the repair part was received.

- b) The monitoring log ~~must~~shall be retained by the owner or operator for ~~at least a minimum of~~ two years after the date on which the record was made.
- c) Copies of the monitoring log ~~must~~shall be made available to the Agency upon verbal or written request at a reasonable time.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.515 Reporting Requirements

The owner or operator of a coke by-product recovery plant ~~must~~shall submit to the Agency; ~~before prior to May 1 and August 1 the first day of May and August~~ of each year; a signed statement attesting that all monitoring and repairs were performed as required under Section 215.512.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.516 Compliance Dates

The owner or operator of an emission source subject to:

- a) Section 215.510 ~~must~~shall comply with the Section by December 31, 1986; ~~and~~
- b) Sections 215.512 through 215.514 ~~must~~shall comply with those Sections by December 31, 1985.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.517 Compliance Plan (Repealed)

~~The owner or operator of a facility or emission source subject to this Subpart shall submit to the Agency, a compliance plan and project completion schedule for:~~

- ~~a) — Section 215.510 by August 31, 1986;~~
- ~~b) — Section 215.514 by October 31, 1985.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

SUBPART V: AIR OXIDATION PROCESSES

Section 215.520 Applicability

This Subpart applies to plants using air oxidation processes ~~and which are~~ located in ~~any of the following counties:~~ Will, McHenry, Cook, DuPage, Lake, Kane, Madison, St. Clair, Macoupin, ~~or~~and Monroe County.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.521 Definitions

In addition to the definitions of 35 Ill. Adm. Code 211, the following definitions apply to this Subpart:

"Air oxidation process" ~~means~~ Oxidation Process": any unit process, including ammoxidation and oxychlorination, which uses air or a combination of air and oxygen as an oxidant in combination with one or more organic reactants to produce one or more organic compounds.

"Cost effectiveness" ~~means~~ Effectiveness": the annual expense for cost of control of a given process stream divided by the reduction in emissions of organic material of that stream.

"Flow (F)" ~~means vent~~ Vent stream flowrate (scm/min) at a standard temperature of 20 °C ~~20°C~~.

"Full operating flowrate" ~~means~~ maximum ~~Operating Flowrate~~": Maximum operating capacity of the facility.

"Hourly emissions (E)" ~~means~~ hourly ~~Emissions (E)~~": Hourly emissions reported in kg/hr measured at full operating flowrate.

"Net heating value (H)" ~~means~~ vent ~~Heating Value (H)~~": Vent stream net heating value (MJ/scm), where the net enthalpy per mole of offgas is based on combustion at 25 °C ~~25°C~~ and 760 mm Hg, but the standard temperature ~~to determine~~ for determining the volume corresponding to one mole is 20 °C ~~20°C~~, as in the definition of "Flow."

"Process vent stream" ~~means~~ Stream": an emission stream resulting from an air oxidation process.

"Total Resource Effectiveness Index (TRE)" ~~means~~ cost ~~Cost~~ effectiveness in dollars per Mg ~~megagram~~ of controlling any gaseous stream vented to the atmosphere from an air oxidation process divided by \$1600/Mg, using the criteria and methods ~~set forth~~ in this Subpart and Appendices E and F.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.525 Emission Limitations for Air Oxidation Processes

- a) ~~A~~ No person ~~must not~~ shall cause or allow the emission of ~~volatile organic material (VOM)~~ from any process vent stream unless the process vent stream is vented to a combustion device which is designed and operated either:
- 1) To reduce the volatile organic emissions vented to it with ~~an efficiency of at least a ninety eight percent (98%)~~ by weight ~~efficiency~~; or
 - 2) To emit ~~VOM~~ ~~volatile organic material~~ at a concentration less than ~~20 ppmv~~ ~~twenty parts per million by volume~~, dry basis.
- b) Air oxidation facilities for which an existing combustion device is employed to control process VOM emissions are not required to meet the ~~98% percent~~ emissions limit until the combustion device is replaced for other reasons, which ~~shall be considered to include, but not be limited to,~~ normal maintenance, malfunction, accident, and obsolescence. The combustion device is considered ~~to be~~ replaced when:
- 1) ~~The entire~~ ~~All of the~~ device is replaced; or
 - 2) ~~The~~ ~~When the~~ cost of ~~repairing the repair of~~ the device or ~~replacing the cost of replacement of~~ part of the device exceeds 50% of the cost of replacing the entire device with a device which complies.
- c) The limitations of subsection (a) do not apply to any process vent stream or combination of process vent streams which has a ~~Total Resource Effectiveness Index (TRE)~~ ~~greater than 1.0, as determined by the following methods:~~
- 1) If an air oxidation process has more than one process vent stream, TRE ~~must~~ shall be based ~~on upon~~ a combination of the process vent stream.
 - 2) TRE of a process vent stream ~~must~~ shall be determined according to the following equation:
- $$TRE = E^{-1} [a + bF^n + cF + dFH + e(FH)^n + fF^{0.5}]$$
- where:
- $$n = 0.88$$
- TRE = Total ~~Resource Effective Index~~ ~~resource effectiveness index.~~
- F = Vent stream flowrate (scm/min), at a standard temperature of ~~20 °C~~ ~~20 °C~~
- E = Hourly measured emissions in kg/hr.

H = Net heating value of the vent stream (MJ/scm), where the net enthalpy per mole of offgas is based on combustion at ~~25 °C~~25 °C and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is ~~20 °C~~20 °C, as in the definition of "Flow".

a,b,c,d,e, and f = Coefficients obtained by use of Appendix F

- 3) For nonchlorinated process vent streams, if the net heating value, H , is greater than 3.6 MJ/scm, F ~~must~~shall be replaced by F' ~~to calculate for purposes of calculating~~ TRE. F' is computed as follows:

$$F' = FH / 3.6$$

where ~~F~~ f and H are as defined in subsection (c)(2).

- 4) The actual numerical values used in the equation ~~described~~ in subsection (c)(2) ~~must~~shall be determined as follows:
- A) All reference methods and procedures for determining the flow, ~~(F)~~, hourly emissions, ~~(E)~~, and net heating value, ~~(H)~~ ~~must~~value shall be in ~~compliance~~accordance with Appendix E.
 - B) All coefficients ~~described~~ in subsection (c)(2) ~~must~~shall be in ~~compliance~~accordance with Appendix F.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.526 Testing and Monitoring

- a) Upon request by the Agency during the permitting process under Section 39 of the Act, the owner or operator of an air oxidation process ~~must~~shall demonstrate compliance with this Subpart by ~~using~~use of the methods ~~specified~~ in Appendix E. This Section does not limit ~~the~~USEPA's authority, under the ~~Clean~~Clean Air Act, to require demonstrations of compliance.
- b) A person planning to conduct a ~~VOM~~volatile organic material emissions test to demonstrate compliance with this Subpart ~~must~~shall notify the Agency of that intent ~~at least~~not less than 30 days before the planned initiation of the ~~test~~tests so ~~that~~the Agency may observe the test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.527 Compliance Date

Each owner or operator of an emission source subject to this Subpart ~~must~~shall comply with ~~the standards and limitations of~~this Subpart by December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART W: AGRICULTURE

Section 215.541 Pesticide Exception

~~The provisions of~~ Sections 215.301 and 215.302 ~~do shall~~ not apply to ~~the~~ spraying or ~~using use of~~ insecticides, herbicides, or other pesticides.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

}

SUBPART X: CONSTRUCTION

Section 215.561 Architectural Coatings

~~A~~ No person ~~must not shall~~ cause or allow the sale or use in the Chicago or St. Louis (Illinois) major metropolitan areas of any architectural coating containing more than 20% ~~percent~~ by volume of photochemically reactive material in containers ~~with having~~ a capacity of more than one gallon.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.562 Paving Operations

~~The provisions of~~ Sections 215.301 and 215.302 ~~do shall~~ not apply to the application of paving asphalt and pavement marking paint from sunrise to sunset.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.563 Cutback Asphalt

a) ~~A~~ No person ~~must not shall~~ cause or allow the use or application of cutback asphalt for paving, resurfacing, reconditioning, repairing, or otherwise maintaining a roadway unless:

- 1) The use or application of the cutback asphalt commences on or after October 1 of any year and ~~the such~~ use or application is completed by April 30 of the following year; ~~or~~
- 2) The cutback asphalt is a long-life stockpile material which remains in stock after April 30 of each year, ~~in which case and as such~~ it may be used until depleted for patching potholes and for other similar repair work; or
- 3) The cutback asphalt is to be used solely as an asphalt prime coat.

- b) Sources subject to this section are not required to submit or obtain an ~~Agency-~~Agency-approved compliance plan or project completion schedule under 35 Ill. -Adm. -Code 201.~~5~~-Subpart H.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART Y: GASOLINE DISTRIBUTION

Section 215.581 Bulk Gasoline Plants

- a) Subject to subsection (e), ~~any~~ person ~~must not~~may cause or allow the transfer of gasoline from a delivery vessel into a stationary storage tank located at a bulk gasoline plant unless:
- 1) The delivery vessel and the stationary storage tank are each equipped with a vapor collection system that meets the requirements of subsection (d)(4);
 - 2) Each vapor collection system is operating;
 - 3) The delivery vessel displays the appropriate sticker ~~under~~pursuant to the requirements of Section 215.584(b) or (d);
 - 4) The pressure relief ~~valve or valves~~valve(s) on the stationary storage tank and the delivery vessel are set to release at ~~a minimum~~no less than 0.7 psi or the highest pressure allowed by state or local fire codes or the guidelines of the ~~National Fire Codes~~, National Fire ~~Protection~~Prevention Association ~~(2024)~~, incorporated by reference in Section 215.105(c); and
 - 5) The stationary storage tank is equipped with a submerged loading pipe.
- b) Subject to subsection (f), ~~any~~ person ~~must not~~may cause or allow the transfer of gasoline from a stationary storage tank located at a bulk gasoline plant into a delivery vessel unless:
- 1) The requirements ~~set forth~~ in subsections (a)(1) through (a)(4) are met; and
 - 2) Equipment is available at the bulk gasoline plant to provide for the submerged filling of the delivery vessel, or the delivery vessel is equipped for bottom loading.
- c) Subject to subsection (e), each owner of a stationary storage tank located at a bulk gasoline plant ~~must~~shall:

- 1) Equip each stationary storage tank with a vapor control system that meets the requirements of subsection (a) or (b), whichever is applicable;
 - 2) Provide instructions to the operator of the bulk gasoline plant describing necessary maintenance operations and procedures for prompt notification of the owner in case of any malfunction of a vapor control system; and
 - 3) Repair, replace, or modify any worn out or malfunctioning component or element of design.
- d) Subject to subsection (e), each operator of a bulk gasoline plant ~~must~~shall:
- 1) Maintain and operate each vapor control system in ~~compliance~~accordance with the owner's instructions;
 - 2) Promptly notify the owner of any scheduled maintenance or malfunction requiring replacement or repair of a major component of a vapor control system; ~~and~~
 - 3) Maintain gauges, meters, or other specified testing devices in proper working order;
 - 4) Operate the bulk plant vapor collection system and gasoline loading equipment in a manner that prevents:
 - A) Gauge pressure from exceeding 18 inches of water and vacuum from exceeding ~~six~~6 inches of water, as measured as close as possible to the vapor hose connection; ~~and~~
 - B) A reading ~~of at least 100%~~equal to or greater than 100 percent of the lower explosive limit (LEL measured as propane) when tested in ~~compliance~~accordance with the procedure described in EPA 450/2-78-051 Appendix B, incorporated by reference in Section 215.105(e); and
 - C) Avoidable leaks of liquid during loading or unloading operations; ~~;~~
 - 5) Provide a pressure tap or equivalent on the bulk plant vapor collection system ~~in order~~ to allow the determination of compliance with Section 215.581(d)(4)(A); and
 - 6) Within 15 business days after ~~the owner, operator, or Agency discovers~~discovery of the leak by the owner, operator, or the Agency, repair and retest a vapor collection system which exceeds the limits of subsection (d)(4)(A) or (B).

- e) ~~The requirements of subsection~~ Subsections (a), (c), and (d) ~~do~~ shall not apply to:
- 1) Any stationary storage tank with a capacity of less than 575 gallons; or
 - 2) Any bulk gasoline plant whose annual gasoline throughput is less than 350,000 gallons as averaged over the preceding three calendar years.
- f) ~~The requirements of subsection~~ Subsection (b) ~~applies only~~ shall only apply to bulk gasoline plants:
- 1) ~~With That have~~ an annual gasoline throughput ~~of at least~~ greater than or equal to 1,000,000 gallons, ~~as~~ averaged over the preceding three calendar years; and
 - 2) That either distribute gasoline to gasoline dispensing facilities subject to ~~the requirements of~~ Section 215.583(a)(2), 35 Ill. Adm. Code 218.583(b)(2), or 35 Ill. Adm. Code 219.583(a)(2) or that are located in ~~the following counties:~~ Boone, Peoria, Rock Island, Tazewell, or Winnebago County.
- g) Bulk gasoline plants were required to take certain actions summarized in Appendix C to achieve compliance ~~which are summarized in Appendix C~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.582 Bulk Gasoline Terminals

- a) ~~A~~ No person ~~must not~~ shall cause or allow the transfer of gasoline into any delivery vessel from any bulk gasoline terminal unless:
- 1) The bulk gasoline terminal is equipped with a vapor control system that limits VOM emission ~~emission of volatile organic material~~ to 80 mg/l (0.00067 lbs/gal) of gasoline loaded;
 - 2) The vapor control system is operating, and all vapors displaced in ~~the~~ loading ~~of~~ gasoline to the delivery vessel are vented only to the vapor control system;
 - 3) There is no liquid drainage from the loading device when it is not in use;
 - 4) All loading and vapor return lines are equipped with fittings which are vapor tight; and
 - 5) The delivery vessel displays the appropriate sticker ~~under~~ pursuant to the requirements of Section 215.584(b) or (d); or, if the terminal is driver-loaded, the terminal owner or operator ~~is~~ shall be deemed to be in

compliance with this section when terminal access authorization is limited to ~~those~~ owners ~~and/or~~ operators of delivery vessels, ~~or both~~, who have provided a current certification ~~under as required by~~ Section 215.584(c)(3).

- b) Bulk gasoline terminals were required to take certain actions summarized in Appendix C to achieve compliance ~~which are summarized in Appendix C~~.
- c) The operator of a bulk gasoline terminal must~~shall~~:
 - 1) Operate the terminal vapor collection system and gasoline loading equipment to prevent~~in a manner that prevents~~:
 - A) Gauge pressure from exceeding 18 inches of water and vacuum from exceeding six~~6~~ inches of water as measured as close as possible to the vapor hose connection; ~~and~~
 - B) A reading of at least 100%~~equal to or greater than 100 percent~~ of the lower explosive limit (LEL measured as propane) when tested in compliance~~accordance~~ with the procedure described in EPA 450/2-78-051 Appendix B, incorporated by reference in Section 215.105(e); and
 - C) Avoidable leaks of liquid during loading or unloading operations; ~~and~~
 - 2) Provide a pressure tap or equivalent on the terminal vapor collection system in order~~to~~ allow the determination of compliance with Section 215.582(d)(1)(A); and
 - 3) Within 15 business days the owner, operator or Agency discovers~~after discovery of the leak by the owner, operator, or the Agency~~, repair and retest a vapor collection system which exceeds the limits of subsection (d)(1)(A) or (B).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.583 Gasoline Dispensing Facilities - Storage Tank Filling Operations

- a) Subject to subsection (b) ~~below~~, any person must not~~shall~~ cause or allow the transfer of gasoline from any delivery vessel into any stationary storage tank at a gasoline dispensing facility unless:
 - 1) The tank is equipped with a submerged loading pipe; and
 - 2) The vapors displaced from the storage tank during filling are processed by a vapor control system that includes at least one ~~or more~~ of the following:

- A) A vapor collection system that meets the requirements of subsection (d)(4)~~-below; or~~
 - B) A refrigeration-condensation system or any other system approved by the Agency that recovers at least 90%~~percent~~ by weight of all vaporized organic material from the equipment being controlled;
~~or and~~
 - C) The delivery vessel displays the appropriate sticker ~~underpursuant to the requirements of~~ Section 215.584(b) or (d)~~-of this Part~~.
- b) ~~Subsection The requirements of subsection~~ (a)(2) ~~docsabove shall~~ not apply to transfers of gasoline to a stationary storage tank at a gasoline dispensing facility if:
 - 1) The tank is equipped with a floating roof or other system of equal or better emission control ~~as~~ approved by the Agency;
 - 2) The tank has a capacity of less than 2,000 gallons and is in place and operating before January 1, 1979;
 - 3) The tank has a capacity of less than 575 gallons; or
 - 4) The tank is not located in ~~any of the following counties:~~ Boone, Cook, DuPage, Kane, Lake, Madison, McHenry, Peoria, Rock Island, St. Clair, Tazewell, Will, or Winnebago County.
- c) Subject to subsection (b)~~-above~~, each owner of a gasoline dispensing facility ~~mustshall~~:
 - 1) Install all control systems and make all process modifications required by subsection (a)~~-above~~;
 - 2) Provide to the operator of the gasoline dispensing facility instructions ~~to the operator of the gasoline dispensing facility~~ describing necessary maintenance operations and procedures for prompt notification of the owner in the case of any malfunction of a vapor control system; and
 - 3) Repair, replace, or modify any worn out or malfunctioning component or element of design.
- d) Subject to subsection (b)~~-above~~, each operator of a gasoline dispensing facility and each delivery vessel operator ~~mustshall~~:
 - 1) Maintain and operate each vapor control system in ~~compliance~~accordance with the owner's instructions;

- 2) Promptly notify the owner of any scheduled maintenance or malfunction requiring replacement or repair of a major component of a vapor control system;
- 3) Maintain gauges, meters, or other specified testing devices in proper working order;
- 4) Operate the vapor collection system and delivery vessel unloading points to prevent in a manner that prevents:
 - A) A reading of at least 100%~~equal to or greater than 100 percent~~ of the lower explosive limit (LEL measured as propane) when tested in compliance~~accordance~~ with the procedure described in EPA 450/2-78-051 Appendix B, incorporated by reference at Section 215.105(e); and
 - B) Avoidable leaks of liquid during the filling of storage tanks; and
- 5) Within 15 business days after the owner, operator, or Agency discovers~~discovery of~~ the leak by the owner, operator, or the Agency, repair and retest a vapor collection system which exceeds the limits of subsection (d)(4)(A) above.
- e) Gasoline dispensing facilities were required to take certain actions summarized in Appendix C to achieve ~~compliance which are summarized in Appendix C of this Part.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.584 Gasoline Delivery Vessels

- a) Any delivery vessel equipped for vapor control using~~by use of~~ vapor collection equipment must:
 - 1) Have~~Shall have~~ a vapor space connection that is~~that is~~ equipped with fittings which are vapor tight;
 - 2) Have~~Shall have~~ its hatches closed at all times during loading or unloading operations, unless a top loading vapor recovery system is used;
 - 3) Not~~Shall not~~ internally exceed a gauge pressure of 18 inches of water or a vacuum of six~~6~~ inches of water;
 - 4) Be~~Shall be~~ designed and maintained to be vapor tight at all times during normal operations;

- 5) ~~Not~~Shall not be refilled in Illinois at other than:
 - A) A bulk gasoline terminal that complies with ~~the requirements of~~ Section 215.582; or
 - B) A bulk gasoline plant that complies with ~~the requirements of~~ Section 215.581(b)(1) and (2).
- 6) ~~Be~~Shall be tested annually in ~~compliance~~accordance with Method 27 ~~at,~~ 40 CFR ~~Part~~60, Appendix A, incorporated by reference in Section 215.105. Each vessel must be repaired and retested ~~within~~with 15 business days after ~~the owner, operator, or Agency discovers~~discovery of the leak ~~by the owner, operator, or the Agency,~~ when it fails to sustain:
 - A) A pressure drop of ~~no more than~~ three inches or less of water in five minutes; and
 - B) A vacuum drop of ~~no more than~~ three inches or less of water in five minutes.
- b) Any delivery vessel meeting the requirements of subsection (a) ~~must~~shall have a sticker affixed to the tank adjacent to the tank manufacturer's data plate which contains the tester's name, the tank identification number, and the date of the test. The sticker ~~must~~shall be in a form prescribed by the Agency, and ~~must~~shall be displayed ~~by~~no later than December 31, 1987.
- c) The owner or operator of a delivery vessel ~~must~~shall:
 - 1) Maintain copies of any test required under subsection (a)(6) for ~~a period of~~ three years;
 - 2) Provide copies of these tests to the Agency upon request; and
 - 3) Provide annual test result certification to bulk gasoline plants and terminals where the delivery vessel is loaded.
- d) Any delivery vessel which has undergone and passed a test in another state which has a USEPA-approved leak testing and certification program will satisfy ~~the requirements of~~ subsection (a). Delivery vessels must display a sticker, decal, or stencil approved by the state where tested or comply with ~~the requirements of~~ subsection (b). All such stickers, decals, or stencils ~~must~~shall be displayed ~~by~~no later than December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.586 Emissions Testing

- a) Any tests of organic material emissions from bulk gasoline terminals, including tests conducted to determine control equipment efficiency or control device destruction efficiency, must be conducted in compliance with the Test Methods and Procedures for the Standards of Performance for Bulk Gasoline Terminals, 40 CFR 60.503, incorporated by reference in Section 215.105. Any alternate test method must be approved by the Agency, which must consider data comparing the performance of the proposed alternative to the performance of the approved test method or methods. If the Agency determines that such data demonstrate that the proposed alternative will achieve results equivalent to the approved test method or methods, the Agency must approve the proposed alternative.
- b) Upon a reasonable request by the Agency, the owner or operator of a VOM emission source subject to this Subpart must conduct emissions testing, at its own expense, to demonstrate compliance.
- c) A person planning to conduct an organic material emissions test to demonstrate compliance with this Subpart must notify the Agency of that intent at least 30 days before the planned initiation of the test so the Agency may observe the test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART Z: DRY CLEANERS

Section 215.607 Standards for Petroleum Solvent Dry Cleaners

- a) The owner or operator of a petroleum solvent dry cleaning dryer must either:
 - 1) Limit VOM emissions of volatile organic material to the atmosphere to an average of 3.5 kg of VOM per 100 kg dry weight of articles dry cleaned; or
 - 2) Install and operate a solvent recovery dryer so that the dryer remains closed and the recovery phase continues until a final solvent flow rate of 50 milliliters per minute is attained.
- b) The owner or operator of a petroleum solvent filtration system must either:
 - 1) Reduce the VOM content in all filtration wastes to 1.0 kg or less per 100 kg dry weight of articles dry cleaned, before disposal, and exposure to the atmosphere; or

- 2) Install and operate a cartridge filtration system, and drain the filter cartridges in their sealed housings for at least eight hours ~~or more~~ before removing them~~their removal~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.608 Operating Practices for Petroleum Solvent Dry Cleaners

~~To~~In order to minimize fugitive solvent emissions, the owner or operator of a petroleum solvent dry cleaning facility must~~shall~~ employ good housekeeping practices, including ~~the following~~:

- a) General housekeeping requirements~~Housekeeping Requirements~~
 - 1) Equipment containing solvent (washers, dryers, extractors, and filters) must~~shall~~ remain closed at all times except during load transfer and maintenance. Lint filter and button trap covers must~~shall~~ remain closed except when solvent-laden material is being removed.
 - 2) Cans, buckets, barrels, and other containers of solvent or of solvent-laden material must~~shall~~ be covered except when in use.
 - 3) Solvent-laden material must~~shall~~ be exposed to the atmosphere only for the minimum time necessary for load transfer.
- b) Installing and operating~~Installation and operation of~~ equipment
 - 1) All cartridge filters must~~shall~~ be installed and operated in compliance~~accordance~~ with the procedures and specifications recommended by the manufacturer for the cartridge filter. After installation, the cartridges must~~shall~~ be inspected, monitored, and maintained in compliance~~accordance~~ with the manufacturer's recommendations, ~~and~~
 - 2) Vents on containers for new solvent and for solvent-containing waste must~~shall~~ be constructed and maintained ~~so as~~ to minimize solvent vapor emissions. Criteria for minimizing~~the minimization of~~ solvent vapor emissions include eliminating~~the elimination of~~ solvent buckets and barrels standing open to the atmosphere, and repairing~~the repair of~~ gaskets and seals that expose solvent-rich environments to the atmosphere, to be determined through visual inspection.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.609 Program for Inspection and Repair of Leaks

- a) The owner or operator of a petroleum solvent dry cleaning facility mustshall conduct the following visual inspections on a weekly basis:
 - 1) Washers, dryers, solvent filters, settling tanks, vacuum stills, and containers and conveyors of petroleum solvent mustshall be inspected for visible leaks of solvent liquid.
 - 2) Pipes, hoses, and fittings mustshall be inspected for active dripping or dampness.
 - 3) Pumps and filters mustshall be inspected for leaks around seals and access covers.
 - 4) Gaskets and seals mustshall be inspected for wear and defects.
- b) Leaks of petroleum solvent liquid and vapors mustshall be repaired within three working days afterof detection, unless necessary replacement parts are not on site.
 - 1) If necessary, repair parts mustshall be ordered within three working days after detectingof detection of the leak.
 - 2) The leak mustshall be repaired within three days after receivingof delivery of necessary parts.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.610 Testing and Monitoring

- a) Compliance with Sections 215.607(b)(2), 215.608, and 215.609 mustshall be determined by visual inspection. and
- b) Compliance with Sections 215.607(a)(2) and (b)(1) mustshall be determined by methods described in EPA-450/3-82-009 (1982), incorporated by reference in Section 215.105 and does not include any later amendments or editions.
- c) If a control device is used to comply with Section 215.607(a)(1), then compliance mustshall be determined using Method 25 at 40 CFR 60, Appendix A-7, Method 25 (2024), incorporated by reference in Section 215.105(1984) and does not include any later amendments or editions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.611 Exemption for Petroleum Solvent Dry Cleaners

The provisions of Sections 215.607 through 215.610 doshall not apply to petroleum solvent dry cleaning facilities whose VOM emissions of volatile organic material do not exceed 91

~~Mgmegagrams~~ (100 ~~Ttons~~) per year in the absence of pollution control equipment, or whose ~~VOM~~ emissions ~~of volatile organic material~~, as limited by the operating permit, will not exceed 91 ~~Mgmegagrams~~ (100 ~~Ttons~~) per year in the absence of pollution control equipment.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.612 Compliance Dates and Geographical Areas

Owners and operators of emission sources located in the counties ~~listed~~ below mustshall comply with ~~the requirements of~~ Sections 215.607 through 215.609 ~~byas expeditiously as practicable but no later than~~ December 31, 1987:

Cook	Madison
DuPage	McHenry
Kane	Monroe
Lake	St. Clair
Macoupin	Will

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.613 Compliance Plan (Repealed)

~~a) The owner or operator of an emission source subject to Section 215.610(a) shall submit to the Agency a compliance plan, including a project completion schedule where applicable, no later than May 31, 1987.~~

~~b) The plan and schedule shall meet the requirements of 35 Ill. Adm. Code 201.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.614 Testing Method for Volatile Organic Material Content of Wastes

The ~~VOM~~~~volatile organic material~~ content of wastes mustshall be determined by Method 24 ~~at~~, 40 CFR 60.5, Appendix A, incorporated by reference in Section 215.105. Any alternate test method must be approved by the Agency, which mustshall consider data comparing the performance of the proposed alternative to the performance of the approved test method or methods~~method(s)~~. If the Agency determines that ~~thesuch~~ data ~~demonstratedemonstrates~~ that the proposed alternative will achieve results equivalent to the approved test method or methods~~method(s)~~, the Agency mustshall approve the proposed alternative.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.615 Emissions Testing

a) Any tests of ~~VOM~~~~volatile organic material~~ emissions, including tests conducted to determine control equipment efficiency or control device destruction

efficiency, ~~must~~shall be conducted in ~~compliance~~accordance with the methods and procedures ~~specified~~in Section 215.102.

- b) Upon a reasonable request by the Agency, the owner or operator of a ~~VOM~~volatile organic material emissions source subject to this Subpart ~~must~~shall conduct emissions testing; at ~~its~~such person's own expense; to demonstrate compliance.
- c) A person planning to conduct a ~~VOM~~volatile organic material emissions test to demonstrate compliance with this Subpart ~~must~~shall notify the Agency of that intent ~~at least~~not less than 30 days before the planned initiation of the ~~test~~tests so the Agency may observe the test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART AA: PAINT AND INK MANUFACTURING

Section 215.620 Applicability

- a) This Subpart ~~applies~~shall apply to ~~the following counties:~~ Cook, DuPage, Kane, Lake, Macoupin, Madison, McHenry, Monroe, St. Clair, and Will ~~Counties~~.
- b) This Subpart ~~applies~~shall apply to all paint and ink manufacturing plants which:
 - 1) ~~Include~~include process emission sources not subject to Subparts B, E, F, N, P, Q, R, S, U, V, X, Y, or Z ~~of this Part~~, and ~~which process emission sources~~as a group would emit ~~at least~~ 100 ~~T tons or more~~ tons per year of ~~VOM~~volatile organic material if no air pollution control equipment were used; or
 - 2) ~~Produce at least~~produce more than ~~two million~~2,000,000 gallons per year of paints or ink formulations; which contain less than ~~10% percent water~~; by weight, ~~water~~, and ink formulations not containing as the primary solvents water, Magic oil, or glycol.
- c) For ~~the purposes of~~ this Subpart, uncontrolled ~~VOM~~volatile organic material emissions are the ~~VOM~~ emissions ~~of volatile organic material~~ which would result if no air pollution control equipment were used.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.621 Exemption for Waterbase Material and Heatset Offset Ink

~~The requirements of~~ Sections 215.624, 215.625, and 215.628(a) ~~do~~shall not apply to equipment while it is being used to produce paint or ink formulations which contain ~~at least~~ 10% ~~percent or more, water~~ by weight, ~~water~~, or inks containing Magic oil and glycol as the primary solvent.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.623 Permit Conditions

~~A~~No person ~~must not~~shall violate any condition in a permit when the condition results in ~~excluding~~exclusion of the plant or an emission source from this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.624 Open-top Mills, Tanks, Vats, or Vessels

~~A~~No person ~~must not~~shall operate an open-top mill, tank, vat, or vessel, with a volume ~~greater of~~more than 12 gallons ~~to produce for the production of~~ paint or ink unless:

- a) The mill, tank, vat, or vessel is equipped with a cover which completely covers the mill, tank, vat, or vessel opening, except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. ~~The~~Such cover ~~must~~shall extend at least 1/2 inch beyond the outer rim of the opening or be attached to the rim.
- b) The cover remains closed, except when production, sampling, maintenance, or inspection procedures require access; ~~and~~.
- c) The cover is maintained in good condition; ~~so~~such that, when in place, it maintains contact with the rim of the opening for at least 90% of the circumference of the rim.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.625 Grinding Mills

- a) ~~A~~No person ~~must not~~shall operate a grinding mill ~~to produce for the production of~~ paint or ink which is not maintained in ~~compliance~~accordance with the manufacturer's specifications.
- b) ~~A~~No person ~~must not~~shall operate a grinding mill fabricated or modified after the effective date of this Subpart which is not equipped with fully enclosed screens.
- c) The manufacturer's specifications ~~must~~shall be kept on file at the plant by the owner or operator of the grinding mill and ~~be~~ made available to any person upon verbal or written request during business hours.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.628 Leaks

The owner or operator of a paint or ink manufacturing plant ~~must~~shall, ~~to detect for the purpose of detecting~~ leaks, conduct an equipment monitoring program consistent with the following:

- a) Each pump ~~must~~shall be checked by visual inspection each calendar week for indications of ~~leaks, that is,~~ liquids dripping from the pump seal, ~~in which case. If there are indications of liquids dripping from the pump seal,~~ the pump ~~must~~shall be repaired as soon as practicable, but ~~within no later than~~ 15 calendar days after the leak is detected.
- b) Any pump, valve, pressure relief valve, sampling connection, open-ended valve, and flange or connector containing a fluid ~~which is~~ at least 10% ~~percent~~ by weight ~~VOM~~volatile organic material which appears to be leaking ~~based on the basis of~~ sight, smell, or sound ~~must~~shall be repaired as soon as practicable, but ~~within no later than~~ 15 calendar days after the leak is detected.
- c) A ~~weatherproof~~weather proof, readily visible tag, in bright colors such as red or yellow, bearing an identification number and the date on which the leak was detected, ~~must~~shall be attached to leaking equipment. The tag may be removed when the equipment ~~has been repaired by adjusting is adjusted~~ or otherwise ~~altering it altered~~ to allow operation without leaking.
- d) When a leak is detected, the owner or operator ~~must~~shall record the date of detection and repair, and the record ~~must~~shall be retained at the plant for at least ~~two~~2 years from the date of each detection or each repair attempt. The record ~~must~~shall be made available to any person upon verbal or written request during business hours.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.630 Clean Up

- a) ~~A~~No person ~~must not~~shall clean paint or ink manufacturing equipment with organic solvent unless the equipment being cleaned is completely covered or enclosed, except for an opening no larger than necessary to allow safe clearance for ~~properly operating~~proper operation of the cleaning equipment, considering the method and materials being used.
- b) ~~A~~No person ~~must~~shall store organic wash solvent only in ~~other than~~ closed containers, unless closed containers are demonstrated to be a safety hazard, ~~or and~~ must dispose of organic wash solvent ~~in a manner such so~~ that only 20% or less ~~more than 20 percent~~ by weight is allowed to evaporate into the atmosphere.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.636 Compliance Date

Owners and operators of emission sources subject to this Subpart ~~must~~shall comply with its requirements by April 1, 1989.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART BB: POLYSTYRENE PLANTS

Section 215.875 Applicability of Subpart BB

~~This~~The provisions of this Subpart ~~applies~~shall apply to polystyrene plants:

- a) ~~Located~~Which are located in ~~any of the following counties:~~ Will, McHenry, Cook, DuPage, Lake, Kane, Madison, St. ~~Clair~~Claire, Monroe, ~~and~~and Macoupin County;
- b) Which use continuous processes to manufacture polystyrene - polybutadiene copolymer; and
- c) Which fall within Standard Industrial Classification Group No. 282, Industry No. 2821, except that ~~manufacturing~~the manufacture of polystyrene resins need not be the primary manufacturing process at the plant.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.877 Emissions Limitation at Polystyrene Plants

~~A~~No person ~~must not~~shall cause or allow ~~the VOM~~ emissions ~~of volatile organic material~~ from the material recovery section to exceed 0.12 kg of ~~VOM~~Volatile Organic Material per 1,000 kg of polystyrene resin produced.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.879 Compliance Date

Every owner and operator of an emission source subject to this Subpart ~~must~~shall comply with its ~~requirements~~standards and limitations by December 31, 1987.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.881 Compliance Plan (Repealed)

- a) ~~The owner or operator of an emission source subject to the requirements of this Subpart shall submit to the Agency a compliance plan in accordance with 35 Ill. Adm. Code 201. Subpart H, including a project completion schedule on or before December 1, 1987.~~

- b) ~~Unless the submitted compliance plan or schedule is disapproved by the Agency, the owner or operator of a facility or emission source subject to this Subpart may operate the emission source according to the plan and schedule as submitted.~~
- e) ~~The plan and schedule shall meet the requirements of 35 Ill. Adm. Code 201. Subpart H and Section 215.883.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.883 Special Requirements for Compliance Plan (Repealed)

~~For sources subject to this Subpart, an approvable compliance plan shall include:~~

- a) ~~A description of each process which is subject to an emissions limitation;~~
- b) ~~Quantification of the emissions from each process;~~
- c) ~~A description of the procedures and methods used to determine the emissions of volatile organic material;~~
- d) ~~A description of the methods which will be used to demonstrate compliance with the allowable plantwide emission limitation (Section 215.877), including a method of inventory, recordkeeping and emission calculation or measurement.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 215.886 Emission Testing

- a) Any tests of VOM~~volatile organic material~~ emissions, including tests conducted to determine control equipment efficiency or control device destruction efficiency, mustshall be conducted in compliance~~accordance~~ with the methods and procedures specified in Section 215.102.
- b) Upon a reasonable request by the Agency, the owner or operator of a polystyrene plant subject to this Subpart mustshall conduct emissions testing; at its~~his~~ own expense; to demonstrate compliance.
- c) A person planning to conduct a VOM~~volatile organic material~~ emissions test to demonstrate compliance with this Subpart mustshall notify the Agency of that intent at least~~not less than~~ 30 days before the planned initiation of the test~~tests~~ so the Agency may observe the test.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART PP: MISCELLANEOUS FABRICATED PRODUCT MANUFACTURING
PROCESSES

Section 215.920 Applicability

- a) ~~This~~~~The requirements of this~~ Subpart ~~applies~~~~apply~~ ~~to the following counties:~~
Cook, DuPage, Kane, Lake, Macoupin, Madison, McHenry, Monroe, St. Clair,
and Will ~~Counties~~.
- b) ~~This~~~~The requirements of this~~ Subpart ~~applies~~~~apply~~ to a plant's miscellaneous
fabricated product manufacturing process emission sources that are not regulated
by Subparts B, E, F, N, P, Q, R, S, U, V, X, Y, or Z if the plant is subject to this
Subpart. A plant is subject to this Subpart if it contains process emission sources,
not regulated by Subparts B, E, F, N, P, Q, R, S, U, V, X, Y, or Z, which as a
group would emit at least 100 ~~Tons or more~~ per year of ~~VOM~~~~volatile organic~~
~~material~~ if no air pollution control equipment were used.
- c) If a plant ceases to fulfill the criteria of subsection (b), the requirements of this
Subpart continue to apply to a miscellaneous fabricated products manufacturing
process emission source which was subject to and met the control requirements of
Section 215.926.
- d) ~~Limits~~~~No limits~~ under this Subpart do not apply to:
 - 1) Emission sources with VOM ~~emissions of volatile organic material~~ to the
atmosphere ~~less than or equal to~~ 1.0 ~~T or less tons~~ per year, if the total
emissions from those sources not complying with Section 215.926 ~~do~~~~does~~
not exceed 5.0 tons per year; and
 - 2) Emission sources whose emissions of VOM~~volatile organic material~~ are
subject to limits in ~~35 Ill. Adm. Code 230 or 35 Ill. Adm. Code 231; or the~~
Lowest Achievable Emission Rate; under 35 Ill. Adm. Code 203; or Best
Available Control Technology; under a permit issued under Section 9.1(d)
~~of the Act or under~~ Section 9.4 of the Act.
- e) For ~~the purposes of~~ this Subpart, an emission source ~~is~~~~shall be~~ considered
regulated by a Subpart if it is subject to the limits of that Subpart; or it would be
subject to the limits of that Subpart if the emission sources; emitting VOM; had
sufficient size, throughput, or emissions; or if the emission source did not meet a
specific exemption ~~contained~~ in that Subpart.
- f) For ~~the purposes of~~ this Subpart, uncontrolled VOM~~volatile organic material~~
emissions are the VOM ~~emissions of volatile organic material~~ that would result if
no air pollution control equipment were used.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.923 Permit Conditions

~~A~~No person ~~must not~~shall violate any condition in a permit when the condition results in ~~excluding~~exclusion of the plant or an emission source from this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.926 Control Requirements

- a) Every owner or operator of an emission source of ~~VOM~~volatile organic material ~~must~~shall operate in compliance with reasonably available control technology (RACT) requirements, which for emission sources subject to this Subpart ~~are~~shall be:
- 1) Emission capture and control techniques which achieve an overall reduction in uncontrolled ~~VOM~~volatile organic material emissions of at least 81%; ~~or~~
 - 2) For coating lines, ~~VOM~~volatile organic material emissions which do not ~~to~~ exceed 0.42 kg/l (3.5 lb/gal) of coating materials as applied, excluding water and any compounds which are specifically exempted from the definition of ~~VOM~~volatile organic material, on a daily basis. Owners and operators complying with this subsection are not required to comply with Section 215.301; or
 - 3) An adjusted RACT emissions limitation obtained ~~under~~pursuant to Subpart I.
- b) Owners and operators of emission sources subject to this Subpart ~~must~~shall comply with its requirements by April 1, 1989.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART QQ: MISCELLANEOUS FORMULATION MANUFACTURING PROCESSES

Section 215.940 Applicability

- a) ~~This~~The requirements of this Subpart ~~applies~~apply ~~to the following counties:~~
Cook, DuPage, Kane, Lake, Macoupin, Madison, McHenry, Monroe, St. Clair,
and Will Counties.
- b) ~~This~~The requirements of this Subpart ~~applies~~apply to a plant's miscellaneous formulation manufacturing process emission sources, which are not regulated by Subpart B, E, F, N, P, Q, R, S, U, V, X, Y, or Z, if the plant is subject to this Subpart. A plant is subject to this Subpart if it contains process emission sources;

not regulated by Subpart B, E, F, N, P, Q, R, S, U, V, X, Y, or Z, which as a group would emit at least 100 ~~Tons or more~~ per year of ~~VOM~~volatile organic material if no air pollution control equipment were used.

- c) If a plant ceases to fulfill the criteria of subsection (b), ~~the requirements of~~ this Subpart ~~continues~~continue to apply to a miscellaneous formulation manufacturing process emission source that was subject to and met the control requirements of Section 215.946.
- d) ~~The~~No limits under this Subpart do not apply to:
 - 1) Emission sources with ~~VOM~~ emissions ~~of volatile organic material~~ to the atmosphere ~~of less than or equal to~~ 2.5 ~~T or less~~tons per year, if the total emissions from those sources not complying with Section 215.946 do not exceed 5.0 ~~Tons~~ per year; and
 - 2) Emission sources whose ~~VOM~~ emissions ~~of volatile organic material~~ are subject to limits in ~~35 Ill. Adm. Code 230 or 35 Ill. Adm. Code 231~~; or the Lowest Achievable Emission Rate; under 35 Ill. Adm. 203; or Best Available Control Technology; under a permit issued under Section 9.1(d) ~~of the Act~~ or ~~under~~ Section 9.4 of the Act.
- e) For ~~the purposes of~~ this Subpart, an emission source ~~is~~shall be considered regulated by a Subpart if it is subject to the limits of that Subpart; or it would be subject to the limits of that Subpart if the emission sources; emitting VOM; had sufficient size, throughput, or emissions; or if the emission source did not meet a specific exemption ~~contained~~ in that Subpart.
- f) For ~~the purposes of~~ this Subpart, uncontrolled ~~VOM~~volatile organic material emissions are the ~~VOM~~ emissions ~~of volatile organic material~~ that would result if no air pollution control equipment were used.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.943 Permit Conditions

~~A~~No person ~~must not~~shall violate any condition in a permit when the condition results in ~~excluding~~exclusion of the plant or an emission source from this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.946 Control Requirements

- a) Every owner or operator of an emission source of ~~VOM~~volatile organic material ~~must~~shall operate in compliance with RACT requirements, which for emission sources subject to this Subpart ~~are~~shall be:

- 1) Emission capture and control techniques which achieve an overall reduction in uncontrolled ~~VOM~~~~volatile organic material~~ emissions of at least 81%; or
 - 2) An adjusted RACT emissions limitation obtained ~~under~~~~pursuant to~~ Subpart I.
- b) ~~Owners~~~~Owner~~ and operators of emission sources subject to this Subpart ~~must~~~~shall~~ comply with its requirements by April 1, 1989

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART RR: MISCELLANEOUS ORGANIC CHEMICAL MANUFACTURING PROCESSES

Section 215.960 Applicability

- a) ~~This~~~~The requirements of this~~ Subpart ~~applies~~~~apply~~ to ~~the following counties:~~ Cook, DuPage, Kane, Lake, Macoupin, Madison, McHenry, Monroe, St. Clair, and Will ~~Counties~~.
- b) ~~This~~~~The requirements of this~~ Subpart ~~applies~~~~apply~~ to a plant's miscellaneous organic chemical manufacturing process emission sources which are not regulated by Subpart B, E, F, N, P, Q, R, S, U, V, X, Y, or Z if the plant is subject to this Subpart. A plant is subject to this Subpart if it contains process emission sources; not regulated by Subpart B, E, F, N, P, Q, R, S, U, V, X, Y, or Z; which as a group would emit at least 100 ~~T~~~~tons or more~~ per year of ~~VOM~~~~volatile organic material~~ if no air pollution control equipment were used.
- c) If a plant ceases to fulfill the criteria of subsection (b), ~~the requirements of this~~ Subpart ~~continues~~~~shall continue~~ to apply to a miscellaneous organic chemical manufacturing process emission source which was subject to and met the control requirements of Section 215.966.
- d) ~~The~~~~No~~ limits under this Subpart do not apply to:
 - 1) Emission sources with VOM emissions ~~of volatile organic material~~ to the atmosphere ~~of less than or equal to~~ 1.0 ~~T~~ ~~or less~~~~ton~~ per year, if the total emissions from those sources not complying with Section 215.966 do not exceed 5.0 ~~T~~~~tons~~ per year; and
 - 2) Emission sources whose VOM emissions ~~of volatile organic material~~ are subject to limits in ~~35 Ill. Adm. Code 230 or 35 Ill. Adm. Code 231; or~~ the Lowest Achievable Emission Rate; under 35 Ill. Adm. Code 203; or Best

Available Control Technology; under a permit issued under Section 9.1(d) ~~of the Act~~ or ~~under~~ Section 9.4 of the Act.

- e) For ~~the purposes of~~ this Subpart, an emission source ~~is~~shall be considered regulated by a Subpart if it is subject to the limits of that Subpart; or it would be subject to the limits of that Subpart if the emission sources; emitting VOM; had sufficient size, throughout, or emissions; or if the emission source did not meet a specific exemption ~~contained~~ in that Subpart.
- f) For ~~the purposes of~~ this Subpart, uncontrolled ~~VOM~~volatile organic material emissions are the VOM emissions ~~of volatile organic material~~ that would result if no air pollution control equipment were used.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.APPENDIX C Past Compliance Dates

~~Before~~Prior to codification, compliance programs, project completion schedules, compliance dates, and compliance schedules for all sources were regulated by Rules 104(a), 104(g), 109(h), 205(j), and 205(m). Past compliance date rules have been deleted from the text of the codified rules; future compliance date rules have been grouped with the rules governing the type of source. As an aid to the public, ~~the old text of the compliance date rules are set out at length in~~ this Appendix lists past compliance dates.

Rule 104(a)

Compliance Programs and Project Completion Schedules -- Applicability

- 1) ~~A~~No person ~~must not~~shall cause or allow the operation of an emission source which ~~does not comply~~is not in compliance with ~~the requirements of~~ Rule 205(k) unless ~~the~~such person is in compliance with a compliance program ~~under as provided for in~~ Rule 104(g) or (h) or Rule 205(m).
- 2) ~~Despite~~Notwithstanding Rule 104(a)(1), cold cleaning degreasers, coin-operated dry cleaning operations, dry cleaning facilities consuming less than 30 gallons per month (360 gallons per year) of perchloroethylene, and sources subject to Rule 205(g) are not required to submit or obtain an ~~Agency-approved~~Agency approved compliance plan or project completion schedule.
- 3) Any compliance plan or project completion schedule, where applicable, ~~must~~shall be a binding condition of the operating permit for the source.

Rule 104(g)

Compliance Programs and Project Completion Schedules -- Submission and Approval Dates

The owner or operator of an emission source subject to the following rules ~~must~~shall have a Compliance Plan and a Project Completion Schedule, where applicable, approved by the Agency

by the following dates. A Compliance Plan and a Project Completion Schedule, where applicable, ~~must~~shall be submitted at least 90 days before the following dates:-

- 1) By February 1, 1980. Gasoline dispensing facilities subject to Rule 205(p) and degreasers subject to Rule 205(k) located in Cook, DuPage, Lake, Kane, McHenry, and Will ~~Counties~~counties.
- 2) By March 1, 1980. Petroleum refineries subject to Rule 205(1), except (1)(4)-(10). Gasoline dispensing facilities subject to Rule 205(p) in Boone, Madison, St. Clair, Peoria, Tazewell, Rock Island, and Winnebago ~~Counties~~counties.
- 3) By April 1, 1980. Degreasers subject to Rule 205(k) located in counties other than Cook, DuPage, Lake, Kane, McHenry, or Will. Bulk gasoline plants, bulk gasoline terminals, and petroleum liquid storage tanks subject to Rule 205(o), except (o)(3), located in Cook, DuPage, Lake, Kane, McHenry, and Will ~~Counties~~counties.
- 4) By April 1, 1980. Coating lines subject to Rule 205(n), except (n)(1)(J), and (K). Bulk gasoline plants, bulk gasoline terminals, and petroleum liquid storage tanks subject to Rule 205(o), except (o)(3), ~~which are~~ located in counties other than Cook, Lake, DuPage, Kane, McHenry, or Will.

Rule 104(h)
Compliance Programs and Project Completion Schedules --
RACT II Compliance Plan Submission and Approval

- 1) The owner or operator of an emission source subject to Rule 205(j)(1) ~~must~~shall submit to the Agency a ~~compliance~~compoiance plan, including a project completion schedule where applicable, ~~by no later than~~:

Rule	Days After Promulgation
(A) Rules 205(o)(3), 205(s), and 205(t)	90
(B) Rules 205(u)(1)(A) and (B)	90
(C) Rule 205(n)(1)(J) and (K)	210

- 2) The owner or operator of an emission source subject to Rule 205(j)(2) ~~must~~shall submit to the Agency a compliance plan, including a project completion schedule where applicable, ~~by no later than~~ December 31, 1986.

- ~~3)4)~~ Unless the submitted compliance plan or schedule is disapproved by the Agency, the owner or operator of a facility or emission source subject to ~~the rules specified in~~ Rule 104(h)(1), (2), or (3) may operate the emission source according to the plan and schedule as submitted.
- ~~4)5)~~ The plan and schedule ~~must~~shall meet the requirements of Rule 104(b) including specific interim dates ~~under as required in~~ Rule 104(b)(2).

Rule 205(j) Compliance Dates

- 1) Except as otherwise stated in subsection (2), every owner or operator of an emission source ~~must~~shall comply with the standards and limitations of Rule 205 in ~~compliance accordance~~ with the dates ~~shown~~ in the following table:

Rule	Type of Source	Compliance Date
205(a) - (i)	New Emission Sources	April 14, 1972
205(a) - (i)	Existing Emission Sources	December 31, 1973
205(k)	All Emission Sources	July 1, 1980
205(l)(1) - (3)	All Emission Sources	July 1, 1980
205(l)(4) - (10)	All Emission Sources	See Rule (m)
205(n)	All Emission Sources	December 31, 1982*
205(n)(1)(J) and (K)	All Emission Sources	December 31, 1983
205(n)(1)(K)(ii)	All Emission Sources	See Rule 205(m)(5)
205(o)(1) and (2) (o)(3)	All Emission Sources	July 1, 1981

205(p)	All Emission Sources	See ~~Rule~~ 205(m)
205(q)	All Emission Sources	December 31, 1980
205(s) and (t)	All Emission Source	December 31, 1983
205(u)(1)(A)-(C)	All Emission Sources	December 31, 1983
205(u)(1)(D)-(G)	All Emission Sources	May 1, 1983

*Except for automobile and light-duty truck manufacturing plants achieving final compliance under a footnote to Rule 205(n)(1).

- 2) If an emission source is not located in one of the counties ~~listed~~ below** and is also not located in any county contiguous ~~to one of them~~~~thereto~~, the owner or operator of the emission source ~~must~~~~shall~~ comply with ~~Rule~~~~the requirements of rule~~ 205(1)(4)-(10), (n)(1)(J) or (K), (o)(3), (s), (t), or (u) ~~by~~~~no later than~~ December 31, 1987:

Cook	Macoupin
DuPage	Madison
Kane	Monroe
Lake	Saint Clair

- 3) ~~Despite~~~~Notwithstanding~~ subsection (2) ~~above~~, if any county is designated as ~~nonattainment~~~~non-attainment~~ by ~~USEPA~~~~the U.S. Environmental Protection Agency~~ at any time ~~after~~~~subsequent to~~ the effective date of this Rule, the owner or operator of an ~~emission~~~~emissin~~ source located in that county or any county contiguous to that county who would otherwise be subject to the compliance date in subsection (2) ~~must~~~~shall~~ comply with ~~the requirements of~~ Rule 205(1)(4)-(10), (n)(1)(J) or (K), (o)(3), (s), (t), or (u) within one year from the date of redesignation but ~~by~~~~in no case later than~~ December 31, 1987.

** These counties are proposed to be designated as nonattainment by ~~USEPA~~~~the U.S. Environmental Protection Agency~~ in ~~47 Fed. Reg.~~~~Federal Register, Volume 47, page~~ 31588 (July 21, 1982).

Rule 205(m) Compliance Schedules

~~This~~The requirements of this section ~~doesshall~~ not apply to any source for which a Project Completion Schedule has been submitted to and approved by the Agency under Rule 104. The owner of any emission source subject to ~~the requirements of~~this section ~~mustshall~~ certify to the Agency by January 15 of each year beginning January 15, 1980, whether increments of progress required to be met in the previous year have been met.

1) Coating Lines

The owner or operator of coating lines subject to ~~the requirements of~~Rule 205(n), except (n)(1)(J) and (K), ~~mustshall~~ take the following actions:

- (A) Submit to the Agency a Compliance Program that meets the requirements of Rule 104(b)(1) by January 1, 1980.
- (B) For sources that, under the approved Compliance Plan, will comply with Rule 205(n) ~~withby use of~~ low solvent coating technology, the following ~~increments~~~~enerelements~~ of progress ~~must,~~
~~shall~~ be met:
 - i) Submit to the Agency by July 1, 1980, and every six months ~~after it~~~~thereafter~~ a report describing in detail the progress in the previous six months in the development, application testing, product quality, customer acceptance, and FDA or other government agency approval of the low solvent coating technology.
 - ii) Initiate process modifications to allow use of low solvent coatings by April 1, 1982.
 - iii) Complete process modifications to allow use of low solvent coatings by October 1, 1982.
- (C) For sources that, under the approved Compliance Plan, will comply with Rule 205(n) by installing ~~emission~~~~emissin~~ control equipment, the following increments of progress ~~must,~~
~~shall~~ be met:
 - i) Award contracts for the emission control ~~equipment~~~~equipment~~ or issue orders ~~tofor the~~ purchase of component parts by July 1, 1980.
 - ii) Initiate on-site construction or ~~installation~~~~installagion~~ of the emission control equipment by July 1, 1982.
 - iii) Complete on-site construction or installation of the emission control equipment by October 1, 1982.

2) Bulk Gasoline Plants, Bulk Gasoline Terminals, and Petroleum Liquid Storage Tanks

The owner of an emission source subject to ~~the requirements of~~ Rule 205(o), except (o)(3), mustshall take the following actions:

- A) Submit to the Agency a Compliance~~Compliance~~ Program that meets the requirements of Rule 104(b)(1) by the date ~~specified~~ in Rule 104(g);
- B) Award contracts for emission control systems or issue orders ~~to~~for ~~the purchase of~~ component parts by July 1, 1980.
- C) Initiate on-site construction or installation of the emission control system by January 1, 1981.
- D) Complete on-site construction or installation of the emission control system and achieve final compliance by July 1, 1981.

3) Gasoline Dispensing Facilities

Owners of gasoline dispensing facilities subject to ~~the requirements of~~ Rule 205(p) mustshall take the following actions:

- A) Submit to the Agency a Compliance Program that meets the requirements of Rule 104(b)(1) by the date ~~specified~~ in Rule 104(g);
- B) Achieve final compliance for 33%~~percent~~ of all gasoline dispensing facilities owned by the ~~ownerowner~~ by July 1, 1980.
- C) Achieve final compliance~~compliance~~ for 66%~~percent~~ of all gasoline dispensing facilities owned by the owner by July 1, 1981.
- D) Achieve final compliance for 100%~~percent~~ of all gasoline dispensing facilities owned by the ~~ownerowner~~ by July 1, 1982.

4) Petroleum Refinery Leaks

The owner or operator of a petroleum refinery mustshall adhere to the increments of progress ~~contained~~ in the following schedule:

- A) Submit to the Agency a monitoring program plan consistent with Rule 205(1)(5) ~~before~~prior to June 1, 1983.

- B) Submit the first monitoring report ~~underpursuant to~~ Rule 205(1)(6)(A)(i) to the Agency ~~beforeprior to~~ July 1, 1983.

5) Coating Lines Subject to Rule 205(n)(1)(K)(ii)

The owner or operator of coating lines subject to Rule 205(n)(1)(k)(ii) may in lieu of compliance with Rule 205(j)(1) demonstrate compliance ~~by usingthrough the use of~~ a low solvent coating technology ~~throughby taking~~ the following actions:

- A) Submit to the Agency a Compliance ~~PlanPeaan~~, including project completion schedule, that meets the requirements of Rule 104(b)(1) within 210 days after the effective date of this rule; and

- B) Meet the following increments of progress:

- i) Submit to the Agency by July 1, 1984, and every six months ~~after it, thereafter~~ a report describing ~~in detail indetail~~ the progress made in the development, application testing, product quality, customer acceptance, and FDA or government agency approval of the low solvent coating technology;
- ii) Initiate process modifications to allow the use of low solvent coatings as soon as coatings meeting Board requirements become commercially available for production use; and
- iii) Achieve final compliance as expeditiously as possible ~~but bybur no later than~~ December 31, 1984.

6) Rotogravure and Flexography Low Solvent Ink Alternative Compliance Plan

The owner or operator of an emission source subject to Rule 205(s) may in lieu of compliance with Rules 104(h)(1)(A) and 205(j) demonstrate compliance ~~by usingthrough the use of~~ a low solvent ink program ~~throughby taking~~ the following actions:

- A) Submit to the Agency a Compliance Plan, including a compliance schedule, by December 31, 1983, which demonstrates:
 - i) ~~Substantialsubstantial~~ emission reductions early in the compliance schedule;

- ii) ~~Greater~~ greater reductions in emissions than would have occurred without ~~occur~~ ~~without~~ a low solvent ink program; and
- iii) ~~Final~~ final compliance as expeditiously as possible but ~~by no~~ later than December 31, 1987; ~~and~~

B) Certify to the Agency that

- i) ~~A~~ a low solvent ink compliance strategy is not technically available, which would not enable the emission source to achieve compliance by the date ~~specified~~ in Rule 205(j); and
- ii) ~~An~~ an unreasonable economic burden would be incurred if the owner or operator were required to demonstrate compliance by the date ~~specified~~ in Rule 205(j); and

C) Agree to install one of the control alternatives ~~specified~~ in Rule 205(s)(1)(C) by June 31, 1986, if the ~~specified~~ low-solvent ink strategy fails to achieve scheduled reductions by December 31, 1985.

9009-53-6	Polystyrene

- a) CAS numbers refer to the Chemical Abstracts Registry numbers assigned to specific chemicals, isomers, or mixtures of chemicals. Some isomers or mixtures that are covered by the standards do not have CAS numbers assigned to them. The standards apply to all ~~of~~ the chemicals listed, whether or not CAS numbers have been assigned and listed or not.

- ~~b) No CAS number(s) have been assigned to this chemical, to its isomers, or mixtures containing these chemicals.~~

- e) ~~CAS numbers for some of the isomers are listed. The : the standards apply to all of the isomers and mixtures, even if CAS numbers have not been assigned.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.APPENDIX E Reference Methods and Procedures

INTRODUCTION

This Appendix ~~provides~~~~presents the~~ reference methods and procedures required for implementing ~~Reasonably Available Control Technology (RACT)~~. Methods and procedures are identified for two types of ~~RACT~~~~ACT~~ implementation:

- a) Determination of VOC destruction efficiency for evaluating compliance with the 98% ~~by~~ weight ~~percent~~ VOC reduction or 20 ppmv emission limit ~~specified~~ in Sections 215.520 through 215.527; and
- b) Determination of offgas flowrate, hourly emissions, and stream net heating value for calculating TRE.

All reference methods ~~identified~~ in this Appendix refer to the reference methods ~~specified~~ at 40 CFR 60. ~~Appendix A~~, incorporated by reference in Section 215.105.

VOC DESTRUCTION EFFICIENCY DETERMINATION

The following reference methods and procedures are required for determining compliance with the percent destruction efficiency ~~specified~~ in Sections 215.520 through 215.527.

- a) Reference Method 1 or 1A ~~to select~~~~for selection of~~ the sampling site. The control device inlet sampling site ~~to determine~~~~for determination of~~ vent stream molar composition or total organic compound destruction efficiency ~~must~~~~shall~~ be ~~before~~~~prior to~~ the inlet of any control device and after all recovery devices.
- b) Reference Methods 2, 2A, 2C, or 2D ~~to determine~~~~for determination of~~ the volumetric flowrate.
- c) Reference Method 3 to measure oxygen concentration of the air dilution correction. The emission sample ~~must~~~~shall~~ be corrected to 3% ~~percent~~ oxygen.
- d) Reference Method 18 to determine the concentration of total organic compounds (minus methane and ethane) in the control device outlet and total organic compound reduction efficiency of the control device.

TRE DETERMINATION

The following reference methods and procedures are required ~~to determine~~^{for determining} the offgas flowrate, hourly emissions, and the net heating value of the gas combusted to calculate the vent stream TRE.

- a) Reference Method 1 or 1A ~~to select~~^{for selection of} the sampling site. The sampling site for the vent stream flowrate and molar composition determination ~~prescribed in (b) and (c)~~ ~~must~~^{shall} be ~~before~~^{prior to} the inlet of any combustion device, ~~before~~^{prior to} any post-reactor dilution of the stream with air, and ~~before~~^{prior to} any post-reactor introduction of halogenated compounds into the vent stream. Subject to the preceding restrictions on the sampling site, it ~~must~~^{shall} be after the final recovery device. If any gas stream other than the air oxidation vent stream is normally conducted through the recovery system of the affected facility, ~~that such~~ stream ~~must~~^{shall} be rerouted or turned off while the vent stream is sampled, but ~~must~~^{shall} be routed normally ~~before~~^{prior to the} measuring ~~of~~ the initial value of the monitored parameters ~~to determine~~^{for determining} compliance with the recommended RACT. If the air oxidation vent stream is normally routed through any equipment which is not a part of the air oxidation process as defined in 35 Ill. Adm. Code 211.122, ~~that such~~ equipment ~~must~~^{shall} be bypassed by the vent stream while the vent stream is sampled, but ~~must~~^{shall} not be bypassed during the measurement of the initial value of the monitored parameters ~~to determine~~^{for determining} compliance with Subpart V.
- b) The molar composition of the vent stream ~~must~~^{shall} be determined using the following methods:
 - 1) Reference Method 18 to measure the concentration of all organics, including those containing halogens, unless a significant portion of the compounds of interest are polymeric (high molecular weight), can polymerize before analysis, or have low vapor pressures, in which case Reference Method 25(a) ~~must~~^{shall} be used.
 - 2) ASTM ~~D1946-90 (2019)~~^{D1946-67 (reapproved 1977)}, incorporated by reference in Section 215.105, to measure the concentration of carbon monoxide and hydrogen.
 - 3) Reference Method 4 to measure the content of water vapor, if necessary.
- c) The volumetric flowrate ~~must~~^{shall} be determined using Reference Method 2, 2A, 2C, or 2D, as appropriate.
- d) The net heating value of the vent stream ~~must~~^{shall} be calculated using the following equation:

$$H=K \sum_{i=1}^n C_i H_i$$

Where:

H = Net heating value of the sample, MJ/scm, where the net enthalpy per mole of offgas is based on combustion at ~~25 °C~~ and 760 mm Hg, but the standard temperature ~~to determine~~~~for determining~~ the volume corresponding to one mole is ~~20 °C~~, as in the definition of F (vent stream flowrate) below.

K = Constant, 1.740×10^{-7} (1/ppm) (mole/scm) (MJ/kcal), where standard temperature for mole/scm is ~~20 °C~~.

C_i = Concentration of sample component i, reported on a wet basis, in ppm, as measured by Reference Method 18 or ASTM ~~D1946-90 (2019)~~~~D1946-67 (reapproved 1977)~~, incorporated by reference in Section 215.105.

H_i = Net heat of combustion of sample component i, kcal/mole based on combustion at ~~25 °C~~ and 760 mm Hg. If published values are not available or cannot be calculated, the heats of combustion of vent stream components ~~must~~~~are required to~~ be determined using ASTM ~~D4809-18~~~~D2382-76~~, incorporated by reference in Section 215.105.

- e) The emission rate of total organic compounds in the process vent stream ~~must~~~~shall~~ be calculated using the following equation:

$$E = K'F \sum_{i=1}^n C_i M_i$$

Where:

E = Emission rate of total organic compounds (minus methane and ethane) in the sample in kg/hr.

K' = ~~Constant~~~~constant~~, 2.494×10^{-6} (1/ppm) (mole/scm) (kg/g) (min/hr), where standard temperature for (mole/scm) is ~~20 °C~~.

M_i = Molecular weight of sample component i (g/mole).

F = Vent stream flowrate (scm/min); at a standard temperature of ~~20 °C~~.

- f) The total vent stream concentration (by volume) of compounds containing halogens (ppmv, by compound) ~~must~~~~shall~~ be summed from the individual concentrations of compounds containing halogens ~~which were~~ measured by Reference Method 18.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 215.APPENDIX F Coefficients for the Total Resource Effectiveness Index (TRE) Equation

This Appendix contains values for the ~~total resource effectiveness index (TRE)~~ equation in Subpart V.

If a flow rate falls exactly on the boundary between the indicated ranges, the operator ~~must~~shall use the row in which the flow rate is maximum.

COEFFICIENTS FOR TRE EQUATION FOR CHLORINATED PROCESS VENT STREAMS WITH NET HEATING VALUE ~~LESS THAN OR EQUAL TO~~ 3.5 MJ/scm OR LESS

SOURCE: Adopted as Chapter 2: Air Pollution, Rule 206: Carbon Monoxide Emissions, R71-23, 4 PCB 191, April 13, 1972, filed and effective April 14, 1972; amended at 3 Ill. Reg. 47, p. 92, effective November 8, 1979; amended at 4 Ill. Reg. 24, p. 514, effective June 4, 1980; codified at 7 Ill. Reg. 13607; amended in R87-18 at 12 Ill. Reg. 20774, effective December 6, 1988; amended in R90-23 at 16 Ill. Reg. 18075, effective November 13, 1992; amended in R23-18(A) at 48 Ill. Reg. 13742, effective August 30, 2024; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 216.100 Scope and Organization

- a) This Part ~~establishes~~ ~~contains~~ standards and limitations for carbon monoxide emissions from stationary sources.
- b) Permits for sources subject to this Part may be required ~~under~~ ~~pursuant to~~ 35 Ill. Adm. Code 201.
- c) ~~Despite~~ ~~Notwithstanding~~ the provisions of this Part, the air quality standards ~~contained~~ in 35 Ill. Adm. Code 243 ~~must~~ ~~may~~ not be violated.
- d) This Part includes ~~the following~~ Subparts ~~arranged as follows~~:
 - 1) Subpart A: General Provisions;
 - 2) Subparts B-J: Fuel Combustion Sources and Incinerators;
 - 3) Subparts K-M: Reserved for Emission Process Sources;
 - 4) Subparts N-End: Industry and ~~Site-specific~~ ~~Site-specific~~ rules.
- e) ~~Rules have been grouped for convenience of the public; the scope of each is determined by its language and history.~~

BOARD NOTE: While subsection (d) describes the organization of this Part, the rules themselves establish their applicability and effect.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 216.101 Measurement Methods

Carbon ~~monoxide~~Monoxide concentrations in an effluent stream ~~must shall~~ be measured by the non-dispersive infrared method, 40 CFR 60. Appendix A, Method 10 (1982), incorporated by reference in Section 216.104, or by other methods approved by the Illinois Environmental Protection Agency (Agency) ~~under~~according to the provisions of 35 Ill. Adm. Code 201.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 216.102 Abbreviations and Conversion Factors

a) This Part uses the ~~The~~ following abbreviations ~~are used in this Part~~:

btu	British thermal unit (<u>60 °F</u>) (~~60°F~~)
CO	carbon monoxide
<u>°C°</u> ~~°C~~	degrees Centigrade
<u>°F°</u> ~~°F~~	degrees Fahrenheit
kg	kilograms
lbs	pounds
<u>MMbtummbtu/</u> ~~MMbtummbtu/~~	million btu per hour
hr	
MW	Megawatts; one million watts
ppm	parts per million

b) This Part uses the ~~The~~ following conversion factors ~~have been used in this Part~~:

<i>English</i>	<u>Metric</u>
1.0	0.293 MW
<u>MMbtummbtu/</u> ~~MMbtummbtu/~~	
hr	
2.205 lbs	1 kg

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 216.103 Definitions

The definitions ~~contained~~ in 35 Ill. Adm. Code 201 and 211 apply to this Part. The definitions for "catalytic cracking unit" and "hot standby" in 40 CFR 63.1579, incorporated by reference in Section 216.104, apply to Section 216.361(d). The definition of "startup" ~~"Startup"~~ in 40 CFR 63.2, incorporated by reference in Section 216.104, applies to Section 216.361(d).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 216.104 Incorporations by Reference

The following materials are incorporated by reference: non-dispersive infrared method, 40 CFR 60.5, Appendix A, Method 10 (1982); 40 CFR 63, Subpart A (2022); 40 CFR 63, Subpart UUU (2022). This Section incorporates no later editions or amendments.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART B: FUEL COMBUSTION EMISSION SOURCES

Section 216.121 Fuel Combustion Emission Sources

A person must not cause or allow the emission of ~~carbon monoxide (CO)~~ into the atmosphere from any fuel combustion emission source with actual heat input greater than 2.9 MW (10 ~~MMBtu~~~~mmbtu~~/hr) to exceed 200 ppm, corrected to ~~50% percent~~ excess air.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 216.122 Exception, Midwest Grain Products

~~The standard for carbon monoxide of~~ Section 216.121 does not apply to emissions from the fluidized bed combustion boiler of Midwest Grain Products of Illinois, ~~located~~ in Pekin, Illinois, where the emission of carbon monoxide ~~must shall~~ not exceed 700 ~~ppm~~~~parts per million~~, corrected to ~~50% percent~~ excess air. Compliance ~~must shall~~ be based ~~on upon~~ a one-hour average.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART C: INCINERATORS

Section 216.141 Incinerators

~~A No~~ person ~~must not shall~~ cause or allow the emission of ~~CO~~~~carbon monoxide~~ into the atmosphere from any incinerator to exceed 500 ppm, corrected to ~~50% percent~~ excess air.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 216.142 Exceptions

Section 216.141 ~~does shall~~ not apply to:

- a) Existing incinerators burning less than 907 kg (2,000 lbs) of refuse per hour which are in compliance with 35 Ill. Adm. Code 212.181(c).
- b) Existing small explosive waste incinerators which meet the conditions of 35 Ill. Adm. Code 212.184(a).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART N: PETROLEUM REFINING AND CHEMICAL MANUFACTURE

Section 216.361 Petroleum and Petrochemical Processes

- a) A person must not cause or allow the emission of a ~~COcarbon monoxide~~ waste gas stream into the atmosphere from a petroleum or petrochemical process, unless the waste gas stream is burned in a direct flame afterburner or ~~COcarbon monoxide~~ boiler so that the resulting concentration of ~~COcarbon monoxide~~ in the waste gas stream is less than or equal to 200 ppm, corrected to 50%~~percent~~ excess air, or the waste gas stream is controlled by other equivalent air pollution control equipment approved by the Agency under 35 Ill. Adm. Code 201.
- b) Regardless of subsection (a), any existing petroleum or petrochemical process using catalyst regenerators of fluidized catalytic converters equipped for in situ combustion of ~~COcarbon monoxide~~ may emit a ~~COcarbon monoxide~~ waste gas stream into the atmosphere if the ~~COcarbon monoxide~~ concentration of the waste gas stream is less than or equal to 750 ppm, corrected to 50%~~percent~~ excess air.
- c) Regardless of subsection (a), any new petroleum or petrochemical process using catalyst regenerators of fluidized catalytic converters equipped for in situ combustion of ~~COcarbon monoxide~~ may emit a ~~COcarbon monoxide~~ waste gas stream into the atmosphere if the ~~COcarbon monoxide~~ concentration of the waste gas stream is less than or equal to 350 ppm, corrected to 50%~~percent~~ excess air.
- d) For the petroleum refinery facilities located in Channahon, Lemont, and Robinson Illinois, regardless of subsections (a) through (c), during startup and hot standby, petroleum catalytic cracking units must comply ~~either~~ with ~~either~~ subsections (a) through (c) or the non-numerical standards for these operating modes in 40 CFR 63, Subpart UUU, Tables 9, 10, 14, and 41, 40 CFR 63.1565(a)(5), 40 CFR 63.1570(c) and (f), 40 CFR 63.1572(c), and 40 CFR 63.1576(a)(2) and (d), incorporated by reference in Section 216.104.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 216.362 Polybasic Organic Acid Partial Oxidation Manufacturing Processes

A person must not cause or allow the emission of any gases containing ~~COcarbon monoxide~~ into the atmosphere from any polybasic organic acid partial oxidation manufacturing process, unless the total fuel value of the waste gas stream is less than 30%~~percent~~ of that required for flame incineration of the waste gas stream at ~~793 °C (1460 °F)~~ ~~793°C (1460°F)~~ without heat exchange. Polybasic organic acid partial oxidation manufacturing processes not meeting the above conditions ~~must shall~~ burn ~~the such~~ waste gas stream in a direct flame afterburner to achieve a resulting concentration of ~~COcarbon monoxide~~ in ~~the such~~ waste gas stream of less than or equal to 200 ppm or must shall employ ~~such~~ other equivalent control method or equipment ~~as may be~~ approved by the Agency ~~under according to the provisions of~~ 35 Ill. Adm. Code 201.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART O: PRIMARY AND FABRICATED METAL PRODUCTS

Section 216.381 Cupolas

~~A No~~ person ~~must not shall~~ cause or allow the emission of gases containing ~~COcarbon monoxide~~ into the atmosphere from any cupola with a manufacturer's rated melt rate ~~exceeding fivein~~ ~~excess of~~ 5 tons per hour, unless ~~the such~~ gases are burned in a direct flame afterburner so that the resulting concentration of ~~COcarbon monoxide~~ in ~~the such~~ gases is less than or equal to 200 ppm, corrected to 50% ~~percent~~ excess air, or ~~the such~~ gas streams are controlled by other equivalent pollution control equipment approved by the Agency ~~under according to the~~ ~~provisions of~~ 35 Ill. Adm. Code 201.

Section 216.382 Exception, General Motor's Ferrous Foundry in Vermilion County (Repealed)

~~The standard for carbon monoxide of 35 Ill. Adm. Code 216.381 shall not apply to the existing ferrous foundry located adjacent to Interstate 74 at G Street in Vermilion County, owned by General Motors Corporation on the effective date of this regulation. The emission of carbon monoxide from this foundry shall not exceed 2,000 ppm corrected to 50 percent excess air.~~

Reg. 6355, effective April 23, 2025; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 217.100 Scope and Organization

- a) This Part sets standards and limitations for emission of [nitrogen](#) oxides ([NO_x](#))ef [nitrogen](#) from stationary sources.
- b) Permits for sources subject to this Part may be required [underpursuant to](#) 35 Ill.

Adm. Code 201 or Section 39.5 of the Act.

- c) ~~Despite Notwithstanding~~ the provisions of this Part, the air quality standards ~~contained~~ in 35 Ill. Adm. Code 243 ~~must~~may not be violated.
- d) ~~These rules have been grouped for convenience of the public; the scope of each is determined by its language and history.~~

BOARD NOTE: While these rules have been organized to clarify them for the public, the rules themselves establish their applicability and effect.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.101 Measurement Methods

Measurement of ~~NO_x nitrogen oxides~~ must be according to:

- a) The phenol disulfonic acid procedures, "Determination of nitrogen oxide emissions from stationary sources", 40 CFR 60.5, Appendix A-4, Method 7, ~~as~~ incorporated by reference in Section 217.104;
- b) Continuous emissions monitoring ~~underpursuant to~~ 40 CFR 75, ~~as~~ incorporated by reference in Section 217.104;
- c) "Determination of Nitrogen Oxides Emissions from Stationary Sources (Instrumental Analyzer Procedure)", 40 CFR 60.5, Appendix A-4, Method 7E, ~~as~~ incorporated by reference in Section 217.104;
- d) Monitoring with portable monitors ~~underpursuant to~~ ASTM D6522-20, ~~as~~ incorporated by reference in Section 217.104; and
- e) "How do I conduct the initial and subsequent performance tests (for turbines), regarding NO_x?", ~~pursuant to~~ 40 CFR 60.4400, ~~as~~ incorporated by reference in Section 217.104.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.102 Abbreviations and Units

- a) This Part uses the~~The~~ following abbreviations~~are used in this Part~~:

ASTM	American Society for Testing and Materials
~~Btu~~	~~British thermal unit~~
bhp	brake horsepower
~~btu~~ ~~Btu~~	~~British thermal unit~~
CEMS	continuous emissions monitoring system
<u>dscf</u>	<u>dry standard cubic feet</u>

EGU	Electrical Generating Unit
~~dscf~~	~~dry standard cubic feet~~
g/bhp-hr	grams per brake horsepower-hour
kg	kilogram
kg/MW-hr	kilograms per megawatt-hour
lb	pound
lbs/ ~~MMbtum~~	~~Btu~~
	pounds per million Btu
Mg	megagram or metric ton
~~MMmm~~	~~million~~
~~MMbtum~~	~~Btu~~

~~MMbtum~~	~~Btu/hr~~
	million British thermal units per hour
~~MWe~~	~~megawatt of electricity~~
MW	megawatt; one million watts
~~MWe~~	~~megawatt of electricity~~
MW-hr	megawatt-hour
NATS	NO _x Allowance Tracking System
NO ₂	nitrogen dioxide
NO _x	nitrogen oxides
O ₂	oxygen
~~PEMS~~	~~predictive emission monitoring system~~
~~peoc~~	~~potential electrical output capacity~~
~~psia~~	~~pounds per square inch absolute~~
~~peoc~~	~~potential electrical output capacity~~
~~PTE~~	~~potential to emit~~
ppm	parts per million
ppmv	parts per million by volume
~~PEMS~~	~~predictive emission monitoring system~~
~~psia~~	~~pounds per square inch absolute~~
T	English ton
TPY	tons per year

b) This Part uses the following conversion factors ~~have been used in this Part~~:

English	Metric
2.205 lb	1 kg
1 T	0.907 Mg
1 lb/T	0.500 kg/Mg

SUBPART C: EXISTING FUEL COMBUSTION EMISSION SOURCES

Section 217.141 Existing Emission Sources in Major Metropolitan Areas

~~A~~~~n~~o person ~~must not~~~~shall~~ cause or allow the emission of ~~NO_x nitrogen oxides~~ into the atmosphere in any ~~one-hour~~~~one hour~~ period from any existing fuel combustion emission unit with an actual heat input

~~of at least equal to or greater than~~ 73.2 MW (250 ~~MMbtu~~mmbtu/hr); ~~and~~ located in the Chicago or St. Louis (Illinois) major metropolitan areas to exceed the following limitations:

- a) For gaseous ~~or and/or~~ liquid fossil fuel firing ~~or both~~, 0.46 kg/MW-hr (0.3 lbs/~~MMbtu~~mmbtu) of actual heat input;
- b) For solid fossil fuel firing, 1.39 kg/MW-hr (0.9 lbs/~~MMbtu~~mmbtu) of actual heat input;
- c) For fuel combustion emission units burning simultaneously any combination of solid, liquid, and gaseous fuel, the allowable emission rate ~~must~~shall be determined by the following equation:

$$E = (AG + BL + CS)Q$$

Where:

- E = allowable ~~NO_x nitrogen oxides~~ emissions rate
- Q = actual heat input
- G = percent of actual heat input derived from gaseous fossil fuel
- L = percent of actual heat input derived from liquid fossil fuel
- S = percent of actual heat input derived from solid fossil fuel
- G + L + S = 100.0

	<u>Metric</u>	<u>English</u>
E	~~kg/hr~~ Kg/hr	~~lb/hr~~ Lbs/hr
Q	MW	~~MMbtu/hr~~ MMbtu/hr
A	0.023	0.003
B	0.023	0.003
C	0.068	0.009

- d) Exceptions: This Section ~~does~~shall not apply to ~~the following~~:
 - 1) Existing fuel combustion sources that are either cyclone fired boilers burning solid or liquid fuel; or horizontally opposed fired boilers burning solid fuel; or
 - 2) Emission units ~~that are~~ subject to the emissions limitations of Subpart E,

F, G, H, I, M, or Q ~~of this Part.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART D: NO_x GENERAL REQUIREMENTS

Section 217.150 Applicability

a) Applicability

- 1) Before July 1, 2005, the provisions of this Subpart and Subparts E, F, G, H, I, and M ~~of this Part~~ apply to ~~the following~~:
 - A) All sources ~~that are~~ located in ~~either~~ one of the following areas ~~and that emit or have the potential to emit at least 100 TPY of NO_x in an amount equal to or greater than 100 tons per year~~:
 - i) The area ~~including~~~~composed of~~ the Chicago area counties of Cook, DuPage, Kane, Lake, McHenry, and Will; the Townships of Aux Sable and Goose Lake in Grundy County; and the Township of Oswego in Kendall County; or
 - ii) The area ~~including~~~~composed of~~ the Metro East area counties of Jersey, Madison, Monroe, and St. Clair; and the Township of Baldwin in Randolph County; and
 - B) Any industrial boiler; process heater; glass melting furnace; cement kiln; lime kiln; iron and steel reheat, annealing, or galvanizing furnace; aluminum reverberatory or crucible furnace; or fossil fuel-fired stationary boiler at ~~the~~~~these~~ sources described in subsection (a)(1)(A) ~~of this Section~~ that emits at least 15 TPY of NO_x ~~in an amount equal to or greater than 15 tons~~ per year and at least 5 TPY ~~equal to or greater than five tons~~ per ozone season.
- 2) On and after July 1, 2025, except as otherwise provided in Subpart E or M, the provisions of this Subpart and Subparts E, F, G, H, I, and M of this Part apply to the owner or operator of any industrial boiler; process heater; glass melting furnace; cement kiln; lime kiln; iron and steel reheat, annealing, or galvanizing furnace; aluminum reverberatory or crucible furnace; or fossil fuel-fired stationary boiler that meets both of the following criteria:
 - A) The emission unit is at a source that is located in one of the following areas and that emits or has the potential to emit at least

50 TPY of NO_x; in an amount equal to or greater than 50 tons per year.

i) The area including~~composed of~~ the Chicago area counties of Cook, DuPage, Kane, Lake, McHenry, and Will;; the Townships of Aux Sable and Goose Lake in Grundy County;; and the Township of Oswego in Kendall County;;
or-

ii) The area including~~composed of~~ the Metro East area counties of Madison, Monroe, and St. Clair; and-

B) The emission unit emits at least 15 TPY ~~tons or more~~ of NO_x to the atmosphere per calendar year.

2) For ~~purposes of~~ this Section, "potential to emit" means the quantity of NO_x that potentially could be emitted by a stationary source before add-on controls based on the design capacity or maximum production capacity of the source and 8,760 hours per year,; or the quantity of NO_x that potentially could be emitted by a stationary source as established in a federally enforceable permit.

b) If a source ceases to fulfill the emissions criteria of subsection (a) ~~of this Section,~~ the requirements of this Subpart and Subpart E, F, G, H, I, or M ~~of this Part~~ continue to apply to any emission unit that was ever subject to ~~the provisions of~~ any of those Subparts.

c) ~~This~~The provisions of this Subpart and Subparts E, F, G, H, I, and M do not apply to afterburners, flares, and incinerators.

d) The owner or operator of an emission unit ~~that is~~ subject to this Subpart and Subpart E, F, G, H, I, or M ~~of this Part~~ must operate ~~the~~such unit in a manner consistent with good air pollution control practice to minimize NO_x emissions.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.152 Compliance Date and 30-Day Rolling Average Basis

a) On and after July 1, 2025, the owner or operator of an emission unit subject to ~~the requirements of~~ this Subpart and Subpart E, F, G, H, I, or M must comply with the requirements of the applicable Subparts. Compliance with emissions limitations must be on a 30-day rolling average basis. A 30-day rolling average consists of 30 operating days,; where an operating day is a calendar day in which any affected emission unit combusts any fuel. Compliance with the 30-day rolling average must be demonstrated 30 operating days after July 1, 2025.

- 1) A 30-day rolling average under Subparts E, F, I, and M is calculated using the total mass of emissions from the period and the total heat input from such period.
 - 2) A 30-day rolling average under Subparts G and H is calculated using the total mass of emissions from the period and the total amount of glass, clinker, or lime produced in the period.
- b) The owner or operator of an emission unit that is constructed or modified on or after July 1, 2025, and that is subject to this Subpart and Subpart E, F, G, H, I, or M must comply with the applicable Subparts within 180 days after initial startup of the new or modified emission unit.
- c) ~~Despite Notwithstanding~~ subsection (a) ~~of this Section~~, compliance with ~~the requirements of~~ Subpart G ~~of this Part~~ by an owner or operator of an emission unit subject to Subpart G ~~will of this Part shall~~ be extended until December 31, 2014, if the unit is required to meet emissions limitations for NO_x, as measured using a ~~continuous emissions monitoring system~~ CEMS, and included ~~on or before May 7, 2010~~, within a legally enforceable order ~~under which on or before May 7, 2010, whereby~~ the emissions limitations are less than 30% ~~percent~~ of the emissions limitations ~~set forth~~ under Section 217.204.
- d) ~~Despite Notwithstanding~~ subsection (a) ~~of this Section~~, the owner or operator of emission units subject to Subpart E or F ~~of this Part~~ and located at a petroleum refinery must comply with ~~the requirements of~~ this Subpart and Subpart E or F ~~of this Part~~, as applicable, for those emission units beginning January 1, 2015. ~~However, except that~~ the owner or operator of emission units listed in Appendix H must comply with the requirements of this Subpart, including the option ~~to demonstrate of demonstrating~~ compliance with the applicable Subpart through an emissions averaging plan under Section 217.158 and Subpart E or F ~~of this Part~~, as applicable, for the listed emission units beginning on the dates ~~set forth in~~ Appendix H. With Agency approval, the owner or operator of emission units listed in Appendix H may elect to comply with ~~the requirements of~~ this Subpart and Subpart E or F ~~of this Part~~, as applicable, by reducing the emissions of emission units other than those listed in Appendix H, if the emissions limitations of those other emission units are equal to or more stringent than the applicable emissions limitations ~~set forth in~~ Subpart E or F ~~of this Part~~, as applicable, by the dates ~~set forth in~~ Appendix H.
- e) ~~Despite Notwithstanding~~ subsection (a) ~~of this Section~~, the owner or operator of emission units subject to Subpart F and located at a petroleum refinery listed in Appendix I that first become subject to the emission limitations under Subpart F on July 1, 2025, must comply with the applicable limitations in Subpart F, including the option ~~to demonstrate of demonstrating~~ compliance with the applicable Subpart through an emissions averaging plan under Section 217.158,

for ~~those such~~ emission units beginning on and after the dates ~~set forth~~ in Appendix I.

- f) Before January 1, 2028, the provisions of Section 217.152(a) that are effective on and after July 1, 2025, do not apply to:
- 1) ~~The~~ three natural gas boilers numbered 6AP, 7AP, and 8AP ~~located~~ at the source ~~located~~ at 100 Abbott Park Road in Lake County; and
 - 2) ~~The~~ two natural gas boilers numbered 9 and 12 ~~located~~ at the source ~~located~~ at 1401 Sheridan Road in Lake County.
- g) ~~Despite~~Notwithstanding subsection (a) ~~of this Section~~, the owner or operator of emission units subject to Subpart E or Subpart F and located at a petrochemical facility listed in Appendix I that first become subject to the emission limitations under Subpart E or F on July 1, 2025, must comply with the applicable limitations in Subpart E or F, including the option ~~to demonstrate~~of demonstrating compliance with the applicable Subpart through an emissions averaging plan under Section 217.158, for ~~those such~~ emission units beginning on and after the dates ~~set forth~~ in Appendix I.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.154 Performance Testing

- a) Performance testing of NO_x emissions for emission units constructed on or before July 1, 2025, and subject to emissions limitations under Subpart E, F, G, H, or I ~~of this Part~~ must be conducted in ~~accordance~~compliance with Section 217.157 ~~of this Subpart~~. This subsection does not apply to owners and operators of emission units demonstrating compliance through a ~~continuous emissions monitoring system (CEMS), predictive emission monitoring system (PEMS),~~ or combustion tuning. If performance testing was already conducted by an owner or operator under this subsection within five years before July 1, 2025, the owner or operator is not required to conduct an additional performance test.
- b) Performance testing of NO_x emissions for emission units for which construction or modification occurs after July 1, 2025, and that are subject to emissions limitations under Subpart E, F, G, H, or I ~~of this Part~~ must be conducted within 60 days after achieving maximum operating rate but ~~within no later than~~ 180 days after initial startup of the new or modified emission unit, in ~~accordance~~compliance with Section 217.157 ~~of this Subpart~~. This subsection does not apply to owners and operators of emission units demonstrating compliance through a CEMS, PEMS, or combustion tuning.

- c) Notification of the initial startup of an emission unit subject to subsection (b) ~~of this Section~~ must be provided to the Agency ~~within no later than~~ 30 days after initial startup.
- d) The owner or operator of an emission unit subject to subsection (a) or (b) ~~of this Section~~ must notify the Agency of the scheduled date for the performance testing in writing at least 30 days before the date and five days before the date.
- e) If demonstrating compliance through an emissions averaging plan, at least 30 days before changing the method of compliance, the owner or operator of an emission unit must submit a written notification to the Agency describing the new method of compliance, the reason for the change in the method of compliance, and the scheduled date for performance testing, if required. ~~When~~Upon changing the method of compliance, the owner or operator of an emission unit must submit to the Agency a revised compliance certification that meets the requirements of Section 217.155.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.155 Initial Compliance Certification

- a) Before July 1, 2025
 - 1) By the applicable compliance date under Section 217.152, an owner or operator of an emission unit subject to Subpart E, F, G, H, or I ~~of this Part~~ who is not demonstrating compliance through ~~the use of~~ a CEMS must certify to the Agency that the emission unit will be in compliance with the applicable emissions limitation of Subpart E, F, G, H, or I ~~of this Part~~ beginning on the applicable compliance date. The performance testing certification must include the results of the performance testing performed in ~~compliance accordance~~ with Section 217.154(a) and (b) and the calculations necessary to demonstrate that the subject emission unit will be in initial compliance.
 - 2) By the applicable compliance date ~~set forth~~ under Section 217.152, an owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ who is demonstrating compliance through ~~the use of~~ a CEMS must certify to the Agency that the affected emission units will be in compliance with the applicable emissions limitation of Subpart E, F, G, H, I, or M ~~of this Part~~ beginning on the applicable compliance date. The compliance certification must include a certification of the installation and operation of a CEMS required under Section 217.157 and the monitoring data necessary to demonstrate that the subject emission unit will be in initial compliance.
- b) On and after July 1, 2025:

- 1) By the applicable compliance date ~~set forth~~ under Section 217.152, an owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ must certify to the Agency that the emission unit will be in compliance with the applicable emissions limitations of Subpart E, F, G, H, I, or M beginning on the applicable compliance date.
 - A) For emission units demonstrating compliance through performance testing, the certification must include the results of the performance testing performed in ~~compliance~~ accordance with Section 217.157 and the calculations necessary to demonstrate that the subject emission unit will be in initial compliance with Subpart E, F, G, H, I, or M as applicable, ~~of this Part~~.
 - B) For emission units demonstrating compliance through ~~the use of a~~ CEMS or PEMS, the certification must certify the installation and operation of a CEMS or PEMS, as applicable, required under Section 217.157.
- 2) For emission units constructed or modified on or after July 1, 2025, the owner or operator must certify to the Agency that the emission unit will be in compliance with the applicable emissions limitations of Subpart E, F, G, H, I, or M within 180 days after initial startup of the new or modified emission unit.
 - A) For emission units demonstrating compliance through performance testing, the certification must include the results of the performance testing performed in accordance with Section 217.154 and the calculations necessary to demonstrate that the subject emission unit will be in initial compliance with Subpart E, F, G, H, I, or M, as applicable, ~~of this Part~~.
 - B) For emission units demonstrating compliance through ~~the use of a~~ CEMS or PEMS, the certification must certify the installation and operation of a CEMS or PEMS, as applicable, required under Section 217.157 and the monitoring data necessary to demonstrate that the subject emission unit will be in initial compliance with Subpart E, F, G, H, I, or M, as applicable, ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.156 Recordkeeping and Reporting

- a) The owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ must keep and maintain all records used to demonstrate initial compliance and ongoing compliance with the requirements of those Subparts.

- 1) Except as otherwise provided under this Subpart or Subpart E, F, G, H, I, or M ~~of this Part~~, copies of the records must be submitted by the owner or operator of the source to the Agency within 30 days after ~~receiving receipt of~~ a written request by the Agency.
 - 2) The records must be kept at the source and maintained for at least five years and must be available for immediate inspection and copying by the Agency.
- b) The owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ must maintain records that demonstrate compliance with the requirements of those Subparts, as applicable, ~~including that include the following~~:
- 1) Identification, type (e.g., gas-fired), and location of each unit;
 - 2) Calendar date of the record;
 - 3) Before July 1, 2025, monthly, seasonal, and annual operating hours. On and after July 1, 2025, daily operating hours;
 - 4) Before July 1, 2025, type and quantity of each fuel used monthly, seasonally, and annually. On and after July 1, 2025, type and quantity of each fuel used daily;
 - 5) On and after July 1, 2025, total mass emissions on a daily basis and on a 30-day rolling average basis;
 - 6) Product and material throughput, as applicable;
 - 7) Reports for all applicable emissions tests for NO_x conducted on the unit, including results;
 - 8) The date, time, and duration of any startup, shutdown, or malfunction in the operation of any emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ or any emissions monitoring equipment. The records must include a description of the malfunction and corrective maintenance activity;
 - 9) A log of all maintenance and inspections related to the unit's air pollution control equipment for NO_x that is performed on the unit;
 - 10) A log for the NO_x monitoring device, if present, including periods when not in service and maintenance and inspection activities that are performed on the device;

- 11) Identification of time periods for which operating conditions and pollutant data were not obtained by the CEMS or PEMS, including the reasons for not obtaining sufficient data and a description of corrective actions taken;
 - 12) Before July 1, 2025, if complying with the emissions averaging plan provisions of Section 217.158, copies of the calculations used to demonstrate compliance with the ozone season and annual control period limitations, noncompliance reports for the ozone season, and ozone and annual control period compliance reports submitted to the Agency; and
 - 13) On and after July 1, 2025, if, under Section 217.152(f), an industrial boiler is using backup distillate fuel oil ~~instead in lieu~~ of natural gas during periods of natural gas curtailment or gas supply interruption, or during periods of periodic testing and maintenance of backup fuels or operator training, ~~for up to not exceeding~~ 48 hours in a calendar year, records documenting the total hours per calendar year of the industrial boiler during these periods.
- c) The owner or operator of an industrial boiler subject to Subpart E ~~of this Part~~ must maintain records ~~in order~~ to demonstrate compliance with the combustion tuning requirements under Section 217.166.
 - d) The owner or operator of a process heater subject to Subpart F ~~of this Part~~ must maintain records ~~in order~~ to demonstrate compliance with the combustion tuning requirements under Section 217.186.
 - e) The owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ must maintain records ~~in order~~ to demonstrate compliance with the testing and monitoring requirements under Section 217.157.
 - f) The owner or operator of an emission unit subject to Subpart E, F, G, H, or I ~~of this Part~~ must provide the following information ~~for with respect to~~ performance testing ~~under pursuant to~~ Section 217.157:
 - 1) Submit a testing protocol to the Agency at least 60 days ~~before prior to~~ testing;
 - 2) Notify the Agency at least 30 days in writing ~~before prior to~~ conducting performance testing for NO_x emissions and five days ~~before the prior to such~~ testing;
 - 3) ~~Within Not later than~~ 60 days after ~~completing the completion of~~ the test, submit the results of the test to the Agency; and
 - 4) If, after the ~~30-day 30 days'~~ notice for an initially scheduled test is sent, there is a delay (e.g., due to operational problems) in conducting the test as

scheduled, the owner or operator of the unit must notify the Agency as soon as practicable of the delay in the original test date, either by providing at least seven days' prior notice of the rescheduled date of the test or by arranging a new test date with the Agency by mutual agreement.

- g) Before July 1, 2025, the owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ must notify the Agency of any exceedances of an applicable emissions limitation of Subpart E, F, G, H, I, or M ~~of this Part~~ by sending the applicable report with an explanation of the causes of the exceedances to the Agency within 30 days ~~after~~ following the end of the applicable compliance period in which the emissions limitation was not met. On and after July 1, 2025, the owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ must notify the Agency of any exceedances of an applicable emissions limitation of Subpart E, F, G, H, I, or M ~~of this Part~~ by sending the applicable report with an explanation of the causes of the exceedances to the Agency within 30 days ~~after~~ following the end of the applicable 30-day rolling average period in which the emissions limitation was not met.
- h) Within 30 days after ~~receiving the receipt of~~ a written request by the Agency, the owner or operator of an emission unit that is exempt from the requirements of Subpart E, F, G, H, I, or M ~~of this Part~~ must submit records that document that the emission unit is exempt from those requirements to the Agency.
- i) Until July 1, 2025, if demonstrating compliance through an emissions averaging plan, by March 1 following the applicable calendar year, the owner or operator must submit to the Agency a report that demonstrates the following:
 - 1) For all units that are part of the emissions averaging plan, the total mass of allowable NO_x emissions for the ozone season and for the annual control period;
 - 2) The total mass of actual NO_x emissions for the ozone season and annual control period for each unit included in the averaging plan;
 - 3) The calculations that demonstrate that the total mass of actual NO_x emissions ~~is are~~ less than the total mass of allowable NO_x emissions using equations in Section 217.158(f); and
 - 4) The information required to determine the total mass of actual NO_x emissions.
- j) On and after July 1, 2025, if demonstrating compliance through an emissions averaging plan, by May 1 following the previous calendar year, the owner or operator must submit to the Agency a report that includes ~~the following~~:

- 1) For all units that are part of the emissions averaging plan, the total mass of allowable NO_x emissions on a 30-day rolling average basis.
 - 2) The total mass of actual NO_x emissions on a 30-day rolling average basis for each unit included in the averaging plan.
 - 3) The calculations that demonstrate that the total mass of actual NO_x emissions is less than the total mass of allowable NO_x emissions using equations in Section 217.158(h).
 - 4) The daily information required to determine the total mass of actual NO_x emissions on a 30-day rolling average basis.
- k) The owner or operator of an emission unit subject to ~~the requirements of~~ Section 217.157 and demonstrating compliance through ~~the use of~~ a CEMS or PEMS must submit to the Agency a report within 30 days after the end of each calendar quarter. This report must include ~~the following~~:
- 1) Information identifying and explaining the times and dates when the CEMS or PEMS for NO_x was not ~~operating in operation~~, other than to calibrate or perform for purposes of calibrating or performing quality assurance or quality control activities for the monitoring equipment; and
 - 2) An excess emissions and monitoring systems performance report in compliance with ~~the requirements of~~ 40 CFR 60.7(c) and (d) and 60.13, or 40 CFR 75, incorporated by reference in Section 217.104, or an alternate procedure approved by the Agency and USEPA.
- l) Until July 1, 2025, the owner or operator of an emission unit subject to Subpart M ~~of this Part~~ must comply with the compliance certification and recordkeeping and reporting requirements in compliance with 40 CFR 96, incorporated by reference in Section 217.104, or an alternate procedure approved by the Agency and USEPA. On and after July 1, 2025, the owner or operator of an emission unit subject to Subpart M ~~of this Part~~ must comply with the compliance certification and recordkeeping and reporting requirements in compliance with 40 CFR 75, incorporated by reference in Section 217.104, or an alternate procedure approved by the Agency and USEPA.
- m) On and after July 1, 2025, the owner or operator of an emission unit subject to Subpart E, F, G, H, I, or M ~~of this Part~~ must submit to the Agency an annual compliance certification report that demonstrates compliance with the applicable requirements ~~to the Agency~~ for the preceding calendar year by May 1 of the following year. The owner or operator may submit the annual compliance certification report to the Agency along with the Annual Emissions Report required under 35 Ill. Adm. Code 254 or the compliance certification required

under 415 ILCS 5/39.5(7)(p)(v). The compliance report must include ~~the following~~:

- 1) Identification, type (e.g., gas-fired), and location of the emission unit~~;~~
- 2) Methods used for determining compliance, including an emissions averaging plan, if applicable, a description of test methods, monitoring, recordkeeping, and reporting requirements~~;~~
- 3) A certification of compliance with the applicable emissions limitation or identification of the periods of noncompliance with a quantification of the excess emissions limitation and the excess emissions~~;~~
- 4) For each calendar month, the highest 30-day rolling average emission rate. The emissions data must be reported in the measurement units of the applicable emissions limitation~~;~~
- 5) The emission unit's daily and total operating hours, capacity utilization, and the percent operation of any CEMS or PEMS during the hours the emission unit was operating~~; and~~
- 6) A certification of compliance with all applicable requirements~~,~~ except those identified~~,~~ signed by a responsible official that contains the following: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.157 Testing and Monitoring

a) Industrial Boilers and Process Heaters

- 1) The owner or operator of an industrial boiler subject to Subpart E ~~of this Part~~ with a rated heat input capacity greater than 250 ~~MMBtu/mmBtu~~/hr must install, calibrate, maintain, and operate a CEMS on the emission unit ~~to measure for the measurement of~~ NO_x emissions discharged into the atmosphere in ~~compliance accordance~~ with 40 CFR 75, ~~as~~ incorporated by reference in Section 217.104. However, the owner or operator of an industrial boiler subject to Subpart E ~~of this Part~~ with a rated heat input capacity greater than 250 ~~MMBtu/mmBtu~~/hr that combusts blast furnace gas with up to 10% natural gas on an annual basis and located at a source that manufactures iron and steel is not required to install, calibrate, maintain, and operate a CEMS on that industrial boiler ~~if, provided~~ the heat input from natural gas does not exceed 10% on an annual basis~~,~~ and the owner or operator complies with the performance test requirements

under this Section and demonstrates, during each performance test, that NO_x emissions from the industrial boiler are less than 70% of the applicable emissions limitation under Section 217.164. If the owner or operator is unable to meet the requirements of this exception, a CEMS is required within 12 months after that event, or by January 1, 2015, whichever is later.

- 2) The owner or operator of an industrial boiler subject to Subpart E ~~of this Part~~ with a rated heat input capacity greater than 100 ~~MMBtu/mmBtu~~/hr and up to but less than or equal to 250 ~~MMBtu/mmBtu~~/hr must install, calibrate, maintain, and operate a CEMS on the emission unit to measure for the measurement of NO_x emissions discharged into the atmosphere in ~~compliance~~ with 40 CFR 60, ~~Subpart~~ A and ~~Appendix~~ B, Performance Specifications 2 and 3, and ~~Appendix~~ F, Quality Assurance Procedures, ~~as~~ incorporated by reference in Section 217.104.
- 3) The owner or operator of a process heater subject to Subpart F ~~of this Part~~ with a rated heat input capacity greater than 100 ~~MMBtu/mmBtu~~/hr must install, calibrate, maintain, and operate a CEMS on the emission unit to measure for the measurement of NO_x emissions discharged into the atmosphere in ~~compliance~~ with 40 CFR 60, ~~Subpart~~ A and ~~Appendix~~ B, Performance Specifications 2 and 3, and ~~Appendix~~ F, Quality Assurance Procedures, ~~as~~ incorporated by reference in Section 217.104.
- 4) On and after July 1, 2025, the owner or operator of an industrial boiler subject to Subpart E ~~of this Part~~, or a process heater subject to Subpart F ~~of this Part~~, with a rated heat input capacity greater than 50 ~~MMBtu/mmBtu~~/hr and up to but less than or equal to 100 ~~MMBtu/mmBtu~~/hr must have an initial performance test conducted in ~~compliance~~ with subsection (a)(8)(A) ~~of this Section~~ and Section 217.154, and subsequent performance tests conducted in ~~compliance~~ with subsection (a)(8) ~~of this Section~~.
- 5) If demonstrating compliance through an emissions averaging plan, the owner or operator of an industrial boiler subject to Subpart E ~~of this Part~~, or a process heater subject to Subpart F ~~of this Part~~, with a rated heat input capacity of less than or equal to 100 ~~MMBtu/mmBtu~~/hr or less and not demonstrating compliance through a CEMS must have an initial performance test conducted in ~~compliance~~ with subsection (a)(8)(A) ~~of this Section~~ and Section 217.154, and subsequent performance tests conducted in ~~compliance~~ with subsection (a)(8) ~~of this Section~~.

- 6) Instead of complying with ~~the requirements of~~ subsection (a)(4) or (5) ~~of this Section~~, an owner or operator of an industrial boiler subject to Subpart E ~~of this Part~~, or a process heater subject to Subpart F ~~of this Part~~, with a rated heat input capacity ~~of less than or equal to~~ 100 ~~MMBtu/mmBtu~~/hr ~~or less~~ may install and operate a CEMS on the emission unit in ~~compliance~~ ~~accordance~~ with the applicable requirements of 40 CFR 60, ~~Subpart~~subpart A and ~~Appendix~~appendix B, Performance Specifications 2 and 3, and ~~Appendix~~appendix F, Quality Assurance Procedures, ~~as~~ incorporated by reference in Section 217.104. The CEMS must be used to demonstrate compliance with the applicable emissions limitation or emissions averaging plan on an ozone season and annual basis until July 1, 2025, and a 30-day rolling average on and after July 1, 2025.
- 7) ~~Despite~~~~Notwithstanding~~ subsection (a)(2) ~~of this Section~~, the owner or operator of an auxiliary boiler subject to Subpart E ~~of this Part~~ with a rated heat input capacity ~~of less than or equal to~~ 250 ~~MMBtu/mmBtu~~/hr ~~or less~~ and a capacity factor of ~~less than or equal to~~ 20% ~~or less~~ is not required to install, calibrate, maintain, and operate a CEMS on the boiler ~~to measure~~~~for the measurement of~~ NO_x emissions discharged into the atmosphere, but must conduct initial and subsequent performance tests in ~~compliance~~ ~~accordance~~ with subsection (a)(8) ~~of this Section~~.
- 8) All performance tests required by this subsection (a) must be conducted at the ~~owner's~~~~owner~~ or operator's sole expense and must meet the requirements in subsection (a)(8)(A). All performance tests required by subsection (a) ~~after~~~~subsequent to~~ an initial performance test must also meet the requirements in subsection (a)(8)(B):
- A) Except ~~under~~~~as provided in~~ subsection (a)(8)(C), the performance test must be conducted using 40 CFR 60, ~~Subpart~~subpart A and ~~Appendix~~appendix A, Method 1, 2, 3, 4, 7E, or 19, in appendix A-1, A-2, A-3, A-4, or A7, respectively, ~~as~~ incorporated by reference in Section 217.104, or other alternative USEPA methods approved by the Agency. Each performance test must consist of three separate runs, each lasting ~~at least a minimum of~~ 60 minutes. ~~NO_x~~~~NO_x~~ emissions must be measured while the industrial boiler or process heater is operating at maximum operating capacity or while it is operating at normal maximum load. If the industrial boiler or process heater has combusted more than one type of fuel in the ~~previous~~~~prior~~ year, a separate performance test is required for each fuel. If a combination of fuels is typically used, a performance test may be conducted, with Agency approval, on the combination of fuels typically used.
- B) A performance test must be conducted at least once every five years. When, in the opinion of the Agency or USEPA, it is

necessary to conduct testing to demonstrate compliance with Section 217.164 or 217.184, as applicable, the owner or operator of an industrial boiler or process heater must have the test conducted in ~~compliance~~ with the applicable test methods and procedures ~~specified~~ in this Section within 90 days after ~~receiving receipt of~~ a notice to test from the Agency or USEPA.

- C) Instead of complying with ~~the requirements of~~ subsection (a)(8)(A) and with written approval from the Agency and USEPA, the owner or operator of an industrial boiler subject to Subpart E or a process heater subject to Subpart F, as applicable, may ~~use~~ utilize an alternative method to determine the emission rate (lbs/~~MMbtum~~ ~~Btu~~) for each fuel combusted in the ~~previous~~ prior year for units that share a common stack. The alternative method must include the use of mass balance for units emitting through the common stack where not all emissions units sharing that common stack are subject to Subpart E or F, as applicable, provided there is adequate performance testing, ~~and/or~~ CEMS monitoring, ~~or both~~ to determine emissions from the units subject to Subpart E or F, as applicable, and where heat input is monitored for all emission units served by the common stack. The owner or operator must comply with all applicable provisions under this Section until ~~the owner or operator receives~~ written Agency and USEPA approval to ~~use~~ utilize the alternative method ~~is received by the owner or operator~~.

- b) Glass Melting Furnaces; Cement Kilns; Lime Kilns; Iron and Steel Reheat, Annealing, and Galvanizing Furnaces; and Aluminum Reverberatory and Crucible Furnaces

- 1) An owner or operator of a glass melting furnace subject to Subpart G ~~of this Part~~, cement kiln or lime kiln subject to Subpart H ~~of this Part~~, iron and steel reheat, annealing, or galvanizing furnace subject to Subpart I ~~of this Part~~, or aluminum reverberatory or crucible furnace subject to Subpart I ~~of this Part~~ that has the potential to emit at least one ton of NO_x ~~in an amount equal to or greater than one ton~~ per day must install, calibrate, maintain, and operate a CEMS on the emission unit ~~to measure for the measurement of~~ NO_x emissions discharged into the atmosphere in ~~compliance~~ with 40 CFR 60, ~~Subpart~~ subpart A and ~~Appendix~~ appendix B, Performance Specifications 2 and 3, and ~~Appendix~~ appendix F, Quality Assurance Procedures, ~~as~~ incorporated by reference in Section 217.104.
- 2) An owner or operator of a glass melting furnace subject to Subpart G ~~of this Part~~, cement kiln or lime kiln subject to Subpart H ~~of this Part~~, iron and steel reheat, annealing, or galvanizing furnace subject to Subpart I ~~of this Part~~, or aluminum reverberatory or crucible furnace subject to Subpart

~~I of this Part~~ that has the potential to emit less than one ton of NO_x ~~in an amount less than one ton~~ per day must have an initial performance test conducted underpursuant to subsection (b)(4) ~~of this Section~~ and Section 217.154.

- 3) An owner or operator of a glass melting furnace subject to Subpart G ~~of this Part~~, cement kiln or lime kiln subject to Subpart H ~~of this Part~~, iron and steel reheat, annealing, or galvanizing furnace subject to Subpart I ~~of this Part~~, or aluminum reverberatory or crucible furnace subject to Subpart I ~~of this Part~~ that has the potential to emit less than one ton of NO_x ~~in an amount less than one ton~~ per day must have subsequent performance tests conducted underpursuant to subsection (b)(4) ~~of this Section~~ as follows:
 - A) All the units, including those that are part of an emissions averaging plan, must conduct subsequent performance tests at least once every five years; and
 - B) When, in the opinion of the Agency or USEPA, it is necessary to conduct testing to demonstrate compliance with Section 217.204, 217.224, or 217.244 ~~of this Part~~, as applicable, the owner or operator must, at his or hers own expense, have the test conducted in compliance ~~accordance~~ with the applicable test methods and procedures specified ~~in this Section~~ within 90 days after receiving receipt of a notice to test from the Agency or USEPA.
- 4) The owner or operator of a glass melting furnace, cement kiln, or lime kiln must have a performance test conducted using 40 CFR 60, Subpart ~~subpart~~ A and Methods 1, 2, 3, 4, or 7E in Appendix ~~appendix~~ A-1, A-2, A-3, or A-4, respectively, as ~~incorporated by reference in Section 217.104 of this Part~~, or other alternative USEPA methods approved by the Agency. The owner or operator of an iron and steel reheat, annealing, or galvanizing furnace, or aluminum reverberatory or crucible furnace must have a performance test conducted using 40 CFR 60, Subpart ~~subpart~~ A and Method 1, 2, 3, 4, 7E, or 19 in Appendix ~~appendix~~ A-1, A-2, A-3, A-4, or A-7, respectively, as ~~incorporated by reference in Section 217.104 of this Part~~, or other alternative USEPA methods approved by the Agency. Each performance test must consist of three separate runs, each lasting at least a minimum of 60 minutes. NO_x emissions must be measured while the emission unit ~~glass melting furnace, cement kiln, lime kiln, iron and steel reheat, annealing, or galvanizing furnace, or aluminum reverberatory or crucible furnace~~ is operating at maximum capacity. If the emission unit ~~glass melting furnace, cement kiln, lime kiln, iron and steel reheat, annealing, or galvanizing furnace, or aluminum reverberatory or crucible furnace~~ has combusted more than one type of fuel in the prior year, a separate performance test is required for each fuel. Except as provided

under subsection (e) ~~of this Section~~, this subsection (b)(4) does not apply if the owner or operator is demonstrating compliance with an emissions limitation through a CEMS under subsection (b)(1) or (b)(5) ~~of this Section~~.

- 5) Instead of complying with ~~the requirements of~~ subsections (b)(2), (b)(3), and (b)(4) ~~of this Section~~, an owner or operator of a glass melting furnace subject to Subpart G ~~of this Part~~, cement kiln or lime kiln subject to Subpart H ~~of this Part~~, iron and steel reheat, annealing, or galvanizing furnace subject to Subpart I ~~of this Part~~, or aluminum reverberatory or crucible furnace subject to Subpart I ~~of this Part~~ that has the potential to emit ~~less than one ton of~~ NO_x ~~in an amount less than one ton~~ per day may install and operate a CEMS on ~~the such~~ emission unit in ~~compliance~~ with the applicable requirements of 40 CFR 60, ~~Subpart~~ Subpart A and ~~Appendix~~ Appendix B, Performance Specifications 2 and 3, and ~~Appendix~~ Appendix F, Quality Assurance Procedures, ~~as~~ incorporated by reference in Section 217.104 ~~of this Part~~. The ~~CEMS~~ continuous emissions monitoring system must be used to demonstrate compliance with the applicable emissions limitation or emissions averaging plan on an ozone season and annual basis until July 1, 2025, and a 30-day rolling average on and after July 1, 2025.
- c) Fossil Fuel-Fired Stationary Boilers. Until July 1, 2025, the owner or operator of a fossil fuel-fired stationary boiler subject to Subpart M ~~of this Part~~ must install, calibrate, maintain, and operate a CEMS on the emission unit ~~to measure for the measurement of~~ NO_x emissions discharged into the atmosphere in ~~compliance~~ with 40 CFR 96, ~~Subpart~~ Subpart H. On and after July 1, 2025, the owner or operator of a fossil fuel-fired stationary boiler subject to Subpart M ~~of this Part~~ must install, calibrate, maintain, and operate a CEMS on the emission unit ~~to measure for the measurement of~~ NO_x emissions discharged into the atmosphere in ~~compliance~~ with 40 CFR 75.
- d) Common Stacks.
 - 1) If two or more emission units subject to Subpart E, F, G, H, I, M, or Q ~~of this Part~~ are served by a common stack, and the owner or operator of the emission units is operating a CEMS, the owner or operator may, with written approval from the Agency, use a single CEMS for the combination of emission units subject to Subpart E, F, G, H, I, M, or Q ~~of this Part~~ that share the common stack, ~~if provided such~~ the emission units are subject to an emissions averaging plan under this Part.
 - 2) If a common stack serves emission units subject to Subpart E or F; ~~and as well as~~ emission units that are not subject to Subpart E or F, each emission unit served by that common stack must be monitored by a CEMS ~~or and/or~~ have had performance testing conducted in ~~compliance~~ with

subsection (a)(8) or both to determine emissions from the emission units subject to Subpart E or F. Additionally, and heat input from all emission units served by the common stack must be monitored.

- 3) Despite Notwithstanding subsection (d)(1), it is not required for all emission units sharing a common stack are not required to be part of an emissions averaging plan if the following criteria are met:
- A) Each emission unit at the source subject to an emissions limitation in Subparts E or F and not served by a common stack is demonstrating compliance with the applicable emissions limitation on a unit basis; and-
 - B) The common stack is monitored by either a CEMS in accordance with this Section or performance testing in accordance with subsection (a)(8)(C) to demonstrate compliance with the applicable emissions limitations.
- e) An Compliance with the CEMS requirements by an owner or operator of an emission unit who is required to install, calibrate, maintain, and operate a CEMS on the emission unit under subsection (a)(1), (a)(2), (a)(3), or (b)(1) -of this Section, or who has elected to comply with the CEMS requirements under subsection (a)(6) or (b)(5) -of this Section, or who has elected to comply with the PEMS requirements under subsection (f) -of this Section, must comply with the CEMS requirements is required by the applicable compliance date under Section 217.152 -of this Subpart.
- f) As an alternative to complying with the requirements of this Section, other than the requirements under subsections (a)(1) and (c) -of this Section, the owner or operator of an emission unit who is not otherwise required by any other statute, regulation, or enforceable order to install, calibrate, maintain, and operate a CEMS on the emission unit may comply with the specifications and test procedures for a PEMS on the emission unit to measure for the measurement of NO_x emissions discharged into the atmosphere in compliance accordance with the requirements of 40 CFR 60, Subpart subpart A and Appendix appendix B, Performance Specification 16. The PEMS must be used to demonstrate compliance with the applicable emissions limitation or emissions averaging plan on an ozone season and annual basis until July 1, 2025, and a 30-day rolling average on and after July 1, 2025.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.158 Emissions Averaging Plans

- a) Despite Notwithstanding any other emissions averaging plan provisions under this Part, an owner or operator of a source with certain emission units subject to Subpart E, F, G, H, I, or M -of this Part, or subject to Subpart Q, of this Part that

are located in either ~~one~~ of the areas ~~set forth~~ under Section 217.150(a)(1)(A)(i) or (ii) or Section 217.150(a)(2)(A)(i) or (ii), may demonstrate compliance with the applicable Subpart through an emissions averaging plan. An emissions averaging plan can ~~only~~ address only emission units that are located at one source, and each unit may ~~only~~ be covered by only one emissions averaging plan. The emission units at the source are affected units and are subject to the requirements of this Section.

- 1) The following units may be included in an emissions averaging plan:
 - A) Units that commenced operation on or before January 1, 2017.
 - B) Before July 1, 2025, units that the owner or operator may claim as exempt under Section 217.162, 217.182, 217.202, 217.222, 217.242, or 217.342 ~~of this Part~~, as applicable, but does not claim exempt. ~~While~~For as long as the unit is included in an emissions averaging plan, it will be treated as an affected unit and subject to the applicable emissions limitations, and testing, monitoring, recordkeeping, and reporting requirements.
 - C) On and after July 1, 2025, units that are not otherwise subject to Subpart E, F, G, H, I, or M, as applicable, under Section 217.150(a)(2)(B), or Subpart Q, as applicable, under Section 217.386(b)(2)(A) or (B), but that the owner or operator chooses to include in an emissions averaging plan. ~~While~~For as long as the unit is included in an emissions averaging plan, it will be treated as an affected unit and subject to the applicable emissions limitations, testing, monitoring, recordkeeping, and reporting requirements.
 - D) Units that ~~commenced~~commence operation after January 1, 2017, if the unit ~~replaced~~replaces a unit that commenced operation on or before January 1, 2017, or it ~~replaced~~replaces a unit that replaced a unit that commenced operation on or before January 1, 2017. The new unit must be used for the same purpose and have substantially equivalent or less process capacity or be permitted for less NO_x emissions on an annual basis than the actual NO_x emissions of the unit or units that are replaced. Within 90 days after permanently shutting down a unit that is replaced, the owner or operator of the unit must submit a written request to withdraw or amend the applicable permit to reflect that the unit is no longer in service before the replacement unit may be included in an emissions averaging plan.
 - E) On and after July 1, 2025, units that are not otherwise subject to Subpart E, F, G, H, I, or M, as applicable, under Section

217.150(a)(2)(B), but that share a common stack with a unit that is subject to Subpart E, F, G, H, I, or M, as applicable.

2) The following types of units may not be included in an emissions averaging plan:

- A) Units that ~~commenced~~commence operation after January 1, 2017, except as provided by subsection (a)(1)(D) ~~of this Section~~.
- B) Before July 1, 2025, units that the owner or operator is claiming are exempt under Section 217.162, 217.182, 217.202, 217.222, 217.242, or 217.342 ~~of this Part~~, as applicable.
- C) Units ~~that are~~ required to meet emission limits or control requirements for NO_x as provided ~~for~~ in an enforceable order, unless the order allows for emissions averaging. In the case of petroleum refineries, this subsection ~~(a)(2)(C)~~ does not prohibit including industrial boilers or process heaters, or both, in an emissions averaging plan, ~~if~~when an enforceable order does not prohibit the owner or operator from using reductions made under the order ~~from also being used for compliance to also comply~~ with any rules or regulations designed to address regional haze or the ~~nonattainment~~non-attainment status of any area.

b) Before July 1, 2025, an owner or operator must submit an emissions averaging plan to the Agency by January 1, 2015. The plan must include, ~~but is not limited to, the following~~:

- 1) The list of affected units included in the plan by unit identification number; and
- 2) A sample calculation demonstrating compliance using the methodology ~~provided~~ in subsection (g) ~~of this Section~~ for the ozone season (May 1 through September 30) and calendar year (January 1 through December 31).

c) On and after July 1, 2025, an owner or operator must submit an emissions averaging plan to the Agency at least 30 days before beginning to use~~the use of~~ that plan to demonstrate compliance. The plan must include, ~~but is not limited to, the following~~:

- 1) The list of affected units included in the plan by unit identification number;

- 2) The allowable emissions limitation for each unit; ~~underas provided in Sections 217.164, 217.184, 217.204, 217.224, 217.244, and 217.344 of this Part,~~ as applicable;
 - 3) A sample calculation demonstrating compliance using the methodology ~~provided in subsection (h) of this Section~~ on a 30-day rolling average basis; ~~and-~~
 - 4) The date the owner or operator will begin using the emissions averaging plan.
- d) An owner or operator may amend an emissions averaging plan only once per calendar year.
- e) ~~Despite~~Notwithstanding subsection (d) ~~of this Section:~~
- 1) If a unit ~~that is~~ listed in an emissions averaging plan is taken out of service, the owner or operator must submit to the Agency, within 30 days after the occurrence, an updated emissions averaging plan; ~~or~~
 - 2) Before July 1, 2025, if a unit that was exempt from ~~the requirements of Subpart E, F, G, H, I, or M of this Part~~ under Section 217.162, 217.182, 217.202, 217.222, 217.242, or 217.342 ~~of this Part,~~ as applicable, no longer qualifies for an exemption, the owner or operator may amend its existing averaging plan to include the unit within 30 days after the unit no longer qualifies for the exemption.
 - 3) On and after July 1, 2025, if a unit that was not otherwise subject to Subpart E, F, G, H, I, or M, as applicable, under Section 217.150(a)(2)(B) becomes subject to Subpart E, F, G, H, I, or M, as applicable, the owner or operator may amend its existing averaging plan to include the unit within 30 days after the unit becomes subject to the applicable Subpart.
- f) An owner or operator must:
- 1) Until July 1, 2025, demonstrate compliance for the ozone season (May 1 through September 30) and the calendar year (January 1 through December 31) ~~by~~ using the methodology and the units listed in the most recent emissions averaging plan submitted to the Agency under subsection (b) ~~of this Section,~~ the monitoring data or test data determined under Section 217.157, and the actual hours of operation for the applicable averaging plan period.
 - 2) On and after July 1, 2025, demonstrate compliance on a 30-day rolling average basis ~~by~~ using the methodology and the units listed in the most recent emissions averaging plan submitted to the Agency under subsection

(c) ~~of this Section~~, the monitoring data or test data determined under Section 217.157, and the actual hours of operation for the applicable averaging plan period.

3) Until July 1, 2025, submit to the Agency; by March 1 following each calendar year; a compliance report containing the information required by Section 217.156(i). On and after July 1, 2025, submit to the Agency; by May 1 following each calendar year; a compliance report containing the information required by Section 217.156(j)

g) Until July 1, 2025, the total mass of actual NO_x emissions from the units listed in the emissions averaging plan must be equal to or less than the total mass of allowable NO_x emissions for those units for both the ozone season and calendar year. The following equation must be used to determine compliance:

$$N_{act} \leq N_{all}$$

Where:

$$N_{act} = \sum_{i=1}^n \sum_{j=1}^k EM_{act(i,j)}$$

$$N_{all} = \sum_{i=1}^n \sum_{j=1}^k EM_{all(i,j)}$$

N_{act} = Total sum of the actual NO_x mass emissions from units included in the averaging plan for each fuel used (tons per ozone season and year).

N_{all} = Total sum of the allowable NO_x mass emissions from units included in the averaging plan for each fuel used (tons per ozone season and year).

$EM_{act(i)}$ = Total mass of actual NO_x emissions in tons for a unit as determined in subsection (f)(1) ~~of this Section~~.

i = Subscript denoting an individual unit.

j = Subscript denoting the fuel type used.

k = Number of different fuel types.

n = Number of different units in the averaging plan.

$EM_{all(i)}$ = Total mass of allowable NO_x emissions in tons for a unit as determined in subsection (f)(2) ~~of this Section~~.

For each unit in the averaging plan, and each fuel used by the unit, determine actual and allowable NO_x emissions using the following equations:

1) Actual emissions must be determined as follows:

When emission limits are prescribed in lb/~~MMBtu~~mmBtu,

$$EM_{act(i)} = E_{act(i)} \times H_i / 2000$$

When emission limits are prescribed in lb/~~Ton~~ of processed product,

$$EM_{act(i)} = E_{act(i)} \times P_i / 2000$$

- 2) Allowable emissions must be determined as follows:

When emission limits are prescribed in lb/~~MMBtu~~mmBtu,

$$EM_{all(i)} = E_{all(i)} \times H_i / 2000$$

When emission limits are prescribed in lb/~~Ton~~ of processed product,

$$EM_{all(i)} = E_{all(i)} \times P_i / 2000$$

Where:

$EM_{act(i)}$ = Total mass of actual NO_x emissions in tons for a unit.

$EM_{all(i)}$ = Total mass of allowable NO_x emissions in tons for a unit.

E_{act} = Actual NO_x emission rate (lbs/~~MMBtu~~mmBtu or lbs/~~Ton~~ of product) as determined by a performance test, a CEMS, or an alternative method approved by the Agency.

E_{all} = Allowable NO_x emission rate (lbs/~~MMBtu~~mmBtu or lbs/~~Ton~~ of product) ~~underas provided in~~ Section 217.164, 217.184, 217.204, 217.224, 217.244, or 217.344, as applicable. For an affected industrial boiler subject to Subpart E-~~of this Part~~, or process heater subject to Subpart F-~~of this Part~~, with a rated heat input capacity ~~of less than or equal to~~ 100 ~~MMBtu~~mmBtu/hr ~~or less~~ demonstrating compliance through an emissions averaging plan, the allowable NO_x emission rate is ~~to be~~ determined from a performance test after the boiler or heater has undergone combustion tuning. For all other units in an emissions averaging plan, an uncontrolled NO_x emission rate from USEPA's AP-42, [Compilation of Air Pollutant Emission Factors for Stationary Sources](#), ~~as~~ incorporated by reference in Section 217.104, or an uncontrolled NO_x emission rate as

determined by an alternative method approved by the Agency, will be used.

- H = Heat input (~~MMBtu~~MMBtu/season or ~~MMBtu~~MMBtu/year) calculated from fuel flow meter and the heating value of the fuel used.
- P = weight in tons of processed product.

- h) On and after July 1, 2025, the total mass of actual NO_x emissions from the units listed in the emissions averaging plan must be equal to or less than the total mass of allowable NO_x emissions for those units on a 30-day rolling average basis. The following equation must be used to determine compliance:

$$N_{act} \leq 0.9N_{all}$$

Where:

$$N_{act} = \sum_{i=1}^n \sum_{j=1}^K EM_{act(i),j}$$

Where N_{act} is the total sum of the actual NO_x mass emissions from units included in the averaging plan for each fuel used (tons per 30-day rolling average basis).

$$N_{all} = \sum_{i=1}^n \sum_{j=1}^K EM_{all(i),j}$$

Where N_{all} is the total sum of the allowable NO_x mass emissions from units included in the averaging plan for each fuel used (tons per 30-day rolling average basis).

- $EM_{act(i)}$ = Total mass of actual NO_x emissions in tons for a unit as determined in subsection (h)(1) ~~of this Section.~~
- i = Subscript denoting an individual unit.
- J = Subscript denoting the fuel type used.
- K = Number of different fuel types.
- n = Number of different units in the averaging plan.
- $EM_{all(i)}$ = Total mass of allowable NO_x emissions in tons for a unit as determined in subsection (h)(2) ~~of this Section.~~

For each unit in the averaging plan, and each fuel used by the unit, determine actual and allowable NO_x emissions using the following equations:

- 1) Actual emissions must be determined as follows:

When emissions limitations are prescribed in lb/MMBtu, ~~mmBtu~~,

$$EM_{act(i)} = E_{act(i)} x^{H_i} / 2000$$

When emissions limitations are prescribed in lb/Ton of processed product,

$$EM_{act(i)} = E_{act(i)} x^{P_i} / 2000$$

Alternatively, for units equipped with CEMS that monitor stack flow in ~~compliance~~ accordance with 40 CFR 60 or 75, or an alternate methodology ~~that has been~~ approved by the Agency or USEPA and included in a federally enforceable permit, actual emission rate for a given unit can be determined as follows:

$$E_{act} = K x C_d x Q_d$$

Where:

E_{act} = NO_x emission rate (lb/hr) as determined by a performance test, a CEMS, a PEMS, or an alternative method approved by the Agency.

K = 1.194 x 10⁻⁷ (1.194 x 10⁻⁷ converts to (lb/dscf)/ppm)

C_d = Hourly average NO_x concentration during unit operation in ppm on a dry basis for a given unit.

Q_d = Hourly average volumetric flow rate during unit operation in scf/hr on a dry basis for a given unit.

2) Allowable emissions must be determined as follows:

When emissions limitations are prescribed in lb/MMBtu, ~~mmBtu~~,

$$EM_{all(i)} = E_{all(i)} x^{H_i} / 2000$$

When emissions limitations are prescribed in lb/Ton of processed product,

$$EM_{all(i)} = E_{all(i)} x^{P_i} / 2000$$

Where:

$EM_{act(i)}$ = Total mass of actual NO_x emissions in tons for a unit.

$EM_{all(i)}$ =	Total mass of allowable NO _x emissions in tons for a unit.
E_{act} =	Actual NO _x emission rate (lbs/ ~~MMbtummmBtu~~ or lbs/ ~~Ton~~ of product) as determined by a performance test, a CEMS, a PEMS, or an alternative method approved by the Agency.
E_{all} =	Allowable NO _x emission rate (lbs/ ~~MMbtummmBtu~~ or lbs/ ~~Ton~~ of product) ~~underas provided in~~ Section 217.164, 217.184, 217.204, 217.224, 217.244, or 217.344, as applicable.
H =	Heat input (~~MMbtummmBtu~~ /30-day rolling average basis) calculated from fuel flow meter and the heating value of the fuel used.
P =	~~Weightweight~~ in tons of processed product.

- i) An owner or operator of an emission unit subject to Subpart Q, ~~of this Part~~ that is located in either ~~one~~ of the areas ~~set forth~~ under Section 217.150(a)(1)(A)(i) or (ii) or Section 217.150(a)(2)(A)(i) or (ii) ~~and that is~~ complying through an emissions averaging plan under this Section must comply with the applicable provisions ~~to determinefor determining~~ actual and allowable emissions under Section 217.390, the testing and monitoring requirements under Section 217.394, and the recordkeeping and reporting requirements under Section 217.396.
- j) The owner or operator of an emission unit located at a petroleum refinery who is demonstrating compliance with an applicable Subpart through an emissions averaging plan under this Section may exclude from the calculation demonstrating compliance (*i.e.* 30-day rolling average under Section 217.152) ~~thethese~~ time periods when an emission unit included in the emissions averaging plan is shut down for a maintenance turnaround, ~~if provided that~~ the requirements in subsection (j)(1) through (j)(5) are met:
 - 1) ~~The~~ owner or operator ~~notifiesnotify~~ the Agency in writing at least 30 days ~~beforein advance of~~ the shutdown of the emission unit for the maintenance turnaround;
 - 2) ~~The~~ shutdown of the emission unit does not exceed 45 days per ozone season or calendar year;
 - 3) ~~Dailydaily~~ emissions of the combined emission units in the emissions averaging plan during the maintenance turnaround do not exceed the turnaround daily emissions cap. The turnaround daily emissions cap is the highest average daily emissions value of the three prior calendar years, where the combined emissions of units in the emissions averaging plan are summed on a daily basis, and those values are averaged for a given calendar year. The turnaround daily emission cap ~~mustis to~~ be submitted to the Agency in the written notification described in subsection (j)(1);

- 4) NO_x pollution control equipment, if any, continues to operate on all other emission units operating during the maintenance turnaround; and
- 5) ~~The~~ owner or operator notifies the Agency in writing within 30 days ~~after~~ of the end of the maintenance turnaround of the actual start and end dates for the maintenance turnaround and, for each day of the maintenance turnaround, the daily emissions of the combined emission units in the emissions averaging plan.

The owner or operator must resume ~~complying~~ compliance with the 30-day rolling average on the calendar day immediately ~~after~~ following the end of the maintenance turnaround and ~~incorporate~~ incorporating the operating days preceding the maintenance turnaround. For ~~purposes of~~ this subsection, "maintenance turnaround" means the shutdown of any emission unit or control equipment that is scheduled at least 30 days ~~before in advance of~~ the shutdown, and the purpose of ~~the such~~ shutdown is to (1) perform general equipment cleaning and repairs due to normal equipment wear and tear; (2) perform required equipment tests and internal inspections; (3) install any unit or equipment modifications/additions, or make provisions for a future modification or addition; ~~or and/or~~ (4) perform normal end-of-run catalyst changeouts or refurbishments; or any combination of these activities.

- k) Until July 1, 2025, the owner or operator of an emission unit that combusts a combination of coke oven gas and other gaseous fuels and that is located at a source that manufactures iron and steel who is demonstrating compliance with an applicable Subpart through an emissions averaging plan under this Section may exclude from the calculation demonstrating compliance ~~the~~ those time periods when the coke oven gas desulfurization unit included in the emissions averaging plan is shut down for maintenance, ~~if provided that~~ the owner or operator ~~notifies~~ notify the Agency in writing at least 30 days ~~before in advance of~~ the shutdown of ~~that unit the coke oven gas desulfurization unit~~ for maintenance, ~~and~~ the shutdown does not exceed 35 days per ozone season or calendar year, and NO_x pollution control equipment, if any, continues to operate on all other emission units operating during the maintenance period.
- l) The owner or operator of an emission unit located at a petroleum refinery who is demonstrating compliance with an applicable Subpart through an emissions averaging plan under this Section may exclude from the calculation demonstrating compliance (i.e. 30-day rolling average under Section 217.152) ~~the~~ those time periods when NO_x pollution control equipment that controls at least one ~~or more~~ emission ~~unit~~ units included in the emissions averaging plan is shut down for a maintenance turnaround, ~~if provided that~~ the requirements in subsection (l)(1) through (l)(5) are met:

- 1) ~~The~~ owner or operator ~~notifies~~notify the Agency in writing, at least 30 days ~~before in advance of~~ the shutdown, of the NO_x pollution control equipment for the maintenance turnaround;
- 2) ~~The~~ shutdown of the NO_x pollution control equipment does not exceed 45 days per ozone season or calendar year;
- 3) ~~Daily~~daily emissions of the combined emission units in the emissions averaging plan during the maintenance turnaround do not exceed the turnaround daily emissions cap. The turnaround daily emissions cap is the highest average daily emissions value of the three prior calendar years, where the combined emissions of units in the emissions averaging plan are summed on a daily basis, and those values are averaged for a given calendar year. The turnaround daily emission cap ~~must~~is to be submitted to the Agency in the written notification described in subsection (l)(1);
- 4) ~~Except~~except for ~~those~~ emission units vented to the NO_x pollution control equipment undergoing the maintenance turnaround, NO_x pollution control equipment, if any, continues to operate on all other emission units operating during the maintenance turnaround; ~~and-~~
- 5) ~~The~~ owner or operator notifies the Agency in writing within 30 days ~~after of~~ the end of the maintenance turnaround of the actual start and end dates for the maintenance turnaround and, for each day of the maintenance turnaround, the daily emissions of the combined emission units in the emissions averaging plan.

The owner or operator must resume ~~complying~~compliance with the 30-day rolling average on the calendar day immediately ~~after~~following the end of the maintenance turnaround and ~~incorporate~~incorporating the operating days preceding the maintenance turnaround. For ~~purposes of~~ this subsection, "maintenance turnaround" means the shutdown of any emission unit or control equipment that is scheduled at least 30 days ~~before in advance of~~ the shutdown, and the purpose of ~~the~~such shutdown is to (1) perform general equipment cleaning and repairs due to normal equipment wear and tear; (2) perform required equipment tests and internal inspections; (3) install any unit or equipment modifications/additions, or make provisions for a future modification or addition; ~~or and/or~~ (4) perform normal end-of-run catalyst changeouts or refurbishments; or any combination of these activities.

- m) ~~Despite~~Notwithstanding subsection (h), for the owner or operator of a petroleum refinery located in Channahon or Wood River, the equation used to determine compliance before January 1, 2028, is ~~as follows~~:

$$N_{act} \leq N_{all}$$

Where N_{act} and N_{all} are defined as under subsection (h).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART E: INDUSTRIAL BOILERS

Section 217.160 Applicability

- a) ~~This~~~~The provisions of this~~ Subpart ~~does~~~~de~~ not apply to boilers serving a generator that has a nameplate capacity greater than 25 MWe and produces electricity for sale, if the ~~boilers~~ meet the applicability criteria under Subpart M ~~of this Part~~.
- b) ~~This~~~~The provisions of this~~ Subpart ~~does~~~~de~~ not apply to fluidized catalytic cracking units, their regenerator, and associated CO boiler or boilers and CO furnace or furnaces where present, if the units are located at a petroleum refinery and ~~the units~~ are required to meet emission limits or control requirements for NO_x as provided ~~for~~ in an enforceable order.
- c) Before July 1, 2025, ~~the provisions of~~ this Subpart ~~does~~~~de~~ not apply to an industrial boiler operating under a federally enforceable limit of NO_x emissions from the boiler ~~of~~ less than 15 ~~TPY tons per year~~ and less than five tons per ozone season.
- d) On and after July 1, 2025, ~~the provisions of~~ this Subpart, except for recordkeeping and reporting requirements, ~~does~~~~de~~ not apply to an industrial boiler when (1) backup distillate fuel oil is used ~~instead in lieu~~ of natural gas during periods of natural gas curtailment or gas supply interruption; or (2) during periods of periodic testing and maintenance of backup fuels or operator training, ~~up to not exceeding~~ 48 hours in a calendar year.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.164 Emissions Limitations

- a) Except as provided ~~for~~ under Section 217.152, on and after January 1, 2015, ~~an~~ person ~~must not~~~~shall~~ cause or allow emissions of NO_x into the atmosphere from any industrial boiler to exceed the following limitations. Until July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on an ozone season and annual basis. On and after July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on a 30-day rolling average basis.

Fuel	Emission Unit Type and Rated	NO_x Emissions Limitation
	Heat Input Capacity (~~MMbtum~~ ~~mmBtu~~ /hr)	(lb/ ~~MMbtum~~ ~~mmBtu~~) or Requirement

Before July 1, 2025

Natural Gas or Other Gaseous Fuels	Industrial boiler greater than 100	0.08
	Industrial boiler less than or equal to 100	Combustion tuning
Distillate Fuel Oil	Industrial boiler greater than 100	0.10
	Industrial boiler less than or equal to 100	Combustion tuning
Other Liquid Fuels	Industrial boiler greater than 100	0.15
	Industrial boiler less than or equal to 100	Combustion tuning
Solid Fuel	Industrial boiler greater than 100, circulating fluidized bed combustor	0.12
	Industrial boiler greater than 250	0.18
	Industrial boiler greater than 100 but less than or equal to 250	0.25
	Industrial boiler less than or equal to 100	Combustion tuning
Fuel	NO _x Emission Unit Type and Rated Heat Input Capacity (MMBtu/hr)	Limitation (lb/MMBtu) or Requirement On and after July 1, 2025

Natural Gas or Other
Gaseous Fuels

Industrial boiler greater than
50

0.08

	Industrial boiler less than or equal to 50	Combustion tuning
Distillate Fuel Oil	Industrial boiler greater than 50	0.10
	Industrial boiler less than or equal to 50	Combustion tuning
Other Liquid Fuels	Industrial boiler greater than 50	0.15
	Industrial boiler less than or equal to 50	Combustion tuning
Solid Fuel	Industrial boiler greater than 50, circulating fluidized bed combustor	0.10
	Industrial boiler greater than 250	0.15
	Industrial boiler greater than 50 but less than or equal to 250	0.20
	Industrial boiler less than or equal to 500	Combustion tuning

- b) For an industrial boiler combusting a combination of natural gas, coke oven gas, and blast furnace gas, the NO_x emissions limitation must be calculated using the following equation:

$$\text{NO}_x \text{ emissions limitation for period in lb/MMBtu} = \frac{(NO_{x_{NG}} * Btu_{NG}) + (NO_{x_{COG}} * Btu_{COG}) + (NO_{x_{BFG}} * Btu_{BFG})}{Btu_{NG} + Btu_{COG} + Btu_{BFG}}$$

Where:

$$NO_{x_{NG}} = 0.084 \text{ lb/MMBtu for natural gas}$$

$$Btu_{NG} = \text{the heat input of natural gas in Btu over that period}$$

$NO_{x_{COG}}$ = 0.144 lb/~~MMbtu~~~~mmBtu~~ for coke oven gas

Btu_{COG} = the heat input of coke oven gas in ~~btu~~~~Btu~~ over that period

$NO_{x_{BFG}}$ = 0.0288 lb/~~MMbtu~~~~mmBtu~~ for blast furnace gas

Btu_{BFG} = the heat input of blast furnace gas in ~~btu~~~~Btu~~ over that period

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.165 Combination of Fuels

The owner or operator of an industrial boiler subject to this Subpart and operated with any combination of fuels must comply with a heat input weighted average emissions limitation to demonstrate compliance with Section 217.164.

(Source: Added at 33 Ill. Reg. 13345, effective August 31, 2009)

Section 217.166 Methods and Procedures for Combustion Tuning

- a) Until July 1, 2025, the owner or operator of an industrial boiler subject to the combustion tuning requirements of Section 217.164 must have combustion tuning performed on the boiler at least annually. The combustion tuning must be performed by an employee of the owner or operator or a contractor who has successfully completed a training course on the combustion tuning of boilers firing the fuel or fuels that are fired in the boiler. The owner or operator must maintain the following records that must be made available to the Agency upon request:
- 1) The date the combustion tuning was performed;
 - 2) The name, title, and affiliation of the person who performed the combustion tuning;
 - 3) Documentation demonstrating the provider of the combustion tuning training course, the dates the training course was taken, and proof of successful completion of the training course;
 - 5) Tune-up procedure followed and checklist of items (such as burners, flame conditions, air supply, scaling on heating surface, etc.) inspected ~~before~~~~prior to~~ the actual tune-up; and
 - 5) Operating parameters recorded at the start and ~~at~~ conclusion of combustion tuning.

- b) On and after July 1, 2025, the owner or operator of an industrial boiler subject to the combustion tuning requirements of Section 217.164 must have combustion tuning performed on the boiler at least annually. The combustion tuning must be performed in compliance with 40 CFR 63.7540(a)(10)(i) through (vi), ~~as~~ incorporated by reference in Section 217.104.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART F: PROCESS HEATERS

Section 217.180 Applicability Exemptions

Before July 1, 2025, ~~the provisions of~~ this Subpart ~~does~~ not apply to a process heater operating under a federally enforceable limit of NO_x emissions from the heater ~~of~~ less than 15 ~~TPY tons per year~~ and less than five tons per ozone season.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.184 Emissions Limitations

Except as provided ~~for~~ under Section 217.152, on or after January 1, 2015, ~~any~~ person ~~must not~~ shall cause or allow emissions of NO_x into the atmosphere from any process heater to exceed the following limitations. Until July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on an ozone season and annual basis. On and after July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on a 30-day rolling average basis.

Fuel	Emission Unit Type and Rated Heat Input Capacity (MMBtu/hr)	NO _x Emissions Limitation (lb/MMBtu) or Requirement Before July 1, 2025
Natural Gas or Other Gaseous Fuels	Process heater greater than 100	0.08
	Process heater less than or equal to 100	Combustion tuning
Residual Fuel Oil	Process heater greater than 100, natural draft	0.10
	Process heater greater than 100, mechanical draft	0.15
	Process heater less than or equal to 100	Combustion tuning

Other Liquid Fuels	Process heater greater than 100, natural draft	0.05
	Process heater greater than 100, mechanical draft	0.08
	Process heater less than or equal to 100	Combustion tuning
Fuel	Emission Unit Type and Rated Heat Input Capacity (MMBtu/hr)	NO _x Emissions Limitation (lb/MMBtu) or Requirement On and after July 1, 2025
Natural Gas or Other Gaseous Fuels	Process heater greater than 50	0.08
	Process heater less than or equal to 50	Combustion tuning
Residual Fuel Oil	Process heater greater than 50, natural draft	0.10
	Process heater greater than 50, mechanical draft	0.15
	Process heater less than or equal to 50	Combustion tuning
Other Liquid Fuels	Process heater greater than 50, natural draft	0.05
	Process heater greater than 50, mechanical draft	0.08
	Process heater less than or equal to 50	Combustion tuning

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.185 Combination of Fuels

The owner or operator of a process heater subject to this Subpart and operated with any combination of fuels must comply with a heat input weighted average emissions limitation to demonstrate compliance with Section 217.184.

(Source: Added at 33 Ill. Reg. 13345, effective August 31, 2009)

Section 217.186 Methods and Procedures for Combustion Tuning

- a) Until July 1, 2025, the owner or operator of a process heater subject to the combustion tuning requirements of Section 217.184 must have combustion tuning performed on the heater at least annually. The combustion tuning must be performed by an employee of the owner or operator or a contractor who has successfully completed a training course on the combustion tuning of heaters firing the fuel or fuels that are fired in the heater. The owner or operator must maintain the following records that must be made available to the Agency upon request:
- 1) The date the combustion tuning was performed;
 - 2) The name, title, and affiliation of the person who performed the combustion tuning;
 - 3) Documentation demonstrating the provider of the combustion tuning training course, the dates the training course was taken, and proof of successful completion of the training course;
 - 4) Tune-up procedure followed and checklist of items (such as burners, flame conditions, air supply, scaling on heating surface, etc.) inspected ~~before~~prior to the actual tune-up; and
 - 5) Operating parameters recorded at the start and ~~at~~ conclusion of combustion tuning.
- b) On and after July 1, 2025, the owner or operator of a process heater subject to the combustion tuning requirements of Section 217.184 must have combustion tuning performed on the heater at least annually. The combustion tuning must be performed in accordance with 40 CFR 63.7540(a)(10)(i) through (vi), ~~as~~ incorporated by reference in Section 217.104.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART G: GLASS MELTING FURNACES

Section 217.200 Applicability Exemption

Before July 1, 2025, ~~the provisions of~~ this Subpart ~~does~~do not apply to a glass melting furnace operating under a federally enforceable limit of NO_x emissions from the furnace ~~of~~to less than 15 ~~TPY~~tons per year and less than five tons per ozone season.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.204 Emissions Limitations

- a) On and after January 1, 2015, ~~any~~ person ~~must not~~~~shall~~ cause or allow emissions of NO_x into the atmosphere from any glass melting furnace to exceed the following limitations. Until July 1, 2025, compliance must be demonstrated with the emissions limitation on an ozone season and annual basis. On and after July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on a 30-day rolling average basis.

Product	Emission Unit Type	NO _x Emissions Limitation (lb/ ~~T~~ ~~ton~~ glass produced)
		Before July 1, 2025
Container Glass	Glass melting furnace	5.0
Flat Glass	Glass melting furnace	7.9
Other Glass	Glass melting furnace	11.0

Product	Emission Unit Type	NO _x Emissions Limitation (lb/ ~~T~~ ~~ton~~ glass produced)
		On and after July 1, 2025
Container Glass	Glass melting furnace	4.0
Flat Glass	Glass melting furnace	7.0
Other Glass	Glass melting furnace	4.0

- b) Before July 1, 2025, the emissions during glass melting furnace startup (~~limited to not to exceed~~ 70 days) or furnace idling (operation at less than 35% of furnace capacity) ~~are~~~~will be~~ excluded from calculations ~~to demonstrate for the purpose of demonstrating~~ compliance with the seasonal and annual emissions limitations under this Section, ~~if provided that~~ the owner or operator, at all times, including periods of startup and idling, to the extent practicable, ~~maintains~~~~maintain~~ and ~~operates~~~~operate~~ any affected emission unit, including associated air pollution control equipment, in a manner consistent with good air pollution control practice ~~to minimize for minimizing~~ emissions. The owner or operator of a glass melting furnace must maintain records that include the date, time, and duration of any startup or idling in the operation of the glass melting furnace.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART H: CEMENT AND LIME KILNS

Section 217.220 Applicability Exemptions

Before July 1, 2025, ~~the provisions of~~ this Subpart ~~does~~ not apply to a cement kiln or lime kiln operating under a federally enforceable limit of NO_x emissions from the kiln ~~of~~ less than 15 ~~TPY~~ tons ~~per year~~ and less than five tons per ozone season.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.224 Emissions Limitations

- a) On and after January 1, 2015, ~~any~~ person ~~must not~~ ~~shall~~ cause or allow emissions of NO_x into the atmosphere from any cement kiln to exceed the following limitations. Until July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on an ozone season and annual basis. On and after July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on a 30-day rolling average basis.

Emission Unit Type	NO _x Emissions Limitation (lb/ ~~T~~ ton clinker produced)
	Before July 1, 2025
Long dry kiln	5.1
Short dry kiln	5.1
Preheater kiln	3.8
Preheater/precalciner kiln	2.8

Emission Unit Type	NO _x Emissions Limitation (lb/ ~~T~~ ton clinker produced)
	On and after July 1, 2025
Long dry kiln	3.0
Short dry kiln	2.3
Preheater kiln	3.8
Preheater/precalciner kiln	2.8

- b) On and after January 1, 2015, ~~any~~ person ~~must not~~ ~~shall~~ cause or allow emissions of NO_x into the atmosphere from any lime kiln to exceed the following limitations. Compliance must be demonstrated with the applicable emissions limitation on an ozone season and annual basis.

Fuel	Emission Unit Type	NO _x Emissions Limitation (lb/ ~~T~~ ton lime produced)

Gas	Rotary kiln	2.2
Coal	Rotary kiln	2.5

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART I: IRON AND STEEL AND ALUMINUM MANUFACTURING

Section 217.240 Applicability Exemptions

Before July 1, 2025, ~~the provisions of~~ this Subpart ~~does~~ not apply to an iron and steel reheat furnace, annealing furnace, or galvanizing furnace, or aluminum reverberatory furnace or crucible furnace operating under a federally enforceable limit of NO_x emissions from the furnace ~~of~~ less than 15 ~~TPY tons per year~~ and less than five tons per ozone season.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.244 Emissions Limitations

- a) On and after January 1, 2015, ~~any~~ person ~~must not~~ ~~shall~~ cause or allow emissions of NO_x into the atmosphere from any reheat furnace, annealing furnace, or galvanizing furnace used in iron and steel making to exceed the following limitations. Until July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on an ozone season and annual basis. On and after July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on a 30-day rolling average basis.

Emission Unit Type	NO _x Emissions Limitation (lb/ ~~MMBtu~~ ~~mmBtu~~) Before July 1, 2025
Reheat furnace, regenerative	0.18
Reheat furnace, recuperative, combusting natural gas	0.09
Reheat furnace, recuperative, combusting a combination of natural gas and coke oven gas	0.142
Reheat furnace, cold-air	0.03
Annealing furnace, regenerative	0.38
Annealing furnace, recuperative	0.16
Annealing furnace, cold-air	0.07

Galvanizing furnace, regenerative	0.46
Galvanizing furnace, recuperative	0.16
Galvanizing furnace, cold air	0.06

Emission Unit Type	NO _x Emissions Limitation (lb/MMBtu) On and after July 1, 2025
Reheat furnace, cold air	0.03
Reheat furnace, regenerative and recuperative	0.09
Annealing furnace, cold air	0.07
Annealing furnace, regenerative and recuperative	0.08
Galvanizing furnace, cold air	0.06
Galvanizing furnace, regenerative and recuperative	0.08

- b) On and after January 1, 2015, ~~any~~ person ~~must not~~ shall cause or allow emissions of NO_x into the atmosphere from any reverberatory furnace or crucible furnace used in aluminum melting to exceed the following limitations. Until July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on an ozone season and annual basis. On and after July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on a 30-day rolling average basis.

Emission Unit Type	NO _x Emissions Limitation (lb/MMBtu)
Reverberatory furnace	0.08
Crucible furnace	0.16

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART K: PROCESS EMISSION SOURCES

Section 217.301 Industrial Processes

- a) New Industrial Processes. ~~A~~No person ~~must not~~shall cause or allow the emission of ~~NO_xnitrogen oxides~~ into the atmosphere from any new process producing products of organic nitrations, ~~and/or~~oxidations using nitric acid, ~~or both~~ to exceed the following standards and limitations:
 - 1) 2.5 kg of ~~NO_xnitrogen oxides~~ (expressed as ~~NO₂nitrogen dioxide~~) per ~~Mgmetric tonne~~ of nitric acid (100%~~percent~~ acid basis) used in ~~thesueh~~ new process (5.0 lbs/T); ~~and-~~
 - 2) ~~5% opacity for visible~~Visible emissions ~~in excess of 5 percent opacity~~.
- b) Existing Industrial Processes. ~~A~~No person ~~must not~~shall cause or allow the emission of nitrogen oxides into the atmosphere from any existing process producing products of organic nitrations, ~~and/or~~oxidations using nitric acid, ~~or both~~ to exceed 5.0 kg of ~~NO_xnitrogen oxides~~ (expressed as ~~NO₂nitrogen dioxide~~) per ~~Mgmetric tonne~~ of nitric acid (100%~~percent~~ acid basis) used in ~~thesueh~~ process (10.0 lbs/T).
- c) Exemption. Subsections (a) and (b) ~~doef this rule shall~~ not apply to any industrial process using less than 90.7 ~~Mgmetric tonnes~~ (100 ~~Ttons~~) of nitric acid (100%~~percent~~ acid basis) annually or ~~producingwhich produces~~ less than 907 kg (1 ~~Tton~~) of ~~NO_xnitrogen oxides~~ (expressed as ~~NO₂nitrogen dioxide~~) per year.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART M: ELECTRICAL GENERATING UNITS

Section 217.340 Applicability and Exemptions

- a) ~~Despite~~Notwithstanding Subpart V ~~of this Part, the provisions of~~ Subpart D ~~of this Part~~ and this Subpart apply to any fossil fuel-fired stationary boiler serving at any time a generator that has a nameplate capacity greater than 25 MWe and produces electricity for sale, excluding any units listed in Appendix D ~~of this Part~~, located at sources subject to this Subpart under Section 217.150.
- b) Before July 1, 2025, ~~the provisions of~~ this Subpart ~~doesde~~ not apply to a fossil fuel-fired stationary boiler operating under a federally enforceable limit of NO_x emissions from the boiler ~~ofte~~ less than 15 ~~TPYtons per year~~ and less than five tons per ozone season

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.344 Emissions Limitations

On and after January 1, 2015, ~~ane~~ person ~~must not~~shall cause or allow emissions of NO_x into the atmosphere from any fossil fuel-fired stationary boiler to exceed the following limitations. Until

July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on an ozone season and annual basis. On and after July 1, 2025, compliance must be demonstrated with the applicable emissions limitation on a 30-day rolling average basis.

Fuel	Emission Unit Type	NO _x Emissions Limitation (lb/MMBtu)
Solid	Boiler	0.12
Natural gas	Boiler	0.06
Liquid	Boiler that commenced operation before January 1, 2008	0.10
	Boiler that commenced operation on or after January 1, 2008	0.08

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.345 Combination of Fuels

The owner or operator of a fossil fuel-fired stationary boiler subject to this Subpart and operated with any combination of fuels must comply with a heat input weighted average emissions limitation to demonstrate compliance with Section 217.344.

(Source: Added at 33 Ill. Reg. 13345, effective August 31, 2009)

SUBPART O: CHEMICAL MANUFACTURE

Section 217.381 Nitric Acid Manufacturing Processes

- a) New Weak Nitric Acid Processes. A person must not cause or allow ~~emissions~~~~the emission~~ of ~~NO_xnitrogen-oxides~~ into the atmosphere from any new weak nitric acid manufacturing process to exceed ~~or violate~~ any of the following standards and limitations:
 - 1) 0.75kg of ~~NO_xnitrogen-oxides~~ (expressed as ~~NO₂nitrogen-dioxide~~) per ~~Mgmetric tonne~~ of acid produced (100%~~-percent~~ acid basis) (1.5 lbs/T), on a 30-day rolling average basis, calculated from the quantity of ~~NO_xNO_x~~ emitted per quantity of acid produced (100%~~-percent~~ acid basis) for each operating hour within the ~~previousprior~~ 30 operating days, and the average of those hourly values over the 30-day operating period;
 - 2) ~~5% opacity for visible~~~~Visible~~ emissions ~~greater than 5 percent opacity,~~ except during startup and shutdown;

- 3) During startup and shutdown, as defined in subsection (e), visible emissions must be controlled through:
- A) Operating in a manner consistent with good air pollution control practices to minimize~~for minimizing~~ emissions;
 - B) Maintaining a log of startup and shutdown events, including the dates, times, and durations of those events, quantity of acid produced during those events (lb/hr), and NO_x~~NO_x~~ emissions during those events (lb/hr). These records must~~shall~~ be submitted to the Agency upon request; and
 - C) Operating in compliance with written startup and shutdown procedures that are specifically developed to minimize startup and shutdown emissions, the duration of individual startups and shutdown, and the frequency of startups and shutdowns~~;~~;
- 4) 0.05 kg of NO_x~~nitrogen oxides~~ (expressed as NO₂~~nitrogen dioxide~~) per Mg~~metric tonne~~ of acid produced (100%~~percent~~ acid basis) from any acid storage tank vents (0.1 lbs/T); and;
- 5) To determine~~In determining~~ compliance with subsection (a)(1), during process operating periods where there is little or no acid production (e.g., startup or shutdown), the average hourly acid production rate must be determined from the data collected over the previous 30 days of normal acid production periods. For any hour in which subsection (a)(5) is used~~utilized~~ for compliance calculations, the owner or operator must maintain records of the quantity of acid produced within that hour.
- b) Existing Weak Nitric Acid Processes. A person must not cause or allow emissions~~the emission~~ of NO_x~~nitrogen oxides~~ into the atmosphere from any existing weak nitric acid manufacturing process to exceed of any the following standards and limitations:
- 1) 2.75 kg of NO_x~~nitrogen oxides~~ (expressed as NO₂~~nitrogen dioxide~~) per Mg~~metric tonne~~ of acid produced (100%~~percent~~ acid basis) (5.5 lbs/T);
 - 2) 5% opacity for visible~~Visible~~ emissions and~~greater than 5 percent opacity;~~;
 - 3) 0.1 kg of NO_x~~nitrogen oxides~~ (expressed as NO₂~~nitrogen dioxide~~) per Mg~~metric tonne~~ of acid produced (100%~~percent~~ acid basis) from any acid storage tank vents (0.2 lbs/T).
- c) Concentrated Nitric Acid Processes. A person must not cause or allow emissions~~the emission~~ of NO_x~~nitrogen oxides~~ into the atmosphere from any

concentrated nitric acid manufacturing process to exceed of any the following standards and limitations:

- 1) 1.5 kg of ~~NO_xnitrogen-oxides~~ (expressed as ~~NO₂nitrogen-dioxide~~) per ~~Mgmetric tonne~~ of acid produced (100%~~-percent~~ acid basis)(3.0 lbs/T);
 - 2) 225 ppm of ~~NO_xnitrogen-oxides~~ (expressed as ~~NO₂nitrogen-dioxide~~) in any effluent gas stream emitted into the atmosphere; and
 - 3) 5% opacity for visible~~Visible~~ emissions ~~in excess of 5 percent opacity~~.
- d) Nitric Acid Concentrating Processes. A person must not cause or allow ~~emissionsthe emission~~ of ~~NO_xnitrogen-oxides~~ into the atmosphere from any nitric acid concentrating process to exceed any of the following standards and limitations:
- 1) 1.5 kg of ~~NO_xnitrogen-oxides~~ (expressed as ~~NO₂nitrogen-dioxide~~) per ~~Mgmetric tonne~~ of acid produced (100%~~-percent~~ acid basis) (3.0 lbs/T);
 - 2) 5% opacity for visible~~Visible~~ emissions ~~greater than 5 percent opacity~~.
- e) The following definitions apply to this Section:
- 1) "Operating ~~periods~~Periods" means a period during which a process is producing nitric acid and ~~NO_xisnitrogen-oxides-are~~ emitted. An operating period begins at the initiation of startup, ends at the completion of shutdown, and includes all periods of malfunction.
 - 2) "Shutdown" means ceasing the nitric acid production operations of a process for any reason. Shutdown begins when ammonia is no longer being fed to the process and ends ~~the earlier of~~ three hours later or when compressed air is no longer being fed to the process, whichever is earlier.
 - 3) "Startup" means the process of initiating the nitric acid production operations of a process. Startup begins one hour before ammonia is first fed to the process and ends ~~up to no more than~~ five hours after ammonia is first fed to the process.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART Q: STATIONARY RECIPROCATING INTERNAL COMBUSTION ENGINES AND TURBINES

Section 217.386 Applicability

- a) Before July 1, 2025, ~~the provisions of~~ this Subpart ~~applies~~shall apply to all:

- 1) Stationary reciprocating internal combustion engines listed in Appendix G ~~of this Part~~.
 - 2) Stationary reciprocating internal combustion engines and turbines located at a source that emits or has the potential to emit at least 100 TPY of NO_x ~~in an amount equal to or greater than 100 tons per year~~ and is in either ~~the area composed of~~ the Chicago area counties of Cook, DuPage, Kane, Lake, McHenry, and Will; ~~the Townships of Aux Sable and Goose Lake in Grundy County; and the Township of Oswego in Kendall County; or in the area composed of the~~ Metro East ~~Metro-East~~ counties of Jersey, Madison, Monroe, and St. Clair; and the Township of Baldwin in Randolph County, where:
 - A) The engine at nameplate capacity is rated at least equal to or greater than 500 bhp output; or
 - B) The turbine is rated at least equal to or greater than 3.5 MW (4,694 bhp) output at 14.7 psia, 59 °F ~~59 °F~~ and 60% ~~percent~~ relative humidity.
- b) On and after July 1, 2025, ~~the provisions of~~ this Subpart applies ~~apply~~ to all:
- 1) Stationary reciprocating internal combustion engines listed in Appendix G ~~of this Part~~.
 - 2) Stationary reciprocating internal combustion engines and turbines located at a source that emits or has the potential to emit at least 50 TPY of NO_x ~~in an amount equal to or greater than 50 tons per year~~ and is in either ~~the area composed of~~ the Chicago area counties of Cook, DuPage, Kane, Lake, McHenry, and Will; ~~the Townships of Aux Sable and Goose Lake in Grundy County; and the Township of Oswego in Kendall County; or in the area composed of the~~ Metro East ~~Metro-East~~ counties of Madison, Monroe, and St. Clair, where:
 - A) The engine at nameplate capacity is rated at least equal to or greater than 500 bhp output; or
 - B) The turbine is rated at least equal to or greater than 3.5 MW (4,694 bhp) output at 14.7 psia, 59 °F ~~59 °F~~ and 60% ~~percent~~ relative humidity.
- c) ~~Despite~~ Notwithstanding subsections (a)(2) and (b)(2) ~~of this Section~~, an affected unit is not subject to ~~the requirements of~~ this Subpart ~~Q~~ if the engine or turbine is:

- 1) Used as an emergency or standby unit as defined by 35 Ill. Adm. Code 211.1920. However, the owner or operator of the unit must comply with the recordkeeping requirement under Section 217.396(a)(13);
 - 2) Used for research or for ~~the purposes of~~ performance verification or testing;
 - 3) Used to control emissions from landfills, where at least 50% ~~percent~~ of the heat input is gas collected from a landfill;
 - 4) Used for agricultural purposes, including ~~the raising of~~ crops or livestock that are produced on site, but not for associated businesses like packing operations, sale of equipment, or repair; or
 - 5) An engine with nameplate capacity rated at less than 1,500 bhp (1,118 kW) output, mounted on a chassis or skids, designed to be moveable, and moved to a different source at least once every 12 months.
- d) If an exempt unit ceases to fulfill the criteria ~~specified in subsection (c) of this Section~~, the unit is subject to the control requirements of this Subpart ~~Q~~, and the owner or operator must notify the Agency in writing within 30 days after becoming aware that the exemption no longer applies and comply with the control requirements of this Subpart ~~Q~~.
 - e) ~~This~~ ~~The requirements of this~~ Subpart ~~Q~~ will continue to apply to any engine or turbine that has ever been subject to ~~the requirements of~~ Section 217.388, even if the affected unit or source ceases to fulfill the rating requirements of subsection (a) or (b) ~~of this Section~~ or becomes eligible for an exemption under subsection (c) ~~of this Section~~.
 - f) ~~Despite~~ ~~Notwithstanding~~ subsection (e), on and after July 1, 2025, ~~this the requirements of~~ Subpart ~~Q~~ will continue to apply to any engine or turbine that has ever been subject to the requirements of Section 217.388, even if the affected unit or source ceases to fulfill the requirements of subsection (b) or becomes eligible for an exemption ~~under pursuant to~~ subsection (c), except for a combustion turbine that serves a generator ~~and that~~ has a nameplate capacity greater than 25 Mwe, ~~and~~ produces electricity for sale, ~~and that~~ does not meet the applicability criteria of subsection (b)(2).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.388 Control and Maintenance Requirements

- a) On and after the applicable compliance date in Section 217.392, an owner or operator of an affected unit must inspect and maintain affected units as required by subsection (a)(4) ~~of this Section~~ and comply with one of the following: the applicable emissions concentration ~~as set forth in subsection (a)(1) of this Section~~,

the requirements for an emissions averaging plan ~~as specified~~ in subsection (a)(2) ~~of this Section~~, or the requirements for operating operation as a low usage unit ~~as specified~~ in subsection (a)(3) ~~of this Section~~.

- 1) Limits the discharge from an affected unit into the atmosphere of any gases that contain NO_x to ~~no more than~~:
 - A) 150 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for spark-ignited rich-burn engines;
 - B) 210 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for spark-ignited lean-burn engines, except for existing spark-ignited Worthington engines that are not listed in Appendix G;
 - C) 365 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for existing spark-ignited Worthington engines that are not listed in Appendix G;
 - D) Diesel Engines
 - i) Before July 1, 2025, 660 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for diesel engines;
 - ii) On and after July 1, 2025, 660 ppmv (corrected to 15% O₂ on a dry basis) for diesel engines other than those constructed on and after July 1, 2025;
 - iii) On and after July 1, 2025, 210 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for diesel engines that are constructed on and after July 1, 2025);
 - E) Gaseous Fuel-Fired Turbines
 - i) Before July 1, 2025, 42 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for gaseous fuel-fired turbines;
 - ii) On and after July 1, 2025, 25 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for gaseous fuel-fired turbines;
 - F) Liquid Fuel-Fired Turbines
 - i) Before July 1, 2025, 96 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for liquid fuel-fired turbines; and
 - ii) On and after July 21, 2025, 65 ppmv (corrected to 15%~~percent~~ O₂ on a dry basis) for liquid fuel-fired turbines.

- 2) Complies with an emissions averaging plan ~~underas provided for in either subsection (a)(2)(A) or (a)(2)(B) of this Section:~~
 - A) For any affected unit identified by Section 217.386, ~~the. The~~ requirements of the applicable emissions averaging plan ~~as set forth~~ in Section 217.390; or
 - B) For units identified in Section 217.386(a)(2), ~~the. The~~ requirements of an emissions averaging plan adopted under any other Subpart of this Part. For the affected engines and turbines, the applicable requirements of this Subpart apply, including, ~~but not limited to,~~ calculation of NO_x allowable and actual emissions rates, compliance dates, monitoring, testing, reporting, and recordkeeping.
- 3) Operates, for units not listed in Appendix G, the affected unit as a low usage unit under subsection (a)(3)(A) or (a)(3)(B) ~~of this Section~~. Low usage units that are not part of an emissions averaging plan are not subject to ~~the requirements of~~ this Subpart ~~Q~~ except for the requirements to inspect and maintain the unit under subsection (a)(4) ~~of this Section~~, test as required by Section 217.394(g), and retain records under Section 217.396(b) and (e). Either ~~the~~ limitation in subsection (a)(3)(A) or (a)(3)(B) may be used at a source, but not both:
 - A) Before July 1, 2025, the potential to emit (PTE) is no more than 100 TPY NO_x aggregated from all engines and turbines located at the source that are not otherwise exempt under Section 217.386(c); and not complying with ~~the requirements of~~ subsection (a)(1) or (a)(2) ~~of this Section~~, and the NO_x PTE limit is ~~contained~~ in a federally enforceable permit; or
 - B) The aggregate bhp-hrs/MW-hrs from all affected units located at the source that are not exempt under Section 217.386(c); and not complying with ~~the requirements of~~ subsection (a)(1) or (a)(2) ~~of this Section~~, are less than or equal to the bhp-hrs and MW-hrs ~~operatingoperation~~ limit ~~listed~~ in subsections (a)(3)(B)(i) and (a)(3)(B)(ii) ~~of this Section~~. The ~~operatingoperation~~ limits of subsections (a)(3)(B)(i) and (a)(3)(B)(ii) ~~of this Section~~ must be ~~contained~~ in a federally enforceable permit, except for units that drive a natural gas compressor located at a natural gas compressor station or storage facility. The ~~operatingoperation~~ limits are:
 - i) 8 mm bhp-hrs or less on an annual basis for engines; and
 - ii) 20,000 MW-hrs or less on an annual basis for turbines.

- 4) Inspects and performs periodic maintenance on the affected unit, in ~~compliance~~ accordance with a Maintenance Plan that documents:
 - A) For a unit not located at a natural gas transmission compressor station or storage facility, either:
 - i) The manufacturer's recommended inspection and maintenance of the applicable air pollution control equipment, monitoring device, and affected unit; or
 - ii) If the original equipment manual is not available or substantial modifications have been made that require an alternative procedure for the applicable air pollution control device, monitoring device, or affected unit, the owner or operator must establish a plan for inspection and maintenance in ~~compliance~~ accordance with what is customary for the type of air pollution control equipment, monitoring device, and affected unit; ~~and~~.
 - B) For a unit located at a natural gas compressor station or storage facility, the operator's maintenance procedures for the applicable air pollution control device, monitoring device, and affected unit.
- b) Owners and operators of affected units may change the method of compliance with this Subpart, as follows:
 - 1) When changing the method of compliance from subsection (a)(3) ~~of this Section~~ to subsection (a)(1) or (a)(2) ~~of this Section~~, the owner or operator must conduct testing and monitoring according to ~~the requirements of~~ Section 217.394(a) through (f), as applicable. Before July 1, 2025, for this purpose, references to the "applicable compliance date" in Section 217.394(a)(2) and (a)(3) ~~shall~~ mean the date by which compliance with subsection (a)(1) or (a)(2) ~~of this Section~~ is to begin.
 - 2) An owner or operator of an affected unit that is changing the method of compliance from subsection (a)(1) or (a)(2) ~~of this Section~~ to subsection (a)(3) ~~of this Section~~ must:
 - A) Continue to operate the affected unit's control device, if that unit relied upon a NO_x emissions control device for compliance with ~~the requirements of~~ subsection (a)(1) or (a)(2) ~~of this Section~~; and
 - B) ~~Before~~ ~~Prior to~~ changing the method of compliance to subsection (a)(3) ~~(e) of this Section~~, complete any outstanding initial performance testing, subsequent ~~performance~~ ~~performances~~ testing.

or monitoring as required by Section 217.394(a), (c), (d), (e), or (f) for the affected unit. If the deadline for the testing or monitoring has not yet occurred (e.g., the five-year testing or monitoring sequence has not yet elapsed), the owner or operator must complete the test or monitoring ~~before~~^{prior to} changing the method of compliance to subsection (a)(3)~~-of this Section~~. After changing the method of compliance to subsection (a)(3)~~-of this Section~~, no additional testing or monitoring will be required for the affected unit while it is complying with subsection (a)(3)~~-of this Section~~, except as provided ~~for~~ in Section 217.394(g).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.390 Emissions Averaging Plans

- a) An owner or operator of certain affected units may comply through an emissions averaging plan.
 - 1) A unit or units that commenced operation before January 1, 2017, may be included in only one emissions averaging plan, as follows:
 - A) Units:
 - i) Located at a single source or at multiple sources in Illinois to address compliance for units identified in Section 217.386(a)(1), so long as the units are owned by the same company or parent company, where the parent company has working control through stock ownership of its subsidiary corporations; or
 - ii) Before July 1, 2025, located at a single source or at multiple sources in either the Chicago area counties or ~~Metro East~~^{Metro-East} area counties to address compliance for units identified in Section 217.386(a)(2), so long as the units are owned by the same company or parent company, where the parent company has working control through stock ownership of its subsidiary corporations. On and after July 1, 2025, units located at a single source or at multiple sources all located in either the Chicago area counties or ~~Metro East~~^{Metro-East} counties to address compliance for units identified in Section 217.386(b)(2), so long as the units are owned by the same company or parent company, where the parent company has working control through stock ownership of its subsidiary corporations;
 - B) Units that have a compliance date later than the control period for which the averaging plan is being used for compliance;

- C) Units that are not otherwise subject to this Subpart (so long as the units are owned by the same company or parent company, where the parent company has working control through stock ownership of its subsidiary corporations) or that the owner or operator may claim as exempt under Section 217.386(c) but does not claim as exempt. ~~While~~~~For as long as~~ the unit is included in an emissions averaging plan, it will be treated as an affected unit and subject to the applicable emission concentration, limits, testing, monitoring, recordkeeping, and reporting requirements; and
 - D) Units that comply with the requirements for low usage units ~~set forth~~ in Section 217.388(a)(3), so long as the unit or units operate NO_x emissions control technology. ~~While~~~~For as long as~~ the unit is included in an emissions averaging plan, it will be subject to the applicable emission concentration limits in subsection (i)(7) ~~of this Section~~, the applicable testing and monitoring requirements for affected units in Section 217.394(a) through (f), and the applicable recordkeeping and reporting requirements for affected and low usage units in Section 217.396(a) through (e).
- 2) The following types of units may not be included in an emissions averaging plan:
 - A) Units that ~~commenced~~~~commence~~ operation after January 1, 2017, unless the unit or units replace a unit or units described in subsection (a)(1) ~~of this Section~~ that commenced operation on or before January 1, 2017, or the unit or units replace a unit or units described in subsection (a)(1) ~~of this Section~~ that replaced a unit or units described in subsection (a)(1) ~~of this Section~~ that commenced operation on or before January 1, 2017. The new unit must be used for the same purpose and have substantially equivalent or less process capacity or be permitted for less NO_x emissions on an annual basis than the actual NO_x emissions of the unit or units that are replaced. The owner or operator of a unit that is shut down and replaced must comply with ~~the provisions of~~ Section 217.396(c)(3) before the replacement unit may be included in an emissions averaging plan.
 - B) Units that the owner or operator is claiming are exempt under Section 217.386(b).
- b) Before July 1, 2025, an owner or operator must submit an emissions averaging plan to the Agency by the applicable compliance date ~~set forth~~ in Section 217.392, or by May 1 of the year in which the owner or operator is using a new emissions averaging plan to comply.

- 1) The plan must include, ~~but is not limited to:~~
 - A) The list of affected units included in the plan by unit identification number and permit number; ~~and-~~
 - B) A sample calculation demonstrating compliance using the methodology ~~provided~~ in subsection (f) ~~of this Section~~ for both the ozone season and calendar year.
- 2) The plan will be effective as follows:
 - A) An initial plan for units required to comply by January 1, 2008₂ is effective January 1, 2008;
 - B) An initial plan for units required to comply by May 1, 2010₂ is effective May 1, 2010₂ for those units;
 - C) A new plan submitted under subsection (b) ~~of this Section~~ but not submitted by January 1, 2008₂ or May 1, 2010₂ is effective retroactively to January 1 of the applicable year;
 - D) An amended plan submitted under subsection (d) ~~of this Section~~ is effective retroactively to January 1 of the applicable year; or
 - E) An amended plan submitted under subsection (e) ~~of this Section~~ is effective on the date it is received by the Agency.
- c) On and after July 1, 2025, an owner or operator must submit an emissions averaging plan to the Agency at least 30 days before ~~using~~~~beginning the use of~~ that plan to demonstrate compliance. The plan must include, ~~but is not limited to the following:~~
 - 1) The list of affected units included in the plan by unit identification number and permit number;~~-~~
 - 2) The applicable NO_x emissions concentration under Section 217.388(a)(1) for each affected unit;~~-~~
 - 3) A sample calculation demonstrating compliance using the methodology ~~provided~~ in subsection (j) ~~of this Section~~ on a 30-day rolling average basis; ~~and-~~
 - 4) The date the owner or operator will begin using the emissions averaging plan.

- d) An owner or operator may amend an emissions averaging plan only once per calendar year.
- e) Despite subsection (d) ~~of this Section~~, an owner or operator, and the buyer or seller, if applicable:
 - 1) Must submit an updated emissions averaging plan or plans to the Agency within 60 days if a unit ~~that is~~ listed in an emissions averaging plan is sold or taken out of service.
 - 2) May amend its emissions averaging plan to include another unit within 30 days after discovering that the unit no longer qualifies as an exempt unit under Section 217.386(b) or as a low usage unit under Section 217.388(a)(3).
 - 3) May submit an updated emissions averaging plan or plans to the Agency within 60 days after purchasing a new unit to include the new unit.
- f) Until July 1, 2025, an owner or operator must:
 - 1) Demonstrate compliance for both the ozone season (May 1 through September 30) and the calendar year (January 1 through December 31) by using the methodology and the units listed in the most recent emissions averaging plan submitted to the Agency under subsection (b), (d), or (e) ~~of this Section~~; the higher of the monitoring or test data determined under Section 217.394; and the actual hours of operation for the applicable control period;
 - 2) Notify the Agency by October 31 ~~after following~~ the ozone season, if compliance cannot be demonstrated for that ozone season; and
 - 3) Submit to the Agency by January 31 ~~after following~~ each calendar year, a compliance report containing the information required by Section 217.396(c)(4).
- g) On and after July 1, 2025, an owner or operator must:
 - 1) Demonstrate compliance on a 30-day rolling average basis by using the methodology and the units listed in the most recent emissions averaging plan submitted to the Agency under subsection (c), (d), or (e) ~~of this Section~~; the higher of the monitoring or test data determined under Section 217.394; and the actual hours of operation for the applicable averaging plan period; ~~and~~.

2) Submit to the Agency by May 1 ~~after following~~ each calendar year, a compliance report containing the information required by Section 217.396(c)(5).

h) Until July 1, 2025, the total mass of actual NO_x emissions from the units listed in the emissions averaging plan must be equal to or less than the total mass of allowable NO_x emissions for those units for both the ozone season and calendar year. The following equation must be used to determine compliance:

$$N_{act} \leq N_{all}$$

Where:

$$N_{act} = \sum_{i=1}^n EM_{act(i)}$$

$$N_{all} = \sum_{i=1}^n EM_{all(i)}$$

N_{act} = Total sum of the actual NO_x mass emissions from units ~~included~~ in the averaging plan for each fuel used (lbs per ozone season and calendar year).

N_{all} = Total sum of the allowable NO_x mass emissions from units ~~included~~ in the averaging plan for each fuel used (lbs per ozone season and calendar year).

$EM_{all(i)}$ = Total mass of allowable NO_x emissions in lbs for a unit as determined in subsection (g)(2) or (h)(2) ~~of this Section~~.

$EM_{act(i)}$ = Total mass of actual NO_x emissions in lbs for a unit as determined in subsection (g)(1) or (h)(1) ~~of this Section~~.

i = Subscript denoting an individual unit and fuel used.

n = Number of different units in the averaging plan.

i) Until July 1, 2025, for each unit in the averaging plan, and each fuel used by a unit, an owner or operator must determine actual and allowable NO_x emissions using the following equations, except as provided ~~for~~ in subsection (l) ~~of this Section~~:

1) Actual emissions must be determined as follows:

$$EM_{act(i)} = E_{act(i)} \times H_i$$

$$E_{act(i)} = \frac{\sum_{j=1}^m C_{d(act(j))} \times F_d \times \left(\frac{20.9}{20.9 - \%O_{2d(j)}} \right)}{m}$$

2) Allowable emissions must be determined as follows:

$$EM_{all(i)} = E_{all(i)} \times H_i$$

$$E_{all(i)} = \frac{\sum_{j=1}^m C_{d(all(j))} \times F_d \times \left(\frac{20.9}{20.9 - \%O_{2d(j)}} \right)}{m}$$

Where:

- EM_{act(i)} = Total mass of actual NO_x emissions in lbs for a unit, except as provided ~~for~~ in subsections (i)(3) and (i)(5) ~~of this Section~~.
- EM_{all(i)} = Total mass of allowable NO_x emissions in lbs for a unit, except as provided ~~for~~ in subsection (i)(3) ~~of this Section~~.
- E_{act} = Actual NO_x emission rate (lbs/~~MMbtummmBtu~~) calculated according to the above equation.
- E_{all} = Allowable NO_x emission rate (lbs/~~MMbtummmBtu~~) calculated according to the above equation, as applicable.
- H = Heat input (~~MMbtummmBtu~~/ozone season or ~~MMbtummmBtu~~/year) calculated from fuel flow meter and the heating value of the fuel used.
- C_{d(act)} = Actual concentration of NO_x in lb/dscf (ppmv x 1.194 x 10⁻⁷) on a dry basis for the fuel used. Actual concentration is determined on each of the most recent test runs or monitoring passes performed under Section 217.394, whichever is higher.
- C_{d(all)} = Allowable concentration of NO_x in lb/dscf (allowable emission limit in ppmv ~~specified~~ in Section 217.388(a)(1), except as provided ~~for~~ in subsection (i)(4), (i)(5), (i)(6), or (i)(7) ~~of this Section~~, if applicable, multiplied by 1.194 x 10⁻⁷) on a dry basis for the fuel used.
- F_d = The ratio of the gas volume of the products of combustion to the heat content of the fuel (dscf/~~MMbtummmBtu~~) as given in the table of F Factors ~~included~~ in 40 CFR 60. ~~Appendix, appendix A, Method 19, or as determined using 40 CFR 60. Appendix, appendix A, Method 19.~~

%O_{2d} = Concentration of O₂oxygen in effluent gas stream measured on a dry basis during each of the applicable tests or monitoring runs used to determinefor determining emissions, as represented by a whole number percent, e.g., using 18.7 for 18.7%O_{2d}, 18.7 would be used.

i = Subscript denoting an individual unit and the fuel used.

j = Subscript denoting each test run or monitoring pass for an affected unit for a given fuel.

m = The number of test runs or monitoring passes for an affected unit using a given fuel.

- 3) For a replacement unit that is electric-powered, the allowable NO_x emissions from the affected unit that was replaced must should be used in the averaging calculations, and the actual NO_x emissions for the electric-powered replacement unit (EM_{act elec(i)}) are zero. Allowable NO_x emissions for the electric-powered replacement are calculated using the actual total bhp-hrs generated by the electric-powered replacement unit on an ozone season and on an annual basis multiplied by the allowable NO_x emission rate in lb/bhp-hr of the replaced unit. The allowable mass of NO_x emissions from an electric-powered replacement unit (EM_{all elec(i)}) must be determined by multiplying the nameplate capacity of the unit by the hours operated during the ozone season or annually and the allowable NO_x emission rate of the replaced unit (E_{all rep}) in lb/MMbtummmBtu converted to lb/bhp-hr. For this calculation the following equation should be used:

$$EM_{all\ elec(i)} = bhp \times OP \times F \times E_{allrep(i)}$$

Where:

EM_{all elec(i)} = Mass of allowable NO_x emissions from the electric-powered replacement unit in lbspounds per ozone season or calendar year.

bhp = Nameplate capacity of the electric-powered replacement unit in brake horsepower.

OP = Operating hours during the ozone season or calendar year.

F = Conversion factor of 0.0077 MMbtummmBtu/bhp-hr.

E_{all rep(i)} = Allowable NO_{xx} emission rate (lbs/MMbtummmBtu) of the replaced unit.

i = Subscript denoting an individual electric unit and the fuel used.

- 4) For a replacement unit that is not electric, the allowable NO_x emissions rate used in the ~~above~~ equations ~~set forth~~ in subsection (i)(2) ~~of this Section~~ must be the higher of the actual NO_x emissions as determined by testing or monitoring data or the applicable uncontrolled NO_x emissions factor from Compilation of Air Pollutant Emission Factors: AP-42, Volume I: Stationary Point and Area Sources, ~~as~~ incorporated by reference in Section 217.104, for the unit that was replaced.
- 5) For a unit that is replaced with purchased power, the allowable NO_x emissions rate used in the equations ~~set forth~~ in subsection (i)(2) ~~of this Section~~ must be the emissions concentration ~~set forth~~ in Section 217.388(a)(1) or subsection (i)(6) ~~of this Section~~, when applicable, for the type of unit that was replaced. For owners or operators replacing units with purchased power, the annual hours of operations that must be used are the calendar year hours of operation for the unit that was shut down, averaged over the three-year period ~~before~~ prior to the shutdown. The actual NO_x emissions for the units replaced by purchased power (EM_{(i)act}) are zero. These units may be included in any emissions averaging plan for ~~up to no more than~~ five years, beginning with the calendar year that the replaced unit is shut down.
- 6) For units ~~with that have~~ a later compliance date, ~~the~~ allowable emissions rate used in the equations ~~set forth~~ in subsection (i)(2) ~~of this Section~~ must be:
 - A) ~~Before~~ Prior to the applicable compliance date under Section 217.392, the higher of the actual NO_x emissions as determined by testing or monitoring data or the applicable uncontrolled NO_x emissions factor from Compilation of Air Pollutant Emission Factors: AP-42, Volume I: Stationary Point and Areas Sources, ~~as~~ incorporated by reference in Section 217.104; or
 - B) On and after the unit's applicable compliance date under Section 217.392, the applicable emissions concentration for that type of unit under Section 217.388(a)(1).
- 7) For a low usage unit complying with ~~the requirements of~~ Section 217.388(a)(3) and used in an emissions averaging plan, the allowable NO_x emissions rate used in the ~~above~~ equations ~~set forth~~ in subsection (i)(2) ~~of this Section~~ must be the higher of the actual NO_x emissions as determined by testing or monitoring data or the applicable uncontrolled NO_x emissions factor from Compilation of Air Pollutant Emission Factors: AP-42, Volume I: Stationary Point and Area Sources, ~~as~~ incorporated by reference in Section 217.104.

- j) On and after July 1, 2025, the total mass of actual NO_x emissions from the units listed in the emissions averaging plan must be equal to or less than the total mass of allowable NO_x emissions for those units on a 30-day rolling average basis. The following equation must be used to determine compliance:

$$N_{act} \leq 0.9N_{all}$$

Where:

$$N_{act} \rightarrow = \sum_{i=1}^n EM_{act(i)}$$

$$N_{all} \rightarrow = \sum_{i=1}^n EM_{all(i)}$$

N_{act} = Total sum of the actual NO_x mass emissions from units included in the averaging plan for each fuel used (lbs per 30-day rolling average basis).

N_{all} = Total sum of the allowable NO_x mass emissions from units included in the averaging plan for each fuel used (lbs per 30-day rolling average basis).

$EM_{all(i)}$ = Total mass of allowable NO_x emissions in lbs for a unit as determined in subsection (k)(2) or (l)(2) ~~of this Section~~.

$EM_{act(i)}$ = Total mass of actual NO_x emissions in lbs for a unit as determined in subsection (k)(1) or (l)(1) ~~of this Section~~.

i = Subscript denoting an individual unit and fuel used.

n = Number of different units in the averaging plan.

- k) On and after July 1, 2025, for each unit in the averaging plan, and each fuel used by a unit, determine actual and allowable NO_x emissions using the following equations, except as provided ~~for~~ in subsection (l) ~~of this Section~~:

- 1) Actual emissions must be determined as follows:

$$EM_{act(i)} = E_{act(i)} \times H_i$$

$$E_{act(i)} = \frac{\sum_{j=1}^m C_{d(act,j)} \times F_d \times \left(\frac{20.9}{20.9 - \%O_{2d(i,j)}} \right)}{m}$$

- 2) Allowable emissions must be determined as follows:

$$EM_{all(i)} = E_{all(i)} \times H_i$$

$$E_{act(i)} = \frac{\sum_{j=1}^m C_{d(all(j))} \times F_d \times \left(\frac{20.9}{20.9 - \%O_{2d(j)}} \right)}{m}$$

Where:

EM _{act(i)} =	Total mass of actual NO _x emissions in lbs for a unit, except as provided ~~for~~ in subsections (k)(3) and (k)(5) ~~of this Section~~ .
EM _{all(i)} =	Total mass of allowable NO _x emissions in lbs for a unit, except as provided ~~for~~ in subsection (k)(3) ~~of this Section~~ .
E _{act} =	Actual NO _x emission rate (lbs/ ~~MMbtummmBtu~~) calculated according to the above equation.
E _{all} =	Allowable NO _x emission rate (lbs/ ~~MMbtummmBtu~~) calculated according to the above equation, as applicable.
H =	Heat input (~~MMbtummmBtu~~ /30-day rolling average basis) calculated from fuel flow meter and the heating value of the fuel used.
C _{d(act)} =	Actual concentration of NO _x in lb/dscf (ppmv x 1.194 x 10 ⁻⁷) on a dry basis for the fuel used. Actual concentration is determined on each of the most recent test runs or monitoring passes performed under Section 217.394, whichever is higher.
C _{d(all)} =	Allowable concentration of NO _x in lb/dscf (allowable emission limit in ppmv ~~specified~~ in Section 217.388(a)(1), except as provided ~~for~~ in subsection (k)(4), (k)(5), (k)(6), or (k)(7) ~~of this Section~~ , if applicable, multiplied by 1.194 x 10 ⁻⁷) on a dry basis for the fuel used.
F _d =	The ratio of the gas volume of the products of combustion to the heat content of the fuel (dscf/ ~~MMbtummmBtu~~) as given in the table of F Factors ~~included~~ in 40 CFR 60. ~~Appendix A-7, appendix A-7, Method 19,~~ or as determined using 40 CFR 60. ~~Appendix, appendix A-7, Method 19.~~
%O _{2d} =	Concentration of ~~O₂~~ oxygen in effluent gas stream measured on a dry basis during each of the applicable tests or monitoring runs used for determining emissions, as represented by a whole number percent, e.g., <u>using 18.7</u> for 18.7%O _{2d} , ~~18.7 would be used~~ .
i =	Subscript denoting an individual unit and the fuel used.
j =	Subscript denoting each test run or monitoring pass for an affected unit for a given fuel.
m =	The number of test runs or monitoring passes for an affected unit using a given fuel.
- 3) For a replacement unit that is electric-powered, the allowable NO_x emissions from the affected unit that was replaced ~~are~~should be used in the averaging calculations, and the actual NO_x emissions for the electric-

powered replacement unit ($EM_{act\ elec(i)}$) are zero. Allowable NO_x emissions for the electric-powered replacement are calculated using the actual total bhp-hrs generated by the electric-powered replacement unit during a 30-day rolling average period multiplied by the allowable NO_x emission rate in lb/bhp-hr of the replaced unit. The allowable mass of NO_x emissions from an electric-powered replacement unit ($EM_{all\ elec(i)}$) must be determined by multiplying the nameplate capacity of the unit by the hours operated during a 30-day rolling average period and the allowable NO_x emission rate of the replaced unit ($E_{all\ rep}$) in lb/~~MMbtummmBtu~~ converted to lb/bhp-hr. For this calculation the following equation should be used:

$$EM_{all\ elec(i)} = bhp \times OP \times F \times E_{all\ rep(i)}$$

Where:

$EM_{all\ elec(i)}$ = Mass of allowable NO_x emissions from the electric-powered replacement unit in ~~lbs~~~~pounds~~ per 30-day rolling average period.
 bhp = Nameplate capacity of the electric-powered replacement unit in brake horsepower.
 OP = Operating hours during the 30-day rolling average period.
 F = Conversion factor of 0.0077 ~~MMbtummmBtu~~/bhp-hr.
 $E_{all\ rep(i)}$ = Allowable NO_x emission rate (lbs/~~MMbtummmBtu~~) of the replaced unit.
 i = Subscript denoting an individual electric unit and the fuel used.

- 4) For a replacement unit that is not electric, the allowable NO_x emissions rate ~~used~~ in the ~~above~~ equations ~~set forth~~ in subsection (k)(2) ~~of this Section~~ must be the higher of the actual NO_x emissions as determined by testing or monitoring data or the applicable uncontrolled NO_x emissions factor from Compilation of Air Pollutant Emission Factors: AP-42, Volume I: Stationary Point and Area Sources, ~~as~~ incorporated by reference in Section 217.104, for the unit that was replaced.
- 5) For a unit that is replaced with purchased power, the allowable NO_x emissions rate ~~used~~ in the equations ~~set forth~~ in subsection (k)(2) ~~of this Section~~ must be the emissions concentration ~~set forth~~ in Section 217.388(a)(1) or subsection (k)(6) ~~of this Section~~, when applicable, for the type of unit that was replaced. For owners or operators replacing units with purchased power, the annual hours of operations that must be used are the calendar year hours of operation for the unit that was shut down, averaged over the three-year period ~~before prior to~~ the shutdown. The actual NO_x emissions for the units replaced by purchased power ($EM_{(i)act}$) are zero. These units may be included in any emissions averaging plan for

~~up to no more than~~ five years, beginning with the calendar year that the replaced unit is shut down.

- 6) For units ~~with that have~~ a later compliance date, ~~the~~ allowable emissions rate ~~used~~ in the equations ~~set forth~~ in subsection (k)(2) ~~of this Section~~ must be:
 - A) ~~Before~~~~Prior to~~ the applicable compliance date under Section 217.392, the higher of the actual NO_x emissions as determined by testing or monitoring data or the applicable uncontrolled NO_x emissions factor from Compilation of Air Pollutant Emission Factors: AP42, Volume I: Stationary Point and Areas Sources, ~~as~~ incorporated by reference in Section 217.104; or
 - B) On and after the unit's applicable compliance date under Section 217.392, the applicable emissions concentration for that type of unit under Section 217.388(a)(1).
- 7) For a low usage unit complying with the requirements of Section 217.388(a)(3) and used in an emissions averaging plan, the allowable NO_x emissions rate ~~used~~ in the ~~above~~ equations ~~set forth~~ in subsection (k)(2) ~~of this Section~~ must be the higher of the actual NO_x emissions as determined by testing or monitoring data or the applicable uncontrolled NO_x emissions factor from Compilation of Air Pollutant Emission Factors: AP42, Volume I: Stationary Point and Area Sources, ~~as~~ incorporated by reference in Section 217.104.
- 1) Until July 1, 2025, for units that use CEMS, the data must show that the total mass of actual NO_x emissions determined under subsection (l)(1) ~~of this Section~~ is less than or equal to the allowable NO_x emissions calculated in ~~compliance~~ with the equations in subsections (h) and (l)(2) ~~of this Section~~ for both the ozone season and calendar year. The equations in subsection (g) ~~do of this Section will~~ not apply. On and after July 1, 2025, for units that use CEMS, the data must show that the total mass of actual NO_x emissions determined under subsection (l)(1) ~~of this Section~~ is less than or equal to the total mass of allowable NO_x emissions calculated in ~~compliance~~ with the equations in subsections (j) and (l)(2) ~~of this Section~~ for each 30-day rolling average period. The equations in subsection (k) ~~do of this Section will~~ not apply.
 - 1) The total mass of actual NO_x emissions in lbs for a unit (EM_{act}) must be the sum of the total mass of actual NO_x emissions from each affected unit, using CEMS data collected in ~~compliance~~ with 40 CFR 60 or 75; or ~~an~~ alternate methodology that has been approved by the Agency or USEPA and included in a federally enforceable permit.
 - 2) The allowable NO_x emissions must be determined as follows:

$$EM_{all(i)} = \sum_{j=1}^m (Cd_j \times flow_j \times 1.194 \times 10^{-7})$$

Where:

$EM_{all(i)}$	= Total mass of allowable NO _x emissions in lbs for a unit.
$flow_{ji}$	= Stack flow (dscf/hr) for a given stack.
Cd_j	= Allowable concentration of NO _x (ppmv) ~~specified~~ in Section 217.388(a)(1) for a given stack (1.194×10^{-7} converts to lb/dscf).
j	= ~~Subscript~~ subscript denoting each hour operation of a given unit.
m	= Total number of hours of operation of a unit.
i	= Subscript denoting an individual unit and the fuel used.

- 3) Alternatively, for units that monitor fuel flow in ~~compliance~~ accordance with 40 CFR 75.5, Appendix D, ~~instead in lieu~~ of monitoring stack flow, the total mass of allowable NO_x emissions may be calculated using the following equation:

$$EM_{all(i)} = \sum_{j=1}^m (C_{d(all(j))} \times F_d \times \left(\frac{20.9}{20.9 - \%O_{2d}} \right) \times H_i)$$

Where:

$EM_{all(i)}$	= Total mass of allowable NO _x emissions in lbs for a unit.
H	= Heat input (~~MMBtu~~) calculated from fuel flow meter and the heating value of the fuel used.
Cd_{all}	= Allowable concentration of NO _x in lb/dscf (allowable emissions concentration in ppmv ~~specified~~ in Section 217.388(a)(1) multiplied by 1.194×10^{-7}) on a dry basis for the fuel used.
F_d	= The ratio of the gas volume of the products of combustion to the heat content of the fuel (dscf/ ~~MMBtu~~) as given in the table of F Factors included in 40 CFR 60. ~~Appendix, appendix~~ A, Method 19, or as determined using 40 CFR 60. ~~Appendix, appendix~~ A, Method 19.
$\%O_{2d}$	= Concentration of ~~O₂~~ oxygen in effluent gas stream measured on a dry basis during each hour used for determining emissions, as represented by a whole number percent, e.g., ~~using 18.7~~ for 18.7%O _{2d} , ~~18.7 would be used~~ .
j	= ~~Subscript~~ subscript denoting each hour of operation of a given unit.
m	= Total number of hours of operation of a unit.
i	= Subscript denoting an individual unit and the fuel used.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.392 Compliance and 30-Day Rolling Average Basis

- a) On and after January 1, 2008, an owner or operator of an affected engine listed in Appendix G may not operate the affected engine unless the requirements of this Subpart ~~Q~~ are met.
- b) On and after May 1, 2010, an owner or operator of a unit identified by Section 217.386(a)(2), and that is not listed in Appendix G, may not operate the affected unit unless the requirements of this Subpart ~~Q~~ are met or the affected unit is exempt ~~underpursuant to~~ Section 217.386(b).
- d) On and after July 1, 2025, an owner or operator of a stationary internal combustion engine or turbine subject to this Subpart ~~Q~~ must not operate the affected engine or turbine unless the requirements of this Subpart ~~Q~~ are met. Compliance must be demonstrated with the applicable emissions concentration or emissions averaging plan on a 30-day rolling average basis. A 30-day rolling average consists of 30 operating days, where an operating day is a calendar day in which any subject emission unit combusts any fuel. Compliance with the 30-day rolling average must be demonstrated 30 operating days after July 1, 2025. A 30-day rolling average is calculated using the total mass of emissions from the period and the total volume of products of combustion in the period. If an affected engine or turbine does not operate 30 operating days in a calendar year, the owner or operator of the unit must demonstrate compliance on an annual calendar year basis until 30 operating days are accumulated on and after July 1, 2025.
- d) Before July 1, 2025, owners and operators of an affected unit may use NO_x allowances to meet the compliance requirements in Section 217.388 as specified in this subsection (d). A NO_x allowance is defined as an allowance used to meet the requirements of a NO_x trading program in which the State of Illinois participates ~~and in which~~ ~~where~~ one allowance is equal to one ton of NO_x emissions.
 - 1) NO_x allowances may be used only under the following circumstances:
 - A) An anomalous or unforeseen operating scenario, inconsistent with historical operations for a particular ozone season or calendar year, that causes an exceedance of an emissions or operating hour limitation;
 - B) To achieve compliance for ~~up to no more than~~ two events in any rolling five-year period;

- C) If the anomalous or unforeseen operating scenario occurs during an ozone season, it counts as a single event for ~~purposes of~~ the calendar year even if there is an exceedance of both an ozone season ~~emission~~ ~~emission~~ limitation and an annual emissions limitation ~~because as a result~~ of the operating scenario; and
 - D) For a unit ~~that is~~ not listed in Appendix G.
 - 2) The owner or operator of the affected unit must surrender to the Agency a NO_x allowance for each ton or portion of a ton of NO_x by which actual emissions exceed allowed emissions, as follows:
 - A) Where a low usage limitation under Section 217.388(a)(3)(B) has been exceeded, the owner or operator of the affected unit must calculate the NO_x emissions resulting from the number of hours that exceeded the operating hour low usage limit and surrender to the Agency one NO_x allowance for each ton or portion of a ton of NO_x that was calculated.
 - B) For noncompliance with a limitation in an emissions averaging plan that includes low usage units, the owner or operator of the affected low usage unit must calculate the NO_x emissions using the applicable allowable emissions concentration from Section 217.388(a)(1).
 - C) For noncompliance with a seasonal limit in Section 217.388(a)(2), ~~only~~ a NO_x ozone season allowance must be used.
 - D) For noncompliance with the emissions concentration limits in Section 217.388(a)(1), low usage limitations in Section 217.388(a)(3), or an annual limitation in an emissions averaging plan in Section 217.388(a)(2), ~~only~~ a NO_x annual allowance ~~must~~ ~~may~~ be used.
 - E) Despite the provisions of subsections (d)(2)(C) and (d)(2)(D) ~~of this Section~~, if a NO_x annual trading program does not exist, a NO_x ozone season allowance may be used for noncompliance with the emissions concentration limits in Section 217.388(a)(1), low usage limitations in Section 217.388(a)(3), or an annual limitation in an emissions averaging plan in Section 217.388(a)(2).
 - 3) The owner or operator must submit a report documenting the circumstances that required the use of NO_x allowances and ~~identifying~~ ~~identify~~ what actions will be taken in subsequent years to address these circumstances and must transfer the NO_x allowances to the Agency's federal NO_x retirement account. The report and the transfer of

allowances must be submitted by October 31 for exceedances during the ozone season and March 1 for exceedances of the emissions concentration limits, the annual emissions averaging plan limits, or low usage limitations. The report must contain the NATS serial numbers of the NO_x allowances.

- e) ~~Despite Notwithstanding~~ subsection (c), the owner or operator of a turbine subject to this Subpart and located at the petroleum refinery in Channahon must comply with the emissions concentration in Section 217.388(a)(1)(E)(i) on and after July 1, 2025, until January 1, 2028, and must comply with the emissions concentration in Section 217.388(a)(1)(E)(ii) on and after January 1, 2028.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.394 Testing and Monitoring

- a) Before July 1, 2025, an owner or operator must conduct an initial performance test under subsection (d)(1) or (d)(2) ~~of this Section~~ as follows:
- 1) By January 1, 2008, for affected engines listed in Appendix G. Performance tests must be conducted on units listed in Appendix G, even if the unit is included in an emissions averaging plan under Section 217.388(a)(2).
 - 2) By the applicable compliance date ~~set forth~~ in Section 217.392, or within the first 876 hours of operation per calendar year, whichever is later:
 - A) For affected units not listed in Appendix G that operate more than 876 hours per calendar year; and
 - B) For units that are not affected units that are included in an emissions averaging plan and operate more than 876 hours per calendar year.
 - 3) Once within the five-year period after the applicable compliance date ~~as set forth~~ in Section 217.392, or once within the five-year period ~~after following~~ the date the unit commenced operation:
 - A) For affected units that operate fewer than 876 hours per calendar year; and
 - B) For units that are not affected units that are included in an emissions averaging plan and ~~that~~ operate fewer than 876 hours per calendar year.

- b) On and after July 1, 2025, an owner or operator of a reciprocating internal combustion engine or turbine, including those that are part of an emissions averaging plan, must either conduct performance testing or install and operate a CEMS in compliance with the requirements in this Section, as applicable, unless the engine or turbine operates as a low usage unit under Section 217.388(a)(3)(B). An owner or operator must conduct an initial performance test under subsection (d)(1) or (d)(2) ~~of this Section~~. Performance testing of NO_x emissions for engines and turbines ~~constructed or modified for which construction or modification occurs~~ after July 1, 2025, must be conducted within 60 days after achieving maximum operating rate but ~~within no later than~~ 180 days after initial startup of the new or modified engine or turbine, in ~~compliance~~ ~~accordance~~ with this Section. If performance testing was already conducted by an owner or operator under subsection (d) within five years before July 1, 2025, the owner or operator is not required to conduct an additional initial performance test.
- c) An owner or operator of an engine or turbine must conduct subsequent performance tests under subsection (c)(1), (c)(2), and (c)(3) ~~of this Section~~ as follows:
- 1) Affected engines listed in Appendix G and all units included in an emissions averaging plan must conduct a performance test at the ~~owner's~~ ~~owner~~ or operator's own expense once every five years. Testing must be performed in the calendar year by May 1 or within 60 days after starting operation, whichever is later;
 - 2) If the monitored data shows that the unit is not in compliance with the applicable emissions concentration or emissions averaging plan, the owner or operator must report the deviation to the Agency in writing within 30 days and conduct a performance test under subsection (d) ~~of this Section~~ within 90 days ~~after~~ of the determination of noncompliance; and
 - 3) When, in the opinion of the Agency or USEPA, it is necessary to conduct testing to demonstrate compliance with Section 217.388, the owner or operator of a unit must, at ~~its~~ ~~his or her~~ own expense, conduct the test in ~~compliance~~ ~~accordance~~ with the applicable test methods and procedures ~~specified~~ in this Section within 90 days after ~~receiving receipt of~~ a notice to test from the Agency or USEPA.
- d) Testing Procedures:
- 1) For an engine: The owner or operator must conduct a performance test using Method 7 or 7E ~~in~~ ~~of~~ 40 CFR 60. ~~Appendix, appendix~~ A, as incorporated by reference in Section 217.104. Each compliance test must consist of three separate runs, each lasting ~~at least a minimum of~~ 60 minutes. NO_x emissions must be measured while the affected unit is operating at peak load. If the unit combusts more than one type of fuel

(gaseous or liquid), including backup fuels, a separate performance test is required for each fuel.

- 2) For a turbine: The owner or operator must conduct a performance test using the applicable procedures and methods in 40 CFR 60.4400, ~~as~~ incorporated by reference in Section 217.104.
- e) Monitoring: Except for ~~these~~ years in which a performance test is conducted under subsection (a), (b), or (c) ~~of this Section~~, the owner or operator of an affected unit or a unit included in an emissions averaging plan must monitor NO_x concentrations annually, once between January 1 and May 1 or within the first 876 hours of operation per calendar year, whichever is later. If annual operation is less than 876 hours per calendar year, each affected unit must be monitored at least once every five years. Monitoring must be performed as follows:
- 1) A portable NO_x monitor ~~using~~utilizing method ASTM D6522-00, ~~as~~ incorporated by reference in Section 217.104, or a method approved by the Agency must be used. If the engine or turbine combusts both liquid and gaseous fuels as primary or backup fuels, separate monitoring is required for each fuel.
 - 2) NO_x and O₂ concentrations measurements must be taken three times for a duration of at least 20 minutes. Monitoring must be done at highest achievable load considering the ambient conditions during operation. The concentrations from the three monitoring runs must be averaged to determine whether the affected unit ~~complies~~is in compliance with the applicable emissions concentration or emissions averaging plan, as specified in Section 217.388.
- f) Instead of complying with ~~the requirements of~~ subsections (a), (b), (c), (d), and (e) ~~of this Section~~, an owner or operator may install and operate on an affected unit a CEMS ~~on an affected unit~~ that meets the applicable requirements of 40 CFR 60.~~Subpart, subpart~~ A and ~~Appendix~~appendix B, or 40 CFR 75, incorporated by reference in Section 217.104, and complies with the quality assurance procedures ~~specified~~ in 40 CFR 60.~~Appendix, appendix~~ F or 40 CFR 75, ~~as~~ incorporated by reference in Section 217.104, or an alternate procedure as approved by the Agency or USEPA in a federally enforceable permit. Until July 1, 2025, the CEMS must be used to demonstrate compliance with the applicable emissions concentration or emissions averaging plan only on an ozone season and annual basis. On and after July 1, 2025, the CEMS must be used to demonstrate compliance with the applicable emissions concentration or emissions averaging plan only on a 30-day rolling average basis.
- g) The testing and monitoring requirements of this Section do not apply to affected units in compliance with ~~the requirements of~~ the low usage limitations under Section 217.388(a)(3), unless the units are included in an emissions averaging

plan. Despite the above circumstances, when, in the opinion of the Agency or USEPA, it is necessary to conduct testing to demonstrate compliance with Section 217.388, the owner or operator of a unit must, at ~~its~~^{his or her} own expense, conduct the test in ~~compliance~~ with the applicable test methods and procedures ~~specified~~ in this Section within 90 days after ~~receiving receipt of~~ a notice to test from the Agency or USEPA.

- h) For an owner or operator of a turbine monitoring in ~~compliance~~ with 40 CFR 75.5-Appendix E, ~~to demonstrate for the purposes of demonstrating~~ compliance with Section 217.388(a)(1)(E), rather than using substitution data procedures according to 40 CFR 75.5-Subpart D, the owner or operator of a unit may calculate emissions during ~~operating~~ periods ~~of operation~~ that are below the minimum operating load tested or above the maximum operating load tested as follows:

- 1) For ~~operating~~ periods ~~of operation~~ below the minimum operating load tested, the owner or operator must use the concentration measured at the minimum operating load tested in ~~compliance~~ with 40 CFR Part 75.5-Appendix E.
- 2) For ~~operating~~ periods ~~of operation~~ above the maximum operating load tested, the owner or operator must use the concentration measured at the maximum operating load tested in ~~compliance~~ with 40 CFR Part 75.5-Appendix E.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.396 Recordkeeping and Reporting

- a) Recordkeeping. The owner or operator of any unit included in an emissions averaging plan (e.g., affected units, nonsubject units, units that could be exempt under Section 217.386(c), and low usage units) or an affected unit that is not exempt under Section 217.386(c) and is not subject to the low usage exemption of Section 217.388(a)(3) must maintain records that demonstrate compliance with the requirements of this Subpart-Q, which include, ~~but are not limited to~~:
- 1) Identification, type (e.g., lean-burn, gas-fired), and location of each unit;
 - 2) Calendar date of the record;
 - 3) Before July 1, 2025, the number of hours the unit operated on a monthly basis and during each ozone season. On and after July 1, 2025, daily operating hours;
 - 4) Type and quantity of the fuel used on a daily basis;

- 5) On and after July 1, 2025, total mass emissions on a daily basis and on a 30-day rolling average basis~~;~~
 - 6) The results of all monitoring performed on the unit and reported deviations~~;~~
 - 7) The results of all tests performed on the unit~~;~~
 - 8) The plan for performing inspection and maintenance of the units, air pollution control equipment, and the applicable monitoring device under Section 217.388(a)(4)~~;~~
 - 9) A log of inspections and maintenance performed on the unit's air emissions, monitoring device, and air pollution control device. These records must include, ~~at a minimum,~~ ~~dates~~date, load levels, and any manual adjustments, along with the reason for the adjustment (e.g., air to fuel ratio, timing, or other settings)~~;~~
 - 10) Before July 1, 2025, if complying with the emissions averaging plan provisions of Sections 217.388(a)(2) and 217.390, copies of the calculations used to demonstrate compliance with the ozone season and annual control period limits, noncompliance reports for the ozone season, and ozone and annual control period compliance reports submitted to the Agency~~;~~
 - 11) Identification of time periods for which operating conditions and pollutant data were not obtained by either the CEMS or alternate monitoring procedures, including the reasons for not obtaining sufficient data and a description of corrective actions taken~~;~~
 - 12) Any NO_x allowance reconciliation reports submitted under Section 217.392(d)(3)~~;~~ ~~and~~
 - 13) If the engine or turbine is used as an emergency or standby unit, records documenting the annual hours of operation of these units in non-emergency situations.
- b) The owner or operator of an affected unit or unit included in an emissions averaging plan must maintain the records required by subsection (a) or (e) ~~of this Section~~, as applicable, for ~~a period of~~ five years at the source at which the unit is located. The records must be made available to the Agency and USEPA upon request.
- c) Reporting Requirements

- 1) The owner or operator must notify the Agency in writing 30 days and five days ~~before~~prior to testing, under Section 217.394(a) and (c), and:
 - A) If, after sending the 30-days' notice ~~of testing for an initially scheduled test is sent~~, there is a delay (e.g., due to operational problems) in conducting the performance test as scheduled, the owner or operator of the unit must notify the Agency as soon as possible of the delay ~~in the original test date~~, either by providing at least seven days ~~prior~~ notice of the rescheduled date of the performance test or by arranging a new test date with the Agency by mutual agreement;
 - B) Provide a testing protocol to the Agency 60 days ~~before~~prior to testing; and
 - C) ~~Within~~Not later than 30 days after ~~completing the completion of~~ the test, submit the results ~~of the test~~ to the Agency.
 - D) ~~Despite~~Notwithstanding subsections (c)(1)(A) through (C), sources affected by 40 CFR ~~Part~~ 75 ~~affected sources~~ may provide testing notification and submit protocol ~~submittal~~ in ~~compliance~~accordance with 40 CFR 75.61(a)(1) and (5) and report in ~~compliance~~accordance with 40 CFR 75.60(b)(7) ~~requirements~~.
- 2) Under the monitoring requirements ~~for monitoring~~ in Section 217.394(e), the owner or operator of the unit must report to the Agency any monitored exceedances of the applicable NO_x concentration from Section 217.388(a)(1) or (a)(2) within 30 days after performing the monitoring.
- 3) Within 90 days after permanently shutting down an affected unit or a unit included in an emissions averaging plan, the owner or operator of the unit must withdraw or amend the applicable permit to reflect that the unit is no longer in service.
- 4) Until July 1, 2025, if demonstrating compliance through an emissions averaging plan:
 - A) By October 31 after following the applicable ozone season, the owner or operator must notify the Agency if ~~it~~ he or she cannot demonstrate compliance for that ozone season; and
 - B) By January 31 after following the applicable calendar year, the owner or operator must submit to the Agency a report that demonstrates ~~the following~~:

- i) For all units that are part of the emissions averaging plan, the total mass of allowable NO_x emissions for the ozone season and for the annual control period;
 - ii) The total mass of actual NO_x emissions for the ozone season and annual control period for each unit included in the averaging plan;
 - iii) The calculations that demonstrate that the total mass of actual NO_x emissions isare less than the total mass of allowable NO_x emissions, using equations in Sections 217.390(h) and (i); and
 - iv) The information required to determine the total mass of actual NO_x emissions and the calculations performed in subsection (c)(4)(B)(iii) of this Section.
- 5) On and after July 1, 2025, if demonstrating compliance through an emissions averaging plan, by May 1 afterfollowing the previous calendar year, the owner or operator must submit to the Agency a report that includes the following:
 - A) For all units that are part of the emissions averaging plan, the total mass of allowable NO_x emissions on a 30-day rolling average basis;-
 - B) The total mass of actual NO_x emissions on a 30-day rolling average basis for each unit included in the averaging plan;-
 - C) The calculations that demonstrate that the total mass of actual NO_x emissions is less than the total mass of allowable NO_x emissions using equations in Sections 217.390(j) and (k); and-
 - D) The daily information required to determine the total mass of actual NO_x emissions on a 30-day rolling average basis.
- 6) If operating a CEMS, the owner or operator must submit an excess emissions and monitoring systems performance report in complianceaccordance with the requirements of 40 CFR 60.7(c) and 60.13 or 40 CFR 75, incorporated by reference in Section 217.104, or an alternate procedure approved by the Agency or USEPA and included in a federally enforceable permit.
- 7) If using NO_x allowances to comply with the requirements of Section 217.388, the owner or operator must submit reconciliation reports as required by Section 217.392(d)(3).

- d) On and after July 1, 2025, the owner or operator of an emission unit subject to this Subpart ~~Q~~ must submit to the Agency an annual compliance certification report that demonstrates compliance with the applicable requirements ~~to the Agency~~ for the previouspreceeding calendar year by May 1 of the nextfollowing year. The owner or operator may submit the annual compliance certification report to the Agency along with the Annual Emissions Report required under 35 Ill. Adm. Code 254 or the compliance certification required under 415 ILCS 5/39.5(7)(p)(v). The compliance report must include the following:
- 1) Identification, type (e.g., lean-burn, gas-fired), and location of the emission unit;~~;~~
 - 2) Methods used to determine~~for determining~~ compliance, including an emissions averaging plan, if applicable, a description of test methods, monitoring, recordkeeping, and reporting requirements;~~;~~
 - 3) A certification of compliance with the applicable emissions concentration or identification of the periods of noncompliance with a quantification of the excess emissions concentration and the excess emissions;~~;~~
 - 4) For each calendar month, the highest 30-day rolling average emission rate. The emissions data must be reported in the measurement units of the applicable emissions concentration;~~;~~
 - 5) The emission unit's daily and total operating hours, capacity utilization, and the percent operation of any CEMS during the hours the emission unit was operating; and~~;~~
 - 6) A certification of compliance with all applicable requirements except those identified, signed by a responsible official, that contains the following: "I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete."
- e) The owner or operator of an affected unit that is complying with the low usage provisions of Section 217.388(a)(3) must:
- 1) Before July 1, 2025, for each unit complying with Section 217.388(a)(3)(A), maintain a record of the NO_x emissions for each calendar year;
 - 2) For each unit complying with Section 217.388(a)(3)(B), maintain a record of bhp or MW-hours operated each calendar year; and

- 3) Before July 1, 2025, for each unit ~~using~~utilizing NO_x allowances for compliance under Section 217.392(d)(3), maintain and submit any NO_x allowance reconciliation reports.
- f) Instead of complying with ~~subsection~~the requirements of subsection (a), ~~of this Section, subsection (b), of this Section, subsections (c)(1) through (c)(5)(e)(4) of this Section, and subsection (d) of this Section,~~ an owner or operator of an affected unit complying with ~~the requirements of~~ Section 217.388(a)(1) and operating a CEMS on that unit may meet the applicable testing, monitoring, reporting, and recordkeeping requirements of 40 CFR 75, incorporated by reference in Section 217.104, for that CEMS ~~of 40 CFR 75, as incorporated by reference in Section 217.104.~~

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART T: CEMENT KILNS

Section 217.400 Applicability

~~The requirements of this~~This Subpart ~~shall apply~~applies to the types of cement kilns ~~listed~~ below with process rates in tons per hour (TPH) of clinker produced that are greater than or equal to the following:

- a) Long dry kilns ~~—~~ 12 TPH;
- b) Long wet kilns ~~—~~ 10 TPH;
- c) Preheater kilns ~~—~~ 16 TPH; and
- d) Preheater/precalciner kilns ~~—~~ 22 TPH.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.402 Control Requirements

- a) After May 30, 2004, an owner or operator of any cement kiln subject to ~~the requirements of this Subpart~~ must~~shall~~ not operate the kiln during the initial control period or any subsequent control period, unless the owner or operator complies with subsection (a)(1), (a)(2), (a)(3), (a)(5), or (a)(6) ~~of this Section~~ for kilns that commenced operation ~~before~~prior to January 1, 1996, or subsection (a)(4) or (a)(6) ~~of this Section~~ for kilns that commenced operation on or after January 1, 1996.
 - 1) The kiln is operated with a low-NO_x burner or a mid-kiln firing system;
 - 2) The kiln ~~does~~shall not exceed the applicable NO_x emission limitation in pounds per ton of clinker (lb/T), ~~expressed~~ in the rates ~~listed~~ below:

- A) Long dry kilns ~~—~~ 5.1 lb NO_x/T of clinker;
 - B) Long wet kilns ~~—~~ 6.0 lb NO_x/T of clinker;
 - C) Preheater kilns ~~—~~ 3.8 lb NO_x/T of clinker; or
 - D) Preheater/precalciner kilns ~~—~~ 2.8 lb NO_x/T of clinker.
- 3) The kiln achieves at least a 30% percent or greater reduction from its uncontrolled baseline, established ~~as set forth~~ in this subsection ~~(a)(3)~~, and complies with the following:

- A) Uncontrolled baseline emissions ~~must~~shall be determined using the following equation:

$$UBE = \frac{[EF \times SPR]}{2000 \text{ lbs NO}_x / T}$$

Where:

UBE = Uncontrolled ~~baseline~~Baseline NO_x emissions ~~expressed~~ in tons of NO_x per control period;

EF = Emissions factor, ~~expressed~~ in lbs of NO_x per ton of clinker produced per control period, based on one of the methods in subsection (a)(3)(B) ~~of this Section~~; and

SPR = Seasonal production rate, ~~expressed~~ in tons of clinker produced per control period, using the average of the two highest control period operating rates from the previous three-year period at the time the application for the permit with federally enforceable conditions is submitted to the Agency ~~under pursuant to~~ subsection (a)(3)(C) ~~of this Section~~.

- B) Emissions factors ~~must~~shall be determined using one of the following methods:
 - i) The average of the emission factors for the type of kiln from the Compilation of Air Pollutant Emission Factors (AP-42) and the Alternative Control Techniques Document ~~—~~ NO_x Emissions from Cement Manufacturing, as incorporated by reference in Section 217.104 ~~of this Part~~;

- ii) The site-specific emission factor developed from representative emissions testing ~~under, pursuant to~~ 40 CFR 60.5, Appendix A, Method 7, 7A, 7C, 7D, or 7E, incorporated by reference in Section 217.104 ~~of this Part~~, based on a range of typical operating conditions. The owner or operator must establish that these operating conditions are representative, subject to approval by the Agency, and must certify that the emissions testing is being conducted under representative conditions; or
 - iii) An alternate method for establishing the emissions factors, when submitted with supporting data to substantiate ~~thesueh~~ emissions factors and approved by the Agency ~~underas set forth in~~ subsection (a)(3)(C) ~~of this Section~~.
 - C) The owner or operator must submit an emission reduction plan to the Agency and obtain ~~Agency~~ approval of that plan ~~by the Agency~~. ~~TheSueh~~ plan ~~willshall~~ be effective only when ~~included in a permit~~ ~~contained~~ as federally enforceable conditions ~~in a permit~~. ~~TheSueh~~ plan ~~mustshall~~ include any alternate procedures for monitoring, testing, reporting, or recordkeeping approved by the Agency, or other provisions as appropriate.
- 4) Any kiln subject to this Subpart that commenced operation on or after January 1, 1996, must meet the more stringent of the requirements of this Subpart or other ~~Clean Air Act (CAA)~~ requirements, or rules promulgated ~~under itthereunder~~, applicable to kilns. If a kiln is required to comply with a more stringent requirement ~~underpursuant to~~ the CAA, and ~~the owner or operator~~ chooses to do so ~~insteadin lieu~~ of complying with this Subpart, the owner or operator must submit an emissions reduction plan that demonstrates that compliance with the CAA requirement results in emissions reductions that are equal to or exceed the requirements of this Section and obtain a permit containing federally enforceable conditions addressing ~~thesueh~~ CAA requirement.
- 5) The owner or operator obtains an alternate emissions standard for operating the kiln ~~underpursuant to~~ Section 28.1 of the Act [415 ILCS 5/28.1]; and in ~~complianceaccordance~~ with 35 Ill. Adm. Code 104, Subpart D, provisions for adjusted standards. An adjusted standard or alternate emissions standard with an alternate compliance schedule ~~willshall~~ be granted by the Board to the extent consistent with federal law. ~~TheSueh~~ alternate ~~willshall~~ be effective only when included as a federally enforceable condition in a permit approved by USEPA or approved as a SIP revision. The adjusted standard ~~mustshall~~ include any alternate procedures for control, compliance, monitoring, operation, testing,

reporting, or recordkeeping that are appropriate. In addition, the owner or operator must demonstrate, as justification for the adjusted standard, that the control requirements ~~contained~~ in this Subpart, as they apply to cement kilns, meet at least one ~~or more~~ of the following criteria:

- A) Unreasonable cost of control resulting from plant, age, location, or basic process design;
 - B) Physical impossibility of installing necessary control equipment; or
 - C) Other factors specific to the cement kiln that support an alternate emissions standard.
- 6) The owner or operator obtains approval from the Agency and USEPA to allow the kiln to participate in the federal NO_x Trading Program. The participation will be effective upon issuance of a permit containing all necessary federally enforceable permit conditions addressing the kiln's participation in the federal NO_x Trading Program under 40 CFR 96 and the Illinois NO_x Trading Program regulations at 35 Ill. Adm. Code 217. The owner or operator is not subject to ~~the requirements of~~ this Subpart for the duration of its participation in the NO_x Trading Program, except for the requirement to submit the initial compliance report under Section 217.408(a) ~~of this Subpart~~.
- b) Notwithstanding any provisions in subparts T, U, and W of Section 217 of Title 35 of the Illinois Administrative Code to the contrary, compliance with the requirements promulgated by the Board pursuant to subsections (b) and (d) of Section 9.9 of the Environmental Protection Act is required by May 31, 2004. ~~Notwithstanding any other provisions of this Subpart, a source and units at the source subject to the provisions of subsection (a) of this Section will become subject to this Subpart on the first day of the control season subsequent to the calendar year in which all of the other states subject to the provisions of the NO_x SIP Call (63 Fed. Reg. 57,355 (October 27, 1998)) that are located in USEPA Region V or that are contiguous to Illinois have adopted regulations to implement NO_x trading programs and other required reductions of NO_x emissions pursuant to the NO_x SIP Call, and such regulations have received final approval by USEPA as part of the respective states' SIPs for ozone, or a final FIP for ozone promulgated by USEPA is effective for such other states.~~ [415 ILCS 5/9.9(f)]

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.404 Testing

- a) Any owner or operator of a kiln that commenced operation before May 1, 2003, and uses a low-NO_x burner or mid-kiln firing system to demonstrate compliance under Section 217.402(a)(1) ~~of this Subpart~~ must maintain

and operate the device according to the manufacturer's specifications as approved by the Agency.

- b) Any owner or operator of a kiln that commenced operation ~~before~~prior to May 1, 2003, and ~~demonstrates~~demonstrating compliance ~~under~~pursuant to Section 217.402(a)(2), (a)(3)(C), or (a)(5) ~~of this Subpart~~ must complete an initial performance test between May 1, 2003, and May 30, 2004, and subsequent annual testing during each control period in which the kiln is operated. This testing must be consistent with ~~the requirements of~~ 40 CFR 60.5, Appendix A, Method 7, 7A, 7C, 7D, or 7E, incorporated by reference in Section 217.104 ~~of this Part~~, or ~~an~~such alternate test method ~~that has been~~ approved by the Agency ~~under~~pursuant to Section 217.402-(a)(3)(C) ~~of this Subpart~~ or the Board ~~under~~pursuant to Section 217.402(a)(5) ~~of this Subpart~~.
- c) The owner or operator of a kiln that commences operation on or after May 1, 2003, must complete, as appropriate, an initial performance test within one year after initial startup and subsequent annual testing during each control period in which the kiln is operated. This testing must be consistent with the test methods ~~listed in subsection (b)~~ ~~of this Section~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.406 Monitoring

- a) The owner or operator of a kiln subject to this Subpart must submit a complete monitoring plan addressing the applicable requirements of subsection (b) ~~of this Section~~ to the Agency and obtain Agency approval of ~~the~~such plan ~~by the Agency~~. The monitoring plan must~~shall~~ identify the operating conditions to be monitored and the records to be maintained under Section 217.410 ~~of this Subpart~~. For any kiln that commences operation on or before August 31, 2003, ~~the~~such plan must~~shall~~ be submitted on or before August 31, 2003. For any other kiln subject to this Subpart, ~~the~~such plan must~~shall~~ be submitted with the construction permit application for ~~the~~such kiln. The~~Such~~ plan will be effective only when included as federally enforceable conditions in a permit issued by the Agency.
- b) The plan must:
 - 1) Identify the specific operating conditions to be monitored and the correlation between the operating conditions and NO_x emission rates;
 - 2) Include the data and information that the owner or operator used to identify the correlation between NO_x emission rates and these operating conditions;

- 3) Identify how the owner or operator will monitor these operating conditions on an hourly or other basis, as approved by the Agency, the quality assurance procedures or practices that will be employed to ensure that the data generated by monitoring these operating conditions will be representative and accurate, and the type and format of the records of these operating conditions that will be maintained by the owner or operator under Section 217.410 ~~of this Subpart~~;
 - 4) If operating a low-NO_x burner or mid-kiln firing system, the plan must include only monitoring the parameters indicated in the manufacturer's specifications and recommendations for the low-NO_x burner or mid-kiln firing system as approved by the Agency; and
 - 5) ~~Despite Notwithstanding the requirements of~~ subsections (b)(1) and (b)(2) ~~of this Section~~ requiring the monitoring of operating parameters, if the owner or operator elects to monitor NO_x emissions using a ~~continuous emissions monitoring system (CEMS)~~, the owner or operator must submit a monitoring plan subject to ~~Agency~~ approval ~~by the Agency~~ that contains the applicable provisions of 40 CFR 60.13 and ~~of Method 7E in 40 CFR 60, Appendix A contained in 40 CFR 60, as~~ incorporated by reference in Section 217.104 ~~of this Part~~, and additional provisions regarding accuracy, data capture, and monitoring frequency.
- c) The owner or operator must monitor the operating parameters of the emission unit and predict NO_x emission rates in ~~compliance~~ ~~accordance~~ with the plan ~~specified~~ in the applicable operating permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.408 Reporting

- a) By May 31, 2004, or within one year after initial startup, whichever occurs later, the owner or operator of a kiln subject to ~~the requirements of~~ this Subpart must submit to the Agency an initial compliance certification for each kiln subject to ~~the requirements of~~ Section 217.402 ~~of this Subpart~~. This certification must contain the following information as applicable:
 - 1) The identity and type of each kiln subject to this Subpart, the name and address of the plant where the kiln is located, and the name and telephone number of the person responsible for demonstrating compliance with this Subpart;
 - 2) A demonstration that each kiln is in compliance with Section 217.402 ~~of this Subpart~~, identifying the provision with which it is complying and ~~is~~ accompanied by a summary of the approved compliance method, e.g., performance test for the kiln and other supporting data being relied upon by the owner or operator;

- 3) If demonstrating compliance ~~withby use of~~ a low-NO_x burner or mid-kiln firing system ~~underpursuant to~~ Section 217.402(a)(1) ~~of this Subpart~~, a copy of the manufacturer's recommended maintenance and schedule for maintenance as approved by the Agency;
 - 4) If demonstrating compliance ~~underpursuant to~~ Section 217.402(a)(3)(C) or (a)(5) ~~of this Subpart~~, the date on which the permit containing the emission reduction plan or SIP revision was received as federally enforceable conditions; and
 - 5) If demonstrating compliance ~~underpursuant to~~ Section 217.402(a)(6) ~~of this Subpart~~, the date of issuance and the identification of the permit authorizing ~~through federally enforceable conditions~~, participation in the federal NO_x Trading Program through federally enforceable conditions.
- b) Beginning in 2004, by December 31 of each year, owners and operators complying with this Subpart ~~underpursuant to~~ Section 217.402(a)(1), (a)(2), (a)(3), (a)(4), or (a)(5) must, as a seasonal component of its annual emission report ~~underpursuant to~~ 35 Ill. Adm. Code 254, report the total NO_x emissions of each subject kiln during the control period of each year to the Agency, if the kiln operated during this period.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.410 Recordkeeping

- a) Any owner or operator of a cement kiln subject to this Subpart must produce and maintain records that include ~~but are not limited to~~:
 - 1) Emissions in pounds of NO_x per ton of clinker produced from each kiln subject to ~~the requirements of~~ Section 217.402(a)(2), (a)(3)(C), or (a)(5) ~~of this Subpart~~;
 - 2) The date, time, and duration of any startup, shutdown, or malfunction in the operation of any cement kiln subject to this Subpart or any emissions monitoring equipment. The records ~~must~~shall include a description of the malfunction and maintenance activity;
 - 3) If operating a low-NO_x burner or mid-kiln firing system, ~~the~~ the date, time, and duration of any regularly scheduled maintenance, with a description of the activity, and tons of clinker produced from each kiln;
 - 4) The results of any required performance testing;
 - 5) Daily cement kiln clinker production in tons per day; and

- 6) The records of monitoring required by Section 217.406 ~~of this Subpart.~~
- b) All records required to be produced or maintained ~~must~~shall be retained on site for ~~at least a minimum of~~ three years and be made available to the Agency upon request.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART U: NO_x CONTROL AND TRADING PROGRAM FOR SPECIFIED NO_x GENERATING UNITS

Section 217.450 Purpose

The purpose of this Subpart is to cap the emissions of ~~nitrogen oxides (NO_x)~~ during the ozone control period from units subject to ~~the provisions of~~ this Subpart (budget units) by determining source allocations and ~~by~~ implementing the federal NO_x Trading Program, 40 CFR 96, consistent with ~~the provisions of~~ this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.451 Sunset Provisions

Except for Sections 217.454(a) and (b) and 217.456(c), (e)(1)(B) through (D), and (e)(2), ~~the provisions of~~ this Subpart ~~U~~ ~~does~~shall not apply for any control period in ~~or after~~ 2009 ~~or thereafter~~. Compliance for 2009 and after is required for these subsections. Noncompliance with ~~the provisions of~~ this Subpart that occurred ~~before~~prior to 2009 is subject to the applicable provisions of this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.452 Severability

If any Section, subsection, or clause of this Subpart is found invalid, ~~the such~~ finding ~~does~~shall not affect the validity of this Subpart as a whole or any Section, sentence, or clause not found invalid.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.454 Applicability

- a) This Subpart applies to any fossil fuel-fired stationary boiler, combustion turbine, or combined cycle system, with a maximum design heat input greater than 250 ~~MMbtu/hr~~MMbtu/hr and that is:
 - 1) A unit listed in Appendix E ~~of this Subpart~~, ~~regardless~~irrespective of any subsequent changes in ownership, unit designation, or name of the unit; or

- 2) A unit not listed in Appendix E ~~of this Subpart~~ that:
 - A) At no time serves a generator producing electricity for sale;
 - B) At any time serves a generator producing electricity for sale; if ~~the such~~ generator has a nameplate capacity of 25 MWe or less and has the potential to use ~~only up to no more than~~ 50% of the potential electrical output capacity of the unit. Fifty percent of a unit's potential electrical output capacity ~~is shall be~~ determined by multiplying the unit's maximum design heat input by 0.0488 MWe/MMBtu ~~mmbtu. If the size of the generator is smaller than this calculated number, the unit is subject to the provisions of this Subpart, but if the size of the generator is greater than this calculated number, the unit is subject to the provisions of Subpart W of this Part; or~~
 - C) Is part of any source, as that term is defined in 35 Ill. Adm. Code Section 211.6130, listed in Appendix E ~~of this Part; or~~
 - ~~D) — Is a unit subject to Subpart W of this Part (excluding any unit listed in Appendix F of this Part, regardless of any change in ownership or any change of operator), and the owner or operator makes a permanent election, at the time of applying for a budget permit pursuant to this Part, to subject the unit to the requirements of this Subpart rather than Subpart W of this Part. Any unit for which such an election is made will not receive an allocation from the Subpart U or Subpart W NO_x Trading Budget.~~
- b) ~~Units meeting Those units that meet~~ the ~~above~~ criteria in subsection (a) are budget units.
- c) Low-emitter status: ~~Despite Notwithstanding~~ subsection (a) ~~of this Section~~, the owner or operator of a budget unit subject to ~~the requirements of~~ subsection (a) ~~of this Section~~ may elect low-emitter status by obtaining a permit with federally enforceable conditions that meet the requirements of Section 217.472(a). Starting with the effective date of ~~that such~~ permit, the unit ~~will shall~~ be subject only to the requirements of Section 217.472.
- d) The owner or operator of any budget unit not listed in Appendix E ~~of this Part~~ but subject to this Subpart ~~must shall~~ not receive an allocation of NO_x allowances from the Subpart U or Subpart W NO_x Trading Budget, except for any allowance from the new source set-aside in ~~compliance accordance~~ with Section 217.468 ~~of this Subpart~~. ~~The Such~~ unit must acquire NO_x allowances in an amount not less than the NO_x emissions from ~~the such~~ budget unit during the control period (rounded to the nearest whole ton) in ~~compliance accordance~~ with the federal NO_x

Trading Program, Subpart X, ~~of this Part~~ or ~~underpursuant to~~ a permanent transfer of NO_x allocations ~~underpursuant to~~ Section 217.462(b) ~~of this Subpart~~.

- e) ~~Despite~~~~Notwithstanding~~ any other provisions of this Subpart, a source and units at the source subject to ~~the provisions of~~ subsection (a) ~~of this Section~~ will become subject to this Subpart *on the first day of the control season subsequent to the calendar year in which all of the other states subject to the provisions of the NO_x SIP Call (63 Fed. Reg. 57355 (October 27, 1998)) that are located in USEPA Region V or are that contiguous to Illinois have adopted regulations to implement NO_x trading programs and other required reductions of NO_x emissions pursuant to the NO_x SIP Call, and such regulations have received final approval by USEPA as part of the respective states' SIPs for ozone, or a final FIP for ozone promulgated by USEPA is effective.* [415 ILCS 5/9.9(f)]

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.456 Compliance Requirements

All budget units subject to ~~the requirements of~~ this Subpart must comply with the following:

- a) ~~This~~~~The requirements of this~~ Subpart and 40 CFR 96, excluding 40 CFR 96.4(b), 96.55(c), and ~~Subpart~~~~subparts~~ C, E, and I, ~~as~~ incorporated by reference in Section 217.104 ~~of this Part~~. To the extent that this Subpart contains provisions which are inconsistent with any provisions of 40 CFR 96, the owner or operator of budget units subject to this Subpart ~~must~~~~shall~~ comply with the provisions of this Subpart ~~instead in lieu of~~ 40 CFR 96 ~~those provisions which were incorporated by reference~~.
- b) Budget permit requirements:
- 1) The owner or operator of each source with one or more budget units at the source subject to this Subpart must submit a complete permit application for a budget permit in ~~compliance~~~~accordance~~ with ~~the provisions of~~ Section 217.458(a)(4), (a)(5), or (a)(6), as applicable, to be issued by the Agency with federally enforceable conditions covering the NO_x Trading Program (budget permit), and that complies with ~~the requirements of~~ Section 217.458 ~~of this Subpart~~.
 - 2) The owner or operator of one or more budget units subject to this Subpart must operate each such budget unit in compliance with ~~the~~~~such~~ budget permit or complete budget permit application, as applicable.
 - 3) The owner or operator of one or more budget units subject to this Subpart ~~must~~, at the time of filing ~~a permit~~~~an~~ application ~~for a permit~~ under this Section, ~~must~~ submit a complete application for ~~either~~ a permit incorporating ~~either~~ a source-wide overdraft account (as ~~such term is~~ defined in 40 CFR 96.2); or ~~a permit incorporating unit-specific unit~~

~~specific~~ compliance accounts for each budget unit at the source subject to this Subpart. ~~This~~~~Such~~ election ~~will~~~~shall~~ be at the sole discretion of the owner or operator of the source, and the Agency ~~must~~~~shall~~ incorporate ~~the~~~~such~~ election into a permit issued to the source ~~under~~~~pursuant to~~ this Subpart.

c) Monitoring requirements:

- 1) For budget units subject to ~~the requirements of~~ this Subpart, and which commence operation on and after January 1, 2000, the owner or operator of each ~~such~~ budget unit at the source must comply with the monitoring requirements of 40 CFR 96, ~~Subpart~~~~subpart~~ H. The account representative of each ~~such~~ budget unit at the source ~~must~~~~shall~~ comply with ~~those sections of~~ the monitoring requirements of 40 CFR 96, ~~Subpart~~~~subpart~~ H, applicable to an account representative.
- 2) The compliance of each budget unit subject to ~~the requirements of~~ subsection (c)(1) or subsection (c)(3)(A) ~~of this Section~~ with the control period NO_x emissions limitation under subsection (d) ~~is of this Section~~ ~~shall be~~ determined by the emissions measurements recorded and reported in ~~compliance~~~~accordance~~ with 40 CFR 96, ~~Subpart~~~~subpart~~ H.
- 3) For budget units which commenced operation ~~before~~~~prior to~~ January 1, 2000:
 - A) The owner or operator of each ~~such~~ budget unit at the source must comply with ~~the requirements of~~ 40 CFR 96, ~~Subpart~~~~subpart~~ H; or
 - B) If the ~~source demonstrates that the~~ monitoring requirements of 40 CFR 96, ~~Subpart~~~~subpart~~ H, are ~~demonstrated by the source to be~~ technically infeasible as applied to a budget unit subject to ~~the requirements of~~ this Subpart, the owner or operator of ~~the~~~~such~~ budget unit may monitor by an alternative monitoring procedure for the budget unit approved by the Agency and ~~the Administrator of USEPA under~~~~pursuant to the provisions of~~ 40 CFR 75, ~~Subpart~~~~subpart~~ E. ~~The~~~~Such~~ alternative monitoring procedures must be ~~contained as~~ federally enforceable conditions in the unit's permit.
- 4) The compliance of each budget unit subject to ~~the requirements of~~ subsection (c)(3)(B) ~~is of this Section~~ ~~shall be~~ determined by the emissions measurements recorded and reported in ~~compliance~~~~accordance~~ with ~~the~~ federally enforceable conditions in the budget unit's permit ~~that~~ ~~address~~~~addressing~~ monitoring as required by subsection (c)(3)(B) ~~of this Section~~.

d) Allowance requirements:

- 1) As of November 30 of each year, the allowance transfer deadline, the account representative of each source subject to ~~the requirements of~~ this Subpart must hold allowances available for compliance deductions under 40 CFR 96.54 for each budget unit at the source subject to this Subpart in the budget unit's compliance accounts, or the source's overdraft account. The number of allowances held in these accounts ~~must~~~~shall not~~ be ~~equal to or greater~~~~less~~ than the total NO_x emissions for the control period (rounded to the nearest whole ton), as determined in ~~compliance~~~~accordance~~ with subsection (c) ~~of this Section~~, plus any number of allowances necessary to account for actual ~~use~~~~utilization~~ (e.g., for testing, ~~startup~~~~start-up~~, malfunction, and ~~shutdown~~~~shut-down~~) under 40 CFR 96.42(e) for all budget units at the source subject to this Subpart. Compliance with this provision ~~is~~~~shall be~~ demonstrated if, as of the allowance transfer deadline, the sum of the allowances available for compliance deductions for all budget units at the source subject to this Subpart is equal to or greater than the total NO_x emissions (rounded to the nearest whole ton) from all budget units at the source subject to this Subpart.
- 2) Allowances ~~must~~~~shall~~ be held in, deducted from, or transferred among allowance accounts in ~~compliance~~~~accordance~~ with this Subpart and 40 CFR 96, ~~Subpart~~~~subparts~~ F and G.
- 3) Each ton of NO_x emitted by a source with ~~at least~~ one ~~or more~~ budget ~~unit~~~~units~~ subject to this Subpart in any control period ~~that exceeds~~~~in excess of~~ the NO_x allowances held by the owner or operator for each budget unit at the source subject to this Subpart for each control period ~~constitutes~~~~shall constitute~~ a separate violation of this Subpart and the Act.
- 4) ~~To~~~~In order to~~ comply with ~~the requirements of~~ subsection (d)(1) ~~of this Section~~, an allowance may not be ~~used~~~~utilized~~ for a control period in a year ~~before~~~~prior to~~ the year for which the allowance was allocated.
- 5) An allowance allocated by the Agency or USEPA under the NO_x Trading Program is a limited authorization to emit one ton of NO_x. ~~The~~~~No provision of the~~ NO_x Trading Program, ~~a budget~~~~any~~ permit issued or permit application submitted ~~under~~~~pursuant to~~ this Subpart, ~~or~~ an exemption under 40 CFR 96.5, and ~~any provision~~~~no provision~~ of law ~~is~~~~not~~~~shall be~~ construed to limit the authority of the United States or the State to terminate or limit this authorization.
- 6) An allowance allocated by the Agency or USEPA under the NO_x Trading Program or ~~under~~~~pursuant to~~ this Subpart does not constitute a property right.

- 7) ~~Once it is recorded~~Upon recordation by USEPA under 40 CFR 96, ~~Subpart~~subpart F or G, every allocation, transfer, or deduction of an allowance to or from a budget unit's compliance account or to or from the source's general or overdraft account where the budget unit is located is deemed to amend automatically and become a part of any budget permit of the budget unit. This automatic amendment of the budget permit ~~occurshall occur~~ by operation of law and ~~doeswill~~ not require any further review.

e) Recordkeeping and reporting requirements:

- 1) Unless otherwise provided, the owner or operator of a source subject to ~~the requirements of~~ this Subpart must keep at the source each of the documents ~~listed in~~ subsections (e)(1)(A) through (e)(1)(D) ~~of this Section~~ for ~~five~~a period of 5 years from the date the document is created. This period may be extended for cause at any time ~~before~~prior to the end of ~~five~~5 years in writing by the Agency or USEPA.
- A) The account certificate of representation for the account representative ~~offer~~ the source and each budget unit at the source subject to ~~the requirements of~~ this Subpart, and all documents that demonstrate the truth of the statements in the account certificate of representation, in ~~compliance~~accordance with 40 CFR 96.13. ~~The, provided that the~~ certificate and ~~such~~ supporting documents must be retained on site at the source beyond ~~thesuch~~ five-year period until ~~thesuch~~ documents are superseded ~~by submitting~~because of the submission of a new account certificate of representation ~~that changes~~changing the account representative.
- B) All emissions monitoring information, in ~~compliance~~accordance with subsection (c). ~~To of this Section, provided that to~~ the extent that 40 CFR 96, ~~Subpart~~subpart H, provides for a three-year period for recordkeeping, the three-year period ~~will~~shall apply.
- C) Copies of all reports and other submissions and all records made or required under this Subpart or documents necessary to demonstrate compliance with ~~the requirements of~~ this Subpart.
- D) Copies of all documents and any other ~~submissions~~submission under this Subpart.
- 2) The account representative of a source and each budget unit at the source subject to ~~the requirements of~~ this Subpart must submit to the Agency and USEPA the reports required under this Subpart, including those under 40 CFR 96, ~~Subpart~~subpart H.

f) Liability:

- 1) ~~A~~No revision of a budget permit ~~does not~~shall excuse any violation of the requirements of the NO_x Trading Program or this Subpart that occurs ~~before~~prior to the date that the revision under ~~the~~such budget permit takes effect.
 - 2) Each budget source and each budget unit at the source ~~must~~shall meet the requirements of the NO_x Trading Program.
 - 3) Any provision of this Subpart or the NO_x Trading Program that applies to a source subject to ~~the requirements of~~ this Subpart (including a provision applicable to the account representative of the source) ~~must~~shall also apply to the owner and operator of ~~the~~such source and to the owner and operator of the budget units subject to ~~the requirements of~~ this Subpart at the source.
 - 4) Any provision of this Subpart or the NO_x Trading Program that applies to a budget unit subject to ~~the requirements of~~ this Subpart (including a provision applicable to the account representative of ~~the~~such budget unit) ~~must~~shall also apply to the owner and operator of ~~the~~such budget unit. Except ~~for~~with regard to the requirements applicable to budget units with a common stack under 40 CFR 96, ~~Subpart~~subpart H, the owner and operator and the account representative of one budget unit ~~are~~shall not ~~be~~ liable for any violation by any other budget unit of which they are not an owner or operator or the account representative and that is located at a source of which they are not an owner or operator or the account representative.
 - 5) Excess emissions requirements: The account representative of a source that has excess emissions in any control period ~~must~~shall surrender the allowances as required for deduction under 40 CFR 96.54(d)(1).
 - 6) The owner or operator of a budget EGU that has excess emissions in any control period ~~must~~shall pay any fine, penalty, or assessment or comply with any other remedy imposed under 40 CFR 96.54(d)(3) and the Act.
- g) Effect on other authorities: ~~This~~No provision of this Subpart, the NO_x Trading Program, a budget permit application, a budget permit, or a retired budget unit exemption under 40 CFR 96.5 ~~is not~~shall be construed as exempting or excluding the owner or operator and, to the extent applicable, the account representative of a source or budget unit from ~~complying~~compliance with any other regulations promulgated under the CAA, the Act, an approved State implementation plan, or a federally enforceable permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.458 Permitting Requirements

a) Budget permit requirements:

- 1) The owner or operator of each source with at least one ~~or more~~ budget ~~units~~ subject to this Subpart is required to timely submit, in compliance~~accordance~~ with subsection (a)(4), (a)(5), or (a)(6) ~~of this Section~~, as applicable, a complete permit application addressing all requirements of this Subpart applicable to thesuch budget units.
- 2) Each budget permit (including a draft or proposed budget permit, if applicable) must~~shall~~ contain federally enforceable conditions addressing all applicable requirements of the NO_x Trading Program and requirements ~~of this Subpart~~ and must~~shall~~ be a complete and segregable portion of the source's entire permit.
- 3) A~~No~~ budget permit must not~~will~~ be issued, and an~~a~~ NO_x allowance account must not~~will~~ be established, for any budget unit subject to this Subpart, until the Agency and USEPA have received a complete account certificate of representation under 40 CFR 96, Subpart~~subpart~~ B, for an account representative of the source and each budget unit at the source subject to this Subpart.
- 4) For any budget unit subject to this Subpart that commenced operation before November 1, 2003, and for which a CAAPP permit is not required under~~pursuant to~~ Section 39.5 of the Act, the owner or operator of thesuch budget unit must submit a budget permit application meeting the requirements of this Subpart on or before November 1, 2003.
- 5) For any budget unit subject to this Subpart that commenced operation before August 1, 2003, and for which a CAAPP permit is required under~~pursuant to~~ Section 39.5 of the Act, the owner or operator of thesuch budget unit must submit a budget permit application meeting the requirements of this Subpart on or before August 1, 2003.
- 6) For any budget unit subject to this Subpart and~~that is subject to~~ Section 39.5 of the Act and~~that~~ commences operation on or after August 1, 2003, and for any budget unit subject to this Subpart but~~and~~ not subject to Section 39.5 of the Act that commences operation on or after November 1, 2003, the owner or operator of thesuch budget units must submit applications for construction and operating permits under~~pursuant to~~ the requirements of Sections 39 and 39.5 of the Act and 35 Ill. Adm. Code 201, and thesuch applications must specify that they are applying for budget permits, and must~~must~~ address the budget permit application requirements of this Subpart.

b) Budget permit applications:

- 1) Duty to apply: The owner or operator of any source with at least one or more budget ~~unit~~units subject to this Subpart must submit to the Agency at least one ~~or more~~ complete budget permit ~~application~~applications under subsection (b)(2) ~~of this Section~~ for ~~the such~~ budget units by the applicable deadline in subsection (a)(4), (a)(5), or (a)(6) ~~of this Section~~. The owner or operator of any source with ~~the such~~ budget units must reapply for a budget permit as required by this Subpart, ~~and~~ 35 Ill. Adm. Code 201, and Sections 39 and 39.5 of the Act.
- 2) Information requirements for budget permit applications: A complete budget permit application must include the following elements concerning the budget units for which the application is submitted:
 - A) Identification of the source, including plant name. The ORIS (Office of Regulatory Information Systems) or facility code assigned to the source by the Energy Information Administration must also be included, if applicable;
 - B) Identification of each fossil fuel-fired combustion turbine, stationary boiler, or combined cycle system budget unit at the source;
 - C) An explanation why each budget unit is subject to the requirements of Section 217.454 ~~of this Subpart~~; and
 - D) The compliance requirements of Section 217.456 ~~of this Subpart~~.
- 3) Federally enforceable status of budget permit: An application for a budget permit must~~shall~~ be treated as a modification of the source's existing federally enforceable permit, if ~~the such~~ permit has been issued for the source, and must~~shall~~ be subject to the same procedural requirements as the original application. When the Agency issues a budget permit, it must~~shall~~ be incorporated into and become a segregable part of the source's existing federally enforceable permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.460 Subpart U NO_x Trading Budget

- a) The initial NO_x allowances available for allocation for each control period (the Subpart U NO_x Trading Budget) for budget units subject to ~~the provisions of~~ this Subpart must~~shall~~ be 4,882 tons per control period, subject to adjustment in compliance~~accordance~~ with subsections (b), (c), and (d) ~~of this Section~~, and

subject to the new source set-aside for budget units subject to this Subpart, ~~as set forth~~ in Sections 217.462 and 217.464 ~~of this Subpart~~. The Subpart U NO_x Trading Budget ~~must~~shall be initially allocated ~~under as set forth in~~ Appendix E ~~of this Part~~.

- b) The Agency may adjust the Subpart U NO_x Trading Budget available for allocations in subsection (a) ~~of this Section~~ by adding allowances for budget units subject to this Subpart opting to become subject to this Subpart ~~underpursuant to~~ the requirements for opt-in units in Sections 217.474 and 217.476 ~~of this Subpart~~.
- c) The Agency ~~must~~shall adjust the Subpart U NO_x Trading Budget available for allocations in subsection (a) ~~of this Section~~ to remove allowances from units opting to become exempt ~~underpursuant to~~ the requirements for low-emitters in Sections 217.454(c) and 217.472 ~~of this Subpart~~.
- d) Except as ~~provided set forth~~ in subsection (e) ~~of this Section~~, if USEPA adjusts the base Subpart U NO_x Trading Budget of 4,882 allowances, the Agency will adjust the Subpart U NO_x Trading Budget pro-rata.
- e) If USEPA adjusts the Subpart U NO_x Trading Budget ~~for as to~~ any individual budget unit, the Subpart U NO_x Trading Budget ~~will~~shall not be adjusted pro-rata, and only the allowance allocation for that budget unit will be adjusted.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.462 Methodology ~~to Obtain~~for Obtaining NO_x Allocations

- a) Appendix E ~~of this Part~~ identifies the sources with existing budget units subject to this ~~Subpart~~subpart and the number of NO_x allowance allocations that each ~~such~~ budget unit is eligible to receive each control period, subject to adjustment in ~~compliance~~accordance with Section 217.460 ~~of this subpart~~ and for transfers made in ~~compliance~~accordance with subsection (b) ~~of this section~~. Each named budget unit's allocation will be adjusted proportionally based on the adjusted Subpart U NO_x Trading Budget ~~under as provided by~~ Section 217.460 ~~of this Subpart~~.
- b) The owner or operator of budget units subject to this Subpart may permanently transfer all or part of their allocation of allowances ~~underpursuant to~~ Column 5 of Appendix E ~~of this Part~~, subject to adjustment in ~~compliance~~accordance with this Subpart, to another budget unit subject to this Subpart, ~~or to a budget unit subject to Subpart W of this Part~~. ~~The~~Such transfer will be effective by submitting a written request to the Agency that is signed by the account representative for the transferring budget unit and ~~includes~~containing the account number for the recipient budget unit. The owner or operator of budget units subject to this Subpart may not permanently transfer all or part of the new source set-aside indicated as the difference between Column 4 and Column 5 of Appendix E ~~of this Part~~.

- c) Subject to adjustment in ~~compliance~~ accordance with this Subpart, or revocation or revision of the federal NO_x Trading Program or this Subpart, allocations ~~underpursuant to~~ Appendix E ~~of this Part~~ exist for the life of the program, including all or a portion of any allocation transferred to another budget unit ~~underpursuant to the provisions of~~ this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.464 Methodology ~~to calculate~~ for Determining NO_x Allowances from the New Source Set-Aside

- a) The methodology ~~to calculate~~ for calculating the allowances available for allocation to be allocated to new budget units subject to this Subpart from the new source set-aside is based on the more stringent emission rate of 0.15 lbs/MMbtummbtu or the permitted NO_x emission rate, but ~~at least~~ not less than 0.055 lbs/MMbtummbtu.

- b) The general equation for determining allowances is:

$$A = \frac{HI \times ER}{2000}$$

Where HI = heat input (in ~~MMbtummbtu~~ /control period) as determined in ~~compliance~~ accordance with subsection (c) ~~of this Section~~.

Where ER = The NO_x emission rate in lbs/~~MMbtummbtu~~ as determined in ~~compliance~~ accordance with subsection (a) ~~of this Section~~.

Where A = allowances of NO_x/control period.

- c) The projected heat input ~~must~~ shall be determined ~~under this subsection as set forth below~~, divided by 2000 lbs/ton:
- 1) For "new" budget units subject to this Subpart that have seasonal heat input from at least ~~three~~ 3 control periods ~~before~~ prior to the allocation year, the average of the budget unit's ~~two~~ 2 highest seasonal heat inputs from the control periods ~~one to three~~ 1 to 3 years ~~before~~ prior to the allocation year;
 - 2) For "new" budget units subject to this Subpart that have seasonal heat input from only ~~two~~ 2 control periods ~~before~~ prior to the allocation year, the average of the budget unit's seasonal heat inputs from the control periods ~~one and two~~ 1 and 2 years ~~before~~ prior to the allocation year;

- 3) For "new" budget units subject to this Subpart that have seasonal heat input from only the control period ~~before~~^{prior to} the allocation year, the heat input from that control period; or
- 4) For "new" budget units subject to this Subpart that have not operated for at least 77 days of the control period ~~before~~^{prior to} the allocation year, the budget unit's maximum design heat input for the control period as designated in the construction permit.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.466 NO_x Allocations Procedure for Subpart U Budget Units

For each control period, the Agency will allocate the total number of NO_x allowances in the Subpart U NO_x Trading Budget apportioned to budget units under Section 217.460 ~~of this Subpart~~, subject to adjustment ~~underas provided in~~ this Subpart. These allocations will be issued ~~underas provided in~~ subsections (a) and (b) ~~of this Section~~, as follows:

- a) The Agency will allocate to each budget unit ~~that is~~ listed in Appendix E ~~of this Part~~ the number of allowances ~~listed in~~ Column 5 of Appendix E ~~of this Part~~ for that budget unit for each ~~three-year~~^{3-year} period of the program. The Agency will report these allocations to USEPA by March 1, ~~of~~ⁱⁿ 2004, and ~~then~~ triennially ~~thereafter~~.
- b) The Agency will allocate allowances from the new source set-aside to "new" budget units ~~underas set forth in~~ Section 217.468 ~~of this Subpart~~.
- c) The Agency will report allocations from the new source set-aside to USEPA by April 1 of each year for the following year.
- d) To the extent that allowances remain in the new source set-aside after any allocation ~~under~~^{pursuant to} subsection (b) ~~of this Section~~, the Agency ~~must~~^{shall} allocate ~~those~~^{any such} remaining allowances pro-rata to the owner or operator of the budget units listed in Appendix E ~~of this Part~~ to the extent a whole allowance may be allocated to ~~the~~^{any such} owner or operator. The Agency will make ~~that~~^{such} allocation by April 15 of each year. If there are insufficient allowances to allocate a whole allowance to any ~~such~~ owner or operator of a budget unit listed in Appendix E ~~of this Part~~, ~~the~~^{such} allowances ~~must~~^{shall} be retained by the Agency in the new source set-aside. Any ~~such~~ allowances retained in the new source set-aside ~~must~~^{shall} be accumulated in the new source set-aside and may either:
 - 1) Be available for allocation to new budget units for future control periods, subject to ~~the provisions of~~ Section 217.468 ~~of this Subpart~~; or

- 2) If, after any annual allocation to new budget units, there are sufficient allowances accumulated in the new source set-aside to allocate at least one or more whole allowances to the owner or operator of existing budget units listed in Appendix E ~~of this Part~~ on a pro-rata basis, ~~the such~~ accumulated whole allowances ~~must shall~~ be allocated pro-rata to ~~the such~~ owner or ~~operator operators~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.468 New Source Set-Asides for "New" Budget Units

- a) For the 2004, 2005, and 2006 control periods, a "new" budget unit is one that commenced commercial operation on or after January 1, 2000. For the 2007 and later control periods, a "new" budget unit is one that commenced commercial operation no more than three control periods ~~before prior to~~ the year the allocation is requested ~~under pursuant to~~ this Section. ~~Units Those units~~ that commenced commercial operation on or after January 1, 2000, but before May 31, 2004, become "existing" budget units on October 1, 2004. ~~Units Those units~~ that commenced commercial operation on or after May 31, 2004, become "existing" budget units at the end of the third control period after they commenced commercial operation.
- b) "New" budget units must have an allowance for every ton of NO_x emitted during the control period ~~under as provided in~~ Section 217.456(d) ~~of this Subpart~~.
- c) The Agency will establish a new source set-aside for each control period from which "new" budget units may purchase NO_x allowances. Each new source set-aside will be allocated allowances equal to 3% of each source's initial total Subpart U NO_x Trading Budget allocation ~~as reflected in~~ Column 5 of Appendix E ~~of this Part~~, which is 146 allowances, for each control period. The allocation for the new source set-aside from each source ~~must shall~~ be based on 3% of the source's initial allocation, without regard to subsequent adjustment to any ~~such~~ source's current allocation, including permanent transfer of allowances to another source or revision of the Subpart U NO_x Trading Budget by USEPA.
- d) A "new" budget unit may request to purchase from the Agency a number of allowances only up to that is not more than the number of allowances for which it is eligible, as determined in Section 217.464 ~~of this Subpart~~, and subject to ~~the provisions of~~ this Section.
- e) The account representative of a "new" budget unit under subsection (a) ~~of this Section~~ may purchase allowances from the new source set-aside by submitting to the Agency a request, in writing or in a format specified by the Agency, to be allocated allowances for the current control period from the new source set-aside. The allocation request for each applicable control period must be submitted after the date on which the Agency issues a construction permit to the "new" budget

unit and before February 1 of the control period for which the allocation is requested.

- f) The Agency will notify the account representative by March 1 of the applicable year of the number of allowances that are eligible for purchase for the "new" budget unit ~~underpursuant to the requirements of~~ this Section. If the Agency does not receive payment by March 15 of the applicable year, the account representative will forfeit ~~theirhis/her~~ eligibility to purchase the allowances offered. The Agency will make available for purchase those forfeited allowances on a pro-rata basis to "new" budget units requesting allocations ~~underpursuant to~~ this Section, up to the number of allowances requested by each account representative. ~~TheseSuch~~ additional allocations are subject to the purchase requirements of subsection (g) ~~of this Section~~.
- g) The price of allowances from the new source set-aside ~~willshall~~ be:
 - 1) For 2004 only, ~~the price willshall be~~ the average price at which NO_x allowances were traded in 2003 in the Ozone Transport Region; and
 - 2) For all years other than 2004, the average price at which NO_x allowances were traded in the interstate NO_x Trading Program for the ~~previouspreceeding~~ control period.
- h) The fees collected by the Agency from the sale of allowances will be distributed pro-rata to budget units receiving allowances ~~underpursuant to~~ Appendix E ~~of this Part~~ on the basis of allocated allowances, subject to Agency administrative costs assessed ~~underpursuant to~~ Section 9.9 of the Act.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.470 Early Reduction Credits (ERCs) for Budget Units

If a budget unit reduces its NO_x emission rate as required by the applicable provisions of subsection (c) ~~of this Section~~ in the 2001 or 2002 control period, or if approved by USEPA ~~in~~ the 2003 control period, for use in 2004 control period, or later control periods authorized by USEPA, the account representative may request early reduction credits (ERCs) for ~~thesueh~~ reductions, and the Agency will allocate ERCs to the budget unit in ~~complianceaceordance~~ with the following:

- a) Each budget unit for which the account representative requests any ERCs under subsection (d) ~~of this Section~~ must monitor NO_x emissions in ~~complianceaceordance~~ with 40 CFR 96, ~~Subpartsubpart~~ H, as incorporated by reference in Section 217.104 ~~of this Part~~, starting with the control period ~~beforeprior to~~ the control period for which ERCs will first be requested and for each control period for which ERCs will be requested. For example, if ERCs are requested for reductions made in the 2001 control period, the budget unit must

have implemented the applicable monitoring for the 2000 control period. The budget unit's monitoring system availability must be at least 90% during the control period ~~before prior to~~ the control period in which the NO_x emissions reduction is made, and the budget unit must be ~~complying in compliance~~ with any applicable State or federal emissions or emissions-related requirements.

- b) The NO_x emission rate and heat input under subsections (c) through (e) ~~must of this Section shall~~ be determined in ~~compliance accordance~~ with 40 CFR 96, ~~Subpart subpart~~ H.
- c) Each budget unit for which ERCs are requested under subsection (d) ~~of this Section~~ must have reduced its NO_x emission rate for each control period for which ERCs are requested by ~~at least~~ 30% ~~or more~~ below the actual NO_x emissions rate (lbs/~~MMbtummbtu~~) for the first control period in which ERC's are requested.
- d) The account representative of a budget unit that meets the requirements of subsections (a) through (c) ~~of this Section~~ may submit to the Agency a request for ERCs for the budget unit based on NO_x emission rate reductions made by the budget unit in control periods 2001, 2002, and 2003.
 - 1) The number of ERCs that may be requested for any applicable control period ~~must shall~~ be an amount equal to the budget unit's heat input for ~~that such~~ control period multiplied by the difference between the budget unit's NO_x emission rate (meeting the requirements of subsection (c) ~~of this Section~~ for the applicable control period) and the budget unit's actual NO_x emission rate for the applicable control period, divided by ~~2,000 2000~~ lbs/ton, and rounded to the nearest ton;
 - 2) Upon request of the account representative, the ERC allowance allocation for a particular budget unit may be deposited in the source's overdraft account rather than in the budget unit's compliance account; and
 - 3) The early reduction request must be submitted by November 1 for reductions made in the previous control period, in a format specified by the Agency.
- e) ~~If in the event that~~ the May 31, 2004, date for implementing the NO_x SIP Call is delayed, the early reduction request must be submitted in ~~compliance accordance~~ with any rulemaking or guidance by USEPA on the distribution of the Compliance Supplement Pool under the NO_x SIP Call, 63 Fed. Reg. 57356 (October 27, 1998).
- f) The Agency will allocate ERCs to the budget units meeting the requirements of subsections (a) through (c) ~~of this Section~~ and covered by ERC requests meeting

the requirements of subsection (d) ~~of this Section~~ in ~~compliance~~accordance with the following procedures:

- 1) The Agency ~~must~~shall allocate no more than 2,427 ERCs over three years, as follows:
 - A) ~~Only up to~~Not more than one-half of the total ERC allowances for reductions made in the control period in 2001;
 - B) ~~At least~~Not less than one-half of the total ERC allowances for reductions made in the control period in 2002; and
 - C) If approved by USEPA, any ERC allowances not allocated ~~under~~pursuant to subsection (f)(1)(A) or (B) ~~of this Section~~, for reductions made in the control period in 2003.
- 2) If the number of ERC allowances requested for a reduction achieved in any control period is less than or equal to the number of ERC allowances designated for that control period in subsection (f)(1) ~~of this Section~~, the Agency will allocate one allowance for each accepted ERC request; and
- 3) If the number of ERC allowances requested for a reduction achieved in any control period is greater than the number of ERC allowances designated for that control period in subsection (f)(1) ~~of this Section~~, the Agency will allocate allowances for accepted requests on a pro-rata basis.
- g) By April 1, the Agency will notify the account representative submitting an ERC request for the subsequent control period of the number of ERC allowances that will be allocated to each budget unit for that control period.
- h) By May 1, 2004, the Agency will submit to USEPA the ERC allocations made by the Agency under this Section. USEPA will record such allocations to the extent that they are consistent with the requirements of this Section.
- i) ERC allowances recorded under subsection (h) ~~of this Section~~ may be deducted under 40 CFR 96.54, ~~as~~ incorporated by reference in Section 217.104 ~~of this Part~~, for the control period in 2004 or ~~such~~ control periods ~~as may be~~ specified by USEPA. ~~Despite~~Notwithstanding 40 CFR 96.55(a), USEPA will deduct as retired any ERC allowances that are not deducted for compliance ~~under~~in accordance with 40 CFR 96.54 for the control period in 2004 or ~~such~~ control periods ~~as may be~~ specified by USEPA.
- j) ERC allowances are treated as banked allowances in 2004 for ~~the purposes of~~ 40 CFR 96.55(a) and (b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.472 Low-Emitter Requirements

~~On and after~~~~Starting with~~ the effective date of the permit ~~underreferred to in~~ Section 217.454(c), the budget unit electing low-emitter status ~~is~~~~shall be~~ subject only to the requirements of this Section.

- a) For each control period the owner or operator elects low-emitter status, the federally enforceable permit conditions must:
 - 1) Restrict the unit to burning only natural gas, fuel oil, or natural gas and fuel oil;
 - 2) Limit the unit's potential NO_x mass emissions for the control period to 25 tons or less;
 - 3) Restrict the unit's operating hours to the number calculated by dividing 25 tons of potential NO_x mass emissions by the unit's maximum potential hourly NO_x mass emissions;
 - 4) Require that the unit's potential NO_x mass emissions ~~shall~~ be calculated by using the monitoring provisions of 40 CFR 75, or, if the unit does not rely on these monitoring provisions, as follows:
 - A) Select the applicable default NO_x emission rate:
0.7 lbs/~~MMbtummbtu~~ for combustion turbines burning only natural gas ~~exclusively~~ during the control period; 1.2 lbs/~~MMbtummbtu~~ for combustion turbines burning any fuel oil during the control period; 1.5 lbs/~~MMbtummbtu~~ for boilers burning only natural gas ~~exclusively~~ during the control period; or 2 lbs/~~MMbtummbtu~~ for boilers burning any fuel oil during the control period.
 - B) Multiply the default NO_x emission rate under subsection (a)(4)(A) ~~of this Section~~ by the unit's maximum rated hourly heat input, which is the higher of the manufacturer's maximum rated hourly heat input or the highest observed hourly heat input. The owner or operator of the unit may request in the permit application required by this subsection that the Agency use a lower value for the unit's maximum rated hourly heat input. The Agency may approve ~~thesueh~~ lower value if the owner or operator demonstrates that the maximum hourly heat input specified by the manufacturer or the highest observed hourly heat input, or both, are not representative. The owner or operator must demonstrate that ~~thesueh~~ lower value is representative of the unit's current capabilities because

modifications have been made to the unit that permanently limit the unit's capacity;

- 5) Require that, for ~~five~~5 years at the source that includes the unit, records demonstrating that the operating hours restriction, the fuel use restriction, and the other requirements of the permit related to these restrictions were met; and
 - 6) Require that the owner or operator of the unit report to the Agency for each control period the unit's hours of operation (treating any partial hour of operation as a whole hour of operation), heat input, and fuel use by type. This report ~~must~~shall be submitted by November 1 of each year the unit elects low-emitter status.
- b) The Agency will notify ~~the~~USEPA in writing of each unit electing low-emitter status ~~underpursuant to the requirements of~~ subsection (a) ~~of this Section~~ and when any of the following occurs:
- 1) The ~~Agency issues the~~ permit with federally enforceable conditions that includes the restrictions in subsection (a) ~~is issued by the Agency~~;
 - 2) ~~TheSuch~~ permit is revised to remove any such restriction;
 - 3) ~~TheSuch~~ permit includes any such restriction that is no longer applicable; or
 - 4) The unit does not comply with any such restriction.
- c) The unit ~~becomes~~shall become subject to ~~the requirements of~~this Subpart if, for any control period under this Section, the fuel use restriction or the operating hours restriction under subsection (a) ~~of this Section~~is removed from the unit's permit or otherwise is no longer applicable, or the unit does not comply with the fuel use restriction or the operating hours restriction under subsection (a) ~~of this Section~~. ~~TheSuch~~ unit ~~must~~shall be treated as commencing operation on September 30 of the control period for which the fuel use restriction or the operating hours restriction is no longer applicable or during which the unit does not comply with the fuel use restriction or the operating hours restriction.
- d) The owner or operator of a unit to which the Agency has ever allocated allowances under Appendix E ~~of this Part~~may elect low-emitter status. In that case, the Agency will reduce the Subpart U NO_x budget by the number of allowances equal to the amount of NO_x emissions the unit is permitted to emit during the control period ~~under, pursuant to~~ a federally enforceable condition in the unit's permit. The owner or operator of a unit electing low-emitter status may demonstrate that it holds sufficient allowances to cover the unit's NO_x emissions by offsetting the emissions from ~~thesuch~~ unit, which must not ~~to~~ exceed its

permitted emission limit ~~as included~~ in its federally enforceable permit, with allowances issued for voluntary NO_x reductions meeting the requirements of Subpart X ~~of this Part~~. The Agency will not reduce the Subpart U NO_x budget by the allowances issued for NO_x reductions obtained in ~~compliance~~ ~~accordance~~ with Subpart X ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.474 Opt-In Units

- a) Any operating fossil fuel-fired stationary boiler, combustion turbine, combined cycle system, cement kiln, or stationary internal combustion engine in the State may qualify under this Subpart to become an opt-in budget unit if it:
 - 1) Is not a budget EGU under Subpart W ~~of this Part~~;
 - 2) Vents all of its emissions to a stack;
 - 3) Has documented heat input for more than 876 hours in the six months immediately preceding the submission of an application for an initial budget permit under subsection (d) ~~of this Section~~;
 - 4) Is not covered by a retired unit exemption under 40 CFR 96.5; and
 - 5) Is not covered by the low-emitter exemption under Section 217.454(c) ~~of this Subpart~~.
- b) Except as otherwise provided in this Subpart, an opt-in budget unit ~~must~~ shall be treated as a budget unit ~~when for purposes of~~ applying this Subpart and 40 CFR 96.
- c) Authorized Account Representative:
 - 1) If an opt-in unit is located at the same source as one or more budget units, it ~~must~~ shall have the same account representative as those budget units.
 - 2) If the opt-in unit is not located at the same source as one or more budget units, the owner or operator of the opt-in unit ~~must~~ shall submit a complete account certificate of representation under 40 CFR 96.13.
- d) To apply for a budget permit, the account representative of a unit meeting the qualifications of subsection (a) ~~of this Section~~ must, except as provided under Section 217.478(f) ~~of this Subpart~~, submit to the Agency:
 - 1) A budget permit application for the unit that:

- A) Meets the requirements under Section 217.458 ~~of this Subpart~~; and
 - B) Contains provisions for a change in the regulatory status of the unit to an opt-in budget unit under Section 217.454 ~~under of this Subpart pursuant to the provisions of~~ Section 217.480(b) ~~of this Subpart~~.
- 2) A monitoring plan for the unit in ~~compliance~~ ~~accordance~~ with 40 CFR 96, ~~Subpart~~ ~~subpart~~ H.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.476 Opt-In Process

The Agency will issue or deny a budget permit for an opt-in unit in ~~compliance~~ ~~accordance~~ with Section 217.458 ~~of this Subpart~~ and the following:

- a) The Agency will determine, on an interim basis, the sufficiency of the monitoring plan accompanying the initial application for a budget permit for an opt-in unit. A monitoring plan is sufficient, ~~for purposes of~~ interim review, if the plan contains information demonstrating that the NO_x emission rate and heat input of the unit are monitored and reported in ~~compliance~~ ~~accordance~~ with 40 CFR 96, ~~Subpart~~ ~~subpart~~ H. A determination of sufficiency ~~will~~ ~~shall~~ not be construed as acceptance or approval of that unit's monitoring plan.
- b) If the Agency determines that the unit's monitoring plan is sufficient under subsection (a) ~~of this Section~~ and after ~~completing~~ ~~completion of~~ the monitoring system certification under 40 CFR 96, ~~Subpart~~ ~~subpart~~ H, the NO_x emission rate and the heat input of the unit ~~must~~ ~~shall~~ be monitored and reported in ~~compliance~~ ~~accordance~~ with 40 CFR 96, ~~Subpart~~ ~~subpart~~ H, for one full control period during which the monitoring system availability is ~~at least~~ ~~not less than~~ 90% and ~~during which~~ the unit is in full compliance with any applicable State or federal emissions or emissions-related requirements.
- c) Based on the information monitored and reported under subsection (b) ~~of this Section~~, the unit's baseline heat rate ~~must~~ ~~shall~~ be calculated as the unit's total heat input (in ~~MMBtu~~ ~~mmbtu~~) for the control period, and the unit's baseline NO_x emission rate ~~must~~ ~~shall~~ be calculated as the unit's total NO_x emissions (in lbs) for the control period divided by the unit's baseline heat rate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.478 Opt-In Budget Units: Withdrawal from the NO_x Trading Program

- a) Requesting withdrawal: To withdraw from the NO_x Trading Program, the account representative of an opt-in budget unit ~~must~~ ~~shall~~ submit to the Agency a request to withdraw from the NO_x Trading Program and to withdraw the budget

permit effective as of a specified date between (and not including) September 30 and May 1. The submission ~~must~~shall be made ~~within no later than~~ 90 days ~~before~~prior to the requested effective date of withdrawal.

- b) Conditions for withdrawal: Before an opt-in budget unit may withdraw from the NO_x Trading Program and the budget permit may be withdrawn under this Section, the following conditions must be met:
- 1) For the control period immediately before the withdrawal is to be effective, the account representative must submit to the Agency an annual compliance certification report in ~~compliance~~accordance with 40 CFR 96.30.
 - 2) If the opt-in budget unit has excess emissions for the control period immediately before the withdrawal is to be effective, USEPA has deducted from the opt-in budget unit's compliance account, or the overdraft account of the NO_x budget source where the opt-in budget unit is located, the number of allowances required in ~~compliance~~accordance with 40 CFR 96.54(d) for the control period.
 - 3) After the requirements for withdrawal under subsections (b)(1) and (2) ~~of this Section~~ are met, USEPA will deduct from the opt-in unit's compliance account, or the overdraft account of the budget source where the opt-in budget unit is located, allowances equal in number to any allowances allocated to that unit under Section 217.782 ~~of this Subpart~~ for the control period for which the withdrawal is to be effective and earlier control periods. USEPA will close the opt-in budget unit's compliance account and will establish, and transfer any remaining allowances to, a new general account for the owners and operators of the opt-in unit. The account representative for the opt-in budget unit ~~must~~shall become the account representative for the general account.
- c) An opt-in budget unit that withdraws from the Subpart U NO_x Trading Program ~~must~~shall comply with all requirements under the NO_x Trading Program ~~for~~concerning all years for which ~~the~~such opt-in budget unit was an opt-in budget unit, even if ~~the~~such requirements arise or must be complied with after the withdrawal takes effect.
- d) Notification:
- 1) After the requirements for withdrawal under subsections (a) and (b) ~~of this Section~~ are met (including deduction of the full amount of allowances required), the Agency will revise the budget permit indicating a specified effective date for the withdrawal that is after the requirements in subsections (a) and (b) ~~of this Section~~ have been met and that is ~~before~~prior to May 1 or after September 30.

- 2) If the requirements for withdrawal under subsections (a) and (b) ~~of this Section~~ are not met, the Agency will issue a notification to the owner or operator and the account representative of the opt-in budget unit that the opt-in unit's request to withdraw its budget permit is denied. If the opt-in budget unit's request to withdraw is denied, the opt-in budget unit ~~will~~shall remain subject to the requirements for an opt-in budget unit.
- e) Reapplication upon failure to meet conditions of withdrawal: If the Agency denies the opt-in budget unit's request to withdraw, the account representative of the opt-in budget unit may submit another request to withdraw in ~~compliance~~accordance with subsections (a) and (b) ~~of this Section~~.
- f) Ability to return to the NO_x Trading Program: Once an opt-in unit withdraws from the NO_x Trading Program and its budget permit is withdrawn under this Section, the account representative may not submit another application for a budget permit under Section 217.474(d) ~~of this Subpart~~ for the unit ~~before~~prior to the date that is four years after the date on which the budget permit with opt-in conditions is withdrawn.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.480 Opt-In Units: Change in Regulatory Status

- a) Notification: When an opt-in unit becomes an opt-in budget unit under Section 217.476 ~~of this Subpart~~, the owner or operator ~~must~~shall notify the Agency and USEPA in writing of ~~the~~such change in the opt-in unit's regulatory status within 30 days ~~after that~~of such change.
- b) Any permit application that provides for a change in the regulatory status of a unit to an opt-in budget unit ~~under~~pursuant to Section 217.474(d)(1)(B) ~~of this Subpart~~ and included in a budget permit, is effective on the date on which ~~the~~such opt-in unit becomes an opt-in budget unit under Section 217.454 ~~of this Subpart~~.
- c) USEPA's action:
 - 1) USEPA will deduct from the compliance account for the opt-in budget unit under this Section, or the overdraft account of the budget source where the opt-in budget unit is located, allowances equal in number to and allocated for the same or a prior control period as:
 - A) Any allowances allocated to the budget unit (as an opt-in unit) under Section 217.482 ~~of this Subpart~~ for any control period after the last control period during which the unit's budget permit was effective; and

- B) If the effective date of any budget permit under subsection (b) ~~of this Section~~ is during a control period, the allowances allocated to the opt-in budget unit (as an opt-in unit) under Section 217.482 ~~of this Subpart~~ for the control period multiplied by the ratio of the number of days in the control period, starting with the effective date of the budget permit under subsection (b) ~~of this Section~~, divided by the total number of days in the control period.
- 2) The account representative mustshall ensure that the compliance account of the opt-in budget unit under subsection (b) ~~of this Section~~, or the overdraft account of the budget source where the opt-in budget unit is located, contains the allowances necessary to completefor completion of the deduction under subsection (c)(1) ~~of this Section~~. If the compliance account or overdraft account does not contain sufficient allowances, USEPA will deduct the required number of allowances, regardless of the control period for which they were allocated, whenever allowances are recorded in either account.
- 3) For every control period during which any budget permit under subsection (b) ~~of this Section~~ is effective, the opt-in budget unit under subsection (b) ~~of this Section~~ will be treated, solely for purposes of allowance allocations under Section 217.466 or 217.468 ~~of this Subpart~~, as a unit that commenced operation on the effective date of the budget permit under subsection (b) ~~of this Section~~ and will be allocated allowances in compliance accordance with Section 217.466 or 217.468 ~~of this Subpart~~.
- 4) DespiteNotwithstanding subsection (c)(2) ~~of this Section~~, if the effective date of any budget permit under subsection (b) ~~of this Section~~ is during a control period, the following number of allowances will be allocated to the opt-in budget unit for the control period: the number of allowances otherwise allocated to the opt-in budget unit under Section 217.466 or 217.468 ~~of this Subpart~~ for the control period multiplied by the ratio of the number of days in the control period, starting with the effective date of the budget permit under subsection (b) ~~of this Section~~, divided by the total number of days in the control period.
- d) When the owner or operator of an opt-in unit does not renew the budget permit for the opt-in budget unit issued underpursuant to Section 217.474(d), USEPA will deduct from the opt-in budget unit's compliance account, or the overdraft account of the budget source where the opt-in budget unit is located, allowances equal in number to and allocated for the same or a prior control period as any allowances allocated to the opt-in budget unit under Section 217.482 ~~of this Subpart~~ for any control period after the last control period for which the budget permit is effective. The account representative mustshall ensure that the opt-in budget unit's compliance account or the overdraft account of the budget source where the opt-in budget unit is located contains the allowances necessary to

~~complete the~~~~for completion of such~~ deduction. If the compliance account or overdraft account does not contain sufficient allowances, USEPA will deduct the required number of allowances, regardless of the control period for which they were allocated, whenever allowances are recorded in either account.

- e) After the deduction under subsection (d) ~~of this Section~~ is completed, USEPA will close the opt-in unit's compliance account. If any allowances remain in the compliance account after ~~completing the~~~~completion of such~~ deduction and any deduction under 40 CFR 96.54, USEPA will close the opt-in unit's compliance account and will establish, and transfer any remaining allowances to, a new general account for the owner or operator of the opt-in unit. The account representative for the opt-in unit ~~must~~~~shall~~ become the account representative for the general account.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.482 Allowance Allocations to Opt-In Budget Units

- a) Allowance allocations:
- 1) By the December 31 immediately before the first control period for which the budget permit is effective, the Agency will allocate allowances to the opt-in budget unit and submit to USEPA the allocation for the control period in ~~compliance~~~~accordance~~ with subsection (b) ~~of this Section~~.
 - 2) By ~~no later than~~ the December 31 after the first control period for which the budget permit is in effect and December 31 of each year ~~after~~ ~~it thereafter~~, the Agency will allocate allowances to the opt-in budget unit and submit to USEPA allocations for the next control period; in ~~compliance~~~~accordance~~ with subsection (b) ~~of this Section~~.
- b) For the first control period, and for each subsequent control period for which the opt-in budget unit has a budget permit, the opt-in budget unit will be allocated allowances in ~~compliance~~~~accordance~~ with the following procedures:
- 1) The heat input (in ~~MMbtu~~~~mmbtu~~) used for calculating allowance allocations will be the lesser of:
 - A) The opt-in unit's baseline heat input determined ~~under~~~~pursuant to~~ Section 217.476(c) ~~of this Subpart~~; or
 - B) The opt-in unit's heat input, for the control period in the year ~~before~~~~prior to~~ the year of the first control period for which the allocations are being calculated, as determined in ~~compliance~~~~accordance~~ with 40 CFR 96, ~~Subpart~~~~subpart~~ H.

- 2) The Agency will allocate allowances to the opt-in budget unit in an amount equaling the heat input (in ~~MMbtummbtu~~) determined under subsection (b)(1) ~~of this Section~~ multiplied by the lesser of:
 - A) The unit's baseline NO_x emission rate (in lbs/~~MMbtummbtu~~) determined ~~underpursuant to~~ Section 217.476(c) ~~of this Subpart~~; or
 - B) The lowest NO_x emissions limitation (calculated in lbs/~~MMbtummbtu~~) under State or federal law that is applicable to the budget opt-in unit for the year of the control period for which the allocations are being calculated, regardless of the averaging period to which the emissions limitation applies.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART V: ELECTRIC POWER GENERATION

Section 217.521 Lake of Egypt Power Plant

- a) The NO_x standard ~~infor nitrogen oxides of~~ Section 217.121(d) does not apply when solid fossil fuel containing ~~25%25 percent by weight~~ or more by weight of coal refuse is burned in Southern Illinois Power Cooperative's Unit No. 4 at its Lake of Egypt Power Plant.
- b) The NO_x standard ~~infor nitrogen oxides of~~ Section 217.121(e) does not apply when solid fossil fuel containing ~~25%25 percent by weight~~ or more by weight of coal refuse is burned in combination with gaseous, liquid, or other solid fossil fuel in Southern Illinois Power Cooperative's Unit No. 4 at its Lake of Egypt Power Plant.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.700 Purpose

The purpose of this Subpart is to control the emissions of ~~nitrogen oxides (NO_x)~~ from ~~electrical generating units (EGUs)~~ during the ozone control period (~~underfor purposes of Subpart V, the ozone control period is May 1 through September 30 of each year, beginning in 2003~~), by limiting ~~NO_x the~~ emissions ~~of NO_x~~ from EGUs to ~~no more than~~ 0.25 lbs/~~MMbtummbtu~~ of actual heat input during each ozone control period. Under this Subpart, the ozone control period is May 1 through September 1 of each year, beginning in 2003.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.702 Severability

If any section, subsection, or clause of this Subpart is found invalid, ~~that such~~ finding ~~does~~shall not affect the validity of this Subpart as a whole or any Section, subsection, or clause not found invalid.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.704 Applicability

The following fossil fuel-fired stationary boilers, combustion turbines, or combined cycle systems are ~~electrical generating units (EGUs)~~ and ~~are~~shall be subject to this Subpart on and after May 1, 2003:

- a) Any unit serving a generator that has a nameplate capacity greater than 25 MWe and produces electricity for sale, excluding ~~the~~those units listed in Appendix D ~~of this Part~~ and any new unit at a source listed in Appendix D ~~of this Part~~.
- b) Any unit with a maximum design heat input ~~that is~~ greater than 250 ~~MMbtu/hr~~MMbtu/hr that commences operation on or after January 1, 1999, serving at any time a generator that has a nameplate capacity of 25 MWe or less and has the potential to use more than 50% of the potential electrical output capacity of the unit. Fifty percent of a unit's potential electrical output capacity ~~is~~shall be determined by multiplying the unit's maximum design heat input by 0.0488 MWe/~~MMbtu~~MMbtu. If the size of the generator is greater than this calculated number, the unit is an EGU subject to ~~the provisions of~~ this Subpart.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.706 Emission Limitations

- a) On ~~and~~ after May 1, 2003, ~~an~~no owner or operator subject to this Subpart ~~must~~not~~shall~~ cause or allow ~~NO_x the~~ emissions ~~of NO_x~~ into the atmosphere from any EGU to exceed 0.25 lbs/~~MMbtu~~MMbtu of actual heat input during each ozone control period, based on a control period average for that unit.
- b) ~~Despite~~Notwithstanding the emission limitation in subsection (a) ~~of this Section~~, any EGU subject to a more stringent NO_x emission limitation ~~under~~pursuant to any State or federal statute, including the Act, the ~~CAA~~Clean Air Act, or any regulations promulgated ~~under them~~thereunder, ~~must~~shall comply with both the requirements of this Subpart and ~~the~~that more stringent emission limitation.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.708 NO_x Averaging

- a) ~~Despite~~Notwithstanding Section 217.706(a) ~~of this Subpart~~, the owners or operators of EGUs listed in Appendix F ~~of this Part~~ and the owner or operator of

Soyland Power may elect to demonstrate compliance with this Subpart by averaging for the ozone control period the NO_x emission rates with any EGU listed in Appendix F or any EGU at Soyland Power's Alsey, ~~Illinois~~ facility that commenced commercial operation on or before January 1, 2000.

- b) The average NO_x emission rate for all EGUs being averaged ~~underpursuant to~~ this Section must not exceed 0.25 lbs/~~MMbtummbtu~~ and ~~mustshall~~ be determined as follows:

$$ER_{avg} = \frac{\sum_{i=1}^n (HI_i \times ER_i)}{\sum_{i=1}^n HI_i}$$

Where:

ER_{avg} = average emission rate in lbs/~~MMbtummbtu~~ of all EGUs in averaging demonstration

HI_i = heat input for the ozone control period of EGU i, in ~~MMbtummbtu~~, as specified in the NO_x averaging demonstration

ER_i = actual NO_x emission rate of EGU i, in lbs/~~MMbtummbtu~~, as specified in the NO_x averaging demonstration

n = number of EGUs that are averaging

- c) Averaging under this Subpart must be authorized through federally enforceable permit conditions for ~~thesuch~~ EGU.
- d) An EGU may be included in only one NO_x averaging demonstration during an ozone control period.
- e) Compliance by averaging for each ozone control period must be demonstrated by November 30 ~~afterfollowing~~ each ozone control period.
- f) If averaging is used to demonstrate compliance with this Subpart ~~and the owner or operator fails to demonstrate compliance, the effect of a failure to demonstrate such compliance shall be that~~ the compliance status of each EGU ~~mustshall~~ be determined ~~underpursuant to~~ Section 217.706(a) as if the NO_x emission rates of ~~thesuch~~ EGUs were not averaged.

- g) The owner or operator of any EGU that elects to participate in an averaging demonstration to demonstrate compliance with this Subpart cannot average with any other EGU for which the owner or operator of ~~the such~~ EGU does not maintain the required records, data, and reports, or does not submit copies of ~~thesuch~~ records, data, or reports to the Agency upon request.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.710 Monitoring

- a) The owner or operator of an EGU subject to this Subpart ~~mustshall~~ install, calibrate, maintain, and operate ~~continuous emissions monitoring systems (CEMS)~~ for NO_x that meet the requirements of 40 CFR 75, ~~Subpartsubpart~~ B.
- b) ~~DespiteNotwithstanding~~ subsection (a), the owner or operator of a gas-fired peaking unit or oil-fired peaking unit as defined in 40 CFR 72.2 may determine NO_x emissions in ~~complianceaccordance~~ with the emissions estimation protocol of 40 CFR 75, ~~Subpartsubpart~~ E.
- c) ~~DespiteNotwithstanding~~ subsection (a), the owner of operator of a combustion turbine that operates less than 350 ~~hourshour~~ per ozone control period may determine the heat input and NO_x emissions of the turbine as follows:
- 1) Heat input ~~mustshall~~ be determined from the metered fuel usage to the turbine or the calculated heat input determined as the product of the turbine's maximum hourly heat input and hours of operation as recorded by operating instrumentation on the turbine;
 - 2) NO_x emissions ~~mustshall~~ be determined as the product of the heat input, as determined ~~in subsection (c)(1)above~~, and the appropriate default NO_x emission factors below:

0.7 lbs/~~MMbtummbtu~~ - Natural gas
1.2 lbs/~~MMbtummbtu~~ - Fuel oil

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 217.712 Reporting and Recordkeeping

The owner or operator of an EGU subject to ~~the requirements of~~ this Subpart ~~mustshall~~:

- a) Comply with the recordkeeping and reporting requirements of 40 CFR 75 applicable to NO_x emissions during the ozone control period, including, ~~but not limited to,~~ 40 CFR 75.54(b) and (d), incorporated by reference in Section 217.104 ~~of this Part~~.

- b) ~~Despite~~Notwithstanding subsection (a), the owner or operator of a combustion turbine for which heat input and NO_x emissions are determined ~~underpursuant to Section~~subsection 217.710(c) ~~must of this Subpart shall~~ comply with the following recordkeeping and reporting requirements:

- 1) Maintain records of the heat input and NO_x emissions of the turbine as determined in ~~compliance~~accordance with Section 217.710(c) ~~of this Subpart~~, and records of metered fuel use or operating hours used to determine heat input; and
- 2) Annually report the heat input and NO_x emissions of the turbine as determined in ~~compliance~~accordance with Section 217.710(c) ~~of this Subpart~~, for each ozone control period, by November 30 of each year.

- c) Submit, with the report required under subsection (c) ~~of this Section~~, the following certification statement, ~~to be~~ signed by a responsible official:

"I certify under penalty of law that this report and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons directly responsible for gathering the information, the information is, to the best of my knowledge and belief after due inquiry, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Signature

Name

Official Title

Telephone No.

Date Signed

- d) If demonstrating compliance through Section 217.706(a) ~~of this Subpart~~, by November 30 of each year beginning in 2003, submit to the Agency a report that demonstrates each EGU has not exceeded a NO_x emission rate of 0.25 lbs/~~MMbtu~~MMBtu during the ozone control period.
- e) If demonstrating compliance through Section 217.708 ~~of this Subpart~~, by November 30 of each year beginning in 2003, submit to the Agency a report that demonstrates the following:

- 1) For all EGUs participating in the averaging demonstration, the averaged ozone control period NO_x emission rate ~~underpursuant to~~ the equation in Section 217.708(b) ~~of this Subpart~~;
 - 2) The average ozone control period NO_x emission rate of each EGU participating in the averaging demonstration; and
 - 3) The information required to determine the averaged NO_x emission rate ~~underpursuant to~~ Section 217.708(b) ~~of this Subpart~~.
- f) Keep and maintain, for ~~five~~ 5 years, all records and data necessary to demonstrate compliance with ~~the requirements of~~ this Subpart, and upon request make ~~thesuch~~ records and data available to Agency and USEPA representatives for inspection and copying during working hours.
 - g) Submit copies of any records and data required by this Section to the Agency within 30 days after ~~receivingreceipt of~~ a written request by the Agency.

SUBPART W: NO_x TRADING PROGRAM FOR ELECTRICAL GENERATING UNITS

Section 217.750 Purpose ~~(Repealed)~~

~~The purpose of this Subpart is to control the emissions of nitrogen oxides (NO_x) during the ozone control period (May 1 through September 30 of each year, except that in 2004, "control period" means May 31 through September 30) from electrical generating units (EGUs) by determining source allocations and implementing the NO_x Trading Program pursuant to 40 CFR 96, as authorized by Section 9.9 of the Act [415 ILCS 5/9.9].~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.751 Sunset Provisions ~~(Repealed)~~

~~The provisions of this Subpart W shall not apply for any control period in 2009 or thereafter. Noncompliance with the provisions of this Subpart that occurred prior to 2009 is subject to the applicable provisions of this Subpart.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.752 Severability ~~(Repealed)~~

~~If any Section, subsection or clause of this Subpart is found invalid, such finding shall not affect the validity of this Subpart as a whole or any Section, sentence or clause not found invalid.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.754 Applicability (Repealed)

- a) ~~The following fossil fuel-fired stationary boilers, combustion turbines or combined cycle systems are electrical generating units (EGUs) and are subject to this Subpart:~~
 - 1) ~~Any unit serving a generator that has a nameplate capacity greater than 25 MWe and produces electricity for sale, excluding those units listed in Appendix D of this Part.~~
 - 2) ~~Any unit with a maximum design heat input that is greater than 250 mmbtu/hr that commences operation on or after January 1, 1999, serving at any time a generator that has a nameplate capacity of 25 MWe or less and has the potential to use more than 50% of the potential electrical output capacity of the unit. Fifty percent of a unit's potential electrical output capacity shall be determined by multiplying the unit's maximum design heat input by 0.0488 MWe/mmbtu. If the size of the generator is greater than this calculated number, the unit is an EGU subject to the provisions of this Subpart.~~
- b) ~~Those units that meet the above criteria and are subject to the NO_x Trading Program emissions limitations contained in this Subpart are budget EGUs.~~
- c) ~~Low emitter status: Notwithstanding subsection (a) of this Section, the owner or operator of a budget EGU under subsection (a) of this Section may elect low-emitter status by obtaining a permit with federally enforceable conditions meeting the requirements of subsection (c)(1) of this Section. Starting with the effective date of such permit, the EGU shall not be a budget EGU and shall be subject only to the requirements of this subsection (c).~~
 - 1) ~~For each control period under this subsection (c), the federally enforceable permit conditions must:~~
 - A) ~~Restrict the EGU to burning only natural gas, fuel oil, or natural gas and fuel oil;~~
 - B) ~~Limit the EGU's potential NO_x mass emissions for the control period to 25 tons or less;~~
 - C) ~~Restrict the EGU's operating hours during the control period to the number calculated by dividing 25 tons of potential NO_x mass emissions by the EGU's maximum potential hourly NO_x mass emissions;~~
 - D) ~~Require that the EGU's potential NO_x mass emissions be calculated by using the monitoring provisions of 40 CFR 75 or, if~~

~~the EGU does not rely on these monitoring provisions, by using the applicable default rate, as follows:~~

~~i) Select the applicable default NO_x emission rate from one of the following:~~

~~0.7 lb/mmbtu for combustion turbines burning natural gas exclusively during the control period;~~

~~1.2 lbs/mmbtu for combustion turbines burning any fuel oil during the control period;~~

~~1.5 lbs/mmbtu for boilers burning natural gas exclusively during the control period; or~~

~~2 lbs/mmbtu for boilers burning any fuel oil during the control period.~~

~~ii) Multiply the default NO_x emission rate under subsection (c)(1)(D)(i) of this Section by the EGU's unit specific maximum rated heat input (mmbtu), which is the higher of the manufacturer's maximum rated hourly heat input or the highest observed hourly heat input. The owner or operator of the EGU may request in the permit application required by this subsection (c) that the Agency use a lower value for the EGU's maximum rated hourly heat input. The Agency may approve such lower value if the owner or operator demonstrates that the maximum hourly heat input specified by the manufacturer or the highest observed hourly heat input, or both, are not representative. The owner or operator must also demonstrate that such lower value is representative of the EGU's current capabilities because modifications have been made to the EGU that permanently limit the EGU's capacity;~~

~~E) Require that the owner or operator of the EGU retain for five years, at the source that includes the EGU, records demonstrating that the operating hours restriction, the fuel use restriction, and the other requirements of the permit related to these restrictions were met; and~~

~~F) Require that the owner or operator of the EGU report to the Agency the EGU's hours of operation (treating any partial hour of operation as a whole hour of operation), heat input, and fuel use by type during each control period. This report shall be submitted by November 1 of each year the EGU elects low emitter status.~~

- ~~2) — The Agency will notify USEPA in writing of each EGU electing low-emitter status pursuant to the requirements of subsection (c)(1) of this Section and when any of the following occurs:~~
- ~~A) — The permit with federally enforceable conditions that includes the restrictions in subsection (c)(1) of this Section is issued by the Agency;~~
 - ~~B) — Such permit is revised to remove any such restriction;~~
 - ~~C) — Such permit includes any such restriction that is no longer applicable; or~~
 - ~~D) — The EGU does not comply with any such restriction.~~
- ~~3) — The EGU shall become a budget EGU, subject to the requirements of this Subpart if, for any control period under subsection (c) of this Section, the fuel use restriction or the operating hours restriction under subsection (c)(1) of this Section is removed from the EGU's permit or otherwise becomes no longer applicable, or the EGU does not comply with the fuel use restriction or the operating hours restriction under subsection (c)(1) of this Section. Such EGU shall be treated as commencing operation and, for a unit under subsection (a)(1) of this Section, commencing commercial operation, on September 30 of the year prior to the control period for which the fuel use restriction or the operating hours restriction is no longer applicable or during which the EGU does not comply with the fuel use restriction or the operating hours restriction.~~
- ~~4) — The owner or operator of an EGU to which the Agency has ever allocated allowances may elect low-emitter status. In that case, the Agency will reduce the EGU trading budget by the number of allowances corresponding to the amount of NO_x emissions the EGU is permitted to emit during the control period as set forth in the EGU's federally enforceable state operating permit.~~
- ~~d) — Notwithstanding the provisions in subsection (a) of this Section, sources may opt in to the NO_x Trading Program and will receive allowance allocations consistent with applicable requirements, if they meet the requirements for a budget opt in unit pursuant to Sections 217.774 through 217.782 of this Part.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.756 Compliance Requirements (Repealed)

~~All EGUs subject to the requirements of this Subpart must comply with the following:~~

- a) ~~The requirements of this Subpart and 40 CFR 96 (excluding 40 CFR 96.4(b) and 96.55(c), and excluding 40 CFR 96, Subparts C, E, and I) as incorporated by reference in Section 217.104 of this Part.~~
- b) ~~Permit requirements:~~
 - 1) ~~The owner or operator of each source with one or more budget EGUs at the source must apply for a permit issued by the Agency with federally enforceable conditions covering the NO_x Trading Program ("budget permit") that complies with the requirements of Section 217.758 of this Part.~~
 - 2) ~~The owner or operator of each budget source and each budget EGU at the source must operate the budget EGU in compliance with such budget permit.~~
- e) ~~Monitoring requirements:~~
 - 1) ~~The owner or operator of each budget source and each budget EGU at the source must comply with the monitoring requirements of 40 CFR 96, subpart H. The account representative of each budget source and each budget EGU at the source must comply with those sections of the monitoring requirements of 40 CFR 96, subpart H, applicable to an account representative.~~
 - 2) ~~The compliance of each budget EGU with the budget emissions limitation under subsection (d) of this Section shall be determined by the emissions measurements recorded and reported in accordance with 40 CFR 96, subpart H.~~
- d) ~~NO_x requirements:~~
 - 1) ~~By November 30 of each year, the allowance transfer deadline, the account representative of each budget source and each budget EGU at the source shall hold allowances available for compliance deductions under 40 CFR 96.54 in the budget EGU's compliance account or the source's overdraft account. The number of allowances held shall not be less than the budget EGU's total tons of NO_x emissions for the control period, rounded to the nearest whole ton, as determined in accordance with 40 CFR 96, subpart H, plus any number necessary to account for actual utilization (e.g., for testing, start-up, malfunction, and shut down) under 40 CFR 96.42(e) for the control period.~~
 - 2) ~~Each ton of NO_x emitted in excess of the number of NO_x allowances held by the owner or operator for each budget EGU for each control period shall constitute a separate violation of this Part and the Act.~~

- 3) ~~A budget EGU shall be subject to the monitoring and NO_x requirements of subsections (c)(1) and (d)(1) of this Section starting on the later of May 31, 2004, the date on which the EGU commences OR THE FIRST DAY OF THE CONTROL SEASON SUBSEQUENT TO THE CALENDAR YEAR IN WHICH ALL OF THE OTHER STATES SUBJECT TO THE PROVISIONS OF THE NO_x SIP CALL (63 Fed. Reg. 57355 (October 27, 1998)) THAT ARE LOCATED IN USEPA REGION V OR THAT ARE CONTIGUOUS TO ILLINOIS HAVE ADOPTED REGULATIONS TO IMPLEMENT NO_x TRADING PROGRAMS AND OTHER REQUIRED REDUCTIONS OF NO_x EMISSIONS PURSUANT TO THE NO_x SIP CALL, AND SUCH REGULATIONS HAVE RECEIVED FINAL APPROVAL BY USEPA AS PART OF THE RESPECTIVE STATES' SIPS FOR OZONE, OR A FINAL FIP FOR OZONE PROMULGATED BY USEPA IS EFFECTIVE. [415 ILCS 5/9.9(f)]~~
- 4) ~~Allowances shall be held in, deducted from, or transferred among allowance accounts in accordance with this Subpart and 40 CFR 96, subparts F and G, and Sections 217.774 through 217.782 of this Part.~~
- 5) ~~In order to comply with the requirements of subsection (d)(1) of this Section, an allowance may not be utilized for a control period in a year prior to the year for which the allowance is allocated.~~
- 6) ~~An allowance allocated by the Agency or USEPA under the NO_x Trading Program is a limited authorization to emit one ton of NO_x in accordance with the NO_x Trading Program. No provision of the NO_x Trading Program, the budget permit application, the budget permit, or a retired unit exemption under 40 CFR 96.5, and no provision of law shall be construed to limit the authority of the United States or the State to terminate or limit this authorization.~~
- 7) ~~An allowance allocated by the Agency or USEPA under the NO_x Trading Program does not constitute a property right.~~
- 8) ~~Upon recordation by USEPA under 40 CFR 96, subpart F or G, or Section 217.782 of this Part, every allocation, transfer, or deduction of an allowance to or from a budget EGU's compliance account or to or from the overdraft account of the budget source where the budget EGU is located is deemed to amend automatically, and become a part of, any budget permit of the budget EGU. This automatic amendment of the budget permit shall be deemed an operation of law and will not require any further review.~~
- e) ~~Recordkeeping and reporting requirements:~~

- ~~1) Unless otherwise provided, the owner or operator of the budget source and each budget EGU at the source shall keep on site at the source each of the documents listed in subsections (e)(1)(A) through (e)(1)(D) of this Section for a period of five years from the date the document is created. This period may be extended for cause, at any time prior to the end of five years, in writing by the Agency or USEPA.~~
 - ~~A) The account certificate of representation of the account representative for the source and each budget EGU at the source, all documents that demonstrate the truth of the statements in the account certificate of representation, in accordance with 40 CFR 96.13, provided that the certificate and documents must be retained on site at the source beyond such five year period until such documents are superseded because of the submission of a new account certificate of representation changing the account representative.~~
 - ~~B) All emissions monitoring information, in accordance with 40 CFR 96, subpart H, provided that to the extent that 40 CFR 96, subpart H provides for a three year period for recordkeeping, the three year period shall apply.~~
 - ~~C) Copies of all reports, compliance certifications, and other submissions and all records made or required under the NO_x Trading Program or documents necessary to demonstrate compliance with the requirements of the NO_x Trading Program or with the requirements of this Subpart.~~
 - ~~D) Copies of all documents used to complete a budget permit application and any other submission under the NO_x Trading Program.~~
 - ~~2) The account representative of a budget source and each budget EGU at the source must submit to the Agency and USEPA the reports and compliance certifications required under the NO_x Trading Program, including those under 40 CFR 96, subparts D and H, and Section 217.774 of this Part.~~
- ~~f) Liability:~~
- ~~1) No revision of a permit for a budget EGU shall excuse any violation of the requirements of the NO_x Trading Program that occurs prior to the date that the revision to such budget permit takes effect.~~
 - ~~2) Each budget source and each budget EGU shall meet the requirements of the NO_x Trading Program.~~

- ~~3) Any provision of the NO_x Trading Program that applies to a budget source (including any provision applicable to the account representative of a budget source) shall also apply to the owner and operator of such budget source and to the owner and operator of each budget EGU at the source.~~
- ~~4) Any provision of the NO_x Trading Program that applies to a budget EGU (including any provision applicable to the account representative of a budget EGU) shall also apply to the owner and operator of such budget EGU. Except with regard to the requirements applicable to budget EGUs with a common stack under 40 CFR 96, subpart H, the owner and operator and the account representative of one budget EGU shall not be liable for any violation by any other budget EGU of which they are not an owner or operator or the account representative.~~
- ~~5) The account representative of a budget EGU that has excess emissions in any control period shall surrender the allowances as required for deduction under 40 CFR 96.54(d)(1).~~
- ~~6) The owner or operator of a budget EGU that has excess emissions in any control period shall pay any fine, penalty, or assessment or comply with any other remedy imposed under 40 CFR 96.54(d)(3) and the Act.~~
- ~~g) Effect on other authorities. No provision of the NO_x Trading Program, a budget permit application, a budget permit, a low-emitter exemption under Section 217.754(c) of this Subpart, or a retired unit exemption under 40 CFR 96.5 shall be construed as exempting or excluding the owner and operator and, to the extent applicable, the account representative of a budget source or budget EGU, from compliance with any other regulation promulgated under the CAA, the Act, an approved State implementation plan, or a federally enforceable permit.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.758 Permitting Requirements (Repealed)

- ~~a) Budget permit requirements:~~
 - ~~1) Each source with a budget EGU is required to submit a complete permit application addressing all applicable NO_x Trading Program requirements for a permit meeting the requirements of this Section, applicable to each budget EGU at the source. Each budget permit (including any draft or proposed budget permit, if applicable) will contain elements required for a complete budget permit application under subsection (b)(2) of this Section.~~
 - ~~2) Each budget permit (including a draft or proposed budget permit, if applicable) shall contain federally enforceable conditions addressing all applicable NO_x Trading Program requirements and shall be a complete~~

~~and segregable portion of the source's entire permit under subsection (a)(1) of this Section.~~

- ~~3) — No budget permit shall be issued, and no NO_x allowance account shall be established for a budget EGU at a source, until the Agency and USEPA have received a complete account certificate of representation under 40 CFR 96, subpart B, for an account representative of the source and the budget EGU at the source.~~
- ~~4) — For budget EGUs that commenced operation before November 1, 2003, and for which a CAAPP permit is not required pursuant to Section 39.5 of the Act, the owner or operator of such unit must submit a budget permit application meeting the requirements of this Section on or before November 1, 2003.~~
- ~~5) — For budget EGUs that commenced operation before August 1, 2003, and for which a CAAPP permit is required pursuant to Section 39.5 of the Act, the owner or operator of such unit must submit a budget permit application meeting the requirements of this Section on or before August 1, 2003.~~
- ~~6) — For budget EGUs that are subject to Section 39.5 of the Act and that commence operation on or after August 1, 2003, and for budget EGUs not subject to Section 39.5 of the Act and that commence operation on or after November 1, 2003, the owner or operator of such units must submit applications for construction and operating permits pursuant to the requirements of Sections 39 and 39.5 of the Act and 35 Ill. Adm. Code 201 and such applications must specify that they are applying for budget permits, and must address the budget permit application requirements of this Section.~~

~~b) — Budget permit applications:~~

- ~~1) — Duty to apply. The owner or operator of any source with one or more budget EGUs shall submit to the Agency a complete budget permit application for the source under subsection (b)(2) of this Section by the applicable deadline in subsection (a)(4), (a)(5), or (a)(6) of this Section. The owner or operator of any source with one or more budget EGUs shall reapply for a budget permit for the source as required by this Subpart, 35 Ill. Adm. Code 201, and Sections 39 and 39.5 of the Act.~~
- ~~2) — Information requirements for budget permit applications. A complete budget permit application shall include the following elements concerning the source for which the application is submitted:~~
 - ~~A) — Identification of the source, including plant name. The ORIS (Office of Regulatory Information Systems) or facility code~~

~~assigned to the source by the Energy Information Administration shall also be included, if applicable;~~

~~B) Identification of each budget EGU at the source. An explanation of whether each EGU is a budget EGU under Section 217.754 or 217.774 of this Part;~~

~~C) The compliance requirements of Section 217.756 of this Part; and~~

~~D) For each opt-in unit at the source the following certification statements by the account representative:~~

~~i) "I certify that each unit for which this permit application is submitted under Section 217.774 of this Part is not a budget EGU under Section 217.754 of this Part and is not covered by a retired unit exemption that is in effect under 40 CFR 96.5."~~

~~ii) If the application is for an initial budget permit, "I certify that each unit for which this permit application is submitted under Section 217.774 of this Part, and has documented heat input for more than 876 hours in the six months immediately preceding the submission of an application for an initial budget permit under Section 217.774(d) of this Part."~~

~~3) An application for a budget permit shall be treated as a modification of the EGU's existing federally enforceable permit, if such a permit has been issued for that EGU, and shall be subject to the same procedural requirements. When the Agency issues a budget permit, it shall be incorporated into and become part of that EGU's existing federally enforceable permit.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.760 NO_x Trading Budget (Repealed)

~~The NO_x trading budget available for allowance allocations for each control period shall be determined as follows:~~

~~a) The total base EGU trading budget is 30,701 tons per control period subject, however, to the following:~~

~~1) In 2004 through 2006, 5% of this number shall be allocated to the new source set aside under Section 217.768 of this Part, resulting in an EGU trading budget of 29,166 tons available for allocation per control period; and~~

- ~~2) In 2007 and thereafter, 2% of this amount shall be allocated to the new source set aside, resulting in an EGU trading budget of 30,087 tons available for allocation per control period.~~
- ~~b) The Agency must adjust the total base EGU trading budget available for allocation in subsection (a) of this Section to remove allowances from budget EGUs opting to become exempt pursuant to the requirements for low emitters in Section 217.754(c)(4) of this Part.~~
- ~~e) If USEPA adjusts the total base EGU trading budget for any reason, the Agency will adjust the budget pro rata.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.762 Methodology for Calculating NO_x Allocations for Budget Electrical Generating Units (EGUs) (Repealed)

~~The methodology for calculating the allowances to be allocated to budget EGUs is based on the following emission rates and heat inputs:~~

- ~~a) The applicable NO_x emission rates are as follows:~~
 - ~~1) For budget EGUs listed in Appendix F: 0.15 lb/mmbtu.~~
 - ~~2) For budget EGUs not listed in Appendix F: The more stringent of 0.15 lb/mmbtu or the permitted NO_x emission rate, but not less than 0.055 lb/mmbtu.~~
- ~~b) Heat input (HI) (in mmbtu/control period) is determined as follows:~~
 - ~~1) The budget EGU's two highest heat inputs from the control periods four to six years prior to the year for which the allocation is being made are averaged. However, for a budget EGU that did not commence commercial operation at least six years prior to the control period for which the allocation is being made, the heat inputs for the following control periods shall be used:~~
 - ~~A) If the budget EGU has heat input for the control period four years prior to the year for which the NO_x allocation is being made, but not for the control periods five and six years prior, the heat input for that control period four years prior shall be used; or~~
 - ~~B) If the budget EGU has heat inputs for the control periods four and five years prior to the year for which the NO_x allocation is being made, but not for the control period six years prior, the heat input for the control periods four and five years prior shall be averaged.~~

2) ~~The budget EGU's heat input in subsection (b)(1) of this Section for the control period in each year will be determined in accordance with:~~

A) ~~40 CFR 75, as incorporated by reference in Section 217.104 of this Part, if the budget EGU was otherwise subject to its requirements for the year; or~~

B) ~~The best available data reported to the Agency for the budget EGU if the budget EGU was not subject to the requirements of 40 CFR 75, for the year.~~

c) ~~The general equation for determining allowances is:~~

$$A = \frac{HI \times ER}{2000}$$

~~Where:~~

HI = ~~heat input (in mmbtu/control period) as determined in Section 217.762(b) of this Part.~~

ER = ~~The NO_x emission rate in lbs/mmbtu as determined in Section 217.762(a) of this Part.~~

A = ~~allowances of NO_x/control period.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.764 NO_x Allocations for Budget EGUs (Repealed)

~~For each control period, the Agency will allocate the total number of NO_x allowances in the trading budget apportioned to budget EGUs under Section 217.760 of this Part. These allocations will be issued as provided in subsections (a) through (f) of this Section and Section 217.768 for this Part of new sources. Specifically:~~

a) ~~In 2004, 2005, and 2006 (or the first three years of the program):~~

1) ~~The Agency will allocate to each budget EGU that is listed in Appendix F of this Part the number of allowances listed in Column 7 of Appendix F of this Part for that budget EGU, as well as any allowances that are not allocated from the new source set aside to budget EGUs in subsection (a)(2) of this Section. Any such allowances from the new source set aside will be allocated to budget EGUs listed in Appendix F of this Part pursuant to 217.768(j) of this Part.~~

~~2) The Agency will allocate allowances from the new source set aside to budget EGUs that commenced commercial operation on or after January 1, 1995, pursuant to Section 217.768 of this Part.~~

~~3) The Agency will report these allocations to USEPA at the time it submits the SIP.~~

~~b) In 2007 (or the fourth year of the program):~~

~~1) The Agency will allocate to each budget EGU that is listed in Appendix F of this Part the number of allowances listed in Column 8 of Appendix F for that budget EGU, and any allowances that are not allocated to budget EGUs under subsection (b)(2) of this Section will be allocated as provided in subsection (b)(4) of this Section.~~

~~2) The Agency will apportion to each budget EGU that commenced commercial operation on or after January 1, 1995, and before May 1, 2003, allowances as calculated in the following equation:~~

$$\text{A} = \frac{0.80 \times (\text{HI} \times \text{ER})}{2000}$$

~~Where:~~

~~HI = heat input (in mmbtu/control period) as determined in Section 217.762(b) of this Part.~~

~~ER = the NO_x emission rate in lbs/mmbtu, as determined in Section 217.762(a)(2) of this Part.~~

~~A = allowances of NO_x/control period.~~

~~3) Notwithstanding subsection (b)(2) of this Section, if the total number of allowances determined by subsection (b)(2) of this Section is more than 6,017, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (b)(1) of this Section, the Agency will prorate the number of NO_x allowances available to budget EGUs pursuant to the criteria in subsection (b)(2) of this Section so that the total number of allowances allocated to these budget EGUs does not exceed 6,017.~~

~~4) If the total number of allowances allocated pursuant to subsection (b)(2) of this Section is less than 6,017, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (b)(1) of this Section, the Agency will allocate the remaining allowances to budget EGUs as follows:~~

- A) ~~For budget EGUs in subsection (b)(1) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(1) of this Part.~~
- B) ~~For budget EGUs in subsection (b)(2) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(2) of this Part.~~
- 5) ~~The Agency will allocate allowances from the new source set aside, pursuant to Section 217.768 of this Part, to budget EGUs that commenced commercial operation after May 1, 2003 and that have not operated for the full 2003 control period.~~
- 6) ~~The Agency will report these allocations to USEPA by April 1, 2004, except for allocations from the new source set aside, which the Agency will report by May 1, 2007.~~
- e) ~~In 2008 (or the fifth year of the program):~~
- 1) ~~The Agency will allocate to each budget EGU that is listed in Appendix F of this Part the number of allowances listed in Column 8 of Appendix F for that budget EGU, and any allowances that are not allocated to budget EGUs under subsection (b)(2) of this Section will be allocated as provided in subsection (b)(4) of this Section.~~
- 2) ~~The Agency will apportion to each budget EGU that commenced commercial operation on or after January 1, 1995, and before May 1, 2004, allowances as calculated in the following equation:~~

$$A = \frac{0.80 \times (HI \times ER)}{2000}$$

~~Where:~~

~~HI = heat input (in mmbtu/control period) as determined in Section 217.762(b) of this Part.~~

~~ER = the NO_x emission rate in lbs/mmbtu, as determined in Section 217.762(a)(2) of this Part.~~

~~A = allowances of NO_x/control period.~~

- 3) ~~Notwithstanding subsection (c)(2) of this Section, if the total number of allowances determined by subsection (c)(2) of this Section is more than 6,017, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (c)(1) of this Section, the Agency will prorate the number of NO_x allowances available to budget EGUs pursuant to the criteria in subsection (c)(2) of this Section so that the total number of allowances allocated to these budget EGUs does not exceed 6,017.~~
- 4) ~~If the total number of allowances allocated pursuant to subsection (c)(2) of this Section is less than 6,017, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (c)(1) of this Section, the Agency will allocate the remaining allowances to budget EGUs as follows:~~
 - A) ~~For budget EGUs in subsection (c)(1) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(1) of this Part.~~
 - B) ~~For budget EGUs in subsection (c)(2) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(2) of this Part.~~
- 5) ~~The Agency will allocate allowances from the new source set aside, pursuant to Section 217.768 of this Part, to budget EGUs that commenced commercial operation after May 1, 2004 and that have not operated for the full 2004 control period.~~
- 6) ~~The Agency will report these allocations to USEPA by April 1, 2005, except for allocations from the new source set aside, which the Agency will report by May 1, 2008.~~
- d) ~~In 2009 (or the sixth year of the program):~~
 - 1) ~~The Agency will allocate to each budget EGU that is listed in Appendix F of this Part the number of allowances listed in Column 9 of Appendix F for that budget EGU and any allowances that are not allocated to budget EGUs under subsection (d)(2) of this Section will be allocated as provided in subsection (d)(4) of this Section.~~
 - 2) ~~The Agency will apportion to each budget EGU that commenced commercial operation on or after January 1, 1995, and before May 1, 2005, allowances calculated in the following equation:~~

$$A = \frac{0.50 \times (HI \times ER)}{2000}$$

Where:

HI = ~~heat input (in mmbtu/control period) as determined in Section 217.762(b) of this Part.~~

ER = ~~the NO_x emission rate in lbs/mmbtu, as determined in Section 217.762(a)(2) of this Part.~~

A = ~~allowances of NO_x/control period.~~

- 3) ~~Notwithstanding subsection (d)(2) of this Section, if the total number of allowances determined by subsection (d)(2) of this Section is more than 15,043, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (d)(1) of this Section, the Agency will prorate the total number of NO_x allowances available to budget EGUs that received allowances pursuant to the criteria in subsection (d)(2) of this Section so that the total number of allowances allocated to these budget EGUs does not exceed 15,043.~~
- 4) ~~If the total number of allowances allocated pursuant to subsection (d)(2) of this Section is less than 15,043, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (d)(1) of this Section, the Agency will allocate the remaining allowances to budget EGUs as follows:~~
 - A) ~~For budget EGUs in subsection (d)(1) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(1) of this Part.~~
 - B) ~~For budget EGUs in subsection (d)(2) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(2) of this Part.~~
- 5) ~~The Agency will allocate allowances from the new source set aside, pursuant to Section 217.768 of this Part, to budget EGUs that commenced commercial operation after May 1, 2005 and that have not operated for the full 2005 control period.~~
- 6) ~~As of April 30, 2009, if the number of allowances in the new source set aside exceeds 3% of the total number of tons of NO_x emissions in the trading budget apportioned to budget EGUs as determined pursuant to Section 217.768(i) and (j) of this Part, the number of allowances above 3%~~

~~will be allocated to budget EGUs receiving allowances pursuant to this subsection (d).~~

- ~~7) The Agency will report these allocations to USEPA by April 1, 2006, except for allocations from the new source set aside, which the Agency will report by May 1, 2009.~~

~~e) In 2010 (or the seventh year of the program):~~

- ~~1) The Agency will allocate to each budget EGU that is listed in Appendix F of this Part the number of allowances listed in Column 9 of Appendix F for that budget EGU and any allowances that are not allocated to budget EGUs under subsection (e)(2) of this Section as provided in subsection (e)(4) of this Section.~~
- ~~2) The Agency will assign to each budget EGU that commenced commercial operation on or after January 1, 1995, and before May 1, 2006, allowances as calculated in the following equation:~~

$$\text{A} = \frac{0.50 \times (\text{HI} \times \text{ER})}{2000}$$

~~Where:~~

~~HI = heat input (in mmbtu/control period) as determined in Section 217.762(b) of this Part.~~

~~ER = the NO_x emission rate in lbs/mmbtu, as determined in Section 217.762(a)(2) of this Part.~~

~~A = allowances of NO_x/control period.~~

- ~~3) Notwithstanding subsection (e)(2) of this Section, if the total number of allowances determined by subsection (e)(2) of this Section is more than 15,043, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (e)(1) of this Section, the Agency will prorate the total number of NO_x allowances allocated to budget EGUs that received allowances pursuant to the criteria in subsection (e)(2) of this Section so that the total number of allowances allocated to these budget EGUs does not exceed 15,043.~~
- ~~4) If the total number of allowances allocated pursuant to subsection (e)(2) of this Section is less than 15,043, which is the number of allowances remaining in the trading budget after allocations have been made to budget EGUs in subsection (e)(1) of this Section, the Agency will allocate the remaining allowances to budget EGUs as follows:~~

- ~~A) For budget EGUs in subsection (e)(1) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(1) of this Part.~~
 - ~~B) For budget EGUs in subsection (e)(2) of this Section, the pro-rata allocation shall be determined by the heat input calculated pursuant to Section 217.762(b) of this Part, multiplied by the emission rate in Section 217.762(a)(2) of this Part.~~
- ~~5) The Agency will allocate allowances from the new source set aside, pursuant to Section 217.768 of this Part, to budget EGUs that commenced commercial operation after May 1, 2006 and that have not operated for the full 2006 control period.~~
- ~~6) As of April 30, 2010, if the number of allowances in the new source set-aside exceeds 3% of the total number of tons of NO_x emissions in the trading budget apportioned to budget EGUs as determined pursuant to Section 217.768(i) and (j) of this Part, the number of allowances above 3% will be allocated to budget EGUs receiving allowances pursuant to this subsection (e).~~
- ~~7) The Agency will report these allocations to USEPA by April 1, 2007, except for allocations from the new source set aside, which the Agency will report by May 1, 2010.~~
- ~~f) In 2011 (or the eighth year) of the program and annually thereafter:~~
 - ~~1) The Agency will apportion the available NO_x allowances to each budget EGU based on its heat input determined in Section 217.762(b) of this Part, multiplied by:
 - ~~A) For budget EGUs that commenced commercial operation prior to January 1, 1995, the NO_x emission rate determined in Section 217.762(a)(1) of this Part.~~
 - ~~B) For budget EGUs that commenced commercial operation on or after January 1, 1995, the NO_x emission rate determined in Section 217.762(a)(2) of this Part.~~~~
 - ~~2) The Agency will allocate allowances from the new source set aside, pursuant to Section 217.768 of this Part, to budget EGUs that commenced commercial operation after the control period four years prior to the year in which allocations are made and that have not operated for the full~~

~~control period four years prior to the year in which the allocations are being made.~~

- ~~3) As of April 30, 2011, if the number of allowances in the new source set-aside exceeds 3% of the total number of tons of NO_x emissions in the trading budget apportioned to budget EGUs as determined pursuant to Section 217.768(e) and (f) of this Part, the number of allowances above 3% will be allocated to budget EGUs receiving allowances pursuant to this subsection (f).~~
- ~~4) The Agency will report these allocations to USEPA by April 1 of each year that is three years prior to the year in which the allocations are being made, except for allocations from the new source set aside, which the Agency will report by May 1 of each year in which the allocations are being made.~~

~~BOARD NOTE: Because of litigation involving the NO_x SIP Call, Michigan v. EPA, No. 98-1497, 2000 WL 180650 (D.C. Cir. March 3, 2000), the years defining the control periods may change. Should this occur, the dates set forth under each year will be considered to adjust correspondingly.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.768 New Source Set-Asides for "New" Budget EGUs (Repealed)

~~a) "New" budget EGUs~~

- ~~1) A "new" budget EGU is one that commenced commercial operation on or after January 1, 1995, and does not receive allowances pursuant to Section 217.764 of this Part.~~
- ~~2) "New" budget EGUs must have an allowance for every ton of NO_x emitted during the control period as provided in Section 217.756(d) of this Part.~~
- ~~3) A "new" budget EGU may request from the Agency a number of allowances that is not more than the number of allowances for which it is eligible, as determined in subsection (e) of this Section.~~

~~b) The Agency shall apportion allowances from the new source set-aside as follows:~~

- ~~1) For 2004, 2005, and 2006, to budget EGUs that commenced commercial operation on or after January 1, 1995; and~~
- ~~2) For 2007 and thereafter, to budget EGUs that have not operated the full control period four years prior to the control period for which the allocation is being made.~~

- e) ~~The Agency will establish a new source set aside for each control period. Each new source set aside will be allocated allowances equal to:~~
- 1) ~~5% of the EGU trading budget in 2004, 2005, and 2006, which is 1,535 allowances, subject to adjustment to reflect additions or deletions to the EGU trading budget;~~
 - 2) ~~2% of the EGU of the trading budget in 2007 and thereafter, which is 614 allowances, subject to adjustment to reflect additions or deletions to the EGU trading budget.~~
 - 3) ~~As of April 30 of the applicable year, beginning in 2009 and thereafter, if the number of allowances in the new source set aside is greater than or equal to 3% of the total number of tons of NO_x emissions in the trading budget apportioned to budget EGUs, which is 921 allowances, subject to adjustment to reflect additions or deletions to the EGU trading budget, pursuant to subsections (i) and (j) of this Section, the number of allowances above 3% will be allocated to budget EGUs receiving allowances pursuant to Section 217.764 of this Part. These allowances shall be allocated on a pro-rata basis.~~
- d) ~~The account representative of a "new" budget EGU under subsection (a) of this Section may obtain allowances from the new source set aside by submitting to the Agency a request, in writing or in a format specified by the Agency, to be allocated allowances for the current control period from the new source set aside. The allocation request for each applicable control period must be submitted after the date on which the Agency issues a construction permit to the budget EGU and before March 1 of the control period for which the allocation is requested.~~
- e) ~~In an allocation request under subsection (d) of this Section, the account representative may request allowances for a control period in a number that does not exceed the projected heat input in mmbtu during the applicable control period multiplied by the more stringent of 0.15 lb/mmbtu or the permitted emission rate, but no more stringent than 0.055 lb/mmbtu. The projected heat input shall be determined as set forth below, divided by 2000 lbs/ton:~~
- 1) ~~For "new" budget EGUs that have heat input from at least three control periods prior to the allocation year, the average of the budget EGU's two highest seasonal heat inputs from the control periods one to three years prior to the allocation year;~~
 - 2) ~~For "new" budget EGUs that have heat input from only two control periods prior to the allocation year, the average of the budget EGU's seasonal heat inputs from the control periods one and two years prior to the allocation year;~~

- 3) ~~For "new" budget EGUs that have seasonal heat input from only the control period prior to the allocation year, the heat input from that control period; or~~
- 4) ~~For "new" budget EGUs that have commenced commercial operation but have not operated for at least 77 days of the control period prior to the allocation year, the budget EGU's maximum design heat input for the control period as designated in the construction permit.~~
- f) ~~Beginning in 2007, the Agency will review and allocate allowances pursuant to each allocation request, contingent upon receiving payment pursuant to subsection (k) of this Section, by April 15 of the applicable year, as follows:~~
 - 1) ~~Upon receipt of the allocation request, the Agency will determine whether the request is consistent with the requirements of subsections (d) and (e) of this Section and will make any necessary adjustments to the request to ensure that the control period and the number of allowances requested are consistent with those requirements of subsections (d) and (e) of this Section.~~
 - 2) ~~If the new source set aside for the control period for which allowances are requested has a number of allowances greater than or equal to the total number requested by all "new" budget EGUs, the Agency will allocate the number of allowances requested to the "new" budget EGUs.~~
 - 3) ~~If the new source set aside for the control period for which allowances are requested has a number of allowances less than the total number of allowances requested by all "new" budget EGUs, the Agency will allocate the available allowances to the "new" budget EGUs on a pro-rata basis, based on the number of allowances requested.~~
- g) ~~For "new" budget EGUs that commenced commercial operation on or after January 1, 1995, but prior to January 1, 2004, the Agency will notify the account representative of the number of allowances that have been allocated to the "new" budget EGU by March 30 of the applicable year. There will be no charge for allowances received under this subsection.~~
- h) ~~For "new" budget EGUs that commenced commercial operation on or after January 1, 2004, the Agency will notify by March 30 of the applicable year the account representative of the number of allowances that are eligible for purchase for the "new" budget EGU pursuant to the requirements of subsection (k) of this Section. If the Agency does not receive payment by April 15 of the applicable year, the account representative will forfeit his/her eligibility to purchase the allowances offered. The Agency will make available for purchase those forfeited allowances on a pro-rata basis to "new" budget EGUs that received allocations pursuant to subsection (f)(2) of this Section, up to the number of allowances~~

~~requested by each account representative. Such additional allocations are subject to the purchase requirements of subsection (k) of this Section, to the extent applicable.~~

- ~~i) For "new" budget EGUs that have commenced commercial operation but have operated for 76 or fewer days of the control period in 2003, USEPA will deduct allowances to account for the actual utilization of the EGU during the 2004 control period consistent with the provisions of 40 CFR 96.42(e). Any allowances allocated by the Agency for such "new" budget EGUs that are not used for compliance during the 2004 control period shall be returned to the Agency's new source set aside account.~~
- ~~j) For the years 2004, 2005, and 2006, any allowances that are not allocated pursuant to subsections (g), (h) and (i) of this Section will be allocated on a pro-rata basis to the budget EGUs listed in Appendix F of this Part. There will be no charge for allowances received under this subsection.~~
- ~~k) Fees for new source set aside allowances:
 - ~~1) "New" budget EGUs that commence commercial operation on or after January 1, 2004, that obtain allowances allocated from the new source set aside shall pay for such allocations pursuant to Section 9.9 of the Act.~~
 - ~~2) The price of allowances from the new source set aside shall be:
 - ~~A) The average price at which NO_x allowances are traded in the interstate NO_x Trading Program for the preceding control period; and~~
 - ~~B) For 2004 only, the price shall be the average price at which NO_x allowances were traded in 2003 in the Ozone Transport Region.~~~~
 - ~~3) The fees collected by the Agency from the sale of allowances will be distributed pro-rata to budget EGUs receiving allowances pursuant to Section 217.764 of this Part on the basis of allocated allowances subject to Agency administrative costs assessed pursuant to Section 9.9 of the Act.~~~~
- ~~l) A "new" budget EGU will become an existing budget EGU and will receive allowances pursuant to the requirements of Section 217.764 of this Part, as follows:
 - ~~1) For a budget EGU that commences commercial operation between and including January 1, 1995, and April 30, 2003, the budget EGU will be allocated allowances in 2004 for the 2007 control period and will become an existing budget EGU on May 1, 2007.~~~~

- 2) ~~For a budget EGU that commences commercial operation after April 30, 2003, the budget EGU will become an existing budget EGU in the control period for which it receives an allocation pursuant to Section 217.764 of this Part. It will be considered a "new" budget EGU and will receive its allowances from the new source set aside in the intervening years from start-up until it receives allocations pursuant to Section 217.764 of this Part.~~

~~BOARD NOTE: Because of litigation involving the NO_x SIP Call, Michigan v. EPA, No. 98-1497 2000 WL 180650 (D.C. Cir. March 3, 2000), the years defining the control periods may change. Should this occur, other dates in this Section will be considered to adjust as necessary.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.770 Early Reduction Credits for Budget EGUs (Repealed)

~~If a budget EGU reduces its NO_x emission rate as required by the applicable provisions of subsection (c) of this Section in the 2001, 2002, or 2003 control period, for use in the 2004 control period, or later control periods authorized by USEPA, the account representative may request early reduction credits (ERCs) for such reductions, and the Agency will allocate ERCs to the budget EGU in accordance with the following:~~

- a) ~~Each budget EGU for which the account representative requests any ERCs under subsection (d) of this Section shall monitor NO_x emissions in accordance with 40 CFR 96, subpart H, as incorporated by reference in Section 217.104 of this Part, starting with the control period prior to the control period for which ERCs will first be requested and for each control period for which ERCs will be requested. For example, if ERCs are requested for reductions made in the 2001 control period, the budget EGU must have implemented the applicable monitoring for the 2000 control period. The unit's monitoring system availability shall be not less than 90% during the control period prior to the control period in which the NO_x emissions reduction is made and the unit must be in compliance with any applicable State or federal emissions or emissions-related requirements.~~
- b) ~~The NO_x emission rate and heat input under subsections (c) through (e) of this Section shall be determined in accordance with 40 CFR 96, subpart H.~~
- c) ~~Each budget EGU for which ERCs are requested under subsection (d) of this Section must have reduced its NO_x emission rate for each control period for which ERCs are requested, as follows:~~
 - 1) ~~For budget EGUs subject to the requirements of Title IV of the CAA and not included in a NO_x averaging plan pursuant to 40 CFR 72 and 76, as incorporated by reference in Section 217.104 of this Part, at least 30% less than the NO_x emission rate specified in the applicable Title IV permit or other applicable federally enforceable permit.~~

- 2) ~~For budget EGUs subject to the requirements of Title IV of the CAA and included in a NO_x averaging plan pursuant to 40 CFR 72 and 76, at least 30% less than the annual emission rate required in the NO_x averaging plan in the applicable Title IV permit or other applicable federally enforceable permit.~~
- 3) ~~For budget EGUs not subject to the requirements of Title IV of the CAA, at least 30% less than the actual NO_x emissions rate (lbs/mmbtu) for the 2000 control period.~~
- d) ~~The account representative of a budget EGU that meets the requirements of subsections (a) through (c) of this Section may submit to the Agency a request for ERCs for a EGU based on NO_x emission rate reductions made by the EGU in control periods 2001, 2002, and 2003, in accordance with subsection (c) of this Section.~~
 - 1) ~~The number of ERCs for any applicable control period shall be an amount equal to the unit's heat input for such control period multiplied by the difference between the EGU's NO_x emission rate (meeting the requirements of subsection (c) of this Section for the applicable control period) and the EGU's actual NO_x emission rate for the applicable control period, divided by 2000 lbs/ton, and rounded to the nearest ton.~~
 - 2) ~~Upon request of the account representative, the ERC allowance allocation for a particular EGU may be deposited in the source's general account rather than in the unit's compliance account.~~
 - 3) ~~The early reduction request must be submitted in a format specified by the Agency by:~~
 - A) ~~November 1, 2001, for reductions made in the 2001 control period;~~
 - B) ~~November 1, 2002, for reductions made in the 2002 control period;~~
~~and~~
 - C) ~~November 1, 2003, for reductions made in the 2003 control period.~~
- e) ~~In the event that the date for implementing the NO_x SIP Call, May 31, 2004, is delayed, the early reduction request must be submitted in accordance with any rulemaking or guidance by USEPA on the distribution of the Compliance Supplement Pool under the NO_x SIP Call (63 Fed. Reg. 57356).~~
- f) ~~The Agency will allocate ERCs to the budget EGUs meeting the requirements of subsections (a) through (c) of this Section and covered by ERC requests meeting the requirements of subsection (d) of this Section in accordance with the following procedures:~~

- 1) ~~Upon receipt of each ERC request, the Agency will accept the request only if the requirements of subsections (a) through (d) of this Section are met and will make any necessary adjustment to the request to ensure that the amount of the ERCs requested meets the requirements of subsections (b) through (d) of this Section;~~
- 2) ~~The Agency shall allocate at least 15,261 ERCs over three years, as follows:~~
 - A) ~~If USEPA has approved this Subpart as a SIP revision, not more than one half of the total ERC allowances for reductions made in the control period in 2001;~~
 - B) ~~Not more than one half of the total ERC allowances for reductions made in the control period in 2002; and~~
 - C) ~~Any ERC allowances not allocated pursuant to subsection (f)(2)(A) or (B) of this Section, for reductions made in the control period in 2003.~~
- 3) ~~If the number of ERC allowances requested for a reduction achieved in the control period in 2003 is less than or equal to the number of ERC allowances designated for that control period in subsection (f)(2)(A) of this Section, the Agency will allocate to each budget EGU one allowance for each accepted ERC request;~~
- 4) ~~If the number of ERC allowances requested for a reduction achieved in the control period in 2003 is greater than the number of ERC allowances designated for that control period in subsection (f)(2)(A) of this Section, the Agency will allocate to each budget EGU allowances for accepted requests on a pro-rata basis.~~
- g) ~~The Agency will notify the account representative submitting an ERC request for the subsequent control period of the number of ERC allowances that will be allocated to each budget EGU for that control period as follows:~~
 - 1) ~~By March 1, 2002, for ERCs requested for and earned in the 2001 control period;~~
 - 2) ~~By March 1, 2003, for ERCs requested for and earned in the 2002 control period; and~~
 - 3) ~~By March 1, 2004, for ERCs requested for and earned in the 2003 control period.~~

- ~~h) By May 1, 2004, the Agency will submit to USEPA the ERC allocations made by the Agency under this Section. USEPA will record such allocations to the extent that they are consistent with the requirements of this Section.~~
- ~~i) ERC allowances recorded under subsection (h) of this Section may be deducted for compliance under 40 CFR 96.54, as incorporated by reference in Section 217.104 of this Part, for the control period in 2004 or such additional control periods as may be specified by USEPA. Notwithstanding 40 CFR 96.55(a), USEPA will deduct as retired any ERC allowances that are not deducted for compliance in accordance with 40 CFR 96.54 for the control period in 2004.~~
- ~~j) ERC allowances are treated as banked allowances in 2004 for the purposes of 40 CFR 96.55(a) and (b).~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.774 Opt-In Units (Repealed)

- ~~a) Any operating fossil fuel fired stationary boiler, combustion turbine, combined cycle system, cement kiln or stationary internal combustion engine in the State may qualify under this Subpart to become a budget opt-in unit if it:~~
 - ~~1) Is not a budget EGU under Section 217.754 of this Part;~~
 - ~~2) Vents all of its emissions to a stack;~~
 - ~~3) Has documented heat input for more than 876 hours in the six months immediately preceding the submission of an application for an initial budget permit under subsection (d) of this Section;~~
 - ~~4) Is not covered by a retired unit exemption under 40 CFR 96.5;~~
 - ~~5) Is not covered by the low emitter exemption under Section 217.754(c) of this Part; and~~
 - ~~6) Is not located at a source listed in Appendix D of this Part.~~
- ~~b) Except as otherwise provided in this Part, a budget opt-in unit shall be treated as a budget EGU for purposes of applying this Subpart and 40 CFR 96.~~
- ~~c) Authorized account representative:~~
 - ~~1) If an opt-in unit is located at the same source as one or more budget EGUs, it shall have the same account representative as those budget EGUs.~~

- 2) ~~If the opt-in unit is not located at the same source as one or more budget EGUs, the owner or operator of the opt-in unit shall submit a complete account certificate of representation under 40 CFR 96.13.~~
- d) ~~To apply for a budget permit, the account representative of a unit meeting the qualifications of subsection (a) of this Section must, except as provided under Section 217.778(f) of this Part, submit to the Agency:~~
 - 1) ~~A budget permit application for the unit that:~~
 - A) ~~Meets the requirements under Section 217.758 of this Part; and~~
 - B) ~~Contains provisions for a change in the regulatory status of the unit to a budget opt-in unit under Section 217.754 of this Part pursuant to the provisions of Section 217.780(b) of this Part.~~
 - 2) ~~A monitoring plan for the unit in accordance with 40 CFR 96, subpart H.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.776 Opt-In Process (Repealed)

~~The owner or operator of a unit meeting the qualifications of Section 217.774(a) of this Part may submit an application for a budget permit for a budget opt-in unit under Section 217.774(d) of this Part. The Agency will issue or deny a budget permit for such opt-in unit in accordance with Section 217.758 of this Part and the following:~~

- a) ~~The Agency will determine, on an interim basis, the sufficiency of the monitoring plan accompanying the initial application for a budget permit for an opt-in unit. A monitoring plan is sufficient, for purposes of interim review, if the plan contains information demonstrating that the NO_x emission rate and heat input of the unit are monitored and reported in accordance with 40 CFR 96, subpart H. A determination of sufficiency shall not be construed as acceptance or approval of that unit's monitoring plan.~~
- b) ~~If the Agency determines that the unit's monitoring plan is sufficient under subsection (a) of this Section and after completion of the monitoring system certification under 40 CFR 96, subpart H, the NO_x emission rate and the heat input of the unit shall be monitored and reported in accordance with 40 CFR 96, subpart H, for one full control period during which the monitoring system availability is not less than 90% and during which the unit is in full compliance with any applicable State or federal emissions or emissions-related requirements.~~
- e) ~~Based on the information monitored and reported under subsection (b) of this Section, the unit's baseline heat rate shall be calculated as the unit's total heat input (in mmbtu) for the control period and the unit's baseline NO_x emission rate~~

~~shall be calculated as the unit's total NO_x emissions (in lbs) for the control period divided by the unit's baseline heat rate.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.778 Budget Opt-In Units: Withdrawal from NO_x Trading Program
(Repealed)

- ~~a) Requesting withdrawal. To withdraw from the NO_x Trading Program, the account representative of a budget opt in unit shall submit to the Agency a request to withdraw from the NO_x Trading Program and to withdraw the budget permit effective as of a specified date between (and not including) September 30 and May 1. The submission shall be made no later than 90 days prior to the requested effective date of withdrawal.~~
- ~~b) Conditions for withdrawal.~~
 - ~~1) Before a budget opt in unit may withdraw from the NO_x Trading Program and the budget permit may be withdrawn under this Section, the following conditions must be met:
 - ~~A) For the control period immediately before the withdrawal is to be effective, the account representative must submit to the Agency an annual compliance certification report in accordance with 40 CFR 96.30.~~
 - ~~B) If the budget opt in unit has excess emissions for the control period immediately before the withdrawal is to be effective, USEPA has deducted from the budget opt in unit's compliance account, or the overdraft account of the NO_x budget source where the budget opt in unit is located, the number of allowances required in accordance with 40 CFR 96.54(d) for the control period.~~~~
 - ~~2) After the requirements for withdrawal under subsection (b)(1) of this Section are met, USEPA will deduct from the opt in unit's compliance account, or the overdraft account of the budget source where the budget opt in unit is located, allowances equal in number to any allowances allocated to that unit under Section 217.782 of this Part for the same or earlier control period for which the withdrawal is to be effective. USEPA will close the budget opt in unit's compliance account and will establish, and transfer any remaining allowances to, a new general account for the owners and operators of the opt in unit. The account representative for the budget opt in unit shall become the account representative for the general account.~~
- ~~c) A budget opt in unit that withdraws from the NO_x Trading Program shall comply with all requirements under the NO_x Trading Program concerning all years for~~

~~which such budget opt-in unit was a budget opt-in unit, even if such requirements arise or must be complied with after the withdrawal takes effect.~~

~~d) Notification.~~

~~1) After the requirements for withdrawal under subsections (a) and (b) of this Section are met (including deduction of the full amount of allowances required), the Agency will revise the budget permit indicating a specified effective date for the withdrawal that is after the requirements in subsections (a) and (b) of this Section have been met and that is prior to May 1 or after September 30.~~

~~2) If the requirements for withdrawal under subsections (a) and (b) of this Section are not met, the Agency will issue a notification to the owner or operator and the account representative of the budget opt-in unit that the opt-in unit's request to withdraw its budget permit is denied. If the budget opt-in unit's request to withdraw is denied, the budget opt-in unit shall remain subject to the requirements for a budget opt-in unit.~~

~~e) Reapplication upon failure to meet conditions of withdrawal. If the Agency denies the budget opt-in unit's request to withdraw, the account representative of the budget opt-in unit may submit another request to withdraw in accordance with subsections (a) and (b) of this Section.~~

~~f) Ability to return to the NO_x Trading Program. Once an opt-in unit withdraws from the NO_x Trading Program and its budget permit is withdrawn under this Section, the account representative may not submit another application for a budget permit under Section 217.774(d) of this Part for the unit prior to the date that is four years after the date on which the budget permit with opt-in conditions is withdrawn.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.780 Opt-In Units: Change in Regulatory Status (Repealed)

~~a) Notification. When an opt-in unit becomes a budget opt-in unit under Section 217.754(d) of this Part, the owner or operator shall notify the Agency and USEPA in writing of such change in the opt-in unit's regulatory status within 30 days after such change.~~

~~b) Any permit application that provides for a change in the regulatory status of a unit to a budget opt-in unit pursuant to Section 217.774(d)(1)(B) of this Part and is included in a budget permit is effective on the date on which such opt-in unit becomes a budget opt-in unit under Section 217.754 of this Part.~~

~~c) USEPA action.~~

- 1) ~~USEPA will deduct from the compliance account for the budget opt-in unit under this Section, or the overdraft account of the budget source where the budget opt-in unit is located, allowances equal in number to and allocated for the same or a prior control period as:~~
 - A) ~~Any allowances allocated to the budget unit (as an opt-in unit) under Section 217.782 of this Part for any control period after the last control period during which the unit's budget permit was effective; and~~
 - B) ~~If the effective date of any budget permit under subsection (b) of this Section is during a control period, the allowances allocated to the budget opt-in unit (as an opt-in unit) under Section 217.782 of this Part for the control period multiplied by the ratio of the number of days in the control period, starting with the effective date of the budget permit under subsection (b) of this Section, divided by the total number of days in the control period.~~
- 2) ~~The account representative shall ensure that the compliance account of the budget opt-in unit under subsection (b) of this Section, or the overdraft account of the budget source where the budget opt-in unit is located, contains the allowances necessary for completion of the deduction under subsection (c)(1) of this Section. If the compliance account or overdraft account does not contain sufficient allowances, USEPA will deduct the required number of allowances, regardless of the control period for which they were allocated, whenever allowances are recorded in either account.~~
- 3) ~~For every control period during which any budget permit under subsection (b) of this Section is effective, the budget opt-in unit under subsection (b) of this Section will be treated, solely for purposes of allowance allocations under Section 217.764 or 217.768 of this Part, as a unit that commenced operation on the effective date of the budget permit under subsection (b) of this Section and will be allocated allowances in accordance with Section 217.764 or 217.768 of this Part.~~
- 4) ~~Notwithstanding subsection (c)(2) of this Section, if the effective date of any budget permit under subsection (b) of this Section is during a control period, the following number of allowances will be allocated to the budget opt-in unit under subsection (b) of this Section or under Section 217.764 or 217.768 of this Part for the control period: the number of allowances otherwise allocated to the budget opt-in unit under Section 217.764 or 217.768 of this Part for the control period multiplied by the ratio of the number of days in the control period, starting with the effective date of the budget permit under subsection (b) of this Section, divided by the total number of days in the control period.~~

- d) ~~When the owner or operator of an opt-in unit does not renew the budget permit for the budget opt-in unit issued pursuant to Section 217.774(d), USEPA will deduct from the budget opt-in unit's compliance account, or the overdraft account of the budget source where the budget opt-in unit is located, allowances equal in number to and allocated for the same or a prior control period as any allowances allocated to the budget opt-in unit under Section 217.782 of this Part for any control period after the last control period for which the budget permit is effective. The account representative shall ensure that the budget opt-in unit's compliance account or the overdraft account of the budget source where the budget opt-in unit is located contains the allowances necessary for completion of such deduction. If the compliance account or overdraft account does not contain sufficient allowances, USEPA will deduct the required number of allowances, regardless of the control period for which they were allocated, whenever allowances are recorded in either account.~~
- e) ~~After the deduction under subsection (d) of this Section is completed, USEPA will close the opt-in unit's compliance account. If any allowances remain in the compliance account after completion of such deduction and any deduction under 40 CFR 96.54, USEPA will close the opt-in unit's compliance account and will establish, and transfer any remaining allowances to, a new general account for the owner or operator of the opt-in unit. The account representative for the opt-in unit shall become the account representative for the general account.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.782 Allowance Allocations to Budget Opt-In Units (Repealed)

- a) ~~Allowance allocations:~~
- 1) ~~By the December 31 immediately before the first control period for which the budget permit is effective, the Agency will allocate allowances to the budget opt-in unit and submit to USEPA the allocation for the control period in accordance with subsection (b) of this Section.~~
 - 2) ~~By no later than the December 31 after the first control period for which the budget permit is in effect and the December 31 of each year thereafter, the Agency will allocate allowances to the budget opt-in unit and submit to USEPA allocations for the next control period, in accordance with subsection (b) of this Section.~~
- b) ~~For each control period for which the budget opt-in unit has a budget permit, the budget opt-in unit will be allocated allowances in accordance with the following procedures:~~
- 1) ~~The heat input (in mmbtu) used for calculating allowance allocations will be the lesser of:~~

- A) ~~The opt-in unit's baseline heat input determined pursuant to Section 217.776(c) of this Part; or~~
 - B) ~~The opt-in unit's heat input, for the control period in the year prior to the year of the control period for which the allocations are being calculated, as determined in accordance with 40 CFR 96, subpart H.~~
- 2) ~~The Agency will allocate allowances to the budget opt-in unit in an amount equaling the heat input (in mmbtu) determined under subsection (b)(1) of this Section multiplied by the lesser of:~~
- A) ~~The unit's baseline NO_x emission rate (in lbs/mmbtu) determined pursuant to Section 217.776(c) of this Part; or~~
 - B) ~~The lowest NO_x emissions limitation (calculated in lbs/mmbtu) under State or federal law that is applicable to the budget opt-in unit for the year of the control period for which the allocations are being calculated during the control period, regardless of the averaging period to which the emissions limitation applies.~~

SUBPART X: VOLUNTARY NO_x EMISSIONS REDUCTION PROGRAM

Section 217.800 Purpose (Repealed)

~~The purpose of this Subpart is to implement Section 9.9(d)(3) of the Act by providing a method by which additional NO_x allowances may be generated for use by emission units subject to the requirements of Subparts U or W of this Part. [415 ILCS 5/9.9(d)(3)]~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.805 Emission Unit Eligibility (Repealed)

~~Any owner or operator of a stationary source may submit a proposal, as provided in Section 217.835 of this Subpart, for voluntarily reducing NO_x emissions during the control period, if each emission unit from which NO_x reductions at the source will be obtained meets the following criteria:~~

- a) ~~Discharges through a stack;~~
- b) ~~Is fossil fuel fired;~~
- c) ~~Is not subject to the requirements of Subparts T, U, V or W of this Part;~~

- ~~d) — Is not a retired unit pursuant to 40 CFR 96.5;~~
- ~~e) — Has not elected to become an opt-in unit pursuant to Section 217.754 or Section 217.774 of this Part; and~~
- ~~f) — Is not a stationary internal combustion engine that emits more than one ton of NO_x per day during the ozone control period.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.810 Participation Requirements (Repealed)

- ~~a) — Any owner or operator of a source (emission reduction source) with one or more emission units meeting the requirements of Section 217.805 of this Subpart and seeking to make quantifiable, verifiable and federally enforceable voluntary reductions of NO_x emissions during the control period from one or more emission units (emission reduction units) must comply with the following requirements:~~
 - ~~1) — Submit a NO_x emission reduction proposal that meets the requirements of Section 217.835 of this Subpart;~~
 - ~~2) — Request an emission cap on NO_x emissions from all NO_x emission units at the emission reduction source that are not otherwise subject to Subparts U or W of this Part, and that are the same type of emission unit as the emission reduction unit (e.g., if the emission reduction unit is a boiler, combined cycle system or turbine, then the emission cap must include all boilers, combined cycle systems or turbines that are not otherwise subject to Subparts U or W of this Part, or if the emission unit is a cement kiln, then the emission cap must include all cement kilns), provided, however, the owner or operator of the source may submit a demonstration in accordance with Section 217.835 of this Subpart that any like-kind emission unit or units should not be included in the NO_x emission cap;~~
 - ~~3) — Demonstrate how the NO_x emission cap required by subsection (a)(2) of this Section is to be determined, in accordance with Sections 217.820 and 217.845 of this Subpart, which cap reflects the NO_x emission reduction specified in the proposal;~~
 - ~~4) — Permit requirements:~~
 - ~~A) — Obtain a permit, or an amendment to an existing permit, for the source, with federally enforceable conditions containing the commitments in the NO_x emission reduction proposal and the emissions cap by the later of May 1, 2003, or the date on which the~~

~~reduction in NO_x emissions will commence and operate the source in compliance with such permit; or~~

~~B) For each emission unit that will be generating voluntary NO_x emissions by ceasing operation, withdrawing the applicable permit, or requesting a revision to the permit to reflect the shutdown of the emission reduction unit, by the later of May 1, 2003, or the date specified in the NO_x reduction proposal.~~

~~5) Submit an emissions baseline determination for each unit subject to the NO_x emission cap in accordance with the requirements of Section 217.820 of this Subpart.~~

~~6) Monitoring requirements:~~

~~A) To the extent applicable, each emission reduction unit at the source shall comply with the monitoring requirements of Section 217.850 of this Subpart.~~

~~B) The emissions measurements recorded and reported in accordance with Sections 217.850 and 217.855 of this Subpart shall be used to determine compliance by the emission reduction unit with the emissions limitation set forth in the NO_x emission reduction proposal and the federally enforceable permit conditions required pursuant to subsection (a)(4) of this Section.~~

~~C) The emissions measurements recorded and reported in accordance with Sections 217.850 and 217.855 of this Subpart shall be used to determine compliance by the emission reduction source with the emissions cap set forth in the NO_x emission reduction proposal and the federally enforceable permit condition required pursuant to subsection (a)(4) of this Section.~~

~~b) The owner or operator of the emission reduction source is required to submit an annual certification to the Agency that the source has complied with the cap on NO_x emissions for the source and that the NO_x emission reductions specified in the approved proposal were made pursuant to the requirements of Section 217.850 of this Subpart.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.815 NO_x Emission Reductions and the Subpart X NO_x Trading Budget
(Repealed)

- a) ~~NO_x emission reductions may be recognized under this Subpart if they are quantifiable, verifiable, and federally enforceable, and meet one or more of the following criteria:~~
- 1) ~~Due to the use of any NO_x emission reduction technology (e.g., combustion or post combustion control technology or fuel switching) at the emission reduction unit pursuant to federally enforceable conditions in the permit for the unit addressing such control technology or fuel switching, NO_x emissions from the emission reduction unit for any control period beginning in 2003 are or will be lower than such unit's emissions baseline. The amount of actual NO_x emission reductions shall be determined in accordance with Section 217.820 of this Subpart, and the amount of creditable NO_x emission reductions shall be determined in accordance with Section 217.825 of this Subpart;~~
 - 2) ~~The emission reduction unit is permanently shut down after January 1, 1995, and the owner or operator requests a revision to the relevant operating permit to reflect the shut down of the emission reduction unit. The amount of actual NO_x emission reductions shall be determined in accordance with Section 217.820 of this Subpart, and the amount of creditable NO_x emission reductions shall be determined in accordance with Section 217.825 of this Subpart;~~
 - 3) ~~During any control period beginning in 2003, the emission reduction unit's control period NO_x emission rate or hours of operation is reduced pursuant to federally enforceable conditions in a permit for such unit, resulting in an actual reduction in NO_x emissions from such unit's emissions baseline. The amount of actual NO_x emission reductions shall be determined in accordance with Section 217.820 of this Subpart, and the amount of creditable NO_x emission reductions shall be determined in accordance with Section 217.825 of this Subpart.~~
- b) ~~USEPA shall adjust the State's trading portion of the statewide NO_x budget, as established in the NO_x SIP Call, 63 Fed. Reg. 57356 (October 27, 1998), and create allowances for the creditable portion, as set forth in Section 217.825 of this Subpart, of verifiable, quantifiable, and federally enforceable NO_x emission reductions meeting the requirements of this Subpart (the Subpart X NO_x Trading Budget), and allowances from the Subpart X NO_x Trading Budget shall be allocated to recipient emission units in accordance with this Subpart.~~
- c) ~~The Agency shall submit an allocation to USEPA for the creditable portion of verifiable, quantifiable, and federally enforceable NO_x emission reductions meeting the requirements of this Subpart, which allocation may be used for the~~

~~purposes of demonstrating compliance with the requirements of Subparts U and W of this Part.~~

- ~~d) — If USEPA adjusts or fails to adjust the Subpart X NO_x Trading Budget as to any individual emission reduction unit, the Subpart X NO_x Trading Budget shall not be adjusted pro-rata, and only the allowance allocation for that emission reduction unit will be adjusted.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.820 Baseline Emissions Determination (Repealed)

- ~~a) — An emission unit's emissions baseline shall be determined as follows:~~

- ~~1) — By multiplying the unit's actual emissions during the 1995 calendar year, as reported in the annual emission report submitted in accordance with 35 Ill. Adm. Code 254, by 5/12ths; or~~
- ~~2) — If the NO_x emissions from the unit were not included in the emission reduction source's 1995 annual emissions report submitted to the Agency pursuant to 35 Ill. Adm. Code 254, by determining the base case amount included for such unit in the NO_x SIP Call inventory, as specified in the "Technical Support Document for Illinois' Statewide NO_x Budget" (63 Fed. Reg. 17349 (Nov. 7, 1997)).~~

- ~~b) — If the NO_x baseline emissions for the 1995 control period cannot be determined by either of the methods listed in subsection (a)(1) or (2) of this Section, such actual NO_x baseline emissions shall be determined based on the average emission rate multiplied by the average number of hours of operation from two of the three control periods, as selected by the emission reduction source, prior to the year the emission reduction proposal is effective. The unit's emission rate and hours of operation will be determined based on the unit's reported NO_x emission rate and hours of operation in the most recent annual emission reports for such unit submitted in accordance with 35 Ill. Adm. Code 254.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.825 Calculation of Creditable NO_x Emission Reductions (Repealed)

~~For actual NO_x emission reductions achieved pursuant to Section 217.815(a) of this Subpart, the gross amount of control period actual NO_x emission reductions shall be determined pursuant to Section 217.820 of this Subpart. Eighty percent of the actual NO_x emission reductions achieved~~

~~pursuant to Section 217.815(a) shall be creditable. Twenty percent of the actual NO_x emission reductions shall be retired for the benefit of air quality.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.830 Limitations on NO_x Emission Reductions (Repealed)

- ~~a) — Each NO_x allowance issued for NO_x emission reductions meeting the requirements of this Subpart is a limited authorization to emit one ton of NO_x in accordance with the federal NO_x Trading Program as set forth in Subpart U or W of this Part, as applicable. No provision of the federal NO_x Trading Program, the emission reduction proposal, the permit application, the permit, or of law shall be construed to limit the authority of the United States or the State to terminate or limit such authorization.~~
- ~~b) — Any NO_x allowance issued in accordance with this Subpart does not constitute a property right.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.835 NO_x Emission Reduction Proposal (Repealed)

- ~~a) — A NO_x emission reduction proposal shall include the following:~~
 - ~~1) — Information identifying each emission unit at the source that emits NO_x; whether the unit is subject to Subpart T, U, V, W or X of this Part, and the baseline emissions for each emission unit subject to the NO_x emission cap as determined in accordance with Section 217.820 of this Subpart;~~
 - ~~2) — Information identifying each emission reduction unit from which the NO_x emission reductions have been or will be achieved;~~
 - ~~3) — An explanation of the method used to achieve the NO_x emission reductions;~~
 - ~~4) — The amount of the NO_x emission reductions, including supporting calculations and documentation, such as fuel usage information;~~
 - ~~5) — The emission units subject to the NO_x emission cap in accordance with Section 217.810(a) of this Subpart, and if all like-kind or same-type emission units are not proposed to be included within the NO_x emission cap, an explanation of how the owner or operator of the emission reduction source will ensure that production shifting will not occur, such~~

~~that the emission reduction source will achieve real, verifiable, and quantifiable NO_x emission reductions;~~

- ~~6) The control period NO_x emission cap to be achieved by the emission reduction source, including both the baseline emissions for each recipient unit subject to the NO_x emission cap and the NO_x emission reductions from the emission reduction units included in the proposal;~~
 - ~~7) The name and address of the owner or operator of each emission unit to which the NO_x allowances will be allocated, the Subpart of this Part (i.e., Subpart U or W) to which each unit is subject, including the name, telephone number, and account number of the account representative for each such unit; and~~
 - ~~8) Certification by the owner or operator of each unit that is the subject of each proposed emission reduction proposal of his/her acceptance of the terms of the proposal and certification that the emission reductions specified in the proposal have been or will be achieved.~~
- ~~b) The owner or operator of a source submitting an emission reduction proposal must notify the Agency in writing within 30 days of any event or circumstance that makes the NO_x emission reduction proposal incorrect or incomplete.~~
- ~~c) The owner or operator of a source with an approved emission reduction proposal may request to withdraw its emission reduction proposal, and cease to create NO_x allowances under this Subpart, as follows:~~
- ~~1) Requesting withdrawal: To withdraw from participation under this Subpart, the owner or operator of an emission reduction unit shall submit to the Agency a written request to withdraw from participation and to withdraw or revise the applicable permit effective as of a specified date between (and not including) September 30 and May 1. The submission shall be made no later than 90 days prior to the requested effective date of withdrawal.~~
 - ~~2) Conditions for withdrawal: Before an emission reduction source may withdraw its approved emission reduction proposal, and the federally enforceable permit may be withdrawn under this Section, the owner or operator must submit to the Agency an annual compliance certification report in accordance with Section 217.855 of this Subpart for the control period immediately before the withdrawal is to be effective.~~
 - ~~3) An emission reduction source that withdraws from this Subpart shall comply with all requirements under its approved emission reduction proposal and federally enforceable permit conditions addressing such~~

~~proposal concerning all years for which the emission reduction source was in the program, even if such requirements arise or must be complied with after the withdrawal takes effect.~~

~~4) Notification:~~

~~A) After the requirements for withdrawal under subsections (a) and (b) of this Section are met, the Agency will revise the permit indicating a specified effective date for the withdrawal that is after the requirements in subsections (a) and (b) of this Section have been met and that is prior to May 1 or after September 30.~~

~~B) If the requirements for withdrawal under subsections (a) and (b) of this Section are not met, the Agency will issue a notification to the owner or operator of the emission reduction source that the request to withdraw its permit is denied. If the request to withdraw is denied, the source shall remain subject to the requirements of its approved emission reduction proposal and federally enforceable permit conditions addressing the proposal and the requirements of this Subpart.~~

~~5) Reapplication upon failure to meet conditions of withdrawal: If the Agency denies the request of the owner or operator of the emission reduction source's request to withdraw, the owner or operator of the source may submit another request to withdraw in accordance with subsections (a) and (b) of this Section.~~

~~6) Upon successful withdrawal from the program, the emission reduction source shall no longer be subject to the provisions of this Subpart.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.840 Agency Action (Repealed)

~~a) The Agency shall notify the owner or operator submitting a NO_x emission reduction proposal in writing of its decision with respect to the proposal within 90 days after receipt of such proposal and, if applicable, of NO_x emissions data to verify that the specified reductions have occurred. The owner or operator of the emission reduction source may extend the deadline for Agency action in writing. If the Agency disapproves or conditionally approves a proposal, this written notice shall include a statement of the specific reasons for the disapproval or conditional approval of the proposal. The following shall be considered a final Agency action for the purposes of appeal: if the Agency fails to take action within such 90 day period, subject to any extension, or if the Agency disapproves a proposal. If the Agency conditionally approves a proposal, the owner or operator of the emission reduction source has 30 days to submit a modified~~

~~proposal addressing the specific items listed by the Agency. If the owner and operator of the emission reduction source does not submit a modified emission reduction proposal within such 30-day period, the conditional approval shall be deemed to be a disapproval, and shall be deemed to be a final action for purposes of appeal.~~

~~b) The NO_x emissions reduction proposal will not be effective until:~~

~~1) After the owner or operator of the emission reduction source has obtained or modified a permit with federally enforceable conditions addressing the requirements of this Subpart; or~~

~~2) If NO_x emission reductions are being obtained by the shut down of an emission reduction unit, the owner or operator of the emission reduction unit has either:~~

~~A) Obtained or modified a permit with federally enforceable conditions addressing the requirements of this Subpart; or~~

~~_____ B) Withdrawn the applicable permit and the Agency has:~~

~~i) Provided USEPA with a copy of the proposal and notice of the Agency's proposed approval of the emission reduction proposal, and USEPA has not disapproved such proposal;~~

~~ii) Published notice and offered an opportunity to comment, pursuant to 35 Ill. Adm. Code 252, on such permit withdrawal, its proposed approval of the emission reduction proposal for the shut down of the emission reduction unit and the creditable NO_x emission reductions that will be created by the shut down.~~

~~e) If the Agency approves the proposal, and subject to the provisions of subsection (b) of this Section, the Agency shall submit an allocation to USEPA for the creditable reductions created pursuant to the requirements of this Subpart subject to the following:~~

~~1) Any allowances generated pursuant to this Subpart shall be issued to the recipient emission unit identified in the proposal, for each control period in which the NO_x emissions reductions are verified, and the requirements of this Subpart continue to be met;~~

~~2) The owner or operator of the emission reduction source has, by the November 1 following the control period that the emission reduction unit has reduced NO_x emissions, verified the NO_x emission reductions in~~

~~accordance with Section 217.845 of this Subpart, and obtained a permit containing federally enforceable conditions addressing the requirements of this Subpart;~~

- ~~3) The allowances shall be issued by May 1 after the control period in which the reduction has occurred, for use in any future control period.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.845 Emissions Determination Methods (Repealed)

~~The owner or operator of an emission reduction source must demonstrate that it has obtained the NO_x emission reductions, and has not exceeded its NO_x emission cap, as specified in its approved NO_x emission reduction proposal, as follows:~~

- ~~a) If the NO_x emission reductions are generated pursuant to Section 217.815(a)(1) of this Subpart, the NO_x emission rate for each emission reduction unit shall be determined as follows:~~
- ~~1) Through the use of continuous emissions monitoring in accordance with Section 217.850 of this Subpart; or~~
- ~~2) Through the use of any test methods and procedures provided in 40 CFR 60 and approved by the Agency, or any other method approved by the Agency when included as federally enforceable conditions in a permit issued or revised pursuant to this Subpart.~~
- ~~b) If the NO_x emission reductions are generated pursuant to Section 217.815(a)(3) of this Subpart, submit an initial compliance demonstration plan to the Agency 120 days prior to the control period date that the emission reduction unit will commence NO_x emission reductions in compliance with an approved emissions reduction proposal. Such demonstration shall be based on the actual NO_x emission rate measured in accordance with Section 217.850 of this Subpart.~~
- ~~c) If the emission reduction unit's compliance with the NO_x emission reduction proposal is determined in accordance with subsection (a)(2) of this Section, conducting an initial test 90 days prior to the date the specified emission reductions will be obtained, or within 45 days of the Agency's request for NO_x emission reductions already obtained, and notifying the Agency in writing of any test performed to comply with the requirements of this Subpart at least 30 days prior to the test. The Agency may at any time require annual control period testing of any emission unit at the NO_x emission reduction source, and may require such testing as part of its approval of a NO_x emission reduction proposal.~~

- d) ~~By the November 1 following each control period in which NO_x emission reductions are generated, the owner or operator of an emission reduction source must:~~
 - 1) ~~Submit a compliance certification, including supporting data, that the NO_x emission cap, as specified in its approved NO_x emission reduction proposal, has not been exceeded; and~~
 - 2) ~~Monitor and report the NO_x emissions during each control period from all NO_x emission units at the source subject to the NO_x emission cap in accordance with Sections 217.850 and 217.855 of this Subpart.~~
- e) ~~The owner or operator of an emission reduction source shall, 120 days prior to the date that the emission reduction source will commence NO_x emission reductions in compliance with an approved emissions reduction proposal, submit to the Agency a performance evaluation for each CEMS using the applicable performance specifications in 40 CFR 60, Appendix B, as incorporated by reference in Section 217.104 of this Part.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.850 Emissions Monitoring (Repealed)

- a) ~~The owner or operator of an emission reduction source shall install, calibrate, maintain, and operate during the control period on each NO_x emission unit at the source subject to the NO_x emission cap a continuous emission monitoring system (CEMS), or an alternative approved by the Agency and included in a federally enforceable permit condition, for measuring NO_x emissions to the atmosphere.~~
- b) ~~The CEMS shall be operated and data recorded during all periods of operation of the emission unit at the source during the control period, except for periods of CEMS breakdowns and repairs as provided in subsection (c) of this Section.~~
- c) ~~CEMS quality assurance data must be recorded during calibration checks and zero and span adjustments.~~
- d) ~~The 1-hour average NO_x emissions measured by the CEMS shall be:~~
 - 1) ~~Expressed in lbs/hr or in lbs/mmbtu and heat input;~~
 - 2) ~~Calculated using the data points required under 40 CFR 60.13, as incorporated by reference in Section 217.104 of this Subpart; and~~

- 3) ~~Calculated using at least two data points separated by a minimum of 15 minutes (where the unit operates for more than one quarter of an hour) if data are unavailable as a result of the performance of calibration, quality assurance, or preventive maintenance activities.~~
- e) ~~The procedures under 40 CFR 60.13, as incorporated by reference in Section 217.104 of this Subpart, shall be followed for installation, evaluation, and operation of each CEMS.~~
- f) ~~For monitoring systems measuring NO_x in lbs/hr, if NO_x emission data are not obtained because of CEMS breakdown, repairs, calibration checks, or zero and span adjustments, NO_x emission data shall be obtained by using the data substitution procedures contained in 40 CFR 75, subpart D, incorporated by reference in Section 217.104 of this Part.~~
- g) ~~For monitoring systems measuring NO_x in lbs/mmbtu, if NO_x emission data are not obtained because of CEMS breakdown, repairs, calibration checks, or zero and span adjustments, NO_x emission data shall be obtained by using the rolling hourly average of emission data recorded for the previous 30 day period of operation if the data capture for such period is 95% or greater and the period of missing data is equal to or less than 24 consecutive hours. If the data capture for such previous 30 day period is less than 95% or the period of missing data is greater than 24 consecutive hours, the data shall be obtained by using the highest hourly average recorded during the previous 30 days of operation.~~
- h) ~~The CEMS shall be subject to the quality assurance procedures and requirements of 40 CFR 60, Appendix F, incorporated by reference in Section 217.104 of this Part.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.855 Reporting (Repealed)

- a) ~~By the November 1 of each year beginning in 2003, or the year of the first control period for which NO_x emission reductions were generated in accordance with this Subpart, an owner or operator of an emission reduction source must, as a seasonal component of the annual emission report for the source pursuant to 35 Ill. Adm. Code 254, report to the Agency the total control period NO_x emissions of each NO_x emission unit at the source subject to the NO_x emission cap.~~
- b) ~~Within 30 days after receipt of such data or evaluation, the owner or operator of each emission reduction source shall submit to the Agency the performance test data from the initial performance test for each emission reduction unit and the performance evaluation for each CEMS using the applicable performance~~

~~specifications in 40 CFR 60, Appendix B, as incorporated by reference in Section 217.104 of this Part.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.860 Recordkeeping (Repealed)

- ~~a) The owner or operator of an emission reduction source shall keep and maintain the following records for each NO_x emission unit at the source subject to the NO_x emission cap:~~
- ~~1) Daily, monthly, and control period operating hours;~~
 - ~~2) Type and quantity of each fuel used daily during the control period;~~
 - ~~3) Control period capacity factor of individual fuels fired and all fuels fired;~~
 - ~~4) Monitoring records; and~~
 - ~~5) To the extent applicable, the performance test data from the initial performance test for each emission reduction unit and the performance evaluation for each CEMS using the applicable performance specifications in 40 CFR 60, Appendix B, as incorporated by reference in Section 217.104 of this Part.~~
- ~~b) The owner or operator of an emission reduction source shall maintain records of the following information for each operating day for each NO_x emission unit subject to the NO_x emission cap:~~
- ~~1) Calendar date;~~
 - ~~2) The average hourly NO_x mass emission rate expressed as lbs/hr;~~
 - ~~3) The control period total NO_x mass emissions to date;~~
 - ~~4) Identification of times when emission data have been excluded from the calculation of NO_x mass emissions, the reasons for excluding the data, and any corrective actions taken;~~
 - ~~5) Identification of the times when the pollutant concentration exceeded full span of the CEMS;~~
 - ~~6) Description of any modifications to the CEMS that could affect the ability of the CEMS to comply with the Performance Specifications in 40 CFR 60, Appendix B; and~~

- ~~7) Results of daily CEMS drift tests and quarterly accuracy assessments as required under 40 CFR 60, Appendix F.~~
- ~~e) The owner or operator of any NO_x emission reduction source subject to the continuous monitoring requirements for NO_x under this Subpart, shall submit a compliance certification containing the information recorded under subsection (b) of this Section. All compliance certification reports shall be postmarked by November 1 or the next business day if November 1 falls on a Saturday or Sunday, of each control period in which NO_x emission reductions are generated.~~
- ~~d) Maintenance of records: Unless otherwise provided, the owner or operator of a NO_x emission reduction source shall keep on site at the source, each of the following documents for a period of 5 years from the date the document is created. This period may be extended for cause, at any time prior to the end of 5 years, in writing by the Agency.~~
- ~~1) The emission reduction proposal and all documents that demonstrate the accuracy of the statements in the proposal for each year the emission reduction source generates NO_x reductions under this Subpart and for 5 years thereafter.~~
- ~~2) All emissions monitoring information required pursuant to this Subpart; provided that to the extent that 40 CFR 60 provides for a 3 year period for recordkeeping, the 3 year period shall apply.~~
- ~~3) Copies of all reports, compliance certifications, and other submissions and all records made or required under this Subpart.~~
- ~~4) Copies of all documents used to complete any permit application and supporting documents and any other submission to demonstrate compliance with the requirements of this Subpart.~~

(Source: Repealed at 50 Ill. Reg. _____, effective _____)

Section 217.865 Enforcement (Repealed)

- ~~a) Excess emissions requirements: The owner or operator of an emission reduction source for which NO_x reductions have been recognized pursuant to this Section and that has excess NO_x emissions in any control period for which NO_x allowances have been issued must:~~
- ~~1) For the first control period during which the emission reduction source has excess NO_x emissions, purchase NO_x allowances in an amount equal to 2 times the excess NO_x emissions in accordance with the federal NO_x~~

~~Trading Program and surrender the allowances to the Agency by December 31 following the control period in which the emission reduction source had excess emissions;~~

~~2) For the second control period during which the emission reduction source has excess NO_x emissions, purchase allowances in an amount equal to 3 times the excess NO_x emissions in accordance with the federal NO_x Trading Program and surrender the allowances to the Agency by December 31 following the control period in which the emission reduction source had excess emissions;~~

~~3) If the emission reduction source has excess NO_x emissions for 3 control periods, purchase allowances in an amount equal to 4 times the excess NO_x emissions pursuant to the federal NO_x Trading Program and surrender the allowances to the Agency by December 31 following the control period in which the emission reduction source had excess emissions, and the NO_x emission reduction proposal shall be automatically revoked. The emission reduction source will thereafter not be able to generate NO_x emission reductions for which NO_x allowances may be issued under this Subpart.~~

~~b) All allowances surrendered to the Agency pursuant to subsections (a)(1) through (a)(3) of this Section shall be retired to benefit air quality.~~

~~c) Nothing in this Subpart limits the authority of the State or the federal government to seek penalties and injunctive relief for any violation of this Subpart or any permit condition. Nothing in this Subpart limits the right of the State or the federal government or any person to directly enforce against actions or omissions which constitute violations of permits required by the Act or regulations promulgated thereunder or the CAA or applicable federal environmental laws and regulations.~~

Section 217.APPENDIX I: Compliance Dates for Certain Emissions Units at Petroleum

Refineries and Petrochemical Facilities

Phillips 66 Company (Facility ID 119090AAA)

Point	Emission Unit Description	Compliance Date
0036	CAU Heater	December 31, 2025
0010	HTR-SMR Steam Methane Reformer	December 31, 2026
0033	RAU Heater	December 31, 2027
0085	HDU-1 Heater	December 31, 2027
0088	HDU-2 Heater	December 31, 2027

CITGO Petroleum Corporation (Facility ID 197010AAI)

Point	Emission Unit Description	Compliance Date
0011	Coker 1 Heater	January 1, 2026
0064	Coker 1 Heater	January 1, 2026
0012	Coker 1 Heater	January 1, 2026
0019	No. 2 Catalytic Reformer Charge Heater and Stabilizer Reboiler	July 1, 2026
0066	No. 2 Catalytic Reformer Interheater and Naphtha Stripper Reboiler	July 1, 2026
0069	Reactor Charge Heater	January 1, 2026
0071	No. 1 Catalytic Reformer Reheat Furnace	January 1, 2026
125B-1	Diesel Hydrotreater Feed Heater	January 1, 2026
125B-2	Diesel Hydrotreater Stripper Reboiler	January 1, 2026

Equistar Chemicals LP (Facility ID 063800AAC)

Point	Emission Unit Description	Compliance Date
0025	Steam Superheater	December 31, 2027
0026(a)	Cracking Furnaces 101/102	May 1, 2026
0026(a)	Cracking Furnaces 105/106	May 1, 2026
0026(a)	Cracking Furnaces 107/108	May 1, 2026
0026(a)	Cracking Furnace 113	May 1, 2026

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER c: EMISSIONS STANDARDS AND
LIMITATIONS FOR STATIONARY SOURCES

PART 218
ORGANIC MATERIAL EMISSION STANDARDS AND
LIMITATIONS FOR THE CHICAGO AREA

SUBPART A: GENERAL PROVISIONS

Section	
218.100	Introduction
218.101	Savings Clause
218.102	Abbreviations and Conversion Factors
218.103	Applicability
218.104	Definitions
218.105	Test Methods and Procedures
218.106	Compliance Dates
218.107	Operating ~~Operation~~ of Afterburners
218.108	Exemptions, Variations, and Alternative Means of Control or Compliance Determinations
218.109	Vapor Pressure of Volatile Organic Liquids
218.110	Vapor Pressure of Organic Material or Solvent
218.111	Vapor Pressure of Volatile Organic Material
218.112	Incorporations by Reference
218.113	Monitoring for Negligibly Reactive ~~Negligibly Reactive~~ Compounds
218.114	Compliance with Permit Conditions

SUBPART B: ORGANIC EMISSIONS FROM STORAGE
AND LOADING OPERATIONS

Section	
218.119	Applicability for VOL
218.120	Control Requirements for Storage Containers of VOL
218.121	Storage Containers of VPL
218.122	Loading Operations
218.123	Petroleum Liquid Storage Tanks
218.124	External Floating Roofs
218.125	Compliance Dates
218.126	Compliance Plan (Repealed)
218.127	Testing VOL Operations
218.128	Monitoring VOL Operations
218.129	Recordkeeping and Reporting for VOL Operations

SUBPART C: ORGANIC EMISSIONS FROM MISCELLANEOUS EQUIPMENT

Section	
218.141	Separation Operations
218.142	Pumps and Compressors
218.143	Vapor Blowdown
218.144	Safety Relief Valves

SUBPART E: SOLVENT CLEANING

Section	
218.181	Solvent Cleaning Degreasing Operations
218.182	Cold Cleaning
218.183	Open Top Vapor Degreasing
218.184	Conveyorized Degreasing
218.185	Compliance Schedule (Repealed)
218.186	Test Methods
218.187	Other Industrial Solvent Cleaning Operations

SUBPART F: COATING OPERATIONS

Section	
218.204	Emission Limitations
218.205	Daily-Weighted Average Limitations
218.206	Solids Basis Calculation
218.207	Alternative Emission Limitations
218.208	Exemptions from Emission Limitations
218.209	Exemption from General Rule on Use of Organic Material
218.210	Compliance Schedule
218.211	Recordkeeping and Reporting
218.212	Cross-Line Averaging to Establish Compliance for Coating Lines
218.213	Recordkeeping and Reporting for Cross-Line Averaging Participating Coating Lines
218.214	Changing Compliance Methods
218.215	Wood Furniture Coating Averaging Approach
218.216	Wood Furniture Coating Add-On Control Use
218.217	Wood Furniture Coating and Flat Wood Paneling Coating Work Practice Standards
218.218	Work Practice Standards for Paper Coatings, Metal Furniture Coatings, and Large Appliance Coatings
218.219	Work Practice Standards for Automobile and Light-Duty Truck Assembly Coatings and Miscellaneous Metal and Plastic Parts Coatings

SUBPART G: USE OF ORGANIC MATERIAL

Section

218.301	Use of Organic Material
218.302	Alternative Standard
218.303	Fuel Combustion Emission Units
218.304	Operations with Compliance Program

SUBPART H: PRINTING AND PUBLISHING

Section	
218.401	Flexographic and Rotogravure Printing
218.402	Applicability
218.403	Compliance Schedule
218.404	Recordkeeping and Reporting
218.405	Lithographic Printing: Applicability
218.406	Provisions Applying to Heatset Web Offset Lithographic Printing Prior to March 15, 1996 (Repealed)
218.407	Emission Limitations and Control Requirements for Lithographic Printing Lines
218.408	Compliance Schedule for Lithographic Printing On and After March 15, 1996 (Repealed)
218.409	Testing for Lithographic Printing On and After March 15, 1996
218.410	Monitoring Requirements for Lithographic Printing
218.411	Recordkeeping and Reporting for Lithographic Printing
218.412	Letterpress Printing Lines: Applicability
218.413	Emission Limitations and Control Requirements for Letterpress Printing Lines
218.415	Testing for Letterpress Printing Lines
218.416	Monitoring Requirements for Letterpress Printing Lines
218.417	Recordkeeping and Reporting for Letterpress Printing Lines

SUBPART Q: SYNTHETIC ORGANIC CHEMICAL AND POLYMER MANUFACTURING PLANT

Section	
218.421	General Requirements
218.422	Inspection Program Plan for Leaks
218.423	Inspection Program for Leaks
218.424	Repairing Leaks
218.425	Recordkeeping for Leaks
218.426	Report for Leaks
218.427	Alternative Program for Leaks
218.428	Open-Ended Valves
218.429	Standards for Control Devices
218.430	Compliance Date (Repealed)
218.431	Applicability
218.432	Control Requirements
218.433	Performance and Testing Requirements
218.434	Monitoring Requirements
218.435	Recordkeeping and Reporting Requirements

218.436 Compliance Date

SUBPART R: PETROLEUM REFINING AND
RELATED INDUSTRIES; ASPHALT MATERIALS

Section

218.441 Petroleum Refinery Waste Gas Disposal
218.442 Vacuum Producing Systems
218.443 Wastewater (Oil/Water) Separator
218.444 Process Unit Turnarounds
218.445 Leaks: General Requirements
218.446 Monitoring Program Plan for Leaks
218.447 Monitoring Program for Leaks
218.448 Recordkeeping for Leaks
218.449 Reporting for Leaks
218.450 Alternative Program for Leaks
218.451 Sealing Device Requirements
218.452 Compliance Schedule for Leaks ([Repealed](#))
218.453 Compliance Dates (Repealed)

SUBPART S: RUBBER AND MISCELLANEOUS PLASTIC PRODUCTS

Section

218.461 Manufacture of Pneumatic Rubber Tires
218.462 Green Tire Spraying Operations
218.463 Alternative Emission Reduction Systems
218.464 Emission Testing
218.465 Compliance Dates (Repealed)
218.466 Compliance Plan (Repealed)

SUBPART T: PHARMACEUTICAL MANUFACTURING

Section

218.480 Applicability
218.481 Control of Reactors, Distillation Units, Crystallizers, Centrifuges, and Vacuum Dryers
218.482 Control of Air Dryers, Production Equipment Exhaust Systems, and Filters
218.483 Material Storage and Transfer
218.484 In-Process Tanks
218.485 Leaks
218.486 Other Emission Units
218.487 Testing
218.488 Monitoring for Air Pollution Control Equipment
218.489 Recordkeeping for Air Pollution Control Equipment

SUBPART V: BATCH OPERATIONS AND AIR OXIDATION PROCESSES

Section	
218.500	Applicability for Batch Operations
218.501	Control Requirements for Batch Operations
218.502	~~Determining~~ ~~Determination of~~ Uncontrolled Total Annual Mass Emissions and Average Flow Rate Values for Batch Operations
218.503	Performance and Testing Requirements for Batch Operations
218.504	Monitoring Requirements for Batch Operations
218.505	Reporting and Recordkeeping for Batch Operations
218.506	Compliance Date
218.520	Emission Limitations for Air Oxidation Processes
218.521	Definitions (Repealed)
218.522	Savings Clause
218.523	Compliance
218.524	~~Determining~~ ~~Determination of~~ Applicability
218.525	Emission Limitations for Air Oxidation Processes
218.526	Testing and Monitoring
218.527	Compliance Date (Repealed)

SUBPART W: AGRICULTURE

Section	
218.541	Pesticide Exception

SUBPART X: CONSTRUCTION

Section	
218.561	Architectural Coatings
218.562	Paving Operations
218.563	Cutback Asphalt

SUBPART Y: GASOLINE DISTRIBUTION

Section	
218.581	Bulk Gasoline Plants
218.582	Bulk Gasoline Terminals
218.583	Gasoline Dispensing Operations – Storage Tank Filling Operations
218.584	Gasoline Delivery Vessels
218.585	Gasoline Volatility Standards
218.586	Gasoline Dispensing Operations – Motor Vehicle Fueling Operations

SUBPART Z: DRY CLEANERS

Section	
218.601	Perchloroethylene Dry Cleaners (Repealed)
218.602	Applicability (Repealed)

218.603	Leaks (Repealed)
218.604	Compliance Dates (Repealed)
218.605	Compliance Plan (Repealed)
218.606	Exception to Compliance Plan (Repealed)
218.607	Standards for Petroleum Solvent Dry Cleaners
218.608	Operating Practices for Petroleum Solvent Dry Cleaners
218.609	Program for Inspection and Repair of Leaks
218.610	Testing and Monitoring
218.611	Applicability for Petroleum Solvent Dry Cleaners
218.612	Compliance Dates (Repealed)
218.613	Compliance Plan (Repealed)

SUBPART AA: PAINT AND INK MANUFACTURING

Section	
218.620	Applicability
218.621	Exemption for Waterbase Material and Heatset-Offset Ink
218.623	Permit Conditions (Repealed)
218.624	Open-Top Mills, Tanks, Vats, or Vessels
218.625	Grinding Mills
218.626	Storage Tanks
218.628	Leaks
218.630	~~Cleanup~~ Clean-Up
218.636	Compliance Schedule
218.637	Recordkeeping and Reporting

SUBPART BB: POLYSTYRENE PLANTS

Section	
218.640	Applicability
218.642	Emissions Limitation at Polystyrene Plants
218.644	Emissions Testing

SUBPART CC: POLYESTER RESIN PRODUCT MANUFACTURING PROCESS

Section	
218.660	Applicability
218.666	Control Requirements
218.667	Compliance Schedule
218.668	Testing
218.670	Recordkeeping and Reporting for Exempt Emission Units
218.672	Recordkeeping and Reporting for Subject Emission Units

SUBPART DD: AEROSOL CAN FILLING

Section

218.680	Applicability
218.686	Control Requirements
218.688	Testing
218.690	Recordkeeping and Reporting for Exempt Emission Units
218.692	Recordkeeping and Reporting for Subject Emission Units

SUBPART FF: BAKERY OVENS (REPEALED)

Section	
218.720	Applicability (Repealed)
218.722	Control Requirements (Repealed)
218.726	Testing (Repealed)
218.727	Monitoring (Repealed)
218.728	Recordkeeping and Reporting (Repealed)
218.729	Compliance Date (Repealed)
218.730	Certification (Repealed)

SUBPART GG: MARINE TERMINALS

Section	
218.760	Applicability
218.762	Control Requirements
218.764	Compliance Certification
218.766	Leaks
218.768	Testing and Monitoring
218.770	Recordkeeping and Reporting

SUBPART HH: MOTOR VEHICLE REFINISHING

Section	
218.780	Emission Limitations
218.782	Alternative Control Requirements
218.784	Equipment Specifications
218.786	Surface Preparation Materials
218.787	Work Practices
218.788	Testing
218.789	Monitoring and Recordkeeping for Control Devices
218.790	General Recordkeeping and Reporting (Repealed)
218.791	Compliance Date
218.792	Registration (Repealed)
218.875	Applicability of Subpart BB (Renumbered)
218.877	Emissions Limitation at Polystyrene Plants (Renumbered)
218.879	Compliance Date (Repealed)
218.881	Compliance Plan (Repealed)
218.883	Special Requirements for Compliance Plan (Repealed)
218.886	Emissions Testing (Renumbered)

SUBPART II: FIBERGLASS BOAT MANUFACTURING MATERIALS

Section

218.890	Applicability
218.891	Emission Limitations and Control Requirements
218.892	Testing Requirements
218.894	Recordkeeping and Reporting Requirements

SUBPART JJ: MISCELLANEOUS INDUSTRIAL ADHESIVES

Section

218.900	Applicability
218.901	Emission Limitations and Control Requirements
218.902	Testing Requirements
218.903	Monitoring Requirements
218.904	Recordkeeping and Reporting Requirements

SUBPART PP: MISCELLANEOUS FABRICATED PRODUCT MANUFACTURING PROCESSES

Section

218.920	Applicability
218.923	Permit Conditions (Repealed)
218.926	Control Requirements
218.927	Compliance Schedule
218.928	Testing
218.929	Cementable and Dress or Performance Shoe Leather

SUBPART QQ: MISCELLANEOUS FORMULATION MANUFACTURING PROCESSES

Section

218.940	Applicability
218.943	Permit Conditions (Repealed)
218.946	Control Requirements
218.947	Compliance Schedule
218.948	Testing

SUBPART RR: MISCELLANEOUS ORGANIC CHEMICAL MANUFACTURING PROCESSES

Section

218.960	Applicability
218.963	Permit Conditions (Repealed)
218.966	Control Requirements
218.967	Compliance Schedule

218.968 Testing

SUBPART TT: OTHER EMISSION UNITS

Section

218.980 Applicability
218.983 Permit Conditions (Repealed)
218.986 Control Requirements
218.987 Compliance Schedule
218.988 Testing

SUBPART UU: RECORDKEEPING AND REPORTING

Section

218.990 Exempt Emission Units
218.991 Subject Emission Units

218.APPENDIX A List of Chemicals Defining Synthetic Organic Chemical and Polymer Manufacturing
218.APPENDIX B VOM Measurement Techniques for Capture Efficiency (Repealed)
218.APPENDIX C Reference Methods and Procedures
218.APPENDIX D Coefficients for the Total Resource Effectiveness Index (TRE) Equation
218.APPENDIX E List of Affected Marine Terminals
218.APPENDIX G TRE Index Measurements for SOCM I Reactors and Distillation Units
218.APPENDIX H Baseline VOM Content Limitations for Subpart F, Section 218.212
Cross-Line Averaging

AUTHORITY: Implementing Section 10 and authorized by Sections 27, 28, and 28.5 of the Environmental Protection Act [415 ILCS 5/10, 27, 28, and 28.5].

SOURCE: Adopted at R91-7 at 15 Ill. Reg. 12231, effective August 16, 1991; amended in R91-24 at 16 Ill. Reg. 13564, effective August 24, 1992; amended in R91-28 and R91-30 at 16 Ill. Reg. 13864, effective August 24, 1992; amended in R93-9 at 17 Ill. Reg. 16636, effective September 27, 1993; amended in R93-14 at 18 Ill. Reg. 1945, effective January 24, 1994; amended in R94-12 at 18 Ill. Reg. 14973, effective September 21, 1994; amended in R94-15 at 18 Ill. Reg. 16392, effective October 25, 1994; amended in R94-16 at 18 Ill. Reg. 16950, effective November 15, 1994; amended in R94-21, R94-31 and R94-32 at 19 Ill. Reg. 6848, effective May 9, 1995; amended in R94-33 at 19 Ill. Reg. 7359, effective May 22, 1995; amended in R96-13 at 20 Ill. Reg. 14428, effective October 17, 1996; amended in R97-24 at 21 Ill. Reg. 7708, effective June 9, 1997; amended in R97-31 at 22 Ill. Reg. 3556, effective February 2, 1998; amended in R98-16 at 22 Ill. Reg. 14282, effective July 16, 1998; amended in R02-20 at 27 Ill. Reg. 7283, effective April 8, 2003; amended in R04-12/20 at 30 Ill. Reg. 9684, effective May 15, 2006; amended in R06-21 at 31 Ill. Reg. 7086, effective April 30, 2007; amended in R08-8 at 32 Ill. Reg. 14874, effective August 26, 2008; amended in R10-10 at 34 Ill. Reg. 5330, effective March 23, 2010; amended in R10-8 at 34 Ill. Reg. 9096, effective June 25, 2010; amended in R10-20 at 34 Ill. Reg. 14174, effective September 14, 2010; amended in R10-

8(A) at 35 Ill. Reg. 469, effective December 21, 2010; amended in R11-23 at 35 Ill. Reg. 13473, effective July 27, 2011; amended in R11-23(A) at 35 Ill. Reg. 18813, effective October 25, 2011; amended in R12-24 at 37 Ill. Reg. 1699, effective January 28, 2013, amended in R13-18 at 38 Ill. Reg. 1032, effective December 23, 2013; amended in R18-21 at 50 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 218.100 Introduction

- a) This Part contains standards and limitations for emissions of organic material and volatile organic material from stationary sources located in the Chicago area; ~~which is~~ comprised of Cook, DuPage, Kane, Lake, McHenry, and Will Counties; ~~and~~ Aux Sable Township and Goose Lake Township in Grundy County; and Oswego Township in Kendall County.
- b) Sources subject to this Part may be subject to ~~the following~~:
 - 1) Permits required under 35 Ill. Adm. Code 201; and
 - 2) Air quality standards under 35 Ill. Adm. Code 243.
- c) This Part is divided into Subparts ~~which are~~ grouped as follows:
 - 1) Subpart A: General Provisions;
 - 2) Subparts B-F: Emissions from equipment and operations in common to more than one industry;
 - 3) Subpart G: Emissions from use of organic material;
 - 4) Subparts H-RR: Rules for various industry groups;
 - 5) Subpart TT: Rules for emission units not otherwise addressed; ~~and~~
 - 6) Subpart UU: Recordkeeping and reporting for equipment and operations addressed by Subparts PP, QQ, RR, and TT.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.101 Savings Clause

- a) Every owner or operator of an emission unit formerly subject to 35 Ill. Adm. Code 215 ~~must~~shall have complied with its standards and limitations by the dates and schedules applicable to the emission unit in ~~compliance~~accordance with 35 Ill. Adm. Code 215 or upon initial start-up. All compliance dates or schedules

~~underfound in~~ 35 Ill. Adm. Code 215 are not superseded by this Part and remain in full force and effect.

- b) Nothing in this Part ~~affectsshall affect~~ the responsibility of any owner or operator that is now or has been subject to the FIP to comply with its requirements ~~thereunder~~ by the dates specified in the FIP.
- c) ~~AsNothing in~~ this Part ~~as it~~ is amended, ~~nothing relieves from time to time shall relieve~~ the owner or operator of a source subject to ~~the requirements of~~ this Part from the obligation to comply with the applicable requirements and compliance dates ~~set forth in~~ Section 218.106 ~~of this Subpart~~ or any specific schedules ~~undereontained within~~ the applicable Subparts of this Part, even though those compliance dates may have been expressly superseded by subsequent amendments.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.102 Abbreviations and Conversion Factors

The abbreviations and conversion factors ~~atof~~ 35 Ill. Adm. Code ~~211.102211~~ apply to this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.103 Applicability

~~ThisThe provisions of this~~ Part ~~applicsshall apply~~ to all sources located in the Chicago area ~~comprised, which is composed~~ of Cook, DuPage, Kane, Lake, McHenry, and Will Counties; ~~and~~ Aux Sable Township and Goose Lake Township in Grundy County; ~~and~~ Oswego Township in Kendall County.

- a) ~~ThisThe provisions of this~~ Part ~~takes effectsshall become effective~~ on July 1, 1991, with the following exceptions:
 - 1) ~~ThisThe provisions of this~~ Part ~~takes effectsshall become effective~~ on September 1, 1991, for each appellant, including the constituents represented by appellants who are associations, who has appealed the ~~federal implementation plan (FIP)~~ for the Chicago area (Illinois Regulatory Group v. USEPA, No. 90-2778 (and consolidated cases) (7th Cir.)).
 - 2) The effectiveness of any provision of this Part applicable to any individual source or category of sources which has appealed the FIP ~~issshall be~~ stayed to the extent that ~~thesueh~~ individual source or category of sources received a stay of the effectiveness of the FIP, pending reconsideration, from the USEPA or from the court in the FIP appeal cited in subsection ~~(a)(1)~~ ~~218.103(a)(1) above~~. When USEPA has published in the Federal Register

final action to revise or affirm the provisions of the FIP specifically applicable to ~~thesuch~~ individual source or category of sources or ~~thesuch~~ stay is otherwise terminated, the Board ~~mustshall~~ take corresponding action, and the Agency ~~mustshall~~ submit ~~thatsuch~~ action to USEPA for approval. Until ~~such time as~~ USEPA approves the corresponding amendment to this Part, the FIP rule ~~remainsshall remain~~ the applicable implementation plan for that source or category of sources under the Clean Air Act.

3) ~~ThisThe provisions of this~~ Part ~~takes effectshall become effective~~ on November 15, 1992, for all sources located in Aux Sable Township or Goose Lake Township in Grundy County or in Oswego Township in Kendall County.

b) ~~ThisThe provisions of the~~ Part ~~doesshall~~ not apply to Viskase Corporation; Allsteel, Incorporated; Stepan Company; or Ford Motor Company to the extent ~~that thesuch~~ source has obtained an adjusted standard from the Board or an exclusion from the General Assembly for any Subpart of this Part or ~~of~~ 35 Ill. Adm. Code 215.

(~~BOARD NOTE~~~~Board Note:~~ ~~SectionSubsection~~ 218.103(b) ~~isof this Section shall be~~ effective at the federal level only ~~whenupon approval by~~ USEPA ~~approves it.~~)

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.104 Definitions

The definitions of 35 Ill. Adm. Code 211 apply to this Part.

(Source: Amended at 17 Ill. Reg. 16636, effective September 27, 1993)

Section 218.105 Test Methods and Procedures

- a) Coatings, Inks, and Fountain Solutions
The following test methods and procedures ~~mustshall~~ be used to determine compliance of as applied coatings, inks, and fountain solutions with the limitations ~~set forth~~ in this Part.
- 1) Sampling: Samples collected for analyses ~~mustshall~~ be one-liter taken into a one-liter container at a location and time ~~so~~~~such~~ that the sample will be representative of the coating as applied (i.e., the sample ~~mustshall~~ include any dilution solvent or other VOM added during the manufacturing process). The container must be tightly sealed immediately after the sample is taken. Any solvent or other VOM added after the sample is taken must be measured and accounted for in the calculations in subsection (a)(3)-~~of this Section~~. For multiple package coatings, separate

samples of each component ~~mustshall~~ be obtained. A mixed sample ~~mustshall~~ not be obtained as it will cure in the container. Sampling procedures ~~mustshall~~ follow the guidelines ~~presented~~ in:

- A) ~~ASTM-D D3925-02 (2022) Standard Practice for Sampling Liquid Paints and Related Pigment Coating, 3925-81 (1985) standard practice for sampling liquid paints and related pigment coating. This practice is~~ incorporated by reference in Section 218.112 ~~of this Part.~~
 - B) ~~ASTM-E E300-03 (2022) Standard Practice for Sampling Industrial Chemicals, 300-86 standard practice for sampling industrial chemicals. This practice is~~ incorporated by reference in Section 218.112 ~~of this Part.~~
- 2) Analyses: The applicable analytical methods ~~in this subsection (a)(2) mustspecified below shall~~ be used to determine the composition of coatings, inks, or fountain solutions as applied.
- A) Method 24 of 40 CFR 60. ~~Appendix A-7, appendix A-7,~~ incorporated by reference in Section 218.112 ~~of this Part,~~ must be used to determine the VOM content and density of coatings. If it is demonstrated to the satisfaction of the Agency and ~~the~~ USEPA that plant coating formulation data are equivalent to Method 24 results, formulation data may be used. ~~If there is~~ In the event of any inconsistency between a Method 24 test and a facility's formulation data, the Method 24 test will govern.
 - B) Method 24A of 40 CFR 60. ~~Appendix A-7, appendix A-7,~~ incorporated by reference in Section 218.112 ~~of this Part,~~ must be used to determine the VOM content and density of rotogravure printing inks and related coatings. If it is demonstrated to the satisfaction of the Agency and USEPA that the plant coating formulation data are equivalent to Method 24A results, formulation data may be used. ~~If there is~~ In the event of any inconsistency between a Method 24A test and formulation data, the Method 24A test will govern.
 - C) The following ASTM methods are the analytical procedures to ~~determinefor determining~~ VOM:
 - i) ~~ASTM-D D1475-13 (2020) Standard Test Method for Density of Paint Varnish, Lacquer, and Related Products, 1475-85: Standard test method for density of paint, varnish, lacquer and related products. This test method is~~ incorporated by reference in Section 218.112 ~~of this Part.~~

- ii) ~~ASTM-D D2369-24 Standard Test Method for Volatile Content of a Coating, 2369-87: Standard test method for volatile content of a coating. This test method is incorporated by reference in Section 218.112 of this Part.~~
- iii) ~~ASTM-D D3792-16 (2002) Standard Test Method for Water Content of Water Reducible Paints by Direct Injection Into a Gas Chromatograph, 3792-86: Standard test method for water content of water-reducible paints by direct injection into a gas chromatograph. This test method is incorporated by reference in Section 218.112 of this Part.~~
- iv) ~~ASTM-D D4017-22 Standard Test Method for Waer in Paints and Paint Material by Karl Fischer Method, 4017-81 (1987): Standard test method for water content in paints and paint materials by the Karl Fischer method. This test method is incorporated by reference in Section 218.112 of this Part.~~
- v) ~~ASTM-D D4457-02 (2014) Standard Test Method for Determination of Dichloromethane and 1,1,1, Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph, 4457-85: Standard test method for determination of dichloromethane and 1,1,1, trichloroethane in paints and coatings by direct injection into a gas chromatograph. (The procedure delineated above can be used to develop protocols for any compounds specifically exempted from the definition of VOM.) This test method is incorporated by reference in Section 218.112 of this Part. This method can be used to develop protocols for any compounds specifically exempted from the definition of VOM.~~
- vi) ~~ASTM-D D2697-22 Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings, 2697-86: Standard test method for volume non-volatile matter in clear or pigmented coatings. This test method is incorporated by reference in Section 218.112 of this Part.~~
- vii) ~~ASTM D 3980-87: Standard practice for interlaboratory testing of paint and related materials. This practice is incorporated by reference in Section 218.112 of this Part.~~
- viii) ~~ASTM-E E180-03 Standard Practice for Determining the Precision Data of ASTM Methods for Analysis of and~~

~~Testing of Industrial Chemicals, 180-85: Standard practice for determining the precision data of ASTM methods for analysis of and testing of industrial chemicals. This practice is~~ incorporated by reference in Section 218.112 ~~of this Part.~~

~~viii*)~~ ASTM ~~D~~ D2372-85 (2022) Standard Practice for Separation of Vehicle from Solvent-Reducible Paints, ~~Standard method of separation of vehicle from solvent-reducible paints. This method is~~ incorporated by reference in Section 218.112 ~~of this Part.~~

D) ~~An~~Use of an adaptation to any of the analytical methods ~~specified~~ in subsections (a)(2)(A), (B), and (C) ~~of this Section~~ may not be used unless approved by the Agency and USEPA. An owner or operator must submit sufficient documentation for the Agency and USEPA to find that the analytical methods ~~specified~~ in subsections (a)(2)(A), (B), and (C) ~~of this Section~~ will yield inaccurate results and that the proposed adaptation is appropriate.

3) Calculations: Calculations ~~to determine~~~~for determining~~ the VOM content, water content, and ~~the~~ content of any compounds ~~which are~~ specifically exempted from the definition of VOM of coatings, inks, and fountain solutions as applied ~~must~~~~shall~~ follow the guidance ~~provided~~ in the following documents:

A) "A ~~Guideline~~Guide for Surface Coating Calculation", July 1986, EPA-340/1-86-016, incorporated by reference in Section 218.112 ~~of this Part.~~

B) "Procedures for Certifying Quantity of Volatile Organic Compounds Emitted by Paint, Ink and Other Coatings" (revised June 1986), EPA-450/3-84-019, incorporated by reference in Section 218.112 ~~of this Part.~~

C) "A Guide for Graphic Arts Calculations", August 1988, EPA-340/1-88-003, incorporated by reference in Section 218.112 ~~of this Part.~~

b) Automobile or Light-Duty Truck Test Protocol

1) The protocol for testing, including determining the transfer efficiency of coating applicators, at primer surfacer operations and topcoat operations at an automobile or light-duty truck assembly source ~~must~~~~shall~~ follow the procedures in the following:

- A) ~~Before~~Prior to May 1, 2012: "Protocol for Determining the Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations" ("topcoat protocol"), December 1988, EPA-450/3-88-018, incorporated by reference in Section 218.112 ~~of this Part~~.
 - B) On and after May 1, 2012: "Protocol for Determining the Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Primer-Surfacer and Topcoat Operations" ("topcoat protocol"), September 2008, EPA-453/R-08-002, incorporated by reference in Section 218.112 ~~of this Part~~.
 - 2) ~~Before~~Prior to testing ~~under~~pursuant to the applicable topcoat protocol, the owner or operator of a coating operation subject to the topcoat or primer surfacer limit in Section 218.204(a)(2), (a)(3), or (a)(5) ~~must~~218.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(E) shall submit a detailed testing proposal specifying the method by which testing will be conducted and how compliance will be demonstrated consistent with the applicable topcoat protocol. The proposal ~~must~~shall include: ~~at a minimum,~~
 - A) ~~A~~a comprehensive plan (including a rationale) ~~to determine for determining~~ the transfer efficiency at each booth through ~~the use of~~ in-plant or pilot testing;
 - B) ~~The~~the selection of coatings to be tested (~~to determine for the purpose of determining~~ transfer efficiency), including the rationale for coating groupings;
 - C) ~~The~~the method ~~to determine for determining~~ the analytic VOM content of as applied coatings and the formulation solvent content of as applied coatings; ~~and~~
 - D) ~~A~~a description of the records of coating VOM content as applied and coating's usage that will be kept to demonstrate compliance.
 - 3) ~~When~~Upon approval of the proposal by the Agency and USEPA approve the proposal, the compliance demonstration for a coating line may proceed.
- c) Capture System Efficiency Test Protocols
 - 1) Applicability.
~~Subsection~~The requirements of subsection (c)(2) ~~must of this Section shall~~ apply to all VOM emitting process emission units employing capture equipment (e.g., hoods, ducts), except those ~~eases noted~~ in this subsection (c)(1).

- A) If an emission unit is equipped with ~~(or uses)~~ a permanent total enclosure (PTE) that meets Agency and USEPA specifications, and ~~which~~ directs all VOM to a control device, then the emission unit is exempted from the requirements ~~described~~ in subsection (c)(2) ~~of this Section~~. The Agency and USEPA specifications to determine whether a structure is considered a PTE are ~~given~~ in Method 204 of ~~appendix M of~~ 40 CFR 51.Appendix M, incorporated by reference in Section 218.112 ~~of this Part~~. In this instance, the capture efficiency is assumed to be ~~100%~~100 percent, and the emission unit is still required to measure control efficiency using appropriate test methods ~~as specified~~ in subsection (d) ~~of this Section~~.
- B) If an emission unit is equipped with ~~(or uses)~~ a control device designed to collect and recover VOM (e.g., carbon adsorber), an explicit measurement of capture efficiency is not necessary ~~if provided that~~ the conditions ~~given below in this subsection (c)(1)(B)~~ are met. The overall control of the system can be determined by directly comparing the input liquid VOM to the recovered liquid VOM. The general procedure for use in this situation is ~~given~~ in 40 CFR 60.433, incorporated by reference in Section 218.112 ~~of this Part~~, with the following additional restrictions:
- i) Unless otherwise specified in subsection (c)(1)(B)(ii), the owner or operator ~~must~~shall obtain data each operating day for the solvent usage and solvent recovery to permit ~~determining the determination of~~ the solvent recovery efficiency of the system each operating day using a 7-day rolling period. The recovery efficiency for each operating day is computed as the ratio of the total recovered solvent for that day and the most recent ~~previous 6~~prior 6 operating days to the total solvent usage for the same 7-day period used for the recovered solvent, rather than a 30-day weighted average ~~under as given in~~ 40 CFR 60.433, incorporated by reference at Section 218.112 ~~of this Part~~. This ratio ~~must~~shall be expressed as a percentage. The ratio ~~must~~shall be computed within 72 hours ~~after following~~ each 7-day period. A source that believes that the 7-day rolling period is not appropriate may use an ~~alternative~~alternative multi-day rolling period ~~of up to not to exceed~~ 30 days, with the approval of the Agency and USEPA. In addition, ~~the source must meet~~ the criteria in subsection (c)(1)(B)(iii) or ~~subsection (c)(1)(B)(iv) must be met~~.

- ii) The owner or operator of the source engaged in printing located at 350 ~~East 22nd~~^{E. 22nd} Street, Chicago, ~~Illinois,~~ ~~must~~^{shall} obtain data each operating day for the solvent usage and solvent recovery to permit ~~determining the determination of~~ the solvent recovery efficiency of the system each operating day using a 14-day rolling period. The recovery efficiency for each operating day is computed as the ratio of the total recovered solvent for that day and the most recent ~~previous~~^{prior} 13 operating days to the total solvent usage for the same 14-day period used for the recovered solvent, rather than a 30-day weighted average ~~under as given in~~ 40 CFR 60.433, incorporated by reference in Section 218.112 ~~of this Part~~. This ratio ~~must~~^{shall} be expressed as a percentage. The ratio ~~must~~^{shall} be computed within 17 days ~~after~~^{following} each 14-day period. In addition, ~~the source must meet~~ the criteria in subsection (c)(1)(B)(iii) or ~~subsection (c)(1)(B)(iv) must be met~~.
- iii) The solvent recovery system (i.e., capture and control system) must be dedicated to a single coating line, printing line, or other discrete activity that by itself is subject to an applicable VOM emission standard, ~~or~~
- iv) If the solvent recovery system controls more than one coating line, printing line, or other discrete activity that by itself is subject to an applicable VOM emission standard, the overall control (i.e., the total recovered VOM divided by the sum of liquid VOM input from all lines and other activities venting to the control system) must meet or exceed the most stringent standard applicable to any line or other discrete activity venting to the control system.

2) Capture Efficiency Protocols.

The capture efficiency of an emission unit ~~must~~^{shall} be measured using one of the protocols ~~in this subsection (c)(2) given below~~. Appropriate test methods to be ~~used~~^{utilized} in each of the capture efficiency protocols are ~~described~~ in ~~appendix M of~~ 40 CFR 51. ~~Appendix M~~, incorporated by reference at Section 218.112 ~~of this Part~~. Any error margin associated with a test method or protocol may not be incorporated into the results of a capture efficiency test. If these techniques are not suitable for a particular process, then an alternative capture efficiency protocol may be used ~~under, pursuant to the provisions of~~ Section 218.108(b) ~~of this Part~~.

- A) Gas/gas method using temporary total enclosure (TTE). The

Agency and USEPA specifications to determine whether a temporary enclosure is considered a TTE are ~~given~~ in Method 204 of ~~appendix M of~~ 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112-~~of this Part~~. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{G_w}{G_w + F_w}$$

where:

- CE = Capture efficiency, decimal fraction;
- G_w = Mass of VOM captured and delivered to control device using a TTE;
- F_w = Mass of uncaptured VOM that escapes from a TTE.

Method 204B or 204C ~~contained in~~ [appendix M of](#) 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112-~~of this Part~~, is used to obtain G_w. Method 204D in ~~appendix M of~~ 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112-~~of this Part~~, is used to obtain F_w.

- B) Liquid/gas method using TTE. The Agency and USEPA specifications to determine whether a temporary enclosure is considered a TTE are ~~given~~ in Method 204 of ~~appendix M of~~ 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112-~~of this Part~~. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{L - F_w}{L}$$

where:

- CE = Capture efficiency, decimal fraction;
- L = Mass of liquid VOM input to process emission unit;
- F_w = Mass of uncaptured VOM that escapes from a TTE.

Method 204A or 204F ~~contained in~~ [appendix M of](#) 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112-~~of this Part~~, is used to obtain L. Method 204 D in ~~appendix M of~~ 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112-~~of this Part~~, is used to obtain F_w.

- C) Gas/gas method using the building or room (building or room enclosure), in which the affected coating line, printing line, or

other emission unit is located, as the enclosure as determined by Method 204 of ~~appendix M of~~ 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112 ~~of this Part~~, and in which "F_B" and "G" are measured while operating only the affected line or emission unit. All fans and blowers in the building or room must be operated as they would under normal production. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{G}{G + F_B}$$

where:

- CE = Capture efficiency, decimal fraction;
- G = Mass of VOM captured and delivered to control device;
- F_B = Mass of uncaptured VOM that escapes from building enclosure.

Method 204B or 204C ~~contained in~~ [appendix M of](#) 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112, ~~of this Part~~ is used to obtain G. Method 204E in [appendix M of](#) 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112, ~~of this Part~~ is used to obtain F_B.

- D) Liquid/gas method using the building or room (building or room enclosure), in which the affected coating line, printing line, or other emission unit is located, as the enclosure as determined by Method 204 of ~~appendix M of~~ 40 CFR 51.[Appendix M](#), incorporated by reference in Section 218.112 ~~of this Part~~, and in which "F_B" and "L" are measured while operating only the affected line or emission unit. All fans and blowers in the building or room must be operated as they would under normal production. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{L - F_B}{L}$$

where:

- CE = Capture efficiency, decimal fraction;
- L = Mass of liquid VOM input to process emission unit;
- F_B = Mass of uncaptured VOM that escapes from building enclosure.

Method 204A or 204F ~~contained in~~ [appendix M of](#) 40 CFR

51. [Appendix M](#), incorporated by reference in Section 218.112 ~~of this Part~~ is used to obtain L. Method 204E in ~~appendix M of 40 CFR 51. Appendix M~~, incorporated by reference in Section 218.112 ~~of this Part~~ is used to obtain F_B.

- E) Mass balance using Data Quality Objective (DQO) or Lower Confidence Limit (LCL) protocol. For a liquid/gas input where an owner or operator is using the DQO/LCL protocol and not using an enclosure as described in Method 204 of ~~appendix M of 40 CFR 51. Appendix M~~, incorporated by reference in Section 218.112 ~~of this Part~~, the VOM content of the liquid input (L) must be determined using Method 204A or 204F in ~~appendix M of 40 CFR 51. Appendix M~~, incorporated by reference in Section 218.112 ~~of this Part~~. The VOM content of the captured gas stream (G) to the control device must be determined using Method 204B or 204C in ~~appendix M of 40 CFR 51. Appendix M~~, incorporated by reference in Section 218.112 ~~of this Part~~. The results of capture efficiency calculations (G/L) must satisfy the DQO or LCL statistical analysis protocol ~~as described~~ in Section 3 of USEPA's "Guidelines for Determining Capture Efficiency," incorporated by reference at Section 218.112 ~~of this Part~~. Where capture efficiency testing is done to determine emission reductions for ~~the purpose of~~ establishing emission credits for offsets, shutdowns, and trading, the LCL protocol cannot be used for these applications. In enforcement cases, the LCL protocol cannot confirm non-compliance; capture efficiency must be determined using a protocol under subsection (c)(2)(A), (B), (C), or (D) ~~of this Section~~, the DQO protocol of this subsection (c)(2)(E), or an alternative protocol ~~underpursuant to~~ Section 218.108(b) ~~of this Part~~.

BOARD NOTE: Where LCL was used in testing emission units that are the subject of later requests for establishing emission credits for offsets, shutdowns, and trading, prior LCL results may not be relied upon to determine the appropriate amount of credits. Instead, to establish the appropriate amount of credits, additional testing may be required that would satisfy the protocol of Section 218.105(c)(2)(A), (B), (C) or (D), the DQO protocol of Section 218.105(c)(2)(E), or an alternative protocol ~~underpursuant to~~ Section 218.108(b) ~~of this Part~~.

- 3) Simultaneous testing of multiple lines or emission units with a common control device. If an owner or operator has multiple lines sharing a common control device, the capture efficiency of the lines may be tested simultaneously, subject to the following provisions:

- A) Multiple line testing must meet the criteria of Section 4 of USEPA's "Guidelines for Determining Capture Efficiency," incorporated by reference at Section 218.112 ~~of this Part~~;
 - B) The most stringent capture efficiency required for any individual line or unit must be met by the aggregate of lines or units; and
 - C) Testing of all the lines of emission units must be performed with the same capture efficiency test protocol.
- 4) Recordkeeping and Reporting
- A) All owners or operators ~~to which affected by~~ this subsection applies must maintain on file a copy of the capture efficiency protocol submitted to the Agency and ~~the USEPA on file~~. All results of the appropriate test methods and capture efficiency protocols must be reported to the Agency within 60 days after the test date. A copy of the results must be kept on file with the source for ~~three a period of 3~~ years.
 - B) If any changes are made to capture or control equipment, then the source ~~mustis required to~~ notify the Agency and ~~the~~ USEPA of these changes, and a new test may be required by the Agency or ~~the~~ USEPA.
 - C) The source must notify the Agency 30 days ~~before prior to~~ performing any capture efficiency or control test. At that time, the source must notify the Agency which capture efficiency protocol and control device test methods will be used. Notification of the actual date and expected time of testing must be submitted at least five a minimum of 5 working days ~~before prior to~~ the actual date of the test. The Agency may at its discretion accept notification with shorter advance notice ~~if those provided that such~~ arrangements do not interfere with the Agency's ability to review the protocol or observe testing.
 - D) Sources ~~usingutilizing~~ a PTE must demonstrate that this enclosure meets the requirements ~~of given in~~ Method 204 in ~~appendix M of~~ 40 CFR 51 Appendix M, incorporated by reference in Section 218.112 ~~of this Part~~, for a PTE during any testing of their control device.
 - E) Sources ~~usingutilizing~~ a TTE must demonstrate that their TTE meets the requirements ~~of given in~~ Method 204 in ~~appendix M of~~ 40 CFR 51 Appendix M, incorporated by reference in Section 218.112 ~~of this Part~~, for a TTE during testing of their control

device. The source must also provide documentation that the quality assurance criteria for a TTE have been achieved.

- F) Any source ~~using~~utilizing the DQO or LCL protocol must submit the following information to the Agency with each test report:
- i) A copy of all test methods, Quality Assurance/Quality Control procedures, and calibration procedures to be used from those ~~described in~~ appendix M of 40 CFR 51. Appendix M, incorporated by reference in Section 218.112 ~~of this Part~~;
 - ii) A table with information on each sample taken, including the sample identification and the VOM content of the sample;
 - iii) The quantity of material used for each test run;
 - iv) The quantity of captured VOM for each test run;
 - v) The capture efficiency calculations and results for each test run;
 - vi) The DQO ~~or~~and/or LCL calculations or both and results; and
 - vii) The Quality Assurance/Quality Control results, including how often the instruments were calibrated, the calibration results, and the calibration gases used.

d) Control Device Efficiency Testing and Monitoring

- 1) The control device efficiency ~~must~~shall be determined by simultaneously measuring the inlet and outlet gas phase VOM concentrations and gas volumetric flow rates in ~~compliance~~accordance with the gas phase test methods ~~specified in~~ subsection (f) ~~of this Section~~.
- 2) An owner or operator:
 - A) That uses an afterburner or carbon adsorber to comply with any ~~section~~Section of Part 218 ~~must~~shall use Agency and USEPA approved continuous monitoring equipment which is installed, calibrated, maintained, and operated according to vendor specifications at all times the control device is in use, except ~~under as provided in~~ subsection (d)(3) ~~of this Section~~. The continuous monitoring equipment must monitor the following

parameters:

- i) For each afterburner which does not have a catalyst bed, the combustion chamber temperature of each afterburner.
 - ii) For each afterburner which has a catalyst bed, commonly known as a catalytic afterburner, the temperature rise across each catalytic afterburner bed or VOM concentration of exhaust.
 - iii) For each carbon adsorber, the VOM concentration of each carbon adsorption bed exhaust or the exhaust of the bed next in sequence to be desorbed.
- B) Must install, calibrate, operate, and maintain, in compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring device, such as a strip chart, recorder, or computer, ~~with having~~ an accuracy of $\pm 1\%$ ~~1 percent~~ of the temperature measured in degrees Celsius or $\pm 0.5^\circ\text{C}$ ~~0.5°C~~, whichever is greater.
- C) Of an automobile or light-duty truck primer surfacer operation or topcoat operation subject to subsection (d)(2)(A), ~~must~~ ~~shall~~ keep a separate record of the following data for the control devices, unless alternative provisions are ~~set forth~~ in a permit ~~under~~ ~~pursuant to~~ Title V of the ~~CAA~~ ~~Clean Air Act~~:
- i) For thermal afterburners for which combustion chamber temperature is monitored, all 3-hour periods of operation in which the average combustion temperature was more than 28°C ~~(50°F)~~ ~~28°C~~ ~~(50°F)~~ below the average combustion temperature measured during the most recent performance test that demonstrated that the operation was in compliance.
 - ii) For catalytic afterburners for which temperature rise is monitored, all 3-hour periods of operation in which the average gas temperature before the catalyst bed is more than 28°C ~~(50°F)~~ ~~28°C~~ ~~(50°F)~~ below the average gas temperature immediately before the catalyst bed measured during the most recent performance test that demonstrated that the operation was in compliance.
 - iii) For catalytic afterburners and carbon adsorbers for which VOM concentration is monitored, all 3-hour periods of operation during which the average VOM concentration or the reading of organics in the exhaust gases is more than

~~20%~~^{20 percent} greater than the average exhaust gas concentration or reading measured by the organic monitoring device during the most recent determination of the recovery efficiency of a carbon adsorber or performance test for a catalytic afterburner ~~that, which~~ ~~determination or test~~ demonstrated that the operation was in compliance.

3) An owner or operator that uses a carbon adsorber to comply with Section 218.401 ~~of this Part~~ may operate the adsorber during periods of monitoring equipment malfunction ~~if, provided that:~~

A) The owner or operator notifies ~~the Agency~~ in writing ~~the Agency~~ within 10 days after the conclusion of any ~~72-hour~~^{72 hour} period during which the adsorber is operated and the associated monitoring equipment is not operational; ~~of the~~^{such} monitoring equipment failure and provides the duration of the malfunction, a description of the repairs made to the equipment, and the total to date of all hours in the calendar year during which the adsorber was operated and the associated monitoring equipment was not operational;

B) During ~~the~~^{such} period of malfunction, the adsorber is operated using timed sequences as the basis for periodic regeneration of the adsorber;

C) The period of ~~such~~ adsorber operation does not exceed 360 hours in any calendar year without the approval of the Agency and USEPA; and

D) The total of all hours in the calendar year during which the adsorber was operated and the associated monitoring equipment was not operational ~~must~~^{shall} be reported, in writing, to the Agency and USEPA by January 31 of the ~~next~~^{following} calendar year.

e) Overall Efficiency

1) The overall efficiency of the emission control system ~~must~~^{shall} be determined as the product of the capture system efficiency and the control device efficiency or by the liquid/liquid test protocol ~~as specified in 40 CFR 60.433, incorporated by reference in Section 218.112 of this Part,~~ (and revised by subsection (c)(1)(B) ~~of this Section~~) for each solvent recovery system. ~~When~~^{In those cases in which} the overall efficiency is being determined for an entire line, the capture efficiency used to calculate the product of the capture and control efficiency is the total capture

efficiency over the entire line.

- 2) For coating lines which are both chosen by the owner or operator to comply with Section 218.207(c), (d), (e), (f), (g), (m), or (n) ~~of this Part~~ by the alternative in Section 218.207(b)(2) ~~of this Part~~ and meet the criteria allowing them to comply with Section 218.207 ~~of this Part~~ instead of Section 218.204 ~~of this Part~~, the overall efficiency of the capture system and control device, as determined by the test methods and procedures ~~specified~~ in subsections (c), (d), and (e)(1) ~~must of this Section, shall be at least no less than~~ the equivalent overall efficiency ~~which shall be~~ calculated by the following equation:

$$E = \frac{VOM_a - VOM_l}{VOM_a} \times 100$$

where:

E = Equivalent overall efficiency of the capture system and control device as a percentage;

VOM_a = Actual VOM content of a coating, or the daily-weighted average VOM content of two or more coatings (if more than one coating is used), as applied to the subject coating line as determined by the applicable test methods and procedures ~~specified~~ in subsection (a) ~~of this Section~~ in units of kg ~~VOM/l VOM/l~~ (lb VOM/gal) of coating solids as applied;

VOM_l = The VOM emission limit ~~specified~~ in Section 218.204 or 218.205 ~~of this Part~~ in units of kg ~~VOM/l VOM/l~~ (lb VOM/gal) of coating solids as applied.

- f) ~~VOM~~ ~~Volatil Organic Material~~ Gas Phase Source Test Methods.
The methods in 40 CFR ~~60. Appendix 60, appendix~~ A, incorporated by reference in Section 218.112, ~~must of this Part delineated below shall~~ be used to determine control device efficiencies.

- 1) 40 CFR 60. ~~Appendix A-6, appendix A~~, Method 18 ~~and Appendix A-7, Method~~ 25 or 25A, incorporated by reference in Section 218.112, ~~of this Part~~ as appropriate to the conditions at the site, ~~must shall~~ be used to determine VOM concentration. Method selection ~~must shall~~ be based on ~~considering consideration of~~ the diversity of organic species present and their total concentration and ~~on consideration of~~ the potential presence of interfering gases. Except as indicated in subsections (f)(1)(A) and (B) ~~below~~, the test ~~must shall~~ consist of three separate runs, each lasting a

minimum of 60 minutes, unless the Agency and ~~the~~USEPA determine that process variables dictate shorter sampling times.

- A) When the method is to be used to determine the efficiency of a carbon adsorption system with a common exhaust stack for all the individual adsorber vessels, the test ~~must~~shall consist of three separate runs, each coinciding with one or more complete sequences through the adsorption cycles of all the individual absorber vessels.
 - B) When the method is to be used to determine the efficiency of a carbon adsorption system with individual exhaust stacks for each absorber vessel, each adsorber vessel ~~must~~shall be tested individually. The test for each absorber vessel ~~must~~shall consist of three separate runs. Each run ~~must~~shall coincide with one or more complete adsorption cycles.
- 2) 40 CFR 60.~~Appendix A-1, appendix A~~, Method 1 or 1A, incorporated by reference in Section 218.112 ~~of this Part~~, ~~must~~shall be used for sample and velocity traverses.
 - 3) 40 CFR 60.~~Appendix A-1, appendix A~~, Method 2, 2A, 2C, or 2D, incorporated by reference in Section 218.112 ~~of this Part~~, ~~must~~shall be used for velocity and volumetric flow rates.
 - 4) 40 CFR 60.~~Appendix A-2, appendix A~~, Method 3, incorporated by reference in Section 218.112 ~~of this Part~~, ~~must~~shall be used for gas analysis.
 - 5) 40 CFR 60.~~Appendix A-3, appendix A~~, Method 4, incorporated by reference in Section 218.112 ~~of this Part~~, ~~must~~shall be used for stack gas moisture.
 - 6) 40 CFR 60.~~Appendix A-1, appendix A~~, Methods 2, 2A, 2C, ~~and~~ 2D, ~~Appendix A-2, Method 3~~, and ~~Appendix A-3, Method 4~~, incorporated by reference in Section 218.112 ~~of this Part~~, ~~must~~shall be performed, as applicable, at least twice during each test run.
 - 7) ~~An~~Use of an adaptation to any of the test methods ~~specified~~ in subsections (f)(1), (2), (3), (4), (5), and (6) ~~of this Section~~ may not be used unless approved by the Agency and ~~the~~USEPA on a case by case basis. An owner or operator must submit sufficient documentation for the Agency and ~~the~~USEPA to find that the test methods ~~specified~~ in subsections (f)(1), (2), (3), (4), (5), and (6) of this Section will yield inaccurate results and that the proposed adaptation is appropriate.

- g) Leak Detection Methods for ~~VOM. Volatile Organic Material~~
Owners or operators required by this Part to carry out a leak detection monitoring program ~~must~~ comply with the following requirements:
- 1) Leak Detection Monitoring
 - A) Monitoring ~~must~~ comply with 40 CFR 60. ~~Appendix A-7, appendix A, Method 21, incorporated by reference in Section 218.112 of this Part.~~
 - B) The detection instrument ~~must~~ meet the performance criteria of Method 21.
 - C) The instrument ~~must~~ be calibrated before use on each day of its use by the methods ~~specified~~ in Method 21.
 - D) Calibration gases ~~must~~ be:
 - i) Zero air (less than 10 ppm of hydrocarbon in air); and
 - ii) A mixture of methane or n-hexane and air at a concentration of approximately, but ~~at least~~ ~~no less than~~, 10,000 ppm methane or n-hexane.
 - E) The instrument probe ~~must~~ be traversed around all potential leak interfaces as close to the interface as possible as described in Method 21.
 - 2) When equipment is tested for compliance with no detectable emissions as required, the test ~~must~~ comply with the following requirements:
 - A) The requirements of subsections (g)(1)(A) through (g)(1)(E) ~~must of this Section shall~~ apply.
 - B) The background level ~~must~~ be determined ~~under as set forth in~~ Method 21.
 - 3) Leak detection tests ~~must~~ be performed consistent with:
 - A) "APTI Course SI 417 Controlling Volatile Organic Compound Emissions from Leaking Process Equipment₂"; EPA-450/2-82-015, incorporated by reference in Section 218.112 ~~of this Part.~~
 - B) "Portable Instrument User's Manual for Monitoring VOC Sources₂"; EPA-340/1-86-015, incorporated by reference in Section 218.112 ~~of this Part.~~

- C) "Protocols for Generating Unit-Specific Emission Estimates for Equipment Leaks of VOC and VHAP₂"; EPA-450/3-88-010, incorporated by reference in Section 218.112 ~~of this Part~~.
 - D) "Petroleum Refinery Enforcement Manual₂"; EPA-340/1-80-008, incorporated by reference in Section 218.112 ~~of this Part~~.
- h) Bulk Gasoline Delivery System Test Protocol
 - 1) The method ~~to determine~~~~for determining~~ the emissions of gasoline from a vapor recovery system ~~is atare delineated in~~ 40 CFR ~~60.50360, Subpart XX, section 60.503~~, incorporated by reference in Section 218.112 ~~of this Part~~.
 - 2) Other tests ~~mustshall~~ be performed consistent with:
 - A) "Inspection Manual for Control of Volatile Organic Emissions from Gasoline Marketing Operations: Appendix D₂"; EPA-340/1-80-012, incorporated by reference in Section 218.112 ~~of this Part~~.
 - B) "Control of Hydrocarbons from Tank Truck Gasoline Loading Terminals: Appendix A₂"; EPA-450/2-77-026, incorporated by reference in Section 218.112 ~~of this Part~~.
 - i) ~~Despite~~~~Notwithstanding~~ other requirements of this Part, upon request of the Agency where it is necessary to demonstrate compliance, an owner or operator of an emission unit ~~which is~~ subject to this Part ~~mustshall~~, at ~~its~~own expense, conduct tests in ~~compliance~~~~accordance~~ with the applicable test methods and procedures ~~specific~~ in this Part. Nothing in this Section ~~limits~~~~shall limit~~ ~~USEPA's~~ authority ~~of the USEPA under~~~~pursuant to~~ the ~~CAA~~Clean Air Act, as amended, to require testing.
 - j) Stage II Gasoline Vapor Recovery Test Methods.

— The methods ~~to determine~~~~for determining~~ the acceptable performance of Stage II Gasoline Vapor Recovery System are ~~delineated~~ in "Technical Guidance-Stage II Vapor Recovery Systems for Control of Vehicle Refueling Emissions at Gasoline Dispensing Facilities," ~~found at~~ EPA 450/3-91-022b and incorporated by reference in Section 218.112 ~~of this Part~~. ~~These~~~~Specifically, the~~ test methods are ~~as follows~~:

- 1) Dynamic Backpressure Test₂ ~~is a test procedure~~ used to determine the pressure drop (flow resistance) through balance vapor collection and control systems (including nozzles, vapor hoses, swivels, dispenser piping, and underground piping) at prescribed flow rates.

- 2) Pressure Decay/Leak Test, ~~is a test procedure~~ used to quantify the vapor tightness of a vapor collection and control system installed at gasoline dispensing facilities.
- 3) Liquid Blockage Test, ~~is a test procedure~~ used to detect low points in any vapor collection and control system where condensate may accumulate.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.106 Compliance Dates

- a) Except as otherwise provided in this Section or ~~as otherwise provided in~~ a specific Subpart of this Part, compliance with ~~the requirements of~~ all rules is required by July 1, 1991, or September 1, 1991, for all sources located in Cook, DuPage, Kane, Lake, McHenry, or Will Counties, consistent with the appropriate provisions of Section 218.103 ~~of this Section~~.
- b) Except as otherwise provided in this Section or ~~as otherwise provided in~~ a specific Subpart of this Part, compliance with ~~the requirements of~~ this Part is required by November 15, 1993, for all sources located in Aux Sable Township or Goose Lake Township in Grundy County; or in Oswego Township in Kendall County.
- c) All emission units which meet the applicability requirements of Sections ~~218.402(a)218.402(a)(2)~~, 218.611(b), 218.620(b), 218.660(a), 218.680(a), 218.920(b), 218.940(b), 218.960(b), or 218.980(b) ~~of this Part~~, including emission units at sources ~~which are~~ excluded from the applicability criteria of Sections 218.402(a)(1), 218.611(a), 218.620(a), 218.920(a), 218.940(a), 218.960(a), or 218.980(a) ~~of this Part~~ by virtue of permit conditions or other enforceable means, must comply with ~~the requirements of~~ Subparts H, Z, AA, CC, DD, PP, QQ, RR, or TT ~~of this Part~~, respectively, by March 15, 1995. Any owner or operator of an emission unit which has already met the applicability requirements of Sections 218.402(a)(1), 218.611(a), 218.620(a), 218.920(a), 218.940(a), 218.960(a), ~~or~~ 218.980(a) ~~of this Part on or~~ by the effective date of this subsection is required to comply with all compliance dates or schedules ~~found in~~ Section Sections 218.106(a) or 218.106(b), as applicable.
- d) Any owner or operator of a source with an emission unit subject to ~~the requirements of~~ Section 218.204(m)(2) or (m)(3) ~~of this Part~~ must comply with those requirements by March 25, 1995.
- e) Any owner or operator of a source subject to ~~the requirements of~~ Section ~~218.204(c)(1), 218.204(g)(1)218.204(e)(2), 218.204(g)(2), or 218.204(h)(1)~~ ~~must~~ ~~218.204(h)(2) of this Part shall~~ comply with the applicable requirements in the applicable subsections ~~and, as well as~~ all applicable requirements in Sections 218.205 through 218.214 and 218.218; by May 1, 2012.

- f) Any owner or operator of a source subject to ~~the requirements of~~ Section 218.204(p) ~~must of this Part shall~~ comply with the requirements in Section 218.204(p) ~~and, as well as~~ all applicable requirements in Sections 218.205 through 218.211, 218.214, and 218.217 by August 1, 2010.
- g) Any owner or operator of a source subject to ~~the requirements of~~ Section ~~218.204(a)218.204(a)(2)~~ or 218.204(q) ~~must of this Part shall~~ comply with the applicable requirements in those Sections ~~and, as well as~~ all applicable requirements in Sections 218.205 through 218.214 and 218.219, by May 1, 2012.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.107 ~~Operating~~Operation of Afterburners

~~Operating~~The operation of any natural gas fired afterburner and capture system used to comply with this Part is not required ~~from during the period of~~ November 1 of any year to April 1 of the ~~next following~~ year, ~~if operating the provided that the operation of such~~ devices is not required for ~~purposes of~~ occupational safety or health, or ~~to for the~~ control of toxic substances, odor nuisances, or other regulated pollutants.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.108 Exemptions, Variations, and Alternative Means of Control or Compliance Determinations

~~Despite~~Notwithstanding the provisions of any other Sections of this Part:

- a) Any exemptions, variations, or alternatives adopted by the Board ~~under pursuant to~~ Section 28, 28.1, or 35 of the Act to the control requirements, emission limitations, or test methods ~~set forth~~ in this Part ~~are shall be~~ effective only when approved by ~~the~~ USEPA as a SIP revision.
- b) Any equivalent alternative control plan, equivalent device, or other equivalent alternative practice authorized by the Agency where this Part provides for ~~the such~~ alternative or equivalent practice or equivalent variations or alterations to test methods approved by the Agency ~~is shall be~~ effective only when included in a federally enforceable permit or approved as a SIP revision.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.109 Vapor Pressure of Volatile Organic Liquids

- a) If the VOL consists of only a single compound, the vapor pressure ~~must shall~~ be determined by ASTM Method ~~D2879-18, D2879-86~~ (incorporated by reference in Section 218.112 of this Part,) or the vapor pressure may be obtained from a publication such as: Boublik, T., V. Fried, and E. Hala, "The Vapor Pressure of Pure Substances," Elsevier Scientific Publishing Co., New York (1973); Perry's

Chemical Engineer's Handbook, [9th edition](#), McGraw-Hill Book Company ~~(2018)(1984)~~; CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company ~~(2024)(1986-87)~~; and Lange's Handbook of Chemistry, John A. Dean, editor, McGraw-Hill Book Company ~~(1998)(1985)~~, [each incorporated by reference in Section 218.112.](#)

- b) If the VOL is a mixture, the vapor pressure ~~must~~[shall](#) be determined by ASTM Method ~~D2879-18, D2879-86~~ [\(incorporated by reference in Section 218.112.\)](#) or by the following equation:

$$P_{vol} = \sum_{i=1}^n P_i X_i$$

where:

P_{vol} =	Total vapor pressure of the mixture;
n =	Number of components in the mixture;
i =	Subscript denoting an individual component;
P_i =	Vapor pressure of a component determined in compliance ~~accordance~~ with subsection (a) ~~of this Section~~ ;
X_i =	Mole fraction of the component in the total mixture.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.110 Vapor Pressure of Organic Material or Solvent

- a) If the organic material or solvent consists of only a single compound, the vapor pressure ~~must~~[shall](#) be determined by ASTM Method ~~D2879-18, D2879-86~~ [\(incorporated by reference in Section 218.112 of this Part.\)](#) or the vapor pressure may be obtained from a publication such as: Boublik, T., V. Friedl, and E. Hala, "The Vapor Pressure of Pure Substances," Elsevier Scientific Publishing Co., New York (1973); Perry's Chemical Engineer's Handbook, [9th edition](#), McGraw-Hill Book Company ~~(2018)(1984)~~; CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company ~~(2024)(1986-87)~~; and Lange's Handbook of Chemistry, John A. Dean, editor, McGraw-Hill Book Company ~~(1998)(1985)~~, [each incorporated by reference in Section 218.112.](#)
- b) If the organic material or solvent is in a mixture made up of both organic material compounds and compounds which are not organic material, the vapor pressure ~~must~~[shall](#) be determined by the following equation:

$$P_{om} = \frac{\sum_{i=1}^n P_i X_i}{\sum_{i=1}^n X_i}$$

where:

P_{om} = Total vapor pressure of the portion of the mixture which is composed of organic material;

n = Number of organic material components in the mixture;

i = Subscript denoting an individual component;

P_i = Vapor pressure of an organic material component determined in [compliance accordance](#) with subsection (a) ~~of this Section~~;

X_i = Mole fraction of the organic material component of the total organic mixture.

- c) If the organic material or solvent is in a mixture made up of only organic material compounds, the vapor pressure [mustshall](#) be determined by ASTM Method [D2879-18, D2879-86](#) (incorporated by reference in Section 218.112, ~~of this Part~~) or by the ~~above~~ equation [in subsection \(b\)](#).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.111 Vapor Pressure of Volatile Organic Material

- a) If the VOM consists of only a single compound, the vapor pressure [mustshall](#) be determined by ASTM Method [D2879-18, D2879-86](#) (incorporated by reference in Section 218.112, ~~of this Part~~) or the vapor pressure may be obtained from a publication such as: Boublik, T., V. Fried, and E. Hala, "The Vapor Pressure of Pure Substances," Elsevier Scientific Publishing Co., New York (1973); Perry's Chemical Engineer's Handbook, [9th edition](#), McGraw-Hill Book Company [\(2018\)\(1984\)](#); CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company [\(2024\)\(1986-87\)](#); and Lange's Handbook of Chemistry, John A. Dean, editor, McGraw-Hill Book Company [\(1998\)\(1985\)](#), [each incorporated by reference in Section 218.112](#).

- b) If the VOM is in a mixture made up of both VOM compounds and compounds which are not VOM, the vapor pressure ~~must~~shall be determined by the following equation:

$$P_{\text{vom}} = \frac{\sum_{i=1}^n P_i X_i}{\sum_{i=1}^n X_i}$$

where:

P_{vom} = Total vapor pressure of the portion of the mixture which is composed of VOM;

n = Number of VOM components in the mixture;

i = Subscript denoting an individual component;

P_i = Vapor pressure of a VOM component determined in ~~compliance~~accordance with subsection (a) ~~of this Section~~;

X_i = Mole fraction of the VOM component of the total organic mixture.

- c) If the VOM is in a mixture made up of only VOM compounds, the vapor pressure ~~must~~shall be determined by ASTM Method ~~D2879-18, D2879-86~~ (incorporated by reference in Section 218.112 of this Part.) or by the ~~above~~ equation in subsection (b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.112 Incorporations by Reference

The following materials are incorporated by reference and do not contain any subsequent additions or amendments.

Section 218.113 Monitoring for ~~Negligibly Reactive~~ **Negligibly Reactive** Compounds

The requirements of 35 Ill. Adm. Code 215.109, which allows the Agency to require testing and monitoring for ~~negligibly reactive~~ compound as a precondition to ~~exempting them~~ **their exemption** from the definition of "volatile organic compound", ~~applies~~ **shall apply** to owners and operators of sources subject to this Part.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.114 Compliance with Permit Conditions

~~A~~ **No** person ~~must not~~ **shall** violate any terms or conditions of a permit reflecting the requirements of this Part, operate any source except in compliance with its permit, or violate any other applicable requirements.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

SUBPART B: ORGANIC EMISSIONS FROM STORAGE AND LOADING OPERATIONS

Section 218.119 Applicability for VOL

a) ~~The limitations of~~ Section 218.120 ~~applies of this Subpart shall apply~~ to all storage containers of ~~volatile organic liquid (VOL)~~ with a maximum true vapor pressure of 0.5 psia or greater in any stationary tank, reservoir, or other container of 151 cubic meters (40,000 gal) capacity or greater, except ~~to vessels as provided below:~~

1) ~~a)~~ Vessels with a capacity greater than or equal to 40,000 gallons storing a liquid with a maximum true pressure of less than 0.5 psia;

2) ~~b)~~ Vessels of coke oven by-product plants;

- ~~3)e)~~ Pressure vessels designed to operate in excess of 29.4 psia and without emissions to the atmosphere;
- ~~4)d)~~ Vessels permanently attached to mobile vehicles such as trucks, rail cars, barges, or ships;
- ~~5)e)~~ Vessels storing petroleum liquids; or
- ~~6)f)~~ Vessels used to store beverage alcohol.
- ~~b)g)~~ Vessels with storage capacity less than 40,000 gallons must comply with Section 218.129(f).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.120 Control Requirements for Storage Containers of VOL

- a) Every owner or operator storing VOL in a vessel of 40,000 gallons or greater with a maximum true vapor pressure equal to 0.75 psia but less than 11.1 psia ~~mustshall~~ reduce VOM emissions from storage tanks, reservoirs, or other containers as follows:
 - 1) Each fixed roof tank ~~mustshall~~ be equipped with an internal floating roof that meets the following specifications or that is equipped with a vapor control system that meets the specifications ~~contained~~ in subsection (a)(4) ~~below~~:
 - A) The internal floating roof ~~mustshall~~ rest or float on the liquid surface (but not necessarily in complete contact with it) inside a storage vessel that has a fixed roof. The internal floating roof ~~mustshall~~ be floating on the liquid surface at all times, except during initial fill and ~~during those intervals~~ when the storage vessel is completely emptied and subsequently refilled. When the roof is resting on the leg supports, the process of filling, emptying, or refilling ~~mustshall~~ be continuous and ~~mustshall~~ be accomplished as rapidly as possible.
 - B) Each internal floating roof ~~mustshall~~ be equipped with one of the following closure devices between the wall of the storage vessel and the edge of the internal floating roof:
 - i) ~~A foam or liquid-filled seal mounted in contact with the liquid (liquid-mounted seal).~~ A liquid-mounted seal ~~means, which is~~ a foam- or liquid-filled seal mounted in contact with the liquid between the wall of the storage vessel and

the floating roof continuously around the circumference of the tank;

- ii) Two seals mounted one above the other so that each forms a continuous closure that completely covers the space between the wall of the storage vessel and the edge of the internal floating roof. The lower seal may be vapor-mounted, but both must be continuous; or
- iii) A mechanical shoe seal, which is a metal sheet held vertically against the wall of the storage vessel by springs or weighted levers and is connected by braces to the floating roof. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.

- C) Each opening in a noncontact internal floating roof, except for automatic bleeder vents (vacuum breaker vents) and the rim space vents, is to provide a projection below the liquid surface.
- D) Each opening in the internal floating roof, except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains, ~~mustis to~~ be equipped with a cover or lid which ~~mustis to~~ be maintained in a closed position at all times (i.e., no visible gap) except when the device is in actual use. The cover or lid ~~mustshall~~ be equipped with a gasket. Covers on each access hatch and automatic gauge float well ~~mustshall~~ be bolted except when they are in use.
- E) Automatic bleeder vents ~~mustshall~~ be equipped with a gasket and ~~are to be~~ closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the roof leg supports.
- F) Rim space vents ~~mustshall~~ be equipped with a gasket and ~~are to be~~ set to open only when the internal floating roof is not floating or at the manufacturer's recommended setting.
- G) Each penetration of the internal floating roof for ~~the purpose of~~ sampling ~~mustshall~~ be a sample well. The sample well ~~mustshall~~ have a slit fabric cover that covers at least ~~90%90 percent~~ of the opening.
- H) Each penetration of the internal floating roof that allows for passage of a ladder ~~mustshall~~ have a gasketed sliding cover.

- 2) During the next scheduled tank cleaning or before March 15, 2004, whichever comes first, each internal floating roof tank mustshall meet the specifications ~~set forth~~ in subsections (a)(1)(A) through (H) ~~above~~.
- 3) Each external floating roof tank mustshall meet the following specifications:
 - A) Each external floating roof mustshall be equipped with a closure device between the wall of the storage vessel and the roof edge. The closure device ~~mustis to~~ consist of two seals, one above the other. The lower seal is referred to as the primary seal, and the upper seal is referred to as the secondary seal.
 - i) Except ~~underas provided in~~ Section 218.127(b)(4) ~~of this Subpart~~, the primary seal mustshall completely cover the annular space between the edge of the floating roof and tank wall and mustshall be either a liquid mounted seal or a shoe seal.
 - ii) The secondary seal mustshall completely cover the annular space between the external floating roof and the wall of the storage vessel in a continuous fashion, except as allowed in Section 218.127(b)(4) ~~of this Subpart~~.
 - iii) The tank mustshall be equipped with the closure device after the next scheduled tank cleaning, but ~~by no later than~~ March 15, 2004.
 - B) Except for automatic bleeder vents and rim space vents, each opening in a noncontact external floating roof mustshall provide a projection below the liquid surface. Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof ~~mustis to~~ be equipped with a gasketed cover, seal, or lid ~~that is to be~~ maintained in a closed position at all times (i.e., no visible gap), except when the device is in actual use. Automatic bleeder vents ~~mustare to~~ be closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the roof leg supports. Rim vents ~~mustare to~~ be set to open when the roof is being floated off the roof leg supports or at the manufacturer's recommended setting. Automatic bleeder vents and rim space vents ~~mustare to~~ be gasketed. Each emergency roof drain ~~mustis to~~ be provided with a slotted membrane fabric cover that covers at least ~~90%90 percent~~ of the area of the opening.
 - C) The roof mustshall be floating on the liquid at all times (i.e., off the roof leg supports) except when the tank is completely emptied and

subsequently refilled. The process of filling, emptying, or refilling when the roof is resting on the leg supports ~~must~~ be continuous and ~~must~~ be accomplished as rapidly as possible.

- 4) A closed vent system and control device ~~must~~ respectively ~~shall~~ meet the following specifications:
 - A) The closed vent system ~~must~~ be designed to collect all VOM vapors and gases discharged from the storage vessel and operated with no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background and visual inspections, as determined by the methods ~~specified~~ in 40 CFR 60.485(c), incorporated by reference at Section 218.112(d) ~~of this Part~~.
 - B) The control device ~~must~~ be designed and operated to reduce inlet VOM emissions by ~~95%~~ ~~95 percent~~ or greater. If a flare is used as the control device, it ~~must~~ meet the specifications ~~described~~ in the general control device requirements of 40 CFR 60.18, incorporated by reference at Section 218.112(d) ~~of this Part~~.
- 5) An alternative emission control plan equivalent to the requirements of subsection (a)(1), (a)(2), (a)(3), or (a)(4) ~~above~~ that has been approved by the Agency and ~~the~~ USEPA in a federally enforceable permit or as a SIP revision.
 - b) The owner or operator of each storage vessel with a design capacity ~~of at least equal to or greater than~~ 40,000 gallons which contains VOL that, as stored, has a maximum true vapor pressure greater than or equal to 11.1 psia ~~must~~ equip each storage vessel with a closed vent system and control device as specified in subsection (a)(4) ~~above~~.
 - c) ~~Despite~~ ~~Notwithstanding~~ subsection (b) ~~of this Section~~, where an owner or operator can demonstrate that the control device installed on a storage vessel on or before December 31, 1992, was designed to reduce inlet VOM emissions by ~~at least 90%~~ ~~greater than or equal to 90 percent~~ but less than ~~95%~~ ~~95 percent~~, the control device ~~must~~ be operated to reduce inlet VOM ~~emission~~ ~~emission~~ by ~~at least 90%~~ ~~90 percent or greater~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.121 Storage Containers of VPL

~~A~~ ~~No~~ person ~~must not~~ ~~shall~~ cause or allow the storage of any volatile petroleum liquid (VPL) with a vapor pressure of 10.34 kPa (1.5 psia) or greater at ~~294.3 °K (70 °F)~~ ~~294.3°K (70°F)~~ or any gaseous organic material in any stationary tank, reservoir, or other container of more than 151 cubic meters (40,000 gal) capacity unless ~~the~~ ~~such~~ tank, reservoir, or other container:

- a) Is a pressure tank capable of withstanding the vapor pressure of ~~thesueh~~ liquid or the pressure of the gas, ~~so as~~ to prevent vapor or gas loss to the atmosphere at all times; or
- b) Is designed and equipped with one of the following vapor loss control devices:
 - 1) A floating roof which rests on the surface of the VPL and is equipped with a closure seal or seals between the roof edge and the tank wall. ~~TheSueh~~ floating roof ~~mustshall~~ not be permitted if the VPL has a vapor pressure of 86.19 kPa (12.5 psia) or greater at ~~294.3 °K (70 °F)~~294.3°K (70°F). ~~A~~~~No~~ person ~~must notshall~~ cause or allow the emission of air contaminants into the atmosphere from any gauging or sampling devices attached to ~~thesueh~~ tanks, except during sampling or maintenance operations.
 - 2) A vapor recovery system consisting of:
 - A) A vapor gathering system capable of collecting 85% or more of the uncontrolled VOM that would be otherwise emitted to the atmosphere; and
 - B) A vapor disposal system capable of processing ~~sueh~~-VOM ~~so as~~ to prevent its emission to the atmosphere. ~~A~~~~No~~ person ~~must notshall~~ cause or allow the emission of air contaminants into the atmosphere from any gauging or sampling devices attached to ~~asueh~~ tank, reservoir, or other container except during sampling.
 - 3) Other equipment or means of equal efficiency approved by the Agency ~~underaaccording to the provisions of~~ 35 Ill. Adm. Code 201, and ~~further~~ processed consistent with Section 218.108.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.122 Loading Operations

- a) ~~A~~~~No~~ person ~~must notshall~~ cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere during the loading of any organic material from the aggregate loading pipes of any loading area ~~with ahaving~~ through-put ~~of~~ greater than 151 cubic meters per day (40,000 gal/day) into any railroad tank car, tank truck, or trailer, unless ~~thesueh~~ loading area is equipped with submerged loading pipes or a device that is equally effective in controlling emissions and is approved by the Agency ~~underaaccording to the provisions of~~ 35 Ill. Adm. Code 201, and ~~further~~ processed consistent with Section 218.108.
- b) ~~A~~~~No~~ person ~~must notshall~~ cause or allow the loading of any organic material into any stationary tank ~~withhaving~~ a storage capacity ~~of~~ greater than 946 ~~l~~ (250 gal), unless ~~thesueh~~ tank is equipped with a permanent submerged loading pipe or an

equivalent device approved by the Agency ~~under~~according to the provisions of 35 Ill. Adm. Code 201; and ~~further~~ processed consistent with Section 218.108 ~~of this Part~~, or unless ~~the such~~ tank is a pressure tank ~~under as described in~~ Section 218.121(a) ~~of this Part~~ or is fitted with a recovery system ~~under as described in~~ Section 218.121(b)(2) ~~of this Part~~.

- c) Exception: If no odor nuisance exists, ~~the limitations of~~ this Section ~~applies shall~~ only ~~apply to the~~ loading ~~of~~ VOL with a vapor pressure of 17.24 kPa (2.5 psia) or greater at ~~294.3 °K (70 °F)~~294.3°K (70°F).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.123 Petroleum Liquid Storage Tanks

- a) ~~Subsection~~The requirements of subsection (b) ~~does of this Section shall~~ not apply to any stationary storage tank:
- 1) Equipped before January 1, 1979, with one of the vapor loss control devices ~~specified in~~ Section 218.121(b) ~~of this Part~~, except Section 218.121(b)(1) ~~of this Part~~;
 - 2) With a capacity ~~of~~ less than 151.42 cubic meters (40,000 gal);
 - 3) With a capacity ~~of~~ less than 1,600 cubic meters (422,400 gal) and used to store produced crude oil and condensate ~~before prior to~~ custody transfer;
 - 4) With a capacity ~~of~~ less than 1,430 cubic meters (378,000 gal) and used to store produced oil or condensate in crude oil gathering;
 - 5) Subject to new source performance standards for storage vessels of petroleum liquid, 40 CFR 60, as regulations promulgated by ~~USEPA the~~ U.S. Environmental Protection Agency under Section 111 of the ~~CAA [42 U.S.C. 7411] Clean Air Act (42 USC 7411)~~, as amended. *The provisions of Section 111 of the federal Clean Air Act . . . are applicable in this State and are enforceable under the Environmental Protection Act* ~~f the Environmental Protection Act~~ (Ill. Rev. Stat. 1991, ch. 111 1/2, par. 1009.1(b)) [415 ILCS 5/9.1(b)];
 - 6) In which ~~VPL volatile petroleum liquid~~ is not stored; or
 - 7) Which is a pressure tank ~~under as described in~~ Section 218.121(a) ~~of this Part~~.
- b) Subject to subsection (a), ~~an of this Section no~~ owner or operator of a stationary storage tank ~~must not shall~~ cause or allow the storage of any ~~VPL volatile petroleum liquid~~ in the tank unless:

- 1) The tank is equipped with one of the vapor loss control devices ~~underspecified in~~ Section 218.121(b) ~~of this Part~~;
- 2) There are no visible holes, tears, or other defects in the seal or any seal fabric or material of any floating roof;
- 3) All openings of any floating roof deck, except stub drains, are equipped with covers, lids, or seals ~~such~~ that:
 - A) The cover, lid, or seal is in the closed position at all times except when petroleum liquid is transferred to or from the tank;
 - B) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports; and
 - C) Rim vents, if provided, are set to open when the roof is being floated off the roof leg supports or at the manufacturer's recommended setting;
- 4) Routine inspections of floating roof seals are conducted through roof hatches once every six months;
- 5) A complete inspection of the cover and seal of any floating roof tank is made whenever the tank is emptied for reasons other than ~~transferring the transfer of~~ petroleum liquid during the normal operation of the tank, or whenever repairs are made ~~because as a result~~ of any semi-annual inspection or incidence of roof damage or defect; and
- 6) A record of the results of each inspection conducted under subsection (b)(4) or (b)(5) ~~of this Section~~ is maintained.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.124 External Floating Roofs

- a) In addition to meeting the requirements of Section 218.123(b) ~~of this Part~~, ~~an~~ owner or operator of a stationary storage tank equipped with an external floating roof ~~must not shall~~ cause or allow the storage of any ~~VPL volatile petroleum liquid~~ in the tank unless:
 - 1) The tank has been fitted:
 - A) With a continuous secondary seal extending from the floating roof to the tank wall (rim mounted secondary seal); ~~or~~

- B) With any other equipment or means of equal efficiency approved by the Agency ~~under~~according to the provisions of 35 Ill. Adm. Code 201, and ~~further~~ processed consistent with Section 218.108 ~~of this Part~~;
- 2) Each seal closure device meets the following requirements:
- A) The seal is intact and uniformly in place around the circumference of the floating roof between the floating roof and tank wall; and
 - B) The accumulated area of gaps exceeding 0.32 ~~cm~~centimeter (1/8 ~~in.~~inch) in width between the secondary seal and the tank wall ~~does~~shall not exceed 21.2 square ~~cm~~centimeters per meter of tank diameter (1.0 square ~~in.~~inches per foot of tank diameter). Compliance with this requirement ~~must~~shall be determined by:
 - i) Physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 0.32 cm (0.125 in.) uniform diameter probe passes freely (without forcing or binding against the seal) between the seal and the tank wall; and
 - ii) Summing the area of the individual gaps.
- 3) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers across at least ~~90%~~90 percent of the area of the opening;
- 4) Openings are equipped with projections into the tank which remain below the liquid surface at all times;
- 5) Inspections are conducted ~~before~~prior to May 1 of each year to ~~ensure~~insure compliance with subsection (a) ~~of this Section~~;
- 6) The secondary seal gap is measured ~~before~~prior to May 1 of each year and within 30 days ~~after~~of a written request to demonstrate compliance with subsection (2)(B) ~~of this Section~~;
- 7) Records of the types of ~~VPL~~volatile petroleum liquid stored, the maximum true vapor pressure of the liquid as stored, the results of the inspections, and the results of the secondary seal gap measurements are maintained and available to the Agency, upon verbal or written request, at any reasonable time for ~~at least a minimum of~~ two years after the date on which the record was made.

- b) Subsection (a) ~~above~~ does not apply to any stationary storage tank equipped with an external floating roof:
 - 1) Exempted under Section 218.123(a)(2) through 218.123(a)(6) ~~of this Part~~;
 - 2) Of welded construction equipped with a metallic type shoe seal ~~and having~~ a secondary seal from the top of the shoe seal to the tank wall (shoe-mounted secondary seal);
 - 3) Of welded construction equipped with a metallic type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid-filled-type seal, or other closure device of equivalent control efficiency approved by the Agency in which a petroleum liquid with a true vapor pressure less than 27.6 kPa (4.0 psia) at ~~294.3 °K (70 °F)~~ ~~294.3 °K (70 °F)~~ is stored; or
 - 4) Used to store crude oil with a pour point of ~~50 °F~~ ~~50 °F~~ or higher as determined by ASTM Standard ~~D97-17b (2022)~~, ~~D97-66~~ incorporated by reference in Section 218.112 ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.125 Compliance Dates

Every owner or operator of a VOL or VPL storage vessel subject to ~~the requirements of~~ this Subpart ~~must~~ shall comply with ~~the requirements of~~ this Subpart ~~by the deadline in accordance with the compliance schedule specified~~ in the applicable subsection ~~below~~:

- a) Every owner or operator of a VPL storage vessel ~~under of the type included in~~ Sections 218.121, 218.123, and 218.124 ~~must of this Subpart shall~~ have complied with ~~the requirements of~~ Sections 218.121, 218.123, and 218.124 by the date ~~set forth~~ in Section 218.106(a) or (b) ~~of this Part~~.
- b) Every owner or operator of a VOL storage vessel ~~under of the type identified in~~ Section 218.119 ~~must of this Subpart shall~~ comply with ~~the requirements of~~ Section 218.120 ~~of this Subpart~~ as follows:
 - 1) For fixed roof tanks (Section 218.120(a)(1) ~~of this Subpart~~), by March 15, 1996.
 - 2) For internal floating roof tanks (Section 218.120(a)(2) ~~of this Subpart~~), either during the next scheduled tank cleaning or by March 15, 2004, whichever comes first;
 - 3) For external floating roof tanks (Section 218.120(a)(3) ~~of this Subpart~~), either during the next scheduled tank cleaning or by March 15, 2004, whichever comes first; and

- 4) For closed vent system and control device equipped tanks (Section 218.120(a)(4) ~~of this Subpart~~), by March 15, 1996.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.127 Testing VOL Operations

The owner or operator of each storage vessel specified in Section 218.119 ~~must of this Subpart shall~~ comply with ~~the requirements of~~ subsection (a), (b), or (c) ~~below~~. The applicable subsection for a particular storage vessel depends on the control equipment installed to meet the requirements of this Subpart.

- a) After installing the control equipment necessary for the source to comply with ~~the requirements of~~ Section 218.120(a)(1) or (2) ~~of this Subpart~~ (permanently affixed roof and internal floating roof), each owner or operator ~~must shall~~:
 - 1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service) ~~before prior to~~ filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, the owner or operator ~~must shall~~ repair the items before filling the storage vessel.
 - 2) For vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, ~~or if~~ there is liquid accumulated on the roof, ~~or if~~ the seal is detached, or if there are holes or tears in the seal fabric, the owner or operator ~~must shall~~ repair the items or empty and remove the storage vessel from service within 45 days. If a failure ~~that is~~ detected during inspections required in this subsection cannot be repaired within 45 days, and if the vessel cannot be emptied within 45 days, the owner or operator may request a 30-day extension from the Agency in the inspection report required in Section 218.129(a)(3) ~~of this Subpart~~. ~~The Such a~~ request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions the owner or operator will take ~~to ensure that will assure~~ that the control equipment will be repaired or the vessel will be emptied within 30 days.
 - 3) For vessels equipped with both primary and secondary seals:
 - A) Visually inspect the vessel as specified in subsection (a)(4) ~~below~~ at least every ~~five~~5 years; or

- B) Visually inspect the vessel as specified in subsection (a)(2) ~~above~~.
- 4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal, or if the seal fabric or the secondary seal has holes, tears, or other openings in the seal, or if the seal fabric or the gaskets no longer close off the liquid surfaces from the atmosphere, or if the slotted membrane has more than ~~10%~~~~10 percent~~ open area, the owner or operator ~~must~~~~shall~~ repair the items as necessary so that none of the conditions ~~specified~~ in this subsection exists before refilling the storage vessel with VOL. ~~Inspections~~~~In no event shall inspections~~ conducted in ~~compliance~~~~accordance~~ with this ~~subsection~~ ~~must~~~~provision~~ occur ~~at least once every~~~~at intervals greater than~~ 10 years ~~for in the case of~~ vessels ~~undergoing~~~~conducting~~ the annual visual inspection ~~under as specified in~~ subsections (a)(2) and (a)(3)(B) ~~above~~ and at ~~least once every five~~~~intervals~~ ~~no greater than 5~~ years ~~for in the case of~~ vessels ~~underspecified in~~ subsection (a)(3)(A) ~~above~~.
- 5) Notify the Agency in writing at least 30 days ~~before~~~~prior to the~~ filling or refilling ~~of~~ each storage vessel for which an inspection is required by subsections (a)(1) and (a)(4) ~~above~~ to afford the Agency the opportunity to have an observer present. If the inspection required by subsection (a)(4) ~~above~~ is not planned and the owner or operator could not have known about the inspection 30 days ~~before~~~~in advance of~~ refilling the tank, the owner or operator ~~must~~~~shall~~ notify the Agency at least ~~seven~~~~7~~ days ~~before~~~~prior to the~~ refilling ~~of~~ the storage vessel. Notification ~~must~~~~shall~~ be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing and sent by express mail so that ~~the Agency receives it~~~~it is received by the Agency~~ at least ~~seven~~~~7~~ days ~~before~~~~prior to the~~ refilling.
- b) The owner or operator of external floating roof tanks ~~must~~~~shall~~:
- 1) Determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel.
- A) Measurements of gaps between the tank wall ~~and~~ the primary seal (seal gaps) ~~must~~~~shall~~ be performed during the hydrostatic testing of the vessel or within 60 days after the initial fill with VOL and ~~then~~ at least once every ~~five~~~~5~~ years ~~thereafter~~.

- B) Measurements of gaps between the tank wall and the secondary seal mustshall be performed within 60 days after the initial fill with VOL and then at least once per year ~~thereafter~~.
 - C) If any source ceases to store VOL for ~~onea period of 1~~ year or more, subsequent introduction of VOL into the vessel mustshall be considered an initial fill for ~~the purposes of~~ subsections (b)(1)(A) and (b)(1)(B) ~~above~~.
- 2) Determine gap widths and areas in the primary and secondary seals individually according to the following procedures:
- A) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports;
 - B) Measure seal gaps around the entire circumference of the tank in each place where a 1/8 inch in diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel, and measure the circumferential distance of each ~~such~~ location; and
 - C) Determine the total surface area of each gap described in subsection (b)(2)(B) ~~above~~ by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each ~~such~~ width by its respective circumferential distance.
- 3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually, ~~and~~ divide the sum for each by the nominal diameter of the tank, and compare each ratio to the ~~respective~~ standards in subsection (b)(4) ~~below~~.
- 4) Make necessary repairs or empty the storage vessel within 45 days after identification in any inspection for seals not meeting the requirements ~~listed~~ in subsections (b)(4)(A) and (B) ~~below~~:
- A) The accumulated area of gaps between the tank wall and the mechanical shoe or liquid-mounted primary seal mustshall not exceed 10 in. ~~(2)~~ per foot of tank diameter, and the width of any portion of any gap mustshall not exceed 1.5 in. There must notare ~~to be no~~ holes, tears, or other openings in the shoe, seal fabric, or seal envelope.
 - B) The secondary seal mustis to meet the following requirements:

- i) The secondary seal ~~mustis to~~ be installed above the primary seal so that it completely covers the space between the roof edge and the tank wall, except ~~underas provided in~~ subsection (b)(2)(C) ~~above~~.
 - ii) The accumulated area of gaps between the tank wall and the secondary seal used in combination with a metallic shoe or liquid-mounted primary seal ~~mustshall~~ not exceed 1.0 in. ~~(2)~~ per foot of tank diameter, and the width of any portion of any gap ~~mustshall~~ not exceed 0.5 in. There ~~must notshall~~ be ~~no~~ gaps between the tank wall and the secondary seal when used ~~in combination~~ with a vapor mounted primary seal.
 - iii) There ~~must notare to~~ be ~~no~~ holes, tears, or other openings in the seal or seal fabric.
- C) If a failure ~~that is~~ detected during inspections required in Section 218.127(b)(1) ~~of this Subpart~~ cannot be repaired within 45 days and ~~if~~ the vessel cannot be emptied within 45 days, the owner or operator may request a 30-day extension from the Agency in the inspection report required in Section 218.129(b)(4) ~~of this Subpart~~. ~~The Such~~ extension request must include a demonstration of unavailability of alternate storage capacity and ~~a specification of a~~ specific schedule that will ~~ensure assure that~~ the control equipment will be repaired or the vessel ~~will be~~ emptied as soon as possible.
- 5) Notify the Agency 30 days ~~before in advance of~~ any gap measurements required by subsection (b)(1) ~~above~~ to afford the Agency the opportunity to have an observer present.
- 6) Visually inspect the external floating roof, ~~the~~ primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.
 - A) If the external floating roof has defects, ~~if~~ the primary seal has holes, tears, or other openings in the seal or the seal fabric, or ~~if~~ the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator ~~mustshall~~ repair the items as necessary so that none of the conditions ~~specified~~ in this subsection exist before filling or refilling the storage vessel with VOL.
 - B) For all the inspections required by subsection (b)(6) ~~above~~, the owner or operator ~~mustshall~~ notify the Agency in writing at least 30 days ~~before prior to~~ filling or refilling ~~of~~ each storage vessel to afford the Agency the opportunity to inspect the storage vessel ~~before prior to~~ the refilling of the storage vessel. Notification

~~must~~shall be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be sent by express mail so that ~~the Agency receives it is received by the Agency~~ at least ~~seven~~7 days ~~before~~prior to the refilling.

- c) The owner or operator of each source ~~that is~~ equipped with a closed vent system and a flare to meet the requirements of Section 218.120(a)(4) ~~must of this Subpart shall~~ meet ~~the requirements specified in~~ the general control device requirements of 40 CFR 60.18(e) and (f), incorporated by reference at Section 218.112(d) ~~of this Part~~.

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.128 Monitoring VOL Operations

- a) Except ~~under as provided in~~ subsection (d), the owner or operator of each storage vessel with a design capacity ~~of at least greater than or equal to~~ 40,000 gallons storing a liquid with a maximum true vapor pressure that is normally less than 0.75 psia ~~must~~shall notify the Agency within 30 days when the maximum true vapor pressure of the liquid exceeds 0.75 psia.
- b) Available data on the storage temperature may be used to determine the maximum true vapor pressure.
- 1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based ~~on upon~~ the highest expected calendar-month average of the storage temperature. For vessels operated at ambient temperatures, the maximum true vapor pressure is calculated based ~~on upon~~ the maximum local monthly average ambient temperature as reported by the National Weather Service.
- 2) For other liquids, the vapor pressure ~~must be~~:
- A) Determined by ASTM Method D-879-83, incorporated by reference at Section 218.112(a) ~~of this Part~~;
- B) Measured by an appropriate method approved by the Agency and USEPA; or
- C) Calculated by an appropriate method approved by the Agency and USEPA.
- c) The owner or operator of each vessel storing a mixture of indeterminate or variable composition ~~are~~shall be subject to the following:

- 1) ~~Before~~~~Prior to~~ the initial filling of the vessel, the maximum true vapor pressure for the range of anticipated liquid compositions to be stored ~~must~~~~will~~ be determined using the methods ~~described~~ in subsection (b).
- 2) For vessels in which the vapor pressure of the anticipated liquid composition is at least 0.5 psia ~~or greater~~ but less than 0.75 psia, an initial physical test of the vapor pressure is required; ~~then~~ a physical test is required at least once every ~~six~~6 months ~~using one of the~~~~thereafter is required~~ ~~as determined by~~ the following methods:
 - A) ASTM Method D-~~2879-18~~~~2879-83~~, incorporated by reference at Section 218.112(a) ~~of this Part~~;
 - B) ASTM Method D-~~323-20a~~~~323-08~~, incorporated by reference at Section 218.112(a) ~~of this Part~~; or
 - C) ~~An~~~~As measured by an~~ appropriate method approved by the Agency.
- d) The owner or operator of each vessel equipped with a closed vent system and control device meeting the specifications of Section 218.120 ~~of this Subpart~~ is exempt from the requirements of subsections (a) and (b).

(Source: Amended at 50 Ill. Reg. _____, effective _____)

Section 218.129 Recordkeeping and Reporting for VOL Operations

The owner or operator of each storage vessel specified in Section 218.120(a) ~~must~~~~of this Subpart~~ ~~shall~~ maintain records and furnish reports as required by subsection (a), (b), or (c) ~~below~~ as appropriate for the control equipment installed to meet the requirements of Section 218.120. The owner or operator ~~must~~~~shall~~ keep copies of all reports and records required by this Section, except for the records required by subsection (c)(1) ~~below~~, for at least ~~three~~3 years. The records required by subsection (c)(1) ~~must~~~~below~~ ~~shall~~ be kept for the life of the control equipment.

- a) After installing control equipment in ~~compliance~~~~accordance~~ with Section 218.120(a)(1) or (2) ~~of this Subpart~~ (fixed roof and internal floating roof), the owner or operator ~~must~~~~shall~~:
 - 1) Furnish the Agency with a report that describes the control equipment and certifies that the control equipment meets the specifications of Section 218.120(a)(1) and 218.127(a)(1) ~~of this Subpart~~;
 - 2) Keep a record of each inspection performed as required by Section 218.127(a)(1), (a)(2), (a)(3), and (a)(4) ~~of this Subpart~~. Each record ~~must~~~~shall~~ identify the storage vessel on which the inspection was performed and ~~must~~~~shall~~ contain the date the vessel was inspected and the

observed condition of each component of the control equipment (seals, internal floating roof, and fittings);

- 3) If any of the conditions ~~described~~ in Section 218.127(a)(2) ~~of this Subpart~~ are detected during the annual visual inspection required by Section 218.127(a)(2), report to the Agency within 30 days after the inspection the identity of the storage vessel, the nature of the defects, and the date the storage vessel was emptied or the nature of and date the repair was made; and
 - 4) After each inspection required by Section 218.127(a)(3) ~~of this Subpart~~ where holes or tears in the seal or seal fabric, ~~or~~ defects in the internal floating roof, or other control equipment defects ~~listed~~ in Section 218.127(a)(3)(B) ~~of this Subpart~~ are discovered, report to the Agency within 30 days after the inspection the identity of the storage vessel and the reason it did not meet the specifications of Section 218.120(a)(1) or (2) or Section 218.127(a) ~~of this Subpart~~, and list each repair made.
- b) After installing control equipment in ~~compliance~~accordance with Section 218.120(a)(3) ~~of this Subpart~~ (external floating roof), the owner or operator must~~shall~~:
- 1) Furnish the Agency with a report that describes the control equipment, and certify that the control equipment meets the specifications of Sections 218.120(a)(3) and 218.127(b)(2), (b)(3), and (b)(4) ~~of this Subpart~~;
 - 2) Within 60 days after performing the seal gap measurements required by Section 218.127(b)(1) ~~of this Subpart~~, furnish the Agency with a report that contains:
 - A) The date of measurement;
 - B) The raw data obtained in the measurement; and
 - C) The calculations ~~of this Subpart~~ described in Section 218.127(b)(2) and (b)(3) ~~of this Subpart~~;
 - 3) Maintain records of each gap measurement performed as required by Section 218.127(b) ~~of this Subpart~~. ~~The~~Such records must~~shall~~ identify the storage vessel in which the measurement was performed and must~~shall~~ contain:
 - A) The date of measurement;
 - B) The raw data obtained in the measurement; and

- C) The calculations described in Section 218.127(b)(2) and (b)(3) ~~of this Subpart~~;
 - 4) After each seal gap measurement that detects gaps exceeding the limitations ~~underspecified by~~ Section 218.127(b)(4) ~~of this Subpart~~, submit a report to the Agency within 30 days after the inspection identifying the vessel and containing the information ~~specified in~~ subsection (b)(2) ~~above~~ and the date the vessel was emptied or the repairs were made and the date of repair.
- c) After installing control equipment in ~~compliance~~ with Section 218.127(a)(4) or (b)(1) ~~of this Subpart~~ (closed vent system and control device other than a flare), the owner or operator ~~must~~ shall maintain ~~the following records~~:
- 1) A copy of the operating plan; and
 - 2) The measured values of the parameters monitored in ~~compliance~~ with Section 218.127(c)(2) ~~of this Subpart~~.
- d) After installing a closed vent system and flare to comply with Section 218.127 ~~of this Subpart~~, the owner or operator ~~must~~ shall:
- 1) Provide the Agency with a report containing the measurements required by 40 CFR 60.18(f)(1), (2), (3), (4), (5), and (6), incorporated by reference at Section 218.112(d) ~~of this Part~~, within ~~six~~ 6 months after the initial start-up date;
 - 2) Maintain records of all periods of operation during which the flare pilot flame is absent; and
 - 3) Report semiannually all periods recorded under 40 CFR 60.115b(d)(2), incorporated by reference at Section 218.112(d) ~~of this Part~~, in which the pilot flame was absent.
- e) The owner or operator ~~must~~ shall maintain all records required by this Section, except for the records required by subsection (f) ~~below~~, for at least ~~three~~ 3 years. The records required by subsection (f) ~~must~~ shall be kept for the life of the source.
- f) The owner or operator of each storage vessel specified in Section 218.119 ~~must~~ shall maintain readily accessible records of the dimension of the storage vessel and an analysis of the capacity of the storage vessel. Each storage vessel with a design capacity less than 40,000 gallons is ~~not~~ subject to ~~no~~ provisions of this Part, other than the requirement to maintain those required by

~~maintaining~~ readily accessible records of the dimensions of the storage vessel and analysis of the capacity of the storage vessel.

- g) Except ~~underas provided in~~ Section 218.128(c) and (d) ~~of this Subpart~~, the owner or operator of each storage vessel subject to ~~the requirements in~~ Section 218.120 with a design capacity ~~of at least~~~~greater than or equal to~~ 40,000 gallons storing a liquid with a maximum true vapor pressure ~~at least~~~~greater than or equal to~~ 0.5 psia but less than 0.75 psia ~~must~~~~shall~~ maintain a record of the VOL storage, the period of storage, and the maximum true vapor pressure of the VOL during the ~~respective~~ storage period.
