Subject: [External] Rantoul Transfer Station Case number PCB 2026-002
Date: Tuesday, November 17, 2026 4:13:41 PM

The Illinois pollution control board should overturn the village of Rantoul decision to approve the waste transfer station.

I think the village of Rantoul process for approving the waste transfer station was unfair because: 1.) the Rantoul citizens were not adequately informed about a transfer station even being considered for Rantoul until it was already voted on. In other words this was done under the table until it was voted on. For me, I watch 95% of these meetings, first I heard of this is when they voted on it which the mayor was the tie vote and he voted yes. I heard there was money under the table for this, but I can't specifically substantiate this. 2.) this will directly affect the west part of town in a negative way lots of new businesses and housing have arrived and planned on coming to Rantoul. A few have already canceled plans to build, which will negatively affect the town. I personally have two friends that canceled their plans to build houses due to this. 3.) the smell and large trucks coming in and out of this side of town will affect the quality of life for those that live in this area. 4.) even even with a fence up around the site there will be garbage around these areas.

We as Rantoul citizens should have been informed about this so we could voice our concerns and have a say. I am not against a transfer station however I am against the Location. It should not be around housing and business areas that are so close to where they want to put this transfer station. I would ask for you to please think about this decision that will negatively affect our community.

It has taken Rantoul over 20 years to see growth after Chanute Air Force Base closed. It would be sad to see this growth that we currently have stop or even worse Go back 20 years like it was.

Thank you for your time and consideration in this manner. I do appreciate it.

Sincerely,

Mary Mann Reifsteck
