

ILLINOIS POLLUTION CONTROL BOARD  
March 16, 1995

IN THE MATTER OF: )  
 )  
15% ROP PLAN CONTROL MEASURES )  
FOR VOM EMISSIONS - PART VII: ) R94-33  
BATCH OPERATIONS: ) (Rulemaking - Air)  
AMENDMENTS TO 35 ILL. ADM. )  
CODE PARTS 211, 218 AND 219 )

Proposed Rule.                      Second Notice.

OPINION AND ORDER OF THE BOARD (by R.C. Flemal):

This matter comes before the Board on the November 14, 1994 filing by the Illinois Environmental Protection Agency (Agency) of a proposal for rulemaking. The proposal is intended to implement portions of the federal Clean Air Act.

Section 182(b)(1) of the Clean Air Act (42 U.S.C. 7511(b)(1)) requires all moderate and above ozone nonattainment areas to achieve a 15% reduction of 1990 emissions of volatile organic material (VOM) by 1996. The Chicago and Metro-East St. Louis areas are classified as "severe" and "moderate" nonattainment for ozone, respectively, and are subject to the 15% reduction requirement. Today's proposal represents Part VII of the rulemakings anticipated in Illinois' 15% Rate of Progress Plan and one part of Illinois' submittal of a complete state implementation plan (SIP) for the control of ozone. Today's proposal seeks to amend 35 Ill. Adm. Code 211, 218 and 219.

The Board's responsibility in this matter arises from the Environmental Protection Act (Act) (415 ILCS 5/1 et seq. (1992)). The Board is charged therein to "determine, define and implement the environmental control standards applicable in the State of Illinois" (415 ILCS 5/5(b)). This proposal was filed pursuant to Section 28.5 of the Act as a fast-track rulemaking proceeding. (415 ILCS 5/28.5 (1992).) Section 28.5 of the Act requires the Board to proceed with rulemaking under set time-frames. The Board has no discretion to adjust these time-frames under any circumstances.

Today the Board acts to send this proposal to second notice. The Clerk shall cause the filing of the attached order with the Joint Committee on Administrative Rules pursuant to Section 5 of the Administrative Procedures Act (APA). (5 ILCS 100/1005-40 (1992).)

### PROCEDURAL HISTORY

Pursuant to Section 28.5 of the Act, the Board on November 18, 1994 sent this proposal to first notice under the APA without commenting on the merits of the proposal. The proposal was published in the Illinois Register on December 16, 1994 as follows: Section 211 was published at 18 Ill. Reg. 17808; Section 218 was published at 18 Ill. Reg. 17823; and Section 219 was published at 18 Ill. Reg. 17844.

Hearing was held in this matter on January 4, 1995, in Chicago, Illinois, before hearing officer Audrey Lozuk-Lawless. The Board has also received six public comments, which are discussed in detail below.

### PROPOSAL

The proposed rules are intended to provide for control of VOM emissions from chemical processes operating in a batch or non-continuous mode. The rules would be implemented by amendments to 35 Ill. Adm. Code Part 211, 218 and 219, Subpart V.

Sources that are intended to be covered are all batch operations at sources identified by specific standard industrial classifications (SIC) codes. The codes, as defined in the 1987 edition of the Standard Industrial Classification Manual, are codes that cover manufacture as a primary product or intermediate, any chemical identified by the following: plastic materials and resins (SIC 2821), pharmaceutical preparations (2834), medicinal chemicals and botanical production (SIC 2833), gum and wood chemicals (SIC 2861), cyclic crudes and intermediates (SIC 2865), industrial organic chemicals (SIC 2869), and agricultural chemicals (SIC 2879)<sup>1</sup>.

The geographic areas subject to this proposal are the Chicago and Metro-East St. Louis ozone nonattainment areas as defined in 35 Ill. Adm. Code 218.103 and 219.103.

The Agency has identified eighteen affected facilities located within these areas, with the majority of affected

---

<sup>1</sup> The rule also explicitly applies to all batch operations at Stepan Company's Millsdale manufacturing facility located in Elwood, Illinois, regardless of SIC codes. (See proposed Section 218.500(a)(2).) As Stepan Company observes (PC #6 at 2), the Millsdale facility has certain batch operations that do not fit into the specified codes, but which nevertheless are chemically and operationally similar to those that do.

facilities located in the Chicago ozone nonattainment area. The Agency has undertaken various outreach activities with these affected industries and industrial associations, including meeting with interested persons and distributing drafts of the proposal among them. (Statement of Reasons at 6-7.)

The Agency contends that the control programs as proposed are designed to allow compliance at a cost of less than \$2,500 per ton of VOM reduced. (Statement of Reasons at 6.) The United States Environmental Protection Agency (USEPA) estimates that the cost effectiveness of controlling VOM emissions from batch processes is \$2,500 per ton. (Id. at 5.)

### TESTIMONY AND COMMENTS

The Board received the following six public comments in this rulemaking:

- |       |  |
|-------|--|
| PC #1 | Comments of the Illinois Department of Commerce and Community Affairs;           |
| PC #2 | Comments of the Administrative Code Division of the Illinois Secretary of State; |
| PC #3 | Comments of the City of Chicago Department of Environment;                       |
| PC #4 | Comments of the Illinois Environmental Protection Agency;                        |
| PC #5 | Comments of the Illinois Environmental Regulatory Group; and                     |
| PC #6 | Comments of Stepan Company.  |

The Board has considered all public comments, as well as all testimony and exhibits, in making its decisions in this matter. The following is a summary of the major issues raised in comments and during the hearing process.

#### A. Comments of the Illinois Department of Commerce and Community Affairs

The comment from the Illinois Department of Commerce and Community Affairs (DCCA) states that DCCA has reviewed the proposal and determined that it will not significantly impact small businesses. DCCA defers to the findings from hearings conducted by the Board and written public comment to the Board.

B. Comments of the Administrative Code Division of the Illinois Secretary of State

The comment of the Administrative Code Division recommends various nonsubstantive form and typographical corrections. The Board accepts these recommendations and incorporates them into today's second notice proposal.

C. Comments of the City of Chicago Department of Environment

The Chicago Department of Environment (CDOE) recognizes that the proposed rulemaking will impact Chicago area industry; CDOE nevertheless supports the proposed rulemaking. CDOE states that the targeted VOM reduction level of 12 tons per day is a necessary and significant step toward reducing VOM emissions in this region as required by the Clean Air Act. CDOE also believes this proposal will not only help the region reach ozone attainment, but result in positive environmental and health benefits.

D. Comments of the Illinois Environmental Protection Agency, Illinois Environmental Regulatory Group, and Stepan Company

Substantive issues have been addressed in public comment by the Agency (PC #4), the Illinois Environmental Regulatory Group (IERG -- PC #5), and the Stepan Company (Stepan -- PC #6). Most of these issues originally arose during discussions at the January 4, 1995 hearing, and the public comments represent the response of the three parties to these discussions. Included are a number of changes recommended by the Agency in response to concerns of IERG and Stepan.

- 1) Sections 218.505 and 219.505, Reporting/Recordkeeping Requirements for Owners and Operators

IERG proposes that the recordkeeping/reporting requirement for flares, found at Sections 218.505 and 219.505, be limited to the maintenance of records of the flare pilot flame monitoring, and record of all periods of operations during which the pilot flame is absent. (PC #5 at 2.) In response to this proposal, the Agency recommends that the Board delete a portion of the first notice Sections 218.505(c)(2) and 219.505(c)(2). (PC #4 at 8.)

The Board accepts the Agency's proposed deletion for the purposes of second notice. (See Sections 218.505(c)(2) and 219.505(c)(2).)

- 2) Sections 218.502(b)(2) and 219.502(b)(2) and Sections 218.503(f)(3)(A)(iii) and 219.503(f)(3)(A)(iii), Definition of Emission Event

IERG and Stepan claim that the proposal needs to address the zero flow rate situation, wherein a batch cycle sits for a period of time prior to the process continuing; failure to consider zero flow rates could result in a flawed determination of applicability and/or control efficiency. (PC #5 at 3; PC #6 at 18.) IERG proposes language to clarify that an "emission event" is a "discrete period of venting that is associated with a single unit operation", and "the zero flow rate period would not be an emission event for purposes of the Batch Processes Rule". (PC #5 at 3.)

The Agency responds that if flow rates are measured in accordance with Section 218.502(f)(2) and the resulting flow rate measurement is equivalent to zero, then "such an event is not considered an emission event for purposes of this proposal". (PC #4 at 8.) In addition, the Agency proposes additional language to Sections 218.502(b)(2) and 219.502(b)(2) and Sections 218.503(f)(3)(iii) and 219.503(f)(3)(iii) that defines the term "emission event" and considers the situation where the flow rate for any emission event is zero.

The Board accepts this expanded definitional language as proposed by the Agency and incorporates it into the second notice proposal. (See Sections 218.502(f)(2), 219.502(f)(2), 218.503(f)(3)(A)(iii), and 219.503(f)(3)(A)(iii).)

- 3) Sections 218.503(f)(3)(A) and 219.503(f)(3)(A), Method 25A and Method 18 Testing Procedure for Batch Processes

IERG and Stepan propose that additional flexibility should be allowed when sampling batch cycles of eight hours or greater duration. (PC #5 at 3; PC #6 at 13-17.) IERG claims that during review of the draft CTG and discussions with the USEPA's Research Triangle Park staff and the Agency, it was agreed that alternative sampling strategy could be used for batch cycles of eight hours or greater duration that contain emission events greater than four hours. (PC #5 at 4.) Stepan believes that emissions from these long events can be accurately quantified based on three one-hour samples taken during the emission event. (PC #6 at 16 - 17.)

The Agency agrees with Stepan's recommendation that an alternative sampling strategy be allowed. Specifically, the Agency now proposes the option of allowing either continuous testing or discrete testing in the form of a minimum of three one-hour samples for each emission event of greater than four hours at each single unit operation. (PC #4 at 5.) However, the Agency specifically proposes that if the facilities elect the discrete sampling option, an emission profile (developed using material balances and process stoichiometry) must be developed for the entire duration of the emission event and the facility

must demonstrate that the portion of the emissions event being tested defines the emissions profile for such emission event. (PC #4 at 5.)

The Board accepts the Agency's revised language and incorporates it into the second notice proposal. (See Sections 218.503(f)(3)(i) and (ii), and Sections 219.503(f)(3)(i) and (ii).)

- 4) Section 218.503(f)(3)(A)(i) and 219.503(f)(3)(A)(i), Time Period for Changing Out an Impinger Train under Method 18

IERG and Stepan propose that the Board increase the maximum amount of time to change out an impinger train when testing under Method 18. Their proposal is to increase the time from a 15-minute interval to a maximum 30-minute interval. (PC #5 at 4; PC #6 at 17-18.)

The Agency agrees with IERG and Stepan that a 30-minute interval between measurements is acceptable, but only in the event that a change in the impinger train is necessary. Otherwise, the Agency proposes the 15-minute interval must not be exceeded<sup>2</sup>. (PC #4 at 6.)

The Board accepts the Agency's addition and incorporates it into the second notice proposal. (See Section 218.503(f)(3)(A)(i) and Section 219.503(f)(3)(A)(i).)

- 5) Sections 218.502(a) and 219.502(a), Alternative Approach to Determine Uncontrolled Total Annual Mass Emissions of VOM

IERG proposes that an alternative method be included to allow an owner or operator, where total production is reflected in the data upon which a valid Agency permit is based, to determine applicability on the basis of annual production versus the actual number of cycles that occur during a given year. (PC #5 at 5; Tr. at 32.) Stepan also questions whether the Agency would agree to an alternative approach based on total production rather than the potential or permitted number of batch cycles.

The Agency comments that "(i)f the permitted levels as reflected in Stepan's operating permit correspond to total production, then the Agency would agree with Stepan's proposal to allow the use of total production as an alternative to the use of potential or permitted number of batch cycles in calculating

---

<sup>2</sup> The Agency's comment cites Sections 218/219.503(f)(3)(i). The correct citation is 218/219.503(f)(3)(A)(i).

uncontrolled mass emissions". (PC #4 at 5.) In addition, the Agency proposes a definition for the term "emission event" within Sections 218.502 and 219.502. (PC #4 at 5.)

The Board accepts the Agency's additional language and incorporates it into the second notice proposal. (See Sections 218.502(a)(2), 219.502(a), 218.502(b), 219.502(b), 218.503(f)(3)(A)(iii), and 219.503(f)(3)(A)(iii).)

6) Sections 218.503(i) and 219.503(i), Absence of Request by Agency to Conduct Performance Testing

IERG suggests that the Agency clarify that when utilizing control devices other than flares or process boilers, in the absence of an Agency request to conduct performance testing, an owner or operator may demonstrate compliance by the use of engineering estimates or process stoichiometry. (PC #5 at 5.)

The Agency agrees with IERG's suggestion and has proposed additional language to specifically provide for the use of engineering estimates. (PC #4 at 8.)

The Board accepts this additional language and incorporates it into the second notice proposal. (See Sections 218.503(i) and 219.503(i).)

7) Continuous Process Units

Stepan proposes that the Board include clarification that in aggregating emissions from a process train, owners and operators (and Agency permit writers) should consider the following:

"i) Is the unit used in more than one train? ii) Are the units interdependent? iii) Are the materials used chemically compatible? iv) Are the units geographically close and accessible? v) Are the units operated as a process train throughout the year? vi) Are any continuous units involved? and vii) Can emissions be vented to a common control device?" (PC #6 at 11-12.)

The Agency does not propose specific language to address Stepan's concerns. The Board finds that no additional modifications in response to Stepan's suggestions are necessary.

8) Calendar Year

At hearing Stepan questioned the Agency whether determinations of uncontrolled total annual mass emissions were to be based on a calendar year or a rolling 12-month period. (Tr. at 38-39.) The Agency responded that the intent was that a calendar year be used for all calculations of uncontrolled total annual mass emissions. (Tr. at 39.)

Stepan now asks that the Board memorialize this portion of the record within today's opinion and order. (PC #6 at 18.) The Board accordingly observes that the record in this matter indicates that a calendar year is intended to be used for purposes of calculating uncontrolled total annual mass emissions.

9) Effective Date

Stepan recommends that the Board make these regulations effective as of the date when the final rule is published in the Illinois Register. (PC #6 at 19.) The Board notes that pursuant to the APA all adopted regulations becomes effective in this manner, and that accordingly no special action by the Board is warranted.

CONCLUSION

The Board finds that the proposed rules are technically feasible and economically reasonable, and that the rules are necessary to meet the requirements of the Clean Air Act. The Board finds that the record supports proceeding to second notice with the proposed rules as amended.

ORDER

The Board hereby proposes the following amendments to 35 Ill. Adm. Code 211, 218 and 219. The Board directs the Clerk to submit the following amendments to the Joint Committee on Administrative Rules for second notice.

APPENDIX A Rule into Section Table  
 APPENDIX B Section into Rule Table

AUTHORITY: Implementing Sections 9, 9.1 and 10 and authorized by  
 Section 27 and 28.5 of the Environmental Protection Act [415 ILCS  
 5/9, 9.1, 10, 27 and 28.5].

SOURCE: Adopted as Chapter 2: Air Pollution, Rule 201:  
 Definitions, R71-23, 4 PCB 191, filed and effective April 14,  
 1972; amended in R74-2 and R75-5, 32 PCB 295, at 3 Ill. Reg. 5,  
 p. 777, effective February 3, 1979; amended in R78-3 and 4, 35  
 PCB 75 and 243, at 3 Ill. Reg. 30, p. 124, effective July 28,  
 1979; amended in R80-5, at 7 Ill. Reg. 1244, effective January  
 21, 1983; codified at 7 Ill. Reg. 13590; amended in R82-1 (Docket

A) at 10 Ill. Reg. 12624, effective July 7, 1986; amended in R85-21(A) at 11 Ill. Reg. 11747, effective June 29, 1987; amended in R86-34 at 11 Ill. Reg. 12267, effective July 10, 1987; amended in R86-39 at 11 Ill. Reg. 20804, effective December 14, 1987; amended in R82-14 and R86-37 at 12 Ill. Reg. 787, effective December 24, 1987; amended in R86-18 at 12 Ill. Reg. 7284, effective April 8, 1988; amended in R86-10 at 12 Ill. Reg. 7621, effective April 11, 1988; amended in R88-23 at 13 Ill. Reg. 10862, effective June 27, 1989; amended in R89-8 at 13 Ill. Reg. 17457, effective January 1, 1990; amended in R89-16(A) at 14 Ill. Reg. 9141, effective May 23, 1990; amended in R88-30(B) at 15 Ill. Reg. 5223, effective March 28, 1991; amended in R88-14 at 15 Ill. Reg. 7901, effective May 14, 1991; amended in R91-10 at 15 Ill. Reg. 15564, effective October 11, 1991; amended in R91-6 at 15 Ill. Reg. 15673, effective October 14, 1991; amended in R91-22 at 16 Ill. Reg. 7656, effective May 1, 1992; amended in R91-24 at 16 Ill. Reg. 13526, effective August 24, 1992; amended in R93-9 at 17 Ill. Reg. 16504, effective September 27, 1993; amended in R93-11 at 17 Ill. Reg. 21471, effective December 7, 1993; amended in R93-14 at 18 Ill. Reg. 1253, effective January 18, 1994; amended in R94-12 at 18 Ill. Reg. 14962, effective September 21, 1994; amended in R94-14 at 18 Ill. Reg. 15744, effective October 17, 1994; amended in R94-15 at 18 Ill. Reg. 16379, effective October 25, 1994; amended in R94-16 at 18 Ill. Reg. 16929, effective November 15, 1994; amended in R94-33 at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_.

BOARD NOTE: This Part implements the Illinois Environmental Protection Act as of July 1, 1994.

#### SUBPART B: DEFINITIONS

##### Section 211.695      Batch Operation

"Batch operation" means, for purposes of 35 Ill. Adm. Code Parts 218 and 219, Sections 218.500 through 218.506 and 219.500 through 219.506, a noncontinuous operation in which a discrete quantity or batch of feed is charged into a chemical manufacturing process unit and distilled or reacted, or otherwise used at one time, and may include, but is not limited to, reactors, filters, dryers, distillation columns, extractors, crystallizers, blend tanks, neutralizer tanks, digesters, surge tanks and product separators. After each batch operation, the equipment is generally emptied before a fresh batch is started.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

##### Section 211.696      Batch Process Train

"Batch process train" means, for purposes of 35 Ill. Adm. Code Parts 218 and 219, Sections 218.500 through 218.506 and 219.500

through 219.506, the collection of equipment (e.g., reactors, filters, dryers, distillation columns, extractors, crystallizers, blend tanks, neutralizer tanks, digesters, surge tanks and product separators) configured to produce a specific product or intermediate by a batch operation. A batch process train terminates at the point of storage or product handling of the product or intermediate being produced in the batch process train. Irrespective of the product being produced, a batch process train which is independent of other processes shall be considered a single batch process train for purposes of 35 Ill. Adm. Code Parts 218 and 219.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 211.5245 Process Vent

"Process vent" means, for purposes of 35 Ill. Adm. Code Parts 218 and 219, Sections 218.500 through 218.506 and 219.500 through 219.506, any non-fugitive source of VOM emissions to the atmosphere resulting from non-combustion emission units. A process vent begins at the inlet to the control device, or in the absence of a control device, at the point of discharge to the atmosphere. This includes all emission units vents and stacks. Not included in this definition are exhaust streams from exhaust hoods and building ventilation fans which are used to provide ventilation for workers and not to collect and discharge emissions from specific emission units.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 211.6025 Single Unit Operation

"Single unit operation" means, for purposes of 35 Ill. Adm. Code Parts 218 and 219, Sections 218.500 through 218.506 and 219.500 through 219.506, a distinct piece of equipment in a batch operation within which one or more discrete processing steps occur. Such discrete processing steps include, but are not limited to, the preparation of reactants, facilitation of reactions, separation and purification of products or intermediates, and recycling of materials.

TITLE 35: ENVIRONMENTAL PROTECTION  
SUBTITLE B: AIR POLLUTION  
CHAPTER I: POLLUTION CONTROL BOARD  
SUBCHAPTER C: EMISSIONS STANDARDS AND LIMITATIONS  
FOR STATIONARY SOURCES

PART 218  
ORGANIC MATERIAL EMISSION STANDARDS AND LIMITATIONS FOR THE  
CHICAGO AREA

SUBPART A: GENERAL PROVISIONS

Section	
218.100	Introduction
218.101	Savings Clause
218.102	Abbreviations and Conversion Factors
218.103	Applicability
218.104	Definitions
218.105	Test Methods and Procedures
218.106	Compliance Dates
218.107	Operation of Afterburners
218.108	Exemptions, Variations, and Alternative Means of Control or Compliance Determinations
218.109	Vapor Pressure of Volatile Organic Liquids
218.110	Vapor Pressure of Organic Material or Solvents
218.111	Vapor Pressure of Volatile Organic Material
218.112	Incorporations by Reference
218.113	Monitoring for Negligibly-Reactive Compounds
218.114	Compliance with Permit Conditions

SUBPART B: ORGANIC EMISSIONS FROM STORAGE AND LOADING  
OPERATIONS

Section	
218.119	Applicability for VOL
218.120	Control Requirements for Storage Containers of VOL
218.121	Storage Containers of VPL
218.122	Loading Operations
218.123	Petroleum Liquid Storage Tanks
218.124	External Floating Roofs
218.125	Compliance Dates
218.126	Compliance Plan (Repealed)
218.127	Testing VOL Operations
218.128	Monitoring VOL Operations
218.129	Recordkeeping and Reporting for VOL Operations

SUBPART C: ORGANIC EMISSIONS FROM MISCELLANEOUS  
EQUIPMENT

Section	
218.141	Separation Operations
218.142	Pumps and Compressors

218.143 Vapor Blowdown  
 218.144 Safety Relief Valves

SUBPART E: SOLVENT CLEANING

Section  
 218.181 Solvent Cleaning in General  
 218.182 Cold Cleaning  
 218.183 Open Top Vapor Degreasing  
 218.184 Conveyorized Degreasing  
 218.185 Compliance Schedule (Repealed)  
 218.186 Test Methods

SUBPART F: COATING OPERATIONS

Section  
 218.204 Emission Limitations  
 218.205 Daily-Weighted Average Limitations  
 218.206 Solids Basis Calculation  
 218.207 Alternative Emission Limitations  
 218.208 Exemptions from Emission Limitations  
 218.209 Exemption from General Rule on Use of Organic Material  
 218.210 Compliance Schedule  
 218.211 Recordkeeping and Reporting

SUBPART G: USE OF ORGANIC MATERIAL

Section  
 218.301 Use of Organic Material  
 218.302 Alternative Standard  
 218.303 Fuel Combustion Emission Units  
 218.304 Operations with Compliance Program

SUBPART H: PRINTING AND PUBLISHING

Section  
 218.401 Flexographic and Rotogravure Printing  
 218.402 Applicability  
 218.403 Compliance Schedule  
 218.404 Recordkeeping and Reporting  
 218.405 Heatset Web Offset Lithographic Printing

SUBPART Q: LEAKS FROM SYNTHETIC  
 ORGANIC CHEMICAL AND POLYMER  
 MANUFACTURING PLANT

Section  
 218.421 General Requirements  
 218.422 Inspection Program Plan for Leaks  
 218.423 Inspection Program for Leaks  
 218.424 Repairing Leaks  
 218.425 Recordkeeping for Leaks

218.426 Report for Leaks  
 218.427 Alternative Program for Leaks  
 218.428 Open-Ended Valves  
 218.429 Standards for Control Devices  
 218.430 Compliance Date (Repealed)

SUBPART R: PETROLEUM REFINING AND  
 RELATED INDUSTRIES; ASPHALT MATERIALS

Section  
 218.441 Petroleum Refinery Waste Gas Disposal  
 218.442 Vacuum Producing Systems  
 218.443 Wastewater (Oil/Water) Separator  
 218.444 Process Unit Turnarounds  
 218.445 Leaks: General Requirements  
 218.446 Monitoring Program Plan for Leaks  
 218.447 Monitoring Program for Leaks  
 218.448 Recordkeeping for Leaks  
 218.449 Reporting for Leaks  
 218.450 Alternative Program for Leaks  
 218.451 Sealing Device Requirements  
 218.452 Compliance Schedule for Leaks  
 218.453 Compliance Dates (Repealed)

SUBPART S: RUBBER AND MISCELLANEOUS PLASTIC PRODUCTS

Section  
 218.461 Manufacture of Pneumatic Rubber Tires  
 218.462 Green Tire Spraying Operations  
 218.463 Alternative Emission Reduction Systems  
 218.464 Emission Testing  
 218.465 Compliance Dates (Repealed)  
 218.466 Compliance Plan (Repealed)

SUBPART T: PHARMACEUTICAL MANUFACTURING

Section  
 218.480 Applicability  
 218.481 Control of Reactors, Distillation Units, Crystallizers,  
 Centrifuges and Vacuum Dryers  
 218.482 Control of Air Dryers, Production Equipment Exhaust  
 Systems and Filters  
 218.483 Material Storage and Transfer  
 218.484 In-Process Tanks  
 218.485 Leaks  
 218.486 Other Emission Units  
 218.487 Testing  
 218.488 Monitoring for Air Pollution Control Equipment  
 218.489 Recordkeeping for Air Pollution Control Equipment

SUBPART V: BATCH OPERATIONS AND AIR OXIDATION PROCESSES

Section	
<u>218.500</u>	<u>Applicability for Batch Operations</u>
<u>218.501</u>	<u>Control Requirements for Batch Operations</u>
<u>218.502</u>	<u>Determination of Uncontrolled Total Annual Mass Emissions and Average Flow Rate Values for Batch Operations</u>
<u>218.503</u>	<u>Performance and Testing Requirements for Batch Operations</u>
<u>218.504</u>	<u>Monitoring Requirements for Batch Operations</u>
<u>218.505</u>	<u>Reporting and Recordkeeping for Batch Operations</u>
<u>218.506</u>	<u>Compliance Date</u>
218.520	Emission Limitations for Air Oxidation Processes
218.521	Definitions (Repealed)
218.522	Savings Clause
218.523	Compliance
218.524	Determination of Applicability
218.525	Emission Limitations for Air Oxidation Processes
218.526	Testing and Monitoring
218.527	Compliance Date (Repealed)

## SUBPART W: AGRICULTURE

Section	
218.541	Pesticide Exception

## SUBPART X: CONSTRUCTION

Section	
218.561	Architectural Coatings
218.562	Paving Operations
218.563	Cutback Asphalt

## SUBPART Y: GASOLINE DISTRIBUTION

Section	
218.581	Bulk Gasoline Plants
218.582	Bulk Gasoline Terminals
218.583	Gasoline Dispensing Operations - Storage Tank Filling Operations
218.584	Gasoline Delivery Vessels
218.585	Gasoline Volatility Standards
218.586	Gasoline Dispensing Operations - Motor Vehicle Fueling Operations

## SUBPART Z: DRY CLEANERS

Section	
218.601	Perchloroethylene Dry Cleaners
218.602	Applicability
218.603	Leaks
218.604	Compliance Dates (Repealed)
218.605	Compliance Plan (Repealed)

218.606 Exception to Compliance Plan (Repealed)  
 218.607 Standards for Petroleum Solvent Dry Cleaners  
 218.608 Operating Practices for Petroleum Solvent Dry Cleaners  
 218.609 Program for Inspection and Repair of Leaks  
 218.610 Testing and Monitoring  
 218.611 Applicability for Petroleum Solvent Dry Cleaners  
 218.612 Compliance Dates (Repealed)  
 218.613 Compliance Plan (Repealed)

SUBPART AA: PAINT AND INK MANUFACTURING

Section  
 218.620 Applicability  
 218.621 Exemption for Waterbase Material and Heatset-Offset Ink  
 218.623 Permit Conditions (Repealed)  
 218.624 Open Top Mills, Tanks, Vats or Vessels  
 218.625 Grinding Mills  
 218.626 Storage Tanks  
 218.628 Leaks  
 218.630 Clean Up  
 218.636 Compliance Schedule  
 218.637 Recordkeeping and Reporting

SUBPART BB: POLYSTYRENE PLANTS

Section  
 218.640 Applicability  
 218.642 Emissions Limitation at Polystyrene Plants  
 218.644 Emissions Testing

SUBPART CC: POLYESTER RESIN PRODUCT MANUFACTURING PROCESS

Section  
 218.660 Applicability  
 218.666 Control Requirements  
 218.667 Compliance Schedule  
 218.668 Testing  
 218.670 Recordkeeping and Reporting for Exempt Emission Units  
 218.672 Recordkeeping and Reporting for Subject Emission Units

SUBPART DD: AEROSOL CAN FILLING

Section  
 218.680 Applicability  
 218.686 Control Requirements  
 218.688 Testing  
 218.690 Recordkeeping and Reporting for Exempt Emission Units  
 218.692 Recordkeeping and Reporting for Subject Emission Units

SUBPART GG: MARINE TERMINALS

Section  
 218.760 Applicability

218.762 Control Requirements  
 218.764 Compliance Certification  
 218.766 Leaks  
 218.768 Testing and Monitoring  
 218.770 Recordkeeping and Reporting  
 218.875 Applicability of Subpart BB (Renumbered)  
 218.877 Emissions Limitation at Polystyrene Plants (Renumbered)  
 218.879 Compliance Date (Repealed)  
 218.881 Compliance Plan (Repealed)  
 218.883 Special Requirements for Compliance Plan (Repealed)  
 218.886 Emissions Testing (Renumbered)

SUBPART PP: MISCELLANEOUS FABRICATED PRODUCT MANUFACTURING  
 PROCESSES

Section  
 218.920 Applicability  
 218.923 Permit Conditions (Repealed)  
 218.926 Control Requirements  
 218.927 Compliance Schedule  
 218.928 Testing

SUBPART QQ: MISCELLANEOUS FORMULATION MANUFACTURING PROCESSES

Section  
 218.940 Applicability  
 218.943 Permit Conditions (Repealed)  
 218.946 Control Requirements  
 218.947 Compliance Schedule  
 218.948 Testing

SUBPART RR: MISCELLANEOUS ORGANIC CHEMICAL MANUFACTURING  
 PROCESSES

Section  
 218.960 Applicability  
 218.963 Permit Conditions (Repealed)  
 218.966 Control Requirements  
 218.967 Compliance Schedule  
 218.968 Testing

SUBPART TT: OTHER EMISSION UNITS

Section  
 218.980 Applicability  
 218.983 Permit Conditions (Repealed)  
 218.986 Control Requirements  
 218.987 Compliance Schedule  
 218.988 Testing

SUBPART UU: RECORDKEEPING AND REPORTING

Section  
 218.990 Exempt Emission Units  
 218.991 Subject Emission Units

Section 218.Appendix A: List of Chemicals Defining Synthetic Organic Chemical and Polymer Manufacturing  
 Section 218.Appendix B: VOM Measurement Techniques for Capture Efficiency  
 Section 218.Appendix C: Reference Methods and Procedures  
 Section 218.Appendix D: Coefficients for the Total Resource Effectiveness Index (TRE) Equation  
 Section 218.Appendix E: List of Affected Marine Terminals

AUTHORITY: Implementing Section 10 and authorized by Section 28.5 of the Environmental Protection Act [415 ILCS 5/10 and 28.5].

BOARD NOTE: This Part implements the Illinois Environmental Protection Act as of July 1, 1994.

#### SUBPART V: BATCH OPERATIONS AND AIR OXIDATION PROCESSES

##### Section 218.500 Applicability for Batch Operations

- a) The control requirements set forth in Section 218.501 of this Subpart shall apply to:
- 1) Process vents associated with batch operations at sources identified by any of the following four-digit standard industrial classification ("SIC") codes, as defined in the 1987 edition of the Federal Standard Industrial Classification Manual: SIC 2821, 2833, 2834, 2861, 2865, 2869, and 2879; and
  - 2) All batch operations at Stepan Company's Millsdale manufacturing facility, Elwood, Illinois.

- b) The requirements of Sections 218.500 through 218.506 shall not apply to:
- 1) Any emission unit included within the category specified in 35 Ill. Adm. Code Part 218, Subpart B or T;
  - 2) Any emission unit included within the category specified in Sections 218.520 through 218.527 of this Subpart; and
  - 3) Any emission unit included within an Early Reduction Program, as specified in 40 CFR Part 63, and published in 57 Fed. Reg. 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.
- c) The following single unit operations and batch process trains are subject to this Subpart but are considered to be de minimis and are, therefore, exempt from the control requirements of Section 218.501 of this Subpart. However, the recordkeeping and reporting requirements in Section 218.505 of this Subpart shall apply to such de minimis single unit operations and batch process trains:
- 1) Within a batch operation, any single unit operation with uncontrolled total annual mass emissions of less than or equal to 500 lb/yr of VOM. Such single unit operations are also excluded from the calculation of the total annual mass emissions for a batch process train. If the uncontrolled total annual mass emissions from such exempt single unit operation exceed 500 lb/yr of VOM in any subsequent year, the source shall calculate applicability in accordance with subsection (d) of this Section for both the individual single unit operation and the batch process train containing the single unit operation; and
  - 2) Any batch process train containing process vents that have, in the aggregate, uncontrolled total annual mass emissions, as determined in accordance with Section 218.502(a) of this Subpart, of less than 30,000 lb/yr of VOM for all products manufactured in such batch process train.
- d) The applicability equations in subsection (e) of this Section, which require the calculation of uncontrolled total annual mass emissions and flow rate value, shall be used to determine whether a single unit operation or

a batch process train is subject to the control requirements set forth in Section 218.501 of this Subpart. The applicability equation shall be applied to the following:

- 1) Any single unit operation with uncontrolled total annual mass emissions that exceed 500 lb/yr and with a VOM concentration greater than 500 ppmv. In this individual determination, no applicability analysis shall be performed for any single unit operation with a VOM concentration of less than or equal to 500 ppmv; and
- 2) Any batch process train containing process vents which, in the aggregate, have uncontrolled total annual mass emissions of 30,000 lb/yr or more of VOM from all products manufactured in the batch process train. Any single unit operation with uncontrolled total annual mass emissions exceeding 500 lb/yr, regardless of VOM concentration, shall be included in the aggregate applicability analysis.

e) Applicability equations

- 1) The applicability equations in this subsection are specific to volatility.
- 2) For purposes of this subsection, the following abbreviations apply:
  - A) FR = Vent stream flow rate, scfm;
  - B) UTAME = Uncontrolled total annual mass emissions of VOM, expressed as lb/yr;
  - C) WAV = Weighted average volatility;
  - D) MVOM<sub>i</sub> = Mass of VOM component i;
  - E) MWVOM<sub>i</sub> = Molecular weight of VOM component i; and
  - F) VP<sub>i</sub> = Vapor pressure of VOM component i.
- 3) Weighted average volatility shall be calculated as follows:

$$\frac{\sum (MVOM_i)}{\sum [(VP_i) \times \text{FR}_i]}$$

$$WAV = \frac{\sum_{i=1}^n (MVOM_i)}{\sum_{i=1}^n (MWVOM_i)}$$

4) For purposes of determining applicability, flow rate values shall be calculated as follows:

A) Low WAV has a vapor pressure less than or equal to 75 mmHg at 20°C (68°F), and shall use the following equation:

$$FR = [0.07 (UTAME)] - 1,821$$

B) Moderate WAV has a vapor pressure greater than 75 mmHg but less than or equal to 150 mmHg at 20°C (68°F), and shall use the following equation:

$$FR = [0.031 (UTAME)] - 494$$

C) High WAV has a vapor pressure greater than 150 mmHg at 20°C (68°F), and shall use the following equation:

$$FR = [0.013 (UTAME)] - 301$$

5) To determine the vapor pressure of VOM, the applicable methods and procedures in Section 218.111 of this Part shall apply.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

#### Section 218.501 Control Requirements for Batch Operations

- a) Every owner or operator of a single unit operation with an average flow rate, as determined in accordance with Section 218.502(b) of this Subpart, below the flow rate value calculated by the applicability equations contained in Section 218.500(e) of this Subpart, shall reduce uncontrolled VOM emissions from such single unit operation by an overall efficiency, on average, of at least 90 percent, or 20 ppmv, per batch cycle.
- b) Every owner or operator of a batch process train with an average flow rate, as determined in accordance with Section 218.502(b)(2) of this Subpart, below the flow rate value calculated by the applicability equations contained in Section 218.500(e) of this Subpart, shall

reduce uncontrolled VOM emissions from such batch process train by an overall efficiency, on average, of at least 90 percent, or 20 ppmv, per batch cycle. For purposes of demonstrating compliance with the emission limitations set forth in this Section, any control device meeting the criteria in subsection (c) of this Section shall be deemed to achieve a control efficiency of 90 percent, or 20 ppmv, per batch cycle, as applicable.

- c) Notwithstanding subsections (a) or (b) of this Section, any source that has installed on or before March 15, 1995, any control device which is demonstrated to the Agency's satisfaction to be unable to meet the applicable control requirements of this Section, scrubber, or shell and tube condenser using a non-refrigerated cooling media, and such device achieves at least 81 percent control efficiency of VOM emissions, is required to meet the 90 percent emission limitation or 20 ppmv VOM concentration set forth in subsections (a) or (b) of this Section, as applicable, upon the earlier to occur of the date the device is replaced for any reason, including, but not limited to, normal maintenance, malfunction, accident, and obsolescence, or December 31, 1999. A scrubber, shell and tube condenser using a non-refrigerated cooling media, or other control device meeting the criteria of this subsection, is considered replaced when:
- 1) All of the device is replaced; or
  - 2) When either the cost to repair the device or the cost to replace part of the device exceeds 50 percent of the cost of replacing the entire device with a control device that complies with the 90 percent emission limitation or 20 ppmv VOM concentration level in subsection (a) of this Section, as applicable.
- d) If a boiler or process heater is used to comply with this Section, the vent stream shall be introduced into the flame zone of the boiler or process heater.
- e) If a flare is used to comply with this Section, it shall comply with the requirements of 40 CFR 60.18, incorporated by reference at Section 218.112 of this Part. The flare operation requirements of 40 CFR 60.18 do not apply if a process, not subject to this Subpart, vents an emergency relief discharge into a common flare header and causes the flare servicing the process subject to this Subpart to not comply with one or more of the provisions of 40 CFR 60.18.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 218.502      Determination of Uncontrolled Total Annual Mass Emissions and Average Flow Rate Values for Batch Operations

- a) Uncontrolled total annual mass emissions shall be determined by the following methods:
- 1) Direct process vent emissions measurements taken prior to any release to the atmosphere, following any recovery device and prior to any control device, provided such measurements conform with the requirements of measuring the mass flow rate of VOM incoming to the control device as set forth in Section 218.503(f)(2), (f)(3)(A) and (f)(3)(B) of this Subpart; or
  - 2) Engineering estimates of the uncontrolled VOM emissions from a process vent or process vents, in the aggregate, within a batch process train, using either the potential or permitted number of batch cycles per year or total production as represented in the source's operating permit as follows:
    - A) Engineering estimates of the uncontrolled VOM emissions shall be based upon accepted chemical engineering principles, measurable process parameters, or physical or chemical laws and their properties. Examples of methods include, but are not limited to, the following:
      - i) Use of material balances based on process stoichiometry to estimate maximum VOM concentrations;
      - ii) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities; and
      - iii) Estimation of VOM concentrations based on saturation conditions.
    - B) All data, assumptions and procedures used in any engineering estimate shall be documented.
- b) Average flow rate shall be determined by any of the following methods:

- 1) Direct process vent flow rate measurements taken prior to any release to the atmosphere, following any recovery device and prior to any control device, provided such measurements conform with the requirements of measuring incoming volumetric flow rate set forth in Section 218.503(e)(2) of this Subpart;
- 2) Average flow rate for a single unit operation having multiple emission events or batch process trains shall be the weighted average flow rate, calculated as follows:

$$\text{WAF} = \frac{\sum_{i=1}^n [\text{AFR}_i \times \text{ADE}_i]}{\sum_{i=1}^n (\text{ADE}_i)}$$

where:

WAF = Actual weighted average flow rate for a single unit operation or batch process train;  
AFR<sub>i</sub> = Average flow rate per emission event;  
ADE<sub>i</sub> = Annual duration of emission event; and  
n = Number of emission events.

For purposes of this formula, the term "emission event" shall be defined as a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded vapor space when the single unit operation is heated is also an emission event. Both of these examples of emission events and others may occur in the same single unit operation during the course of the batch cycle. If the flow rate measurement for any emission event is zero, according to Section 218.503(f)(2) of this Subpart, then such event is not an emission event for purposes of this Section.

3) Engineering estimates calculated in accordance with the requirements in subsection (a)(2) of this Section.

c) For purposes of determining the average flow rate for steam vacuuming systems, the steam flow shall be included in the average flow rate calculation.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 218.503 Performance and Testing Requirements for Batch Operations

- a) Upon the Agency's request, the owner or operator of a batch operation shall conduct testing to demonstrate compliance with Section 218.501 of this Subpart. The owner or operator shall, at its own expense, conduct such tests in accordance with the applicable test methods and procedures specified in Section 218.503(d), (e), and (f) of this Subpart.
- b) Notwithstanding subsection (a) of this Section, flares and process boilers used to comply with control requirements of Section 218.501 of this Subpart shall be exempt from performance testing requirements.
- c) When a flare is used to comply with the control requirements of Section 218.501 of this Subpart, the flare shall comply with the requirements of 40 CFR 60.18, incorporated by reference at Section 218.112 of this Part.
- d) The owner or operator of a batch operation that is exempt from the control requirements of Section 218.501 of this Subpart shall demonstrate, upon the Agency's request, the absence of oversized gas moving equipment in any manifold. Gas moving equipment shall be considered oversized if it exceeds the maximum requirements of the exhaust flow rate by more than 30 percent.
- e) For the purpose of demonstrating compliance with the control requirements in Section 218.501 of this Subpart, the batch operation shall be run at representative operating conditions and flow rates during any performance test.
- f) The following methods in 40 CFR 60, Appendix A, incorporated by reference at Section 218.112 of this Part, shall be used to demonstrate compliance with the reduction efficiency requirement set forth in Section 218.501 of this Subpart:

- 1) Method 1 or 1A, as appropriate, for selection of the sampling sites if the flow measuring device is not a rotameter. The control device inlet sampling site for determination of vent stream VOM composition reduction efficiency shall be prior to the control device and after the control device;
- 2) Method 2, 2A, 2C, or 2D, as appropriate, for determination of gas stream volumetric flow rate flow measurements, which shall be taken continuously. No traverse is necessary when the flow measuring device is an ultrasonic probe;
- 3) Method 25A or Method 18, if applicable, to determine the concentration of VOM in the control device inlet and outlet;
  - A) The sampling time for each run shall be as follows:
    - i) For batch cycles less than eight hours in length, readings shall be taken continuously over the entire length of the batch cycle with a maximum of 15-minute intervals between measurements if using Method 25A. If using Method 18, readings shall be taken continuously with a maximum of 15-minute intervals between measurements throughout the batch cycle unless it becomes necessary to change the impinger train, in which case a 30-minute interval shall not be exceeded.
    - ii) For batch cycles of eight hours and greater in length, the owner or operator may either test in accordance with the test procedures defined in subsection (f)(3)(A)(i) of this Section or the owner or operator may elect to perform tests, pursuant to either Method 25A or Method 18, only during those portions of each emission event which define the emission profile of each emission event occurring within the batch cycle. For each emission event of less than four hours in duration, the owner or operator shall test continuously over the entire emission event as set forth in Subsection

- (f)(3)(A)(i) of this Section. For each emission event of greater than four hours in duration, the owner or operator shall elect either to perform a minimum of three one hour test runs during the emission event or shall test continuously over the entire emission event within each single unit operation in the batch process train. To demonstrate that the portion of the emission event to be tested define the emission profile for the emission event, the owner or operator electing to rely on this option shall develop an emission profile for the entire emission event. Such emission profile shall be based upon either process knowledge or test data collected. Examples of information that could constitute process knowledge include, but are not limited to, calculations based on material balances and process stoichiometry. Previous test results may be used provided such results are still relevant to the current process vent stream conditions.
- iii) For purposes of subsection (f)(3) of this Section, the term "emission event" shall be defined as a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded single unit operation vapor space, when the vessel is heated is also an emission event. Both of these examples of emission events and others may occur in the same single unit operation during the course of the batch cycle. If the flow rate measurement for any emission event is zero, in accordance with Section 218.503(f)(2) of the Subpart,

then such event is not an emission event for purposes of this Section.

- B) The mass emission rate from the process vent or inlet to the control device shall be determined by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in accordance with subsection (f)(1) of this Section throughout the batch cycle;
- C) The mass emission rate from the control device outlet shall be obtained by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in accordance with subsection (f)(1) of this Section throughout the batch cycle; and
- D) The efficiency of the control device shall be determined by integrating the mass emission rates obtained in subsections (f)(3)(B) and (f)(3)(C) of this Section, over the time of the batch cycle and dividing the difference in inlet and outlet mass flow totals by the inlet mass flow total.
- g) Upon request by the Agency to conduct testing, an owner or operator of a batch operation which has installed a scrubber, a shell and tube condenser using a non-refrigerated cooling media, or any other control device which meets the criteria of Section 218.501(c) of this Subpart, shall demonstrate that such device achieves the control efficiency applicable within Section 218.501 of this Subpart upon the earlier to occur of the date the device is replaced or December 31, 1999.
- h) The owner or operator of a batch operation may propose an alternative test method or procedures to demonstrate compliance with the control requirements set forth in Section 218.501 of this Subpart. Such method or procedures shall be approved by the Agency and USEPA as evidenced by federally enforceable permit conditions.
- i) In the absence of a request by the Agency to conduct performance testing in accordance with the provisions of this Section, a source may demonstrate compliance by the use of engineering estimates or process stoichiometry.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 218.504 Monitoring Requirements for Batch Operations

- a) Every owner or operator using an afterburner to comply with Section 218.501 of this Subpart shall install, calibrate, maintain and operate, according to manufacturer's specifications, temperature monitoring devices with an accuracy of  $\pm 1$  percent of the temperature being measured expressed in degrees Celsius, equipped with continuous recorders.
- 1) Where a catalytic afterburner is used, temperature monitoring devices shall be installed in the gas stream immediately before and after the catalyst bed.
  - 2) Where an afterburner other than a catalytic afterburner is used, a temperature monitoring device shall be installed in the combustion chamber.
- b) Every owner or operator using a flare to comply with Section 218.501 of this Subpart shall install, calibrate, maintain and operate, according to manufacturer's specifications, a heat sensing device, such as an ultra-violet beam sensor or thermocouple, at the pilot light to indicate continuous presence of a flame.
- c) Every owner or operator using a scrubber to comply with this Section 218.501 of this Subpart shall install, calibrate, maintain, and operate, according to manufacturer's specifications, the following:
- 1) A temperature monitoring device for scrubbant liquid having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius and a specific gravity device for scrubbant liquid, each equipped with a continuous recorder; or
  - 2) A VOM monitoring device used to indicate the concentration of VOM exiting the control device based on a detection principle such as infra-red photoionization, or thermal conductivity, each equipped with a continuous recorder.
- d) Every owner or operator using a condenser to comply with Section 218.501 of this Subpart shall install, calibrate, maintain, and operate, according to manufacturer's specifications, the following:

- 1) A condenser exit temperature monitoring device equipped with a continuous recorder and having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius; or
  - 2) A VOM monitoring device used to indicate the concentration of VOM such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.
- e) Every owner or operator using a carbon adsorber to comply with this Subpart shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, the following equipment:
- 1) An integrating regeneration steam flow monitoring device having an accuracy of  $\pm 10$  percent, and a carbon bed temperature monitoring device having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius, both equipped with a continuous recorder; or
  - 2) A VOM monitoring device used to indicate the concentration level of VOM exiting such device based on a detection principle such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.
- f) Every owner or operator using a boiler or process heater with a design heat input capacity less than 44 Mw to comply with Section 218.501 of this Subpart shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a temperature monitoring device in the firebox with an accuracy of  $\pm 1$  percent of the temperature being measured expressed in degrees Celsius, equipped with a continuous recorder. Any boiler or process heater in which all process vent streams are introduced with primary fuel is exempt from this requirement.
- g) The owner or operator of a process vent shall be permitted to monitor by an alternative method or may monitor parameters other than those listed in subsections (a) through (f) of this Section, if approved by the Agency and USEPA. Such alternative method or parameters shall be contained in the source's operating permit as federally enforceable permit conditions.
- h) Notwithstanding subsections (a) through (g) of this Section, sources using a scrubber, shell and tube condenser using a non-refrigerated cooling media, or

other control device meeting the criteria of Section 218.501(c) of this Subpart, are required to monitor compliance with the requirements of this Subpart on and after the earlier to occur of the date such device is replaced for any reason or December 31, 1999.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 218.505            Reporting and Recordkeeping for Batch Operations

- a) Every owner or operator of a de minimis single unit operation or batch process train exempt under Section 218.500(c)(1) or (c)(2) of this Subpart shall keep records of the uncontrolled total annual mass emissions for any de minimis single unit operation or batch process train, as applicable, and documentation verifying these values or measurements. The documentation shall include the engineering calculations, any measurements made in accordance with Section 218.503 of this Subpart, and the potential or permitted number of batch cycles per year or, in the alternative, total production as represented in the source's operating permit.
- b) Every owner or operator of a single unit operation exempt under Section 218.500(b)(3) or (d) of this Subpart shall keep the following records:
- 1) The uncontrolled total annual mass emissions and documentation verifying these values or measurements. The documentation shall include any engineering calculations, any measurements made in accordance with Section 218.503 of this Subpart, and the potential or permitted number of batch cycles per year, or, in the alternative, total production as represented in the source's operating permit.
  - 2) The average flow rate in scfm and documentation verifying this value.
- c) Every owner or operator of a batch operation subject to the control requirements of Section 218.501 of this Subpart shall keep records of the following parameters required to be monitored under Section 218.504 of this Subpart:
- 1) If using a thermal or catalytic afterburner to comply with Section 218.501 of this Subpart, records indicating the average combustion chamber

temperature of the afterburner (or the average temperature upstream and downstream of the catalyst bed for a catalytic afterburner), measured continuously and averaged over the same time period as the performance test;

- 2) If using a flare (i.e., steam-assisted, air-assisted or nonassisted) to comply with Section 218.501 of this Subpart, continuous records of the flare pilot flame monitoring and records of all periods of operations during which the pilot flame is absent.
- 3) If using any of the following as a control device, the following records:
  - A) Where a scrubber is used, the exit specific gravity (or alternative parameter which is a measure of the degree of absorbing liquid saturation, if approved by the Agency) and the average exit temperature of the absorbing liquid, measured continuously and averaged over the same time period as the performance test (both measured while the vent stream is routed normally);
  - B) Where a condenser is used, the average exit (product side) temperature measured continuously and averaged over the same time period as the performance test while the vent stream is routed normally;
  - C) Where a carbon adsorber is used, the total steam mass flow measured continuously and averaged over the same time period as the performance test (full carbon bed cycle), temperature of the carbon bed after regeneration (and within 15 minutes after completion of any cooling cycle(s)), and duration of the carbon bed steaming cycle (all measured while the vent stream is routed normally); or
  - D) As an alternative to subsection (c)(3)(A), (c)(3)(B), or (c)(3)(C) of this Section, at a minimum, records indicating the concentration level or reading indicated by the VOM monitoring device at the outlet of the scrubber, condenser, or carbon adsorber, measured continuously and averaged over the same time period as the performance test (while the vent stream is routed normally).

- d) Every owner or operator of a single unit operation claiming a vent stream concentration exemption level, as set forth in Section 218.500(d)(1) of this Subpart, shall maintain records to indicate the vent stream concentration is less than or equal to 500 ppmv, and shall notify the Agency in writing if the vent stream concentration at any time equals or exceeds 500 ppmv, within 60 days after such event. Such notification shall include a copy of all records of such event.
- e) An owner or operator of a batch operation subject to the control requirements of Section 218.501 of this Subpart may maintain alternative records other than those listed in subsection (c) of this Section. Any alternative recordkeeping shall be approved by the Agency and USEPA and shall be contained in the source's operating permit as federally enforceable permit conditions.
- f) Notwithstanding subsections (a) through (e) of this Section, any owner or operator of a batch operation which uses either a scrubber, shell and tube condenser using non-refrigerated cooling media, or other control device meeting the criteria of Section 218.501(c) of this Subpart, is required to monitor compliance with the requirements of this Subpart on and after the earlier to occur of the date such device is replaced for any reason or December 31, 1999.
- g) The owner or operator of a de minimis single unit operation or batch process train exempt from the control requirements of Section 218.500(c) of this Subpart shall notify the Agency in writing if the uncontrolled total annual mass emissions from such de minimis single unit operation or batch process train exceed the threshold in Section 218.500(c)(1) or (c)(2) of this Subpart, respectively, within 60 days after the event occurs. Such notification shall include a copy of all records of such event.
- h) Every owner or operator of a batch operation required to keep records under this Section shall maintain such records at the source for a minimum period of three years and shall make all such records available to the Agency upon request.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 218.506            Compliance Date

Every owner or operator of a batch operation subject to Sections 218.500 through 218.506 of this Subpart shall comply with its standards, limitations and mandates by March 15, 1996, or upon initial start up, whichever is later.

Reg. \_\_\_\_\_, effective \_\_\_\_\_ for a maximum of 150 days.

BOARD NOTE: This Part implements the Illinois Environmental Protection Act as of July 1, 1994.

SUBPART V: BATCH OPERATIONS AND AIR OXIDATION PROCESSES

Section 219.500      Applicability for Batch Operations

- a) The control requirements set forth in Section 219.501 of this Subpart shall apply to process vents associated with batch operations at sources identified by any of the following four-digit standard industrial classification ("SIC") codes, as defined in the 1987 edition of the Federal Standard Industrial Classification Manual: SIC 2821, 2833, 2834, 2861, 2865, 2869, and 2879.
- b) The requirements of Sections 219.500 through 219.506 shall not apply to:
- 1) Any emission unit included within the category specified in 35 Ill. Adm. Code Part 219, Subpart B or T;
  - 2) Any emission unit included within the category specified in Sections 219.520 through 219.527 of this Subpart; and
  - 3) Any emission unit included within an Early Reduction Program, as specified in 40 CFR Part 63, and published in 57 Fed. Reg. 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.
- c) The following single unit operations and batch process trains are subject to this Subpart but are considered to be de minimis and are, therefore, exempt from the

control requirements of Section 219.501 of this Subpart. However, the recordkeeping and reporting requirements in Section 219.505 of this Subpart shall apply to such de minimis single unit operations and batch process trains:

- 1) Within a batch operation, any single unit operation with uncontrolled total annual mass emissions of less than or equal to 500 lb/yr of VOM. Such single unit operations are also excluded from the calculation of the total annual mass emissions for a batch process train. If the uncontrolled total annual mass emissions from such exempt single unit operation exceed 500 lb/yr of VOM in any subsequent year, the source shall calculate applicability in accordance with subsection (d) of this Section for both the individual single unit operation and the batch process train containing the single unit operation; and
  - 2) Any batch process train containing process vents that have, in the aggregate, uncontrolled total annual mass emissions, as determined in accordance with Section 219.502(a) of this Subpart, of less than 30,000 lb/yr of VOM for all products manufactured in such batch process train.
- d) The applicability equations in subsection (e) of this Section, which require the calculation of uncontrolled total annual mass emissions and flow rate value, shall be used to determine whether a single unit operation or a batch process train is subject to the control requirements set forth in Section 219.501 of this Subpart. The applicability equation shall be applied to the following:
- 1) Any single unit operation with uncontrolled total annual mass emissions that exceed 500 lb/yr and with a VOM concentration greater than 500 ppmv. In this individual determination, no applicability analysis shall be performed for any single unit operation with a VOM concentration of less than or equal to 500 ppmv; and
  - 2) Any batch process train containing process vents which, in the aggregate, have uncontrolled total annual mass emissions of 30,000 lb/yr or more of VOM from all products manufactured in the batch process train. Any single unit operation with uncontrolled total annual mass emissions exceeding 500 lb/yr, regardless of VOM concentration, shall

be included in the aggregate applicability analysis.

e) Applicability equations

1) The applicability equations in this subsection are specific to volatility.

2) For purposes of this subsection, the following abbreviations apply:

A) FR = Vent stream flow rate, scfm;

B) UTAME = Uncontrolled total annual mass emissions of VOM, expressed as lb/yr;

C) WAV = Weighted average volatility;

D) MVOM<sub>i</sub> = Mass of VOM component i;

E) MWVOM<sub>i</sub> = Molecular weight of VOM component i; and

F) VP<sub>i</sub> = Vapor pressure of VOM component i.

3) Weighted average volatility shall be calculated as follows:

$$WAV = \frac{\sum_{i=1}^n [(VP_i) \times \frac{(MVOM_i)}{(MWVOM_i)}]}{\sum_{i=1}^n \left[ \frac{(MVOM_i)}{(MWVOM_i)} \right]}$$

4) For purposes of determining applicability, flow rate values shall be calculated as follows:

A) Low WAV has a vapor pressure less than or equal to 75 mmHg at 20°C (68°F), and shall use the following equation:

$$FR = [0.07 (UTAME)] - 1,821$$

B) Moderate WAV has a vapor pressure greater than 75 mmHg but less than or equal to 150 mmHg at 20°C (68°F), and shall use the following equation:

$$FR = [0.031 (UTAME)] - 494$$

- C) High WAV has a vapor pressure greater than 150 mmHg at 20°C (68°F), and shall use the following equation:

$$FR = [0.013 (UTAME)] - 301$$

- 5) To determine the vapor pressure of VOM, the applicable methods and procedures in Section 219.111 of this Part shall apply.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 219.501 Control Requirements for Batch Operations

- a) Every owner or operator of a single unit operation with an average flow rate, as determined in accordance with Section 219.502(b) of this Subpart, below the flow rate value calculated by the applicability equations contained in Section 219.500(e) of this Subpart, shall reduce uncontrolled VOM emissions from such single unit operation by an overall efficiency, on average, of at least 90 percent, or 20 ppmv, per batch cycle.
- b) Every owner or operator of a batch process train with an average flow rate, as determined in accordance with Section 219.502(b)(2) of this Subpart, below the flow rate value calculated by the applicability equations contained in Section 219.500(e) of this Subpart, shall reduce uncontrolled VOM emissions from such batch process train by an overall efficiency, on average, of at least 90 percent, or 20 ppmv, per batch cycle. For purposes of demonstrating compliance with the emission limitations set forth in this Section, any control device meeting the criteria in subsection (c) of this Section shall be deemed to achieve a control efficiency of 90 percent, or 20 ppmv, per batch cycle, as applicable.
- c) Notwithstanding subsection (a) or (b) of this Section, any source that has installed on or before March 15, 1995, any control device which is demonstrated to the Agency's satisfaction to be unable to meet the applicable control requirements of this Section, scrubber, or shell and tube condenser using a non-refrigerated cooling media, and such device achieves at least 81 percent control efficiency of VOM emissions, is required to meet the 90 percent emission limitation or 20 ppmv VOM concentration set forth in subsection (a) or (b) of this Section, as applicable, upon the

earlier to occur of the date the device is replaced for any reason, including, but not limited to, normal maintenance, malfunction, accident, and obsolescence, or December 31, 1999. A scrubber, shell and tube condenser using a non-refrigerated cooling media, or other control device meeting the criteria of this subsection, is considered replaced when:

- 1) All of the device is replaced; or
  - 2) When either the cost to repair the device or the cost to replace part of the device exceeds 50 percent of the cost of replacing the entire device with a control device that complies with the 90 percent emission limitation or 20 ppmv VOM concentration level in subsection (a) of this Section, as applicable.
- d) If a boiler or process heater is used to comply with this Section, the vent stream shall be introduced into the flame zone of the boiler or process heater.
- e) If a flare is used to comply with this Section, it shall comply with the requirements of 40 CFR 60.18, incorporated by reference at Section 219.112 of this Part. The flare operation requirements of 40 CFR 60.18 do not apply if a process, not subject to this Subpart, vents an emergency relief discharge into a common flare header and causes the flare servicing the process subject to this Subpart to not comply with one or more of the provisions of 40 CFR 60.18.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 219.502      Determination of Uncontrolled Total Annual Mass Emissions and Actual Weighted Average Flow Rate Values for Batch Operations

- a) Uncontrolled total annual mass emissions shall be determined by the following methods:
- 1) Direct process vent emissions measurements taken prior to any release to the atmosphere, following any recovery device and prior to any control device, provided such measurements conform with the requirements of measuring the mass flow rate of VOM incoming to the control device as set forth in Section 219.503(f)(2), (f)(3)(A) and (f)(3)(B) of this Subpart; or

2) Engineering estimates of the uncontrolled VOM emissions from a process vent or process vents, in the aggregate, within a batch process train, using either the potential or permitted number of batch cycles per year or total production as represented in the source's operating permit as follows:

A) Engineering estimates of the uncontrolled VOM emissions shall be based upon accepted chemical engineering principles, measurable process parameters, or physical or chemical laws and their properties. Examples of methods include, but are not limited to, the following:

- i) Use of material balances based on process stoichiometry to estimate maximum VOM concentrations;
- ii) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities; and
- iii) Estimation of VOM concentrations based on saturation conditions.

B) All data, assumptions and procedures used in any engineering estimate shall be documented.

b) Average flow rate shall be determined by any of the following methods:

- 1) Direct process vent flow rate measurements taken prior to any release to the atmosphere, following any recovery device and prior to any control device, provided such measurements conform with the requirements of measuring incoming volumetric flow rate set forth in Section 219.503(e)(2) of this Subpart;
- 2) Average flow rate for a single unit operation having multiple emission events or batch process trains shall be the weighted average flow rate, calculated as follows:

$$\text{WAF} = \frac{\sum_{i=1}^n [\text{AFR}_i \times \text{ADE}_i]}{\sum_{i=1}^n (\text{ADE}_i)}$$

i=1

where:

WAF = Actual weighted average flow rate for a single unit operation or batch process train;  
AFR<sub>i</sub> = Average flow rate per emission event;  
ADE<sub>i</sub> = Annual duration of emission event; and  
n = Number of emission events.

For purposes of this formula, the term "emission event" shall be defined as a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded vapor space when the single unit operation is heated is also an emission event. Both of these examples of emission events and others may occur in the same single unit operation during the course of the batch cycle. If the flow rate measurement for any emission event is zero, according to Section 218.503(f)(2) of this Subpart, then such event is not an emission event for purposes of this Section.

3) Engineering estimates calculated in accordance with the requirements in subsection (a)(2) of this Section.

c) For purposes of determining the average flow rate for steam vacuuming systems, the steam flow shall be included in the average flow rate calculation.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 219.503 Performance and Testing Requirements for Batch Operations

a) Upon the Agency's request, the owner or operator of a batch operation shall conduct testing to demonstrate compliance with Section 219.501 of this Subpart. The owner or operator shall, at its own expense, conduct

such tests in accordance with the applicable test methods and procedures specified in Section 219.503(d), (e), and (f) of this Subpart.

- b) Notwithstanding subsection (a) of this Section, flares and process boilers used to comply with control requirements of Section 219.501 of this Subpart shall be exempt from performance testing requirements.
- c) When a flare is used to comply with the control requirements of Section 219.501 of this Subpart, the flare shall comply with the requirements of 40 CFR 60.18, incorporated by reference at Section 219.112 of this Part.
- d) The owner or operator of a batch operation that is exempt from the control requirements of Section 219.501 of this Subpart shall demonstrate, upon the Agency's request, the absence of oversized gas moving equipment in any manifold. Gas moving equipment shall be considered oversized if it exceeds the maximum requirements of the exhaust flow rate by more than 30 percent.
- e) For the purpose of demonstrating compliance with the control requirements in Section 219.501 of this Subpart, the batch operation shall be run at representative operating conditions and flow rates during any performance test.
- f) The following methods in 40 CFR 60, Appendix A, incorporated by reference at Section 219.112 of this Part, shall be used to demonstrate compliance with the reduction efficiency requirement set forth in Section 219.501 of this Subpart:
  - 1) Method 1 or 1A, as appropriate, for selection of the sampling sites if the flow measuring device is not a rotameter. The control device inlet sampling site for determination of vent stream VOM composition reduction efficiency shall be prior to the control device and after the control device;
  - 2) Method 2, 2A, 2C, or 2D, as appropriate, for determination of gas stream volumetric flow rate flow measurements, which shall be taken continuously. No traverse is necessary when the flow measuring device is an ultrasonic probe;
  - 3) Method 25A or Method 18, if applicable, to determine the concentration of VOM in the control device inlet and outlet;

A) The sampling time for each run shall be as follows:

- i) For batch cycles less than eight hours in length, readings shall be taken continuously over the entire length of the batch cycle with a maximum of 15-minute intervals between measurements if using Method 25A. If using Method 18, readings shall be taken continuously with a maximum of 15-minute intervals between measurements throughout the batch cycle unless it becomes necessary to change the impinger train, in which case a 30-minute interval shall not be exceeded.
  
- ii) For batch cycles of eight hours and greater in length, the owner or operator may either test in accordance with the test procedures defined in subsection (f)(3)(A)(i) of this Section or the owner or operator may elect to perform tests, pursuant to either Method 25A or Method 18, only during those portions of each emission event which define the emission profile of each emission event occurring within the batch cycle. For each emission event of less than four hours in duration, the owner or operator shall test continuously over the entire emission event as set forth in subsection (f)(3)(A)(i) of this Section. For each emission event of greater than four hours in duration, the owner or operator shall elect either to perform a minimum of three one hour test runs during the emission event or shall test continuously over the entire emission event within each single unit operation in the batch process train. To demonstrate that the portion of the emission event to be tested define the emission profile for the emission event, the owner or operator electing to rely on this option shall develop an emission profile for the entire emission event. Such emission profile shall be based upon either process knowledge or test data collected. Examples of information that could constitute process knowledge include, but are not limited to,

calculations based on material balances and process stoichiometry. Previous test results may be used provided such results are still relevant to the current process vent stream conditions.

iii) For purposes of subsection (f)(3) of this Section, the term "emission event" shall be defined as a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded single unit operation vapor space, when the vessel is heated is also an emission event. Both of these examples of emission events and others may occur in the same single unit operation during the course of the batch cycle. If the flow rate measurement for any emission event is zero, in accordance with Section 218.503(f)(2) of the Subpart, then such event is not an emission event for purposes of this Section.

- B) The mass emission rate from the process vent or inlet to the control device shall be determined by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in accordance with subsection (f)(1) of this Section throughout the batch cycle;
- C) The mass emission rate from the control device outlet shall be obtained by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in accordance with subsection (f)(1) of this Section throughout the batch cycle; and
- D) The efficiency of the control device shall be determined by integrating the mass emission rates obtained in subsections (f)(3)(B) and (f)(3)(C) of this Section, over the time of the batch cycle and dividing the difference

in inlet and outlet mass flow totals by the inlet mass flow total.

- g) Upon request by the Agency to conduct testing, an owner or operator of a batch operation which has installed a scrubber, a shell and tube condenser using a non-refrigerated cooling media, or any other control device which meets the criteria of Section 219.501(c) of this Subpart, shall demonstrate that such device achieves the control efficiency applicable within Section 219.501 of this Subpart upon the earlier to occur of the date the device is replaced or December 31, 1999.
- h) The owner or operator of a batch operation may propose an alternative test method or procedures to demonstrate compliance with the control requirements set forth in Section 219.501 of this Subpart. Such method or procedures shall be approved by the Agency and USEPA as evidenced by federally enforceable permit conditions.
- i) In the absence of a request by the Agency to conduct performance testing in accordance with the provisions of this Section, a source may demonstrate compliance by the use of engineering estimates or process stoichiometry.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

Section 219.504          Monitoring Requirements for Batch Operations

- a) Every owner or operator using an afterburner to comply with Section 219.501 of this Subpart shall install, calibrate, maintain and operate, according to manufacturer's specifications, temperature monitoring devices with an accuracy of  $\pm 1$  percent of the temperature being measured expressed in degrees Celsius, equipped with continuous recorders.
  - 1) Where a catalytic afterburner is used, temperature monitoring devices shall be installed in the gas stream immediately before and after the catalyst bed.
  - 2) Where an afterburner other than a catalytic afterburner is used, a temperature monitoring device shall be installed in the combustion chamber.
- b) Every owner or operator using a flare to comply with Section 219.501 of this Subpart, shall install, calibrate, maintain and operate, according to

manufacturer's specifications, a heat sensing device, such as an ultra-violet beam sensor or thermocouple, at the pilot light to indicate continuous presence of a flame.

c) Every owner or operator using a scrubber to comply with this Section 219.501 of this Subpart shall install, calibrate, maintain, and operate, according to manufacturer's specifications, the following:

1) A temperature monitoring device for scrubbant liquid having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius and a specific gravity device for scrubbant liquid, each equipped with a continuous recorder; or

2) A VOM monitoring device used to indicate the concentration of VOM exiting the control device based on a detection principle such as infra-red photoionization, or thermal conductivity, each equipped with a continuous recorder.

d) Every owner or operator using a condenser to comply with Section 219.501 of this Subpart shall install, calibrate, maintain, and operate, according to manufacturer's specifications, the following:

1) A condenser exit temperature monitoring device equipped with a continuous recorder and having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius; or

2) A VOM monitoring device used to indicate the concentration of VOM such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.

e) Every owner or operator using a carbon adsorber to comply with this Subpart shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, the following equipment:

1) An integrating regeneration steam flow monitoring device having an accuracy of  $\pm 10$  percent, and a carbon bed temperature monitoring device having an accuracy of  $\pm 1$  percent of the temperature being monitored expressed in degrees Celsius, both equipped with a continuous recorder; or

2) A VOM monitoring device used to indicate the concentration level of VOM exiting such device

based on a detection principle such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.

- f) Every owner or operator using a boiler or process heater with a design heat input capacity less than 44 Mw to comply with Section 219.501 of this Subpart shall install, calibrate, maintain, and operate, according to the manufacturer's specifications, a temperature monitoring device in the firebox with an accuracy of  $\pm 1$  percent of the temperature being measured expressed in degrees Celsius, equipped with a continuous recorder. Any boiler or process heater in which all process vent streams are introduced with primary fuel is exempt from this requirement.
- g) The owner or operator of a process vent shall be permitted to monitor by an alternative method or may monitor parameters other than those listed in subsections (a) through (f) of this Section, if approved by the Agency and USEPA. Such alternative method or parameters shall be contained in the source's operating permit as federally enforceable permit conditions.
- h) Notwithstanding subsections (a) through (g) of this Section, sources using a scrubber, shell and tube condenser using a non-refrigerated cooling media, or other control device meeting the criteria of Section 219.501(c) of this Subpart, are required to monitor compliance with the requirements of this Subpart on and after the earlier to occur of the date such device is replaced for any reason or December 31, 1999.

Section 219.505            Reporting and Recordkeeping for Batch Operations

- a) Every owner or operator of a de minimis single unit operation or batch process train exempt under Section 219.500(c)(1) or (c)(2) of this Subpart shall keep records of the uncontrolled total annual mass emissions for any de minimis single unit operation or batch process train, as applicable, and documentation verifying these values or measurements. The documentation shall include the engineering calculations, any measurements made in accordance with Section 218.503 of this Subpart, and the potential or permitted number of batch cycles per year or, in the

alternative, total production as represented in the source's operating permit.

- b) Every owner or operator of a single unit operation exempt under Section 219.500(b)(3) or (d) of this Subpart shall keep the following records:
- 1) The uncontrolled total annual mass emissions and documentation verifying these values or measurements. The documentation shall include any engineering calculations, any measurements made in accordance with Section 218.503 of this Subpart, and the potential or permitted number of batch cycles per year or, in the alternative, total production as represented in the source's operating permit.
  - 2) The average flow rate in scfm and documentation verifying this value.
- c) Every owner or operator of a batch operation subject to the control requirements of Section 219.501 of this Subpart shall keep records of the following parameters required to be monitored under Section 219.504 of this Subpart:
- 1) If using a thermal or catalytic afterburner to comply with Section 219.501 of this Subpart, records indicating the average combustion chamber temperature of the afterburner (or the average temperature upstream and downstream of the catalyst bed for a catalytic afterburner), measured continuously and averaged over the same time period as the performance test;
  - 2) If using a flare (i.e., steam-assisted, air-assisted or nonassisted) to comply with Section 219.501 of this Subpart, continuous records of the flare pilot flame monitoring and records of all periods of operations during which the pilot flame is absent.
  - 3) If using any of the following as a control device, the following records:
    - A) Where a scrubber is used, the exit specific gravity (or alternative parameter which is a measure of the degree of absorbing liquid saturation, if approved by the Agency) and the average exit temperature of the absorbing liquid, measured continuously and averaged over the same time period as the performance

test (both measured while the vent stream is routed normally);

- B) Where a condenser is used, the average exit (product side) temperature measured continuously and averaged over the same time period as the performance test while the vent stream is routed normally;
- C) Where a carbon adsorber is used, the total steam mass flow measured continuously and averaged over the same time period as the performance test (full carbon bed cycle), temperature of the carbon bed after regeneration (and within 15 minutes after completion of any cooling cycle(s)), and duration of the carbon bed steaming cycle (all measured while the vent stream is routed normally); or
- D) As an alternative to subsections (c)(3)(A), (c)(3)(B), or (c)(3)(C) of this Section, at a minimum, records indicating the concentration level or reading indicated by the VOM monitoring device at the outlet of the scrubber, condenser, or carbon adsorber, measured continuously and averaged over the same time period as the performance test (while the vent stream is routed normally).
- d) Every owner or operator of a single unit operation claiming a vent stream concentration exemption level, as set forth in Section 218.500(d)(1) of this Subpart, shall maintain records to indicate the vent stream concentration is less than or equal to 500 ppmv, and shall notify the Agency in writing if the vent stream concentration at any time equals or exceeds 500 ppmv, within 60 days after such event. Such notification shall include a copy of all records of such event.
- e) An owner or operator of a batch operation subject to the control requirements of Section 219.501 of this Subpart may maintain alternative records other than those listed in subsection (c) of this Section. Any alternative recordkeeping shall be approved by the Agency and USEPA and shall be contained in the source's operating permit as federally enforceable permit conditions.
- f) Notwithstanding subsections (a) through (e) of this Section, any owner or operator of a batch operation which uses either a scrubber, shell and tube condenser

using non-refrigerated cooling media, or other control device meeting the criteria of Section 219.501(c) of this Subpart, is required to monitor compliance with the requirements of this Subpart on and after the earlier to occur of the date such device is replaced for any reason or December 31, 1999.

- g) The owner or operator of a de minimis single unit operation or batch process train exempt from the control requirements of Section 219.500(c) of this Subpart shall notify the Agency in writing if the uncontrolled total annual mass emissions from such de minimis single unit operation or batch process train exceed the threshold in Section 219.500(c)(1) or (c)(2) of this Subpart, respectively, within 60 days after the event occurs. Such notification shall include a copy of all records of such event.
- h) Every owner or operator of a batch operation required to keep records under this Section shall maintain such records at the source for a minimum period of three years and shall make all such records available to the Agency upon request.

Section 219.506      Compliance Date

Every owner or operator of a batch operation subject to Sections 219.500 through 219.506 of this Subpart shall comply with its standards, limitations and mandates by March 15, 1996, or upon initial start up, whichever is later.

(Source: Added at 19 Ill. Reg. \_\_\_\_\_, effective \_\_\_\_\_)

IT IS SO ORDERED.

I, Dorothy M. Gunn, Clerk of the Illinois Pollution Control Board, hereby certify that the above opinion and order was adopted on the 16<sup>th</sup> day of March, 1995, by a vote of 7-0.

  
Dorothy M. Gunn, Clerk  
Illinois Pollution Control Board
