

PCB 2023-063

Paul Christian Pratapas v Trillium Farms by Pulte Homes

12/13/2022

A US Army recruiter for Naperville is my neighbor. She informed me of our nearest Army Corp of Engineers office.

Site Conditions: Not fitting of a 55+ community majority occupied. Small stones throughout public streets with connected stormwater system.

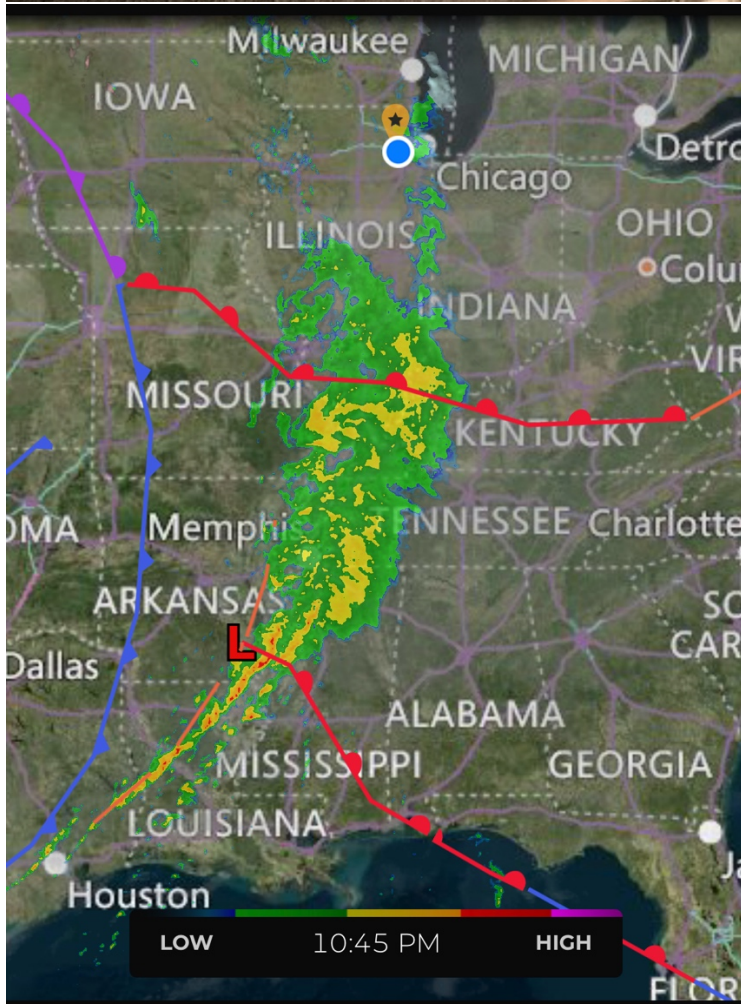

Pollutants not controlled and sediment laden water flooding street due to filter fabric covering inlets. NOT an approved BMP. Sediment laden water pooled at the high point and low point of site. Mobil mortar mixer and rinse barrels in the raw. Continued inability to control pollutants. This area is surrounded by nocturnal animals which drink water in the night.

A quasi-linear convective system (squall line) ahead of a cold front
