TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE G: WASTE DISPOSAL
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER b: PERMITS

PART 702

RCRA AND UIC PERMIT PROGRAMS

SUBPART A: GENERAL PROVISIONS

Section

702.101 Purpose, Scope, and Applicability
702.102 Electronic Reporting
702.103 Trade Secret or Non-Disclosable Information Submitted to the Agency or Board
702.104 References
702.105 Rulemaking
702.106 Adoption of Agency Criteria
702.107 Permit Appeals and Review of Agency Determinations
702.108 Variances and Adjusted Standards
702.109 Enforcement Actions
702.110 Definitions

SUBPART B: PERMIT APPLICATIONS

Section

702.120 Permit Application
702.121 Who Applies
702.122 Completeness
702.123 Information Requirements
702.124 Recordkeeping
702.125 Continuation of Expiring Permits
702.126 Signatories to Permit Applications and Reports

SUBPART C: PERMIT CONDITIONS

Section

702.140 Conditions Applicable to all Permits
702.141 Duty to Comply
702.142 Duty to Reapply
702.143 Need to Halt or Reduce Activity Not a Defense
702.144 Duty to Mitigate
702.145 Proper Operation and Maintenance
702.146 Permit Actions
702.147 Property Rights
702.148 Duty to Provide Information
702.149 Inspection and Entry
702.150 Monitoring and Records

702.151 Signature Requirements
702.152 Reporting Requirements
702.160 Establishing Permit Conditions
702.161 Duration of Permits
702.162 Schedules of Compliance
702.163 Alternative Schedules of Compliance
702.164 Recording and Reporting

SUBPART D: ISSUED PERMITS

Section
702.181 Effect of a Permit
702.182 Transfer
702.183 Modification
702.184 Causes for Modification
702.185 Facility Siting
702.186 Revocation
702.187 Minor Modifications

AUTHORITY: Implementing Sections 7.2, 13, and 22.4 and authorized by Section 27 of the Environmental Protection Act [415 ILCS 5/7.2, 13, 22.4, and 27].

SOURCE: Adopted in R81-32 at 6 Ill. Reg. 12479, effective May 17, 1982; amended in R82-19 at 7 Ill. Reg. 14352, effective May 17, 1982; amended in R84-9 at 9 Ill. Reg. 11926, effective July 24, 1985; amended in R85-23 at 10 Ill. Reg. 13274, effective July 29, 1986; amended in R86-1 at 10 Ill. Reg. 14083, effective August 12, 1986; amended in R86-28 at 11 Ill. Reg. 6131, effective March 24, 1987; amended in R87-5 at 11 Ill. Reg. 19376, effective November 12, 1987; amended in R87-26 at 12 Ill. Reg. 2579, effective January 15, 1988; amended in R87-29 at 12 Ill. Reg. 6673, effective March 28, 1988; amended in R87-39 at 12 Ill. Reg. 13083, effective July 29, 1988; amended in R89-1 at 13 Ill. Reg. 18452, effective November 13, 1989; amended in R89-2 at 14 Ill. Reg. 3089, effective February 20, 1990; amended in R89-9 at 14 Ill. Reg. 6273, effective April 16, 1990; amended in R92-10 at 17 Ill. Reg. 5769, effective March 26, 1993; amended in R93-16 at 18 Ill. Reg. 6918, effective April 26, 1994; amended in R94-5 at 18 Ill. Reg. 18284, effective December 20, 1994; amended in R95-6 at 19 Ill. Reg. 9913, effective June 27, 1995; amended in R95-20 at 20 Ill. Reg. 11210, effective August 1, 1996; amended in R96-10/R97-3/R97-5 at 22 Ill. Reg. 532, effective December 16, 1997; amended in R99-15 at 23 Ill. Reg. 9359, effective July 26, 1999; amended in R00-11/R01-1 at 24 Ill. Reg. 18585, effective December 7, 2000; amended in R06-16/R06-17/R06-18 at 31 Ill. Reg. 438, effective December 20, 2006; amended in R11-2/R11-16 at 35 Ill. Reg. 17647, effective October 14, 2011; amended in R11-14 at 36 Ill. Reg. 1588, effective January 20, 2012; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. 20953, effective November 19, 2018; amended in R20-8/R20-16 at 44 Ill. Reg. 15047, effective September 3, 2020.

SUBPART A: GENERAL PROVISIONS

Section 702.101 Purpose, Scope, and Applicability

a) Coverage

1) The permit regulations of 35 Ill. Adm. Code 702 through 705 include provisions for the following two permit programs:

A) The RCRA (Resource Conservation and Recovery Act) permit program pursuant to Title V and Title X of the Environmental Protection Act.

B) The UIC (Underground Injection Control) permit program pursuant to Title III and Title X of the Environmental Protection Act.

2) The regulations of 35 Ill. Adm. Code 702 through 705 cover basic permitting requirements (35 Ill. Adm. Code 702 through 704) and procedures for processing of permit applications (35 Ill. Adm. Code 705) for the RCRA and UIC permit programs.

3) The regulations of 35 Ill. Adm. Code 702 through 705 are derived from 40 CFR 124, 144, and 270.

b) Structure

1) The regulations of 35 Ill. Adm. Code 702 through 705 comprise the following four Parts:

A) This Part contains definitions applicable to 35 Ill. Adm. Code 702 through 705. It also contains basic permitting requirements for the RCRA and UIC programs.

B) The regulations of 35 Ill. Adm. Code 703 contain requirements specific to RCRA permits. In case of inconsistency between 35 Ill. Adm. Code 702 and 703, 35 Ill. Adm. Code 703 will control.

C) The regulations of 35 Ill. Adm. Code 704 contain requirements specific to UIC permits. In case of inconsistency between 35 Ill. Adm. Code 702 and 704, 35 Ill. Adm. Code 704 will control.

D) The regulations of 35 Ill. Adm. Code 705 establish procedures for issuance of RCRA and UIC permits by the Agency.

2) The structure and coverage of 35 Ill. Adm. Code 702 through 704 are indicated in the following table:

	RCRA and UIC	RCRA Subpart of	UIC Subpart of

	Subpart of 35 Ill. Adm. Code 702	35 Ill. Adm. Code 703	35 Ill. Adm. Code 704
General	A	A	A
Prohibitions	—	B	B
Authorization by Rule	—	C	C
Permit Application	B	D	D
Special Forms of Permits	—	E	—
Permit Conditions	C	F	E
Issued Permits	D	—	H
Permit Modification	—	G	—
Remedial Action Plans	—	H	—
Integration with MACT Standards	—	I	—
RCRA Standardized Permits	—	J	—
Requirements Applicable to Hazardous Waste Injection Wells	—	—	F
Financial Responsibility for Class I Hazardous Waste Injection Wells	—	—	G
Requirements Applicable to Class V Injection Wells	—	—	I
Requirements Applicable to Class VI Injection Wells	—	—	J

c) Relation to Other Requirements

1) Permit application forms. An applicant for a RCRA or UIC permit or a person seeking interim status under RCRA must submit its application on an Agency permit application form when such is available.

2) Technical regulations. Each of the two permit programs that are covered in these permit regulations has separate additional regulations that contain technical requirements for that program. These separate regulations are used by the Agency to determine the requirements that must be placed in any permit that it issues. These separate regulations are located as follows:

RCRA 35 Ill. Adm. Code 724 and 726 through 728

BOARD NOTE: Derived in significant part from 40 CFR 144.1 and 270.1 (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.102 Electronic Reporting

The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Derived from 40 CFR 3 and 145.11(a)(33), as added, and 40 CFR 271.10(b), 271.11(b), and 271.12(h) (2005), as amended at 70 Fed. Reg. 59848 (Oct. 13, 2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.103 Trade Secret or Non-Disclosable Information Submitted to the Agency or Board

a) In accordance with Section 7 of the Environmental Protection Act, and as federally required by 40 CFR 2, a person submitting certain information to the Agency or Board pursuant to this Part and 35 Ill. Adm. Code 703 through 705 may claim that information as trade secret or non-disclosable information. Any such claim of trade secret or non-disclosable information must be asserted at the time of submission in the manner prescribed by 35 Ill. Adm. Code 130. If no claim is made at the time of submission, the Agency or Board may make the information available to the public without further notice. If a claim is asserted, the information will be treated in accordance with 35 Ill. Adm. Code 130 and Board and Agency procedures.

b) Claims of trade secret or non-disclosable information for the following information will be denied:

1) The name and address of any permit applicant or permittee;

2) The identity of substances being placed or to be placed in landfills or hazardous waste treatment, storage, or disposal facilities; and

3) For UIC permits, information that deals with the existence, absence, or level of contaminants in drinking water.

BOARD NOTE: Derived from 40 CFR 144.5 and 270.12 (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.104 References

The centralized incorporation by reference provisions of 35 Ill. Adm. Code 720.111 include the incorporation of all documents by reference that are used to establish compliance with the requirements of the Illinois RCRA and UIC programs.

BOARD NOTE: This Section corresponds with 40 CFR 270.6 (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.105 Rulemaking

a) Identical-in-Substance Regulations

1) Generally applicable federal rules. Twice each year, the Board reserves identical-in-substance rulemaking dockets pursuant to Sections 7.2, 13(c), and 22.4(a) of the Act. The Board's intent is generally to include all federal RCRA or UIC amendments that occurred in the appropriate of the prior concluded update periods of January 1 through June 30 or July 1 through December 31. The Board reviews the federal actions that occurred in the period of interest and includes those that require Board action in the reserved docket. The Board itself initiates any necessary amendments to the RCRA or UIC program, so no person needs to file a rulemaking proposal for the included amendments. The Board routinely excludes from these identical-in-substance proposals those federal amendments that pertain to facilities or activities that exist or occur outside Illinois.

2) The Board does not generally include site-specific federal amendments in an identical-in-substance rulemaking proposal without a request from a member of the regulated community. The owner or operator of a facility subject to a site-specific federal rule that wishes the Board to incorporate that rule into the Illinois regulations should submit a request to the Clerk of the Board for inclusion of that site-specific rule in a future identical-in-substance rulemaking proposal. Any person wishing such inclusion may petition the Board to adopt appropriate amendments to the Illinois RCRA or UIC program pursuant to Sections 7.2 and 13(c) or 22.4(a) of the Act. The petition must take the form of a proposal for rulemaking pursuant to 35 Ill. Adm. Code 101 and 102. The proposal must include a listing of all amendments of interest to the petitioner together with copies of the Federal Register notices on which the amendments are to be based.

b) Other Regulations. With respect to the Illinois RCRA or UIC program or permit issuance, any person may petition the Board to adopt amendments or additional regulations that are not identical in substance to federal regulations. Such proposal must conform to 35 Ill. Adm. Code 101 and 102 and Sections 13(d), 22.4(b) and (c), and Title VII of the Act.

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.106 Adoption of Agency Criteria

a) The Agency may, in its sole discretion, adopt criteria that will give guidance to the public as to what it will approve in RCRA and UIC permit applications and as to what conditions it will impose in permit issuance. The statutory authority for the Agency adopting such criteria is the Agency's authority to issue permits pursuant to Sections 4 and 39 of the Act, and the requirement of the Administrative Procedure Act [5 ILCS 100] that agencies codify as rules those policies or interpretations of general applicability that affect persons outside the Agency.

b) With respect to review of permit applications and establishment of permit conditions, the Agency must adopt as criteria any policies and interpretations of general applicability that affect persons outside the Agency.

c) Any criteria that the Agency adopts must include each of the following:

1) Clear references to related provisions of the Act and Board regulations;

2) A statement that the criteria are not Board regulations;

3) A statement that the criteria apply only to review of permit applications and establishment of conditions; and

4) Procedures to be followed if an applicant wishes to deviate from Agency criteria.

d) For purposes of permit issuance, proof of compliance with Agency-adopted criteria is prima facie proof of compliance with related provisions of the appropriate Act and Board regulations. However, persons other than the Agency may challenge Agency-adopted criteria as applied in the context of permit issuance.

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.107 Permit Appeals and Review of Agency Determinations

Unless the contrary intention is indicated, all actions taken by the Agency pursuant to 35 Ill. Adm. Code 702 through 704, 721 through 728, 730, 733, 738, or 739 are to be done as part of an original permit application or a proceeding for modification of an issued permit. Such actions are subject to the procedural requirements of 35 Ill. Adm. Code 705.

a) Any final Agency action on an original permit application, a proceeding for modification of an issued permit, or any action for review of a final Agency determination required by these regulations may be appealed to the Board

pursuant to Title X of the Environmental Protection Act and 35 Ill. Adm. Code 105 and 705.212.

b) Other actions that are not required by these regulations, whether undertaken by the Agency gratuitously or pursuant to a statutory authorization, such as one taken to enforce a bond, insurance policy, or similar instrument of a contractual nature or one intended to guide a regulated person in seeking compliance with the regulations, may not be permit modifications reviewable by the Board. The affected person may seek review of an Agency determination that is not a permit determination in any court of competent jurisdiction.

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.108 Variances and Adjusted Standards

a) The Agency has no authority to issue any permit that is inconsistent with Board regulations. If an applicant seeks a permit that would authorize actions that are inconsistent with Board regulations, including delayed compliance dates, the applicant should file for either of the following two forms of relief:

1) A petition for a variance pursuant to Title IX of the Environmental Protection Act (Act) and Subtitle B of 35 Ill. Adm. Code 104; or

2) A petition for an adjusted standard pursuant to Section 28.2 of the Act and Subtitle D of 35 Ill. Adm. Code 104.

b) The Agency must file a recommendation within prescribed times following the filing of a petition for a variance or adjusted standard. The recommendation must include a draft of the language the Agency proposes to include in the permit if its recommendation is accepted.

c) If the Board grants a variance or adjusted standard, it will order the Agency to issue or modify the permit pursuant to the variance.

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.109 Enforcement Actions

Any person may file a civil complaint with the Board alleging violation of the RCRA or UIC regulations, a permit requirement, or permit conditions, pursuant to Title VIII of the Act and 35 Ill. Adm. Code 103.

a) A formal complaint filed with the Board will initiate a civil enforcement action in which the complainant bears the burden of proving that the respondent committed the alleged violations.

b) The Board will forward any informal complaint to the Agency, and the Agency must investigate the alleged violations set forth in the complaint.

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.110 Definitions

The following definitions apply to 35 Ill. Adm. Code 702, 703, 704, and 705. Terms not defined in this Section have the meaning given by the appropriate act and regulations, as such are defined in this Section. When a definition applies primarily to one or more programs, those programs appear in parentheses after the defined terms.

"Act" or "Environmental Protection Act" means the Environmental Protection Act [415 ILCS 5].

"Administrator" means the Administrator of the United States Environmental Protection Agency or an authorized representative.

"Agency" means the Illinois Environmental Protection Agency.

"Application" means the Agency forms for applying for a permit. For RCRA, application also includes the information required by the Agency pursuant to 35 Ill. Adm. Code 703.182 through 703.212 (contents of Part B of the RCRA application).

"Appropriate act and regulations" means the federal Resource Conservation and Recovery Act (42 USC 6901 et seq.) (RCRA), the federal Safe Drinking Water Act (42 USC 300f et seq.) (SDWA), or the Environmental Protection Act, whichever is applicable, and the applicable regulations promulgated under those statutes.

"Approved program or approved state" means a state or interstate program that has been approved or authorized by USEPA pursuant to 40 CFR 271 (RCRA) or section 1422 of the SDWA (42 USC 300h-1) (UIC).

"Aquifer" (RCRA and UIC) means a geologic formation, group of formations, or part of a formation that is capable of yielding a significant amount of water to a well or spring.

"Area of review" (UIC) means the area surrounding an injection well described according to the criteria set forth in 35 Ill. Adm. Code 730.106, or in the case of an area permit, the project area plus a circumscribing area the width of which is either 402 meters (one-quarter of a mile) or a number calculated according to the criteria set forth in 35 Ill. Adm. Code 730.106.

"Board" (RCRA and UIC) means the Illinois Pollution Control Board.

"Cesspool" (UIC) means a drywell that receives untreated sanitary waste containing human excreta and which sometimes has an open bottom or perforated sides.

"Closure" (RCRA) means the act of securing a Hazardous waste management facility pursuant to 35 Ill. Adm. Code 724.

"Component" (RCRA) means any constituent part of a unit or any group of constituent parts of a unit that are assembled to perform a specific function (e.g., a pump seal, pump, kiln liner, or kiln thermocouple).

"Contaminant" (UIC) means any physical, chemical, biological, or radiological substance or matter in water.

"Corrective action management unit" or "CAMU" (RCRA) means an area within a facility that is designated by the Agency pursuant to Subpart S of 35 Ill. Adm. Code 724 for the purpose of implementing corrective action requirements pursuant to 35 Ill. Adm. Code 724.201 and RCRA section 3008(h) (42 USC 6928(h)). A CAMU must only be used for the management of remediation wastes pursuant to implementing such corrective action requirements at the facility. BOARD NOTE: USEPA must also designate a CAMU until it grants this authority to the Agency. See the note following 35 Ill. Adm. Code 724.652.

"CWA" (RCRA and UIC) means the Clean Water Act (33 USC 1251 et seq.), as amended.

"Director" (RCRA and UIC) means the Director of the Illinois Environmental Protection Agency or the Director's designee.

"Disposal" (RCRA) means the discharge, deposit, injection, dumping, spilling, leaking, or placing of any hazardous waste into or on any land or water so that such hazardous waste or any constituent of the waste may enter the environment or be emitted into the air or discharged into any waters, including groundwater.

"Disposal facility" (RCRA) means a facility or part of a facility at which hazardous waste is intentionally placed into or on the land or water, and at which hazardous waste will remain after closure. The term disposal facility does not include a corrective action management unit into which remediation wastes are placed.

"Draft permit" (RCRA and UIC) means a document prepared pursuant to 35 Ill. Adm. Code 705.141 indicating the Agency's tentative decision to issue, deny, modify, terminate, or reissue a permit. A notice of intent to deny a permit, as discussed in 35 Ill. Adm. Code 705.141, is a type of draft permit. A denial of a request for modification, as discussed in 35 Ill. Adm. Code 705.128, is not a draft permit. A proposed permit is not a draft permit.

"Drywell" (UIC) means a well, other than an improved sinkhole or subsurface fluid distribution system, that is completed above the water table so that its bottom and sides are typically dry, except when receiving fluids.

"Drilling mud" (UIC) means a heavy suspension used in drilling an injection well, introduced down the drill pipe and through the drill bit.

"Elementary neutralization unit" (RCRA) means a device of which the following is true:

It is used for neutralizing wastes that are hazardous wastes only because they exhibit the corrosivity characteristics defined in 35 Ill. Adm. Code 721.122, or are listed in Subpart D of 35 Ill. Adm. Code 721 only for this reason; and

It meets the definition of tank, tank system, container, transport vehicle, or vessel in 35 Ill. Adm. Code 720.110.

"Emergency permit" (RCRA and UIC) means a RCRA or UIC permit issued in accordance with 35 Ill. Adm. Code 703.221 or 704.163, respectively.

"Environmental Protection Agency" or "EPA" or "USEPA" (RCRA and UIC) means the United States Environmental Protection Agency.

"Exempted aquifer" (UIC) means an aquifer or its portion that meets the criteria in the definition of "underground source of drinking water" but which has been exempted according to the procedures in 35 Ill. Adm. Code 702.105, 704.104, and 704.123(b).

"Existing hazardous waste management (HWM) facility" or "existing facility" (RCRA) means a facility that was in operation or for which construction commenced on or before November 19, 1980. A facility has commenced construction if the following occurs:

The owner or operator has obtained the federal, State, and local approvals or permits necessary to begin physical construction; and

Either of the following has transpired:

A continuous on-site, physical construction program has begun; or

The owner or operator has entered into contractual obligations for physical construction of the facility that cannot be canceled or modified without substantial loss and which are to be completed within a reasonable time.

"Existing injection well" (UIC) means an injection well that is not a new injection well.

"Facility mailing list" (RCRA) means the mailing list for a facility maintained by the Agency in accordance with 35 Ill. Adm. Code 705.163(a).

"Facility or activity" (RCRA and UIC) means any HWM facility, UIC injection well, or any other facility or activity (including land or appurtenances thereto) that is subject to regulations under the Illinois RCRA or UIC program.

"Federal, State, and local approvals or permits necessary to begin physical construction" (RCRA) means permits and approvals required under federal, State, or local hazardous waste control statutes, regulations, or ordinances.

"Fluid" (UIC) means any material or substance that flows or moves, whether in a semisolid, liquid, sludge, gas, or any other form or state.

"Formation" (UIC) means a body of rock characterized by a degree of lithologic homogeneity that is prevailingly, but not necessarily, tabular and is mappable on the earth's surface or traceable in the subsurface.

"Formation fluid" (UIC) means fluid present in a formation under natural conditions, as opposed to introduced fluids, such as drilling mud.

"Functionally equivalent component" (RCRA) means a component that performs the same function or measurement and which meets or exceeds the performance specifications of another component.

"Generator" (RCRA) means any person, by site location, whose act or process produces hazardous waste.

"Geologic sequestration" means the long-term containment of a gaseous, liquid, or supercritical carbon dioxide stream in a subsurface geologic formation. This term does not apply to carbon dioxide capture or transport.

"Groundwater" (RCRA and UIC) means a water below the land surface in a zone of saturation.

"Hazardous waste" (RCRA and UIC) means a hazardous waste as defined in 35 Ill. Adm. Code 721.103.

"Hazardous waste management facility" or "HWM facility" (RCRA) means all contiguous land and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (for example, one or more landfills, surface impoundments, or combinations of them).

"HWM facility" (RCRA) means hazardous waste management facility.

"Improved sinkhole" (UIC) means a naturally occurring karst depression or other natural crevice that is found in volcanic terrain and other geologic settings that have been modified by man for the purpose of directing and emplacing fluids into the subsurface.

"Injection well" (RCRA and UIC) means a well into which fluids are being injected.

"Injection zone" (UIC) means a geologic formation, group of formations, or part of a formation receiving fluids through a well.

"In operation" (RCRA) means a facility that is treating, storing, or disposing of hazardous waste.

"Interstate agency" means an agency of two or more states established by or under an agreement or compact approved by the Congress, or any other agency of two or more states having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator under the appropriate act and regulations.

"Major facility" means any RCRA or UIC facility or activity classified as such by the Regional Administrator or the Agency.

"Manifest" (RCRA and UIC) means the shipping document originated and signed by the generator that contains the information required by Subpart B of 35 Ill. Adm. Code 722.

"National Pollutant Discharge Elimination System" means the program for issuing, modifying, revoking and reissuing, terminating, monitoring, and enforcing permits and imposing and enforcing pretreatment requirements pursuant to Section 12(f) of the Environmental Protection Act and Subpart A of 35 Ill. Adm. Code 309 and 35 Ill. Adm. Code 310. The term includes an approved program.

"New HWM facility" (RCRA) means a hazardous waste management facility that began operation or for which construction commenced after November 19, 1980.

"New injection well" (UIC) means a well that began injection after March 3, 1984, the date of USEPA approval of the UIC program for the State of Illinois. BOARD NOTE: See 40 CFR 147.700 (2017) and 49 Fed. Reg. 3991 (Feb. 1, 1984).

"Off-site" (RCRA) means any site that is not on-site.

"On-site" (RCRA) means on the same or geographically contiguous property that may be divided by public or private rights-of-way, provided the entrance and exit between the properties is at a cross-roads intersection, and access is by crossing as opposed to going along, the rights-of-way. Non-contiguous properties owned by the same person, but connected by a right-of-way that the person controls and to which the public does not have access, is also considered on-site property.

"Owner or operator" means the owner or operator of any facility or activity subject to regulation under the RCRA or UIC program.

"Permit" means an authorization, license, or equivalent control document issued to implement this Part and 35 Ill. Adm. Code 703, 704, and 705. "Permit" includes RCRA permit by rule (35 Ill. Adm. Code 703.141), RCRA standardized permit (35 Ill. Adm. Code 703.238), UIC area permit (35 Ill. Adm. Code 704.162), and RCRA or UIC "Emergency Permit" (35 Ill. Adm. Code 703.221 and 704.163). "Permit" does not include RCRA interim status (35 Ill. Adm. Code 703.153 through 703.157), UIC authorization by rule (Subpart C of 35 Ill. Adm. Code 704), or any permit that has not yet been the subject of final Agency action, such as a draft permit or a proposed permit.

"Person" means any individual, partnership, co-partnership, firm, company, corporation, association, joint stock company, trust, estate, political subdivision, state agency, or any other legal entity, or their legal representative, agency, or assigns.

"Physical construction" (RCRA) means excavation, movement of earth, erection of forms or structures, or similar activity to prepare an HWM facility to accept hazardous waste.

"Plugging" (UIC) means the act or process of stopping the flow of water, oil, or gas into or out of a formation through a borehole or well penetrating that formation.

"Point of injection" means the last accessible sampling point prior to waste fluids being released into the subsurface environment through a Class V injection well. For example, the point of injection of a Class V septic system might be the distribution box—the last accessible sampling point before the waste fluids drain into the underlying soils. For a dry well, it is likely to be the well bore itself.

"POTW" means publicly owned treatment works.

"Project" (UIC) means a group of wells in a single operation.

"Publicly owned treatment works" or "POTW" is as defined in 35 Ill. Adm. Code 310.

"Radioactive waste" (UIC) means any waste that contains radioactive material in concentrations that exceed those listed in table II, column 2 in appendix B to 10 CFR 20, incorporated by reference in 35 Ill. Adm. Code 720.111.

"RCRA" (RCRA) means the Resource Conservation and Recovery Act of 1976 (42 USC 6901 et seq.). For the purposes of regulation pursuant to 35 Ill. Adm. Code 700 through 705, 720 through 728, 733, 738, and 739, "RCRA" refers only to RCRA Subtitle C. This does not include the RCRA Subtitle D (municipal solid waste landfill) regulations, found in 35 Ill. Adm. Code 810 through 815, and the RCRA Subtitle I (underground storage tank) regulations found in 35 Ill. Adm. Code 731 and 732.

"RCRA permit" (RCRA) means a permit required pursuant to Section 21(f) of the Act.

"RCRA standardized permit" (RCRA) means a RCRA permit issued pursuant to Subpart J of 35 Ill. Adm. Code 703 and Subpart G of 35 Ill. Adm. Code 705 that authorizes management of hazardous waste. The RCRA standardized permit may have two parts: a uniform portion issued for all RCRA standardized permits and a supplemental portion issued at the discretion of the Agency.

"Regional Administrator" (RCRA and UIC) means the Regional Administrator of the USEPA Region in which the facility is located or the Regional Administrator's designee.
BOARD NOTE: Illinois is in USEPA Region 5.

"Remedial action plan" or "RAP" (RCRA) means a special form of RCRA permit that a facility owner or operator may obtain pursuant to Subpart H of 35 Ill. Adm. Code 703, instead of a RCRA permit issued pursuant to this Part and 35 Ill. Adm. Code 703, to authorize the treatment, storage, or disposal of hazardous remediation waste (as defined in 35 Ill. Adm. Code 720.110) at a remediation waste management site.

"Sanitary waste" (UIC) means liquid or solid wastes originating solely from humans and human activities, such as wastes collected from toilets, showers, wash basins, sinks used for cleaning domestic areas, sinks used for food preparation, clothes washing operations, and sinks or washing machines where food and beverage serving dishes, glasses, and utensils are cleaned. Sources of these wastes may include single or multiple residences, hotels and motels, restaurants, bunkhouses, schools, ranger stations, crew quarters, guard stations, campgrounds, picnic grounds, day-use recreation areas, other commercial facilities, and industrial facilities, provided the waste is not mixed with industrial waste.

"Schedule of compliance" (RCRA and UIC) means a schedule of remedial measures included in a permit, including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the appropriate act and regulations.

"SDWA" (UIC) means the Safe Drinking Water Act (42 USC 300f et seq.).

"Septic system" (UIC) means a well, as defined in this Section, that is used to emplace sanitary waste below the surface and which is typically comprised of a septic tank and subsurface fluid distribution system or disposal system.

"Site" (RCRA and UIC) means the land or water area where any facility or activity is physically located or conducted, including adjacent land used in connection with the facility or activity.

"SIC code" (RCRA and UIC) means "Standard Industrial Classification code". This is the code assigned to a site by the United States Department of Transportation, Federal Highway Administration, based on the particular activities that occur on the site, as set forth in its publication, "Standard Industrial Classification Manual", incorporated by reference in 35 Ill. Adm. Code 720.111.

"State" (RCRA and UIC) means the State of Illinois.

"State Director" (RCRA and UIC) means the Director of the Illinois Environmental Protection Agency.

"State/USEPA agreement" (RCRA and UIC) means an agreement between the Regional Administrator and the State that coordinates USEPA and State activities, responsibilities, and programs, including those under the RCRA and SDWA.

"Storage" (RCRA) means the holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere.

"Stratum" (plural "strata") (UIC) means a single sedimentary bed or layer, regardless of thickness, that consists of generally the same kind of rock material.

"Subsurface fluid distribution system" (UIC) means an assemblage of perforated pipes, drain tiles, or other similar mechanisms intended to distribute fluids below the surface of the ground.

"Total dissolved solids" (UIC) means the total dissolved (filterable) solids as determined by use of the method specified in 40 CFR 136.3 (Identification of Test Procedures; the method for filterable residue), incorporated by reference in 35 Ill. Adm. Code 720.111.

"Transfer facility" (RCRA) means any transportation related facility, including loading docks, parking areas, storage areas, and other similar areas where shipments of hazardous wastes are held during the normal course of transportation.

"Transferee" (UIC) means the owner or operator receiving ownership or operational control of the well.

"Transferor" (UIC) means the owner or operator transferring ownership or operational control of the well.

"Transporter" (RCRA) means a person engaged in the off-site transportation of "hazardous waste" by air, rail, highway, or water.

"Treatment" (RCRA) means any method, technique, process, including neutralization, designed to change the physical, chemical, or biological character or composition of any "hazardous waste" so as to neutralize such wastes, or so as

to recover energy or material resources from the waste, or so as to render such wastes non-hazardous or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume.

"UIC" (UIC) means the Underground Injection Control program.

"Underground injection" (UIC) means a well injection.

"Underground source of drinking water" or "USDW" (RCRA and UIC) means an aquifer or its portion that is not an exempted aquifer and of which either of the following is true:

It supplies any public water system; or

It contains a sufficient quantity of groundwater to supply a public water system; and

It currently supplies drinking water for human consumption; or

It contains less than 10,000 mg/ℓ total dissolved solids.

"USDW" (RCRA and UIC) means an underground source of drinking water.

"Wastewater treatment unit" (RCRA) means a device of which the following is true:

It is part of a wastewater treatment facility that is subject to regulation pursuant to Subpart A of 35 Ill. Adm. Code 309 or 35 Ill. Adm. Code 310; and

It receives and treats or stores an influent wastewater that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or generates and accumulates a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or treats or stores a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103; and

It meets the definition of tank or tank system in 35 Ill. Adm. Code 720.110.

"Well" (UIC) means a bored, drilled, or driven shaft, or a dug hole, whose depth is greater than the largest surface dimension; a dug hole whose depth is greater than the largest surface dimension; or an improved sinkhole; or, a subsurface fluid distribution system.

"Well injection" (UIC) means the subsurface emplacement of fluids through a well.

BOARD NOTE: Derived from 40 CFR 124.2, 144.3, and 270.2 (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

SUBPART B: PERMIT APPLICATIONS

Section 702.120 Permit Application

a) Applying for a UIC Permit. Any person that is required to have a permit (including new applicants and permittees with expiring permits) must complete, sign, and submit an application to the Agency as described in this Section and in 35 Ill. Adm. Code 704.161 (UIC). Any person that is currently authorized with UIC authorization by rule (Subpart C of 35 Ill. Adm. Code 704) must apply for a permit when required to do so by the Agency. The procedure for application, issuance, and administration of an emergency permit is found exclusively in 35 Ill. Adm. Code 704.163 (UIC).

b) Applying for a RCRA Permit. The following information outlines how to obtain a permit and where to find requirements for specific permits:

1) If the facility is covered by RCRA permits by rule (35 Ill. Adm. Code 703.141), the owner or operator needs not apply for a permit.

2) If the facility owner or operator currently has interim status pursuant to RCRA (Subpart C of 35 Ill. Adm. Code 703), it must apply for a permit when required by the Agency.

3) If the facility owner or operator is required to have a permit (including new applicants and permittees with expiring permits), it must complete, sign, and submit an application to the Agency, as described in this Section; in Sections 702.121 through 702.124; and in 35 Ill. Adm. Code 703.125, 703.126, 703.150 through 703.157, 703.186, and 703.188.

4) If the facility owner or operator is seeking an emergency permit, the procedures for application, issuance, and administration are found exclusively in 35 Ill. Adm. Code 703.220.

5) If the facility owner or operator is seeking a research, development, and demonstration permit, the procedures for application, issuance, and administration are found exclusively in 35 Ill. Adm. Code 703.231.

6) If the facility owner or operator is seeking a RCRA standardized permit, the procedures for application and issuance are found in Subpart G of 35 Ill. Adm. Code 705 and Subpart J of 35 Ill. Adm. Code 703.

BOARD NOTE: Subsection (a) is derived from 40 CFR 144.31(a) (2017), and subsection (b) is derived from 40 CFR 270.10(a) (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.121 Who Applies

When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit, except that the owner must also sign the permit application.

BOARD NOTE: Derived from 40 CFR 144.31(b) (1993) and 270.10(b) (1992).

(Source: Amended at 18 Ill. Reg. 18284, effective December 20, 1994)

Section 702.122 Completeness

The Agency must not issue a permit under a program (RCRA or UIC) before receiving a complete application for a permit under that program, except for emergency permits. An application for a permit under a program is complete when the Agency receives an application form and any supplemental information that is completed to its satisfaction. (35 Ill. Adm. Code 705.122). An application for a permit is complete notwithstanding the failure of the owner or operator to submit the exposure information described in 35 Ill. Adm. Code 703.186 (RCRA).

BOARD NOTE: Derived from 40 CFR 144.31(d) and 270.10(c) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.123 Information Requirements

An applicant for a RCRA or UIC Class I, III, or V permit must provide the following information to the Agency, using the application form provided by the Agency (additional information required of applicants is set forth in Subpart D of 35 Ill. Adm. Code 703 (RCRA) and 35 Ill. Adm. Code 704.161 (UIC)). An applicant for a Class VI injection well permit must follow the criteria provided in 35 Ill. Adm. Code 730.182.

a) The activities conducted by the applicant that require it to obtain a permit under RCRA or UIC.

b) The name, mailing address, and location of the facility for which the application is submitted.

c) Up to four SIC codes that best reflect the principal products or services provided by the facility.

d) The operator's name, address, telephone number, ownership status, and status as Federal, State, private, public, or other entity.

e) This subsection (e) corresponds with 40 CFR 144.31(e)(5) and 270.13(f), relating to facilities on Indian lands. The Board has replaced the corresponding federal text with this statement to maintain structural parity with the corresponding federal rules.

f) A listing of all permits or construction approvals received or applied for under any of the following programs:

1) The hazardous waste management program under RCRA, this Part, and 35 Ill. Adm. Code 703;

2) The UIC program under SDWA, this Part, and 35 Ill. Adm. Code 704;

3) The National Pollutant Discharge Elimination System (NPDES) program under the federal CWA (33 USC 1251 et seq.) and 35 Ill. Adm. Code 309;

4) The Prevention of Significant Deterioration (PSD) program under the federal Clean Air Act (42 USC 7401 et seq.);

5) The nonattainment program under the federal Clean Air Act;

6) The National Emission Standards for Hazardous Pollutants (NESHAPs) preconstruction approval under the federal Clean Air Act;

7) Any ocean dumping permits under the federal Marine Protection Research and Sanctuaries Act (33 UCS 1401 et seq.);

8) Any dredge or fill permits under Section 404 of CWA (33 USC 1344); and

9) Any other relevant environmental permits, including any State-issued permits.

g) A topographic map (or other map if a topographic map is unavailable) extending 1609 meters (one mile) beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or which are otherwise known to the applicant within 402 meters (one-quarter mile) of the facility property boundary.

h) A brief description of the nature of the business.

BOARD NOTE: Derived from 40 CFR 144.31(e)(1) through (e)(8); 270.10(d); and 270.13(a) through (d), (f), and (k) through (m) (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.124 Recordkeeping

An applicant must keep records of all data used to complete permit applications and any supplemental information submitted pursuant to 35 Ill. Adm. Code 702.123, Subpart D of 35 Ill.

Adm. Code 703 (RCRA); and 35 Ill. Adm. Code 704.161 (UIC) for a period of at least three years from the date the application is signed.

BOARD NOTE: Derived from 40 CFR 144.31(f) and 270.10(i) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.125 Continuation of Expiring Permits

a) The conditions of an expired permit continue in force until the effective date of a new permit (see 35 Ill. Adm. Code 705.201) if both of the following conditions are fulfilled:

1) The permittee has submitted a timely application pursuant to 35 Ill. Adm. Code 703.181 (RCRA) or 704.161 (UIC) that is a complete (pursuant to Section 702.122) application for a new permit; and

2) The Agency, through no fault of the permittee, does not issue a new permit with an effective date pursuant to 35 Ill. Adm. Code 705.201 on or before the expiration date of the previous permit (for example, when issuance is impracticable due to time or resource constraints).

b) Effect. Permits continued pursuant to this Section remain fully effective and enforceable.

c) Enforcement. When the permittee is not in compliance with the conditions of the expiring or expired permit, the Agency may choose to do any or all of the following:

1) Initiate enforcement action based upon the permit that has been continued;

2) Issue a notice of intent to deny the new permit pursuant to 35 Ill. Adm. Code 705.141. If the permit is denied, the owner or operator would then be required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit;

3) Issue a new permit pursuant to 35 Ill. Adm. Code 705 with appropriate conditions; or

4) Take other actions authorized by the Environmental Protection Act, or regulations adopted thereunder.

d) This subsection (d) corresponds with 40 CFR 144.37(d) and 270.51(d), which pertain to continuation of USEPA-issued permits until disposition of a permit application filed with an authorized state. A corresponding provision is unnecessary in the Illinois regulations. This statement maintains structural consistency with the corresponding federal rules.

e) RCRA Standardized Permits

1) The conditions of an owner's or operator's expired RCRA standardized permit continue until the effective date of its new permit (see 35 Ill. Adm. Code 705.201) if all of the following conditions are fulfilled:

A) If the Agency is the permit-issuing authority;

B) If the owner or operator has submitted a timely and complete Notice of Intent pursuant to 35 Ill. Adm. Code 705.301(a)(2) requesting coverage under a RCRA standardized permit; and

C) If the Agency, through no fault of the owner or operator, does not issue the permit before the previous permit expires (for example, where it is impractical to make the permit effective by that date because of time or resource constraints).

2) In some instances, the Agency may notify the owner or operator that it is not eligible for a RCRA standardized permit (see 35 Ill. Adm. Code 705.302(c)). In such an instance, the conditions of the owner's or operator's expired permit will continue if the owner or operator submits the information specified in subsection (a)(1) (that is, a complete application for a new permit) within 60 days after it receives an Agency notification that the owner or operator is not eligible for a RCRA standardized permit.

BOARD NOTE: Derived from 40 CFR 144.37 and 270.51 (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.126 Signatories to Permit Applications and Reports

a) Applications. A permit application must be signed as follows:

1) For a corporation: a permit application must be signed by a responsible corporate officer. For the purpose of this Section, a responsible corporate officer means either of the following persons:

A) A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person that performs similar policy or decision-making functions for the corporation; or

B) The manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding $25 million (in second-quarter 1980 dollars), if authority to sign documents has

been assigned or delegated to the manager in accordance with corporate procedures;

BOARD NOTE: The Board does not require specific assignments or delegations of authority to responsible corporate officers identified in subsection (a)(1)(A). The Agency will presume that these responsible corporate officers have the requisite authority to sign permit applications, unless the corporation has notified the Agency to the contrary. Corporate procedures governing authority to sign permit applications may provide for assignment or delegation to applicable corporate positions pursuant to subsection (a)(1)(B), rather than to specific individuals.

2) For a partnership or sole proprietorship: a permit application must be signed by a general partner or the proprietor, respectively; or

3) For a municipality, State, federal, or other public agency: a permit application must be signed by either a principal executive officer or ranking elected official. For purposes of this Section, a principal executive officer of a federal agency includes either of the following persons:

A) The chief executive officer of the agency, or

B) A senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of USEPA).

b) Reports. All reports required by permits or other information requested by the Agency must be signed by a person described in subsection (a), or by a duly authorized representative of that person. A person is a duly authorized representative only if each of the following conditions are fulfilled:

1) The authorization is made in writing by a person described in subsection (a);

2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, or position of equivalent responsibility. (A duly authorized representative may thus be either a named individual or any individual occupying a named position); and

3) The written authorization is submitted to the Agency.

c) Changes to Authorization. If an authorization pursuant to subsection (b) is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of

subsection (b) must be submitted to the Agency prior to or together with any reports, information, or applications to be signed by an authorized representative.

d) Certification

1) Any person signing a document pursuant to subsection (a) or (b) must make the following certification:

> I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons that manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2) Alternative Owner Certification. For remedial action plans (RAPs) pursuant to Subpart H, if the operator certifies according to subsection (d)(1), then the owner may choose to make the following certification instead of the certification in subsection (d)(1):

> Based on my knowledge of the conditions of the property described in the RAP and my inquiry of the person or persons that manage the system referenced in the operator's certification, or those persons directly responsible for gathering the information, the information submitted is, upon information and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

BOARD NOTE: Derived from 40 CFR 144.32 and 270.11 (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

SUBPART C: PERMIT CONDITIONS

Section 702.140 Conditions Applicable to all Permits

The conditions of this Subpart C apply to all RCRA and UIC permits. For additional conditions applicable to all permits for each of the programs individually, see Subpart F of 35 Ill. Adm. Code 703 (RCRA) and Subpart E of 704 (UIC). All conditions applicable to all permits and all additional conditions applicable to all permits for individual programs must be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to these regulations must be given in the permit.

BOARD NOTE: Derived from 40 CFR 144.51 preamble and 270.30 preamble (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.141 Duty to Comply

The permittee must comply with all conditions of its permit. Any permit noncompliance constitutes a violation of the Illinois Environmental Protection Act and is grounds for one or more of the following actions: for an enforcement action, for permit revocation or modification, or for denial of a permit renewal application.

BOARD NOTE: Sections 703.242 (RCRA) and 704.181(a) (UIC) contain additional information on operation under an emergency permit. Derived from 40 CFR 144.51(a) and 270.30(a) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.142 Duty to Reapply

If a permittee wishes to continue an activity regulated by its permit after the expiration date of the permit, the permittee must apply for and obtain a new permit.

BOARD NOTE: Derived from 40 CFR 144.51(b) and 270.30(b) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.143 Need to Halt or Reduce Activity Not a Defense

It will not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of its permit.

BOARD NOTE: Derived from 40 CFR 144.51(c) and 270.30(c) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.144 Duty to Mitigate

a) For RCRA permits, in the event of noncompliance with its permit, the permittee must take all reasonable steps to minimize releases to the environment, and must carry out such measures as are reasonable to preventsignificant adverse impacts on human health or the environment.

b) For UIC permits, the permittee must take all reasonable steps to minimize or correct any adverse impact on the environment resulting from non-compliance with its permit.

BOARD NOTE: Derived from 40 CFR 144.51(d) and 270.30(d) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.145 Proper Operation and Maintenance

The permittee must at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) that are installed or used by the permittee to achieve compliance with the conditions of its permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. Proper operation and maintenance requires the operation of backup or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.

BOARD NOTE: Derived from 40 CFR 144.51(e) and 270.30(e) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.146 Permit Actions

A permit may be modified or revoked for cause. The filing of a request by the permittee for a permit modification or reissuance, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

BOARD NOTE: Derived from 40 CFR 144.51(f) and 270.30(f) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.147 Property Rights

A permit conveys no property rights of any sort, nor does a permit convey any exclusive privilege.

BOARD NOTE: Derived from 40 CFR 144.51(g) and 270.30(g) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.148 Duty to Provide Information

A permittee must furnish to the Agency, within a reasonable time, any relevant information that the Agency may request to determine whether cause exists for modifying or reissuing this permit or to determine compliance with this permit. The permittee must also furnish to the Agency, upon request, copies of records required to be kept by this permit.

BOARD NOTE: Derived from 40 CFR 144.51(h) and 270.30(h) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.149 Inspection and Entry

A permittee must allow an authorized representative of the Agency, upon the presentation of credentials and other documents as may be required by law, to do any of the following:

a) Enter at reasonable times upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

b) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

c) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and

d) Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the appropriate Act, any substances or parameters at any location.

BOARD NOTE: Derived from 40 CFR 144.51(i) and 270.30(i) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.150 Monitoring and Records

a) Samples and measurements taken for the purpose of monitoring must be representative of the monitored activity.

b) The permittee must retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation; copies of all reports required by its permit; and records of all data used to complete the application for its permit for a period of at least three years from the date of the sample, measurement, report, or application. This period may be extended by request of the Agency at any time.

c) Records of monitoring information must include all of the following information:

1) The date, exact place, and time of sampling or measurements;

2) The individuals who performed the sampling or measurements;

3) The dates analyses were performed;

4) The individuals who performed the analyses;

5) The analytical techniques or methods used; and

6) The results of such analyses.

d) The owner or operator of a Class VI injection well must retain records as specified in Subpart H of 35 Ill. Adm. Code 730, including Sections 730.184(g), 730.191(f), 730.192(d), 730.193(f), and 730.193(h).

BOARD NOTE: Derived from 40 CFR 144.51(j) and 270.30(j) (2011).

(Source: Amended at 36 Ill. Reg. 1588, January 20, 2012)

Section 702.151 Signature Requirements

All applications, reports, or information submitted to the Agency must be signed and certified in accordance with Section 702.126.

BOARD NOTE: Derived from 40 CFR 144.51(k) and 270.30(k) (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.152 Reporting Requirements

a) Planned Changes. The permittee must give notice to the Agency as soon as possible of any planned physical alterations or additions to the permitted facility.

b) Anticipated Noncompliance. The permittee must give advance notice to the Agency of any planned changes in the permitted facility or activity that may result in noncompliance with permit requirements. For RCRA, see also 35 Ill. Adm. Code 703.247.

c) Transfers. This permit is not transferable to any person, except after notice to the Agency. The Agency may require modification of the permit to change the name of the permittee and incorporate such other requirements as may be necessary under the appropriate Act. (See Sections 702.182 and 702.183, in some cases modification is mandatory.)

d) Monitoring Reports. Monitoring results must be reported at the intervals specified in the permit.

e) Compliance Schedules. Reports of compliance or non-compliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of the permit must be submitted no later than specified in Section 702.162.

f) Twenty-four hour reporting as required in 35 Ill. Adm. Code 703.245 or 704.181(d).

g) Other Noncompliance. The permittee must report all instances of noncompliance not reported under subsections (d), (e), and (f) at the time monitoring reports are submitted. The reports must contain the information referenced in subsection (f).

h) Other Information. If the permittee becomes aware that it failed to submit any relevant facts in a permit application or that it submitted incorrect information in a permit application or in any report to the Agency, the permittee must promptly submit such facts or information.

BOARD NOTE: Derived from 40 CFR 144.51(l) and 270.30(l).

(Source: Amended at 44 Ill. Reg. 15047, effective September 3, 2020)

Section 702.160 Establishing Permit Conditions

a) In addition to conditions required in permits for both programs (Sections 702.140 through 702.152), the Agency must establish conditions in RCRA and UIC permits, as required on a case-by-case basis, pursuant to Section 702.150 (monitoring and records), Section 702.161 (duration of permits), Section 702.162 (schedules of compliance), Section 702.163 (alternate schedules of compliance), and Section 702.164 (Recording and Reporting). For UIC only, permits for owners and operators of hazardous waste injection wells must include conditions meeting the requirements of 35 Ill. Adm. Code 704.201 through 704.203 (requirements for wells injecting hazardous waste), 704.189 (financial responsibility), and 704.191 (additional conditions), and Subpart G of 35 Ill. Adm. Code 730 (criteria and standards applicable to Class I hazardous waste injection wells). Permits for other wells must contain the requirements set forth in Subpart E of 35 Ill. Adm. Code 704 (permit conditions) when applicable.

b) Additional conditions.

1) In addition to conditions required in all permits for a particular program (Subpart F of 35 Ill. Adm. Code 703 for RCRA and Subpart C of 35 Ill. Adm. Code 704 for UIC), the Agency must establish conditions in permits for the individual programs, as required on a case-by-case basis, to provide for and assure compliance with all applicable requirements of the appropriate act and regulations.

2) An applicable requirement is a statutory or regulatory requirement that takes effect prior to final administrative disposition of a permit. The provisions of 35 Ill. Adm. Code 705.184 (reopening of comment period) provide a means for reopening permit proceedings at the discretion of the Agency where new requirements become effective during the permitting process and are of sufficient magnitude to make additional proceedings desirable. An applicable requirement is also any requirement that takes effect prior to the modification of a permit, to the extent allowed in 35 Ill. Adm. Code 705.201.

3) A new or reissued permit, and a modified permit to the extent allowed pursuant to 35 Ill. Adm. Code 705.201, must incorporate each of the applicable requirements referenced in Subpart F of 35 Ill. Adm. Code 703 (RCRA) and Subpart E of 35 Ill. Adm. Code 704 (UIC).

c) Incorporation. All permit conditions must be incorporated either expressly or by reference. If incorporated by reference, a specific citation to the applicable regulations or requirements must be given in the permit.

BOARD NOTE: Derived from 40 CFR 144.52 and 270.32 (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

Section 702.161 Duration of Permits

a) Permit duration.

1) RCRA. A RCRA permit must be effective for a fixed term to be determined by the Agency on a case-by-case basis, but not to exceed 10 years.

2) UIC. A UIC permit for a Class I or Class V injection well must be effective for a fixed term to be determined by the Agency on a case-by-case basis, but not to exceed 10 years. A UIC permit for a Class III injection well must be issued for a period not to exceed five years; provided, however, that the Agency must, without requiring a new application, renew such permits for a period not to exceed five years per renewal, up to the operating life of the facility, unless the Agency determines that the permit should be modified, reissued, or a minor modification made, as provided in Sections 702.183 through 702.187, in which case the permittee must file a new permit application. A UIC permit for a Class VI injection well must be issued for a period not to exceed five years; provided, however, that the Agency must, without requiring a new application, renew a Class VI injection well permit for a period not to exceed five years per renewal, up to the operating life of the facility and the post-injection site care period, unless the Agency determines that the permit should be modified, reissued, or a minor modification made, as provided in Sections 702.183 through 702.187, in which case the permittee must file a new permit application.

b) Except as provided in Section 702.125, the term of a permit must not be extended by modification beyond the maximum duration specified in this Section.

c) The Agency may issue any permit for a duration that is less than the full allowable term pursuant to this Section.

d) The Agency must review each RCRA permit for a land disposal facility no later than five years after the date of permit issuance or reissuance, and the Agency must modify the permit as necessary, as provided in Section 702.183 and 702.184.

BOARD NOTE: Derived from 40 CFR 144.36 and 270.50 (2011).

(Source: Amended at 36 Ill. Reg. 1588, January 20, 2012)

Section 702.162 Schedules of Compliance

The permit may, when appropriate, specify a schedule of compliance leading to compliance with the appropriate act and regulations.

a) Time for Compliance. Any schedules of compliance pursuant to this Section must require compliance as soon as possible. For UIC, in addition, schedules of compliance must require compliance not later than three years after the effective date of the permit.

b) Interim Dates. If a permit establishes a schedule of compliance that exceeds one year from the date of permit issuance, the schedule must set forth interim requirements and the dates for their achievement.

1) The time between interim dates must not exceed one year.

2) If the time necessary for completion of any interim requirement (such as the construction of a control facility) is more than one year and is not readily divisible into stages for completion, the permit must specify interim dates for the submission of reports of progress toward compliance of the interim requirements and indicate a projected completion date.

c) Reporting. A RCRA permit must be written to require that no later than 14 days following such interim date and the final date of compliance, the permittee must notify the Agency in writing of its compliance or noncompliance with the interim or final requirements. A UIC permit must be written to require that, if subsection (a) is applicable, progress reports be submitted no later than 30 days following each interim date and the final date of compliance.

d) The Agency may not permit a schedule of compliance involving violation of regulations adopted by the Board unless the permittee has been granted a variance. To avoid delay, an applicant seeking a schedule of compliance should file a variance petition pursuant to Subpart B of 35 Ill. Adm. Code 104 at the same time the permit application is filed.

BOARD NOTE: Derived from 40 CFR 144.53(a) and 270.33(a) (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.163 Alternative Schedules of Compliance

A RCRA or UIC permit applicant or permittee may cease conducting regulated activities (by receiving a terminal volume of hazardous waste and, for treatment or storage HWM facilities, by closing pursuant to applicable requirements; for disposal HWM facilities, by closing and conducting post-closure care pursuant to applicable requirements; or, for UIC wells, by plugging and abandonment), rather than continuing to operate and meet permit requirements as follows:

a) If the permittee decides to cease conducting regulated activities at a given time within the term of a permit that has already been issued, either of the following must occur:

1) The permit may be modified to contain a new or additional schedule leading to timely cessation of activities; or

2) The permittee must cease conducting permitted activities before noncompliance with any interim or final compliance schedule requirement already specified in the permit.

b) If the decision to cease conducting regulated activities is made before issuance of a permit whose term will include the termination date, the permit must contain a schedule leading to termination that will ensure timely compliance with applicable requirements.

c) If the permittee is undecided whether to cease conducting regulated activities, the Agency may issue or modify a permit to contain two alternative schedules, as follows:

1) Both schedules must contain an identical interim deadline requiring a final decision on whether to cease conducting regulated activities no later than a date that ensures sufficient time to comply with applicable requirements in a timely manner if the decision is to continue conducting regulated activities;

2) One schedule must lead to timely compliance with applicable requirements;

3) The second schedule must lead to cessation of regulated activities by a date that will ensure timely compliance with applicable requirements.

4) Each permit containing two alternative schedules must include a requirement that, after the permittee has made a final decision pursuant to subsection (c)(1), it must follow the schedule leading to compliance, if the decision is to continue conducting regulated activities, or follow the schedule leading to termination, if the decision is to cease conducting regulated activities.

d) The applicant's or permittee's decision to cease conducting regulated activities must be evidenced by a firm public commitment satisfactory to the Agency, such as a written resolution of the board of directors of a corporation.

BOARD NOTE: Derived from 40 CFR 144.53(b) and 270.33(b) (2017).

(Source: Amended at 42 Ill. Reg. 20953, effective November 19, 2018)

Section 702.164 Recording and Reporting

A permit must specify the following:

a) Requirements as to the proper use, maintenance, and installation, when appropriate, of monitoring equipment or methods (including biological monitoring methods, when appropriate);

b) Required monitoring, including type, intervals, and frequency sufficient to yield data that are representative of the monitored activity including, when appropriate, continuous monitoring; and

c) Applicable reporting requirements based on the impact of the regulated activity and as specified in 35 Ill. Adm. Code 724 (RCRA) and 35 Ill. Adm. Code 730 (UIC). Reporting must be no less frequent than specified in the above regulations.

BOARD NOTE: Derived from 40 CFR 144.54 and 270.31 (2005).

(Source: Amended at 31 Ill. Reg. 438, effective December 20, 2006)

SUBPART D: ISSUED PERMITS

Section 702.181 Effect of a Permit

a) The existence of a RCRA or UIC permit does not constitute a defense to a violation of the Environmental Protection Act or this Subtitle G, except for prohibitions against development, modification, or operation without a permit. A permit may be modified or reissued during its term for cause, as set forth in Subpart G of 35 Ill. Adm. Code 703 (RCRA) or Subpart H of 35 Ill. Adm. Code 704 (UIC) and Section 702.186, or a permit may be modified upon the request of the permittee, as provided by 35 Ill. Adm. Code 703.280 through 703.283.

BOARD NOTE: 40 CFR 270.4(a) differs from this subsection (a) in two significant aspects: (1) 40 CFR 270.4(a)(1) states that compliance with the permit is compliance with federal law; and (2) 40 CFR 270.4(a)(1)(i) through (a)(1)(iv) enumerate exceptions when compliance with the permit can violate federal law. The exceptions under which compliance with a permit can violate federal law are the following intervening events: (1) new or amended statutory requirements; (2) new or amended 40 CFR 268 land disposal restrictions; (3) the adoption of the 40 CFR 264 leak detection requirements; and (4) the adoption of the air emissions limitations of subparts AA, BB, and CC of 40 CFR 265. By not codifying the federal exceptions, since they are not necessary in the Illinois program to accomplish the intended purpose, the Board does not intend to imply that compliance with a RCRA permit obviates immediate compliance with any of the events included in the federal exceptions.

b) The issuance of a permit does not convey property rights of any sort, nor does issuance convey any exclusive privilege.

c) The issuance of a permit does not authorize injury to persons or property or invasion of other private rights, nor does issuance authorize any infringement of State or local law or regulations, except as noted in subsection (a).

BOARD NOTE: Derived from 40 CFR 144.35 and 40 CFR 270.4 (2017).

Section 702.186 Revocation

The Board will revoke a permit during its term in accordance with Title VIII of the Environmental Protection Act for the following causes:

a) The permittee's violation of the Environmental Protection Act or regulations adopted thereunder;

b) Noncompliance by the permittee with any condition of the permit;

c) The permittee's failure in the application or during the permit issuance process to disclose fully all relevant facts, or the permittee's misrepresentation of any relevant facts at any time; or

d) A determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification, reissuance, or revocation.

SUBPART A: GENERAL PROVISIONS

Section 703.100 Scope and Relation to Other Parts

a) This Part requires RCRA permits, pursuant to Section 21(f) of the Environmental Protection Act [415 ILCS 5/21(f)], for hazardous waste management (HWM) facilities, which may include one or more treatment, storage, or disposal (TSD) units. This Part also contains specific rules on applications for and issuance of RCRA permits;

b) The provisions of 35 Ill. Adm. Code 702 contain general provisions on applications for and issuance of RCRA permits. The provisions of 35 Ill. Adm. Code 705 contain procedures to be followed by the Illinois Environmental Protection Agency (Agency) in issuing RCRA permits;

c) The definitions of 35 Ill. Adm. Code 702.110 apply to this Part. 35 Ill. Adm. Code 720 contains definitions applicable to the RCRA operating standards of 35 Ill. Adm. Code 720 through 728, 733, 738, and 739. 35 Ill. Adm. Code 721 defines "solid waste" and "hazardous waste";

d) The standards of 35 Ill. Adm. Code 724 and 725 apply to HWM facilities required to have RCRA permits. The provisions of 35 Ill. Adm. Code 722 and 723 contain standards applicable to generators and transporters of hazardous waste.

e) The standards of 35 Ill. Adm. Code 727 set forth the specific procedural requirements for a RCRA standardized permit, which alter the applicability of this Part and 35 Ill. Adm. Code 702 and 705 in several regards as specified in the affected provisions. A TSD that is otherwise subject to permitting under RCRA and which meets the criteria in subsection (e)(1) or (e)(2) of this Section, may be eligible for a RCRA standardized permit pursuant to Subpart J of this Part.

1) The facility generates hazardous waste and then non-thermally treats or stores hazardous waste on-site in tanks, containers, or containment buildings; or

2) The facility receives hazardous waste generated off-site by a generator under the same ownership as the receiving facility, and the facility stores or non-thermally treats the hazardous waste in containers, tanks, or containment buildings.

BOARD NOTE: Subsection (e) of this Section is derived from the final sentence of 40 CFR 124.1(b), the second sentence of 40 CFR 270.1(b), and 40 CFR 270.1(b)(1) and (b)(2) (2005), as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.101 Purpose

a) The purpose of this Part is to provide for the issuance of RCRA permits to satisfy the permit requirement of Section 21(f) of the Environmental Protection Act [415 ILCS 5/21(f)];

b) This Part is adopted in order to obtain final authorization from the United States Environmental Protection Agency (USEPA) for the State of Illinois to participate in permit issuance pursuant to the federal Resource Conservation and Recovery Act (RCRA) (42 USC 6901).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.102 Electronic Reporting

The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Derived from 40 CFR 3, as added, and 40 CFR 271.10(b), 271.11(b), and 271.12(h) (2005), as amended at 70 Fed. Reg. 59848 (Oct. 13, 2005).

(Source: Added at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.110 References

35 Ill. Adm. Code 720.111 lists all documents incorporated by reference for the Illinois RCRA and UIC programs.

BOARD NOTE: This Section corresponds with 40 CFR 270.6.

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

SUBPART B: PROHIBITIONS

Section 703.120 Prohibitions in General

a) Violation of the provisions of this Subpart may result in an enforcement action and sanctions pursuant to Titles VIII and XII of the Environmental Protection Act;

b) This Subpart B serves the following functions:

1) It prohibits the conduct of hazardous waste management operations without a RCRA permit (Sections 703.121 and 703.122);

2) It specifies exclusions from the permit requirement (Section 703.123);

3) It sets times for the filing of applications and reapplications (Sections 703.125 and 703.126);

4) It prohibits violation of the conditions of RCRA permits (Section 703.122);

c) Subpart C grants permits by rule, and sets the conditions for interim status, which allows operation of certain facilities prior to permit issuance. Subpart C contains prohibitions applicable during the interim status period;

d) The following definitions apply to this Subpart B:

1) 35 Ill. Adm. Code 702.110; and

2) 35 Ill. Adm. Code 721, the definitions of "solid waste" and "hazardous waste".

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.121 RCRA Permits

a) No person may conduct any hazardous waste storage, hazardous waste treatment, or hazardous waste disposal operation as follows:

1) Without a RCRA permit for the HWM (hazardous waste management) facility; or

2) In violation of any condition imposed by a RCRA permit.

b) An owner or operator of a HWM unit must have permits during the active life (including the closure period) of the unit. An owner or operator of a surface impoundment, landfill, land treatment unit, or a waste pile unit that received wastes after July 26, 1982, or that certified closure (according to 35 Ill. Adm. Code 725.215) after January 26, 1983, must have a post-closure care permit, unless it demonstrates closure by removal or decontamination, as provided under Sections 703.159 and 703.160, or obtains enforceable documents containing alternative requirements, as provided under Section 703.161. If a post-closure care permit is required, the permit must address applicable 35 Ill. Adm. Code 724

groundwater monitoring, unsaturated zone monitoring, corrective action, and post-closure care requirements.

c) The denial of a permit for the active life of a hazardous waste management facility or unit does not affect the requirement to obtain a post-closure care permit under this Section.

BOARD NOTE: Derived from 40 CFR 270.1(c) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.122 Specific Inclusions in Permit Program

Owners and operators of certain facilities require RCRA permits as well as permits under other programs for certain aspects of the facility operation. RCRA permits are required for the following activities and facilities:

a) Injection wells that dispose of hazardous waste, and associated surface facilities that treat, store or dispose of hazardous waste. However, the owner and operator with a UIC permit will be deemed to have a RCRA permit for the injection well itself if they comply with the requirements of Section 703.141(b) (permit by rule for injection wells);

b) Treatment, storage, or disposal of hazardous waste at facilities requiring an NPDES (National Pollutant Discharge Elimination System) permit issued pursuant to 35 Ill. Adm. Code 309. However, the owner and operator of a publicly owned treatment works (POTW) receiving hazardous waste will be deemed to have a RCRA permit for that waste if they comply with the requirements of Section 703.141(c) (permit by rule for POTWs);

c) Barges or vessels that dispose of hazardous waste by ocean disposal and onshore hazardous waste treatment or storage facilities associated with an ocean disposal operation. However, the owner and operator will be deemed to have a RCRA permit for ocean disposal from the barge or vessel itself if they comply with the requirements of Section 703.141(a) (permit by rule for ocean disposal barges and vessels).

(BOARD NOTE: Derived from 40 CFR 270.1(c)(1) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.123 Specific Exclusions and Exemptions from Permit Program

The following persons are not required to obtain a RCRA permit:

a) A generator that accumulates hazardous waste on site in compliance with all of the conditions for exemption provided in 35 Ill. Adm. Code 722.114 through 722.117;

b) A farmer that disposes of hazardous waste pesticides from the farmer's own use, as provided in 35 Ill. Adm. Code 722.170;

c) A person that owns or operates a facility solely for the treatment, storage, or disposal of hazardous waste excluded from regulations under this Part by 35 Ill. Adm. Code 721.104 or 722.114 (VSQG exemption);

d) An owner or operator of a totally enclosed treatment facility, as defined in 35 Ill. Adm. Code 720.110;

e) An owner or operator of an elementary neutralization unit or wastewater treatment unit, as defined in 35 Ill. Adm. Code 720.110;

f) A transporter that stores manifested shipments of hazardous waste in containers that meet the requirements of 35 Ill. Adm. Code 722.130 at a transfer facility for a period of ten days or less;

g) A person that adds absorbent material to waste in a container (as defined in 35 Ill. Adm. Code 720.110) or a person that adds waste to absorbent material in a container, provided that these actions occur at the time waste is first placed in the container; and 35 Ill. Adm. Code 724.117(b), 724.271, and 724.272 are complied with; and

h) A universal waste handler or universal waste transporter (as defined in 35 Ill. Adm. Code 720.110) that manages the wastes listed in subsections (h)(1) through (h)(6). Such a handler or transporter is subject to regulation under 35 Ill. Adm. Code 733.

1) Batteries, as described in 35 Ill. Adm. Code 733.102;

2) Pesticides, as described in 35 Ill. Adm. Code 733.103;

3) Mercury-containing equipment, as described in 35 Ill. Adm. Code 733.104;

4) Lamps, as described in 35 Ill. Adm. Code 733.105;

5) Aerosol cans, as described in 35 Ill. Adm. Code 733.106; and

6) Paint and paint-related wastes, as described in 35 Ill. Adm. Code 733.107.

i) This subsection (i) corresponds with 40 CFR 270.1(c)(2)(ix), which applies only to a facility outside Illinois. This statement maintains structural consistency with the corresponding USEPA rule.

j) Reverse Distributors Accumulating Potentially Creditable Hazardous Waste Pharmaceuticals and Evaluated Hazardous Waste Pharmaceuticals, as defined in Section 726.600. Reverse distributors are subject to regulation under Subpart P of 35 Ill. Adm. Code 726 for the accumulation of potentially creditable hazardous waste pharmaceuticals and evaluated hazardous waste pharmaceuticals.

k) Recyclers of ignitable spent refrigerants subject to regulation under Section 726 subpart Q.

BOARD NOTE: Derived from 40 CFR 270.1(c)(2).

(Source: Amended at 49 Ill. Reg. 11329, effective August 27, 2025)

Section 703.124 Discharges of Hazardous Waste

a) A person is not required to obtain a RCRA permit for treatment or containment activities taken during immediate response to any of the following situations:

1) A discharge of a hazardous waste;

2) An imminent and substantial threat of a discharge of hazardous waste;

3) A discharge of a material that, when discharged, becomes a hazardous waste; or

4) An immediate threat to human health, public safety, property, or the environment from the known or suspected presence of military munitions, other explosive material, or an explosive device, as determined by an explosive or munitions emergency response specialist as defined in 35 Ill. Adm. Code 720.110.

b) Any person who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of this Part for those activities.

c) In the case of an emergency response involving military munitions, the responding military emergency response specialist's organizational unit must retain records for three years after the date of the response that identify the following: the date of the response, the responsible persons responding, the type and description of material addressed, and the disposition of the material.

BOARD NOTE: Derived from 40 CFR 270.1(c)(3) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.125 Reapplying for a Permit

If a facility owner or operator has an effective permit and it wants to reapply for a new one, it has the following two options:

a) The owner or operator may submit a new application at least 180 days before the expiration date of the effective permit, unless the Agency allows a later date; or

b) If the owner or operator intends to be covered by a RCRA standardized permit, it may submit a Notice of Intent, as described in 35 Ill. Adm. Code 702.125(e)(1) at least 180 days before the expiration date of the effective permit, unless the Agency allows a later date. The Agency may not allow the owner or operator to submit an application or Notice of Intent later than the expiration date of the existing permit, except as allowed by 35 Ill. Adm. Code 702.125(e)(2).

BOARD NOTE: Derived from 40 CFR 270.10(h) (2005), as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.126 Initial Applications

Except as provided in Subpart C of this Part, no person may begin physical construction of a new HWM facility without having submitted Part A and Part B of the permit application and received a finally effective RCRA permit.

BOARD NOTE: Derived from 40 CFR 270.10(f)(1) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.127 Federal Permits (Repealed)

(Source: Repealed at 8 Ill. Reg. 206, effective December 27, 1983)

SUBPART C: AUTHORIZATION BY RULE AND INTERIM STATUS

Section 703.140 Purpose and Scope

a) The Sections of this Subpart C are divided into the following two groups:

1) Section 703.141 (Permits by Rule); and

2) Sections 703.151 through 703.158, relating to interim status;

b) The interim status rules correspond to subpart G of 40 CFR 270, which relates to interim status. Other portions of the federal rules may be found in Subpart B of this Part. The intent is to group the interim status rules so they can be more easily ignored by those to whom they do not apply, and so they can be conveniently repealed after the interim status period.

(Source: Amended at 30 Ill. Reg. 2845, effective February 23, 2006)

Section 703.141 Permits by Rule

Notwithstanding any other provision of this Part or 35 Ill. Adm. Code 705, the following must be deemed to have a RCRA permit if the conditions listed are met:

a) Ocean disposal barges or vessels. The owner or operator of a barge or other vessel that accepts hazardous waste for ocean disposal, if the owner or operator does the following:

1) It has a permit for ocean dumping issued by USEPA under 40 CFR 220;

2) It complies with the conditions of that permit; and

3) It complies with the following hazardous waste regulations:

A) 35 Ill. Adm. Code 724.111 (USEPA Identification Number);

B) 35 Ill. Adm. Code 724.171 (Use of Manifest System);

C) 35 Ill. Adm. Code 724.172 (Manifest Discrepancies);

D) 35 Ill. Adm. Code 724.173(a) and (b)(1) (Operating Record);

E) 35 Ill. Adm. Code 724.175 (Biennial Report); and

F) 35 Ill. Adm. Code 724.176, (Unmanifested Waste Report).

b) Injection wells. The owner or operator of an underground injection well disposing of hazardous waste, if the owner or operator fulfills the following conditions:

1) It has a permit for underground injection issued under 35 Ill. Adm. Code 704; and

2) It complies with the conditions of that permit and the requirements of Subpart F of 35 Ill. Adm. Code 704 (requirements for wells managing hazardous waste); and

3) For UIC permits issued after November 8, 1984, the following:

A) It complies with 35 Ill. Adm. Code 724.201; and

B) Where the UIC well is the only unit at the facility that requires a RCRA permit, it complies with Section 703.187.

c) Publicly owned treatment works (POTW). The owner or operator of a POTW that accepts for treatment hazardous waste, if the owner or operator fulfills the following conditions:

1) It has an NPDES permit;

2) It complies with the conditions of that permit;

3) It complies with the following regulations:

A) 35 Ill. Adm. Code 724.111 (Identification Number);

B) 35 Ill. Adm. Code 724.171 (Use of Manifest System);

C) 35 Ill. Adm. Code 724.172 (Manifest Discrepancies);

D) 35 Ill. Adm. Code 724.173(a) and (b)(1) (Operating Record);

E) 35 Ill. Adm. Code 724.175 (Annual Report);

F) 35 Ill. Adm. Code 724.176 (Unmanifested Waste Report); and

G) For NPDES permits issued after November 8, 1984, 35 Ill. Adm. Code 724.201 (Corrective Action for Solid Waste Management Units); and

4) If the waste meets all federal, it complies with State and local pretreatment requirements that would be applicable to the waste if it were being discharged into the POTW through a sewer, pipe, or similar conveyance.

BOARD NOTE: Illinois pretreatment requirements are codified in 35 Ill. Adm. Code 307 and 310.

BOARD NOTE: See 40 CFR 270.60 (2012).

(Source: Amended at 37 Ill. Reg. 17659, effective October 24, 2013)

Section 703.150 Application by Existing HWM Facilities and Interim Status Qualifications

a) The owner or operator of an existing HWM facility or of an HWM facility in existence on the effective date of statutory or regulatory amendments that render the facility subject to the requirement to have a RCRA permit must submit Part A of the permit application to the Agency no later than the following times, whichever comes first:

1) Six months after the date of publication of regulations that first require the owner or operator to comply with standards in 35 Ill. Adm. Code 725 or 726; or

2) Thirty days after the date the owner or operator first becomes subject to the standards in 35 Ill. Adm. Code 725 or 726.

b) In granting a variance under subsection (c), the Board will consider whether there has been substantial confusion as to whether the owner or operator of such facilities were required to file a Part A application and whether such confusion was attributable to ambiguities in 35 Ill. Adm. Code 720, 721, or 725.

c) The time for filing Part A of the permit application may be extended only by a Board Order entered pursuant to a variance petition.

d) The owner or operator of an existing HWM facility may be required to submit Part B of the permit application. The Agency will notify the owner or operator that a Part B application is required, and set a date for receipt of the application, not less than six months after the date the notice is sent. The owner or operator my voluntarily submit a Part B application for all or part of the HWM facility at any time. Notwithstanding the above, any owner or operator of an existing HWM facility must submit a Part B permit application in accordance with the dates specified in Section 703.157. Any owner or operator of a land disposal facility in existence on the effective date of statutory or regulatory amendments that render the facility subject to the requirement to have a RCRA permit must submit a Part B application in accordance with the dates specified in Section 703.157.

e) Interim status may be terminated as provided in Section 703.157.

BOARD NOTE: Derived from 40 CFR 270.10(e) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.151 Application by New HWM Facilities

a) Except as provided in subsection (c), no person may begin physical construction of a new HWM facility without having submitted Part A and Part B of the permit application and having received a finally effective RCRA permit;

b) An application for a permit for a new HWM facility (including both Part A and Part B) may be filed at any time after promulgation of standards in 35 Ill. Adm. Code 724 applicable to any TSD unit in the facility. Except as provided in subsection (c), all applications must be submitted to the Agency at least 180 days before physical construction is expected to commence;

c) Notwithstanding subsection (a), a person may construct a facility for the incineration of polychlorinated biphenyls pursuant to an approval issued by the Administrator of USEPA under Section (6)(e) of the federal Toxic Substances Control Act (42 USC 9601 et seq.) and any person owning or operating such a facility may, at any time after construction or operation of such facility has begun, file an application for a RCRA permit to incinerate hazardous waste authorizing such facility to incinerate waste identified or listed under 35 Ill. Adm. Code 721.

d) Such persons may continue physical construction of the HWM facility after the effective date of the standards applicable to it if the person submits Part B of the permit application on or before the effective date of such standards (or on some later date specified by the Agency). Such person must not operate the HWM facility without having received a finally effective RCRA permit.

BOARD NOTE: Derived from 40 CFR 270.10(f) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.152 Amended Part A Application

a) If any owner or operator of an HWM facility has filed Part A of a permit application and has not yet filed Part B, the owner or operator must file an amended Part A application with the Agency, as follows:

1) No later than the effective date of revised regulations under 35 Ill. Adm. Code 721 listing or identifying additional hazardous wastes, if the facility is treating, storing, or disposing of any of those newly listed or identified wastes;

2) As necessary to comply with provisions of Section 703.155 for changes during interim status.

b) The owner or operator of a facility who fails to comply with the updating requirements of subsection (a) of this Section does not receive interim status as to the wastes not covered by duly filed Part A applications.

BOARD NOTE: Derived from 40 CFR 270.10(g) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.153 Qualifying for Interim Status

a) Any person who owns or operates an existing HWM facility or a facility in existence on the effective date of statutory or regulatory amendments that render the facility subject to the requirement to have a RCRA permit must have interim status and must be treated as having been issued a permit to the extent he or she has fulfilled the following requirements:

1) The owner or operator has complied with the requirements of Section 3010(a) of the federal Resource Conservation and Recovery Act (42 USC 6930(a)) pertaining to notification of hazardous waste activity;

BOARD NOTE: Some existing facilities may not be required to file a notification under Section 3010(a) of the federal Resource Conservation and Recovery Act (42 USC 6930(a)). These facilities may qualify for interim status by meeting subsection (a)(2).

2) The owner or operator has complied with the requirements of Sections 703.150 and 703.152 governing submission of Part A applications.

b) Failure to qualify for interim status. If the Agency has reason to believe upon examination of a Part A application that the Part A application fails to meet the requirements of 35 Ill. Adm. Code 702.123 or 703.181, it must notify the owner or operator in writing of the apparent deficiency. Such notice must specify the grounds for the Agency's belief that the application is deficient. The owner or operator must have 30 days from receipt to respond to such a notification and to explain or cure the alleged deficiency in its Part A application. If, after such notification and opportunity for response, the Agency determines that the application is deficient it may take appropriate enforcement action.

c) Subsection (a) of this Section must not apply to any facility that has been previously denied a RCRA permit or if authority to operate the facility under the federal Resource Conservation and Recovery Act (42 USC 6901 et seq.) has been previously terminated.

BOARD NOTE: Derived from 40 CFR 270.70 (2005).

(Source: Amended at 30 Ill. Reg. 2845, effective February 23, 2006)

Section 703.154 Prohibitions During Interim Status

During the interim status period the facility must not do any of the following:

a) Treat, store, or dispose of hazardous waste not specified in Part A of the permit application;

b) Employ processes not specified in Part A of the permit application; or

c) Exceed the design capacities specified in Part A of the permit application.

BOARD NOTE: Derived from 40 CFR 270.71(a) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.155 Changes During Interim Status

a) Except as provided in subsection (b) of this Section, the owner or operator of an interim status facility may make the following changes at the facility:

1) Treatment, storage, or disposal of new hazardous wastes not previously identified in Part A of the permit application (and, in the case of newly listed or identified wastes, addition of the units being used to treat, store, or dispose of the hazardous wastes on the date of the listing or identification) if the owner or operator submits a revised Part A permit application prior to such treatment, storage, or disposal;

2) Increases in the design capacity of processes used at the facility if the owner or operator submits a revised Part A permit application prior to such a change (along with a justification explaining the need for the change) and the Agency approves the change because either of the following conditions exist:

A) There is a lack of available treatment, storage, or disposal capacity at other hazardous waste management facilities; or

B) The change is necessary to comply with a federal, State, or local requirement, including 35 Ill. Adm. Code 725, 728, or 729;

3) Changes in the processes for the treatment, storage, or disposal of hazardous waste may be made at a facility or addition of processes if the owner or operator submits a revised Part A permit application prior to such a change (along with a justification explaining the need for change) and the Agency approves the change because either of the following conditions exist:

A) The change is necessary to prevent a threat to human health or the environment because of an emergency situation; or

B) The change is necessary to comply with a federal, State, or local requirement, including 35 Ill. Adm. Code 725, 728, or 729;

4) Changes in the ownership or operational control of a facility if the new owner or operator submits a revised Part A permit application no later than 90 days prior to the scheduled change. When a transfer of ownership or operational control of a facility occurs, the old owner or operator must comply with the requirements of Subpart H of 35 Ill. Adm. Code 725 (financial requirements), until the new owner or operator has demonstrated to the Agency that it is complying with the requirements of that Subpart. The new owner or operator must demonstrate compliance with the financial assurance requirements within six months after the date of the change in the ownership or operational control of the facility. Upon demonstration to the Agency by the new owner or operator of compliance with the financial assurance requirements, the Agency must notify the old owner or operator in writing that the old owner or operator no longer needs to comply with Subpart H of 35 Ill. Adm. Code 725 as of the date of demonstration. All other interim status duties are transferred effective immediately upon the date of the change of ownership or operational control of the facility;

5) Changes made in accordance with an interim status corrective action order issued by: USEPA under Section 3008(h) of the federal Resource Conservation and Recovery Act (42 USC 6901 et seq.) or other federal authority; a court pursuant to a judicial action brought USEPA; a court pursuant to the Environmental Protection Act; or the Board. Changes under this subsection (a)(5) are limited to the treatment, storage, or disposal of solid waste from releases that originate within the boundary of the facility;

6) Addition of newly regulated units for the treatment, storage, or disposal of hazardous waste if the owner or operator submits a revised Part A permit application on or before the date on which the unit becomes subject to the new requirements.

b) Except as specifically allowed under this subsection (b), changes listed under subsection (a) of this Section must not be made if they amount to reconstruction of the HWM facility. Reconstruction occurs when the capital investment in the changes to the facility exceeds 50 percent of the capital cost of a comparable entirely new HWM facility. If all other requirements are met, the following changes may be made even if they amount to a reconstruction:

1) Changes made solely for the purpose of complying with requirements of 35 Ill. Adm. Code 725.293 for tanks and ancillary equipment.

2) If necessary to comply with federal, State or local requirements, including 35 Ill. Adm. Code 725, 728, or 729, changes to an existing unit, changes solely involving tanks or containers, or addition of replacement surface

impoundments that satisfy the statutory standards of Section 35 Ill. Adm. Code 728.139.

3) Changes that are necessary to allow an owner or operator to continue handling newly listed or identified hazardous wastes that have been treated, stored or disposed of at the facility prior to the effective date of the rule establishing the new listing or identification.

4) Changes during closure of a facility or of a unit within a facility made in accordance with an approved closure plan.

5) Changes necessary to comply with an interim status corrective action order issued by: USEPA under Section 3008(h) of the federal Resource Conservation and Recovery Act (42 USC 6930(a)) or other federal authority; a court pursuant to a judicial action brought by USEPA; a court pursuant to the Environmental Protection Act; or the Board. Changes under this subsection (b)(5) are limited to the treatment, storage, or disposal of solid waste from releases that originate within the boundary of the facility.

6) Changes to treat or store, in tanks, containers, or containment buildings, hazardous wastes subject to land disposal restrictions imposed in 35 Ill. Adm. Code 728, provided that such changes are made solely for the purpose of complying with 35 Ill. Adm. Code 728.

7) Addition of newly regulated units under subsection (a)(6) of this Section.

8) Changes necessary to comply with the federal Clean Air Act (CAA) Maximum Achievable Control Technology (MACT) emissions standards of subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

BOARD NOTE: Derived from 40 CFR 270.72 (2005). The federal CAA MACT standards are directly implemented in Illinois pursuant to Section 39.5 of the Environmental Protection Act [415 ILCS 5/39.5].

(Source: Amended at 30 Ill. Reg. 2845, effective February 23, 2006)

Section 703.156 Interim Status Standards

During interim status, an owner or operator must comply with the interim status standards of 35 Ill. Adm. Code 725.

BOARD NOTE: Derived from 40 CFR 270.71(b) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.157 Grounds for Termination of Interim Status

Interim status terminates when either of the following occurs:

a) Final administrative disposition is made of a permit application, except an application for a remedial action plan (RAP) under Subpart H; or

b) The owner or operator fails to furnish a requested Part B application on time, or to furnish the full information required by the Part B application, in which case the Agency must notify the owner and operator of the termination of interim status following the procedures for a notice of intent to deny a permit pursuant to 35 Ill. Adm. Code 705.

c) Corresponding 40 CFR 270.10(e)(1)(iii) required a RCRA Part B permit application before a date long past. This statement maintains structural consistency with the federal rules.

d) For an owner or operator of a land disposal facility that is in existence on the effective date of statutory or regulatory amendments under the federal Resource Conservation and Recovery Act (42 USC 6901 et seq.) that render the facility subject to the requirement to have a RCRA permit and which is granted interim status, twelve months after the date on which the facility first becomes subject to such permit requirement, unless the owner or operator of such facility does as follows:

    1) It submits a Part B application for a RCRA permit for such facility before the date 12 months after the date on which the facility first becomes subject to such permit requirement; and

    2) It certifies that such facility is in compliance with all applicable groundwater monitoring and financial responsibility requirements.

e) For an owner or operator of any land disposal unit that is granted authority to operate under Section 703.155(a)(1), (a)(2), or (a)(3), on the day 12 months after the effective date of such requirement, unless the owner or operator certifies that such unit is in compliance with all applicable groundwater monitoring and financial responsibility requirements (Subparts F and H of 35 Ill. Adm. Code 725).

BOARD NOTE: Derived from 40 CFR 270.10(e)(5) and 270.73 (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.158 Permits for Less Than an Entire Facility

The Agency may issue or deny a permit for one or more units at a facility without simultaneously issuing or denying a permit to all of the units at the facility. The interim status of any unit for which a permit has not been issued or denied is not affected by the issuance or denial of a permit to any other unit at the facility.

BOARD NOTE: Derived from 40 CFR 270.1(c)(4) (1992).

(Source: Amended at 18 Ill. Reg. 18316, effective December 20, 1994)

Section 703.159 Closure by Removal

An owner or operator of a surface impoundment, a land treatment unit, or a waste pile that is closing by removal or decontamination under 35 Ill. Adm. Code 725 standards must obtain a post-closure permit, unless it demonstrates to the Agency that the closure met the standards for closure by removal or decontamination in 35 Ill. Adm. Code 724.328, 724.380(e), or 724.358, respectively. The demonstration may be made in the following ways:

a) If the owner or operator has submitted a Part B application for a post-closure permit, the owner or operator may request a determination, based on information contained in the application, that 35 Ill. Adm. Code 724 closure by removal standards are met. If the Agency makes a tentative decision that the 35 Ill. Adm. Code 724 standards are met, the Agency will notify the public of this proposed decision, allow for public comment and reach a final determination according to the procedures in Section 703.160.

b) If the owner or operator has not submitted a Part B application for a post-closure permit, the owner or operator may petition the Agency for a determination that a post-closure permit is not required because the closure met the applicable 35 Ill. Adm. Code 724 standards.

    1) The petition must include data demonstrating that closure by removal or decontamination standards were met.

    2) The Agency must approve or deny the petition according to the procedures outlined in Section 703.160.

BOARD NOTE: Derived from 40 CFR 270.1(c)(5) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.160 Procedures for Closure Determination

a) If a facility owner or operator seeks an equivalency determination under Section 703.159, the Agency must provide the public, through a newspaper notice, the opportunity to submit written comments on the information submitted by the

owner or operator within 30 days from the date of the notice. The Agency must also, in response to a request or at its own discretion, hold a public hearing whenever such a hearing might clarify one or more issues concerning the equivalence of the 35 Ill. Adm. Code 725 closure to a 35 Ill. Adm. Code 724 closure. The Agency must give public notice of the hearing at least 30 days before it occurs. (Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the two notices may be combined.)

b) The Agency must determine whether the 35 Ill. Adm. Code 725 closure met the 35 Ill. Adm. Code 724 closure by removal or decontamination requirements within 90 days after receipt of the request or petition. If the Agency finds that the closure did not meet the applicable 35 Ill. Adm. Code 724 standards, it must provide the owner or operator with a written statement of the reasons why the closure failed to meet 35 Ill. Adm. Code 724 standards. The owner or operator may submit additional information in support of an equivalency demonstration within 30 days after receiving such written statement. The Agency must review any additional information submitted and make a final determination within 60 days.

c) If the Agency determines that the facility did not close in accordance with 35 Ill. Adm. Code 724 closure by removal standards, the facility is subject to post-closure permitting requirements.

BOARD NOTE: See 40 CFR 270.1(c)(6) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.161 Enforceable Document for Post-Closure Care

a) An owner or operator may obtain an enforceable document containing alternative requirements for post-closure care that imposes the requirements of 35 Ill. Adm. Code 725.221. "Enforceable document containing alternative requirements" or "other enforceable document", as used in this Part and in 35 Ill. Adm. Code 724 and 725, means an order of the Board, an Agency-approved plan, or an order of a court of competent jurisdiction that meets the requirements of subsection (b). An "enforceable document containing alternative requirements" or "other enforceable document", may also mean an order of USEPA (such as pursuant to section 3008(h) of RCRA, 42 USC 6928(h), or under section 106 of the federal Comprehensive Environmental Response, Compensation and Liability Act, 42 USC 9606).

BOARD NOTE: Derived from 40 CFR 270.1(c)(7) (2017).

b) Any alternative requirements issued under this Section or established to satisfy the requirements of 35 Ill. Adm. Code 724.190(f), 724.210(c), 724.240(d), 725.190(f),

725.210(c), or 725.240(d) must be embodied in a document that is enforceable and subject to appropriate compliance orders and civil penalties under Titles VIII and XII of the Act.

BOARD NOTE: Derived from 40 CFR 271.16(e) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

SUBPART D: APPLICATIONS

Section 703.180 Applications in General

a) This Subpart D contains requirements for applications for RCRA permits. A "Part A" application is required of all facilities to obtain interim status. The "Part B" application is a prerequisite to an actual permit, and need be filed for an existing facility with interim status only when requested. New facilities must file Part A and Part B at the same time;

b) Subpart E of this Part contains requirements for applications for emergency permits, trial burn permits, and land treatment demonstration permits;

c) The application package must consist of the following:

1) Information required by 35 Ill. Adm. Code 702.123;

2) Part A (Section 703.181);

3) Part B, as follows:

A) General information (Section 703.183);

B) Facility location information (Section 703.184);

C) Groundwater protection information, if required (Section 703.185);

D) Specific information for each type of TSD unit, i.e. tanks, surface impoundments, landfills, etc. (Sections 703.200 et seq.);

E) Additional information to demonstrate compliance with 35 Ill. Adm. Code 724 (Section 703.183(t));

F) Information for trial burn permits and land treatment demonstrations (Subpart E of this Part).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.181 Contents of Part A

In addition to the information in 35 Ill. Adm. Code 702.123, Part A of the RCRA application must include the following information:

a) The latitude and longitude of the facility;

b) The name, address, and telephone number of the owner of the facility;

c) An indication of whether the facility is new or existing and whether it is a first or revised application;

d) For existing facilities, a scale drawing of the facility showing the location of all past, present, and future treatment, storage, and disposal areas;

e) For existing facilities, photographs of the facility clearly delineating all existing structures; existing treatment, storage, and disposal areas; and sites of future treatment, storage, and disposal areas;

f) A description of the processes to be used for treating, storing, and disposing of hazardous waste, and the design capacity of these items;

g) A specification of the hazardous wastes listed or designated under 35 Ill. Adm. Code 721 to be treated, stored, or disposed of at the facility, an estimate of the quantity of such wastes to be treated, stored, or disposed of annually, and a general description of the processes to be used for such wastes.

h) For hazardous debris, a description of the debris categories and containment categories to be treated, stored, or disposed of at the facility.

BOARD NOTE: Derived from 40 CFR 270.13(b), (e), (g), (h) through (j), and (n) (2012).

(Source: Amended at 37 Ill. Reg. 17659, effective October 24, 2013)

Section 703.182 Contents of Part B

Part B information requirements presented in Sections 703.183 et seq. reflect the standards promulgated in 35 Ill. Adm. Code 724. These information requirements are necessary in order for the Agency to determine compliance with the 35 Ill. Adm. Code 724 standards. If an owner or operator of a HWM facility can demonstrate that the information prescribed in Part B cannot be provided to the extent required, the Agency may make allowance for submission of such information on a case by case basis. Information required in Part B must be submitted to the Agency and signed in accordance with the requirements in 35 Ill. Adm. Code 702.126. Certain technical data, such as design drawings and specifications and engineering studies, must be certified by a qualified Professional Engineer. For post-closure care permits, only the information

specified in Section 703.214 is required in Part B of the permit application. Part B of the RCRA application includes the following:

a) General information (Section 703.183);

b) Facility location information (Section 703.184);

c) Groundwater protection information (Section 703.185);

d) Exposure information (Section 703.186); and

e) Specific information (Section 703.200 et seq.).

BOARD NOTE: Derived from 40 CFR 270.14(a) (2007).

(Source: Amended at 32 Ill. Reg. 11672, effective July 14, 2008)

Section 703.183 General Information

The following information is required in the Part B application for all HWM facilities, except as 35 Ill. Adm. Code 724.101 provides otherwise:

a) A general description of the facility;

b) Chemical and physical analyses of the hazardous wastes and hazardous debris to be handled at the facility. At a minimum, these analyses must contain all the information that must be known to treat, store, or dispose of the wastes properly in accordance with 35 Ill. Adm. Code 724;

c) A copy of the waste analysis plan required by 35 Ill. Adm. Code 724.113(b) and, if applicable, 35 Ill. Adm. Code 724.113(c);

d) A description of the security procedures and equipment required by 35 Ill. Adm. Code 724.114, or a justification demonstrating the reasons for requesting a waiver of this requirement;

e) A copy of the general inspection schedule required by 35 Ill. Adm. Code 724.115(b). Include where applicable, as part of the inspection schedule, specific requirements in 35 Ill. Adm. Code 724.274, 724.293(i), 724.295, 724.326, 724.354, 724.373, 724.403, 724.702, 724.933, 724.952, 724.953, 724.958, 724.984, 724.985, 724.986, and 724.988;

f) A justification of any request for a waiver of the preparedness and prevention requirements of Subpart C of 35 Ill. Adm. Code 724;

g) A copy of the contingency plan required by Subpart D of 35 Ill. Adm. Code 724;

BOARD NOTE: Include, where applicable, as part of the contingency plan, specific requirements in 35 Ill. Adm. Code 724.200 and 724.327. Corresponding 40 CFR 270.14(b)(7) refers to the requirements of 40 CFR 264.255 (corresponding with 35 Ill. Adm. Code 724.355), marked "reserved" by USEPA.

h) A description of procedures, structures, or equipment used at the facility as follows:

1) To prevent hazards in unloading operations (for example, ramps, or special forklifts);

2) To prevent run-off from hazardous waste handling areas to other areas of the facility or environment, or to prevent flooding (for example, berms, dikes, or trenches);

3) To prevent contamination of water supplies;

4) To mitigate effects of equipment failure and power outages;

5) To prevent undue exposure of personnel to hazardous waste (for example, protective clothing); and

6) To prevent releases to the atmosphere;

i) A description of precautions to prevent accidental ignition or reaction of ignitable, reactive, or incompatible wastes, as required to demonstrate compliance with 35 Ill. Adm. Code 724.117, including documentation demonstrating compliance with 35 Ill. Adm. Code 724.117(c);

j) A description of the area traffic pattern, the estimated traffic volume (number and types of vehicles), and area traffic control (for example, show turns across traffic lanes and stacking lanes, if appropriate); a description of access road surfacing and load bearing capacity; and the locations and types of traffic control signals;

k) Facility location information, as required by Section 703.184;

BOARD NOTE: The Board has codified 40 CFR 270.14(b)(11)(iii) through (b)(11)(v) as Section 703.184(c) through (e) to comport with Illinois Administrative Code codification requirements. The Board did not include an equivalent to 40 CFR 270.14(b)(11)(i) and (b)(11)(ii), relating to certain seismic zones not located within Illinois.

l) An outline of both the introductory and continuing training programs by the owner or operator to prepare persons to operate or maintain the HWM facility in a safe manner, as required to demonstrate compliance with 35 Ill. Adm. Code

724.116. A brief description of how training will be designed to meet actual job tasks in accordance with requirements in 35 Ill. Adm. Code 724.116(a)(3);

m) A copy of the closure plan and, where applicable, the post-closure plan required by 35 Ill. Adm. Code 724.212, 724.218, and 724.297. Include, where applicable, as part of the plans, specific requirements in 35 Ill. Adm. Code 724.278, 724.297, 724.328, 724.358, 724.380, 724.410, 724.451, 724.701, and 724.703;

n) For hazardous waste disposal units that have been closed, documentation that notices required under 35 Ill. Adm. Code 724.219 have been filed;

o) The most recent closure cost estimate for the facility, prepared in accordance with 35 Ill. Adm. Code 724.242, and a copy of the documentation required to demonstrate financial assurance under 35 Ill. Adm. Code 724.243. For a new facility, a copy of the required documentation may be submitted 60 days prior to the initial receipt of hazardous wastes, if it is later than the submission of the Part B permit application;

p) Where applicable, the most recent post-closure cost estimate for the facility, prepared in accordance with 35 Ill. Adm. Code 724.244, plus a copy of the documentation required to demonstrate financial assurance under 35 Ill. Adm. Code 724.245. For a new facility, a copy of the required documentation may be submitted 60 days prior to the initial receipt of hazardous wastes, if it is later than the submission of the Part B permit application;

q) Where applicable, a copy of the insurance policy or other documentation that comprises compliance with the requirements of 35 Ill. Adm. Code 724.247. For a new facility, documentation showing the amount of insurance meeting the specification of 35 Ill. Adm. Code 724.247(a) and, if applicable, 35 Ill. Adm. Code 724.247(b) that the owner or operator plans to have in effect before initial receipt of hazardous waste for treatment, storage, or disposal. A request for an alternative level of required coverage for a new or existing facility may be submitted as specified in 35 Ill. Adm. Code 724.247(c);

r) This subsection corresponds with 40 CFR 270.14(b)(18), pertaining to state financial mechanisms that do not apply in Illinois. This statement maintains structural parity with the federal regulations;

s) A topographic map showing 305 meters (1,000 feet) around the facility at a scale of 2.5 centimeters (1 inch) equal to not more than 61.0 meters (200 feet). Contours must be shown on the map. The contour interval must be sufficient to clearly show the pattern of surface water flow near and from each operational unit of the facility. For example, contours with an interval of 1.5 meters (5 feet), if relief is greater than 6.1 meters (20 feet), or an interval of 0.6 meters (2 feet), if relief is less than 6.1 meters (20 feet). An owner or operator of an HWM facility

located in a mountainous area must use larger contour intervals to adequately show topographic profiles of facilities. The map must clearly show the following:

1) Map scale and date;

2) 100-year floodplain area;

3) Surface waters including intermittent streams;

4) Surrounding land uses (e.g., residential, commercial, agricultural, recreational, etc.);

5) A wind rose (i.e., prevailing windspeed and direction);

6) Orientation of the map (north arrow);

7) Legal boundaries of the HWM facility site;

8) Access control (e.g., fences, gates, etc.);

9) Injection and withdrawal wells both on-site and off-site;

10) Buildings; treatment, storage, or disposal operations; or other structures (e.g., recreation areas, run-off control systems, access and internal roads, storm, sanitary and process sewage systems, loading and unloading areas, fire control facilities, etc.);

11) Barriers for drainage or flood control; and

12) Location of operational units within the HWM facility site, where hazardous waste is (or will be) treated, stored, or disposed of (include equipment cleanup areas);

BOARD NOTE: For large HWM facilities, the Agency must allow the use of other scales on a case-by-case basis.

t) Applicants must submit such information as the Agency determines is necessary for it to determine whether to issue a permit and what conditions to impose in any permit issued;

u) For land disposal facilities, if a case-by-case extension has been approved under 35 Ill. Adm. Code 728.105 or if a petition has been approved under 35 Ill. Adm. Code 728.106, a copy of the notice of approval of the extension or of approval of the petition is required; and

v) A summary of the pre-application meeting, along with a list of attendees and their addresses, and copies of any written comments or materials submitted at the meeting, as required under 35 Ill. Adm. Code 703.191(c).

BOARD NOTE: Derived from 40 CFR 270.14(b).

(Source: Amended at 43 Ill. Reg. 5777, May 2, 2019)

Section 703.184 Facility Location Information

a) In order to show compliance with the facility location requirements of Section 21(l) of the Environmental Protection Act [415 ILCS 5/21(l)], the owner or operator must include the following information, or a demonstration that Section 21(l) does not apply:

1) The location of any active or inactive shaft or tunneled mine below the facility;

2) The location of any active faults in the earth's crust within two miles of the facility boundary;

3) The location of existing private wells or existing sources of a public water supply within 1000 feet of any disposal unit boundary;

4) The location of the corporate boundaries of any municipalities within one and one-half miles of the facility boundary;

BOARD NOTE: Subsections (a)(1), (a)(2), (a)(3), and (a)(4) request information necessary to allow the Agency to determine the applicability of Section 21(l) of the Environmental Protection Act [415 ILCS 5/21(l)] requirements. These provisions are not intended to modify the requirements of the Act. For example, the operator is required to give the location of wells on its own property, even though the Agency might find that these do not prohibit the site location.

5) Documentation showing approval of municipalities if such approval is required by Section 21(l) of the Environmental Protection Act [415 ILCS 5/21(l)];

BOARD NOTE: This subsection (a) is a State-only requirement derived from 415 ILCS 5/21(l).

b) This subsection (b) corresponds with 40 CFR 270.14(b)(11)(ii), which pertains exclusively to facilities located in certain federally listed seismic zones, none of which is in Illinois. This statement maintains structural consistency with the corresponding federal rules;

c) A facility owner or operator must provide an identification of whether the facility is located within a 100-year floodplain. This identification must indicate the source of data for such determination and include a copy of the relevant flood map produced by the Federal Emergency Management Agency, National Flood Insurance Program (NFIP), if used, or the calculations and maps used where a NFIP map is not available. Information must also be provided identifying the 100-year flood level and any other special flooding factors (e.g., wave action) that must be considered in designing, constructing, operating, or maintaining the facility to withstand washout from a 100-year flood;

BOARD NOTE: NFIP maps are available as follows: Flood Map Distribution Center, National Flood Insurance Program, Federal Emergency Management Agency, 6930 (A-F) San Tomas Road, Baltimore, MD 21227-6227. 800-638-6620; and, Illinois Floodplain Information Depository, State Water Survey, 514 WSRC, University of Illinois, Urbana, IL 61801. 217-333-0447. Where NFIP maps are available, they will normally be determinative of whether a facility is located within or outside of the 100-year flood plain. However, where the NFIP map excludes an area (usually areas of the flood plain less than 200 feet in width), these areas must be considered and a determination made as to whether they are in the 100-year floodplain. Where NFIP maps are not available for a proposed facility location, the owner or operator must use equivalent mapping techniques to determine whether the facility is within the 100-year floodplain, and if so located, what is the 100-year flood elevation.

d) An owner or operator of a facility located in the 100-year floodplain must provide the following information:

1) Engineering analysis to indicate the various hydrodynamic and hydrostatic forces expected to result at the site as a consequence of a 100-year flood;

2) Structural or other engineering studies showing the design of operational units (e.g., tanks, incinerators) and flood protection devices (e.g., floodwalls, dikes) at the facility and how these will prevent washout;

3) If applicable, and in lieu of subsections (d)(1) and (d)(2), a detailed description of procedures to be followed to remove hazardous waste to safety before the facility is flooded, including the following:

A) Timing of such movement relative to flood levels, including estimated time to move the waste, to show that such movement can be completed before floodwaters reach the facility;

B) A description of the locations to which the waste will be moved and demonstration that those facilities will be eligible to receive

hazardous waste in accordance with 35 Ill. Adm. Code 702, 703, and 724 through 727;

C) The planned procedures, equipment, and personnel to be used and the means to ensure that such resources will be available in time for use; and

D) The potential for accidental discharges of the waste during movement;

e) An owner or operator of an existing facility not in compliance with 35 Ill. Adm. Code 724.118(b) must provide a plan showing how the facility will be brought into compliance and a schedule for compliance. Such an owner or operator must file a concurrent variance petition with the Board; and

f) An owner or operator of a new regional pollution control facility, as defined in Section 3 of the Environmental Protection Act [415 ILCS 5/3], must provide documentation showing site location suitability from the county board or other governing body as provided by Section 39(c) and 39.2 of that Act [415 ILCS 5/39(c) and 39.2].

BOARD NOTE: The Board has codified 40 CFR 270.14(b)(11)(iii) through (b)(11)(v) as subsections (c) through (e) to comport with Illinois Administrative Code codification requirements. The Board has not codified an equivalent to 40 CFR 270.14(b)(11)(i) and (b)(11)(ii), relating to certain seismic zones not located within Illinois.

(Source: Amended at 40 Ill. Reg. 11271, effective August 9, 2016)

Section 703.185 Groundwater Protection Information

The following additional information regarding protection of groundwater is required from an owner or operator of a hazardous waste facility containing a regulated unit, except as provided in 35 Ill. Adm. Code 724.190(b):

a) A summary of the groundwater monitoring data obtained during the interim status period under 35 Ill. Adm. Code 725.190 through 725.194, where applicable;

b) Identification of the uppermost aquifer and aquifers hydraulically interconnected beneath the facility property, including groundwater flow direction and rate, and the basis for such identification (i.e., the information obtained from hydrogeologic investigations of the facility area);

c) On the topographic map required under Section 703.183(s), a delineation of the waste management area, the property boundary, the proposed "point of compliance" as defined under 35 Ill. Adm. Code 724.195, the proposed location of groundwater monitoring wells as required under 35 Ill. Adm. Code 724.197

and, to the extent possible, the information required in subsection (b) of this Section;

d) A description of any plume of contamination that has entered the groundwater from a regulated unit at the time that the application is submitted that does the following:

1) It delineates the extent of the plume on the topographic map required under Section 703.183(s);

2) It identifies the concentration of each Appendix I to 35 Ill. Adm. Code 724 constituent throughout the plume or identifies the maximum concentrations of each Appendix I to 35 Ill. Adm. Code 724 constituent in the plume;

e) Detailed plans and an engineering report describing the proposed groundwater monitoring program to be implemented to meet the requirements of 35 Ill. Adm. Code 724.197;

f) If the presence of hazardous constituents has not been detected in the groundwater at the time of permit application, the owner or operator must submit sufficient information, supporting data and analyses to establish a detection monitoring program that meets the requirements of 35 Ill. Adm. Code 724.198. This submission must address the following items as specified under that Section:

1) A proposed list of indicator parameters, waste constituents or reaction products that can provide a reliable indication of the presence of hazardous constituents in the groundwater;

2) A proposed groundwater monitoring system;

3) Background values for each proposed monitoring parameter or constituent, or procedures to calculate such values; and

4) A description of proposed sampling, analysis, and statistical comparison procedures to be utilized in evaluating groundwater monitoring data;

g) If the presence of hazardous constituents has been detected in the groundwater at the point of compliance at the time of permit application, the owner or operator must submit sufficient information, supporting data and analyses to establish a compliance monitoring program that meets the requirements of 35 Ill. Adm. Code 724.199. Except as provided in 35 Ill. Adm. Code 724.198(h)(5), the owner or operator must also submit an engineering feasibility plan for a corrective action program necessary to meet the requirements of 35 Ill. Adm. Code 724.200, unless the owner or operator obtains written authorization in advance from the Agency to submit a proposed permit schedule for submittal of such a plan. To demonstrate

compliance with 35 Ill. Adm. Code 724.199, the owner or operator must address the following items:

1) A description of the wastes previously handled at the facility;

2) A characterization of the contaminated groundwater, including concentrations of hazardous constituents;

3) A list of hazardous constituents for which compliance monitoring will be undertaken in accordance with 35 Ill. Adm. Code 724.197 and 724.199;

4) Proposed concentration limits for each hazardous constituent, based on the criteria set forth in 35 Ill. Adm. Code 724.194(a), including a justification for establishing any alternate concentration limits;

5) Detailed plans and an engineering report describing the proposed groundwater monitoring system, in accordance with the requirements of 35 Ill. Adm. Code 724.197; and

6) A description of proposed sampling, analysis, and statistical comparison procedures to be utilized in evaluating groundwater monitoring data;

h) If hazardous constituents have been measured in the groundwater that exceed the concentration limits established under 35 Ill. Adm. Code 724.194, Table 1, or if groundwater monitoring conducted at the time of permit application under 35 Ill. Adm. Code 725.190 through 725.194 at the waste boundary indicates the presence of hazardous constituents from the facility in groundwater over background concentrations, the owner or operator must submit sufficient information, supporting data, and analyses to establish a corrective action program that meets the requirements of 35 Ill. Adm. Code 724.200. However, an owner or operator is not required to submit information to establish a corrective action program if it demonstrates to the Agency that alternate concentration limits will protect human health and the environment after considering the criteria listed in 35 Ill. Adm. Code 724.194(b). An owner or operator who is not required to establish a corrective action program for this reason must instead submit sufficient information to establish a compliance monitoring program that meets the requirements of subsection (f) and 35 Ill. Adm. Code 724.199.

1) To demonstrate compliance with 35 Ill. Adm. Code 724.200, the owner or operator must address, at a minimum, the following items:

A) A characterization of the contaminated groundwater, including concentrations of hazardous constituents;

B) The concentration limit for each hazardous constituent found in the groundwater, as set forth in 35 Ill. Adm. Code 724.194;

C) Detailed plans and an engineering report describing the corrective action to be taken; and

D) A description of how the groundwater monitoring program will assess the adequacy of the corrective action.

2) The permit may contain a schedule for submittal of the information required in subsections (h)(1)(C) and (h)(1)(D) of this Section, provided the owner or operator obtains written authorization from the Agency prior to submittal of the complete permit application.

BOARD NOTE: Derived from 40 CFR 270.14(c) (2005).

(Source: Amended at 30 Ill. Reg. 2845, effective February 23, 2006)

Section 703.186 Exposure Information

Any Part B permit application submitted by an owner or operator of a facility that stores, treats, or disposes of hazardous waste in a surface impoundment or a landfill must be accompanied by information, reasonably ascertainable by the owner or operator, on the potential for the public to be exposed to hazardous wastes or hazardous constituents through releases related to the unit. At a minimum, such information must address the following:

a) Reasonably foreseeable potential releases from both normal operations and accidents at the unit, including releases associated with transportation to or from the unit;

b) The potential pathways of human exposure to hazardous wastes or constituents resulting from the releases described under subsection (a); and

c) The potential magnitude and nature of the human exposure resulting from such releases.

BOARD NOTE: Derived from 40 CFR 270.10(j) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.187 Solid Waste Management Units

a) The following information is required for each solid waste management unit at a facility seeking a permit:

1) The location of the unit on the topographic map required under Section 703.183(s);

2) Designation of the type of unit;

3) General dimensions and structural description (supply any available drawings);

4) When the unit was operated; and

5) Specification of all wastes that have been managed at the unit, to the extent available.

b) The owner or operator of any facility containing one or more solid waste management units must submit all available information pertaining to any release of hazardous wastes or hazardous constituents from such unit or units.

c) The owner or operator must conduct and provide the results of sampling and analysis of groundwater, land surface and subsurface strata, surface water or air, which may include the installation of wells, where the Agency determines it is necessary to complete a RCRA facility assessment that will determine if a more complete investigation is necessary.

BOARD NOTE: Derived from 40 CFR 270.14(d) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.188 Other Information

The Agency may require a permittee or applicant to submit information in order to establish permit conditions pursuant to Section 703.241(a)(2) (conditions necessary to adequately protect human health and the environment) and 35 Ill. Adm. Code 702.161 (duration of permits).

BOARD NOTE: Derived from 40 CFR 270.10(k) (2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.189 Additional Information Required to Assure Compliance with MACT Standards

If the Agency determines, based on one or more of the factors listed in subsection (a) that compliance with the standards of subpart EEE of 40 CFR 63, incorporated by reference in 35 Ill. Adm. Code 720.111, alone may not adequately protect human health and the environment, the Agency must require the additional information or assessments necessary to determine whether additional controls are necessary to ensure adequate protection of human health and the environment. This includes information necessary to evaluate the potential risk to human health or the environment resulting from both direct and indirect exposure pathways. The Agency may also require a permittee or applicant to provide information necessary to determine whether such an assessment should be required.

a) The Agency must base the evaluation of whether compliance with the standards of subpart EEE of 40 CFR 63, incorporated by reference in 35 Ill. Adm. Code 720.111, alone adequately protects human health and the environment on factors relevant to the potential risk from a hazardous waste combustion unit, including, as appropriate, any of the following factors:

1) Particular site-specific considerations such as proximity to receptors (such as schools, hospitals, nursing homes, day care centers, parks, community activity centers, or other potentially sensitive receptors), unique dispersion patterns, etc.;

2) The identities and quantities of emissions of persistent, bioaccumulative or toxic pollutants considering enforceable controls in place to limit those pollutants;

3) The identities and quantities of non-dioxin products of incomplete combustion most likely to be emitted and to pose significant risk based on known toxicities (confirmation of which should be made through emissions testing);

4) The identities and quantities of other off-site sources of pollutants in proximity of the facility that significantly influence interpretation of a facility-specific risk assessment;

5) The presence of significant ecological considerations, such as the proximity of a particularly sensitive ecological area;

6) The volume and types of wastes, for example wastes containing highly toxic constituents;

7) Other on-site sources of hazardous air pollutants that significantly influence interpretation of the risk posed by the operation of the source in question;

8) Adequacy of any previously conducted risk assessment, given any subsequent changes in conditions likely to affect risk; and

9) Such other factors as may be appropriate.

b) This subsection (b) corresponds with 40 CFR 270.10(l)(b), which USEPA has marked "Reserved". This statement maintains structural consistency with the corresponding federal rules.

BOARD NOTE: Derived from 40 CFR 270.10(l) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.191 Public Participation: Pre-Application Public Notice and Meeting

a) Applicability. This Section applies to any RCRA Part B application seeking an initial permit for a hazardous waste management unit. This Section also applies to any RCRA Part B application seeking renewal of a permit for such a unit, where the renewal application is proposing a significant change in facility operations. For the purposes of this Section, a "significant change" is any change that would qualify as a class 3 permit modification pursuant to Section 703.283 and Appendix A to this Part. This Section also applies to a hazardous waste management facility for which facility the owner or operator is seeking coverage under a RCRA standardized permit (see Subpart J of this Part), including renewal of a RCRA standardized permit for such a unit, where the renewal is proposing a significant change in facility operations, as defined at 35 Ill. Adm. Code 705.304(a)(3). This Section does not apply to any permit modification pursuant to Sections 703.280 through 703.283 or to any application that is submitted for the sole purpose of conducting post-closure activities or post-closure activities and corrective action at a facility.

b) Prior to the submission of a RCRA Part B permit application or the submission of a written Notice of Intent to be covered by a RCRA standardized permit (see Subpart J of this Part), the applicant must hold at least one meeting with the public in order to solicit questions from the community and inform the community of its proposed hazardous waste management activities. The applicant must post a sign-in sheet or otherwise provide a voluntary opportunity for attendees to provide their names and addresses.

c) The applicant must submit to the Agency, as part of its RCRA Part B permit application or the submission of a written Notice of Intent to be covered by a RCRA standardized permit (see Subpart J of this Part), a summary of the meeting, along with the list of attendees and their addresses developed pursuant to subsection (b) of this Section and copies of any written comments or materials submitted at the meeting, in accordance with Section 703.183.

d) The applicant must provide public notice of the pre-application meeting at least 30 days prior to the meeting. The applicant must maintain documentation of the notice and provide that documentation to the permitting agency upon request.

1) The applicant must provide public notice in each of the following forms:

A) A newspaper advertisement. The applicant must publish a notice in a newspaper of general circulation in the county that hosts the proposed location of the facility. The notice must fulfill the requirements set forth in subsection (d)(2) of this Section. In addition, the Agency must instruct the applicant to publish the

notice in newspapers of general circulation in adjacent counties, where the Agency determines that such publication is necessary to inform the affected public. The notice must be published as a display advertisement.

B) A visible and accessible sign. The applicant must post a notice on a clearly marked sign at or near the facility. The notice must fulfill the requirements set forth in subsection (d)(2) of this Section. If the applicant places the sign on the facility property, then the sign must be large enough to be readable from the nearest point where the public would pass by the site.

C) A broadcast media announcement. The applicant must broadcast a notice at least once on at least one local radio station or television station. The notice must fulfill the requirements set forth in subsection (d)(2) of this Section. The applicant may employ another medium with prior approval of the Agency.

D) A notice to the Agency. The applicant must send a copy of the newspaper notice to the permitting agency and to the appropriate units of State and local government, in accordance with 35 Ill. Adm. Code 705.163(a).

2) The notices required pursuant to subsection (d)(1) of this Section must include the following:

A) The date, time, and location of the meeting;

B) A brief description of the purpose of the meeting;

C) A brief description of the facility and proposed operations, including the address or a map (e.g., a sketched or copied street map) of the facility location;

D) A statement encouraging people to contact the facility at least 72 hours before the meeting if they need special access to participate in the meeting; and

E) The name, address, and telephone number of a contact person for the applicant.

BOARD NOTE: Derived from 40 CFR 124.31 (2005), as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.192 Public Participation: Public Notice of Application

a) Applicability. This Section applies to any RCRA Part B application seeking an initial permit for a hazardous waste management unit. This Section also applies to any RCRA Part B application seeking renewal of a permit for such a unit pursuant to 35 Ill. Adm. Code 702.125. This Section does not apply to hazardous waste units for which facility owners or operators are seeking coverage under a RCRA standardized permit (see Subpart J of this Part). This Section also does not apply to permit modifications pursuant to Sections 703.280 through 703.283 or a permit application submitted for the sole purpose of conducting post-closure activities or post-closure activities and corrective action at a facility.

b) Notification at application submittal.

1) The Agency must provide public notice, as set forth in 35 Ill. Adm. Code 705.161, and notice to appropriate units of State and local government, as set forth in 35 Ill. Adm. Code 705.163(a)(5), that a Part B permit application has been submitted to the Agency and is available for review.

2) The notice must be published within 30 calendar days after the application is received by the Agency. The notice must include the following information:

A) The name and telephone number of the applicant's contact person;

B) The name and telephone number of the appropriate Agency regional office, as directed by the Agency, and a mailing address to which information, opinions, and inquiries may be directed throughout the permit review process;

C) An address to which people can write in order to be put on the facility mailing list;

D) The location where copies of the permit application and any supporting documents can be viewed and copied;

E) A brief description of the facility and proposed operations, including the address or a map (e.g., a sketched or copied street map) of the facility location on the front page of the notice; and

F) The date that the application was submitted.

c) Concurrent with the notice required pursuant to subsection (b) of this Section, the Agency must place the permit application and any supporting documents in a location accessible to the public in the vicinity of the facility or at the Agency regional office appropriate for the facility.

BOARD NOTE: Derived from 40 CFR 124.32 (2005), as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.193 Public Participation: Information Repository

a) Applicability. The requirements of this Section must apply to any application seeking a RCRA permit for a hazardous waste management unit.

b) The Agency must assess the need for an information repository on a case-by-case basis. When assessing the need for an information repository, the Agency must consider a variety of factors, including the following: the level of public interest; the type of facility; the presence of an existing repository; and the proximity to the nearest copy of the administrative record. If the Agency determines, at any time after submittal of a permit application, that there is a need for a repository, then the Agency must notify the facility that it must establish and maintain an information repository. (See Section 703.248 for similar provisions relating to the information repository during the life of a permit.)

c) The information repository must contain all documents, reports, data, and information deemed necessary by the Agency to fulfill the purposes for which the repository is established. The Agency will have the discretion to limit the contents of the repository.

d) The information repository must be located and maintained at a site chosen by the facility. If the Agency determines that the chosen site is unsuitable for the purposes and persons for which it was established, due to problems with the location, hours of availability, access, or other relevant considerations, then the Agency must specify a more appropriate site.

e) The Agency must specify requirements for the applicant for informing the public about the information repository. At a minimum, the Agency must require the facility to provide a written notice about the information repository to all individuals on the facility mailing list.

f) The facility owner or operator must be responsible for maintaining and updating the repository with appropriate information throughout a time period specified by the Agency. The Agency may close the repository if it determines that the repository is no longer needed based on its consideration of the factors in subsection (b) of this Section.

BOARD NOTE: Derived from 40 CFR 124.33 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.200 Specific Part B Application Information

Additional information is required in the Part B application by the following Sections from owners or operators of specific types of TSD unit:

a) Containers (Section 703.201);

b) Tanks (Section 703.202);

c) Surface impoundments (Section 703.203);

d) Waste piles (Section 703.204);

e) Incinerators (Section 703.205);

f) Land treatment (Section 703.206); and

g) Landfills (Section 703.207).

BOARD NOTE: Derived in part from 40 CFR 270.14(a) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.201 Containers

For a facility that stores containers of hazardous waste, except as otherwise provided in 35 Ill. Adm. Code 724.270, the Part B application must include the following:

a) A description of the containment system to demonstrate compliance with 35 Ill. Adm. Code 724.275. Show at least the following:

1) Basic design parameters, dimensions, and materials of construction;

2) How the design promotes drainage or how containers are kept from contact with standing liquids in the containment system;

3) Capacity of the containment system relative to the number and volume of containers to be stored;

4) Provisions for preventing or managing run-on; and

5) How accumulated liquids can be analyzed and removed to prevent overflow.

b) For storage areas that store containers holding wastes that do not contain free liquids, a demonstration of compliance with 35 Ill. Adm. Code 724.275(c), including the following:

1) Test procedures and results or other documentation or information to show that the wastes do not contain free liquids; and

2) A description of how the storage area is designed or operated to drain and remove liquids or how containers are kept from contact with standing liquids.

c) Sketches, drawings, or data demonstrating compliance with 35 Ill. Adm. Code 724.276 (location of buffer zone and containers holding ignitable or reactive wastes) and 35 Ill. Adm. Code 724.277(c) (location of incompatible wastes), where applicable.

d) Where incompatible wastes are stored or otherwise managed in containers, a description of the procedures used to ensure compliance with 35 Ill. Adm. Code 724.117(b) and (c) and 724.277(a) and (b).

e) Information on air emission control equipment, as required in Section 703.213.

BOARD NOTE: Derived from 40 CFR 270.15 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.202 Tank Systems

Except as otherwise provided in 35 Ill. Adm. Code 724.290, the owner or operator of a facility that uses tanks to store or treat hazardous waste must provide the following additional information:

a) A written assessment that is reviewed and certified by a qualified Professional Engineer as to the structural integrity and suitability for handling hazardous waste of each tank system, as required under 35 Ill. Adm. Code 724.291 and 724.292;

b) Dimensions and capacity of each tank;

c) Description of feed systems, safety cutoff, bypass systems, and pressure controls (e.g., vents);

d) A diagram of piping, instrumentation, and process flow for each tank system;

e) A description of materials and equipment used to provide external corrosion protection, as required under 35 Ill. Adm. Code 724.292(a)(3)(B);

f) For new tank systems, a detailed descriptions of how the tank systems will be installed in compliance with 35 Ill. Adm. Code 724.292(b), (c), (d), and (e);

g) Detailed plans and description of how the secondary containment system for each tank system is or will be designed, constructed, and operated to meet the requirements of 35 Ill. Adm. Code 724.293(a), (b), (c), (d), (e), and (f);

h) For tank systems for which alternative design and operating practices are sought pursuant to 35 Ill. Adm. Code 724.293(g), the following:

1) Detailed plans and engineering and hydrogeologic reports, as appropriate, describing alternate design and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous waste or hazardous constituents into the groundwater or surface water during the life of the facility,

2) A detailed assessment of the substantial present or potential hazards posed to human health or the environment should a release enter the environment, or

3) A copy of the petition for alternative design and operating practices or, if such have already been granted, a copy of the Board order granting alternative design and operating practices;

i) Description of controls and practices to prevent spills and overflows, as required under 35 Ill. Adm. Code 724.294(b);

j) For tank systems in which ignitable, reactive or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility design will achieve compliance with the requirements of 35 Ill. Adm. Code 724.298 and 724.299; and

k) Information on air emission control equipment, as required in Section 703.213.

BOARD NOTE: Derived from 40 CFR 270.16 (2007).

(Source: Amended at 32 Ill. Reg. 11672, effective July 14, 2008)

Section 703.203 Surface Impoundments

For a facility that stores, treats, or disposes of hazardous waste in surface impoundments, except as otherwise provided in 35 Ill. Adm. Code 724.101, the Part B application must include the following:

a) A list of the hazardous wastes placed or to be placed in each surface impoundment.

b) Detailed plans and an engineering report describing how the surface impoundment is designed and is or will be constructed, operated, and maintained to meet the requirements of 35 Ill. Adm. Code 724.119, 724.321, 724.322, and 724.323, addressing the following items:

1) The liner system (except for an existing portion of a surface impoundment). If an exemption from the requirement for a liner is sought, as provided by 35 Ill. Adm. Code 724.321(b), submit a copy of the Board order granting an adjusted standard pursuant to 35 Ill. Adm. Code 724.321(b);

2) The double liner and leak (leachate) detection, collection, and removal system, if the surface impoundment must meet the requirements of 35 Ill. Adm. Code 724.321(c). If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by 35 Ill. Adm. Code 724.321(d), (e), or (f), submit appropriate information;

3) If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation and the location of the saturated zone in relation to the leak detection system;

4) The construction quality assurance (CQA) plan if required under 35 Ill. Adm. Code 724.119;

5) Proposed action leakage rate, with rationale, if required under 35 Ill. Adm. Code 724.322; response action plan, if required under 35 Ill. Adm. Code 724.323; and a proposed pump operating level, if required under 35 Ill. Adm. Code 724.326(d)(3);

6) Prevention of overtopping; and

7) Structural integrity of dikes.

c) A description of how each surface impoundment, including the double liner system, leak detection system, cover system, and appurtenances for control of overtopping will be inspected in order to meet the requirements of 35 Ill. Adm. Code 724.326(a), (b), and (d). This information must be included in the inspection plan submitted under Section 703.183(e).

d) A certification by a qualified engineer that attests to the structural integrity of each dike, as required under 35 Ill. Adm. Code 724.326(c). For new units, the owner or operator must submit a statement by a qualified engineer that the

engineer will provide such a certification upon completion of construction in accordance with the plans and specifications.

e) A description of the procedure to be used for removing a surface impoundment from service, as required under 35 Ill. Adm. Code 724.327(b) and (c). This information must be included in the contingency plan submitted under Section 703.183(g).

f) A description of how hazardous waste residues and contaminated materials will be removed from the unit at closure, as required under 35 Ill. Adm. Code 724.328(a)(1). For any wastes not to be removed from the unit upon closure, the owner or operator must submit detailed plans and an engineering report describing how 35 Ill. Adm. Code 724.328(a)(2) and (b) will be complied with. This information must be included in the closure plan and, where applicable, the post-closure plan submitted under Section 703.183(m).

g) If ignitable or reactive wastes are to be placed in a surface impoundment, an explanation of how 35 Ill. Adm. Code 724.329 will be complied with.

h) If incompatible wastes, or incompatible wastes and materials, will be placed in a surface impoundment, an explanation of how 35 Ill. Adm. Code 724.330 will be complied with.

i) A waste management plan for hazardous waste numbers F020, F021, F022, F023, F026, and F027 describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of 35 Ill. Adm. Code 724.331. This submission must address the following items, as specified in that Section:

    1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

    2) The attenuative properties of underlying and surrounding soils or other materials;

    3) The mobilizing properties of other materials co-disposed with these wastes; and

    4) The effectiveness of additional treatment, design, or monitoring techniques.

j) Information on air emission control equipment, as required in Section 703.213.

BOARD NOTE: Derived from 40 CFR 270.17 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.204 Waste Piles

For a facility that stores or treats hazardous waste in waste piles, except as otherwise provided in 35 Ill. Adm. Code 724.101, the Part B application must include the following:

a) A list of hazardous wastes placed or to be placed in each waste pile;

b) If an exemption is sought to 35 Ill. Adm. Code 724.351 and Subpart F of 35 Ill. Adm. Code 724, as provided by 35 Ill. Adm. Code 724.350(c) or 724.190(b)(2), an explanation of how the requirements of 35 Ill. Adm. Code 724.350(c) will be complied with or detailed plans and an engineering report describing how the requirements of 35 Ill. Adm. Code 724.190(b)(2) will be met;

c) Detailed plans and an engineering report describing how the pile is designed and is or will be constructed, operated and maintained to meet the requirements of 35 Ill. Adm. Code 724.119, 724.351, 724.352, and 724.353, addressing the following items:

1) Liner, leak detection, and removal system.

A) The liner system (except for an existing portion of a waste pile), if the waste pile must meet the requirements of 35 Ill. Adm. Code 724.351(a). If an exemption from the requirement for a liner is sought, as provided by 35 Ill. Adm. Code 724.351(b), the owner or operator must submit a copy of the Board order granting an adjusted standard pursuant to 35 Ill. Adm. Code 724.351(b);

B) The double liner and leak (leachate) detection, collection and removal system, if the waste pile must meet the requirements of 35 Ill. Adm. Code 724.351(c). If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by 35 Ill. Adm. Code 724.351(d), (e), or (f), submit appropriate information;

C) If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system;

D) The CQA plan, if required under 35 Ill. Adm. Code 724.119;

E) Proposed action leakage rate, with rationale, if required under 35 Ill. Adm. Code 724.352, and response action plan, if required under 35 Ill. Adm. Code 724.353;

2) Control of run-on;

3) Control of run-off;

4) Management of collection and holding units associated with run-on and run-off control systems; and

5) Control of wind dispersal of particulate matter, where applicable;

d) A description of how each waste pile, including the double liner system, leachate collection and removal system, leak detection system, cover system, and appurtenances for control of run-on and run-off, will be inspected in order to meet the requirements of 35 Ill. Adm. Code 724.354(a), (b), and (c). This information must be included in the inspection plan submitted under Section 703.183(e);

e) If the treatment is carried out on or in the pile, details about the process and equipment used, and the nature and quality of the residuals;

f) If ignitable or reactive wastes are to be placed in a waste pile, an explanation of how the ~~the~~ applicant will comply with requirements of 35 Ill. Adm. Code 724.356;

g) If incompatible wastes, or incompatible wastes and materials, will be placed in a waste pile, an explanation of how the applicant will comply with 35 Ill. Adm. Code 724.357;

h) A description of how hazardous waste residues and contaminated materials will be removed from the waste pile at closure, as required under 35 Ill. Adm. Code 724.358(a). For any waste not to be removed from the waste pile upon closure, the owner or operator must submit detailed plans and an engineering report describing how the applicant will comply with 35 Ill. Adm. Code 724.410(a) and (b). This information must be included in the closure plan and, where applicable, the post-closure plan submitted under Section 703.183(m); and

i) A waste management plan for hazardous waste numbers F020, F021, F022, F023, F026, and F027 describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of 35 Ill. Adm. Code 724.359. This submission must address the following items as specified in that Section:

1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

2) The attenuative properties of underlying and surrounding soils or other materials;

3) The mobilizing properties of other materials co-disposed with these wastes; and

4) The effectiveness of additional treatment, design, or monitoring techniques.

BOARD NOTE: Derived from 40 CFR 270.18 (2005).

(Source: Amended at 30 Ill. Reg. 2845, effective February 23, 2006)

Section 703.205 Incinerators that Burn Hazardous Waste

For a facility that incinerates hazardous waste, except as 35 Ill. Adm. Code 724.440 and subsection (e) provide otherwise, the applicant must fulfill the requirements of subsection (a), (b), or (c) in completing the Part B application.

a) When seeking exemption pursuant to 35 Ill. Adm. Code 724.440(b) or (c) (ignitable, corrosive, or reactive wastes only), the applicant must fulfill the following requirements:

1) Documentation that the waste is listed as a hazardous waste in Subpart D of 35 Ill. Adm. Code 721 solely because it is ignitable (Hazard Code I), corrosive (Hazard Code C), or both;

2) Documentation that the waste is listed as a hazardous waste in Subpart D of 35 Ill. Adm. Code 721 solely because it is reactive (Hazard Code R) for characteristics other than those listed in 35 Ill. Adm. Code 721.123(a)(4) and (a)(5) and will not be burned when other hazardous wastes are present in the combustion zone;

3) Documentation that the waste is a hazardous waste solely because it possesses the characteristic of ignitability or corrosivity, or both, as determined by the tests for characteristics of hazardous wastes pursuant to Subpart C of 35 Ill. Adm. Code 721; or

4) Documentation that the waste is a hazardous waste solely because it possesses the reactivity characteristics listed in 35 Ill. Adm. Code 721.123(a)(1) through (a)(3) or (a)(6) through (a)(8), and that it will not be burned when other hazardous wastes are present in the combustion zone.

b) Submit a trial burn plan or the results of a trial burn, including all required determinations, in accordance with Section 703.222 through 703.224.

c) In lieu of a trial burn, the applicant may submit the following information:

1) An analysis of each waste or mixture of wastes to be burned including the following:

A) Heat value of the waste in the form and composition in which it will be burned;

B) Viscosity (if applicable) or description of physical form of the waste;

C) An identification of any hazardous organic constituents listed in Appendix H to 35 Ill. Adm. Code 721 that are present in the waste to be burned, except that the applicant need not analyze for constituents listed in Appendix H to 35 Ill. Adm. Code 721 that would reasonably not be expected to be found in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion stated. The waste analysis must rely on appropriate analytical methods;

D) An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by the appropriate analytical methods; and

E) A quantification of those hazardous constituents in the waste that may be designated as POHCs based on data submitted from other trial or operational burns that demonstrate compliance with the performance standard in 35 Ill. Adm. Code 724.443;

BOARD NOTE: The federal regulations do not themselves define the phrase "appropriate analytical methods", but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D):

> [T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] ..:
>
> 1. Appropriate methods are reliable and accepted as such in the scientific community.
>
> 2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

2) A detailed engineering description of the incinerator, including the following:

A) Manufacturer's name and model number of incinerator;

B) Type of incinerator;

C) Linear dimension of incinerator unit including cross sectional area of combustion chamber;

D) Description of auxiliary fuel system (type/feed);

E) Capacity of prime mover;

F) Description of automatic waste feed cutoff systems;

G) Stack gas monitoring and pollution control monitoring system;

H) Nozzle and burner design;

I) Construction materials; and

J) Location and description of temperature, pressure and flow indicating devices and control devices;

3) A description and analysis of the waste to be burned compared with the waste for which data from operational or trial burns are provided to support the contention that a trial burn is not needed. The data should include those items listed in subsection (c)(1). This analysis should specify the POHCs that the applicant has identified in the waste for which a permit is sought, and any differences from the POHCs in the waste for which burn data are provided;

4) The design and operating conditions of the incinerator unit to be used, compared with that for which comparative burn data are available;

5) A description of the results submitted from any previously conducted trial burns, including the following:

A) Sampling and analysis techniques used to calculate performance standards in 35 Ill. Adm. Code 724.443;

B) Methods and results of monitoring temperatures, waste feed rates, carbon monoxide, and an appropriate indicator of combustion gas

velocity (including a statement concerning the precision and accuracy of this measurement); and

C) The certification and results required by subsection (b);

6) The expected incinerator operation information to demonstrate compliance with 35 Ill. Adm. Code 724.443 and 724.445, including the following:

A) Expected carbon monoxide (CO) level in the stack exhaust gas;

B) Waste feed rate;

C) Combustion zone temperature;

D) Indication of combustion gas velocity;

E) Expected stack gas volume, flow rate, and temperature;

F) Computed residence time for waste in the combustion zone;

G) Expected hydrochloric acid removal efficiency;

H) Expected fugitive emissions and their control procedures; and

I) Proposed waste feed cut-off limits based on the identified significant operating parameters;

7) The Agency may, pursuant to 35 Ill. Adm. Code 705.122, request such additional information as may be necessary for the Agency to determine whether the incinerator meets the requirements of Subpart O of 35 Ill. Adm. Code 724 and what conditions are required by that Subpart and Section 39(d) of the Environmental Protection Act; and

8) Waste analysis data, including that submitted in subsection (c)(1), sufficient to allow the Agency to specify as permit Principal Organic Hazardous Constituents (permit POHCs) those constituents for which destruction and removal efficiencies will be required.

d) The Agency must approve a permit application without a trial burn if it finds the following:

1) The wastes are sufficiently similar; and

2) The incinerator units are sufficiently similar, and the data from other trial burns are adequate to specify (pursuant to 35 Ill. Adm. Code 724.445)

operating conditions that will ensure that the performance standards in 35 Ill. Adm. Code 724.443 will be met by the incinerator.

e) When the owner or operator of a hazardous waste incineration unit becomes subject to RCRA permit requirements, or when the owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPs) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), this Section does not apply, except those provisions that the Agency determines are necessary to ensure compliance with 35 Ill. Adm. Code 724.445(a) and (c) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the Agency may apply the provisions of this Section, on a case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

BOARD NOTE: Operating conditions used to determine effective treatment of hazardous waste remain effective after the owner or operator demonstrates compliance with the standards of subpart EEE of 40 CFR 63.

BOARD NOTE: Derived from 40 CFR 270.19 (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.206 Land Treatment

For a facility that uses land treatment to dispose of hazardous waste, except as otherwise provided in 35 Ill. Adm. Code 724.101, the Part B application must include the following:

a) A description of plans to conduct treatment demonstration, as required under 35 Ill. Adm. Code 724.372. The description must include the following information:

1) The wastes for which the demonstration will be made and the potential hazardous constituents in the wastes;

2) The data sources to be used to make the demonstration (e.g., literature, laboratory data, field data, or operating data);

3) Any specific laboratory or field test that will be conducted, including the following:

A) the type of test (e.g., column leaching, degradation);

B) materials and methods, including analytical procedures;

C) expected time for completion;

D) characteristics of the unit that will be simulated in the demonstration, including treatment zone characteristics, climatic conditions, and operating practices;

b) A description of a land treatment program, as required under 35 Ill. Adm. Code 724.371. This information must be submitted with the plans for the treatment demonstration, and updated following the treatment demonstration. The land treatment program must address the following items:

1) The wastes to be land treated;

2) Design measures and operating practices necessary to maximize treatment in accordance with 35 Ill. Adm. Code 724.373(a) including the following:

A) Waste application method and rate;

B) Measures to control soil pH;

C) Enhancement of microbial or chemical reactions; and

D) Control of moisture content;

3) Provisions for unsaturated zone monitoring, including the following:

A) Sampling equipment, procedures, and frequency;

B) Procedures for selecting sampling locations;

C) Analytical procedures;

D) Chain of custody control;

E) Procedures for establishing background values;

F) Statistical methods for interpreting results; and

G) The justification for any hazardous constituents recommended for selection as principal hazardous constituents, in accordance with the criteria for such selection in 35 Ill. Adm. Code 724.378(a);

4) A list of hazardous constituents reasonably expected to be in, or derived from, the wastes to be land treated based on waste analysis performed pursuant to 35 Ill. Adm. Code 724.113;

5) The proposed dimensions of the treatment zone;

c) A description of how the unit is or will be designed, constructed, operated, and maintained in order to meet the requirements of 35 Ill. Adm. Code 724.373. This submission must address the following items:

1) Control of run-on;

2) Collection and control of run-off;

3) Minimization of run-off of hazardous constituents from the treatment zone;

4) Management of collection and holding facilities associated with run-on and run-off control systems;

5) Periodic inspection of the unit. This information should be included in the inspection plan submitted under Section 703.183(e); and

6) Control of wind dispersal of particulate matter, if applicable;

d) If food-chain crops are to be grown in or on the treatment zone of the land treatment unit, a description of how the demonstration required under 35 Ill. Adm. Code 724.376(a) will be conducted, including the following:

1) Characteristics of the food-chain crop for which the demonstration will be made;

2) Characteristics of the waste, treatment zone, and waste application method and rate to be used in the demonstration;

3) Procedures for crop growth, sample collection, sample analysis, and data evaluation; and

4) Characteristics of the comparison crop including the location and conditions under which it was or will be grown;

e) If food-chain crops are to be grown and cadmium is present in the land-treated waste, a description of how the requirements of 35 Ill. Adm. Code 724.376(b) will be complied with;

f) A description of the vegetative cover to be applied to closed portions of the facility and a plan for maintaining such cover during the post-closure care period, as required under 35 Ill. Adm. Code 724.380(a)(8) and (c)(2). This information should be included in the closure plan and, where applicable, the post-closure care plan submitted under Section 703.183(m);

g) If ignitable or reactive wastes will be placed in or on the treatment zone, an explanation of how the requirements of 35 Ill. Adm. Code 724.381 will be complied with;

h) If incompatible wastes or incompatible wastes and materials will be placed in or on the same treatment zone, an explanation of how 35 Ill. Adm. Code 724.382 will be complied with; and

i) A waste management plan for hazardous waste numbers F020, F021, F022, F023, F026, and F027 describing how a land treatment facility is or will be designed, constructed, operated, and maintained to meet the requirements of 35 Ill. Adm. Code 724.383. This submission must address the following items as specified in that Section:

1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

2) The attenuative properties of underlying and surrounding soils or other materials;

3) The mobilizing properties of other materials co-disposed with these wastes; and

4) The effectiveness of additional treatment, design, or monitoring techniques.

BOARD NOTE: Derived from 40 CFR 270.20 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.207 Landfills

For a facility that disposes of hazardous waste in landfills, except as otherwise provided in 35 Ill. Adm. Code 724.101, the Part B application must include the following:

a) A list of the hazardous wastes placed or to be placed in each landfill or landfill cell;

b) Detailed plans and an engineering report describing how the landfill is designed and is or will be constructed, operated and maintained to meet the requirements of 35 Ill. Adm. Code 724.119, 724.401, 724.402, and 724.403, addressing the following items:

1) Liner, leak detection, collection, and removal systems.

A) The liner system (except for an existing portion of a landfill), if the landfill must meet the requirements of 35 Ill. Adm. Code 724.401(a). If an exemption from the requirement for a liner is sought as provided by 35 Ill. Adm. Code 724.401(b), submit a copy of the Board order granting an adjusted standard pursuant to 35 Ill. Adm. Code 724.401(b);

B) The double liner and leak (leachate) detection, collection, and removal system, if the landfill must meet the requirements of 35 Ill. Adm. Code 724.401(c). If an exemption from the requirements for double liners and a leak detection, collection and removal system or alternative design is sought as provided by 35 Ill. Adm. Code 724.401(d), (e), or (f), submit appropriate information;

C) If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system;

D) The CQA plan, if required under 35 Ill. Adm. Code 724.119;

E) Proposed action leakage rate, with rationale, if required under 35 Ill. Adm. Code 724.402, and response action plan, if required under 35 Ill. Adm. Code 724.404, and proposed pump operating level, if required under 35 Ill. Adm. Code 724.403;

2) Control of run-on;

3) Control of run-off;

4) Management of collection and holding facilities associated with run-on and run-off control systems; and

5) Control of wind dispersal of particulate matter, where applicable;

c) A description of how each landfill, including the double liner system, leachate collection and removal system, leak detection system, cover system, and appurtenances for control of run-on and run-off, will be inspected in order to meet

the requirements of 35 Ill. Adm. Code 724.403(a), (b), and (c). This information must be included in the inspection plan submitted under Section 703.183(e);

d) A description of how each landfill, including the liner and cover systems, will be inspected in order to meet the requirements of the 35 Ill. Adm. Code 724.403(a) and (b). This information must be included in the inspection plan submitted under Section 703.183(e);

e) Detailed plans and an engineering report describing the final cover that will be applied to each landfill or landfill cell at closure in accordance with 35 Ill. Adm. Code 724.410(a), and a description of how each landfill will be maintained and monitored after closure in accordance with 35 Ill. Adm. Code 724.410(b). This information must be included in the closure and post-closure plans submitted under Section 703.183(m);

f) If ignitable or reactive wastes will be landfilled, an explanation of how the requirements of 35 Ill. Adm. Code 724.412 will be complied with;

g) If incompatible wastes, or incompatible wastes and materials, will be landfilled, an explanation of how 35 Ill. Adm. Code 724.413 will be complied with;

h) If bulk or non-containerized liquid waste or waste containing free liquids is to be landfilled, an explanation of how the requirements of 35 Ill. Adm. Code 724.414 will be complied with;

i) If containers of hazardous waste are to be landfilled, an explanation of how the requirements of 35 Ill. Adm. Code 724.415 or 724.416, as applicable, will be complied with; and

j) A waste management plan for hazardous waste numbers F020, F021, F022, F023, F026, and F027 describing how a landfill is or will be designed, constructed, operated, and maintained to meet the requirements of 35 Ill. Adm. Code 724.417. This submission must address the following items, as specified in that Section:

    1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

    2) The attenuative properties of underlying and surrounding soils or other materials;

    3) The mobilizing properties of other materials co-disposed with these wastes; and

    4) The effectiveness of additional treatment, design, or monitoring techniques.

BOARD NOTE: Derived from 40 CFR 270.21 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.208 Boilers and Industrial Furnaces Burning Hazardous Waste

When the owner or operator of a cement or lightweight aggregate kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace becomes subject to RCRA permit requirements, or when the owner or operator of an existing cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPs) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), this Section does not apply. This Section applies, however, if the Agency determines certain provisions are necessary to ensure compliance with 35 Ill. Adm. Code 726.202(e)(1) and (e)(2)(C) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events; or if the facility is an area source and the owner or operator elects to comply with the Sections 726.205, 726.206, and 726.207 standards and associated requirements for particulate matter, hydrogen chloride and chlorine gas, and non-mercury metals; or if the Agency determines that certain provisions apply, on a case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

a) Trial Burns

1) General. Except as provided below, an owner or operator that is subject to the standards to control organic emissions provided by 35 Ill. Adm. Code 726.204, standards to control particulate matter provided by 35 Ill. Adm. Code 726.205, standards to control metals emissions provided by 35 Ill. Adm. Code 726.206, or standards to control hydrogen chloride (HCl) or chlorine gas emissions provided by 35 Ill. Adm. Code 726.207 must conduct a trial burn to demonstrate conformance with those standards and must submit a trial burn plan or the results of a trial burn, including all required determinations, in accordance with Section 703.232.

A) Pursuant to subsections (a)(2) through (a)(5) and 35 Ill. Adm. Code 726.204 through 726.207, the Agency may waive a trial burn to demonstrate conformance with a particular emission standard; and

B) The owner or operator may submit data in lieu of a trial burn, as prescribed in subsection (a)(6).

2) Waiver of Trial Burn of DRE (Destruction Removal Efficiency)

A) Boilers Operated under Special Operating Requirements. When seeking to be permitted pursuant to 35 Ill. Adm. Code 726.204(a)(4) and 726.210, which automatically waive the DRE trial burn, the owner or operator of a boiler must submit documentation that the boiler operates under the special operating requirements provided by 35 Ill. Adm. Code 726.210.

B) Boilers and Industrial Furnaces Burning Low Risk Waste. When seeking to be permitted under the provisions for low risk waste provided by 35 Ill. Adm. Code 726.204(a)(5) and 726.209(a), which waive the DRE trial burn, the owner or operator must submit the following:

i) Documentation that the device is operated in conformance with 35 Ill. Adm. Code 726.209(a)(1).

ii) Results of analyses of each waste to be burned, documenting the concentrations of nonmetal compounds listed in Appendix H to 35 Ill. Adm. Code 721, except for those constituents that would reasonably not be expected to be in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion explained. The analysis must rely on appropriate analytical methods.

BOARD NOTE: The federal regulations do not themselves define the phrase "appropriate analytical methods", but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D):

> [T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] . . . :
>
> 1. Appropriate methods are reliable and accepted as such in the scientific community.
>
> 2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

iii) Documentation of hazardous waste firing rates and calculations of reasonable, worst-case emission rates of each constituent identified in subsection (a)(2)(B)(ii) using procedures provided by 35 Ill. Adm. Code 726.209(a)(2)(B).

iv) Results of emissions dispersion modeling for emissions identified in subsection (a)(2)(B)(iii) using modeling procedures prescribed by 35 Ill. Adm. Code 726.206(h). The Agency must review the emission modeling conducted by the applicant to determine conformance with these procedures. The Agency must either approve the modeling or determine that alternate or supplementary modeling is appropriate.

v) Documentation that the maximum annual average ground level concentration of each constituent identified in subsection (a)(2)(B)(ii) quantified in conformance with subsection (a)(2)(B)(iv) does not exceed the allowable ambient level established in Appendix D or E to 35 Ill. Adm. Code 726. The acceptable ambient concentration for emitted constituents for which a specific reference air concentration has not been established in Appendix D to 35 Ill. Adm. Code 726 or risk-specific doses has not been established in Appendix E to 35 Ill. Adm. Code 726 is 0.1 micrograms per cubic meter, as noted in the footnote to Appendix D to 35 Ill. Adm. Code 726.

3) Waiver of Trial Burn for Metals. When seeking to be permitted under the Tier I (or adjusted Tier I) metals feed rate screening limits provided by 35 Ill. Adm. Code 726.206(b) and (e) that control metals emissions without requiring a trial burn, the owner or operator must submit the following:

A) Documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feed stocks;

B) Documentation of the concentration of each metal controlled by 35 Ill. Adm. Code 726.206(b) or (c) in the hazardous waste, other fuels and industrial furnace feedstocks, and calculations of the total feed rate of each metal;

C) Documentation of how the applicant will ensure that the Tier I feed rate screening limits provided by 35 Ill. Adm. Code 726.206(b) or (e) will not be exceeded during the averaging period provided by that subsection;

D) Documentation to support the determination of the TESH (terrain-adjusted effective stack height), good engineering practice stack height, terrain type, and land use, as provided by 35 Ill. Adm. Code 726.206(b)(3) through (b)(5);

E) Documentation of compliance with the provisions of 35 Ill. Adm. Code 726.206(b)(6), if applicable, for facilities with multiple stacks;

F) Documentation that the facility does not fail the criteria provided by 35 Ill. Adm. Code 726.206(b)(7) for eligibility to comply with the screening limits; and

G) Proposed sampling and metals analysis plan for the hazardous waste, other fuels, and industrial furnace feed stocks.

4) Waiver of Trial Burn for PM (Particulate Matter). When seeking to be permitted under the low risk waste provisions of 35 Ill. Adm. Code 726.209(b), which waives the particulate standard (and trial burn to demonstrate conformance with the particulate standard), applicants must submit documentation supporting conformance with subsections (a)(2)(B) and (a)(3).

5) Waiver of Trial Burn for HCl and Chlorine Gas. When seeking to be permitted under the Tier I (or adjusted Tier I) feed rate screening limits for total chlorine and chloride provided by 35 Ill. Adm. Code 726.207(b)(1) and (e) that control emissions of HCl and chlorine gas without requiring a trial burn, the owner or operator must submit the following:

A) Documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feed stocks;

B) Documentation of the levels of total chlorine and chloride in the hazardous waste, other fuels and industrial furnace feedstocks, and calculations of the total feed rate of total chlorine and chloride;

C) Documentation of how the applicant will ensure that the Tier I (or adjusted Tier I) feed rate screening limits provided by 35 Ill. Adm. Code 726.207(b)(1) or (e) will not be exceeded during the averaging period provided by that subsection;

D) Documentation to support the determination of the TESH, good engineering practice stack height, terrain type and land use as provided by 35 Ill. Adm. Code 726.207(b)(3);

E) Documentation of compliance with the provisions of 35 Ill. Adm. Code 726.207(b)(4), if applicable, for facilities with multiple stacks;

F) Documentation that the facility does not fail the criteria provided by 35 Ill. Adm. Code 726.207(b)(3) for eligibility to comply with the screening limits; and

G) Proposed sampling and analysis plan for total chlorine and chloride for the hazardous waste, other fuels, and industrial furnace feedstocks.

6) Data in Lieu of Trial Burn. The owner or operator may seek an exemption from the trial burn requirements to demonstrate conformance with Section 703.232 and 35 Ill. Adm. Code 726.204 through 726.207 by providing the information required by Section 703.232 from previous compliance testing of the device in conformance with 35 Ill. Adm. Code 726.203 or from compliance testing or trial or operational burns of similar boilers or industrial furnaces burning similar hazardous wastes under similar conditions. If data from a similar device is used to support a trial burn waiver, the design and operating information required by Section 703.232 must be provided for both the similar device and the device to which the data is to be applied, and a comparison of the design and operating information must be provided. The Agency must approve a permit application without a trial burn if the Agency finds that the hazardous wastes are sufficiently similar, the devices are sufficiently similar, the operating conditions are sufficiently similar, and the data from other compliance tests, trial burns, or operational burns are adequate to specify (pursuant to 35 Ill. Adm. Code 726.102) operating conditions that will ensure conformance with 35 Ill. Adm. Code 726.102(c). In addition, the following information must be submitted:

A) For a waiver from any trial burn, the following:

i) A description and analysis of the hazardous waste to be burned compared with the hazardous waste for which data from compliance testing or operational or trial burns are provided to support the contention that a trial burn is not needed;

ii) The design and operating conditions of the boiler or industrial furnace to be used, compared with that for which comparative burn data are available; and

iii) Such supplemental information as the Agency finds necessary to achieve the purposes of this subsection (a).

B) For a waiver of the DRE trial burn, the basis for selection of POHCs (principal organic hazardous constituents) used in the other trial or operational burns that demonstrate compliance with the DRE performance standard in 35 Ill. Adm. Code 726.204(a). This analysis should specify the constituents in Appendix H to 35 Ill. Adm. Code 721 that the applicant has identified in the hazardous waste for which a permit is sought and any differences from the POHCs in the hazardous waste for which burn data are provided.

b) Alternative HC Limit for Industrial Furnaces with Organic Matter in Raw Materials. An owner or operator of industrial furnaces requesting an alternative HC limit pursuant to 35 Ill. Adm. Code 726.204(f) must submit the following information at a minimum:

1) Documentation that the furnace is designed and operated to minimize HC emissions from fuels and raw materials;

2) Documentation of the proposed baseline flue gas HC (and CO) concentration, including data on HC (and CO) levels during tests when the facility produced normal products under normal operating conditions from normal raw materials while burning normal fuels and when not burning hazardous waste;

3) Test burn protocol to confirm the baseline HC (and CO) level including information on the type and flow rate of all feedstreams, point of introduction of all feedstreams, total organic carbon content (or other appropriate measure of organic content) of all nonfuel feedstreams, and operating conditions that affect combustion of fuels and destruction of hydrocarbon emissions from nonfuel sources;

4) Trial burn plan to do the following:

A) To demonstrate when burning hazardous waste that flue gas HC (and CO) concentrations do not exceed the baseline HC (and CO) level; and

B) To identify, in conformance with Section 703.232(d), the types and concentrations of organic compounds listed in Appendix H to 35

Ill. Adm. Code 721 that are emitted when burning hazardous waste;

5) Implementation plan to monitor over time changes in the operation of the facility that could reduce the baseline HC level and procedures to periodically confirm the baseline HC level; and

6) Such other information as the Agency finds necessary to achieve the purposes of this subsection (b).

c) Alternative Metals Implementation Approach. When seeking to be permitted under an alternative metals implementation approach pursuant to 35 Ill. Adm. Code 726.206(f), the owner or operator must submit documentation specifying how the approach ensures compliance with the metals emissions standards of 35 Ill. Adm. Code 726.106(c) or (d) and how the approach can be effectively implemented and monitored. Further, the owner or operator must provide such other information that the Agency finds necessary to achieve the purposes of this subsection (c).

d) Automatic Waste Feed Cutoff System. An owner or operator must submit information describing the automatic waste feed cutoff system, including any pre-alarm systems that may be used.

e) Direct Transfer. An owner or operator that uses direct transfer operations to feed hazardous waste from transport vehicles (containers, as defined in 35 Ill. Adm. Code 726.211) directly to the boiler or industrial furnace must submit information supporting conformance with the standards for direct transfer provided by 35 Ill. Adm. Code 726.211.

f) Residues. An owner or operator that claims that its residues are excluded from regulation pursuant to 35 Ill. Adm. Code 726.212 must submit information adequate to demonstrate conformance with those provisions.

BOARD NOTE: Derived from 40 CFR 270.22 (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.209 Miscellaneous Units

Except as otherwise provided in 35 Ill. Adm. Code 724.700, the owner or operator of a facility that treats, stores, or disposes of hazardous waste in miscellaneous units must provide the following additional information in the Part B application:

a) A detailed description of the unit being used or proposed for use, including the following:

1) Physical characteristics, materials of construction, and dimensions of the unit;

2) Detailed plans and engineering reports describing how the unit will be located, designed, constructed, operated, maintained, monitored, inspected, and closed to comply with the requirements of 35 Ill. Adm. Code 724.701 and 724.702; and

3) For disposal units, a detailed description of the plans to comply with the post-closure requirements of 35 Ill. Adm. Code 724.703;

b) Detailed hydrologic, geologic, and meteorologic assessments and land-use maps for the region surrounding the site that address and ensure compliance of the unit with each factor in the environmental performance standards of 35 Ill. Adm. Code 724.701. Preliminary hydrologic, geologic, and meteorologic assessments will suffice, unless the Agency notifies the applicant that, based on the preliminary assessments, the unit will not conform with the environmental performance standards of 35 Ill. Adm. Code 724.701. The Agency must follow the procedures for incomplete applications in 35 Ill. Adm. Code 705.122;

c) Information on the potential pathways of exposure of humans or environmental receptors to hazardous waste or hazardous constituents and on the potential magnitude and nature of such exposures;

d) For any treatment unit, a report on a demonstration of the effectiveness of the treatment based on laboratory or field data; and

e) Any additional information that the Agency determines is necessary for evaluation of compliance of the unit with the environmental performance standards of 35 Ill. Adm. Code 724.701.

BOARD NOTE: Derived from 40 CFR 270.23 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.210 Process Vents

Except as otherwise provided in 35 Ill. Adm. Code 724.101, the owner or operator of a facility that has process vents to which Subpart AA of 35 Ill. Adm. Code 724 applies must provide the following additional information:

a) For facilities that cannot install a closed-vent system and control device to comply with Subpart AA of 35 Ill. Adm. Code 724 on the effective date on which the facility becomes subject to that Subpart or Subpart AA of 35 Ill. Adm. Code 725, an implementation schedule, as specified in 35 Ill. Adm. Code 724.933(a)(2).

b) Documentation of compliance with the process vent standards in 35 Ill. Adm. Code 724.932, including the following:

1) Information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for the affected vent and for the overall facility (i.e., the total emissions for all affected vents at the facility), and the approximate location within the facility of each affected unit (e.g., identify the hazardous waste management units on a facility plot plan);

2) Information and data supporting estimates of vent emissions and emission reduction achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, estimates of vent emissions and emission reductions must be made using operating parameter values (e.g., temperatures, flow rates, or concentrations) that represent the conditions that exist when the waste management unit is operating at the highest load or capacity level reasonably expected to occur; and

3) Information and data used to determine whether or not a process vent is subject to 35 Ill. Adm. Code 724.932.

c) Where an owner or operator applies for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with 35 Ill. Adm. Code 724.932, and chooses to use test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device, a performance test plan as specified in 35 Ill. Adm. Code 724.935(b)(3).

d) Documentation of compliance with 35 Ill. Adm. Code 724.933, including the following:

1) A list of all information references and sources used in preparing the documentation.

2) Records, including the dates of each compliance test required by 35 Ill. Adm. Code 724.933(k).

3) A design analysis, specifications, drawings, schematics, piping, and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions", USEPA publication number EPA-450/2-81-005, incorporated by reference in 35 Ill. Adm. Code 720.111(a), or other engineering texts approved by the Agency that present basic control device information. The design analysis must address the vent stream characteristics and control device parameters as specified in 35 Ill. Adm. Code 724.935(b)(4)(C).

4) A statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur.

5) A statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of 95 weight percent or greater, unless the total organic emission limits of 35 Ill. Adm. Code 724.932(a) for affected process vents at the facility can be attained by a control device involving vapor recovery at an efficiency less than 95 weight percent.

BOARD NOTE: Derived from 40 CFR 270.24 (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.211 Equipment

Except as otherwise provided in 35 Ill. Adm. Code 724.101, the owner or operator of a facility that has equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies must provide the following additional information:

a) For each piece of equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies, the following:

1) Equipment identification number and hazardous waste management unit identification;

2) Approximate locations within the facility (e.g., identify the hazardous waste management unit on a facility plot plan);

3) Type of equipment (e.g., a pump or pipeline valve);

4) Percent by weight total organics in the hazardous wastestream at the equipment;

5) Hazardous waste state at the equipment (e.g., gas/vapor or liquid); and

6) Method of compliance with the standard (e.g., "monthly leak detection and repair" or "equipped with dual mechanical seals").

b) For facilities that cannot install a closed-vent system and control device to comply with Subpart BB of 35 Ill. Adm. Code 724 on the effective date that facility

becomes subject to this Subpart or Subpart BB of 35 Ill. Adm. Code 724, an implementation schedule as specified in 35 Ill. Adm. Code 724.933(a)(2).

c) Where an owner or operator applies for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system and chooses to use test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device, a performance test plan as specified in 35 Ill. Adm. Code 724.935(b)(3).

d) Documentation that demonstrates compliance with the equipment standards in 35 Ill. Adm. Code 724.952 or 724.959. This documentation must contain the records required pursuant to 35 Ill. Adm. Code 724.964. The Agency must request further documentation if necessary to demonstrate compliance. Documentation to demonstrate compliance with 35 Ill. Adm. Code 724.960 must include the following information:

1) A list of all information references and sources used in preparing the documentation;

2) Records, including the dates of each compliance test required by 35 Ill. Adm. Code 724.933(j);

3) A design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions", USEPA publication number EPA-450/2-81-005, incorporated by reference in 35 Ill. Adm. Code 720.111(a), or other engineering texts approved by the Agency that present basic control device information. The design analysis must address the vent stream characteristics and control device parameters, as specified in 35 Ill. Adm. Code 724.935(b)(4)(C);

4) A statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur; and

5) A statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of 95 weight percent or greater.

BOARD NOTE: Derived from 40 CFR 270.25 (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.212 Drip Pads

Except as otherwise provided by 35 Ill. Adm. Code 724.101, the owner or operator of a hazardous waste treatment, storage, or disposal facility that collects, stores, or treats hazardous waste on drip pads must provide the following additional information:

a) A list of hazardous wastes placed or to be placed on each drip pad.

b) If an exemption is sought to Subpart F of 35 Ill. Adm. Code 724, as provided by 35 Ill. Adm. Code 724.190, detailed plans and an engineering report describing how the requirements of 35 Ill. Adm. Code 724.190(b)(2) will be met.

c) Detailed plans and an engineering report describing how the drip pad is or will be designed, constructed, operated, and maintained to meet the requirements of 35 Ill. Adm. Code 724.673, including the as-built drawings and specifications. This submission must address the following items, as specified in 35 Ill. Adm. Code 724.671:

    1) The design characteristics of the drip pad;

    2) The liner system;

    3) The leakage detection system, including the leak detection system and how it is designed to detect the failure of the drip pad or the presence of any releases of hazardous waste or accumulated liquid at the earliest practicable time;

    4) Practices designed to maintain drip pads;

    5) The associated collection system;

    6) Control of run-on to the drip pad;

    7) Control of run-off from the drip pad;

    8) The interval at which drippage and other materials will be removed from the associated collection system and a statement demonstrating that the interval will be sufficient to prevent overflow onto the drip pad;

    9) Cleaning procedures and documentation:

        A) Procedures for cleaning the drip pad at least once every seven days to ensure the removal of any accumulated residues of waste or other materials, including, but not limited to: rinsing, washing with detergents or other appropriate solvents, or steam cleaning; and

B) Provisions for documenting the date, time, and cleaning procedure used each time the pad is cleaned;

10) Operating practices and procedures that will be followed to ensure that tracking of hazardous waste or waste constituents off the drip pad due to activities by personnel or equipment is minimized;

11) Procedures for ensuring that, after removal from the treatment vessel, treated wood from pressure and non-pressure processes is held on the drip pad until drippage has ceased, including recordkeeping practices;

12) Provisions for ensuring that collection and holding units associated with the run-on and run-off control systems are emptied or otherwise managed as soon as possible after storms to maintain design capacity of the system;

13) If treatment is carried out on the drip pad, details of the process equipment used, and the nature and quality of the residuals;

14) A description of how each drip pad, including appurtenances for control of run-on and run-off, will be inspected in order to meet the requirements of 35 Ill. Adm. Code 724.673. This information must be included in the inspection plan submitted under Section 703.183(e);

15) A certification signed by a qualified Professional Engineer, stating that the drip pad design meets the requirements of 35 Ill. Adm. Code 724.673(a) through (f); and

16) A description of how hazardous waste residues and contaminated materials will be removed from the drip pad at closure, as required under 35 Ill. Adm. Code 724.675(a). For any waste not to be removed from the drip pad upon closure, the owner or operator must submit detailed plans and an engineering report describing how 35 Ill. Adm. Code 724.410(a) and (b) will be complied with. This information must be included in the closure plan and, where applicable, the post-closure plan submitted under Section 703.183(m).

BOARD NOTE: Derived from 40 CFR 270.26 (2007).

(Source: Amended at 32 Ill. Reg. 11672, effective July 14, 2008)

Section 703.213 Air Emission Controls for Tanks, Surface Impoundments, and Containers

Except as otherwise provided in 35 Ill. Adm. Code 724.101, the owner or operator of a tank, a surface impoundment, or a container that uses air emission controls in accordance with the

requirements of Subpart CC of 35 Ill. Adm. Code 724 must provide the following additional information:

a) Documentation for each floating roof cover installed on a tank subject to 35 Ill. Adm. Code 724.984(d)(1) or (d)(2) that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the applicable design specifications, as listed in 35 Ill. Adm. Code 725.991(e)(1) or (f)(1).

b) Identification of each container area subject to the requirements of Subpart CC of 35 Ill. Adm. Code 724 and certification by the owner or operator that the requirements of this Subpart D are met.

c) Documentation for each enclosure used to control air pollutant emissions from containers in accordance with the requirements of 35 Ill. Adm. Code 724.984(d)(5) or 724.986(e)(1)(ii) that includes records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure, as specified in "Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure" in appendix B to 40 CFR 52.741 (VOM Measurement Techniques for Capture Efficiency), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

d) Documentation for each floating membrane cover installed on a surface impoundment in accordance with the requirements of 35 Ill. Adm. Code 724.985(c) that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the specifications listed in 35 Ill. Adm. Code 724.985(c)(1).

e) Documentation for each closed-vent system and control device installed in accordance with the requirements of 35 Ill. Adm. Code 724.987 that includes design and performance information, as specified in Section 703.124(c) and (d).

f) An emission monitoring plan for both Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111(b), and control device monitoring methods. This plan must include the following information: monitoring points, monitoring methods for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliances.

g) When an owner or operator of a facility subject to Subpart CC of 35 Ill. Adm. Code 725 cannot comply with Subpart CC of 35 Ill. Adm. Code 724 by the date of permit issuance, the schedule of implementation required under 35 Ill. Adm. Code 725.982.

BOARD NOTE: Derived from 40 CFR 270.27 (2015).

(Source: Amended at 40 Ill. Reg. 11271, effective August 9, 2016)

Section 703.214 Post-Closure Care Permits

For post-closure care permits, the owner or operator is required to submit only the information specified in Sections 703.183(a), (d), (e), (f), (k), (m), (n), (p), (r), and (s); 703.184; 703.185; and 703.187, unless the Agency determines that additional information from Section 703.183, 703.202, 703.203, 703.204, 703.206, or 703.207 is necessary. The owner or operator is required to submit the same information when an alternative authority is used in lieu of a post-closure permit, as provided in Section 703.161.

BOARD NOTE: Derived from 40 CFR 270.28 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

SUBPART E: SPECIAL FORMS OF PERMITS

Section 703.220 Emergency Permits

a) Notwithstanding any other provision of this Part or 35 Ill. Adm. Code 702 or 705, in the event that the Agency finds an imminent and substantial endangerment to human health or the environment, the Agency may issue a temporary emergency permit, as follows:

1) To a non-permitted facility to allow treatment, storage, or disposal of hazardous waste; or

2) To a permitted facility to allow treatment, storage, or disposal of a hazardous waste not covered by an effective permit.

b) This emergency permit must comply with all of the following requirements:

1) The emergency permit may be oral or written. If oral, it must be followed in five days by a written emergency permit.

2) The emergency permit must not exceed 90 days in duration.

3) The emergency permit must clearly specify the hazardous wastes to be received and the manner and location of their treatment, storage, or disposal.

4) The emergency permit may be terminated by the Agency at any time without process if it determines that termination is appropriate to adequately protect human health and the environment.

5) The emergency permit must be accompanied by a public notice published under 35 Ill. Adm. Code 705.162 including the following:

A) The name and address of the office granting the emergency authorization;

B) The name and location of the permitted HWM facility;

C) A brief description of the wastes involved;

D) A brief description of the action authorized and reasons for authorizing it; and

E) The duration of the emergency permit.

6) The emergency permit must incorporate, to the extent possible and not inconsistent with the emergency situation, all applicable requirements of this Part and 35 Ill. Adm. Code 724.

7) An emergency permit that would authorize actions not in compliance with Board rules, other than procedural requirements, require a variance or provisional variance under Title IX of the Act.

BOARD NOTE: Derived from 40 CFR 270.61.

(Source: Amended at 44 Ill. Reg. 15055, effective September 3, 2020)

Section 703.221 Alternative Compliance with the Federal NESHAPS

When an owner or operator of a hazardous waste incineration unit becomes subject to RCRA permit requirements, or when an owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPs) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), Sections 703.221 through 703.225 do not apply, except those provisions that the Agency determines are necessary to ensure compliance with 35 Ill. Adm. Code 724.445(a) and (c) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the Agency may apply the provisions of Sections 703.221 through 703.225, on a

case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

BOARD NOTE: Derived from 40 CFR 270.62 preamble (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.222 Incinerator Conditions Prior to Trial Burn

For the purposes of determining operational readiness following completion of physical construction, the Agency must establish permit conditions, including but not limited to allowable waste feeds and operating conditions, in the permit to a new hazardous waste incinerator. These permit conditions will be effective for the minimum time required to bring the incinerator to a point of operational readiness sufficient to conduct a trial burn, not to exceed 720 hours operating time for treatment of hazardous waste. The Agency must extend the duration of this operation period once, for up to 720 additional hours, at the request of the applicant when good cause is shown. The permit must be modified to reflect the extension according to Section 703.280.

a) Applicants must submit a statement, with Part B of the permit application, which suggests the conditions necessary to operate in compliance with the performance standards of 35 Ill. Adm. Code 724.443 during this period. This statement must include, at a minimum, restrictions on waste constituents, waste feed rates, and the operating parameters identified in 35 Ill. Adm. Code 724.445;

b) The Agency must review this statement and any other relevant information submitted with Part B of the permit application and specify requirements for this period sufficient to meet the performance standards of 35 Ill. Adm. Code 724.443 based on engineering judgment.

BOARD NOTE: Derived from 40 CFR 270.62(a) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.223 Incinerator Conditions During Trial Burn

For the purposes of determining feasibility of compliance with the performance standards of 35 Ill. Adm. Code 724.443 and of determining adequate operating conditions under 35 Ill. Adm. Code 724.445, the Agency must establish conditions in the permit to a new hazardous waste incinerator to be effective during the trial burn.

a) Applicants must propose a trial burn plan, prepared under subsection (b) with Part B of the permit application;

b) The trial burn plan must include the following information:

1) An analysis of each waste or mixture of wastes to be burned that includes the following:

A) Heat value of the waste in the form and composition in which it will be burned;

B) Viscosity (if applicable), or description of physical form of the waste;

C) An identification of any hazardous organic constituents listed in Appendix H to 35 Ill. Adm. Code 721, that are present in the waste to be burned, except that the applicant need not analyze for constituents listed in Appendix H to 35 Ill. Adm. Code 721 that would reasonably not be expected to be found in the waste. The constituents excluded from analysis must be identified, and the basis for their exclusion stated. The waste analysis must rely on appropriate analytical methods; and

D) An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by the appropriate analytical methods;

BOARD NOTE: The federal regulations do not themselves define the phrase "appropriate analytical methods", but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D):

> [T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] . . . :
>
> 1. Appropriate methods are reliable and accepted as such in the scientific community.
>
> 2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

2) A detailed engineering description of the incinerator for which the permit is sought including the following:

A) Manufacturer's name and model number of incinerator (if available);

B) Type of incinerator;

C) Linear dimensions of the incinerator unit including the cross sectional area of combustion chamber;

D) Description of the auxiliary fuel system (type/feed);

E) Capacity of prime mover;

F) Description of automatic waste feed cut-off systems;

G) Stack gas monitoring and pollution control equipment;

H) Nozzle and burner design;

I) Construction materials;

J) Location and description of temperature-, pressure-, and flow-indicating and control devices;

3) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis;

4) A detailed test schedule for each waste for which the trial burn is planned including dates, duration, quantity of waste to be burned, and other factors relevant to the Agency's decision under subsection (e);

5) A detailed test protocol, including, for each waste identified, the ranges of temperature, waste feed rate, combustion gas velocity, use of auxiliary fuel, and any other relevant parameters that will be varied to affect the destruction and removal efficiency of the incinerator;

6) A description of, and planned operating conditions for, any emission control equipment that will be used;

7) Procedures for rapidly stopping waste feed, shutting down the incinerator, and controlling emissions in the event of an equipment malfunction;

8) Such other information as the Agency reasonably finds necessary to determine whether to approve the trial burn plan in light of the purposes of this subsection (b) and the criteria in subsection (e). Such information must be requested by the Agency pursuant to 35 Ill. Adm. Code 705.123;

c) The Agency, in reviewing the trial burn plan, must evaluate the sufficiency of the information provided and must require the applicant, pursuant to 35 Ill. Adm. Code 705.123, to supplement this information, if necessary, to achieve the purposes of this Section;

d) Based on the waste analysis data in the trial burn plan, the Agency must specify as trial Principal Organic Hazardous Constituents (POHCs), those constituents for which destruction and removal efficiencies must be calculated during the trial burn. These trial POHCs must be specified by the Agency based on its estimate of the difficulty of incineration of the constituents identified in the waste analysis, their concentration or mass in the waste feed, and, for wastes listed in Subpart D of 35 Ill. Adm. Code 721, the hazardous waste organic constituent of constituents identified in Appendix G or H to 35 Ill. Adm. Code 721 as the basis for listing;

e) The Agency must approve a trial burn plan if it finds the following:

1) That the trial burn is likely to determine whether the incinerator performance standard required by 35 Ill. Adm. Code 724.443 can be met;

2) That the trial burn itself will not present an imminent hazard to human health or the environment;

3) That the trial burn will help the Agency to determine operating requirements to be specified under 35 Ill. Adm. Code 724.445; and

4) That the information sought in subsections (e)(1) and (e)(3) cannot reasonably be developed through other means;

f) The Agency must send a notice to all persons on the facility mailing list, as set forth in 35 Ill. Adm. Code 705.161(a), and to the appropriate units of State and local government, as set forth in 35 Ill. Adm. Code 705.163(a)(5), announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the Agency has issued such notice.

1) This notice must be mailed within a reasonable time period before the scheduled trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the Agency.

2) This notice must contain the following:

A) The name and telephone number of the applicant's contact person;

B) The name and telephone number of the Agency regional office appropriate for the facility;

C) The location where the approved trial burn plan and any supporting documents can be reviewed and copied; and

D) An expected time period for commencement and completion of the trial burn;

g) During each approved trial burn (or as soon after the burn as is practicable), the applicant must make the following determinations:

1) A quantitative analysis of the trial POHCs, in the waste feed to the incinerator;

2) A quantitative analysis of the exhaust gas for the concentration and mass emissions of the trial POHCs, molecular oxygen, and hydrogen chloride (HCl);

3) A quantitative analysis of the scrubber water (if any), ash residues, and other residues, for the purpose of estimating the fate of the trial POHCs;

4) A computation of destruction and removal efficiency (DRE), in accordance with the DRE formula specified in 35 Ill. Adm. Code 724.443(a);

5) If the HCl (hydrogen chloride) emission rate exceeds 1.8 kilograms (4 pounds) of HCl per hour, a computation of HCl removal efficiency, in accordance with 35 Ill. Adm. Code 724.443(b);

6) A computation of particulate emissions, in accordance with 35 Ill. Adm. Code 724.443(c);

7) An identification of sources of fugitive emissions and their means of control;

8) A measurement of average, maximum and minimum temperatures, and combustion gas velocity;

9) A continuous measurement of carbon monoxide (CO) in the exhaust gas;

10) Such other information as the Agency specifies as necessary to ensure that the trial burn will determine compliance with the performance standards in 35 Ill. Adm. Code 724.443 and to establish the operating conditions required by 35 Ill. Adm. Code 724.445 as necessary to meet that performance standard;

h) The applicant must submit to the Agency a certification that the trial burn has been carried out in accordance with the approved trial burn plan, and must submit

the results of all the determinations required in subsection (g). This submission must be made within 90 days after completion of the trial burn, or later, if approved by the Agency;

i) All data collected during any trial burn must be submitted to the Agency following the completion of the trial burn;

j) All submissions required by this Section must be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report under 35 Ill. Adm. Code 702.126;

k) Based on the results of the trial burn, the Agency must set the operating requirements in the final permit according to 35 Ill. Adm. Code 724.445. The permit modification must proceed as a minor modification according to Section 703.280.

BOARD NOTE: Derived from 40 CFR 270.62(b) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.224 Incinerator Conditions After Trial Burn

For the purposes of allowing operation of a new hazardous waste incinerator following completion of the trial burn and prior to final modification of the permit conditions to reflect the trial burn results, the Agency may establish permit conditions, including, but not limited to, allowable waste feeds and operating conditions sufficient to meet the requirements of 35 Ill. Adm. Code 724.445, in the permit to a new hazardous waste incinerator. These permit conditions will be effective for the minimum time required to complete sample analysis, data computation, and submission of the trial burn results by the applicant and modification of the facility permit by the Agency.

a) Applicants must submit a statement, with Part B of the permit application, that identifies the conditions necessary to operate in compliance with the performance standards of 35 Ill. Adm. Code 724.443, during this period. This statement should include, at a minimum, restrictions on waste constituents, waste feed rates, and the operating parameters identified in 35 Ill. Adm. Code 724.445;

b) The Agency will review this statement and any other relevant information submitted with Part B of the permit application and specify those requirements for this period most likely to meet the performance standards of 35 Ill. Adm. Code 724.443 based on engineering judgment.

BOARD NOTE: Derived from 40 CFR 270.62(c) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.225 Trial Burns for Existing Incinerators

For the purpose of determining feasibility of compliance with the performance standards of 35 Ill. Adm. Code 724.443 and of determining adequate operating conditions under 35 Ill. Adm. Code 724.445, the applicant for a permit for an existing hazardous waste incinerator must prepare and submit a trial burn plan and perform a trial burn in accordance with Sections 703.205(b) and 703.223(b) through (e) and (g) through (j) or, instead, submit other information, as specified in Section 703.205(c). The Agency must announce its intention to approve the trial burn plan in accordance with the timing and distribution requirements of Section 703.223(f). The contents of the notice must include the following: the name and telephone number of a contact person at the facility; the name and telephone number of a contact office at the Agency; the location where the trial burn plan and any supporting documents can be reviewed and copied; and a schedule of the activities that are required prior to permit issuance, including the anticipated time schedule for Agency approval of the plan and the time period during which the trial burn would be conducted. Applicants submitting information under Section 703.205(a) are exempt from compliance with 35 Ill. Adm. Code 724.443 and 724.445 and, therefore, are exempt from the requirement to conduct a trial burn. Applicants that submit trial burn plans and receive approval before submission of a permit application must complete the trial burn and submit the results, specified in Section 703.223(g), with Part B of the permit application. If completion of this process conflicts with the date set for submission of the Part B application, the applicant must contact the Agency to establish a later date for submission of the Part B application or the trial burn results. Trial burn results must be submitted prior to issuance of the permit. When the applicant submits a trial burn plan with Part B of the permit application, the Agency must specify a time period prior to permit issuance in which the trial burn must be conducted and the results submitted.

BOARD NOTE: Derived from 40 CFR 270.62(d) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.230 Land Treatment Demonstration

a) For the purpose of allowing an owner or operator to meet the treatment demonstration requirements of 35 Ill. Adm. Code 724.372, the Agency may issue a treatment demonstration permit. The permit must contain only those requirements necessary to meet the standards in 35 Ill. Adm. Code 724.372(c). The permit must be issued either as a treatment or disposal permit, covering only the field test or laboratory analyses, or as a two-phase facility permit, covering the field tests, or laboratory analyses and design, construction, operation, and maintenance of the land treatment unit.

1) The Agency must issue a two-phase facility permit if it finds, based on information submitted in Part B of the application, that substantial information already exists, although incomplete or inconclusive, upon which to base the issuance of a facility permit;

2) If the Agency finds that not enough information exists upon which it can establish permit conditions to attempt to provide for compliance with all of the requirements of Subpart M of 35 Ill. Adm. Code 724, it must issue a treatment demonstration permit covering only the field test or laboratory analyses;

b) If the Agency finds that a phased permit is to be issued, it must establish, as requirements in the first phase of the facility permit, conditions for conducting the field tests or laboratory analyses. These permit conditions must include design and operating parameters (including the duration of the tests or analyses and, in the case of field tests, the horizontal and vertical dimensions of the treatment zone), monitoring procedures, post-demonstration cleanup activities, and any other conditions that the Agency finds necessary under 35 Ill. Adm. Code 724.372(c). The Agency must include conditions in the second phase of the facility permit to attempt to meet all Subpart M of 35 Ill. Adm. Code 724 requirements pertaining to unit design, construction, operation and maintenance. The Agency must establish these conditions in the second phase of the permit based upon the substantial but incomplete or inconclusive information contained in the Part B application, as follows:

1) The first phase of the permit becomes effective as provided in 35 Ill. Adm. Code 705.201(d);

2) The second phase of the permit becomes effective as provided in subsection (d) of this Section;

c) When the owner or operator who has been issued a two-phase permit has completed the treatment demonstration, it must submit to the Agency a certification, signed by a person authorized to sign a permit application or report under 35 Ill. Adm. Code 702.126, that the field tests or laboratory analyses have been carried out in accordance with the conditions specified in phase one of the permit for conducting such tests or analyses. The owner or operator must also submit all data collected during the field tests or laboratory analyses within 90 days of completion of those tests or analyses, unless the Agency approves a later date;

d) If the Agency determines that the results of the field tests or laboratory analyses meet the requirements of 35 Ill. Adm. Code 724.372, it must modify the second phase of the permit to incorporate any requirements necessary for operation of the facility in compliance with Subpart M of 35 Ill. Adm. Code 724, based upon the results of the field tests or laboratory analyses.

1) This permit modification may proceed as a minor modification under Section 703.280, or otherwise must proceed as a modification under Section 703.271(b). If such modifications are necessary, the second phase

of the permit becomes effective only after those modifications have been made.

2) If no modifications of the second phase of the permit are necessary, or if only minor modifications are necessary and have been made, the Agency must give notice of its final decision to the permit applicant and to each person who submitted written comments on the phased permit or who requested notice of final decision on the second phase of the permit. The second phase of the permit then becomes effective as specified in 35 Ill. Adm. Code 705.201(d).

BOARD NOTE: Derived from 40 CFR 270.63 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.231 Research, Development and Demonstration Permits

a) The Agency may issue a research, development, and demonstration permit for any hazardous waste treatment facility that proposes to utilize an innovative and experimental hazardous waste treatment technology or process for which permit standards for such experimental activity have not been promulgated pursuant to 35 Ill. Adm. Code 724 or 726. Any such permit must include such terms and conditions as will adequately protect human health and the environment. Such a permit must provide as follows:

1) It must provide for the construction of such facilities as necessary, and for operation of the facility for not longer than one year, unless renewed as provided in subsection (d) of this Section;

2) It must provide for the receipt and treatment by the facility of only those types and quantities of hazardous waste necessary for purposes of determining the efficacy and performance capabilities of the technology or process and the effects of such technology or process on human health and the environment; and

3) It must include such requirements as necessary to adequately protect human health and the environment (including, but not limited to, requirements regarding monitoring, operation, financial responsibility, closure, and remedial action), and such requirements as necessary regarding testing and providing of information to the Agency with respect to the operation of the facility.

b) For the purpose of expediting review and issuance of permits pursuant to this Section, the Agency may, consistent with adequate protection of human health and the environment, modify or waive permit application and permit issuance requirements in this Part and 35 Ill. Adm. Code 702 and 705 except that there

may be no modification or waiver of regulations regarding financial responsibility (including insurance) or of procedures regarding public participation.

c) Pursuant to Section 34 of the Act [415 ILCS 5/34], the Agency may order an immediate termination of all operations at the facility at any time it determines that termination is necessary to adequately protect human health and the environment. The permittee may seek Board review of the termination pursuant to Section 34(d) of the Act [415 ILCS 5/39(d)].

d) Any permit issued pursuant to this Section may be renewed not more than three times. Each such renewal must be for a period of not more than one year.

BOARD NOTE: Derived from 40 CFR 270.65 (2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.232 Permits for Boilers and Industrial Furnaces Burning Hazardous Waste

When the owner or operator of a cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace becomes subject to RCRA permit requirements or when an owner or operator of an existing cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPs) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), this Section does not apply. This Section does apply, however, if the Agency determines certain provisions are necessary to ensure compliance with 35 Ill. Adm. Code 726.202(e)(1) and (e)(2)(C) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events; or if the facility is an area source and the owner or operator elects to comply with the Sections 726.205, 726.206, and 726.207 standards and associated requirements for particulate matter, hydrogen chloride and chlorine gas, and non-mercury metals; or if the Agency determines certain provisions apply, on a case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

a) General. The owner or operator of a new boiler or industrial furnace (one not operating under the interim status standards of 35 Ill. Adm. Code 726.203) is subject to subsections (b) through (f). A boiler or industrial furnace operating under the interim status standards of 35 Ill. Adm. Code 726.203 is subject to subsection (g).

b) Permit Operating Periods for a New Boiler or Industrial Furnace. A permit for a new boiler or industrial furnace must specify appropriate conditions for the following operating periods:

1) Pretrial burn period. For the period beginning with initial introduction of hazardous waste and ending with initiation of the trial burn, and only for the minimum time required to bring the boiler or industrial furnace to a point of operation readiness to conduct a trial burn, not to exceed 720 hours operating time when burning hazardous waste, the Agency must establish permit conditions in the pretrial burn period, including but not limited to allowable hazardous waste feed rates and operating conditions. The Agency must extend the duration of this operational period once, for up to 720 additional hours, at the request of the applicant when good cause is shown. The permit must be modified to reflect the extension according to Sections 703.280 through 703.283.

A) Applicants must submit a statement, with Part B of the permit application, that suggests the conditions necessary to operate in compliance with the standards of 35 Ill. Adm. Code 726.204 through 726.207 during this period. This statement should include, at a minimum, restrictions on the applicable operating requirements identified in 35 Ill. Adm. Code 726.202(e).

B) The Agency must review this statement and any other relevant information submitted with Part B of the permit application and specify requirements for this period sufficient to meet the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 based on the Agency's engineering judgment.

2) Trial Burn Period. For the duration of the trial burn, the Agency must establish conditions in the permit for the purposes of determining feasibility of compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 and determining adequate operating conditions pursuant to 35 Ill. Adm. Code 726.202(e). Applicants must propose a trial burn plan, prepared pursuant to subsection (c), to be submitted with Part B of the permit application.

3) Post-Trial Burn Period

A) For the period immediately following completion of the trial burn, and only for the minimum period sufficient to allow sample analysis, data computation and submission of the trial burn results by the applicant, and review of the trial burn results and modification of the facility permit by the Agency to reflect the trial burn results, the Agency must establish the operating requirements most likely to ensure compliance with the performance standards

of 35 Ill. Adm. Code 726.204 through 726.207 based on the Agency's engineering judgment.

B) Applicants must submit a statement, with Part B of the application, that identifies the conditions necessary to operate during this period in compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207. This statement should include, at a minimum, restrictions on the operating requirements provided by 35 Ill. Adm. Code 726.202 (e).

C) The Agency must review this statement and any other relevant information submitted with Part B of the permit application and specify requirements of this period sufficient to meet the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 based on the Agency's engineering judgment.

4) Final permit period. For the final period of operation the Agency must develop operating requirements in conformance with 35 Ill. Adm. Code 726.202(e) that reflect conditions in the trial burn plan and are likely to ensure compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207. Based on the trial burn results, the Agency must make any necessary modifications to the operating requirements to ensure compliance with the performance standards. The permit modification must proceed according to Sections 703.280 through 703.283.

c) Requirements for Trial Burn Plans. The trial burn plan must include the following information. The Agency, in reviewing the trial burn plan, must evaluate the sufficiency of the information provided and may require the applicant to supplement this information, if necessary, to achieve the purposes of this subsection (c).

1) An analysis of each feed stream, including hazardous waste, other fuels, and industrial furnace feed stocks, as fired, that includes the following:

A) Heating value, levels of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, thallium, total chlorine and chloride, and ash; and

B) Viscosity or description of the physical form of the feed stream.

2) An analysis of each hazardous waste, as fired, including the following:

A) An identification of any hazardous organic constituents listed in Appendix H to 35 Ill. Adm. Code 721 that are present in the feed stream, except that the applicant need not analyze for constituents

listed in Appendix H that would reasonably not be expected to be found in the hazardous waste. The constituents excluded from analysis must be identified and the basis for this exclusion explained. The analysis must be conducted in accordance with appropriate analytical methods;

B) An approximate quantification of the hazardous constituents identified in the hazardous waste, within the precision produced by the appropriate analytical methods; and

C) A description of blending procedures, if applicable, prior to firing the hazardous waste, including a detailed analysis of the hazardous waste prior to blending, an analysis of the material with which the hazardous waste is blended, and blending ratios.

BOARD NOTE: The federal regulations do not themselves define the phrase "appropriate analytical methods", but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D):

> [T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] . . . :
>
> 1. Appropriate methods are reliable and accepted as such in the scientific community.
>
> 2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

3) A detailed engineering description of the boiler or industrial furnace, including the following:

A) Manufacturer's name and model number of the boiler or industrial furnace;

B) Type of boiler or industrial furnace;

C) Maximum design capacity in appropriate units;

D) Description of the feed system for the hazardous waste and, as appropriate, other fuels and industrial furnace feedstocks;

E) Capacity of hazardous waste feed system;

F) Description of automatic hazardous waste feed cutoff systems;

G) Description of any pollution control system; and

H) Description of stack gas monitoring and any pollution control monitoring systems.

4) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and sample analysis.

5) A detailed test schedule for each hazardous waste for which the trial burn is planned, including dates, duration, quantity of hazardous waste to be burned, and other factors relevant to the Agency's decision pursuant to subsection (b)(2).

6) A detailed test protocol, including, for each hazardous waste identified, the ranges of hazardous waste feed rate, and, as appropriate, the feed rates of other fuels and industrial furnace feedstocks, and any other relevant parameters that may affect the ability of the boiler or industrial furnace to meet the performance standards in 35 Ill. Adm. Code 726.204 through 726.207.

7) A description of and planned operating conditions for any emission control equipment that will be used.

8) Procedures for rapidly stopping the hazardous waste feed and controlling emissions in the event of an equipment malfunction.

9) Such other information as the Agency finds necessary to determine whether to approve the trial burn plan in light of the purposes of this subsection (c) and the criteria in subsection (b)(2).

d) Trial Burn Procedures

1) A trial burn must be conducted to demonstrate conformance with the standards of 35 Ill. Adm. Code 726.104 through 726.107.

2) The Agency must approve a trial burn plan if the Agency finds as follows:

A) That the trial burn is likely to determine whether the boiler or industrial furnace can meet the performance standards of 35 Ill. Adm. Code 726.104 through 726.107;

B) That the trial burn itself will not present an imminent hazard to human health and the environment;

C) That the trial burn will help the Agency to determine operating requirements to be specified pursuant to 35 Ill. Adm. Code 726.102(e); and

D) That the information sought in the trial burn cannot reasonably be developed through other means.

3) The Agency must send a notice to all persons on the facility mailing list, as set forth in 35 Ill. Adm. Code 705.161(a), and to the appropriate units of State and local government, as set forth in 35 Ill. Adm. Code 705.163(a)(5), announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the Agency has issued such notice.

A) This notice must be mailed within a reasonable time period before the trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the Agency.

B) This notice must contain the following:

i) The name and telephone number of applicant's contact person;

ii) The name and telephone number of the Agency regional office appropriate for the facility;

iii) The location where the approved trial burn plan and any supporting documents can be reviewed and copied; and

iv) An expected time period for commencement and completion of the trial burn.

4) The applicant must submit to the Agency a certification that the trial burn has been carried out in accordance with the approved trial burn plan, and submit the results of all the determinations required in subsection (c). The Agency must, in the trial burn plan, require that the submission be made within 90 days after completion of the trial burn, or later if the Agency determines that a later date is acceptable.

5) All data collected during any trial burn must be submitted to the Agency following completion of the trial burn.

6) All submissions required by this subsection (d) must be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report pursuant to 35 Ill. Adm. Code 702.126.

e) Special Procedures for DRE Trial Burns. When a DRE trial burn is required pursuant to 35 Ill. Adm. Code 726.104, the Agency must specify (based on the hazardous waste analysis data and other information in the trial burn plan) as trial Principal Organic Hazardous Constituents (POHCs) those compounds for which destruction and removal efficiencies must be calculated during the trial burn. These trial POHCs will be specified by the Agency based on information including the Agency's estimate of the difficulty of destroying the constituents identified in the hazardous waste analysis, their concentrations or mass in the hazardous waste feed, and, for hazardous waste containing or derived from wastes listed in Subpart D of 35 Ill. Adm. Code 721, the hazardous waste organic constituents identified in Appendix G to 35 Ill. Adm. Code 721 as the basis for listing.

f) Determinations Based on Trial Burn. During each approved trial burn (or as soon after the burn as is practicable), the applicant must make the following determinations:

1) A quantitative analysis of the levels of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, thallium, silver, and chlorine/chloride in the feed streams (hazardous waste, other fuels, and industrial furnace feedstocks);

2) When a DRE trial burn is required pursuant to 35 Ill. Adm. Code 726.204(a), the following determinations:

A) A quantitative analysis of the trial POHCs in the hazardous waste feed;

B) A quantitative analysis of the stack gas for the concentration and mass emissions of the trial POHCs; and

C) A computation of destruction and removal efficiency (DRE), in accordance with the DRE formula specified in 35 Ill. Adm. Code 726.204(a);

3) When a trial burn for chlorinated dioxins and furans is required pursuant to 35 Ill. Adm. Code 726.204(e), a quantitative analysis of the stack gas for the concentration and mass emission rate of the 2,3,7,8-chlorinated tetra- through octa-congeners of chlorinated dibenzo-p-dioxins and furans, and a computation showing conformance with the emission standard;

4) When a trial burn for PM, metals, or HCl and chlorine gas is required pursuant to 35 Ill. Adm. Code 726.205, 726.206(c) or (d), or 726.207(b)(2) or (c), a quantitative analysis of the stack gas for the concentrations and mass emissions of PM, metals, or HCl and chlorine gas, and computations showing conformance with the applicable emission performance standards;

5) When a trial burn for DRE, metals, and HCl and chlorine gas is required pursuant to 35 Ill. Adm. Code 726.204(a), 726.206(c) or (d), or 726.207(b)(2) or (c), a quantitative analysis of the scrubber water (if any), ash residues, other residues, and products for the purpose of estimating the fate of the trial POHCs, metals, and chlorine and chloride;

6) An identification of sources of fugitive emissions and their means of control;

7) A continuous measurement of carbon monoxide (CO), oxygen, and, where required, hydrocarbons (HC) in the stack gas; and

8) Such other information as the Agency specifies as necessary to ensure that the trial burn will determine compliance with the performance standards 35 Ill. Adm. Code 726.204 through 726.207 and to establish the operating conditions required by 35 Ill. Adm. Code 726.204 through 726.207 and of determining adequate operating conditions pursuant to 35 Ill. Adm. Code 726.203, and to establish the operating conditions required by 35 Ill. Adm. Code 726.202(e) as necessary to meet those performance standards.

g) Interim Status Boilers and Industrial Furnaces. For the purpose of determining feasibility of compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 and of determining adequate operating conditions pursuant to 35 Ill. Adm. Code 726.203, an applicant that owns or operates an existing boiler or industrial furnace that is operated under the interim status standards of 35 Ill. Adm. Code 726.203 must either prepare and submit a trial burn plan and perform a trial burn in accordance with this Section or submit other information as specified in Section 703.208(a)(6). The Agency must announce its intention to approve of the trial burn plan in accordance with the timing and distribution requirements of subsection (d)(3). The contents of the notice must include all of the following information: the name and telephone number of a contact person at the facility; the name and telephone number of the Agency regional office appropriate for the facility; the location where the trial burn plan and any supporting documents can be reviewed and copied; and a schedule of the activities that are required prior to permit issuance, including the anticipated time schedule for Agency approval of the plan, and the time periods during which the trial burn would be conducted. Applicants that submit a trial burn plan and receive approval before submission of the Part B permit application must complete the trial burn and submit the results specified in subsection (f) with the

Part B permit application. If completion of this process conflicts with the date set for submission of the Part B application, the applicant must contact the Agency to establish a later date for submission of the Part B application or the trial burn results. If the applicant submits a trial burn plan with Part B of the permit application, the trial burn must be conducted and the results submitted within a time period prior to permit issuance to be specified by the Agency.

BOARD NOTE: Derived from 40 CFR 270.66 (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.234 Remedial Action Plans

Remedial Action Plans (RAPs) are special forms of permits that are regulated under Subpart H of this Part.

BOARD NOTE: Derived from 40 CFR 270.68 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.238 RCRA Standardized Permits for Storage and Treatment Units

A RCRA standardized permit is a special form of permit for the owner or operator of a TSD that engages in either of the following activities:

a) It generates hazardous waste and then non-thermally treats or stores the hazardous waste on-site in tanks, containers, or containment buildings; or

b) It receives hazardous waste generated off-site by a generator under the same ownership as the receiving facility, and then it stores or non-thermally treats the hazardous waste in containers, tanks, or containment buildings. The owner or operator of a facility operating under a RCRA standardized permit is regulated pursuant to Subpart J of this Part, Subpart G of 35 Ill. Adm. Code 705, and 35 Ill. Adm. Code 727.

BOARD NOTE: Derived from 40 CFR 270.67, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Added at 31 Ill. Reg. 487, effective December 20, 2006)

SUBPART F: PERMIT CONDITIONS OR DENIAL

Section 703.240 Permit Denial

The Agency may, pursuant to the procedures of 35 Ill. Adm. Code 705, deny the permit application either in its entirety or only as to the active life of a HWM facility or unit.

BOARD NOTE: Derived from 40 CFR 270.29 (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.241 Establishing Permit Conditions

a) General conditions:

1) In addition to the conditions established pursuant to 35 Ill. Adm. Code 702.160(a), each RCRA permit must include permit conditions necessary to achieve compliance with each of the applicable requirements specified in 35 Ill. Adm. Code 724 and 726 through 728. In satisfying this provision, the Agency may incorporate applicable requirements of 35 Ill. Adm. Code 724 and 726 through 728 directly into the permit or establish other permit conditions that are based on these Parts;

2) Each RCRA permit issued pursuant to Section 39(d) of the Environmental Protection Act [415 ILCS 5/39(d)] must contain terms and conditions that the Agency determines are necessary to adequately protect human health and the environment; and

3) If, as the result of an assessments or other information, the Agency determines that conditions, in addition to those required under subpart EEE of 40 CFR 63 or 35 Ill. Adm. Code 724 or 726, are necessary to ensure adequate protection of human health and the environment, the Agency must include those terms and conditions in a RCRA permit for a hazardous waste combustion unit.

BOARD NOTE: Subsection (a) derived from 270.32(b) (2012).

b) The conditions specified in this Subpart F, in addition to those set forth in 35 Ill. Adm. Code 702.140 through 702.152, apply to all RCRA permits.

BOARD NOTE: Subsection (b) derived from 40 CFR 270.30 preamble (2012).

(Source: Amended at 37 Ill. Reg. 17659, effective October 24, 2013)

Section 703.242 Noncompliance Pursuant to Emergency Permit

In addition to 35 Ill. Adm. Code 702.141 (duty to comply), the permittee need not comply with the conditions of its permit to the extent and for the duration such noncompliance is authorized in an emergency permit. (See Section 703.221).

BOARD NOTE: Derived from 40 CFR 270.30(a) (1992).

(Source: Amended at 18 Ill. Reg. 18316, effective December 20, 1994)

Section 703.243 Monitoring

In addition to 35 Ill. Adm. Code 702.150 (monitoring) the following apply:

a) The permittee must retain records of all monitoring information, including the certification required by 35 Ill. Adm. Code 724.173(b)(3), for a period of at least three years from the date of the certification.

b) The permittee must maintain records from all groundwater monitoring wells and associated groundwater surface elevations, for the active life of the facility, and for disposal facilities for the post-closure care period as well.

BOARD NOTE: Derived from 40 CFR 270.30(j)(2) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.244 Notice of Planned Changes (Repealed)

(Source: Repealed at 18 Ill. Reg. 18316, effective December 20, 1994)

Section 703.245 Twenty-four Hour Reporting

a) The permittee must report any non-compliance that may endanger health or the environment orally within 24 hours after the permittee becomes aware of the circumstances, including the following:

1) Information concerning release of any hazardous waste that may cause an endangerment to public drinking water supplies;

2) Any information of a release or discharge of hazardous waste, or of a fire or explosion from a HWM facility, that could threaten the environment or human health outside the facility.

b) The description of the occurrence and its cause must include the following:

1) Name, address, and telephone number of the owner or operator;

2) Name, address, and telephone number of the facility;

3) Date, time, and type of incident;

4) Name and quantity of materials involved;

5) The extent of injuries, if any;

6) An assessment of actual or potential hazards to the environment and human health outside the facility, where this is applicable; and

7) Estimated quantity and disposition of recovered material that resulted from the incident.

c) A written submission must also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission must contain a description of the non-compliance and its cause; the period of noncompliance including exact dates, times, and, if the noncompliance has not been corrected, the anticipated time the noncompliance is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. The Agency may waive the five-day written notice requirement in favor of a written report within 15 days.

BOARD NOTE: Derived from 40 CFR 270.30(l)(6) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.246 Reporting Requirements

The following reports required by 35 Ill. Adm. Code 724 must be submitted in addition to those required by 35 Ill. Adm. Code 702.152 (reporting requirements):

a) Manifest discrepancy report: if a significant discrepancy in a manifest is discovered, the permittee must: ~~attempt to reconcile the discrepancy. If not resolved within 15 days, the permittee must submit a letter report including a copy of the manifest to the Agency (see 35 Ill. Adm. Code 724.172).~~

1) Attempt to reconcile the discrepancy. If not resolved within 20 days, the permittee must submit a letter report including a copy of the manifest to the Agency (see 35 Ill. Adm. Code 724.172).

2) Beginning on December 1, 2025, attempt to reconcile the discrepancy. If not resolved within 20 days, the permittee must immediately submit a Discrepancy Report to the USEPA e-manifest System describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.

b) Unmanifested waste report. A permittee must: ~~if hazardous waste is received without an accompanying manifest, the permittee must submit an unmanifested waste report to the Agency within 15 days of receipt of unmanifested waste. (see 35 Ill. Adm. Code 724.176)~~

1) Submit the Unmanifested Waste Report to the Agency within 15 days of receipt of unmanifested waste. (See 35 Ill. Adm. Code 724.176)

2) Beginning on December 1, 2025, submit an electronic Unmanifested Waste Report in the USEPA e-Manifest system for submission to the USEPA within 15 days of receipt of unmanifested waste. (See 35 Ill. Adm. Code 724.176)

c) Facility activities report: a facility activities report must be submitted covering facility activities as described in 35 Ill. Adm. Code 724.175.

BOARD NOTE: Derived from 40 CFR 270.30(l)(7) through (l)(9) (2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.247 Anticipated Noncompliance

In addition to 35 Ill. Adm. Code 702.152(b), for a new facility, the permittee must not treat, store, or dispose of hazardous waste; and for a facility being modified, the permittee must not treat, store, or dispose of hazardous waste in the modified portion of the facility, except as provided in Section 703.280, until one of the following has occurred:

a) The permittee has submitted to the Agency by certified mail or hand delivery a letter signed by the permittee and a registered professional engineer stating that the facility has been constructed or modified in compliance with the permit; and

b) Either:

1) The Agency has inspected the modified or newly constructed facility and finds it is in compliance with the conditions of the permit; or

2) Within 15 days after the date of submission of the letter in subsection (a) of this Section, the permittee has not received notice from the Agency of its intent to inspect, the permittee may commence treatment, storage, or disposal of hazardous waste.

BOARD NOTE: Derived from 40 CFR 270.30(l)(2) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.248 Information Repository

The Agency may require the permittee to establish and maintain an information repository at any time, based on the factors set forth in Section 703.193(b). The information repository must be governed by the provisions in Section 703.193(c) through (f).

BOARD NOTE: Derived from 40 CFR 270.30(m) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

SUBPART G: CHANGES TO PERMITS

Section 703.260 Transfer

a) A permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or reissued (pursuant to subsection (b) of this Section or Section 703.272) to identify the new permittee and incorporate such other requirements as are necessary under the appropriate Act. The new owner or operator to whom the permit is transferred must comply with all the terms and conditions specified in such permit.

b) Changes in the ownership or operational control of a facility must be made as a Class 1 modification with the prior written approval of the Agency in accordance with Section 703.281 or as a routine change with prior Agency approval pursuant to 35 Ill. Adm. Code 705.304(c). The new owner or operator must submit a revised permit application no later than 90 days prior to the scheduled change. A written agreement containing a specific date for transfer of permit responsibility between the current and new permittees must also be submitted to the Agency. When a transfer of ownership or operational control occurs, the old owner or operator must comply with Subpart H of 35 Ill. Adm. Code 724 (Financial Requirements), until the new owner or operator has demonstrated compliance with that Subpart. The new owner or operator must demonstrate compliance with that Subpart within six months after the date of change of operational control of the facility. Upon demonstration to the Agency by the new owner or operator of compliance with that Subpart, the Agency must notify the old owner or operator that the old owner or operator no longer needs to comply with that Subpart as of the date of demonstration.

BOARD NOTE: Derived from 40 CFR 270.40 (2005), as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005).

BOARD NOTE: The new operator may be required to employ a chief operator that is certified pursuant to 35 Ill. Adm. Code 745.

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.270 Modification or Reissuance

When the Agency receives any information (for example, inspects the facility, receives information submitted by the permittee, as required in the permit (see 35 Ill. Adm. Code 702.140 through 702.152 and Section 703.241 et seq.), receives a request for reissuance pursuant to 35 Ill. Adm. Code 705.128, or conducts a review of the permit file) it may determine whether or not one or more of the causes, listed in Sections 703.271 or 703.272, for modification, reissuance, or both, exist. If cause exists, the Agency must modify or reissue the permit accordingly, subject to

the limitations of Section 703.273, and may request an updated application if necessary. When a permit is modified, only the conditions subject to modification are reopened. If a permit is reissued, the entire permit is reopened and subject to revision and the permit is reissued for a new term. (See 35 Ill. Adm. Code 705.128(c)(2).) If cause does not exist pursuant to Section 703.271 or 703.272, the Agency must not modify or reissue the permit, except on the request of the permittee. If a permit modification is requested by the permittee, the Agency must approve or deny the request according to the procedures of Section 703.280 through 703.283 or Section 703.353 and Subpart G of 35 Ill. Adm. Code 705. Otherwise, a draft permit must be prepared and other procedures in 35 Ill. Adm. Code 705 must be followed.

BOARD NOTE: Derived from the preamble to 40 CFR 270.41 (2017). The Board has chosen to use "reissue" where the corresponding federal provisions use "revoke and reissue". Revocation is a remedy in the context of an enforcement action that is reserved to the Board. See 415 ILCS 5/33(b); 35 Ill. Adm. Code 702.186. The Board intends that a reissued permit completely supercede the earlier version of that permit.

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.271 Causes for Modification

The following are cause for modification, but not reissuance, of permits; the following are cause for reissuance as well as modification when the permittee requests or agrees:

a) Alterations. There are material and substantial alterations or additions to the permitted facility or activity that occurred after permit issuance which justify the application of permit conditions that are different or absent in the existing permit.

b) Information. The Agency has received information. Permits will be modified during their terms for this cause only if the information was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and would have justified the application of different permit conditions at the time of issuance.

c) New statutory requirements or regulations. The standards or regulations on which the permit was based have been changed by statute, through promulgation of new or amended standards or regulations, or by judicial decision after the permit was issued.

d) Compliance schedules. The Agency determines good cause exists for modification of a compliance schedule, such as an act of God, strike, flood, materials shortage, or other events over which the permittee has little or no control and for which there is no reasonably available remedy.

e) The Agency must also modify a permit as follows:

1) When modification of a closure plan is required under 35 Ill. Adm. Code 724.212(b) or 724.218(b).

2) After the Agency receives the notification of expected closure under 35 Ill. Adm. Code 724.213, when the Agency determines that extension of the 90 or 180 day periods under 35 Ill. Adm. Code 724.213, modification of the 30-year post-closure period under 35 Ill. Adm. Code 724.217(a), continuation of security requirements under 35 Ill. Adm. Code 724.217(b), or permission to disturb the integrity of the containment system under 35 Ill. Adm. Code 724.217(c) are unwarranted.

3) When the permittee has filed a request under 35 Ill. Adm. Code 724.247(c) for a modification to the level of financial responsibility or when the Agency demonstrates under 35 Ill. Adm. Code 724.247(d) that an upward adjustment of the level of financial responsibility is required.

4) When the corrective action program specified in the permit under 35 Ill. Adm. Code 724.200 has not brought the regulated unit into compliance with the groundwater protection standard within a reasonable period of time.

5) To include a detection monitoring program meeting the requirements of 35 Ill. Adm. Code 724.198, when the owner or operator has been conducting a compliance monitoring program under 35 Ill. Adm. Code 724.199 or a corrective action program under 35 Ill. Adm. Code 724.200, and the compliance period ends before the end of the post-closure care period for the unit.

6) When a permit requires a compliance monitoring program under 35 Ill. Adm. Code 724.199, but monitoring data collected prior to permit issuance indicate that the facility is exceeding the groundwater protection standard.

7) To include conditions applicable to units at a facility that were not previously included in the facility's permit.

8) When a land treatment unit is not achieving complete treatment of hazardous constituents under its current permit conditions.

f) Notwithstanding any other provision of this Section, when a permit for a land disposal facility is reviewed under 35 Ill. Adm. Code 702.161(d), the Agency must modify the permit as necessary to assure that the facility continues to comply with the currently applicable requirements in this Part and 35 Ill. Adm. Code 702, 703, and 720 through 727.

BOARD NOTE: Derived from 40 CFR 270.41(a) (2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.272 Causes for Modification or Reissuance

The following are causes to modify or, alternatively, reissue a permit:

a) This subsection (a) corresponds with 40 CFR 270.41(b)(1), which pertains to termination of a permit, which is not possible through an administrative action of the Agency. This statement maintains structural consistency with the corresponding federal rules.

b) The Agency has received notification (as required in the permit, see 35 Ill. Adm. Code 702.152(c)) of a proposed transfer of the permit; or

c) The Agency has received notification under 35 Ill. Adm. Code 705.301(a)(2) of a facility owner's or operator's intent to be covered by a RCRA standardized permit.

BOARD NOTE: Derived from 40 CFR 270.41(b) (2005), as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.273 Facility Siting

Suitability of the facility location will not be considered at the time of permit modification or reissuance unless new information or standards indicate that a threat to human health or the environment exists which was unknown at the time of permit issuance or unless required under the Environmental Protection Act. However, certain modifications require site location suitability approval pursuant to Section 39.2 of the Environmental Protection Act [415 ILCS 5/39.2].

BOARD NOTE: Derived from 40 CFR 270.41(c) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.280 Permit Modification at the Request of the Permittee

a) Class 1 Modifications. See Section 703.281.

b) Class 2 Modifications. See Section 703.282.

c) Class 3 Modifications. See Section 703.283.

d) Other Modifications

1) In the case of modifications not explicitly listed in Appendix A, the permittee may submit a Class 3 modification request to the Agency, or the permittee may request a determination by the Agency that the modification be reviewed and approved as a Class 1 or Class 2 modification. If the permittee requests that the modification be classified as a Class 1 or 2 modification, the permittee must provide the Agency with the necessary information to support the requested classification.

2) The Agency must make the determination described in subsection (d)(1) as promptly as practicable. In determining the appropriate class for a specific modification, the Agency must consider the similarity of the modification to other modifications codified in Appendix A and the following criteria:

A) Class 1 modifications apply to minor changes that keep the permit current with routine changes to the facility or its operation. These changes do not substantially alter the permit conditions or reduce the capacity of the facility to adequately protect human health or the environment. In the case of Class 1 modifications, the Agency may require prior approval.

B) Class 2 modifications apply to changes that are necessary to enable a permittee to respond, in a timely manner, to any of the following:

i) Common variations in the types and quantities of the wastes managed under the facility permit;

ii) Technological advances; and

iii) Changes necessary to comply with new regulations, where these changes can be implemented without substantially changing design specifications or management practices in the permit.

C) Class 3 modifications substantially alter the facility or its operation.

e) Temporary Authorizations

1) Upon request of the permittee, the Agency must, without prior public notice and comment, grant the permittee a temporary authorization in accordance with this subsection (e). Temporary authorizations have a term of not more than 180 days.

2) Procedures

A) The permittee may request a temporary authorization for the following:

i) Any Class 2 modification meeting the criteria in subsection (e)(3)(B); and

ii) Any Class 3 modification that meets the criteria in subsection (e)(3)(B)(i) or that meets the criteria in subsections (e)(3)(B)(iii) through (e)(3)(B)(v) and provides improved management or treatment of a hazardous waste already listed in the facility permit.

B) The temporary authorization request must include the following:

i) A description of the activities to be conducted under the temporary authorization;

ii) An explanation of why the temporary authorization is necessary; and

iii) Sufficient information to ensure compliance with 35 Ill. Adm. Code 724 standards.

C) The permittee must send a notice about the temporary authorization request to all persons on the facility mailing list maintained by the Agency and to appropriate units of State and local governments, as specified in 35 Ill. Adm. Code 705.163(a)(5). This notification must be made within seven days after submission of the authorization request.

3) The Agency must approve or deny the temporary authorization as quickly as practical. To issue a temporary authorization, the Agency must find as follows:

A) That the authorized activities are in compliance with the standards of 35 Ill. Adm. Code 724.

B) That the temporary authorization is necessary to achieve one of the following objectives before action is likely to be taken on a modification request:

i) To facilitate timely implementation of closure or corrective action activities;

ii) To allow treatment or storage in tanks, containers, or containment buildings, in accordance with 35 Ill. Adm. Code 728;

iii) To prevent disruption of ongoing waste management activities;

iv) To enable the permittee to respond to sudden changes in the types or quantities of the wastes managed under the facility permit; or

v) To facilitate other changes to adequately protect human health and the environment.

4) A temporary authorization must be reissued for one additional term of up to 180 days, provided that the permittee has requested a Class 2 or 3 permit modification for the activity covered in the temporary authorization, and either of the following is true:

A) The reissued temporary authorization constitutes the Agency's decision on a Class 2 permit modification in accordance with Section 703.282(f)(1)(D) or (f)(2)(D); or

B) The Agency determines that the reissued temporary authorization involving a Class 3 permit modification request is warranted to allow the authorized activities to continue while the modification procedures of 35 Ill. Adm. Code 703.283 are conducted.

f) Public Notice and Appeals of Permit Modification Decisions

1) The Agency must notify persons on the facility mailing list and appropriate units of State and local government within 10 days after any decision to grant or deny a Class 2 or 3 permit modification request. The Agency must also notify such persons within 10 days after an automatic authorization for a Class 2 modification goes into effect pursuant to Section 703.282(f)(3) or (f)(5).

2) The Agency's decision to grant or deny a Class 2 or 3 permit modification request may be appealed under the permit appeal procedures of 35 Ill. Adm. Code 705.212.

3) An automatic authorization that goes into effect pursuant to Section 703.282(f)(3) or (f)(5) may be appealed under the permit appeal procedures of 35 Ill. Adm. Code 705.212; however, the permittee may continue to conduct the activities pursuant to the automatic authorization

until the Board enters a final order on the appeal notwithstanding the provisions of 35 Ill. Adm. Code 705.204.

g) Newly Regulated Wastes and Units

1) The permittee is authorized to continue to manage wastes listed or identified as hazardous pursuant to 35 Ill. Adm. Code 721, or to continue to manage hazardous waste in units newly regulated as hazardous waste management units, if each of the following is true:

A) The unit was in existence as a hazardous waste facility with respect to the newly listed or characterized waste or newly regulated waste management unit on the effective date of the final rule listing or identifying the waste, or regulating the unit;

B) The permittee submits a Class 1 modification request on or before the date on which the waste becomes subject to the new requirements;

C) The permittee is in compliance with the applicable standards of 35 Ill. Adm. Code 725 and 726;

D) The permittee also submits a complete Class 2 or 3 modification request within 180 days after the effective date of the rule listing or identifying the waste, or subjecting the unit to management standards pursuant to 35 Ill. Adm. Code 724, 725, or 726; and

E) In the case of land disposal units, the permittee certifies that such unit is in compliance with all applicable requirements of 35 Ill. Adm. Code 725 for groundwater monitoring and financial responsibility requirements on the date 12 months after the effective date of the rule identifying or listing the waste as hazardous, or regulating the unit as a hazardous waste management unit. If the owner or operator fails to certify compliance with all these requirements, the owner or operator loses authority to operate pursuant to this Section.

2) New wastes or units added to a facility's permit pursuant to this subsection (g) do not constitute expansions for the purpose of the 25 percent capacity expansion limit for Class 2 modifications.

h) Military Hazardous Waste Munitions Treatment and Disposal. The permittee is authorized to continue to accept waste military munitions notwithstanding any permit conditions barring the permittee from accepting off-site wastes, if each of the following is true:

1) The facility was in existence as a hazardous waste facility and the facility was already permitted to handle the waste military munitions on the date when the waste military munitions became subject to hazardous waste regulatory requirements;

2) On or before the date when the waste military munitions become subject to hazardous waste regulatory requirements, the permittee submits a Class 1 modification request to remove or amend the permit provision restricting the receipt of off-site waste munitions; and

3) The permittee submits a complete Class 2 modification request within 180 days after the date when the waste military munitions became subject to hazardous waste regulatory requirements.

i) Permit Modification List. The Agency must maintain a list of all approved permit modifications and must publish a notice once a year in a State-wide newspaper that an updated list is available for review.

j) Combustion Facility Changes to Meet 40 CFR 63 MACT Standards. The following procedures apply to hazardous waste combustion facility permit modifications requested pursuant to Appendix A, paragraph L(9).

1) A facility owner or operator must have complied with the federal notification of intent to comply (NIC) requirements of 40 CFR 63.1210 that was in effect prior to October 11, 2000, (see subpart EEE of 40 CFR 63 (2000), incorporated by reference in 35 Ill. Adm. Code 720.111(b)) in order to request a permit modification pursuant to this Section for the purpose of technology changes needed to meet the standards of 40 CFR 63.1203, 63.1204, and 63.1205, incorporated by reference in 35 Ill. Adm. Code 720.111(b).

2) If the Agency does not act to either approve or deny the request within 90 days of receiving it, the request must be deemed approved. The Agency may, at its discretion, extend this 90-day deadline one time for up to 30 days by notifying the facility owner or operator in writing before the 90 days has expired. A facility owner or operator must comply with the NIC requirements of 40 CFR 63.1210(b) and 63.1212(a) before a permit modification can be requested under this Section for the purpose of technology changes needed to meet the 40 CFR 63.1215, 63.1216, 63.1217, 63.1218, 63.1219, 63.1220, and 63.1221 standards as added on October 12, 2005, incorporated by reference in 35 Ill. Adm. Code 720.111(b).

k) Waiver of RCRA Permit Conditions in Support of Transition to the 40 CFR 63 MACT Standards

1) The facility owner or operator may request to have specific RCRA operating and emissions limits waived by submitting a Class 1 permit modification request under Appendix A, paragraph L.10. The owner or operator must provide the information described in subsections (k)(1)(A) though (k)(1)(C), with Agency review subject to the conditions of subsection (k)(1)(D):

A) It must identify the specific RCRA permit operating and emissions limits that the owner or operator is requesting to waive;

B) It must provide an explanation of why the changes are necessary in order to minimize or eliminate conflicts between the RCRA permit and MACT compliance; and

C) It must discuss how the revised provisions will be sufficiently protective.

D) The Agency must approve or deny the request within 30 days after receipt of the request. The Agency may, at its discretion, extend this 30-day deadline one time for up to 30 days by notifying the facility owner or operator in writing.

2) To request this modification in conjunction with MACT performance testing, where permit limits may only be waived during actual test events and pretesting, as defined under 40 CFR 63.1207(h)(2)(i) and (h)(2)(ii), incorporated by reference in 35 Ill. Adm. Code 720.111(b), for an aggregate time not to exceed 720 hours of operation (renewable at the discretion of the Agency) the owner or operator must fulfill the conditions of subsection (k)(2)(A), subject to the conditions of subsection (k)(2)(B):

A) It must submit its modification request to the Agency at the same time it submits its test plans to the Agency.

B) The Agency may elect to approve or deny the request contingent upon approval of the test plans.

l) This subsection (l) corresponds with 40 CFR 270.42(l), which USEPA removed and marked reserved at 81 Fed. Reg. 85732 (November 28, 2016). This statement maintains structural consistency with the corresponding federal requirements.

BOARD NOTE: Derived from 40 CFR 270.42(d) through (k) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.281 Class 1 Modifications

a) Except as provided in subsection (a)(2) of this Section, the permittee may put into effect Class I modifications listed in Appendix A under the following conditions:

1) The permittee must notify the Agency concerning the modification by certified mail or other means that establish proof of delivery within 7 calendar days after the change is put into effect. This notice must specify the changes being made to permit conditions or supporting documents referenced by the permit and must explain why they are necessary. Along with the notice, the permittee must provide the applicable information required by Section 703.181 through 703.185, 703.201 through 703.207, 703.221 through 703.225, and 703.230.

2) The permittee must send a notice of the modification to all persons on the facility mailing list, maintained by the Agency in accordance with 35 Ill. Adm. Code 705.163(a)(4), and the appropriate units of State and local government, as specified in 35 Ill. Adm. Code 705.163(a)(5). This notification must be made within 90 calendar days after the change is put into effect. For the Class 1 modifications that require prior Agency approval, the notification must be made within 90 calendar days after the Agency approves the request.

3) Any person may request the Agency to review, and the Agency must for cause reject, any Class 1 modification. The Agency must inform the permittee by certified mail that a Class 1 modification has been rejected, explaining the reasons for the rejection. If a Class 1 modification has been rejected, the permittee must comply with the original permit conditions.

b) Class 1 permit modifications identified in Appendix A by an asterisk must be made only with the prior written approval of the Agency.

c) For a Class 1 permit modification, the permittee may elect to follow the procedures in Section 703.282 for Class 2 modifications instead of the Class 1 procedures. The permittee must inform the Agency of this decision in the notice required in Section 703.282(b)(1).

BOARD NOTE: Derived from 40 CFR 270.42(a) (2002).

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.282 Class 2 Modifications

a) For Class 2 modifications, listed in Appendix A, the permittee must submit a modification request to the Agency that does the following:

1) Describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;

2) Identifies that the modification is a Class 2 modification;

3) Explains why the modification is needed; and

4) Provides the applicable information required by Section 703.181 through 703.185, 703.201 through 703.207, 703.221 through 703.225, and 703.230.

b) The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the Agency and to the appropriate units of State and local government as specified in 35 Ill. Adm. Code 705.163(a)(5) and must, to the extent practicable, publish this notice in a newspaper of general circulation published in the County in which the facility is located. If no such newspaper exists, the permittee must publish the notice in a newspaper of general circulation in the vicinity of the facility. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the Agency evidence of the mailing and publication. The notice must include:

1) Announcement of a 60-day comment period, in accordance with subsection (e), and the name and address of an Agency contact to whom comments must be sent;

2) Announcement of the date, time and place for a public meeting held in accordance with subsection (d);

3) Name and telephone number of the permittee's contact person;

4) Name and telephone number of an Agency contact person;

5) Locations where copies of the modification request and any supporting documents can be viewed and copied; and

6) The following statement: "The permittee's compliance history during the life of the permit being modified is available from the Agency contact person".

c) The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.

d) The permittee must hold a public meeting no earlier than 15 days after the publication of the notice required in subsection (b) and no later than 15 days before the close of the 60-day comment period. The meeting must be held in the

County in which the permitted facility is located, unless it is impracticable to do so, in which case the hearing must be held in the vicinity of the facility.

e) The public must be provided 60 days to comment on the modification request. The comment period begins on the date that the permittee publishes the notice in the local newspaper. Comments must be submitted to the Agency contact identified in the public notice.

f) Agency Decision

1) No later than 90 days after receipt of the notification request, the Agency must:

A) Approve the modification request, with or without changes, and modify the permit accordingly;

B) Deny the request;

C) Determine that the modification request must follow the procedures in Section 703.283 for Class 3 modifications for either of the following reasons:

i) There is significant public concern about the proposed modification; or

ii) The complex nature of the change requires the more extensive procedures of Class 3;

D) Approve the request, with or without changes, as a temporary authorization having a term of up to 180 days; or

E) Notify the permittee that the Agency will decide on the request within the next 30 days.

2) If the Agency notifies the permittee of a 30-day extension for a decision, the Agency must, no later than 120 days after receipt of the modification request, do the following:

A) Approve the modification request, with or without changes, and modify the permit accordingly;

B) Deny the request;

C) Determine that the modification request must follow the procedures in Section 703.283 for Class 3 modifications for the following reasons:

i) There is significant public concern about the proposed modification; or

ii) The complex nature of the change requires the more extensive procedures of Class 3; or

D) Approve the request, with or without changes, as a temporary authorization having a term of up to 180 days.

3) If the Agency fails to make one of the decisions specified in subsection (f)(2) by the 120th day after receipt of the modification request, the permittee is automatically authorized to conduct the activities described in the modification request for up to 180 days, without formal Agency action. The authorized activities must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of 35 Ill. Adm. Code 725. If the Agency approves, with or without changes, or denies the modification request during the term of the temporary or automatic authorization provided for in subsections (f)(1), (f)(2), or (f)(3), such action cancels the temporary or automatic authorization.

4) Notification by Permittee

A) In the case of an automatic authorization under subsection (f)(3), or a temporary authorization under subsection (f)(1)(D) or (f)(2)(D), if the Agency has not made a final approval or denial of the modification request by the date 50 days prior to the end of the temporary or automatic authorization, the permittee must, within seven days after that time, send a notification to persons on the facility mailing list, and make a reasonable effort to notify other persons who submitted written comments on the modification request, that informs them as follows:

i) That the permittee has been authorized temporarily to conduct the activities described in the permit modification request; and

ii) That, unless the Agency acts to give final approval or denial of the request by the end of the authorization period, the permittee will receive authorization to conduct such activities for the life of the permit.

B) If the owner or operator fails to notify the public by the date specified in subsection (f)(4)(A), the effective date of the

permanent authorization will be deferred until 50 days after the owner or operator notifies the public.

5) Except as provided in subsection (f)(7), if the Agency does not finally approve or deny a modification request before the end of the automatic or temporary authorization period or reclassify the modification as a Class 3 modification, the permittee is authorized to conduct the activities described in the permit modification request for the life of the permit unless modified later under Section 703.270 or Section 703.280. The activities authorized under this subsection must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of 35 Ill. Adm. Code 725.

6) In making a decision to approve or deny a modification request, including a decision to issue a temporary authorization or to reclassify a modification as a Class 3, the Agency must consider all written comments submitted to the Agency during the public comment period and must respond in writing to all significant comments in the Agency's decision.

7) With the written consent of the permittee, the Agency may extend indefinitely or for a specified period the time periods for final approval or denial of a modification request or for reclassifying a modification as a Class 3.

g) The Agency must deny or change the terms of a Class 2 permit modification request under subsections (f)(1) through (f)(3) for the following reasons:

1) The modification request is incomplete;

2) The requested modification does not comply with the appropriate requirements of 35 Ill. Adm. Code 724 or other applicable requirements; or

3) The conditions of the modification fail to protect human health and the environment.

h) The permittee may perform any construction associated with a Class 2 permit modification request beginning 60 days after the submission of the request unless the Agency establishes a later date for commencing construction and informs the permittee in writing before day 60.

BOARD NOTE: Derived from 40 CFR 270.42(b) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.283 Class 3 Modifications

a) For Class 3 modifications, listed in Appendix A, the permittee must submit a modification request to the Agency that does the following:

1) Describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;

2) Identifies that the modification is a Class 3 modification;

3) Explains why the modification is needed; and

4) Provides the applicable information required by Section 703.181 through 703.187, 703.201 through 703.209, 703.221 through 703.225, 703.230, and 703.232.

b) The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the Agency and to the appropriate units of State and local government, as specified in 35 Ill. Adm. Code 705.163(a)(5), and must publish this notice in a newspaper of general circulation in the county in which the facility is located. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the Agency evidence of the mailing and publication. The notice must include the following:

1) Announcement of a 60-day comment period, in accordance with subsection (e), and the name and address of an Agency contact to whom comments must be sent;

2) Announcement of the date, time, and place for a public meeting held in accordance with subsection (d);

3) Name and telephone number of the permittee's contact person;

4) Name and telephone number of an Agency contact person;

5) Locations where copies of the modification request and any supporting documents can be viewed and copied; and

6) The following statement: "The permittee's compliance history during the life of the permit being modified is available from the Agency contact person".

c) The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.

d) The permittee must hold a public meeting no earlier than 15 days after the publication of the notice required in subsection (b) and no later than 15 days before the close of the 60-day comment period. The meeting must be held to the extent practicable in the vicinity of the permitted facility.

e) The public must be provided 60 days to comment on the modification request. The comment period will begin on the date the permittee publishes the notice in the local newspaper. Comments must be submitted to the Agency contact identified in the public notice.

f) After the conclusion of the 60-day comment period, the Agency must grant or deny the permit modification request, according to the permit modification procedures of 35 Ill. Adm. Code 705. In addition, the Agency must consider and respond to all significant written comments received during the 60-day comment period.

BOARD NOTE: Derived from 40 CFR 270.42(c) (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

SUBPART H: REMEDIAL ACTION PLANS

Section 703.300 Special Regulatory Format

USEPA wrote the federal counterpart to this Subpart H, subpart H of 40 CFR 270, in a special format to make it easier to understand the regulatory requirements. The Board has adapted the substance of the corresponding federal regulations in this Subpart H to use a more conventional regulatory format, rather than the question-and-answer format used by USEPA.

BOARD NOTE: Derived from 40 CFR 270.79 (2005).

(Source: Amended at 30 Ill. Reg. 2845, effective February 23, 2006)

Section 703.301 General Information

a) Definition of a RAP.

1) A RAP is a special form of RCRA permit that an owner or operator may obtain, instead of a permit issued under 35 Ill. Adm. Code 702 and this Part, to authorize the owner or operator to treat, store, or dispose of hazardous remediation waste (as defined in 35 Ill. Adm. Code 720.110) at a remediation waste management site. A RAP may only be issued for the area of contamination where the remediation wastes to be managed under the RAP originated, or areas in close proximity to the contaminated area, except as allowed in limited circumstances under Section 703.306.

2) The requirements in 35 Ill. Adm. Code 702 and this Part do not apply to RAPs unless those requirements for traditional RCRA permits are specifically required under this Subpart H. The definitions in 35 Ill. Adm. Code 702.110 apply to RAPs.

3) Notwithstanding any other provision of 35 Ill. Adm. Code 702 or this Part, any document that meets the requirements in this Section constitutes a RCRA permit, as defined in 35 Ill. Adm. Code 702.110.

4) A RAP may be either of the following:

A) A stand-alone document that includes only the information and conditions required by this Subpart H; or

B) A part (or parts) of another document that includes information or conditions for other activities at the remediation waste management site, in addition to the information and conditions required by this Subpart H.

5) If an owner or operator is treating, storing, or disposing of hazardous remediation wastes as part of a cleanup compelled by authorities issued by USEPA or the State of Illinois, a RAP does not affect the obligations under those authorities in any way.

6) If an owner or operator receives a RAP at a facility operating under interim status, the RAP does not terminate the facility's interim status.

BOARD NOTE: Subsection (a) is derived from 40 CFR 270.80 (2002).

b) When an owner or operator needs a RAP.

1) Whenever an owner or operator treats, stores, or disposes of hazardous remediation wastes in a manner that requires a RCRA permit under Section 703.121, an owner or operator must obtain either of the following:

A) A RCRA permit according to 35 Ill. Adm. Code 702 and this Part; or

B) A RAP according to this Subpart H.

2) Treatment units that use combustion of hazardous remediation wastes at a remediation waste management site are not eligible for RAPs under this Subpart H.

3) An owner or operator may obtain a RAP for managing hazardous remediation waste at an already permitted RCRA facility. An owner or

operator must have the RAP approved as a modification to the owner's or operator's existing permit according to the requirements of Sections 703.270 through 703.273 or Sections 703.280 through 703.283 instead of the requirements in this Subpart H. However, when an owner or operator submits an application for such a modification, the information requirements in Sections 703.281(a)(1), 703.282(a)(4), and 703.283(a)(4) do not apply. Instead, an owner or operator must submit the information required under Section 703.302(d). When the owner's or operator's RCRA permit is modified, the RAP becomes part of the RCRA permit. Therefore, when the owner's or operator's RCRA permit (including the RAP portion) is modified or reissued, or terminated, or when it expires, the permit will be modified, according to the applicable requirements in Sections 703.270 through 703.273 or 703.280 through 703.283, it will be reissued, according to the applicable requirements in 35 Ill. Adm. Code 702.186 and Sections 703.270 through 703.273, or it will be terminated, according to the applicable requirements in 35 Ill. Adm. Code 702.186, or the permit will expire, according to the applicable requirements in 35 Ill. Adm. Code 702.125 and 702.161.

BOARD NOTE: Subsection (b) is derived from 40 CFR 270.85 (2002).

c) The provisions of 35 Ill. Adm. Code 702.181 apply to RAPs.

BOARD NOTE: Subsection (c) is derived from 40 CFR 270.90 (2002). The corresponding federal provision includes an explanation that 40 CFR 270.4 provides that compliance with a permit constitutes compliance with RCRA. This is contrary to Illinois law, under which compliance with a permit does not constitute an absolute defense to a charge of violation of a substantive standard other than a failure to operate in accordance with the terms of a permit. See 35 Ill. Adm. Code 702.181(a) and accompanying Board Note.

(Source: Amended at 27 Ill. Reg. 3496, effective February 14, 2003)

Section 703.302 Applying for a RAP

a) Applying for a RAP. To apply for a RAP, an owner or operator must complete an application, sign it, and submit it to the Agency according to the requirements in this Subpart H.

BOARD NOTE: Subsection (a) is derived from 40 CFR 270.95 (2012).

b) The person who must obtain a RAP. When a facility or remediation waste management site is owned by one person, but the treatment, storage, or disposal activities are operated by another person, it is the operator's duty to obtain a RAP, except that the owner must also sign the RAP application.

BOARD NOTE: Subsection (b) is derived from 40 CFR 270.100 (2012).

c) The person who must sign the application and any required reports for a RAP. Both the owner and the operator must sign the RAP application and any required reports according to 35 Ill. Adm. Code 702.126(a), (b), and (c). In the application, both the owner and the operator must also make the certification required pursuant to 35 Ill. Adm. Code 702.126(d)(1). However, the owner may choose the alternative certification pursuant to 35 Ill. Adm. Code 702.126(d)(2) if the operator certifies pursuant to 35 Ill. Adm. Code 702.126(d)(1).

BOARD NOTE: Subsection (c) is derived from 40 CFR 270.105 (2012).

d) What an owner or operator must include in its application for a RAP. An owner or operator must include the following information in its application for a RAP:

1) The name, address, and USEPA identification number of the remediation waste management site;

2) The name, address, and telephone number of the owner and operator;

3) The latitude and longitude of the site;

4) The United States Geological Survey (USGS) or county map showing the location of the remediation waste management site;

5) A scaled drawing of the remediation waste management site showing the following:

A) The remediation waste management site boundaries;

B) Any significant physical structures; and

C) The boundary of all areas on-site where remediation waste is to be treated, stored, or disposed of;

6) A specification of the hazardous remediation waste to be treated, stored, or disposed of at the facility or remediation waste management site. This must include information on the following:

A) Constituent concentrations and other properties of the hazardous remediation wastes that may affect how such materials should be treated or otherwise managed;

B) An estimate of the quantity of these wastes; and

C) A description of the processes an owner or operator will use to treat, store, or dispose of this waste, including technologies, handling systems, design, and operating parameters an owner or operator will use to treat hazardous remediation wastes before disposing of them according to the land disposal restrictions of 35 Ill. Adm. Code 728, as applicable;

7) Enough information to demonstrate that operations that follow the provisions in the owner's or operator's RAP application will ensure compliance with applicable requirements of 35 Ill. Adm. Code 724, 726, and 728;

8) Such information as may be necessary to enable the Agency to carry out its duties under other federal laws as is required for traditional RCRA permits pursuant to Section 703.183(t);

9) Any other information the Agency decides is necessary for demonstrating compliance with this Subpart H or for determining any additional RAP conditions that are necessary to adequately protect human health and the environment.

BOARD NOTE: Subsection (d) is derived from 40 CFR 270.110 (2012).

e) If an owner or operator wants to keep this information confidential. 35 Ill. Adm. Code 130 allows an owner or operator to claim as confidential any or all of the information an owner or operator submits to the Agency pursuant to this Subpart H. An owner or operator must assert any such claim at the time that the owner or operator submits its RAP application or other submissions by stamping the words "trade secret" in red ink, as provided in 35 Ill. Adm. Code 130.302. If an owner or operator asserts a claim in compliance with 35 Ill. Adm. Code 130.200 at the time it submits the information, the Agency must treat the information according to the procedures in 35 Ill. Adm. Code 130. If an owner or operator does not assert a claim at the time it submits the information, the Agency must make the information available to the public without further notice to the owner or operator. The Agency must deny any requests for confidentiality of an owner's or operator's name or address.

BOARD NOTE: Subsection (e) is derived from 40 CFR 270.115 (2012).

f) To whom the owner or operator must submit its RAP application. An owner or operator must submit its application for a RAP to the Agency for approval.

BOARD NOTE: Subsection (f) is derived from 40 CFR 270.120 (2012).

g) If an owner or operator submits its RAP application as part of another document, what the owner or operator must do. If an owner or operator submits its application

for a RAP as a part of another document, an owner or operator must clearly identify the components of that document that constitute its RAP application.

BOARD NOTE: Subsection (g) is derived from 40 CFR 270.125 (2012).

(Source: Amended at 37 Ill. Reg. 17659, effective October 24, 2013)

Section 703.303 Getting a RAP Approved

a) The process for approving or denying an application for a RAP.

1) If the Agency tentatively finds that an owner's or operator's RAP application includes all of the information required by Section 703.302(d) and that the proposed remediation waste management activities meet the regulatory standards, the Agency must make a tentative decision to approve the RAP application. The Agency must then prepare a draft RAP and provide an opportunity for public comment before making a final decision on the RAP application, according to this Subpart H.

2) If the Agency tentatively finds that the owner's or operator's RAP application does not include all of the information required by Section 703.302(d) or that the proposed remediation waste management activities do not meet the regulatory standards, the Agency may request additional information from an owner or operator or ask an owner or operator to correct deficiencies in the owner's or operator's application. If an owner or operator fails or refuses to provide any additional information the Agency requests, or to correct any deficiencies in its RAP application, the Agency may either make a tentative decision to deny that owner's or operator's RAP application or to approve that application with certain changes, as allowed pursuant to Section 39 of the Act [415 ILCS 5/39]. After making this tentative decision, the Agency must prepare a notice of intent to deny the RAP application ("notice of intent to deny") or to approve that application with certain changes and provide an opportunity for public comment before making a final decision on the RAP application, according to the requirements in this Subpart H.

BOARD NOTE: Subsection (a) is derived from 40 CFR 270.130 (2005).

b) What the Agency must include in a draft RAP. If the Agency prepares a draft RAP, the draft must include the following information:

1) The information required pursuant to Section 703.302(d)(1) through (d)(6);

2) The following terms and conditions:

A) Terms and conditions necessary to ensure that the operating requirements specified in the RAP comply with applicable requirements of 35 Ill. Adm. Code 724, 726, and 728 (including any recordkeeping and reporting requirements). In satisfying this provision, the Agency may incorporate, expressly or by reference, applicable requirements of 35 Ill. Adm. Code 724, 726, and 728 into the RAP or establish site-specific conditions, as required or allowed by 35 Ill. Adm. Code 724, 726, and 728;

B) The terms and conditions in Subpart F of this Part;

C) The terms and conditions for modifying, reissuing, and terminating the RAP, as provided in Section 703.304(a); and

D) Any additional terms or conditions that the Agency determines are necessary to adequately protect human health and the environment, including any terms and conditions necessary to respond to spills and leaks during use of any units permitted under the RAP; and

3) If the draft RAP is part of another document, as described in Section 703.301(a)(4)(B), the Agency must clearly identify the components of that document that constitute the draft RAP.

BOARD NOTE: Subsection (b) is derived from 40 CFR 270.135 (2005).

c) What else the Agency must prepare in addition to the draft RAP or notice of intent to deny. Once the Agency has prepared the draft RAP or notice of intent to deny, it must then do the following:

1) Prepare a statement of basis that briefly describes the derivation of the conditions of the draft RAP and the reasons for them, or the rationale for the notice of intent to deny;

2) Compile an administrative record, including the following information:

A) The RAP application, and any supporting data furnished by the applicant;

B) The draft RAP or notice of intent to deny;

C) The statement of basis and all documents cited therein (material readily available at the applicable Agency office or published material that is generally available need not be physically included with the rest of the record, as long as it is specifically referred to in the statement of basis); and

D) Any other documents that support the decision to approve or deny the RAP; and

3) Make information contained in the administrative record available for review by the public upon request.

BOARD NOTE: Subsection (c) is derived from 40 CFR 270.140 (2005).

d) The procedures for public comment on the draft RAP or notice of intent to deny.

1) The Agency must publish notice of its intent as follows:

A) Send notice to an owner or operator of its intention to approve or deny the owner's or operator's RAP application, and send an owner or operator a copy of the statement of basis;

B) Publish a notice of its intention to approve or deny the owner's or operator's RAP application in a major local newspaper of general circulation;

C) Broadcast its intention to approve or deny the owner's or operator's RAP application over a local radio station; and

D) Send a notice of its intention to approve or deny the owner's or operator's RAP application to each unit of local government having jurisdiction over the area in which the owner's or operator's site is located, and to each State agency having any authority under State law with respect to any construction or operations at the site.

2) The notice required by subsection (d)(1) of this Section must provide an opportunity for the public to submit written comments on the draft RAP or notice of intent to deny within at least 45 days.

3) The notice required by subsection (d)(1) of this Section must include the following information:

A) The name and address of the Agency office processing the RAP application;

B) The name and address of the RAP applicant, and if different, the remediation waste management site or activity the RAP will regulate;

C) A brief description of the activity the RAP will regulate;

D) The name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft RAP or notice of intent to deny, statement of basis, and the RAP application;

E) A brief description of the comment procedures in this Section, and any other procedures by which the public may participate in the RAP decision;

F) If a hearing is scheduled, the date, time, location, and purpose of the hearing;

G) If a hearing is not scheduled, a statement of procedures to request a hearing;

H) The location of the administrative record, and times when it will be open for public inspection; and

I) Any additional information that the Agency considers necessary or proper.

4) If, within the comment period, the Agency receives written notice of opposition to its intention to approve or deny the owner's or operator's RAP application and a request for a hearing, the Agency must hold an informal public hearing to discuss issues relating to the approval or denial of the owner's or operator's RAP application. The Agency may also determine on its own initiative that an informal hearing is appropriate. The hearing must include an opportunity for any person to present written or oral comments. Whenever possible, the Agency must schedule this hearing at a location convenient to the nearest population center to the remediation waste management site and give notice according to the requirements in subsection (d)(1) of this Section. This notice must, at a minimum, include the information required by subsection (d)(3) of this Section and the following additional information:

A) A reference to the date of any previous public notices relating to the RAP application;

B) The date, time, and place of the hearing; and

C) A brief description of the nature and purpose of the hearing, including the applicable rules and procedures.

BOARD NOTE: Subsection (d) is derived from 40 CFR 270.145 (2005).

e) How the Agency must make a final decision on a RAP application.

1) The Agency must consider and respond to any significant comments raised during the public comment period or during any hearing on the draft RAP or notice of intent to deny, and the Agency may revise the draft RAP based on those comments, as appropriate.

2) If the Agency determines that the owner's or operator's RAP includes the information and terms and conditions required in subsection (b) of this Section, then it will issue a final decision approving the owner's or operator's RAP and, in writing, notify the owner or operator and all commenters on the owner's or operator's draft RAP that the RAP application has been approved.

3) If the Agency determines that the owner's or operator's RAP does not include the information required in subsection (b) of this Section, then it will issue a final decision denying the RAP and, in writing, notify the owner or operator and all commenters on the owner's or operator's draft RAP that the RAP application has been denied.

4) If the Agency's final decision is that the tentative decision to deny the RAP application was incorrect, it must withdraw the notice of intent to deny and proceed to prepare a draft RAP, according to the requirements in this Subpart H.

5) When the Agency issues its final RAP decision, it must refer to the procedures for appealing the decision pursuant to subsection (f) of this Section.

6) Before issuing the final RAP decision, the Agency must compile an administrative record. Material readily available at the applicable Agency office or published materials that are generally available and which are included in the administrative record need not be physically included with the rest of the record, as long as it is specifically referred to in the statement of basis or the response to comments. The administrative record for the final RAP must include information in the administrative record for the draft RAP (see subsection (c)(2) of this Section) and the following items:

   A) All comments received during the public comment period;

   B) Tapes or transcripts of any hearings;

   C) Any written materials submitted at these hearings;

   D) The responses to comments;

E) Any new material placed in the record since the draft RAP was issued;

F) Any other documents supporting the RAP; and

G) A copy of the final RAP.

7) The Agency must make information contained in the administrative record available for review by the public upon request.

BOARD NOTE: Subsection (e) is derived from 40 CFR 270.150 (2005).

f) Administrative appeal of a decision to approve or deny a RAP application.

1) Any commenter on the draft RAP or notice of intent to deny, or any participant in any public hearing on the draft RAP, may appeal the Agency's decision to approve or deny the owner's or operator's RAP application to the Board pursuant to 35 Ill. Adm. Code 705.212. Any person that did not file comments, or did not participate in any public hearings on the draft RAP, may petition for administrative review only to the extent of the changes from the draft to the final RAP decision. Appeals of RAPs may be made to the same extent as for final permit decisions pursuant to 35 Ill. Adm. Code 705.201 (or a decision pursuant to Section 703.240 to deny a permit for the active life of a RCRA hazardous waste management facility or unit). Instead of the notice required pursuant to Subpart D of 35 Ill. Adm. Code 705 and 705.212(c), the Agency must give public notice of any grant of review of a RAP through the same means used to provide notice pursuant to subsection (d) of this Section. The notice will include the following information:

A) The public hearing and any briefing schedule for the appeal, as provided by the Board;

B) A statement that any interested person may participate in the public hearing or file public comments or an amicus brief with the Board; and

C) The information specified in subsection (d)(3) of this Section, as appropriate.

2) This appeal is a prerequisite to seeking judicial review of these Agency actions.

BOARD NOTE: Subsection (f) is derived from 40 CFR 270.155 (2005).

g) When a RAP becomes effective. A RAP becomes effective 35 days after the Agency notifies the owner or operator and all commenters that the RAP is approved, unless any of the following is true:

1) The Agency specifies a later effective date in its decision;

2) An owner or operator or another person has appealed the RAP pursuant to subsection (f) of this Section (if the RAP is appealed, and the request for review is granted pursuant to subsection (f), conditions of the RAP are stayed according to 35 Ill. Adm. Code 705.202 through 705.204); or

3) No commenters requested a change in the draft RAP, in which case the RAP becomes effective immediately when it is issued.

BOARD NOTE: Subsection (g) is derived from 40 CFR 270.160 (2005). The corresponding federal provision provides that a RAP is effective 30 days after the Agency notice of approval. The Board has used 35 days to be consistent with the 35 days within which a permit appeal must be filed pursuant to Section 40(a)(1) of the Act [415 ILCS 5/40(a)(1)].

h) When an owner or operator may begin physical construction of new units permitted under the RAP. An owner or operator must not begin physical construction of new units permitted under the RAP for treating, storing, or disposing of hazardous remediation waste before receiving a final, effective RAP.

BOARD NOTE: Subsection (h) is derived from 40 CFR 270.165 (2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.304 How a RAP May Be Modified, Reissued, or Terminated

a) After a RAP is issued, how it may be modified, reissued, or terminated. In a RAP, the Agency must specify, either directly or by reference, procedures for any future modification, reissuance, or termination of the RAP. These procedures must provide adequate opportunities for public review and comment on any modification, reissuance, or termination that would significantly change the owner's or operator's management of its remediation waste, or that otherwise merits public review and comment. If the RAP has been incorporated into a traditional RCRA permit, as allowed pursuant to Section 703.301(b)(3), then the RAP will be modified according to the applicable requirements in Sections 703.260 through 703.283, reissued according to the applicable requirements in 35 Ill. Adm. Code 702.186 and Sections 703.270 through 703.273, or terminated according to the applicable requirements of 35 Ill. Adm. Code 702.186.

BOARD NOTE: Subsection (a) is derived from 40 CFR 270.170 (2005).

b) Reasons for which the Agency may choose to modify a final RAP.

1) The Agency may modify the owner's or operator's final RAP on its own initiative only if one or more of the following reasons listed in this Section exist. If one or more of these reasons do not exist, then the Agency must not modify a final RAP, except at the request of the owner or operator. Reasons for modification are the following:

A) The owner or operator made material and substantial alterations or additions to the activity that justify applying different conditions;

B) The Agency finds new information that was not available at the time of RAP issuance and would have justified applying different RAP conditions at the time of issuance;

C) The standards or regulations on which the RAP was based have changed because of new or amended statutes, standards, or regulations or by judicial decision after the RAP was issued;

D) If the RAP includes any schedules of compliance, the Agency may find reasons to modify the owner's or operator's compliance schedule, such as an act of God, strike, flood, or materials shortage or other events over which an owner or operator has little or no control and for which there is no reasonably available remedy;

E) The owner or operator is not in compliance with conditions of its RAP;

F) The owner or operator failed in the application or during the RAP issuance process to disclose fully all relevant facts, or an owner or operator misrepresented any relevant facts at the time;

G) The Agency has determined that the activity authorized by the owner's or operator's RAP endangers human health or the environment and can only be remedied by modifying the RAP; or

H) The owner or operator has notified the Agency (as required in the RAP and pursuant to 35 Ill. Adm. Code 702.152(c)) of a proposed transfer of a RAP.

2) Notwithstanding any other provision in this Section, when the Agency reviews a RAP for a land disposal facility pursuant to Section 703.304(f), it may modify the permit as necessary to assure that the facility continues to comply with the currently applicable requirements in 35 Ill. Adm. Code 702, 703, and 720 through 727.

3) The Agency must not reevaluate the suitability of the facility location at the time of RAP modification unless new information or standards indicate that a threat to human health or the environment exists that was unknown when the RAP was issued.

BOARD NOTE: Subsection (b) is derived from 40 CFR 270.175 (2005).

c) Reasons for which the Agency may choose to reissue a final RAP.

1) The Agency may reissue a final RAP on its own initiative only if one or more reasons for reissuance exist. If one or more reasons do not exist, then the Agency must not modify or reissue a final RAP, except at the owner's or operator's request. Reasons for modification or reissuance are the same as the reasons listed for RAP modifications in subsections (b)(1)(E) through (b)(1)(H) of this Section if the Agency determines that reissuance of the RAP is appropriate.

2) The Agency must not reevaluate the suitability of the facility location at the time of RAP reissuance, unless new information or standards indicate that a threat to human health or the environment exists that was unknown when the RAP was issued.

BOARD NOTE: Subsection (c) is derived from 40 CFR 270.180 (2005).

d) Reasons for which the Agency may choose to terminate a final RAP, or deny a renewal application. The Agency may terminate a final RAP on its own initiative or deny a renewal application for the same reasons as those listed for RAP modifications in subsections (b)(1)(E) through (b)(1)(G) of this Section if the Agency determines that termination of the RAP or denial of the RAP renewal application is appropriate.

BOARD NOTE: Subsection (d) is derived from 40 CFR 270.185 (2005).

e) Administrative appeal of an Agency decision to approve or deny a modification, reissuance, or termination of a RAP.

1) Any commenter on the modification, reissuance, or termination, or any person that participated in any hearing on these actions, may appeal the Agency's decision to approve a modification, reissuance, or termination of a RAP, according to Section 703.303(f). Any person that did not file comments or did not participate in any public hearing on the modification, reissuance, or termination may petition for administrative review only of the changes from the draft to the final RAP decision.

2) Any commenter on the modification, reissuance, or termination, or any person that participated in any hearing on these actions, may appeal the

Agency's decision to deny a request for modification, reissuance, or termination to the Board. Any person that did not file comments or who did not participate in any public hearing on the modification, reissuance, or termination may petition for administrative review only of the changes from the draft to the final RAP decision.

3) The procedure for appeals of RAPs is as follows:

A) The person appealing the decision must send a petition to the Board pursuant to 35 Ill. Adm. Code 101 and 105. The petition must briefly set forth the relevant facts, state the defect or fault that serves as the basis for the appeal, and explain the basis for the petitioner's legal standing to pursue the appeal.

B) The Board has 120 days after receiving the petition to act on it.

C) If the Board does not take action on the petition within 120 days after receiving it, the appeal must be considered denied.

BOARD NOTE: Corresponding 40 CFR 270.190(c)(2) and (c)(3) (2002) allow 60 days for administrative review, which is too short a time for the Board to publish the appropriate notices, conduct public hearings, and conduct its review. Rather, the Board has borrowed the 120 days allowed as adequate time for Board review of permit appeals provided in Section 40(a)(2) of the Act [415 ILCS 5/40(a)(2)].

4) This appeal is a prerequisite to seeking judicial review of the Agency action on the RAP.

BOARD NOTE: Subsection (e) is derived from 40 CFR 270.190 (2005). The corresponding federal provisions provide for informal appeal of an Agency RAP decision. There is no comparable informal procedure pursuant to Sections 39 and 40 of the Act [415 ILCS 5/39 and 40].

f) Expiration of a RAP. RAPs must be issued for a fixed term, not to exceed ten years, although they may be renewed upon approval by the Agency in fixed increments of no more than ten years. In addition, the Agency must review any RAP for hazardous waste land disposal five years after the date of issuance or reissuance and the owner or operator or the Agency must follow the requirements for modifying the RAP as necessary to assure that the owner or operator continues to comply with currently applicable requirements in the Act and federal RCRA sections 3004 and 3005 (42 USC 6904 and 6905).

BOARD NOTE: Subsection (f) is derived from 40 CFR 270.195 (2005).

g) How an owner or operator may renew a RAP that is expiring. If an owner or operator wishes to renew an expiring RAP, the owner or operator must follow the process for application for and issuance of RAPs in this Subpart H.

BOARD NOTE: Subsection (g) is derived from 40 CFR 270.200 (2005).

h) What happens if the owner or operator has applied correctly for a RAP renewal but has not received approval by the time its old RAP expires. If the owner or operator has submitted a timely and complete application for a RAP renewal, but the Agency, through no fault of the owner or operator, has not issued a new RAP with an effective date on or before the expiration date of the previous RAP, the previous RAP conditions continue in force until the effective date of the new RAP or RAP denial.

BOARD NOTE: Subsection (h) is derived from 40 CFR 270.205 (2005).

(Source: Amended at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.305 Operating Under a RAP

a) The records an owner or operator must maintain concerning its RAP. An owner or operator is required to keep records of the following:

1) All data used to complete RAP applications and any supplemental information that an owner or operator submits for a period of at least three years from the date the application is signed; and

2) Any operating or other records the Agency requires an owner or operator to maintain as a condition of the RAP.

BOARD NOTE: Subsection (a) is derived from 40 CFR 270.210 (2002).

b) How time periods in the requirements in Subpart H of this Part and the RAP are computed.

1) Any time period scheduled to begin on the occurrence of an act or event must begin on the day after the act or event. (For example, if a RAP specifies that the owner or operator must close a staging pile within 180 days after the operating term for that staging pile expires, and the operating term expires on June 1, then June 2 counts as day one of the 180 days, and the owner or operator would have to complete closure by November 28.)

2) Any time period scheduled to begin before the occurrence of an act or event must be computed so that the period ends on the day before the act or event. (For example, if an owner or operator is transferring ownership or operational control of its site, and the owner or operator wishes to transfer

its RAP, the new owner or operator must submit a revised RAP application no later than 90 days before the scheduled change. Therefore, if an owner or operator plans to change ownership on January 1, the new owner or operator must submit the revised RAP application no later than October 3, so that the 90th day would be December 31.)

3) If the final day of any time period falls on a weekend or legal holiday, the time period must be extended to the next working day. (For example, if an owner or operator wishes to appeal the Agency's decision to modify its RAP, then an owner or operator must petition the Board within 35 days after the Agency has issued the final RAP decision. If the 35th day falls on Sunday, then the owner or operator may submit its appeal by the Monday after. If the 35th day falls on July 4th, then the owner or operator may submit its appeal by July 5th.)

4) Whenever a party or interested person has the right to or is required to act within a prescribed period after the service of notice or other paper upon him by mail, four days may not be added to the prescribed term. (For example, if an owner or operator wishes to appeal the Agency's decision to modify its RAP, then the owner or operator must petition the Board within 35 days after the Agency has issued the final RAP decision.)

BOARD NOTE: Subsection (b) is derived from 40 CFR 270.215 (2002). Federal subsections (c) and (d) provide that a RAP is effective 30 days after the Agency notice of approval. The Board has used 35 days to be consistent with the 35 days within which a permit appeal must be filed under Section 40(a)(1) of the Act [415 ILCS 5/40(a)(1)]. Further, federal subsection (d) provides three days for completion of service by mail. The addition of four days (see procedural rule 35 Ill. Adm. Code 101.144(c)) to be consistent with 40 CFR 270.215(d) would exceed the 35 days allowed under Section 40(a)(1) of the Act [415 ILCS 5/40(a)(1)].

c) How an owner or operator may transfer its RAP to a new owner or operator.

1) If an owner or operator wishes to transfer its RAP to a new owner or operator, the owner or operator must follow the requirements specified in its RAP for RAP modification to identify the new owner or operator, and incorporate any other necessary requirements. These modifications do not constitute "significant" modifications for purposes of Section 703.304(a). The new owner or operator must submit a revised RAP application no later than 90 days before the scheduled change along with a written agreement containing a specific date for transfer of RAP responsibility between the owner or operator and the new permittees.

2) When a transfer of ownership or operational control occurs, the old owner or operator must comply with the applicable requirements in Subpart H of 35 Ill. Adm. Code 724 (Financial Requirements) until the new owner or

operator has demonstrated that it is complying with the requirements in that Subpart. The new owner or operator must demonstrate compliance with Subpart H of 35 Ill. Adm. Code 724 within six months after the date of the change in ownership or operational control of the facility or remediation waste management site. When the new owner or operator demonstrates compliance with Subpart H of 35 Ill. Adm. Code 724 to the Agency, the Agency must notify the former owner or operator that it no longer needs to comply with Subpart H of 35 Ill. Adm. Code 724 as of the date of demonstration.

BOARD NOTE: Subsection (c) is derived from 40 CFR 270.220 (2002).

d) What the Agency must report about noncompliance with RAPs. The Agency must report noncompliance with RAPs according to the provisions of 40 CFR 270.5 (Noncompliance and Program Reporting by the Director), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

BOARD NOTE: Subsection (d) is derived from 40 CFR 270.225 (2005).

(Source: Amended at 30 Ill. Reg. 2845, effective February 23, 2006)

Section 703.306 Obtaining a RAP for an Off-Site Location

An owner or operator may perform remediation waste management activities under a RAP at a location removed from the area where the remediation wastes originated.

a) An owner or operator may request a RAP for remediation waste management activities at a location removed from the area where the remediation wastes originated if the owner or operator believes such a location would be more protective than the contaminated area or areas in close proximity.

b) If the Agency determines that an alternative location, removed from the area where the remediation waste originated, is more protective than managing remediation waste at the area of contamination or areas in close proximity, then the Agency must approve a RAP for this alternative location.

c) An owner or operator must request the RAP, and the Agency must approve or deny the RAP, according to the procedures and requirements in this Subpart H.

d) A RAP for an alternative location must also meet the following requirements, which the Agency must include in the RAP for such locations:

1) The RAP for the alternative location must be issued to the person responsible for the cleanup from which the remediation wastes originated;

2) The RAP is subject to the expanded public participation requirements in Sections 703.191, 703.192, and 703.193;

3) The RAP is subject to the public notice requirements in 35 Ill. Adm. Code 705.163;

4) The site permitted in the RAP may not be located within 61 meters or 200 feet of a fault that has had displacement in the Holocene time. (The owner or operator must demonstrate compliance with this standard through the requirements in Section 703.183(k).) (See the definitions of terms in 35 Ill. Adm. Code 724.118(a).)

BOARD NOTE: Sites in Illinois are assumed to be in compliance with the requirement of subsection (d)(4) of this Section, since they are not listed in appendix VI to 40 CFR 264 (Political Jurisdictions in Which Compliance with § 264.18(a) Must Be Demonstrated), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

e) These alternative locations are remediation waste management sites, and retain the following benefits of remediation waste management sites:

1) Exclusion from facility-wide corrective action under 35 Ill. Adm. Code 724.201; and

2) Application of 35 Ill. Adm. Code 724.101(j) in lieu of Subparts B, C, and D of 35 Ill. Adm. Code 724.

BOARD NOTE: Derived from 40 CFR 270.230 (2012).

(Source: Amended at 37 Ill. Reg. 17659, effective October 24, 2013)

SUBPART I: INTEGRATION WITH MAXIMUM ACHIEVABLE CONTROL TECHNOLOGY (MACT) STANDARDS

Section 703.320 Options for Incinerators and Cement and Lightweight Aggregate Kilns to Minimize Emissions from Startup, Shutdown, and Malfunction Events

a) Facilities with Existing Permits

1) Revisions to permit conditions after documenting compliance with MACT. The owner or operator of a RCRA-permitted incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace, when requesting removal of permit conditions that are no longer applicable according to 35 Ill. Adm. Code 724.440(b) and 726.200(b), may request that the Agency address permit

conditions that minimize emissions from startup, shutdown, and malfunction events under any of the following options:

A) Retain Relevant Permit Conditions. Under this option, the Agency must do the following:

i) Retain permit conditions that address releases during startup, shutdown, and malfunction events, including releases from emergency safety vents, as these events are defined in the facility's startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) (When and How Must You Comply with the Standards and Operating Requirements?), incorporated by reference in 35 Ill. Adm. Code 720.111(b); and

ii) Limit applicability of those permit conditions only to when the facility is operating under its startup, shutdown, and malfunction plan.

B) Revise Relevant Permit Conditions. Under this option, the following must occur:

i) The Agency must identify a subset of relevant existing permit requirements, or develop alternative permit requirements, that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history;

ii) The Agency must retain or add these permit requirements to the permit to apply only when the facility is operating under its startup, shutdown, and malfunction plan; and

iii) The owner or operator must comply with subsection (a)(3).

BOARD NOTE: The Board found it necessary to deviate from the structure of corresponding 40 CFR 270.235(a)(1)(ii) in this subsection (a)(1)(B) in order to comport with Illinois Administrative Code codification requirements. The substance of 40 CFR 270.235(a)(1)(ii)(A), (a)(1)(ii)(A)(*1*), and (a)(1)(ii)(A)(*2*) appear as subsections (a)(1)(B), (a)(1)(B)(i), and (a)(1)(B)(ii). The substance of 40 CFR 270.235(a)(1)(ii)(B) has been codified as subsection (a)(3). The Board added subsection (a)(1)(B)(iii) to direct attention to subsection (a)(3).

C) Remove Permit Conditions. Under this option the following are required:

i) The owner or operator must document that the startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) has been approved pursuant to 40 CFR 63.1206(c)(2)(ii)(B); and

ii) The Agency must remove permit conditions that are no longer applicable according to 35 Ill. Adm. Code 724.440(b) and 726.200(b).

2) Addressing Permit Conditions upon Permit Reissuance. The owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that has conducted a comprehensive performance test and submitted to the Agency a Notification of Compliance documenting compliance with the standards of subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b), may request in the application to reissue the permit for the combustion unit that the Agency control emissions from startup, shutdown, and malfunction events under any of the following options:

A) RCRA Option A. Under this option, the Agency must do the following:

i) Include, in the permit, conditions that ensure compliance with 35 Ill. Adm. Code 724.445(a) and (c) or 726.202(e)(1) and (e)(2)(C) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events, including releases from emergency safety vents; and

ii) Specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan; or

BOARD NOTE: The Board found it necessary to deviate from the structure of corresponding 40 CFR 270.235(a)(2)(i) in this subsection (a)(2)(A) in order to comport with Illinois Administrative Code codification requirements. The substance of 40 CFR 270.235(a)(2)(i)(A), (a)(2)(i)(A)(1), and (a)(2)(i)(A)(2) appear as subsections (a)(2)(A), (a)(2)(A)(i), and (a)(2)(A)(ii).

B) RCRA Option B. Under this option, the following must occur:

i) The Agency must include, in the permit, conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history;

ii) The Agency must specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan; and

iii) The owner or operator must comply with subsection (a)(3) of this Section; and

BOARD NOTE: The Board found it necessary to deviate from the structure of corresponding 40 CFR 270.235(a)(2)(ii) in this subsection (a)(2)(B) in order to comport with Illinois Administrative Code codification requirements. The substance of 40 CFR 270.235(a)(2)(ii)(A), (a)(2)(ii)(A)(1), and (a)(2)(ii)(A)(2) appear as subsections (a)(2)(B), (a)(2)(B)(i), and (a)(2)(B)(ii). The substance of 40 CFR 270.235(a)(2)(ii)(B) has been codified as subsection (a)(3). The Board added subsection (a)(2)(B)(iii) to direct attention to subsection (a)(3).

C) CAA Option. Under this option the following are required:

i) The owner or operator must document that the startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) has been approved pursuant to 40 CFR 63.1206(c)(2)(ii)(B); and

ii) The Agency must omit from the permit conditions that are not applicable pursuant to 35 Ill. Adm. Code 724.440(b) and 726.200(b).

3) Changes That May Significantly Increase Emissions

A) The owner or operator must notify the Agency in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. The owner or operator must notify the Agency of such changes within five days of making such changes. The owner or operator must identify in the notification recommended revisions

to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.

B) The Agency may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents in either of the following ways:

i) Upon permit renewal; or

ii) If warranted, by modifying the permit pursuant to Section 703.270 or 703.280 through 703.283.

BOARD NOTE: The substance of 40 CFR 270.235(a)(1)(ii)(B) and (a)(2)(ii)(B) has been codified as this subsection (a)(3).

b) Interim Status Facilities

1) Interim status operations. In compliance with 35 Ill. Adm. Code 725.440 and 726.200(b), the owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of 35 Ill. Adm. Code 725 or 726 may control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options after conducting a comprehensive performance test and submitting to the Agency a Notification of Compliance documenting compliance with the standards of subpart EEE of 40 CFR 63:

A) RCRA Option. Under this option, the owner or operator must continue to comply with the interim status emission standards and operating requirements of 35 Ill. Adm. Code 725 or 726 relevant to control of emissions from startup, shutdown, and malfunction events. Those standards and requirements apply only during startup, shutdown, and malfunction events; or

B) CAA Option. Under this option, the owner or operator is exempt from the interim status standards of 35 Ill. Adm. Code 725 or 726 relevant to control of emissions of toxic compounds during startup, shutdown, and malfunction events upon submission of written notification and documentation to the Agency that the startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) has been approved pursuant to 40 CFR 63.1206(c)(2)(ii)(B).

2) Operations Under a Subsequent RCRA Permit permit. When an owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of 35 Ill. Adm. Code 725 or 726 submits a RCRA permit application, the owner or operator may request that the Agency control emissions from startup, shutdown, and malfunction events under any of the options provided by subsection (a)(2)(A), (a)(2)(B), or (a)(2)(C) of this Section.

c) New Units. A hazardous waste incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace unit that becomes subject to RCRA permit requirements must control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options:

1) It may comply with the requirements specified in 40 CFR 63.1206(c)(2), incorporated by reference in 35 Ill. Adm. Code 720.111(b); or

2) It may request to include in the RCRA permit, conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information, including the source's startup, shutdown, and malfunction plan and design. The Agency must specify that these permit conditions apply only when the facility is operating under its startup, shutdown, and malfunction plan.

BOARD NOTE: Derived from 40 CFR 270.235 (2017). Operating conditions used to determine effective treatment of hazardous waste remain effective after the owner or operator demonstrates compliance with the standards of subpart EEE of 40 CFR 63.

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

SUBPART J: RCRA STANDARDIZED PERMITS FOR STORAGE AND TREATMENT UNITS

Section 703.350 General Information About RCRA Standardized Permits

a) RCRA Standardized Permit. A RCRA standardized permit (RCRA) is a special type of permit that authorizes the owner or operator of a facility to manage hazardous waste. A RCRA standardized permit is issued pursuant to Subpart G of 35 Ill. Adm. Code 705 and this Subpart J.

BOARD NOTE: Subsection (a) is derived from 40 CFR 270.250 (2017).

b) Eligibility for a RCRA Standardized Permit

1) The facility owner or operator may be eligible for a RCRA standardized permit if the following conditions are fulfilled:

A) The facility generates hazardous waste and then stores or non-thermally treats the hazardous waste on-site in containers, tanks, or containment buildings; or

B) The facility receives hazardous waste generated off-site by a generator under the same ownership as the receiving facility, and the facility stores or non-thermally treats the hazardous waste in containers, tanks, or containment buildings.

C) The Agency must inform the facility owner or operator of its eligibility for a RCRA standardized permit when the Agency makes a decision on its permit application.

2) This subsection (b)(2) corresponds with 40 CFR 270.255(b), which USEPA has marked "Reserved". This statement maintains structural consistency with the corresponding federal rules.

BOARD NOTE: Subsection (b) is derived from 40 CFR 270.255 (2017).

c) Permit Requirements Applicable to a RCRA Standardized Permit. The following provisions of this Part and 35 Ill. Adm. Code 702 apply to a RCRA standardized permit:

1) General Information: All provisions derived from subpart A of 40 CFR 270 apply: Sections 703.110, 703.121 through 703.124, 703.158 through 703.160, and 703.161(a) and 35 Ill. Adm. Code 702.104, 702.110, 702.181, and 720.111.

2) Permit Application: All provisions derived from 40 CFR 270.10, 270.11, 270.12, 270.13, and 270.29 in subpart B of 40 CFR 270 apply: Sections 703.125, 703.126, 703.150 through 703.152, 703.157, 703.181, 703.186, 703.188, and 703.240 and 35 Ill. Adm. Code 702.103, 702.120 through 702.124, and 702.126.

3) Permit Conditions: All provisions derived from subpart C of 40 CFR 270 apply: Sections 703.241 through 703.248 and 35 Ill. Adm. Code 702.140 through 702.152, 702.160, and 702.162 through 702.164.

4) Changes to Permit: All provisions derived from 40 CFR 270.40, 270.41, and 270.43 in subpart D of 40 CFR 270 apply: Sections 703.260 and 703.270 through 703.273 and 35 Ill. Adm. Code 702.186.

5) Expiration and Continuation of Permits: All provisions derived from subpart E of 40 CFR 270 apply: 35 Ill. Adm. Code 702.125 and 702.161.

6) Special Forms of Permits: The provision derived from 40 CFR 270.67 in subpart F of 40 CFR 270 apply: Section 703.238.

7) Interim Status: All provisions derived from subpart G of 40 CFR 270 apply: Sections 703.153 through 703.157.

8) Remedial Action Plans: No provisions derived from subpart H of 40 CFR 270 apply: no provisions of Subpart H of 35 Ill. Adm. Code 703 apply.

9) RCRA Standardized Permits: All provisions derived from subpart J of 40 CFR 270 apply: this Subpart J.

BOARD NOTE: Subsection (c) is derived from 40 CFR 270.260 (2017).

(Source: Amended at 42 Ill. Reg. 20993, effective November 19, 2018)

Section 703.351 Applying for a RCRA Standardized Permit

a) Application procedure. The facility owner or operator may apply for a RCRA standardized permit by following the procedures in this Subpart J and Subpart G of 35 Ill. Adm. Code 705.

BOARD NOTE: Subsection (a) of this Section is derived from 40 CFR 270.270, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

b) Information submitted to the Agency to support an application for a RCRA standardized permit. The information in subsections (b)(1) through (b)(10) of this Section will be the basis of an application for a RCRA standardized permit. The facility owner or operator must submit the following information to the Agency when it submits its Notice of Intent pursuant to 35 Ill. Adm. Code 705.301(a)(2) requesting coverage under a RCRA standardized permit:

1) The Part A information described in Section 703.181;

2) A meeting summary and other materials required by 35 Ill. Adm. Code 703.191;

3) Documentation of compliance with the location standards of 35 Ill. Adm. Code 727.110(i) and Sections 703.183(k) and 703.184;

4) This subsection (b)(4) corresponds with 40 CFR 270.275(d), which pertains to submission of information to USEPA relating to implementation of various federal laws (such as the Wild and Scenic

Rivers Act (16 USC 1273 et seq.), the National Historic Preservation Act of 1966 (16 USC 470 et seq.), the Endangered Species Act (16 USC 1531 et seq.), the Coastal Zone Management Act (16 USC 1451 et seq.), the Fish and Wildlife Coordination Act (16 USC 661 et seq.), and executive orders). The provision is not necessary in Illinois because the Agency does not implement the cited federal laws. This statement maintains structural consistency with the corresponding federal rules;

5) Solid waste management unit information required by Section 703.187;

6) A certification meeting the requirements of subsection (c) of this Section, and an audit of the facility's compliance status with 35 Ill. Adm. Code 727, as required by subsection (c) of this Section;

7) A closure plan prepared in accordance with 35 Ill. Adm. Code 727.210;

8) The most recent closure cost estimate for the facility prepared pursuant to 35 Ill. Adm. Code 727.240(c) and a copy of the documentation required to demonstrate financial assurance pursuant to 35 Ill. Adm. Code 727.240(d). For a new facility, the owner or operator may gather the required documentation 60 days before the initial receipt of hazardous wastes;

9) If the owner or operator manages wastes generated offsite, the waste analysis plan; and

10) If the owner or operator manages waste generated from off-site, documentation showing that the waste generator and the off-site facility are under the same ownership.

BOARD NOTE: Subsection (b) of this Section is derived from 40 CFR 270.275, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

c) Certification requirements. The facility owner or operator must submit a signed certification based on an audit of its facility's compliance with 35 Ill. Adm. Code 727.

1) The owner's or operator's certification must read as follows:

I certify under penalty of law that:

1. I have personally examined and am familiar with the report containing the results of an audit conducted of my facility's compliance status with 35 Ill. Adm. Code 727, which supports this certification. Based on my inquiry of those individuals immediately responsible for conducting the audit and preparing the report, I believe that my [include

here the language of the applicable of the following two paragraphs:]

existing facility complies with all applicable requirements of 35 Ill. Adm. Code 727 and will continue to comply until the expiration of the permit;

facility has been designed, and will be constructed and operated to comply with all applicable requirements of 35 Ill. Adm. Code 727, and will continue to comply until expiration of the permit;

2. I will make all information that I am required to maintain at my facility by 35 Ill. Adm. Code 703.352 readily available for review by the permitting agency and the public; and

3. I will continue to make all information required by 35 Ill. Adm. Code 703.352 available until the permit expires. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violation.

2) The owner or operator must sign the certification of subsection (c)(1) of this Section following the requirements of 35 Ill. Adm. Code 702.126(a)(1) through (a)(3).

3) The certification must be based upon an audit that the owner or operator conducted of its facility's compliance status with 35 Ill. Adm. Code 727. A written audit report, signed and certified as accurate by the auditor, must be submitted to the Agency with the 35 Ill. Adm. Code 705.301(a)(2) (Notice of Intent).

BOARD NOTE: Subsection (c) of this Section is derived from 40 CFR 270.280, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Added at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.352 Information That Must Be Kept at the Facility

a) General Types of Information to Be Maintained at the Facility. The facility owner or operator must keep the following information at its facility:

1) A general description of the facility;

2) Results of chemical and physical analyses of the hazardous waste and hazardous debris handled at the facility. At a minimum, these results of

analyses must contain all the information that the owner or operator must know to treat or store the wastes properly pursuant to 35 Ill. Adm. Code 727;

3) A copy of the waste analysis plan required by 35 Ill. Adm. Code 727.110(d)(2);

4) A description of the security procedures and equipment required by 35 Ill. Adm. Code 727.110(e);

5) A copy of the general inspection schedule required by 35 Ill. Adm. Code 727.110(f)(2). The owner or operator must include in the inspection schedule applicable requirements of 35 Ill. Adm. Code 724.933, 724.952, 724.953, 724.958, 724.988, 727.270(e), and 727.290(d) and (f);

6) A justification of any modification of the preparedness and prevention requirements of 35 Ill. Adm. Code 727.130(a) through (f);

7) A copy of the contingency plan required by 35 Ill. Adm. Code 727.150;

8) A description of procedures, structures, or equipment used at the facility to accomplish each of the following:

   A) Prevent hazards in unloading operations (for example, use ramps, special forklifts);

   B) Prevent run-off from hazardous waste handling areas to other areas of the facility or environment, or to prevent flooding (for example, with berms, dikes, trenches, etc.);

   C) Prevent contamination of water supplies;

   D) Mitigate effects of equipment failure and power outages;

   E) Prevent undue exposure of personnel to hazardous waste (for example, requiring protective clothing); and

   F) Prevent releases to atmosphere;

9) A description of precautions to prevent accidental ignition or reaction of ignitable, reactive, or incompatible wastes as required by 35 Ill. Adm. Code 727.110(h);

10) The traffic pattern, estimated volume (number, types of vehicles) and control (for example, show turns across traffic lanes, and stacking lanes;

describe access road surfacing and load bearing capacity; show traffic control signals, etc.);

11) This subsection (a)(11) corresponds with 40 CFR 270.290(k), which USEPA has marked "Reserved". This statement maintains structural consistency with the corresponding federal rules;

12) An outline of both the introductory and continuing training programs that the owner or operator will use to prepare employees to operate or maintain its facility safely as required by 35 Ill. Adm. Code 727.110(g). A brief description of how training will be designed to meet actual job tasks pursuant to 35 Ill. Adm. Code 727.110(g)(1)(B) requirements;

13) A copy of the closure plan required by 35 Ill. Adm. Code 727.210(c). Include, where applicable, as part of the plans, specific requirements in 35 Ill. Adm. Code 727.270(g), 727.290(l), and 727.900(i);

14) This subsection (a)(14) corresponds with 40 CFR 270.290(n), which USEPA has marked "Reserved". This statement maintains structural consistency with the corresponding federal rules;

15) The most recent closure cost estimate for the facility prepared pursuant to 35 Ill. Adm. Code 727.240(c) and a copy of the documentation required to demonstrate financial assurance pursuant to 35 Ill. Adm. Code 727.240(d). For a new facility, the owner or operator may gather the required documentation 60 days before the initial receipt of hazardous wastes;

16) This subsection (a)(16) corresponds with 40 CFR 270.290(p), which USEPA has marked "Reserved". This statement maintains structural consistency with the corresponding federal rules;

17) Where applicable, a copy of the insurance policy or other documentation that complies with the liability requirements of 35 Ill. Adm. Code 727.240(h). For a new facility, documentation showing the amount of insurance meeting the specification of 35 Ill. Adm. Code 727.240(h)(1) that the owner or operator plans to have in effect before initial receipt of hazardous waste for treatment or storage;

18) Where appropriate, proof of coverage by a State financial mechanism, as required by 35 Ill. Adm. Code 727.240(j) or 727.240(k);

19) A topographic map showing 305 meters (1,000 feet) around the facility at a scale of 2.5 centimeters (1 inch) equal to not more than 61.0 meters (200 feet). The map must show elevation contours. The contour interval must show the pattern of surface water flow near and from each operational unit of the facility. For example, contours with an interval of 1.5 meters (5

feet), if relief is greater than 6.1 meters (20 feet), or an interval of 0.6 meters (2 feet), if relief is less than 6.1 meters (20 feet). If the facility is in a mountainous area, the owner or operator should use large contour intervals to adequately show topographic profiles of the facility. The map must clearly show each of the following:

A) The map scale and date;

B) Any 100-year flood plain area;

C) All surface waters including intermittent streams;

D) The surrounding land uses (residential, commercial, agricultural, recreational, etc.);

E) A wind rose (*i.e.,* prevailing windspeed and direction);

F) The orientation of the map (north arrow);

G) Legal boundaries of the facility site;

H) Facility access control (fences, gates);

I) All injection and withdrawal wells both on-site and off-site;

J) All buildings; treatment, storage, or disposal operations; and other structures (recreation areas, run-off control systems, access and internal roads, storm, sanitary, and process sewerage systems, loading and unloading areas, fire control facilities, etc.);

K) Barriers for drainage or flood control; and

L) The location of operational units within the facility where hazardous waste is (or will be) treated or stored (including equipment cleanup areas).

BOARD NOTE: Subsection (a) is derived from 40 CFR 270.290.

b) Container Information to Be Maintained at the Facility. If the facility owner or operator stores or treats hazardous waste in containers, it must keep the following information at its facility:

1) A description of the containment system to demonstrate compliance with the container storage area provisions of 35 Ill. Adm. Code 727.270(d). This description must show the following information:

A) The basic design parameters, dimensions, and materials of construction;

B) How the design promotes drainage or how containers are kept from contact with standing liquids in the containment system;

C) The capacity of the containment system relative to the number and volume of containers to be stored;

D) The provisions for preventing or managing run-on; and

E) How accumulated liquids can be analyzed and removed to prevent overflow;

2) For storage areas that store containers holding wastes that do not contain free liquids, a demonstration of compliance with 35 Ill. Adm. Code 727.270(d)(3), including the following:

A) Test procedures and results or other documentation or information to show that the wastes do not contain free liquids; and

B) A description of how the storage area is designed or operated to drain and remove liquids or how containers are kept from contact with standing liquids;

3) Sketches, drawings, or data demonstrating compliance with 35 Ill. Adm. Code 727.270(e) (location of buffer zone (15m or 50ft) and containers holding ignitable or reactive wastes) and 35 Ill. Adm. Code 727.270(f)(3) (location of incompatible wastes in relation to each other), where applicable;

4) Where incompatible wastes are stored or otherwise managed in containers, a description of the procedures used to ensure compliance with 35 Ill. Adm. Code 727.270(f)(1) and (f)(2), and 35 Ill. Adm. Code 727.110(h)(2) and (h)(3); and

5) Information on air emission control equipment as required by Section 703.352(e).

BOARD NOTE: Subsection (b) is derived from 40 CFR 270.300.

c) Tank Information to Be Maintained at the Facility. If the facility owner or operator uses tanks to store or treat hazardous waste, it must keep the following information at its facility:

1) A written assessment that is reviewed and certified by an independent, qualified, registered professional engineer on the structural integrity and suitability for handling hazardous waste of each tank system, as required pursuant to 35 Ill. Adm. Code 727.290(b) and (c);

2) The dimensions and capacity of each tank;

3) A description of feed systems, safety cutoff, bypass systems, and pressure controls (*e.g.,* vents);

4) A diagram of piping, instrumentation, and process flow for each tank system;

5) A description of materials and equipment used to provide external corrosion protection, as required pursuant to 35 Ill. Adm. Code 727.290(b);

6) For new tank systems, a detailed description of how the tank systems will be installed in compliance with 35 Ill. Adm. Code 727.290(c) and (e);

7) Detailed plans and description of how the secondary containment system for each tank system is or will be designed, constructed, and operated to meet the requirements of 35 Ill. Adm. Code 727.290(f) and (g);

8) This subsection (c)(8) corresponds with 40 CFR 270.305(h), which USEPA has marked "Reserved". This statement maintains structural consistency with the corresponding federal rules;

9) A description of controls and practices to prevent spills and overflows, as required pursuant to 35 Ill. Adm. Code 727.290(i);

10) For tank systems in which ignitable, reactive, or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility design will achieve compliance with 35 Ill. Adm. Code 727.290(m) and (n); and

11) Information on air emission control equipment, as required by Section 703.352(e).

BOARD NOTE: Subsection (c) is derived from 40 CFR 270.305.

d) Equipment Information to Be Maintained at the Facility. If the facility has equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies, the facility owner or operator must keep the following information at its facility:

1) For each piece of equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies, the following:

   A) The equipment identification number and hazardous waste management unit identification;

   B) The approximate locations within the facility (e.g., identify the hazardous waste management unit on a facility plot plan);

   C) The type of equipment (e.g., a pump or a pipeline valve);

   D) The percent by weight of total organics in the hazardous waste stream at the equipment;

   E) The phase of the hazardous waste at the equipment (e.g., gas or vapor or liquid); and

   F) The method of compliance with the standard (e.g., monthly leak detection and repair, or equipped with dual mechanical seals);

2) For a facility that cannot install a closed-vent system and control device to comply with Subpart BB of 35 Ill. Adm. Code 724 on the effective date that the facility becomes subject to the Subpart BB provisions, an implementation schedule as specified in 35 Ill. Adm. Code 724.933(a)(2);

3) Documentation that demonstrates compliance with the equipment standards in 35 Ill. Adm. Code 724.952 and 724.959. This documentation must contain the records required pursuant to 35 Ill. Adm. Code 724.964; and

4) Documentation to demonstrate compliance with 35 Ill. Adm. Code 724.960, which must include the following information:

   A) A list of all information references and sources used in preparing the documentation;

   B) Records, including the dates, of each compliance test required by 35 Ill. Adm. Code 724.933(j);

   C) A design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions", USEPA publication number EPA-450/2-81-005, incorporated by reference in 35 Ill. Adm. Code 720.111(a) or other engineering texts acceptable to the Agency that present basic control device design information. The design analysis must address the vent stream

characteristics and control device operation parameters, as specified in 35 Ill. Adm. Code 724.935(b)(4)(iii);

D) A statement signed and dated by the facility owner or operator that certifies that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is operating at the highest load or capacity level reasonable expected to occur; and

E) A statement signed and dated by the facility owner or operator that certifies that the control device is designed to operate at an efficiency of 95 weight percent or greater.

BOARD NOTE: Subsection (d) is derived from 40 CFR 270.310.

e) Air Emissions Control Information to Be Maintained at the Facility. If the facility owner or operator has air emission control equipment subject to Subpart CC of 35 Ill. Adm. Code 724, it must keep the following information at its facility:

1) Documentation for each floating roof cover installed on a tank subject to 35 Ill. Adm. Code 724.984(d)(1) or (d)(2) that includes information that the owner or operator prepared or the cover manufacturer or vendor provided describing the cover design, and the owner's or operator's certification that the cover meets applicable design specifications listed in 35 Ill. Adm. Code 724.984(e)(1) or (f)(1);

2) Identification of each container area subject to Subpart CC of 35 Ill. Adm. Code 724 and the owner's or operator's certification that the requirements of this Subpart J are met;

3) Documentation for each enclosure used to control air pollutant emissions from tanks or containers pursuant to requirements of 35 Ill. Adm. Code 724.984(d)(5) or 724.986(e)(1)(B). The owner or operator must include records for the most recent set of calculations and measurements that it performed to verify that the enclosure meets the criteria of a permanent total enclosure as specified in appendix B to 40 CFR 52.741 (Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure), incorporated by reference in 35 Ill. Adm. Code 720.111(b);

4) This subsection (e)(4) corresponds with 40 CFR 270.315(d), which USEPA has marked "Reserved". This statement maintains structural consistency with the corresponding federal rules;

5) Documentation for each closed-vent system and control device installed pursuant to 35 Ill. Adm. Code 724.987 that includes design and performance information, as specified in Section 703.210(c) and (d); and

6) An emission monitoring plan for both Method 21 in appendix A to 40 CFR 60 (Determination of Volatile Organic Compound Leaks), incorporated by reference in 35 Ill. Adm. Code 720.111(b), and control device monitoring methods. This plan must include the following information: monitoring points, monitoring methods for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliances.

BOARD NOTE: Subsection (e) is derived from 40 CFR 270.315.

(Source: Amended at 43 Ill. Reg. 5777, May 2, 2019)

Section 703.353 Modifying a RCRA Standardized Permit

A facility owner or operator can modify its RCRA standardized permit by following the procedures found in 35 Ill. Adm. Code 705.304.

BOARD NOTE: Derived from 40 CFR 270.320, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Added at 31 Ill. Reg. 487, effective December 20, 2006)

Section 703.APPENDIX A Classification of Permit Modifications

Class			
	A.	General Permit Provisions	
1	1.	Administrative and informational changes.	
1	2.	Correction of typographical errors.	
1	3.	Equipment replacement or upgrading with functionally equivalent components (e.g., pipes, valves, pumps, conveyors, controls).	
	4.	Changes in the frequency of or procedures for monitoring, reporting, sampling, or maintenance activities by the permittee:	
1		a.	To provide for more frequent monitoring, reporting, or maintenance.
2		b.	Other changes.
	5.	Schedule of compliance:	
1*		a.	Changes in interim compliance dates, with prior approval of the Agency.
3		b.	Extension of final compliance date.

1* 6. Changes in expiration date of permit to allow earlier permit termination, with prior approval of the Agency.

1* 7. Changes in ownership or operational control of a facility, provided the procedures of Section 703.260(b) are followed.

1* 8. Changes to remove permit conditions that are no longer applicable (i.e., because the standards upon which they are based are no longer applicable to the facility).

1* 9. Changes to remove permit conditions applicable to a unit excluded pursuant to the provisions of 35 Ill. Adm. Code 721.104.

1* 10. Changes in the expiration date of a permit issued to a facility at which all units are excluded pursuant to the provisions of 35 Ill. Adm. Code 721.104.

B. General Facility Standards

1. Changes to waste sampling or analysis methods:

1 a. To conform with Agency guidance or Board regulations.

1* b. To incorporate changes associated with F039 (multi-source leachate) sampling or analysis methods.

1* c. To incorporate changes associated with underlying hazardous constituents in ignitable or corrosive wastes.

2 d. Other changes.

2. Changes to analytical quality assurance or quality control plan:

1 a. To conform with agency guidance or regulations.

2 b. Other changes.

1 3. Changes in procedures for maintaining the operating record.

2 4. Changes in frequency or content of inspection schedules.

5. Changes in the training plan:

2 a. That affect the type or decrease the amount of training given to employees.

1 b. Other changes.

6. Contingency plan:

2 a. Changes in emergency procedures (i.e., spill or release response procedures).

1 b. Replacement with functionally equivalent equipment, upgrade, or relocate emergency equipment listed.

2 c. Removal of equipment from emergency equipment list.

1 d. Changes in name, address, or phone number of coordinators or other persons or agencies identified in the plan.

Note: When a permit modification (such as introduction of a new unit) requires a change in facility plans or other general facility standards, that change must be reviewed under the same procedures as the permit modification.

7. CQA plan:

1 a. Changes that the CQA officer certifies in the operating record will provide equivalent or better certainty that the unit components meet the design specifications.

2 b. Other changes.

Note: When a permit modification (such as introduction of a new unit) requires a change in facility plans or other general facility standards, that change must be reviewed under the same procedures as a permit modification.

C. Groundwater Protection

1. Changes to wells:

2 a. Changes in the number, location, depth, or design of upgradient or downgradient wells of permitted groundwater monitoring system.

1 b. Replacement of an existing well that has been damaged or rendered inoperable, without change to location, design, or depth of the well.

1* 2. Changes in groundwater sampling or analysis procedures or monitoring schedule, with prior approval of the Agency.

1*	3.		Changes in statistical procedure for determining whether a statistically significant change in groundwater quality between upgradient and downgradient wells has occurred, with prior approval of the Agency.
2	4.		Changes in point of compliance.
	5.		Changes in indicator parameters, hazardous constituents, or concentration limits (including ACLs (Alternate Concentration Limits)):
3		a.	As specified in the groundwater protection standard.
2		b.	As specified in the detection monitoring program.
2	6.		Changes to a detection monitoring program as required by 35 Ill. Adm. Code 724.198(h), unless otherwise specified in this Appendix.
	7.		Compliance monitoring program:
3		a.	Addition of compliance monitoring program as required by 35 Ill. Adm. Code 724.198(g)(4) and 724.199.
2		b.	Changes to a compliance monitoring program as required by 35 Ill. Adm. Code 724.199(j), unless otherwise specified in this Appendix.
	8.		Corrective action program:
3		a.	Addition of a corrective action program as required by 35 Ill. Adm. Code 724.199(i)(2) and 724.200.
2		b.	Changes to a corrective action program as required by 35 Ill. Adm. Code 724.200(h), unless otherwise specified in this Appendix.
D.	Closure		
	1.		Changes to the closure plan:
1*		a.	Changes in estimate of maximum extent of operations or maximum inventory of waste on-site at any time during the active life of the facility, with prior approval of the Agency.
1*		b.	Changes in the closure schedule for any unit, changes in the final closure schedule for the facility or extension of the closure period, with prior approval of the Agency.

1*		c.	Changes in the expected year of final closure, where other permit conditions are not changed, with prior approval of the Agency.
1*		d.	Changes in procedures for decontamination of facility equipment or structures, with prior approval of the Agency.
2		e.	Changes in approved closure plan resulting from unexpected events occurring during partial or final closure, unless otherwise specified in this Appendix.
2		f.	Extension of the closure period to allow a landfill, surface impoundment, or land treatment unit to receive non-hazardous wastes after final receipt of hazardous wastes under 35 Ill. Adm. Code 724.213(d) or (e).
3	2.		Creation of a new landfill unit as part of closure.
	3.		Addition of the following new units to be used temporarily for closure activities:
3		a.	Surface impoundments.
3		b.	Incinerators.
3		c.	Waste piles that do not comply with 35 Ill. Adm. Code 724.350(c).
2		d.	Waste piles that comply with 35 Ill. Adm. Code 724.350(c).
2		e.	Tanks or containers (other than specified in paragraph D(3)(f) below).
1*		f.	Tanks used for neutralization, dewatering, phase separation, or component separation, with prior approval of the Agency.
2		g.	Staging piles.
	E.	Post-Closure	
1	1.		Changes in name, address, or phone number of the contact in the post-closure plan.
2	2.		Extension of post-closure care period.
3	3.		Reduction in the post-closure care period.

1 4. Changes to the expected year of final closure, where other permit conditions are not changed.

2 5. Changes in post-closure plan necessitated by events occurring during the active life of the facility, including partial and final closure.

F. Containers

1. Modification or addition of container units:

3 a. Resulting in greater than 25 percent increase in the facility's container storage capacity, except as provided in F(1)(c) and F(4)(a).

2 b. Resulting in up to 25 percent increase in the facility's container storage capacity, except as provided in F(1)(c) and F(4)(a).

1 c. Modification or addition of container units or treatment processes necessary to treat wastes that are restricted from land disposal to meet some or all of the applicable treatment standards, with prior approval of the Agency. This modification may also involve the addition of new USEPA hazardous waste numbers or narrative description of wastes. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).

2. Modification of container units without an increased capacity or alteration of the system:

2 a. Modification of a container unit without increasing the capacity of the unit.

1 b. Addition of a roof to a container unit without alteration of the containment system.

3. Storage of different wastes in containers, except as provided in F(4):

3 a. That require additional or different management practices from those authorized in the permit.

2 b. That do not require additional or different management practices from those authorized in the permit.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

4. Storage or treatment of different wastes in containers:

2* a. That require addition of units or change in treatment process or management standards, provided that the wastes are restricted from land disposal and are to be treated to meet some or all of the applicable treatment standards. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).

1* b. That do not require the addition of units or a change in the treatment process or management standards, and provided that the units have previously received wastes of the same type (e.g., incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).

G. Tanks

1. Modification of a tank unit, secondary containment system, or treatment process that increases tank capacity, adds a new tank, or alters treatment, specified as follows:

3 a. Modification or addition of tank units resulting in greater than 25 percent increase in the facility's tank capacity, except as provided in paragraphs G(1)(c), G(1)(d), and G(1)(e).

2 b. Modification or addition of tank units resulting in up to 25 percent increase in the facility's tank capacity, except as provided in paragraphs G(1)(d) and G(1)(e).

2 c. Addition of a new tank that will operate for more than 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation, or component separation.

1* d. After prior approval of the Agency, addition of a new tank that will operate for up to 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation, or component separation.

1* e. Modification or addition of tank units or treatment processes that are necessary to treat wastes that are restricted from land disposal to meet some or all of the applicable treatment standards, with prior approval of the Agency. This modification may also involve the addition of new USEPA hazardous waste numbers. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).

2	2.	Modification of a tank unit or secondary containment system without increasing the capacity of the unit.
1	3.	Replacement of a tank with a tank that meets the same design standards and has a capacity within ±10 percent of the replaced tank provided:
	a.	The capacity difference is no more than 1,500 gallons (5,680 ℓ),
	b.	The facility's permitted tank capacity is not increased, and
	c.	The replacement tank meets the same conditions in the permit.
2	4.	Modification of a tank management practice.
	5.	Management of different wastes in tanks:
3	a.	That require additional or different management practices, tank design, different fire protection specifications or significantly different tank treatment process from that authorized in the permit, except as provided in paragraph G(5)(c).
2	b.	That do not require additional or different management practices or tank design, different fire protection specification, or significantly different tank treatment process than authorized in the permit, except as provided in paragraph G(5)(d). Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.
1*	c.	That require addition of units or change in treatment processes or management standards, provided that the wastes are restricted from land disposal and are to be treated to meet some or all of the applicable treatment standards. The modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
1	d.	That do not require the addition of units or a change in the treatment process or management standards, and provided that the units have previously received wastes of the same type (e.g., incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028). Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

H. Surface Impoundments

3	1.		Modification or addition of surface impoundment units that result in increasing the facility's surface impoundment storage or treatment capacity.
3	2.		Replacement of a surface impoundment unit.
2	3.		Modification of a surface impoundment unit without increasing the facility's surface impoundment storage or treatment capacity and without modifying the unit's liner, leak detection system, or leachate collection system.
2	4.		Modification of a surface impoundment management practice.
	5.		Treatment, storage, or disposal of different wastes in surface impoundments:
3		a.	That require additional or different management practices or different design of the liner or leak detection system than authorized in the permit.
2		b.	That do not require additional or different management practices or different design of the liner or leak detection system than authorized in the permit. Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.
1		c.	That are wastes restricted from land disposal that meet the applicable treatment standards. This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
1		d.	That are residues from wastewater treatment or incineration, provided the disposal occurs in a unit that meets the minimum technological requirements stated in 40 CFR 268.5(h)(2) (Procedures for Case-by-Case Extensions to an Effective Date), incorporated by reference in 35 Ill. Adm. Code 720.111(b), and provided further that the surface impoundment has previously received wastes of the same type (for example, incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
1*	6.		Modifications of unconstructed units to comply with 35 Ill. Adm. Code 724.321(c), 724.322, 724.323, and 724.326(d).
	7.		Changes in response action plan:

3 a. Increase in action leakage rate.

3 b. Change in a specific response reducing its frequency or effectiveness.

2 c. Other changes.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

I. Enclosed Waste Piles. For all waste piles, except those complying with 35 Ill. Adm. Code 724.350(c), modifications are treated the same as for a landfill. The following modifications are applicable only to waste piles complying with 35 Ill. Adm. Code 724.350(c).

1. Modification or addition of waste pile units:

3 a. Resulting in greater than 25 percent increase in the facility's waste pile storage or treatment capacity.

2 b. Resulting in up to 25 percent increase in the facility's waste pile storage or treatment capacity.

2 2. Modification of waste pile unit without increasing the capacity of the unit.

1 3. Replacement of a waste pile unit with another waste pile unit of the same design and capacity and meeting all waste pile conditions in the permit.

2 4. Modification of a waste pile management practice.

5. Storage or treatment of different wastes in waste piles:

3 a. That require additional or different management practices or different design of the unit.

2 b. That do not require additional or different management practices or different design of the unit.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

2 6. Conversion of an enclosed waste pile to a containment building unit.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

J. Landfills and Unenclosed Waste Piles

3	1.		Modification or addition of landfill units that result in increasing the facility's disposal capacity.
3	2.		Replacement of a landfill.
3	3.		Addition or modification of a liner, leachate collection system, leachate detection system, run-off control, or final cover system.
2	4.		Modification of a landfill unit without changing a liner, leachate collection system, leachate detection system, run-off control, or final cover system.
2	5.		Modification of a landfill management practice.
	6.		Landfill different wastes:
3		a.	That require additional or different management practices, different design of the liner, leachate collection system, or leachate detection system.
2		b.	That do not require additional or different management practices, different design of the liner, leachate collection system, or leachate detection system. Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.
1		c.	That are wastes restricted from land disposal that meet the applicable treatment standards. This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
1		d.	That are residues from wastewater treatment or incineration, provided the disposal occurs in a landfill unit that meets the minimum technological requirements stated in 40 CFR 268.5(h)(2) (Procedures for Case-by-Case Extensions to an Effective Date), incorporated by reference in 35 Ill. Adm. Code 720.111(b), and provided further that the landfill has previously received wastes of the same type (for example, incinerator ash). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
1*	7.		Modification of unconstructed units to comply with 35 Ill. Adm. Code 724.351(c), 724.352, 724.353, 724.354(c), 724.401(c), 724.402, 724.403(c), and 724.404.

8. Changes in response action plan:

3 a. Increase in action leakage rate.

3 b. Change in a specific response reducing its frequency or effectiveness.

2 c. Other changes.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

K. Land Treatment

3 1. Lateral expansion of or other modification of a land treatment unit to increase area extent.

2 2. Modification of run-on control system.

3 3. Modify run-off control system.

2 4. Other modification of land treatment unit component specifications or standards required in permit.

5. Management of different wastes in land treatment units:

3 a. That require a change in permit operating conditions or unit design specifications.

2 b. That do not require a change in permit operating conditions or unit design specifications.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

6. Modification of a land treatment unit management practice to:

3 a. Increase rate or change method of waste application.

1 b. Decrease rate of waste application.

2 7. Modification of a land treatment unit management practice to change measures of pH or moisture content or to enhance microbial or chemical reactions.

3	8.	Modification of a land treatment unit management practice to grow food chain crops, to add to or replace existing permitted crops with different food chain crops or to modify operating plans for distribution of animal feeds resulting from such crops.
3	9.	Modification of operating practice due to detection of releases from the land treatment unit pursuant to 35 Ill. Adm. Code 724.378(g)(2).
3	10.	Changes in the unsaturated zone monitoring system that result in a change to the location, depth, or number of sampling points or which replace unsaturated zone monitoring devices or components of devices with devices or components that have specifications different from permit requirements.
2	11.	Changes in the unsaturated zone monitoring system that do not result in a change to the location, depth, or number of sampling points or which replace unsaturated zone monitoring devices or components of devices with devices or components having specifications different from permit requirements.
2	12.	Changes in background values for hazardous constituents in soil and soil-pore liquid.
2	13.	Changes in sampling, analysis, or statistical procedure.
2	14.	Changes in land treatment demonstration program prior to or during the demonstration.
1*	15.	Changes in any condition specified in the permit for a land treatment unit to reflect results of the land treatment demonstration, provided performance standards are met, and the Agency's prior approval has been received.
1*	16.	Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, provided the conditions for the second demonstration are substantially the same as the conditions for the first demonstration and have received the prior approval of the Agency.
3	17.	Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, where the conditions for the second demonstration are not substantially the same as the conditions for the first demonstration.
2	18.	Changes in vegetative cover requirements for closure.

L. Incinerators, Boilers and Industrial Furnaces

3 1. Changes to increase by more than 25 percent any of the following limits authorized in the permit: A thermal feed rate limit, a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.

2 2. Changes to increase by up to 25 percent any of the following limits authorized in the permit: A thermal feed rate limit, a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.

3 3. Modification of an incinerator, boiler, or industrial furnace unit by changing the internal size or geometry of the primary or secondary combustion units; by adding a primary or secondary combustion unit; by substantially changing the design of any component used to remove HCl/Cl_2, metals, or particulate from the combustion gases; or by changing other features of the incinerator, boiler, or industrial furnace that could affect its capability to meet the regulatory performance standards. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards, unless this demonstration can be made through other means.

2 4. Modification of an incinerator, boiler, or industrial furnace unit in a manner that will not likely affect the capability of the unit to meet the regulatory performance standards but which will change the operating conditions or monitoring requirements specified in the permit. The Agency may require a new trial burn to demonstrate compliance with the regulatory performance standards.

5. Operating requirements:

3 a. Modification of the limits specified in the permit for minimum or maximum combustion gas temperature, minimum combustion gas residence time, oxygen concentration in the secondary combustion chamber, flue gas carbon monoxide or hydrocarbon concentration, maximum temperature at the inlet to the PM emission control system, or operating parameters for the air pollution control system. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.

3		b.	Modification of any stack gas emission limits specified in the permit, or modification of any conditions in the permit concerning emergency shutdown or automatic waste feed cutoff procedures or controls.
2		c.	Modification of any other operating condition or any inspection or recordkeeping requirement specified in the permit.
	6.	Burning different wastes:	
3		a.	If the waste contains a POHC that is more difficult to burn than authorized by the permit or if burning of the waste requires compliance with different regulatory performance standards than specified in the permit, the Agency must require a new trial burn to substantiate compliance with the regulatory performance standards, unless this demonstration can be made through other means.
2		b.	If the waste does not contain a POHC that is more difficult to burn than authorized by the permit and if burning of the waste does not require compliance with different regulatory performance standards than specified in the permit. Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.
	7.	Shakedown and trial burn:	
2		a.	Modification of the trial burn plan or any of the permit conditions applicable during the shakedown period for determining operational readiness after construction, the trial burn period or the period immediately following the trial burn.
1*		b.	Authorization of up to an additional 720 hours of waste burning during the shakedown period for determining operational readiness after construction, with the prior approval of the Agency.
1*		c.	Changes in the operating requirements set in the permit for conducting a trial burn, provided the change is minor and has received the prior approval of the Agency.
1*		d.	Changes in the ranges of the operating requirements set in the permit to reflect the results of the trial burn, provided the change is minor and has received the prior approval of the Agency.

1 8. Substitution of an alternative type of non-hazardous waste fuel that is not specified in the permit.

1* 9. Technology changes needed to meet standards under federal subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b), provided the procedures of Section 703.280(j) are followed.

1* 10. Changes to RCRA Permit provisions needed to support transition to federal subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b), provided the procedures of Section 703.280(k) are followed.

M. Containment Buildings

1. Modification or addition of containment building units:

3 a. Resulting in greater than 25 percent increase in the facility's containment building storage or treatment capacity.

2 b. Resulting in up to 25 percent increase in the facility's containment building storage or treatment capacity.

2 2. Modification of a containment building unit or secondary containment system without increasing the capacity of the unit.

3. Replacement of a containment building with a containment building that meets the same design standards provided:

1 a. The unit capacity is not increased.

1 b. The replacement containment building meets the same conditions in the permit.

2 4. Modification of a containment building management practice.

5. Storage or treatment of different wastes in containment buildings:

3 a. That require additional or different management practices.

2 b. That do not require additional or different management practices.

N. Corrective Action

3	1.	Approval of a corrective action management unit pursuant to 35 Ill. Adm. Code 724.652.
2	2.	Approval of a temporary unit or time extension pursuant to 35 Ill. Adm. Code 724.653.
2	3.	Approval of a staging pile or staging pile operating term extension pursuant to 35 Ill. Adm. Code 724.654.

Note: * indicates modifications requiring prior Agency approval.

Reg. 1653, effective January 20, 2012; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. 21179, effective November 19, 2018; amended in R21-13, R22-13, R24-4 at 48 Ill. Reg. 9712, effective June 20, 2024.

SUBPART A: GENERAL PROVISIONS

Section 705.101 Scope and Applicability

a) This Part sets forth procedures that the Illinois Environmental Protection Agency (Agency) must follow in issuing RCRA (Resource Conservation and Recovery Act) and UIC (Underground Injection Control) permits. This Part also specifies rules on effective dates of permits and stays of contested permit conditions.

b) This Part provides for a public comment period and a hearing in some cases. The permit applicant and any other participants must raise issues during this proceeding to preserve issues for effective Board review, as required by Section 705.183.

c) Board review of permit issuance or denial is pursuant to 35 Ill. Adm. Code 105. Board review is restricted to the record that was before the Agency when the permit was issued, as required by Sections 40(a) and 40(b) of the Environmental Protection Act.

d) The provisions of 35 Ill. Adm. Code 702, 703, and 704 contain rules on UIC and RCRA permit applications, permit conditions, and related matters.

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.102 Definitions

The definitions in 35 Ill. Adm. Code 702 apply to this Part.

BOARD NOTE: Derived from 40 CFR 124.2 (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.103 Computation of Time

Any time period allowance schedule or requirement provided under this Part must be computed in accordance with 35 Ill. Adm. Code 101.300.

BOARD NOTE: This Section corresponds with 40 CFR 124.20 (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.104 Electronic Reporting

The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Derived from 40 CFR 3 and 145.11(a)(33), as added, and 40 CFR 271.10(b), 271.11(b), and 271.12(h) (2005), as amended at 70 Fed. Reg. 59848 (Oct. 13, 2005).

(Source: Added at 31 Ill. Reg. 706, effective December 20, 2006)

SUBPART B: PERMIT APPLICATIONS

Section 705.121 Permit Application

a) Any person who requires a permit under the RCRA (Resource Conservation and Recovery Act) or UIC (Underground Injection Control) program must complete, sign, and submit to the Agency an application for each permit required under 35 Ill. Adm. Code 703.121 or 35 Ill. Adm. Code 704.101 through 704.105, as appropriate. An application will not be required for a RCRA permit by rule under 35 Ill. Adm. Code 703.141. An application will not be required for underground injection authorized by rule under Subpart C of 35 Ill. Adm. Code 704.

b) The Agency must not begin the processing of a permit until the applicant has fully complied with the application requirements applicable to that type of permit.

c) Permit applications must comply with the signature and certification requirements of 35 Ill. Adm. Code 702.126.

BOARD NOTE: Derived from 40 CFR 124.3(a) (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.122 Completeness

a) The Agency must review every application for a RCRA or UIC permit for completeness.

b) Time limitations on Agency review for application completeness:

1) Each application for a permit submitted by a new HWM (hazardous waste management) facility or new UIC injection well must be reviewed for completeness within 30 days of its receipt.

2) Each application for a permit by an existing HWM facility (both Parts A and B of the application) or existing injection well must be reviewed for completeness within 60 days of receipt.

c) Upon completing its review for completeness, the Agency must notify the applicant in writing whether the application is complete. If the application is incomplete, the Agency must list the information necessary to make the application complete.

d) When the application is for an existing HWM (Hazardous Waste Management) facility or an existing UIC injection well, the Agency must also specify in the notice of deficiency a date for submitting the necessary information.

e) The Agency shall, within the time limitations specified in subsection (b), notify the applicant whether additional information submitted in response to a notice of deficiency is deemed sufficient or insufficient to complete the application.

f) After the application is deemed complete, the Agency may request additional information from an applicant only when necessary to clarify, modify, or supplement previously submitted material. Requests for such additional information will not render an application incomplete.

BOARD NOTE: Derived from 40 CFR 124.3(c) (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.123 Incomplete Applications

If an applicant fails or refuses to correct Agency-noted deficiencies in its permit application, the Agency may either deny or issue the permit on the basis of the information available to the Agency; if warranted, appropriate enforcement actions may be taken.

BOARD NOTE: Derived from 40 CFR 124.3(d) (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.124 Site Visit

If the Agency decides, pursuant to Section 4(d) of the Act, that a site visit is necessary for any reason in conjunction with the processing of an application, the Agency must notify the applicant, and the Agency and the applicant must schedule a site visit.

BOARD NOTE: Derived from 40 CFR 124.3(e) (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.125 Effective Date

The effective date of a permit application is the date on which the Agency notifies the applicant that the application is complete, as provided in Section 705.122.

BOARD NOTE: Derived from 40 CFR 124.3(f) (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.126 Decision Schedule

For each permit application from a major new HWM facility or major new UIC injection well, the Agency must, no later than the effective date of the application, prepare and mail to the applicant a projected decision schedule. The schedule must specify target dates by which the Agency intends to do the following:

a) Prepare a draft permit pursuant to Subpart C;

b) Give public notice pursuant to Subpart D;

c) Complete the public comment period, including any public hearing pursuant to Subpart E; and

d) Issue a final permit pursuant to Subpart F.

BOARD NOTE: Derived from 40 CFR 124.3(g) (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.127 Consolidation of Permit Processing

Whenever a facility or activity requires more than one permit under more than one Part of the Board's rules and regulations, processing of two or more applications for those permits the Agency may, in its discretion and consistent the individual requirements for each permit, consolidate the processing of those permit applications in accordance with Agency procedures.

BOARD NOTE: Derived from 40 CFR 124.4 (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.128 Modification or Reissuance of Permits

a) The Agency may modify or reissue a permit either at the request of any interested person (including the permittee) or on its own initiative. However, the Agency may only modify or reissue a permit for the reasons specified in 35 Ill. Adm. Code 704.261 through 704.263 (UIC) or 35 Ill. Adm. Code 703.270 through 703.273 (RCRA). A request for permit modification or reissuance must be made in writing, must be addressed to the Agency (Division of Land Pollution Control), and must contain facts or reasons supporting the request.

b) If the Agency determines that a request for modification or reissuance is not justified, it must send the requester a brief written response giving a reason for the determination. A denial of a request for modification or reissuance is not subject to public notice, comment, or public hearing requirements. The requester may appeal a denial of a request to modify or reissue a permit to the Board pursuant to 35 Ill. Adm. Code 105.

c) Agency Modification or Reissuance Procedures

1) If the Agency tentatively decides to initiate steps to modify or reissue a permit pursuant to this Section and 35 Ill. Adm. Code 704.261 through 704.263 or 35 Ill. Adm. Code 703.270 through 703.273 (other than 35 Ill. Adm. Code 703.272(c)), after giving public notice pursuant to Section 705.161(a)(1), as though an application had been received, it must prepare a draft permit pursuant to Section 705.141 incorporating the proposed changes. The Agency may request additional information and may require the submission of an updated permit application. For reissued permits, other than those reissued under 35 Ill. Adm. Code 703.272(c), the Agency must require the submission of a new application. For permits reissued under 35 Ill. Adm. Code 703.272(c), the Agency and the permittee must comply with the appropriate requirements in Subpart G of 35 Ill. Adm. Code 705.

2) In a permit modification proceeding pursuant to this Section, only those conditions to be modified must be reopened when a new draft permit is prepared. When a permit is to be reissued pursuant to this Section, the entire permit is reopened just as if it had expired. During any reissuance proceeding, including any appeal to the Board, the permittee must comply with all conditions of its existing permit until a new final permit is reissued.

3) "Minor modifications", as defined in 35 Ill. Adm. Code 704.264, and "Class 1 and 2 modifications", as defined in 35 Ill. Adm. Code 703.281 and 703.282, are not subject to this Section.

d) To the extent that the Agency has authority to reissue a permit, it must prepare a draft permit or notice of intent to deny in accordance with Section 705.141 if it decides to do so.

e) The Agency or any person may seek the revocation of a permit in accordance with Title VIII of the Environmental Protection Act and the procedure of 35 Ill. Adm. Code 103. Revocation may only be sought for those reasons specified in 35 Ill. Adm. Code 702.186(a) through (d).

BOARD NOTE: Derived from 40 CFR 124.5 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

SUBPART C: APPLICATION REVIEW

Section 705.141 Draft Permits

a) Once an application for permit is complete, the Agency must tentatively decide whether to prepare a draft permit or to deny the application.

b) If the Agency tentatively decides to deny the permit application, it must issue a notice of intent to deny. A notice of intent to deny must be subject to all of the procedural requirements applicable to draft permits under subsection (d). If the Agency's final decision made pursuant to Section 705.201 is that the tentative decision to deny the permit application was incorrect, it must withdraw the notice of intent to deny and proceed to prepare a draft permit under subsection (c).

c) If the Agency decides to prepare a draft permit, it must prepare a draft permit that contains the following information:

1) All conditions under 35 Ill. Adm. Code 702.140 through 702.152 and 35 Ill. Adm. Code 702.160;

2) All compliance schedules under 35 Ill. Adm. Code 702.162 and 702.163;

3) All monitoring requirements under 35 Ill. Adm. Code 702.164; and

4) The following program-specific permit conditions:

A) For RCRA permits, standards for treatment, storage, or disposal and other permit conditions under Subpart F of 35 Ill. Adm. Code 703;

B) For UIC permits, permit conditions under Subpart E of 35 Ill. Adm. Code 704.

d) A draft permit or a notice of intent to deny prepared under this Section must be accompanied by a statement of basis, under Section 705.142, or a fact sheet, under Section 705.143, must be based on the administrative record pursuant to Section 705.144, must be publicly noticed pursuant to Subpart D, and must be made available for public comment pursuant to Section 705.181. The Agency must give

notice of opportunity for a public hearing pursuant to Section 705.182, issue a final decision pursuant to Section 705.201, and respond to comments pursuant to Section 705.210. An appeal may be taken under Section 705.212.

BOARD NOTE: Derived from 40 CFR 124.6 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.142 Statement of Basis

The Agency must prepare a statement of basis for every draft permit or notice of intent to deny for which a fact sheet under Section 705.143 is not prepared. The statement of basis must briefly describe the derivation of the conditions of the draft permit and the reasons for them or, in the case of notices of intent to deny, reasons supporting the tentative decision. The statement of basis must be sent to the applicant and to any other person who requests it.

BOARD NOTE: Derived from 40 CFR 124.7 (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.143 Fact Sheet

a) A fact sheet must be prepared for every draft permit for a major HWM or a major UIC facility or activity, and for every draft permit or notice of intent to deny that the Agency finds is the subject of widespread public interest or raises major issues. The fact sheet must briefly set forth the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit. The Agency must send this fact sheet to the applicant and, on request, to any other person.

b) The fact sheet must include the following, when applicable:

1) A brief description of the type of facility or activity that is the subject of the draft permit;

2) The type and quantity of wastes, fluids or pollutants that are proposed to be or are being treated, stored, disposed of, injected, emitted, or discharged;

3) A brief summary of the basis for refusing to grant a permit or for imposing each draft permit condition including references to applicable statutory or regulatory provisions and appropriate supporting references to the administrative record as defined by Section 705.144;

4) Reasons why any requested schedules of compliance or other alternatives to required standards do or do not appear justified;

5) A description of the procedures for reaching a final decision on the draft permit including the following:

A) The beginning and ending dates of the comment period pursuant to Subpart D, and the address where comments will be received;

B) Procedures for requesting a hearing, and the nature of that hearing; and

C) Any other procedures by which the public may participate in the final decision.

6) The name and telephone number of a person to contact for additional information.

BOARD NOTE: Derived from 40 CFR 124.8 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.144 Administrative Record for Draft Permits or Notices of Intent to Deny

a) The provisions of a draft permit or notice of intent to deny the application must be based on the administrative record, as defined in this Section.

b) The administrative record must consist of the following:

1) The application and any supporting data furnished by the applicant;

2) The draft permit or notice of intent to deny the application;

3) The statement of basis, as provided in Section 705.142, or fact sheet, as provided in Section 705.143;

4) All documents cited in the statement of basis or fact sheet;

5) Other documents contained in the supporting file for the draft permit or notice of intent to deny; and

6) An index of all documents or items included in the record, by location in the record.

c) Published material that is generally available, and which is included in the administrative record under subsection (b), need not be physically included with the rest of the record, as long as it is specifically referred to in the statement of basis or the fact sheet.

d) This Section applies to all draft permits or notices of intent to deny.

BOARD NOTE: Derived from 40 CFR 124.9 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

SUBPART D: PUBLIC NOTICE

Section 705.161 When Public Notice Must Be Given

a) The Agency must give public notice whenever any of the following actions have occurred:

1) A permit application has been tentatively denied under Section 705.141(b);

2) A draft permit has been prepared under Section 705.141(c); and

3) A hearing has been scheduled under Section 705.182.

b) No public notice is required when a request for permit modification or reissuance is denied under Section 705.128(b). Written notice of any such denial must be given to the requester and to the permittee.

c) A public notice may describe more than one permit or permit action.

BOARD NOTE: Derived from 40 CFR 124.10(a) (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.162 Timing of Public Notice

a) Public notice of the preparation of a draft permit (including a notice of intent to deny a permit application) required under Section 705.161 must allow time for public comment, as follows:

1) For UIC permits, at least 30 days; or

2) For RCRA permits, at least 45 days.

b) Public notice of a public hearing must be given at least 30 days in advance of the hearing.

c) Public notice of a hearing may be given at the same time as public notice of the draft permit, and the two notices may be combined.

BOARD NOTE: Derived from 40 CFR 124.10(b) (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.163 Methods of Public Notice

Public notice of activities described in Section 705.161(a) must be given by the following methods:

a) By mailing a copy of a notice to the following persons (any person otherwise entitled to receive notice under this paragraph may waive his or her rights to receive notice for any classes and categories of permits):

1) The applicant.

2) Any other agency or entity that the Agency knows is required by State or federal law to review or approve issuance of a RCRA or UIC permit for the same facility or activity (including USEPA, other Federal and State agencies with jurisdiction over waterways, wildlife or other natural resources, and other appropriate government authorities, including other affected States and units of local government).

3) Federal and State agencies with jurisdiction over fish, shellfish and wildlife resources and over coastal zone management plans, the Advisory Council on Historical Preservation, State Historic Preservation Officers, and other appropriate government authorities, including any affected States.

4) Persons on a mailing list developed by doing as follows:

A) Including those who request in writing to be on the list;

B) Including participants in past permit proceedings in that area; and

C) Notifying the public of the opportunity to be put on the mailing list through periodic publication in the public press and in governmental publications.

D) The Agency may update the mailing list from time to time by requesting written indication of continued interest from those listed. The Agency may delete from the list the name of any person who fails to respond to such a request.

5) For RCRA permits only to the following entities:

A) To any unit of local government having jurisdiction over the area where the facility is proposed to be located; and

B) To each State agency having any authority under State law with respect to the construction or operation of such facility.

6) For Class I injection well UIC permits only, to the Illinois Department of Natural Resources, Office of Mines and Minerals.

7) For a Class VI injection well, mailing or e-mailing a notice to the Illinois Department of Natural Resources, Office of Mines and Minerals, Division of Gas and Oil and to the Agency, Divisions of Public Water Supply and Land Pollution Control.

8) Any other person or entity that the Agency has reason to believe would be particularly interested in or affected by the proposed action.

b) Publication of notice must be made as follows:

1) For major UIC permits, publication of a notice in a daily or weekly newspaper of general circulation within the area affected by the facility or activity.

2) For RCRA permits, publication of a notice in a daily or weekly major local newspaper of general circulation and broadcast over local radio stations.

c) Any other method reasonably calculated to give actual notice of the action in question to the persons potentially affected by it.

BOARD NOTE: Derived from 40 CFR 124.10(c) (2011).

(Source: Amended at 36 Ill. Reg. 1653, January 20, 2012)

Section 705.164 Contents of Public Notice

a) All public notices issued under this Part must contain the following minimum information:

1) The name and address of the Agency;

2) The name and address of the permittee or permit applicant and, if different, the name and address of the facility or activity regulated by the permit;

3) A brief description of the business conducted at the facility or the activity described in the permit application or the draft permit;

4) The name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft permit;

a copy of the statement of basis or fact sheet; and a copy of the permit application;

5) A brief description of the comment procedures required by Sections 705.181 and 705.182; the time and place of any hearing that will be held, including a statement of the procedures to request a hearing (unless a hearing has already been scheduled); and the other procedures by which the public may participate in the final permit decision;

6) The location of the administrative record required by Section 705.144, the time at which the record will be open for public inspection, and a statement that all data submitted by the applicant is available as part of the administrative record; and

7) Any additional information that the Agency considers necessary or appropriate.

b) Public Notices for Hearings. In addition to the general public notice described in subsection (a), the public notice of a hearing under Section 705.182 must contain the following information:

1) Reference to the date of previous public notices relating to the permit;

2) The date, time, and place of the hearing; and

3) A brief description of the nature and purpose of the hearing, including the applicable rules and procedures.

BOARD NOTE: Derived from 40 CFR 124.10(d) (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.165 Distribution of Other Materials

In addition to the general public notice described in Section 705.164(a), all persons identified in Section 705.163(a) must be mailed a copy of the fact sheet or statement of basis, the permit application (if any), and the draft permit (if any).

BOARD NOTE: Derived from 40 CFR 124.10(e) (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

SUBPART E: PUBLIC COMMENT

Section 705.181 Public Comments and Requests for Public Hearings

During the public comment period provided under Subpart D, any interested person may submit written comments on the draft permit to the Agency, and any interested person may request a public hearing. A request for a public hearing must be in writing and must state the nature of the issues proposed to be raised in the hearing. The Agency must consider all comments in making the final decision and must answer, as provided in Section 705.210.

BOARD NOTE: Derived from 40 CFR 124.11 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.182 Public Hearings

a) When the Agency Holds Public Hearings

1) The Agency must hold a public hearing whenever it finds a significant degree of public interest in a draft permit on the basis of requests.

2) The Agency may also hold a public hearing at its discretion, whenever such a hearing might clarify one or more issues involved in the permit decision.

3) For RCRA permits only the following additional requirements apply:

A) The Agency must hold a public hearing whenever it receives written notice of opposition to a draft permit and a request for a hearing within 45 days of public notice under Section 705.162(a);

B) Whenever possible, the Agency must schedule the hearing at a location convenient to the population center nearest to the proposed facility.

4) Public notice of the hearing must be given as specified in Section 705.162.

b) Whenever a public hearing will be held, the Agency must designate a hearing officer who must be responsible for its scheduling and orderly conduct. Conduct of the hearing must be in accordance with Agency rules and procedures, and the hearing must be held in the county in which the HWM or UIC facility or proposed HWM or UIC facility is located.

c) Any person may submit oral or written statements and data concerning the draft permit. Reasonable limits may be set by the hearing officer on the time allowed at hearing for oral statements, and the submission of statements in writing may be required. Written statements must be accepted until the close of the public comment period. The public comment period under Subpart D must automatically be extended to a date not later than 30 days after the close of any public hearing under this Section. The hearing officer may also extend the comment period by entering an appropriate order into the record.

d) A tape recording or written transcript of the hearing must be made available to the public for inspection during regular business hours at the Agency's office in Springfield. Copies of such recording or transcription must be made available on request, upon payment of reasonable costs of duplication pursuant to applicable Agency rules and procedures.

BOARD NOTE: Derived from 40 CFR 124.12 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.183 Obligation to Raise Issues and Provide Information

All persons, including applicants, who believe any condition of a draft permit is inappropriate, or that the Agency's tentative decision to deny an application or prepare a draft permit is inappropriate, must raise all reasonably ascertainable issues and submit all reasonably available arguments and factual grounds supporting their position, including all supporting material, by the close of the public comment period (including any public hearing) under Subpart D. All supporting materials must be included in full and may not be incorporated by reference, unless they are already part of the administrative record in the same proceeding, or they consist of state or federal statutes and regulations, documents of general applicability, or other generally available reference materials. Commenters must make supporting material not already included in the administrative record available to the Agency, as directed by the Agency. The Agency must extend the public comment period by an appropriate time if a commenter demonstrates that the additional time is necessary to submit supporting materials under this Section.

BOARD NOTE: Derived from 40 CFR 124.13 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.184 Reopening of Public Comment Period

a) The Agency may reopen the public comment period under this Section if doing so could expedite the decisionmaking process.

1) If the public comment period is reopened under this subsection (a), any person, including the applicant, who believes any condition of a draft permit is inappropriate or that the Agency's tentative decision to deny an application or prepare a draft permit is inappropriate, must submit all reasonably available factual grounds supporting their position, including all supporting material, before a date, not less than 60 days after public notice given under subsection (a)(2), set by the Agency. Thereafter, any person may file a written response to the material filed by any other person, by a date, not less than 20 days after the date set for filing of the material (as set forth in the preceding sentence), set by the Agency.

2) Public notice of any comment period under this subsection (a) must identify the issues to which the requirements of this subsection (a) will apply.

3) On its own motion or on the request of any person, the Agency may direct that the requirements of subsection (a)(1) will apply during the initial public comment period where the Agency determines that issuance of the permit will be contested and that applying the requirements of subsection (a)(1) will substantially expedite the decisionmaking process. The notice of the draft permit must state whenever this has been done.

4) A comment period of longer than 60 days may be necessary in complicated proceedings to give commenters a reasonable opportunity to comply with the requirements of this Section. A commenter may request a longer comment period, and one must be granted under Subpart D to the extent that the Agency determines that a longer comment period is necessary.

b) If any data, information, or arguments submitted during the public comment period appear to raise substantial new questions concerning a permit, the Agency may undertake one or more of the following actions:

1) It may prepare a new draft permit, appropriately modified, under Section 705.141;

2) It may prepare a revised statement of basis, a fact sheet, or a revised fact sheet and reopen the comment period under subsection (b)(3);

3) It may reopen or extend the comment period to give interested persons an opportunity to comment on the information or arguments submitted.

c) Comments filed during the reopened comment period must be limited to the substantial new questions that caused its reopening. The public notice under Subpart D must define the scope of the reopening.

d) After an extended comment period, the Agency may undertake final action under Section 705.201 that it deems appropriate based on the record.

e) Public notice of any of the above actions must be issued under Subpart D.

BOARD NOTE: Derived from 40 CFR 124.14 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

SUBPART F: PERMIT ISSUANCE

Section 705.201 Final Permit Decision

a) After the close of the public comment period under Subpart D or Section 705.182, the Agency must issue a final permit decision.

b) A final permit decision must consist of either of the following:

1) A letter of denial that includes each of the following:

A) The Sections of the appropriate Act that may be violated if the permit were granted;

B) The provisions of Board regulations that may be violated if the permit were granted;

C) The specific type of information, if any, that the Agency deems the applicant did not provide with its application; and

D) A statement of specific reasons why the Act and the regulations might not be met if the permit were granted; or

2) Issuance of a permit.

c) On the date of the final permit decision, the Agency must notify the applicant and each person who has submitted written comments or requested notice of the final permit decision. This notice must include reference to the procedures for appealing an Agency RCRA or UIC permit decision under Section 705.212.

d) A final permit must become effective 35 days after the final permit decision made under subsection (a), unless:

1) A later effective date is specified in the permit; or

2) Review is requested under Section 705.212, in which case the effective date and conditions will be stayed as provided in Sections 705.202 through 705.205.

BOARD NOTE: This Section corresponds with and is partially derived from 40 CFR 124.15 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.202 Stay of Permit Conditions upon Appeal

An appeal pursuant to Section 705.212 has the following effect on permit conditions:

a) If a timely application was filed for renewal of an existing permit, the existing permit and all its conditions continue to apply during the pendency of the appeal of the renewal permit application, unless the Board orders otherwise.

b) If an application was filed for renewal of an existing permit after the expiration date of the existing permit, the effect of the new permit and all its conditions are stayed pending the outcome of the appeal, and the facility is without a permit during that time, unless the Board orders otherwise.

c) If an application was filed for a permit for a new facility, the effect of the new permit and all its conditions are stayed pending the outcome of the appeal.

d) Contested permit conditions and all permit conditions that are not separable from contested permit conditions are stayed during the pendency of the appeal. The Board may issue an order that identifies the conditions in a permit that are inseparable from contested permit conditions. Where the Board has issued an order that stays some but not all the conditions of a new permit during the pendency of an appeal, compliance is required with those conditions of the existing permit that correspond with the stayed conditions of the new permit, unless compliance with the existing conditions is technologically incompatible with the conditions of the new permit that are not stayed.

BOARD NOTE: Derived from 40 CFR 124.16 (2002).

Section 705.203 Stay for New Application or upon Untimely Application for Renewal (Repealed)

(Source: Repealed at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.204 Stay upon Reapplication or for Modification (Repealed)

(Source: Repealed at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.205 Stay Following Interim Status (Repealed)

(Source: Repealed at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.210 Agency Response to Comments

a) At the time that any final permit decision is issued under Section 705.201, the Agency must issue a response to comments. This response must do the following:

1) It must specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change; and

2) It must briefly describe and respond to all significant comments on the draft permit raised during the public comment period.

b) Any documents cited in the response to comments must be included in the administrative record for the final permit decision as defined in Section 705.211. If new points are raised or new material supplied during the public comment period, the Agency may document its response to those matters by adding new materials to the administrative record.

c) The response to comments must be available to the public in accordance with Agency rules and procedures for access to Agency records.

BOARD NOTE: Derived in part from 40 CFR 124.17 (2002).

(Source: Amended at 27 Ill. Reg. 3675, effective February 14, 2003)

Section 705.211 Administrative Record for Final Permits or Letters of Denial

a) The Agency must base final permit decisions under Section 705.201 on the administrative record defined in this Section.

b) The administrative record for any final permit or letter of denial must consist of the administrative record for the draft permit together with the following:

1) All comments received during the public comment period provided under Subpart D (including any extension or reopening under Section 705.184);

2) The tape or transcript of any hearing held under Section 705.182;

3) Any written materials submitted at such a hearing;

4) The response to comments required by Section 705.210 and any new material placed in the record under that Section;

5) Other documents contained in the supporting file for the permit; and

6) The final permit or letter of denial.

c) The additional documents required under subsection (b) should be added to the record as soon as possible after their receipt or publication by the Agency. The record must be completed on the date that the final permit or letter of denial is issued.

d) This Section applies to all final RCRA permits, UIC permits, and letters of denial, when the draft permit was subject to the administrative record requirements of Section 705.144.

BOARD NOTE: Derived from 40 CFR 124.18 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.212 Appeal of Agency Permit Determinations

a) Within 35 days after a RCRA or UIC final permit decision notification has been issued under Section 705.201, the following persons may petition the Board to review any condition of the permit decision:

1) The permit applicant; and

2) Any person who filed comments on the draft permit or who participated in the public hearing on the draft permit.

b) Any person who failed to file comments or failed to participate in the public hearing on the draft permit may petition for administrative review only to the extent of the changes from the draft to the final permit decision.

c) A petition for review must include a statement of the reasons supporting that review, including a demonstration that any issues being raised were raised during the public comment period (including any public hearing) to the extent required in this Part; in all other respects, the petition must comport with the requirements for permit appeals generally, as provided in 35 Ill. Adm. Code 105.

d) Except as otherwise provided in this Part, 35 Ill. Adm. Code 105 generally will govern appeals of RCRA and UIC permits under this Section. References in the procedural rules to the Agency permit application record will mean, for purposes of this Section, the administrative record for the final permit or letter of denial, as defined in Section 705.211.

e) An appeal under subsection (a) or (b) is a prerequisite to the seeking of judicial review of the final agency action under the administrative review provisions of Article III of the Code of Civil Procedure.

BOARD NOTE: This Section corresponds with 40 CFR 124.19(a).

(Source: Amended at 48 Ill. Reg. 9712, effective June 20, 2024)

SUBPART G: PROCEDURE FOR RCRA STANDARDIZED PERMIT

Section 705.300 General Information About RCRA Standardized Permits

a) RCRA Standardized Permit. A RCRA standardized permit is a special form of RCRA permit that may consist of two parts: a uniform portion that the Agency issues in all cases, and a supplemental portion that the Agency issues on a case-by-case basis at its discretion. The term "RCRA standardized permit" is defined in 35 Ill. Adm. Code 702.110.

1) The Uniform Portion. The uniform portion of a RCRA standardized permit consists of terms and conditions, relevant to the units operated at a facility, that appear in 35 Ill. Adm. Code 727 (Standards for Owners and Operators of Hazardous Waste Facilities Operating under a RCRA Standardized Permit). If an owner or operator intends to operate under the RCRA standardized permit, it must comply with the nationally applicable terms and conditions of 35 Ill. Adm. Code 727.

2) The Supplemental Portion. The supplemental portion of a RCRA standardized permit consists of site-specific terms and conditions, beyond those of the uniform portion, that the Agency may impose on a particular facility, as necessary to adequately protect human health and the environment. If the Agency issues a supplemental portion, the owner or operator must comply with the Agency-imposed site-specific terms and conditions.

A) When required pursuant to 35 Ill. Adm. Code 727.190(l), provisions to implement corrective action must be included in the supplemental portion.

B) Unless otherwise specified, the supplemental permit terms and conditions apply to a facility in addition to the terms and conditions of the uniform portion of the RCRA standardized permit and not in place of any of those terms and conditions.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.200 (2017).

b) Eligibility for a RCRA Standardized Permit

1) A facility owner or operator may be eligible for a RCRA standardized permit if it engages in either of the following:

A) It generates hazardous waste and then stores or non-thermally treats the hazardous waste on-site in containers, tanks, or containment buildings; or

B) It receives hazardous waste generated off-site by a generator under the same ownership as the receiving facility, and then it stores or non-thermally treats the hazardous waste in containers, tanks, or containment buildings.

C) In either case, the Agency must inform the owner or operator of its eligibility when a decision is made on its permit.

2) This subsection (b)(2) corresponds with 40 CFR 124.201(b), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal rule.

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.201 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.301 Applying for a RCRA Standardized Permit

a) Applying for a RCRA standardized permit.

1) A facility owner or operator must follow the requirements in this Subpart, as well as those in 35 Ill. Adm. Code 703.191 and Subparts B and J of 35 Ill. Adm. Code 703.

2) The owner or operator must submit to the Agency a written Notice of Intent to operate under the RCRA standardized permit. The owner or operator must also include the information and certifications required pursuant to Subpart J of 35 Ill. Adm. Code 703.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.202, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

b) Switching from an individual RCRA permit to a RCRA standardized permit. Where all units in the RCRA permit are eligible for a RCRA standardized permit, the owner or operator may request that the Agency reissue its individual permit as a RCRA standardized permit. Where only some of the units in the RCRA permit are eligible for the RCRA standardized permit, the owner or operator may request that the Agency modify its individual permit to no longer include those units and issue a RCRA standardized permit for those units. The Agency must modify or reissue any permit in accordance with 35 Ill. Adm. Code 705.128. The Agency must issue any RCRA standardized permit (or reissue a RCRA permit as a RCRA standardized permit) in accordance with Section 705.302(a).

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.203, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Added at 31 Ill. Reg. 706, effective December 20, 2006)

Section 705.302 Issuance of a RCRA Standardized Permit

a) Agency Preparation of a Draft RCRA Standardized Permit

1) The Agency must review the Notice of Intent and supporting information submitted by the facility owner or operator.

2) The Agency must determine whether the facility is or is not eligible to operate under the RCRA standardized permit.

A) If the facility is eligible for the RCRA standardized permit, the Agency must propose terms and conditions, if any, to include in a supplemental portion. If the Agency determines that these terms and conditions are necessary to adequately protect human health and the environment, and the terms and conditions cannot be imposed, the Agency must tentatively deny coverage under the RCRA standardized permit.

B) If the facility is not eligible for the RCRA standardized permit, the Agency must tentatively deny coverage under the RCRA standardized permit. Cause for ineligibility may include, but is not limited to, the following:

i) A failure of owner or operator to submit all the information required pursuant to 35 Ill. Adm. Code 703.351(b).

ii) Information submitted that is required pursuant to 35 Ill. Adm. Code 703.351(b) that is determined to be inadequate.

iii) The facility does not meet the eligibility requirements (its activities are outside the scope of the RCRA standardized permit).

iv) A demonstrated history of significant non-compliance with applicable requirements.

v) Permit conditions cannot ensure adequate protection of human health and the environment.

3) The Agency must prepare its draft permit decision within 120 days after receiving the Notice of Intent and supporting documents from a facility owner or operator. The Agency's tentative determination pursuant to this Section to deny or grant coverage under the RCRA standardized permit, including any proposed site-specific conditions in a supplemental portion, constitutes a draft permit decision. The Agency is allowed a one time extension of 30 days to prepare the draft permit decision. When the use of the 30-day extension is anticipated, the Agency must inform the permit applicant during the initial 120-day review period. Reasons for an

extension may include, but are not limited to, needing to complete review of submissions with the Notice of Intent (*e.g.*, closure plans, waste analysis plans, etc. for facilities seeking to manage hazardous waste generated off-site).

4) Many requirements in this Part and 35 Ill. Adm. Code 702 apply to processing the RCRA standardized permit application and preparing the Agency's draft permit decision. For example, the Agency's draft permit decision must be accompanied by a statement of basis or fact sheet and must be based on the administrative record. In preparing the Agency's draft permit decision, the following provisions of this Part and 35 Ill. Adm. Code 702 apply (subject to the following modifications):

A) Section 705.101 (Scope and Applicability): all subsections apply.

B) 35 Ill. Adm. Code 702.110 (Definitions): all definitions apply.

C) Sections 705.121 (Permit Application) and 705.124 (Site Visit): all subsections apply.

D) Section 705.127 (Consolidation of Permit Processing): applies.

E) Section 705.128 (Modification or Reissuance of Permits): does not apply.

F) Section 705.141 (Draft Permits): does not apply to the RCRA standardized permit; procedures in this Subpart G apply instead.

G) Section 705.142 (Statement of Basis): applies.

H) Section 705.143 (Fact Sheet): all subsections apply; however, in the context of the RCRA standardized permit, the reference to the public comment period is Section 705.303(b) instead of Subpart D.

I) Section 705.144 (Administrative Record for Draft Permits or Notices of Intent to Deny): all subsections apply.

J) Subpart D (Public Notice): only Section 705.163(a)(4) and (a)(5)(A) applies to the RCRA standardized permit. Most of Subpart D does not apply to the RCRA standardized permit; Section 705.303(a) through (c) applies instead.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.204 (2017).

b) Preparation of a Final RCRA Standardized Permit. The Agency must consider all comments received during the public comment period (see Section 705.303(b)) in

making its final permit decision. In addition, many requirements in this Part and 35 Ill. Adm. Code 702 apply to the public comment period, public hearings, and preparation of the Agency's final permit decision. In preparing a final permit decision, the following provisions of this Part and 35 Ill. Adm. Code 702 apply (subject to the following modifications):

1) Section 705.101 (Scope and Applicability): all subsections apply.

2) 35 Ill. Adm. Code 702.110 (Definitions): all definitions apply.

3) Section 705.181 (Public Comments and Requests for Public Hearings): Section 705.181 does not apply to the RCRA standardized permit; the procedures in Section 705.303(b) apply instead.

4) Section 705.182 (Public Hearings): Section 705.182(b), (c), and (d) applies.

5) Section 705.183 (Obligation to Raise Issues and Provide Information): all subsections apply; however, in the context of the RCRA standardized permit, the reference to the public comment period is Section 705.303(b) instead of Subpart D.

6) Section 705.184 (Reopening of the Public Comment Period): all of subsections apply; however, in the context of the RCRA standardized permit, the reference in Section 705.184(b)(1) to preparation of a draft permit is Section 705.302(a) instead of Section 705.141; the reference in Section 705.184(b)(3) to reopening or extending the comment period relates to Section 705.303(b); the reference in Section 705.184(c) to the public notice is Section 705.303(a) instead of Subpart D.

7) Section 705.201 (Final Permit Decision): all subsections apply; however, in the context of the RCRA standardized permit, the reference to the public comment period is Section 705.303(b) instead of Subpart D.

8) Section 705.202 (Stay of Permit Conditions upon Appeal): all subsections apply.

9) Section 705.210 (Agency Response to Comments): Section 705.210 does not apply to the RCRA standardized permit; procedures in Section 705.303(c) apply instead.

10) Section 705.211 (Administrative Record for Final Permit or Letters of Denial): all subsections apply, however, the reference to response to comments is Section 705.303(c) instead of Section 705.210.

11) Section 705.212 (Appeal of Agency Permit Determinations): all subsections apply.

12) Section 705.103 (Computation of Time): all subsections apply.

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.205 (2017).

c) When a facility owner or operator must apply for an individual permit.

1) Instances in which the Agency may determine that a facility is not eligible for the RCRA standardized permit include, but are not limited to, the following:

A) The facility does not meet the criteria in Section 705.300(b).

B) The facility has a demonstrated history of significant non-compliance with regulations or permit conditions.

C) The facility has a demonstrated history of submitting incomplete or deficient permit application information.

D) The facility has submitted incomplete or inadequate materials with the Notice of Intent (submitted pursuant to Section 705.301(a)(2)).

2) If the Agency determines that a facility is not eligible for the RCRA standardized permit, the Agency must inform the facility owner or operator that it must apply for an individual permit.

3) The Agency may require any facility that has a RCRA standardized permit to apply for and obtain an individual RCRA permit. Any interested person may petition the Agency to take action pursuant to this subsection (c)(3). Instances in which the Agency may require an individual RCRA permit include, but are not limited to, the following:

A) The facility is not in compliance with the terms and conditions of the standardized RCRA permit.

B) Circumstances have changed since the time the facility owner or operator applied for the RCRA standardized permit, so that the facility's hazardous waste management practices are no longer appropriately controlled under the RCRA standardized permit.

4) The Agency may require any facility authorized by a RCRA standardized permit to apply for an individual RCRA permit only if the Agency has notified the facility owner or operator in writing that an individual permit application is required. The Agency must include in this notice a brief

statement of the reasons for its decision, a statement setting a deadline for the owner or operator to file the application, and a statement that, on the effective date of the individual RCRA permit, the facility's RCRA standardized permit automatically terminates. The Agency may grant additional time upon request from the facility owner or operator.

5) When the Agency issues an individual RCRA permit to an owner or operator otherwise subject to a standardized RCRA permit, the RCRA standardized permit for that facility will automatically cease to apply on the effective date of the individual permit.

BOARD NOTE: Subsection (c) is derived from 40 CFR 124.206 (2017). An owner or operator authorized to operate under a RCRA standardized permit that is required by the Agency to submit an application for an individual permit pursuant to this subsection (c) may appeal that Agency determination before the Board pursuant to Section 40 of the Act and 35 Ill. Adm. Code 101 and 105.

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.303 Public Participation in the RCRA Standardized Permit Process

a) Requirements for Public Notices

1) The Agency must provide public notice of its draft permit decision and must provide an opportunity for the public to submit comments and request a hearing on that decision. The Agency must provide the public notice to the following persons:

A) The applicant;

B) Any other agency that the Agency knows has issued or is required to issue a RCRA permit for the same facility or activity (including USEPA when the draft permit is prepared by the State);

C) Federal and State agencies with jurisdiction over fish, shellfish, and wildlife resources and over coastal zone management plans, the Advisory Council on Historic Preservation, Illinois Historic Preservation Agency, including any affected states;

D) Everyone on the facility mailing list developed according to the requirements in Section 705.163(a)(4); and

E) Any units of local government having jurisdiction over the area where the facility is proposed to be located and to each State agency having any authority under State law with respect to the construction or operation of the facility.

2) The Agency must issue the public notice according to the following methods:

A) Publication in a daily or weekly major local newspaper of general circulation and broadcast over local radio stations;

B) In a manner constituting legal notice to the public under State law; and

C) Any other method reasonably calculated to give actual notice of the draft permit decision to the persons potentially affected by it, including press releases or any other forum or medium to elicit public participation.

3) The Agency must include the following information in the public notice:

A) The name and telephone number of the contact person at the facility.

B) The name and telephone number of the Agency's contact office, and a mailing address to which people may direct comments, information, opinions, or inquiries.

C) An address to which people may write to be put on the facility mailing list.

D) The location where people may view and make copies of the draft RCRA standardized permit and the Notice of Intent and supporting documents.

E) A brief description of the facility and proposed operations, including the address or a map (for example, a sketched or copied street map) of the facility location on the front page of the notice.

F) The date that the facility owner or operator submitted the Notice of Intent and supporting documents.

4) At the same time that the Agency issues the public notice pursuant to this Section, it must place the draft RCRA standardized permit (including both the uniform portion and the supplemental portion, if any), the Notice of Intent and supporting documents, and the statement of basis or fact sheet in a location accessible to the public in the vicinity of the facility or at the local Agency office.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.207 (2017).

b) Opportunities for Public Comment and Hearing on a Draft Permit Decision

1) The public notice that the Agency issues pursuant to Section 705.303(a) must allow at least 45 days for interested persons to submit written comments on its draft permit decision. This time is referred to as the public comment period. The Agency must automatically extend the public comment period to the close of any public hearing pursuant to this subsection (b). The hearing officer may also extend the comment period by so stating at the hearing.

2) During the public comment period, any interested person may submit written comments on the draft permit and may request a public hearing. Any request for a public hearing must be submitted to the Agency in writing. The request for a public hearing must state the nature of the issues that the requestor proposes to raise during the hearing.

3) The Agency must hold a public hearing whenever it receives a written notice of opposition to a RCRA standardized permit and a request for a public hearing within the public comment period pursuant to subsection (b)(1). The Agency may also hold a public hearing at its discretion, whenever, for instance, such a hearing might clarify one or more issues involved in the permit decision.

4) Whenever possible, the Agency must schedule a hearing pursuant to this subsection (b) at a location convenient to the nearest population center to the facility. The Agency must give public notice of the hearing at least 30 days before the date set for the hearing. (The Agency may give the public notice of the hearing at the same time it provides public notice of the draft permit, and the Agency may combine the two notices.)

5) The Agency must give public notice of the hearing according to the methods in Section 705.303(a)(1) and (a)(2). The hearing must be conducted according to the procedures in Section 705.182(b), (c), and (d).

6) In their written comments and during the public hearing, if held, interested persons may provide comments on the draft permit decision. These comments may include, but are not limited to, the facility's eligibility for the RCRA standardized permit, the tentative supplemental conditions proposed by the Agency, and the need for additional supplemental conditions.

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.208 (2017).

c) Requirements for Responding to Comments

1) At the time the Agency issues a final RCRA standardized permit, it must also respond to comments received during the public comment period on the draft permit. The Agency's response must do each of the following:

A) It must specify which additional conditions (i.e., those in the supplemental portion), if any, the Agency changed in the final permit, and the reasons for each change.

B) It must briefly describe and respond to all significant comments on the facility's ability to meet the general requirements (i.e., those terms and conditions in the uniform portion) and all significant comments on any additional conditions necessary to adequately protect human health and the environment that are raised during the public comment period or during the hearing.

C) It must make the comments and responses accessible to the public.

2) The Agency may request additional information from the facility owner or operator or inspect the facility if it needs additional information to adequately respond to significant comments or to make decisions about conditions that it may need to add to the supplemental portion of the RCRA standardized permit.

3) The Agency must include in the administrative record for its final permit decision any documents cited in the response to comments. If new points are raised or new material supplied during the public comment period, the Agency may document its response to those matters by adding new materials to the administrative record.

BOARD NOTE: Subsection (c) is derived from 40 CFR 124.209 (2017).

d) Appeal of a Final RCRA Standardized Permit by an Interested Party in the Permit Process. An interested party may petition the Board for administrative review of the Agency's final permit decision, including the Agency's decision that the facility is eligible for the RCRA standardized permit, according to the procedures of Section 705.212. However, the terms and conditions of the uniform portion of the RCRA standardized permit are not subject to administrative review pursuant to this subsection (d).

BOARD NOTE: Subsection (d) is derived from 40 CFR 124.210 (2017).

(Source: Amended at 42 Ill. Reg. 21179, effective November 19, 2018)

Section 705.304 Modifying a RCRA Standardized Permit

a) Permissible Types of Changes an Owner or Operator May Make to its RCRA Standardized Permit. A facility owner or operator may make a routine change, a routine change with prior Agency approval, or a significant change. For the purposes of this subsection (a), the following definitions apply:

"Routine change" is any change to the RCRA standardized permit that qualifies as a Class 1 permit modification (without prior Agency approval) pursuant to Appendix A to 35 Ill. Adm. Code 703.

"Routine change with prior Agency approval" is a change to the RCRA standardized permit that would qualify as a Class 1 modification with prior agency approval, or a Class 2 permit modification pursuant to Appendix A to 35 Ill. Adm. Code 703.

"Significant change" is any change to the RCRA standardized permit that falls into one of the following categories:

It qualifies as a Class 3 permit modification pursuant to Appendix A to 35 Ill. Adm. Code 703;

It is not explicitly identified in Appendix A to 35 Ill. Adm. Code 703; or

It amends any terms or conditions in the supplemental portion of the RCRA standardized permit.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.211 (2017).

b) Procedures to Make Routine Changes

1) An owner or operator can make routine changes to the RCRA standardized permit without obtaining approval from the Agency. However, the owner or operator must first determine whether the routine change it will make amends the information it submitted to the Agency pursuant to 35 Ill. Adm. Code 703.351(b) with its Notice of Intent to operate under the RCRA standardized permit.

2) If the routine changes that the owner or operator makes amend the information it submitted pursuant to 35 Ill. Adm. Code 703.351(b) with its Notice of Intent to operate under the RCRA standardized permit, then before the owner or operator makes the routine changes it must do both of the following:

A) It must submit to the Agency the revised information pursuant to 35 Ill. Adm. Code 703.351(b)(1); and

B) It must provide notice of the changes to the facility mailing list and to State and local governments in accordance with the procedures in Section 705.163(a)(4) and (a)(5).

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.212 (2017).

c) Procedures for Routine Changes with Prior Agency Approval

1) Routine changes to the RCRA standardized permit may only be made with the prior written approval of the Agency.

2) The owner or operator must also follow the procedures in subsections (b)(2)(A) and (b)(2)(B).

BOARD NOTE: Subsection (c) is derived from 40 CFR 124.213 (2017).

d) Procedures the Owner or Operator Must Follow to Make Significant Changes

1) The owner or operator must first provide notice of and conduct a public meeting.

A) Public meeting. The owner or operator must hold a meeting with the public to solicit questions from the community and inform the community of its proposed modifications to its hazardous waste management activities. The owner or operator must post a sign-in sheet or otherwise provide a voluntary opportunity for people attending the meeting to provide their names and addresses.

B) Public notice. At least 30 days before the owner or operator plans to hold the meeting, it must issue a public notice in accordance with 35 Ill. Adm. Code 703.191(d).

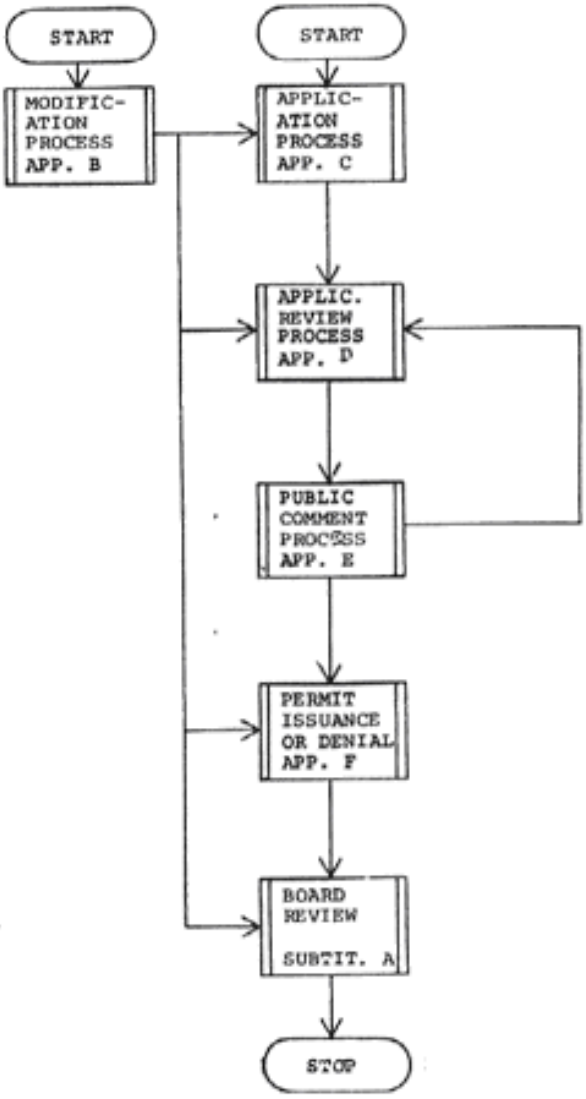
2) After holding the public meeting, the owner or operator must submit a modification request to the Agency that provides the following information:

A) It must describe the exact changes that the owner or operator wants and whether the changes are to information that the owner or operator provided pursuant to 35 Ill. Adm. Code 703.351(b) or to terms and conditions in the supplemental portion of its RCRA standardized permit;

B) It must explain why the modification is needed; and

C) It must include a summary of the public meeting held pursuant to subsection (d)(1), along with the list of attendees and their

addresses and copies of any written comments or materials they submitted at the meeting.



3) Once the Agency receives an owner's or operator's modification request, it must make a tentative determination within 120 days to approve or disapprove the request. The Agency is allowed a one time extension of 30 days to prepare the draft permit decision. When the use of the 30-day extension is anticipated, the Agency should inform the permit applicant during the initial 120-day review period.

4) After the Agency makes its tentative determination, the procedures in Sections 705.302(b) and 705.303 for processing an initial request for coverage under the RCRA standardized permit apply to making the final determination on the modification request.

BOARD NOTE: Subsection (d) is derived from 40 CFR 124.214 (2017).

Reg. 7590, effective April 15, 1998; amended in R97-21/R98-3/R98-5 at 22 Ill. Reg. 17496, effective September 28, 1998; amended in R98-21/R99-2/R99-7 at 23 Ill. Reg. 1704, effective January 19, 1999; amended in R99-15 at 23 Ill. Reg. 9094, effective July 26, 1999; amended in R00-5 at 24 Ill. Reg. 1063, effective January 6, 2000; amended in R00-13 at 24 Ill. Reg. 9443, effective June 20, 2000; amended in R01-3 at 25 Ill. Reg. 1266, effective January 11, 2001; amended in R01-21/R01-23 at 25 Ill. Reg. 9168, effective July 9, 2001; amended in R02-1/R02-12/R02-17 at 26 Ill. Reg. 6550, effective April 22, 2002; amended in R03-7 at 27 Ill. Reg. 3712, effective February 14, 2003; amended in R03-18 at 27 Ill. Reg. 12713, effective July 17, 2003; amended in R05-8 at 29 Ill. Reg. 5974, effective April 13, 2005; amended in R05-2 at 29 Ill. Reg. 6290, effective April 22, 2005; amended in R06-5/R06-6/R06-7 at 30 Ill. Reg. 2930, effective February 23, 2006; amended in R06-16/R06-17/R06-18 at 31 Ill. Reg. 730, effective December 20, 2006; amended in R07-5/R07-14 at 32 Ill. Reg. 11726, effective July 14, 2008; amended in R09-3 at 33 Ill. Reg. 922, effective December 30, 2008; amended in R09-16/R10-4 at 34 Ill. Reg. 18535, effective November 12, 2010; amended in R11-2/R11-16 at 35 Ill. Reg. 17672, effective October 14, 2011; amended in R12-7 at 36 Ill. Reg. 8740, effective June 4, 2012; amended in R13-5 at 37 Ill. Reg. 3180, effective March 4, 2013; amended in R13-15 at 37 Ill. Reg. 17726, effective October 24, 2013; amended in R14-1/R14-2/R14-3 at 38 Ill. Reg. 7189, effective March 13, 2014; amended in R14-13 at 38 Ill. Reg. 12378, effective May 27, 2014; amended in R15-1 at 39 Ill. Reg. 1542, effective January 12, 2015; amended in R16-7 at 40 Ill. Reg. 11286, effective August 9, 2016; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. 21215, effective November 19, 2018; amended in R19-3 at 43

Ill. Reg. 446, effective December 6, 2018; amended in R19-11 at 43 Ill. Reg. 5817, effective May 2, 2019; amended in R20-8/R20-16 at 44 Ill. Reg. 15067, effective September 3, 2020; amended in R21-13, R22-13, R24-4 at 48 Ill. Reg. 9723, effective June 20, 2024; amended in R24-12 at 48 Ill. Reg. 16776, effective November 7, 2024; amended in R25-22 at 49 Ill. Reg. 11338, effective August 27, 2025.

SUBPART A: GENERAL PROVISIONS

Section 720.101 Purpose, Scope, and Applicability

a) This Part provides definitions of terms, general standards, and overview information applicable to 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.

b) In this Part:

1) Section 720.102 provides the rules that the Board and the Agency will use in making information it receives available to the public and the requirements that a generator, transporter, or owner or operator of a treatment, storage, or disposal facility must follow to assert claims of business confidentiality with respect to information that is submitted to the Board or the Agency for the purpose of complying with 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.

2) Section 720.103 establishes rules of grammatical construction for the purpose of complying with 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.

3) Section 720.110 defines terms that are used in 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.102 Availability of Information; Confidentiality of Information

a) Availability and confidentiality of information is governed by Illinois law, including Sections 7 and 7.1 of the Act and 35 Ill. Adm. Code 130.

b) Except as provided under subsections (c) and (d), any person who submits information to the Board or the Agency under this Part or 35 Ill. Adm. Code 721 through 728 may assert a claim of business confidentiality by following the procedures in 35 Ill. Adm. Code 130. Information covered by the claim will be disclosed by the Board or the Agency only to the extent, and by means of the procedures, provided in 35 Ill. Adm. Code 130.

c) Public Disclosure of Hazardous Waste Manifest Documents

1) No claim of business confidentiality may be asserted by any person with respect to information entered on a hazardous waste manifest (USEPA Form 8700-22), a Hazardous Waste Manifest Continuation Sheet (USEPA Form 8700-22A), or an e-Manifest format that may be prepared and used in accordance with 35 Ill. Adm. Code 722.120(a)(3).

2) USEPA has stated that it will make any e-Manifest that is prepared and used under 35 Ill. Adm. Code 722.120(a)(3), or any paper manifest that is submitted to the e-Manifest System under 35 Ill. Adm. Code 724.171(a)(6) or 725.171(a)(6) available to the public under this Section when the electronic or paper manifest is a complete and final document. E-Manifests and paper manifests submitted to the e-Manifest System are complete and final documents, and they become publicly available information, after 90 days have passed since the delivery to the designated facility of the hazardous waste shipment identified in the manifest.

d) Claims of Confidentiality

1) A person may not assert any claim of business confidentiality with respect to information contained in cathode ray tube export documents prepared, used, and submitted under 35 Ill. Adm. Code 721.139(a)(5) and 721.141(a), and for the information contained in hazardous waste export, import, and transit documents prepared, used, and submitted under 35 Ill. Adm. Code 722.182, 722.183, 722.184, 723.120, 724.112, 724.171, 725.112, 725.171, and 727.171, whether submitted electronically into USEPA's Waste Import Export Tracking System or in paper format. After January 22, 2025, no claim of business confidentiality may be asserted by any person with respect to information contained in hazardous secondary material export documents prepared, used and submitted under Section 721.104(a)(25), whether submitted electronically into the USEPA's Waste Import Export Tracking System or in paper format.

2) USEPA will make any cathode ray tube export documents prepared, used, and submitted under 35 Ill. Adm. Code 721.139(a)(5) and 721.141(a) and any hazardous waste export, import, and transit documents prepared, used, and submitted under 35 Ill. Adm. Code 722.182, 722.183, 722.184, 723.120, 724.112, 724.171, 725.112, 725.171, and 727.171 available to the public under this Section when USEPA considers these electronic or paper documents to be final documents. USEPA considers these submitted electronic and paper documents related to hazardous waste exports, imports, and transits and cathode ray tube exports to be final documents on March 1 of the calendar year after the related cathode ray tube exports or hazardous waste exports, imports, or transits occur. After January 22, 2025, USEPA will make available to the public under this section any hazardous secondary material export documents prepared, used and submitted under Section 721.104(a)(25) on March 1 of the

calendar year after the related hazardous secondary material exports occur, when these documents are considered by the USEPA to be final documents.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.103 Use of Number and Gender

As used in 35 Ill. Adm. Code 720 through 728, 730, 733, 738, and 739:

a) Words in any of the masculine, feminine, or neuter genders also includes the other two;

b) Words in the singular include the plural; and

c) Words in the plural include the singular.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.104 Manifest Copy Submission Requirements for Certain Interstate Waste Shipments

If the state in which waste is generated or the state in which waste will be transported to a designated facility requires that the waste be regulated as a hazardous waste or otherwise be tracked through a hazardous waste manifest, the designated facility that receives the waste must, regardless of the state in which the designated facility is located must do the following:

a) Complete the facility portion of the applicable manifest;

b) Sign and date the facility certification;

c) Submit to the e-Manifest System a final copy of the manifest for data processing purposes; and

d) Pay the appropriate per manifest fee to USEPA for each manifest submitted to the e-Manifest System, subject to the fee determination methodology, payment methods, dispute procedures, sanctions, and other fee requirements specified in subpart FF of the applicable of 40 CFR 264 or 265, each incorporated by reference in Section 720.111.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.105 Applicability of Electronic Manifest System and User Fee Requirements to Facilities Receiving State-Only Regulated Waste Shipments

a) For this Section, “state-only regulated waste” means one of the following:

1) A waste that is not hazardous waste but for which a state regulatory program requires use of a manifest (USEPA Form 8700-22); or

2) A hazardous waste that is federally exempt from manifest requirements but not exempt from manifest requirements under state law.

b) In any case in which a state requires a manifest to be used under state law to track the shipping and transporting a state-only regulated waste to a receiving facility, the facility receiving the waste shipment for management must do both of the following:

1) Comply with 35 Ill. Adm. Code 724.171 (Use of Manifest System) and 724.172 (Manifest Discrepancies); and

2) Pay the appropriate per manifest fee to USEPA for each manifest submitted to the e-Manifest System, subject to the fee determination methodology, payment methods, dispute procedures, sanctions, and other fee requirements specified in subpart FF of 40 CFR 264, incorporated by reference in Section 720.111.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.109 Electronic Reporting

a) Scope and Applicability

1) The USEPA, the Board, or the Agency may allow for submitting any document as an electronic document in lieu of a paper document. This Section does not require submitting electronic documents in lieu of paper documents. This Section specifies the requirements for any document that must be submitted to the appropriate of the following:

A) To USEPA directly under Title 40 of the Code of Federal Regulations; or

B) To the Board or the Agency under any provision of 35 Ill. Adm. Code 702 through 705, 720 through 728, 730, 733, 738, or 739.

2) Electronic document submission under this Section can occur only as follows:

A) For submissions of documents to USEPA, submissions may occur only after USEPA has published a notice in the Federal Register announcing that USEPA is prepared to receive, in an electronic

format, documents required or permitted by the identified part or subpart of Title 40 of the Code of Federal Regulations; or

B) For submissions of documents to the State, submissions may occur only under the following circumstances:

i) To the Board, into the Clerk's Office On-Line (COOL) system at www.pcb.illinois.gov.

ii) To the Agency, into any electronic document receiving system for which USEPA has granted approval under 40 CFR 3.1000, so long as the system complies with 40 CFR 3.2000, incorporated by reference in Section 611.102(c), and USEPA has not withdrawn its approval of the system in writing.

3) This Section does not apply to any of the following documents, whether the document is a document submitted to satisfy the requirements cited in subsection (a)(1):

A) Any document submitted via facsimile;

B) Any document submitted via magnetic or optical media, e.g., a diskette, compact disc, digital video disc, or tape; or

C) Any data transfer between USEPA, any state, or any local government and either the Board or the Agency as part of administrative arrangements between the parties to the transfer to share data.

4) Upon USEPA conferring written approval for submitting any types of documents as electronic documents in lieu of paper documents, as described in subsection (a)(2)(B), the Agency or the Board, as appropriate, must publish a Notice of Public Information in the Illinois Register that describes the documents approved for submission as electronic documents, the electronic document receiving system approved to receive them, the acceptable formats and procedures for their submission, and, as applicable, the date on which the Board or the Agency will begin to receive those submissions. If USEPA ceases approval in writing for receiving any type of document as an electronic document in lieu of a paper document, the Board or the Agency must similarly publish a Notice of Public Information in the Illinois Register.

BOARD NOTE: Subsection (a) is derived from 40 CFR 3.1, 3.2, 3.10, 3.20, and 3.1000.

b) Definitions. For this Section, terms will have the meaning attributed them in 40 CFR 3.3, incorporated by reference in 35 Ill. Adm. Code 720.111(b).

c) Procedures for Submitting Electronic Documents in Lieu of Paper Documents to USEPA. Except as provided in subsection (a)(3), any person who is required under Title 40 of the Code of Federal Regulations to create and submit or otherwise provide a document to USEPA may satisfy this requirement with an electronic document, in lieu of a paper document, provided the following conditions are met:

1) The person complies with 40 CFR 3.10, incorporated by reference in Section 720.111(b); and

2) USEPA has first published a notice in the Federal Register as described in subsection (a)(2)(A).

BOARD NOTE: Subsection (c) is derived from 40 CFR 3.2(a) and subpart B of 40 CFR 3.

d) Procedures for Submitting Electronic Documents in Lieu of Paper Documents to the Board or the Agency

1) The Board or the Agency may establish procedural rules for submitting electronic documents. The Board or the Agency must establish any procedural rules under the Administrative Procedure Act [5 ILCS 100/Art. 5].

2) The Board or the Agency may accept electronic documents under this Section only as provided in subsection (a)(2)(B).

BOARD NOTE: Subsection (d) is derived from 40 CFR 3.2(b) and subpart D of 40 CFR 3.

e) Effects of Submitting an Electronic Document in Lieu of Paper Documents

1) If a person who submits a document as an electronic document fails to comply with this Section, that person is subject to the penalties prescribed for failure to comply with the requirement that the electronic document was intended to satisfy.

2) If a document submitted as an electronic document to satisfy a reporting requirement bears an electronic signature, the electronic signature legally binds, obligates, and makes the signer responsible to the same extent as the signer's handwritten signature would on a paper document submitted to satisfy the same reporting requirement.

3) Proof that a particular signature device was used to create an electronic signature will suffice to establish that the individual uniquely entitled to use the device did so with the intent to sign the electronic document and give it effect.

4) Nothing in this Section limits the use of electronic documents or information derived from electronic documents as evidence in enforcement or other proceedings.

BOARD NOTE: Subsection (e) is derived from 40 CFR 3.4 and 3.2000(c).

f) Public Document Subject to State Laws. Any electronic document filed with the Board is a public document. The document, its submission, its retention by the Board, and its availability for public inspection and copying are subject to various State laws, including the following:

1) The Administrative Procedure Act;

2) The Freedom of Information Act [5 ILCS 140];

3) The State Records Act [5 ILCS 160];

4) The Electronic Commerce Security Act [5 ILCS 175];

5) The Act;

6) Regulations relating to public access to Board records (2 Ill. Adm. Code 2175); and

7) Board procedural rules relating to protecting trade secrets and confidential information (35 Ill. Adm. Code 130).

g) Nothing in this Section or in any provisions adopted under subsection (d)(1) will create any right or privilege to submit any document as an electronic document.

BOARD NOTE: Subsection (g) is derived from 40 CFR 3.2 (c).

BOARD NOTE: Derived from 40 CFR 3, 145.11(a)(33), 271.10(b), 271.11(b), and 271.12(h).

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

SUBPART B: DEFINITIONS AND REFERENCES

Section 720.110 Definitions

When used in 35 Ill. Adm. Code 720 through 728, 733, 738, and 739 only, the following terms have the meanings given below:

"Aboveground tank" means a device meeting the definition of tank that is situated so that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) can be visually inspected.

"Active life" of a facility means the period from the initial receipt of hazardous waste at the facility until the Agency receives certification of final closure.

"Active portion" means that portion of a facility where treatment, storage, or disposal operations are being or have been conducted after May 19, 1980, and that is not a closed portion. (See also "closed portion".)

"Acute hazardous waste" means hazardous waste that meets the listing criteria in 35 Ill. Adm. Code 721.111(a)(2) and therefore is either listed in 35 Ill. Adm. Code 721.131 with the assigned hazard code of (H) or is listed in 35 Ill. Adm. Code 721.133(e).
BOARD NOTE: These are USEPA hazardous waste numbers F020, F021, F022, F023, F026, and F027, and all USEPA hazardous waste numbers having the prefix "P".

"Administrator" means the Administrator of the United States Environmental Protection Agency or the Administrator's designee.

"Aerosol can" means a non-refillable receptacle containing a gas compressed, liquefied, or dissolved under pressure, the sole purpose of which is to expel a liquid, paste, or powder, and fitted with a self-closing release device allowing the gas to eject the contents.

"Agency" means the Illinois Environmental Protection Agency.

"Airbag waste" means any hazardous waste airbag modules or hazardous waste airbag inflators.

"Airbag waste collection facility" means any facility that receives airbag waste from airbag handlers subject to regulation under 35 Ill. Adm. Code 721.104(j) and that accumulates the waste for more than ten days.

"Airbag waste handler" means any person, by site, that generates airbag waste that is subject to regulation under 35 Ill. Adm. Code 721.104(j).

"Ancillary equipment" means any devices, like piping, fittings, flanges, valves, and pumps, that are used to distribute, meter, or control the flow of hazardous waste from its point of generation to storage or treatment tanks, between hazardous waste

storage and treatment tanks to a point of disposal onsite, or to a point of shipment for disposal off-site.

"Aquifer" means a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of groundwater to wells or springs.

"Authorized representative" means the person overall responsible for operating a facility or an operational unit (i.e., part of a facility), e.g., the plant manager, superintendent, or person of equivalent responsibility.

"Battery" means a device that consists of one or more electrically connected electrochemical cells that is designed to receive, store, and deliver electric energy. An electrochemical cell is a system consisting of an anode, cathode, and an electrolyte, plus those connections (electrical and mechanical) that are needed to allow the cell to deliver or receive electrical energy. The term battery also includes an intact, unbroken battery from which the electrolyte has been removed.

"Board" means the Illinois Pollution Control Board.

"Boiler" means an enclosed device using controlled flame combustion and having the following characteristics:

Boiler by physical characteristics:

The unit must have physical provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases; and the unit's combustion chamber and primary energy recovery sections must be of integral design. To be of integral design, the combustion chamber and the primary energy recovery sections (like waterwalls and superheaters) must be physically formed into one manufactured or assembled unit. A unit in which the combustion chamber and the primary energy recovery sections are joined only by ducts or connections carrying flue gas is not integrally designed; however, secondary energy recovery equipment (like economizers or air preheaters) need not be physically formed into the same unit as the combustion chamber and the primary energy recovery section. The following units are not precluded from being boilers solely because they are not of integral design: process heaters (units that transfer energy directly to a process stream) and fluidized bed combustion units; and

While in operation, the unit must maintain a thermal energy recovery efficiency of at least 60 percent, calculated in terms of the recovered energy compared with the thermal value of the fuel; and

The unit must export and utilize at least 75 percent of the recovered energy, calculated on an annual basis. In this calculation, no credit may be given for recovered heat used internally in the same unit. (Examples of internal use are the preheating of fuel or combustion air, and the driving of induced or forced draft fans or feedwater pumps.); or

Boiler by designation. The unit is one that the Board has determined, on a case-by-case basis, to be a boiler, after considering the standards in Section 720.132.

"Carbon dioxide stream" means carbon dioxide that has been captured from an emission source (e.g., a power plant), plus incidental associated substances derived from the source materials and the capture process, and any substances added to the stream to enable or improve the injection process.

"Carbon regeneration unit" means any enclosed thermal treatment device used to regenerate spent activated carbon.

"Cathode ray tube" or "CRT" means a vacuum tube, composed primarily of glass, which is the visual or video display component of an electronic device. A "used, intact CRT" means a CRT whose vacuum has not been released. A "used, broken CRT" means glass removed from its housing or casing whose vacuum has been released.

"Central accumulation area" means any on-site area where hazardous waste is accumulating in units subject to either 35 Ill. Adm. Code 722.116 (for an SQG) or 35 Ill. Adm. Code 722.117 (for an LQG). A central accumulation area at an eligible academic entity that chooses to operate under Subpart K of 35 Ill. Adm. Code 722 is also subject to 35 Ill. Adm. Code 722.311 when accumulating unwanted material or hazardous waste.

"Certification" means a statement of professional opinion based upon knowledge and belief.

"Closed portion" means that portion of a facility that an owner or operator has closed in compliance with the approved facility closure plan and all applicable closure requirements. (See also "active portion".)

"Component" means either the tank or ancillary equipment of a tank system.

"Confined aquifer" means an aquifer bounded above and below by impermeable beds or by beds of distinctly lower permeability than that of the aquifer itself; an aquifer containing confined groundwater.

"Contained" means held in a unit (including a land-based unit, as defined in this Section) that meets either of the following containment situations:

Containment situation 1 (non-hazardous waste containment):

The unit is in good condition, with no leaks or other continuing or intermittent unpermitted releases of the hazardous secondary materials to the environment, and is designed, as appropriate for the hazardous secondary materials, to prevent unpermitted releases of hazardous secondary materials to the environment.

"Unpermitted releases" are releases that are not covered by a permit (e.g., a permit to discharge to water or air) and may include releases through surface transport by precipitation run-off, releases to soil and groundwater, windblown dust, fugitive air emissions, and catastrophic unit failures;

The unit is properly labeled or otherwise has a system (like a log) to immediately identify the hazardous secondary materials in the unit; and

The unit holds hazardous secondary materials that are compatible with other hazardous secondary materials placed in the unit, is compatible with the materials used to construct the unit and addresses any potential risks of fires or explosions.

Containment situation 2 (hazardous waste containment):

Hazardous secondary materials in units that meet the applicable requirements of 35 Ill. Adm. Code 724 or 725 are presumptively contained.

"Container" means any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled.

"Containment building" means a hazardous waste management unit that is used to store or treat hazardous waste under the provisions of Subpart DD of 35 Ill. Adm. Code 724 and Subpart DD of 35 Ill. Adm. Code 725.

"Contingency plan" means a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents that could threaten human health or the environment.

"Corrosion expert" means a person who, by reason of knowledge of the physical sciences and the principles of engineering and mathematics, acquired by a

professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. The person must be certified as being qualified by the National Association of Corrosion Engineers (NACE) or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control on buried or submerged metal piping systems and metal tanks.

"CRT collector" means a person that receives used, intact CRTs for recycling, repair, resale, or donation.

"CRT exporter" means any person in the United States that initiates a transaction to send used CRTs outside the United States or its territories for recycling or reuse, or any intermediary in the United States arranging for the export.

"CRT glass manufacturer" means an operation or part of an operation that uses a furnace to manufacture CRT glass.

"CRT processing" means conducting the following activities:

Receiving broken or intact CRTs;

Intentionally breaking intact CRTs or further breaking or separating broken CRTs; and

Sorting or otherwise managing glass removed from CRT monitors.

"Designated facility" means either of the following entities:

A hazardous waste treatment, storage, or disposal facility that has been designated on the manifest by the generator, under 35 Ill. Adm. Code 722.120, of which any of the following is true:

The facility has received a RCRA permit (or interim status) under 35 Ill. Adm. Code 702, 703, and 705;

The facility has received a RCRA permit from USEPA under 40 CFR 124 and 270;

The facility has received a RCRA permit from a state authorized by USEPA under 40 CFR 271; or

The facility is regulated under 35 Ill. Adm. Code 721.106(c)(2) or Subpart F of 35 Ill. Adm. Code 726; or

A generator site designated by the hazardous waste generator on the manifest to receive back its own waste as a return shipment from a

designated hazardous waste treatment, storage, or disposal facility that has rejected the waste according to 35 Ill. Adm. Code 724.172(f) or 725.172(f).

If a waste is destined to a facility in a state other than Illinois that has been authorized by USEPA under 40 CFR 271, but that has not yet obtained authorization to regulate that waste as hazardous, then the designated facility must be a facility allowed by the receiving state to accept the waste.

"Destination facility" means a facility that treats, disposes of, or recycles a particular category of universal waste, except those management activities described in 35 Ill. Adm. Code 733.113(a) and (c) and 733.133(a) and (c). A facility at which a particular category of universal waste is only accumulated is not a destination facility for managing that category of universal waste.

"Dike" means an embankment or ridge of either natural or manmade materials used to prevent the movement of liquids, sludges, solids, or other materials.

"Dioxins and furans" means tetra-, penta-, hexa-, hepta-, and octa-chlorinated dibenzodioxins and furans.

"Director" means the Director of the Illinois Environmental Protection Agency.

"Discharge" or "hazardous waste discharge" means the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water.

"Disposal" means the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that the solid waste or hazardous waste or any of its constituent may enter the environment or be emitted into the air or discharged into any waters, including groundwaters.

"Disposal facility" means a facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water and at which waste will remain after closure. The term disposal facility does not include a corrective action management unit (CAMU) into which remediation wastes are placed.

"Drip pad" means an engineered structure consisting of a curbed, free-draining base, constructed of non-earthen materials and designed to convey preservative kick-back or drippage from treated wood, precipitation and surface water run-on to an associated collection system at wood preserving plants.

"Electronic import-export reporting compliance date" means the date that USEPA will announce in the Federal Register, on or after which exporters, importers, and receiving facilities will be required to submit certain export and import related

documents to USEPA using USEPA's Waste Import Export Tracking System, or its successor system.
BOARD NOTE: A compliance date in Illinois regulations is limited to a date certain on or after the Board has adopted the date by rulemaking. Adoption by rulemaking of the electronic import-export reporting compliance date can occur only after USEPA has made its announcement in the Federal Register. Until the Board has incorporated a date certain by rulemaking, the Board intends that no "electronic import-export reporting compliance date" will apply in the context of the Illinois rules. The federal electronic import-export reporting compliance date named by USEPA, however, may apply as provided by federal law.

"Electronic manifest" or "e-Manifest" means the electronic format of the hazardous waste manifest that is obtained from USEPA's national e-Manifest System and transmitted electronically to the e-Manifest System, and that is the legal equivalent of USEPA Forms 8700-22 (Manifest) and 8700-22A (Continuation Sheet).

"Electronic Manifest System" or "e-Manifest System" means USEPA's national information technology system through which the e-Manifest may be obtained, completed, transmitted, and distributed to users of the e-Manifest System and to regulatory agencies.

"Elementary neutralization unit" means a device that meets the following:

It is used for neutralizing wastes that are hazardous only because they exhibit the corrosivity characteristic defined in 35 Ill. Adm. Code 721.122 or that are listed in Subpart D of 35 Ill. Adm. Code 721 only for this reason; and

It meets the definition of tank, tank system, container, transport vehicle, or vessel in this Section.

"EPA region" or "USEPA region" means the states and territories found in any one of the following ten regions:

Region I: Maine, Vermont, New Hampshire, Massachusetts, Connecticut, and Rhode Island.

Region II: New York, New Jersey, Commonwealth of Puerto Rico, and the U.S. Virgin Islands.

Region III: Pennsylvania, Delaware, Maryland, West Virginia, Virginia, and the District of Columbia.

Region IV: Kentucky, Tennessee, North Carolina, Mississippi, Alabama, Georgia, South Carolina, and Florida.

Region V: Minnesota, Wisconsin, Illinois, Michigan, Indiana, and Ohio.

Region VI: New Mexico, Oklahoma, Arkansas, Louisiana, and Texas.

Region VII: Nebraska, Kansas, Missouri, and Iowa.

Region VIII: Montana, Wyoming, North Dakota, South Dakota, Utah, and Colorado.

Region IX: California, Nevada, Arizona, Hawaii, Guam, American Samoa, and Commonwealth of the Northern Mariana Islands.

Region X: Washington, Oregon, Idaho, and Alaska.

"Equivalent method" means any testing or analytical method approved by the Board under Section 720.120.

"Existing hazardous waste management (HWM) facility" or "existing facility" means a facility that was in operation or for which construction commenced on or before November 19, 1980. A facility commenced construction if the owner or operator obtained the federal, State, and local approvals or permits necessary to begin physically constructing the facility and either of the following occurred:

A continuous on-site, physical construction program began; or

The owner or operator entered contractual obligations that could not be canceled or modified without substantial loss for physically constructing the facility to be completed within a reasonable time.

"Existing portion" means that land surface area of an existing waste management unit, included in the original RCRA Part A permit application, on which wastes have been placed prior to the issuance of a permit.

"Existing tank system" or "existing component" means a tank system or component that is used for the storage or treatment of hazardous waste and that was in operation, or for which installation was commenced, on or prior to July 14, 1986. Installation will be considered to have commenced if the owner or operator has obtained all federal, State, and local approvals or permits necessary to begin physically constructing the site or installing the tank system and if either of the following is met:

A continuous on-site physical construction or installation program has begun; or

The owner or operator entered contractual obligations that cannot be canceled or modified without substantial loss for physically constructing the site or installing the tank system to be completed within a reasonable time.

"Explosives or munitions emergency" means a situation involving the suspected or detected presence of unexploded ordnance (UXO), damaged or deteriorated explosives or munitions, an improvised explosive device (IED), other potentially explosive material or device, or other potentially harmful military chemical munitions or device, that creates an actual or potential imminent threat to human health, including safety, or the environment, including property, as determined by an explosives or munitions emergency response specialist. These situations may require immediate and expeditious action by an explosives or munitions emergency response specialist to control, mitigate, or eliminate the threat.

"Explosives or munitions emergency response" means all immediate response activities by an explosives and munitions emergency response specialist to control, mitigate, or eliminate the actual or potential threat encountered during an explosives or munitions emergency. An explosives or munitions emergency response may include in-place render-safe procedures, treatment, or destruction of the explosives or munitions or transporting those items to another location to be rendered safe, treated, or destroyed. Any reasonable delay in completing an explosives or munitions emergency response caused by a necessary, unforeseen, or uncontrollable circumstance will not terminate the explosives or munitions emergency. Explosives and munitions emergency responses can occur on either public or private lands and are not limited to responses at RCRA facilities.

"Explosives or munitions emergency response specialist" means an individual trained in chemical or conventional munitions or explosives handling, transportation, render-safe procedures, or destruction techniques. Explosives or munitions emergency response specialists include United States Department of Defense (USDOD) emergency explosive ordnance disposal (EOD), technical escort unit (TEU), and USDOD-certified civilian or contractor personnel and other federal, State, or local government or civilian personnel who are similarly trained in explosives or munitions emergency responses.

"Facility" means the following:

All contiguous land and structures, other appurtenances, and improvements on the land used for treating, storing, or disposing of hazardous waste or for managing hazardous secondary materials prior to reclamation. A facility may comprise several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combinations of them).

For implementing corrective action under 35 Ill. Adm. Code 724.201 or 35 Ill. Adm. Code 727.201, all contiguous property under the control of the owner or operator seeking a permit under Subtitle C of RCRA. This

definition also applies to facilities implementing corrective action under RCRA section 3008(h).

Despite the immediately-preceding paragraph of this definition, a remediation waste management site is not a facility that is subject to 35 Ill. Adm. Code 724.201, but a facility that is subject to corrective action requirements if the site is located within the facility.

"Federal agency" means any department, agency, or other instrumentality of the federal government, any independent agency or establishment of the federal government, including any government corporation and the Government Printing Office.

"Federal, State, and local approvals or permits necessary to begin physically constructing" means permits and approvals required under federal, State, or local hazardous waste control statutes, regulations, or ordinances.

"Final closure" means the closure of all hazardous waste management units at the facility in compliance with all applicable closure requirements so that hazardous waste management activities under 35 Ill. Adm. Code 724 and 725 are no longer conducted at the facility unless subject to the provisions of 35 Ill. Adm. Code 722.116 and 722.117.

"Food-chain crops" means tobacco, crops grown for human consumption, and crops grown for feed for animals whose products are consumed by humans.

"Freeboard" means the vertical distance between the top of a tank or surface impoundment dike and the surface of the waste contained therein.

"Free liquids" means liquids that readily separate from the solid portion of a waste under ambient temperature and pressure.

"Generator" means any person, by site, whose act or process produces hazardous waste identified or listed in 35 Ill. Adm. Code 721 or whose act first causes a hazardous waste to become subject to regulation.

"Groundwater" means water below the land surface in a zone of saturation.

"Hazardous secondary material" means a secondary material (e.g., spent material, by-product, or sludge) that, when discarded, would be identified as hazardous waste under 35 Ill. Adm. Code 721.

"Hazardous secondary material generator" means any person whose act or process produces hazardous secondary materials at the generating facility. For this definition, "generating facility" means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator. For Sections

721.102(a)(2)(B) and 721.104(a)(23), a facility that collects hazardous secondary materials from other persons is not the hazardous secondary material generator.

"Hazardous waste" means a hazardous waste as defined in 35 Ill. Adm. Code 721.103.

"Hazardous waste constituent" means a constituent that caused the hazardous waste to be listed in Subpart D of 35 Ill. Adm. Code 721, or a constituent listed in 35 Ill. Adm. Code 721.124.

"Hazardous waste management unit" is a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area. Examples of hazardous waste management units include a surface impoundment, a waste pile, a land treatment area, a landfill cell, an incinerator, a tank and its associated piping and underlying containment system, and a container storage area. A container alone does not constitute a unit; the unit includes containers, and the land or pad upon which they are placed.

"Incinerator" means any enclosed device that:

Uses controlled flame combustion, and the device:

Does not meet the criteria for classification as a boiler, sludge dryer, or carbon regeneration unit, nor

Is not listed as an industrial furnace; or

Meets the definition of infrared incinerator or plasma arc incinerator.

"Incompatible waste" means a hazardous waste that is unsuitable for the following:

Placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., container inner liners or tank walls); or

Commingling with another waste or material under uncontrolled conditions because the commingling might produce heat or pressure, fire, or explosion, violent reaction, toxic dusts, mists, fumes or gases, or flammable fumes or gases.

(See Appendix E to 35 Ill. Adm. Code 724 and Appendix E to 35 Ill. Adm. Code 725 for references that list examples.)

"Individual generator site" means the contiguous site at or on which one or more hazardous wastes are generated. An individual generator site, like a large

manufacturing plant, may have one or more sources of hazardous waste but is considered a single or individual generator site if the site or property is contiguous.

"Industrial furnace" means any of the following enclosed devices that are integral components of manufacturing processes and that use thermal treatment to accomplish recovery of materials or energy:

Cement kilns;

Lime kilns;

Aggregate kilns;

Phosphate kilns;

Coke ovens;

Blast furnaces;

Smelting, melting, and refining furnaces (including pyrometallurgical devices like cupolas, reverberator furnaces, sintering machines, roasters, and foundry furnaces);

Titanium dioxide chloride process oxidation reactors;

Methane reforming furnaces;

Pulping liquor recovery furnaces;

Combustion devices used in the recovery of sulfur values from spent sulfuric acid;

Halogen acid furnaces (HAFs) for producing acid from halogenated hazardous waste generated by chemical production facilities where the furnace is located on the site of a chemical production facility, the acid product has a halogen acid content of at least three percent, the acid product is used in a manufacturing process, and, except for hazardous waste burned as fuel, hazardous waste fed to the furnace has a minimum halogen content of 20 percent, as generated; and

Any other device that the Agency determines to be an industrial furnace based on one or more of the following factors:

The design and use of the device primarily to accomplish recovery of material products;

The use of the device to burn or reduce raw materials to make a material product;

The use of the device to burn or reduce secondary materials as effective substitutes for raw materials, in processes using raw materials as principal feedstocks;

The use of the device to burn or reduce secondary materials as ingredients in an industrial process to make a material product;

The use of the device in common industrial practice to produce a material product; and

Other relevant factors.

"Infrared incinerator" means any enclosed device that uses electric powered resistance heaters as a source of radiant heat followed by an afterburner using controlled flame combustion and that is not listed as an industrial furnace.

"Inground tank" means a device meeting the definition of tank with any portion of the tank wall situated within the ground, so that the ground prevents visually inspecting that external surface area of the tank.

"In operation" refers to a facility that is treating, storing, or disposing of hazardous waste.

"Injection well" means a well into which fluids are being injected. (See also "underground injection".)

"Inner liner" means a continuous layer of material placed inside a tank or container that protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste.

"Installation inspector" means a person who, by reason of knowledge of the physical sciences and the principles of engineering, acquired by a professional education and related practical experience, is qualified to supervise installing tank systems.

"Intermediate facility" means any facility that stores hazardous secondary materials for more than ten days and that is neither a hazardous secondary material generator nor a reclaimer of hazardous secondary material.

"International shipment" means transporting hazardous waste into or out of the jurisdiction of the United States.

"Lamp" or "universal waste lamp" means the bulb or tube portion of an electric lighting device. A lamp is specifically designed to produce radiant energy, most

often in the ultraviolet, visible, or infrared regions of the electromagnetic spectrum. Examples of common universal waste lamps include fluorescent, high intensity discharge, neon, mercury vapor, high-pressure sodium, and metal halide lamps.

"Land-based unit" means an area where hazardous secondary materials are placed in or on the land before recycling. This definition does not include land-based production units.

"Land treatment facility" means a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; these facilities are disposal facilities if the waste will remain after closure.

"Landfill" means a disposal facility or part of a facility where hazardous waste is placed in or on land and that is not a pile, a land treatment facility, a surface impoundment, an underground injection well, a salt dome formation, a salt bed formation, an underground mine, a cave, or a corrective action management unit (CAMU).

"Landfill cell" means a discrete volume of a hazardous waste landfill that uses a liner to isolate wastes from adjacent cells or wastes. Examples of landfill cells are trenches and pits.

"Large quantity generator" or "LQG" means a generator that generates any of the following amounts of material in a calendar month:

Greater than or equal to 1,000 kg (2,200 lbs) of non-acute hazardous waste;

Greater than 1 kg (2.2 lbs) of acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e); or

Greater than 100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e).

"LDS" means leak detection system.

"Leachate" means any liquid, including any suspended components in the liquid, that has percolated through or drained from hazardous waste.

"Liner" means a continuous layer of natural or manmade materials beneath or on the sides of a surface impoundment, landfill, or landfill cell that restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate.

"Leak-detection system" means a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary containment structure. The system must employ operational controls (e.g., daily visual inspections for releases into the secondary containment system of aboveground tanks) or comprise an interstitial monitoring device designed to detect continuously and automatically the failure of the primary or secondary containment structure or the presence of a release of hazardous waste into the secondary containment structure.

"Management" or "hazardous waste management" means the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste.

"Manifest" means the shipping document USEPA Form 8700-22 (including, if necessary, USEPA Form 8700-22A), or the e-Manifest, originated and signed in compliance with the applicable requirements of 35 Ill. Adm. Code 722 through 727.

"Manifest tracking number" means the alphanumeric identification number (i.e., a unique three letter suffix preceded by nine numerical digits) that is pre-printed in Item 4 of the manifest by a registered source.

"Mercury-containing equipment" means a device or part of a device (including thermostats but excluding batteries and lamps) that contains elemental mercury integral to its function.

"Military munitions" means all ammunition products and components produced or used by or for the United States Department of Defense or the United States Armed Services for national defense and security, including military munitions under the control of the United States Department of Defense (USDOD), the United States Coast Guard, the United States Department of Energy (USDOE), and National Guard personnel. The term military munitions includes: confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, smokes, and incendiaries used by USDOD components, including bulk explosives and chemical warfare agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components of these items and devices. Military munitions do not include wholly inert items, improvised explosive devices, and nuclear weapons, nuclear devices, and nuclear components of these items and devices. However, the term does include non-nuclear components of nuclear devices, managed under USDOE's nuclear weapons program after all sanitization operations required under the Atomic Energy Act of 1954 (42 U.S.C. 2014 et seq.), as amended, have been completed.

"Mining overburden returned to the mine site" means any material overlying an economic mineral deposit that is removed to gain access to that deposit and is then used for reclaiming a surface mine.

"Miscellaneous unit" means a hazardous waste management unit where hazardous waste is treated, stored, or disposed of and that is not a container; tank; surface impoundment; pile; land treatment unit; landfill; incinerator; boiler; industrial furnace; underground injection well with appropriate technical standards under 35 Ill. Adm. Code 730; containment building; corrective action management unit (CAMU); unit eligible for a research, development, and demonstration permit under 35 Ill. Adm. Code 703.231; or staging pile.

"Movement" means hazardous waste that is transported to a facility in an individual vehicle.

"NAICS Code" means the code number assigned a facility using the "North American Industry Classification System", incorporated by reference in Section 720.111.

"New hazardous waste management facility", "new HWM facility", or "new facility" means a facility that began operation, or for which construction commenced after November 19, 1980. (See also "Existing hazardous waste management facility".)

"New tank system" or "new tank component" means a tank system or component that will be used for the storage or treatment of hazardous waste and for which installation commenced after July 14, 1986; except for 35 Ill. Adm. Code 724.293(g)(2) and 725.293(g)(2), a new tank system is one for which construction commenced after July 14, 1986. (See also "existing tank system".)

"No free liquids", as used in 35 Ill. Adm. Code 721.104(a)(26) and (b)(18), means that solvent-contaminated wipes may not contain free liquids, as determined by Method 9095B (Paint Filter Liquids Test), included in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", incorporated by reference in Section 720.111, and that there is no free liquid in the container holding the wipes. No free liquids may also be determined using another standard or test method that the Agency has determined by permit condition is equivalent to Method 9095B.

"Non-acute hazardous waste" means hazardous waste that is not acute hazardous waste, as defined in this Section.

"On-ground tank" means a device meeting the definition of tank whose bottom is situated on the same level as the adjacent surrounding surfaces so that visually inspecting the external tank bottom is not possible.

"On-site" means the same or geographically contiguous property that may be divided by public or private right-of-way, provided the entrance and exit between the properties is at a crossroads intersection and access is by crossing as opposed to going along the right-of-way. Non-contiguous properties owned by the same person but connected by a right-of-way that the owner controls and to which the public does not have access is also considered on-site property.

"Open burning" means combusting any material without the following characteristics:

Controlling combustion air to maintain adequate temperature for efficient combustion;

Containing the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion; and

Controlling emission of the gaseous combustion products.
(See also "incineration" and "thermal treatment".)

"Operator" means the person responsible for the overall operating of a facility.

"Owner" means the person that owns a facility or part of a facility.

"Paint" means a pigmented or unpigmented powder coating, or a pigmented or unpigmented mixture of binder and suitable liquid, that forms an adherent coating when applied to a surface. Powder coating is a surface coating that is applied as a dry powder and is fused into a continuous coating film through the use of heat. "Paint" includes architectural paint as defined in the Paint Stewardship Act but does not include other types of coatings such as industrial original equipment or specialty coatings. [415 ILCS 5/22.23e]

"Paint-related waste" is (i) material contaminated with paint that results from the packaging of paint, wholesale and retail operations, paint manufacturing, and paint application or removal activities or (ii) material derived from the reclamation of paint-related wastes that is recycled in a manner other than burning for energy recovery or used in a manner constituting disposal. [415 ILCS 5/22.23e]

"Partial closure" means the closure of a hazardous waste management unit in compliance with the applicable closure requirements of 35 Ill. Adm. Code 724 or 725 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank (including its associated piping and underlying containment systems), landfill cell, surface impoundment, waste pile, or other hazardous waste management unit, while other units of the same facility continue to operate.

“Paper manifest submissions” mean submissions to the paper processing center of the USEPA e-Manifest system by facility owners or operators, of the data from the

designated facility copy of a paper manifest, USEPA Form 8700-22, or a paper Continuations Sheet, USEPA form 8700-22A. Such submissions may be made by submitting image files from paper manifests or continuation sheets in compliance with 40 CFR 264.1311(b), or by submitting both an image file and data file in compliance with procedures in 40 CFR 264.1311(c).

"Person" means an individual, trust, firm, joint stock company, federal agency, corporation (including a government corporation), partnership, association, state, municipality, commission, political subdivision of a state, or any interstate body.

"Personnel" or "facility personnel" means all persons who work at or oversee the operations of a hazardous waste facility and whose actions or failure to act may result in not complying with 35 Ill. Adm. Code 724 or 725.

"Pesticide" means any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest or intended for use as a plant regulator, defoliant, or desiccant, other than any article that meets one of the following descriptions:

It is a new animal drug under section 201(v) of the Federal Food, Drug and Cosmetic Act (FFDCA; 21 U.S.C. 321(v)), incorporated by reference in Section 720.111(c);

It is an animal drug that has been determined by regulation of the federal Secretary of Health and Human Services under FFDCA section 512 (21 U.S.C. 360b), incorporated by reference in Section 720.111(c), to be an exempted new animal drug; or

It is an animal feed under FFDCA section 201(w) (21 U.S.C. 321(w)), incorporated by reference in Section 720.111(c), that bears or contains any substances described in either of the two preceding paragraphs of this definition.

BOARD NOTE: The second exception of corresponding 40 CFR 260.10 reads as follows: "Is an animal drug that has been determined by regulation of the Secretary of Health and Human Services not to be a new animal drug". This is very similar to the language of section 2(u) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA; 7 U.S.C. 136(u)). The three exceptions, taken together, appear intended not to include as pesticide any material within the scope of federal Food and Drug Administration regulation. The Board codified this provision with the intent of retaining the same meaning as its federal counterpart while adding the definiteness required under Illinois law.

"Physical construction" or "physically constructing" (RCRA) means excavating, moving earth, erecting forms or structures, or similar activity to prepare an HWM facility for accepting hazardous waste.

"Pile" means any non-containerized accumulation of solid, non-flowing hazardous waste that is used for treatment or storage, and that is not a containment building.

"Plasma arc incinerator" means any enclosed device that uses a high intensity electrical discharge or arc as a source of heat followed by an afterburner using controlled flame combustion and that is not listed as an industrial furnace.

"Point source" means any discernible, confined, and discrete conveyance, including any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture.

"Publicly owned treatment works" or "POTW" is as defined in 35 Ill. Adm. Code 310.110.

"Qualified groundwater scientist" means a scientist or engineer who has received a baccalaureate or postgraduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields, as demonstrated by state registration, professional certification, or completing accredited university courses that enable the individual to make sound professional judgments regarding groundwater monitoring and contaminant rate and transport. BOARD NOTE: State registration includes registration as a professional engineer with the Department of Professional Regulation under 225 ILCS 325 and 68 Ill. Adm. Code 1380. Professional certification includes certification under the certified groundwater professional program of the National Ground Water Association.

"RCRA" means the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 U.S.C. 6901 et seq.).

"RCRA standardized permit" means a RCRA permit issued under Subpart J of 35 Ill. Adm. Code 703 and Subpart G of 35 Ill. Adm. Code 702 that authorizes management of hazardous waste. The RCRA standardized permit may have two parts: a uniform portion issued in all cases and a supplemental portion issued at the discretion of the Agency.

"Recognized trader" means a person domiciled in the United States, by site of business, who acts to arrange and facilitate transboundary movements of wastes destined for recovery or disposal operations, either by purchasing from and subsequently selling to United States and foreign facilities, or by acting under arrangements with a United States waste facility to arrange for the export or import of the wastes.

"Regional Administrator" means the Regional Administrator for the USEPA region in which the facility is located or the Regional Administrator's designee.

"Remanufacturing" means processing a higher-value hazardous secondary material to manufacture a product that serves a similar functional purpose as the original commercial-grade material. For this definition, a hazardous secondary material is considered higher-value if it was generated from the use of a commercial-grade material in a manufacturing process and can be remanufactured into a similar commercial-grade material.

"Remediation waste" means all solid and hazardous wastes, and all media (including groundwater, surface water, soils, and sediments) and debris that are managed for implementing cleanup.

"Remediation waste management site" means a facility where an owner or operator is or will be treating, storing, or disposing of hazardous remediation wastes. A remediation waste management site is not a facility that is subject to corrective action under 35 Ill. Adm. Code 724.201, but a remediation waste management site is subject to corrective action requirements if the site is in a facility that is subject to corrective action under 35 Ill. Adm. Code 724.201.

"Replacement unit" means a landfill, surface impoundment, or waste pile unit from which substantially all waste is removed, and that is subsequently reused to treat, store, or dispose of hazardous waste. Replacement unit does not include a unit from which waste is removed during closure, if the subsequent reuse solely involves the disposal of waste from that unit and other closing units or corrective action areas at the facility, in compliance with a closure or corrective action plan approved by USEPA or the Agency.

"Representative sample" means a sample of a universe or whole (e.g., waste pile, lagoon, groundwater) that can be expected to exhibit the average properties of the universe or whole.

"Run-off" means any rainwater, leachate, or other liquid that drains over land from any part of a facility.

"Run-on" means any rainwater, leachate, or other liquid that drains over land onto any part of a facility.

"Saturated zone" or "zone of saturation" means that part of the earth's crust in which all voids are filled with water.

"SIC code" means "Standard Industrial Classification code", as assigned to a site by the United States Department of Transportation, Federal Highway Administration, based on the particular activities that occur on the site, as provided in "Standard Industrial Classification Manual", incorporated by reference in Section 720.111(a).

"Sludge" means any solid, semi-solid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility, exclusive of the treated effluent from a wastewater treatment plant.

"Sludge dryer" means any enclosed thermal treatment device that is used to dehydrate sludge and that has a total thermal input, excluding the heating value of the sludge itself, of 2,500 Btu/lb or less of sludge treated on a wet-weight basis.

"Small quantity generator" or "SQG" means a generator that generates the following amounts of material in a calendar month:

Greater than 100 kg (220 lbs) but less than 1,000 kilograms (2,200 lbs) of non-acute hazardous waste;

Less than or equal to 1 kg (2.2 lbs) of acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e); and

Less than or equal to 100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e).

"Solid waste" means a solid waste as defined in 35 Ill. Adm. Code 721.102.

"Solvent-contaminated wipe" means the following:

A wipe that, after use or after cleaning up a spill, meets one or more of the following conditions:

The wipe contains one or more of the F001 through F005 solvents listed in 35 Ill. Adm. Code 721.131 or the corresponding P- or U-listed solvents found in 35 Ill. Adm. Code 721.133;

The wipe exhibits a hazardous characteristic found in Subpart C of 35 Ill. Adm. Code 721 when that characteristic results from a solvent listed in 35 Ill. Adm. Code 721; or

The wipe exhibits only the hazardous waste characteristic of ignitability found in 35 Ill. Adm. Code 721.121 due to the presence of one or more solvents that are not listed in 35 Ill. Adm. Code 721.

Solvent-contaminated wipes that contain listed hazardous waste other than solvents, or exhibit the characteristic of toxicity, corrosivity, or reactivity

due to contaminants other than solvents, are not eligible for the exclusions at 35 Ill. Adm. Code 721.104(a)(26) and (b)(18).

"Sorbent" means a material that is used to soak up free liquids by either adsorption or absorption, or both. "Sorb" means to either adsorb or absorb, or both.

"Staging pile" means an accumulation of solid, non-flowing "remediation waste" (as defined in this Section) that is not a containment building and that is used only during remedial operations for temporary storage at a facility. Staging piles must be designated by the Agency according to 35 Ill. Adm. Code 724.654.

"State" means any of the several states, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

"Storage" means the holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere.

"Sump" means any pit or reservoir that meets the definition of tank and those troughs or trenches connected to it that serve to collect hazardous waste for transport to hazardous waste storage, treatment, or disposal facilities; except that, as used in the landfill, surface impoundment, and waste pile rules, sump means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system or leak detection system for subsequent removal from the system.

"Surface impoundment" or "impoundment" means a facility or part of a facility that is a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials (although it may be lined with manmade materials) that is designed to hold an accumulation of liquid wastes or wastes containing free liquids and that is not an injection well. Examples of surface impoundments are holding, storage, settling and aeration pits, ponds, and lagoons.

"Tank" means a stationary device, designed to contain an accumulation of hazardous waste that is constructed primarily of non-earthen materials (e.g., wood, concrete, steel, plastic) that provide structural support.

"Tank system" means a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system.

"TEQ" means toxicity equivalence, the international method of relating the toxicity of various dioxin and furan congeners to the toxicity of 2,3,7,8-tetra-chlorodibenzo-p-dioxin.

"Thermal treatment" means the treatment of hazardous waste in a device that uses elevated temperatures as the primary means to change the chemical, physical, or biological character or composition of the hazardous waste. Examples of thermal

treatment processes are incineration, molten salt, pyrolysis, calcination, wet air oxidation, and microwave discharge. (See also "incinerator" and "open burning".)

"Thermostat" means a temperature control device that contains metallic mercury in an ampule attached to a bimetal sensing element and mercury-containing ampules that have been removed from the temperature control device complying with 35 Ill. Adm. Code 733.113(c)(2) or 733.133(c)(2).

"Totally enclosed treatment facility" means a facility for the treatment of hazardous waste that is directly connected to an industrial production process and that is constructed and operated in a manner that prevents the release of any hazardous waste or any constituent thereof into the environment during treatment. An example is a pipe in which waste acid is neutralized.

"Transfer facility" means any transportation-related facility, including loading docks, parking areas, storage areas, and other similar areas where shipments of hazardous waste or hazardous secondary materials are held during the normal course of transportation.

"Transport vehicle" means a motor vehicle or rail car used for transporting cargo by any mode. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle.

"Transportation" means the movement of hazardous waste by air, rail, highway, or water.

"Transporter" means a person engaged in transporting hazardous waste off-site by air, rail, highway, or water.

"Treatability study" means the following:

A study in which a hazardous waste is subjected to a treatment process to determine the following:

Whether the waste is amenable to the treatment process;

What pretreatment (if any) is required;

The optimal process conditions needed to achieve the desired treatment;

The efficiency of a treatment process for a specific waste or wastes; and

The characteristics and volumes of residuals from a particular treatment process;

Also included in this definition for 35 Ill. Adm. Code 721.104(e) and (f) exemptions are liner compatibility, corrosion and other material compatibility studies, and toxicological and health effects studies. A treatability study is not a means to commercially treat or dispose of hazardous waste.

"Treatment" means any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste to neutralize the waste, recover energy or material resources from the waste, or render the waste non-hazardous or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume.

"Treatment zone" means a soil area of the unsaturated zone of a land treatment unit within which hazardous constituents are degraded, transformed, or immobilized.

"Underground injection" means the subsurface emplacement of fluids through a bored, drilled, or driven well or through a dug well, if the depth of the dug well is greater than the largest surface dimension. (See also "injection well".)

"Underground tank" means a device meeting the definition of tank whose entire surface area is totally below the surface of and covered by the ground.

"Unfit-for-use tank system" means a tank system that has been determined, through an integrity assessment or other inspection, to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment.

"United States" means the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

"Universal waste" means any of the following hazardous wastes that are managed under the universal waste requirements of 35 Ill. Adm. Code 733:

Batteries, as described in 35 Ill. Adm. Code 733.102;

Pesticides, as described in 35 Ill. Adm. Code 733.103;

Mercury-containing equipment, as described in 35 Ill. Adm. Code 733.104;

Lamps, as described in 35 Ill. Adm. Code 733.105;

Aerosol cans, as described in 35 Ill. Adm. Code 733.106; and

Paint and paint-related wastes, as described in 35 Ill. Adm. Code 733.107.

"Universal waste handler" means either of the following:

A generator (as defined in this Section) of universal waste; or

The owner or operator of a facility, including all contiguous property, that receives universal waste from other universal waste handlers, accumulates the universal waste, and sends that universal waste to another universal waste handler, to a destination facility, or to a foreign destination.

"Universal waste handler" does not mean either of the following:

A person that treats (except under the provisions of Section 733.113(a) or (c) or 733.133(a) or (c)), disposes of, or recycles (except under 35 Ill. Adm. Code 733.113(e) or 733.133(e)) universal waste; or

A person engaged in transporting universal waste off-site by air, rail, highway, or water, including a universal waste transfer facility.

"Universal waste transporter" means a person engaged in transporting universal waste off-site by air, rail, highway, or water.

"Unsaturated zone" or "zone of aeration" means the zone between the land surface and the water table.

"Uppermost aquifer" means the geologic formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer within the facility's property boundary.

"USDOT" or "Department of Transportation" means the United States Department of Transportation.

"Used oil" means any oil that has been refined from crude oil, or any synthetic oil, that has been used and because of this use is contaminated by physical or chemical impurities.

"USEPA" or "EPA" means the United States Environmental Protection Agency.

"USEPA hazardous waste number" or "EPA hazardous waste number" means the number assigned by USEPA to each hazardous waste listed in Subpart D of 35 Ill. Adm. Code 721 and to each characteristic identified in Subpart C of 35 Ill. Adm. Code 721.

"USEPA identification number" or "USEPA ID number" is the unique alphanumeric identifier that USEPA assigns a hazardous waste generator; transporter; treatment, storage, or disposal facility; or reclamation facility upon notification complying with section 3010 of RCRAU.S.C..

"User of the Electronic Manifest System" or "user of the e-Manifest System" means a hazardous waste generator, a hazardous waste transporter, an owner or operator of a hazardous waste treatment, storage, recycling, or disposal facility, or any other person or entity that meets both of the following conditions:

The person or entity must use a manifest to comply with any federal or state requirement to track the shipment, transportation, and receipt of either of the following:

hazardous waste or other waste material that is shipped from the site of generation to an off-site designated facility for treatment, storage, recycling, or disposal; or

rejected wastes or regulated container residues that are shipped from a designated facility to an alternative facility, or returned to the generator; and

The person or entity elects to use either of the following:

the e-Manifest System to obtain, complete and transmit an e-Manifest format supplied by the USEPA e-Manifest System; or

the paper manifest form and submits to the e-Manifest System for data processing purposes a paper copy of the manifest (or data from the paper copy), in compliance with 35 Ill. Adm. Code 724.171(a)(2)(E) or 725.171(a)(2)(E).

A paper copy submitted for data processing purposes is submitted for data exchange purposes only and is not the official copy of record for legal purposes.

"USPS" means the United States Postal Service.

"Very small quantity generator" or "VSQG" means a generator that generates less than or equal to the following amounts of material in a calendar month:

100 kg (220 lbs) of nonacute hazardous waste;

1 kg (2.2 lbs) of acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e); and

100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e).

"Vessel" includes every description of watercraft used or capable of being used for transporting on the water.

"Wastewater treatment unit" means a device that:

Is part of a wastewater treatment facility that has an NPDES permit under 35 Ill. Adm. Code 309 or a pretreatment permit or authorization to discharge under 35 Ill. Adm. Code 310;

Receives and treats or stores an influent wastewater that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or generates and accumulates a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or treats or stores a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103; and

Meets the definition of tank or tank system in this Section.

"Water (bulk shipment) " means transporting bulk hazardous waste loaded or carried on board a vessel without containers or labels.

"Well" means any shaft or pit dug or bored into the earth, generally of a cylindrical form, and often walled with bricks or tubing to prevent the earth from caving in.

"Well injection" means "underground injection".

"Wipe" means a woven or non-woven shop towel, rag, pad, or swab made of wood pulp, fabric, cotton, polyester blends, or other material.

"Zone of engineering control" means an area under the control of the owner or operator that, upon detecting a hazardous waste release, can be readily cleaned up prior to the release of hazardous waste or hazardous constituents to groundwater or surface water.

ASTM C 94-90, "Standard Specification for Ready-Mixed Concrete", approved March 30, 1990, referenced in 35 Ill. Adm. Code 724.673 and 725.543.

ASTM D 88-87, "Standard Test Method for Saybolt Viscosity", approved April 24, 1981, reapproved January 1987, referenced in 35 Ill. Adm. Code 726.200.

ASTM D 93-80, "Standard Test Methods for Flash Point by Pensky-Martens Closed Cup Tester", approved 1980, USEPA-approved for 35 Ill. Adm. Code 721.121.

ASTM D 346-75, "Standard Practice for Collection and Preparation of Coke Samples for Laboratory Analysis", approved 1975, referenced in Appendix A to 35 Ill. Adm. Code 721.

ASTM D 420–69, "Guide to Site Characterization for Engineering, Design, and Construction Purposes", approved 1969, referenced in Appendix A to 35 Ill. Adm. Code 721.

ASTM D 1452–65, "Standard Practice for Soil Investigation and Sampling by Auger Borings", approved 1965, referenced in Appendix A to 35 Ill. Adm. Code 721.

ASTM D 1946-90, “Standard Practice for Analysis of Reformed Gas by Gas Chromatography”, approved March 30, 1990, USEPA-approved for 35 Ill. Adm. Code 724.933 and 725.933.

ASTM D 2161-87, “Standard Practice for Conversion of Kinematic Viscosity to Saybolt Universal or to Saybolt Furol Viscosity”, March 27, 1987, referenced in 35 Ill. Adm. Code 726.200.

ASTM D 2234-76, “Standard Practice for Collection of a Gross Sample of Coal”, approved 1976, referenced in Appendix A to 35 Ill. Adm. Code 721.

ASTM D 2267-88, “Standard Test Method for Aromatics in Light Naphthas and Aviation Gasolines by Gas Chromatography”, approved November 17, 1988, USEPA-approved for 35 Ill. Adm. Code 721.963 and 724.963.

ASTM D 2382-88, “Standard Test Method for Heat of Combustion of Hydrocarbon Fuels by Bomb Calorimeter (High Precision Method)”, approved October 31, 1988, USEPA-approved for 35 Ill. Adm. Code 724.933 and 725.933.

ASTM D 2879-92, “Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope”, approved 1992, USEPA-approved for 35 Ill. Adm. Code 725.984, referenced in 35 Ill. Adm. Code 721.963, 724.963, and 725.963.

ASTM D 3828-87, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved December 14, 1988, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-97, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 1997, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-98, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 1998, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-02, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2002, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-05, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2005, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-07, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2007, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-07a, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2007, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-09, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2009, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-12, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2012, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-12a, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2012, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-16a, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2016, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-16, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2016, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 3828-16a, “Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester”, approved 2016, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 8174-18, “Standard Test Methods for Finite Flash Point Determination of Liquid Wastes by Small-Scale Closed Cup Tester”, approved 2018, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM D 8175-18, “Standard Test Methods for Finite Flash Point Determination of Liquid Wastes by Pensky-Martens Closed Cup Tester”, approved 2018, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM E 169-87, “Standard Practices for General Techniques of Ultraviolet-Visible Quantitative Analysis”, approved February 1, 1987, USEPA-approved for 35 Ill. Adm. Code 721.963 and 724.963.

ASTM E 260-85, “Standard Practice for Packed Column Gas Chromatography”, approved June 28, 1985, USEPA-approved for 35 Ill. Adm. Code 724.963.

ASTM E 681-85, “Standard Practice for Concentration Limits of Flammability of Chemicals (Vapors and Gases)”, approved 1985, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM E 681-98, “Standard Practice for Concentration Limits of Flammability of Chemicals (Vapors and Gases)”, approved 1998, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM E 681-01, “Standard Practice for Concentration Limits of Flammability of Chemicals (Vapors and Gases)”, approved 2001, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM E 681-04, “Standard Practice for Concentration Limits of Flammability of Chemicals (Vapors and Gases)”, approved 2004, reapproved 2015, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM E 681-09, “Standard Practice for Concentration Limits of Flammability of Chemicals (Vapors and Gases)”, approved 1009, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM E 681-09(2015), “Standard Practice for Concentration Limits of Flammability of Chemicals (Vapors and Gases)”, approved 1009, reapproved 2015, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM G 21-70 (1984a), “Standard Practice for Determining Resistance of Synthetic Polymer Materials to Fungi”, approved 1970, referenced in 35 Ill. Adm. Code 724.414 and 725.414.

ASTM G 22-76 (1984b), “Standard Practice for Determining Resistance of Plastics to Bacteria”, referenced in 35 Ill. Adm. Code 724.414 and 725.414.

"Procedures Manual for Ground Water Monitoring at Solid Waste Disposal Facilities", August 1977, EPA-530/SW-611, NTIS document number PB84-174820, referenced in 35 Ill. Adm. Code 725.192. Also available from USEPA, NSCEP.

"Screening Procedures for Estimating the Air Quality Impact of Stationary Sources", October 1992, USEPA publication number EPA-454/R-92-019, NTIS document number 93-219095, referenced in 35 Ill. Adm. Code 726.204 and 726.206. Also

available from USEPA, NSCEP and USEPA, Receptor Analysis Branch.

"Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", USEPA publication number EPA-530/SW-846 (Third Edition, November 1986; Revision 6, January 2005), as amended by Updates I (July 1992), II (November 1994), IIA (August 1993), IIB (January 1995), III (December 1996), IIIA (April 1998), and IIIB (November 2004) (document number 955-001-00000-1), generally referenced in Appendices A and I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 726.200, 726.206, 726.212, 728.106, and 728.107 (in addition to the references cited below for specific methods), www.epa.gov/hw-sw846:

Method 0010 (November 1986) (Modified Method 5 Sampling Train), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0011 (December 1996) (Sampling for Selected Aldehyde and Ketone Emissions from Stationary Sources), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and Appendix I to 35 Ill. Adm. Code 726.

Method 0020 (November 1986) (Source Assessment Sampling System), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0023A (December 1996) (Sampling Method for Polychlorinated Dibenzo-p-Dioxins and Polychlorinated Dibenzofuran Emissions from Stationary Sources), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.204.

Method 0030 (November 1986) (Volatile Organic Sampling Train), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0031 (December 1996) (Sampling Method for Volatile Organic Compounds (SMVOC)), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0040 (December 1996) (Sampling of Principal Organic Hazardous Constituents from Combustion Sources Using Tedlar® Bags), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0050 (December 1996) (Isokinetic HCl/Cl2 Emission Sampling Train), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.207.

Method 0051 (December 1996) (Midget Impinger HCl/Cl2 Emission Sampling Train), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.207.

Method 0060 (December 1996) (Determination of Metals in Stack Emissions), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.206.

Method 0061 (December 1996) (Determination of Hexavalent Chromium Emissions from Stationary Sources), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, 35 Ill. Adm. Code 726.206, and Appendix I to 35 Ill. Adm. Code 726.

Method 1010B (December 2018) (Test Methods for Flash Point by Pensky-Martens Closed Cup Tester), USEPA-approved for 35 Ill. Adm. Code 721.121 and Appendix I to 35 Ill. Adm. Code 721.

Method 1020B (November 2004) (Standard Test Methods for Flash Point by Setaflash (Small Scale) Closed-cup Apparatus), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 1020C (December 2018) (Test Methods for Flash Point by Pensky-Martens Closed Cup Tester), USEPA-approved for 35 Ill. Adm. Code 721.121 and Appendix I to 35 Ill. Adm. Code 721.

Method 1110A (November 2004) (Corrosivity Toward Steel), USEPA-approved for 35 Ill. Adm. Code 721.122 and Appendix I to 35 Ill. Adm. Code 721.

Method 1310B (November 2004) (Extraction Procedure (EP) Toxicity Test Method and Structural Integrity Test), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and referenced in Appendix I to 35 Ill. Adm. Code 728.

Method 1311 (November 1992) (Toxicity Characteristic Leaching Procedure), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721; for 35 Ill. Adm. Code 721.124, 728.107, and 728.140; and for Table T to 35 Ill. Adm. Code 728.

Method 1312 (November 1994) (Synthetic Precipitation Leaching Procedure), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 1320 (November 1986) (Multiple Extraction Procedure), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 1330A (November 1992) (Extraction Procedure for Oily Wastes), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9010C (November 2004) (Total and Amenable Cyanide: Distillation), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 728.140, 728.144, and 728.148, referenced in Tables H and U to 35 Ill. Adm. Code 728.

Method 9012B (November 2004) (Total and Amenable Cyanide (Automated Colorimetric, with Off-Line Distillation)), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 728.140, 728.144, and 728.148, referenced in Tables H and U to 35 Ill. Adm. Code 728.

Method 9040C (November 2004) (pH Electrometric Measurement), USEPA-approved for 35 Ill. Adm. Code 721.122 and Appendix I to 35 Ill. Adm. Code 721.

Method 9045D (November 2004) (Soil and Waste pH), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9060A (November 2004) (Total Organic Carbon), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 721.934, 721.963, 724.934, 724.963, 725.934, and 725.963.

Method 9070A (November 2004) (n-Hexane Extractable Material (HEM) for Aqueous Samples), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9071B (April 1998) (n-Hexane Extractable Material (HEM) for Sludge, Sediment, and Solid Samples), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9095B (November 2004) (Paint Filter Liquids Test), USEPA-approved for 35 Ill. Adm. Code 720.110; Appendix I to 35 Ill. Adm. Code 721; and 35 Ill. Adm. Code 724.290, 724.414, 725.290, 725.414, 725.981, 727.290, and 728.132.

OECD. Organization for Economic Cooperation and Development, Environment Directorate, 2 rue André Pascal, F-75775 Paris Cedex 16, France (www.oecd.org), also OECD Washington Center, 1776 I Street, NW, Suite 450, Washington, DC 20006, 202-452-0050 www.oecd-ilibrary.org :

OECD Guidance Manual. "Guidance Manual for the Implementation of Council Decision C(2001)107/FINAL, as Amended, on the Control of Transboundary Movements of Wastes Destined for Recovery Operations", 2009 (also called "Guidance Manual for the Control of Transboundary Movements of Recoverable Materials" in OECD documents), but only the following segments, which set forth the substantive requirements of OECD decision C(2001)107/FINAL (June 14, 2001), as amended by C(2001)107/ADD1 (February 28, 2002), C(2004)20 (March 9, 2004), C(2005)141 (December 2, 2005), and C(2008)156 (December 4, 2008):

"Annex B: OECD Consolidated List of Wastes Subject to the Green Control Procedure" (individually referred to as "Annex B to OECD Guidance Manual" in 35 Ill. Adm. Code 722), combining Appendix 3 to OECD decision C(2001)107/FINAL, as amended as described above, together with the text of Annex IX ("List B") to the "Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal" ("Basel Convention"). Latest Board search for updated version: August 2020.

"Annex C: OECD Consolidated List of Wastes Subject to the Amber Control Procedure" (individually referred to as "Annex C to OECD Guidance Manual" in 35 Ill. Adm.

Code 722), combining Appendix 4 to OECD decision C(2001)107/FINAL, as amended, together with the text of Annexes II ("Categories of Wastes Requiring Special Consideration") and VIII ("List A") to the Basel Convention. Latest Board search for updated version: August 2020.

BOARD NOTE: The OECD Guidance Manual is available online from OECD at www.oecd.org/environment/waste/guidance-manual-control-transboundary-movements-recoverable-wastes.pdf. The OECD and the Basel Convention consider the OECD Guidance Manual unofficial text of these documents. Despite this unofficial status, the Board has chosen to follow USEPA's lead and incorporate the OECD Guidance Manual by reference, instead of separately incorporating the OECD decision C(2001)107/FINAL (with its subsequent amendments: OECD decisions C(2001)107/ADD1, C(2004)20, C(2005)141, and C(2008)156) and the Basel Convention by reference. Use of the OECD Guidance Manual eases reference to the documents, increases access to the documents, and facilitates future updates to this incorporation by reference. All references to "OECD C(2001)107/FINAL" in the text of 35 Ill. Adm. Code 722 refer to both the OECD decision and the Basel Convention that the OECD decision references. The OECD Guidance Manual includes as Annex A the full text of OECD document C(2001)107/FINAL, with amendments, and Annexes B and C set forth lists of wastes subject to Green control procedures and wastes subject to Amber control procedures, respectively, which consolidate the wastes from C(2001)107/FINAL together with those from the Basel Convention.

OECD Guideline for Testing of Chemicals, "Ready Biodegradability", Method 301B (July 17, 1992), "CO_2 Evolution (Modified Sturm Test)", referenced in 35 Ill. Adm. Code 724.414. Latest Board search for updated version: August 2020.

STI. Available from the Steel Tank Institute, 944 Donata Ct., Lake Zurich, IL 60047, 847-438-8265, https://stispfa.org/.

"EPA RCRA Delisting Program—Guidance Manual for the Petitioner", March 23, 2000, referenced in Section 720.122.

USGSA. Available from the United States Government Services Administration:

Government Bill of Lading (GBL) (GSA Standard Form 1103, rev 9/2003, supplemented as necessary with GSA Standard Form 1109, rev 09/1998), referenced in Section 726.303. Latest Board search for updated version: August 2020.

BOARD NOTE: Available on-line for download in various formats from www.gsa.gov/forms/forms.htm.

b) Code of Federal Regulations. Available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20401, 202-783-3238, www.ecfr.gov or https://www.govinfo.gov/app/collection/cfr:

10 CFR 20.2006 (2023) (Transfer for Disposal and Manifests), referenced in 35 Ill. Adm. Code 726.425 and 726.450.

Table II, column 2 in appendix B to 10 CFR 20 (2023) (Water Effluent Concentrations), referenced in 35 Ill. Adm. Code 702.110, 730.103, and 730.151.

Appendix G to 10 CFR 20 (2023) (Requirements for Transfers of Low-Level Radioactive Waste Intended for Disposal at Licensed Land Disposal Facilities and Manifests), referenced in 35 Ill. Adm. Code 726.440.

10 CFR 71 (2023) (Packaging and Transportation of Radioactive Material), referenced generally in 35 Ill. Adm. Code 726.430.

10 CFR 71.5 (2023) (Transportation of Licensed Material), referenced in 35 Ill. Adm. Code 726.425.

15 CFR 30.4(b) (2023) (Electronic Export Information Filing, Procedures, Deadlines, and Certification Statements), referenced in 35 Ill. Adm. Code 721.139.

15 CFR 30.6 (2023) (Electronic Export Information Data Elements), referenced in 35 Ill. Adm. Code 721.139.

21 CFR 203.3(y) (2023) ("Prescription Drug"), referenced in 35 Ill. Adm. Code 726.600.

21 CFR 1300 through 1317 (2023) (Drug Enforcement Administration, Department of Justice), referenced in 35 Ill. Adm. Code 726.604 and 726.606.

21 CFR 1300.01 (2023) (Definitions Relating to Controlled Substances), referenced in 35 Ill. Adm. Code 726.604 and 726.606.

21 CFR 1300.05 (2023) (Definitions Relating to the Disposal of Controlled Substances), referenced in 35 Ill. Adm. Code 726.606.

21 CFR 1308.11 through 1308.15 (2023) (Schedules), referenced in 35 Ill. Adm. Code 726.606.

21 CFR 1317.90 (2023) (Methods of Destruction), referenced in 35 Ill. Adm. Code 726.606.

21 CFR 1317.95 (2023) (Destruction Procedures), referenced in 35 Ill. Adm. Code 726.606.

29 CFR 1910.1200 (2023) (Hazard Communication), referenced in 35 Ill. Adm. Code 722.115.

33 CFR 153.203 (2023) (Procedure for the Notice of Discharge), referenced in 35 Ill. Adm. Code 723.130 and 739.143.

40 CFR 3.3 (2023) (What Definitions Are Applicable to This Part?), referenced in Section 720.104.

40 CFR 3.10 (2023) (What Are the Requirements for Electronic Reporting to EPA?), referenced in Section 720.104.

40 CFR 3.2000 (2023) (What Are the Requirements Authorized State, Tribe, and Local Programs' Reporting Systems Must Meet?), referenced in Section 720.104.

40 CFR 51.100(ii) (2023) (Definitions), referenced in 35 Ill. Adm. Code 726.200.

Appendix W to 40 CFR 51 (2023) (Guideline on Air Quality Models), referenced in 35 Ill. Adm. Code 726.204.

BOARD NOTE: Also available from NTIS (see above for contact information) as "Guideline on Air Quality Models", Revised 1986, USEPA publication number EPA-450/12-78-027R, NTIS document numbers PB86-245248 (Guideline) and PB88-150958 (Supplement).
Appendix B to 40 CFR 52.741 (2023) (VOM Measurement Techniques for Capture Efficiency), referenced in 35 Ill. Adm. Code 703.213, 703.352, 721.984, 721.986, 721.989, 724.982, 724.984, 724.986, 724.989, 725.983, 725.985, 725.987, and 725.990.

40 CFR 60 (2023) (Standards of Performance for New Stationary Sources), referenced generally in 35 Ill. Adm. Code 721.104, 721.950, 721.964, 721.980, 724.964, 724.980, 725.964, and 725.980.
Subpart VV of 40 CFR 60 (2023) (Standards of Performance for Equipment Leaks of VOC in the Synthetic Organic Chemicals Manufacturing Industry), referenced in 35 Ill. Adm. Code 721.989, 724.989, and 725.990.

Appendix A to 40 CFR 60 (2023) (Test Methods), referenced generally in 35 Ill. Adm. Code 726.205 (in addition to the references cited below for specific methods):

Method 1 (Sample and Velocity Traverses for Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 2 (Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)), referenced in 35 Ill. Adm. Code 721.934, 724.933, 724.934, 725.933, 725.934, and 726.205.

Method 2A (Direct Measurement of Gas Volume through Pipes and Small Ducts), referenced in 35 Ill. Adm. Code 721.933, 724.933, 725.933, and 726.205.

Method 2B (Determination of Exhaust Gas Volume Flow Rate from Gasoline Vapor Incinerators), referenced in 35 Ill. Adm. Code 726.205.

Method 2C (Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)), referenced in 35 Ill. Adm. Code 721.933, 724.933, 725.933, and 726.205.

Method 2D (Measurement of Gas Volume Flow Rates in Small Pipes and Ducts), referenced in 35 Ill. Adm. Code 721.933, 724.933, 725.933, and 726.205.

Method 2E (Determination of Landfill Gas Production Flow Rate), referenced in 35 Ill. Adm. Code 726.205.

Method 2F (Determination of Stack Gas Velocity and Volumetric Flow Rate with Three-Dimensional Probes), referenced in 35 Ill. Adm. Code 726.205.

Method 2G (Determination of Stack Gas Velocity and Volumetric Flow Rate with Two-Dimensional Probes), referenced in 35 Ill. Adm. Code 726.205.

Method 2H (Determination of Stack Gas Velocity Taking into Account Velocity Decay Near the Stack Wall), referenced in 35 Ill. Adm. Code 726.205.

Method 3 (Gas Analysis for the Determination of Dry Molecular Weight), referenced in 35 Ill. Adm. Code 724.443 and 726.205.
Method 3A (Determination of Oxygen and Carbon Dioxide Concentrations in Emissions from Stationary Sources (Instrumental Analyzer Procedure)), referenced in 35 Ill. Adm. Code 726.205.

Method 3B (Gas Analysis for the Determination of Emission Rate Correction Factor or Excess Air), referenced in 35 Ill. Adm. Code 726.205.

Method 3C (Determination of Carbon Dioxide, Methane, Nitrogen, and Oxygen from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 4 (Determination of Moisture Content in Stack Gases), referenced in 35 Ill. Adm. Code 726.205.

Method 5 (Determination of Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 5A (Determination of Particulate Matter Emissions from the Asphalt Processing and Asphalt Roofing Industry), referenced in 35 Ill. Adm. Code 726.205.

Method 5B (Determination of Nonsulfuric Acid Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 5D (Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters), referenced in 35 Ill. Adm. Code 726.205.

Method 5E (Determination of Particulate Matter Emissions from the Wool Fiberglass Insulation Manufacturing Industry), referenced in 35 Ill. Adm. Code 726.205.

Method 5F (Determination of Nonsulfate Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 5G (Determination of Particulate Matter Emissions from Wood Heaters (Dilution Tunnel Sampling Location)), referenced in 35 Ill. Adm. Code 726.205.

Method 5H (Determination of Particulate Emissions from Wood Heaters from a Stack Location), referenced in 35 Ill. Adm. Code 726.205.

Method 5I (Determination of Low Level Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 18 (Measurement of Gaseous Organic Compound Emissions by Gas Chromatography), referenced in 35 Ill. Adm. Code 721.933, 721.934, 724.933, 724.934, 725.933, and 725.934.

Method 21 (Determination of Volatile Organic Compound Leaks), referenced in 35 Ill. Adm. Code 703.213, 721.934, 721.935, 721.963, 721.983, 724.934, 724.935, 724.963, 725.934, 725.935, 725.963, and 725.984.

Method 22 (Visual Determination of Fugitive Emissions from Material Sources and Smoke Emissions from Flares), referenced in 35 Ill. Adm. Code 721.933, 724.933, 724.1101, 725.933, 725.1101, and 727.900.

Method 23 (Determination of Polychlorinated Dibenzo-*p*-Dioxins and Polychlorinated Dibenzofurans from Stationary Sources) referenced in 35 Ill. Adm. Code 726.204.

Method 25A (Determination of Total Gaseous Organic Concentration Using a Flame Ionization Analyzer), referenced in 35 Ill. Adm. Code 721.934, 724.934, and 725.985.

Method 25D (Determination of the Volatile Organic Concentration of Waste Samples), referenced in 35 Ill. Adm. Code 721.983, 724.982, 725.983, and 725.984.

Method 25E (Determination of Vapor Phase Organic Concentration in Waste Samples), referenced in 35 Ill. Adm. Code 721.983 and 725.984.

Method 27 (Determination of Vapor Tightness of Gasoline Delivery Tank Using Pressure-Vacuum Test), referenced in 35 Ill. Adm. Code 721.986, 724.986, and 725.987.

40 CFR 61 (2023) (National Emission Standards for Hazardous Air Pollutants), referenced generally in 35 Ill. Adm. Code 721.104, 721.933, 721.950, 721.964, 721.980, 724.933, 724.964, 725.933, 725.964, and 725.980.

Subpart V of 40 CFR 61 (2023) (National Emission Standard for Equipment Leaks (Fugitive Emission Sources)), referenced in 35 Ill. Adm. Code 721.989, 724.989, and 725.990.

Subpart FF of 40 CFR 61 (2023) (National Emission Standard for Benzene Waste Operations), referenced in 35 Ill. Adm. Code 724.982 and 725.983.

40 CFR 63 (2023) (National Emission Standards for Hazardous Air Pollutants for Source Categories), referenced generally in 35 Ill. Adm. Code 721.293, 721.933, 721.950, 721.964, 721.980, 724.933, 724.964, 724.980, 725.933, 725.964, 725.980, and 726.200.

Subpart RR of 40 CFR 63 (2023) (National Emission Standards for Individual Drain Systems), referenced in 35 Ill. Adm. Code 721.984, 724.984, 724.985, 725.985, and 725.986.

Subpart EEE of 40 CFR 63 (2000) (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), referenced in 35 Ill. Adm. Code 703.280.

Subpart EEE of 40 CFR 63 (2023) (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors) (includes 40 CFR 63.1206 (When and How Must You Comply with the Standards and Operating Requirements?), 63.1215 (What are the Health-Based Compliance Alternatives for Total Chlorine?), 63.1216 (What are the Standards for Solid-Fuel Boilers that Burn Hazardous Waste?), 63.1217 (What are the Standards for Liquid-Fuel Boilers that Burn Hazardous Waste?), 63.1218 (What are the Standards for Hydrochloric Acid Production Furnaces that Burn Hazardous Waste?), 63.1219 (What are the Replacement Standards for Hazardous Waste Incinerators?), 63.1220 (What are the Replacement Standards for Hazardous Waste-Burning Cement Kilns?), and 63.1221 (What are the Replacement Standards for Hazardous Waste-Burning Lightweight Aggregate Kilns?)), referenced in Appendix A to 35 Ill. Adm. Code 703 and 35 Ill. Adm. Code 703.155, 703.205, 703.208, 703.221, 703.232, 703.320, 703.280, 724.440, 724.701, 724.950, 725.440, and 726.200.

Method 301 (Field Validation of Pollutant Measurement Methods from Various Waste Media) in appendix A to 40 CFR 63 (2023) (Test Methods), referenced in 35 Ill. Adm. Code 721.983 and 725.984. Appendix C to 40 CFR 63 (2023) (Determination of the Fraction Biodegraded (F_{bio}) in a Biological Treatment Unit), referenced in 35 Ill. Adm. Code 725.984.

Appendix D to 40 CFR 63 (2023) (Test Methods), referenced in 35 Ill. Adm. Code 721.983 and 725.984.

40 CFR 136.3 (Identification of Test Procedures) (2023), referenced in 35 Ill. Adm. Code 702.110, 704.150, 704.187, and 730.103.

40 CFR 144.70 (2023) (Wording of the Instruments), referenced in 35 Ill. Adm. Code 704.240.

40 CFR 232.2 (2023) (Definitions), referenced in 35 Ill. Adm. Code 721.104.

40 CFR 257 (2023) (Criteria for Classification of Solid Waste Disposal Facilities and Practices), referenced in 35 Ill. Adm. Code 739.181.

Subpart B of 40 CFR 257 (2023) (Disposal Standards for the Receipt of Conditionally Exempt Small Quantity Generator (CESQG) Wastes at Non-Municipal Non-Hazardous Waste Disposal Units) (40 CFR 257.5 through 257.30), referenced in 35 Ill. Adm. Code 722.114.

40 CFR 258 (2023) (Criteria for Municipal Solid Waste Landfills), referenced in 35 Ill. Adm. Code 739.181.

40 CFR 260.21(b) (2023) (Alternative Equivalent Testing Methods), referenced in Section 720.121.

40 CFR 261.151 (2023) (Wording of the Instruments), referenced in 35 Ill. Adm. Code 721.251.

Appendix III to 40 CFR 261 (2023) (Chemical Analysis Test Methods), referenced in 35 Ill. Adm. Code 704.150 and 704.187.

Appendix to 40 CFR 262 (2023) (Uniform Hazardous Waste Manifest and Instructions (EPA Forms 8700-22 and 8700-22A and Their Instructions)), referenced in Appendix A to 35 Ill. Adm. Code 722 and 35 Ill. Adm. Code 724.986 and 725.987.

40 CFR 264.151 (2023) (Wording of the Instruments), referenced in 35 Ill. Adm. Code 724.251 and 727.240.

40 CFR 264.1311 (2023) (Manifest Transactions Subject to Fees), referenced in 35 Ill. Adm. Code 724.171.

40 CFR 264.1312 (2023) (User Fee Calculation Methodology), referenced in 35 Ill. Adm. Code 724.171.

40 CFR 264.1313 (2023) (User Fee Revisions), referenced in 35 Ill. Adm. Code 724.171.

40 CFR 264.1314 (2023) (How to Make User Fee Payments), referenced in 35 Ill. Adm. Code 724.171.

40 CFR 264.1315 (2023) (Sanctions for Delinquent Payments), referenced in 35 Ill. Adm. Code 724.171.

40 CFR 264.1316 (2023) (Informal Fee Dispute Resolution), referenced in 35 Ill. Adm. Code 724.171.

Subpart FF of 40 CFR 264 (2023) (Fees for the Electronic Hazardous Waste Manifest Program), referenced in Sections 720.104 and 720.105.

Appendix I to 40 CFR 264 (2023) (Recordkeeping Instructions), referenced in Appendix A to 35 Ill. Adm. Code 724.

Appendix IV to 40 CFR 264 (2023) (Cochran’s Approximation to the Behrens-Fisher Students’ T-Test), referenced in Appendix D to 35 Ill. Adm. Code 724.

Appendix V to 40 CFR 264 (2023) (Examples of Potentially Incompatible Waste), referenced in Appendix E to 35 Ill. Adm. Code 724 and 35 Ill. Adm. Code 727.270.

Appendix VI to 40 CFR 264 (2023) (Political Jurisdictions in Which Compliance with § 264.18(a) Must Be Demonstrated), referenced in 35 Ill. Adm. Code 703.306, 724.118, and 727.110.

40 CFR 265.1311 (2023) (Manifest Transactions Subject to Fees), referenced in 35 Ill. Adm. Code 725.171.

40 CFR 265.1312 (2023) (User Fee Calculation Methodology), referenced in 35 Ill. Adm. Code 725.171.

40 CFR 265.1313 (2023) (User Fee Revisions), referenced in 35 Ill. Adm. Code 725.171.

40 CFR 265.1314 (2023) (How to Make User Fee Payments), referenced in 35 Ill. Adm. Code 725.171.

40 CFR 265.1315 (2023) (Sanctions for Delinquent Payments), referenced in 35 Ill. Adm. Code 725.171.

40 CFR 265.1316 (2023) (Informal Fee Dispute Resolution), referenced in 35 Ill. Adm. Code 725.171.

Subpart FF of 40 CFR 265 (2023) (Fees for the Electronic Hazardous Waste Manifest Program), referenced in Sections 720.104 and 720.105.

Appendix I to 40 CFR 265 (2023) (Recordkeeping Instructions), referenced in Appendix A to 35 Ill. Adm. Code 725.

Appendix III to 40 CFR 265 (2023) (EPA Interim Primary Drinking Water Standards), referenced in Appendix C to 35 Ill. Adm. Code 725.

Appendix IV to 40 CFR 265 (2023) (Tests for Significance), referenced in Appendix D to 35 Ill. Adm. Code 725.

Appendix V to 40 CFR 265 (2023) (Examples of Potentially Incompatible Waste), referenced in 35 Ill. Adm. Code 725.277, 725.301, 725.330, 725.357, 725.382, and 725.413 and Appendix E to 35 Ill. Adm. Code 725.

Appendix IX to 40 CFR 266 (2023) (Methods Manual for Compliance with the BIF Regulations), referenced generally in Appendix I to 35 Ill. Adm. Code 726.

Section 4.0 (Procedures for Estimating the Toxicity Equivalence of Chlorinated Dibenzo-p-Dioxin and Dibenzofuran Congeners), referenced in 35 Ill. Adm. Code 726.200 and 726.204.

Section 5.0 (Hazardous Waste Combustion Air Quality Screening Procedure), referenced in 35 Ill. Adm. Code 726.204 and 726.206.

Section 7.0 (Statistical Methodology for Bevill Residue Determinations), referenced in 35 Ill. Adm. Code 726.212.

c) Federal Statutes:

Section 11 of the Atomic Energy Act of 1954 (42 U.S.C. 2014 (20232018)), referenced in 35 Ill. Adm. Code 721.104 and 726.310.

Sections 301, 304, 307, and 402 of the Clean Water Act (33 U.S.C. 1311, 1314, 1337, and 1342 (2024~~2018~~)), referenced in 35 Ill. Adm. Code 721.293.

Sections 201(v), 201(w), and 512(j) of the Federal Food, Drug, and Cosmetic Act (FFDCA; 21 U.S.C. 321(v), 321(w), and 360b(j) (2024~~2018~~)), referenced in Section 720.110 and 35 Ill. Adm. Code 733.109.

Section 201(ff) of the Federal Food, Drug, and Cosmetic Act (FFDCA; 21 U.S.C. 321(ff) (2024~~2018~~)), referenced in Section 726.600.

Section 102(27) of the Controlled Substances Act (21 U.S.C. 802(27) (2024~~2018~~) ("Ultimate User")), referenced in 35 Ill. Adm. Code 726.606.

Section 1004 of the Resource Conservation and Recovery Act (42 U.S.C. 6903 (2023~~2018~~)), referenced in 35 Ill. Adm. Code 721.931, 721.951, 721.981, 724.931, 724.981, 725.931, 725.951, and 725.981.

Chapter 601 of subtitle VIII of 49 U.S.C. (49 U.S.C. 60101 through 60141 (2023~~2018~~)), referenced in 35 Ill. Adm. Code 721.104.

Section 1412 of the Department of Defense Authorization Act of 1986 (50 U.S.C. 1521(j)(1) (2023~~2018~~)), referenced in 35 Ill. Adm. Code 726.301.

d) This Section incorporates no later editions or amendments.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

SUBPART C: RULEMAKING PETITIONS AND OTHER PROCEDURES

Section 720.120 Rulemaking

a) Any person may petition the Board to adopt as State regulations rules that are identical in substance with newly adopted federal amendments or regulations. The petition must take the form of a proposal for rulemaking under 35 Ill. Adm. Code 102. The proposal must include a listing of all amendments to 40 CFR 260 through 268, 273, or 279 that have been made since the last preceding amendment or proposal to amend 35 Ill. Adm. Code 720 through 728, 733, or 739, under Section 22.4(a) of the Act.

b) Any person may petition the Board to adopt amendments or additional regulations not identical in substance with federal regulations. The proposal must conform to 35 Ill. Adm. Code 102 and Section 22.4(b) or 22.4(c) and Title VII of the Act.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.121 Alternative Equivalent Testing Methods

a) The Agency has no authority to alter the universe of regulated wastes. Modification of testing methods that are stated in 35 Ill. Adm. Code 721 requires rulemaking under Section 720.120. However, deviation from these methods is allowed under 35 Ill. Adm. Code 721, as observed, for example, in the Board Note appended to 35 Ill. Adm. Code 721.120(c).

b) The Agency may approve alternative equivalent testing methods for a particular person's use to determine whether specified waste streams are subject to these regulations. This must be done by permit condition or letter. Any petition to the Board or request to the Agency concerning alternative equivalent testing methods must include the information required by 40 CFR 260.21(b), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

c) The testing methods specified in 35 Ill. Adm. Code 721 or alternative equivalent testing methods approved by the Agency need not be applied to identify or distinguish waste streams that are known, admitted, or assumed to be subject to these regulations. In this case, any method may be used, subject to the Agency's authority to approve the testing procedures used.

d) If USEPA amends the federal regulations to allow the use of a new testing method, USEPA has stated that it will incorporate the new method by reference in 40 CFR 260.11 and add it to "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", USEPA publication number EPA-530/SW-846, incorporated by reference in Section 720.111(b).

e) Alternative equivalent testing methods will not be approved if the result of the approval would make the Illinois RCRA Subtitle C program less than substantially equivalent to the federal.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.122 Waste Delisting

a) Any person seeking to exclude a waste from a particular generating facility from the lists in Subpart D of 35 Ill. Adm. Code 721 may file a petition, as specified in subsection (n). The Board will grant the petition if the following occur:

1) The petitioner demonstrates that the waste produced by a particular generating facility does not meet any of the criteria under which the waste was listed as a hazardous or acute hazardous waste; and

2) The Board determines that there is a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that these factors do not warrant retaining the waste as a hazardous waste. A Board determination under the preceding sentence must be made by reliance on, and in a manner consistent with, "EPA RCRA Delisting Program—Guidance Manual for the Petitioner", incorporated by reference in Section 720.111(a). A waste that is so excluded, however, still may be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.

b) Listed Wastes and Mixtures. A person may also petition the Board to exclude from 35 Ill. Adm. Code 721.103(a)(2)(B) or (c), a waste that is described in these Sections and is either a waste listed in Subpart D of 35 Ill. Adm. Code 721, or is derived from a waste listed in that Subpart. This exclusion may only be granted for a particular generating, storage, treatment, or disposal facility. The petitioner must make the same demonstration as required by subsection (a). If the waste is a mixture of a solid waste and one or more listed hazardous wastes or is derived from one or more listed hazardous wastes, the demonstration must be made with respect to the waste mixture as a whole; analyses must be conducted for not only those constituents for which the listed waste contained in the mixture was listed as hazardous, but also for factors (including additional constituents) that could cause the waste mixture to be a hazardous waste. A waste that is so excluded may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.

c) Ignitable, Corrosive, Reactive and Toxicity Characteristic Wastes. If the waste is listed in codes "I", "C", "R", or "E" in Subpart D of 35 Ill. Adm. Code 721, the following requirements apply:

1) The petitioner must demonstrate that the waste does not exhibit the relevant characteristic for which the waste was listed, as defined in 35 Ill. Adm. Code 721.121, 721.122, 721.123, or 721.124, using any applicable methods prescribed in those Sections. The petitioner must also show that the waste does not exhibit any of the other characteristics, defined in those Sections, using any applicable methods prescribed in those Sections; and

2) Based on a complete petition, the Board will determine, if it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be hazardous waste, that these factors do not warrant retaining the waste as a hazardous waste. A Board determination under the preceding sentence must be made by reliance on, and in a manner consistent with, "EPA RCRA Delisting Program—Guidance Manual for the Petitioner", incorporated by reference in Section 720.111(a). A waste that is so excluded, however, may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.

d) Toxic Waste. If the waste is listed in code "T" in Subpart D of 35 Ill. Adm. Code 721, the following requirements apply:

1) The petitioner must demonstrate that the waste meets the following:

A) It does not contain the constituent or constituents (as defined in Appendix G of 35 Ill. Adm. Code 721) that caused USEPA to list the waste; or

B) Although containing one or more of the hazardous constituents (as defined in Appendix G of 35 Ill. Adm. Code 721) that caused USEPA to list the waste, the waste does not meet the criterion of 35 Ill. Adm. Code 721.111(a)(3) when considering the factors used in 35 Ill. Adm. Code 721.111(a)(3)(A) through (a)(3)(K) under which the waste was listed as hazardous.

2) Based on a complete petition, the Board will determine, if it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be hazardous waste, that these factors do not warrant retaining the waste as a hazardous waste.

3) The petitioner must demonstrate that the waste does not exhibit any of the characteristics, defined in 35 Ill. Adm. Code 721.121, 721.122, 721.123, or 721.124, using any applicable methods prescribed in those Sections.

4) A waste that is excluded under this subsection (d), however, may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.

e) Acute Hazardous Waste. If the waste is listed with the code "H" in Subpart D of 35 Ill. Adm. Code 721, the following requirements apply:

1) The petitioner must demonstrate that the waste does not meet the criterion of 35 Ill. Adm. Code 721.111(a)(2); and

2) Based on a complete petition, the Board will determine, if it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be hazardous waste, that these factors do not warrant retaining the waste as a hazardous waste. A Board determination under the preceding sentence must be made by reliance on, and in a manner consistent with, "EPA RCRA Delisting Program—Guidance Manual for the Petitioner", incorporated by reference in Section 720.111(a).

3) The petitioner must demonstrate that the waste does not exhibit any of the characteristics, defined in 35 Ill. Adm. Code 721.121, 721.122, 721.123, or 721.124, using any applicable methods prescribed in those Sections.

4) A waste that is so excluded under this subsection I, however, may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.

f) This subsection (f) corresponds with 40 CFR 260.22(f), which USEPA has marked "reserved". This statement maintains structural consistency with the federal regulations.

g) This subsection (g) corresponds with 40 CFR 260.22(g), which USEPA has marked "reserved". This statement maintains structural consistency with the federal regulations.

h) Demonstration samples must include enough representative samples, but in no case less than four samples, taken over a period sufficient to represent the variability or the uniformity of the waste.

i) Each petition must include, in addition to the information required by subsection (n):

1) The name and address of the laboratory facility performing the sampling or tests of the waste;

2) The names and qualifications of the persons sampling and testing the waste;

3) The dates of sampling and testing;

4) The location of the generating facility;

5) A description of the manufacturing processes or other operations and feed materials producing the waste and an assessment of whether these such processes, operations, or feed materials can or might produce a waste that is not covered by the demonstration;

6) A description of the waste and an estimate of the average and maximum monthly and annual quantities of waste covered by the demonstration;

7) Pertinent data on and discussion of the factors delineated in the respective criterion for listing a hazardous waste, if the demonstration is based on the factors in 35 Ill. Adm. Code 721.111(a)(3);

8) A description of the methodologies and equipment used to obtain the representative samples;

9) A description of the sample handling and preparation techniques, including techniques used for extracting, containerizing, and preserving the samples;

10) A description of the tests performed (including results);

11) The names and model numbers of the instruments used in performing the tests; and

12) The following statement signed by the generator or the generator's authorized representative:

> I certify under penalty of law that I have personally examined and am familiar with the information submitted in this demonstration and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

j) After receiving a petition, the Board may request any additional information that the Board needs to evaluate the petition.

k) An exclusion will only apply to the waste generated at the individual facility covered by the demonstration and will not apply to waste from any other facility.

l) The Board will exclude only part of the waste for which the demonstration is submitted if the Board determines that variability of the waste justifies a partial exclusion.
BOARD NOTE: See "EPA RCRA Delisting Program—Guidance Manual for the Petitioner", incorporated by reference in Section 720.111(a).

m) Delisting of specific wastes from specific sources that have been adopted by USEPA may be proposed as State regulations that are identical in substance under Section 720.120(a).

n) Delistings that have not been adopted by USEPA may be proposed to the Board under a petition for adjusted standard under Section 28.1 of the Act and Subpart D of 35 Ill. Adm. Code 104. The justification for the adjusted standard is as specified in subsections (a) through (g), as applicable to the waste in question. The petition must be clearly labeled as a RCRA delisting adjusted standard petition.

1) In accordance with 35 Ill. Adm. Code 101.304, the petitioner must serve copies of the petition, and any other documents filed with the Board, on USEPA at the following addresses:

USEPA
Office of Resource Conservation and Recovery
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

USEPA, Region 5
77 West Jackson Boulevard
Chicago, IL 60604

2) The Board will mail copies of all opinions and orders to USEPA at the above addresses.

3) In conjunction with the normal updating of the RCRA regulations, the Board will maintain, in Appendix I of 35 Ill. Adm. Code 721, a listing of all adjusted standards granted by the Board.

o) The Agency may determine in a permit or a letter directed to a generator that, based on 35 Ill. Adm. Code 721, a waste from a particular source is not subject to these regulations. This Agency finding is evidence against the Agency in any subsequent proceedings but will not be conclusive with reference to other persons or the Board.

p) Any petition to delist directed to the Board or request for determination directed to the Agency must include a showing that the waste will be generated or managed in Illinois.

q) The Board will not grant any petition that would render the Illinois RCRA program less stringent than if the decision were made by USEPA.

r) Delistings apply only within Illinois. Generators must comply with 35 Ill. Adm. Code 722 for waste that is hazardous in any state to which it is to be transported.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.123 Petitions for Regulation as Universal Waste

a) Any person seeking to add a hazardous waste or a category of hazardous waste to the universal waste regulations of 35 Ill. Adm. Code 733 may petition for a regulatory amendment under this Section, Section 720.120, and Subpart G of 35 Ill. Adm. Code 733.

b) Petition and Demonstration.

1) To be successful, the petitioner must demonstrate that regulation under the universal waste regulations of 35 Ill. Adm. Code 733:

A) Is appropriate for the waste or category of waste;

B) Will improve management practices for the waste or category of waste; and

C) Will improve implementing the hazardous waste program.

2) The petition must include the information required by Section 720.120(b). The petition should also address as many of the factors listed in 35 Ill. Adm. Code 733.181 as are appropriate for the waste or category of waste addressed in the petition.

c) The Board will grant or deny a petition using the factors listed in 35 Ill. Adm. Code 733.181. The decision will be based on the weight of evidence that shows the following regarding regulation under 35 Ill. Adm. Code 733:

1) That it is appropriate for the waste or category of waste;,

2) That it will improve management practices for the waste or category of waste; and

3) That it will improve implementing the hazardous waste program.

d) The Board may request additional information to that provided in 35 Ill. Adm. Code 733.181, as needed to evaluate the merits of the petition.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.130 Procedures for Solid Waste Determinations and Non-Waste Determinations

In accordance with the standards and criteria in Sections 720.131 and 720.134 and the procedures in Section 720.133, the Board will determine on a case-by-case basis that the following recycled materials are not solid wastes:

a) Materials that are accumulated speculatively without sufficient amounts being recycled (as defined in 35 Ill. Adm. Code 721.101(c)(8));

b) Materials that are reclaimed and then reused within the original production process in which they were generated;

c) Materials that have been reclaimed but must be reclaimed further before the materials are completely recovered;

d) Hazardous secondary materials that are reclaimed in a continuous industrial process; and

e) Hazardous secondary materials that are indistinguishable in all relevant aspects from a product or intermediate.

(Source: Amended at 43 Ill. Reg. 446, effective December 6, 2018)

Section 720.131 Solid Waste Determinations

a) The Board will determine that those materials that are accumulated speculatively without enough being recycled are not solid wastes if the applicant demonstrates that enough material will be recycled or transferred for recycling in the following year. This Board determination is valid only for the following year, but can be renewed, on an annual basis, by filing a new application. This determination will be based on the following criteria:

1) The manner in which the material is expected to be recycled, when the material is expected to be recycled, and whether this expected disposition is likely to occur (for example, because of past practice, market factors, the nature of the material or contractual arrangements for recycling);

2) The reason that the applicant has accumulated the material for one or more years without recycling 75 percent of the volume accumulated at the beginning of the year;

3) The quantity of material already accumulated and the quantity expected to be generated and accumulated before the material is recycled;

4) The extent to which the material is handled to minimize loss; and

5) Other relevant factors.

b) The Board will determine that those materials that are reclaimed and then reused as feedstock within the original production process in which the materials were generated are not solid wastes if the reclamation operation is an essential part of the production process. This determination will be based on the following criteria:

1) How economically viable the production process would be if it were to use virgin materials, rather than reclaimed materials;

2) The extent to which the material is handled before reclamation to minimize loss;

3) The periods between generating the material and its reclamation, and between reclamation and return to the original primary production process;

4) The location of the reclamation operation in relation to the production process;

5) Whether the reclaimed material is used for the purpose for which it was originally produced when it is returned to the original process, and whether it is returned to the process in substantially its original form;

6) Whether the person that generates the material also reclaims it; and

7) Other relevant factors.

c) The Board will determine, as provided in Section 720.133, that those hazardous secondary materials that have been partially reclaimed but must be reclaimed further before recovery is completed are not solid wastes if the partial reclamation has produced a commodity-like material. A determination that a partially-reclaimed material for which the determination is sought is commodity-like will be based on whether the hazardous secondary material is legitimately recycled, as specified in Section 720.143, and on whether the following decision criteria are satisfied:

1) Whether the degree of partial reclamation the material has undergone is substantial, as demonstrated by using a partial reclamation process other than the process that generated the hazardous secondary material;

2) Whether the partially reclaimed material has sufficient economic value that it will be purchased for further reclamation;

3) Whether the partially reclaimed material is a viable substitute for a product or intermediate produced from virgin or raw materials that is used in subsequent production steps;

4) Whether there is a market for the partially reclaimed material, as demonstrated by known customers who are further reclaiming the material (e.g., records of sales or contracts and evidence of subsequent use, like bills of lading); and

5) Whether the partially reclaimed material is handled to minimize loss.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.132 Boiler Determinations

In accordance with the standards and criteria in Section 720.110 (definition of "boiler"), and the procedures in 720.133, the Board will determine on a case-by-case basis that certain enclosed devices using controlled flame combustion are boilers, even though they do not otherwise meet the definition of boiler contained in Section 720.110, after considering the following criteria:

a) The extent to which the unit has provisions for recovering and exporting thermal energy in the form of steam, heated fluids or heated gases;

b) The extent to which the combustion chamber and energy recovery equipment are of integral design;

c) The efficiency of energy recovery, calculated in terms of the recovered energy compared with the thermal value of the fuel;

d) The extent to which exported energy is utilized;

e) The extent to which the device is in common and customary use as a "boiler" functioning primarily to produce steam, heated fluids or heated gases; and

f) Other relevant factors.

(Source: Amended at 27 Ill. Reg. 12713, effective July 17, 2003)

Section 720.133 Procedures for Determinations

The Board will use the procedures of Subpart D of 35 Ill. Adm. Code 104 for determining whether a material is a solid waste, for determining that a hazardous secondary material is managed at a verified facility, for determining whether a particular enclosed flame combustion device is a boiler, or for evaluating an application for a non-waste determination.

a) The application must address the relevant criteria contained in Section 720.131, 720.132, or 720.134, as applicable.

b) This subsection (b) corresponds with 40 CFR 260.33(b), which pertains to the USEPA procedure for review of petitions. This statement maintains structural consistency with USEPA rules.

c) Changed Circumstances.

1) If a change in circumstances that affects how a hazardous secondary material meets the relevant criteria contained in Section 720.131, 720.132, or 720.134 upon which a solid waste, verified facility, or non-waste determination has been based, the applicant must submit a description of

the change in circumstances to the Board as a petition for adjusted standard that requests modifying the previously granted solid waste, boiler, or non-waste determination under which the petitioner operates or, in the alternative, a Board order that no such modification is necessary.

2) The Board will do the following:

A) determine, based on the record, whether the hazardous secondary material continues to meet the relevant criteria that justify exclusion from definition as solid waste; and

B) issue an appropriate order granting or denying the petition.

d) A solid waste, verified facility, boiler, or non-waste determination is effective for a fixed term not to exceed 10 years, except as provided in this subsection (d). No later than six months prior to the end of this term, facilities must re-apply for a solid waste, verified facility, boiler, or non-waste determination. If a facility owner or operator re-applies for a solid waste, verified facility, boiler, or non-waste determination no later than six months prior to expiration of a solid waste, verified facility, boiler, or non-waste determination, the facility may continue to operate under an expired solid waste, boiler, or non-waste determination until receiving a decision on the re-application from the Board.

e) A facility that receives a solid waste, boiler, or non-waste determination must provide notification, as required by Section 720.142.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.134 Non-Waste Determinations

a) A person generating, managing, or reclaiming hazardous secondary material may petition the Board under this Section, Section 720.133 and Section 28.2 of the Act for an adjusted standard that is a formal determination that a hazardous secondary material is not discarded and therefore is not a solid waste. The Board's adjusted standard determination will be based on the criteria contained in either subsection (b) or (c), as applicable. If the Board denies the petition, the hazardous secondary material might still be eligible for a solid waste determination or verified facility determination under Section 720.131 or an exclusion. A determination made by the Board under this Section becomes effective upon occurrence of the first of the following two events:

1) After USEPA has authorized Illinois to administer this segment of the hazardous waste regulations, the determination is effective upon issuance of the Board order that grants the non-waste determination; or

2) Before USEPA has granted authorization, the non-waste determination becomes effective upon fulfillment of the following conditions:

A) The Board has granted an adjusted standard that determines that the hazardous secondary material meets the criteria in either subsection (b) or (c), as applicable;

B) The Agency has requested that USEPA review the Board's non-waste determination; and

C) USEPA has approved the Board's non-waste determination.

b) The Board will grant a non-waste determination for hazardous secondary material that is reclaimed in a continuous industrial process if the Board determines that the applicant has demonstrated that the hazardous secondary material is a part of the production process and the material is not discarded. The determination will be based on whether the hazardous secondary material is legitimately recycled, as determined under Section 720.143, and on the following criteria:

1) The extent to which the management of the hazardous secondary material is part of the continuous primary production process and is not waste treatment;

2) Whether the capacity of the production process would use the hazardous secondary material in a reasonable time frame and ensure that the hazardous secondary material will not be abandoned (for example, based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);

3) Whether the hazardous constituents in the hazardous secondary material are reclaimed, rather than released to the air, water, or land, at significantly higher levels, from either a statistical or from a health and environmental risk perspective, than would otherwise be released by the production process; and

4) Other relevant factors that demonstrate that the hazardous secondary material is not discarded, including why the hazardous secondary material cannot meet, or should not have to meet, the conditions of an exclusion under 35 Ill. Adm. Code 721.102 or 721.104.

c) The Board will grant a non-waste determination for a hazardous secondary material that is indistinguishable in all relevant aspects from a product or intermediate if the petitioner demonstrates that the hazardous secondary material is comparable to a product or intermediate and is not discarded. The Board's determination will be based on whether the hazardous secondary material is

legitimately recycled, as determined under Section 720.143, and on the following criteria:

1) Whether market participants treat the hazardous secondary material as a product or intermediate, rather than as a waste (for example, based on the current positive value of the hazardous secondary material, stability of demand, or any contractual arrangements);

2) Whether the chemical and physical identity of the hazardous secondary material is comparable to commercial products or intermediates;

3) Whether the capacity of the market would use the hazardous secondary material in a reasonable time frame and ensure that the hazardous secondary material will not be abandoned (for example, based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);

4) Whether the hazardous constituents in the hazardous secondary material are reclaimed, rather than released to the air, water, or land, at significantly higher levels, from either a statistical or from a health and environmental risk perspective, than would otherwise be released by the production process; and

5) Other relevant factors that demonstrate that the hazardous secondary material is not discarded, including why the hazardous secondary material cannot meet, or should not have to meet, the conditions of an exclusion under 35 Ill. Adm. Code 721.102 or 721.104.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.140 Additional Regulation of Certain Hazardous Waste Recycling Activities on a Case-by-Case Basis

a) The Agency may decide on a case-by-case basis that persons accumulating or storing the recyclable materials described in 35 Ill. Adm. Code 721.106(a)(2)(C) should be regulated under 35 Ill. Adm. Code 721.106(b) and (c) rather than under the provisions of Subpart F of 35 Ill. Adm. Code 726. The basis for this decision is that the materials are being accumulated or stored in a manner that does not protect human health and the environment because the materials or their toxic constituents have not been adequately contained, or because the materials being accumulated or stored together are incompatible. In making this decision, the Agency must consider the following factors:

1) The types and amounts of materials accumulated or stored;

2) The method of accumulation or storage;

3) The length of time the materials have been accumulated or stored before being reclaimed;

4) Whether any contaminants are being released into the environment, or are likely to be so released; and

5) Other relevant factors.

b) The procedures for this decision are provided in Section 720.141.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.141 Procedures for Case-by-Case Regulation of Hazardous Waste Recycling Activities

The Agency must use the following procedures when determining whether to regulate hazardous waste recycling activities described in 35 Ill. Adm. Code 721.106(a)(2)(C) under the provisions of 35 Ill. Adm. Code 721.106(b) and (c) rather than under the provisions of Subpart F of 35 Ill. Adm. Code 726.

a) If a generator is accumulating the waste, the Agency must issue a notice stating the factual basis for the decision and stating that the person must comply with the applicable requirements of Subparts A, C, D and E of 35 Ill. Adm. Code 722. The notice will become final within 30 days unless the person served requests a public hearing to challenge the decision. Upon receiving a request, the Agency must hold a public hearing. The Agency must provide notice of the hearing to the public and allow public participation at the hearing. The Agency must issue a final written memorandum of decision after the hearing stating whether complying with 35 Ill. Adm. Code 722 is required, and stating the reasons for the Agency's decision, including all findings of fact and conclusions of law. The memorandum of decision will constitute a final administrative action and may be appealed to the Board. The decision becomes effective 35 days after service of the decision unless the Agency specifies a later date or unless an appeal has been filed with the Board. The decision may be appealed to the Board by any person who participated in the hearing. Proceedings before the Board must be according to the rules in 35 Ill. Adm. Code 105.

b) If the person is accumulating the recyclable material as a storage facility, the notice must state that the person must obtain a permit in accordance with all applicable provisions of 35 Ill. Adm. Code 702, 703, and 705. The owner or operator of the facility must apply for a permit within no less than 60 days and no more than six months after notice, as specified in the notice. If the owner or operator of the facility wishes to challenge the Agency's decision, it may do so in its permit application, in a public hearing held on the draft permit, or in comments filed on the draft permit or on the notice of intent to deny the permit. The fact

sheet accompanying the permit will specify the reasons for the Agency's determination. The question of whether the Agency's decision was proper will remain open for consideration during the public comment period discussed under Subparts D and E of 35 Ill. Adm. Code 705, and in any subsequent hearing.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.142 Notification Requirement for Hazardous Secondary Materials

a) A facility that manages hazardous secondary materials that are excluded from regulation under 35 Ill. Adm. Code 721.104(a)(23), (a)(24), or (a)(27) must send a notification to the Agency, Bureau of Land. The notification must occur prior to operating under the regulatory provision and before March 1 of every even-numbered calendar year thereafter using a copy of Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12). The notification must include the following information:

1) The name, address, and USEPA identification number (if applicable) of the facility;

2) The name and telephone number of a contact person for the facility;

3) The NAICS code of the facility; Determined using the "North American Industry Classification System", incorporated by reference in Section 720.111.

4) The regulation under which the facility will manage the hazardous secondary materials;

5) For reclaimers and intermediate facilities managing hazardous secondary materials under 35 Ill. Adm. Code 721.104(a)(24) or (a)(25), whether the reclaimer or intermediate facility has financial assurance (not applicable for persons managing hazardous secondary materials generated and reclaimed under the control of the generator);

6) When the facility began or expects to begin managing the hazardous secondary materials in accordance with the regulation;

7) A list of hazardous secondary materials that the facility will manage according to the regulation (reported as the USEPA hazardous waste numbers that would apply if the hazardous secondary materials were managed as hazardous wastes);

8) For each hazardous secondary material, whether the hazardous secondary material, or any portion thereof, will be managed in a land-based unit;

9) The quantity of each hazardous secondary material to be managed annually; and

10) The certification (included in USEPA Form 8700-12) signed and dated by an authorized representative of the facility.

b) If a facility that manages hazardous secondary material has submitted a notification, but then subsequently ceases managing hazardous secondary materials in compliance with a regulation listed in subsection (a), the facility owner or operator must notify the Agency within 30 days after the cessation using a copy of USEPA Form 8700-12. For this Section, a facility has stopped managing hazardous secondary materials if the facility no longer generates, manages, or reclaims hazardous secondary materials under the regulation listed in subsection (a), and the facility owner or operator does not expect to manage any amount of hazardous secondary materials for at least one year.

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

(Source: Amended at 48 Ill. Reg. 9723, effective June 20, 2024)

Section 720.143 Legitimate Recycling of Hazardous Secondary Materials

a) Recycling of hazardous secondary materials for the exclusions or exemptions from the hazardous waste regulations must be legitimate. Hazardous secondary material that is not the subject of legitimate recycling is discarded material and is a solid waste. A determination that an activity is legitimate recycling must address this subsection (a) and must consider subsection (b).

1) Legitimate recycling must involve a hazardous secondary material that provides a useful contribution to the recycling process or to a product or intermediate of the recycling process. The hazardous secondary material provides a useful contribution if it fulfills one of the following criteria:

A) The material contributes valuable ingredients to a product or intermediate;

B) The material replaces a catalyst or carrier in the recycling process;

C) The material is the source of a valuable constituent recovered in the recycling process;

D) The material is recovered or regenerated by the recycling process; or

E) The material is used as an effective substitute for a commercial product.

2) The recycling process must produce a valuable product or intermediate. The product or intermediate is valuable if either of the following is true:

A) The product or intermediate is sold to a third party; or

B) The product or intermediate is used by the recycler or the generator as an effective substitute for a commercial product or as an ingredient or intermediate in an industrial process.

3) The generator and the recycler must manage the hazardous secondary material as a valuable commodity when it is under their control. If there is an analogous raw material, the hazardous secondary material must be managed, at a minimum, in a manner consistent with the management of the raw material or in an equally protective manner. If there is no analogous raw material, the hazardous secondary material must be contained. Hazardous secondary materials that are released to the environment and that are not recovered immediately are discarded material.

b) The following factor must be considered in determining the overall legitimacy of a specific recycling activity.

1) The product of the recycling process fulfills the following criteria:

A) The product must not contain significant concentrations of any hazardous constituents found in Appendix H of 35 Ill. Adm. Code 721 that are not found in analogous products;

B) The product must not contain concentrations of hazardous constituents found in Appendix H of 35 Ill. Adm. Code 721 at levels that are significantly elevated from those found in analogous products; and

C) The product must not exhibit a hazardous characteristic (as defined in Subpart C of 35 Ill. Adm. Code 721) that analogous products do not exhibit.

2) In determining that a hazardous secondary material is legitimately recycled, persons must evaluate all factors and consider legitimacy as a whole. If, after carefully evaluating these considerations, the factor in this subsection (b) is not met, then this fact may indicate that the material is not legitimately recycled. However, the factor in this subsection (b) does

not have to be met for the recycling to be considered legitimate. In evaluating the extent to which this factor is met and in determining whether a process that does not meet this factor is still legitimate, persons can consider exposure from toxics in the product, the bioavailability of the toxics in the product and other relevant considerations.

Section 720.APPENDIX A Overview of Federal RCRA Subtitle C (Hazardous Waste) Regulations (Repealed)

(Source: Repealed at 35 Ill. Reg. 17672, effective October 14, 2011)

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE G: WASTE DISPOSAL
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER c: HAZARDOUS WASTE OPERATING REQUIREMENTS

PART 721
IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

SUBPART A: GENERAL PROVISIONS

Section
721.101 Purpose and Scope
721.102 Definition of Solid Waste
721.103 Definition of Hazardous Waste
721.104 Exclusions
721.105 Special Requirements for Hazardous Waste Generated by Small Quantity Generators (Repealed)
721.106 Requirements for Recyclable Materials
721.107 Residues of Hazardous Waste in Empty Containers
721.108 PCB Wastes Regulated under TSCA
721.109 Requirements for Universal Waste

SUBPART B: CRITERIA FOR IDENTIFYING THE CHARACTERISTICS OF HAZARDOUS WASTE AND FOR LISTING HAZARDOUS WASTES

Section
721.110 Criteria for Identifying the Characteristics of Hazardous Waste
721.111 Criteria for Listing Hazardous Waste

SUBPART C: CHARACTERISTICS OF HAZARDOUS WASTE

Section
721.120 General
721.121 Characteristic of Ignitability
721.122 Characteristic of Corrosivity
721.123 Characteristic of Reactivity
721.124 Toxicity Characteristic

SUBPART D: LISTS OF HAZARDOUS WASTE

Section
721.130 General
721.131 Hazardous Wastes from Nonspecific Sources
721.132 Hazardous Waste from Specific Sources
721.133 Discarded Commercial Chemical Products, Off-Specification Species, Container Residues, and Spill Residues Thereof

721.135 Wood Preserving Wastes

SUBPART E: EXCLUSIONS AND EXEMPTIONS

Section
721.138 Exclusion of Comparable Fuel and Syngas Fuel (Repealed)
721.139 Conditional Exclusion for Used, Broken CRTs and Processed CRT Glass Undergoing Recycling
721.140 Conditional Exclusion for Used, Intact CRTs Exported for Recycling
721.141 Notification and Recordkeeping for Used, Intact CRTs Exported for Reuse

SUBPART H: FINANCIAL REQUIREMENTS FOR MANAGEMENT OF EXCLUDED HAZARDOUS SECONDARY MATERIALS

Section
721.240 Applicability
721.241 Definitions of Terms as Used in This Subpart
721.242 Cost Estimate
721.243 Financial Assurance Condition
721.247 Liability Requirements
721.248 Incapacity of Owners or Operators, Guarantors, or Financial Institutions
721.249 Use of State-Required Mechanisms
721.250 State Assumption of Responsibility
721.251 Wording of the Instruments

SUBPART I: USE AND MANAGEMENT OF CONTAINERS

Section
721.270 Applicability
721.271 Condition of Containers
721.272 Compatibility of Hazardous Secondary Materials with Containers
721.273 Management of Containers
721.275 Secondary Containment
721.276 Special Requirements for Ignitable or Reactive Hazardous Secondary Material
721.277 Special Requirements for Incompatible Materials
721.279 Air Emission Standards

SUBPART J: TANK SYSTEMS

Section
721.290 Applicability
721.291 Assessment of Existing Tank System’s Integrity
721.293 Containment and Detection of Releases
721.294 General Operating Requirements
721.296 Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems

721.297 Termination of Remanufacturing Exclusion
721.298 Special Requirements for Ignitable or Reactive Materials
721.299 Special Requirements for Incompatible Materials
721.300 Air Emission Standards

SUBPART M: EMERGENCY PREPAREDNESS AND RESPONSE FOR MANAGEMENT OF EXCLUDED HAZARDOUS SECONDARY MATERIALS

Section
721.500 Applicability
721.510 Preparedness and Prevention
721.511 Emergency Procedures for Facilities Generating or Accumulating 6,000 kg or Less of Hazardous Secondary Material
721.520 Contingency Planning and Emergency Procedures for Facilities Generating or Accumulating More Than 6,000 kg of Hazardous Secondary Material

SUBPART AA: AIR EMISSION STANDARDS FOR PROCESS VENTS

Section
721.930 Applicability
721.931 Definitions
721.932 Standards: Process Vents
721.933 Standards: Closed-Vent Systems and Control Devices
721.934 Test Methods and Procedures
721.935 Recordkeeping Requirements

SUBPART BB: AIR EMISSION STANDARDS FOR EQUIPMENT LEAKS

Section
721.950 Applicability
721.951 Definitions
721.952 Standards: Pumps in Light Liquid Service
721.953 Standards: Compressors
721.954 Standards: Pressure Relief Devices in Gas/Vapor Service
721.955 Standards: Sampling Connection Systems
721.956 Standards: Open-Ended Valves or Lines
721.957 Standards: Valves in gas/Vapor Service or in Light Liquid Service
721.958 Standards: Pumps and Valves in Heavy Liquid Service, Pressure Relief Devices in Light Liquid or Heavy Liquid Service, and Flanges and Other Connectors
721.959 Standards: Delay of Repair
721.960 Standards: Closed-Vent Systems and Control Devices
721.961 Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Percentage of Valves Allowed to Leak
721.962 Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Skip Period Leak Detection and Repair
721.963 Test Methods and Procedures

721.964 Recordkeeping Requirements

SUBPART CC: AIR EMISSION STANDARDS FOR TANKS AND CONTAINERS

Section

721.980 Applicability
721.981 Definitions
721.982 Standards: General
721.983 Material Determination Procedures
721.984 Standards: Tanks
721.986 Standards: Containers
721.987 Standards: Closed-Vent Systems and Control Devices

SUBPART A: GENERAL PROVISIONS

Section 721.101 Purpose and Scope

a) This Part identifies those solid wastes that are subject to regulation as hazardous wastes under 35 Ill. Adm. Code 702, 703, and 722 through 728, and that are subject to the notification requirements of Section 3010 of RCRA (42 USC 6930). In this Part:

1) Subpart A defines the terms "solid waste" and "hazardous waste", identifies those wastes that are excluded from regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728, and establishes special management requirements for hazardous waste that is recycled.

2) Subpart B specifies the criteria used to identify characteristics of hazardous waste and to list hazardous wastes.

3) Subpart C identifies characteristics of hazardous wastes.

4) Subpart D lists particular hazardous wastes.

b) Limitations on Definition of Solid Waste

1) The definition of solid waste contained in this Part applies only to wastes that also are hazardous for the regulations implementing Subtitle C of RCRA. For example, it does not apply to materials (like non-hazardous scrap, paper, textiles, or rubber) that are not otherwise hazardous wastes and that are recycled.

2) This Part identifies only some of the materials that are solid wastes and hazardous wastes under Sections 1004(5), 1004(27) and 7003 of RCRA. A material that is not defined as a solid waste in this Part, or is not a hazardous waste identified or listed in this Part, is still a hazardous waste under those Sections if, in the case of Section 7003 of RCRA, the statutory elements are established.

c) For Sections 721.102 and 721.106, the following definitions apply:

1) A "spent material" is any material that has been used and because of contamination can no longer serve the purpose for which it was produced without processing.

2) "Sludge" has the same meaning used in 35 Ill. Adm. Code 720.110.

3) A "by-product" is a material that is not one of the primary products of a production process and is not solely or separately produced by the production process. Examples are process residues like slags or distillation column bottoms. The term does not include a co-product that is produced for the general public's use and is ordinarily used in the form it is produced by the process.

4) A material is "reclaimed" if it is processed to recover a usable product, or if it is regenerated. Examples are recovering lead values from spent batteries and regenerating spent solvents. In addition, for Section 721.104(a)(23) and (a)(24) smelting, melting, and refining furnaces are considered to be solely engaged in metals reclamation if the metal recovery from the hazardous secondary materials meets the same requirements as those specified for metals recovery from hazardous waste in 35 Ill. Adm. Code 726.200(d)(1) through (d)(3), and if the residuals meet the requirements specified in 35 Ill. Adm. Code 726.212.

5) A material is "used or reused" if:

   A) It is employed as an ingredient (including use as an intermediate) in an industrial process to make a product (for example, distillation bottoms from one process used as feedstock in another process). However, a material will not meet this condition if distinct components of the material are recovered as separate end products (as when metals are recovered from metal-containing secondary materials); or

   B) It is employed in a particular function or application as an effective substitute for a commercial product (for example, spent pickle liquor used as phosphorus precipitant and sludge conditioner in wastewater treatment).

6) "Scrap metal" is bits and pieces of metal parts (e.g., bars, turnings, rods, sheets, or wire) or metal pieces that may be combined with bolts or soldering (e.g., radiators, scrap automobiles, or railroad box cars) that when worn or superfluous can be recycled.

7) A material is "recycled" if it is used, reused, or reclaimed.

8) A material is "accumulated speculatively" if it is accumulated before being recycled. A material is not accumulated speculatively, however, if the person accumulating it can show that the material is potentially recyclable and has a feasible means of being recycled; and that, during the calendar year (commencing on January 1), the amount of material that is

recycled, or transferred to a different site for recycling, equals at least 75 percent by weight or volume of the amount of that material accumulated at the beginning of the period. Materials must be placed in a storage unit with a label indicating the first date that the material began to be accumulated. If placing a label on the storage unit is not practicable, the accumulation period must be documented through an inventory log or other appropriate method. In calculating the percentage of turnover, the 75 percent requirement is to be applied to each material of the same type (e.g., slags from a single smelting process) that is recycled in the same way (i.e., from which the same material is recovered or that is used in the same way). Materials accumulating in units that would be exempt from regulation under Section 721.104(c) are not to be included in making the calculation. Materials that are already defined as solid wastes also are not to be included in making the calculation. Materials are no longer in this category once they are removed from accumulation for recycling, however.

BOARD NOTE: Various segments of this Part and 35 Ill. Adm. Code 720 use the verbal phrase "accumulated speculatively" and the noun phrase "speculative accumulation". Some of those segments rely on this subsection (c)(8) definition of "speculatively accumulated" for defining "speculative accumulation". The Board infers that USEPA intends that the verb phrase define the noun phrase: material that is accumulated speculatively is the subject of speculative accumulation.

9) "Excluded scrap metal" is processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal.

10) "Processed scrap metal" is scrap metal that has been manually or physically altered to either separate it into distinct materials to enhance economic value or to improve the handling of materials. Processed scrap metal includes scrap metal that has been baled, shredded, sheared, chopped, crushed, flattened, cut, melted, or separated by metal type (i.e., sorted) and fines, drosses, and related materials that have been agglomerated. (Note: shredded circuit boards being sent for recycling are not considered processed scrap metal. They are covered under the exclusion from the definition of solid waste for shredded circuit boards being recycled (Section 721.104(a)(14)).

11) "Home scrap metal" is scrap metal as generated by steel mills, foundries, and refineries, like turnings, cuttings, punchings, and borings.

12) "Prompt scrap metal" is scrap metal as generated by the metal working/fabrication industries, and it includes scrap metal like turnings, cuttings, punchings, and borings. Prompt scrap metal is also known as industrial or new scrap metal.

d) The Agency has inspection authority under Section 3007 of RCRA and Section 4 of the Act.

e) Electronic reporting. The filing of any document under any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Subsection (e) is derived from 40 CFR 3, 271.10(b), 271.11(b), and 271.12(h) (2017).

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.102 Definition of Solid Waste

a) Solid Waste

1) A solid waste is any discarded material that is not excluded pursuant to Section 721.104(a) or that is not excluded pursuant to 35 Ill. Adm. Code 720.130 and 720.131 or 35 Ill. Adm. Code 720.130 and 720.134.

2) Discarded Material

A) A discarded material is any material that is described as follows:

i) It is abandoned, as described in subsection (b);

ii) It is recycled, as described in subsection (c);

iii) It is considered inherently waste-like, as described in subsection (d); or

iv) It is a military munition identified as a solid waste in 35 Ill. Adm. Code 726.302.

B) This subsection (a)(2)(B) corresponds with 40 CFR 261.2(a)(2)(ii), which USEPA has removed and marked "reserved". This statement maintains structural consistency with the corresponding federal regulations.

b) A material is a solid waste if it is abandoned in one of the following ways:

1) It is disposed of;

2) It is burned or incinerated;

3) It is accumulated, stored, or treated (but not recycled) before or in lieu of being abandoned by being disposed of, burned, or incinerated; or

4) Sham recycled, as explained in subsection (g).

c) A material is a solid waste if it is recycled—or accumulated, stored, or treated before recycling—as specified in subsections (c)(1) through (c)(4), if one of the following occurs with regard to the material:

1) The material is used in a manner constituting disposal.

A) A material that is noted with a "yes" in column 1 of the table in Appendix Z is a solid waste when one of the following occurs:

i) The material is applied to or placed on the land in a manner that constitutes disposal; or

ii) The material is used to produce products that are applied to or placed on the land or are otherwise contained in products that are applied to or placed on the land (in which cases the product itself remains a solid waste).

B) However, a commercial chemical product that is listed in Section 721.133 is not a solid waste if it is applied to the land and that is its ordinary manner of use.

2) The material is burned for energy recovery.

A) A material that is noted with a "yes" in column 2 of the table in Appendix Z is a solid waste when one of the following occurs:

i) It is burned to recover energy;

ii) It is used to produce a fuel or is otherwise contained in fuels (in which case the fuel itself remains a solid waste);

iii) It is contained in fuels (in which case the fuel itself remains a solid waste).

B) However, a commercial chemical product that is listed in Section 721.133 is not a solid waste if it is itself a fuel.

3) Reclaimed. A material noted with a "No" in column 3 of the table in Appendix Z is not a solid waste when reclaimed (except as provided under Section 721.104(a)(17)). A material noted with a "Yes" in column 3 of

Appendix Z is a solid waste when reclaimed, unless it meets the requirements of Section 721.104(a)(17), (a)(23), (a)(24), or (a)(27).

4) Accumulated Speculatively. A material noted with "yes" in column 4 of the table in Appendix Z is a solid waste when accumulated speculatively.

d) Inherently Waste-Like Materials. The following materials are solid wastes when they are recycled in any manner:

1) USEPA hazardous waste numbers F020, F021 (unless used as an ingredient to make a product at the site of generation), F022, F023, F026, and F028.

2) A secondary material fed to a halogen acid furnace that exhibits a characteristic of a hazardous waste or which is listed as a hazardous waste, as defined in Subpart C or D, except for brominated material that meets the following criteria:

A) The material must contain a bromine concentration of at least 45 percent;

B) The material must contain less than a total of one percent of toxic organic compounds listed in Appendix H; and

C) The material is processed continually on-site in the halogen acid furnace via direct conveyance (hard piping).

3) The following criteria are used to add wastes to the list:

A) Disposal Method or Toxicity

i) The material is ordinarily disposed of, burned, or incinerated; or

ii) The material contains toxic constituents listed in Appendix H and these constituents are not ordinarily found in raw materials or products for which the material substitutes (or are found in raw materials or products in smaller concentrations) and is not used or reused during the recycling process; and

B) The material may pose a substantial hazard to human health and the environment when recycled.

e) Materials That Are Not Solid Waste When Recycled

1) A material is not a solid waste when it can be shown to be recycled by fulfilling one of the following conditions:

A) It is used or reused as an ingredient in an industrial process to make a product, provided the material is not being reclaimed; or

B) It is used or reused as effective substitutes for commercial products; or

C) It is returned to the original process from which it is generated, without first being reclaimed or land disposed. The material must be returned as a substitute for feedstock materials. In cases where the original process to which the material is returned is a secondary process, the material must be managed in such a manner that there is no placement on the land. In cases where the material is generated and reclaimed within the primary mineral processing industry, the conditions of the exclusion found at Section 721.104(a)(17) apply rather than this provision.

2) The following materials are solid wastes, even if the recycling involves use, reuse, or return to the original process (described in subsections (e)(1)(A) through (e)(1)(C)):

A) A material used in a manner constituting disposal or used to produce a product that is applied to the land; or

B) A material burned for energy recovery, used to produce a fuel, or contained in fuels; or

C) A material accumulated speculatively; or

D) A material listed in subsections (d)(1) and (d)(2).

f) Documentation of Claims That a material is Not a Solid Waste or is Conditionally Exempt from Regulation. A respondent in an action to enforce regulations implementing Subtitle C of RCRA or Section 21 of the Environmental Protection Act that raises a claim that a certain material is not a solid waste or that the material is conditionally exempt from regulation must demonstrate that there is a known market or disposition for the material and that the material meets the terms of the exclusion or exemption. In doing so, the person must provide appropriate documentation (such as contracts showing that a second person uses the material as an ingredient in a production process) to demonstrate that the material is not a waste or that the material is exempt from regulation. In addition, an owner or operator of a facility claiming that it actually is recycling a material must show that it has the necessary equipment to recycle that material.

g) Sham Recycling. A hazardous secondary material found to be sham recycled is considered discarded and a solid waste. Sham recycling is recycling that is not legitimate recycling, as defined in 35 Ill. Adm. Code 720.143.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.103 Definition of Hazardous Waste

a) A solid waste, as defined in Section 721.102, is a hazardous waste if the following is true of the waste:

1) It is not excluded from regulation as a hazardous waste pursuant to Section 721.104(b); and

2) It meets any of the following criteria:

A) It exhibits any of the characteristics of hazardous waste identified in Subpart C. However, any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded pursuant to Section 721.104(b)(7) and any other solid waste exhibiting a characteristic of hazardous waste pursuant to Subpart C is a hazardous waste only if it exhibits a characteristic that would not have been exhibited by the excluded waste alone if such mixture had not occurred, or if the mixture continues to exhibit any of the characteristics exhibited by the non-excluded wastes prior to mixture. Further, for the purposes of applying the toxicity characteristic to such mixtures, the mixture is also a hazardous waste if it exceeds the maximum concentration for any contaminant listed in Section 721.124 that would not have been exceeded by the excluded waste alone if the mixture had not occurred or if it continues to exceed the maximum concentration for any contaminant exceeded by the nonexempt waste prior to mixture.

B) It is listed in Subpart D and has not been excluded from the lists in Subpart D pursuant to 35 Ill. Adm. Code 720.120 and 720.122.

C) This subsection (a)(2)(B) corresponds with 40 CFR 261.3(a)(2)(iii), which USEPA removed and marked as "reserved" at 66 Fed. Reg. 27266 (May 16, 2001). This statement maintains structural consistency with the federal regulations.

D) It is a mixture of solid waste and one or more hazardous wastes listed in Subpart D and has not been excluded from this subsection (a)(2) pursuant to 35 Ill. Adm. Code 720.120 and 720.122 or subsection (g) or (h); however, the following mixtures of solid

wastes and hazardous wastes listed in Subpart D are not hazardous wastes (except by application of subsection (a)(2)(A) or (a)(2)(B)) if the generator demonstrates that the mixture consists of wastewater the discharge of which is subject to regulation under either 35 Ill. Adm. Code 309 or 310 (including wastewater at facilities that have eliminated the discharge of wastewater) and the following is true of the waste:

i) It is one or more of the following solvents listed in Section 721.131: benzene, carbon tetrachloride, tetrachloro-ethylene, trichloroethylene or the scrubber waters derived from the combustion of these spent solvents, provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 1 part per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at a facility that is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 1 part per million on an average weekly basis. Any facility that uses benzene as a solvent and claims this exemption must use an aerated biological wastewater treatment system and must use only lined surface impoundments or tanks prior to secondary clarification in the wastewater treatment system. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the Agency. The Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(i) or that the plan parameters would not enable the facility to calculate the

weekly average concentration of these chemicals accurately. If the Agency rejects the sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected;

ii) It is one or more of the following spent solvents listed in Section 721.131: methylene chloride, 1,1,1-trichloro-ethane, chlorobenzene, o-dichlorobenzene, cresols, cresylic acid, nitrobenzene, toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents, 2- ethoxyethanol, or the scrubber waters derived-from the combustion of these spent solvents, provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 25 parts per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at a facility that is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 25 parts per million on an average weekly basis. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the Agency. The Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(ii) or that the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the Agency rejects the

sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected;

iii) It is one of the following wastes listed in Section 721.132, provided that the wastes are discharged to the refinery oil recovery sewer before primary oil/water/solids separation: heat exchanger bundle cleaning sludge from the petroleum refining industry (USEPA hazardous waste number K050), crude oil storage tank sediment from petroleum refining operations (USEPA hazardous waste number K169), clarified slurry oil tank sediment or in-line filter/separation solids from petroleum refining operations (USEPA hazardous waste number K170), spent hydrotreating catalyst (USEPA hazardous waste number K171), and spent hydrorefining catalyst (USEPA hazardous waste number K172);

iv) It is a discarded hazardous waste, commercial chemical product or chemical intermediate listed in Section 721.121, 721.132, or 721.133 arising from de minimis losses of these materials. For purposes of this subsection (a)(2)(D)(iv), "de minimis" losses are inadvertent releases to a wastewater treatment system, including those from normal material handling operations (e.g., spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves, or other devices used to transfer materials); minor leaks of process equipment, storage tanks, or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; and rinsate from empty containers or from containers that are rendered empty by that rinsing. Any manufacturing facility that claims an exemption for de minimis quantities of a waste listed in Section 721.131 or 721.132, or any nonmanufacturing facility that claims an exemption for de minimis quantities of wastes listed in Subpart D, must either have eliminated the discharge of wastewaters or have included in its federal Clean Water Act (33 USC 1251 et seq.) permit application or wastewater pretreatment submission to the Agency or the wastewater pretreatment Control Authority pursuant to 35 Ill. Adm. Code 307 of the constituents for which each waste was listed (in Appendix

G); and the constituents in Table T to 35 Ill. Adm. Code 728 for which each waste has a treatment standard (*i.e.*, land disposal restriction constituents). A facility is eligible to claim the exemption once the Agency or Control Authority has been notified of possible de minimis releases via the Clean Water Act permit application or the wastewater pretreatment submission. A copy of the Clean Water Act permit application or the wastewater pretreatment submission must be placed in the facility's on-site files;

v) It is wastewater resulting from laboratory operations containing toxic (T) wastes listed in Subpart D, provided that the annualized average flow of laboratory wastewater does not exceed one percent of total wastewater flow into the headworks of the facility's wastewater treatment or pretreatment system or provided that the wastes' combined annualized average concentration does not exceed one part per million in the headworks of the facility's wastewater treatment or pretreatment facility. Toxic (T) wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation;

vi) It is one or more of the following wastes listed in Section 721.132: wastewaters from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K157), provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine (including all amounts that cannot be demonstrated to be reacted in the process, destroyed through treatment, or recovered, i.e., what is discharged or volatilized) divided by the average weekly flow of process wastewater prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 parts per million by weight, or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at a facility that is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 5 parts per million on an average weekly basis. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised

sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the Agency. The Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(vi) or that the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the Agency rejects the sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected; or

vii) It is wastewater derived from the treatment of one or more of the following wastes listed in Section 721.132: organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K156), provided that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 milligrams per liter, or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at a facility that is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 5 milligrams per liter on an average weekly basis. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology,

and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the Agency. The Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(vii) or that the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the Agency rejects the sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected.

E) Rebuttable presumption for used oil. Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in Subpart D. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (for example, to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in Appendix H).

i) The rebuttable presumption does not apply to a metalworking oil or fluid containing chlorinated paraffins if it is processed through a tolling arrangement, as described in 35 Ill. Adm. Code 739.124(c), to reclaim metalworking oils or fluids. The presumption does apply to a metalworking oil or fluid if such an oil or fluid is recycled in any other manner, or disposed of.

ii) The rebuttable presumption does not apply to a used oil contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to a used oil contaminated with CFCs that have been mixed with used oil from a source other than a refrigeration unit.

b) A solid waste that is not excluded from regulation pursuant to subsection (a)(1) becomes a hazardous waste when any of the following events occur:

1) In the case of a waste listed in Subpart D, when the waste first meets the listing description set forth in Subpart D.

2) In the case of a mixture of solid waste and one or more listed hazardous wastes, when a hazardous waste listed in Subpart D is first added to the solid waste.

3) In the case of any other waste (including a waste mixture), when the waste exhibits any of the characteristics identified in Subpart C.

c) Unless and until it meets the criteria of subsection (e), a hazardous waste will remain a hazardous waste.

BOARD NOTE: This subsection (c) corresponds with 40 CFR 261.3(c)(1) (2017). The Board has codified 40 CFR 261.3(c)(2) at subsection (e).

d) Any solid waste described in subsection (e) is not a hazardous waste if it meets the following criteria:

1) In the case of any solid waste, it does not exhibit any of the characteristics of hazardous waste identified in Subpart C. (However, wastes that exhibit a characteristic at the point of generation may still be subject to 35 Ill. Adm. Code 728, even if they no longer exhibit a characteristic at the point of land disposal.)

2) In the case of a waste that is a listed waste pursuant to Subpart D, a waste that contains a waste listed pursuant to Subpart D, or a waste that is derived from a waste listed in Subpart D, it also has been excluded from subsection (e) pursuant to 35 Ill. Adm. Code 720.120 and 720.122.

e) Specific Inclusions and Exclusions

1) Except as otherwise provided in subsection (e)(2), (g), or (h), any solid waste generated from the treatment, storage, or disposal of a hazardous waste, including any sludge, spill residue, ash, emission control dust, or leachate (but not including precipitation run-off), is a hazardous waste. (However, materials that are reclaimed from solid wastes and that are used beneficially are not solid wastes and hence are not hazardous wastes under this provision unless the reclaimed material is burned for energy recovery or used in a manner constituting disposal.)

2) The following solid wastes are not hazardous even though they are generated from the treatment, storage, or disposal of a hazardous waste, unless they exhibit one or more of the characteristics of hazardous waste:

A) Waste pickle liquor sludge generated by lime stabilization of spent pickle liquor from the iron and steel industry (SIC Codes 331 and 332).

B) Wastes from burning any of the materials exempted from regulation by Section 721.106(a)(3)(C) and (a)(3)(D).

C) Nonwastewater residues, such as slag, resulting from high temperature metal recovery (HTMR) processing of K061, K062, or F006 waste in the units identified in this subsection (e)(2) that are disposed of in non-hazardous waste units, provided that these residues meet the generic exclusion levels identified in the tables in this subsection (e)(2)(C) for all constituents and the residues exhibit no characteristics of hazardous waste. The types of units identified are rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations, or the following types of industrial furnaces (as defined in 35 Ill. Adm. Code 720.110): blast furnaces; smelting, melting, and refining furnaces (including pyrometallurgical devices such as cupolas, reverberator furnaces, sintering machines, roasters, and foundry furnaces); and other furnaces designated by the Agency pursuant to that definition.

i) Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan; at a minimum, composite samples of residues must be collected and analyzed quarterly and when the process or operation generating the waste changes.

ii) Persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements. The generic exclusion levels are the following:

Generic exclusion levels for K061 and K062 nonwastewater HTMR residues:

Constituent	Maximum for any single composite sample (mg/ℓ)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16

Silver	0.30
Thallium	0.020
Vanadium	1.26
Zinc	70

Generic exclusion levels for F006 nonwastewater HTMR residues:

Constituent	Maximum for any single composite sample (mg/ℓ)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Cyanide (total) (mg/kg)	1.8
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Zinc	70

iii) A one-time notification and certification must be placed in the facility's files and sent to the Agency (or, for out-of-State shipments, to the appropriate Regional Administrator of USEPA or the state agency authorized to implement federal 40 CFR 268 requirements) for K061, K062, or F006 HTMR residues that meet the generic exclusion levels for all constituents, which do not exhibit any characteristics, and which are sent to RCRA Subtitle D (municipal solid waste landfill) units. The notification and certification that is placed in the generator's or treater's files must be updated if the process or operation generating the waste changes or if the RCRA Subtitle D unit receiving the waste changes. However, the generator or treater need only notify the Agency on an annual basis if such changes occur. Such notification and certification should be sent to the Agency by the end of the calendar year, but no later than December 31. The notification must include the following information: the name and address of the non-hazardous waste management unit receiving the waste shipment; the USEPA hazardous waste number and treatability group at the initial point of generation; and the treatment standards applicable to the waste at the initial point of generation.

The certification must be signed by an authorized representative and must state as follows:

"I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

D) Biological treatment sludge from the treatment of one of the following wastes listed in Section 721.132: organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K156) and wastewaters from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K157).

E) Catalyst inert support media separated from one of the following wastes listed in Section 721.132: spent hydrotreating catalyst (USEPA hazardous waste number K171) and spent hydrorefining catalyst (USEPA hazardous waste number K172).

BOARD NOTE: This subsection (e) would normally correspond with 40 CFR 261.3(e), a subsection that has been deleted and marked "reserved" by USEPA. Rather, this subsection (e) corresponds with 40 CFR 261.3(c)(2), which the Board codified here to comport with codification requirements and to enhance clarity.

f) Notwithstanding subsections (a) through (e) and provided the debris, as defined in 35 Ill. Adm. Code 728.102, does not exhibit a characteristic identified at Subpart C, the following materials are not subject to regulation under 35 Ill. Adm. Code 702, 703, 720, 721 to 726, or 728:

1) Hazardous debris as defined in 35 Ill. Adm. Code 728.102 that has been treated using one of the required extraction or destruction technologies specified in Table F to 35 Ill. Adm. Code 728; persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements; or

2) Debris, as defined in 35 Ill. Adm. Code 728.102, that the Agency, considering the extent of contamination, has determined is no longer contaminated with hazardous waste.

g) Exclusion of certain wastes listed in Subpart D solely because they exhibit a characteristic of ignitability, corrosivity, or reactivity.

1) A hazardous waste that is listed in Subpart D solely because it exhibits one or more characteristics of ignitability, as defined under Section 721.121; corrosivity, as defined under Section 721.122; or reactivity, as defined under Section 721.123 is not a hazardous waste if the waste no longer exhibits any characteristic of hazardous waste identified in Subpart C.

2) The exclusion described in subsection (g)(1) also pertains to the following:

A) Any mixture of a solid waste and a hazardous waste listed in Subpart D solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity, as regulated under subsection (a)(2)(D); and

B) Any solid waste generated from treating, storing, or disposing of a hazardous waste listed in Subpart D solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity, as regulated under subsection (e)(1).

3) Wastes excluded pursuant to this subsection (g) are subject to 35 Ill. Adm. Code 728 (as applicable), even if they no longer exhibit a characteristic at the point of land disposal.

4) Any mixture of a solid waste excluded from regulation in Section 721.104(b)(7) and a hazardous waste listed in Subpart D solely because the listed hazardous waste exhibits one or more of the characteristics of ignitability, corrosivity, or reactivity, as regulated under subsection (a)(2)(D), is not a hazardous waste if the mixture no longer exhibits any characteristic of hazardous waste identified in Subpart C for which USEPA listed the hazardous waste listed in Subpart D.

h) Eligible Radioactive Mixed Waste

1) Hazardous waste containing radioactive waste is no longer a hazardous waste when it meets the eligibility criteria and conditions of Subpart N of 35 Ill. Adm. Code 726 (i.e., it is “eligible radioactive mixed waste”).

2) The exemption described in subsection (h)(1) also pertains to the following:

A) Any mixture of a solid waste and an eligible radioactive mixed waste; and

B) Any solid waste generated from treating, storing, or disposing of an eligible radioactive mixed waste.

3) Waste exempted pursuant to this subsection (h) must meet the eligibility criteria and specified conditions in 35 Ill. Adm. Code 726.325 and 726.330 (for storage and treatment) and in 35 Ill. Adm. Code 726.410 and 726.415 (for transportation and disposal). Waste that fails to satisfy these eligibility criteria and conditions is regulated as hazardous waste.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.104 Exclusions

a) Materials That Are Not Solid Wastes. The following materials are not solid wastes for this Part:

1) Sewage.

A) Domestic sewage (untreated sanitary wastes that pass through a sewer system); and

B) Any mixture of domestic sewage and other waste that passes through a sewer system to publicly-owned treatment works for treatment, except as prohibited by 35 Ill. Adm. Code 726.605 and 40 CFR 403.5(b), incorporated by reference in 35 Ill. Adm. Code 720.111.

2) Industrial wastewater discharges that are point source discharges with NPDES permits issued by the Agency under Section 12(f) of the Act and 35 Ill. Adm. Code 309.

BOARD NOTE: This exclusion applies only to the actual point source discharge. It does not exclude industrial wastewaters while they are being collected, stored, or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.

3) Irrigation return flows.

4) Source, by-product, or special nuclear material, as defined by Section 11 of the Atomic Energy Act of 1954, as amended (42 USC 2014), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

5) Materials subjected to in-situ mining techniques that are not removed from the ground as part of the extraction process.

6) Pulping liquors (i.e., black liquors) that are reclaimed in a pulping liquor recovery furnace and then reused in the pulping process, unless it is accumulated speculatively, as defined in Section 721.101(c).

7) Spent sulfuric acid used to produce virgin sulfuric acid, provided it is not accumulated speculatively, as defined in Section 721.101(c).

8) Secondary materials that are reclaimed and returned to the original process or processes in which they were generated, if they are reused in the production process, provided that the following is true:

A) Only tank storage is involved, and the entire process through completing reclamation is closed by being entirely connected with pipes or other comparable enclosed means of conveyance;

B) Reclamation does not involve controlled flame combustion (like that occurring in boilers, industrial furnaces, or incinerators);

C) The secondary materials are never accumulated in tanks for over 12 months without being reclaimed; and

D) The reclaimed material is not used to produce a fuel or used to produce products that are used in a manner constituting disposal.

9) Wood preserving wastes.

A) Spent wood preserving solutions that have been used and that are reclaimed and reused for their original intended purpose;

B) Wastewaters from the wood preserving process that have been reclaimed and that are reused to treat wood; and

C) Prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in subsections (a)(9)(A) and (a)(9)(B), so long as they meet the following conditions:

i) The wood preserving wastewaters and spent wood preserving solutions are reused on-site at water-borne plants in the production process for their original intended purpose;

ii) Prior to reuse, the wastewaters and spent wood preserving solutions are managed to prevent release to either land or groundwater or both;

iii) Any unit used to manage wastewaters or spent wood preserving solutions prior to reuse can be visually or otherwise determined to prevent such releases;

iv) Any drip pad used to manage the wastewaters or spent wood preserving solutions prior to reuse complies with the standards in Subpart W of 35 Ill. Adm. Code 725, regardless of whether the plant generates a total of less than 100 kg/month of hazardous waste; and

v) Prior to operating under this exclusion, the plant owner or operator prepares a one-time notification to the Agency stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records until closure of the facility. The exclusion applies only so long as the plant meets the conditions under subsection (a)(9)(C). If the plant does not comply with any condition, it may apply to the Agency for reinstatement of the exclusion. The Agency must reinstate the exclusion in writing if it finds that the plant has returned to complying with all conditions and that the violations are not likely to recur. If the Agency denies an application, it must transmit to the applicant specific, detailed statements in writing as to the reasons it denied the application. The applicant under this subsection (a)(9)(C)(v) may appeal the Agency's determination to deny the reinstatement, grant the reinstatement with conditions, or terminate a reinstatement before the Board under Section 40 of the Act.

10) USEPA hazardous waste numbers K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke by-products processes that are hazardous only because they exhibit the toxicity characteristic specified in Section 721.124, when subsequent to generation these materials are recycled to coke ovens, to the tar recovery process as a feedstock to produce coal tar, or are mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the waste from the point it is generated to the point it is recycled to coke ovens, to tar recovery, to the tar refining processes, or prior to when it is mixed with coal.

11) Nonwastewater splash condenser dross residue from the treatment of USEPA hazardous waste number K061 in high temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery.

12) Certain oil-bearing hazardous secondary materials and recovered oil, as follows:

A) Oil-bearing hazardous secondary materials (i.e., sludges, by-products, or spent materials) that are generated at a petroleum refinery (standard industrial classification (SIC) code 2911) and are inserted into the petroleum refining process (SIC code 2911: including, distillation, catalytic cracking, fractionation, or thermal cracking units (i.e., cokers)), unless the material is placed on the land, or speculatively accumulated before being so recycled. Materials inserted into thermal cracking units are excluded under this subsection (a)(12), if the coke product also does not exhibit a characteristic of hazardous waste. Oil-bearing hazardous secondary materials may be inserted into the same petroleum refinery where they are generated or sent directly to another petroleum refinery and still be excluded under this provision. Except as provided in subsection (a)(12)(B), oil-bearing hazardous secondary materials generated elsewhere in the petroleum industry (i.e., from sources other than petroleum refineries) are not excluded under this Section. Residuals generated from processing or recycling materials excluded under this subsection (a)(12)(A), if the materials as generated would have otherwise met a listing under Subpart D, are designated as USEPA hazardous waste number F037 listed wastes when disposed of or intended for disposal.

B) Recovered oil that is recycled in the same manner and with the same conditions as described in subsection (a)(12)(A). Recovered oil is oil that has been reclaimed from secondary materials (including wastewater) generated from normal petroleum industry practices, including refining, exploration and production, bulk storage, and transportation incident (SIC codes 1311, 1321, 1381, 1382, 1389, 2911, 4612, 4613, 4922, 4923, 4789, 5171, and 5172). Recovered oil does not include oil-bearing hazardous wastes listed in Subpart D; however, oil recovered from such wastes may be considered recovered oil. Recovered oil does not include used oil, as defined in 35 Ill. Adm. Code 739.100.

13) Excluded scrap metal (processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal) being recycled.

14) Shredded circuit boards being recycled if they meet the following conditions:

A) The circuit boards are stored in containers sufficient to prevent a release to the environment prior to recovery; and

B) The circuit boards are free of mercury switches, mercury relays, nickel-cadmium batteries, and lithium batteries.

15) Condensates derived from the overhead gases from kraft mill steam strippers that are used to comply with federal Clean Air Act regulation 40 CFR 63.446(e). The exemption applies only to combustion at the mill generating the condensates.

16) This subsection (a)(16) corresponds with 40 CFR 261.4(a)(16), marked "reserved" by USEPA. This statement maintains structural consistency with the federal regulations.

17) Spent materials (as defined in Section 721.101) (other than hazardous wastes listed in Subpart D) generated within the primary mineral processing industry from which minerals, acids, cyanide, water, or other values are recovered by mineral processing or by beneficiation, if :

A) The spent material is legitimately recycled to recover minerals, acids, cyanide, water, or other values;

B) The spent material is not accumulated speculatively;

C) Except as provided in subsection (a)(17)(D), the spent material is stored in tanks, containers, or buildings that meet the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof that are made of non-earthen materials providing structural support (except that smelter buildings may have partially earthen floors if the spent material is stored on the non-earthen portion), and have a roof suitable for diverting rainwater away from the foundation; a tank must be free standing, not be a surface impoundment (as defined in 35 Ill. Adm. Code 720.110), and be manufactured of a material suitable for containment of its contents; a container must be free standing and be manufactured of a material suitable for containment of its contents. If a tank or container contains any particulate that may be subject to wind dispersal, the owner or operator must operate the unit in a manner that controls fugitive dust. A tank, container, or building must be designed, constructed, and operated to prevent significant releases to the environment of these materials.

D) The Agency must allow by permit in writing that solid mineral processing spent materials only may be placed on pads, rather than in tanks, containers, or buildings if the facility owner or operator can demonstrate the following: the solid mineral processing secondary materials do not contain any free liquid; the pads are designed, constructed, and operated to prevent significant releases of the spent material into the environment; and the pads provide the same degree of containment afforded by the non-RCRA tanks, containers, and buildings eligible for exclusion.

i) The Agency must also consider whether storage on pads poses the potential for significant releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, and air exposure pathways must include the following: the volume and physical and chemical properties of the spent material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway; and the possibility and extent of harm to human and environmental receptors via each exposure pathway.

ii) Pads must meet the following minimum standards: they must be designed of non-earthen material that is compatible with the chemical nature of the mineral processing spent material; they must be capable of withstanding physical stresses associated with placement and removal; they must have run-on and run-off controls; they must be operated in a manner that controls fugitive dust; and they must have integrity assurance through inspections and maintenance programs.

iii) Before making a determination under this subsection (a)(17)(D), the Agency must provide notice and the opportunity for comment to all persons potentially interested in the determination. This can be accomplished by placing notice of this action in major local newspapers, or broadcasting notice over local radio stations.

BOARD NOTE: See Subpart D of 35 Ill. Adm. Code 703 for the RCRA Subtitle C permit public notice requirements.

E) The owner or operator provides a notice to the Agency, providing the following information: the types of materials to be recycled,

the type and location of the storage units and recycling processes, and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process.

F) For subsection (b)(7), mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by non-mineral processing industries are not eligible for the conditional exclusion from the definition of solid waste.

18) Petrochemical recovered oil from an associated organic chemical manufacturing facility, if the oil is to be inserted into the petroleum refining process (SIC code 2911) along with normal petroleum refinery process streams, if:

A) The oil is hazardous only because it exhibits the characteristic of ignitability (as defined in Section 721.121) or toxicity for benzene (Section 721.124, USEPA hazardous waste number D018); and

B) The oil generated by the organic chemical manufacturing facility is not placed on the land, or speculatively accumulated before being recycled into the petroleum refining process. An "associated organic chemical manufacturing facility" is a facility for which the: primary SIC code is 2869, but its operations may also include SIC codes 2821, 2822, and 2865; it is physically co-located with a petroleum refinery; and the petroleum refinery to which the oil being recycled is returned also provides hydrocarbon feedstocks to the organic chemical manufacturing facility. "Petrochemical recovered oil" is oil that has been reclaimed from secondary materials (i.e., sludges, by-products, or spent materials, including wastewater) from normal organic chemical manufacturing operations, as well as oil recovered from organic chemical manufacturing processes.

19) Spent caustic solutions from petroleum refining liquid treating processes used as a feedstock to produce cresylic or naphthenic acid, unless the material is placed on the land or accumulated speculatively, as defined in Section 721.101(c).

20) Hazardous secondary materials used to make zinc fertilizers, if that the following conditions are met:

A) Hazardous secondary materials used to make zinc micronutrient fertilizers must not be accumulated speculatively, as defined in Section 721.101(c)(8).

B) A generator or intermediate handler of zinc-bearing hazardous secondary materials that are to be incorporated into zinc fertilizers must:

i) Submit a one-time notice to the Agency that contains the name, address, and USEPA identification number of the generator or intermediate handler facility, that provides a brief description of the secondary material that will be subject to the exclusion, and that identifies when the manufacturer intends to begin managing excluded zinc-bearing hazardous secondary materials under the conditions specified in this subsection (a)(20).

ii) Store the excluded secondary material in tanks, containers, or buildings that are constructed and maintained in a way that prevents releases of the secondary materials into the environment. At a minimum, any building used for this purpose must be an engineered structure made of non-earthen materials that provide structural support, and it must have a floor, walls, and a roof that prevent wind dispersal and contact with rainwater. A tank used for this purpose must be structurally sound and, if outdoors, it must have a roof or cover that prevents contact with wind and rain. A container used for this purpose must be kept closed, except when it is necessary to add or remove material, and it must be in sound condition. Containers that are stored outdoors must be managed within storage areas that meet the conditions of subsection (a)(20)(F).

iii) With each off-site shipment of excluded hazardous secondary materials, provide written notice to the receiving facility that the material is subject to the conditions of this subsection (a)(20).

iv) Maintain records at the generator's or intermediate handler's facility, for at least three years, of all shipments of excluded hazardous secondary materials. For each shipment these records must, at a minimum, contain the information specified in subsection (a)(20)(G).

C) A manufacturer of zinc fertilizers or zinc fertilizer ingredients made from excluded hazardous secondary materials must:

i) Store excluded hazardous secondary materials in compliance with the storage requirements for generators and intermediate handlers, as specified in subsection (a)(20)(B)(ii).

ii) Submit a one-time notification to the Agency that, at a minimum, specifies the name, address, and USEPA identification number of the manufacturing facility and that identifies when the manufacturer intends to begin managing excluded zinc-bearing hazardous secondary materials under the conditions specified in this subsection (a)(20).

iii) Maintain for a minimum of three years records of all shipments of excluded hazardous secondary materials received by the manufacturer, which must at a minimum identify for each shipment the name and address of the generating facility, the name of transporter, and the date on which the materials were received, the quantity received, and a brief description of the industrial process that generated the material.

iv) Submit an annual report to the Agency that identifies the total quantities of all excluded hazardous secondary materials that were used to manufacture zinc fertilizers or zinc fertilizer ingredients in the previous year, the name and address of each generating facility, and the industrial processes from which the hazardous secondary materials were generated.

D) Nothing in this Section preempts, overrides, or otherwise negates the provision in 35 Ill. Adm. Code 722.111 that requires any person who generates a solid waste to determine if that waste is a hazardous waste.

E) Interim status and permitted storage units that have been used to store only zinc-bearing hazardous wastes prior to submitting the one-time notice described in subsection (a)(20)(B)(i), and that afterward will be used only to store hazardous secondary materials excluded under this subsection (a)(20), are not subject to the closure requirements of 35 Ill. Adm. Code 724 and 725.

F) Storage areas where containers are stored outdoors under subsection (a)(20)(B)(ii), must:

i) Have containment structures or systems sufficiently impervious to contain leaks, spills, and accumulated precipitation;

ii) Provide for effective drainage and removal of leaks, spills, and accumulated precipitation; and

iii) Prevent run-on into the containment system.

BOARD NOTE: Subsections (a)(20)(F)(i) through (a)(20)(F)(iii) are derived from 40 CFR 261.4(a)(20)(ii)(B)(1) through (a)(20)(ii)(B)(3). The Board added the preamble to these federal paragraphs as subsection (a)(20)(F) to comport with Illinois Administrative Code codification requirements.

G) Required records of shipments of excluded hazardous secondary materials under subsection (a)(20)(B)(iv) must, at a minimum, contain the following information:

i) The name of the transporter and date of the shipment;

ii) The name and address of the facility that received the excluded material, along with documentation confirming receipt of the shipment; and

iii) The type and quantity of excluded secondary material in each shipment.

BOARD NOTE: Subsections (a)(20)(G)(i) through (a)(20)(G)(iii) are derived from 40 CFR 261.4(a)(20)(ii)(D)(1) through (a)(20)(ii)(D)(3). The Board added the preamble to these federal paragraphs as subsection (a)(20)(G) to comport with Illinois Administrative Code codification requirements.

21) Zinc fertilizers made from hazardous wastes or hazardous secondary materials that are excluded under subsection (a)(20), if:

A) The fertilizers meet the following contaminant limits:

i) For metal contaminants:

Constituent	Maximum Allowable Total Concentration in Fertilizer, per Unit (1%) of Zinc (ppm)
Arsenic	0.3
Cadmium	1.4
Chromium	0.6
Lead	2.8

ii) For dioxin contaminants, the fertilizer must contain no more than eight parts per trillion of dioxin, measured as toxic equivalent (TEQ).

B) The manufacturer performs sampling and analysis of the fertilizer product to determine compliance with the contaminant limits for metals at least once every six months, and for dioxins at least once every 12 months. Testing must also be performed whenever changes occur to manufacturing processes or ingredients that could significantly affect the amounts of contaminants in the fertilizer product. The manufacturer may use any reliable analytical method to demonstrate that a constituent of concern is not present in the product at concentrations above the applicable limits. It is the responsibility of the manufacturer to ensure that the sampling and analysis are unbiased, precise, and representative of the products introduced into commerce.

C) The manufacturer maintains, for at least three years, records of all sampling and analyses performed for determining compliance with subsection (a)(21)(B). The records must at a minimum include the following:

i) The dates and times product samples were taken, and the dates the samples were analyzed;

ii) The names and qualifications of the persons taking the samples;

iii) A description of the methods and equipment used to take the samples;

iv) The name and address of the laboratory facility at which analyses of the samples were performed;

v) A description of the analytical methods used, including any cleanup and sample preparation methods; and

vi) All laboratory analytical results used to determine compliance with the contaminant limits specified in this subsection (a)(21).

22) Used CRTs

A) Used, intact CRTs, as defined in 35 Ill. Adm. Code 720.110, are not solid waste within the United States, unless they are disposed of or speculatively accumulated, as defined in Section 721.101(c)(8), by a CRT collector or glass processor.

B) Used, intact CRTs, as defined in 35 Ill. Adm. Code 720.110, are not solid waste when exported for recycling if they comply with Section 721.140.

C) Used, broken CRTs, as defined in 35 Ill. Adm. Code 720.110, are not solid waste if they comply with the requirements of Section 721.139.

D) Glass removed from CRTs is not a solid waste if it complies with the requirements of Section 721.139(c).

23) Hazardous Secondary Materials Reclaimed under the Control of the Generator. Hazardous secondary material generated and legitimately reclaimed within the United States or its territories and under the control of the generator, if the material complies with subsections (a)(23)(A) and (a)(23)(B):

A) Excluded Hazardous Secondary Materials

i) The hazardous secondary material is generated and reclaimed at the generating facility. (For this subsection (a)(23)(A)(i), "generating facility" means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator.);

ii) The hazardous secondary material is generated and reclaimed at different facilities, if the reclaiming facility is controlled by the generator or if both the generating facility and the reclaiming facility are controlled by a person as defined in 35 Ill. Adm. Code 720.110, and if the generator provides one of the following certifications:

"On behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], which is controlled by [insert generator facility name] and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material."

or

> "On behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], that both facilities are under common control, and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material."

For subsection (a)(23)(A)(ii), "control" means the power to direct the policies of the facility, whether by the ownership of stock, voting rights, or otherwise, except that contractors who operate facilities on behalf of a different person, as defined in 35 Ill. Adm. Code 720.110, cannot be deemed to "control" such facilities. The generating and receiving facilities must both maintain at their facilities, for no less than three years, records of hazardous secondary materials sent or received under this exclusion. In both cases, the records must contain the name of the transporter, the date of the shipment, and the type and quantity of the hazardous secondary material shipped or received under the exclusion. These requirements may be satisfied by routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations); or

iii) The hazardous secondary material is generated under a written contract between a tolling contractor and a toll manufacturer and is reclaimed by the tolling contractor, if the tolling contractor certifies as follows:

> "On behalf of [insert tolling contractor name], I certify that [insert tolling contractor name] has a written contract with [insert toll manufacturer name] to manufacture [insert name of product or intermediate] which is made from specified unused materials, and that [insert tolling contractor name] will reclaim the hazardous secondary materials generated during this manufacture. On behalf of [insert tolling contractor name], I also certify that [insert tolling contractor name] retains ownership of, and responsibility for, the hazardous secondary materials that are generated during the course of the manufacture, including any releases of hazardous

secondary materials that occur during the manufacturing process."

The tolling contractor must maintain at its facility, for at least three years, records of hazardous secondary materials received under its written contract with the tolling manufacturer, and the tolling manufacturer must maintain at its facility, for no less than three years, records of hazardous secondary materials shipped under its written contract with the tolling contractor. In both cases, the records must contain the name of the transporter, the date of the shipment, and the type and quantity of the hazardous secondary material shipped or received under the written contract. These requirements may be satisfied by routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations). For this subsection (a)(23)(A)(ii), "tolling contractor" means a person who arranges for producing a product or intermediate made from specified unused materials through a written contract with a toll manufacturer. "Toll manufacturer" means a person who produces a product or intermediate made from specified unused materials under a written contract with a tolling contractor.

B) Management of Hazardous Secondary Materials

i) The hazardous secondary material is contained, as defined in 35 Ill. Adm. Code 720.110. A hazardous secondary material released to the environment is discarded material and a solid waste unless it is immediately recovered for reclamation. Hazardous secondary material managed in a unit with leaks or other continuing or intermittent unpermitted releases is discarded material and a solid waste;

ii) The hazardous secondary material is not speculatively accumulated, as defined in Section 721.101(c)(8);

iii) Notice is provided, as required by 35 Ill. Adm. Code 720.142;

iv) The hazardous secondary material is not otherwise subject to material-specific management conditions under subsection (a) when reclaimed, and it is not a spent lead acid battery (see 35 Ill. Adm. Code 726.180 and 733.102);

v) Persons performing the recycling of hazardous secondary materials under this exclusion must maintain documentation of their legitimacy determination on-site. Documentation must be a written description of how the recycling meets all three factors in 35 Ill. Adm. Code 720.143(a) and how the factor in 35 Ill. Adm. Code 720.143(b) was considered. Documentation must be maintained for three years after the recycling operation has ceased; and

vi) The emergency preparedness and response requirements found in Subpart M are met.

24) Hazardous Secondary Materials Transferred for Off-Site Reclamation. Hazardous secondary material that is generated and then transferred to another person for reclamation is not a solid waste if the management of the material meets the conditions of subsections (a)(24)(A) through (a)(24)(G):

A) The hazardous secondary material must not be speculatively accumulated, as defined in Section 721.101(c)(8).

B) No person or facility other than the hazardous secondary material generator, the transporter, an intermediate facility, or a reclaimer manages the material; the hazardous secondary material must not be stored for more than ten days at a transfer facility, as defined in Section 721.110; and the hazardous secondary material must be packaged according to applicable USDOT regulations codified as 49 CFR 173, 178, and 179, incorporated by reference in 35 Ill. Adm. Code 720.111, while in transport.

C) The hazardous secondary material must not otherwise be subject to material-specific management conditions under other provisions of this subsection (a) when reclaimed, and the hazardous secondary material must not be a spent lead-acid battery (see 35 Ill. Adm. Code 726.180 and 733.102).

D) Reclaiming the hazardous secondary material must be legitimate, as determined under 35 Ill. Adm. Code 720.143.

E) The hazardous secondary material generator must meet each of the following conditions:

i) The hazardous secondary material must be contained as defined in 35 Ill. Adm. Code 720.110. A hazardous

secondary material released to the environment is discarded and a solid waste unless it is immediately recovered for recycling. Hazardous secondary material managed in a unit that leaks or that otherwise continuously releases hazardous secondary material is discarded material and a solid waste.

ii) Prior to arranging for transport of hazardous secondary materials to a reclamation facility where the hazardous secondary material is managed in a unit that is not subject to a RCRA permit or interim status standards, the hazardous secondary material generator must make reasonable efforts to ensure that each reclaimer intends to properly and legitimately reclaim the hazardous secondary material and not discard it, and that each reclaimer will manage the hazardous secondary material in a manner that is protective of human health and the environment. If the hazardous secondary material will pass through an intermediate facility where the hazardous secondary materials is managed at that facility in a unit that is not subject to a RCRA permit or interim status standards, the hazardous secondary material generator must make contractual arrangements with the intermediate facility to ensure that the hazardous secondary material is sent to the reclamation facility identified by the hazardous secondary material generator, and the hazardous secondary material generator must perform reasonable efforts to ensure that the intermediate facility will manage the hazardous secondary material in a manner that is protective of human health and the environment. Reasonable efforts must be repeated at a minimum of every three years for the hazardous secondary material generator to claim the exclusion and to send the hazardous secondary materials to each reclaimer and any intermediate facility. In making these reasonable efforts, the generator may use any credible evidence available, including information gathered by the hazardous secondary material generator, provided by the reclaimer or intermediate facility, or provided by a third party. The hazardous secondary material generator must affirmatively answer the questions in subsection (a)(24)(H) for each reclamation facility and any intermediate facility.
BOARD NOTE: The Board moved the required generator inquiries of 40 CFR 261.4(a)(24)(v)(B)(*1*) through (a)(24)(v)(B)(*5*) to subsection (a)(24)(H) to comply with codification requirements.

iii) The hazardous secondary material generator must maintain for a minimum of three years documentation and certification that reasonable efforts were made for each reclamation facility and, if applicable, intermediate facility where the facility manages the hazardous secondary materials in a unit that is not subject to a RCRA permit or interim status standards prior to transferring hazardous secondary material. Documentation and certification must be made available upon request by USEPA or the Agency within 72 hours, or within a longer period as specified by USEPA or the Agency. The certification statement must include the printed name and official title of an authorized representative of the hazardous secondary material generator company, the authorized representative's signature, and the date signed. The certification statement must also incorporate the following language:

> "I hereby certify in good faith and to the best of my knowledge that, prior to arranging for transport of excluded hazardous secondary materials to [insert name(s) of reclamation facility and any intermediate facility], reasonable efforts were made in compliance with 35 Ill. Adm. Code 721.104(a)(24)(E)(ii) to ensure that the hazardous secondary materials would be recycled legitimately, and otherwise managed in a manner that is protective of human health and the environment, and that such efforts were based on current and accurate information."

BOARD NOTE: The Board combined the documentation, certification, and records retention requirements of corresponding 40 CFR 261.4(a)(24)(v)(C)(*1*) through (a)(24)(v)(C)(*3*) into subsection (a)(24)(E)(iii) to comply with codification requirements.

iv) The hazardous secondary material generator must maintain certain records at the generating facility for a minimum of three years that document every off-site shipment of hazardous secondary materials. The documentation for each shipment must, at a minimum, include the following information about the shipment: the name of the transporter and date of the shipment; the name and address of each reclaimer and intermediate facility to which the hazardous secondary material was sent; and the type and quantity of hazardous secondary material in the shipment.

BOARD NOTE: The Board combined and moved the shipping documentation and records retention requirements of corresponding 40 CFR 261.4(a)(24)(v)(C) and (a)(24)(v)(C)(1) through (a)(24)(v)(C)(3) to this single subsection (a)(24)(E)(iv). This combination allowed complying with codification requirements relating to the maximum permissible indent level.

v) The hazardous secondary material generator must maintain at the generating facility, for a minimum of three years, for every off-site shipment of hazardous secondary materials, confirmations of receipt from each reclaimer and intermediate facility to which its hazardous secondary materials were sent. Each confirmation of receipt must include the name and address of the reclaimer (or intermediate facility), the type and quantity of the hazardous secondary materials received, and the date on which the facility received the hazardous secondary materials. The generator may meet this requirement using routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations of receipt).

vi) The hazardous secondary material generator must comply with the emergency preparedness and response conditions in Subpart M.

BOARD NOTE: The Board intends that "RCRA permit" in subsections (a)(24)(E)(ii) and (a)(24)(E)(iii) include a permit issued by USEPA or a sister state under section 3005 of RCRA (42 USC 6925).

F) The reclaimer of hazardous secondary material or any intermediate facility, as defined in 35 Ill. Adm. Code 720.110, that manages material that is excluded from regulation under this subsection (a)(24) must meet the following conditions:

i) The owner or operator of a reclamation or intermediate facility must maintain at its facility for a minimum of three years records of every shipment of hazardous secondary material that the facility received and, if applicable, for every shipment of hazardous secondary material that the facility received and subsequently sent off-site from the facility for further reclamation. For each shipment, these records must, at a minimum, contain the following information: the name of the transporter and date of the

shipment; the name and address of the hazardous secondary material generator and, if applicable, the name and address of the reclaimer or intermediate facility from which the facility received the hazardous secondary materials; the type and quantity of hazardous secondary material in the shipment; and, for hazardous secondary materials that the facility subsequently transferred off-site for further reclamation after receiving it, the name and address of the (subsequent) reclaimer and any intermediate facility to which the facility sent the hazardous secondary material.

BOARD NOTE: The Board combined the provisions from 40 CFR 261.4(a)(24)(vi)(A) and (a)(24)(vi)(A)(1) through (a)(24)(vi)(A)(3) that enumerate the required information into this single subsection (a)(24)(F)(i). This combination allowed complying with codification requirements relating to the maximum permissible indent level.

ii) The intermediate facility must send the hazardous secondary material to the reclaimers designated by the generator of the hazardous secondary materials.

iii) The reclaimer or intermediate facility that receives a shipment of hazardous secondary material must send a confirmation of receipt to the hazardous secondary material generator for each off-site shipment of hazardous secondary materials. A confirmation of receipt must include the name and address of the reclaimer (or intermediate facility), the type and quantity of the hazardous secondary materials received, and the date on which the facility received the hazardous secondary materials. The reclaimer or intermediate facility may meet this requirement using routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations of receipt).

iv) The reclaimer or intermediate facility must manage the hazardous secondary material in a manner that is at least as protective of human health and the environment as that employed for analogous raw material, and the material must be contained. An "analogous raw material" is a raw material for which the hazardous secondary material substitutes and that serves the same function and has similar physical and chemical properties as the hazardous secondary material.

v) A reclaimer of hazardous secondary materials must manage any residuals that are generated from its reclamation processes in a manner that is protective of human health and the environment. If any residuals of the reclamation process exhibit a characteristic of hazardous waste, as defined in Subpart C, or if the residuals themselves are specifically listed as hazardous waste in Subpart D, those residuals are hazardous waste. The reclaimer and any subsequent persons must manage that hazardous waste in compliance with the applicable requirements of 35 Ill. Adm. Code: Subtitle G or similar regulations authorized by USEPA as equivalent to 40 CFR 260 through 272.

vi) The reclaimer and intermediate facility must have financial assurance that complies with Subpart H.

G) In addition, any person claiming the exclusion for recycled hazardous secondary material under this subsection (a)(24) must provide notification as required by 35 Ill. Adm. Code 720.142.

H) For the reasonable inquiries required by subsection (a)(24)(E)(ii), the hazardous secondary material generator must affirmatively answer the following questions for each reclamation facility and any intermediate facility:

i) Does the available information indicate that the reclamation process is legitimate under 35 Ill. Adm. Code 720.143? In answering this question, the hazardous secondary material generator can rely on its existing knowledge of the physical and chemical properties of the hazardous secondary material, as well as information from other sources (e.g., the reclamation facility, audit reports, etc.) about the reclamation process.

ii) Does the publicly available information indicate that the reclamation facility and any intermediate facility that is used by the hazardous secondary material generator notified the appropriate authorities of hazardous secondary materials reclamation activities under 35 Ill. Adm. Code 720.142, and have they notified the appropriate authorities that the financial assurance condition is satisfied per subsection (a)(24)(F)(vi)? In answering these questions, the hazardous secondary material generator can rely on the available information documenting the reclamation facility's and any intermediate facility's complying with the notification requirements per 35 Ill. Adm. Code

720.142, including the requirement in 35 Ill. Adm. Code 720.142(a)(5) to notify USEPA or the Agency whether the reclaimer or intermediate facility has financial assurance.

iii) Does publicly available information indicate that the reclamation facility or any intermediate facility that is used by the hazardous secondary material generator has not had any formal enforcement actions taken against the facility in the previous three years for violations of the RCRA hazardous waste regulations and has not been classified as a significant noncomplier with RCRA Subtitle C? In answering this question, the hazardous secondary material generator can rely on the publicly available information from USEPA or the state. If the reclamation facility or any intermediate facility that is used by the hazardous secondary material generator has had a formal enforcement action taken against the facility in the previous three years for violations of the RCRA hazardous waste regulations and has been classified as a significant non-complier with RCRA Subtitle C, does the hazardous secondary material generator have credible evidence that the facility will manage the hazardous secondary materials properly? In answering this question, the hazardous secondary material generator can obtain additional information from USEPA, the state, or the facility itself that the facility has addressed the violations, taken remedial steps to address the violations and prevent future violations, or that the violations are not relevant to the proper management of the hazardous secondary materials.

iv) Does the available information indicate that the reclamation facility and any intermediate facility that is used by the hazardous secondary material generator have the equipment and trained personnel to safely recycle the hazardous secondary material? In answering this question, the generator may rely on a description by the reclamation facility or by an independent third party of the equipment and trained personnel to be used to recycle the generator's hazardous secondary material.

v) If residuals are generated from reclaiming the excluded hazardous secondary materials, does the reclamation facility have the permits required (if any) to manage the residuals? If not, does the reclamation facility have a contract with an appropriately permitted facility to dispose of the residuals? If not, does the hazardous secondary

material generator have credible evidence that the residuals will be managed in a manner that is protective of human health and the environment? In answering these questions, the hazardous secondary material generator can rely on publicly available information from USEPA or the state, or information provided by the facility itself.

BOARD NOTE: The Board moved the required generator inquiries into a reclamation or intermediate facility of 40 CFR 261.4(a)(24)(v)(B) and (a)(24)(v)(B)(1) through (a)(24)(v)(B)(5) to this subsection (a)(24)(H) to comply with codification requirements.

25) Hazardous secondary material that is exported from the United States and reclaimed at a reclamation facility located in a foreign country is not a solid waste, provided that the hazardous secondary material generator complies with the applicable requirements of subsections (a)(24)(A) through (a)(24)(E) and (a)(24)(H) (excepting subsection (a)(24)(H)(ii) for foreign reclaimers and foreign intermediate facilities), and that the hazardous secondary material generator also complies with the following requirements:

A) The generator must notify USEPA of an intended export before the hazardous secondary material is scheduled to leave the United States. The generator must submit a complete notification at least 60 days before the initial shipment is intended to be shipped off-site. This notification may cover export activities extending over a 12-month or lesser period. The notification must be in writing, signed by the hazardous secondary material generator, and include the following information:

i) The name, site~~mailing~~ address, telephone number and USEPA identification number (if applicable) of the hazardous secondary material generator;

ii) A description of the hazardous secondary material and the USEPA hazardous waste number that would apply if the hazardous secondary material were managed as hazardous waste and the USDOT proper shipping name, hazard class and identification number (UN or NA) for each hazardous secondary material as identified in the hazardous materials table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) The estimated frequency or rate at which the hazardous secondary material is to be exported and the period over which the hazardous secondary material is to be exported;

iv) The estimated total quantity of hazardous secondary material;

v) All points of entry to and departure from each foreign country through which the hazardous secondary material will pass;

vi) A description of the means by which each shipment of the hazardous secondary material will be transported (e.g., mode of transportation vehicle (air, highway, rail, water, etc.), types of container (drums, boxes, tanks, etc.), etc.);

vii) A description of how the hazardous secondary material will be reclaimed in the country of import;

viii) The name and site address of the reclaimer, any intermediate facility, and any alternate reclaimer and intermediate facilities; and

ix) The name of any countries of transit through which the hazardous secondary material will be sent and a description of the approximate length of time it will remain in such countries and the nature of its handling while there (for this Section, the terms "USEPA Acknowledgement of Consent", "country of import", and "country of transit" are used as defined in 35 Ill. Adm. Code 722.181 with the exception that the terms in this Section refer to hazardous secondary materials, rather than hazardous waste).

B) The generator must submit notifications electronically using USEPA's Waste Import Export Tracking System (WIETS).

C) Except for changes to the telephone number required in subsection (a)(25)(A)(i) and decreases in the quantity of hazardous secondary material indicated under subsection (a)(25)(A)(iv), when the conditions specified on the original notification change (including any exceedance of the estimate of the quantity of hazardous secondary material specified in the original notification), the hazardous secondary material generator must provide USEPA with a written renotification of the change. The shipment must not occur until consent of the country of import to the changes (except for changes to subsection (a)(25)(A)(ix) and in the ports of entry to

and departure from countries of transit under subsection (a)(25)(A)(v)) has been obtained and the hazardous secondary material generator receives from USEPA a USEPA Acknowledgment of Consent reflecting the country of import's consent to the changes.

D) Upon request by USEPA, the hazardous secondary material generator must furnish to USEPA any additional information that a country of import requests to respond to a notification.

E) USEPA will provide a complete notification to the country of import and any countries of transit. A notification is complete when USEPA receives a notification that USEPA determines complies with subsection (a)(25)(A). ~~When a claim of confidentiality is asserted with respect to any notification information required by subsection (a)(25)(A), USEPA may find the notification not complete until any such claim is resolved in compliance with 35 Ill. Adm. Code 720.102.~~

F) The export of hazardous secondary material under this subsection (a)(25) is prohibited unless the hazardous secondary material generator receives from USEPA an USEPA Acknowledgment of Consent documenting the consent of the country of import to the receipt of hazardous secondary material. When the country of import objects to receipt of the hazardous secondary material or withdraws a prior consent, USEPA will notify the hazardous secondary material generator in writing. USEPA will also notify the hazardous secondary material generator of any responses from countries of transit.

G) For exports to OECD member countries, the receiving country may respond to the notification using tacit consent. If no objection has been lodged by any country of import or countries of transit to a notification provided under subsection (a)(25)(A) within 30 days after the date of issuance of the acknowledgement of receipt of notification by the competent authority of the country of import, the transboundary movement may commence. In such cases, USEPA will send a USEPA Acknowledgment of Consent to inform the hazardous secondary material generator that the country of import and any relevant countries of transit have not objected to the shipment and are thus presumed to have consented tacitly. Tacit consent expires one calendar year after the close of the 30-day period; renotification and renewal of all consents is required for exports after that date.

H) A copy of the USEPA Acknowledgment of Consent must accompany the shipment. The shipment must conform to the terms of the USEPA Acknowledgment of Consent.

I) If the shipment cannot be delivered for any reason to the reclaimer, intermediate facility or the alternate reclaimer or alternate intermediate facility, the hazardous secondary material generator must re-notify USEPA of a change in the conditions of the original notification to allow shipment to a new reclaimer in compliance with subsection (a)(25)(C) and obtain another USEPA Acknowledgment of Consent.

J) Hazardous secondary material generators must keep a copy of each notification of intent to export and each USEPA Acknowledgment of Consent for a period of three years following receipt of the USEPA Acknowledgment of Consent. They may meet this recordkeeping requirement by retaining electronically submitted notifications or electronically generated Acknowledgements in their account on USEPA's WIETS, provided that such copies are readily available for viewing and production if requested by any USEPA or Agency inspector. No hazardous secondary material generator may be held liable for the inability to produce a notification or Acknowledgement for inspection under this Section if it can demonstrate that the inability to produce such copies is due exclusively to technical difficulty with USEPA's WIETS for which the hazardous secondary material generator bears no responsibility.

K) Hazardous secondary material generators must file with USEPA, no later than March 1 of each year, a report summarizing the types, quantities, frequency, and ultimate destination of all hazardous secondary materials exported during the previous calendar year. Annual reports must be submitted electronically using USEPA's WIETS. Such reports must include the following information:

i) Name, mailing and site address, and USEPA identification number (if applicable) of the hazardous secondary material generator;

ii) The calendar year covered by the report;

iii) The name and site address of each reclaimer and intermediate facility;

iv) By reclaimer and intermediate facility, for each hazardous secondary material exported, a description of the hazardous secondary material and the USEPA hazardous waste

number that would apply if the hazardous secondary material were managed as hazardous waste; the USDOT hazard class, incorporated by reference in 35 Ill. Adm. Code 720.111; the name and USEPA identification number (if applicable) for each transporter used, the consent number(s) under which the hazardous secondary material was shipped and for each consent number(s) the total amount of hazardous secondary material shipped, and the number of shipments during the calender year covered by the report; and

v) A certification signed by the hazardous secondary material generator that states as follows:

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

L) Any person claiming an exclusion under this subsection (a)(25) must provide notification as required by 35 Ill. Adm. Code 720.142.

26) Solvent-contaminated wipes that are sent for cleaning and reuse are not solid wastes from the point of generation if the following conditions are met:

A) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in non-leaking, closed containers that are labeled "Excluded Solvent-Contaminated Wipes". The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

B) The solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for cleaning;

C) At the point of being sent for cleaning on-site or at the point of being transported off-site for cleaning, the solvent-contaminated wipes must contain no free liquids, as defined in 35 Ill. Adm. Code 720.110;

D) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in this Part and 35 Ill. Adm. Code 720, 722 through 728, and 733;

E) Generators must maintain at their site the following documentation:

i) The name and address of the laundry or dry cleaner that is receiving the solvent-contaminated wipes;

ii) The documentation that the 180-day accumulation time limit in 35 Ill. Adm. Code 721.104(a)(26)(B) is being met; and

iii) A description of the process the generator is using to ensure that the solvent-contaminated wipes contain no free liquids at the point of being laundered or dry cleaned on-site or at the point of being transported off-site for laundering or dry cleaning; and

F) The solvent-contaminated wipes are sent to a laundry or dry cleaner whose discharge, if any, is regulated under sections 301 and 402 or section 307 of the federal Clean Water Act (33 USC 1311 and 1341 or 33 USC 1317) or equivalent Illinois or sister-state requirements approved by USEPA under 33 USC 1311 through 1346 and 1370.

27) Hazardous secondary material that is generated and then transferred to another person for remanufacturing is not a solid waste, provided that the following conditions are met:
BOARD NOTE: The North American Industrial Classification System (NAICS) codes used in this subsection (a)(27) are defined in the NAICS Manual, available from the Office of Management and Budget and incorporated by reference in 35 Ill. Adm. Code 720.111.

A) The hazardous secondary material consists of one or more of the following spent solvents: toluene, xylenes, ethylbenzene, 1,2,4-trimethylbenzene, chlorobenzene, n-hexane, cyclohexane, methyl tert-butyl ether, acetonitrile, chloroform, chloromethane, dichloromethane, methyl isobutyl ketone, N,N-dimethylformamide, tetrahydrofuran, n-butyl alcohol, ethanol, or methanol.

B) The hazardous secondary material originated from using one or more of the solvents listed in subsection (a)(27)(A) in a commercial grade for reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), or the paints and coatings manufacturing sectors (NAICS 325510).

C) The hazardous secondary material generator sends the hazardous secondary material spent solvents listed in subsection (a)(27)(A) to a remanufacturer in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), or the paints and coatings manufacturing sectors (NAICS 325510).

D) After remanufacturing one or more of the solvents listed in subsection (a)(27)(A), the use of the remanufactured solvent must be limited to reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), and the paints and coatings manufacturing sectors (NAICS 325510) or to using them as ingredients in a product. These allowed uses correspond to chemical functional uses enumerated in 40 CFR 711.15(b)(4)(i)(C) (Reporting Information to EPA), incorporated by reference in 35 Ill. Adm. Code 720.111, including Industrial Function Category Codes U015 (solvents consumed in a reaction to produce other chemicals) and U030 (solvents that become part of the mixture). BOARD NOTE: The Board observes that the citation to Toxic Substances Control Act function categories and use of the word "including" to preface specific example Industrial Function Category Codes does not expand the range of permissible uses beyond the express limitations recited in the first segment of this subsection (a)(27)(D) and subsection (a)(27)(E).

E) After remanufacturing one or more of the solvents listed in subsection (a)(27)(i), the use of the remanufactured solvent does

not involve cleaning or degreasing oil, grease, or similar material from textiles, glassware, metal surfaces, or other articles. (These disallowed continuing uses correspond to chemical functional uses in Industrial Function Category Code U029 (solvents (for cleaning and degreasing)) in 40 CFR 711.15(b)(4)(i)(C), incorporated by reference in 35 Ill. Adm. Code 720.111.

F) Both the hazardous secondary material generator and the remanufacturer must meet the following requirements:

i) The generator and remanufacturer must notify USEPA Region 5 and the Agency, and update the notification every two years per 35 Ill. Adm. Code 720.142;

ii) The generator and remanufacturer must develop and maintain an up-to-date remanufacturing plan that identifies the information enumerated in subsection (a)(27)(G); BOARD NOTE: The Board moved corresponding 40 CFR 261.4(a)(27)(vi)(B)(*1*) through (a)(27)(vi)(B)(*1*) to appear as subsections (a)(27)(G)(i) through (a)(27)(G)(v) to comport with codification requirements.

iii) The generator and remanufacturer must maintain records of shipments and confirmations of receipts for a period of three years from the dates of the shipments;

iv) The generator and remanufacturer must, prior to remanufacturing, store the hazardous spent solvents in tanks or containers that meet technical standards found in Subparts I and J, with the tanks and containers being labeled or otherwise having an immediately available record of the material being stored;

v) The generator and remanufacturer must, during remanufacturing, and during storage of the hazardous secondary materials prior to remanufacturing, the remanufacturer certifies that the remanufacturing equipment, vents, and tanks are equipped with and are operating air emission controls complying with the applicable Clean Air Act regulations of 40 CFR 60, 61 and 63, incorporated by reference in 35 Ill. Adm. Code 720.111; or, absent such Clean Air Act standards for the particular operation or piece of equipment covered by the remanufacturing exclusion, are complying with the appropriate standards in Subparts AA (vents), BB (equipment) and CC (tank storage); and

vi) The generator and remanufacturer must meet the requirements prohibiting speculative accumulation in Section 721.101(c)(8).

G) The following information items are required elements for a remanufacturing plan.

i) The name, address and USEPA ID number of the generators and the remanufacturers;

ii) The types and estimated annual volumes of spent solvents to be remanufactured;

iii) The processes and industry sectors that generate the spent solvents;

iv) The specific uses and industry sectors for the remanufactured solvents; and

v) A certification from the remanufacturer stating as follows: "On behalf of [insert remanufacturer facility name], I certify that this facility is a remanufacturer under pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), and/or the paints and coatings manufacturing sectors (NAICS 325510), and will accept the spent solvent(s) solely for remanufacturing into commercial-grade solvent(s) that will be used for reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) or for use as product ingredient(s). I also certify that the remanufacturing equipment, vents, and tanks are equipped with and are operating air emission controls complying with the appropriate Clean Air Act regulations under 40 CFR 60, 61 or 63, or, absent such Clean Air Act standards for the particular operation or piece of equipment covered by the remanufacturing exclusion, comply with the appropriate standards in Subparts AA (vents), BB (equipment) and CC (tank storage)."

BOARD NOTE: Subsections (a)(27)(G)(i) through (a)(27)(G)(v) correspond with 40 CFR 261.4(a)(27)(vi)(B)(*1*) through (a)(27)(vi)(B)(*1*), moved to this subsection (a)(27)(G) to comport with codification requirements.

b) Solid Wastes That Are Not Hazardous Wastes. The following solid wastes are not hazardous wastes:

1) Household waste, including household waste that has been collected, transported, stored, treated, disposed of, recovered (e.g., refuse-derived fuel), or reused. "Household waste" means any waste material (including garbage, trash, and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels, and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas). A resource recovery facility managing municipal solid waste must not be deemed to be treating, storing, disposing of, or otherwise managing hazardous wastes for regulation under this Part, if the following describe the facility:

A) The facility receives and burns only the following waste:

i) Household waste (from single and multiple dwellings, hotels, motels, and other residential sources); or

ii) Solid waste from commercial or industrial sources that does not contain hazardous waste; and

B) The facility does not accept hazardous waste and the owner or operator of such facility has established contractual requirements or other appropriate notification or inspection procedures to assure that hazardous wastes are not received at or burned in such facility.

BOARD NOTE: The U.S. Supreme Court determined, in City of Chicago v. Environmental Defense Fund, Inc., 511 U.S. 328, 114 S. Ct. 1588, 128 L. Ed. 2d 302 (1994), that this exclusion and RCRA section 3001(i) (42 USC 6921(i)) do not exclude the ash from facilities covered by this subsection (b)(1) from regulation as a hazardous waste. At 59 Fed. Reg. 29372 (June 7, 1994), USEPA granted facilities managing ash from such facilities that is determined a hazardous waste under Subpart C until December 7, 1994 to file a RCRA Part A permit application under 35 Ill. Adm. Code 703.181. At 60 Fed. Reg. 6666 (Feb. 3, 1995), USEPA stated that it interpreted that the point at which ash becomes subject to RCRA Subtitle C regulation is when that material leaves the combustion building (including connected air pollution control equipment).

2) Solid wastes generated by any of the following that are returned to the soil as fertilizers:

A) The growing and harvesting of agricultural crops; or

B) The raising of animals, including animal manures.

3) Mining overburden returned to the mine site.

4) Coal and Fossil Fuel Combustion Waste

A) Fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste generated primarily from combusting coal or other fossil fuels, except as provided in 35 Ill. Adm. Code 726.212 for facilities that burn or process hazardous waste.

B) The following wastes generated primarily from processes that support combusting coal or other fossil fuels that are co-disposed with the wastes in subsection (b)(4)(A), except as provided by 35 Ill. Adm. Code 726.112 for facilities that burn or process hazardous waste:

i) Coal Pile Run-Off. For this subsection (b)(4), "coal pile run-off" means any precipitation that drains off coal piles.

ii) Boiler Cleaning Solutions. For this subsection (b)(4), "boiler cleaning solutions" means water solutions and chemical solutions used to clean the fire-side and waterside of the boiler.

iii) Boiler Blowdown. For this subsection (b)(4), "boiler blowdown" means water purged from boilers used to generate steam.

iv) Process Water Treatment and Demineralizer Regeneration Wastes. For this subsection (b)(4), "process water treatment and demineralizer regeneration wastes" means sludges, rinses, and spent resins generated from processes to remove dissolved gases, suspended solids, and dissolved chemical salts from combustion system process water.

v) Cooling Tower Blowdown. For this subsection (b)(4), "cooling tower blowdown" means water purged from a closed cycle cooling system. Closed cycle cooling systems include cooling towers, cooling ponds, or spray canals.

vi) Air Heater and Precipitator Washes. For this subsection (b)(4), "air heater and precipitator washes" means wastes from cleaning air preheaters and electrostatic precipitators.

vii) Effluents from Floor and Yard Drains and Sumps. For this subsection (b)(4), "effluents from floor and yard drains and sumps" means wastewaters, such as wash water, collected by or from floor drains, equipment drains, and sumps located inside the power plant building; and wastewaters, such as rain run-off, collected by yard drains and sumps located outside the power plant building.

viii) Wastewater Treatment Sludges. For this subsection (b)(4), "wastewater treatment sludges" refers to sludges generated from the treatment of wastewaters specified in subsections (b)(4)(B)(i) through (b)(4)(B)(vi).

5) Drilling fluids, produced waters, and other wastes associated with the exploring, developing, or producing crude oil, natural gas, or geothermal energy.

6) Chromium Wastes

A) Wastes that fail the test for the toxicity characteristic (Section 721.124 and Appendix B) because chromium is present or that are listed in Subpart D due to the presence of chromium, that do not fail the test for the toxicity characteristic for any other constituent or that are not listed due to the presence of any other constituent, and that do not fail the test for any other characteristic, if the waste generator shows the following:

i) The chromium in the waste is exclusively (or nearly exclusively) trivalent chromium;

ii) The waste is generated from an industrial process that uses trivalent chromium exclusively (or nearly exclusively) and the process does not generate hexavalent chromium; and

iii) The waste is typically and frequently managed in non-oxidizing environments.

B) The following are specific wastes that meet the standard in subsection (b)(6)(A) (so long as they do not fail the test for the toxicity characteristic for any other constituent and do not exhibit any other characteristic):

i) Chrome (blue) trimmings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair

save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;

ii) Chrome (blue) shavings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;

iii) Buffing dust generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue;

iv) Sewer screenings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;

v) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;

vi) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, and through-the-blue;

vii) Waste scrap leather from the leather tanning industry, the shoe manufacturing industry, and other leather product manufacturing industries; and

viii) Wastewater treatment sludges from producing titanium dioxide pigment using chromium-bearing ores by the chloride process.

7) Solid waste from extracting, beneficiating, and processing of ores and minerals (including coal, phosphate rock, and overburden from the mining of uranium ore), except as provided by 35 Ill. Adm. Code 726.212 for facilities that burn or process hazardous waste.

A) For this subsection (b)(7), beneficiating ores and minerals is restricted to the following activities: crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water or carbon dioxide; roasting; autoclaving or chlorination in preparation for leaching (except if the roasting (or autoclaving or chlorination) and leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; floatation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat tank, and in situ leaching.

B) For this subsection (b)(7), solid waste from the processing of ores and minerals includes only the following wastes as generated:

i) Slag from primary copper processing;

ii) Slag from primary lead processing;

iii) Red and brown muds from bauxite refining;

iv) Phosphogypsum from phosphoric acid production;

v) Slag from elemental phosphorus production;

vi) Gasifier ash from coal gasification;

vii) Process wastewater from coal gasification;

viii) Calcium sulfate wastewater treatment plant sludge from primary copper processing;

ix) Slag tailings from primary copper processing;

x) Fluorogypsum from hydrofluoric acid production;

xi) Process wastewater from hydrofluoric acid production;

xii) Air pollution control dust or sludge from iron blast furnaces;

xiii) Iron blast furnace slag;

xiv) Treated residue from roasting and leaching of chrome ore;

xv) Process wastewater from primary magnesium processing by the anhydrous process;

xvi) Process wastewater from phosphoric acid production;

xvii) Basic oxygen furnace and open-hearth furnace air pollution control dust or sludge from carbon steel production;

xviii) Basic oxygen furnace and open-hearth furnace slag from carbon steel production;

xix) Chloride processing waste solids from titanium tetrachloride production; and

xx) Slag from primary zinc production.

C) A residue derived from co-processing mineral processing secondary materials with normal beneficiation raw materials or with normal mineral processing raw materials remains excluded under this subsection (b) if the following conditions are met:

i) The owner or operator processes at least 50 percent by weight normal beneficiation raw materials or normal mineral processing raw materials; and

ii) The owner or operator legitimately reclaims the secondary mineral processing materials.

8) Cement kiln dust waste, except as provided by 35 Ill. Adm. Code 726.212 for facilities that burn or process hazardous waste.

9) Solid waste that consists of discarded arsenical-treated wood or wood products that fails the test for the toxicity characteristic for USEPA hazardous waste numbers D004 through D017 and that is not a hazardous waste for any other reason if the waste is generated by persons that utilize the arsenical-treated wood and wood products for these materials' intended end use.

10) Petroleum-contaminated media and debris that fail the test for the toxicity characteristic of Section 721.124 (USEPA hazardous waste numbers D018 through D043 only) and that are subject to corrective action regulations under 35 Ill. Adm. Code 731.

11) This subsection (b)(11) corresponds with 40 CFR 261.4(b)(11), which expired by its own terms on January 25, 1993. This statement maintains structural parity with USEPA regulations.

12) Used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment, including mobile air conditioning systems, mobile refrigeration, and commercial and industrial air conditioning and refrigeration systems, that use chlorofluorocarbons as the heat transfer fluid in a refrigeration cycle, provided the refrigerant is reclaimed for further use.

13) Non-terne plated used oil filters that are not mixed with wastes listed in Subpart D, if these oil filters have been gravity hot-drained using one of the following methods:

A) Puncturing the filter anti-drain back valve or the filter dome end and hot-draining;

B) Hot-draining and crushing;

C) Dismantling and hot-draining; or

D) Any other equivalent hot-draining method that will remove used oil.

14) Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.

15) Leachate or gas condensate collected from landfills where certain solid wastes have been disposed of, under the following circumstances:

A) The following conditions must be met:

i) The solid wastes disposed of would meet one or more of the listing descriptions for the following USEPA hazardous waste numbers that are generated after the effective date listed for the waste:

USEPA Hazardous Waste Numbers	Listing Effective Date
K169, K170, K171, and K172	February 8, 1999
K174 and K175	May 7, 2001
K176, K177, and K178	May 20, 2002
K181	August 23, 2005

ii) The solid wastes described in subsection (b)(15)(A)(i) were disposed of prior to the effective date of the listing (as provided in that subsection);

iii) The leachate or gas condensate does not exhibit any characteristic of hazardous waste nor is derived from any other listed hazardous waste; and

iv) Discharge of the leachate or gas condensate, including leachate or gas condensate transferred from the landfill to a POTW by truck, rail, or dedicated pipe, is subject to regulation under section 307(b) or 402 of the federal Clean Water Act (33 USC 1317(b) or 1342).

B) Leachate or gas condensate derived from K169, K170, K171, K172, K176, K177, K178, or K181 waste will no longer be exempt if it is stored or managed in a surface impoundment prior to discharge. There is one exception: if the surface impoundment is used to temporarily store leachate or gas condensate in response to an emergency situation (e.g., shutdown of wastewater treatment system), provided the impoundment has a double liner, and provided the leachate or gas condensate is removed from the impoundment and continues to be managed complying with the conditions of this subsection (b)(15) after the emergency ends.

16) This subsection (b)(16) corresponds with 40 CFR 261.4(b)(16), which USEPA has marked "reserved". This statement maintains structural parity with USEPA regulations.

17) This subsection (b)(17) corresponds with 40 CFR 261.4(b)(17), which pertains exclusively to waste generated by a specific facility outside Illinois. This statement maintains structural parity with USEPA regulations.

18) Solvent-contaminated wipes, except for wipes that are hazardous waste due to the presence of trichloroethylene, that are sent for disposal are not hazardous wastes from the point of generation if the following conditions are met:

A) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in non-leaking, closed containers that are labeled "Excluded Solvent-Contaminated Wipes". The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated

wipes. When the container is full, when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

B) The solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for disposal;

C) At the point of being transported for disposal, the solvent-contaminated wipes must contain no free liquids, as defined in 35 Ill. Adm. Code 720.110;

D) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in this Part and 35 Ill. Adm. Code 720, 722 through 728, and 733;

E) Generators must maintain at their site the following documentation:

i) The name and address of the landfill or combustor that is receiving the solvent-contaminated wipes;

ii) The documentation that the 180-day accumulation time limit in 35 Ill. Adm. Code 721.104(b)(18)(B) is being met; and

iii) A description of the process the generator is using to ensure that the solvent-contaminated wipes contain no free liquids at the point of being transported for disposal; and

F) The solvent-contaminated wipes are sent for disposal at one of the following facilities:

i) A municipal solid waste landfill regulated under RCRA Subtitle D regulations: 35 Ill. Adm. Code 810 through 815, including the landfill design criteria of 35 Ill. Adm. Code 811.303 through 811.309, 811.315 through 811.317, and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402; 40 CFR 258, including the landfill design criteria of 40 CFR 258.40; or equivalent regulations of a sister state that USEPA has approved under 42 USC 6943 and 6947; or

ii) A hazardous waste landfill regulated under RCRA Subtitle C regulations: 35 Ill. Adm. Code 724 or 725; 40 CFR 264 or 265; or equivalent regulations of a sister state that USEPA has approved under 42 USC 6926; or

iii) A municipal waste combustor or other combustion facility regulated under section 129 of the Clean Air Act (42 USC 7429) or equivalent Illinois or sister-state regulations approved by USEPA under 42 USC 7429; or

iv) A hazardous waste combustor, boiler, or industrial furnace regulated under RCRA Subtitle C regulations: 35 Ill. Adm. Code 724 or 725 or Subpart H of 35 Ill. Adm. Code 726; 40 CFR 264 or 265 or subpart H of 40 CFR 266; or equivalent regulations of a sister state that USEPA has approved under 42 USC 6926.

c) Hazardous wastes that are exempted from certain regulations. A hazardous waste that is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, or in a manufacturing process unit, or an associated non-waste-treatment manufacturing unit, is not subject to regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728 or to the notification requirements of section 3010 of RCRA (42 USC 6930) until it exits the unit in which it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than 90 days after the unit ceases to be operated for manufacturing or for storage or transporting product or raw materials.

d) Samples

1) Except as provided in subsections (d)(2) and (d)(4), a sample of solid waste or a sample of water, soil, or air that is collected solely for testing to determine its characteristics or composition is not subject to any requirements of this Part or 35 Ill. Adm. Code 702, 703, and 722 through 728. The sample qualifies when it meets one of the following conditions:

A) The sample is being transported to a laboratory for testing;

B) The sample is being transported back to the sample collector after testing;

C) The sample is being stored by the sample collector before transport to a laboratory for testing;

D) The sample is being stored in a laboratory before testing;

E) The sample is being stored in a laboratory for testing but before it is returned to the sample collector; or

F) The sample is being stored temporarily in the laboratory after testing for a specific purpose (for example, until conclusion of a court case or enforcement action if further testing of the sample may be necessary).

2) To qualify for the exemption in subsection (d)(1)(A) or (d)(1)(B), a sample collector shipping samples to a laboratory and a laboratory returning samples to a sample collector must do the following:

A) Comply with USDOT, U.S. Postal Service (USPS), or any other applicable shipping requirements; or

B) Comply with the following requirements if the sample collector determines that USDOT, USPS, or other shipping requirements do not apply to the shipment of the sample:

i) Assure that the following information accompanies the sample: The sample collector's name, mailing address, and telephone number; the laboratory's name, mailing address, and telephone number; the quantity of the sample; the date of the shipment; and a description of the sample; and

ii) Package the sample so that it does not leak, spill, or vaporize from its packaging.

3) This exemption does not apply if the laboratory determines that the waste is hazardous, but the laboratory is no longer meeting any of the conditions stated in subsection (d)(1).

4) To qualify for the exemption in subsections (d)(1)(A) and (d)(1)(B), the mass of a sample that will be exported to a foreign laboratory or that will be imported to a U.S. laboratory from a foreign source must additionally not exceed 25 kg.

e) Treatability Study Samples

1) Except as provided in subsections (e)(2) and (e)(4), a person that generates or collects samples for conducting treatability studies, as defined in 35 Ill. Adm. Code 720.110, are not subject to any requirement of 35 Ill Adm. Code 722 and 723,~~35 Ill. Adm. Code 721 through 723~~ or to the notification requirements of section 3010 of RCRA (42 USC 6930). Nor are such samples included in the quantity determinations of Section 722.113 and the accumulation limits in Sections 722.114(a)(3),

722.114(a)(4), and 722.116(b)(1)~~35 Ill. Adm. Code 722.114 and 722.116~~ when:

A) The sample is being collected and prepared for transportation by the generator or sample collector;

B) The sample is being accumulated or stored by the generator or sample collector prior to transportation to a laboratory or testing facility; or

C) The sample is being transported to the laboratory or testing facility for conducting a treatability study.

2) The exemption in subsection (e)(1) is applicable to samples of hazardous waste being collected and shipped for conducting treatability studies provided that the following conditions are met:

A) The generator or sample collector uses (in "treatability studies") no more than 10,000 kg of media contaminated with non-acute hazardous waste, 1,000 kg of non-acute hazardous waste other than contaminated media, 1 kg of acute hazardous waste, or 2,500 kg of media contaminated with acute hazardous waste for each process being evaluated for each generated waste stream;

B) The mass of each shipment does not exceed 10,000 kg; the 10,000 kg quantity may be all media contaminated with non-acute hazardous waste, or may include 2,500 kg of media contaminated with acute hazardous waste, 1,000 kg of hazardous waste, and 1 kg of acute hazardous waste;

C) The sample must be packaged so that it does not leak, spill, or vaporize from its packaging during shipment and subsection (e)(2)(C)(i) or (e)(2)(C)(ii) are met.

i) Transporting each sample shipment complies with USDOT, USPS, or any other applicable shipping requirements; or

ii) If the USDOT, USPS, or other shipping requirements do not apply to the shipment of the sample, the following information must accompany the sample: The name, mailing address, and telephone number of the originator of the sample; the name, address, and telephone number of the facility that will perform the treatability study; the quantity of the sample; the date of the shipment; and, a description of the sample, including its USEPA hazardous waste number;

D) The sample is shipped to a laboratory or testing facility that is exempt under subsection (f), or has an appropriate RCRA permit or interim status;

E) The generator or sample collector maintains the following records for a period ending three years after completing the treatability study:

i) Copies of the shipping documents;

ii) A copy of the contract with the facility conducting the treatability study; and

iii) Documentation showing the following: The amount of waste shipped under this exemption; the name, address, and USEPA identification number of the laboratory or testing facility that received the waste; the date the shipment was made; and whether or not unused samples and residues were returned to the generator; and

F) The generator reports the information required in subsection (e)(2)(E)(iii) in its report under 35 Ill. Adm. Code 722.141.

3) The Agency may grant requests on a case-by-case basis for up to an additional two years for treatability studies involving bioremediation. The Agency may grant requests, on a case-by-case basis, for quantity limits in excess of those specified in subsections (e)(2)(A), (e)(2)(B), and (f)(4), for up to an additional 5,000 kg of media contaminated with non-acute hazardous waste, 500 kg of non-acute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, and 1 kg of acute hazardous waste under the circumstances in either subsection (e)(3)(A) or (e)(3)(B), subject to the limitations of subsection (e)(3)(C):

A) In response to requests for authorization to ship, store, and conduct further treatability studies on additional quantities in advance of commencing treatability studies. Factors to be considered in reviewing such requests include the nature of the technology, the type of process (e.g., batch versus continuous), the size of the unit undergoing testing (particularly in relation to scale-up considerations), the time or quantity of material required to reach steady-state operating conditions, or test design considerations, such as mass balance calculations.

B) In response to requests for authorization to ship, store, and conduct treatability studies on additional quantities after initiating or

completing initial treatability studies when the following occurs: There has been an equipment or mechanical failure during the conduct of the treatability study, there is need to verify the results of a previously-conducted treatability study, there is a need to study and analyze alternative techniques within a previously-evaluated treatment process, or there is a need to do further evaluating an ongoing treatability study to determine final specifications for treatment.

C) The additional quantities and timeframes allowed in subsections (e)(3)(A) and (e)(3)(B) are subject to all the provisions in subsections (e)(1) and (e)(2)(B) through (e)(2)(F). The generator or sample collector must apply to the Agency and provide in writing the following information:

i) The reason why the generator or sample collector requires additional time or quantity of sample for the treatability study evaluation and the additional time or quantity needed;

ii) Documentation accounting for all samples of hazardous waste from the waste stream that have been sent for or undergone treatability studies, including the date each previous sample from the waste stream was shipped, the quantity of each previous shipment, the laboratory or testing facility to which it was shipped, what treatability study processes were conducted on each sample shipped, and the available results of each treatability study;

iii) A description of the technical modifications or change in specifications that will be evaluated and the expected results;

iv) If such further study is being required due to equipment or mechanical failure, the applicant must include information regarding the reason for the failure or breakdown and also include what procedures or equipment improvements have been made to protect against further breakdowns; and

v) Such other information as the Agency determines is necessary.

4) To qualify for the exemption in subsection (e)(1)(A), the mass of a sample that will be exported to a foreign laboratory or testing facility, or that will be imported to a U.S. laboratory or testing facility from a foreign source must additionally not exceed 25 kg.

5) Final Agency determinations under this subsection (e) may be appealed to the Board.

f) Samples undergoing treatability studies at laboratories or testing facilities. Samples undergoing treatability studies and the laboratory or testing facility conducting such treatability studies (to the extent such facilities are not otherwise subject to RCRA requirements) are not subject to any requirement of this Part, or of 35 Ill. Adm. Code 702, 703, 722 through 726, and 728 or to the notification requirements of section 3010 of RCRA (42 USC 6930), provided that the owner or operator complies with subsections (f)(1) through (f)(11). A mobile treatment unit may qualify as a testing facility subject to subsections (f)(1) through (f)(11). Where a group of mobile treatment units are located at the same site, the limitations specified in subsections (f)(1) through (f)(11) apply to the entire group of mobile treatment units collectively as if the group were one mobile treatment unit.

1) No less than 45 days before conducting treatability studies, the facility notifies the Agency in writing that it intends to conduct treatability studies under this subsection (f).

2) The laboratory or testing facility conducting the treatability study has a USEPA identification number.

3) No more than a total of 10,000 kg of "as received" media contaminated with non-acute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, or 250 kg of other "as received" hazardous waste is subject to initiating treatment in all treatability studies in any single day. "As received" waste refers to the waste as received in the shipment from the generator or sample collector.

4) The quantity of "as received" hazardous waste stored at the facility for evaluation in treatability studies does not exceed 10,000 kg, the total of which can include 10,000 kg of media contaminated with non-acute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, 1,000 kg of non-acute hazardous wastes other than contaminated media, and 1 kg of acute hazardous waste. This quantity limitation does not include treatment materials (including non-hazardous solid waste) added to "as received" hazardous waste.

5) No more than 90 days have elapsed since the treatability study for the sample was completed, or no more than one year (two years for treatability studies involving bioremediation) has elapsed since the generator or sample collector shipped the sample to the laboratory or testing facility, whichever date first occurs. Up to 500 kg of treated material from a particular waste stream from treatability studies may be archived for future evaluation up to five years from the date of initial

receipt. Quantities of materials archived are counted against the total storage limit for the facility.

6) The treatability study does not involve the placement of hazardous waste on the land or open burning of hazardous waste.

7) The facility maintains records for three years following completing each study that show complying with the treatment rate limits and the storage time and quantity limits. The following specific information must be included for each treatability study conducted:

   A) The name, address, and USEPA identification number of the generator or sample collector of each waste sample;

   B) The date the shipment was received;

   C) The quantity of waste accepted;

   D) The quantity of "as received" waste in storage each day;

   E) The date the treatment study was initiated and the amount of "as received" waste introduced to treatment each day;

   F) The date the treatability study was concluded;

   G) The date any unused sample or residues generated from the treatability study were returned to the generator or sample collector or, if sent to a designated facility, the name of the facility and the USEPA identification number.

8) The facility keeps, on-site, a copy of the treatability study contract and all shipping papers associated with the transport of treatability study samples to and from the facility for a period ending three years from the completion date of each treatability study.

9) The facility prepares and submits a report to the Agency, by March 15 of each year, that includes the following information for the previous calendar year:

   A) The name, address, and USEPA identification number of the facility conducting the treatability studies;

   B) The types (by process) of treatability studies conducted;

   C) The names and addresses of persons for whom studies have been conducted (including their USEPA identification numbers);

D) The total quantity of waste in storage each day;

E) The quantity and types of waste subjected to treatability studies;

F) When each treatability study was conducted; and

G) The final disposition of residues and unused sample from each treatability study.

10) The facility determines whether any unused sample or residues generated by the treatability study are hazardous waste under Section 721.103 and, if so, are subject to 35 Ill. Adm. Code 702, 703, and 721 through 728, unless the residues and unused samples are returned to the sample originator under the exemption of subsection (e).

11) The facility notifies the Agency by letter when the facility is no longer planning to conduct any treatability studies at the site.

g) Dredged Material That Is Not a Hazardous Waste. Dredged material that is subject to a permit that has been issued under section 404 of the Federal Water Pollution Control Act (33 USC 1344) is not a hazardous waste. For this this subsection (g), the following definitions apply:

"Dredged material" has the meaning ascribed it in 40 CFR 232.2 (Definitions), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

"Permit" means any of the following:

A permit issued by the U.S. Army Corps of Engineers (Army Corps) under section 404 of the Federal Water Pollution Control Act (33 USC 1344);

A permit issued by the Army Corps under section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 USC 1413);

or

In the case of Army Corps civil works projects, the administrative equivalent of the permits referred to in the preceding two paragraphs of this definition, as provided for in Army Corps regulations (for example, see 33 CFR 336.1, 336.2, and 337.6).

h) Carbon Dioxide Stream Injected for Geologic Sequestration. Carbon dioxide streams that are captured and transported for injecting into an underground injection well subject to the requirements for Class VI carbon sequestration

injection wells, including the requirements in 35 Ill. Adm. Code 704 and 730, are not a hazardous waste, if the following conditions are met:

1) Transporting the carbon dioxide stream must comply with U.S. Department of Transportation requirements, including the pipeline safety laws (chapter 601 of subtitle VIII of 49 USC, incorporated by reference in 35 Ill. Adm. Code 720.111) and regulations (49 CFR 190 through 199, incorporated by reference in 35 Ill. Adm. Code 720.111) of the U.S. Department of Transportation, and pipeline safety regulations adopted and administered by a state authority under a certification under 49 USC 60105, incorporated by reference in 35 Ill. Adm. Code 720.111, and 49 CFR 171 through 180, incorporated by reference in 35 Ill. Adm. Code 720.111, as applicable;
BOARD NOTE: The parenthetical language relating to pipeline transportation does not preclude transportation by air, water, highway, or rail that complies with U.S. Department of Transportation regulations at 49 CFR 171 through 180. For this reason, the Board has added citations of those regulations.

2) Injecting the carbon dioxide stream must comply with the applicable requirements for Class VI carbon sequestration injection wells, including the applicable requirements in 35 Ill. Adm. Code 704 and 730;

3) No hazardous wastes may be mixed with, or otherwise co-injected with, the carbon dioxide stream; and

4) Required Certifications

A) Any generator of a carbon dioxide stream, that claims that a carbon dioxide stream is excluded under this subsection (h), must have an authorized representative (as defined in 35 Ill. Adm. Code 720.110) sign a certification statement worded as follows:

"I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under 35 Ill. Adm. Code 721.104(h) has not been mixed with hazardous wastes, and I have transported the carbon dioxide stream complying with (or have contracted with a pipeline operator or transporter to transport the carbon dioxide stream complying with) U.S. Department of Transportation requirements, including the pipeline safety laws (49 USC 60101 et seq.) and regulations (49 CFR Parts 190 through 199) of the U.S. Department of Transportation, and the pipeline safety regulations adopted and administered by a state authority pursuant to a certification under 49 USC 60105, as applicable, for injection into a well subject to the

requirements for the Class VI Underground Injection Control Program of the federal Safe Drinking Water Act (42 USC 300f et seq.)."

B) Any Class VI carbon sequestration injection well owner or operator, who claims that a carbon dioxide stream is excluded under this subsection (h), must have an authorized representative (as defined in 35 Ill. Adm. Code 720.110) sign a certification statement worded as follows:

"I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under 35 Ill. Adm. Code 721.104(h) has not been mixed with, or otherwise co-injected with, hazardous waste at the UIC Class VI permitted facility, and that injecting the carbon dioxide stream complies with the applicable requirements for UIC Class VI wells, including the applicable requirements in 35 Ill. Adm. Code 704 and 730."

C) The signed certification statement must be kept on-site, for no less than three years, and must be made available within 72 hours after a written request from the Agency or USEPA, or their designee. The signed certification statement must be renewed every year that the exclusion is claimed, by having an authorized representative (as defined in 35 Ill. Adm. Code 720.110) annually prepare and sign a new copy of the certification statement within one year after the date of the previous statement. The signed certification statement must also be readily accessible on the facility's publicly available website (if such website exists) as a public notification with the title of "Carbon Dioxide Stream Certification" at the time the exclusion is claimed.

i) This subsection corresponds with 40 CFR 261.4(i), which USEPA marked "Reserved". This statement maintains structural consistency with the federal regulation.

j) Airbag Waste

1) At the airbag waste handler or during transport to an airbag waste collection facility or designated facility, airbag waste is not subject to regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728 and is not subject to the notification requirements of section 3010 of RCRA provided that the airbag waste handler or transporter meets the following conditions:

A) The airbag waste handler or transporter accumulates the airbag waste in a quantity of no more than 250 airbag modules or airbag inflators for no longer than 180 days;

B) The airbag waste handler or transporter packages the airbag waste in a container designed to address the risk posed by the airbag waste and labeled "Airbag Waste—Do Not Reuse";

C) The airbag waste handler or transporter sends the airbag waste directly to either of the following facilities:

i) An airbag waste collection facility in the United States that is under the control of a vehicle manufacturer or its authorized representative or that is under the control of a person authorized to administer a remedy program in response to a vehicle safety recall under 49 USC 30120; or

ii) A designated facility, as defined in 35 Ill. Adm. Code 720.110;

D) The transport of the airbag waste complies with all applicable USDOT regulations in 49 CFR 171 through 180 during transit; and

E) The airbag waste handler maintains at the handler facility, for at least three years, records of each off-site shipment of airbag waste and each confirmation of receipt from the receiving facility. For each shipment, these records must, at a minimum, contain the name of the transporter, the date of the shipment, the name and address of the receiving facility, and the type and quantity of airbag waste (i.e., airbag modules or airbag inflators) in the shipment. A confirmation of receipt must include the name and address of the receiving facility, the type and quantity of the airbag waste (i.e., airbag modules and airbag inflators) received, and the date when the airbag waste collection facility received the airbag waste. The airbag waste handler must make shipping records and confirmations of receipt available for inspection and may meet this requirement using routine business records (e.g., electronic or paper financial records, bills of lading, copies of USDOT shipping papers, electronic confirmations of receipt, etc.).

2) Once the airbag waste arrives at an airbag waste collection facility or designated facility, it becomes subject to all applicable hazardous waste regulations. The facility receiving airbag waste is considered the hazardous waste generator for the hazardous waste regulations and must comply with 35 Ill. Adm. Code 722.

3) Reuse in vehicles of defective airbag modules or defective airbag inflators that are subject to a recall under 49 USC 30120 is considered sham recycling and prohibited under 35 Ill. Adm. Code 721.102(g).

BOARD NOTE: This precludes any possibility that reuse qualifies for recycling-based exclusion from the definition of solid waste. Federal law prohibits selling defective recalled motor vehicle equipment if it may reasonably be used for its original purpose. (See 42 USC 30120(j).)

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.105 Special Requirements for Hazardous Waste Generated by Small Quantity Generators (Repealed)

(Source: Repealed at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.106 Requirements for Recyclable Materials

a) Recyclable Materials

1) Hazardous wastes that are recycled are subject to the requirements for generators, transporters, and storage facilities of subsections (b) and (c), except for the materials listed in subsections (a)(2) and (a)(3). Hazardous wastes that are recycled will be known as "recyclable materials".

2) The following recyclable materials are not subject to this Section but are regulated under Subparts C through QH ~~H~~ of 35 Ill. Adm. Code 726 and all applicable provisions in 35 Ill. Adm. Code 702, 703, and 728.

A) Recyclable materials used in a manner constituting disposal (see Subpart C of 35 Ill. Adm. Code 726);

B) Hazardous wastes burned (as defined in 35 Ill. Adm. Code 726.200(a)) in boilers and industrial furnaces that are not regulated under Subpart O of 35 Ill. Adm. Code 724 or Subpart O (see Subpart H of 35 Ill. Adm. Code 726);

C) Recyclable materials from which precious metals are reclaimed (see Subpart F of 35 Ill. Adm. Code 726); ~~and~~

D) Spent lead-acid batteries that are being reclaimed (see Subpart G of 35 Ill. Adm. Code 726); and ~~.~~

E) Ignitable spent refrigerants recycled for reuse (35 Ill Adm. Code 726 subpart Q).

3) The following recyclable materials are not subject to regulation under 35 Ill. Adm. Code 722 through 728, or 702 and 703 and are not subject to the notification requirements of section 3010 of RCRA (42 USC 6930):

A) Industrial ethyl alcohol that is reclaimed except that exports and imports of these recyclable material must comply with 40 CFR 262, subpart H.

i) The person initiating a shipment for reclamation in a foreign country, and any intermediary arranging for the shipment, must comply with the requirements applicable to an exporter in Section 722.183 with the exception of Section 722.183(c);

ii) Transporters transporting a shipment for export or import must comply with the movement document requirements listed in Section 723.120(a)(2) and (c).

B) Scrap metal that is not excluded under Section 721.104(a)(13);

C) Fuels produced from the refining of oil-bearing hazardous wastes along with normal process streams at a petroleum refining facility if these wastes result from normal petroleum refining, production, and transportation practices (this exemption does not apply to fuels produced from oil recovered from oil-bearing hazardous waste if the recovered oil is already excluded under Section 721.104(a)(12));

D) Petroleum Refining Wastes

i) Hazardous waste fuel produced from oil-bearing hazardous wastes from petroleum refining, production, or transportation practices or produced from oil reclaimed from the hazardous wastes, if these hazardous wastes are reintroduced into a process that does not use distillation or does not produce products from crude oil, so long as the resulting fuel meets the used oil specification under 35 Ill.

Adm. Code 739.111 and so long as no other hazardous wastes are used to produce the hazardous waste fuel;

ii) Hazardous waste fuel produced from oil-bearing hazardous waste from petroleum refining production, and transportation practices, if the hazardous wastes are reintroduced into a refining process after a point at which contaminants are removed, so long as the fuel meets the used oil fuel specification under 35 Ill. Adm. Code 739.111; and

iii) Oil reclaimed from oil-bearing hazardous wastes from petroleum refining, production, and transportation practices, which reclaimed oil is burned as a fuel without reintroduction to a refining process, so long as the reclaimed oil meets the used oil fuel specification under 35 Ill. Adm. Code 739.111.

4) Used oil that is recycled and is also a hazardous waste solely because it exhibits a hazardous characteristic is not subject to 35 Ill. Adm. Code 720 through 728, but it is regulated under 35 Ill. Adm. Code 739. Used oil that is recycled includes any used oil that is reused for any purpose following its original use (including the purpose for which the oil was originally used). This term includes oil that is re-refined, reclaimed, burned for energy recovery, or reprocessed.

5) Hazardous waste that is exported or imported for recovery is subject to Subpart H of 35 Ill. Adm. Code 722.

b) Generators and transporters of recyclable materials are subject to the applicable requirements of 35 Ill. Adm. Code 722 and 723 and the notification requirements under section 3010 of RCRA (42 USC 6930), except as provided in subsection (a).

c) Storage and Recycling

1) Owners or operators of facilities that store recyclable materials before they are recycled are regulated under all applicable provisions of Subparts A through L, AA through DD of 35 Ill. Adm. Code 724 and 725 and 35 Ill. Adm. Code 702, 703, 705, 726, 727, and 728; and the notification requirement under section 3010 of RCRA (42 USC 6930), except as provided in subsection (a). (The recycling process itself is exempt from regulation, except as provided in subsection (d).)

2) Owners or operators of facilities that recycle recyclable materials without storing them before they are recycled are subject to the following requirements, except as provided in subsection (a):

A) Notification requirements under section 3010 of RCRA (42 USC 6930);

B) 35 Ill. Adm. Code 725.171 and 725.172 (dealing with the use of the manifest and manifest discrepancies);

C) Subsection (d); and

D) 35 Ill. Adm. Code 725.175 (annual reporting requirements).

d) Owners or operators of facilities required to have a RCRA permit under 35 Ill. Adm. Code 703 with hazardous waste management units that recycle hazardous wastes are subject to Subparts AA and BB of 35 Ill. Adm. Code 724 or 725 or 35 Ill. Adm. Code 267.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.107 Residues of Hazardous Waste in Empty Containers

a) Applicability of rules.

1) Any hazardous waste remaining in either an empty container or an inner liner removed from an empty container, as defined in subsection (b), is not subject to regulation under 35 Ill. Adm. Code 702, 703, or 721 through 728, or to the notification requirements of Section 3010 of the Resource Conservation and Recovery Act.

2) Any hazardous waste in either a container that is not empty or an inner liner that is removed from a container that is not empty, as defined in subsection (b), is subject to regulations under 35 Ill. Adm. Code 702, 703, and 721 through 728 and to the notification requirements of Section 3010 of the Resource Conservation and Recovery Act.

b) Definition of "empty":

1) A container or an inner liner removed from a container that has held any hazardous waste, except a waste that is a compressed gas or that is identified as an acute hazardous waste listed in Section 721.131 or 721.133(e), is empty if the conditions of subsections (b)(1)(A) and (b)(1)(B) exist, subject to the limitations of subsection (b)(1)(C):

A) All wastes have been removed that can be removed using the practices commonly employed to remove materials from that type of container, e.g., pouring, pumping, and aspirating, and

B) No more than 2.5 centimeters (one inch) of residue remain on the bottom of the container or inner liner, or

C) Weight Limits

i) No more than three percent by weight of the total capacity of the container remains in the container or inner liner if the container is less than or equal to 119 gallons (450 liters) in size; or

ii) No more than 0.3 percent by weight of the total capacity of the container remains in the container or inner liner if the container is greater than 119 gallons (450 liters) in size.

2) A container that has held a hazardous waste that is a compressed gas is empty when the pressure in the container approaches ambient atmospheric pressure.

3) A container or an inner liner removed from a container that has held an acute hazardous waste listed in Section 721.131 or 721.133(e) is empty if any of the following occurs:

A) The container or inner liner has been triple rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;

B) The container or inner liner has been cleaned by another method that has been shown in the scientific literature, or by tests conducted by the generator, to achieve equivalent removal; or

C) In the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container has been removed.

c) A container that held hazardous waste pharmaceuticals is determined empty under 35 Ill. Adm. Code 726.607, in lieu of under this Section, except as provided by 35 Ill. Adm. Code 726.607(c) and (d).

(Source: Amended at 44 Ill. Reg. 15142, effective September 3, 2020)

Section 721.108 PCB Wastes Regulated under TSCA

Polychlorinatedbiphenyl-(PCB-)containing dielectric fluid and electric equipment containing such fluid are exempt from regulation under 35 Ill. Adm. Code 702, 703, and 721 through 728, and from the notification requirements of Section 3010 of RCRA (42 USC 6930) if the following conditions are fulfilled with regard to the fluid:

a) The fluid is authorized for use and regulated pursuant to federal 40 CFR 761; and

b) The fluid is hazardous only because it fails the test for toxicity characteristic (hazardous waste numbers D018 through D043 only).

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.109 Requirements for Universal Waste

The wastes listed in this Section are exempt from regulation under 35 Ill. Adm. Code 702, 703, 722 through 726, and 728, except as specified in 35 Ill. Adm. Code 733, and are therefore not fully regulated as hazardous waste. The following wastes are subject to regulation under 35 Ill. Adm. Code 733:

a) Batteries, as described in 35 Ill. Adm. Code 733.102;

b) Pesticides, as described in 35 Ill. Adm. Code 733.103;

c) Mercury-containing equipment, as described in 35 Ill. Adm. Code 733.104;

d) Lamps, as described in 35 Ill. Adm. Code 733.105;

e) Aerosol cans, as described in 35 Ill. Adm. Code 733.106; and

f) Paint and paint-related wastes, as described in 35 Ill. Adm. Code 733.107.

(Source: Amended at 49 Ill. Reg. 11375, effective August 27, 2025)

SUBPART B: CRITERIA FOR IDENTIFYING THE CHARACTERISTICS OF HAZARDOUS WASTE AND FOR LISTING HAZARDOUS WASTES

Section 721.110 Criteria for Identifying the Characteristics of Hazardous Waste

a) USEPA stated in corresponding federal 40 CFR 261.10 that it identifies and defines a characteristic of hazardous waste in Subpart C only upon determining the following:

1) That a solid waste that exhibits the characteristic may do either of the following:

A) It could cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or

B) It could pose a substantial present or potential hazard to human health or the environment when it is improperly treated, stored, transported, disposed of or otherwise managed; and

2) That the characteristic can be as follows:

A) It can be measured by an available standardized test method that is reasonable within the capability of generators of solid waste or private sector laboratories that are available to serve generators of solid waste; or

B) It can reasonably be detected by generators of solid waste through their knowledge of their waste.

b) Delisting procedures are contained in 35 Ill. Adm. Code 720.122.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.111 Criteria for Listing Hazardous Waste

a) USEPA stated in corresponding federal 40 CFR 261.11 that it lists a solid waste as a hazardous waste only upon determining that the solid waste meets one of the following criteria:

1) The solid waste exhibits any of the characteristics of hazardous waste identified in Subpart C; or

2) Acute hazardous waste. The solid waste has been found to be fatal to humans in low doses or, in the absence of data on human toxicity, it has been shown in studies to have an oral LD 50 toxicity (rat) of less than 50 mg/kg, an inhalation LC 50 toxicity (rat) of less than 2 mg/ℓ, or a dermal LD 50 toxicity (rabbit) of less than 200 mg/kg or is otherwise capable of causing or significantly contributing to an increase in serious irreversible or incapacitating reversible, illness.

BOARD NOTE: Waste listed under subsection (a)(2) are designated Acute Hazardous Waste.

3) Toxic Waste. The solid waste contains any of the toxic constituents listed in Appendix H and, after considering the following factors, USEPA concludes that the waste is capable of posing a substantial present or

potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed:

BOARD NOTE: Substances are listed in Appendix H only if they have been shown in scientific studies to have toxic, carcinogenic, mutagenic, or teratogenic effects on humans or other life forms.

A) The nature of the toxicity presented by the constituent;

B) The concentration of the constituent in the waste;

C) The potential of the constituent or any toxic degradation product of the constituent to migrate from the waste into the environment under the types of improper management considered in subsection (a)(3)(G);

D) The persistence of the constituent or any toxic degradation product of the constituent;

E) The potential for the constituent or any toxic degradation product of the constituent to degrade into nonharmful constituents and the rate of degradation;

F) The degree to which the constituent or any degradation product of the constituent bioaccumulates in ecosystems;

G) The plausible types of improper management to which the waste could be subjected;

H) The quantities of the waste generated at individual generator sites or on a regional or national basis;

I) The nature and severity of the human health and environmental damage that has occurred because of the improper management of the wastes containing the constituent;

J) Action taken by other governmental agencies or regulatory programs based on the health or environmental hazard posed by the waste or waste constituent; and

K) Other factors as may be appropriate.

BOARD NOTE: Wastes listed under subsection (a)(3) are designated toxic wastes.

b) USEPA stated in corresponding federal 40 CFR 261.11(b) that it may list classes or types of solid waste as hazardous waste if USEPA has reason to believe that individual wastes, within the class or type of waste, typically or frequently are hazardous under the definition of hazardous waste found in section 1004(5) of RCRA (42 USC 6904(5)).

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

SUBPART C: CHARACTERISTICS OF HAZARDOUS WASTE

Section 721.120 General

a) A solid waste, as defined in Section 721.102, that is not excluded from regulation as a hazardous waste under Section 721.104(b), is a hazardous waste if it exhibits any of the characteristics identified in this Subpart C.

BOARD NOTE: 35 Ill. Adm. Code 722.111 states the generator's responsibility to determine whether the generator's waste exhibits one or more characteristics identified in this Subpart C.

b) A hazardous waste that is identified by a characteristic in this Subpart C is assigned every USEPA hazardous waste number that is applicable as specified in this Subpart C. This number must be used in complying with the notification requirements of Section 3010 of RCRA (42 U.S.C. 6930) and all applicable recordkeeping and reporting requirements under 35 Ill. Adm. Code 702, 703, and 722 through 728.

c) For this Subpart C, a sample obtained using any of the applicable sampling methods specified in Appendix A is a representative sample within the meaning of 35 Ill. Adm. Code 720.

BOARD NOTE: Since the Appendix A sampling methods are not being formally adopted, a person who desires to employ an alternative sampling method is not required to demonstrate the equivalency of the person's method under the procedures set forth in 35 Ill. Adm. Code 720.121.

(Source: Amended at 48 Ill. Reg. 9827, effective June 20, 2024)

Section 721.121 Characteristic of Ignitability

a) A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

1) It is a liquid, other than a solution containing less than 24 percent alcohol by volume and at least 50 percent water by weight, that has a flash point less than 60°C (140°F), as determined by one of the following ASTM

standards: D 93-79, D 93-80, D 3278-78, D 8174-18, or D 8175-18, each incorporated by reference in 35 Ill. Adm. Code 720.111(a), as specified in SW-846 Test Methods 1010B or 1020C, each incorporated by reference in 35 Ill. Adm. Code 720.111(a).

2) It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorbing moisture, or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.

3) It is an ignitable compressed gas.

A) The term "compressed gas" designates any material or mixture having in the container an absolute pressure exceeding 40 p.s.i. at 70 °F or, regardless of the pressure at 70 °F, having an absolute pressure exceeding 104 p.s.i. at 130 °F. Alternatively, the term "compressed gas" designates any liquid flammable material having a vapor pressure exceeding 40 p.s.i. absolute at 100 °F, as determined by ASTM D 323.

B) A compressed gas is characterized as ignitable if any one of the following occurs:

i) Either a mixture of 13 percent or less (by volume) with air forms a flammable mixture or the flammable range with air is wider than 12 percent regardless of the lower limit. These limits must be determined at atmospheric temperature and pressure. The method of sampling and test procedure must be ASTM E 681-85, incorporated by reference in 35 Ill. Adm. Code 720.111, or other equivalent methods approved by the Associate Administrator, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation.

ii) It is determined to be flammable or extremely flammable using 49 CFR 173.115(l), incorporated by reference in 35 Ill. Adm. Code 720.111.

4) It is an oxidizer, as defined in 49 CFR 173.127 (Class 5, Division 5.1—Definition and Assignment of Packaging Groups), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

A) An organic compound containing the bivalent -O-O- structure and which may be considered a derivative of hydrogen peroxide where one or more of the hydrogen atoms have been replaced by organic radicals must be classed as an organic peroxide unless:

i) The material is a Division 1.1, 1.2, or 1.3 explosive, as defined in 40 CFR § 261.23(a)(8), in which case it must be classed as an explosive;

ii) Offering the material for transportation is forbidden under 49 CFR 172.101 and 49 CFR 173.21;

iii) The predominant hazard of the material containing an organic peroxide is other than that of an organic peroxide; or

iv) According to data on file with the Pipeline and Hazardous Materials Safety Administration in the U.S. Department of Transportation, it has been determined that the material does not present a hazard in transportation.

b) A solid waste that exhibits the characteristic of ignitability has the USEPA hazardous waste number of D001.

(Source: Amended at 48 Ill. Reg. 9827, effective June 20, 2024)

Section 721.122 Characteristic of Corrosivity

a) A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:

1) It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter using Method 9040C (pH Electrometric Measurement) in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods", USEPA publication number EPA-530/SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111(a).

2) It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55 °C (130 °F), as determined by Method 1110A (Corrosivity Toward Steel) in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods", USEPA publication number EPA-530/SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111(a).

BOARD NOTE: The corrosivity characteristic determination currently does not apply to non-liquid wastes, as discussed by USEPA at 45 Fed. Reg. 33109, May 19, 1980 and at 55 Fed. Reg. 22549, June 1, 1990.

b) A solid waste that exhibits the characteristic of corrosivity has the USEPA hazardous waste number of D002.

(Source: Amended at 44 Ill. Reg. 15142, effective September 3, 2020)

Section 721.123 Characteristic of Reactivity

a) A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

1) It is normally unstable and readily undergoes violent change without detonating.

2) It reacts violently with water.

3) It forms potentially explosive mixtures with water.

4) When mixed with water, it generates toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.

5) It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5 can generate toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.

6) It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.

7) It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.

8) It is a forbidden explosive, as defined in federal 49 CFR 173.54 (Forbidden Explosives) or a Division 1.1, 1.2, or 1.3 explosive, as defined in 49 CFR 173.50 (Class 1—Definitions), each incorporated by reference in 35 Ill. Adm. Code 720.111(b).

BOARD NOTE: Corresponding 40 CFR 261.23 cites to 49 CFR 173.53 (Provisions for Using Old Classifications of Explosives). That citation aids bridging obsolete USDOT rules to the current version. The Board has not included citation to 49 CFR 173.53 because it imposes no substantive requirements.

b) A solid waste that exhibits the characteristic of reactivity has the USEPA hazardous waste number of D003.

(Source: Amended at 35 Ill. Reg. 17734, effective October 14, 2011)

Section 721.124 Toxicity Characteristic

a) A solid waste (except manufactured gas plant waste) exhibits the characteristic of toxicity if, using Method 1311 (Toxicity Characteristic Leaching Procedure (TCLP)) in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", USEPA publication number EPA-530/SW-846, as incorporated by reference in 35 Ill. Adm. Code 720.111(a), the extract from a representative sample of the waste contains any of the contaminants listed in the table in subsection (b) at a concentration equal to or greater than the respective value given in that table. If the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering using the methodology outlined in Method 1311, is the extract for this Section.

BOARD NOTE: The reference to the "EP toxicity test" in 35 Ill. Adm. Code 808.410(b)(4) is to be understood as referencing the test required by this Section.

b) A solid waste that exhibits the characteristic of toxicity has the USEPA hazardous waste number specified in the following table that corresponds to the toxic contaminant causing it to be hazardous.

MAXIMUM CONCENTRATION OF CONTAMINANTS FOR THE TOXICITY CHARACTERISTIC

USEPA Hazardous Waste No.	Contaminant	CAS Number	Note	Regulatory Level (mg/ℓ)
D004	Arsenic	7440-38-2		5.0
D005	Barium	7440-39-3		100.0
D018	Benzene	71-43-2		0.5
D006	Cadmium	7440-43-9		1.0
D019	Carbon tetrachloride	56-23-5		0.5
D020	Chlordane	57-74-9		0.03
D021	Chlorobenzene	108-90-7		100.0
D022	Chloroform	67-66-3		6.0
D007	Chromium	7440-47-3		5.0
D023	o-Cresol	95-48-7	2	200.0
D024	m-Cresol	108-39-4	2	200.0
D025	p-Cresol	106-44-5	2	200.0
D026	Cresol		2	200.0
D016	2,4-D	94-75-7		10.0
D027	1,4-Dichlorobenzene	106-46-7		7.5
D028	1,2-Dichloroethane	107-06-2		0.5
D029	1,1-Dichloroethylene	75-35-4		0.7
D030	2,4-Dinitrotoluene	121-14-2	1	0.13
D012	Endrin	72-20-8		0.02
D031	Heptachlor (and its epoxide)	76-44-8		0.008

D032	Hexachlorobenzene	118-74-1	1	0.13
D033	Hexachlorobutadiene	87-68-3		0.5
D034	Hexachloroethane	67-72-1		3.0
D008	Lead	7439-92-1		5.0
D013	Lindane	58-89-9		0.4
D009	Mercury	7439-97-6		0.2
D014	Methoxychlor	72-43-5		10.0
D035	Methyl ethyl ketone	78-93-3		200.0
D036	Nitrobenzene	98-95-3		2.0
D037	Pentachlorophenol	87-86-5		100.0
D038	Pyridine	110-86-1	1	5.0
D010	Selenium	7782-49-2		1.0
D011	Silver	7440-22-4		5.0
D039	Tetrachloroethylene	127-18-4		0.7
D015	Toxaphene	8001-35-2		0.5
D040	Trichloroethylene	79-01-6		0.5
D041	2,4,5-Trichlorophenol	95-95-4		400.0
D042	2,4,6-Trichlorophenol	88-06-2		2.0
D017	2,4,5-TP (Silvex)	93-72-1		1.0
D043	Vinyl chloride	75-01-4		0.2

Notes to Table:

1 Quantitation limit is greater than the calculated regulatory level. The quantitation limit therefore becomes the regulatory level.

2 If o-, m-, p-cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used. The regulatory level of total cresol is 200.0 mg/ℓ.

(Source: Amended at 48 Ill. Reg. 9827, effective June 20, 2024)

SUBPART D: LISTS OF HAZARDOUS WASTE

Section 721.130 General

a) A solid waste is a hazardous waste if it is listed in this Subpart D unless it has been excluded from this list under 35 Ill. Adm. Code 720.120 and 720.122.

b) The basis for listing the classes or types of wastes listed in this Subpart D is indicated by employing one or more of the following hazard codes:

1) Hazard Codes.

A) Ignitable waste (I)

B) Corrosive waste (C)

C) Reactive waste (R)

D) Toxicity Characteristic waste (E)

E) Acute hazardous waste (H)

F) Toxic waste (T)

2) Appendix G identifies the constituent that caused USEPA to list the waste as a toxicity characteristic waste (E) or toxic waste (T) in Sections 721.131 and 721.132.

c) Each hazardous waste listed in this Subpart D is assigned a USEPA hazardous waste number that precedes the name of the waste. This number must be used in complying with the federal notification requirements of section 3010 of RCRA (42 USC 6930) and certain recordkeeping and reporting requirements under 35 Ill. Adm. Code 702, 703, and 722 through 725, 727, and 728.

d) The following hazardous wastes listed in Section 721.131 or 721.132 are subject to the generator category limits for acute hazardous wastes established in 35 Ill. Adm. Code 722.113(g): hazardous wastes numbers F020, F021, F022, F023, F026, and F027.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.131 Hazardous Wastes from Nonspecific Sources

a) The following solid wastes are listed hazardous wastes from non-specific sources, unless they are excluded under 35 Ill. Adm. Code 720.120 and 720.122 and listed in Appendix I.

USEPA Hazardous Waste No.	Industry and Hazardous Waste	Hazard Code
F001	The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetra-chloride, and chlorinated fluorocarbons; all spent solvent mixtures and blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)

F002	The following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, orthodichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures and blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F003	The following spent non-halogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures and blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures and blends containing, before use, one or more of the above non-halogenated solvents and a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I)
F004	The following spent non-halogenated solvents: cresols and cresylic acid and nitrobenzene; all spent solvent mixtures and blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F005	The following spent non-halogenated solvents: toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures and blends, containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I, T)

F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc, and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	(T)
F007	Spent cyanide plating bath solutions from electroplating operations.	(R, T)
F008	Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.	(R, T)
F009	Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.	(R, T)
F010	Quenching bath residues from oil baths from metal heat-treating operations where cyanides are used in the process.	(R, T)
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat-treating operations.	(R, T)
F012	Quenching wastewater treatment sludges from metal heat-treating operations where cyanides are used in the process.	(T)
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive conversion coating process. Wastewater treatment sludge from the manufacturing of motor vehicles using a zinc phosphating process will not be subject to this listing at the point of generation if the waste is not placed outside on the land prior to shipment to a landfill for disposal and it is disposed of in a regulated landfill that fulfills either of the following conditions: It is located in Illinois, and it is one of the following types of landfills:	(T)

It is a landfill that is a hazardous waste management unit, as defined in 35 Ill. Adm. Code 720.110;

It is a municipal solid waste landfill, as defined in 35 Ill. Adm. Code 810.103; or

It is a putrescible or chemical waste landfill that is subject to the requirements of Subpart C of 35 Ill. Adm. Code 811.

It is located outside Illinois, and it is one of the following types of landfills:

It is a RCRA Subtitle D municipal solid waste or industrial solid waste landfill unit that is equipped with a single clay liner and which is permitted, licensed or otherwise authorized by the state; or

It is a landfill unit that is subject to or which otherwise meets the landfill requirements in 40 CFR 258.40, 264.301 or 265.301.

For the purposes of this hazardous waste listing, "motor vehicle manufacturing" is defined in subsection (b)(4)(A), and subsection (b)(4)(B) describes the recordkeeping requirements for motor vehicle manufacturing facilities.

F020	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of tri- or tetra-chlorophenol or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.)	(H)
F021	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of pentachloro-phenol or of intermediates used to produce its derivatives.	(H)

F022	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of tetra-, penta-, or hexa-chlorobenzenes under alkaline conditions.	(H)
F023	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexachlorophene from highly purified 2,4,5-trichlorophenol.)	(H)
F024	Process wastes, including but not limited to, distillation residues, heavy ends, tars, and reactor cleanout wastes, from the production of certain chlorinated aliphatic hydrocarbons by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution. (This listing does not include wastewaters, wastewater treatment sludges, spent catalysts, and wastes listed in this Section or in Section 721.132.)	(T)
F025	Condensed light ends, spent filters and filter aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution.	(T)
F026	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions.	(H)

F027	Discarded unused formulations containing tri-, tetra- or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component.)	(H)
F028	Residues resulting from the incineration or thermal treatment of soil contaminated with hazardous waste numbers F020, F021, F022, F023, F026, and F027.	(T)
F032	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 hazardous waste number deleted in accordance with Section 721.135 and where the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol.	(T)
F034	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol.	(T)
F035	Wastewaters, (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol.	(T)

F037	Petroleum refinery primary oil/water/solids separation sludge—any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refineries. Such sludges include, but are not limited to, those generated in: oil/water/solids separators; tanks and impoundments; ditches and other conveyances; sumps; and stormwater units receiving dry weather flow. Sludge generated in stormwater units that do not receive dry weather flow, sludge generated from non-contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludge generated in aggressive biological treatment units as defined in subsection (b)(2) (including sludge generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units), and K051 wastes are not included in this listing. This listing does include residuals generated from processing or recycling oil-bearing hazardous secondary materials excluded under Section 721.104(a)(12)(A) if those residuals are to be disposed of.	(T)
F038	Petroleum refinery secondary (emulsified) oil/water/solids separation sludge—any sludge or float generated from the physical or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in the following types of units: induced air floatation (IAF) units, tanks and impoundments, and all sludges generated in dissolved air flotation (DAF) units. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated from non-contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges and floats generated in aggressive biological treatment units as defined in subsection (b)(2) (including sludges and floats generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units), F037, K048, and K051 wastes are not included in this listing.	(T)

F039	Multi-source leachate resulting from the disposal of more than one restricted waste classified as hazardous under this Subpart D. For purposes of this hazardous waste listing, "leachate" means liquids that have percolated through land-disposed wastes. (This multi-source leachate listing does not apply to leachate resulting from the disposal of more than one of the following USEPA hazardous wastes where the disposal of no other hazardous waste is involved: F020, F021, F022, F026, F027, and F028. Leachate from disposal of any combination of these hazardous wastes is considered single-source leachate, and that leachate retains the USEPA hazardous waste numbers of the wastes from which the leachate derived, and the leachate must meet the treatment standards for the underlying hazardous waste numbers.) BOARD NOTE: Derived from the listing for F039 at 40 CFR 261.31(a) (2017) and the discussion at 55 Fed. Reg. 22520, 22619-22623 (June 1, 1990).	(T)

BOARD NOTE: The primary hazardous properties of these materials have been indicated by the letters T (Toxicity), R (Reactivity), I (Ignitability), and C (Corrosivity). The letter H indicates Acute Hazardous Waste. "(I, T)" should be used to specify mixtures that are ignitable and contain toxic constituents.

b) Listing-Specific Definitions

1) For the purpose of the F037 and F038 listings, "oil/water/solids" is defined as oil or water or solids.

2) For the purposes of the F037 and F038 listings, the following apply:

A) "Aggressive biological treatment units" are defined as units that employ one of the following four treatment methods: activated sludge, trickling filter, rotating biological contactor for the continuous accelerated biological oxidation of wastewaters, or high-rate aeration. "High-rate aeration" is a system of surface impoundments or tanks in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity, and the following is true:

i) The units employ a minimum of six horsepower per million gallons of treatment volume; and either

ii) The hydraulic retention time of the unit is no longer than five days; or

iii) The hydraulic retention time is no longer than 30 days and the unit does not generate a sludge that is a hazardous waste by the toxicity characteristic.

B) Generators and treatment, storage, or disposal (TSD) facilities have the burden of proving that their sludges are exempt from listing as F037 or F038 wastes under this definition. Generators and TSD facilities must maintain, in their operating or other on site records, documents and data sufficient to prove the following:

i) The unit is an aggressive biological treatment unit, as defined in this subsection; and

ii) The sludges sought to be exempted from F037 or F038 were actually generated in the aggressive biological treatment unit.

3) Time of Generation. For the purposes of the designated waste, the "time of generation" is defined as follows:

A) For the F037 listing, sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement.

B) For the F038 listing:

i) Sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement; and

ii) Floats are considered to be generated at the moment they are formed in the top of the unit.

4) For the purposes of the F019 hazardous waste listing, the following apply to wastewater treatment sludges from the manufacturing of motor vehicles using a zinc phosphating process:

A) "Motor vehicle manufacturing" is defined to include the manufacture of automobiles and light trucks or utility vehicles (including light duty vans, pick-up trucks, minivans, and sport utility vehicles). A facility owner or operator must be engaged in

manufacturing complete vehicles (body and chassis or unibody) or chassis only; and

B) The generator must maintain documentation and information in its on-site records that is sufficient to prove that the wastewater treatment sludge to be exempted from the F019 listing meets the conditions of the listing. These records must include the following information: the volumes of waste generated and disposed of off site; documentation showing when the waste volumes were generated and sent off site; the name and address of the receiving facility; and documentation confirming receipt of the waste by the receiving facility. The generator must maintain these documents on site for no less than three years. The retention period for the documentation is automatically extended during the pendency of any enforcement action or as requested by USEPA or by the Agency in writing.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.132 Hazardous Waste from Specific Sources

a) The following solid wastes are listed hazardous wastes from specific sources unless they are excluded under 35 Ill. Adm. Code 720.120 and 720.122 and listed in Appendix I.

USEPA Hazardous Waste No.	Industry and Hazardous Waste	Hazard Code
	Wood Preservation Process Wastes:	
K001	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote or pentachlorophenol.	(T)
	Inorganic Pigments Production Wastes:	
K002	Wastewater treatment sludge from the production of chrome yellow and orange pigments.	(T)
K003	Wastewater treatment sludge from the production of molybdate orange pigments.	(T)
K004	Wastewater treatment sludge from the production of zinc yellow pigments.	(T)

K005	Wastewater treatment sludge from the production of chrome green pigments.	(T)
K006	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).	(T)
K007	Wastewater treatment sludge from the production of iron blue pigments.	(T)
K008	Oven residue from the production of chrome oxide green pigments.	(T)

Organic Chemicals Production Wastes:

K009	Distillation bottoms from the production of acetaldehyde from ethylene.	(T)
K010	Distillation side cuts from the production of acetaldehyde from ethylene.	(T)
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile.	(R, T)
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile.	(R, T)
K014	Bottoms from the acetonitrile purification column in the production of acrylonitrile.	(T)
K015	Still bottoms from the distillation of benzyl chloride.	(T)
K016	Heavy ends or distillation residues from the production of carbon tetrachloride.	(T)
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.	(T)
K018	Heavy ends from the fractionation column in ethyl chloride production.	(T)
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.	(T)
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.	(T)
K021	Aqueous spent antimony catalyst waste from fluoromethanes production.	(T)

K022	Distillation bottom tars from the production of phenol/acetone from cumene.	(T)
K023	Distillation light ends from the production of phthalic anhydride from naphthalene.	(T)
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene.	(T)
K093	Distillation light ends from the production of phthalic anhydride from ortho-xylene.	(T)
K094	Distillation bottoms from the production of phthalic anhydride from ortho-xylene.	(T)
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene.	(T)
K026	Stripping still tails from the production of methyl ethyl pyridines.	(T)
K027	Centrifuge and distillation residues from toluene diisocyanate production.	(R, T)
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.	(T)
K029	Waste from the product stream stripper in the production of 1,1,1-trichloroethane.	(T)
K095	Distillation bottoms from the production of 1,1,1-trichloroethane.	(T)
K096	Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.	(T)
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.	(T)
K083	Distillation bottoms from aniline production.	(T)
K103	Process residues from aniline extraction from the production of aniline.	(T)
K104	Combined wastewater streams generated from nitrobenzene/aniline production.	(T)

K085	Distillation or fractionation column bottoms from the production of chlorobenzenes.	(T)
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.	(T)
K107	Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(C, T)
K108	Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(I, T)
K109	Spent filter cartridges from the product purification from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K110	Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K111	Product washwaters from the production of dinitrotoluene via nitration of toluene.	(C, T)
K112	Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K113	Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K114	Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K115	Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K116	Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.	(T)

K117	Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.	(T)
K118	Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(T)
K136	Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(T)
K156	Organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)
K157	Wastewaters (including scrubber waters, condenser waters, washwaters, and separation waters) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)
K158	Baghouse dusts and filter/separation solids from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)
K159	Organics from the treatment of thiocarbamate wastes.	(T)
K161	Purification solids (including filtration, evaporation, and centrifugation solids), bag house dust, and floor sweepings from the production of dithiocarbamate acids and their salts. (This listing does not include K125 or K126.)	(R, T)
K174	Wastewater treatment sludges from the production of ethylene dichloride or vinyl chloride monomer (including sludges that result from commingled ethylene dichloride or vinyl chloride monomer wastewater and other wastewater), unless the sludges meet the following conditions: 1) The sludges are disposed of in a RCRA Subtitle C (42 USC 6921-6939e) or non-hazardous landfill licensed or permitted by a state or the federal government;	(T)

2) The sludges are not otherwise placed on the land prior to final disposal; and

3) The generator maintains documentation demonstrating that the waste was either disposed of in an on-site landfill or consigned to a transporter or disposal facility that provided a written commitment to dispose of the waste in an off-site landfill. Upon a showing by the government that a respondent in any enforcement action brought to enforce the requirements of RCRA Subtitle C managed wastewater treatment sludges from the production of vinyl chloride monomer or ethylene dichloride, the respondent must demonstrate that it meets the conditions of the exclusion that are set forth above. In doing so, the respondent must provide appropriate documentation that the terms of the exclusion were met (e.g., contracts between the generator and the landfill owner or operator, invoices documenting delivery of waste to landfill, etc.).

K175	Wastewater treatment sludges from the production of vinyl chloride monomer using mercuric chloride catalyst in an acetylene-based process.	(T)

Inorganic Chemicals Production Wastes:

K071	Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.	(T)
K073	Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.	(T)
K106	Wastewater treatment sludge from the mercury cell process in chlorine production.	(T)
K176	Baghouse filters from the production of antimony oxide, including filters from the production of intermediates (e.g., antimony metal or crude antimony oxide).	(E)
K177	Slag from the production of antimony oxide that is speculatively accumulated or disposed of, including slag from the production of intermediates (e.g., antimony metal or crude antimony oxide).	(T)

K178	Residues from manufacturing and manufacturing-site storage of ferric chloride from acids formed during the production of titanium dioxide using the chloride-ilmenite process.	(T)
K181	Nonwastewaters from the production of dyes or pigments (including nonwastewaters commingled at the point of generation with nonwastewaters from other processes) that, at the point of generation, contain mass loadings of any of the constituents identified in subsection (c) that are equal to or greater than the corresponding subsection (c) levels, as determined on a calendar year basis. These wastes will not be hazardous if the nonwastewaters are managed in one of the following ways: 1) They are disposed of in a municipal solid waste landfill unit that is subject to the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402; 2) They are disposed of in a hazardous waste landfill unit that is subject to either 35 Ill. Adm. Code 724.401 or 725.401; 3) They are disposed of in other municipal solid waste landfill units that meet the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402, 35 Ill. Adm. Code 724.401, or 35 Ill. Adm. Code 725.401; or 4) They are treated in a combustion unit that is permitted under 415 ILCS 5/39(d), or an onsite combustion unit that is permitted under 415 ILCS 5/39.5. For the purposes of this listing, dyes or pigments production is defined in subsection (b)(1). Subsection (d) describes the process for demonstrating that a facility's nonwastewaters are not K181 waste. This listing does not apply to wastes that are otherwise identified as hazardous under Sections 721.121 through 721.124 and 721.131 through 721.133 at the point of generation. Also, the	(T)

	listing does not apply to wastes generated before any annual mass loading limit is met, as set forth in subsection (c).	
	Pesticides Production Wastes:	
K031	By-product salts generated in the production of MSMA and cacodylic acid.	(T)
K032	Wastewater treatment sludge from the production of chlordane.	(T)
K033	Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.	(T)
K034	Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.	(T)
K097	Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.	(T)
K035	Wastewater treatment sludges generated in the production of creosote.	(T)
K036	Still bottoms from toluene reclamation distillation in the production of disulfoton.	(T)
K037	Wastewater treatment sludges from the production of disulfoton.	(T)
K038	Wastewater from the washing and stripping of phorate production.	(T)
K039	Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.	(T)
K040	Wastewater treatment sludge from the production of phorate.	(T)
K041	Wastewater treatment sludge from the production of toxaphene.	(T)
K098	Untreated process wastewater from the production of toxaphene.	(T)
K042	Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T.	(T)
K043	2,6-Dichlorophenol waste from the production of 2,4-D.	(T)

K099	Untreated wastewater from the production of 2,4-D.	(T)
K123	Process wastewater (including supernates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salts.	(T)
K124	Reactor vent scrubber water from the production of ethylenebisdithiocarbamic acid and its salts.	(C, T)
K125	Filtration, evaporation, and centrifugation solids from the production of ethylenebisdithiocarbamic acid and its salts.	(T)
K126	Baghouse dust and floor sweepings in milling and packaging operations from the production or formulation of ethylenebisdithiocarbamic acid and its salts.	(T)
K131	Wastewater from the reactor and spent sulfuric acid from the acid dryer from the production of methyl bromide.	(C, T)
K132	Spent absorbent and wastewater separator solids from the production of methyl bromide.	(T)
	Explosives Production Wastes:	
K044	Wastewater treatment sludges from the manufacturing and processing of explosives.	(R)
K045	Spent carbon from the treatment of wastewater containing explosives.	(R)
K046	Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds.	(T)
K047	Pink/red water from TNT operations.	(R)
	Petroleum Refining Wastes:	
K048	Dissolved air flotation (DAF) float from the petroleum refining industry.	(T)
K049	Slop oil emulsion solids from the petroleum refining industry.	(T)
K050	Heat exchanger bundle cleaning sludge from the petroleum refining industry.	(T)

K051	API separator sludge from the petroleum refining industry.	(T)
K052	Tank bottoms (leaded) from the petroleum refining industry.	(T)
K169	Crude oil storage tank sediment from petroleum refining operations.	(T)
K170	Clarified slurry oil tank sediment or in-line filter/separation solids from petroleum refining operations.	(T)
K171	Spent hydrotreating catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (this listing does not include inert support media).	(I, T)
K172	Spent hydrorefining catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (this listing does not include inert support media).	(I, T)
	Iron and Steel Production Wastes:	
K061	Emission control dust/sludge from the primary production of steel in electric furnaces.	(T)
K062	Spent pickle liquor generated by steel finishing operations of facilities within the iron and steel industry (SIC Codes 331 and 332) (as defined in 35 Ill. Adm. Code 720.110).	(C, T)
	Primary Aluminum Production Wastes:	
K088	Spent potliners from primary aluminum reduction.	(T)
	Secondary Lead Production Wastes:	
K069	Emission control dust/sludge from secondary lead smelting.	(T)

BOARD NOTE: This listing is administratively stayed for sludge generated from secondary acid scrubber systems. The stay will remain in effect until this note is removed.

K100	Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.	(T)
	Veterinary Pharmaceuticals Production Wastes:	
K084	Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
K101	Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
K102	Residue from use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
	Ink Formulation Wastes:	
K086	Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, dryers, soaps and stabilizers containing chromium and lead.	(T)
	Coke Production Wastes:	
K060	Ammonia still lime sludge from coking operations.	(T)
K087	Decanter tank tar sludge from coking operations.	(T)
K141	Process residues from the recovery of coal tar, including, but not limited to, collecting sump residues from the production of coke from coal or the recovery of coke by-products produced from coal. This listing does not include K087 (decanter tank tar sludges from coking operations).	(T)
K142	Tar storage tank residues from the production of coke from coal or from the recovery of coke by-products produced from coal.	(T)
K143	Process residues from the recovery of light oil, including, but not limited to, those generated in stills, decanters, and wash oil recovery units from the recovery of coke by-products produced from coal.	(T)

K144	Wastewater sump residues from light oil refining, including, but not limited to, intercepting or contamination sump sludges from the recovery of coke by-products produced from coal.	(T)
K145	Residues from naphthalene collection and recovery operations from the recovery of coke by-products produced from coal.	(T)
K147	Tar storage tank residues from coal tar refining.	(T)
K148	Residues from coal tar distillation, including, but not limited to, still bottoms.	(T)
K149	Distillation bottoms from the production of α- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. (This waste does not include still bottoms from the distillation of benzyl chloride.)	(T)
K150	Organic residuals, excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of α- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.	(T)
K151	Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of α- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.	(T)

b) Listing-Specific Definition. For the purposes of the K181 hazardous waste listing in subsection (a), "dyes or pigments production" includes manufacture of the following product classes: dyes, pigments, and FDA-certified colors that are in the azo, triarylmethane, perylene, and anthraquinone classes. Azo products include azo, monoazo, diazo, triazo, polyazo, azoic, benzidine, and pyrazolone products. Triarylmethane products include both triarylmethane and triphenylmethane products. Wastes that are not generated at a dyes or pigments manufacturing site, such as wastes from the offsite use, formulation, and packaging of dyes or pigments, are not included in the K181 listing.

c) K181 Listing Levels. Nonwastewaters containing constituents in amounts equal to or exceeding the following levels during any calendar year are subject to the

K181 hazardous waste listing in subsection (a), unless the conditions in the K181 hazardous waste listing are met:

Constituent	Chemical Abstracts No.	Mass Levels (kg/yr)
Aniline	62-53-3	9,300
o-Anisidine	90-04-0	110
4-Chloroaniline	106-47-8	4,800
p-Cresidine	120-71-8	660
2,4-Dimethylaniline	95-68-1	100
1,2-Phenylenediamine	95-54-5	710
1,3-Phenylenediamine	108-45-2	1,200

d) Procedures for Demonstrating That Dyes or Pigments Nonwastewaters Are Not K181 Waste. The procedures described in subsections (d)(1) through (d)(3) and (d)(5) establish when nonwastewaters from the production of dyes or pigments would not be hazardous. (These procedures apply to wastes that are not disposed of in landfill units or treated in combustion units, as specified in subsection (a)). If the nonwastewaters are disposed of in landfill units or treated in combustion units as described in subsection (a), then the nonwastewaters are not hazardous. In order to demonstrate that it is meeting the landfill disposal or combustion conditions contained in the K181 waste listing description, the generator must maintain documentation as described in subsection (d)(4).

1) Determination Based on No K181 Waste Constituents. A generator that has knowledge (e.g., knowledge of constituents in wastes based on prior sampling and analysis data or information about raw materials used, production processes used, and reaction and degradation products formed) that its waste contains none of the K181 waste constituents (see subsection (c)) can use its knowledge to determine that its waste is not K181 waste. The generator must document the basis for all such determinations on an annual basis and keep each annual documentation for three years.

2) Determination for Generated Quantities of 1,000 Tonnes (1,000 Metric Tons) Per Year or Less for Wastes That Contain K181 Waste Constituents. If the total annual quantity of dyes or pigments nonwastewaters generated is 1,000 tonnes or less, the generator can use knowledge of the wastes (e.g., knowledge of constituents in wastes based on prior analytical data or information about raw materials used, production processes used, and reaction and degradation products formed) to conclude that annual mass loadings for the K181 constituents are below the listing levels of subsection (c). To make this determination, the generator must fulfill the following conditions:

A) Each year, the generator must document the basis for determining that the annual quantity of nonwastewaters expected to be generated will be less than 1,000 tonnes;

B) The generator must track the actual quantity of nonwastewaters generated from January 1 through December 31 of each calendar year. If, at any time within the year, the actual waste quantity exceeds 1,000 tonnes, the generator must comply with the requirements of subsection (d)(3) for the remainder of that calendar year;

C) The generator must keep a running total of the K181 waste constituent mass loadings over the course of the calendar year; and

D) The generator must keep the following records on site for the three most recent calendar years in which the hazardous waste determinations were made:

i) The quantity of dyes or pigments nonwastewaters generated;

ii) The relevant process information used; and

iii) The calculations performed to determine annual total mass loadings for each K181 waste constituent in the nonwastewaters during the year.

3) Determination for generated quantities greater than 1,000 tonnes per year for wastes that contain K181 constituents. If the total annual quantity of dyes or pigments nonwastewaters generated is greater than 1,000 tonnes, the generator must perform each of the following steps in order to make a determination that its waste is not K181 waste:

A) The generator must determine which K181 waste constituents (see subsection (c)) are reasonably expected to be present in the wastes based on knowledge of the wastes (e.g., based on prior sampling and analysis data or information about raw materials used, production processes used, and reaction and degradation products formed);

B) If 1,2-phenylenediamine is present in the wastes, the generator can use either knowledge of the wastes or sampling and analysis procedures to determine the level of this constituent in the wastes. For determinations based on use of knowledge of the wastes, the generator must comply with the procedures for using knowledge of

the wastes described in subsection (d)(2) and keep the records described in subsection (d)(2)(D). For determinations based on sampling and analysis, the generator must comply with the sampling and analysis and recordkeeping requirements described in subsection (d)(3)(C);

C) The generator must develop a waste sampling and analysis plan (or modify an existing plan) to collect and analyze representative waste samples for the K181 waste constituents reasonably expected to be present in the wastes. At a minimum, the plan must include the following elements:

i) A discussion of the number of samples needed to characterize the wastes fully;

ii) The planned sample collection method to obtain representative waste samples;

iii) A discussion of how the sampling plan accounts for potential temporal and spatial variability of the wastes; and

iv) A detailed description of the test methods to be used, including sample preparation, clean up (if necessary), and determinative methods;

D) The generator must collect and analyze samples in accordance with the waste sampling and analysis plan, and the plan must fulfill the following requirements:

i) The sampling and analysis must be unbiased, precise, and representative of the wastes; and

ii) The analytical measurements must be sufficiently sensitive, accurate, and precise to support any claim that the constituent mass loadings are below the listing levels of subsection (c);

E) The generator must record the analytical results;

F) The generator must record the waste quantity represented by the sampling and analysis results;

G) The genrator must calculate constituent-specific mass loadings (product of concentrations and waste quantity);

H) The generator must keep a running total of the K181 waste constituent mass loadings over the course of the calendar year;

I) The generator must determine whether the mass of any of the K181 waste constituents listed in subsection (c) generated between January 1 and December 31 of any calendar year is below the K181 waste listing levels;

J) The generator must keep the following records on site for the three most recent calendar years in which the hazardous waste determinations are made:

i) The sampling and analysis plan;

ii) The sampling and analysis results (including quality assurance or quality control data);

iii) The quantity of dyes or pigments nonwastewaters generated; and

iv) The calculations performed to determine annual mass loadings; and

K) The generator must conduct non-hazardous waste determinations annually to verify that the wastes remain non-hazardous.

i) The annual testing requirements are suspended after three consecutive successful annual demonstrations that the wastes are non-hazardous. The generator can then use knowledge of the wastes to support subsequent annual determinations.

ii) The annual testing requirements are reinstated if the manufacturing or waste treatment processes generating the wastes are significantly altered, resulting in an increase of the potential for the wastes to exceed the listing levels.

iii) If the annual testing requirements are suspended, the generator must keep records of the process knowledge information used to support a non-hazardous determination. If testing is reinstated, the generator must retain a description of the process change.

4) Recordkeeping for the Landfill Disposal and Combustion Exemptions. For the purposes of meeting the landfill disposal and combustion condition set out in the K181 waste listing description in subsection (a), the

generator must maintain on site for three years documentation demonstrating that each shipment of waste was received by a landfill unit that is subject to or which meets the landfill design standards set out in the listing description or that the waste was treated in combustion units, as specified in the listing description in subsection (a).

5) Waste Holding and Handling. During the interim period, from the point of generation to completion of the hazardous waste determination, the generator must store the wastes appropriately. If the wastes are determined to be hazardous and the generator has not complied with the hazardous waste storage requirements of 35 Ill. Adm. Code 722.116 during the interim period, the generator could be subject to an enforcement action for improper hazardous waste management.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.133 Discarded Commercial Chemical Products, Off-Specification Species, Container Residues, and Spill Residues Thereof

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded, as described in Section 721.102(a)(2)(A); when they are mixed with waste oil or used oil or other material and applied to the land for dust suppression or road treatment; when they are otherwise applied to the land in lieu of their original intended use or when they are contained in products that are applied to land in lieu of their original intended use; or when, in lieu of their original intended use, they are produced for use as (or as a component of) a fuel, distributed for use as a fuel, or burned as a fuel.

a) Any commercial chemical product or manufacturing chemical intermediate having the generic name listed in subsection (e) or (f).

b) Any off-specification commercial chemical product or manufacturing chemical intermediate that, if it met specifications, would have the generic name listed in subsection (e) or (f).

c) Any residue remaining in a container or inner liner removed from a container that has held any commercial chemical product or manufacturing chemical intermediate having the generic name listed in subsection (e) or (f), unless the container is empty, as defined in Section 721.107(b)(3) or 35 Ill. Adm. Code 726.607.

BOARD NOTE: Unless the residue is being beneficially used or reused; legitimately recycled or reclaimed; or accumulated, stored, transported, or treated prior to such use, reuse, recycling, or reclamation, the Board considers the residue to be intended for discard, and thus a hazardous waste. An example of a legitimate reuse of the residue would be if the residue remains in the container and the container is used to hold the same commercial chemical product or

manufacturing chemical intermediate it previously held. An example of the discard of the residue would be if the drum is sent to a drum reconditioner that reconditions the drum but discards the residue.

d) Any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into or on any land or water of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in subsection (e) or (f) or any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into or on any land or water of any off-specification chemical product or manufacturing chemical intermediate that, if it met specifications, would have the generic name listed in subsection (e) or (f).

BOARD NOTE: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name" refers to a chemical substance that is manufactured or formulated for commercial or manufacturing use that consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulations in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in subsection (e) or (f). If a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in subsection (e) or (f), such waste will be listed in either Sections 721.131 or 721.132 or will be identified as a hazardous waste by the characteristics set forth in Subpart C.

e) The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products or manufacturing chemical intermediates referred to in subsections (a) through (d) are identified as acute hazardous waste (H). These wastes and their corresponding USEPA hazardous waste numbers are the following:

BOARD NOTE: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), and R (Reactivity). The absence of a letter indicates that the compound is only listed for acute toxicity. Wastes are first listed in alphabetical order by substance and then listed again in numerical order by USEPA hazardous waste number.

Alphabetical Listing

USEPA Hazardous Waste No.	Chemical Abstracts No. (CAS No.)	Substance	Hazard Code
P023	107-20-0	Acetaldehyde, chloro-	
P002	591-08-2	Acetamide, N-(aminothioxomethyl)	
P057	640-19-7	Acetamide, 2-fluoro-	
P058	62-74-8	Acetic acid, fluoro-, sodium salt	

P002	591-08-2	1-Acetyl-2-thiourea	
P003	107-02-8	Acrolein	
P070	116-06-3	Aldicarb	
P203	1646-88-4	Aldicarb sulfone	
P004	309-00-2	Aldrin	
P005	107-18-6	Allyl alcohol	
P006	20859-73-8	Aluminum phosphide	(R, T)
P007	2763-96-4	5-(Aminomethyl)-3-isoxazolol	
P008	504-24-5	4-Aminopyridine	
P009	131-74-8	Ammonium picrate	(R)
P119	7803-55-6	Ammonium vanadate	
P099	506-61-6	Argentate(1-), bis(cyano-C)-, potassium	
P010	7778-39-4	Arsenic acid H_3AsO_4	
P012	1327-53-3	Arsenic oxide As_2O_3	
P011	1303-28-2	Arsenic oxide As_2O_5	
P011	1303-28-2	Arsenic pentoxide	
P012	1327-53-3	Arsenic trioxide	
P038	692-42-2	Arsine, diethyl-	
P036	696-28-6	Arsonous dichloride, phenyl-	
P054	151-56-4	Aziridine	
P067	75-55-8	Aziridine, 2-methyl	
P013	542-62-1	Barium cyanide	
P024	106-47-8	Benzenamine, 4-chloro-	
P077	100-01-6	Benzenamine, 4-nitro-	
P028	100-44-7	Benzene, (chloromethyl)-	
P042	51-43-4	1,2-Benzenediol, 4-(1-hydroxy-2-(methylamino)ethyl)-, (R)-	
P046	122-09-8	Benzeneethanamine, α,α-dimethyl-	
P014	108-98-5	Benzenethiol	
P127	1563-66-2	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-, methylcarbamate	
P188	57-64-7	Benzoic acid, 2-hydroxy-, compound with (3aS-cis)-1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethylpyrrolo(2,3-b)indol-5-yl methylcarbamate ester (1:1)	
P001	81-81-2*	2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, and salts, when present at concentrations greater than 0.3 percent	
P028	100-44-7	Benzyl chloride	
P015	7440-41-7	Beryllium powder	
P017	598-31-2	Bromoacetone	
P018	357-57-3	Brucine	
P045	39196-18-6	2-Butanone, 3,3-dimethyl-1-(methylthio)-, O-((methylamino)carbonyl) oxime	

P021	592-01-8	Calcium cyanide
P021	592-01-8	Calcium cyanide $Ca(CN)_2$
P189	55285-14-8	Carbamic acid, ((dibutylamino)-thio)-methyl-, 2,3-dihydro-2,2-dimethyl-7-benzofuranyl ester
P191	644-64-4	Carbamic acid, dimethyl-, 1-((dimethyl-amino)carbonyl)-5-methyl-1H-pyrazol-3-yl ester
P192	119-38-0	Carbamic acid, dimethyl-, 3-methyl-1-(1-methylethyl)-1H-pyrazol-5-yl ester
P190	1129-41-5	Carbamic acid, methyl-, 3-methyl-phenyl ester
P127	1563-66-2	Carbofuran
P022	75-15-0	Carbon disulfide
P095	75-44-5	Carbonic dichloride
P189	55285-14-8	Carbosulfan
P023	107-20-0	Chloroacetaldehyde
P024	106-47-8	p-Chloroaniline
P026	5344-82-1	1-(o-Chlorophenyl)thiourea
P027	542-76-7	3-Chloropropionitrile
P029	544-92-3	Copper cyanide
P029	544-92-3	Copper cyanide CuCN

BOARD NOTE: An asterisk (*) following the CAS number indicates that the CAS number is given for the parent compound only.

f) The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products referred to in subsections (a) through (d), are identified as toxic wastes (T) unless otherwise designated. These wastes and their corresponding USEPA hazardous waste numbers are the following:

BOARD NOTE: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), R (Reactivity), I (Ignitability), and C (Corrosivity). The absence of a letter indicates that the compound is only listed for toxicity. Wastes are first listed in alphabetical order by substance and then listed again in numerical order by USEPA hazardous waste number.

(Source: Amended at 44 Ill. Reg. 15142, effective September 3, 2020)

Section 721.135 Wood Preserving Wastes

a) Wastes from wood preserving processes at plants that do not resume or initiate use of chlorophenolic preservatives will not meet the listing definition of F032 once the generator has met all of the requirements of subsections (b) and (c). These wastes may, however, continue to meet another hazardous waste listing description or may exhibit one or more of the hazardous waste characteristics.

b) Generators must either clean or replace all process equipment that may have come into contact with chlorophenolic formulations or constituents thereof, including, but not limited to, treatment cylinders, sumps, tanks, piping systems, drip pads, fork lifts and trams, in a manner that minimizes or eliminates the escape of hazardous waste or constituents, leachate, contaminated drippage or hazardous waste decomposition products to the groundwater, surface water, or atmosphere.

1) Generators must do one of the following:

A) Prepare and follow an equipment cleaning plan and clean equipment in accordance with subsection (b)(2); or

B) Prepare and follow an equipment replacement plan and replace equipment in accordance with subsection (b)(3); or

C) Document cleaning and replacement in accordance with subsections (b)(2) and (b)(3), carried out after termination of use of chlorophenolic preservatives.

2) Cleaning requirements.

A) The generator must prepare and sign a written equipment cleaning plan that describes the following:

i) The equipment to be cleaned;

ii) How the equipment will be cleaned;

iii) The solvent to be used in cleaning;

iv) How solvent rinses will be tested; and

v) How cleaning residues will be disposed of.

B) Equipment must be cleaned as follows:

i) Remove all visible residues from process equipment; and

ii) Rinse process equipment with an appropriate solvent until dioxins and dibenzofurans are not detected in the final solvent rinse.

C) Analytical requirements.

i) Rinses must be tested by using an appropriate method.

ii) "Not detected" means at or below the following lower method calibration limit (MCL): the 2,3,7,8-TCDD-based MCL is 0.01 parts per trillion (ppt), using a sample weight of 1000 g, an IS spiking level of 1 ppt, and a final extraction volume of 10 to 50 µℓ. For other congeners, multiply the values by 1 for TCDF, PeCDD, or PeCDF; by 2.5 for HxCDD, HxCDF, HpCDD, or HpCDF; or by 5 for OCDD or OCDF.

D) The generator must manage all residues from the cleaning process as F032 waste.

3) Replacement requirements.

A) The generator must prepare and sign a written equipment replacement plan that describes the following:

i) The equipment to be replaced;

ii) How the equipment will be replaced; and

iii) How the equipment will be disposed of.

B) The generator must manage the discarded equipment as F032 waste.

4) Documentation requirements. The generator must document that previous equipment cleaning and replacement was performed in accordance with subsections (b)(2) and (b)(3) and that the equipment cleaning and replacement occurred after cessation of use of chlorophenolic preservatives.

c) The generator must maintain the following records documenting the cleaning and replacement as part of the facility's operating record:

1) The name and address of the facility;

2) Formulations previously used and the date on which their use ceased in each process at the plant;

3) Formulations currently used in each process at the plant;

4) The equipment cleaning or replacement plan;

5) The name and address of any persons who conducted the cleaning and replacement;

6) The dates on which cleaning and replacement were accomplished;

7) The dates of sampling and testing;

8) A description of the sample handling and preparation techniques used for extraction, containerization, preservation and chain-of-custody of the samples;

9) A description of the tests performed, the date the tests were performed and the results of the tests;

10) The name and model numbers of the instruments used in performing the tests;

11) QA/QC documentation; and

12) The following statement signed by the generator or the generator's authorized representative:

> I certify under penalty of law that all process equipment required to be cleaned or replaced under 35 Ill. Adm. Code 721.135 was cleaned or replaced as represented in the equipment cleaning and replacement plan and accompanying documentation. I am aware that there are significant penalties for providing false information, including the possibility of fine or imprisonment.

(Source: Amended at 40 Ill. Reg. 11367, effective August 9, 2016)

SUBPART E: EXCLUSIONS AND EXEMPTIONS

Section 721.138 Exclusion of Comparable Fuel and Syngas Fuel (Repealed)

(Source: Repealed at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.139 Conditional Exclusion for Used, Broken CRTs and Processed CRT Glass Undergoing Recycling

Used, broken CRTs are not solid waste if they meet the following conditions:

a) Prior to CRT Processing. These materials are not solid wastes if they are destined for recycling and they meet the following requirements:

1) Storage. The broken CRTs must be managed in either of the following ways:

A) They are stored in a building with a roof, floor, and walls, or

B) They are placed in a container (i.e., a package or a vehicle) that is constructed, filled, and closed to minimize releases to the environment of CRT glass (including fine solid materials).

2) Labeling. Each container in which the used, broken CRT is contained must be labeled or marked clearly with one of the following phrases: "Used cathode ray tubes—contains leaded glass" or "Leaded glass from televisions or computers". It must also be labeled with the following statement: "Do not mix with other glass materials."

3) Transportation. The used, broken CRTs must be transported in a container meeting the requirements of subsections (a)(1)(B) and (a)(2).

4) Speculative Accumulation and Use Constituting Disposal. The used, broken CRTs are subject to the limitations on speculative accumulation, as defined in subsection (c)(8). If they are used in a manner constituting disposal, they must comply with the applicable requirements of Subpart C of 35 Ill. Adm. Code 726, instead of the requirements of this Section.

5) Exports. In addition to the applicable conditions specified in subsections (a)(1) through (a)(4), an exporter of used, broken CRTs must comply with the following requirements:

A) It must notify the Agency and USEPA of an intended export before the CRTs are scheduled to leave the United States. A complete notification should be submitted sixty (60) days before the initial shipment is intended to be shipped off-site. This notification may cover export activities extending over a 12-month or shorter period. The notification must be in writing, signed by the exporter, and include the following information:

i) The name, site~~mailing~~ address, telephone number and USEPA identification number (if applicable) of the exporter of the CRTs.

ii) The estimated frequency or rate at which the CRTs are to be exported and the period of time over which they are to be exported.

iii) The estimated total quantity of CRTs specified in kilograms.

iv) All points of entry to and departure from each foreign country through which the CRTs will pass.

v) A description of the means by which each shipment of the CRTs will be transported (e.g., mode of transportation vehicle (air, highway, rail, water, etc.), types of container (drums, boxes, tanks, etc.)).

vi) The name and site address of the recycler or recyclers and the estimated quantity of used CRTs to be sent to each facility, as well as the name of any alternate recycler.

vii) A description of the manner in which the CRTs will be recycled in the foreign country that will be receiving the CRTs.

viii) The name of any transit country through which the CRTs will be sent and a description of the approximate length of time the CRTs will remain in such country and the nature of their handling while there.

B) Notifications must be submitted electronically using USEPA's Waste Import Export Tracking System (WIETS).

C) Upon request by the Agency or USEPA, the exporter must furnish to the Agency and USEPA any additional information which a receiving country requests in order to respond to a notification.

D) USEPA has stated that it will provide a complete notification to the receiving country and any transit countries. A notification is complete when the Agency and USEPA receives a notification that USEPA determines satisfies the requirements of subsection (a)(5)(A).

E) The export of CRTs is prohibited, unless all of the following occur:

i) The receiving country consents to the intended export. When the receiving country consents in writing to the receipt of the CRTs, USEPA has stated that it will forward a USEPA an Acknowledgment of Consent (AOC) to Export CRTs to the exporter. Where the receiving country objects to receipt of the CRTs or withdraws a prior consent, USEPA has stated that it will notify the exporter in writing. USEPA has stated that it will also notify the exporter of any responses from transit countries.

ii) The exporter or a U.S. authorized agent must fulfill the requirements of subsection (a)(6).
BOARD NOTE: The Board moved the text of corresponding 40 CFR 261.39(a)(5)(v)(B)(*1*) through (a)(5)(v)(B)(*2*)(*vii*) to appear as subsections (a)(6)(A) through (a)(6)(B)(vii) to comport with codification requirements.

F) When the conditions specified on the original notification change, the exporter must provide the Agency and USEPA with a written renotification of the change using the allowable methods listed in subsection (a)(5)(ii) of this section, except for changes to the telephone number in subsection (a)(5)(A)(i) and decreases in the quantity indicated pursuant to subsection (a)(5)(A)(iii). The shipment cannot take place until consent of the receiving country to the changes has been obtained (except for changes to

information about points of entry and departure and transit countries pursuant to subsections (a)(5)(A)(iv) and (a)(5)(A)(viii)) and the exporter of CRTs receives from USEPA a copy of the AOC to Export CRTs reflecting the receiving country's consent to the changes.

G) A copy of the AOC to Export CRTs must accompany the shipment of CRTs. The shipment must conform to the terms of the Acknowledgment.

H) If a shipment of CRTs cannot be delivered for any reason to the recycler or the alternate recycler, the exporter of CRTs must renotify the Agency and USEPA of a change in the conditions of the original notification to allow shipment to a new recycler in accordance with subsection (a)(5)(F) and obtain another AOC to Export CRTs.

I) An exporter must keep copies of notifications and AOCs to Export CRTs for a period of three years following receipt of the AOC. An exporter may satisfy this recordkeeping requirement by retaining electronically submitted notifications or electronically generated Acknowledgements in the CRT exporter's account on USEPA's WIETS, or its successor system, provided that such copies are readily available for viewing and production if requested by any USEPA or authorized state inspector. No CRT exporter may be held liable for the inability to produce a notification or Acknowledgement for inspection under this section if the CRT exporter can demonstrate that the inability to produce such copies are due exclusively to technical difficulty with USEPA's WIETS, or its successor system for which the CRT exporter bears no responsibility.

J) A CRT exporter must file with USEPA, no later than March 1 of each year, an annual report summarizing the quantities (in kilograms), frequency of shipment, and ultimate destinations (i.e., the facility or facilities where the recycling occurs) of all used CRTs exported during the previous calendar year. This annual report must also include the following:

i) The name, USEPA identification number (if applicable), and mailing and site address of the exporter;

ii) The calendar year covered by the report;

iii) A certification signed by the CRT exporter that states as follows:

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents and that, based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

K) Annual reports must be submitted to the office listed using the allowable methods specified in subsection (a)(5)(B). Exporters must keep copies of each annual report for a period of at least three years fromafter the due date of the report. An exporter may satisfy this recordkeeping requirement by retaining electronically submitted annual reports in the CRT exporter's account on USEPA's WIETS, or its successor system, provided that a copy is readily available for viewing and production if requested by any USEPA or authorized Agency inspector. No CRT exporter may be held liable for the inability to produce an annual report for inspection under this Section if the CRT exporter can demonstrate that the inability to produce the annual report is due exclusively to technical difficulty with USEPA's WIETS, or its successor system for which the CRT exporter bears no responsibility.

BOARD NOTE: The hazardous waste import and export rules define "USEPA Acknowledgement of Consent" in 35 Ill. Adm. Code 722.181.

6) AES Reporting Requirements. The exporter or a U.S. authorized agent must:

A) Submit Electronic Export Information (EEI) for each shipment to the Automated Export System (AES) or its successor system, under the International Trade Data System (ITDS) platform, in accordance with 15 CFR 30.4(b), incorporated by reference in 35 Ill. Adm. Code 720.111.

B) Include the following items in the EEI, along with the other information required under 15 CFR 30.6, incorporated by reference in 35 Ill. Adm. Code 720.111:

i) The USEPA license code;

ii) The commodity classification code (per 15 CFR 30.6(a)(12));

iii) The USEPA consent number;

iv) The country of ultimate destination (per 15 CFR 30.6(a)(5));;

v) The date of export (per 15 CFR 30.6(a)(2));;

vi) The quantity of waste in shipment and units for reported quantity, if required reporting units established by value for the reported commodity classification number are in units of weight or volume (per 15 CFR 30.6(a)(15));; or

vii) The USEPA net quantity reported in units of kilograms, if required reporting units established by value for the reported commodity classification number are not in units of weight or volume.

BOARD NOTE: The Board moved the text of corresponding 40 CFR 261.39(a)(5)(v)(B)(*1*) through (a)(5)(v)(B)(*2*)(*vii*) to appear as subsections (a)(6)(A) through (a)(6)(B)(vii) to comport with codification requirements.

BOARD NOTE: Corresponding 40 CFR 261.39(a)(5) requires communications relating to export of CRTs between the exporter and USEPA. It is clear that USEPA intends to maintain its central role between the exporter and the export-receiving country and it granting authorization to export. Nevertheless, the Board has required the exporter submit to the Agency also whatever notifications it must submit to USEPA relating to the export. The intent is to facilitate the Agency's efforts towards assurance of compliance with the regulations as a whole, and not to require a separate authorization for export by the Agency.

b) Requirements for used CRT processing. Used, broken CRTs undergoing CRT processing, as defined in 35 Ill. Adm. Code 720.110, are not solid waste if they meet the following requirements:

1) Storage. Used, broken CRTs undergoing CRT processing are subject to the requirement of subsection (a)(4).

2) CRT Processing

A) All activities specified in the second and third paragraphs of the definition of "CRT processing" in 35 Ill. Adm. Code 720.110 must be performed within a building with a roof, floor, and walls; and

BOARD NOTE: The activities specified in the second and third paragraphs of the definition of "CRT processing" are "intentionally

breaking intact CRTs or further breaking or separating broken CRTs" and "sorting or otherwise managing glass removed from CRT monitors".

B) No activities may be performed that use temperatures high enough to volatilize lead from CRTs.

c) Glass from CRT processing that is sent to CRT glass making or lead smelting. Glass from CRT processing that is destined for recycling at a CRT glass manufacturer or a lead smelter after CRT processing is not a solid waste unless it is speculatively accumulated, as defined in Section 721.101(c)(8).

d) Use constituting disposal. Glass from CRT processing that is used in a manner constituting disposal must comply with the requirements of Subpart C of 35 Ill. Adm. Code 726 instead of the requirements of this Section.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.140 Conditional Exclusion for Used, Intact CRTs Exported for Recycling

Used, intact CRTs exported for recycling are not solid waste if they meet the notice and consent conditions of Section 721.139(a)(5) and they are not speculatively accumulated, as defined in Section 721.101(c)(8).

(Source: Added at 32 Ill. Reg. 11786, effective July 14, 2008)

Section 721.141 Notification and Recordkeeping for Used, Intact CRTs Exported for Reuse

a) A CRT exporter that exports used, intact CRTs for reuse must send a notification to the Agency and USEPA. This notification may cover export activities extending over a 12-month or lesser period.

1) The notification must be in writing, signed by the exporter, and include the following information:

A) Name, mailing address, telephone number, and USEPA identification number (if applicable) of the exporter of the used, intact CRTs;

B) The estimated frequency or rate at which the used, intact CRTs are to be exported for reuse and the period of time over which they are to be exported;

C) The estimated total quantity of used, intact CRTs specified in kilograms;

D) All points of entry to and departure from each transit country through which the used, intact CRTs will pass, a description of the approximate length of time the used, intact CRTs will remain in that country, and the nature of their handling while there;

E) A description of the means by which each shipment of the used, intact CRTs will be transported (e.g., mode of transportation vehicle (air, highway, rail, water, etc.), types of container (drums, boxes, tanks, etc.));

F) The name and address of the ultimate destination facility or facilities where the used, intact CRTs will be reused, refurbished, distributed, or sold for reuse and the estimated quantity of used, intact CRTs to be sent to each facility, as well as the name of any alternate destination facility or facilities;

G) A description of the manner in which the used, intact CRTs will be reused (including reuse after refurbishment) in the foreign country that will be receiving the used, intact CRTs; and

H) A certification signed by the CRT exporter that states as follows:

"I certify under penalty of law that the CRTs described in this notice are intact and fully functioning or capable of being functional after refurbishment and that the used CRTs will be reused or refurbished and reused. I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

2) Notifications submitted by mail should be sent to the following mailing address:

Office of Enforcement and Compliance Assurance
Office of Federal Activities
International Compliance Assurance Division (Mail Code 2254A)
Environmental Protection Agency
1200 Pennsylvania Ave., NW
Washington, DC 20460

Hand-delivered notifications should be sent to the following address:

Office of Enforcement and Compliance Assurance
Office of Federal Activities
International Compliance Assurance Division (Mail Code 2254A)
Environmental Protection Agency
William Jefferson Clinton Building, Room 6144
1200 Pennsylvania Ave., NW
Washington, DC 20004

In either case, the following must be prominently displayed on the front of the envelope:

"Attention: Notification of Intent to Export CRTs".

A notification submitted to the Agency by mail or hand-delivered must be sent to the following mailing address:

Illinois Environmental Protection Agency
Bureau of Land Pollution Control
2520 West Iles Avenue
PO Box 19276
Springfield, Illinois 62794-9276

b) A CRT exporter that exports used, intact CRTs for reuse must keep copies of normal business records, such as contracts, demonstrating that each shipment of exported used, intact CRTs will be reused. This documentation must be retained for a period of at least three years from the date the CRTs were exported. If the documents are written in a language other than English, a CRT exporter of used, intact CRTs sent for reuse must provide both the original, non-English version of the normal business records, as well as a third-party translation of the normal business records into English, within 30 days after a request by USEPA.

(Source: Amended at 49 Ill. Reg. 12715, effective September 23, 2025)

SUBPART H: FINANCIAL REQUIREMENTS FOR MANAGEMENT OF EXCLUDED HAZARDOUS SECONDARY MATERIALS

Section 721.240 Applicability

The requirements of this subpart apply to (1) those areas of an entity managing hazardous secondary materials excluded under Section 721.104(a)(23) or (24) where such materials are generated or accumulated on site, and (2) facilities regulated under the standards at Section 726, subpart Q that receive ignitable spent refrigerant from off-site and that are not transfer facilities that store the refrigerants for less than ten (10) days.

a) A generator of hazardous secondary material, or an intermediate or reclamation facility, that accumulates 6000 kg or less of hazardous secondary material at any

time must comply with §§ 261.410 and 261.411. ~~The requirements of this Subpart H apply to owners or operators of reclamation and intermediate facilities managing hazardous secondary materials excluded under Section 721.104(a)(24), except as provided otherwise in this Section.~~

b) A generator of hazardous secondary material, or an intermediate or reclamation facility that accumulates more than 6000 kg of hazardous secondary material at any time must comply with Sections 721.510 and 721.520. ~~States and the federal government are exempt from the financial assurance requirements of this Subpart H.~~

c) Facilities receiving refrigerant from off-site under Section 726, subpart Q that are not transfer facilities that store the refrigerants for less than ten (10) days must comply with Sections 721.510 and 721.520.

(Source: Added at 34 Ill. Reg. 18611, effective November 12, 2010)

Section 721.241 Definitions of Terms as Used in This Subpart

The terms defined in 35 Ill. Adm. Code 725.241(d), (f), (g), and (h) have the same meaning in this Subpart H as they do in 35 Ill. Adm. Code 725.241.

(Source: Added at 34 Ill. Reg. 18611, effective November 12, 2010)

721.242 Cost Estimate

a) The owner or operator of a reclamation or intermediate facility must have a detailed written estimate, in current dollars, of the cost of disposing of any hazardous secondary material as listed or characteristic hazardous waste, and the potential cost of closing the facility as a treatment, storage, and disposal facility.

1) The estimate must equal the cost of conducting the activities described in this subsection (a) at the point when the extent and manner of the facility's operation would make these activities the most expensive.

2) The cost estimate must be based on the costs to the owner or operator of hiring a third party to conduct these activities. A third party is a party that is neither a parent nor a subsidiary of the owner or operator. (See definition of "parent corporation" in 35 Ill. Adm. Code 725.241(d).) The owner or operator may use costs for on-site disposal in compliance with applicable requirements if the owner or operator can demonstrate that on-site disposal capacity will always exist over the life of the facility.

3) The cost estimate may not incorporate any salvage value that may be realized with the sale of hazardous secondary materials, or hazardous or non-hazardous wastes (if permitted by the Agency under 35 Ill. Adm.

Code 725.213(d)), facility structures or equipment, land, or other assets associated with the facility.

4) The owner or operator may not incorporate a zero cost for hazardous secondary materials, or hazardous or non-hazardous wastes (if permitted by the Agency under 35 Ill. Adm. Code 725.213(d)) that might have economic value.

b) During the active life of the facility, the owner or operator must adjust the written cost estimate for inflation within 60 days prior to the anniversary date of the establishment of the financial instruments used to comply with Section 721.243. An owner or operator that uses the financial test or corporate guarantee must update its cost estimate for inflation within 30 days after the close of the firm's fiscal year and before submitting updated information to the Agency and USEPA under Section 721.243(e)(3). The adjustment may be made by recalculating the cost estimate in current dollars, or by using an inflation factor derived from the most recent Implicit Price Deflator for Gross National Product (Deflator) published by the U.S. Department of Commerce, as specified in subsections (b)(1) and (b)(2). The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year.

1) The first adjustment is made by multiplying the cost estimate by the inflation factor. The result is the adjusted cost estimate.

2) Subsequent adjustments are made by multiplying the latest adjusted cost estimate by the latest inflation factor.

BOARD NOTE: The table of Deflators is available as Table 1.1.9. in the National Income and Product Account Tables, published by U.S. Department of Commerce, Bureau of Economic Analysis, National Economic Accounts, available on-line at the following web address: https://apps.bea.gov/itable/?reqid=19&step=2&isuri=1&categories=survey Select: Section 1-Domestic Product and Income

c) During the active life of the facility, the owner or operator must revise the cost estimate within 30 days after a change in a facility's operating plan or design that would increase the costs of conducting the activities described in subsection (a) or within 60 days after an unexpected event that increases the cost of conducting the activities described in subsection (a). The revised cost estimate must be adjusted for inflation, as specified in subsection (b).

d) The owner or operator must keep the following documents at the facility during the operating life of the facility: The latest cost estimate prepared under subsections (a) and (c) and, when this estimate has been adjusted under subsection (b), the latest adjusted cost estimate.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.243 Financial Assurance Condition

As required by Section 721.104(a)(24)(F)(vi), an owner or operator of a reclamation facility or an intermediate facility must have financial assurance as a condition of the exclusion. The owner or operator must choose from the options specified in subsections (a) through (e).

a) Trust Fund

1) An owner or operator may meet the requirements of this Section by establishing a trust fund that complies with this subsection (a) and submitting an originally signed duplicate of the trust agreement to the Agency. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

2) The wording of the trust agreement must be identical to the wording specified by the Agency under Section 721.251, and the trust agreement must be accompanied by a formal certification of acknowledgment, as specified by the Agency under Section 721.251. Schedule A of the trust agreement must be updated within 60 days after any change in the amount of the current cost estimate covered by the agreement.

3) The trust fund must be funded for the full amount of the current cost estimate before it may be relied upon to comply with this Section.

4) Whenever the current cost estimate changes, the owner or operator must compare the new cost estimate with the trustee's most recent annual valuation of the trust fund. Within 60 days after the change in the cost estimate, if the value of the fund is less than the amount of the new cost estimate, the owner or operator must either deposit an amount into the fund so that its value after this deposit at least equals the amount of the current cost estimate, or the owner or operator must obtain other financial assurance that complies with this Section to cover the difference.

5) If the value of the trust fund is greater than the total amount of the current cost estimate, the owner or operator may submit a written request to the Agency for release of the amount more than the current cost estimate.

6) If an owner or operator substitutes other financial assurance that complies with this Section for all or part of the trust fund, it may submit a written request to the Agency for release of the amount in excess of the current cost estimate covered by the trust fund.

7) Within 60 days after receiving a request from the owner or operator for a release of funds, as specified in subsection (a)(5) or (a)(6), the Agency

will instruct the trustee to release to the owner or operator those funds that the Agency specifies in writing. If the owner or operator begins final closure under Subpart G of 35 Ill. Adm. Code 724 or 725, it may request reimbursements for partial or final closure expenditures by submitting itemized bills to the Agency. The owner or operator may request reimbursements for partial closure only if sufficient funds are remaining in the trust fund to cover the maximum costs of closing the facility over its remaining operating life. Within 60 days after receiving bills for partial or final closure activities, if the Agency determines that the partial or final closure expenditures conforms to the approved closure plan, or otherwise justified, the Agency will instruct the trustee to make reimbursements in those amounts as the Agency specifies in writing. If the Agency has reason to believe that the maximum cost of closure over the remaining life of the facility will be significantly greater than the value of the trust fund, the Agency may withhold reimbursements of those amounts that the Agency deems prudent until the Agency determines, in under 35 Ill. Adm. Code 725.243(i), that the owner or operator is no longer required to maintain financial assurance for final closure of the facility. If the Agency does not instruct the trustee to make these reimbursements, the Agency must provide to the owner or operator a detailed written statement of reasons.

8) The Agency must agree to terminating the trust fund when either of the following has occurred:

A) The Agency determines that the owner or operator has substituted alternative financial assurance that complies with this Section; or

B) The Agency releases the owner or operator from obligation under this Section in compliance with subsection (i).

b) Surety Bond Guaranteeing Payment into a Trust Fund

1) An owner or operator may comply with this Section by obtaining a surety bond that complies with this subsection (b) and submitting the bond to the Agency. The surety company issuing the bond must, at a minimum, be listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury.
BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies", on an annual basis under 31 CFR 223.16. Circular 570 is available on the Internet from the following website: https://www.fiscal.treasury.gov/surety-bonds/circular-570.html.

2) The wording of the surety bond must be identical to the wording specified by the Agency under Section 721.251.

3) The owner or operator that uses a surety bond to comply with this Section must also establish a standby trust fund. Under the terms of the bond, all payments made under the bond will be deposited by the surety directly into the standby trust fund according to the Agency's instructions. This standby trust fund must comply with subsection (a), except that the following also apply:

   A) The owner or operator must submit an originally signed duplicate of the trust agreement to the Agency with the surety bond; and

   B) Until the standby trust fund is funded under this Section, the following are not required:

      i) Payments into the trust fund, as specified in subsection (a);

      ii) Updating Schedule A of the trust agreement to show current cost estimates;

      iii) Annual valuations, as required by the trust agreement; and

      iv) Notices of nonpayment, as required by the trust agreement.

4) The bond must guarantee that the owner or operator will undertake one of the following actions:

   A) That the owner or operator will fund the standby trust fund in an amount equal to the penal sum of the bond before loss of the exclusion under Section 721.104(a)(24);

   B) That the owner or operator will fund the standby trust fund in an amount equal to the penal sum within 15 days after an administrative order to begin closure issued by the Agency becomes final, or within 15 days after an order to begin closure is issued by the Board or a court of competent jurisdiction; or

   C) Within 90 days after receipt by both the owner or operator and the Agency of a notice cancelling the bond from the surety, that the owner or operator will provide alternate financial assurance that complies with this Section and obtain the Agency’s written approval of the assurance provided.

5) Under the terms of the bond, the surety must become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.

6) The penal sum of the bond must be in an amount at least equal to the current cost estimate, except as provided in subsection (f).

7) Whenever the current cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current cost estimate and submit evidence of this increase to the Agency, or obtain other financial assurance that complies with this Section to cover the increase. Whenever the current cost estimate decreases, the penal sum may be reduced to the amount of the current cost estimate following written approval by the Agency.

8) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.

9) The owner or operator may cancel the bond if the Agency has given prior written consent based on the Agency's receipt of evidence of alternate financial assurance that complies with this Section.

c) Letter of Credit

1) An owner or operator may comply with this Section by obtaining an irrevocable standby letter of credit that complies with this subsection (c) and submitting the letter to the Agency. The issuing institution must be an entity that has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

2) The wording of the letter of credit must be identical to the wording specified by the Agency under Section 721.251.

3) An owner or operator that uses a letter of credit to comply with this Section must also establish a standby trust fund. Under the terms of the letter of credit, all amounts paid under a draft by the Agency will be deposited by the issuing institution directly into the standby trust fund according to the Agency's instructions. This standby trust fund must comply with subsection (a), except that the following also apply:

A) The owner or operator must submit an originally signed duplicate of the trust agreement to the Agency with the letter of credit; and

B) Unless the standby trust fund is funded under this Section, the following are not required:

i) Payments into the trust fund, as specified in subsection (a);

ii) Updating Schedule A of the trust agreement to show current cost estimates;

iii) Annual valuations, as required by the trust agreement; and

iv) Notices of nonpayment, as required by the trust agreement.

4) The letter of credit must be accompanied by a letter from the owner or operator that refers to the letter of credit by number, issuing institution, and date, and that provides the following information: The USEPA identification number (if any issued), name, and address of the facility, and the amount of funds assured for the facility by the letter of credit.

5) The letter of credit must be irrevocable, and the letter must be issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless, at least 120 days before the current expiration date, the issuing institution notifies both the owner or operator and the Agency by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the 120 days will begin on the date when both the owner or operator and the Agency have received the notice, as evidenced by the return receipts.

6) The letter of credit must be issued in an amount at least equal to the current cost estimate, except as provided in subsection (f).

7) Whenever the current cost estimate increases to an amount greater than the amount of the credit, within 60 days after the increase, the owner or operator must either cause the amount of the credit to be increased, so that it at least equals the current cost estimate, and submit evidence of this increase to the Agency, or it must obtain other financial assurance that complies with this Section to cover the increase. Whenever the current cost estimate decreases, the amount of the credit may be reduced to the amount of the current cost estimate following written approval by the Agency.

8) Following a determination by the Agency that the hazardous secondary materials do not meet the conditions of the exclusion set forth in Section 721.104(a)(24), the Agency may draw on the letter of credit.

9) If the owner or operator does not establish alternative financial assurance that complies with this Section and obtain written approval of the alternate assurance from the Agency within 90 days after receipt by both the owner or operator and the Agency of a notice from the issuing institution that it has decided not to extend the letter of credit beyond the current expiration date, the Agency may draw on the letter of credit. The Agency may delay the drawing if the issuing institution extends the term of the credit. During the last 30 days after any extension, the Agency may draw on the letter of credit if the owner or operator has failed to provide alternative financial assurance that complies with this Section and obtain written approval of this assurance from the Agency.

10) The Agency must return the letter of credit to the issuing institution for termination when either of the following occurs:

A) The owner or operator substitutes alternative financial assurance that complies with this Section; or

B) The Agency releases the owner or operator from the requirements of this Section under subsection (i).

d) Insurance

1) An owner or operator may comply with this Section by obtaining insurance that complies with this subsection (d) and submitting a certificate of that insurance to the Agency. At a minimum, the insurer must be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states.

2) The wording of the certificate of insurance must be identical to the wording specified by the Agency under Section 721.251.

3) The insurance policy must be issued for a face amount at least equal to the current cost estimate, except as provided in subsection (f). The term "face amount" means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer's future liability will be lowered by the amount of the payments.

4) The insurance policy must guarantee that funds will be available whenever needed to pay the cost of removal of all hazardous secondary materials from the unit, to pay the cost of decontaminating the unit, and to pay the costs of performing activities required under Subpart G of 35 Ill. Adm. Code 724 or 725, as applicable, for the facilities covered by the policy. The policy must also guarantee that once funds are needed, the insurer will

be responsible for paying out funds, up to an amount equal to the face amount of the policy, upon the direction of the Agency, to the party or parties as the Agency specifies.

5) After beginning partial or final closure under 35 Ill. Adm. Code 724 or 725, as applicable, an owner or operator or any other authorized person may request reimbursements for closure expenditures by submitting itemized bills to the Agency. The owner or operator may request reimbursements only if the remaining value of the policy is sufficient to cover the maximum costs of closing the facility over its remaining operating life. If the Agency determines that the expenditures are according to the approved plan or are otherwise justified, the Agency must, within 60 days after receiving bills for closure activities, instruct the insurer in writing to make reimbursements in the amounts that the Agency specifies. If the Agency has reason to believe that the maximum cost over the remaining life of the facility will be significantly greater than the face amount of the policy, the Agency may withhold reimbursement of the amounts that the Agency deems prudent until the Agency determines, under subsection (h), that the owner or operator is no longer required to maintain financial assurance for the particular facility. If the Agency does not instruct the insurer to make the reimbursements under this subsection (d)(5), the Agency must provide to the owner or operator a detailed written statement of reasons.

BOARD NOTE: The owner or operator may appeal any Agency determination made under this subsection (d)(5), as provided by Section 40 of the Act.

6) The owner or operator must maintain the policy in full force and effect until the Agency consents to the owner or operator terminating the policy, as specified in subsection (d)(10). Failure to pay the premium, without substituting alternate financial assurance as specified in this Section, will constitute a significant violation of these regulations warranting the remedy that is deemed necessary under Sections 31, 39, and 40 of the Act. This violation will be deemed to begin upon receipt by the Agency of a notice of future cancellation, termination, or failure to renew the policy due to nonpayment of the premium, rather than upon the date of policy expiration.

7) Each policy must contain a provision allowing assignment of the policy to a successor owner or operator. The assignment may be conditioned on consent of the insurer, so long as the policy provides that the insurer may not unreasonably refuse this consent.

8) The policy must provide that the insurer may not cancel, terminate, or fail to renew the policy, except for failure to pay the premium. The automatic

renewal of the policy must, at a minimum, provide the insured with the option of renewing at the face amount of the expiring policy. If the owner or operator fails to pay the premium, the insurer may elect to cancel, terminate, or fail to renew the policy by sending notice by certified mail to the owner or operator and the Agency. Cancellation, termination, or failure to renew may not occur, however, during the 120 days that begin on the date that both the Agency and the owner or operator have received the notice, as evidenced by the return receipts. Cancellation, termination, or failure to renew the policy may not occur, and the policy will remain in full force and effect if on or before the expiration date, one of the following events occurs:

A) The Agency deems the facility abandoned;

B) Conditional exclusion or interim status is lost, terminated, or revoked;

C) Closure is ordered by the Board or a court of competent jurisdiction;

D) The owner or operator is named as debtor in a voluntary or involuntary proceeding under Title 11 of the U.S. Code (Bankruptcy); or

E) The premium due has been paid.

9) Whenever the owner or operator learns that the current cost estimate has increased to an amount greater than the face amount of the policy, the owner or operator must, within 60 days after learning of the increase, either cause the face amount to be increased to an amount at least equal to the current cost estimate and submit evidence of this increase to the Agency, or the owner or operator must obtain other financial assurance that complies with this Section to cover the increase. Whenever the current cost estimate decreases, the face amount may be reduced to the amount of the current cost estimate after the owner or operator has obtained the written approval of the Agency.

10) The Agency must give written consent that allows the owner or operator to terminate the insurance policy when either of the following events occurs:

A) The Agency has determined that the owner or operator has substituted alternative financial assurance that complies with this Section; or

B) The Agency has released the owner or operator from obligation under this Section under subsection (i).

e) Financial Test and Corporate Guarantee

1) An owner or operator may comply with this Section by demonstrating that the owner or operator passes one of the financial tests specified in this subsection (e). To pass a financial test, the owner or operator must meet the criteria of either subsection (e)(1)(A) or (e)(1)(B):

A) Test 1. The owner or operator must have each of the following:

i) Two of the following three ratios: A ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5;

ii) Net working capital and tangible net worth each at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates;

iii) Tangible net worth of at least $10 million; and

iv) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates.

B) Test 2. The owner or operator must have each of the following:

i) A current rating for its most recent bond issuance of AAA, AA, A, or BBB, as issued by Standard and Poor's, or Aaa, Aa, A, or Baa, as issued by Moody's;

ii) Tangible net worth at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates;

iii) Tangible net worth of at least $10 million; and

iv) Assets located in the United States amounting to either at least 90 percent of total assets or at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates.

2) Definitions as used in subsection (e)(1).

"Current cost estimates" means the following four cost estimates required in the standard letter from the owner's or operator's chief financial officer:

The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in subsections (e)(1) through (e)(9);
The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the corporate guarantee specified in subsection (e)(10);
For facilities in a state outside of Illinois, the cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in Subpart H of 40 CFR 261 or through a financial test deemed by USEPA as equivalent to that in Subpart H of 40 CFR 261; and

The cost estimate for each facility for which the owner or operator has not demonstrated financial assurance to the Agency, USEPA, or a sister state in which the facility is located by any mechanism that complies with the applicable of this Subpart H, Subpart H of 40 CFR 261, or regulations deemed by USEPA as equivalent to Subpart H of 40 CFR 261.

"Current plugging and abandonment cost estimates" means the following four cost estimates required in the standard form of a letter from the owner's or operator's chief financial officer (see 35 Ill. Adm. Code 704.240):

The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in 35 Ill. Adm. Code 704.219(a) through (i);

The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in 35 Ill. Adm. Code 704.219(j);
For facilities in a state outside of Illinois, the cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in Subpart F of 40 CFR 144 or through a financial test deemed by USEPA as equivalent to that in Subpart F of 40 CFR 144; and

The cost estimate for each facility for which the owner or operator has not demonstrated financial assurance to the Agency, USEPA, or a sister state in which the facility is located by any mechanism that complies with the applicable requirements of Subpart G of 35 Ill. Adm. Code 704, Subpart F of 40 CFR 144, or regulations deemed by USEPA as equivalent to Subpart F of 40 CFR 144.

BOARD NOTE: Corresponding 40 CFR 261.143(e)(2) defines "current cost estimate" as "the cost estimates required to be shown in paragraphs 1–4 of the letter from the owner's or operator's chief financial officer (Section 261.151(e))" and "current plugging and abandonment cost estimates" as "the cost estimates required to be shown in paragraphs 1–4 of the letter from the owner's or operator's chief financial officer (Section 144.70(f) of this chapter)". The Board has substituted the descriptions of these estimates, using those specified by USEPA in 40 CFR 261.151(e) and 144.70(f), as appropriate. Since the letter of the chief financial officer must include the cost estimates for any facilities that the owner or operator manages outside of Illinois, the Board has referred to the corresponding regulations of those sister states as "regulations deemed by USEPA as equivalent to Subpart F of 40 CFR 144 and Subpart H of 40 CFR 261".

3) To demonstrate that it meets the financial test in subsection (e)(1), the owner or operator must submit the following items to the Agency:

A) A letter signed by the owner's or operator's chief financial officer and worded as specified by the Agency under Section 721.251 that is derived from the independently audited, year-end financial statements for the latest fiscal year, with the amounts of the pertinent environmental liabilities included in these financial statements;

B) A copy of an independent certified public accountant's report on examining the owner's or operator's financial statements for the latest completed fiscal year; and

C) If the chief financial officer's letter prepared under subsection (e)(3)(A) includes financial data that shows that the owner or operator meets the test in subsection (e)(1)(A) (Test 1), and either the data in the chief financial officer's letter are different from the data in the audited financial statements required by subsection (e)(3)(B)of this Section, or the data are different from any other audited financial statement or data filed with the federal Securities and Exchange Commission, then the owner or operator must submit a special report from its independent certified public accountant. The special report must be based on an agreed-upon

procedures engagement, in compliance with professional auditing standards. The report must describe the procedures used to compare the data in the chief financial officer's letter (prepared under subsection (e)(3)(A)), the findings of the comparison, and the reasons for any differences.

4) This subsection (e)(3)(4) corresponds with 40 CFR 261.143(e)(3)(iv), a provision relating to extending the deadline for filing the financial documents required by 40 CFR 261.143(e)(3) until 90 days after the effective date of the federal rule. Thus, the latest date for filing the documents was March 29, 2009, which is now past. See 40 CFR 261.143(e)(3) and 73 Fed. Reg. 64668 (Oct. 30, 2008). This statement maintains structural consistency with the corresponding federal provision.

5) After initially submitting items specified in subsection (e)(3), the owner or operator must send updated information to the Agency within 90 days after the close of each succeeding fiscal year. This information must comprise all three items specified in subsection (e)(3).

6) If the owner or operator no longer complies with subsection (e)(1), it must send notice to the Agency of intent to establish alternative financial assurance that complies with this Section. The owner or operator must send the notice by certified mail within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements. The owner or operator must provide the alternative financial assurance within 120 days after the end of the fiscal year.

7) The Agency may, based on a reasonable belief that the owner or operator may no longer be complying with subsection (e)(1), require reports of financial condition at any time from the owner or operator in addition to those specified in subsection (e)(3). If the Agency finds, on the basis of these reports or other information, that the owner or operator no longer complies with subsection (e)(1), the owner or operator must provide alternative financial assurance that meets the requirements of this Section within 30 days after receiving notice of the finding.

8) The Agency must disallow use of the financial tests in this subsection (e) on the basis of qualifications in the opinion expressed by the independent certified public accountant in the accountant's report on examining the owner's or operator's financial statements (see subsection (e)(3)(B)) if the Agency determines that those qualifications significantly, adversely affect the owner's or operator's ability to provide its own financial assurance by this mechanism. An adverse opinion or a disclaimer of opinion will be cause for disallowance. The Agency must evaluate all other kinds of qualifications on an individual basis. The owner or operator must provide

alternative financial assurance that complies with this Section within 30 days after receiving notice of Agency disallowance under this subsection (e)(8).

9) The owner or operator is no longer required to submit the items specified in subsection (e)(3) when either of the following events occur:

A) An owner or operator has substituted alternative financial assurance that complies with this Section; or

B) The Agency releases the owner or operator from obligation under this Section under subsection (i).

10) Corporate guarantee for financial responsibility. An owner or operator may comply with this Section by obtaining a written corporate guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a sister firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements applicable to an owner or operator in subsections (e)(1) through (e)(8), and it must comply with the terms of the guarantee. The wording of the guarantee must be identical to the wording specified by the Agency under Section 721.251. A certified copy of the guarantee must accompany the items sent to the Agency that are required by subsection (e)(3). One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee. The terms of the guarantee must provide as follows:

A) Following a determination by the Agency that the hazardous secondary materials at the owner or operator's facility covered by this guarantee do not meet the conditions of the exclusion under Section 721.104(a)(24), the guarantor must dispose of any hazardous secondary material as hazardous waste and close the facility in compliance with the applicable closure requirements in 35 Ill. Adm. Code 724 or 725, or the guarantor must establish a trust fund in the name of the owner or operator and in the amount of the current cost estimate that complies with subsection (a).

B) The corporate guarantee must remain in force unless the guarantor has sent notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however,

during the 120 days beginning on the date on which both the owner or operator and the Agency have received the notice of cancellation, as evidenced by the return receipts.

C) If the owner or operator fails to provide alternative financial assurance that complies with this Section and obtain the written approval of the alternate assurance from the Agency within 90 days after the date on which both the owner or operator and the Agency have received the notice of cancellation of the corporate guarantee from the guarantor, the guarantor must provide the alternative financial assurance in the name of the owner or operator.

f) Use of Multiple Financial Mechanisms. An owner or operator may comply with this Section by establishing more than one financial mechanism per facility. The mechanisms that an owner or operator may use for this purpose are limited to a trust fund that complies with subsection (a), a surety bond that complies with subsection (b), a letter of credit that complies with subsection (c), and insurance that complies with subsection (d). The mechanisms must individually satisfy the indicated requirements of this Section, except that it is the combination of all mechanisms used by the owner or operator, rather than any individual mechanism, that must provide financial assurance for an aggregated amount at least equal to the current cost estimate. If an owner or operator uses a trust fund in combination with a surety bond or a letter of credit, the owner or operator may use the trust fund as the standby trust fund for the other mechanisms. The owner or operator may establish a single standby trust fund for two or more mechanisms. The Agency may use any of the mechanisms to provide care for the facility.

g) Use of a Single Financial Mechanism for Multiple Facilities. An owner or operator may use a single financial assurance mechanism that complies with this Section to comply with this Section for more than one facility. Evidence of financial assurance submitted to the Agency must include a list showing, for each facility, the USEPA identification number (if any), name, address, and the amount of funds assured by the mechanism. If the facilities covered by the mechanism are in more than one Region, USEPA requires the owner of operator to submit and maintain identical evidence of financial assurance with each USEPA Region in which a covered facility is located. The amount of funds available through the mechanism must not be less than the sum of funds that would be available if a separate mechanism had been established and maintained for each facility. In directing funds available through a mechanism for any of the facilities covered by that mechanism, the Agency may direct only that amount of funds designated for that facility, unless the owner or operator agrees to the use of additional funds available under the mechanism.

h) Removal and Decontamination Plan for Release from Financial Assurance Obligations

1) An owner or operator of a reclamation facility or an intermediate facility that wishes to be released from its financial assurance obligations under Section 721.104(a)(24)(F)(vi) must submit a plan for removing all hazardous secondary material residues from the facility. The owner or operator must submit the plan to the Agency at least 180 days prior to the date on which the owner or operator expects to cease to operate under the exclusion.

2) The plan must, at a minimum, include the following information:

   A) For each hazardous secondary materials storage unit subject to financial assurance requirements under Section 721.104(a)(24)(F)(vi), the plan must describe how all excluded hazardous secondary materials will be recycled or sent for recycling, and how all residues, contaminated containment systems (liners, etc.), contaminated soils, subsoils, structures, and equipment will be removed or decontaminated as necessary to protect human health and the environment;

   B) The plan must describe the steps necessary to remove or decontaminate all hazardous secondary material residues and contaminated containment system components, equipment, structures, and soils, including procedures for cleaning equipment and removing contaminated soils, methods for sampling and testing surrounding soils, and criteria for determining the extent of decontamination necessary to protect human health and the environment;

   C) The plan must describe any other activities necessary to protect human health and the environment during this timeframe, including leachate collection, run-on and run-off control, etc.; and

   D) The plan must include a schedule for conducting the activities described that, at a minimum, includes the total time required to remove all excluded hazardous secondary materials for recycling and decontaminate all units subject to financial assurance under Section 721.104(a)(24)(F)(vi) and the time required for intervening activities that will allow tracking of the progress of decontamination.

3) The Agency must provide the owner or operator and the public, through a newspaper notice, the opportunity to submit written comments on and request modifications to the plan. The Agency must accept any comments or requests to modify the plan that it receives within 30 days after the date when the notice is published. The Agency must also, in response to a

request or in its discretion, hold a public hearing whenever it determines that a hearing might clarify one or more issues concerning the plan. The Agency must give public notice of the hearing at least 30 days before it occurs. (Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the Agency may combine the two notices.) The Agency must approve, modify, or disapprove the plan within 90 days after its receipt. If the Agency does not approve the plan, the Agency must provide the owner or operator with a detailed written statement of reasons for its refusal, and the owner or operator must modify the plan or submit a new plan for approval within 30 days after the owner or operator receives a written statement from the Agency. The Agency must approve or modify this owner- or operator-modified plan in writing within 60 days. If the Agency modifies the owner- or operator-modified plan, this modified plan becomes the approved plan. The Agency must assure that the approved plan is consistent with this subsection (h). A copy of the modified plan with a detailed statement of reasons for the modifications must be mailed to the owner or operator.

4) Within 60 days after completing the activities described for each hazardous secondary materials management unit, the owner or operator must submit to the Agency, by registered mail, a certification that all hazardous secondary materials have been removed from the unit and that the unit has been decontaminated in compliance with the specifications in the approved plan. The certification must be signed by the owner or operator and by a qualified Professional Engineer. Upon request, the owner or operator must furnish the Agency with documentation that supports the Professional Engineer's certification, until the Agency releases the owner or operator from the financial assurance requirements of Section 721.104(a)(24)(F)(vi).

i) Releasing the Owner or Operator from Obligation Under This Section. Within 60 days after receiving certifications from the owner or operator and a qualified Professional Engineer that all hazardous secondary materials have been removed from the facility or from a unit at the facility and the facility or unit has been decontaminated according to the approved plan in compliance with subsection (h), the Agency must determine whether or not the owner or operator has accomplished the objectives of removing all hazardous secondary materials from the facility or from a unit at the facility and decontaminating the facility in compliance with the approved plan. If the Agency determines that the owner or operator has accomplished both objectives, the Agency must notify the owner or operator in writing, within the 60 days, that the owner and operator are no longer required under Section 721.104(a)(24)(F)(vi) to maintain financial assurance for that facility or unit at the facility. If the Agency determines that the owner or operator has not accomplished both objectives, it must provide the owner or operator with a detailed written statement of the basis for its determination.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.247 Liability Requirements

a) Coverage for Sudden Accidental Occurrences. The owner or operator of one or more hazardous secondary material reclamation facilities or intermediate facilities that are subject to financial assurance requirements under Section 721.104(a)(24)(F)(vi) must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of its facilities. The owner or operator must maintain liability coverage in force for sudden accidental occurrences in the amount of at least $1 million per occurrence with an annual aggregate of at least $2 million, exclusive of legal defense costs. This liability coverage may be demonstrated as specified in any of subsections (a)(1), (a)(2), (a)(3), (a)(4), (a)(5), or (a)(6).

1) An owner or operator may demonstrate the required liability coverage by having liability insurance that complies with this subsection (a)(1).

A) Each insurance policy must be amended by attachment of the Hazardous Secondary Material Facility Liability Endorsement or evidenced by a Certificate of Liability Insurance. The wording of the Hazardous Secondary Material Facility Liability Endorsement must be identical to the wording specified by the Agency under Section 721.251. The wording of the Certificate of Liability Insurance must be identical to the wording specified by the Agency under Section 721.251. The owner or operator must submit a signed duplicate original of the Hazardous Secondary Material Facility Liability Endorsement or the Certificate of Liability Insurance to the Agency. If requested by the Agency, the owner or operator must provide a signed duplicate original of the insurance policy.

B) At a minimum, each insurance policy must be issued by an insurer that is licensed to transact the business of insurance, or that is eligible to provide insurance as an excess or surplus lines insurer, in one or more states.

2) An owner or operator may comply with this Section by passing a financial test or using the guarantee for liability coverage that complies with subsections (f) and (g).

3) An owner or operator may comply with this Section by obtaining a letter of credit for liability coverage that complies with subsection (h).

4) An owner or operator may comply with this Section by obtaining a surety bond for liability coverage that complies with subsection (i).

5) An owner or operator may comply with this Section by obtaining a trust fund for liability coverage that complies with subsection (j).

6) An owner or operator may demonstrate the required liability coverage by using a combination of insurance under subsections (a)(2) through (a)(5), except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee if the financial statement of the owner or operator is consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated by the combination must total at least the minimum amounts required for the facility by this Section. If the owner or operator demonstrates the required coverage using a combination of financial assurances under this subsection (a)(6), the owner or operator must specify at least one assurance as "primary" coverage and all other assurance as "excess" coverage.

7) An owner or operator must notify the Agency in writing within 30 days whenever any of the following events has occurred:

   A) A claim has resulted in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized by any of subsections (a)(1) through (a)(6);

   B) A Certification of Valid Claim for bodily injury or property damages caused by a sudden or non-sudden accidental occurrence arising from operating a hazardous secondary material reclamation facility or intermediate facility is entered between the owner or operator and a third-party claimant for liability coverage established under any of subsections (a)(1) through (a)(6); or

   C) A final court order that establishes a judgment for bodily injury or property damage caused by a sudden or non-sudden accidental occurrence that arose from operating a hazardous secondary material reclamation facility or intermediate facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under any of subsections (a)(1) through (a)(6).

BOARD NOTE: Corresponding 40 CFR 261.147(a) recites that it applies to "a hazardous secondary material reclamation facility or intermediate facility with land-based units…or a group of such facilities". The Board has rendered this provision in the singular, intending that it include several facilities as a group if necessary. The Board does not intend to limit the applicability of this provision to

multiple facilities. Note that the Agency can require complying with this provision by a facility to which it would not otherwise apply under subsection (d)(2), subject to the owner's or operator's right to appeal an Agency determination to the Board.

b) Coverage for Non-sudden Accidental Occurrences. An owner or operator of a hazardous secondary material reclamation facility or intermediate facility with land-based units, as defined in Section 720.110, that is used to manage hazardous secondary materials excluded under Section 721.104(a)(24) must demonstrate financial responsibility for bodily injury and property damage to third parties caused by non-sudden accidental occurrences that arise from operations of the facility or group of facilities. The owner or operator must maintain liability coverage for non-sudden accidental occurrences in the amount of at least $3 million per occurrence with an annual aggregate of at least $6 million, exclusive of legal defense costs. An owner or operator that must comply with this Section may combine the required per occurrence coverage levels for sudden and non-sudden accidental occurrences into a single per-occurrence level, and the owner or operator may combine the required annual aggregate coverage levels for sudden and non-sudden accidental occurrences into a single annual aggregate level. An owner or operator that combines coverage levels for sudden and non-sudden accidental occurrences must maintain liability coverage in the amount of at least $4 million per occurrence and $8 million annual aggregate. The owner or operator may demonstrate this liability coverage by any of the means in subsections (b)(1) through (b)(6):

1) An owner or operator may demonstrate the required liability coverage by having liability insurance that complies with this subsection (b)(1).

A) Each insurance policy must be amended by attachment of the Hazardous Secondary Material Facility Liability Endorsement or evidenced by a Certificate of Liability Insurance. The wording of the Hazardous Secondary Material Facility Liability Endorsement must be identical to the wording specified by the Agency under Section 721.251. The wording of the Certificate of Liability Insurance must be identical to the wording specified by the Agency under Section 721.251. The owner or operator must submit a signed duplicate original of the Hazardous Secondary Material Facility Liability Endorsement or the Certificate of Liability Insurance to the Agency. If requested by the Agency, the owner or operator must provide a signed duplicate original of the insurance policy.

B) At a minimum, each insurance policy must be issued by an insurer that is licensed to transact the business of insurance, or that is eligible to provide insurance as an excess or surplus lines insurer, in one or more states.

2) An owner or operator may comply with this Section by passing a financial test or by using the guarantee for liability coverage that complies with subsections (f) and (g).

3) An owner or operator may comply with this Section by obtaining a letter of credit for liability coverage that complies with subsection (h).

4) An owner or operator may comply with this Section by obtaining a surety bond for liability coverage that complies with subsection (i).

5) An owner or operator may comply with this Section by obtaining a trust fund for liability coverage that complies with subsection (j).

6) An owner or operator may demonstrate the required liability coverage by using a combination of insurance under subsections (b)(1) through (b)(5), except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee if the financial statement of the owner or operator is consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated by the combination must total to at least the minimum amounts required for the facility by this Section. If the owner or operator demonstrates the required coverage by using a combination of financial assurances under this subsection (b)(6), the owner or operator must specify at least one assurance as "primary" coverage and all other assurance as "excess" coverage.

7) An owner or operator must notify the Agency in writing within 30 days whenever any of the following events has occurred:

   A) A claim has resulted in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized by any of subsections (b)(1) through (b)(6);

   B) A Certification of Valid Claim for bodily injury or property damages caused by a sudden or non-sudden accidental occurrence arising from operating a hazardous secondary material treatment or storage facility is entered between the owner or operator and a third-party claimant for liability coverage established under any of subsections (b)(1) through (b)(6); or

   C) A final court order that establishes a judgment for bodily injury or property damage caused by a sudden or non-sudden accidental occurrence that arose from operating a hazardous secondary material treatment and/or storage facility is issued against the owner or operator or an instrument that is providing financial

assurance for liability coverage under any of subsections (b)(1) through (b)(6).

BOARD NOTE: Corresponding 40 CFR 261.147(b) recites that it applies to "a hazardous secondary material reclamation facility or intermediate facility with land-based units ... or a group of such facilities". The Board has rendered this provision in the singular, intending that it include several facilities as a group if necessary. The Board does not intend to limit the applicability of this provision to multiple facilities. Note that the Agency can require complying with this provision by a facility to which it would not otherwise apply under subsection (d)(2), subject to the owner's or operator's right to appeal an Agency determination to the Board.

c) Petition for Adjusted Standard. If an owner or operator can demonstrate that the level of financial responsibility required by subsection (a) or (b) is not consistent with the degree and duration of risk associated with treatment or storage at a facility, the owner or operator may petition the Board for an adjusted standard under Section 28.1 of the Act. The petition for an adjusted standard must be filed with the Board and submitted in writing to the Agency, as required by 35 Ill. Adm. Code 101 and Subpart D of 35 Ill. Adm. Code 104. If granted, the adjusted standard will take the form of an adjusted level of required liability coverage, this level to be based on the Board's assessment of the degree and duration of risk associated with owning or operating the facility or group of facilities. The owner or operator that requests an adjusted standard must provide the technical and engineering information that is necessary for the Board to determine that an alternative level of financial responsibility to that required by subsection (a) or (b) should apply.

BOARD NOTE: Corresponding 40 CFR 261.147(c) allows application for a "variance" for "the levels of financial responsibility" required for "the facility or group of facilities". The Board has rendered this provision in the singular, intending that it include a single petition pertaining to several facilities as a group. The Board does not intend to limit the applicability of this provision to multiple facilities in a single petition. The Board has chosen the adjusted standard procedure for variance from the level of financial responsibility required by subsection (a) or (b).

d) Adjustments by the Agency

1) If the Agency determines that the level of financial responsibility required by subsection (a) or (b) is not consistent with the degree and duration of risk associated with treatment or storage of hazardous secondary material at a facility, the Agency may adjust the level of financial responsibility required to comply with subsection (a) or (b) to the level that the Agency considers necessary to protect human health and the environment. The

Agency must base this adjusted level on an assessment of the degree and duration of risk associated with owning or operating the facility.

2) In addition, if the Agency determines that there is a significant risk to human health and the environment from non-sudden accidental occurrences resulting from the operations of a facility that is not a surface impoundment, pile, or land treatment facility, the Agency may require the owner or operator of the facility to comply with subsection (b).

3) An owner or operator must furnish to the Agency, within a reasonable time, any information that the Agency requests to aid its determination whether cause exists for these adjustments of level or type of coverage.

BOARD NOTE: The owner or operator may appeal any Agency determination made under this subsection (d) under Section 40 of the Act.

e) Release from the Financial Assurance Obligation for a Facility or a Unit at a Facility

1) After an owner or operator has removed all hazardous secondary material from a facility or a unit at a facility and decontaminated the facility or unit at the facility, the owner or operator may submit a written request that the Agency release it from the obligation of subsections (a) and (b) as they apply to the facility or to the unit. The owner or operator and a qualified Professional Engineer must submit with the request certifications stating that all hazardous secondary materials have been removed from the facility or from a unit at the facility, and that the facility or a unit has been decontaminated in compliance with the owner's or operator's Agency-approved Section 721.243(h) plan.

2) Within 60 days after receiving the complete request and certifications described in subsection (e)(1), the Agency must notify the owner or operator in writing of its determination on the request. The Agency must grant the request only if it determines that the owner or operator has removed all hazardous secondary materials from the facility or from the unit at the facility and that the owner or operator has decontaminated the facility or unit in compliance with its Agency-approved Section 721.243(h) plan.

3) After an affirmative finding by the Agency under subsection (e)(2), the owner or operator is no longer required to maintain liability coverage under Section 721.104(a)(24)(F)(vi) for that facility or unit at the facility that is indicated in the written notice issued by the Agency.

BOARD NOTE: The Board has broken the single sentence of corresponding 40 CFR 261.147(e) into five sentences in three subsections in this subsection (e) for

enhanced clarity. The owner or operator may appeal any Agency determination made under this subsection (e) under Section 40 of the Act.

f) Financial Test for Liability Coverage

1) An owner or operator may comply with this Section by demonstrating that it passes one of the financial tests specified in this subsection (f)(1). To pass a financial test, the owner or operator must meet the criteria of either subsection (f)(1)(A) or (f)(1)(B):

A) Test 1. The owner or operator must have each of the following:

i) Net working capital and tangible net worth each at least six times the amount of liability coverage that the owner or operator needs to demonstrate by this test;

ii) Tangible net worth of at least $10 million; and

iii) Assets in the United States that amount to either at least 90 percent of the owner's or operator's total assets or at least six times the amount of liability coverage that it needs to demonstrate by this test.

B) Test 2. The owner or operator must have each of the following:

i) A current rating for its most recent bond issuance of AAA, AA, A, or BBB, as issued by Standard and Poor's, or Aaa, Aa, A, or Baa, as issued by Moody's;

ii) Tangible net worth of at least $10 million;

iii) Tangible net worth at least six times the amount of liability coverage to be demonstrated by this test; and

iv) Assets in the United States amounting to either at least 90 percent of the owner's or operator's total assets or at least six times the amount of liability coverage that it needs to demonstrate by this test.

2) Definition

"Amount of liability coverage", as used in subsection (f)(1), refers to the annual aggregate amounts for which coverage is required under subsections (a) and (b) and the annual aggregate amounts for which coverage is required under 35 Ill. Adm. Code 724.247(a) and (b) or 725.247(a) and (b).

3) To demonstrate that it meets the financial test in subsection (f)(1), the owner or operator must submit the following three items to the Agency:

A) A letter signed by the owner's or operator's chief financial officer and worded as specified by the Agency under Section 721.251. If an owner or operator is using the financial test to demonstrate both financial assurance, as specified by Section 721.243(e), and liability coverage, as specified by this Section, the owner or operator must submit the letter specified by the Agency under Section 721.251 for financial assurance to cover both forms of financial responsibility; no separate letter is required for liability coverage;

B) A copy of an independent certified public accountant's report on examining the owner's or operator's financial statements for the latest completed fiscal year; and

C) If the chief financial officer's letter prepared under subsection (f)(3)(A) includes financial data that shows that the owner or operator satisfies the test in subsection (f)(1)(A) (Test 1), and either the data in the chief financial officer's letter are different from the data in the audited financial statements required by subsection (f)(3)(B), or the data are different from any other audited financial statement or data filed with the federal Securities and Exchange Commission, then the owner or operator must submit a special report from its independent certified public accountant. The special report must be based on an agreed-upon procedures engagement, in compliance with professional auditing standards. The report must describe the procedures used to compare the data in the chief financial officer's letter (prepared under subsection (f)(3)(A)), the findings of the comparison, and the reasons for any difference.

4) This subsection (f)(4) corresponds with 40 CFR 261.147(f)(3)(iv), a provision relating to extending the deadline for filing the financial documents required by 40 CFR 261.147(f)(3) until as late as 90 days after the effective date of the federal rule. Thus, the latest date for filing the documents was March 29, 2009, which is now past. See 40 CFR 261.147(f)(3) and 73 Fed. Reg. 64668 (Oct. 30, 2008). This statement maintains structural consistency with the corresponding federal provision.

5) After initially submitting items specified in subsection (f)(3), the owner or operator must send updated information to the Agency within 90 days after the close of each succeeding fiscal year. This information must comprise all three items specified in subsection (f)(3).

6) If the owner or operator no longer complies with of subsection (f)(1), it must obtain insurance (subsection (a)(1), a letter of credit (subsection (h), a surety bond (subsection (i), a trust fund (subsection (j), or a guarantee (subsection (g) for the entire amount of required liability coverage required by this Section. Evidence of liability coverage must be submitted to the Agency within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the test requirements.

7) The Agency must disallow use of the financial tests in this subsection (f) on the basis of qualifications in the opinion expressed by the independent certified public accountant in the accountant's report on examining the owner's or operator's financial statements (see subsection (f)(3)(B)) if the Agency determines that those qualifications significantly, adversely affect the owner's or operator's ability to provide its own financial assurance by this mechanism. An adverse opinion or a disclaimer of opinion will be cause for disallowance. The Agency must evaluate all other kinds of qualifications on an individual basis. The owner or operator must provide evidence of insurance for the entire amount of required liability coverage that complies with this Section within 30 days after receiving notice Agency disallowance under this subsection (f)(7).

g) Corporate Guarantee for Liability Coverage

1) Subject to the limitations of subsection (g)(2), an owner or operator may comply with this Section by obtaining a written guarantee ("guarantee"). The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a sister firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements applicable to an owner or operator in subsections (f)(1) through (f)(6). The wording of the guarantee must be identical to the wording specified by the Agency under Section 721.251. A certified copy of the guarantee must accompany the items sent to the Agency that are required by subsection (f)(3). One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, this letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee.

A) The guarantor must pay full satisfaction, up to the limits of coverage, whenever either of the following events has occurred with regard to liability for bodily injury or property damage to

third parties caused by sudden or non-sudden accidental occurrences (or both) that arose from operating facilities covered by the corporate guarantee:

i) The owner or operator has failed to meet a judgment based on a determination of liability; or

ii) The owner or operator has failed to pay an amount agreed to in settlement of claims arising from or alleged to arise from the injury or damage.

B) This subsection (g)(1)(B) is derived from 40 CFR 261.147(g)(1)(ii), which USEPA has marked as "reserved". This statement maintains structural consistency with the corresponding federal regulations.

BOARD NOTE: Any determination by the Agency under this subsection (g)(1)(B) is subject to Section 40 of the Act. This subsection (g)(1)(B) is derived from 40 CFR 264.141(h) and 265.141(h) (2017).

2) Limitations on Guarantee and Documentation Required

A) If both the guarantor and the owner or operator are incorporated in the United States, a guarantee may be used to comply with this Section only if the Attorneys General or Insurance Commissioners of each of the following states have submitted a written statement to the Agency that a guarantee executed as described in this Section is a legally valid and enforceable obligation in that state:

i) The state in which the guarantor is incorporated (if other than the State of Illinois); and

ii) The State of Illinois (as the state in which the facility covered by the guarantee is located).

B) If either the guarantor or the owner or operator is incorporated outside the United States, a guarantee may be used to comply with this Section only if both of the following has occurred:

i) The non-U.S. corporation has identified a registered agent for service of process in the State of Illinois (as the state in which the facility covered by the guarantee is located) and in the state in which it has its principal place of business (if other than the State of Illinois); and

ii) The Attorney General or Insurance Commissioner of the State of Illinois (as the state in which a facility covered by the guarantee is located) and the state in which the guarantor corporation has its principal place of business (if other than the State of Illinois) has submitted a written statement to the Agency that a guarantee executed as described in this Section is a legally valid and enforceable obligation in that state.

C) The facility owner or operator and the guarantor must provide the Agency with all documents that are necessary and adequate to support an Agency determination that the required substantial business relationship exists adequate to support the guarantee.

BOARD NOTE: The Board added documentation to this subsection (g)(2)(C) to ensure that the owner and operator ensures all information necessary for an Agency determination is submitted to the Agency. The information required would include copies of any contracts and other documents that establish the nature, extent, and duration of the business relationship; any statements of competent legal opinion, signed by an attorney duly licensed to practice law in each of the jurisdictions referred to in the applicable of subsection (g)(2)(A) or (g)(2)(B), that would support a conclusion that the business relationship is adequate consideration to support the guarantee in the pertinent jurisdiction; a copy of the documents required by subsection (g)(2)(A)(ii) or (g)(2)(B)(ii); documents that identify the registered agent, as required by subsection (g)(2)(B)(i); and any other documents requested by the Agency that are reasonably necessary to make a determination that a substantial business relationship exists, as defined in subsection (g)(1)(A).

h) Letter of Credit for Liability Coverage

1) An owner or operator may comply with this Section by obtaining an irrevocable standby letter of credit that complies with this subsection (h) and submitting a copy of the letter of credit to the Agency.

2) The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.

3) The wording of the letter of credit must be identical to the wording specified by the Agency under Section 721.251.

4) An owner or operator that uses a letter of credit to comply with Section may also establish a standby trust fund. Under the terms of this letter of credit, all amounts paid under a draft by the trustee of the standby trust fund must be deposited by the issuing institution into the standby trust fund complying with instructions from the trustee. The trustee of the standby trust fund must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

5) The wording of the standby trust fund must be identical to the wording specified by the Agency under Section 721.251.

i) Surety Bond for Liability Coverage

1) An owner or operator may comply with this Section by obtaining a surety bond that complies with this subsection (i) and submitting a copy of the bond to the Agency.

2) The surety company issuing the bond must be among those listed as acceptable sureties on federal bonds in the most recent Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies", on an annual basis under 31 CFR 223.16. Circular 570 is available on the Internet at the following website: http://www.fiscal.treasury.gov/surety-bonds/circular-570.html.

3) The wording of the surety bond must be identical to the wording specified by the Agency under Section 721.251.

4) A surety bond may be used to comply with this Section only if the Attorneys General or Insurance Commissioners of the following states have submitted a written statement to the Agency that a surety bond executed as described in this Section is a legally valid and enforceable obligation in that state:

A) The state in which the surety is incorporated; and

B) The State of Illinois (as the state in which the facility covered by the surety bond is located).

j) Trust Fund for Liability Coverage

1) An owner or operator may comply with this Section by establishing a trust fund that complies with this subsection (j) and submitting an originally signed duplicate of the trust agreement to the Agency.

2) The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

3) The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to comply with this Section. If at any time after the trust fund is created the amount of funds in the trust fund is reduced below the full amount of the liability coverage that the owner or operator must provide, the owner or operator must either add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided, or the owner or operator must obtain other financial assurance that complies with this Section to cover the difference. If the owner or operator must either add sufficient funds or obtain other financial assurance, it must do so before the anniversary date of the establishment of the trust fund. For this subsection, "the full amount of the liability coverage to be provided" means the amount of coverage for sudden or non-sudden occurrences that the owner or operator must provide under this Section, less the amount of financial assurance for liability coverage that the owner or operator has provided by other financial assurance mechanisms to demonstrate financial assurance.

4) The wording of the trust fund must be identical to the wording specified by the Agency under Section 721.251.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.248 Incapacity of Owners or Operators, Guarantors, or Financial Institutions

a) An owner or operator must notify the Agency by certified mail of the commencement of a voluntary or involuntary proceeding pursuant to Title 11 of the United States Code (Bankruptcy) that names the owner or operator as debtor, within 10 days after commencement of the proceeding. A guarantor of a corporate guarantee undertaken to satisfy the requirements of Section 721.243(e) must make such a notification if it is named as debtor, as required under the terms of the corporate guarantee.

b) An owner or operator that satisfies the requirements of Section 721.243 or 721.247 by obtaining a trust fund, surety bond, letter of credit, or insurance policy will be deemed to be without the required financial assurance or liability coverage in the event of bankruptcy of the trustee or issuing institution, or in the event of a suspension or revocation of the authority of the trustee institution to act as trustee

or of the institution issuing the surety bond, letter of credit, or insurance policy to issue such instruments. The owner or operator must establish other financial assurance or liability coverage within 60 days after such an event.

(Source: Added at 34 Ill. Reg. 18611, effective November 12, 2010)

Section 721.249 Use of State-Required Mechanisms

This Section corresponds with 40 CFR 261.149, which pertains to USEPA approval of state-endorsed instruments for providing financial assurance. The Board directs attention to that federal provision without duplicating its requirements here, since it is important to regulated entities in Illinois, although it does not impose requirements necessary as a matter of State law.

(Source: Added at 34 Ill. Reg. 18611, effective November 12, 2010)

Section 721.250 State Assumption of Responsibility

This Section corresponds with 40 CFR 261.150, which pertains to USEPA approval of state financial assurance requirements and the assumption of responsibility by a state. The Board directs attention to that federal provision without duplicating its requirements here, since USEPA approval of the Illinois requirements is important to regulated entities in Illinois, although the federal provision does not impose requirements necessary as a matter of State law.

(Source: Added at 34 Ill. Reg. 18611, effective November 12, 2010)

Section 721.251 Wording of the Instruments

The Agency must promulgate standardized forms for financial assurance instruments based on 40 CFR 261.151 (Wording of the Instruments), incorporated by reference in 35 Ill. Adm. Code 720.111(b), with such changes in wording as are necessary under Illinois law. Any owner or operator required to establish financial assurance under this Subpart H must do so only upon the standardized forms for financial assurance instruments promulgated by the Agency. The Agency must reject any financial assurance instrument that does not comport with the Agency-promulgated standardized forms.

(Source: Added at 34 Ill. Reg. 18611, effective November 12, 2010)

SUBPART I: USE AND MANAGEMENT OF CONTAINERS

Section 721.270 Applicability

This Subpart I applies to hazardous secondary materials excluded under the remanufacturing exclusion at Section 721.104(a)(27) and stored in containers.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.271 Condition of Containers

If a container holding hazardous secondary material is not in good condition (e.g., the container has severe rusting, apparent structural defects, etc.) or if the container begins to leak, the hazardous secondary material must be transferred from this container to a container that is in good condition or managed in some other way that complies with the requirements of this Part.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.272 Compatibility of Hazardous Secondary Materials with Containers

A container holding hazardous secondary material must be made of or lined with materials that will not react with, and are otherwise compatible with, the hazardous secondary material to be stored, so that the ability of the container to contain the material is not impaired.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.273 Management of Containers

a) A container holding hazardous secondary material must always be closed during storage, except when it is necessary to add or remove the hazardous secondary material.

b) A container holding hazardous secondary material must not be opened, handled, or stored in a manner that may rupture the container or cause it to leak.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.275 Secondary Containment

a) Container storage areas must have a secondary containment system that is designed and operated in accordance with subsection (b).

b) A secondary containment system must be designed and operated as follows:

1) A base must underlie the containers which is free of cracks or gaps and is sufficiently impervious to contain leaks, spills, and accumulated precipitation until the collected material is detected and removed;

2) The base must be sloped or the secondary containment system must be otherwise designed and operated to drain and remove liquids resulting from leaks, spills, or precipitation, unless the containers are elevated or are otherwise protected from contact with accumulated liquids;

3) The secondary containment system must have sufficient capacity to contain ten percent of the volume of containers or the volume of the largest container, whichever is greater;

4) Run-on into the secondary containment system must be prevented unless the collection system has sufficient excess capacity in addition to that required in subsection (b)(3) to contain any run-on which might enter the system; and

5) Spilled or leaked material and accumulated precipitation must be removed from the sump or collection area in as timely a manner as is necessary to prevent overflow of the secondary collection system.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.276 Special Requirements for Ignitable or Reactive Hazardous Secondary Material

Containers holding ignitable or reactive hazardous secondary material must be located at least 15 meters (50 feet) from the facility's property line.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.277 Special Requirements for Incompatible Materials

a) Incompatible materials must not be placed in the same container.

b) Hazardous secondary material must not be placed in an unwashed container that previously held an incompatible material.

c) A storage container holding a hazardous secondary material that is incompatible with any other materials stored nearby must be separated from the other materials or protected from them by means of a dike, berm, wall, or other device.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.279 Air Emission Standards

The remanufacturer or other person that stores or treats the hazardous secondary material must manage all hazardous secondary material placed in a container in accordance with the applicable requirements of Subparts AA, BB, and CC.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

SUBPART J: TANK SYSTEMS

Section 721.290 Applicability

a) The requirements of this Subpart J apply to tank systems for storing or treating hazardous secondary material excluded under the remanufacturing exclusion at Section 721.104(a)(27).

b) Tank systems, including sumps, as defined in 35 Ill. Adm. Code 720.110, that serve as part of a secondary containment system to collect or contain releases of hazardous secondary materials are exempted from the requirements in Section 721.293(a).

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.291 Assessment of Existing Tank System's Integrity

a) A tank system must meet the secondary containment requirements of Section 721.293, or the remanufacturer or other person that handles the hazardous secondary material must determine that the tank system is not leaking or is unfit for use. Except as provided in subsection (c), a written assessment reviewed and certified by a qualified Professional Engineer must be kept on file at the remanufacturer's facility or other facility that stores or treats the hazardous secondary material that attests to the tank system's integrity.

b) The qualified Professional Engineer's assessment must determine that the tank system is adequately designed and has sufficient structural strength and compatibility with the materials to be stored or treated, to ensure that the tank system will not collapse, rupture, or fail. At a minimum, this assessment must consider the following:

1) Design standards, if available, according to which the tank system and ancillary equipment were constructed;

2) Hazardous characteristics of the materials that have been and will be handled;

3) Existing corrosion protection measures;

4) Documented age of the tank system, if available (otherwise, an estimate of the age); and

5) Results of a leak test, internal inspection, or other tank system integrity examination such that:

A) For non-enterable underground tanks, the assessment must include a leak test that is capable of taking into account the effects of

temperature variations, tank end deflection, vapor pockets, and high water table effects; and

B) For other than non-enterable underground tanks and for ancillary equipment, this assessment must include either a leak test, as described above, or other integrity examination that is certified by a qualified Professional Engineer that addresses cracks, leaks, corrosion, and erosion.

BOARD NOTE: The practices described in the American Petroleum Institute (API) Publication, Guide for Inspection of Refinery Equipment, Chapter XIII, "Atmospheric and Low-Pressure Storage Tanks", 4th edition, 1981, incorporated by reference in 35 Ill. Adm. Code 720.111, may be used, where applicable, as guidelines in conducting other than a leak test.

c) If, as a result of the assessment conducted in accordance with subsection (a), a tank system is found to be leaking or unfit for use, the remanufacturer or other person that stores or treats the hazardous secondary material must comply with the requirements of Section 721.296.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.293 Containment and Detection of Releases

a) The following must be true of a secondary containment system:

1) The system is designed, installed, and operated to prevent any migration of materials or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and

2) The system is capable of detecting and collecting releases and accumulated liquids until the collected material is removed.

BOARD NOTE: If the collected material is a hazardous waste under this Part, the material is subject to management as a hazardous waste in accordance with all applicable requirements of 35 Ill. Adm. Code 722 through 728. If the collected material is discharged through a point source to waters of the United States, it is subject to the NPDES permit requirement of Section 12(f) of the Environmental Protection Act and 35 Ill. Adm. Code 309. If discharged to a Publicly Owned Treatment Works (POTW), it is subject to the requirements of 35 Ill. Adm. Code 307 and 310. If the collected material is released to the environment, it may be subject to the reporting requirements of 35 Ill. Adm. Code 750.410 and federal 40 CFR 302.6.

b) To meet the requirements of subsection (a), a secondary containment system must fulfill the following requirements:

1) The secondary containment system must be constructed of or lined with materials that are compatible with the materials to be placed in the tank system and must have sufficient strength and thickness to prevent failure owing to pressure gradients (including static head and external hydrological forces), physical contact with the material to which it is exposed, climatic conditions, and the stress of daily operation (including stresses from nearby vehicular traffic);

2) The secondary containment system must be placed on a foundation or base capable of providing support to the secondary containment system, resistance to pressure gradients above and below the system, and capable of preventing failure due to settlement, compression, or uplift;

3) The secondary containment system must be provided with a leak-detection system that is designed and operated so that the system will detect the failure of either the primary or secondary containment structure or the presence of any release of hazardous secondary material or accumulated liquid in the secondary containment system at the earliest practicable time; and

4) The secondary containment system must be sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked material and accumulated precipitation must be removed from the secondary containment system in as timely a manner as is possible, but in no case later than 24 hours after the leak, spill, or accumulation of precipitation occurs, to prevent harm to human health and the environment.

c) Secondary containment for tanks must include one or more of the following devices:

1) A liner (external to the tank);

2) A vault; or

3) A double-walled tank.

d) In addition to the requirements of subsections (a), (b), and (c), secondary containment systems must satisfy the following requirements:

1) An external liner system must fulfill the following requirements:

A) The secondary containment system must be designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;

B) The secondary containment system must be designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. The additional capacity must be sufficient to contain precipitation from a 25-year, 24-hour rainfall event;

C) The secondary containment system must be free of cracks or gaps; and

D) The secondary containment system must be designed and installed to surround the tank completely and to cover all surrounding earth likely to come into contact with the material if the material is released from the tanks (i.e., capable of preventing lateral as well as vertical migration of the material).

2) A vault system must fulfill the following requirements:

A) The vault system must be designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;

B) The vault system must be designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. The additional capacity must be sufficient to contain precipitation from a 25-year, 24-hour rainfall event;

C) The vault system must be constructed with chemical-resistant water stops in place at all joints (if any);

D) The vault system must be provided with an impermeable interior coating or lining that is compatible with the stored material and that will prevent migration of material into the concrete;

E) The vault system must be provided with a means to protect against the formation of and ignition of vapors within the vault, if the material being stored or treated is ignitable or reactive; and

F) The vault system must be provided with an exterior moisture barrier or be otherwise designed or operated to prevent migration

of moisture into the vault if the vault is subject to hydraulic pressure.

3) A double-walled tank must fulfill the following requirements:

A) The double-walled tank must be designed as an integral structure (i.e., an inner tank completely enveloped within an outer shell) so that any release from the inner tank is contained by the outer shell;

B) The double-walled tank must be protected, if constructed of metal, from both corrosion of the primary tank interior and of the external surface of the outer shell; and

C) The double-walled tank must be provided with a built-in continuous leak detection system capable of detecting a release at the earliest practicable time, but in no case later than 24 hours after the release occurs.

BOARD NOTE: The provisions outlined in the Steel Tank Institute's (STI) "Standard for Dual Wall Underground Steel Storage Tanks", incorporated by reference in 35 Ill. Adm. Code 720.111, may be used as guidelines for aspects of the design of underground steel double-walled tanks.

e) This subsection (e) corresponds with 40 CFR 261.194(e), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal regulations.

f) Ancillary equipment must be provided with secondary containment (e.g., trench, jacketing, double-walled piping, etc.) that meets the requirements of subsections (a) and (b), except for the following equipment:

1) Aboveground piping (exclusive of flanges, joints, valves, and other connections) that are visually inspected for leaks on a daily basis;

2) Welded flanges, welded joints, and welded connections that are visually inspected for leaks on a daily basis;

3) Seal-less or magnetic coupling pumps and seal-less valves that are visually inspected for leaks on a daily basis; and

4) Pressurized aboveground piping systems with automatic shut-off devices (e.g., excess flow check valves, flow metering shutdown devices, loss of pressure actuated shut-off devices, etc.) that are visually inspected for leaks on a daily basis.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.294 General Operating Requirements

a) Hazardous secondary materials or treatment reagents must not be placed in a tank system if the materials or reagents could cause the tank, its ancillary equipment, or the containment system to rupture, leak, corrode, or otherwise fail.

b) The remanufacturer or other person that stores or treats the hazardous secondary material must use appropriate controls and practices to prevent spills and overflows from tank or containment systems. These include, at a minimum, the following controls and practices:

1) Spill prevention controls (e.g., check valves, dry disconnect couplings, etc.);

2) Overfill prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and

3) Maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation.

c) The remanufacturer or other person that stores or treats the hazardous secondary material must comply with the requirements of Section 721.296 if a leak or spill occurs in the tank system.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.296 Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems

A tank system or secondary containment system from which there has been a leak or spill, or that is unfit for use, must be removed from service immediately, and the remanufacturer or other person that stores or treats the hazardous secondary material must satisfy the following requirements:

a) Cessation of use; prevent flow or addition of materials. The remanufacturer or other person that stores or treats the hazardous secondary material must immediately stop the flow of hazardous secondary material into the tank system or secondary containment system and inspect the system to determine the cause of the release.

b) Removal of material from tank system or secondary containment system.

1) If the release was from the tank system, the remanufacturer or other person that stores or treats the hazardous secondary material must, within

24 hours after detection of the leak or, if the remanufacturer or other person that stores or treats the hazardous secondary material demonstrates that it is not possible, at the earliest practicable time, remove as much of the material as is necessary to prevent further release of hazardous secondary material to the environment and to allow inspection and repair of the tank system to be performed.

2) If the material released was to a secondary containment system, all released materials must be removed within 24 hours or in as timely a manner as is possible to prevent harm to human health and the environment.

c) Containment of visible releases to the environment. The remanufacturer or other person that stores or treats the hazardous secondary material must immediately conduct a visual inspection of the release and, based upon that inspection:

1) The remanufacturer must prevent further migration of the leak or spill to soils or surface water; and

2) The remanufacturer must remove, and properly dispose of, any visible contamination of the soil or surface water.

d) Notifications, reports.

1) Any release to the environment, except as provided in subsection (d)(2), must be reported to the Agency and the Administrator of USEPA Region 5 within 24 hours of its detection. If the release has been reported pursuant to 40 CFR 302, that report will satisfy the requirement to notify USEPA, but the release must still be reported to the Agency.

2) A leak or spill of hazardous secondary material is exempted from the requirements of this subsection (d) if the following is true of the leak or spill:

A) The leak or spill is less than or equal to a quantity of one pound; and

B) The leak or spill is immediately contained and cleaned up.

3) Within 30 days after detection of a release to the environment, a report containing the following information must be submitted to the Agency and the Administrator of USEPA Region 5:

A) The likely route of migration of the release;

B) The characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate);

C) The results of any monitoring or sampling conducted in connection with the release (if available). If sampling or monitoring data relating to the release are not available within 30 days, these data must be submitted to the Agency and the Administrator of USEPA Region 5 as soon as the results become available;

D) The proximity to downgradient drinking water, surface water, and populated areas; and

E) A description of response actions taken or planned.

e) Provision of secondary containment, repair, or closure.

1) Unless the remanufacturer or other person that stores or treats the hazardous secondary material satisfies the requirements of subsections (e)(2) through (e)(4), the tank system must cease to operate under the remanufacturing exclusion at Section 721.104(a)(27).

2) If the cause of the release was a spill that has not damaged the integrity of the tank system, the remanufacturer or other person that stores or treats the hazardous secondary material may return the tank system to service as soon as the released material is removed and repairs, if necessary, are made.

3) If the cause of the release was a leak from the primary tank system into the secondary containment system, the primary tank system must be repaired prior to returning the tank system to service.

4) If the source of the release was a leak to the environment from a component of a tank system without secondary containment, the remanufacturer or other person that stores or treats the hazardous secondary material must provide the component of the tank system from which the leak occurred with secondary containment that satisfies the requirements of Section 721.293 before it can be returned to service, unless the source of the leak is an aboveground portion of a tank system that can be inspected visually. If the source is an aboveground component that can be inspected visually, the component must be repaired and may be returned to service without secondary containment as long as the requirements of subsection (f) are satisfied. Additionally, if a leak has occurred in any portion of a tank system component that is not readily accessible for visual inspection (e.g., the bottom of an inground or on-ground tank), the entire component must be provided with secondary

containment in accordance with Section 721.193 prior to being returned to use.

f) Certification of major repairs. If the remanufacturer or other person that stores or treats the hazardous secondary material has repaired a tank system in accordance with subsection (e), and the repair has been extensive (e.g., installation of an internal liner, repair of a ruptured primary containment or secondary containment vessel, etc.), the tank system must not be returned to service, unless the remanufacturer or other person that stores or treats the hazardous secondary material has obtained a certification by a qualified Professional Engineer that the repaired system is capable of handling hazardous secondary materials without release for the intended life of the system. This certification must be kept on file at the facility and maintained until closure of the facility.

BOARD NOTE: USEPA stated in note 1 appended to corresponding 40 CFR 261.196 that the Regional Administrator may, on the basis of any information received that there is or has been a release of hazardous secondary material or hazardous constituents into the environment, issue an order under RCRA section 7003(a) (42 USC 6973(a)) requiring corrective action or such other response as deemed necessary to protect human health or the environment. USEPA stated in note 2 appended to corresponding 40 CFR 261.196 that 40 CFR 302 may require the owner or operator to notify the National Response Center of certain releases.

(Source: Amended at 43 Ill. Reg. 5884, May 2, 2019)

Section 721.297 Termination of Remanufacturing Exclusion

Hazardous secondary material stored in units more than 90 days after the unit ceases to operate under the remanufacturing exclusion at Section 721.104(a)(27) or otherwise ceases to be operated for manufacturing, or for storage of a product or a raw material, then becomes subject to regulation as hazardous waste under 35 Ill. Adm. Code 702, 703, 705, and 721 through 728, as applicable.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.298 Special Requirements for Ignitable or Reactive Materials

a) Ignitable or reactive material must not be placed in a tank system, unless the material is stored or treated in such a way that it is protected from any material or conditions that may cause the material to ignite or react.

b) The remanufacturer or other person that stores or treats hazardous secondary material that is ignitable or reactive must store or treat the hazardous secondary material in a tank system that is in compliance with the requirements for the maintenance of protective distances between the material management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in Tables 2-1 through 2-6 of the National Fire Protection

Association's "Flammable and Combustible Liquids Code", incorporated by reference in 35 Ill. Adm. Code 720.111.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.299 Special Requirements for Incompatible Materials

a) Incompatible materials must not be placed together in the same tank system.

b) Hazardous secondary material must not be placed in a tank system that has not been decontaminated and that previously held an incompatible material.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.300 Air Emission Standards

The remanufacturer or other person that stores or treats the hazardous secondary material must manage all hazardous secondary material placed in a tank in accordance with the applicable requirements of Subparts AA, BB, and CC.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

SUBPART M: EMERGENCY PREPAREDNESS AND RESPONSE FOR MANAGEMENT OF EXCLUDED HAZARDOUS SECONDARY MATERIALS

Section 721.500 Applicability

The requirements of Subpart M apply to (1) those areas of an entity managing hazardous secondary materials excluded under Section 721.104(a)(23) or (a)(24) where such~~hazardous secondary~~ materials are generated or accumulated on site, ~~,~~ and (2) facilities regulated under the standards in Section 726 subpart Q that receive ignitable spent refrigerant from off-site and that are not transfer facilities that store refrigerants for less than ten (10) days.

a) A generator of hazardous secondary material, or an intermediate or reclamation facility operating, that accumulates 6,000 kg or less of hazardous secondary material at any time must comply with Sections 721.510 and 721.511.

b) A generator of hazardous secondary material, or an intermediate or reclamation facility that accumulates more than 6,000 kg of hazardous secondary material at any time must comply with Sections 721.510 and 721.520.

c) Facilities receiving refrigerant from off-site under Section 726 subpart Q that are not transfer facilities that store the refrigerants for less than ten (10) days must comply with Sections 721.510 and 721.520.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.510 Preparedness and Prevention

a) Maintaining and Operating the Facility. Facilities generating or accumulating hazardous secondary material must be maintained and operated to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous secondary materials or hazardous secondary material constituents to air, soil, or surface water that could threaten human health or the environment.

b) Required Equipment. All facilities generating or accumulating hazardous secondary material must be equipped with the following, unless none of the hazards posed by hazardous secondary material handled at the facility could require a particular kind of equipment specified below:

1) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

2) A device, like a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams;

3) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, like those using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and

4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

c) Testing and Maintenance of Equipment. The owner or operator must test and maintain all required facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment as necessary to assure its proper operation in time of emergency.

d) Access to Communications or Alarm System

1) Whenever hazardous secondary material is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless the device is not required under subsection (b).

2) If there is ever just one employee on the premises while the facility is operating, the employee must have immediate access to a device, like a telephone (immediately available at the scene of operation) or a hand-held

two-way radio, capable of summoning external emergency assistance, unless the device is not required under subsection (b).

e) Required Aisle Space. The hazardous secondary material generator or intermediate or reclamation facility must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

f) Arrangements with Local Authorities

1) The hazardous secondary material generator or an intermediate or reclamation facility must attempt to make the following arrangements, as appropriate for the type of waste handled at its facility and the potential need for the services of these organizations:

A) Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of hazardous secondary material handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes;

B) If more than one police and fire department might respond to an emergency, agreements designating primary emergency authority to a specific police department and a specific fire department, and agreements with any others to provide support to the primary emergency authority;

C) Agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and

D) Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses that could result from fires, explosions, or releases at the facility.

2) When state or local authorities decline to enter into the arrangements required by this subsection (f), the hazardous secondary material generator or an intermediate or reclamation facility must document the refusal in the operating record.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.511 Emergency Procedures for Facilities Generating or Accumulating 6,000 kg or Less of Hazardous Secondary Material

A generator or an intermediate or reclamation facility that generates or accumulates 6,000 kg or less of hazardous secondary material must comply with the following requirements:

a) At all times there must be at least one employee either on the premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures specified in subsection (d). This employee is the emergency coordinator.

b) The generator or intermediate or reclamation facility must post the following information next to the telephone:

1) The name and telephone number of the emergency coordinator;

2) Location of fire extinguishers and spill control material, and, if present, fire alarm; and

3) The telephone number of the fire department, unless the facility has a direct alarm.

c) The generator or an intermediate or reclamation facility must ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies;

d) The emergency coordinator or their designee must respond to any emergencies that arise. The applicable responses are as follows:

1) In the event of a fire, call the fire department or attempt to extinguish it using a fire extinguisher;

2) In the event of a spill, contain the flow of hazardous waste to the extent possible and, as soon as is practicable, clean up the hazardous waste and any contaminated materials or soil;

3) In the event of a fire, explosion, or other release that could threaten human health outside the facility or when the generator or an intermediate or reclamation facility has knowledge that a spill has reached surface water, the generator or an intermediate or reclamation facility must immediately notify the National Response Center (using their 24-hour toll free number 800-424-8802). The report must include the following information:

A) The name, address, and USEPA identification number of the facility;

B) The date, time, and type of incident (e.g., spill or fire);

C) The quantity and type of hazardous waste involved in the incident;

D) The extent of injuries, if any; and

E) The estimated quantity and disposition of recovered materials, if any.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.520 Contingency Planning and Emergency Procedures for Facilities Generating or Accumulating More Than 6,000 kg of Hazardous Secondary Material or Receiving Ignitable Spent Refrigerants

A generator or an intermediate or reclamation facility that generates or accumulates more than 6,000 kg of hazardous secondary material, or a facility receiving refrigerant from off-site under Section 726, subpart Q, that is not a transfer facility that stores the refrigerants for less than ten (10) days must comply with the following requirements: ~~A generator or an intermediate or reclamation facility that generates or accumulates more than 6,000 kg of hazardous secondary material must comply with the following requirements:~~

a) Purpose of and Implementing Contingency Plan

1) Each generator or an intermediate or reclamation facility that accumulates more than 6,000 kg of hazardous secondary material must have a contingency plan for its facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous secondary material or hazardous secondary material constituents to air, soil, or surface water.

2) The provisions of the contingency plan must be carried out immediately whenever there is a fire, explosion, or release of hazardous secondary material or hazardous secondary material constituents that could threaten human health or the environment.

b) Content of Contingency Plan

1) The contingency plan must describe the actions facility personnel must take to comply with subsections (a) and (f) in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous secondary material or hazardous secondary material constituents to air, soil, or surface water at the facility.

2) If the generator or an intermediate or reclamation facility accumulating more than 6,000 kg of hazardous secondary material has already prepared

a Spill Prevention, Control, and Countermeasures (SPCC) Plan under 40 CFR 112, or some other emergency or contingency plan, the facility needs only amend that plan to incorporate hazardous secondary material management provisions that are sufficient to comply with this Part. The hazardous secondary material generator or an intermediate or reclamation facility may develop one contingency plan that meets all regulatory requirements. When modifications are made to non-RCRA provisions in an integrated contingency plan, the changes do not trigger the need for a RCRA permit modification.

BOARD NOTE: USEPA has recommended that the contingency plan be based on the National Response Team's Integrated Contingency Plan Guidance ("One Plan").

3) The contingency plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services, under 35 Ill. Adm. Code 722.510(f).

4) The contingency plan must list names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator (see subsection (e)), and this list must be kept up to date. If more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates.

5) The contingency plan must include a list of all emergency equipment at the facility (like fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), if this equipment is required. This list must be kept up to date. In addition, the plan must include the location and a physical description of each emergency equipment item on the list, and a brief outline of its capabilities.

6) The contingency plan must include an evacuation plan for facility personnel if there is a possibility that evacuation could be necessary. This evacuation plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes (if the primary routes could be blocked by releases of hazardous secondary material or fires).

c) Copies of Contingency Plan. The facility owner or operator must do as follows with the contingency plan and all revisions to the plan:

1) Maintain a copy at the facility; and

2) Submit a copy to every local police department, fire department, hospital, and State and local emergency response team that may be called upon to provide emergency services.

d) Amendment of Contingency Plan. The facility owner or operator must review and immediately amend its contingency plan, if necessary, whenever any of the following occurs:

1) Applicable regulations are revised;

2) The plan fails in an emergency;

3) The facility changes—in its design, construction, operation, maintenance, or other circumstances—in a way that materially increases the potential for fires, explosions, or releases of hazardous secondary material or hazardous secondary material constituents, or the facility changes the response necessary in an emergency;

4) The list of emergency coordinators changes; or

5) The list of emergency equipment changes.

e) Emergency Coordinator. At all times, there must be at least one employee, either on the facility premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time), with the responsibility for coordinating all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of hazardous secondary materials handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan. The emergency coordinator's responsibilities are more fully spelled out in subsection (f). Applicable responsibilities for the emergency coordinator vary, depending on factors like type and variety of hazardous secondary materials handled by the facility, and type and complexity of the facility.

f) Emergency Procedures

1) Whenever there is an imminent or actual emergency, the emergency coordinator (or his designee when the emergency coordinator is on call) must immediately:

A) Activate internal facility alarms or communication systems, when applicable, to notify all facility personnel; and

B) Notify appropriate State or local agencies with designated response roles if their help is needed.

2) Whenever there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analysis.

3) Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-offs from water or chemical agents used to control fire and heat-induced explosions).

4) If the emergency coordinator determines that the facility has had a release, fire, or explosion that could threaten human health, or the environment, outside the facility, the emergency coordinator must report its findings as follows:

A) If the emergency coordinator's assessment indicates that evacuating local areas may be advisable, the emergency coordinator must immediately notify appropriate local authorities. The emergency coordinator must be available to help appropriate officials decide whether local areas should be evacuated; and

B) The emergency coordinator must immediately notify either the government official designated as the on-scene coordinator for that geographical area, or the National Response Center (using their 24-hour toll free number 800-424-8802). The report must include the following information:

i) The name and telephone number of the reporter;

ii) The name and address of facility;

iii) The time and type of incident (e.g., release, fire);

iv) The name and quantity of materials involved, to the extent known;

v) The extent of injuries, if any; and

vi) The possible hazards to human health, or the environment, outside the facility.

5) During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous secondary material at the facility. These measures must include, when applicable, stopping processes and operations, collecting, and containing released material, and removing or isolating containers.

6) If the facility stops operations in response to a fire, explosion or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

7) Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered secondary material, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. Unless the hazardous secondary material generator can demonstrate, in compliance with Section 721.103(c) or (d), that the recovered material is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and must manage the recovered material in compliance with all applicable requirements of 35 Ill. Adm. Code 722, 723, and 725.

8) The emergency coordinator must ensure that the following has occurred in the affected areas of the facility:

A) Any secondary material that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and

B) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

9) The hazardous secondary material generator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the emergency coordinator must submit a written report on the incident to the Regional Administrator. The report must include the following information:

A) The name, address, and telephone number of the hazardous secondary material generator;

B) The name, address, and telephone number of the facility;

C) The date, time, and type of incident (e.g., fire, explosion, etc.);

D) The name and quantity of materials involved;

E) The extent of injuries, if any;

F) An assessment of actual or potential hazards to human health or the environment, when this is applicable; and

G) The estimated quantity and disposition of recovered material that resulted from the incident.

g) Personnel Training. All employees must be thoroughly familiar with proper waste handling and emergency procedures relevant to their responsibilities during normal facility operations and emergencies.

SUBPART AA: AIR EMISSION STANDARDS FOR PROCESS VENTS

Section 721.930 Applicability

The regulations in this Subpart AA apply to process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or stream stripping operations that manage hazardous secondary materials excluded under the remanufacturing exclusion at Section 721.104(a)(27) with organic concentrations of at least 10 ppmw (parts per million by weight), unless the process vents are equipped with operating air emission controls in accordance with the requirements of an applicable federal Clean Air Act regulation codified under 40 CFR 60, 61, or 63.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.931 Definitions

As used in this Subpart AA, all terms not defined in this Section will have the meaning given them in section 1004 of the Resource Conservation and Recovery Act, incorporated by reference in 35 Ill. Adm. Code 720.111, and 35 Ill. Adm. Code 720 through 726.

"Air stripping operation" is a desorption operation employed to transfer one or more volatile components from a liquid mixture into a gas (air) either with or without the application of heat to the liquid. Packed towers, spray towers, and bubble-cap, sieve, or valve-type plate towers are among the process configurations used for contacting the air and a liquid.

“Bottoms receiver” means a container or tank used to receive and collect the heavier bottoms fractions of the distillation feed stream that remain in the liquid phase.

“Closed-vent system” means a system that is not open to the atmosphere and that is composed of piping, connections, and, if necessary, flow-inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device.

“Condenser” means a heat-transfer device that reduces a thermodynamic fluid from its vapor phase to its liquid phase.

“Connector” means flanged, screwed, welded, or other joined fittings used to connect two pipelines or a pipeline and a piece of equipment. For the purposes of reporting and recordkeeping, connector means flanged fittings that are not covered by insulation or other materials that prevent location of the fittings.

“Continuous recorder” means a data-recording device recording an instantaneous data value at least once every 15 minutes.

“Control device” means an enclosed combustion device, vapor recovery system, or flare. Any device the primary function of which is the recovery or capture of solvents or other organics for use, reuse, or sale (e.g., a primary condenser on a solvent recovery unit) is not a control device.

“Control device shutdown” means the cessation of operation of a control device for any purpose.

“Distillate receiver” means a container or tank used to receive and collect liquid material (condensed) from the overhead condenser of a distillation unit and from which the condensed liquid is pumped to larger storage tanks or other process units.

“Distillation operation” means an operation, either batch or continuous, separating one or more feed streams into two or more exit streams, each exit stream having component concentrations different from those in the feed streams. The separation is achieved by the redistribution of the components between the liquid and vapor phase as they approach equilibrium within the distillation unit.

“Double block and bleed system” means two block valves connected in series with a bleed valve or line that can vent the line between the two block valves.

“Equipment” means each valve, pump, compressor, pressure relief device, sampling connection system, open-ended valve or line, or flange or other connector, and any control devices or systems required by this Subpart AA.

“Flame zone” means the portion of the combustion chamber in a boiler occupied by the flame envelope.

“Flow indicator” means a device that indicates whether gas flow is present in a vent stream.

“First attempt at repair” means to take rapid action for the purpose of stopping or reducing leakage of organic material to the atmosphere using best practices.

“Fractionation operation” means a distillation operation or method used to separate a mixture of several volatile components of different boiling points in successive stages, each stage removing from the mixture some proportion of one of the components.

“Hazardous secondary material management unit shutdown” means a work practice or operational procedure that stops operation of a hazardous secondary material management unit or part of a hazardous secondary material management unit. An unscheduled work practice or operational procedure that stops operation of a hazardous secondary material management unit or part of a hazardous secondary material management unit for less than 24 hours is not a hazardous secondary material management unit shutdown. The use of spare equipment and technically feasible bypassing of equipment without stopping operation are not hazardous secondary material management unit shutdowns.

“Hot well” means a container for collecting condensate as in a steam condenser serving a vacuum-jet or steam-jet ejector.

“In gas/vapor service” means that the piece of equipment contains or contacts a hazardous secondary material stream that is in the gaseous state at operating conditions.

“In heavy liquid service” means that the piece of equipment is not in gas/vapor service or in light liquid service.

“In light liquid service” means that the piece of equipment contains or contacts a material stream where the vapor pressure of one or more of the organic components in the stream is greater than 0.3 kilopascals (kPa) at 20 °C, the total concentration of the pure organic components having a vapor pressure greater than 0.3 kPa at 20 °C is equal to or greater than 20 percent by weight, and the fluid is a liquid at operating conditions.

“In situ sampling systems” means non-extractive samplers or in-line samplers.

“In vacuum service” means that equipment is operating at an internal pressure that is at least 5 kPa below ambient pressure.

“Malfunction” means any sudden failure of a control device or a hazardous secondary material management unit or failure of a hazardous secondary material management unit to operate in a normal or usual manner, so that organic emissions are increased.

“Open-ended valve or line” means any valve, except pressure relief valves, having one side of the valve seat in contact with hazardous secondary material and one side open to the atmosphere, either directly or through open piping.

“Pressure release” means the emission of materials resulting from the system pressure being greater than the set pressure of the pressure relief device.

“Process heater” means a device that transfers heat liberated by burning fuel to fluids contained in tubes, including all fluids except water that are heated to produce steam.

“Process vent” means any open-ended pipe or stack that is vented to the atmosphere either directly, through a vacuum-producing system, or through a tank (e.g., distillate receiver, condenser, bottoms receiver, surge control tank, separator tank, or hot well) associated with hazardous secondary material distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations.

“Repaired” means that equipment is adjusted, or otherwise altered, to eliminate a leak.

“Sampling connection system” means an assembly of equipment within a process or material management unit used during periods of representative operation to take samples of the process or material fluid. Equipment used to take non-routine grab samples is not considered a sampling connection system.

“Sensor” means a device that measures a physical quantity or the change in a physical quantity, such as temperature, pressure, flow rate, pH, or liquid level.

“Separator tank” means a device used for separation of two immiscible liquids.

“Solvent extraction operation” means an operation or method of separation in which a solid or solution is contacted with a liquid solvent (the two being mutually insoluble) to preferentially dissolve and transfer one or more components into the solvent.

“Startup” means the setting in operation of a hazardous secondary material management unit or control device for any purpose.

"Steam stripping operation" means a distillation operation in which vaporization of the volatile constituents of a liquid mixture takes place by the introduction of steam directly into the charge.

"Surge control tank" means a large-sized pipe or storage reservoir sufficient to contain the surging liquid discharge of the process tank to which it is connected.

"Thin-film evaporation operation" means a distillation operation that employs a heating surface consisting of a large diameter tube that may be either straight or tapered, horizontal or vertical. Liquid is spread on the tube wall by a rotating assembly of blades that maintain a close clearance from the wall or actually ride on the film of liquid on the wall.

"Vapor incinerator" means any enclosed combustion device that is used for destroying organic compounds and does not extract energy in the form of steam or process heat.

"Vented" means discharged through an opening, typically an open-ended pipe or stack, allowing the passage of a stream of liquids, gases, or fumes into the atmosphere. The passage of liquids, gases, or fumes is caused by mechanical means such as compressors or vacuum-producing systems or by process-related means such as evaporation produced by heating and not caused by tank loading and unloading (working losses) or by natural means such as diurnal temperature changes.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.932 Standards: Process Vents

a) The remanufacturer or other person that stores or treats hazardous secondary materials in hazardous secondary material management units with process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations managing hazardous secondary material with organic concentrations of at least 10 ppmw must either:

1) Reduce total organic emissions from all affected process vents at the facility below 1.4 kg/h (3 lb/h) and 2.8 Mg/yr (3.1 tons/yr); or

2) Reduce, by use of a control device, total organic emissions from all affected process vents at the facility by 95 weight percent.

b) If the remanufacturer or other person that stores or treats the hazardous secondary material installs a closed-vent system and control device to comply with the provisions of subsection (a) the closed-vent system and control device must meet the requirements of Section 721.933.

c) Determinations of vent emissions and emission reductions or total organic compound concentrations achieved by add-on control devices may be based on engineering calculations or performance tests. If performance tests are used to determine vent emissions, emission reductions, or total organic compound concentrations achieved by add-on control devices, the performance tests must conform with the requirements of Section 721.934(c).

d) When a remanufacturer or other person that stores or treats the hazardous secondary material and the Agency do not agree on determinations of vent emissions or emission reductions or total organic compound concentrations achieved by add-on control devices based on engineering calculations, the procedures in Section 721.934(c) must be used to resolve the disagreement. The Agency must state any disagreement on a determination of vent emissions or emission reductions in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.933 Standards: Closed-Vent Systems and Control Devices

a) Applicability

1) The remanufacturer or other person that stores or treats the hazardous secondary materials in hazardous secondary material management units using closed-vent systems and control devices used to comply with provisions of this Part must comply with the provisions of this Section.

2) This subsection (a)(2) corresponds with 40 CFR 261.1033, which USEPA has marked "reserved". This statement maintains structural consistency with the federal regulations.

b) A control device involving vapor recovery (e.g., a condenser or adsorber) must be designed and operated to recover the organic vapors vented to it with an efficiency of 95 weight percent or greater unless the total organic emission limits of Section 721.932(a)(1) for all affected process vents can be attained at an efficiency less than 95 weight percent.

c) An enclosed combustion device (e.g., a vapor incinerator, boiler, or process heater) must be designed and operated to reduce the organic emissions vented to it by 95 weight percent or greater; to achieve a total organic compound concentration of 20 ppmv, expressed as the sum of the actual compounds, not carbon equivalents, on a dry basis corrected to three percent oxygen; or to provide a minimum residence time of 0.50 seconds at a minimum temperature of 760 °C. If a boiler or process heater is used as the control device, then the vent stream must be introduced into the flame zone of the boiler or process heater.

d) Flares

1) A flare must be designed for and operated with no visible emissions, as determined by the methods specified in subsection (e)(1), except for periods not to exceed a total of five minutes during any two consecutive hours.

2) The owner or operator must operate a flare with a flame present at all times, as determined by the methods specified in subsection (f)(2)(C).

3) A flare must be used only if the net heating value of the gas being combusted is 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam-assisted or air-assisted; or if the net heating value of the gas being combusted is 7.45 MJ/scm (200 Btu/scf) or greater if the flare is non-assisted. The net heating value of the gas being combusted must be determined by the methods specified in subsection (e)(2).

4) Exit Velocity

A) A steam-assisted or unassisted flare must be designed for and operated with an exit velocity, as determined by the methods specified in subsection (e)(3), less than 18.3 m/s (60 ft/s), except as provided in subsections (d)(4)(B) and (C).

B) A steam-assisted or non-assisted flare designed for and operated with an exit velocity, as determined by the methods specified in subsection (e)(3), equal to or greater than 18.3 m/s (60 ft/s) but less than 122 m/s (400 ft/s) is allowed if the net heating value of the gas being combusted is greater than 37.3 MJ/scm (1,000 Btu/scf).

C) A steam-assisted or non-assisted flare designed for and operated with an exit velocity, as determined by the methods specified in subsection (e)(3), less than the velocity, V_{max}, as determined by the method specified in subsection (e)(4), and less than 122 m/s (400 ft/s) is allowed.

5) An air-assisted flare must be designed and operated with an exit velocity less than the velocity, V_{max}, as determined by the method specified in subsection (e)(5).

6) A flare used to comply with this Section must be steam-assisted, air-assisted, or unassisted.

e) Compliance Determination and Equations

1) Reference Method 22 (Visual Determination of Fugitive Emissions from Material Sources and Smoke Emissions from Flares) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, must be used to determine the compliance of a flare with the visible emission provisions of this Subpart AA. The observation period is two hours and must be used according to Method 22.

2) The net heating value of the gas being combusted in a flare must be calculated using the following equation:

$$H_T = K\left[\sum_{i=1}^{n} C_i H_i\right]$$

Where:

H_T = Net heating value of the sample, MJ/scm; if the net enthalpy per mole of offgas is based on combustion at 25°C and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mol is 20°C

K = Constant, 1.74×10^{-7} (1/ppm) (g mol/scm) (MJ/kcal) if standard temperature for (g mol/scm) is 20°C

C_i = Concentration of sample component i in ppm on a wet basis, as measured for organics by Reference Method 18 (Measurement of Gaseous Organic Compound Emissions by Gas Chromatography) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, and measured for hydrogen and carbon monoxide by ASTM D 1946-90, incorporated by reference in Section 720.111

H_i = Net heat of combustion of sample component i, kcal/g mol at 25°C and 760 mm Hg. The heats of combustion may be determined using ASTM D 2382–83, incorporated by reference in Section 720.111, if published values are not available or cannot be calculated.

3) The actual exit velocity of a flare must be determined by dividing the volumetric flow rate (in units of standard temperature and pressure), as determined by Reference Methods 2 (Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)), 2A (Direct Measurement of Gas Volume through Pipes and Small Ducts), 2C (Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)), or 2D (Measurement of Gas Volume Flow Rates in Small Pipes and Ducts) in appendix A to 40 CFR 60 (Test Methods), each incorporated by reference in 35 Ill. Adm. Code 720.111, as appropriate, by the unobstructed (free) cross-sectional area of the flare tip.

4) The maximum allowed velocity in m/s, V_{max}, for a flare complying with subsection (d)(4)(C) must be determined by the following equation:

$$\log_{10}(V_{max}) = \frac{(H_T + 28.8)}{31.7}$$

Where:

H_T = The net heating value as determined in subsection (e)(2)

5) The maximum allowed velocity in m/s, V_{max}, for an air-assisted flare must be determined by the following equation:

$$V_{max} = 8.706 + 0.7084\ (H_T)$$

Where:

H_T = The net heating value as determined in subsection (e)(2)

f) The remanufacturer or other person that stores or treats the hazardous secondary material must monitor and inspect each control device required to comply with this section to ensure proper operation and maintenance of the control device by implementing the following requirements:

1) Install, calibrate, maintain, and operate according to the manufacturer's specifications a flow indicator that provides a record of vent stream flow from each affected process vent to the control device at least once every hour. The flow indicator sensor must be installed in the vent stream at the nearest feasible point to the control device inlet but before the point at which the vent streams are combined.

2) Install, calibrate, maintain, and operate according to the manufacturer's specifications a device to continuously monitor control device operation as specified below:

A) For a thermal vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of ±1 percent of the temperature being monitored in °C or ±0.5°C, whichever is greater. The temperature sensor must be installed at a location in the combustion chamber downstream of the combustion zone.

B) For a catalytic vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature at two locations and have an accuracy of ±1 percent of the temperature being monitored in °C or ±0.5°C,

whichever is greater. One temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed inlet and a second temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed outlet.

C) For a flare, a heat sensing monitoring device equipped with a continuous recorder that indicates the continuous ignition of the pilot flame.

D) For a boiler or process heater having a design heat input capacity less than 44 MW, a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of ±1 percent of the temperature being monitored in °C or ±0.5°C, whichever is greater. The temperature sensor must be installed at a location in the furnace downstream of the combustion zone.

E) For a boiler or process heater having a design heat input capacity greater than or equal to 44 MW, a monitoring device equipped with a continuous recorder to measure a parameter(s) that indicates good combustion operating practices are being used.

F) For a condenser, either:

i) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds in the exhaust vent stream from the condenser; or

ii) A temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature with an accuracy of ±1 percent of the temperature being monitored in °C or ±0.5 °C, whichever is greater. The temperature sensor must be installed at a location in the exhaust vent stream from the condenser exit (i.e., product side).

G) For a carbon adsorption system that regenerates the carbon bed directly in the control device like a fixed-bed carbon adsorber, either:

i) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds in the exhaust vent stream from the carbon bed; or

ii) A monitoring device equipped with a continuous recorder to measure a parameter that indicates the carbon bed is regenerated on a regular, predetermined time cycle.

3) Inspect the readings from each monitoring device required by subsections (f)(1) and (f)(2) at least once each operating day to check control device operation and, if necessary, immediately implement the corrective measures necessary to ensure the control device operates in compliance with this Section.

g) A remanufacturer or other person that stores or treats hazardous secondary material in a hazardous secondary material management unit using a carbon adsorption system like a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device must replace the existing carbon in the control device with fresh carbon at a regular, predetermined time interval that is no longer than the carbon service life established as a requirement of Section 721.935(b)(4)(C)(vi).

h) A remanufacturer or other person that stores or treats hazardous secondary material in a hazardous secondary material management unit using a carbon adsorption system like a carbon canister that does not regenerate the carbon bed directly onsite in the control device must replace the existing carbon in the control device with fresh carbon on a regular basis by using one of the following procedures:

1) Monitor the concentration level of the organic compounds in the exhaust vent stream from the carbon adsorption system on a regular schedule and replace the existing carbon with fresh carbon immediately when carbon breakthrough is indicated. The monitoring frequency must be daily or at an interval no greater than 20 percent of the time required to consume the total carbon working capacity established as a requirement of Section 721.935(b)(4)(C)(vii), whichever is longer.

2) Replace the existing carbon with fresh carbon at a regular, predetermined time interval that is less than the design carbon replacement interval established as a requirement of Section 721.935(b)(4)(C)(vii).

i) An alternative operational or process parameter may be monitored if it can be demonstrated that another parameter will ensure that the control device is operated in conformance with these standards and the control device's design specifications.

j) A remanufacturer or other person that stores or treats hazardous secondary material at an affected facility seeking to comply with the provisions of this part by using a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system

must develop documentation including sufficient information to describe the control device operation and identify the process parameter or parameters that indicate proper operation and maintenance of the control device.

k) A closed-vent system must meet either of the following design requirements:

1) A closed-vent system must be designed to operate with no detectable emissions, as indicated by an instrument reading of less than 500 ppmv above background as determined by the procedure in Section 721.934(b), and by visual inspections; or

2) A closed-vent system must be designed to operate at a pressure below atmospheric pressure. The system must be equipped with at least one pressure gauge or other pressure measurement device that can be read from a readily accessible location to verify that negative pressure is being maintained in the closed-vent system when the control device is operating.

l) The remanufacturer or other person that stores or treats the hazardous secondary material must monitor and inspect each closed-vent system required to comply with this section to ensure proper operation and maintenance of the closed-vent system by implementing the following requirements:

1) Each closed-vent system that is used to comply with subsection (k)(1) must be inspected and monitored in compliance with the following requirements:

A) An initial leak detection monitoring of the closed-vent system must be conducted by the remanufacturer or other person that stores or treats the hazardous secondary material on or before the date that the system becomes subject to this section. The remanufacturer or other person that stores or treats the hazardous secondary material must monitor the closed-vent system components and connections using the procedures specified in Section 721.934(b) to demonstrate that the closed-vent system operates with no detectable emissions, as indicated by an instrument reading of less than 500 ppmv above background.

B) After initial leak detection monitoring required in subsection (l)(1)(A), the remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor the closed-vent system as follows:

i) Closed-vent system joints, seams, or other connections that are permanently or semi-permanently sealed (e.g., a welded joint between two sections of hard piping or a bolted and gasketed ducting flange) must be visually inspected at least

once per year to check for defects that could result in air pollutant emissions. The remanufacturer or other person that stores or treats the hazardous secondary material must monitor a component or connection using the procedures specified in Section 721.934(b) to demonstrate that it operates with no detectable emissions following any time the component is repaired or replaced (e.g., a section of damaged hard piping is replaced with new hard piping) or the connection is unsealed (e.g., a flange is unbolted).

ii) Closed-vent system components or connections other than those specified in subsection (l)(1)(B)(i) must be monitored annually and at other times as requested by the Agency, except as provided for in subsection (o), using the procedures specified in Section 721.934(b) to demonstrate that the components or connections operate with no detectable emissions. The Agency must make any request for monitoring in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

C) If a defect or leak is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect or leak in compliance with subsection (l)(3).

D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection and monitoring in compliance with the requirements specified in Section 721.935.

2) Each closed-vent system that is used to comply with subsection (k)(2) must be inspected and monitored as follows:

A) The closed-vent system must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in ductwork or piping or loose connections.

B) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the closed-vent system on or before the date that the system becomes subject to this Section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year.

C) If a defect or leak is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect or the leak in compliance with subsection (l)(3).

D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection and monitoring in compliance with the requirements specified in Section 721.935.

3) The remanufacturer or other person that stores or treats the hazardous secondary material must repair all detected defects as follows:

A) Detectable emissions, as indicated by visual inspection, or by an instrument reading greater than 500 ppmv above background, must be controlled as soon as practicable, but not later than 15 calendar days after the emission is detected, except as provided for in subsection (l)(3)(C).

B) A first attempt at repair must be made within 5 calendar days after the emission is detected.

C) Delay of repair of a closed-vent system for which leaks have been detected is allowed if the repair is technically infeasible without a process unit shutdown, or if the remanufacturer or other person that stores or treats the hazardous secondary material determines that emissions resulting from immediate repair would be greater than the fugitive emissions likely to result from delay of repair. Repair of the equipment must be completed by the end of the next process unit shutdown.

D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the defect repair in compliance with the requirements specified in Section 721.935.

m) Closed-vent systems and control devices used to comply with provisions of this Subpart AA must be operated at all times when emissions may be vented to them.

n) The owner or operator using a carbon adsorption system to control air pollutant emissions must document that all carbon that is a hazardous waste and that is removed from the control device is managed in one of the following manners, regardless of the average volatile organic concentration of the carbon:

1) Regenerated or reactivated in a thermal treatment unit that meets one of the following:

A) The owner or operator of the unit has been issued a final permit under 35 Ill. Adm. Code 702, 703, and 705 that implements Subpart X; or

B) The unit is equipped with and operating air emission controls in compliance with the applicable requirements of Subparts AA and CC or Subparts AA and CC of 35 Ill. Adm. Code 725; or

C) The unit is equipped with and operating air emission controls in compliance with a national emission standard for hazardous air pollutants under 40 CFR 61 (National Emission Standards for Hazardous Air Pollutants) or 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants for Source Categories), each incorporated by reference in 35 Ill. Adm. Code 720.111(b).

2) Incinerated in a hazardous waste incinerator for which the owner or operator either:

A) Has been issued a final permit under 35 Ill. Adm. Code 702, 703, and 705 that implements Subpart O; or

B) Has designed and operates the incinerator in compliance with the interim status requirements of Subpart O of 35 Ill. Adm. Code 725.

3) Burned in a boiler or industrial furnace for which the owner or operator either:

A) Has been issued a final permit under 35 Ill. Adm. Code 702, 703, and 705 that implements Subpart H of 35 Ill. Adm. Code 726; or

B) Has designed and operates the boiler or industrial furnace in compliance with the interim status requirements of Subpart H of 35 Ill. Adm. Code 726.

o) Any components of a closed-vent system that are designated, as described in Section 721.935(c)(9), as unsafe to monitor are exempt from subsection (l)(1)(B)(ii) if both of the following conditions are met:

1) The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit using a closed-vent system determines that the components of the closed-vent system are unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with subsection (l)(1)(B)(ii); and

2) The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit using a closed-vent system adheres to a written plan that requires monitoring the closed-vent system components using the procedure specified in subsection (l)(1)(B)(ii) as frequently as practicable during safe-to-monitor times.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.934 Test Methods and Procedures

a) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of this Subpart AA must comply with the test methods and procedural requirements provided in this Section.

b) When a closed-vent system is tested for compliance with no detectable emissions, as required in Section 721.933(l) of this Subpart AA, the test must comply with the following requirements:

1) Monitoring must comply with Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.

2) The detection instrument must meet the performance criteria of Reference Method 21.

3) The instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.

4) Calibration gases must be:

A) Zero air (less than 10 ppm of hydrocarbon in air).

B) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppm methane or n-hexane.

5) The background level must be determined as set forth in Reference Method 21.

6) The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.

7) The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with 500 ppm for determining compliance.

c) Performance tests to determine compliance with Section 721.932(a) and with the total organic compound concentration limit of Section 721.933(c) must comply with the following:

1) Performance tests to determine total organic compound concentrations and mass flow rates entering and exiting control devices must be conducted and data reduced in accordance with the following reference methods and calculation procedures:

A) Reference Method 2 (Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111 for velocity and volumetric flow rate.

B) Reference Method 18 (Measurement of Gaseous Organic Compound Emissions by Gas Chromatography) or Reference Method 25A (Determination of Total Gaseous Organic Concentration Using a Flame Ionization Analyzer) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, for organic content. If Reference Method 25A is used, the organic HAP used as the calibration gas must be the single organic HAP representing the largest percent by volume of the emissions. The use of Reference Method 25A is acceptable if the response from the high-level calibration gas is at least 20 times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.

C) Each performance test must consist of three separate runs; each run must be conducted for at least one hour under the conditions that exist when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. For the purpose of determining total organic compound concentrations and mass flow rates, the average of results of all runs must apply. The average must be computed on a time-weighted basis.

D) Total organic mass flow rates must be determined by the following equation:

i) For sources utilizing Reference Method 18.

$$E_h = Q_{2sd}\left\{\sum_{i=1}^{n} C_i MW_i\right\}[0.0416][10^{-6}]$$

Where:

E_h = Total organic mass flow rate, kg/h

Q_{2sd} = Volumetric flow rate of gases entering or exiting control device, as determined by Reference Method 2, dscm/h

n = Number of organic compounds in the vent gas

C_i = Organic concentration in ppm, dry basis, of compound i in the vent gas, as determined by Reference Method 18

MW_i = Molecular weight of organic compound i in the vent gas, kg/kg-mol

0.0416 = Conversion factor for molar volume, kg-mol/m^3 (@293 K and 760 mm Hg)

10^{-6} = Conversion from ppm

ii) For sources utilizing Reference Method 25A.

$E_h = (Q)(C)(MW)(0.0416)(10^{-6})$

Where:

E_h = Total organic mass flow rate, kg/h

Q = Volumetric flow rate of gases entering or exiting control device, as determined by Reference Method 2, dscm/h

C = Organic concentration in ppm, dry basis, as determined by Reference Method 25A

MW = Molecular weight of propane, 44

0.0416 = Conversion factor for molar volume, kg-mol/m^3 (@293 K and 760 mm Hg)

10^{-6} = Conversion from ppm

E) The annual total organic emission rate must be determined by the following equation:

$E_A = (E_h)(H)$

Where:

E_A = Total organic mass emission rate, kg/y

E_h = Total organic mass flow rate for the process vent, kg/h

H = Total annual hours of operations for the affected unit, h/y

F) Total organic emissions from all affected process vents at the facility must be determined by summing the hourly total organic mass emission rates (E_h, as determined in subsection (c)(1)(D)) and by summing the annual total organic mass emission rates (E_A, as determined in subsection (c)(1)(E)) for all affected process vents at the facility.

2) The remanufacturer or other person that stores or treats the hazardous secondary material must record process information as necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction must not constitute representative conditions for the purpose of a performance test.

3) The remanufacturer or other person that stores or treats the hazardous secondary material at an affected facility must provide, or cause to be provided, performance testing facilities, as follows:

A) Sampling ports adequate for the test methods specified in subsection (c)(1).

B) Safe sampling platforms.

C) Safe access to sampling platforms.

D) Utilities for sampling and testing equipment.

4) For the purpose of making compliance determinations, the time-weighted average of the results of the three runs must apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the control of the remanufacturer or other person that stores or treats the hazardous

secondary material, the Agency may approve compliance determination using the average of the results of the two other runs. The Agency must state any approval or disapproval of a compliance determination in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

d) To show that a process vent associated with a hazardous secondary material distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation is not subject to the requirements of this Subpart AA, the remanufacturer or other person that stores or treats the hazardous secondary material must make an initial determination that the time-weighted, annual average total organic concentration of the material managed by the hazardous secondary material management unit is less than 10 ppmw using one of the following two methods:

1) Direct measurement of the organic concentration of the material using the following procedures:

A) The remanufacturer or other person that stores or treats the hazardous secondary material must take a minimum of four grab samples of material for each material stream managed in the affected unit under process conditions expected to cause the maximum material organic concentration.

B) For material generated onsite, the grab samples must be collected at a point before the material is exposed to the atmosphere such as in an enclosed pipe or other closed system that is used to transfer the material after generation to the first affected distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation. For material generated offsite, the grab samples must be collected at the inlet to the first material management unit that receives the material provided the material has been transferred to the facility in a closed system such as a tank truck and the material is not diluted or mixed with other material.

C) Each sample must be analyzed and the total organic concentration of the sample must be computed using Method 9060A of "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", EPA Publication SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111, or analyzed for its individual organic constituents.

D) The arithmetic mean of the results of the analyses of the four samples must apply for each material stream managed in the unit in determining the time-weighted, annual average total organic

concentration of the material. The time-weighted average is to be calculated using the annual quantity of each material stream processed and the mean organic concentration of each material stream managed in the unit.

2) Using knowledge of the material to determine that its total organic concentration is less than 10 ppmw. Documentation of the material determination is required. Examples of documentation that must be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the material is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to generate a material stream having a total organic content less than 10 ppmw, or prior speciation analysis results on the same material stream where it can also be documented that no process changes have occurred since that analysis that could affect the material total organic concentration.

e) The determination that distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations manage hazardous secondary materials with time-weighted, annual average total organic concentrations less than 10 ppmw must be made as follows:

1) By the effective date that the facility becomes subject to the provisions of this Subpart AA or by the date when the material is first managed in a hazardous secondary material management unit, whichever is later; and

2) For continuously generated material, annually; or

3) Whenever there is a change in the material being managed or a change in the process that generates or treats the material.

f) When a remanufacturer or other person that stores or treats the hazardous secondary material and the Agency do not agree on whether a distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation manages a hazardous secondary material with organic concentrations of at least 10 ppmw based on knowledge of the material, the dispute may be resolved by using direct measurement, as specified at subsection (d)(1). The Agency must state any disagreement in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.935 Recordkeeping Requirements

a) Compliance Required

1) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of this Subpart AA must comply with the recordkeeping requirements of this Section.

2) A remanufacturer or other person that stores or treats the hazardous secondary material of more than one hazardous secondary material management unit subject to the provisions of this Subpart AA may comply with the recordkeeping requirements for these hazardous secondary material management units in one recordkeeping system if the system identifies each record by each hazardous secondary material management unit.

b) The remanufacturer or other person that stores or treats the hazardous secondary material must keep the following records on-site:

1) For facilities that comply with the provisions of Section 721.933(a)(2), an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The schedule must also include a rationale of why the installation cannot be completed at an earlier date. The implementation schedule must be kept on-site at the facility by the effective date that the facility becomes subject to the provisions of this Subpart AA.

2) Up-to-date documentation of compliance with the process vent standards in Section 721.932, including the following:

A) Information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for each affected vent and for the overall facility (i.e., the total emissions for all affected vents at the facility), and the approximate location within the facility of each affected unit (e.g., identify the hazardous secondary material management units on a facility plot plan).

B) Information and data supporting determinations of vent emissions and emission reductions achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, determinations of vent emissions and emission reductions must be made using operating parameter values (e.g., temperatures, flow rates, or vent stream organic compounds and concentrations) that represent the conditions that result in maximum organic emissions, such as when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. If the remanufacturer or other person that stores or treats the hazardous

secondary material takes any action (e.g., managing a material of different composition or increasing operating hours of affected hazardous secondary material management units) that would result in an increase in total organic emissions from affected process vents at the facility, then a new determination is required.

3) Where a remanufacturer or other person that stores or treats the hazardous secondary material chooses to use test data to determine the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan must be developed and include the following:

A) A description of how it is determined that the planned test is going to be conducted when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. This must include the estimated or design flow rate and organic content of each vent stream and define the acceptable operating ranges of key process and control device parameters during the test program.

B) A detailed engineering description of the closed-vent system and control device, including the following:

i) Manufacturer's name and model number of control device.

ii) Type of control device.

iii) Dimensions of the control device.

iv) Capacity.

v) Construction materials.

C) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis.

4) Documentation of compliance with Section 721.933 must include the following information:

A) A list of all information references and sources used in preparing the documentation.

B) Records, including the dates, of each compliance test required by Section 721.933(k).

C) If engineering calculations are used, a design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions", incorporated by reference as specified in 35 Ill. Adm. Code 720.111, or other engineering texts acceptable to the Agency that present basic control device design information. Documentation provided by the control device manufacturer or vendor that describes the control device design in accordance with subsections (b)(4)(C)(i) through (b)(4)(C)(vii) may be used to comply with this requirement. The design analysis must address the vent stream characteristics and control device operation parameters, as specified below. The Agency must state whether or not the other engineering texts are acceptable or unacceptable in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

i) For a thermal vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average temperature in the combustion zone and the combustion zone residence time.

ii) For a catalytic vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average temperatures across the catalyst bed inlet and outlet.

iii) For a boiler or process heater, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average flame zone temperatures, combustion zone residence time, and description of method and location where the vent stream is introduced into the combustion zone.

iv) For a flare, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also consider the requirements specified in Section 721.933(d).

v) For a condenser, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis

must also establish the design outlet organic compound concentration level, design average temperature of the condenser exhaust vent stream, and design average temperatures of the coolant fluid at the condenser inlet and outlet.

vi) For a carbon adsorption system such as a fixed-bed adsorber that regenerates the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis must also establish the design exhaust vent stream organic compound concentration level, number and capacity of carbon beds, type and working capacity of activated carbon used for carbon beds, design total steam flow over the period of each complete carbon bed regeneration cycle, duration of the carbon bed steaming and cooling/ drying cycles, design carbon bed temperature after regeneration, design carbon bed regeneration time, and design service life of carbon.

vii) For a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis must also establish the design outlet organic concentration level, capacity of carbon bed, type and working capacity of activated carbon used for carbon bed, and design carbon replacement interval based on the total carbon working capacity of the control device and source operating schedule.

D) A statement signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous secondary material management unit is or would be operating at the highest load or capacity level reasonably expected to occur.

E) A statement signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material certifying that the control device is designed to operate at an efficiency of 95 percent or greater unless the total organic concentration limit of Section 721.932(a) is achieved at an efficiency less than 95 weight percent or the total organic emission

limits of Section 721.932(a) for affected process vents at the facility can be attained by a control device involving vapor recovery at an efficiency less than 95 weight percent. A statement provided by the control device manufacturer or vendor certifying that the control equipment meets the design specifications may be used to comply with this requirement.

F) If performance tests are used to demonstrate compliance, all test results.

c) Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of this part must be recorded and kept up-to-date at the facility. The information must include the following:

1) Description and date of each modification that is made to the closed-vent system or control device design.

2) Identification of operating parameter, description of monitoring device, and diagram of monitoring sensor location or locations used to comply with Section 721.933 (f)(1) and (f)(2).

3) Monitoring, operating, and inspection information required by Section 721.933(f) through (k).

4) Date, time, and duration of each period that occurs while the control device is operating when any monitored parameter exceeds the value established in the control device design analysis, as specified below:

A) For a thermal vapor incinerator designed to operate with a minimum residence time of 0.50 second at a minimum temperature of 760ºC, period when the combustion temperature is below 760ºC.

B) For a thermal vapor incinerator designed to operate with an organic emission reduction efficiency of 95 weight percent or greater, period when the combustion zone temperature is more than 28 ºC below the design average combustion zone temperature established as a requirement of subsection (b)(4)(C)(i).

C) For a catalytic vapor incinerator, period when either of the following occurs:

i) Temperature of the vent stream at the catalyst bed inlet is more than 28 ºC below the average temperature of the inlet

vent stream established as a requirement of subsection (b)(4)(C)(ii); or

ii) Temperature difference across the catalyst bed is less than 80 percent of the design average temperature difference established as a requirement of subsection (b)(4)(C)(ii).

D) For a boiler or process heater, period when either of the following occurs:

i) Flame zone temperature is more than 28 ºC below the design average flame zone temperature established as a requirement of subsection (b)(4)(C)(iii); or

ii) Position changes where the vent stream is introduced to the combustion zone from the location established as a requirement of subsection (b)(4)(C)(iii).

E) For a flare, period when the pilot flame is not ignited.

F) For a condenser that complies with Section 721.933(f)(2)(F)(i), period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the condenser are more than 20 percent greater than the design outlet organic compound concentration level established as a requirement of subsection (b)(4)(C)(v).

G) For a condenser that complies with Section 721.933(f)(2)(F)(ii), period when either of the following occurs:

i) Temperature of the exhaust vent stream from the condenser is more than 6 ºC above the design average exhaust vent stream temperature established as a requirement of subsection (b)(4)(C)(v); or

ii) Temperature of the coolant fluid exiting the condenser is more than 6 ºC above the design average coolant fluid temperature at the condenser outlet established as a requirement of subsection (b)(4)(C)(v).

H) For a carbon adsorption system, such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device and which complies with Section 721.933(f)(2)(G)(i), any period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the carbon bed are more than 20 percent

greater than the design exhaust vent stream organic compound concentration level established as a requirement of subsection (b)(4)(C)(vi).

I) For a carbon adsorption system, such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device and which complies with Section 721.933(f)(2)(G)(ii), any period when the vent stream continues to flow through the control device beyond the predetermined carbon bed regeneration time established as a requirement of subsection (b)(4)(C)(vi).

5) Explanation for each period recorded under subsection (c)(4) of the cause for control device operating parameter exceeding the design value and the measures implemented to correct the control device operation.

6) For a carbon adsorption system operated subject to requirements specified in Section 721.933(g) or (h)(2), any date when existing carbon in the control device is replaced with fresh carbon.

7) For a carbon adsorption system operated subject to requirements specified in Section 721.933(h)(1), a log that records:

A) Date and time when control device is monitored for carbon breakthrough and the monitoring device reading.

B) Date when existing carbon in the control device is replaced with fresh carbon.

8) Date of each control device startup and shutdown.

9) A remanufacturer or other person that stores or treats the hazardous secondary material designating any components of a closed-vent system as unsafe to monitor pursuant to Section 721.933(o) must record in a log that is kept at the facility the identification of closed-vent system components that are designated as unsafe to monitor in accordance with the requirements of Section 721.933(o), an explanation for each closed-vent system component stating why the closed-vent system component is unsafe to monitor, and the plan for monitoring each closed-vent system component.

10) When each leak is detected as specified in Section 721.933(l), the following information must be recorded:

A) The instrument identification number, the closed-vent system component identification number, and the operator name, initials, or identification number.

B) The date the leak was detected and the date of first attempt to repair the leak.

C) The date of successful repair of the leak.

D) Maximum instrument reading measured by Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, after it is successfully repaired or determined to be nonrepairable.

E) "Repair delayed" and the reason for the delay if a leak is not repaired within 15 calendar days after discovery of the leak.

i) The remanufacturer or other person that stores or treats the hazardous secondary material may develop a written procedure that identifies the conditions that justify a delay of repair. In such cases, reasons for delay of repair may be documented by citing the relevant sections of the written procedure.

ii) If delay of repair was caused by depletion of stocked parts, there must be documentation that the spare parts were sufficiently stocked on-site before depletion and the reason for depletion.

d) Records of the monitoring, operating, and inspection information required by subsections (c)(3) through (c)(10) must be maintained by the owner or operator for at least three years following the date of each occurrence, measurement, maintenance, corrective action, or record.

e) For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the Agency must specify the appropriate recordkeeping requirements. The Agency must specify the appropriate recordkeeping requirements in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

f) Up-to-date information and data used to determine whether or not a process vent is subject to the requirements in Section 721.932, including supporting documentation as required by Section 721.934(d)(2) when application of the knowledge of the nature of the hazardous secondary material stream or the

process by which it was produced is used, must be recorded in a log that is kept at the facility.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

SUBPART BB: AIR EMISSION STANDARDS FOR EQUIPMENT LEAKS

Section 721.950 Applicability

The regulations in this this Subpart BB apply to equipment that contains hazardous secondary materials excluded under the remanufacturing exclusion at Section 721.104(a)(27), unless the equipment operations are subject to the requirements of an applicable federal Clean Air Act regulation in 40 CFR 60 (Standards of Performance for New Stationary Sources), 61 (National Emission Standards for Hazardous Air Pollutants), or 63 (National Emission Standards for Hazardous Air Pollutants for Source Categories), each incorporated by reference in 35 Ill. Adm. Code 720.111.

BOARD NOTE: Section 9.1(b) and (d) of the Act make the federal new source performance standards and national emission standards for hazardous air pollutants directly applicable in Illinois and prohibit operation of an emission source without a permit issued by the Agency. The Agency issues permits that incorporate the federal new source performance standards and national emission standards for hazardous air pollutants pursuant to Section 39.5 of the Act.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.951 Definitions

As used in this this Subpart BB, all terms will have the meaning given them in Section 721.931; section 1004 of the federal Resource Conservation and Recovery Act (42 USC 6903), incorporated by reference in 35 Ill. Adm. Code 720.111; and 35 Ill. Adm. Code 720 through 726.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.952 Standards: Pumps in Light Liquid Service

a) Monitoring.

1) Each pump in light liquid service must be monitored monthly to detect leaks by the methods specified in Section 721.963(b), except as provided in subsections (d), (e), and (f).

2) Each pump in light liquid service must be checked by visual inspection each calendar week for indications of liquids dripping from the pump seal.

b) Leaks.

1) If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

2) If there are indications of liquids dripping from the pump seal, a leak is detected.

c) Repairs.

1) When a leak is detected, it must be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in Section 721.959.

2) A first attempt at repair (e.g., tightening the packing gland) must be made no later than five calendar days after each leak is detected.

d) Each pump equipped with a dual mechanical seal system that includes a barrier fluid system is exempt from the requirements of subsection (a), provided the following requirements are met:

1) Each dual mechanical seal system must be as follows:

A) Operated with the barrier fluid at a pressure that is at all times greater than the pump stuffing box pressure; or

B) Equipped with a barrier fluid degassing reservoir that is connected by a closed-vent system to a control device that complies with the requirements of Section 721.960; or

C) Equipped with a system that purges the barrier fluid into a hazardous secondary material stream with no detectable emissions to the atmosphere.

2) The barrier fluid system must not be a hazardous secondary material with organic concentrations 10 percent or greater by weight.

3) Each barrier fluid system must be equipped with a sensor that will detect failure of the seal system, the barrier fluid system, or both.

4) Each pump must be checked by visual inspection, each calendar week, for indications of liquids dripping from the pump seals.

5) Alarms.

A) Each sensor as described in subsection (d)(3) must be checked daily or be equipped with an audible alarm that must be checked monthly to ensure that it is functioning properly.

B) The remanufacturer or other person that stores or treats the hazardous secondary material must determine, based on design considerations and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.

6) Leaks.

A) If there are indications of liquids dripping from the pump seal or the sensor indicates failure of the seal system, the barrier fluid system, or both based on the criterion determined in subsection (d)(5)(B), a leak is detected.

B) When a leak is detected, it must be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in Section 721.959.

C) A first attempt at repair (e.g., relapping the seal) must be made no later than five calendar days after each leak is detected.

e) Any pump that is designated, as described in Section 721.964(g)(2), for no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, is exempt from the requirements of subsections (a), (c), and (d) if the pump meets the following requirements:

1) Must have no externally actuated shaft penetrating the pump housing.

2) Must operate with no detectable emissions as indicated by an instrument reading of less than 500 ppm above background as measured by the methods specified in Section 721.963(c).

3) Must be tested for compliance with subsection (e)(2) initially upon designation, annually, and at other times as requested by the Agency. The Agency must request any compliance testing at times other than annually in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

f) If any pump is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal or seals to a control device that complies with the requirements of Section 721.960, it is exempt from the requirements of subsections (a) through (e).

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.953 Standards: Compressors

a) Each compressor must be equipped with a seal system that includes a barrier fluid system and that prevents leakage of total organic emissions to the atmosphere, except as provided in subsections (h) and (i).

b) Each compressor seal system as required in subsection (a) must be:

1) Operated with the barrier fluid at a pressure that is at all times greater than the compressor stuffing box pressure; or

2) Equipped with a barrier fluid system that is connected by a closed-vent system to a control device that complies with the requirements of Section 721.960; or

3) Equipped with a system that purges the barrier fluid into a hazardous secondary material stream with no detectable emissions to atmosphere.

c) The barrier fluid must not be a hazardous secondary material with organic concentrations 10 percent or greater by weight.

d) Each barrier fluid system, as described in subsections (a) through (c), must be equipped with a sensor that will detect failure of the seal system, barrier fluid system, or both.

e) Inspections.

1) Each sensor as required in subsection (d) must be checked daily or must be equipped with an audible alarm that must be checked monthly to ensure that it is functioning properly unless the compressor is located within the boundary of an unmanned plant site, in which case the sensor must be checked daily.

2) The remanufacturer or other person that stores or treats the hazardous secondary material must determine, based on design considerations and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.

f) If the sensor indicates failure of the seal system, the barrier fluid system, or both based on the criterion determined under subsection (e)(2), a leak is detected.

g) Repairs.

1) When a leak is detected, it must be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in Section 721.959.

2) A first attempt at repair (e.g., tightening the packing gland) must be made no later than five calendar days after each leak is detected.

h) A compressor is exempt from the requirements of subsections (a) and (b) if it is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal to a control device that complies with the requirements of Section 721.960, except as provided in subsection (i).

i) Any compressor that is designated, as described in Section 721.964(g)(2), for no detectable emissions as indicated by an instrument reading of less than 500 ppm above background is exempt from the requirements of subsections (a) through (h) if the compressor:

1) Is determined to be operating with no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, as measured by the method specified in Section 721.963(c).

2) Is tested for compliance with subsection (i)(1) initially upon designation, annually, and at other times as requested by the Agency. The Agency must request any compliance testing at times other than annually in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.954 Standards: Pressure Relief Devices in Gas/Vapor Service

a) Except during pressure releases, each pressure relief device in gas/vapor service must be operated with no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, as measured by the method specified in Section 721.963(c).

b) Actions following pressure release.

1) After each pressure release, the pressure relief device must be returned to a condition of no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, as soon as practicable, but no later than five calendar days after each pressure release, except as provided in Section 721.959.

2) No later than five calendar days after the pressure release, the pressure relief device must be monitored to confirm the condition of no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, as measured by the method specified in Section 721.963(c).

c) Any pressure relief device that is equipped with a closed-vent system capable of capturing and transporting leakage from the pressure relief device to a control device as described in Section 721.960 is exempt from the requirements of subsections (a) and (b).

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.955 Standards: Sampling Connection Systems

a) Each sampling connection system must be equipped with a closed-purge, closed-loop, or closed-vent system. This system must collect the sample purge for return to the process or for routing to the appropriate treatment system. Gases displaced during filling of the sample container are not required to be collected or captured.

b) Each closed-purge, closed-loop, or closed-vent system as required in subsection (a) must meet one of the following requirements:

1) It must return the purged process fluid directly to the process line;

2) It must collect and recycle the purged process fluid; or

3) It must be designed and operated to capture and transport all the purged process fluid to a material management unit that complies with the applicable requirements of Sections 721.984 through 264.986 or a control device that complies with the requirements of Section 721.960.

c) In-situ sampling systems and sampling systems without purges are exempt from the requirements of subsections (a) and (b).

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.956 Standards: Open-Ended Valves or Lines

a) Equipment.

1) Each open-ended valve or line must be equipped with a cap, blind flange, plug, or a second valve.

2) The cap, blind flange, plug, or second valve must seal the open end at all times except during operations requiring hazardous secondary material stream flow through the open-ended valve or line.

b) Each open-ended valve or line equipped with a second valve must be operated in a manner such that the valve on the hazardous secondary material stream end is closed before the second valve is closed.

c) When a double block and bleed system is being used, the bleed valve or line may remain open during operations that require venting the line between the block valves but must comply with subsection (a) at all other times.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.957 Standards: Valves in Gas/Vapor Service or in Light Liquid Service

a) Each valve in gas/vapor or light liquid service must be monitored monthly to detect leaks by the methods specified in Section 721.963(b) and must comply with subsections (b) through (e), except as provided in subsections (f), (g), and (h) and Sections 721.961 and 721.962.

b) If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

c) Monitoring Frequency.

1) Any valve for which a leak is not detected for two successive months may be monitored the first month of every succeeding quarter, beginning with the next quarter, until a leak is detected.

2) If a leak is detected, the valve must be monitored monthly until a leak is not detected for two successive months,

d) Leak repair.

1) When a leak is detected, it must be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected, except as provided in Section 721.959.

2) A first attempt at repair must be made no later than five calendar days after each leak is detected.

e) First attempts at repair include, but are not limited to, the following best practices where practicable:

1) Tightening of bonnet bolts.

2) Replacement of bonnet bolts.

3) Tightening of packing gland nuts.

4) Injection of lubricant into lubricated packing.

f) Any valve that is designated, as described in Section 721.964(g)(2), for no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, is exempt from the requirements of subsection (a) if the valve:

1) Has no external actuating mechanism in contact with the hazardous secondary material stream.

2) Is operated with emissions less than 500 ppm above background as determined by the method specified in Section 721.963(c).

3) Is tested for compliance with subsection (f)(2) initially upon designation, annually, and at other times as requested by the Agency. The Agency must request any compliance testing at times other than annually in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

g) Any valve that is designated, as described in Section 721.964(h)(1), as an unsafe-to-monitor valve is exempt from the requirements of subsection (a) if both of the following conditions are fulfilled:

1) The remanufacturer or other person that stores or treats the hazardous secondary material determines that the valve is unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with subsection (a); and

2) The remanufacturer or other person that stores or treats the hazardous secondary material adheres to a written plan that requires monitoring of the valve as frequently as practicable during safe-to-monitor times.

h) Any valve that is designated, as described in Section 721.964(h)(2), as a difficult-to-monitor valve is exempt from the requirements of subsection (a) if all of the following conditions are fulfilled:

1) The remanufacturer or other person that stores or treats the hazardous secondary material determines that the valve cannot be monitored without elevating the monitoring personnel more than two meters above a support surface;

2) The hazardous secondary material management unit within which the valve is located was in operation before January 13, 2015; and

3) The owner or operator of the valve follows a written plan that requires monitoring of the valve at least once per calendar year.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.958 Standards: Pumps and Valves in Heavy Liquid Service, Pressure Relief Devices in Light Liquid or Heavy Liquid Service, and Flanges and Other Connectors

a) Pumps and valves in heavy liquid service, pressure relief devices in light liquid or heavy liquid service, and flanges and other connectors must be monitored within five days by the method specified in Section 721.963(b) if evidence of a potential leak is found by visual, audible, olfactory, or any other detection method.

b) If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

c) Repairs.

1) When a leak is detected, it must be repaired as soon as practicable, but not later than 15 calendar days after it is detected, except as provided in Section 721.959.

2) The first attempt at repair must be made no later than five calendar days after each leak is detected.

d) First attempts at repair include, but are not limited to, the best practices described under Section 721.957(e).

e) Any connector that is inaccessible or which is ceramic or ceramic-lined (e.g., porcelain, glass, or glass-lined) is exempt from the monitoring requirements of subsection (a) and from the recordkeeping requirements of Section 721.964.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.959 Standards: Delay of Repair

a) Delay of repair of equipment for which leaks have been detected will be allowed if the repair is technically infeasible without a hazardous secondary material management unit shutdown. In such a case, repair of this equipment must occur before the end of the next hazardous secondary material management unit shutdown.

b) Delay of repair of equipment for which leaks have been detected will be allowed for equipment that is isolated from the hazardous secondary material management unit and that does not continue to contain or contact hazardous secondary material with organic concentrations at least 10 percent by weight.

c) Delay of repair for valves will be allowed if:

1) The remanufacturer or other person that stores or treats the hazardous secondary material determines that emissions of purged material resulting

from immediate repair are greater than the emissions likely to result from delay of repair.

2) When repair procedures are effected, the purged material is collected and destroyed or recovered in a control device complying with Section 721.960.

d) Delay of repair for pumps will be allowed if both of the following conditions are fulfilled:

1) Repair requires the use of a dual mechanical seal system that includes a barrier fluid system; and

2) Repair is completed as soon as practicable, but not later than six months after the leak was detected.

e) Delay of repair beyond a hazardous secondary material management unit shutdown will be allowed for a valve if valve assembly replacement is necessary during the hazardous secondary material management unit shutdown, valve assembly supplies have been depleted, and valve assembly supplies had been sufficiently stocked before the supplies were depleted. Delay of repair beyond the next hazardous secondary material management unit shutdown will not be allowed unless the next hazardous secondary material management unit shutdown occurs sooner than six months after the first hazardous secondary material management unit shutdown.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.960 Standards: Closed-Vent Systems and Control Devices

a) The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit using closed-vent systems and control devices subject to this Subpart BB must comply with the provisions of Section 721.933.

b) Implementation Schedule

1) The remanufacturer or other person that stores or treats the hazardous secondary material at an existing facility who cannot install a closed-vent system and control device to comply with the provisions of this Subpart BB on the effective date that the facility becomes subject to the provisions of this Subpart BB must prepare an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The controls must be installed as soon as possible, but the implementation schedule may allow up to 30 months after the effective

date that the facility becomes subject to this Subpart BB for installation and startup.

2) Any unit beginning operation that is subject to the provisions of this Subpart BB when operation begins, must comply with the rules immediately (i.e., must have control devices installed and operating on startup of the affected unit); the 30-month implementation schedule does not apply.

3) The remanufacturer or other person that stores or treats the hazardous secondary material at any facility in existence on the effective date of a statutory or regulatory amendment that renders the facility subject to this Subpart BB must comply with all requirements of this Subpart BB as soon as practicable but no later than 30 months after the amendment's effective date. When control equipment required by this Subpart BB cannot be installed and begin operation by the effective date of the statutory or regulatory amendment that renders the facility subject to this Subpart BB, the facility owner or operator must prepare an implementation schedule that includes the following information: specific calendar dates for award of contracts or issuance of purchase orders for the control equipment, initiation of on-site installation of the control equipment, completion of the control equipment installation, and performance of any testing to demonstrate that the installed equipment meets the applicable standards of this Subpart BB. The remanufacturer or other person that stores or treats the hazardous secondary material must keep a copy of the implementation schedule at the facility.

BOARD NOTE: The federal effective date of this provision was July 15, 2015. The resulting compliance deadline for the Subpart BB standards was then January 18, 2018 for all facilities to which this Subpart BB applied on July 15, 2015. All new and modified facilities to which this Subpart BB applies are to immediately comply upon beginning operation after July 15, 2015. Where this Subpart BB becomes applicable to a facility subject to after July 15, 2015 as a result of statutory or regulatory amendment, compliance with the Subpart BB standards is required 30 months after the effective date of the statutory or regulatory amendment that subjected that facility to this provision.

4) Remanufacturers or other persons that store or treat the hazardous secondary materials at facilities and units that become newly subject to the requirements of this Subpart BB due to an action other than those described in subsection (b)(3), must comply with all applicable requirements immediately (i.e., must have control devices installed and operating on the date the facility or unit becomes subject to this Subpart BB; the 30-month implementation schedule does not apply).

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.961 Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Percentage of Valves Allowed to Leak

a) A remanufacturer or other person that stores or treats the hazardous secondary material subject to the requirements of Section 721.957 may elect to have all valves within a hazardous secondary material management unit comply with an alternative standard that allows no greater than two percent of the valves to leak.

b) The following requirements must be met if a remanufacturer or other person that stores or treats the hazardous secondary material decides to comply with the alternative standard of allowing two percent of valves to leak:

1) A performance test, as specified in subsection (c), must be conducted initially upon designation, annually, and at other times requested by the Agency in writing to the remanufacturer or other persons that stores or treats the hazardous secondary material; and

2) If a valve leak is detected, it must be repaired in accordance with Section 721.957(d) and (e).

c) Performance tests must be conducted in the following manner:

1) All valves subject to the requirements in Section 721.957 within the hazardous secondary material management unit must be monitored within one week by the methods specified in Section 721.963(b).

2) If an instrument reading of 10,000 ppm or greater is measured, a leak is detected.

3) The leak percentage must be determined by dividing the number of valves subject to the requirements in Section 721.957 for which leaks are detected by the total number of valves subject to the requirements in Section 721.957 within the hazardous secondary material management unit.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.962 Alternative Standards for Valves in Gas/Vapor Service or in Light Liquid Service: Skip Period Leak Detection and Repair

a) A remanufacturer or other person that stores or treats the hazardous secondary material subject to the requirements of Section 721.957 may elect for all valves within a hazardous secondary material management unit to comply with one of the alternative work practices specified in subsections (b)(2) and (b)(3).

b) Reduced Monitoring.

1) A remanufacturer or other person that stores or treats the hazardous secondary material must comply with the requirements for valves, as described in Section 721.957, except as described in subsections (b)(2) and (b)(3).

2) After two consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than two percent, a remanufacturer or other person that stores or treats the hazardous secondary material may begin to skip one of the quarterly leak detection periods (i.e., monitor for leaks once every six months) for the valves subject to the requirements in Section 721.957.

3) After five consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than two percent, a remanufacturer or other person that stores or treats the hazardous secondary material may begin to skip three of the quarterly leak detection periods (i.e., monitor for leaks once every year) for the valves subject to the requirements in Section 721.957.

4) If the percentage of valves leaking is greater than two percent, the remanufacturer or other person that stores or treats the hazardous secondary material must monitor monthly in compliance with the requirements in Section 721.957, but may again elect to use this Section after meeting the requirements of Section 721.957(c)(1).

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.963 Test Methods and Procedures

a) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of this Subpart BB must comply with the test methods and procedures requirements provided in this Section.

b) Leak detection monitoring, as required in Sections 721.952 through 721.962, must comply with the following requirements:

1) Monitoring must comply with Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.

2) The detection instrument must meet the performance criteria of Reference Method 21.

3) The instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.

4) Calibration gases must be as follows:

A) Zero air (less than 10 ppm of hydrocarbon in air); and

B) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppm methane or n-hexane.

5) The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.

c) When equipment is tested for compliance with no detectable emissions, as required in Sections 721.952(e), 721.953(i), 721.954, and 721.957(f), the test must comply with the following requirements:

1) The requirements of subsections (b)(1) through (b)(4).

2) The background level must be determined as set forth in Reference Method 21.

3) The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.

4) The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with 500 ppm for determining compliance.

d) A remanufacturer or other person that stores or treats the hazardous secondary material must determine, for each piece of equipment, whether the equipment contains or contacts a hazardous secondary material with organic concentration that equals or exceeds 10 percent by weight using the following:

1) Methods described in ASTM Methods D 2267–88, E 169–87, E 168– 88, E 260–85, incorporated by reference in 35 Ill. Adm. Code 720.111;

2) Method 9060A of "Test Methods for Evaluating Solid Waste", USEPA Publication SW–846, incorporated by reference in 35 Ill. Adm. Code 720.111, for computing total organic concentration of the sample, or analyzed for its individual organic constituents; or

3) Application of the knowledge of the nature of the hazardous secondary material stream or the process by which it was produced. Documentation of a material determination by knowledge is required. Examples of documentation that must be used to support a determination under this

provision include production process information documenting that no organic compounds are used, information that the material is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to have a total organic content less than 10 percent, or prior speciation analysis results on the same material stream, where it can also be documented that no process changes have occurred since that analysis that could affect the material total organic concentration.

e) If a remanufacturer or other person that stores or treats the hazardous secondary material determines that a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least 10 percent by weight, the determination can be revised only after following the procedures in subsection (d)(1) or (d)(2).

f) When a remanufacturer or other person that stores or treats the hazardous secondary material and the Agency do not agree on whether a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least 10 percent by weight, the procedures in subsection (d)(1) or (d)(2) can be used to resolve the dispute. The Agency must state any disagreement on whether a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least 10 percent by weight in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

g) Samples used in determining the percent organic content must be representative of the highest total organic content hazardous secondary material that is expected to be contained in or contact the equipment.

h) To determine if pumps or valves are in light liquid service, the vapor pressures of constituents may be obtained from standard reference texts or may be determined by ASTM D 2879-92, incorporated by reference in 35 Ill. Adm. Code 720.111.

i) Performance tests to determine if a control device achieves 95 weight percent organic emission reduction must comply with the procedures of Section 721.934(c)(1) through (c)(4).

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.964 Recordkeeping Requirements

a) Lumping Units.

1) A remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of this Subpart BB must comply with the recordkeeping requirements of this Section.

2) A remanufacturer or other person that stores or treats the hazardous secondary material in more than one hazardous secondary material management unit subject to the provisions of this Subpart BB may comply with the recordkeeping requirements for these hazardous secondary material management units in one recordkeeping system if the system identifies each record by each hazardous secondary material management unit.

b) A person that stores or treats a hazardous secondary material must record and keep the following information at the facility:

1) For each piece of equipment to which this Subpart BB applies:

A) The equipment identification number and hazardous secondary material management unit identification.

B) The approximate locations within the facility (e.g., identify the hazardous secondary material management unit on a facility plot plan).

C) The type of equipment (e.g., a pump or pipeline valve).

D) The percent-by-weight total organics in the hazardous secondary material stream at the equipment.

E) The hazardous secondary material state at the equipment (e.g., gas/vapor or liquid).

F) A method of compliance with the standard (e.g., "monthly leak detection and repair" or "equipped with dual mechanical seals").

2) For facilities that comply with the provisions of Section 721.933(a)(2), an implementation schedule, as specified in Section 721.933(a)(2).

3) When a remanufacturer or other person that stores or treats the hazardous secondary material chooses to use test data to demonstrate the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan, as specified in Section 721.935(b)(3).

4) Documentation of compliance with Section 721.960, including the detailed design documentation or performance test results specified in Section 721.935(b)(4).

c) When each leak is detected, as specified in Sections 721.952, 721.953, 721.957, and 721.958, the following requirements apply:

1) A weatherproof and readily visible identification, marked with the equipment identification number, the date evidence of a potential leak was found in accordance with Section 721.958(a), and the date the leak was detected, must be attached to the leaking equipment.

2) The identification on equipment, except on a valve, may be removed after it has been repaired.

3) The identification on a valve may be removed after it has been monitored for two successive months as specified in Section 721.957(c) and no leak has been detected during those two months.

d) When each leak is detected, as specified in Sections 721.952, 721.953, 721.957, and 721.958, the following information must be recorded in an inspection log and must be kept at the facility:

1) The instrument and operator identification numbers and the equipment identification number.

2) The date evidence of a potential leak was found in accordance with Section 721.958(a).

3) The date the leak was detected and the dates of each attempt to repair the leak.

4) Repair methods applied in each attempt to repair the leak.

5) "Above 10,000" if the maximum instrument reading measured by the methods specified in Section 721.963(b) after each repair attempt is equal to or greater than 10,000 ppm.

6) "Repair delayed" and the reason for the delay if a leak is not repaired within 15 calendar days after discovery of the leak.

7) Documentation supporting the delay of repair of a valve in compliance with Section 721.959(c).

8) The signature of the remanufacturer or other person that stores or treats the hazardous secondary material (or designate) whose decision it was that repair could not be effected without a hazardous secondary material management unit shutdown.

9) The expected date of successful repair of the leak if a leak is not repaired within 15 calendar days.

10) The date of successful repair of the leak.

e) Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of Section 721.960 must be recorded and kept up-to-date at the facility, as specified in Section 721.935(c). Design documentation is specified in Section 721.935(c)(1) and (c)(2) and monitoring, operating, and inspection information in Section 721.935(c)(3) through (c)(8).

f) For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the Agency must specify in writing the appropriate recordkeeping requirements.

g) The following information pertaining to all equipment subject to the requirements in Sections 721.952 through 721.960 must be recorded in a log that is kept at the facility:

1) A list of identification numbers for equipment (except welded fittings) subject to the requirements of this Subpart BB.

2) List of Equipment.

A) A list of identification numbers for equipment that the remanufacturer or other person that stores or treats the hazardous secondary material elects to designate for no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background, under the provisions of Sections 721.952(e), 721.953(i), and 721.957(f).

B) The designation of this equipment as subject to the requirements of Sections 721.952(e), 721.953(i), or 721.957(f) must be signed by the remanufacturer or other person that stores or treats the hazardous secondary material.

3) A list of equipment identification numbers for pressure relief devices required to comply with Section 721.954(a).

4) Compliance Tests.

A) The dates of each compliance test required in Sections 721.952(e), 721.953(i), 721.954, and 721.957(f).

B) The background level measured during each compliance test.

C) The maximum instrument reading measured at the equipment during each compliance test.

5) A list of identification numbers for equipment in vacuum service.

6) Identification, either by list or location (area or group) of equipment that contains or contacts hazardous secondary material with an organic concentration of at least 10 percent by weight for less than 300 hours per calendar year.

h) The following information pertaining to all valves subject to the requirements of Section 721.957(g) and (h) must be recorded in a log that is kept at the facility:

1) A list of identification numbers for valves that are designated as unsafe to monitor, an explanation for each valve stating why the valve is unsafe to monitor, and the plan for monitoring each valve.

2) A list of identification numbers for valves that are designated as difficult to monitor, an explanation for each valve stating why the valve is difficult to monitor, and the planned schedule for monitoring each valve.

i) The following information must be recorded in a log that is kept at the facility for valves complying with Section 721.962:

1) A schedule of monitoring.

2) The percent of valves found leaking during each monitoring period.

j) The following information must be recorded in a log that is kept at in the facility:

1) Criteria required in Sections 721.952(d)(5)(B) and 721.953(e)(2) and an explanation of the design criteria.

2) Any changes to these criteria and the reasons for the changes.

k) The following information must be recorded in a log that is kept at the facility for use in determining exemptions, as provided in the applicability Section of this Subpart BB and other specific Subparts:

1) An analysis determining the design capacity of the hazardous secondary material management unit.

2) A statement listing the hazardous secondary material influent to and effluent from each hazardous secondary material management unit subject to the requirements in Sections 721.952 through 721.960 and an analysis

determining whether these hazardous secondary materials are heavy liquids.

3) An up-to-date analysis and the supporting information and data used to determine whether or not equipment is subject to the requirements in Sections 721.952 through 721.960. The record must include supporting documentation as required by Section 721.963(d)(3) when application of the knowledge of the nature of the hazardous secondary material stream or the process by which it was produced is used. If the remanufacturer or other person that stores or treats the hazardous secondary material takes any action (e.g., changing the process that produced the material) that could result in an increase in the total organic content of the material contained in or contacted by equipment determined not to be subject to the requirements in Sections 721.952 through 721.960, then a new determination is required.

l) Records of the equipment leak information required by subsection (d) and the operating information required by subsection (e) need be kept only three years.

m) The remanufacturer or other person that stores or treats the hazardous secondary material at a facility with equipment that is subject to this Subpart BB and to regulations in 40 CFR 60 (Standards of Performance for New Stationary Sources), 61 (National Emission Standards for Hazardous Air Pollutants), or 63 (National Emission Standards for Hazardous Air Pollutants for Source Categories), incorporated by reference in 35 Ill. Adm. Code 720.111, may elect to determine compliance with this Subpart BB either by documentation pursuant to Section 721.964, or by documentation of compliance with the regulations in 40 CFR 60, 61, or 63 pursuant to the relevant provisions of the regulations in 40 CFR 60, 61, or 63. The documentation of compliance under regulations in 40 CFR 60, 61, or 63 must be kept with or made readily available at the facility.

BOARD NOTE: 415 ILCS 5/9.1(b) and (d) make the federal new source performance standards and national emission standards for hazardous air pollutants directly applicable in Illinois and prohibit operation of an emission source without a permit issued by the Agency. The Agency issues permits that incorporate the federal new source performance standards and national emission standards for hazardous air pollutants pursuant to 415 ILCS 5/39.5.

SUBPART CC: AIR EMISSION STANDARDS FOR TANKS AND CONTAINERS

Section 721.980 Applicability

The regulations in this Subpart CC apply to tanks and containers that contain hazardous secondary materials excluded under the remanufacturing exclusion at Section 721.104(a)(27),

unless the tanks and containers are equipped with and operating air emission controls in accordance with the requirements of an applicable federal Clean Air Act regulations codified in 40 CFR 60 (Standards of Performance for New Stationary Sources), 61 (National Emission Standards for Hazardous Air Pollutants), or 63 (National Emission Standards for Hazardous Air Pollutants for Source Categories), each incorporated by reference in 35 Ill. Adm. Code 720.111.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.981 Definitions

As used in this this Subpart CC, all terms not defined in this Section will have the meaning given to them in section 1004 of the federal Resource Conservation and Recovery Act (42 USC 6903), incorporated by reference in 35 Ill. Adm. Code 720.111, and 35 Ill. Adm. Code 720 through 726.

"Average volatile organic concentration" or "average VO concentration" means the mass-weighted average volatile organic concentration of a hazardous secondary material as determined in accordance with the requirements of Section 721.984.

"Closure device" means a cap, hatch, lid, plug, seal, valve, or other type of fitting that blocks an opening in a cover such that when the device is secured in the closed position it prevents or reduces air pollutant emissions to the atmosphere. Closure devices include devices that are detachable from the cover (e.g., a sampling port cap), manually operated (e.g., a hinged access lid or hatch), or automatically operated (e.g., a spring-loaded pressure relief valve).

"Continuous seal" means a seal that forms a continuous closure that completely covers the space between the edge of the floating roof and the wall of a tank. A continuous seal may be a vapor-mounted seal, liquid-mounted seal, or metallic shoe seal. A continuous seal may be constructed of fastened segments so as to form a continuous seal.

"Cover" means a device that provides a continuous barrier over the hazardous secondary material managed in a unit to prevent or reduce air pollutant emissions to the atmosphere. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment that can be detached and removed from the unit or a cover may be formed by structural features permanently integrated into the design of the unit.

"Empty hazardous secondary material container" means any of the following:

A container from which all hazardous secondary materials have been removed that can be removed using the practices commonly employed to remove materials from that type of container (e.g., pouring, pumping, or

aspirating), and no more than 2.5 centimeters (one inch) of residue remain on the bottom of the container or inner liner;

A container that is less than or equal to 119 gallons (450 liters) in size and no more than three percent by weight of the total capacity of the container remains in the container or inner liner; or

A container that is greater than 119 (450 liters) gallons in size and no more than 0.3 percent by weight of the total capacity of the container remains in the container or inner liner.

"Enclosure" means a structure that surrounds a tank or container, captures organic vapors emitted from the tank or container, and vents the captured vapors through a closed-vent system to a control device.

"External floating roof" means a pontoon-type or double-deck type cover that rests on the surface of the material managed in a tank with no fixed roof.

"Fixed roof" means a cover that is mounted on a unit in a stationary position and does not move with fluctuations in the level of the material managed in the unit.

"Floating membrane cover" means a cover consisting of a synthetic flexible membrane material that rests upon and is supported by the hazardous secondary material being managed in a surface impoundment.

"Floating roof" means a cover consisting of a double deck, pontoon single deck, or internal floating cover which rests upon and is supported by the material being contained, and is equipped with a continuous seal.

"Hard-piping" means pipe or tubing that is manufactured and properly installed in accordance with relevant standards and good engineering practices.

"In light material service" means the container is used to manage a material for which both of the following conditions apply: The vapor pressure of one or more of the organic constituents in the material is greater than 0.3 kilopascals (kPa) at 20°C; and the total concentration of the pure organic constituents having a vapor pressure greater than 0.3 kPa at 20°C is equal to or greater than 20 percent by weight.

"Internal floating roof" means a cover that rests or floats on the material surface (but not necessarily in complete contact with it) inside a tank that has a fixed roof.

"Liquid-mounted seal" means a foam or liquid-filled primary seal mounted in contact with the hazardous secondary material between the tank wall and the floating roof continuously around the circumference of the tank.

"Malfunction" means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions.

"Material determination" means performing all applicable procedures in accordance with the requirements of Section 721.984 to determine whether a hazardous secondary material meets standards specified in this Subpart CC. Examples of a material determination include performing the procedures in accordance with the requirements of Section 721.984 to determine the average VO concentration of a hazardous secondary material at the point of material origination; the average VO concentration of a hazardous secondary material at the point of material treatment and comparing the results to the exit concentration limit specified for the process used to treat the hazardous secondary material; the organic reduction efficiency and the organic biodegradation efficiency for a biological process used to treat a hazardous secondary material and comparing the results to the applicable standards; or the maximum volatile organic vapor pressure for a hazardous secondary material in a tank and comparing the results to the applicable standards.

"Maximum organic vapor pressure" means the sum of the individual organic constituent partial pressures exerted by the material contained in a tank, at the maximum vapor pressure-causing conditions (i.e., temperature, agitation, pH effects of combining materials, etc.) reasonably expected to occur in the tank. For the purpose of this Subpart CC, maximum organic vapor pressure is determined using the procedures specified in Section 721.984(c).

"Metallic shoe seal" means a continuous seal that is constructed of metal sheets which are held vertically against the wall of the tank by springs, weighted levers, or other mechanisms and is connected to the floating roof by braces or other means. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.

"No detectable organic emissions" means no escape of organics to the atmosphere as determined using the procedure specified in Section 721.984(d).

"Point of material origination" means as follows:

> Where the remanufacturer or other person that stores or treats the hazardous secondary material is the generator of the hazardous secondary material, the point of material origination means the point when a material produced by a system, process, or material management unit is determined to be a hazardous secondary material excluded under Section 721.104(a)(27).

BOARD NOTE: Where the person that stores or treats the hazardous secondary material is the generator of the hazardous secondary material, "point of material origination" is being used in a manner similar to the use of the term "point of generation" in air standards established under authority of the federal Clean Air Act in 40 CFR 60 (Standards of Performance for New Stationary Sources), 61 (National Emission Standards for Hazardous Air Pollutants), and 63 (National Emission Standards for Hazardous Air Pollutants for Source Categories), each incorporated by reference in 35 Ill. Adm. Code 720.111.
Where the remanufacturer or other person that stores or treats the hazardous secondary material is not the generator of the hazardous secondary material, point of material origination means the point when the remanufacturer or other person that stores or treats the hazardous secondary material accepts delivery or takes possession of the hazardous secondary material.

"Safety device" means a closure device such as a pressure relief valve, frangible disc, fusible plug, or any other type of device that functions exclusively to prevent physical damage or permanent deformation to a unit or its air emission control equipment by venting gases or vapors directly to the atmosphere during unsafe conditions resulting from an unplanned, accidental, or emergency event. For the purpose of this Subpart CC, a safety device is not used for routine venting of gases or vapors from the vapor headspace underneath a cover such as during filling of the unit or to adjust the pressure in this vapor headspace in response to normal daily diurnal ambient temperature fluctuations. A safety device is designed to remain in a closed position during normal operations and open only when the internal pressure, or another relevant parameter, exceeds the device threshold setting applicable to the air emission control equipment as determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials.

"Single-seal system" means a floating roof having one continuous seal. This seal may be vapor-mounted, liquid-mounted, or a metallic shoe seal.

"Vapor-mounted seal" means a continuous seal that is mounted such that there is a vapor space between the hazardous secondary material in the unit and the bottom of the seal.

"Volatile organic concentration" or "VO concentration" means the fraction by weight of the volatile organic compounds contained in a hazardous secondary material expressed in terms of parts per million (ppmw) as determined by direct measurement or by knowledge of the material in accordance with the requirements of Section 721.984. For the purpose of determining the VO

concentration of a hazardous secondary material, organic compounds with a Henry's law constant value of at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m^3) at 25ºC must be included.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.982 Standards: General

a) This Section applies to the management of hazardous secondary material in tanks and containers subject to this Subpart CC.

b) The remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from each hazardous secondary material management unit in accordance with standards specified in Sections 721.984 through 721.987, as applicable to the hazardous secondary material management unit, except as provided for in subsection (c).

c) A tank or container is exempt from standards specified in Sections 721.984 through 721.987, as applicable, provided that the hazardous secondary material management unit is a tank or container for which all hazardous secondary material entering the unit has an average VO concentration at the point of material origination of less than 500 parts per million by weight (ppmw). The average VO concentration must be determined using the procedures specified in Section 721.983(a). The remanufacturer or other person that stores or treats the hazardous secondary material must review and update, as necessary, this determination at least once every 12 months following the date of the initial determination for the hazardous secondary material streams entering the unit.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.983 Material Determination Procedures

a) Procedure to Determine Average Volatile Organic (VO) Concentration

1) Determining average VO concentration at the point of material origination. A remanufacturer or other person that stores or treats the hazardous secondary material must determine the average VO concentration at the point of material origination for each hazardous secondary material placed in a hazardous secondary material management unit exempted under the provisions of Section 721.982(c) from using air emission controls in compliance with standards specified in Sections 721.984 through 721.987, as applicable to the hazardous secondary material management unit.

A) An initial determination of the average VO concentration of the material stream must be made before the first time any portion of the material in the hazardous secondary material stream is placed in a hazardous secondary material management unit exempted under the provisions of Section 721.982(c) from using air emission controls, and thereafter an initial determination of the average VO concentration of the material stream must be made for each averaging period that a hazardous secondary material is managed in the unit; and

B) Perform a new material determination whenever changes to the source generating the material stream are reasonably likely to cause the average VO concentration of the hazardous secondary material to increase to a level that is equal to or greater than the applicable VO concentration limits specified in Section 721.982.

2) Determining average VO concentration using direct measurement or knowledge. For a material determination that is required by subsection (a)(1), the average VO concentration of a hazardous secondary material at the point of material origination must be determined using either direct measurement, as specified in subsection (a)(3), or by knowledge of the hazardous secondary material, as specified in subsection (a)(4).

3) Direct measurement to determine average VO concentration of a hazardous secondary material at the point of material origination, as follows:

A) Identification. The remanufacturer or other person that stores or treats the hazardous secondary material must identify and record in a log that is kept at the facility the point of material origination for the hazardous secondary material.

B) Sampling. Samples of the hazardous secondary material stream must be collected at the point of material origination in a manner so that volatilization of organics contained in the material and in the subsequent sample is minimized and an adequately representative sample is collected and maintained for analysis by the selected method.

i) The averaging period to be used for determining the average VO concentration for the hazardous secondary material stream on a mass-weighted average basis must be designated and recorded. The averaging period can represent any time interval that the remanufacturer or other person that stores or treats the hazardous secondary

material determines is appropriate for the hazardous secondary material stream but must not exceed one year.

ii) Enough samples, but at least four, must be collected and analyzed for a hazardous secondary material determination. The samples for a given material determination must be collected within a one-hour period. The average of the four or more sample results constitutes a material determination for the material stream. One or more material determinations may be required to represent the complete range of material compositions and quantities that occur during the entire averaging period due to normal variations in the operating conditions for the source or process generating the hazardous secondary material stream. Examples of these normal variations are seasonal variations in material quantity or fluctuations in ambient temperature.

iii) All samples must be collected and handled according to written procedures prepared by the remanufacturer or other person that stores or treats the hazardous secondary material and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous secondary material stream are collected so that a minimum loss of organics occurs throughout the sample collection and handling process, and by which sample integrity is maintained. A copy of the written sampling plan must be maintained at the facility. An example of acceptable sample collection and handling procedures for a total volatile organic constituent concentration may be found in Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.

iv) Sufficient information, as specified in the "site sampling plan" required under subsection (a)(3)(B)(iii), must be prepared and recorded to document the material quantity represented by the samples and, as applicable, the operating conditions for the source or process generating the hazardous secondary material represented by the samples.

C) Analysis. Each collected sample must be prepared and analyzed according to Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm.

Code 720.111, for the total concentration of volatile organic constituents, or using one or more methods when the individual organic compound concentrations are identified and summed and the summed material concentration accounts for and reflects all organic compounds in the material with Henry's law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m^3) at 25 ºC. At the discretion of the remanufacturer or other person that stores or treats the hazardous secondary material, the test data obtained may be adjusted by any appropriate method to discount any contribution to the total volatile organic concentration that is a result of including a compound with a Henry's law constant value of less than 0.1 Y/X at 25ºC. To adjust these data, the measured concentration of each individual chemical constituent contained in the material is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}). If the remanufacturer or other person that stores or treats the hazardous secondary material elects to adjust the test data, the adjustment must be made to all individual chemical constituents with a Henry's law constant value greater than or equal to 0.1 Y/X at 25ºC contained in the material. To adjust these data, the measured concentration of each individual chemical constituent contained in the waste is multiplied by the constituent-specific adjustment factors (f_{m25D}) approved in writing by the Agency. Other test methods may be used if they meet the requirements in subsection (a)(3)(C)(i) or (a)(3)(C)(ii) and provided the requirement to reflect all organic compounds in the material with Henry's law constant values greater than or equal to 0.1 Y/X (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m^3) at 25 ºC, is met.

i) Any USEPA standard method that has been validated in compliance with appendix D to 40 CFR 63 (Alternative Validation Procedure for EPA Waste and Wastewater Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.

ii) Any other analysis method that has been validated in according to the procedures specified in Section 5.1 or Section 5.3, and the corresponding calculations in Section 6.1 or Section 6.3, of Method 301 (Field Validation of Pollutant Measurement Methods from Various Waste Media) in appendix A to 40 CFR 63 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111. The data are acceptable if they meet the criteria specified in Section 6.1.5 or Section 6.3.3 of Method 301. If correction

is required under section 6.3.3 of Method 301, the data are acceptable if the correction factor is within the range 0.7 to 1.30. Other sections of Method 301 are not required.

D) Calculations

i) The average VO concentration ($\overline{C}$) on a mass-weighted basis must be calculated by using the results for all material determinations conducted in compliance with subsections (a)(3)(B) and (a)(3)(C) and the following equation:

$$\overline{C} = \frac{1}{Q_T} \times \sum_{i=1}^{n} Q_i \times C_i$$

Where:

$\overline{C}$ = Average VO concentration of the hazardous secondary material at the point of material origination on a mass-weighted basis, ppmw

i = Individual material determination "i" of the hazardous secondary material

n = Total number of material determinations of the hazardous secondary material conducted for the averaging period (not to exceed one year)

Q_i = Mass quantity of hazardous secondary material stream represented by C_i, kg/hr

Q_T = Total mass quantity of hazardous secondary material during the averaging period, kg/hr

C_i = Measured VO concentration of material determination "i" as determined in compliance with subsection (a)(3)(C) (i.e., the average of the four or more samples specified in subsection (a)(3)(B)(ii)), ppmw

ii) For determining C_i, for individual material samples analyzed in compliance with subsection (a)(3)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must account for VO concentrations determined to be below the detection limit of the analytical method by using the VO concentration that is one-half the blank value determined in the method at section 4.4 of Reference Method 25D, if Reference Method 25D is used for the analysis; or that is one-half the sum of the limits of detection established for each organic constituent in the material that has a Henry's law constant

values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m^3) at 25ºC, if any other analytical method is used.

4) Use of knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material to determine average VO concentration of a hazardous secondary material at the point of material origination.

A) Documentation must be prepared that presents the information used as the basis for the knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material of the hazardous secondary material stream's average VO concentration. Examples of information that may be used as the basis for knowledge include material balances for the source or process generating the hazardous secondary material stream; constituent-specific chemical test data for the hazardous secondary material stream from previous testing that are still applicable to the current material stream; previous test data for other locations managing the same type of material stream; or other knowledge based on information included in shipping papers or material certification notices.

B) If test data are used as the basis for knowledge, then the remanufacturer or other person that stores or treats the hazardous secondary material must document the test method, sampling protocol, and the means by which sampling variability and analytical variability are accounted for in determining the average VO concentration. For example, a remanufacturer or other person that stores or treats the hazardous secondary material may use organic concentration test data for the hazardous secondary material stream that are validated according to Method 301 (Field Validation of Pollutant Measurement Methods from Various Waste Media) in appendix A to 40 CFR 63 (Test Methods) as the basis for knowledge of the material.

C) A remanufacturer or other person that stores or treats the hazardous secondary material using chemical constituent-specific concentration test data as the basis for knowledge of the hazardous secondary material may adjust the test data to the corresponding average VO concentration value that would have been obtained had the material samples been analyzed using Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111(b). To

adjust these data, the measured concentration for each individual chemical constituent contained in the material is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}).

D) In the event that the Agency and the remanufacture or other person that stores or treats the hazardous secondary material disagree on a determination of the average VO concentration for a hazardous secondary material stream using knowledge, then the results from a determination of average VO concentration using direct measurement, as specified in subsection (a)(3), must be used to establish compliance with the applicable requirements of this Subpart CC. The Agency may perform or request that the remanufacturer or other person that stores or treats the hazardous secondary material perform this determination using direct measurement. The remanufacturer or other person that stores or treats the hazardous secondary material may choose one or more appropriate methods to analyze each collected sample under subsection (a)(3)(C). The Agency must state any disagreement on determination of the average VO concentration for a hazardous secondary material stream using knowledge in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

b) This subsection (b) corresponds with 40 CFR 261.1083(b), marked "reserved" by USEPA. This statement maintains structural consistency with the federal regulations.

c) Procedure to Determine the Maximum Organic Vapor Pressure of a Hazardous Secondary Material in a Tank

1) A remanufacturer or other person that stores or treats the hazardous secondary material must determine the maximum organic vapor pressure for each hazardous secondary material placed in a tank using Tank Level 1 controls in compliance with standards specified in Section 721.984(c).

2) A remanufacturer or other person that stores or treats the hazardous secondary material must use either direct measurement as specified in subsection (c)(3) or knowledge of the waste as specified by subsection (c)(4) to determine the maximum organic vapor pressure that is representative of the hazardous secondary material composition stored or treated in the tank.

3) Direct Measurement to Determine the Maximum Organic Vapor Pressure of a Hazardous Secondary Material

A) Sampling. Enough samples must be collected to be representative of the hazardous secondary material contained in the tank. All samples must be collected and handled according to written procedures prepared by the remanufacturer or other person that stores or treats the hazardous secondary material and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous secondary material are collected so that a minimum loss of organics occurs throughout the sample collection and handling process and by which sample integrity is maintained. A copy of the written sampling plan must be maintained at the facility. An example of acceptable sample collection and handling procedures may be found in Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

B) Analysis. Any appropriate one of the following methods may be used to analyze the samples and compute the maximum organic vapor pressure of the hazardous secondary material:

i) Reference Method 25E (Determination of Vapor Phase Organic Concentration in Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111(b);

ii) Methods described in American Petroleum Institute Publication 2517, Third Edition, February 1989, "Evaporative Loss from External Floating-Roof Tanks", incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Methods obtained from standard reference texts;

iv) ASTM Method 2879–92, incorporated by reference in 35 Ill. Adm. Code 720.111; and

v) Any other method approved in writing by the Agency.

4) Use of Knowledge to Determine the Maximum Organic Vapor Pressure of the Hazardous Secondary Material. Documentation must be prepared and recorded that presents the information used as the basis for the knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material that the maximum organic vapor pressure of the hazardous secondary material is less than the maximum vapor pressure limit listed in Section 721.984(b)(1)(A) for the applicable tank design capacity category. An example of information that may be used is documentation that the hazardous secondary material is generated by a

process for which at other locations it previously has been determined by direct measurement that the hazardous secondary material's waste maximum organic vapor pressure is less than the maximum vapor pressure limit for the appropriate tank design capacity category.

d) Procedure for Determining No Detectable Organic Emissions for the Purpose of Complying with this Subpart CC

1) The test must be conducted according to the procedures specified in Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111. Each potential leak interface (i.e., a location if organic vapor leakage could occur) on the cover and associated closure devices must be checked. Potential leak interfaces that are associated with covers and closure devices include the interface of the cover and its foundation mounting, the periphery of any opening on the cover and its associated closure device, and the sealing seat interface on a spring-loaded pressure relief valve.

2) The test must be performed when the unit contains a hazardous secondary material having an organic concentration representative of the range of concentrations for the hazardous secondary material expected to be managed in the unit. During the test, the cover and closure devices must be secured in the closed position.

3) The detection instrument must meet the performance criteria of Reference Method 21, except the instrument response factor criteria in section 3.1.2(a) of Reference Method 21, must be for the average composition of the organic constituents in the hazardous secondary material placed in the hazardous secondary management unit, not for each individual organic constituent.

4) The detection instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.

5) Calibration gases must be as follows:

A) Zero air (less than 10 ppmv hydrocarbon in air); and

B) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppmv methane or n-hexane.

6) The background level must be determined according to the procedures in Reference Method 21.

7) Each potential leak interface must be checked by traversing the instrument probe around the potential leak interface as close to the interface as possible, as described in Reference Method 21. If the configuration of the cover or closure device prevents a complete traverse of the interface, all accessible portions of the interface must be sampled. If the configuration of the closure device prevents any sampling at the interface and the device is equipped with an enclosed extension or horn (e.g., some pressure relief devices), the instrument probe inlet must be placed at approximately the center of the exhaust area to the atmosphere.

8) The arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of 500 ppmv except when monitoring a seal around a rotating shaft that passes through a cover opening, in which case the comparison must be as specified in subsection (d)(9). If the difference is less than 500 ppmv, then the potential leak interface is determined to operate with no detectable organic emissions.

9) For the seals around a rotating shaft that passes through a cover opening, the arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of 10,000 ppmw. If the difference is less than 10,000 ppmw, then the potential leak interface is determined to operate with no detectable organic emissions.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.984 Standards: Tanks

a) The provisions of this Section apply to the control of air pollutant emissions from tanks for which Section 721.982(b) references the use of this Section for air emission control.

b) The remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from each tank subject to this Section in compliance with the following requirements, as applicable:

1) For a tank that manages hazardous secondary material that meets the conditions specified in subsections (b)(1)(A) through (b)(1)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the tank in compliance with the Tank Level 1 controls specified in subsection (c) or the Tank Level 2 controls specified in subsection (d).

A) The hazardous secondary material in the tank has a maximum organic vapor pressure that is less than the maximum organic

vapor pressure limit for the tank's design capacity category, as follows:

i) For a tank design capacity equal to or greater than 151 m^3, the maximum organic vapor pressure limit for the tank is 5.2 kPa.

ii) For a tank design capacity equal to or greater than 75 m^3 but less than 151 m^3, the maximum organic vapor pressure limit for the tank is 27.6 kPa.

iii) For a tank design capacity less than 75 m^3, the maximum organic vapor pressure limit for the tank is 76.6 kPa.

B) The hazardous secondary material in the tank is not heated by the remanufacturer or other person that stores or treats the hazardous secondary material to a temperature that is greater than the temperature at which the maximum organic vapor pressure of the hazardous secondary material is determined for complying with subsection (b)(1)(A).

2) For a tank that manages hazardous secondary material that does not meet the conditions specified in subsections (b)(1)(A) through (b)(1)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the tank by using Tank Level 2 controls in compliance with subsection (d). An example of tanks required to use Tank Level 2 controls is a tank for which the hazardous secondary material in the tank has a maximum organic vapor pressure that is equal to or greater than the maximum organic vapor pressure limit for the tank's design capacity category, as specified in subsection (b)(1)(A).

c) A remanufacturer or other person that stores or treats the hazardous secondary material controlling air pollutant emissions from a tank using Tank Level 1 controls must meet the requirements specified in subsections (c)(1) through (c)(4):

1) The remanufacturer or other person that stores or treats that hazardous secondary material must determine the maximum organic vapor pressure for a hazardous secondary material to be managed in the tank using Tank Level 1 controls before the first time the hazardous secondary material is placed in the tank. The maximum organic vapor pressure must be determined using the procedures specified in Section 721.983(c). Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform a new determination whenever changes to the hazardous secondary material managed in the tank could potentially cause the maximum organic vapor pressure to

increase to a level that is equal to or greater than the maximum organic vapor pressure limit for the tank design capacity category specified in subsection (b)(1)(A), as applicable to the tank.

2) The tank must be equipped with a fixed roof designed to meet the following specifications:

A) The fixed roof and its closure devices must be designed to form a continuous barrier over the entire surface area of the hazardous secondary material in the tank. The fixed roof may be a separate cover installed on the tank (e.g., a removable cover mounted on an open-top tank) or may be an integral part of the tank structural design (e.g., a horizontal cylindrical tank equipped with a hatch).

B) The fixed roof must be installed in a manner so that there are no visible cracks, holes, gaps, or other open spaces between roof section joints or between the interface of the roof edge and the tank wall.

C) Each opening in the fixed roof, and any manifold system associated with the fixed roof, must meet either of the following requirements:

i) It must be equipped with a closure device designed to operate so that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the opening and the closure device; or

ii) It must be connected by a closed-vent system that is vented to a control device. The control device must remove or destroy organics in the vent stream and must be operating whenever hazardous secondary material is managed in the tank, except as provided in this subsection (c)(2)(C)(ii). During any period of routine inspection, maintenance, or other activities needed for normal operations, and for removal of accumulated sludge or other residues from the bottom of the tank. During any period when it is necessary to provide access to the tank for performing the foregoing activities, venting of the vapor headspace underneath the fixed roof to the control device is not required, opening of closure devices is allowed, and removal of the fixed roof is allowed. After completing the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the

closed position or reinstall the cover, as applicable, and resume operating the control device.

BOARD NOTE: This subsection (c)(2)(C)(ii) corresponds with 40 CFR 261.1083(c)(2)(iii)(B). The Board combined the texts of 40 CFR 261.1083(c)(2)(iii)(B)(*1*) and (c)(2)(iii)(B)(*2*) into this single subsection to comport with codification requirements.

D) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices must include the organic vapor permeability; the effects of any contact with the hazardous secondary material or its vapors managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.

3) Whenever a hazardous secondary material is in the tank, the fixed roof must be installed with each closure device secured in the closed position, except as follows:

A) Opening of closure devices or removal of the fixed roof is allowed at the following times:

i) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of these activities include those times when a worker needs to open a port to sample the liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. After completing the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.

ii) To remove accumulated sludge or other residues from the bottom of tank.

B) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device that vents to the atmosphere is allowed during normal operations for maintaining the tank internal pressure in compliance with the tank

design specifications. The device must be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens must be established so that the device remains in the closed position whenever the tank internal pressure is within the internal pressure operating range determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on the tank manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the tank internal pressure exceeds the internal pressure operating range for the tank because of loading operations or diurnal ambient temperature fluctuations.

C) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.

4) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the air emission control equipment in according to the following requirements.

A) The fixed roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

B) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the fixed roof and its closure devices on or before the date that the tank becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year except under the special conditions provided for in subsection (l).

C) If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in compliance with subsection (k).

D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in compliance with the requirements specified in Section 721.989(b).

d) Remanufacturers or other persons that store or treat the hazardous secondary material controlling air pollutant emissions from a tank using Tank Level 2 controls must use one of the following tanks:

1) A fixed-roof tank equipped with an internal floating roof in compliance with subsection (e);

2) A tank equipped with an external floating roof in compliance with subsection (f);

3) A tank vented through a closed-vent system to a control device in compliance with subsection (g);

4) A pressure tank designed and operated in compliance with subsection (h); or

5) A tank located inside an enclosure that is vented through a closed-vent system to an enclosed combustion control device in compliance with subsection (i).

e) The remanufacturer or other person that stores or treats the hazardous secondary material that controls air pollutant emissions from a tank using a fixed roof with an internal floating roof must meet the requirements specified in subsections (e)(1) through (e)(3).

1) The tank must be equipped with a fixed roof and an internal floating roof in compliance with the following requirements:

A) The internal floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.

B) The internal floating roof must be equipped with a continuous seal between the wall of the tank and the floating roof edge that meets either of the following requirements:

i) A single continuous seal that is either a liquid-mounted seal or a metallic shoe seal, as defined in Section 721.981; or

ii) Two continuous seals mounted one above the other. The lower seal may be a vapor-mounted seal.

C) The internal floating roof must meet the following specifications:

i) Each opening in a noncontact internal floating roof except for automatic bleeder vents (vacuum breaker vents) and the rim space vents is to provide a projection below the liquid surface.

ii) Each opening in the internal floating roof must be equipped with a gasketed cover or a gasketed lid except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains.

iii) Each penetration of the internal floating roof for sampling must have a slit fabric cover that covers at least 90 percent of the opening.

iv) Each automatic bleeder vent and rim space vent must be gasketed.

v) Each penetration of the internal floating roof that allows for passage of a ladder must have a gasketed sliding cover.

vi) Each penetration of the internal floating roof that allows for passage of a column supporting the fixed roof must have a flexible fabric sleeve seal or a gasketed sliding cover.

2) The remanufacturer or other person that stores or treats the hazardous secondary material must operate the tank in compliance with the following requirements:

A) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling must be continuous and must be completed as soon as practical.

B) Automatic bleeder vents are always to be set closed when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.

C) Prior to filling the tank, each cover, access hatch, gauge float well or lid on any opening in the internal floating roof must be bolted or fastened closed (i.e., no visible gaps). Rim space vents are to be set to open only when the internal floating roof is not floating or

when the pressure beneath the rim exceeds the manufacturer's recommended setting.

3) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the internal floating roof in according to the following procedures:

A) The floating roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include the internal floating roof is not floating on the surface of the liquid inside the tank; liquid has accumulated on top of the internal floating roof; any portion of the roof seals have detached from the roof rim; holes, tears, or other openings are visible in the seal fabric; the gaskets no longer close off the hazardous secondary material surface from the atmosphere; or the slotted membrane has more than 10 percent open area.

B) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the internal floating roof components as follows, except as provided in subsection (e)(3)(C):

i) It must visually inspect the internal floating roof components through openings on the fixed roof (e.g., manholes and roof hatches) at least once every 12 months after initial fill; and

ii) It must visually inspect the internal floating roof, primary seal, secondary seal (if one is in service), gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every 10 years.

C) As an alternative to performing the inspections specified in subsection (e)(3)(B), for an internal floating roof equipped with two continuous seals mounted one above the other, the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the internal floating roof, primary and secondary seals, gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every five years.

D) Prior to each inspection required by subsection (e)(3)(B) or (e)(3)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency in

advance of each inspection to provide the Agency with the opportunity to have an observer present during the inspection. The remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency of the date and location of the inspection as follows:

i) Prior to each visual inspection of an internal floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the Agency at least 30 calendar days before refilling the tank, except when an inspection is not planned as provided for in subsection (e)(3)(D)(ii).

ii) When a visual inspection is not planned and the remanufacturer or other person that stores or treats the hazardous secondary material could not have known about the inspection 30 calendar days before refilling the tank, the remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the Agency at least seven calendar days before refilling the tank.

E) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in compliance with subsection (k).

F) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in compliance with the requirements specified in Section 721.989(b).

4) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any tank complying with subsection (e).

f) The remanufacturer or other person that stores or treats the hazardous secondary material that controls air pollutant emissions from a tank using an external floating roof must meet the requirements specified in subsections (f)(1) through (f)(3).

1) The remanufacturer or other person that stores or treats the hazardous secondary material must design the external floating roof as follows:

A) The external floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.

B) The floating roof must be equipped with two continuous seals, one above the other, between the wall of the tank and the roof edge. The lower seal is referred to as the primary seal, and the upper seal is referred to as the secondary seal.

i) The primary seal must be a liquid-mounted seal or a metallic shoe seal, as defined in 35 Ill. Adm. Code 721.981. The total area of the gaps between the tank wall and the primary seal must not exceed 212 square centimeters (cm^2) per meter of tank diameter, and the width of any portion of these gaps must not exceed 3.8 centimeters (cm). If a metallic shoe seal is used for the primary seal, the metallic shoe seal must be designed so that one end extends into the liquid in the tank and the other end extends a vertical distance of at least 61 cm above the liquid surface.

ii) The secondary seal must be mounted above the primary seal and cover the annular space between the floating roof and the wall of the tank. The total area of the gaps between the tank wall and the secondary seal must not exceed 21.2 cm^2 per meter of tank diameter, and the width of any portion of these gaps must not exceed 1.3 cm.

C) The external floating roof must meet the following specifications:

i) Except for automatic bleeder vents (vacuum breaker vents) and rim space vents, each opening in a noncontact external floating roof must provide a projection below the liquid surface.

ii) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be equipped with a gasketed cover, seal, or lid.

iii) Each access hatch and each gauge float well must be equipped with a cover designed to be bolted or fastened when the cover is secured in the closed position.

iv) Each automatic bleeder vent and each rim space vent must be equipped with a gasket.

v) Each roof drain that empties into the liquid managed in the tank must be equipped with a slotted membrane fabric cover that covers at least 90 percent of the area of the opening.

vi) Each unslotted and slotted guide pole well must be equipped with a gasketed sliding cover or a flexible fabric sleeve seal.

vii) Each unslotted guide pole must be equipped with a gasketed cap on the end of the pole.

viii) Each slotted guide pole must be equipped with a gasketed float or other device that closes off the liquid surface from the atmosphere.

ix) Each gauge hatch and each sample well must be equipped with a gasketed cover.

2) The remanufacturer or other person that stores or treats the hazardous secondary material must operate the tank in compliance with the following requirements:

A) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling must be continuous and must be completed as soon as practical.

B) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be secured and maintained in a closed position at all times except when the closure device must be open for access.

C) Covers on each access hatch and each gauge float well must be bolted or fastened when secured in the closed position.

D) Automatic bleeder vents must be set closed always when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.

E) Rim space vents must be set to open only at those times that the roof is being floated off the roof leg supports or when the pressure beneath the rim seal exceeds the manufacturer’s recommended setting.

F) The cap on the end of each unslotted guide pole must be secured in the closed position always except when measuring the level or collecting samples of the liquid in the tank.

G) The cover on each gauge hatch or sample well must be secured in the closed position always except when the hatch or well must be opened for access.

H) Both the primary seal and the secondary seal must completely cover the annular space between the external floating roof and the wall of the tank in a continuous fashion except during inspections.

3) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the external floating roof according to the following procedures:

A) The remanufacturer or other person that stores or treats the hazardous secondary material must measure the external floating roof seal gaps as follows:

i) The remanufacturer or other person that stores or treats the hazardous secondary material must perform measurements of gaps between the tank wall and the primary seal within 60 calendar days after initially operating the tank following installing the floating roof and, thereafter, at least once every five years.

ii) The remanufacturer or other person that stores or treats the hazardous secondary material must perform measurements of gaps between the tank wall and the secondary seal within 60 calendar days after initially operating the tank following installing the floating roof and, thereafter, at least once every year.

iii) If a tank ceases to hold hazardous secondary material for a period of one year or more, subsequently introducing hazardous secondary material into the tank must be considered an initial operation for subsections (f)(3)(A)(i) and (f)(3)(A)(ii).

iv) The remanufacturer or other person that stores or treats the hazardous secondary material must determine the total surface area of gaps in the primary seal and in the secondary seal individually using the procedure described in subsection (f)(3)(D):

BOARD NOTE: The Board moved corresponding 40 CFR 261.1084(f)(3)(i)(D)(*1*) through (f)(3)(i)(D)(*4*) to appear as subsections (f)(3)(D)(i) through (f)(3)(D)(iv) to comport with codification requirements.

v) If the seal gap measurements do not conform to the specifications in subsection (f)(1)(B), the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in compliance with subsection (k).

vi) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in compliance with the requirements specified in Section 721.989(b).

B) The remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the external floating roof as follows:

i) The floating roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include holes, tears, or other openings in the rim seal or seal fabric of the floating roof; a rim seal detached from the floating roof; all or a portion of the floating roof deck being submerged below the surface of the liquid in the tank; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

ii) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the external floating roof and its closure devices on or before the date that the tank becomes subject to this Section. After the initial inspection, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year except for the special conditions provided for in subsection (l).

iii) If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in compliance with subsection (k).

iv) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in compliance with the requirements specified in Section 721.989(b).

C) Before each inspection required by subsection (f)(3)(A) or (f)(3)(B), the remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency in advance of each inspection to provide the Agency with the opportunity to have an observer present during the inspection. The remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency of the date and location of the inspection as follows:

i) Before each inspection to measure external floating roof seal gaps, as required under subsection (f)(3)(A), written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the Agency at least 30 calendar days before the date the measurements are scheduled to be performed.

ii) Before each visual inspection of an external floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the Agency at least 30 calendar days before refilling the tank, except when an inspection is not planned as provided for in subsection (f)(3)(C)(iii).

iii) When a visual inspection is not planned and the remanufacturer or other person that stores or treats the hazardous secondary material could not have known about the inspection 30 calendar days before refilling the tank, the owner or operator must notify the Agency as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the Agency at least seven calendar days before refilling the tank.

D) Procedure for determining the total surface area of gaps in the primary seal and in the secondary seal individually.

i) The seal gap measurements must be performed at one or more floating roof levels when the roof is floating off the roof supports.

ii) Seal gaps, if any, must be measured around the entire perimeter of the floating roof in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against the seal) between the seal and the wall of the tank and measure the circumferential distance of each location.

iii) For a seal gap measured under this subsection (f)(3), the gap surface area must be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each width by its respective circumferential distance.

iv) The total gap area must be calculated by adding the gap surface areas determined for each identified gap location for the primary seal and the secondary seal individually, and then dividing the sum for each seal type by the nominal diameter of the tank. These total gap areas for the primary seal and secondary seal are then compared to the respective standards for the seal type as specified in subsection (f)(1)(B).

BOARD NOTE: The texts of corresponding 40 CFR 261.1084(f)(3)(i)(D)(*1*) through (f)(3)(i)(D)(*4*), which would normally appear in subsection (f)(3)(A)(iv), but codification requirements do not allow a fifth level of subsections. Thus, the Board has codified them to appear as subsections (f)(3)(D)(i) through (f)(3)(D)(iv) to comport with codification requirements.

4) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any tank complying with this subsection (f).

g) The remanufacturer or other person that stores or treats the hazardous secondary material that controls air pollutant emissions from a tank by venting the tank to a control device must meet the following requirements:

1) The tank must be covered by a fixed roof and vented directly through a closed-vent system to a control device in compliance with the following requirements:

A) The fixed roof and its closure devices must be designed to form a continuous barrier over the entire surface area of the liquid in the tank.

B) Each opening in the fixed roof not vented to the control device must be equipped with a closure device. If the pressure in the vapor headspace underneath the fixed roof is less than atmospheric pressure when the control device is operating, the closure devices must be designed to operate so that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device. If the pressure in the vapor headspace underneath the fixed roof is equal to or greater than atmospheric pressure when the control device is operating, the closure device must be designed to operate with no detectable organic emissions.

C) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices must include, organic vapor permeability, the effects of any contact with the liquid and its vapor managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.

D) The closed-vent system and control device must be designed and operated in compliance with the requirements of Section 721.987.

2) Whenever a hazardous secondary material is in the tank, the fixed roof must be installed with each closure device secured in the closed position and the vapor headspace underneath the fixed roof vented to the control device, except as follows:

A) Venting to the control device is not required, and opening of closure devices or removal of the fixed roof is allowed at the following times:

i) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of activities needed for normal operations include those times when a worker needs to open a port to sample liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. After completing the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.

ii) To remove accumulated sludge or other residues from the bottom of a tank.

B) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.

3) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor the air emission control equipment according to the following procedures:

A) The fixed roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

B) The closed-vent system and control device must be inspected and monitored by the remanufacturer or other person that stores or treats the hazardous secondary material according to the procedures specified in Section 721.987.

C) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the air emission control equipment on or before the date that the tank becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year except for the special conditions provided for in subsection (l).

D) In the event that a defect is detected, the remanufacture or other person that stores or treats the hazardous secondary material must repair the defect in compliance with subsection (k).

E) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in compliance with the requirements specified in Section 721.989(b).

h) The remanufacturer or other person that stores or treats the hazardous secondary material that controls air pollutant emissions by using a pressure tank must meet the following requirements:

1) The tank must be designed not to vent to the atmosphere because compression of the vapor headspace in the tank during filling of the tank to its design capacity.

2) All tank openings must be equipped with closure devices designed to operate with no detectable organic emissions as determined using the procedure specified in Section 721.983(d).

3) Whenever a hazardous secondary material is in the tank, the tank must be operated as a closed system that does not vent to the atmosphere, except under either or the following conditions described in subsection (h)(3)(A) or (h)(3)(B).

A) At those times when opening of a safety device, as defined in Section 721.981, is required to avoid an unsafe condition.

B) At those times when purging of inerts from the tank is required and the purge stream is routed to a closed-vent system and control device designed and operated in compliance with of Section 721.987.

i) The remanufacturer or other person that stores or treats the hazardous secondary material that controls air pollutant emissions by using an enclosure vented through a closed-vent system to an enclosed combustion control device must meet the following requirements:

1) The tank must be located inside an enclosure. The enclosure must be designed and operated in according to the criteria for a permanent total enclosure as specified in "Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure" in appendix B to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111. The enclosure may have permanent or temporary openings to allow worker access; passage of material into or out of the enclosure by conveyor,

vehicles, or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The remanufacturer or other person that stores or treats the hazardous secondary material must perform the verification procedure for the enclosure as specified in Section 5.0 of "Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure" initially when the enclosure is first installed and annually thereafter.

2) The enclosure must be vented through a closed-vent system to an enclosed combustion control device that is designed and operated in compliance with the standards for either a vapor incinerator, boiler, or process heater specified in Section 721.987.

3) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any enclosure, closed-vent system, or control device used to comply with subsections (i)(1) and (i)(2).

4) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor the closed-vent system and control device, as specified in Section 721.987.

j) The remanufacturer or other person that stores or treats the hazardous secondary material must transfer hazardous secondary material to a tank subject to this section as follows:

1) Transfer of hazardous secondary material, except as provided in subsection (j)(2), to the tank from another tank subject to this section must be conducted using continuous hard-piping or another closed system that does not allow exposure of the hazardous secondary material to the atmosphere. For complying with this provision, an individual drain system is considered to be a closed system when it complies with subpart RR of 40 CFR 63 (National Emission Standards for Individual Drain Systems), incorporated by reference in 35 Ill. Adm. Code 720.111.

2) Subsection (j)(1) does not apply when transferring a hazardous secondary material to the tank under any of the following conditions:

A) The hazardous secondary material meets the average VO concentration conditions specified in Section 721.982(c) at the point of material origination.

B) The hazardous secondary material has been treated by an organic destruction or removal process to meet the requirements in Section 721.982(c).

C) The hazardous secondary material complies with Section 721.982(c).

k) The remanufacturer or other person that stores or treats the hazardous secondary material must repair each defect detected during an inspection performed under subsection I(4), (e)(3), (f)(3), or (g)(3), as follows:

1) The remanufacturer or other person that stores or treats the hazardous secondary material must make first efforts at repair of the defect no later than five calendar days after detection, and repair must be completed as soon as possible, but within 45 calendar days after detection, except as provided in subsection (k)(2).

2) Repair of a defect may be delayed beyond 45 calendar days if the remanufacturer or other person that stores or treats the hazardous secondary material determines that repair of the defect requires emptying or temporary removal from service of the tank and no alternative tank capacity is available at the site to accept the hazardous secondary material normally managed in the tank. In this case, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect the next time the process or unit that is generating the hazardous secondary material managed in the tank stops operation. Repair of the defect must be completed before the process or unit resumes operation.

l) Following the initial inspection and monitoring of the cover as required by the applicable provisions of this Subpart CC, subsequent inspection and monitoring may be performed at intervals longer than one year under the following special conditions:

1) If inspecting or monitoring the cover would expose a worker to dangerous, hazardous, or other unsafe conditions, then the remanufacturer or other person that stores or treats the hazardous secondary material may designate a cover as an "unsafe to inspect and monitor cover" and comply with the following requirements:

A) Prepare a written explanation for the cover stating the reasons why the cover is unsafe to visually inspect or to monitor, if required.

B) Develop and implement a written plan and schedule to inspect and monitor the cover, using the procedures specified in the applicable Section of this Subpart CC, as frequently as practicable during those times when a worker can safely access the cover.

2) If a tank is buried partially or entirely underground, a remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor, as required by the applicable provisions of this

Section, only those portions of the tank cover and those connections to the tank (e.g., fill ports, access hatches, gauge wells, etc.) that are located on or above the ground surface.

(Source: Amended at 48 Ill. Reg. 16813, effective November 22, 2024)

Section 721.986 Standards: Containers

a) Applicability. The provisions of this Section apply to the control of air pollutant emissions from containers for which Section 721.982(b) references the use of this Section for air emission control.

b) General Requirements

1) The remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from each container subject to this Section in accordance with the following requirements, as applicable to the container.

A) For a container having a design capacity greater than 0.1 m^3 and less than or equal to 0.46 m^3, the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the container in accordance with the Container Level 1 standards specified in subsection (c).

B) For a container having a design capacity greater than 0.46 m^3 that is not in light material service, the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the container in accordance with the Container Level 1 standards specified in subsection (c).

C) For a container having a design capacity greater than 0.46 m^3 that is in light material service, the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the container in accordance with the Container Level 2 standards specified in subsection (d).

2) This subsection (b)(2) corresponds with 40 CFR 261.1086(b)(2), marked "reserved" by USEPA. This statement maintains structural consistency with the federal regulations

c) Container Level 1 Standards

1) A container using Container Level 1 controls is one of the following:

A) A container that meets the applicable U.S. Department of Transportation (USDOT) regulations on packaging hazardous materials for transportation, as specified in subsection (f).

B) A container equipped with a cover and closure devices that form a continuous barrier over the container openings such that, when the cover and closure devices are secured in the closed position, there are no visible holes, gaps, or other open spaces into the interior of the container. The cover may be a separate cover installed on the container (e.g., a lid on a drum or a suitably secured tarp on a roll-off box) or may be an integral part of the container structural design (e.g., a "portable tank" or bulk cargo container equipped with a screw-type cap).

C) An open-top container in which an organic-vapor suppressing barrier is placed on or over the hazardous secondary material in the container such that no hazardous secondary material is exposed to the atmosphere. One example of such a barrier is application of a suitable organic-vapor suppressing foam.

2) A container used to meet the requirements of subsection (c)(1)(B) or (c)(1)(C) must be equipped with covers and closure devices, as applicable to the container, that are composed of suitable materials to minimize exposure of the hazardous secondary material to the atmosphere and to maintain the equipment integrity, for as long as the container is in service. Factors to be considered in selecting the materials of construction and designing the cover and closure devices must include, organic vapor permeability; the effects of contact with the hazardous secondary material or its vapor managed in the container; the effects of outdoor exposure of the closure device or cover material to wind, moisture, and sunlight; and the operating practices for which the container is intended to be used.

3) Whenever a hazardous secondary material is in a container using Container Level 1 controls, the remanufacturer or other person that stores or treats the hazardous secondary material must install all covers and closure devices for the container, as applicable to the container, and secure and maintain each closure device in the closed position except as follows:

A) Opening of a closure device or cover is allowed for the purpose of adding hazardous secondary material or other material to the container as follows:

i) If the container is filled to the intended final level in one continuous operation, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position

and install the covers, as applicable to the container, upon conclusion of the filling operation.

ii) If discrete quantities or batches of material intermittently are added to the container over a period of time, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within 15 minutes; the person performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the hazardous secondary material being added to the container, whichever condition occurs first.

B) Opening of a closure device or cover is allowed for the purpose of removing hazardous secondary material from the container, as follows:

i) For the purpose of meeting the requirements of this section, an empty hazardous secondary material container may be open to the atmosphere at any time (i.e., covers and closure devices on such a container are not required to be secured in the closed position).

ii) If discrete quantities or batches of material are removed from the container, but the container is not an empty hazardous secondary material container, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within 15 minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.

C) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous secondary material. Examples of routine activities other than transfer of hazardous secondary material include those times when a worker needs to open a port to measure the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside

the container. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container.

D) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device must be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the remanufacturer or other persons that stores or treats the hazardous secondary material based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.

E) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.

4) The remanufacturer or other person that stores or treats the hazardous secondary material using containers with Container Level 1 controls must inspect the containers and their covers and closure devices, as follows:

A) If a hazardous secondary material already is in the container at the time the remanufacturer or other person that stores or treats the hazardous secondary material first accepts possession of the container at the facility and the container is not emptied within 24 hours after the container is accepted at the facility (i.e., is not an empty hazardous secondary material container) the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container

visual inspection must be conducted on or before the date that the container is accepted at the facility (i.e., the date the container becomes subject to the container standards of this Subpart CC).

B) If a container used for managing hazardous secondary material remains at the facility for a period of one year or more, the remanufacturer or other person that stores or treats the hazardous secondary material must initially visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. After the initial inspection, a visual inspection must occur at least once every 12 months. If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (c)(4)(C).

C) When a defect is detected for the container, cover, or closure devices, the remanufacturer or other person that stores or treats the hazardous secondary material must make first efforts at repair of the defect no later than 24 hours after detection and repair must be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous secondary material must be removed from the container and the container must not be used to manage hazardous secondary material until the defect is repaired.

5) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain at the facility a copy of the procedure used to determine that containers with capacity of 0.46 m^3 or greater which do not meet applicable USDOT regulations, as specified in subsection (f), are not managing hazardous secondary material in light material service.

d) Container Level 2 Standards

1) A container using Container Level 2 controls is one of the following:

A) A container that meets the applicable USDOT regulations on packaging hazardous materials for transportation, as specified in subsection (f).

B) A container that operates with no detectable organic emissions, as defined in Section 721.981, and determined in accordance with the procedure specified in subsection (g).

C) A container that has been demonstrated within the preceding 12 months to be vapor-tight by using Reference Method 27 (Determination of Vapor Tightness of Gasoline Delivery Tank Unis Pressure-Vacuum Test) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, in accordance with the procedure specified in subsection (h).

2) Transfer of hazardous secondary material in or out of a container using Container Level 2 controls must be conducted in such a manner as to minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, considering the physical properties of the hazardous secondary material and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that USEPA has stated that it considers to meet the requirements of this subsection (d) include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous secondary material is filled and subsequently purging the transfer line before removing it from the container opening.

3) Whenever a hazardous secondary material is in a container using Container Level 2 controls, the remanufacturer or other person that stores or treats the hazardous secondary material must install all covers and closure devices for the container, and secure and maintain each closure device in the closed position, except as follows:

A) Opening of a closure device or cover is allowed for the purpose of adding hazardous secondary material or other material to the container, as follows:

i) If the container is filled to the intended final level in one continuous operation, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.

ii) If discrete quantities or batches of material intermittently are added to the container over a period of time, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being

filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within 15 minutes; the person performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the material being added to the container, whichever condition occurs first.

B) Opening of a closure device or cover is allowed for the purpose of removing hazardous secondary material from the container, as follows:

i) For the purpose of meeting the requirements of this Section, an empty hazardous secondary material container may be open to the atmosphere at any time (i.e., covers and closure devices are not required to be secured in the closed position on an empty container).

ii) If discrete quantities or batches of material are removed from the container, but the container is not an empty hazardous secondary materials container, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within 15 minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.

C) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous secondary material. Examples of routine activities other than transfer of hazardous secondary material include those times when a worker needs to open a port to measure the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container.

D) Opening of a spring-loaded, pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in

accordance with the container design specifications. The device must be designed to operate with no detectable organic emission when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.

E) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.

4) The remanufacturer or other person that stores or treats the hazardous secondary material using containers with Container Level 2 controls must inspect the containers and their covers and closure devices as follows:

A) If a hazardous secondary material already is in the container at the time the remanufacturer or other person that stores or treats the hazardous secondary material first accepts possession of the container at the facility and the container is not emptied within 24 hours after the container is accepted at the facility (i.e., is not an empty hazardous secondary material container), the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection must be conducted on or before the date that the container is accepted at the facility (i.e., the date the container becomes subject to the container standards of this Subpart CC).

B) If a container used for managing hazardous secondary material remains at the facility for a period of one year or more, the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the container and its

cover and closure devices initially and thereafter, at least once every 12 months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (d)(4)(C).

C) When a defect is detected for the container, cover, or closure devices, the remanufacturer or other person that stores or treats the hazardous secondary material must make first efforts at repair of the defect no later than 24 hours after detection, and repair must be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous secondary material must be removed from the container and the container must not be used to manage hazardous secondary material until the defect is repaired.

e) Container Level 3 Standards

1) A container using Container Level 3 controls is one of the following:

A) A container that is vented directly through a closed-vent system to a control device in accordance with the requirements of subsection (e)(2)(B).

B) A container that is vented inside an enclosure which is exhausted through a closed-vent system to a control device in accordance with the requirements of subsections (e)(2)(A) and (e)(2)(B).

2) The remanufacturer or other person that stores or treats the hazardous secondary material must meet the following requirements, as applicable to the type of air emission control equipment selected by the remanufacturer or other person that stores or treats the hazardous secondary material:

A) The container enclosure must be designed and operated in accordance with the criteria for a permanent total enclosure, as specified in "Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure" in appendix B (VOM Measurement Techniques for Capture Efficiency) to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111. The enclosure may have permanent or temporary openings to allow worker access; passage of containers through the enclosure by conveyor or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The remanufacturer or other person that stores or treats

the hazardous secondary material must perform the verification procedure for the enclosure as specified in Section 5.0 of "Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure" initially when the enclosure is first installed and, thereafter, annually.

B) The closed-vent system and control device must be designed and operated in accordance with the requirements of Section 721.987.

3) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any container, enclosure, closed-vent system, or control device used to comply with the requirements of subsection (e)(1).

4) Remanufacturers or other persons that store or treat the hazardous secondary material using Container Level 3 controls in accordance with the provisions of this Subpart CC must inspect and monitor the closed-vent systems and control devices as specified in Section 721.987.

5) Remanufacturers or other persons that store or treat the hazardous secondary material that use Container Level 3 controls in accordance with the provisions of this Subpart CC must prepare and maintain the records specified in Section 721.989(d).

6) Transfer of hazardous secondary material in or out of a container using Container Level 3 controls must be conducted in such a manner as to minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, considering the physical properties of the hazardous secondary material and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that USEPA has stated that it considers to meet the requirements of this subsection (e) include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous secondary material is filled and subsequently purging the transfer line before removing it from the container opening.

f) For the purpose of compliance with subsection (c)(1)(A) or (d)(1)(A), containers must be used that meet the applicable USDOT regulations on packaging hazardous materials for transportation, as follows:

1) The container meets the applicable requirements specified in 49 CFR 178 (Specifications for Packagings) or 179 (Specifications for Tank Cars), each incorporated by reference in 35 Ill. Adm. Code 720.111.

2) Hazardous secondary material is managed in the container in accordance with the applicable requirements specified in subpart B of 49 CFR 107 (Hazardous Material Program Procedures) and 49 CFR 172 (Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, Training Requirements, and Security Plans), 173 (Shippers—General Requirements for Shipments and Packagings), and 180 (Continuing Qualification and Maintenance of Packagings), incorporated by reference in 35 Ill. Adm. Code 720.111.

3) For the purpose of complying with this Subpart CC, no exceptions to the 49 CFR 178 (Specifications for Packagings) or 179 (Specifications for Tank Cars) regulations are allowed.

g) To determine compliance with the no detectable organic emissions requirement of subsection (d)(1)(B), the procedure specified in Section 721.983(d) must be used.

1) Each potential leak interface (i.e., a location where organic vapor leakage could occur) on the container, its cover, and associated closure devices, as applicable to the container, must be checked. Potential leak interfaces that are associated with containers include, but are not limited to: the interface of the cover rim and the container wall; the periphery of any opening on the container or container cover and its associated closure device; and the sealing seat interface on a spring-loaded pressure-relief valve.

2) The test must be performed when the container is filled with a material having a volatile organic concentration representative of the range of volatile organic concentrations for the hazardous secondary materials expected to be managed in this type of container. During the test, the container cover and closure devices must be secured in the closed position.

h) Procedure for determining a container to be vapor-tight using Reference Method 27 (Determination of Vapor Tightness of Gasoline Delivery Tank Unis Pressure-Vacuum Test) in appendix A (Test Methods) to 40 CFR 60, incorporated by reference in 35 Ill. Adm. Code 720.111, for the purpose of complying with subsection (d)(1)(C).

1) The test must be performed in accordance with Reference Method 27 of appendix A to 40 CFR 60.

2) A pressure measurement device must be used that has a precision of ±2.5 mm water and that is capable of measuring above the pressure at which the container is to be tested for vapor tightness.

3) If the test results determined by Reference Method 27 indicate that the container sustains a pressure change less than or equal to 0.75 kPa within five minutes after it is pressurized to a minimum of 4.5 kPa, then the container is determined to be vapor-tight.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.987 Standards: Closed-Vent Systems and Control Devices

a) This Section applies to each closed-vent system and control device installed and operated by the remanufacturer or other person who stores or treats the hazardous secondary material to control air emissions in accordance with standards of this Subpart CC.

b) The closed-vent system must meet the following requirements:

1) The closed-vent system must route the gases, vapors, and fumes emitted from the hazardous secondary material in the hazardous secondary material management unit to a control device that meets the requirements specified in subsection (c).

2) The closed-vent system must be designed and operated in accordance with the requirements specified in Section 721.933(k).

3) If the closed-vent system includes bypass devices that could be used to divert the gas or vapor stream to the atmosphere before entering the control device, each bypass device must be equipped with either a flow indicator as specified in subsection (b)(3)(A) or a seal or locking device as specified in subsection (b)(3)(B). For the purpose of complying with this subsection (b), low leg drains, high point bleeds, analyzer vents, open-ended valves or lines, spring loaded pressure relief valves, and other fittings used for safety purposes are not considered to be bypass devices.

A) If a flow indicator is used to comply with subsection (b)(3), the indicator must be installed at the inlet to the bypass line used to divert gases and vapors from the closed-vent system to the atmosphere at a point upstream of the control device inlet. For this subsection (b), a flow indicator means a device which indicates the presence of either gas or vapor flow in the bypass line.

B) If a seal or locking device is used to comply with subsection (b)(3), the device must be placed on the mechanism by which the bypass device position is controlled (e.g., valve handle, damper lever, etc.) when the bypass device is in the closed position such that the bypass device cannot be opened without breaking the seal or removing the lock. Examples of such devices include, but are not

limited to, a car-seal or a lock-and-key configuration valve. The remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the seal or closure mechanism at least once every month to verify that the bypass mechanism is maintained in the closed position.

4) The closed-vent system must be inspected and monitored by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the procedure specified in Section 721.933(l).

c) The control device must meet the following requirements:

1) The control device must be one of the following devices:

A) A control device designed and operated to reduce the total organic content of the inlet vapor stream vented to the control device by at least 95 percent by weight;

B) An enclosed combustion device designed and operated in accordance with the requirements of Section 721.933(c); or

C) A flare designed and operated in accordance with the requirements of Section 721.933(d).

2) The remanufacturer or other person that stores or treats the hazardous secondary material who elects to use a closed-vent system and control device to comply with the requirements of this Section must comply with the requirements specified in subsections (c)(2)(A) through (c)(2)(F).

A) Periods of planned routine maintenance of the control device, during which the control device does not meet the specifications of subsection (c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable, must not exceed 240 hours per year.

B) The specifications and requirements in subsections (c)(1)(A) through (c)(1)(C) for control devices do not apply during periods of planned routine maintenance.

C) The specifications and requirements in subsections (c)(1)(A) through (c)(1)(C) for control devices do not apply during a control device system malfunction.

D) The remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate compliance with the requirements of subsection (c)(2)(A) (i.e., planned routine

maintenance of a control device, during which the control device does not meet the specifications of subsection (c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable, must not exceed 240 hours per year) by recording the information specified in Section 721.989(e)(1)(E).

E) The remanufacturer or other person that stores or treats the hazardous secondary material must correct control device system malfunctions as soon as practicable after their occurrence in order to minimize excess emissions of air pollutants.

F) The remanufacturer or other person that stores or treats the hazardous secondary material must operate the closed-vent system such that gases, vapors, or fumes are not actively vented to the control device during periods of planned maintenance or control device system malfunction (i.e., periods when the control device is not operating or not operating normally) except in cases when it is necessary to vent the gases, vapors, or fumes to avoid an unsafe condition or to implement malfunction corrective actions or planned maintenance actions.

3) The remanufacturer or other person that stores or treats the hazardous secondary material using a carbon adsorption system to comply with subsection (c)(1) must operate and maintain the control device in accordance with the following requirements:

A) Following the initial startup of the control device, all activated carbon in the control device must be replaced with fresh carbon on a regular basis in accordance with the requirements of Section 721.933(g) or (h).

B) All carbon that is hazardous waste and that is removed from the control device must be managed in accordance with the requirements of Section 721.933(n), regardless of the average volatile organic concentration of the carbon.

4) A remanufacturer or other person that stores or treats the hazardous secondary material using a control device other than a thermal vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with subsection (c)(1) must operate and maintain the control device in accordance with the requirements of Section 721.933(j).

5) The remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate that a control device achieves the performance requirements of subsection (c)(1) as follows:

A) A remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate the performance of each control device, using either a performance test, as specified in subsection (c)(5)(C), or a design analysis, as specified in subsection (c)(5)(D), except for the following:

i) A flare;

ii) A boiler or process heater with a design heat input capacity of 44 megawatts or greater; or

iii) A boiler or process heater into which the vent stream is introduced with the primary fuel.

B) A remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate the performance of each flare in accordance with the requirements specified in Section 721.933(e).

C) For a performance test conducted to meet the requirements of subsection (c)(5)(A), the remanufacturer or other person that stores or treats the hazardous secondary material must use the test methods and procedures specified in Section 721.934(c)(1) through (c)(4).

D) For a design analysis conducted to meet the requirements of subsection (c)(5)(A), the design analysis must meet the requirements specified in Section 721.935(b)(4)(C).

E) The remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate that a carbon adsorption system achieves the performance requirements of subsection (c)(1) based on the total quantity of organics vented to the atmosphere from all carbon adsorption system equipment that is used for organic adsorption, organic desorption or carbon regeneration, organic recovery, and carbon disposal.

6) If the remanufacturer or other person that stores or treats the hazardous secondary material and the Agency do not agree on a demonstration of control device performance using a design analysis, then the disagreement must be resolved using the results of a performance test performed by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the requirements of subsection (c)(5)(C). The Agency may choose to have an authorized representative observe the performance test. The Agency must state any disagreement on a demonstration of control device performance using a design analysis in

writing to the remanufacturer or other person that treats or stores hazardous secondary material.

7) The closed-vent system and control device must be inspected and monitored by the remanufacture or other person that stores or treats the hazardous secondary material in accordance with the procedures specified in Section 721.933(f)(2) and (l). The readings from each monitoring device required by Section 721.933(f)(2) must be inspected at least once each operating day to check control device operation. Any necessary corrective measures must be immediately implemented to ensure the control device is operated in compliance with the requirements of this Section.

(Source: Amended at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.988 Inspection and Monitoring Requirements

a) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor air emission control equipment used to comply with this Subpart CC in accordance with the applicable requirements specified in Sections 721.984 through 721.987.

b) The remanufacturer or other person that stores or treats the hazardous secondary material must develop and implement a written plan and schedule to perform the inspections and monitoring required by subsection (a). The remanufacturer or other person that stores or treats the hazardous secondary material must keep the plan and schedule at the facility.

(Source: Added at 40 Ill. Reg. 11367, effective August 9, 2016)

Section 721.989 Recordkeeping Requirements

a) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to requirements of this Subpart CC must record and maintain the information specified in subsections (b) through (j), as applicable to the facility. Except for air emission control equipment design documentation and information required by subsections (i) and (j), records required by this section must be maintained at the facility for a minimum of three years. Air emission control equipment design documentation must be maintained at the facility until the air emission control equipment is replaced or otherwise no longer in service. Information required by subsections (i) and (j) must be maintained at the facility for as long as the hazardous secondary material management unit is not using air emission controls specified in Sections 721.984 through 721.987 in compliance with the conditions specified in Section 721.980.

b) The remanufacturer or other person that stores or treats the hazardous secondary material using a tank with air emission controls in compliance with Section 721.984 must prepare and maintain records for the tank that include the following information:

1) For each tank using air emission controls in compliance with Section 721.984, the remanufacturer or other person that stores or treats the hazardous secondary material must record:

A) A tank identification number (or other unique identification description as selected by the remanufacturer or other person that stores or treats the hazardous secondary material).

B) A record for each inspection required by Section 721.984 that includes the following information:

i) The date inspection was conducted.

ii) For each defect detected during the inspection, the location of the defect, a description of the defect, the date of detection, and corrective action taken to repair the defect. If the repair of the defect is delayed in under Section 721.984, the remanufacturer or other person that stores or treats the hazardous secondary material must also record the reason for the delay and the date that completion of repair of the defect is expected.

2) In addition to the information required by subsection (b)(1), the remanufacturer or other person that stores or treats the hazardous secondary material must record the following information, as applicable to the tank:

A) The remanufacturer or other person that stores or treats the hazardous secondary material using a fixed roof to comply with the Tank Level 1 control requirements specified in Section 721.984(c) must prepare and maintain records for each determination for the maximum organic vapor pressure of the hazardous secondary material in the tank performed in compliance with Section 721.984(c). The records must include the date and time the samples were collected, the analysis method used, and the analysis results.

B) The remanufacturer or other person that stores or treats the hazardous secondary material using an internal floating roof to comply with the Tank Level 2 control requirements specified in

Section 721.1084(e) of this Subpart CC must prepare and maintain documentation describing the floating roof design.

C) Remanufacturer or other persons that store or treat the hazardous secondary material using an external floating roof to comply with the Tank Level 2 control requirements specified in Section 721.984(f) must prepare and maintain the following records:

i) Documentation describing the floating roof design and the dimensions of the tank.

ii) Records for each seal gap inspection required by Section 721.984(f)(3) describing the results of the seal gap measurements. The records must include the date that the measurements were performed, the raw data obtained for the measurements, and the calculations of the total gap surface area. If the seal gap measurements do not conform to the specifications in Section 721.984(f)(1), the records must include a description of the repairs that were made, the date the repairs were made, and the date the tank was emptied, if necessary.

D) Each remanufacturer or other person that stores or treats the hazardous secondary material using an enclosure to comply with the Tank Level 2 control requirements specified in Section 721.984(i) must prepare and maintain the following records:

i) Records for the most recent set of calculations and measurements performed by the remanufacturer or other person that stores or treats the hazardous secondary material to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure" in appendix B (VOM Measurement Techniques for Capture Efficiency) to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111.

ii) Records required for the closed-vent system and control device in compliance with subsection (e).

c) This subsection (c) corresponds with 40 CFR 261.1089(c), marked "reserved" by USEPA. This statement maintains structural consistency with the federal regulations.

d) The remanufacturer or other person that stores or treats the hazardous secondary material using containers with Container Level 3 air emission controls in

compliance with Section 721.986 must prepare and maintain records that include the following information:

1) Records for the most recent set of calculations and measurements performed by the remanufacturer or other person that stores or treats the hazardous secondary material to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure" in appendix B (VOM Measurement Techniques for Capture Efficiency) to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111.

2) Records required for the closed-vent system and control device in compliance with subsection (e).

e) The remanufacturer or other person that stores or treats the hazardous secondary material using a closed-vent system and control device in compliance with Section 721.987 must prepare and maintain records that include the following information:

1) Documentation for the closed-vent system and control device that includes:

A) Certification that is signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material stating that the control device is designed to operate at the performance level documented by a design analysis, as specified in subsection (e)(1)(B), or by performance tests as specified in subsection (e)(1)(C) when the tank or container is or would be operating at capacity or the highest level reasonably expected to occur.

B) If a design analysis is used, then design documentation as specified in Section 721.935(b)(4). The documentation must include information prepared by the remanufacturer or other person that stores or treats the hazardous secondary material or provided by the control device manufacturer or vendor that describes the control device design in compliance with Section 721.935(b)(4)(C) and certification by the remanufacturer or other person that stores or treats the hazardous secondary material that the control equipment meets the applicable specifications.

C) If performance tests are used, then a performance test plan, as specified in Section 721.935(b)(3), and all test results.

D) Information as required by Section 721.935(c)(1) and (c)(2), as applicable.

E) A remanufacturer or other person that stores or treats the hazardous secondary material must record, on a semiannual basis, the information specified in subsections (e)(1)(E)(i) and (e)(1)(E)(ii) for those planned routine maintenance operations that would require the control device not to comply with Section 721.987(c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable.

i) A description of the planned routine maintenance that is anticipated to be performed for the control device during the next six-month period. This description must include the type of maintenance necessary, planned frequency of maintenance, and lengths of maintenance periods.

ii) A description of the planned routine maintenance that was performed for the control device during the previous six-month period. This description must include the type of maintenance performed and the total number of hours during those six months that the control device did not comply with Section 721.987(c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable, due to planned routine maintenance.

F) A remanufacturer or other person that stores or treats the hazardous secondary material must record the information specified in subsections (e)(1)(F)(i) through (e)(1)(F)(iii) for those unexpected control device system malfunctions that would require the control device not to comply with Section 721.987(c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable.

i) The occurrence and duration of each malfunction of the control device system.

ii) The duration of each period during a malfunction when gases, vapors, or fumes are vented from the hazardous secondary material management unit through the closed-vent system to the control device while the control device is not properly functioning.

iii) Actions taken during periods of malfunction to restore a malfunctioning control device to its normal or usual manner of operation.

G) Records of the management of carbon removed from a carbon adsorption system conducted in compliance with Section 721.987(c)(3)(B).

f) The remanufacturer or other person that stores or treats the hazardous secondary material using a tank or container exempted under the hazardous secondary material organic concentration conditions specified in Section 721.982(c), must prepare and maintain at the facility records documenting the information used for each material determination (e.g., test results, measurements, calculations, and other documentation). If analysis results for material samples are used for the material determination, then the remanufacturer or other person that stores or treats the hazardous secondary material must record the date, time, and location that each material sample is collected in compliance with applicable requirements of Section 721.983.

BOARD NOTE: Corresponding 40 CFR 261.1089(f) includes a subsection (f)(2) that USEPA marked "reserved". Because there is no 40 CFR 1089(f)(1), the Board included no text to correspond with subsection (f)(2).

g) A remanufacturer or other person that stores or treats the hazardous secondary material designating a cover as "unsafe to inspect and monitor" under Section 721.984(l) must record and keep at facility the following information: the identification numbers for hazardous secondary material management units with covers that are designated as "unsafe to inspect and monitor", the explanation for each cover stating why the cover is unsafe to inspect and monitor, and the plan and schedule for inspecting and monitoring each cover.

h) The remanufacturer or other person that stores or treats the hazardous secondary material that is subject to this Subpart CC and to the control device standards in subpart VV (Standards of Performance for Equipment Leaks of VOC in the Synthetic Organic Chemicals Manufacturing Industry for which Construction, Reconstruction, or Modification Commenced After January 5, 1981, on or Before November 7, 2006) of 40 CFR 60 or subpart V of 40 CFR 61 (National Emission Standard for Equipment Leaks (Fugitive Emission Sources)), each incorporated by reference in 35 Ill. Adm. Code 720.111, may elect to demonstrate complying with the applicable sections of this Subpart CC by documentation either under this Subpart CC, or under the provisions of subpart VV of 40 CFR 60 or subpart V of 40 CFR 61, to the extent that the documentation required by 40 CFR 60 or 61 duplicates the documentation required by this Section.

Section 721.APPENDIX A Representative Sampling Methods

The methods and equipment used for sampling waste materials will vary with the form and consistency of the waste materials to be sampled. Samples collected using the sampling protocols listed below, for sampling waste with properties similar to the indicated materials, are considered by USEPA to be representative of the waste.

Extremely viscous liquid: ASTM D 140–70 (Standard Practice for Sampling Bituminous Materials), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Crushed or powdered material: ASTM D 346–75 (Standard Practice for Collection and Preparation of Coke Samples for Laboratory Analysis), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Soil or rock-like material: ASTM D 420–69 (Guide to Site Characterization for Engineering, Design, and Construction Purposes), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Soil-like material: ASTM D 1452–65 (Standard Practice for Soil Investigation and Sampling by Auger Borings), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Fly ash-like material: ASTM D 2234–76(Standard Practice for Collection of a Gross Sample of Coal), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Containerized liquid wastes: "Composite Liquid Waste Sampler (COLIWASA)".

Liquid waste in pits, ponds, lagoons, and similar reservoirs: "Pond Sampler".

Section 721.APPENDIX G Basis for Listing Hazardous Wastes

USEPA hazardous waste No.	Hazardous constituents for which listed
F001	Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, chlorinated fluorocarbons.
F002	Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, 1,1,2-trichlorethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane.
F003	N.A.
F004	Cresols and cresylic acid, nitrobenzene.
F005	Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, 2-ethoxyethanol, benzene, 2-nitropropane.
F006	Cadmium, hexavalent chromium, nickel, cyanide (complexed).
F007	Cyanide (salts).
F008	Cyanide (salts).

F009	Cyanide (salts).
F010	Cyanide (salts).
F011	Cyanide (salts).
F012	Cyanide (complexed).
F019	Hexavalent chromium, cyanide (complexed).
F020	Tetra- and pentachlorodibenzo-p-dioxins; tetra- and pentachlorodibenzofurans; tri- and tetrachlorophenols and their clorophenoxy derivative acids, esters, ethers, amines, and other salts.
F021	Penta- and hexachlorodibenzo-p-dioxins; penta- and hexachlorodibenzofurans; pentachlorophenol and its derivatives.
F022	Tetra-, penta- and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans.
F023	Tetra- and pentachlorodibenzo-p-dioxins; tetra- and pentachlorodibenzofurans; tri- and tetra- chlorophenols and their chlorophenoxy derivative acids, esters, ethers, amines, and other salts.
F024	Chloromethane, dichloromethane, trichloromethane, carbon tetrachloride, chloroethylene, 1,1-dichloroethane, 1,2-dichloroethane, trans-1,2-dichloroethylene, 1,1-dichloroethylene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethylene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, tetrachloroethylene, pentachloroethane, hexachloroethane, allyl chloride (3-chloropropene), dichloropropane, dichloropropene, 2-chloro-1,3-butadiene, hexachloro-1,3-butadiene, hexachlorochylopentadiene, hexachlorocylohexane, benzene, chlorobenzene, dichlorobenzenes, 1,2,4-trichlorobenzene, tetrachlorobenzenes, pentachlorobenzene, hexachlorobenzene, toluene, naphthalene.
F025	Chloromethane, diclоromethane, trichloromethane; carbon tetrachloride; chloroethylene; 1,1-dichloroethane; 1,2-dichloroethane; trans-1,2-dichloroethylene; 1,1-dichloroethylene; 1,1,1-trichloroethane; 1,1,2-trichloroethane; trichloroethylene; 1,1,1,2-tetrachloroethane; 1,1,2,2-tetrachloroethane; tetrachloroethylene; pentachloroethane; hexachloroethane; allyl chloride (3-chloropropene); dichloropropane; dichloropropene; 2-chloro-1,3-butadiene; hexachloro-1,3-butadiene; hexachlorocyclopentadiene; benzene; chlorobenzene; dichlorobenzene; 1,2,4-trichlorobenzene; tetrachlorobenzene; pentachlorobenzene; hexachlorobenzene; toluene; naphthalene.
F026	Tetra-, penta-, and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans.
F027	Tetra-, penta, and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans; tri-, tetra-, and pentachlorophenols and their chlorophenoxy derivative acids, esters, ethers, amines, and other salts.
F028	Tetra-, penta-, and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans; tri-, tetra-, and pentachlorophenols and their chlorophenoxy derivative acids, esters, ethers, amines, and other salts.

F032	Benz(a)anthracene; benzo(a)pyrene; dibenz(a,h)anthracene; indeno(1,2,3-cd)pyrene; pentachlorophenol; arsenic; chromium; tetra-, penta-, hexa-, and heptachlorordibenzo-p-dioxins; tetra-, penta-, hexa-, and heptachlorodibenzofurans.
F034	Benz(a)anthracene, benzo(k)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, naphthalene, arsenic, chromium.
F035	Arsenic, chromium, lead.
F037	Benzene, benzo(a)pyrene, chrysene, lead, chromium.
F038	Benzene, benzo(a)pyrene, chrysene, lead, chromium.
F039	All constituents for which treatment standards are specified for multi-source leachate (wastewaters and nonwastewaters) under Table B to 35 Ill. Adm. Code 728 (Constituent Concentrations in Waste).
K001	Pentachlorophenol, phenol, 2-chlorophenol, p-chloro-m-cresol, 2,4-dimethylphenol, 2,4- dinitrophenol, trichlorophenols, tetrachlorophenols, 2,4- dinitrophenol, creosote, chrysene, naphthalene, fluoranthene, benzo(b)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, benz(a) anthracene, dibenz(a)anthracene, acenaphthalene.
K002	Hexavalent chromium, lead.
K003	Hexavalent chromium, lead.
K004	Hexavalent chromium.
K005	Hexavalent chromium, lead.
K006	Hexavalent chromium.
K007	Cyanide (complexed), hexavalent chromium.
K008	Hexavalent chromium.
K009	Chloroform, formaldehyde, methylene chloride, methyl chloride, paraldehyde, formic acid.
K010	Chloroform, formaldehyde, methylene chloride, methyl chloride, paraldehyde, formic acid, chloroacetaldehyde.
K011	Acrylonitrile, acetonitrile, hydrocyanic acid.
K013	Hydrocyanic acid, acrylonitrile, acetonitrile.
K014	Acetonitrile, acrylamide.
K015	Benzyl chloride, chlorobenzene, toluene, benzotrichloride.
K016	Hexachlorobenzene, hexachlorobutadiene, carbon tetrachloride, hexachloroethane, perchloroethylene.
K017	Epichlorohydrin, chloroethers (bis(chloromethyl) ether and bis- (2-chloroethyl) ethers), trichloropropane, dichloropropanols.
K018	1,2-dichloroethane, trichloroethylene, hexachlorobutadiene, hexachlorobenzene.
K019	Ethylene dichloride, 1,1,1-trichloroethane, 1,1,2-trichloroethane, tetrachloroethanes (1,1,2,2-tetrachloroethane and 1,1,1,2-tetrachloroethane), trichloroethylene, tetrachloroethylene, carbon tetrachloride, chloroform, vinyl chloride, vinylidene chloride.

K020	Ethylene dichloride, 1,1,1-trichloroethane, 1,1,2-trichloroethane, tetrachloroethanes (1,1,2,2-tetrachloroethane and 1,1,1,2-tetrachloroethane), trichloroethylene, tetrachloroethylene, carbon tetrachloride, chloroform, vinyl chloride, vinylidene chloride.
K021	Antimony, carbon tetrachloride, chloroform.
K022	Phenol, tars (polycyclic aromatic hydrocarbons).
K023	Phthalic anhydride, maleic anhydride.
K024	Phthalic anhydride, 1,4-naphthoguinone.
K025	Meta-dinitrobenzene, 2,4-dinitrotoluene.
K026	Paraldehyde, pyridines, 2-picoline.
K027	Toluene diisocyanate, toluene-2,4-diamine.
K028	1,1,1-trichloroethane, vinyl chloride.
K029	1,2-dichloroethane, 1,1,1-trichloroethane, vinyl chloride, vinylidene chloride, chloroform.
K030	Hexachlorobenzene, hexachlorobutadiene, hexachloroethane, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, ethylene dichloride.
K031	Arsenic.
K032	Hexachlorocyclopentadiene.
K033	Hexachlorocyclopentadiene.
K034	Hexachlorocyclopentadiene.
K035	Creosote, chrysene, naphthalene, fluoranthene, benzo(b) fluoranthene, benzo(a)-pyrene, indeno(1,2,3-cd) pyrene, benzo(a)anthracene, dibenzo(a)anthracene, acenaphthalene.
K036	Toluene, phosphorodithioic and phosphorothioic acid esters.
K037	Toluene, phosphorodithioic and phosphorothioic acid esters.
K038	Phorate, formaldehyde, phosphorodithioic and phosphorothioic acid esters.
K039	Phosphorodithioic and phosphorothioic acid esters.
K040	Phorate, formaldehyde, phosphorodithioic and phosphorothioic acid esters.
K041	Toxaphene.
K042	Hexachlorobenzene, ortho-dichlorobenzene.
K043	2,4-dichlorophenol, 2,6-dichlorophenol, 2,4,6-trichlorophenol.
K044	N.A.
K045	N.A.
K046	Lead.
K047	N.A.
K048	Hexavalent chromium, lead.
K049	Hexavalent chromium, lead.
K050	Hexavalent chromium.
K051	Hexavalent chromium, lead.
K052	Lead.
K060	Cyanide, naphthalene, phenolic compounds, arsenic.
K061	Hexavalent chromium, lead, cadmium.
K062	Hexavalent chromium, lead.
K069	Hexavalent chromium, lead, cadmium.
K071	Mercury.

K073	Chloroform, carbon tetrachloride, hexachloroethane, trichloroethane, tetrachloroethylene, dichloroethylene, 1,1,2,2-tetrachloroethane.
K083	Aniline, diphenylamine, nitrobenzene, phenylenediamine.
K084	Arsenic.
K085	Benzene, dichlorobenzenes, trichlorobenzenes, tetrachlorobenzenes, pentachlorobenzene, hexachlorobenzene, benzyl chloride.
K086	Lead, hexavalent chromium.
K087	Phenol, naphthalene.
K088	Cyanide (complexes).
K093	Phthalic anhydride, maleic anhydride.
K094	Phthalic anhydride.
K095	1,1,2-trichloroethane, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane.
K096	1,2-dichloroethane, 1,1,1-trichloroethane, 1,1,2-trichloroethane.
K097	Chlordane, heptachlor.
K098	Toxaphene.
K099	2,4-dichlorophenol, 2,4,6-trichlorophenol.
K100	Hexavalent chromium, lead, cadmium.
K101	Arsenic.
K102	Arsenic.
K103	Aniline, nitrobenzene, phenylenediamine.
K104	Aniline, benzene, diphenylamine, nitrobenzene, phynylenediamine.
K105	Benzene, monochlorobenzene, dichlorobenzenes, 2,4,6-trichlorophenol.
K106	Mercury.
K111	2,4-Dinitrotoluene.
K112	2,4-Toluenediamine, o-toluidine, p-toluidine, aniline.
K113	2,4-Toluenediamine, o-toluidine, p-toluidine, aniline.
K114	2,4-Toluenediamine, o-toluidine, p-toluidine.
K115	2,4-Toluenediamine.
K116	Carbon tetrachloride, tetrachloroethylene, chloroform, phosgene.
K117	Ethylene dibromide.
K118	Ethylene dibromide.
K123	Ethylene thiourea.
K124	Ethylene thiourea.
K125	Ethylene thiourea.
K126	Ethylene thiourea.
K131	Dimethyl sulfate, methyl bromide.
K132	Methyl bromide.
K136	Ethylene dibromide.
K141	Benzene, benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene.
K142	Benzene, benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene.
K143	Benzene, benz(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene.
K144	Benzene, benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene.

K145	Benzene, benz(a)anthracene, benzo(a)pyrene, dibenz(a,h)anthracene, naphthalene.
K147	Benzene, benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene.
K148	Benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene.
K149	Benzotrichloride, benzyl chloride, chloroform, chloromethane, chlorobenzene, 1,4-dichlorobenzene, hexachlorobenzene, pentachlorobenzene, 1,2,4,5-tetrachlorobenzene, toluene.
K150	Carbon tetrachloride, chloroform, chloromethane, 1,4-dichlorobenzene, hexachlorobenzene, pentachlorobenzene, 1,2,4,5-tetrachlorobenzene, 1,1,2,2-tetrachloroethane, tetrachloroethylene, 1,2,4-trichlorobenzene.
K151	Benzene, carbon tetrachloride, chloroform, hexachlorobenzene, pentachlorobenzene, toluene, 1,2,4,5-tetrachlorobenzene, tetrachloroethylene.
K156	Benomyl, carbaryl, carbendazim, carbofuran, carbosulfan, formaldehyde, methylene chloride, triethylamine.
K157	Carbon tetrachloride, formaldehyde, methyl chloride, methylene chloride, pyridine, triethylamine.
K158	Benomyl, carbendazim, carbofuran, carbosulfan, chloroform, methylene chloride.
K159	Benzene, butylate, EPTC, molinate, pebulate, vernolate.
K161	Antimony, arsenic, metam-sodium, ziram.
K169	Benzene.
K170	Benzo(a)pyrene, dibenz(a,h)anthracene, benzo (a) anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, 3-methylcholanthrene, 7,12-dimethylbenz(a)anthracene.
K171	Benzene, arsenic.
K172	Benzene, arsenic.
K174	1,2,3,4,6,7,8-Heptachlorodibenzo-p-dioxin (1,2,3,4,6,7,8-HpCDD), 1,2,3,4,6,7,8-heptachlorodibenzofuran (1,2,3,4,6,7,8-HpCDF), 1,2,3,4,7,8,9-heptachlorodibenzofuran (1,2,3,6,7,8,9-HpCDF), all hexachlorodibenzo-p-dioxins (HxCDDs), all hexachlorodibenzofurans (HxCDFs), all pentachlorodibenzo-p-dioxins (PeCDDs), 1,2,3,4,6,7,8,9-octachlorodibenzo-p-dioxin (OCDD), 1,2,3,4,6,7,8,9- octachlorodibenzofuran (OCDF), all pentachlorodibenzofurans (PeCDFs), all tetrachlorodibenzo-p-dioxins (TCDDs), all tetrachlorodibenzofurans (TCDFs).
K175	Mercury.
K176	Arsenic, lead.
K177	Antimony.
K178	Thallium.
K181	Aniline, o-anisidine, 4-chloroaniline, p-cresidine, 2,4-dimethylaniline, 1,2-phenylenediamine, 1,3-phenylenediamine.

N.A.—Waste is hazardous because it fails the test for the characteristic of ignitability, corrosivity, or reactivity.

(Source: Amended at 35 Ill. Reg. 17734, effective October 14, 2011)

Section 721.APPENDIX H Hazardous Constituents

Common Name	Chemical Abstracts Name	Chemical Abstracts Number (CAS No.)	USEPA Hazard-ous Waste Number
A2213	Ethanimidothioic acid, 2-(dimethylamino)-N-hydroxy-2-oxo-, methyl ester	30558-43-1	U394
Acetonitrile	Same	75-05-8	U003
Acetophenone	Ethanone, 1-phenyl-	98-86-2	U004
2-Acetylaminofluorene	Acetamide, N-9H-fluoren-2-yl-	53-96-3	U005
Acetyl chloride	Same	75-36-5	U006
1-Acetyl-2-thiourea	Acetamide, N-(aminothioxomethyl)-	591-08-2	P002
Acrolein	2-Propenal	107-02-8	P003
Acrylamide	2-Propenamide	79-06-1	U007
Acrylonitrile	2-Propenenitrile	107-13-1	U009
Aflatoxins	Same	1402-68-2	
Aldicarb	Propanal, 2-methyl-2-(methylthio)-, O-((methylamino)carbonyl)oxime	116-06-3	P070
Aldicarb sulfone	Propanal, 2-methyl-2- (methyl-sulfonyl)-, O-((methylamino)-carbonyl)oxime	1646-88-4	P203
Aldrin	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-, (1-α,4-α,4a-β,5-α,8-α,8a-β)-	309-00-2	P004
Allyl alcohol	2-Propen-1-ol	107-18-6	P005
Allyl chloride	1-Propene, 3-chloro-	107-05-1	
Aluminum phosphide	Same	20859-73-8	P006
4-Aminobiphenyl	(1,1'-Biphenyl)-4-amine	92-67-1	
5-(Aminomethyl)-3-isoxazolol	3(2H)-Isoxazolone, 5-(amino-methyl)-	2763-96-4	P007
4-Aminopyridine	4-Pyridinamine	504-24-5	P008
Amitrole	1H-1,2,4-Triazol-3-amine	61-82-5	U011
Ammonium vanadate	Vanadic acid, ammonium salt	7803-55-6	P119
Aniline	Benzenamine	62-53-3	U012
o-Anisidine (2-methoxyaniline)	Benzenamine, 2-Methoxy-	90-04-0	
Antimony	Same	7440-36-0	
Antimony compounds, N.O.S. (not otherwise specified)			

Aramite	Sulfurous acid, 2-chloroethyl-, 2-(4-(1,1-dimethylethyl)phenoxy)-1-methylethyl ester	140-57-8	
Arsenic	Arsenic	7440-38-2	
Arsenic compounds, N.O.S.			
Arsenic acid	Arsenic acid H_3AsO_4	7778-39-4	P010
Arsenic pentoxide	Arsenic oxide As_2O_5	1303-28-2	P011
Arsenic trioxide	Arsenic oxide As_2O_3	1327-53-3	P012
Auramine	Benzenamine, 4,4'-carbonimidoyl-bis(N, N-dimethyl-	492-80-8	U014
Azaserine	L-Serine, diazoacetate (ester)	115-02-6	U015
Barban	Carbamic acid, (3-chlorophenyl)-, 4-chloro-2-butynyl ester	101-27-9	U280
Barium	Same	7440-39-3	
Barium compounds, N.O.S.			
Barium cyanide	Same	542-62-1	P013
Bendiocarb	1,3-Benzodioxol-4-ol-2,2-dimethyl-, methyl carbamate	22781-23-3	U278
Bendiocarb phenol	1,3-Benzodioxol-4-ol-2,2-dimethyl-,	22961-82-6	U364
Benomyl	Carbamic acid, (1- ((butylamino)-carbonyl)-1H-benzimidazol-2-yl)-, methyl ester	17804-35-2	U271
Benz(c)acridine	Same	225-51-4	U016
Benz(a)anthracene	Same	56-55-3	U018
Benzal chloride	Benzene, (dichloromethyl)-	98-87-3	U017
Benzene	Same	71-43-2	U019
Benzenearsonic acid	Arsonic acid, phenyl-	98-05-5	
Benzidine	(1,1'-Biphenyl)-4,4'-diamine	92-87-5	U021
Benzo(b)fluoranthene	Benz(e)acephenanthrylene	205-99-2	
Benzo(j)fluoranthene	Same	205-82-3	
Benzo(k)fluoranthene	Same	207-08-9	
Benzo(a)pyrene	Same	50-32-8	U022
p-Benzoquinone	2,5-Cyclohexadiene-1,4-dione	106-51-4	U197
Benzotrichloride	Benzene, (trichloromethyl)-	98-07-7	U023
Benzyl chloride	Benzene, (chloromethyl)-	100-44-7	P028
Beryllium powder	Same	7440-41-7	P015
Beryllium compounds, N.O.S.			
Bis(pentamethylene)thiuram tetrasulfide	Piperidine, 1,1'-(tetrathio-dicarbonothioyl)-bis-	120-54-7	
Bromoacetone	2-Propanone, 1-bromo-	598-31-2	P017
Bromoform	Methane, tribromo-	75-25-2	U225
4-Bromophenyl phenyl ether	Benzene, 1-bromo-4-phenoxy-	101-55-3	U030
Brucine	Strychnidin-10-one, 2,3-dimethoxy-	357-57-3	P018

Butylate	Carbamothioic acid, bis(2-methyl-propyl)-, S-ethyl ester	2008-41-5	
Butyl benzyl phthalate	1,2-Benzenedicarboxylic acid, butyl phenylmethyl ester	85-68-7	
Cacodylic acid	Arsenic acid, dimethyl-	75-60-5	U136
Cadmium	Same	7440-43-9	
Cadmium compounds, N.O.S.			
Calcium chromate	Chromic acid H_2CrO_4, calcium salt	13765-19-0	U032
Calcium cyanide	Calcium cyanide $Ca(CN)_2$	592-01-8	P021
Carbaryl	1-Naphthalenol, methylcarbamate	63-25-2	U279
Carbendazim	Carbamic acid, 1H-benzimidazol-2-yl, methyl ester	10605-21-7	U372
Carbofuran	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-, methylcarbamate	1563-66-2	P127
Carbofuran phenol	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-	1563-38-8	U367
Carbosulfan	Carbamic acid, ((dibutylamino)-thio)methyl-2,3-dihydro-2,2-dimethyl-7-benzofuranyl ester	55285-14-8	P189
Carbon disulfide	Same	75-15-0	P022
Carbon oxyfluoride	Carbonic difuoride	353-50-4	U033
Carbon tetrachloride	Methane, tetrachloro-	56-23-5	U211
Chloral	Acetaldehyde, trichloro-	75-87-6	U034
Chlorambucil	Benzenebutanoic acid, 4(bis-(2-chloroethyl)amino)-	305-03-3	U035
Chlordane	4,7-Methano-1H-indene, 1,2,4,5,6,7,8,8-octachloro-2,3,3a,4,7,7a-hexahydro-	57-74-9	U036
Chlordane, α and γ isomers			U036
Chlorinated benzenes, N.O.S.			
Chlorinated ethane, N.O.S.			
Chlorinated fluorocarbons, N.O.S.			
Chlorinated naphthalene, N.O.S.			
Chlorinated phenol, N.O.S.			
Chlornaphazine	Naphthalenamine, N,N'-bis(2-chloroethyl)-	494-03-1	U026
Chloroacetaldehyde	Acetaldehyde, chloro-	107-20-0	P023
Chloroalkyl ethers, N.O.S.			
p-Chloroaniline	Benzenamine, 4-chloro-	106-47-8	P024
Chlorobenzene	Benzene, chloro-	108-90-7	U037
Chlorobenzilate	Benzeneacetic acid, 4-chloro-α-(4-chlorophenyl)-α-hydroxy-, ethyl ester	510-15-6	U038
p-Chloro-m-cresol	Phenol, 4-chloro-3-methyl-	59-50-7	U039

2-Chloroethyl vinyl ether	Ethene, (2-chloroethoxy)-	110-75-8	U042
Chloroform	Methane, trichloro-	67-66-3	U044
Chloromethyl methyl ether	Methane, chloromethoxy-	107-30-2	U046
β-Chloronaphthalene	Naphthalene, 2-chloro-	91-58-7	U047
o-Chlorophenol	Phenol, 2-chloro-	95-57-8	U048
1-(o-Chlorophenyl)thiourea	Thiourea, (2-chlorophenyl)-	5344-82-1	P026
Chloroprene	1,3-Butadiene, 2-chloro-	126-99-8	
3-Chloropropionitrile	Propanenitrile, 3-chloro-	542-76-7	P027
Chromium	Same	7440-47-3	
Chromium compounds, N.O.S.			
Chrysene	Same	218-01-9	U050
Citrus red No. 2	2-Naphthalenol, 1-((2,5-dimethoxyphenyl)azo)-	6358-53-8	
Coal tar creosote	Same	8007-45-2	
Copper cyanide	Copper cyanide CuCN	544-92-3	P029
Copper dimethyldithiocarbamate	Copper, bis(dimethylcarbamo-dithioato-S,S')-,	137-29-1	
Creosote	Same		U051
p-Cresidine	2-Methoxy-5-methylbenzenamine	120-71-8	
Cresols (Cresylic acid)	Phenol, methyl-	1319-77-3	U052
Crotonaldehyde	2-Butenal	4170-30-3	U053
m-Cumenyl methylcarbamate	Phenol, 3-(methylethyl)-, methyl carbamate	64-00-6	P202
Cyanides (soluble salts and complexes), N.O.S.			P030
Cyanogen	Ethanedinitrile	460-19-5	P031
Cyanogen bromide	Cyanogen bromide (CN)Br	506-68-3	U246
Cyanogen chloride	Cyanogen chloride (CN)Cl	506-77-4	P033
Cycasin	β-D-glucopyranoside, (methyl-ONN-azoxy)methyl-	14901-08-7	
Cycloate	Carbamothioic acid, cyclohexyl-ethyl-, S-ethyl ester	1134-23-2	
2-Cyclohexyl-4,6-dinitrophenol	Phenol, 2-cyclohexyl-4,6-dinitro-	131-89-5	P034
Cyclophosphamide	2H-1,3,2-Oxazaphosphorin-2-amine, N,N-bis(2-chloroethyl)-tetrahydro-2-oxide	50-18-0	U058
2,4-D	Acetic acid, (2,4-dichlorophen-oxy)-	94-75-7	U240
2,4-D, salts and esters	Acetic acid, (2,4-dichlorophenoxy)-, salts and esters		U240
Daunomycin	5,12-Naphthacenedione, 8-acetyl-10-((3-amino-2,3,6-trideoxy-α-L-lyxo-hexopyranosyl)oxy)-7,8,9,10-tetrahydro-6,8,11-tri-hydroxy-l-methoxy-, (8S-cis)-	20830-81-3	U059

Dazomet	2H-1,3,5-thiadiazine-2-thione, tetrahydro-3,5-dimethyl	533-74-4	
DDD	Benzene, 1,1'-(2,2-dichloroethylidene)bis(4-chloro-	72-54-8	U060
DDE	Benzene, 1,1'-(dichloroethenylidene)bis(4-chloro-	72-55-9	
DDT	Benzene, 1,1'-(2,2,2-trichloroethylidene)bis(4-chloro-	50-29-3	U061
Diallate	Carbamothioic acid, bis(1-methylethyl)-, S-(2,3-dichloro-2-propenyl) ester	2303-16-4	U062
Dibenz(a,h)acridine	Same	226-36-8	
Dibenz(a,j)acridine	Same	224-42-0	
Dibenz(a,h)anthracene	Same	53-70-3	U063
7H-Dibenzo(c,g)carbazole	Same	194-59-2	
Dibenzo(a,e)pyrene	Naphtho(1,2,3,4-def)chrysene	192-65-4	
Dibenzo(a,h)pyrene	Dibenzo(b,def)chrysene	189-64-0	
Dibenzo(a,i)pyrene	Benzo(rst)pentaphene	189-55-9	U064
1,2-Dibromo-3-chloropropane	Propane, 1,2-dibromo-3-chloro-	96-12-8	U066
Dibutyl phthalate	1,2-Benzenedicarboxylic acid, dibutyl ester	84-74-2	U069
o-Dichlorobenzene	Benzene, 1,2-dichloro-	95-50-1	U070
m-Dichlorobenzene	Benzene, 1,3-dichloro-	541-73-1	U071
p-Dichlorobenzene	Benzene, 1,4-dichloro-	106-46-7	U072
Dichlorobenzene, N.O.S.	Benzene, dichloro-	25321-22-6	
3,3'-Dichlorobenzidine	(1,1'-Biphenyl)-4,4'-diamine, 3,3'-dichloro-	91-94-1	U073
1,4-Dichloro-2-butene	2-Butene, 1,4-dichloro-	764-41-0	U074
Dichlorodifluoromethane	Methane, dichlorodifluoro-	75-71-8	U075
Dichloroethylene, N.O.S.	Dichloroethylene	25323-30-2	
1,1-Dichloroethylene	Ethene, 1,1-dichloro-	75-35-4	U078
1,2-Dichloroethylene	Ethene, 1,2-dichloro-, (E)-	156-60-5	U079
Dichloroethyl ether	Ethane, 1,1'-oxybis(2-chloro-	111-44-4	U025
Dichloroisopropyl ether	Propane, 2,2'-oxybis(2-chloro-	108-60-1	U027
Dichloromethoxyethane	Ethane, 1,1'-(methylenebis(oxy)-bis(2-chloro-	111-91-1	U024
Dichloromethyl ether	Methane, oxybis(chloro-	542-88-1	P016
2,4-Dichlorophenol	Phenol, 2,4-dichloro-	120-83-2	U081
2,6-Dichlorophenol	Phenol, 2,6-dichloro-	87-65-0	U082
Dichlorophenylarsine	Arsonous dichloride, phenyl-	696-28-6	P036
Dichloropropane, N.O.S.	Propane, dichloro-	26638-19-7	
Dichloropropanol, N.O.S.	Propanol, dichloro-	26545-73-3	
Dichloropropene, N.O.S.	1-Propene, dichloro-	26952-23-8	
1,3-Dichloropropene	1-Propene, 1,3-dichloro-	542-75-6	U084

Dieldrin	2,7:3,6-Dimethanonaphth(2, 3-b)-oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6, 6a,7,7a-octahydro-, (1aα,2β,2aα,3β,6β,6aα,7β,7aα)-	60-57-1	P037
1,2:3,4-Diepoxybutane	2,2'-Bioxirane	1464-53-5	U085
Diethylarsine	Arsine, diethyl-	692-42-2	P038
Diethylene glycol, dicarbamate	Ethanol, 2,2'-oxybis-, dicarbamate	5952-26-1	U395
1,4-Diethyleneoxide	1,4-Dioxane	123-91-1	U108
Diethylhexyl phthalate	1,2-Benzenedicarboxylic acid, bis(2-ethylhexyl) ester	117-81-7	U028
N,N'-Diethylhydrazine	Hydrazine, 1,2-diethyl-	1615-80-1	U086
O,O-Diethyl-S-methyl dithio-phosphate	Phosphorodithioic acid, O,O-diethyl S-methyl ester	3288-58-2	U087
Diethyl-p-nitrophenyl phosphate	Phosphoric acid, diethyl 4-nitro-phenyl ester	311-45-5	P041
Diethyl phthalate	1,2-Benzenedicarboxylic acid, diethyl ester	84-66-2	U088
O,O-Diethyl O-pyrazinyl phosphorothioate	Phosphorothioic acid, O,O-diethyl O-pyrazinyl ester	297-97-2	P040
Diethylstilbestrol	Phenol, 4,4'-(1,2-diethyl-1,2-ethenediyl)bis-, (E)-	56-53-1	U089
Dihydrosafrole	1,3-Benzodioxole, 5-propyl-	94-58-6	U090
Diisopropylfluorophosphate (DFP)	Phosphorofluoridic acid, bis(1-methylethyl) ester	55-91-4	P043
Dimethoate	Phosphorodithioic acid, O,O-dimethyl S-(2-(methylamino)-2-oxoethyl) ester	60-51-5	P044
3,3'-Dimethoxybenzidine	(1,1'-Biphenyl)-4,4'-diamine, 3,3'-dimethoxy-	119-90-4	U091
p-Dimethylaminoazobenzene	Benzenamine, N,N-dimethyl-4-(phenylazo)-	60-11-7	U093
2,4-Dimethylaniline (2,4-xylidine)	Benzenamine, 2,4-dimethyl-	95-68-1	
7,12-Dimethylbenz(a)anthracene	Benz(a)anthracene, 7,12-dimethyl-	57-97-6	U094
3,3'-Dimethylbenzidine	(1,1'-Biphenyl)-4,4'-diamine, 3,3'-dimethyl-	119-93-7	U095
Dimethylcarbamoyl chloride	Carbamic chloride, dimethyl-	79-44-7	U097
1,1-Dimethylhydrazine	Hydrazine, 1,1-dimethyl-	57-14-7	U098
1,2-Dimethylhydrazine	Hydrazine, 1,2-dimethyl-	540-73-8	U099
α,α-Dimethylphenethylamine	Benzeneethanamine, α, α-dimethyl-	122-09-8	P046
2,4-Dimethylphenol	Phenol, 2,4-dimethyl-	105-67-9	U101
Dimethylphthalate	1,2-Benzenedicarboxylic acid, dimethyl ester	131-11-3	U102
Dimethyl sulfate	Sulfuric acid, dimethyl ester	77-78-1	U103

Dimetilan	Carbamic acid, dimethyl-, 1-((dimethylamino) carbonyl)-5-methyl-1H-pyrazol-3-yl ester	644-64-4	P191
Dinitrobenzene, N.O.S.	Benzene, dinitro-	25154-54-5	
4,6-Dinitro-o-cresol	Phenol, 2-methyl-4,6-dinitro-	534-52-1	P047
4,6-Dinitro-o-cresol salts			P047
2,4-Dinitrophenol	Phenol, 2,4-dinitro-	51-28-5	P048
2,4-Dinitrotoluene	Benzene, 1-methyl-2,4-dinitro-	121-14-2	U105
2,6-Dinitrotoluene	Benzene, 2-methyl-1,3-dinitro-	606-20-2	U106
Dinoseb	Phenol, 2-(1-methylpropyl)-4,6-dinitro-	88-85-7	P020
Di-n-octyl phthalate	1,2-Benzenedicarboxylic acid, dioctyl ester	117-84-0	U107
Diphenylamine	Benzenamine, N-phenyl-	122-39-4	
1,2-Diphenylhydrazine	Hydrazine, 1,2-diphenyl-	122-66-7	U109
Di-n-propylnitrosamine	1-Propanamine, N-nitroso-N-propyl-	621-64-7	U111
Disulfiram	Thioperoxydicarbonic diamide, tetraethyl	97-77-8	
Disulfoton	Phosphorodithioic acid, O,O-diethyl S-(2-(ethylthio)ethyl) ester	298-04-4	P039
Dithiobiuret	Thioimidodicarbonic diamide $((H_2N)C(S))_2NH$	541-53-7	P049
Endosulfan	6, 9-Methano-2,4,3-benzodioxa-thiepen,6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9a-hexahydro-, 3-oxide,	115-29-7	P050
Endothal	7-Oxabicyclo(2.2.1)heptane-2,3-dicarboxylic acid	145-73-3	P088
Endrin	2,7:3,6-Dimethanonaphth(2,3-b)-oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-, (1a α,2β,2aβ,3α,6α,6aβ,7β,7aα)-,	72-20-8	P051
Endrin metabolites			P051
Epichlorohydrin	Oxirane, (chloromethyl)-	106-89-8	U041
Epinephrine	1,2-Benzenediol, 4-(1-hydroxy-2-(methylamino)ethyl)-, (R)-	51-43-4	P042
EPTC	Carbamothioic acid, dipropyl-, S-ethyl ester	759-94-4	
Ethyl carbamate (urethane)	Carbamic acid, ethyl ester	51-79-6	U238
Ethyl cyanide	Propanenitrile	107-12-0	P101
Ethylenebisdithiocarbamic acid	Carbamodithioic acid, 1,2-ethane-diylbis-	111-54-6	U114
Ethylenebisdithiocarbamic acid, salts and esters			U114
Ethylene dibromide	Ethane, 1,2-dibromo-	106-93-4	U067
Ethylene dichloride	Ethane, 1,2-dichloro-	107-06-2	U077

Ethylene glycol monoethyl ether	Ethanol, 2-ethoxy-	110-80-5	U359
Ethyleneimine	Aziridine	151-56-4	P054
Ethylene oxide	Oxirane	75-21-8	U115
Ethylenethiourea	2-Imidazolidinethione	96-45-7	U116
Ethylidine dichloride	Ethane, 1,1-dichloro-	75-34-3	U076
Ethyl methacrylate	2-Propenoic acid, 2-methyl-, ethyl ester	97-63-2	U118
Ethyl methanesulfonate	Methanesulfonic acid, ethyl ester	62-50-0	U119
Ethyl Ziram	Zinc, bis(diethylcarbamodithioato-S,S')-	14324-55-1	U407
Famphur	Phosphorothioc acid, O-(4-((dimethylamino)sulfonyl)phenyl) O,O-dimethyl ester	52-85-7	P097
Ferbam	Iron, tris(dimethylcarbamo-dithioato-S,S')-,	14484-64-1	
Fluoranthene	Same	206-44-0	U120
Fluorine	Same	7782-41-4	P056
Fluoroacetamide	Acetamide, 2-fluoro-	640-19-7	P057
Fluoroacetic acid, sodium salt	Acetic acid, fluoro-, sodium salt	62-74-8	P058
Formaldehyde	Same	50-00-0	U122
Formetanate hydrochloride	Methanimidamide, N,N-dimethyl-N'-(3-(((methylamino)carbonyl)-oxy)phenyl)-, monohydrochloride	23422-53-9	P198
Formic acid	Same	64-18-16	U123
Formparanate	Methanimidamide, N,N-dimethyl-N'-(2-methyl-4-(((methylamino)-carbonyl)oxy)phenyl)-	17702-57-7	P197
Glycidylaldehyde	Oxiranecarboxaldehyde	765-34-4	U126
Halomethanes, N.O.S.			
Heptachlor	4,7-Methano-1H-indene,1,4,5,6,7,8,8-heptachloro-3a,4,7,7a-tetrahydro-	76-44-8	P059
Heptachlor epoxide	2,5-Methano-2H-indeno(1, 2b)oxirene, 2,3,4,5,6,7,7-hepta-chloro-1a,1b,5,5a,6,6a-hexa-hydro-, (1aα,1bβ,2α,5α,5aβ,6β, 6aα)-	1024-57-3	
Heptachlor epoxide (α, β, and γ isomers)			
Heptachlorodibenzofurans			
Heptachlorodibenzo-p-dioxins			
Hexachlorobenzene	Benzene, hexachloro-	118-74-1	U127
Hexachlorobutadiene	1,3-Butadiene, 1,1,2,3,4,4-hexa-chloro-	87-68-3	U128
Hexachlorocyclo-pentadiene	1,3-Cyclopentadiene, 1,2,3,4,5,5-hexachloro-	77-47-4	U130

Hexachlorodibenzo-p-dioxins			
Hexachlorodibenzofurans			
Hexachloroethane	Ethane, hexachloro-	67-72-1	U131
Hexachlorophene	Phenol, 2,2'-methylenebis(3,4,6-trichloro-	70-30-4	U132
Hexachloropropene	1-Propene, 1,1,2,3,3,3-hexachloro-	1888-71-7	U243
Hexaethyltetraphosphate	Tetraphosphoric acid, hexaethyl ester	757-58-4	P062
Hydrazine	Same	302-01-2	U133
Hydrogen cyanide	Hydrocyanic acid	74-90-8	P063
Hydrogen fluoride	Hydrofluoric acid	7664-39-3	U134
Hydrogen sulfide	Hydrogen sulfide H_2S	7783-06-4	U135
Indeno(1,2,3-cd)pyrene	Same	193-39-5	U137
3-Iodo-2-propynyl-n-butyl-carbamate	Carbamic acid, butyl-, 3-iodo-2-propynyl ester	55406-53-6	
Isobutyl alcohol	1-Propanol, 2-methyl-	78-83-1	U140
Isodrin	1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-(1α,4α,4aβ,5β,8β,8aβ)-,	465-73-6	P060
Isolan	Carbamic acid, dimethyl-, 3-methyl-1-(1-methylethyl)-1H-pyrazol-5-yl ester	119-38-0	P192
Isosafrole	1,3-Benzodioxole, 5-(1-propenyl)-	120-58-1	U141
Kepone	1,3,4-Metheno-2H-cyclobuta(cd)-pentalen-2-one, 1,1a,3,3a,4,5,5,5a,5b,6-decachlorooctahydro-,	143-50-0	U142
Lasiocarpine	2-Butenoic acid, 2-methyl-, 7-((2,3-dihydroxy-2-(1-methoxyethyl)-3-methyl-1-oxobutoxy)methyl)-2,3,5,7a-tetrahydro-1H-pyrrolizin-l-yl ester, (1S-(1-α(Z),7(2S*,3R*),7aα))-	303-34-4	U143
Lead	Same	7439-92-1	
Lead and compounds, N.O.S.			
Lead acetate	Acetic acid, lead (2+) salt	301-04-2	U144
Lead phosphate	Phosphoric acid, lead (2+) salt (2:3)	7446-27-7	U145
Lead subacetate	Lead, bis(acetato-O)tetrahydroxy-tri-	1335-32-6	U146
Lindane	Cyclohexane, 1,2,3,4,5,6-hexa-chloro-, 1α,2α,3β,4α,5α,6β)-	58-89-9	U129
Maleic anhydride	2,5-Furandione	108-31-6	U147
Maleic hydrazide	3,6-Pyridazinedione, 1,2-dihydro-	123-33-1	U148

Malononitrile	Propanedinitrile	109-77-3	U149
Manganese dimethyldithio-carbamate	Manganese, bis(dimethylcarbamo-dithioato-S,S')-,	15339-36-3	P196
Melphalan	L-Phenylalanine, 4-(bis(2-chloro-ethyl)amino)-	148-82-3	U150
Mercury	Same	7439-97-6	U151
Mercury compounds, N.O.S.			
Mercury fulminate	Fulminic acid, mercury (2+) salt	628-86-4	P065
Metam Sodium	Carbamodithioic acid, methyl-, monosodium salt	137-42-8	
Methacrylonitrile	2-Propenenitrile, 2-methyl-	126-98-7	U152
Methapyrilene	1,2-Ethanediamine, N,N-dimethyl-N'-2-pyridinyl-N'-(2-thienyl-methyl)-	91-80-5	U155
Methiocarb	Phenol, (3,5-dimethyl-4-(methylthio)-, methylcarbamate	2032-65-7	P199
Metholmyl	Ethanimidothioic acid, N-(((methylamino)carbonyl)oxy)-, methyl ester	16752-77-5	P066
Methoxychlor	Benzene, 1,1'-(2,2,2-trichloro-ethylidene)bis(4-methoxy-	72-43-5	U247
Methyl bromide	Methane, bromo-	74-83-9	U029
Methyl chloride	Methane, chloro-	74-87-3	U045
Methylchlorocarbonate	Carbonochloridic acid, methyl ester	79-22-1	U156
Methyl chloroform	Ethane, 1,1,1-trichloro-	71-55-6	U226
3-Methylcholanthrene	Benz(j)aceanthrylene, 1,2-dihydro-3-methyl-	56-49-5	U157
4,4'-Methylenebis(2-chloro-aniline)	Benzenamine, 4,4'-methylene-bis(2-chloro-	101-14-4	U158
Methylene bromide	Methane, dibromo-	74-95-3	U068
Methylene chloride	Methane, dichloro-	75-09-2	U080
Methyl ethyl ketone (MEK)	2-Butanone	78-93-3	U159
Methyl ethyl ketone peroxide	2-Butanone, peroxide	1338-23-4	U160
Methyl hydrazine	Hydrazine, methyl-	60-34-4	P068
Methyl iodide	Methane, iodo-	74-88-4	U138
Methyl isocyanate	Methane, isocyanato-	624-83-9	P064
2-Methyllactonitrile	Propanenitrile, 2-hydroxy-2-methyl-	75-86-5	P069
Methyl methacrylate	2-Propenoic acid, 2-methyl-, methyl ester	80-62-6	U162
Methyl methanesulfonate	Methanesulfonic acid, methyl ester	66-27-3	
Methyl parathion	Phosphorothioic acid, O,O-dimethyl O-(4-nitrophenyl) ester	298-00-0	P071

Methylthiouracil	4-(1H)-Pyrimidinone, 2,3-dihydro-6-methyl-2-thioxo-	56-04-2	U164
Metolcarb	Carbamic acid, methyl-, 3-methylphenyl ester	1129-41-5	P190
Mexacarbate	Phenol, 4-(dimethylamino)-3,5-dimethyl-, methylcarbamate (ester)	315-18-4	P128
Mitomycin C	Azirino(2', 3':3, 4)pyrrolo(1, 2-a)indole-4, 7-dione, 6-amino-8-(((aminocarbonyl)oxy)methyl)-1,1a,2,8,8a,8b-hexahydro-8a-methoxy-5-methyl-, (1a-S-(1aα, 8β,8aα,8bα))-,	50-07-7	U010
Molinate	1H-Azepine-1-carbothioic acid, hexahydro-, S-ethyl ester	2212-67-1	
MNNG	Guanidine, N-methyl-N'-nitro-N-nitroso-	70-25-7	U163
Mustard gas	Ethane, 1,1'-thiobis(2-chloro-	505-60-2	U165
Naphthalene	Same	91-20-3	U165
1,4-Naphthoquinone	1,4-Naphthalenedione	130-15-4	U166
α-Naphthylamine	1-Naphthalenamine	134-32-7	U167
β-Naphthylamine	2-Naphthalenamine	91-59-8	U168
α-Naphthylthiourea	Thiourea, 1-naphthalenyl-	86-88-4	P072
Nickel	Same	7440-02-0	
Nickel compounds, N.O.S.			
Nickel carbonyl	Nickel carbonyl $Ni(CO)_4$, (T-4)-	13463-39-3	P073
Nickel cyanide	Nickel cyanide $Ni(CN)_2$	557-19-7	P074
Nicotine	Pyridine, 3-(1-methyl-2-pyrrolidinyl)-, (S)-	54-11-5	P075
Nicotine salts			P075
Nitric oxide	Nitrogen oxide NO	10102-43-9	P076
p-Nitroaniline	Benzenamine, 4-nitro-	100-01-6	P077
Nitrobenzene	Benzene, nitro-	98-95-3	U169
Nitrogen dioxide	Nitrogen oxide NO_2	10102-44-0	P078
Nitrogen mustard	Ethanamine, 2-chloro-N-(2-chloroethyl)-N-methyl-	51-75-2	
Nitrogen mustard, hydrochloride salt			
Nitrogen mustard N-oxide	Ethanamine, 2-chloro-N-(2-chloroethyl)-N-methyl-, N-oxide	126-85-2	
Nitrogen mustard, N-oxide, hydrochloride salt			
Nitroglycerin	1,2,3-Propanetriol, trinitrate	55-63-0	P081
p-Nitrophenol	Phenol, 4-nitro-	100-02-7	U170
2-Nitropropane	Propane, 2-nitro-	79-46-9	U171
Nitrosamines, N.O.S.		35576-91-1	

N-Nitrosodi-n-butylamine	1-Butanamine, N-butyl-N-nitroso-	924-16-3	U172
N-Nitrosodiethanolamine	Ethanol, 2,2'-(nitrosoimino)bis-	1116-54-7	U173
N-Nitrosodiethylamine	Ethanamine, N-ethyl-N-nitroso-	55-18-5	U174
N-Nitrosodimethylamine	Methanamine, N-methyl-N-nitroso-	62-75-9	P082
N-Nitroso-N-ethylurea	Urea, N-ethyl-N-nitroso-	759-73-9	U176
N-Nitrosomethylethylamine	Ethanamine, N-methyl-N-nitroso-	10595-95-6	
N-Nitroso-N-methylurea	Urea, N-methyl-N-nitroso-	684-93-5	U177
N-Nitroso-N-methylurethane	Carbamic acid, methylnitroso-, ethyl ester	615-53-2	U178
N-Nitrosomethylvinylamine	Vinylamine, N-methyl-N-nitroso-	4549-40-0	P084
N-Nitrosomorpholine	Morpholine, 4-nitroso-	59-89-2	
N-Nitrosonornicotine	Pyridine, 3-(1-nitroso-2-pyrrolidinyl)-, (S)-	16543-55-8	
N-Nitrosopiperidine	Piperidine, 1-nitroso-	100-75-4	U179
N-Nitrosopyrrolidine	Pyrrolidine, 1-nitroso-	930-55-2	U180
N-Nitrososarcosine	Glycine, N-methyl-N-nitroso-	13256-22-9	
5-Nitro-o-toluidine	Benzenamine, 2-methyl-5-nitro-	99-55-8	U181
Octachlorodibenzo-p-dioxin (OCDD)	1,2,3,4,6,7,8,9-Octachlorodibenzo-p-dioxin.	3268-87-9	
Octachlorodibenzofuran (OCDF)	1,2,3,4,6,7,8,9-Octachlorodibenzo-furan.	39001-02-0	
Octamethylpyrophosphoramide	Diphosphoramide, octamethyl-	152-16-9	P085
Osmium tetroxide	Osmium oxide OsO_4, (T-4)	20816-12-0	P087
Oxamyl	Ethanimidothioc acid, 2-(dimethylamino)-N-(((methyl-amino)carbonyl)oxy)-2-oxo-, methyl ester	23135-22-0	P194
Paraldehyde	1,3,5-Trioxane, 2,4,6-trimethyl-	123-63-7	U182
Parathion	Phosphorothioic acid, O,O-diethyl O-(4-nitrophenyl) ester	56-38-2	P089
Pebulate	Carbamothioic acid, butylethyl-, S-propyl ester	1114-71-2	
Pentachlorobenzene	Benzene, pentachloro-	608-93-5	U183
Pentachlorodibenzo-p-dioxins			
Pentachlorodibenzofurans			
Pentachloroethane	Ethane, pentachloro-	76-01-7	U184
Pentachloronitrobenzene (PCNB)	Benzene, pentachloronitro-	82-68-8	U185
Pentachlorophenol	Phenol, pentachloro-	87-86-5	See F027
Phenacetin	Acetamide, N-(4-ethoxyphenyl)-	62-44-2	U187
Phenol	Same	108-95-2	U188
Phenylenediamine	Benzenediamine	25265-76-3	
1,2-Phenylenediamine	1,2-Benzenediamine	95-54-5	
1,3-Phenylenediamine	1,3-Benzenediamine	108-45-2	
Phenylmercury acetate	Mercury, (acetato-O)phenyl-	62-38-4	P092
Phenylthiourea	Thiourea, phenyl-	103-85-5	P093

Phosgene	Carbonic dichloride	75-44-5	P095
Phosphine	Same	7803-51-2	P096
Phorate	Phosphorodithioic acid, O,O-diethyl S-((ethylthio)methyl) ester	298-02-2	P094
Phthalic acid esters, N.O.S.			
Phthalic anhydride	1,3-Isobenzofurandione	85-44-9	U190
Physostigmine	Pyrrolo(2,3-b)indol-5-ol, 1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethyl-, methylcarbamate (ester), (3aS-cis)-	57-47-6	P204
Physostigmine salicylate	Benzoic acid, 2-hydroxy-, compound with (3aS-cis)-1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethylpyrrolo(2,3-b)indol-5-yl methylcarbamate ester (1:1)	57-64-7	P188
2-Picoline	Pyridine, 2-methyl-	109-06-8	U191
Polychlorinated biphenyls, N.O.S.			
Potassium cyanide	Same	151-50-8	P098
Potassium dimethyldithio-carbamate	Carbamodithioc acid, dimethyl, potassium salt	128-03-0	
Potassium n-hydroxymethyl-n-methyl-dithiocarbamate	Carbamodithioc acid, (hydroxy-methyl)methyl-, monopotassium salt	51026-28-9	
Potassium n-methyldithio-carbamate	Carbamodithioc acid, methyl-monopotassium salt	137-41-7	
Potassium silver cyanide	Argentate(1-), bis(cyano-C)-, potassium)	506-61-6	P099
Potassium pentachlorophenate	Pentachlorophenol, potassium salt	7778736	None
Promecarb	Phenol, 3-methyl-5-(1-methyl-ethyl)-, methyl carbamate	2631-37-0	P201
Pronamide	Benzamide, 3,5-dichloro-N-(1,1-dimethyl-2-propynyl)-	23950-58-5	U192
1,3-Propane sultone	1,2-Oxathiolane, 2,2-dioxide	1120-71-4	U193
Propham	Carbamic acid, phenyl-, 1-methyl-ethyl ester	122-42-9	U373
Propoxur	Phenol, 2-(1-methylethoxy)-, methylcarbamate	114-26-1	U411
n-Propylamine	1-Propanamine	107-10-8	U194
Propargyl alcohol	2-Propyn-1-ol	107-19-7	P102
Propylene dichloride	Propane, 1,2-dichloro-	78-87-5	U083
1,2-Propylenimine	Aziridine, 2-methyl-	75-55-8	P067
Propylthiouracil	4(1H)-Pyrimidinone, 2,3-dihydro-6-propyl-2-thioxo-	51-52-5	
Prosulfocarb	Carbamothioic acid, dipropyl-, S-(phenylmethyl) ester	52888-80-9	U387

Pyridine	Same	110-86-1	U196
Reserpine	Yohimban-16-carboxylic acid, 11,17-dimethoxy-18-((3,4,5-trimethoxybenzoyl)oxy)-, methyl ester, (3β,16β,17α,18β,20α)-	50-55-5	U200
Resorcinol	1,3-Benzenediol	108-46-3	U201
Safrole	1,3-Benzodioxole, 5-(2-propenyl)-	94-59-7	U203
Selenium	Same	7782-49-2	
Selenium compounds, N.O.S.			
Selenium dioxide	Selenious acid	7783-00-8	U204
Selenium sulfide	Selenium sulfide SeS_2	7488-56-4	U205
Selenium, tetrakis(dimethyl-dithiocarbamate	Carbamodithioic acid, dimethyl-, tetraanhydrosulfide with ortho-thioselenious acid	144-34-3	
Selenourea	Same	630-10-4	P103
Silver	Same	7440-22-4	
Silver compounds, N.O.S.			
Silver cyanide	Silver cyanide AgCN	506-64-9	P104
Silvex (2,4,5-TP)	Propanoic acid, 2-(2,4,5-trichlorophenoxy)-	93-72-1	See F027
Sodium cyanide	Sodium cyanide NaCN	143-33-9	P106
Sodium dibutyldithiocarbamate	Carbamodithioic acid, dibutyl-, sodium salt	136-30-1	
Sodium diethyldithiocarbamate	Carbamodithioic acid, diethyl-, sodium salt	148-18-5	
Sodium dimethyldithiocarbamate	Carbamodithioic acid, dimethyl-, sodium salt	128-04-1	
Sodium pentachlorophenate	Pentachlorophenol, sodium salt	131522	None
Streptozotocin	D-Glucose, 2-deoxy-2-(((methyl-nitrosoamino)carbonyl)amino)-	18883-66-4	U206
Strychnine	Strychnidin-10-one	57-24-9	P108
Strychnine salts			P108
Sulfallate	Carbamodithioic acid, diethyl-, 2-chloro-2-propenyl ester	95-06-7	
TCDD	Dibenzo(b,e)(1,4)dioxin, 2,3,7,8-tetrachloro-	1746-01-6	
Tetrabutylthiuram disulfide	Thioperoxydicarbonic diamide, tetrabutyl	1634-02-2	
Tetramethylthiuram monosulfide	Bis(dimethylthiocarbamoyl) sulfide	97-74-5	
1,2,4,5-Tetrachlorobenzene	Benzene, 1,2,4,5-tetrachloro-	95-94-3	U207
Tetrachlorodibenzo-p-dioxins			
Tetrachlorodibenzofurans			
Tetrachloroethane, N.O.S.	Ethane, tetrachloro-, N.O.S.	25322-20-7	
1,1,1,2-Tetrachloroethane	Ethane, 1,1,1,2-tetrachloro-	630-20-6	U208
1,1,2,2-Tetrachloroethane	Ethane, 1,1,2,2-tetrachloro-	79-34-5	U209

Tetrachloroethylene	Ethene, tetrachloro-	127-18-4	U210
2,3,4,6-Tetrachlorophenol	Phenol, 2,3,4,6-tetrachloro-	58-90-2	See F027
2,3,4,6-Tetrachlorophenol, potassium salt	Same	53535276	None
2,3,4,6-Tetrachlorophenol, sodium salt	Same	25567559	None
Tetraethyldithiopyrophosphate	Thiodiphosphoric acid, tetraethyl ester	3689-24-5	P109
Tetraethyl lead	Plumbane, tetraethyl-	78-00-2	P110
Tetraethylpyrophosphate	Diphosphoric acid, tetraethyl ester	107-49-3	P111
Tetranitromethane	Methane, tetranitro-	509-14-8	P112
Thallium	Same	7440-28-0	
Thallium compounds			
Thallic oxide	Thallium oxide Tl_2O_3	1314-32-5	P113
Thallium (I) acetate	Acetic acid, thallium (1+) salt	563-68-8	U214
Thallium (I) carbonate	Carbonic acid, dithallium (1+) salt	6533-73-9	U215
Thallium (I) chloride	Thallium chloride TlCl	7791-12-0	U216
Thallium (I) nitrate	Nitric acid, thallium (1+) salt	10102-45-1	U217
Thallium selenite	Selenious acid, dithallium (1+) salt	12039-52-0	P114
Thallium (I) sulfate	Sulfuric acid, dithallium (1+) salt	7446-18-6	P115
Thioacetamide	Ethanethioamide	62-55-5	U218
Thiodicarb	Ethanimidothioic acid, N,N'-(thiobis((methylimino)carbonyl-oxy))-bis-, dimethyl ester	59669-26-0	U410
Thiofanox	2-Butanone, 3,3-dimethyl-1-(methylthio)-, O-((methylamino)-carbonyl)oxime	39196-18-4	P045
Thiophanate-methyl	Carbamic acid, (1,2-phyenylenebis(iminocarbono-thioyl))bis-, dimethyl ester	23564-05-8	U409
Thiomethanol	Methanethiol	74-93-1	U153
Thiophenol	Benzenethiol	108-98-5	P014
Thiosemicarbazide	Hydrazinecarbothioamide	79-19-6	P116
Thiourea	Same	62-56-6	P219
Thiram	Thioperoxydicarbonic diamide $((H_2N)C(S))_2S_2$, tetramethyl-	137-26-8	U244
Tirpate	1,3-Dithiolane-2-carboxaldehyde, 2,4-dimethyl-, O-((methylamino)-carbonyl)oxime	26419-73-8	P185
Toluene	Benzene, methyl-	108-88-3	U220
Toluenediamine	Benzenediamine, ar-methyl-	25376-45-8	U221
Toluene-2,4-diamine	1,3-Benzenediamine, 4-methyl-	95-80-7	
Toluene-2,6-diamine	1,3-Benzenediamine, 2-methyl-	823-40-5	
Toluene-3,4-diamine	1,2-Benzenediamine, 4-methyl-	496-72-0	
Toluene diisocyanate	Benzene, 1,3-diisocyanatomethyl-	26471-62-5	U223

o-Toluidine	Benzenamine, 2-methyl-	95-53-4	U328
o-Toluidine hydrochloride	Benzeneamine, 2-methyl-, hydrochloride	636-21-5	U222
p-Toluidine	Benzenamine, 4-methyl-	106-49-0	U353
Toxaphene	Same	8001-35-2	P123
Triallate	Carbamothioic acid, bis(1-methylethyl)-, S-(2,3,3-trichloro-2-propenyl) ester	2303-17-5	U389
1,2,4-Trichlorobenzene	Benzene, 1,2,4-trichloro-	120-82-1	
1,1,2-Trichloroethane	Ethane, 1,1,2-trichloro-	79-00-5	U227
Trichloroethylene	Ethene, trichloro-	79-01-6	U228
Trichloromethanethiol	Methanethiol, trichloro-	75-70-7	P118
Trichloromonofluoromethane	Methane, trichlorofluoro-	75-69-4	U121
2,4,5-Trichlorophenol	Phenol, 2,4,5-trichloro-	95-95-4	See F027
2,4,6-Trichlorophenol	Phenol, 2,4,6-trichloro-	88-06-2	See F027
2,4,5-T	Acetic acid, (2,4,5-trichlorophenoxy)-	93-76-5	See F027
Trichloropropane, N.O.S.		25735-29-9	
1,2,3-Trichloropropane	Propane, 1,2,3-trichloro-	96-18-4	
Triethylamine	Ethanamine, N,N-diethyl-	121-44-8	U404
O,O,O-Triethylphosphorothioate	Phosphorothioic acid, O,O,O-triethyl ester	126-68-1	
1,3,5-Trinitrobenzene	Benzene, 1,3,5-trinitro-	99-35-4	U234
Tris(1-aziridinyl)phosphine sulfide	Aziridine, 1,1',1"-phosphinothioylidynetris-	52-24-4	
Tris(2,3-dibromopropyl) phosphate	1-Propanol, 2,3-dibromo-, phosphate (3:1)	126-72-7	U235
Trypan blue	2,7-Naphthalenedisulfonic acid, 3,3'-((3,3'-dimethyl(1,1'-biphenyl)-4,4'-diyl)bis(azo))bis(5-amino-4-hydroxy)-, tetrasodium salt	72-57-1	U236
Uracil mustard	2,4-(1H,3H)-Pyrimidinedione, 5-(bis(2-chloroethyl)amino)-	66-75-1	U237
Vanadium pentoxide	Vanadium oxide V_2O_5	1314-62-1	P120
Vernolate	Carbamothioc acid, dipropyl-, S-propyl ester	1929-77-7	
Vinyl chloride	Ethene, chloro-	75-01-4	U043
Warfarin	2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, when present at concentrations less than 0.3 percent	81-81-2	U248
Warfarin	2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, when present at concentrations greater than 0.3 percent	81-81-2	P001

Warfarin salts, when present at concentrations less than 0.3 percent			U248
Warfarin salts, when present at concentrations greater than 0.3 percent			P001
Zinc cyanide	Zinc cyanide $Zn(CN)_2$	557-21-1	P121
Zinc phosphide	Zinc phosphide P_2Zn_3, when present at concentrations greater than 10 percent	1314-84-7	P122
Zinc phosphide	Zinc phosphide P_2Zn_3, when present at concentrations of 10 percent or less	1314-84-7	U249
Ziram	Zinc, bis(dimethylcarbamo-dithioato-S,S')- (T-4)-	137-30-4	P205

Note: The abbreviation N.O.S. (not otherwise specified) signifies those members of the general class that are not specifically listed by name in this Section.

Section 721.APPENDIX I Wastes Excluded by Administrative Action

Section 721.TABLE B Wastes Excluded by USEPA pursuant to 40 CFR 260.20 and 260.22 from Specific Sources

Facility Address	Waste Description
Amoco Oil Company Wood River, Illinois	150 million gallons of DAF float from petroleum refining contained in four surge ponds after treatment with the Chemfix stabilization process. This waste contains USEPA hazardous waste number K048. This exclusion applies to the 150 million gallons of waste after chemical stabilization as long as the mixing ratios of the reagent with the waste are monitored continuously and do not vary outside of the limits presented in the demonstration samples and one grab

	sample is taken each hour from each treatment unit, composited, and TCLP tests performed on each sample. If the levels of lead or total chromium exceed 0.5 ppm in the EP extract, then the waste that was processed during the compositing period is considered hazardous; the treatment residue must be pumped into bermed cells to ensure that the waste is identifiable in the event that removal is necessary.

Conversion Systems, Inc. Horsham, Pennsylvania (Sterling, Illinois operations)	Chemically stabilized electric arc furnace dust (CSEAFD) that is generated by Conversion Systems, Inc. (CSI) (using the Super Detox® treatment process, as modified by CSI to treat electric arc furnace dust (EAFD) (USEPA hazardous waste no. K061)), at the following site and which is disposed of in a RCRA Subtitle D municipal solid waste landfill (MSWLF): Northwestern Steel, Sterling, Illinois. CSI must implement a testing program for each site that meets the following conditions: 1. Verification testing requirements: Sample collection and analyses, including quality control procedures, must be performed using appropriate methods. As applicable to the method-defined parameters of concern, analyses requiring the use of methods in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", USEPA publication number EPA-530/SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111(a), must be used without substitution. As applicable, the EPA-530/SW-846 methods might include Methods 0010, 0011, 0020, 0023A, 0030, 0031, 0040, 0050, 0051, 0060, 0061, 1010A, 1020B, 1110A, 1310B, 1311, 1312, 1320, 1330A, 9010C, 9012B, 9040C, 9045D, 9060A, 9070A (uses USEPA Method 1664, Rev. A), 9071B, and 9095B. A. Initial verification testing: During the first 20 days of full-scale operation of a newly-constructed Super Detox® treatment facility, CSI must analyze a minimum of four composite samples of CSEAFD representative of the full 20-day period. Composite samples must be composed of representative samples collected from every batch generated. The CSEAFD samples must be analyzed for the constituents listed in condition 3 below. CSI must report the operational and analytical test data, including quality control information, obtained during this initial period no later than 60 days after the generation of the first batch of CSEAFD. B. Addition of new Super Detox® treatment facilities to the exclusion: Option 1: If USEPA approves additional facilities, CSI may petition the Board for identical-in substance amendment of this exclusion pursuant to

Section 22.4 for the Act and 35 Ill. Adm. Code 102 and 720.120(a), or

Option 2: If USEPA has not approved such amendment, CSI may petition the Board for amendment pursuant to the general rulemaking procedures of Section 27 of the Act and 35 Ill. Adm. Code 102 and 720.120(b); or

Option 3: Alternatively to options 1 or 2 above, CSI may petition the Board for a hazardous waste delisting pursuant to Section 28.1 of the Act and Subpart D of 35 Ill. Adm. Code 104 and 35 Ill. Adm. Code 720.122.

If CSI pursues general rulemaking (option 2 above) or hazardous waste delisting (option 3 above), it must demonstrate that the CSEAFD generated by a specific Super Detox® treatment facility consistently meets the delisting levels specified in condition 3 below.

C. Subsequent verification testing: For the approved facility, CSI must collect and analyze at least one composite sample of CSEAFD each month. The composite samples must be composed of representative samples collected from all batches treated in each month. These monthly representative samples must be analyzed, prior to the disposal of the CSEAFD, for the constituents listed in condition 3 below. CSI may, at its discretion, analyze composite samples gathered more frequently to demonstrate that smaller batches of waste are non-hazardous.

2. Waste holding and handling: CSI must store as hazardous all CSEAFD generated until verification testing, as specified in condition 1A or 1C above, as appropriate, is completed and valid analyses demonstrate that condition 3 below is satisfied. If the levels of constituents measured in the samples of CSEAFD do not exceed the levels set forth in condition 3, then the CSEAFD is non-hazardous and may be disposed of in a RCRA Subtitle D municipal solid waste landfill. If constituent levels in a sample exceed any of the delisting levels set forth in condition 3 below, the CSEAFD generated during the time period corresponding to this sample must be retreated until it meets these levels

or managed and disposed of as hazardous waste, in accordance with 35 Ill. Adm. Code 702 through 705, 720 through 728, 733, 738, and 739. CSEAFD generated by a new CSI treatment facility must be managed as a hazardous waste prior to the addition of the name and location of the facility to this exclusion pursuant to condition 1C above. After addition of the new facility to the exclusion pursuant to condition 1B above, CSEAFD generated during the verification testing in condition 1A is also non-hazardous if the delisting levels in condition 3 are satisfied.

3. Delisting levels: All leachable concentrations for metals must not exceed the following levels (in parts per million (ppm)): antimony—0.06; arsenic—0.50; barium—7.6; beryllium—0.010; cadmium—0.050; chromium—0.33; lead—0.15; mercury—0.009; nickel—1; selenium—0.16; silver—0.30; thallium—0.020; vanadium—2; and zinc—70. Metal concentrations must be measured in the waste leachate by the method specified in Section 721.124.

4. Changes in operating conditions: After initiating subsequent testing, as described in condition 1C, if CSI significantly changes the stabilization process established pursuant to condition 1 (e.g., use of new stabilization reagents), CSI must seek amendment of this exclusion using one of the options set forth in condition 1B above. After written amendment of this exclusion, CSI may manage CSEAFD wastes generated from the new process as non-hazardous if the wastes meet the delisting levels set forth in condition 3 above.

5. Data submittals: At least one month prior to operation of a new Super Detox® treatment facility, CSI must notify the Agency in writing when the Super Detox® treatment facility is scheduled to be on-line. The data obtained through condition 1A must be submitted to the Agency within the time period specified. Records of operating conditions and analytical data from condition 1 must be compiled, summarized, and maintained on site for a minimum of five years. These records and data must be furnished to the Agency upon request and made available for inspection. Failure to submit the required data within the specified time period or to maintain the required records on site for the specified time will be considered a violation of the Act and Board regulations. All data submitted must be accompanied by a signed copy of the

following certification statement to attest to the truth and accuracy of the data submitted:

"Under civil and criminal penalty of law for the making or submission of false or fraudulent statements or representations, I certify that the information contained in or accompanying this document is true, accurate, and complete.

"As to (those) identified section(s) of this document for which I cannot personally verify its (their) truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate, and complete.

"In the event that any of this information is determined by the Board or a court of law to be false, inaccurate, or incomplete, and upon conveyance of this fact to the company, I recognize and agree that this exclusion of waste will be void as if it never had effect or to the extent directed by the Board or court and that the company will be liable for any actions taken in contravention of the company's obligations under the federal RCRA and Comprehensive Environmental Response, Compensation and Liability Act (42 USC 9601 et seq.) and corresponding provisions of the Act premised upon the company's reliance on the void exclusion."

BOARD NOTE: The obligations of this exclusion are derived from but also distinct from the obligations under the corresponding federally-granted exclusion of table 2 of appendix IX to 40 CFR 261.

Section 721.APPENDIX I Wastes Excluded by Administrative Action

Section 721.TABLE D Wastes Excluded by the Board by Adjusted Standard

The Board has entered the following orders on petitions for adjusted standards for delisting, pursuant to 35 Ill. Adm. Code 720.122.

AS 91-1 Petition of Keystone Steel & Wire Co. for Hazardous Waste Delisting (Feb. 6, 1992 and Apr. 23, 1992). (Chemically stabilized electric arc furnace dust (K061 waste).)

AS 91-3 Petition of Peoria Disposal Company for an Adjusted Standard from 35 Ill. Adm. Code 721.Subpart D (Feb. 4, 1993 and Mar. 11, 1993). (Chemically stabilized wastewater treatment sludges from electroplating, anodizing, chemical milling and etching, and circuit board manufacturing (F006 waste).)

AS 93-7 Petition of Keystone Steel & Wire Company for an Adjusted Standard from 35 Ill. Adm. Code 721.132 (Feb. 17, 1994, Mar. 17, 1994, and Dec. 14, 1994). (Chemically stabilized waste pickling liquor (K062 waste).)

AS 94-10 Petition of Envirite Corporation for an Adjusted Standard from 35 Ill. Adm. Code 721.Subpart D, AS 94-10 (Dec. 14, 1994 and Feb. 16, 1995). (Sludge from the treatment of multiple hazardous wastes (F006, F007, F008, F009, F011, F012, F019, K002, K003, K004, K005, K006, K007, K008, and K062 wastes).)

AS 08-5 Petition of BFI Waste Systems of North America, Inc. for Waste Delisting (Dec. 4, 2008). (F039 waste)

AS 08-10 RCRA Delisting Adjusted Standard Petition of Peoria Disposal Co. (Jan. 8, 2009). (Treated K061 waste)

Section721.APPENDIX J Method of Analysis for Chlorinated Dibenzo-p-Dioxins and Dibenzofurans (Repealed)

(Source: Repealed at 18 Ill. Reg. 12175, effective July 29, 1994)

Section 721.APPENDIX Y Table to Section 721.138: Maximum Contaminant Concentration and Minimum Detection Limit Values for Comparable Fuel Specification (Repealed)

(Source: Repealed at 42 Ill. Reg. 21673, effective November 19, 2018)

Section 721.APPENDIX Z Table to Section 721.102: Recycled Materials That Are Solid Waste

The following table lists the instances when a recycled secondary material is solid waste, based on the type of secondary material and the mode of material management during recycling. This table supports the requirements of the recycling provision of the definition of solid waste rule, at Section 721.102(c).

Table

	1	2	3	4
	Use constituting disposal	Burning for energy recovery or use to produce a fuel	Reclamation (except as provided in Section 721.104-(a)(17), (a)(23), (a)(24), or (a)(27))	Speculative accumulation
Applicable Subsection of Section 721.102:	(c)(1)	(c)(2)	(c)(3)	(c)(4)
Spent materials	Yes	Yes	Yes	Yes
Sludges (listed in Section 721.131 or 721.132)	Yes	Yes	Yes	Yes
Sludges exhibiting a characteristic of hazardous waste	Yes	Yes	No	Yes
By-products (listed in Section 721.131 or 721.132)	Yes	Yes	Yes	Yes
By-products exhibiting a characteristic of hazardous waste	Yes	Yes	No	Yes
Commercial chemical products listed in Section 721.133	Yes	Yes	No	No
Scrap metal that is not excluded pursuant to Section 721.104(a)(13)	Yes	Yes	Yes	Yes

Yes - Defined as a solid waste
No - Not defined as a solid waste

BOARD NOTE: Derived from Table 1 to 40 CFR 261.2 (2017). The terms "spent materials", "sludges", "by-products", "scrap metal", and "processed scrap metal" are defined in Section 721.101.

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE G: WASTE DISPOSAL
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER c: HAZARDOUS WASTE OPERATING REQUIREMENTS

PART 722
STANDARDS APPLICABLE TO GENERATORS OF HAZARDOUS WASTE

SUBPART A: GENERAL

Section
722.101 Definitions
722.105 Electronic Reporting
722.110 Purpose, Scope, and Applicability
722.111 Hazardous Waste Determination
722.112 USEPA Identification Numbers (Repealed)
722.113 Generator Category Determination
722.114 Conditions for Exemption for a Very Small Quantity Generator
722.115 Satellite Accumulation Area Regulations for a Small Quantity Generator or Large Quantity Generator
722.116 Conditions for Exemption for a Small Quantity Generator That Accumulates Hazardous Waste
722.117 Conditions for Exemption for a Large Quantity Generator That Accumulates Hazardous Waste
722.118 USEPA Identification Numbers and Re-Notification for a Small Quantity Generator or Large Quantity Generator

SUBPART B: MANIFEST REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section
722.120 General Requirements
722.121 Manifest Tracking Numbers, Manifest Printing, and Obtaining Manifests
722.122 Number of Copies
722.123 Use of the Manifest
722.124 Use of the Electronic Manifest
722.125 Electronic Manifest Signatures
722.127 Waste Minimization Certification

SUBPART C: PRE-TRANSPORT REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section
722.130 Packaging
722.131 Labeling
722.132 Marking

722.133 Placarding
722.134 Accumulation Time (Repealed)
722.135 Liquids in Landfills Prohibition

SUBPART D: RECORDKEEPING AND REPORTING REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section
722.140 Recordkeeping
722.141 Annual Reporting for Large Quantity Generators
722.142 Exception Reporting
722.143 Additional Reporting
722.144 Recordkeeping for Small Quantity Generators
722.150 Applicability (Repealed)
722.151 Definitions (Repealed)
722.152 General Requirements (Repealed)
722.153 Notification of Intent to Export (Repealed)
722.154 Special Manifest Requirements (Repealed)
722.155 Exception Report (Repealed)
722.156 Annual Reports (Repealed)
722.157 Recordkeeping (Repealed)
722.158 International Agreements (Repealed)
722.160 Imports of Hazardous Waste (Repealed)

SUBPART G: FARMERS

Section
722.170 Farmers

SUBPART H: TRANSBOUNDARY SHIPMENTS OF HAZARDOUS WASTE FOR RECOVERY OR DISPOSAL

Section
722.180 Applicability
722.181 Definitions
722.182 General Conditions
722.183 Exports of Hazardous Waste
722.184 Imports of Hazardous Waste
722.185 Contracts (Repealed)
722.186 Provisions Relating to Recognized Traders (Repealed)
722.187 Reporting and Recordkeeping (Repealed)
722.189 OECD Waste Lists (Repealed)

SUBPART K: ALTERNATIVE REQUIREMENTS FOR HAZARDOUS WASTE DETERMINATION AND ACCUMULATION OF UNWANTED MATERIAL FOR LABORATORIES OWNED BY ELIGIBLE ACADEMIC ENTITIES

Section
722.300 Definitions
722.301 Applicability
722.302 Opting into the Subpart K Requirements
722.303 Notice of Election into the Subpart K Requirements
722.304 Notice of Withdrawal from the Subpart K Requirements
722.305 Summary of the Requirements of this Subpart K
722.306 Container Standards in the Laboratory
722.307 Personnel Training
722.308 Removing Unwanted Material from the Laboratory
722.309 Hazardous Waste Determination and Removal of Unwanted Material from the Laboratory
722.310 Hazardous Waste Determination in the Laboratory
722.311 Hazardous Waste Determination at an On-Site Central Accumulation Area
722.312 Hazardous Waste Determination at an On-Site Treatment, Storage, or Disposal Facility
722.313 Laboratory Clean-Outs
722.314 Laboratory Management Plan
722.315 Unwanted Material That Is Not Solid Waste or Hazardous Waste
722.316 Non-Laboratory Hazardous Waste Generated at an Eligible Academic Entity

SUBPART L: ALTERNATIVE STANDARDS FOR EPISODIC GENERATION

Section
722.330 Applicability
722.331 Definitions for this Subpart L
722.332 Conditions for a Generator Managing Hazardous Waste from an Episodic Event
722.333 Request to Manage One Additional Episodic Event Per Calendar Year

SUBPART M: PREPAREDNESS, PREVENTION, AND EMERGENCY PROCEDURES FOR LARGE QUANTITY GENERATORS

Section
722.350 Applicability
722.351 Maintenance and Operation of Facility
722.352 Required Equipment
722.353 Testing and Maintenance of Equipment
722.354 Access to Communications or Alarm System
722.355 Required Aisle Space
722.356 Arrangements with Local Authorities
722.360 Purpose and Implementation of Contingency Plan
722.361 Content of Contingency Plan
722.362 Copies of Contingency Plan
722.363 Amendment of Contingency Plan
722.364 Emergency Coordinator

722.365 Emergency Procedures

722.APPENDIX A Hazardous Waste Manifest (Repealed)

AUTHORITY: Implementing Sections 7.2 and 22.4 and authorized by Section 27 of the Environmental Protection Act [415 ILCS 5/7.2, 22.4, and 27].

Reg. 11717, effective August 9, 2016; recodified at 42 Ill. Reg. 11553; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. 22047, effective November 19, 2018; amended in R19-3 at 43 Ill. Reg. 563, effective December 6, 2018; amended in R19-11 at 43 Ill. Reg. 5955, May 2, 2019; amended in R20-8/R20-16 at 44 Ill. Reg. 15263, effective September 3, 2020; amended in R21-13, R22-13, R24-4 at 48 Ill. Reg. 9846, effective June 20, 2024; R24-12 at 48 Ill. Reg. 16994, effective November 22, 2024.

SUBPART A: GENERAL

Section 722.101 Definitions

As used in this Part, the following terms have the following meanings:

"Condition for exemption" means any requirement in Sections 722.114 through 722.117, 722.170, or Subpart K or Subpart L that states an event, action, or standard that must occur or be met in order to obtain an exemption from any applicable requirement in 35 Ill. Adm. Code 702, 703, and 724 through 728, or from any requirement for notification under section 3010 of RCRA (42 USC 6930) for treatment storage, and disposal facilities.

"Independent requirement" means a requirement of this Part that states an event, action, or standard that must occur or be met; and that applies without relation to, or irrespective of, the purpose of obtaining a conditional exemption from storage facility permit, interim status, and operating requirements under Sections 722.114 through 722.117, 722.170, or Subpart K or Subpart L.

(Source: Amended at 48 Ill. Reg. 16994, effective November 22, 2024)

Section 722.105 Electronic Reporting

The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Derived from 40 CFR 3, 271.10(b), 271.11(b), and 271.12(h) (2017).

(Source: Renumbered from Section 722.113 and amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.110 Purpose, Scope, and Applicability

a) This Part establishes standards for generators of hazardous waste, as defined by 35 Ill. Adm. Code 720.110.

1) A person who generates a hazardous waste, as defined by 35 Ill. Adm. Code 721, is subject to all the applicable independent requirements in the following provisions:

A) Independent Requirements of a VSQG

i) Section 722.111(a) through (d) (hazardous waste determination and recordkeeping); and

ii) Section 722.113 (generator category determination).

B) Independent Requirements of a SQG

i) Section 722.111 (hazardous waste determination and recordkeeping);

ii) Section 722.113 (generator category determination);

iii) Section 722.118 (USEPA identification numbers and re-notification for SQGs and LQGs);

iv) Subpart B (manifest requirements applicable to SQGs and LQGs);

v) Subpart C (pre-transport requirements applicable to SQGs and LQGs);

vi) Section 722.140 (recordkeeping);

vii) Section 722.144 (recordkeeping for SQGs); and

viii) Subpart H (transboundary movements of hazardous waste for recovery or disposal).

C) Independent Requirements of a LQG

i) Section 722.111 (hazardous waste determination and recordkeeping);

ii) Section 722.113 (generator category determination);

iii) Section 722.118 (USEPA identification numbers and re-notification for SQGs and LQGs);

iv) Subpart B (manifest requirements applicable to SQGs and LQGs);

v) Subpart C (pre-transport requirements applicable to SQGs and LQGs;

vi) Subpart D (recordkeeping and reporting applicable to SQGs and LQGs, except Section 722.144); and

vii) Subpart H (transboundary movements of hazardous waste for recovery or disposal).

2) A generator that accumulates hazardous waste on site is a person that stores hazardous waste; this generator is subject to the applicable requirements of 35 Ill. Adm. Code 702, 703, and 724 through 727 and section 3010 of RCRA (42 USC 6930), for treatment, storage, and disposal facilities unless the generator is one of the following:

A) A VSQG that meets the conditions for exemption in Section 722.114;

B) A SQG that meets the conditions for exemption in Sections 722.115 and 722.116; or

C) A LQG that meets the conditions for exemption in Sections 722.115 and 722.117.

3) A generator must not transport, offer its hazardous waste for transport, or otherwise cause its hazardous waste to be sent to a facility that is not a designated facility, as defined in 35 Ill. Adm. Code 720.110, or which is not otherwise authorized to receive the generator's hazardous waste.

b) Determining Generator Category. A generator must use Section 722.113 to determine which provisions of this Part are applicable to the generator based on the quantity of hazardous waste generated per calendar month.

c) This subsection (c) corresponds with 40 CFR 262.10(c), which USEPA removed and marked "reserved". This statement maintains structural consistency with the federal provision.

d) Any person that exports or imports hazardous waste must comply with Section 722.118 and Subpart H.

e) Any person that imports hazardous waste into the United States must comply with the generator standards of this Part.

f) A farmer that generates waste pesticides that are hazardous waste and that complies with Section 722.170 is not required to comply with other standards in this Part or 35 Ill. Adm. Code 702, 703, 724, 725, 727, or 728 with respect to such pesticides.

g) Generator Violation and Noncompliance

1) A generator's violation of an independent requirement is subject to enforcement action under Title VIII of the Act, including Board orders, and the penalties provided by Title XII of the Act.

2) A generator's noncompliance with a condition for exemption in this Part is not subject to enforcement action under Title VIII of the Act, including Board orders, and the penalties provided by Title XII of the Act as a violation of a condition for exemption provided in this Part. Noncompliance by any generator with an applicable condition for exemption from storage permit and operations requirements means that the facility is a storage facility operating without an exemption from the

permit, interim status, and operations requirements in 35 Ill. Adm. Code 702, 703, and 724 through 727, and the notification requirements of section 3010 of RCRA (42 USC 6930). Without an exemption, any violations of such storage requirements are subject to enforcement action under Title VIII of the Act, including Board orders, and the penalties provided by Title XII of the Act.

h) An owner or operator that initiates a shipment of hazardous waste from a treatment, storage, or disposal facility must comply with the generator standards established in this Part.

i) A person responding to an explosives or munitions emergency under 35 Ill. Adm. Code 724.101(g)(8)(A)(iv) or (g)(8)(D) or 35 Ill. Adm. Code 725.101(c)(11)(A)(iv) or (c)(11)(D) and 35 Ill. Adm. Code 703.121(a)(4) or (c) is not required to comply with the standards of this Part.

j) This subsection (j) corresponds with 40 CFR 262.10(j), which USEPA removed and marked "reserved". This statement maintains structural consistency with USEPA rules.

k) This subsection (k) corresponds with 40 CFR 262.10(k), a provision that relates only to facilities in the Commonwealth of Massachusetts. This statement maintains structural consistency with USEPA rules.

l) The laboratories owned by an eligible academic entity that chooses to be subject to the requirements of Subpart K are not subject to the requirements in subsections (l)(1) and (l)(2), except as specifically otherwise provided in Subpart K. For this subsection (l), the terms "laboratory" and "eligible academic entity" must have the meanings given them in Section 722.300.

1) The independent requirements of Section 722.111 or the regulations in Section 722.115 for an LQG or an SQG, except as provided in Subpart K; and

2) The conditions of Section 722.114 for a VSQG, except as provided in Subpart K.

m) A reverse distributor (as defined in 35 Ill. Adm. Code 726.600) is subject to Subpart P of 35 Ill. Adm. Code 726 for the management of hazardous waste pharmaceuticals instead of this Part.

n) A healthcare facility (as defined in 35 Ill. Adm. Code 726.600) must determine whether it is subject to Subpart P of 35 Ill. Adm. Code 726 for the management of hazardous waste pharmaceuticals, based on the total hazardous waste it generates per calendar month (including both hazardous waste pharmaceuticals and non-pharmaceutical hazardous waste). A healthcare facility that generates more than a

threshold quantity of hazardous waste is subject to Subpart P of 35 Ill. Adm. Code 726 for the management of hazardous waste pharmaceuticals instead of this Part. A threshold quantity of hazardous waste is 100 kg (220 pounds) of hazardous waste in a calendar month; more than 1 kg (2.2 pounds) of acute hazardous waste in a calendar month; or more than 100 kg (220 pounds) in a calendar month of any residue or contaminated soil, water, or other debris resulting from the clean-up of a spill of any acute hazardous wastes listed in 35 Ill. Adm. Code 721.131 or 721.133(e) into or on any land or water. A healthcare facility that is a VSQG when counting all of its hazardous waste, including both its hazardous waste pharmaceuticals and its non-pharmaceutical hazardous waste, remains subject to Section 722.114 and is not subject to Subpart P of 35 Ill. Adm. Code 726, except that the healthcare facility remains subject to 35 Ill. Adm. Code 726.605 and 726.607 and the optional provisions of 35 Ill. Adm. Code 726.604.

BOARD NOTE: A generator that treats, stores, or disposes of hazardous waste on-site must comply with the applicable standards and permit requirements in 35 Ill. Adm. Code 702, 703, 724 through 728, 733, and 739.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.111 Hazardous Waste Determination

A person that generates a solid waste, as defined in 35 Ill. Adm. Code 721.102, must make an accurate determination as to whether that waste is a hazardous waste to ensure that the waste is properly managed according to applicable RCRA regulations. A hazardous waste determination is made using the following steps:

a) The hazardous waste determination for each solid waste must be made at the point of waste generation, before any dilution, mixing, or other alteration of the waste occurs, and at any time in the course of its management that it has, or may have, changed its properties as a result of exposure to the environment or other factors that may change the properties of the waste such that the RCRA classification of the waste may change.

b) The person must determine whether the solid waste is excluded from regulation under 35 Ill. Adm. Code 721.104.

c) If the waste is not excluded under 35 Ill. Adm. Code 721.104, the person must then use knowledge of the waste to determine whether the waste meets any of the listing descriptions under Subpart D of 35 Ill. Adm. Code 721. Acceptable knowledge that may be used in making an accurate determination as to whether the waste is listed may include waste origin, composition, the process producing the waste, feedstock, and other reliable and relevant information. If a waste is listed, the person may file a delisting petition under 35 Ill. Adm. Code 720.120 and 720.122 to demonstrate to the Administrator that the waste from this particular site or operation is not a hazardous waste.

d) The person then must also determine whether the waste exhibits one or more hazardous characteristics, as identified in Subpart C of 35 Ill. Adm. Code 721, by following the procedures in subsection (d)(1) or (d)(2), or a combination of both.

1) The person must apply knowledge of the hazard characteristic of the waste in light of the materials or the processes used to generate the waste. Acceptable knowledge may include process knowledge (e.g., information about chemical feedstocks and other inputs to the production process); knowledge of products, by-products, and intermediates produced by the manufacturing process; chemical or physical characterization of wastes; information on the chemical and physical properties of the chemicals used or produced by the process or otherwise contained in the waste; testing that illustrates the properties of the waste; or other reliable and relevant information about the properties of the waste or its constituents. A test other than a test method in Subpart C of 35 Ill. Adm. Code 721, or an equivalent test method approved by the Agency or the Board under 35 Ill. Adm. Code 720.121, may be used as part of a person's knowledge to determine whether a solid waste exhibits a characteristic of hazardous waste. However, the tests do not, by themselves, provide definitive results. Persons testing their waste must obtain a representative sample of the waste for the testing, as defined at 35 Ill. Adm. Code 720.110.

2) When available knowledge is inadequate to make an accurate determination, the person must test the waste according to the applicable methods in Subpart C of 35 Ill. Adm. Code 721 or according to an equivalent method approved by the Administrator under 35 Ill. Adm. Code 720.121 and complying with the following:

A) A persons testing its waste must obtain a representative sample of the waste for the testing, as defined at 35 Ill. Adm. Code 720.110.

B) Where a test method is specified in Subpart C of 35 Ill. Adm. Code 721, the results of the regulatory test, when properly performed, are definitive for determining the regulatory status of the waste.

e) If the generator determines that the waste is hazardous, the generator must refer to 35 Ill. Adm. Code 721, 724 through 728, and 733 for possible exclusions or restrictions pertaining to the management of the specific waste.

f) Recordkeeping for SQGs and LQGs. A SQG or LQG must maintain records supporting its hazardous waste determinations, including records that identify whether a solid waste is a hazardous waste, as defined by 35 Ill. Adm. Code 721.103. Records must be maintained for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. These records must comprise the generator's knowledge of the waste and support the

generator's determination, as described at subsections (c) and (d). The records must include the following types of information: the results of any tests, sampling, waste analyses, or other determinations made in compliance with this Section; records documenting the tests, sampling, and analytical methods used to demonstrate the validity and relevance of the tests; records consulted in order to determine the process by which the waste was generated, the composition of the waste, and the properties of the waste; and records which explain the knowledge basis for the generator's determination, as described at subsection (d)(1). The periods of record retention referred to in this Section are extended automatically during any unresolved enforcement action regarding the regulated activity or as requested in writing by the Agency.

BOARD NOTE: Any Agency request for extended records retention under this subsection (f) is subject to Board review under Section 40 of the Act.

g) Identifying USEPA Hazardous Waste Numbers for SQGs and LQGs. Consistent with subsection (d), if the waste is determined to be hazardous, SQGs and LQGs must identify all applicable USEPA hazardous waste numbers in Subparts C and D of 35 Ill. Adm. Code 721. Prior to shipping the waste off site, the generator also must mark its containers with all applicable USEPA hazardous waste numbers (USEPA hazardous waste numbers) according to 35 Ill. Adm. Code 722.132.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.112 USEPA Identification Numbers (Repealed)

(Source: Repealed at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.113 Generator Category Determination

A generator must determine its generator category. A generator's category is based on the amount of hazardous waste generated each calendar month and may change from calendar month to calendar month. This Section sets forth procedures to determine whether a generator is a VSQG, an SQG, or an LQG for a particular calendar month, as defined in 35 Ill. Adm. Code 720.110.

a) Generators of Either Acute Hazardous Waste or Non-acute Hazardous Waste. A generator that either generates acute hazardous waste or non-acute hazardous waste in a calendar month must determine its generator category for that month by doing the following:

1) Counting the total amount of hazardous waste generated in the calendar month;

2) Subtracting from the total any amounts of waste exempt from counting, as described in subsections (c) and (d); and

3) Determining the resulting generator category for the hazardous waste generated using the table in subsection (g).

b) Generators of Both Acute and Nonacute Hazardous Waste. A generator that generates both acute hazardous waste and non-acute hazardous waste in the same calendar month must determine its generator category for that month by doing the following:

1) Counting separately the total amount of acute hazardous waste and the total amount of non-acute hazardous waste generated in the calendar month;

2) Subtracting from each total any amounts of waste exempt from counting, as described in subsections (c) and (d);

3) Determining separately the resulting generator categories for the quantities of acute and non-acute hazardous waste generated using the table in subsection (g); and

4) Comparing the resulting generator categories from subsection (b)(3) and applying the more stringent generator category to the accumulation and management of both non-acute hazardous waste and acute hazardous waste generated for that calendar month.

c) When making the monthly quantity-based determinations required by this Part, the generator must include all hazardous waste that it generates, except the following hazardous wastes:

1) Hazardous waste that is exempt from regulation under 35 Ill. Adm. Code 721.104(c) through (f), 721.106(a)(3), 721.107(a)(1), or 721.108;

2) Hazardous waste that is managed immediately upon generation only in on-site elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities, as defined in 35 Ill. Adm. Code 720.110;

3) Hazardous waste that is recycled, without prior storage or accumulation, only in an on-site process subject to regulation under 35 Ill. Adm. Code 721.106(c)(2);

4) Hazardous waste that is used oil managed under the requirements of 35 Ill. Adm. Code 721.106(a)(4) and 739;

5) Hazardous waste that is spent lead-acid batteries managed under the requirements of Subpart G of 35 Ill. Adm. Code 726;

6) Hazardous waste that is universal waste managed under 35 Ill. Adm. Code 721.109 and 733;

7) Hazardous waste that is a hazardous waste that is an unused commercial chemical product (listed in Subpart D of 35 Ill. Adm. Code 721 or exhibiting one or more characteristics in Subpart C of 35 Ill. Adm. Code 721) that is generated solely as a result of a laboratory clean-out conducted at an eligible academic entity under Section 722.313. For purposes of this provision, the term eligible academic entity must have the meaning as defined in Section 722.300;

8) Hazardous waste that is managed as part of an episodic event in compliance with the conditions of Subpart L; or

9) A hazardous waste pharmaceutical, as defined in 35 Ill. Adm. Code 726.600, that is subject to or managed under Subpart P of 35 Ill. Adm. Code 726, or a hazardous waste pharmaceutical that is also a Drug Enforcement Administration controlled substance that is conditionally exempt under 35 Ill. Adm. Code 726.606.

d) In determining the quantity of hazardous waste generated in a calendar month, a generator need not include any of the following:

1) Hazardous waste when it is removed from on-site accumulation, so long as the hazardous waste was previously counted once for the purposes of this Section;

2) Hazardous waste generated by onsite treatment (including reclamation) of the generator's hazardous waste, so long as the hazardous waste that is treated was previously counted once for the purposes of this Section; and

3) Hazardous waste spent materials that are generated, reclaimed, and subsequently reused on site, so long as such spent materials have been previously counted once for the purposes of this Section.

e) Based on the generator category, as determined under this Section, the generator must meet the applicable independent requirements listed in Section 722.110. A generator's category also determines which of the provisions of Sections 722.114, 722.115, 722.116, or 722.117 must be met to obtain an exemption from the storage facility permit, interim status, and operating requirements when accumulating hazardous waste.

f) Mixing Hazardous Waste with Solid Waste

1) VSQG Waste

A) Hazardous waste generated by a VSQG may be mixed with solid wastes. A VSQG may mix a portion or all of its hazardous waste with solid waste and remain subject to Section 722.114, even though the resultant mixture exceeds the quantity limits identified in the definition of VSQG at 35 Ill. Adm. Code 720.110, unless the

mixture exhibits one or more of the characteristics of hazardous waste identified in Subpart C of 35 Ill. Adm. Code 721.

B) If the resulting mixture described in subsection (f)(1)(A) exhibits a characteristic of hazardous waste, this resultant mixture is a newly-generated hazardous waste. The VSQG must count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the VSQG calendar month quantity limits identified in the definition of generator categories found in 35 Ill. Adm. Code 720.110. If the total quantity exceeds the very small generator calendar quantity limits, to remain exempt from the permitting, interim status, and operating standards, the VSQG must meet the conditions for exemption applicable to either an SQG or an LQG. The VSQG must also comply with the applicable independent requirements for either an SQG or an LQG.

C) If a VSQG's waste is mixed with used oil, the mixture is subject to 35 Ill. Adm. Code 739. Any material produced from such a mixture by processing, blending, or other treatment is also regulated under 35 Ill. Adm. Code 739.

2) SQG and LQG Waste

A) Hazardous wastes generated by an SQG or LQG may be mixed with solid waste. These mixtures are subject to the following requirements: the mixture rule in 35 Ill. Adm. Code 721.103(a)(2)(iv), (b)(2) and (b)(3), and (g)(2)(A); the prohibition against dilution rule at 35 Ill. Adm. Code 728.103(a); the land disposal restriction requirements of 35 Ill. Adm. Code 728.140 if a characteristic hazardous waste is mixed with a solid waste so that it no longer exhibits the hazardous characteristic; and the hazardous waste determination requirement at Section 722.111.

B) If the resulting mixture described in subsection (f)(2)(A) is found to be a hazardous waste, this resultant mixture is a newly-generated hazardous waste. An SQG must count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the SQG calendar monthly quantity limits identified in the definition of generator categories found in 35 Ill. Adm. Code 720.110. If the total quantity exceeds the small generator calendar quantity limits, to remain exempt from the permitting, interim status, and operating standards, the SQG must meet the conditions for exemption applicable to an LQG. The SQG must also comply with the applicable independent requirements for an LQG.

g) Generator Categories Based on Quantity of Waste Generated in a Calendar Month

Quantity of acute hazardous waste generated in a calendar month	Quantity of non-acute hazardous waste generated in a calendar month	Quantity of residues from a cleanup of acute hazardous waste generated in a calendar month	Generator category
> 1 kg (> 2.2 lb)	Any amount	Any amount	LQG
Any amount	≥ 1,000 kg (≥ 2,200 lbs)	Any amount	LQG
Any amount	Any amount	> 100 kg (> 220 lbs)	LQG
≤ 1 kg (≤ 2.2 lbs)	> 100 kg and < 1,000 kg (> 220 lbs and < 2,200 lbs)	≤ 100 kg (≤ 220 lbs)	SQG
≤ 1 kg (≤ 2.2 lbs)	≤ 100 kg	≤ 100 kg (≤ 220 lbs)	VSQG

(Source: Amended at 44 Ill. Reg. 15263, effective September 3, 2020)

Section 722.114 Conditions for Exemption for a Very Small Quantity Generator

a) If a VSQG meets all the conditions for exemption listed in this Section, hazardous waste generated by the VSQG is not subject to the requirements of 35 Ill. Adm. Code 702, 703, 705, and 722 through 728 and the notification requirements of section 3010 of RCRA (42 USC 6930), and the VSQG may accumulate hazardous waste on site without complying with these requirements, except that the VSQG must comply with this Section and Sections 722.110 through 722.113. The conditions for exemption are as follows:

1) In a calendar month, the VSQG generates less than or equal to the amounts specified in the definition of "VSQG" in 35 Ill. Adm. Code 720.110;

2) The VSQG complies with Section 722.111(a) through (d);

3) If the VSQG accumulates at any time greater than one kg (2.2 lbs) of acute hazardous waste or 100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e), all quantities of that acute hazardous waste are

subject to the following additional conditions for exemption and independent requirements:

A) The waste is held on site for no more than 90 days beginning on the date when the accumulated wastes exceed the amounts provided in subsection (a)(3);

B) The conditions for exemption in Section 722.117(a) through (g);

C) Notification as a ‘‘very small quantity generator’’ in Section 722.118 (a) through (c);

D) Preparation and use of the manifest in Subpart B;

E) Pre-transport requirements in Subpart C;

F) Recordkeeping and reporting requirements in Subpart D; and

G) Requirements for transboundary movements of hazardous wastes in Subpart H.

4) If the VSQG accumulates at any time 1,000 kg (2,200 lbs) or greater of non-acute hazardous waste, all quantities of that hazardous waste are subject to the following additional conditions for exemption:

A) The waste is held on site for no more than 180 days, or 270 days, if applicable, beginning on the date when the accumulated waste exceed the amounts provided in subsection (a)(1);
BOARD NOTE: Section 722.116(c) allows an SQG that must transport its waste or offer its waste for transportation over a distance of 200 miles for off-site treatment, storage, or disposal to accumulate the waste for up to 270 days.

B) The quantity of waste accumulated on site never exceeds 6,000 kg (13,200 lbs);

C) The VSQG meets the conditions for exemption in Section 722.116(b)(2) through (f);

D) Notification as a ‘‘very small quantity generator’’ under Section 722.118(a) through (c);

E) Preparation and use of the manifest in Subpart B;

F) Pre-transport requirements in Subpart C;

G) Recordkeeping and reporting requirements in Subpart D; and

H) Requirements for transboundary movements of hazardous wastes in Subpart H.

5) A VSQG that accumulates hazardous waste in amounts less than or equal to the limits in subsections (a)(3) and (a)(4) must either treat or dispose of its hazardous waste in an on-site facility or ensure delivery to an off-site treatment, storage, or disposal facility. The facility, if located in the U.S., must be one of the following:

A) A permitted facility under 35 Ill. Adm. Code 702 and 703;

B) An interim status facility under Subpart C of 35 Ill. Adm. Code 703 and 35 Ill. Adm. Code 725;

C) A facility authorized to manage hazardous waste by a state whose hazardous waste management program is approved by USEPA under 40 CFR 271;

D) A municipal solid waste landfill that is subject to the standards of 40 CFR 258 and is permitted, licensed, or registered by a USEPA-authorized state to manage municipal solid waste;

E) A solid waste management facility that is permitted, licensed, or registered by a state to manage non-municipal non-hazardous waste and, if the facility is a non-municipal non-hazardous waste disposal unit, the facility must comply with the requirements in subpart B of 40 CFR 257, incorporated by reference in 35 Ill. Adm. Code 720.111;

F) A facility which~~engaging in either of the following activities~~:

i) Beneficially uses or reuses or legitimately recycles or reclaims its waste; or ~~Beneficial use or reuse, or legitimate recycling or reclamation of its waste; or~~

ii) Treats its waste prior to beneficial use or reuse, or legitimate recycling or reclamation; and~~Treating its waste prior to beneficial use or reuse, or legitimate recycling or reclamation;~~

iii) For ignitable spent refrigerants regulated under Section 726 subpart Q, meets the requirements of that subpart.

G) For universal waste managed under 35 Ill. Adm. Code 733, a universal waste handler or destination facility subject to the requirements of 35 Ill. Adm. Code 733;

H) An LQG under the control of the same person as the VSQG, if the following conditions are met:

i) The VSQG and the LQG are under the control of the same person, as defined in 35 Ill. Adm. Code 720.110. "Control", for this Section, means the power to direct the policies of the generator, whether by the ownership of stock, voting rights, or otherwise, except that a contractor that operates a generator facility on behalf of a different person, as defined in 35 Ill. Adm. Code 720.110, cannot be deemed to "control" the VSQG and LQG.

ii) The VSQG marks its containers of hazardous waste with the words "Hazardous Waste" and an indication of the hazards of the contents. Examples of indication of the hazards include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labelling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200, incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

I) A reverse distributor (as defined in 35 Ill. Adm. Code 726.600), if the hazardous waste pharmaceutical is a potentially creditable hazardous waste pharmaceutical generated by a healthcare facility (as defined in 35 Ill. Adm. Code 726.600);

J) A healthcare facility (as defined in 35 Ill. Adm. Code 726.600) that meets the conditions in 35 Ill. Adm. Code 726.602(l) and 726.603(b), as applicable, to accept non-creditable hazardous waste pharmaceuticals and potentially creditable hazardous waste pharmaceuticals from an off-site healthcare facility that is a VSQG; or

K) For airbag waste, an airbag waste collection facility or a designated facility subject to the requirements of 35 Ill. Adm. Code 721.104(j).

b) The placement of bulk or noncontainerized liquid hazardous waste or hazardous waste containing free liquids (whether sorbents have been added) in any landfill is prohibited.

c) A VSQG experiencing an episodic event may generate and accumulate hazardous waste in compliance with Subpart L instead of Sections 722.115, 722.116, and 722.117.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.115 Satellite Accumulation Area Regulations for a Small Quantity Generator or Large Quantity Generator

a) A generator may accumulate as much as 55 gallons (208 ℓ) of non-acute hazardous waste or either one quart (0.94 ℓ) of liquid acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) or 1 kg (2.2 lbs) of solid acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) in containers at or near any point of generation where wastes initially accumulate that is under the control of the operator of the process generating the waste, without a permit or interim status and without complying with the requirements of 35 Ill. Adm. Code 702, 703, 705, and 724 through 727, provided that the generator complies with all of the conditions for exemption in this Section. A generator may comply with the conditions for exemption in this Section instead of complying with the conditions for exemption in Section 722.116(b) or 722.117(a), except as required in Section 722.115(a)(7) and (a)(8). The conditions for exemption for satellite accumulation are the following:

1) If a container holding hazardous waste is not in good condition, or if the container begins to leak, the generator must immediately transfer the hazardous waste from the leaking container to a container that is in good condition and not leaking, or immediately transfer and manage the waste in a central accumulation area operated in compliance with Section 722.116(b) or 722.117(a).

2) The generator must use a container made of or lined with materials that will not react with and that are otherwise compatible with the hazardous waste to be accumulated, so that the ability of the container to contain the waste is not impaired.

3) Special Standards for Incompatible Wastes

A) The generator must not place incompatible wastes or incompatible wastes and materials (see appendix V of 40 C.F.R. 265, incorporated by reference in 35 Ill. Adm. Code 720.111, for examples) in the same container, unless the generator complies with Section 725.117(b).

B) The generator must not place hazardous waste in an unwashed container that previously held an incompatible waste or material

(see appendix V of 40 C.F.R. 265, incorporated by reference in 35 Ill. Adm. Code 720.111, for examples), unless the generator complies with Section 725.117(b).

C) The generator must separate a container holding hazardous waste or otherwise protect it by any practical means from any other incompatible waste or other materials accumulated nearby in other containers.

4) A container holding hazardous waste must be closed at all times during accumulation, except at the following times:

A) When the generator is adding, removing, or consolidating waste; or

B) When the generator is engaged in necessary temporary venting of a container for either of the following reasons:

i) For the proper operation of equipment; or

ii) To prevent dangerous situations, such as build-up of extreme pressure.

5) A generator must mark or label its container with the following:

A) The words "Hazardous Waste"; and

B) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic) listed in Subpart C or D of 35 Ill. Adm. Code 721; hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111.

6) A generator who accumulates either acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) or non-acute hazardous waste in excess of the amounts listed in subsection (a) at or near any point of generation must do the following:

A) Either:

i) Comply within three consecutive calendar days with the applicable central accumulation area regulations in Section 722.116(b) or 722.117(a); or

ii) Remove the excess from the satellite accumulation area within three consecutive calendar days to any of a central accumulation area operated in accordance with the applicable regulations in Section 722.116(b) or 722.117(a); an on-site interim status or permitted treatment, storage, or disposal facility; or an off-site designated facility.

B) During the three-consecutive-calendar-day period provided by subsection (a)(6)(A)(ii), the generator must continue to comply with subsections (a)(1) through (a)(5). The generator must mark or label the containers holding the excess accumulation of hazardous waste with the date the excess amount began accumulating.

7) All satellite accumulation areas operated by an SQG must meet the preparedness and prevention regulations of Section 722.116(b)(8) and emergency procedures at Section 722.116(b)(9).

8) All satellite accumulation areas operated by an LQG must meet the Preparedness, Prevention and Emergency Procedures in Subpart M.

b) This subsection (b) corresponds with 40 CFR 262.115(b), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal regulation.

(Source: Amended at 44 Ill. Reg. 15263, effective September 3, 2020)

Section 722.116 Conditions for Exemption for a Small Quantity Generator That Accumulates Hazardous Waste

An SQG may accumulate hazardous waste on site without a permit or interim status, and without complying with the requirements of 35 Ill. Adm. Code 702, 703, 705, and 724 through 727, or the notification requirements of section 3010 of RCRA (42 USC 6930) for treatment, storage, and disposal facilities, if all of the conditions for exemption listed in this Section are met:

a) Generation. The generator must generate in a calendar month no more than the amounts specified in the definition of "SQG" in 35 Ill. Adm. Code 720.110.

b) Accumulation. The generator accumulates hazardous waste on site for no more than 180 days, unless in compliance with the conditions for exemption for longer accumulation in subsections (c), (d), and (e). The following accumulation conditions also apply:

1) Accumulation Limit. The quantity of acute hazardous waste accumulated on site never exceeds 1 kilogram (2.2 pounds) and the quantity of non-acute hazardous waste accumulated on site never exceeds ~~must never exceed~~ 6,000 kg (13,200 lbs);

2) Accumulation of Hazardous Waste in Containers

A) Condition of Containers. If a container holding hazardous waste is not in good condition or the container begins to leak, the SQG must immediately transfer the hazardous waste from this container to a container that is in good condition or immediately manage the waste in some other way that complies with the conditions for exemption of this Section.

B) Compatibility of Waste with Container. The SQG must use a container made of or lined with materials that will not react with and that are otherwise compatible with the hazardous waste to be accumulated, so that the ability of the container to contain the waste is not impaired.

C) Management of Containers

i) A container holding hazardous waste must always be closed during accumulation, except when it is necessary to add or remove waste.

ii) A container holding hazardous waste must not be opened, handled, or accumulated in a manner that may rupture the container or cause it to leak.

D) Inspections. At least weekly, the SQG must inspect central accumulation areas. The SQG must look for leaking containers and for deterioration of containers caused by corrosion or other factors. See subsection (b)(2)(A) for remedial action required if deterioration or leaks are detected.

E) Special Conditions for Accumulation of Incompatible Wastes

i) The SQG must not place incompatible wastes or incompatible wastes and materials (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111) must not be placed in the same container, unless the generator complies with 35 Ill. Adm. Code 725.117(b).

ii) The SQG must not place hazardous waste in an unwashed container that previously held an incompatible waste or material (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111), unless the generator complies with 35 Ill. Adm. Code 725.117(b).

iii) The SQG must separate or protect a container accumulating hazardous waste, by means of a dike, berm, wall, or other device, from any waste or other materials accumulated or stored nearby in other containers, piles, open tanks, or surface impoundments.

3) Accumulation of Hazardous Waste in Tanks

A) This subsection (b)(3)(A) corresponds with 40 CFR 262.16(b)(3)(i), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal regulation.

B) An SQG of hazardous waste must comply with the following general operating conditions:

i) Treatment or accumulation of hazardous waste in tanks must comply with 35 Ill. Adm. Code 725.117(b).

ii) The SQG must not place hazardous wastes or treatment reagents in a tank if the hazardous wastes or treatment reagents could cause the tank or its inner liner to rupture, leak, corrode, or otherwise fail before the end of its intended life.

iii) The SQG must operate uncovered tanks must be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., dike or trench), a drainage control system, or a diversion structure (e.g., standby tank) with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank.

iv) If hazardous waste is continuously fed into a tank, the SQG must equip the tank with a means to stop this inflow (e.g., waste feed cutoff system or by-pass system to a stand-by tank).

C) Except as noted in subsection (b)(3)(D), an SQG that accumulates hazardous waste in tanks must inspect each of the following, if present:

i) Discharge control equipment (e.g., waste feed cutoff systems, by-pass systems, and drainage systems) at least

once each operating day, to ensure that it is in good working order;

ii) Data gathered from monitoring equipment (e.g., pressure and temperature gauges) at least once each operating day, to ensure that the tank is being operated according to its design;

iii) The level of waste in the tank at least once each operating day, to ensure compliance with subsection (b)(3)(ii)(C);

iv) The construction materials of the tank at least weekly, to detect corrosion or leaking of fixtures or seams; and

v) The construction materials of discharge confinement structures and the immediately surrounding area (e.g., dikes) at least weekly, to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation). The SQG must remedy any deterioration or malfunction of equipment or structures that the inspection reveals on a schedule that ensures that the problem does not lead to an environmental or human health hazard. If a hazard is imminent or has already occurred, the SQG must immediately take remedial action.

D) A SQG accumulating hazardous waste in tanks or tank systems that have full secondary containment and that either use leak detection equipment to alert personnel to leaks, or implement established workplace practices to ensure leaks are promptly identified, must inspect at least weekly, if applicable, the areas identified in subsections (b)(3)(C)(i) through (b)(3)(C)(v). Use of the alternate inspection schedule must be documented in the generator's operating record. This documentation must include a description of the established workplace practices at the SQG.

E) This subsection (b)(3)(E) corresponds with 40 CFR 262.116(b)(3)(v), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal regulation.

F) An SQG accumulating hazardous waste in tanks must remove all hazardous waste from tanks, discharge control equipment, and discharge confinement structures upon closure of the facility. At closure, as throughout the operating period, unless the SQG can demonstrate, in compliance with 35 Ill. Adm. Code 721.103(c) or (d), that any solid waste removed from its tank is not a hazardous

waste, then it must manage such waste in accordance with all applicable provisions of this Part and 35 Ill. Adm. Code 722, 723, 725 and 728.

G) An SQG must comply with the following special conditions for accumulation of ignitable or reactive waste:

i) Ignitable or reactive waste must not be placed in a tank, unless the waste is treated, rendered, or mixed before or immediately after placement in a tank so that the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under 35 Ill. Adm. Code 721.121 or 721.123, and the SQG complies with 35 Ill. Adm. Code 725.117(b); the generator accumulates or treats the waste is in such a way that the waste is protected from any material or conditions that may cause it to ignite or react; or the SQG uses the tank solely for emergencies.

ii) An SQG that treats or accumulates ignitable or reactive waste in covered tanks must comply with the buffer zone requirements for tanks contained in NFPA 30 (1977 or 1981), incorporated by reference in 35 Ill. Adm. Code 720.111.

iii) An SQG must not place incompatible wastes, or incompatible wastes and materials (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111) in the same tank or place hazardous waste in an unwashed tank that previously held an incompatible waste or material, unless the generator complies with 35 Ill. Adm. Code 725.117(b).

4) Accumulation of Hazardous Waste on Drip Pads. If the waste is placed on drip pads, the SQG must comply with the following:

A) Subpart W of 35 Ill. Adm. Code 725 (except 35 Ill. Adm. Code 725.545(c));

B) The SQG must remove all wastes from the drip pad at least once every 90 days. Any hazardous wastes that the generator removes from the drip pad are then subject to the 180-day accumulation limit in subsection (b) and Section 722.115 if hazardous wastes are being managed in satellite accumulation areas prior to being moved to the central accumulation area; and

C) The SQG must maintain on site at the facility the following records readily available for inspection:

i) A written description of procedures that are followed to ensure that all wastes are removed from the drip pad and associated collection system at least once every 90 days; and

ii) Documentation of each waste removal, including the quantity of waste removed from the drip pad and the sump or collection system and the date and time of removal.

5) Accumulation of Hazardous Waste in Containment Buildings. If the SQG places waste in containment buildings, the SQG must comply with Subpart DD of 35 Ill. Adm. Code 725. The SQG must label its containment buildings with the words "Hazardous Waste" in a conspicuous place easily visible to employees, visitors, emergency responders, waste handlers, or other persons on site. The SQG must also provide in a conspicuous place an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111. The SQG must also maintain both of the following:

A) The professional engineer certification that the building complies with the design standards specified in 35 Ill. Adm. Code 725.1101. This certification must be in the generator's files prior to operation of the unit; and

B) The following records, by use of inventory logs, monitoring equipment, or any other effective means:

i) A written description of procedures to ensure that each waste volume remains in the unit for no more than 90 days, a written description of the waste generation and management practices for the facility showing that the generator is consistent with maintaining the 90 day limit, and documentation that the SQG complies with the procedures; or

ii) Documentation that the SQG empties the unit at least once every 90 days.

iii) The SQG must maintain inventory logs or records with the above information on site and readily available for inspection.

6) Labeling and Marking of Containers and Tanks

A) Containers. An SQG must mark or label its containers with the following:

i) The words "Hazardous Waste";

ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111; and

iii) The date upon which each period of accumulation begins clearly visible for inspection on each container.

B) Tanks. An SQG accumulating hazardous waste in tanks must do the following:

i) Mark or label its tanks with the words "Hazardous Waste";

ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Use inventory logs, monitoring equipment, or other records to demonstrate that hazardous waste has been emptied within 180 days of first entering the tank if using a batch process or, in the case of a tank with a continuous flow process, demonstrate that estimated volumes of hazardous waste entering the tank daily exit the tank within 180 days of first entering; and

iv) Keep inventory logs or records with the above information on site and readily available for inspection.

7) Land Disposal Restrictions. An SQG must comply with all the applicable requirements under 35 Ill. Adm. Code 728.

8) Preparedness and Prevention

A) Maintenance and Operation of Facility. An SQG must maintain and operate its facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment.

B) Required Equipment. An SQG must equip all areas where hazardous waste is either generated or accumulated with the items in subsections (b)(8)(B)(i) through (b)(8)(B)(iv) (unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below or the actual waste generation or accumulation area does not lend itself for safety reasons to have a particular kind of equipment specified below). An SQG may determine the most appropriate places to locate equipment necessary to prepare for and respond to emergencies.

i) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

ii) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams;

iii) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that

using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and

iv) Water at adequate volume and pressure to supply water hose streams, foam producing equipment, automatic sprinklers, or water spray systems.

C) Testing and Maintenance of Equipment. The SQG must test and maintain all communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, if required, as necessary to assure its proper operation in time of emergency.

D) Access to Communications or Alarm System

i) Whenever the SQG pours, mixes, spreads, or otherwise handles hazardous waste, all personnel involved in the operation must have immediate access (i.e., direct or unimpeded access) to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required under subsection (a)(8)(B).

ii) When there is just one employee on the premises while the facility is operating, the employee must have immediate access (i.e., direct or unimpeded access) to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, that is capable of summoning external emergency assistance, unless such a device is not required under subsection (a)(8)(B).

E) Required Aisle Space. The SQG must maintain aisle space that allows the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

F) Arrangements with Local Authorities

i) The SQG must attempt to make arrangements with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals, taking into account the types and quantities of hazardous wastes handled at the facility. Arrangements may be made with the Local Emergency Planning Committee, if this is the

appropriate organization with which to make arrangements. An SQG attempting to make arrangements with its local fire department must determine the potential need for the services of the local police department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals. As part of this coordination, the SQG must attempt to make arrangements, as necessary, to familiarize the above organizations with the layout of the facility, the properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes, as well as the types of injuries or illnesses that could result from fires, explosions, or releases at the facility. If more than one police or fire department might respond to an emergency, the SQG must attempt to make arrangements designating primary emergency authority to a specific fire or police department and with any others to provide support to the primary emergency authority.
BOARD NOTE: The State Emergency Response Commission (SERC) maintains an on-line listing of Local Emergency Planning Committees in Illinois by jurisdiction: www.illinois.gov/iema/Preparedness/SERC/Documents/LEPC_ReleaseReportingContactList.pdf.

ii) An SQG must maintain records documenting the arrangements with the local fire department as well as any other organization necessary to respond to an emergency. This documentation must include documentation in the operating record that either confirms these arrangements actively exist or, in cases where no arrangements exist, confirming that the SQG attempted to make these arrangements.

iii) A facility possessing 24-hour response capabilities may seek a waiver from the authority having jurisdiction over the fire code within Illinois or the facility's locality, as far as needing to make arrangements with the local fire department as well as any other organization necessary to respond to an emergency, provided that the SQG documents the waiver in the operating record.

9) Emergency Procedures. The SQG must comply with the following conditions for those areas of the generator facility where hazardous waste is generated and accumulated:

A) At all times, at least one employee must be either on the premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures specified in subsection (b)(9)(D). This employee is the emergency coordinator.

B) The SQG must post the following information next to telephones or in areas directly involved in the generation and accumulation of hazardous waste:

i) The name and emergency telephone number of the emergency coordinator;

ii) The location of fire extinguishers and spill control material, and, if present, fire alarm; and

iii) The telephone number of the fire department, unless the facility has a direct alarm.

C) The SQG must ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures that are relevant to their responsibilities during normal facility operations and emergencies;

D) The emergency coordinator or his or her designee must respond to any emergencies that arise. The required responses are the following:

i) In the event of a fire, the emergency coordinator must call the fire department or attempt to extinguish the fire using a fire extinguisher;

ii) When a spill occurs, the SQG must contain the flow of hazardous waste to the extent possible and, as soon as is practicable, clean up the hazardous waste and any contaminated materials or soil. The SQG can either itself conduct this containment and cleanup or have a contractor perform the work on its behalf;

iii) When a fire, explosion, or other release occurs that could threaten human health outside the facility, or when the SQG has knowledge that a spill has reached surface water, the SQG must immediately notify the National Response Center (using the 24-hour toll free number, 800-424–8802). The report must include the name, address, and USEPA identification number of the SQG; the date, time, and type

of incident (e.g., spill or fire); the quantity and type of hazardous waste involved in the incident; the extent of any injuries; and the estimated quantity and disposition of any recovered materials.

c) Transporting Waste More Than 200 Miles. An SQG that must transport its waste or offer its waste for transportation over a distance of 200 miles or more for off-site treatment, storage, or disposal may accumulate hazardous waste on site for 270 days or less without having a permit or interim status, provided that the SQG complies with the conditions of subsection (b).

d) Accumulation Time Limit Extension. An SQG that accumulates hazardous waste for more than 180 days (or for more than 270 days if the SQG must transport its waste or offer its waste for transportation over a distance of 200 miles or more for off-site treatment, storage, or disposal) is subject to the requirements of 35 Ill. Adm. Code 702, 703, 724, 725, 727, and 728, unless the Agency has granted the SQG an extension to the 180-day (or 270-day if applicable) period. The Agency may grant an extension if hazardous wastes must remain on site for longer than 180 days (or 270 days if applicable) due to unforeseen, temporary, and uncontrollable circumstances. The Agency may grant an extension of up to 30 days on a case-by-case basis.

BOARD NOTE: The Agency may grant a provisional variance that extends the permissible accumulation period under sections 35(b) and 36(c) of the Act. This subsection provides the basis for granting and maximum duration of an extension.

e) Rejected Loads

1) An SQG may accumulate returned waste on site in accordance with subsections (a) through (d) under the following conditions:

A) The SQG sent the shipment of hazardous waste to a designated facility believing that the designated facility could accept and manage the waste; and

B) The generator later received that shipment back as a rejected load or residue in accordance with the manifest discrepancy provisions of 35 Ill. Adm. Code 724.172 or 725.172.

2) Upon receipt of the returned shipment, the SQG must do either of the following:

A) Sign Item 18c of the manifest, if the transporter returned the shipment using the original manifest; or

B) Sign Item 20 of the manifest, if the transporter returned the shipment using a new manifest.

f) An SQG experiencing an episodic event may accumulate hazardous waste in accordance with Subpart L in lieu of Section 722.117.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.117 Conditions for Exemption for a Large Quantity Generator That Accumulates Hazardous Waste

An LQG may accumulate hazardous waste on site without a permit or interim status, and without complying with the requirements of 35 Ill. Adm. Code 702, 703 and 724 through 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), provided that the LQG meets all of the following conditions for exemption:

a) Accumulation. The LQG may accumulate hazardous waste on site for no more than 90 days, unless in compliance with the accumulation time limit extension or F006 accumulation conditions for exemption in subsections (b) through (e). The following accumulation conditions also apply:

1) Accumulation of Hazardous Waste in Containers. If the hazardous waste is placed in containers, the LQG must comply with the following requirements:

A) Air Emission Standards. The LQG must comply with the applicable requirements of Subparts AA, BB, and CC of 35 Ill. Adm. Code 725;

B) Condition of Containers. If a container holding hazardous waste is not in good condition, or if the container begins to leak, the LQG must immediately transfer the hazardous waste from the leaking container to a container that is in good condition or otherwise immediately manage the waste in some other way that complies with the conditions for exemption of this Section;

C) Compatibility of Waste with Container. The LQG must use a container made of or lined with materials that will not react with and are otherwise compatible with the hazardous waste to be stored, so that the ability of the container to contain the waste is not impaired;

D) Management of Containers

i) The LQG must always keep a container holding hazardous waste closed during accumulation, except when it is necessary to add or remove waste.

ii) The LQG must not open, handle, or store a container holding hazardous waste in a manner that may rupture the container or cause the container to leak.

E) Inspections. At least weekly, the LQG must inspect central accumulation areas. The LQG must look for leaking containers and for deterioration of containers caused by corrosion or other factors. See subsection (a)(1)(B) for remedial action required if the LQG detects deterioration or leaks.

F) Special Conditions for Accumulation of Ignitable and Reactive Wastes

i) The LQG must locate containers holding ignitable or reactive waste at least 15 meters (50 feet) from the facility's property line, unless the LQG obtains a written approval from the authority having jurisdiction over the local fire code that allows hazardous waste accumulation to occur within this restricted area. The LQG must maintain a record of the written approval as long as the LQG accumulates ignitable or reactive hazardous waste in this area.

ii) The LQG must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. The LQG must separate and protect this waste from sources of ignition or reaction, including, but not limited to, the following: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical, or mechanical), spontaneous ignition (e.g., from heat-producing chemical reactions), or radiant heat. While handling ignitable or reactive waste, the LQG must confine smoking and open flame to specially designated locations. The LQG must conspicuously place "No Smoking" signs wherever there is a hazard from ignitable or reactive waste.

G) Special Conditions for Accumulation of Incompatible Wastes

i) The LQG must not place incompatible wastes or incompatible wastes and materials (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111) in the same container, unless the LQG complies with 35 Ill. Adm. Code 725.117(b).

ii) The LQG must not place hazardous waste in an unwashed container that previously held an incompatible waste or material (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111), unless the LQG complies with 35 Ill. Adm. Code 725.117(b).

iii) The LQG must separate a container holding hazardous waste or otherwise protect it by means of a dike, berm, wall, or other device from any other incompatible waste or other materials accumulated or stored nearby in other containers, piles, open tanks, or surface impoundments.

2) Accumulation of Hazardous Waste in Tanks. If the LQG places the waste in tanks, the LQG must comply with the applicable requirements of Subpart J, except 35 Ill. Adm. Code 725.297(c) (Closure and Post-Closure Care) and 35 Ill. Adm. Code 725.300 (Waste Analysis and Trial Tests) and the applicable requirements of Subparts AA, BB, and CC of 35 Ill. Adm. Code 725.

3) Accumulation of Hazardous Waste on Drip Pads. If the LQG places hazardous waste on drip pads, the LQG must comply with the following:

A) Subpart W of 35 Ill. Adm. Code 725;

B) The LQG must remove all wastes from the drip pad at least once every 90 days. Any hazardous wastes that the LQG removes from the drip pad are subject to the 90-day accumulation limit in subsection (a) and Section 722.115, if the LQG manages the hazardous wastes in satellite accumulation areas prior to moving them to a central accumulation area; and

C) The LQG must maintain on site at the facility the following records readily available for inspection:

i) A written description of procedures that the LQG follows to ensure that it removes all wastes from the drip pad and associated collection system at least once every 90 days; and

ii) Documentation of each waste removal, including the quantity of waste that the LQG removed from the drip pad and the sump or collection system and the date and time of removal.

4) Accumulation of Hazardous Waste in Containment Buildings. If the LQG places the waste in containment buildings, the LQG must comply with Subpart DD of 35 Ill. Adm. Code 725. The LQG must label its containment building with the words "Hazardous Waste" in a conspicuous place easily visible to employees, visitors, emergency responders, waste handlers, or other persons on site. The LQG must also provide in a conspicuous place an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111. The LQG must also maintain both of the following:

A) The professional engineer certification that the building complies with the design standards specified in 35 Ill. Adm. Code 725.1101. This certification must be in the LQG's files prior to operation of the unit; and

B) The following records, by use of inventory logs, monitoring equipment, or any other effective means:

i) A written description of procedures to ensure that each waste volume remains in the unit for no more than 90 days, a written description of the waste generation and management practices for the facility showing that the generator is consistent with respecting the 90-day limit, and documentation that the LQG complies with the procedures

ii) Documentation that the LQG empties the unit at least once every 90 days.

iii) The LQG must maintain inventory logs or records with the above information on site and readily available for inspection.

5) Labeling and Marking of Containers and Tanks

A) Containers. An LQG must mark or label its containers with the following:

i) The words "Hazardous Waste";

ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (labeling) and subpart F (placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111; and

iii) The date upon which each period of accumulation begins clearly visible for inspection on each container.

B) Tanks. An LQG accumulating hazardous waste in tanks must do the following:

i) Mark or label its tanks with the words "Hazardous Waste";

ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Use inventory logs, monitoring equipment or other records to demonstrate that hazardous waste has been emptied within 90 days of first entering the tank if using a batch process or, in the case of a tank with a continuous flow process, demonstrate that estimated volumes of hazardous waste entering the tank daily exit the tank within 90 days of first entering; and

iv) Keep inventory logs or records with the above information on site and readily available for inspection.

6) Emergency Procedures. The LQG must comply with the standards in Subpart M (Preparedness, Prevention and Emergency Procedures for Large Quantity Generators).

7) Personnel Training

A) Personnel Training Program

i) Facility personnel must successfully complete a program of classroom instruction, online training (e.g., computer-based or electronic) or on-the-job training that teaches them to perform their duties in a way that ensures compliance with this Part. The LQG must ensure that this program includes all the elements described in the document required under subsection (a)(7)(D).

ii) A person trained in hazardous waste management procedures must direct the program, and the program must include instruction that teaches facility personnel hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which the LQG employs them.

iii) At a minimum, the design of the training program must ensure that facility personnel can respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including, if applicable, procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; key parameters for automatic waste feed cut-off systems; communications or alarm systems; response to fires or explosions; response to ground-water contamination incidents; and shutdown of operations.

iv) For facility employees that receive emergency response training under 29 CFR 1910.120(p)(8) (Emergency response program) and 1910.120(q) (Emergency response to hazardous substance releases), incorporated by reference in 35 Ill. Adm. Code 720.111, the LQG is not required to provide separate emergency response training under this Section, provided that the overall facility training meets all the conditions of exemption in this Section.

B) Facility personnel must successfully complete the program required in subsection (a)(7)(A) within six months after the date of their employment, assignment to the facility, or assignment to a

new position at the facility, whichever is later. An employee must not work in unsupervised positions until he or she has completed the training standards of subsection (a)(7)(A).

C) Facility personnel must take part in an annual review of the initial training required in subsection (a)(7)(A).

D) The LQG must maintain the following documents and records at the facility:

i) The job title for each position at the facility related to hazardous waste management and the name of the employee filling each job;

ii) A written job description for each position listed under subsection (a)(7)(D)(i). This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but the description must include the requisite skill, education, other qualifications, and duties of facility personnel assigned to each position;

iii) A written description of the type and amount of both introductory and continuing training that the LQG will give to each person filling a position listed under subsection (a)(7)(D)(i);

iv) Records documenting that the LQG has given and facility personnel has completed the training or job experience required by subsections (a)(7)(A), (B), and (C).

E) The LQG must keep training records on current personnel until closure of the facility. The LQG must keep training records on former employees for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

8) Closure. An LQG accumulating hazardous wastes in containers, tanks, drip pads, and containment buildings, prior to closing the facility or a unit at the facility, must meet the following conditions:

A) Notification for Closure of a Waste Accumulation Unit. An LQG must perform one of the following when closing a waste accumulation unit, but not all waste accumulation units:

i) Place a notice in the operating record within 30 days after closure identifying the location of the unit within the facility (if the waste accumulation unit is subsequently reopened, the generator may remove the notice from the operating record); or

ii) Meet the closure performance standards of subsection (a)(8)(C) for container, tank, and containment building waste accumulation units or subsection (a)(8)(D) for drip pads and notify USEPA and the Agency following the procedures in subsection (a)(8)(B)(ii) for the waste accumulation unit. ~~If the waste accumulation unit is subsequently reopened, the LQG may remove the notice from the operating record.~~

B) Notification for Closure of the Facility

i) Notify the Agency using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12) no later than 30 days prior to closing the facility.

ii) Notify the Agency using USEPA Form 8700-12 within 90 days after closing the facility that it has complied with the closure performance standards of subsection (a)(8)(C) or (a)(8)(D). If the facility cannot meet the closure performance standards of subsection (a)(8)(C) or (a)(8)(D), notify the Agency using USEPA Form 8700-12 that it will close as a landfill under 35 Ill. Adm. Code 725.410 in the case of a container, tank, or containment building units. If the facility cannot meet the closure performance standards of subsection (a)(8)(C) or (a)(8)(D), notify using USEPA Form 8700-12 that it will close under the standards of 35 Ill. Adm. Code 725.545(b) for a facility with drip pads.

iii) An LQG may request additional time to clean close, but it must notify the Agency using USEPA Form 8700-12 within 75 days after the date provided in subsection (a)(8)(B)(i) to request an extension and provide an explanation as to why the additional time is required.

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

C) Closure Performance Standards for Container, Tank Systems, and Containment Building Waste Accumulation Units

i) At closure, the LQG must close the waste accumulation unit or facility in a manner that minimizes the need for further maintenance by controlling, minimizing, or eliminating the post-closure escape of hazardous waste, hazardous constituents, leachate, contaminated run-off, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere to the extent necessary to protect human health and the environment.

ii) The LQG must remove or decontaminate all contaminated equipment, structures, soil, and any remaining hazardous waste residues from waste accumulation units, including containment system components (pads, liners, etc.), contaminated soils and subsoils, bases, and structures and equipment contaminated with waste, unless 35 Ill. Adm. Code 721.103(d) applies.

iii) The LQG must manage any hazardous waste generated in the process of closing the LQG's facility or units accumulating hazardous waste in accordance with all applicable standards of 35 Ill. Adm. Code 722, 723, 725, and 728, including removing any hazardous waste contained in these units within 90 days of generating the waste and managing these wastes in a permitted or interim status hazardous waste treatment, storage, and disposal facility.

iv) If the LQG demonstrates that it cannot practicably remove or decontaminate any contaminated soils and wastes, as required in subsection (a)(8)(B)(ii), then the waste accumulation unit is a landfill, and the LQG must close the waste accumulation unit and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills (35 Ill. Adm. Code 725.410). In addition, the LQG must meet all of the requirements for landfills specified in Subparts G and H of 35 Ill. Adm. Code 725 for the purposes of closure, post-closure, and financial responsibility, for a waste accumulation unit that is a landfill.

D) Closure Performance Standards for Drip Pad Waste Accumulation Units. At closure, the LQG must comply with the closure

requirements of subsections (a)(8)(B) and (a)(8)(C)(i), and (a)(8)(C)(iii) and 35 Ill. Adm. Code 725.545(a) and (b).

E) The closure requirements of this subsection (a)(8) do not apply to satellite accumulation areas.

9) Land Disposal Restrictions. The LQG must comply with all applicable requirements of 35 Ill. Adm. Code 728.

b) Accumulation Time Limit Extension. An LQG that accumulates hazardous waste for more than 90 days is subject to the requirements of 35 Ill. Adm. Code 702, 703, and 724 through 728 and the notification requirements of section 3010 of RCRA (42 USC 6930), unless the Agency has granted the LQG an extension to the 90-day period. The Agency may grant an extension if hazardous wastes must remain on site for longer than 90 days due to unforeseen, temporary, and uncontrollable circumstances. The Agency may grant an extension of up to 30 days on a case-by-case basis.

BOARD NOTE: The Agency may grant a provisional variance that extends the permissible accumulation period under sections 35(b) and 36(c) of the Act. This subsection provides the basis for granting and maximum duration of an extension.

c) Accumulation of F006 Waste. An LQG also generating wastewater treatment sludges from electroplating operations that meet the listing description for USEPA hazardous waste number F006 may accumulate F006 waste on site for more than 90 days but not more than 180 days without being subject to 35 Ill. Adm. Code 702, 703, and 724 through 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), provided that the LQG complies with all of the following additional conditions for exemption:

1) The LQG has implemented pollution prevention practices that reduce the amount of any hazardous substances, pollutants, or contaminants entering F006 waste or otherwise being released to the environment prior to recycling of the waste;

2) The F006 waste is legitimately recycled through metals recovery;

3) The LQG accumulates no more than 20,000 kg of F006 waste on site at any one time; and

4) The LQG manages the F006 waste in accordance with the following requirements:

A) Requirements for Managing F006 Waste

i) If the LQG places the F006 waste in containers, the LQG must comply with the applicable conditions for exemption in subsection (a)(1).

ii) If the LQG places the F006 waste in tanks, the LQG must comply with the applicable conditions for exemption in subsection (a)(2).

iii) If the LQG places the F006 waste in containment buildings, the LQG must comply with Subpart DD of 35 Ill. Adm. Code 725. Prior to operation of the unit, the LQG must place in the operating record of the facility the certification of a professional engineer that the containment building complies with the design standards specified in 35 Ill. Adm. Code 725.1101. The LQG must also place in the operating record either documentation that the LQG empties the unit is at least once every 180 days or all three of the following items: a written description of procedures to ensure that the F006 waste remains in the unit for no more than 180 days, a written description of the facility waste generation and management practices showing that the practices are consistent with the 180-day limit, and documentation that the LQG is complying with the procedures.

B) The LQG is exempt from all requirements of Subparts G and H of 35 Ill. Adm. Code 725, except for those referenced in subsection (a)(8).

C) The LQG must clearly mark the date upon which each period of accumulation begins, and the date must be clearly visible for inspection on each container.

D) While accumulating waste on site, the LQG must clearly labeled or mark each container and tank is with the following:

i) The words “Hazardous Waste”; and

ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172; a hazard statement or pictogram consistent with 29 CFR 1910.1200; or a chemical hazard label consistent with

NFPA 704, each incorporated by reference in 35 Ill. Adm. Code 720.111.

E) The LQG must comply with the requirements in subsections (a)(6) and (a)(7).

d) F006 Waste Transported over 200 Miles. An LQG also generating wastewater treatment sludges from electroplating operations that meet the listing description for the USEPA hazardous waste number F006 may accumulate F006 waste on site for more than 90 days but not more than 270 days without being subject to 35 Ill. Adm. Code 702, 703, and 724 through 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), if the LQG must transport this waste or offer this waste for transportation over a distance of 200 miles or more for off-site metals recovery and the LQG complies with all of the conditions for exemption of subsections (c)(1) through (c)(4).

e) F006 Waste Accumulation Time Extension. An LQG accumulating F006 waste in accordance with subsections (c) and (d) that either accumulates F006 waste on site for more than 180 days (or for more than 270 days if the LQG must transport this waste or offer this waste for transportation over a distance of 200 miles or more) or accumulates more than 20,000 kg (44,000 lbs) of F006 waste on site is an operator of a storage facility and is subject to the requirements of 35 Ill. Adm. Code 702, 703, 724, 725, 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), unless the Agency has granted the LQG an extension to the 180-day period (or 270-day period, if applicable) or an exception to the 20,000- kg (44,000 lb) accumulation limit. The Agency may grant an extension of the accumulation period or an exception to the accumulation limit if F006 waste must remain on site for longer than 180 days (or 270 days, if applicable) or if more than 20,000 kg (44,000 lbs) of F006 waste must remain on site due to unforeseen, temporary, and uncontrollable circumstances. The Agency may grant an extension of up to 30 days or an exception to the accumulation limit on a case-by-case basis.

BOARD NOTE: The Agency may grant a provisional variance that extends the permissible accumulation period or accumulation amount limit under sections 35(b) and 36(c) of the Act. This subsection provides the basis for granting and maximum duration of an extension.

f) Consolidation of Hazardous Waste Received from VSQGs. An LQG may accumulate on site hazardous waste received from a VSQG under control of the same person (as defined in 35 Ill. Adm. Code 720.110), without a storage facility permit or interim status and without complying with the requirements of 35 Ill. Adm. Code 702, 703, and 724 through 728 and the notification requirements of section 3010 of RCRA (42 USC 6930) for treatment, storage, and disposal facilities, provided that the LQG complies with the following conditions. "Control", for this Section, means the power to direct the policies of the LQG and

VSQG, whether by the ownership of stock, voting rights, or otherwise, except that a contractor that operates a LQG or VSQG facility on behalf of a different person is not be considered to "control" the LQG or VSQG.

1) The LQG must notify the Agency at least 30 days prior to receiving the first shipment from a VSQG using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12); and

   A) The LQG must identify on the form the names and site addresses for the VSQG as well as the name and business telephone number for a contact person for the VSQG; and

   B) The LQG must submit an updated USEPA Form 8700-12 within 30 days after a change in the name or site address for the VSQG.

   BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

2) The LQG maintains records of shipments for three years from the date the LQG receives the hazardous waste from the VSQG. These records must identify the name, site address, and contact information for the VSQG and include a description of the hazardous waste received, including the quantity and the date the LQG received the waste.

3) The LQG must comply with the independent requirements identified in Section 722.110(a)(1)(C) and the conditions for exemption in this Section for all hazardous waste received from a VSQG. For the labeling and marking regulations in subsection (a)(5), the LQG must label the container or unit with the date accumulation started (i.e., the date the LQG received the hazardous waste from the VSQG). If the LQG is consolidating incoming hazardous waste from a VSQG with either its own hazardous waste or with hazardous waste from other VSQGs, the LQG must label each container or unit with the earliest date when the VSQG first accumulated on site any hazardous waste in the container.

g) Rejected Load. An LQG may accumulate the returned waste on site in compliance with subsections (a) and (b) if the LQG sent the shipment of hazardous waste to a designated facility believing that the designated facility can accept and manage the waste and later received that shipment back as a rejected load or residue in compliance with the manifest discrepancy provisions of 35 Ill. Adm. Code 724.172 or 725.172. Upon receipt of the returned shipment, the LQG must do either of the following:

1) Sign Item 18c of the manifest, if the transporter returned the shipment using the original manifest; or

2) Sign Item 20 of the manifest, if the transporter returned the shipment using a new manifest.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.118 USEPA Identification Numbers and Re-Notification for a Small Quantity Generator or Large Quantity Generator

a) An SQG or LQG must not treat, store, dispose of, transport, or offer for transportation hazardous waste without having received a USEPA identification number.

b) An SQG or LQG that has not received a USEPA identification number must obtain one by applying to the Agency using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12). Upon receiving the request USEPA will assign a USEPA identification number to the generator.

c) An SQG or LQG must not offer its hazardous waste to a transporter or treatment, storage, or disposal facility that has not received a USEPA identification number.

d) Re-Notification

1) An SQG must renotify the Agency starting in 2021 and every four years thereafter using USEPA Form 8700-12. The SQG must submit this re-notification by September 1st of each year in which re-notification is required.

2) An LQG must renotify the Agency by March 1 of each even-numbered year thereafter using USEPA Form 8700-12. An LQG may submit this renotification as part of its annual report required by Section 722.141.

e) A recognized trader must not arrange for import or export of hazardous waste without having received a USEPA identification number from USEPA.

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

(Source: Amended at 43 Ill. Reg. 5955, May 2, 2019)

SUBPART B: MANIFEST REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section 722.120 General Requirements

a) Paper Manifest.~~Manifest Form Required~~

1) An SQG or LQG that transports hazardous waste or offers for transport a hazardous waste~~offers a hazardous waste for transportation~~ for off-site treatment, storage, or disposal or a treatment, storage, or disposal facility that offers for transport a rejected hazardous waste load,~~load of hazardous waste~~ must prepare a manifest (OMB Control number 2050-0039) on USEPA Form 8700-22, ~~(~~and, if necessary, ~~on~~ USEPA Form 8700-22A.~~)~~ Large and small quantity generators must register with the USEPA's e-Manifest system to obtain signed and dated copies of completed manifests from USEPA e-Manifest system and comply with subsection (a)(2). ~~according to the instructions included in the Uniform Hazardous Waste Manifest and Instructions~~

Board Note ~~(~~USEPA Forms 8700-22 and 8700-22A~~)~~, incorporated by reference in 35 Ill. Adm. Code 720.111(b).

2) Post-receipt manifest data corrections. After facilities have certified that the manifest is complete, by signing it at the time of submission to the USEPA e-Manifest system, any post-receipt data corrections may be submitted at any time by any interested person (e.g., waste handler) named on the manifest. If corrections are requested by the Agency for portions of the manifest that a generator is required to complete, the generator must address the data correction within 30 days from the date of the request. Data correction submissions must be made electronically via the post-receipt data corrections process as described in Section 725.171(l), which applies to corrections made to either paper or electronic manifests.~~This subsection (a)(2) corresponds with 40 CFR 262.20(a)(2), an applicability statement that became obsolete for the purposes of the Illinois rules on September 6, 2006. This statement maintains structural parity with the corresponding federal regulations.~~

3) E-Manifest. In lieu of using the manifest form specified in subsection (a)(1), a person required to prepare a manifest under subsection (a)(1) may prepare and use an e-Manifest, provided that the person complies with the following requirements:

A) Section 722.124 for use of e-Manifests; and

B) 40 CFR 3.10, incorporated by reference in 35 Ill. Adm. Code 720.111, for the reporting of electronic documents to USEPA.

b) An SQG or LQG must designate on the manifest one receiving facility that is permitted to handle the waste described on the manifest.

c) An SQG or LQG may also designate on the manifest one alternate receiving facility that is permitted to handle his waste in the event an emergency prevents delivery of the waste to the primary designated facility.

d) If the transporter is unable to deliver the hazardous waste to the designated receiving facility or the alternate facility, the SQG or LQG must either designate another receiving facility or instruct the transporter to return the waste.

e) The requirements of this Subpart B do not apply to hazardous waste produced by generators of greater than 100 kg but less than 1,000 kg in a calendar month where the following conditions are fulfilled:

1) The waste is reclaimed under a contractual agreement that specifies the type of waste and frequency of shipments;

2) The vehicle used to transport the waste to the recycling facility and to deliver regenerated material back to the generator is owned and operated by the reclaimer of the waste; and

3) The SQG or LQG maintains a copy of the reclamation agreement in his files for a period of at least three years after termination or expiration of the agreement.

f) The requirements of this Subpart B and Section 722.132(b) do not apply to the transport of hazardous wastes on a public or private right-of-way within or along the border of contiguous property under the control of the same person, even if such contiguous property is divided by a public or private right-of-way. Notwithstanding 35 Ill. Adm. Code 723.110(a), the generator or transporter must comply with the requirements for transporters set forth in 35 Ill. Adm. Code 723.130 and 723.131 in the event of a discharge of hazardous waste on a public or private right-of-way.

(Source: Amended at 43 Ill. Reg. 563, effective December 6, 2018)

Section 722.121 Manifest Tracking Numbers, Manifest Printing, and Obtaining Manifests

a) USEPA exclusively administers requirements for hazardous waste manifest forms and continuation sheets (USEPA Forms 8700-22 and 8700-22A). USEPA prescribes the manifest form format, content, printing, and registration requirements in 40 CFR 262.21.

b) Use of Approved Manifests

1) A generator may use manifests printed by any source so long as the source of the printed form has received approval from USEPA to print the manifest pursuant to 40 CFR 262.21(c) and (e).

BOARD NOTE: USEPA maintains a listing of registered sources at https://www.epa.gov/hwgenerators/approved-registered-printers-epas-manifest-registry.

2) The waste generator must determine whether the generator state or the consignment state for a shipment regulates any additional wastes (beyond those regulated federally) as hazardous wastes under these states' authorized programs. The generator must also determine whether the consignment state or generator state requires the generator to submit any copies of the manifest to these states. In cases where the generator must supply copies to either the generator's state or the consignment state, the generator is responsible for supplying legible photocopies of the manifest to these states.

BOARD NOTE: This subsection (b) derives from 40 CFR 262.21(g). It is the only provision in 40 CFRF 262.21 that does not exclusively apply to the form format, content, printing, and registration requirements for manifests.

(Source: Amended at 43 Ill. Reg. 5955, May 2, 2019)

Section 722.122 Number of Copies

The manifest consists of at least that number of copies that will provide the generator; each transporter; and the owner or operator of the designated receiving treatment, storage, or disposal facility each with one copy for their records, plus provide one copy to be returned to the generator.

(Source: Amended at 44 Ill. Reg. 15263, effective September 3, 2020)

Section 722.123 Use of the Manifest

a) The generator must do the following:

1) Sign the manifest certification by hand;

2) Obtain the handwritten signature of the initial transporter and date of acceptance on the manifest; and

3) Retain one copy, in accordance with Section 722.140(a).

b) The generator must give the transporter the remaining copies of the manifest.

c) For shipments of hazardous waste within the United States solely by water (bulk shipments only), the generator must send three copies of the manifest dated and

signed in accordance with this Section to the owner or operator of the designated receiving facility, if that facility is in the United States, or to the last water (bulk shipment) transporter to handle the waste in the United States, if the waste is exported by water. Copies of the manifest are not required for each transporter.

d) For rail shipments of hazardous waste within the United States that originate at the site of generation, the generator must send at least three copies of the manifest dated and signed in accordance with this Section to the following persons:

1) The next non-rail transporter, if any;

2) The designated receiving facility, if the waste is transported solely by rail; or

3) The last rail transporter to handle the waste in the United States, if the waste is exported by rail.

BOARD NOTE: See Section 723.120(e) and (f) for special provisions for rail or water (bulk shipment) transporters.

e) For shipments of hazardous waste to a designated receiving facility in an authorized state that has not yet obtained authorization to regulate that particular waste as hazardous, the generator must assure that the designated receiving facility agrees to sign and return the manifest to the generator, and that any out-of-state transporter signs and forwards the manifest to the designated receiving facility.

f) For rejected shipments of hazardous waste or container residues contained in non-empty containers that the designated facility has returned to the generator (following the procedures of 35 Ill. Adm. Code 724.172(f) or 725.172(f)), the generator must do each of the following:

1) The generator must sign the hazardous waste manifest (USEPA Form 8700-22) as follows:

A) Item 20 of the new manifest if a new manifest is used for the returned shipment; or

B) Item 18c of the original manifest if the original manifest is used for the returned shipment;

2) The generator must provide a copy of the manifest to the transporter;

3) Within 30 days after delivery of the rejected shipment or container residues contained in non-empty containers, the generator must send a copy of the manifest to the designated facility that returned the shipment to the generator; and

4) The generator must retain a copy of each manifest at the generator's site for at least three years from the date of delivery.

BOARD NOTE: The use of the term "non-empty containers" in this subsection (f) derives from the language of corresponding 40 CFR 262.23(f). "Non-empty containers", for the purposes of this subsection (f), are containers that are not deemed "empty" by the empty container rule of 35 Ill. Adm. Code 721.107. That rule allows a container that still contains waste residues to be considered "empty" under specified conditions. Thus, "container residues contained in non-empty containers" are subject to regulation as hazardous waste, and the requirements of this subsection (f) apply to those residues.

(Source: Amended at 44 Ill. Reg. 15263, effective September 3, 2020)

Section 722.124 Use of the Electronic Manifest

a) Legal Equivalence to Paper Manifests. E-Manifests that are obtained, completed, and transmitted in accordance with Section 722.120(a)(3), and used in accordance with this Section in lieu of USEPA Forms 8700-22 and 8700-22A are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in 35 Ill. Adm. Code 720 through 728 to obtain, complete, sign, provide, use, or retain a manifest.

1) Any requirement in 35 Ill. Adm. Code 721 through 728 to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of Section 722.125.

2) Any requirement in 35 Ill. Adm. Code 721 through 728 to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when an e-Manifest is transmitted to the other person by submission to the e-Manifest System.

3) Any requirement in any provision of 35 Ill. Adm. Code 721 through 728 for a generator to keep or retain a copy of each manifest is satisfied by retention of a signed e-Manifest in the generator's account on the national e-Manifest System, provided that such copies are readily available for viewing and production if requested by any USEPA or authorized Agency inspector.

4) No generator may be held liable for the inability to produce an e-Manifest for inspection under this Section if the generator can demonstrate that the inability to produce the e-Manifest is due exclusively to a technical difficulty with the e-Manifest System for which the generator bears no responsibility.

BOARD NOTE: The Board has rendered the language "and requirement in these regulations" in corresponding 35 Ill. Adm. Code 722.124(a) and (a)(1) through

(a)(3) as "any requirement in any provision of 35 Ill. Adm. Code 720 through 728" in the appropriate segments of this subsection (a). The Board intends that use of the e-Manifest System have the same effect in Illinois as it would where the federal requirements directly apply.

b) A generator may participate in the e-Manifest System either by accessing the e-Manifest System from its own electronic equipment, or by accessing the e-Manifest System from portable equipment brought to the generator's site by the transporter who accepts the hazardous waste shipment from the generator for off-site transportation.

c) Restriction on Use of e-Manifests. A generator may use an e-Manifest for the tracking of waste shipments involving any hazardous waste only if it is known at the time the manifest is originated that all waste handlers named on the manifest participate in the use of the electronic manifest, except that a generator may sign by hand and retain a paper copy of the manifest signed by hand by the initial transporter, in lieu of executing the generator copy electronically, thereby enabling the transporter and subsequent waste handlers to execute the remainder of the manifest copies electronically.

d) Requirement for One Printed Copy. To the extent the hazardous materials regulation on shipping papers for carriage by public highway requires shippers of hazardous materials to supply a paper document for compliance with 49 CFR 177.817, incorporated by reference in 35 Ill. Adm. Code 720.111, a generator originating an e-Manifest must also provide the initial transporter with one printed copy of the e-Manifest.

e) Special Procedures When e-Manifest Is Unavailable. If a generator has prepared an e-Manifest for a hazardous waste shipment, but the e-Manifest System becomes unavailable for any reason prior to the time that the initial transporter has signed electronically to acknowledge the receipt of the hazardous waste from the generator, the generator must obtain and complete a paper manifest and if necessary, a continuation sheet (USEPA Forms 8700-22 and 8700-22A) in accordance with the manifest instructions, and use these paper forms from this point forward in accordance with the requirements of Section 722.123.

f) Special Procedures for Electronic Signature Methods Undergoing Tests. If a generator has prepared an e-Manifest for a hazardous waste shipment, and signs this manifest electronically using an electronic signature method that is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, the generator must also sign with an ink signature the generator or offeror certification on the printed copy of the manifest provided under subsection (d).

g) This subsection (g) corresponds with 40 CFR 262.24(g), which USEPA has removed and marked "reserved". This statement maintains consistency with the corresponding federal rules.

h) Post-Receipt Manifest Data Corrections. After a facility has certified to the receipt of hazardous wastes by signing Item 20 of the manifest, any post-receipt data corrections may be submitted at any time by any interested person (e.g., waste handler) named on the manifest. A generator may participate electronically in the post-receipt data corrections process by following the process described in 35 Ill. Adm. Code 724.171(l), which applies to corrections made to either paper or electronic manifest records.

(Source: Amended at 43 Ill. Reg. 563, effective December 6, 2018)

Section 722.125 Electronic Manifest Signatures

Electronic signature methods for the e-Manifest System must fulfill the following criteria:

a) The signature must be a legally valid and enforceable signature under applicable USEPA and other federal requirements pertaining to electronic signatures; and

b) The signature must be a method that is designed and implemented in a manner that USEPA considers to be as cost-effective and practical as possible for the users of the e-Manifest System.

(Source: Added at 39 Ill. Reg. 1700, effective January 12, 2015)

Section 722.127 Waste Minimization Certification

A generator that initiates a shipment of hazardous waste must certify to one of the following statements in Item 15 of the uniform hazardous waste manifest:

a) "I am a large quantity generator. I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment"; or

b) "I am a small quantity generator. I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford."

BOARD NOTE: 35 Ill. Adm. Code 720.110 defines a "small quantity generator" as a generator that generates less than 1,000 kilograms of hazardous waste in any calendar month. There is no corresponding definition of "large quantity generator" in the federal regulations, but the Board interprets the term to mean a hazardous waste generator that is not a small quantity generator.

(Source: Amended at 32 Ill. Reg. 11927, effective July 14, 2008)

SUBPART C: PRE-TRANSPORT REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section 722.130 Packaging

Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator must package the waste in accordance with the applicable U.S. Department of Transportation (USDOT) regulations on packaging under 49 CFR 173 (Shippers—General Requirements for Shipments and Packages), 178 (Specifications for Packagings), and 179 (Specifications for Tank Cars), each incorporated by reference in 35 Ill. Adm. Code 720.111(b).

(Source: Amended at 30 Ill. Reg. 3138, effective February 23, 2006)

Section 722.131 Labeling

Before transporting or offering hazardous waste for transportation off-site, a generator must label each package in accordance with the applicable USDOT regulations on hazardous materials under 49 CFR 172 (Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

(Source: Amended at 30 Ill. Reg. 3138, effective February 23, 2006)

Section 722.132 Marking

a) Before transporting or offering hazardous waste for transportation off-site, a generator must mark each package of hazardous waste in accordance with the applicable USDOT regulations on hazardous materials under 49 CFR 172 (Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements), incorporated by reference in 35 Ill. Adm. Code 720.111(b);

b) Marking Small Containers. Before transporting hazardous waste or offering hazardous waste for transportation off site, a generator must mark each container of 119 gallons (450 ℓ) or less that is used in such transportation with the following words and information displayed in accordance with the requirements of 49 CFR 172.304 (Marking Requirements), incorporated by reference in 35 Ill. Adm. Code 720.111(b):

1) HAZARDOUS WASTE—Federal Law Prohibits Improper Disposal. If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.

2) Generator's Name and Address _____.

3) Generator's USEPA Identification Number _____.

4) Manifest Tracking Number _____.

5) USEPA hazardous waste numbers _____.

c) A generator may use a nationally recognized electronic system, such as bar coding, to identify the USEPA hazardous waste numbers, as required by subsection (b)(5) or (d).

d) The generator need not mark lab packs that will be incinerated in compliance with 35 Ill. Adm. Code 728.142(c) with USEPA hazardous waste numbers, except D004, D005, D006, D007, D008, D010, and D011, where applicable.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.133 Placarding

Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator must placard or offer the initial transporter the appropriate placards according to USDOT regulations for hazardous materials under subpart F of 49 CFR 172 (Placarding), incorporated by reference in 35 Ill. Adm. Code 720.111(b). If placards are not required, a generator must mark each motor vehicle according to 49 CFR 171.3(b)(1) (Hazardous Waste), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

(Source: Amended at 32 Ill. Reg. 11927, effective July 14, 2008)

Section 722.134 Accumulation Time (Repealed)

(Source: Repealed at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.135 Liquids in Landfills Prohibition

The placement of bulk or noncontainerized liquid hazardous waste or hazardous waste containing free liquids (whether or not sorbents have been added) in any landfill is prohibited. Prior to disposal in a hazardous waste landfill, liquids must meet the additional requirements as specified in 35 Ill. Adm. Code 724.414 and 725.414.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

SUBPART D: RECORDKEEPING AND REPORTING REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section 722.140 Recordkeeping

a) A generator must keep a copy of each manifest signed in accordance with Section 722.123(a) for three years or until it receives a signed copy from the designated facility that received the waste. This signed copy must be retained as a record for at least three years from the date the waste was accepted by the initial transporter.

b) A generator must keep a copy of each Annual Report and Exception Report for a period of at least three years from the due date of the report (March 1).

c) Section 722.111(f) requires documenting hazardous waste determinations.

d) The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested in writing by the Agency.

BOARD NOTE: Any Agency request for extended records retention under this subsection (d) is subject to Board review pursuant to Section 40 of the Act.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.141 Annual Reporting for Large Quantity Generators

a) A generator that is an LQG for at least one month of any calendar year (reporting year) shipping any hazardous waste off site to a treatment, storage or disposal facility within the United States must complete and submit an annual report to the Agency by March 1 of the following year. The annual report must be submitted on a form supplied by the Agency, and it must cover generator activities during the previous calendar year.

b) Any generator that is an LQG for at least one month of any calendar year (reporting year) treating, storing, or disposing of hazardous waste on site must complete and submit to the Agency by March 1 of the following year an annual report on a form provided by the Agency covering those wastes in accordance with the provisions of 35 Ill. Adm. Code 702, 703, and 724 through 727. This requirement also applies to an LQG that receives hazardous waste from a VSQG under Section 722.117(f).

c) Exports of hazardous waste to foreign countries are not required to be reported on the annual report form. Section 722.183(g) establishes a separate annual report requirement for hazardous waste exporters.

(Source: Amended at 44 Ill. Reg. 15263, effective September 3, 2020)

Section 722.142 Exception Reporting

a) For LQG.

1) A LQG that does not receive a copy of the manifest with the ~~handwritten~~ signature of the owner or operator of the designated facility within 45~~35~~ days of~~after~~ the date the waste was accepted by the initial transporter must contact the transporter or the owner or operator of the designated facility to determine the status of the hazardous waste.

2) A LQG must submit an Exception Report to the Agency if the generator has not received a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 6045 days ofafter the date the waste was accepted by the initial transporter. The Exception Report must include the following documents:

A) A legible copy of the manifest for which the generator does not have a confirmation of delivery; and

B) A cover letter signed by the generator or the generator's authorized representative explaining the efforts taken to locate the hazardous waste and the result of those efforts.

3) Within 30 days of adoption, ~~Beginning on December 1, 2025~~, the Agency will no longer accept mailed paper Exception Reports from LQGs. Beginning on December 1, 2025, a LQG must submit an Exception Report to the USEPA e-Manifest system if the generator has not received a copy of the manifest with the signature of the owner or operator of the designated facility within 60 days of the date the waste was accepted by the initial transporter. The Exception Report must include:

A) A legible copy of the manifest for which the generator does not have confirmation of delivery.

B) An explanation of the efforts taken to locate the hazardous waste and the results of those efforts.

b) A SQG that does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 60 days after the date the waste was accepted by the initial transporter must: ~~submit a legible copy of the manifest to the Agency, with some indication that the generator has not received confirmation of delivery.~~

1) Submit a legible copy of the manifest, with some indication that the generator has not received confirmation of delivery, to the Agency.

BOARD NOTE: The submission need be only a handwritten or typed note on the manifest itself, or on an attached sheet of paper, stating that the returned copy was not received.

2) Within 30 days of adoption, the Agency will no longer accept mailed paper Exception Reports from SQGs. Beginning on December 1, 2025, a SQG must submit a legible copy of the manifest, with some indication that the generator has not received confirmation of delivery, to the Agency. Generators that are normally VSQGs but are subject to the SQG provisions of this subsection (b) because of an episodic generation event pursuant to

Section 722.332.(a)(5) must submit a legible copy of the manifest, with some indication that the generator has not received confirmation of delivery, to the Agency.

c) A generator must comply with the requirements of subsection (a) or (b), as applicable, when a designated facility has forwarded a rejected shipment of hazardous waste or container residues contained in non-empty containers to an alternate facility using a new manifest (following the procedures of 35 Ill. Adm. Code 724.172(e)(1) through (e)(6) or 725.172(e)(1) through (e)(6)). For generator compliance with subsection (a) or (b), when a designated facility forwards a shipment of rejected waste to an alternate facility, the following requirements apply:

1) The copy of the manifest received by the generator must have the handwritten signature of the owner or operator of the alternate facility in place of the signature of the owner or operator of the designated facility; and

2) The ~~35-,~~ 45-~~,~~ or 60-day timeframes begin on the date that the initial transporter accepts the waste from the designated facility for shipment to the alternate facility.

d) Exception Report Retention

1) Beginning on December 1, 2025, any requirement in Section 722.140 for a generator to keep or retain a copy of an Exception Report is satisfied by retention of a signed electronic Exception Report in the generator's account on the USEPA e-Manifest system, provided that the Exception Report is readily available if requested by the Agency.

2) Beginning on December 1, 2025, no generator may be held liable for the inability to produce an electronic Exception Report for inspection under this section if the generator can demonstrate that the inability to produce the electronic Exception Report is due exclusively to a technical difficulty with the e-Manifest system for which the generator bears no responsibility.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.143 Additional Reporting

The Agency, as it deems necessary under Section 4 of the Illinois Environmental Protection Act, may require generators to furnish additional reports concerning the quantities and disposition of wastes identified or listed in 35 Ill. Adm. Code 721.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.144 Recordkeeping for Small Quantity Generators

Of the requirements in this Subpart D, an SQG is subject to only the following independent requirements:

a) Section 722.140(a), (c), and (d), recordkeeping;

b) Section 722.142(b), exception reporting; and

c) Section 722.143, additional reporting.

Section 722.160 Imports of Hazardous Waste (Repealed)

(Source: Repealed at 42 Ill. Reg. 22047, effective November 19, 2018)

SUBPART G: FARMERS

Section 722.170 Farmers

A farmer disposing of waste pesticides from the farmer's own use that are hazardous wastes is not required to comply with the standards in this Part or other standards in 35 Ill. Adm. Code 702, 703, 724, 725, or 728 for those wastes, provided the farmer triple rinses each emptied pesticide container in accordance with 35 Ill. Adm. Code 721.107(b)(3) and disposes of the pesticide residues on the farmer's own farm in a manner consistent with the disposal instructions on the pesticide label.

(Source: Amended at 29 Ill. Reg. 6312, effective April 22, 2005)

SUBPART H: TRANSBOUNDARY SHIPMENTS OF HAZARDOUS WASTE FOR RECOVERY OR DISPOSAL

Section 722.180 Applicability

a) The requirements of this Subpart H apply to transboundary movements of hazardous waste.

b) Any person (including importer, exporter, disposal facility operator, or recovery facility operator) that mixes two or more wastes (including hazardous and non-hazardous wastes) or which otherwise subjects two or more wastes (including hazardous and non-hazardous wastes) to physical or chemical transformation operations, and thereby creates a new hazardous waste, becomes a generator and assumes all subsequent generator duties under this Subchapter c and any exporter duties under this Subpart H, as applicable.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.181 Definitions

In addition to the definitions in 35 Ill. Adm. Code 720.110, the following definitions apply to Subpart H and to other provisions within Part 722 as specifically indicated:

"Amber control procedures" means the controls listed in Section D of Annex A ("Amber Control Procedure") to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).
BOARD NOTE: The Board added this definition.

"Amber waste" means a waste listed in Appendix 4 ("List of Wastes Subject to the Amber Control Procedure") to Annex A and in Annex C ("OECD Consolidated List of Wastes Subject to the Amber Control Procedure") to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).
BOARD NOTE: The Board added this definition.

"Competent authority" means the regulatory authority or authorities of countries concerned having jurisdiction over transboundary movements of wastes.
BOARD NOTE: Under the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal (Basel Convention), party countries are required to establish or designate competent authorities to facilitate implementation of the Convention. Basel Convention, art. 5 (as amended through May 27, 2014). The Basel Convention, United Nations Environment Programme maintains an on-line list of competent authorities by country: http://www.basel.int/Countries/CountryContacts/tabid/1342/Default.aspx.

"Countries concerned" means the countries of export or import and any countries of transit. Use of singular "concerned country" is contemplated within this definition if the text refers only to a single country.

"Country of export" means any country from which a transboundary movement of hazardous waste is planned to be initiated or is initiated.

"Country of import" means any country to which a transboundary movement of hazardous waste is planned or takes place for the purpose of submitting the waste to recovery or disposal operations in that country.

"Country of transit" means any country other than the country of export or country of import across which a transboundary movement of waste is planned to be initiated or takes place.

"Disposal operations" means activities that do not lead to the possibility of resource recovery, recycling, reclamation, direct re-use, or alternate uses, which include the following:

D1 Release or Deposit into or onto land, other than by any of operations D2 through D5 or D12.

D2 Land treatment, such as biodegradation of liquids or sludges in soils.

D3 Deep injection, such as injection into wells, salt domes, or naturally occurring repositories.

D4 Surface impoundment, such as placing of liquids or sludges into pits, ponds, or lagoons.

D5 Specially engineered landfill, such as placement into lined discrete cells that are capped and isolated from one another and the environment.

D6 Release into a water body other than a sea or ocean, and other than by operation D4.

D7 Release into a sea or ocean, including sea-bed insertion, other than by operation D4.

D8 Biological treatment not specified elsewhere in operations D1 through D12 that results in final compounds or mixtures that are discarded by means of any of operations D1 through D12.

D9 Physical or chemical treatment not specified elsewhere in operations D1 through D12, such as evaporation, drying, calcination, neutralization, or precipitation, that results in final compounds or mixtures that are discarded by means of any of operations D1 through D12.

D10 Incineration on land.

D11 Incineration at sea.

D12 Permanent storage.

D13 Interim blending or mixing, prior to any of operations D1 through D12.

D14 Interim repackaging, prior to any of operations D1 through D12.

D15 Interim storage, prior to any of operations D1 through D12.

DC1 Release, including the venting of compressed or liquified gases, or treatment, other than by any of operations D1 to D12 (for transboundary movements with Canada only).

DC2 Testing of a new technology to dispose of a hazardous waste (for transboundary movements with Canada only).

"Export" means the transportation of hazardous waste from a location under the jurisdiction of the United States to a location under the jurisdiction of another country, or a location not under the jurisdiction of any country, for the recovery or disposal operations at the destination.

"Exporter" (designated as "primary exporter" in the certification statement on the RCRA hazardous waste manifest (USEPA Form 8700-22)) means either the person domiciled in the United States that originates the movement document in compliance with Section 722.183(d) or the manifest in compliance with Subpart B specifying a foreign receiving facility as the destination of the hazardous waste or any recognized trader that proposes export of the hazardous wastes for recovery or disposal operations in the country of import.

"Foreign exporter" means the person under the jurisdiction of the country of export that has, or will have at the time the planned transboundary movement starts, possession or other forms of legal control of the hazardous waste and that proposes shipment of hazardous waste to the United States for recovery or disposal operations.

"Foreign importer" means the person assigned possession or other form of legal control of the hazardous waste once the exported hazardous waste is received in the country of import.

"Foreign receiving facility" means a facility that operates or is authorized to operate under the importing country’s domestic law to receive the hazardous wastes and to perform recovery or disposal operations on them.

"Green control procedures" means the controls listed in Section C of Annex A ("Green Control Procedure") to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).
BOARD NOTE: The Board added this definition.

"Green waste" means a waste listed in Appendix 3 ("List of Wastes Subject to the Green Control Procedures") to Annex A and in Annex B ("OECD Consolidated List of Wastes Subject to the Green Control Procedure") to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).
BOARD NOTE: The Board added this definition.

"Import" means the transportation of hazardous waste from a location under the jurisdiction of another country to a location under the jurisdiction of the United States for the recovery or disposal operations at the destination.

"Importer" means the person that is assigned possession or other form of legal control of the hazardous waste at the time the imported hazardous waste is received in the United States.

"OECD" means the Organisation for Economic Co-operation and Development.

"OECD area" means all land or marine areas under the national jurisdiction of any OECD member country. When the regulations refer to shipments to or from an OECD member country, this means OECD area.

"OECD Guidance Manual" means "Guidance Manual for the Implementation of Council Decision C(2001)107/FINAL, As Amended, on the Control of Transboundary Movements of Wastes Destined for Recovery Operations", 2009 (also called "Guidance Manual for the Control of Transboundary Movements of Recoverable Materials" in OECD documents), but only the segments incorporated by reference in 35 Ill. Adm. Code 722.111(a), which state the substantive requirements of OECD decision C(2001)107/FINAL, as amended by C(2004)20; C(2005)141 and C(2008)156.
BOARD NOTE: The Board added this definition. Although USEPA conventionally refers to the OECD requirements by the designation "C(2001)107/FINAL", USEPA incorporated the OECD Guidance Manual by reference for the substance of the OECD requirements. The substance of the OECD requirements requires reference to the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal (Basel Convention) for full meaning, and the OECD Guidance Manual includes Annexes A through C, which present the full text of OECD decision C(2001)107/FINAL and the Basel Convention. For these reasons, the Board refers directly to the OECD Guidance Manual and incorporates Annexes A through C of the Guidance Manual by reference.

"OECD member country" means any of the countries that are members of the OECD and participate in the OECD Guidance Manual.
BOARD NOTE: Corresponding 40 CFR 262.81 states that USEPA provides a list of OECD member countries on the Internet. (https://www.epa.gov/hwgenerators/international-agreements-transboundary-shipments-hazardous-waste#oecd).

"Receiving facility" means a facility within the jurisdiction of the United States that operates or is authorized to operate to receive hazardous wastes and to perform recovery or disposal operations on them under RCRA and other domestic laws.

"Recognized trader" means a person that, with appropriate authorization of countries concerned, acts in the role of principal to purchase and subsequently sell wastes; this person has legal control of the wastes from time of purchase to time of sale; the person may act to arrange and facilitate transboundary movements of wastes destined for recovery operations.

"Recovery facility" means a facility that, under domestic law, is operating or is authorized to operate in the country of import to receive wastes and to perform recovery operations on them.

"Recovery operations" means activities leading to resource recovery, recycling, reclamation, direct re-use, or alternative uses, which include the following types of operations:

R1 Use as a fuel (other than in direct incineration) or other means to generate energy,

R2 Solvent reclamation or regeneration,

R3 Recycling or reclamation of organic substances that are not used as solvents,

R4 Recycling or reclamation of metals and metal compounds,

R5 Recycling or reclamation of other inorganic materials,

R6 Regeneration of acids or bases,

R7 Recovery of components used for pollution abatement,

R8 Recovery of components from used catalysts,

R9 Used oil re-refining or other reuses of previously used oil,

R10 Land treatment resulting in benefit to agriculture or ecological improvement,

R11 Use of residual materials obtained from any of the operations numbered R1 through R10 or RC 1,

R12 Interim exchange of wastes before recycling using any of the operations numbered R1 through R11 or RC 1, and

R13 Interim accumulation of material intended for any operation numbered R1 through R11 or RC1.

RC14 Recovery or regeneration of a substance or use or re-use of a recyclable material, other than by any of operations R1 through R10 (for transboundary shipments with Canada only).

RC2 Testing of a new technology to recycle a hazardous recyclable material (for transboundary shipments with Canada only).

RC3 Interim storage prior to any of operations R1 through R11 or RC14 (for transboundary shipments with Canada only).

"Transboundary movement" means any movement of hazardous wastes from an area under the national jurisdiction of one country to an area under the national jurisdiction of another country.

"USEPA Acknowledgment of Consent" or "AOC" means the letter USEPA sends to the exporter documenting the specific terms of the country of import's consent and any countries of transit's consents.
BOARD NOTE: Corresponding 40 CFR 262.81 provides that the AOC meets the definition of "export license" in 15 CFR 30.1.

(Source: Amended at 48 Ill. Reg. 9846, effective June 20, 2024)

Section 722.182 General Conditions

a) Scope. The level of control for exports and imports of waste is indicated by designation of the waste as either Green waste or Amber waste, as defined in Section 722.181, and whether the waste is or is not hazardous waste.

1) Green Wastes

A) Green waste that is not hazardous waste is subject to existing controls normally applied to commercial transactions and is not subject to the requirements of Subpart H.

B) Green waste that is hazardous waste is subject to the requirements of Subpart H.

2) Amber Wastes

A) Amber waste that is hazardous waste is subject to the Amber control procedures in Subpart H, even if it is imported to or exported from a country that does not consider the waste to be hazardous or control the transboundary shipment as a hazardous waste import or export.

i) For exports, exporter must comply with Section 722.183.

ii) For imports, the recovery or disposal facility and the importer must comply with Section 722.184.

B) Amber waste that is not hazardous waste, but which is considered hazardous by the other country, is subject to the Amber control procedures in the country that considers the waste hazardous, and are not subject to the requirements of Subpart H. All responsibilities of the U.S. importer or exporter shift to the foreign importer or foreign exporter in the other country that considers the waste hazardous unless the parties make other arrangements through contracts.

BOARD NOTE: Some Amber wastes are not listed or otherwise identified as hazardous under RCRA, and therefore are not subject to the requirements of Subpart H. Regardless of the status of the waste under RCRA, however, other federal environmental statutes (e.g., the Toxic Substances Control Act (42 USC 2601 et seq.)) restrict certain waste imports or exports. These other federal restrictions continue to apply without regard to the applicability or inapplicability of Subpart H.

3) Mixtures

A) A Green waste that is mixed with one or more other Green wastes such that the resulting mixture is not hazardous waste is not subject to the requirements of Subpart H.

BOARD NOTE: USEPA has noted that the law of some countries may require that mixtures of different Green wastes be subject to the Amber control procedures.

B) A Green waste that is mixed with one or more Amber wastes, in any amount, de minimis or otherwise, or a mixture of two or more Amber wastes that is hazardous waste is subject to the requirements of Subpart H.

BOARD NOTE: USEPA has noted that the law of some countries may require that a mixture of a Green waste and more than a de minimis amount of an Amber waste or a mixture of two or more Amber wastes be subject to the Amber control procedures.

4) Waste that is not yet OECD-listed waste is eligible for transboundary movements, as follows:

A) If the waste is hazardous waste, the waste is subject to the requirements of Subpart H.

B) If the waste is not hazardous waste, the waste is not subject to the requirements of Subpart H.

b) General Conditions Applicable to Transboundary Movements of Hazardous Waste

1) The hazardous waste must be destined for recovery or disposal operations at a facility that, under applicable domestic law, is operating or is authorized to operate in the country of import;

2) The transboundary movement must comply with applicable international transport agreements; and

BOARD NOTE: These international agreements include, the Chicago Convention (1944), ADR (1957), ADNR (1970), MARPOL Convention (1973/1978), SOLAS Convention (1974), IMDG Code (1985), COTIF (1985), and RID (1985).

3) Any transit of hazardous waste through one or more countries must comply with all applicable international and national laws and regulations.

c) Duty to return wastes subject to the Amber control procedures during transit through the United States. When a transboundary movement of hazardous waste subject to the Amber control procedures does not comply with the requirements of the notification and movement documents or otherwise constitutes illegal shipment, and if alternative arrangements cannot be made to recover or dispose of these wastes in an environmentally sound manner, the waste must be returned to the country of export. The U.S. transporter must inform EPA at the specified mailing address in subsection (e) of the need to return the shipment. USEPA will then inform the competent authority of the country of export, citing the reasons for returning the waste. The U.S. transporter must complete the return within 90 days from the time USEPA informs the country of export of the need to return the waste, unless informed in writing by USEPA of another timeframe agreed to by the concerned countries.

d) Laboratory Analysis Exemption. Export or import of a hazardous waste sample is exempt from the requirements of Subpart H if the sample is destined for laboratory analysis to assess its physical or chemical characteristics or to determine its suitability for recovery or disposal operations, the sample does not exceed 25 kg (55 pounds) in quantity, the sample is appropriately packaged and labeled, and the sample complies with the conditions of 35 Ill. Adm. Code 721.104(d) or (e).

e) USEPA Address for Submittals by Postal Mail or Hand Delivery. Submittals required in Subpart H to be made by postal mail or hand delivery should be sent to the following addresses:

1) For Postal Mail Delivery:

Office of Enforcement and Compliance Assurance
Office of Federal Activities
International Compliance Assurance Division (2254A)
Environmental Protection Agency
1200 Pennsylvania Avenue NW.
Washington, DC 20460.

2) For Hand-Delivery:

Office of Land and Emergency Management
Office of Resource Conservation and Recovery
Materials Recovery and Waste Management Division
International Branch (Mail Code 2255T)
Environmental Protection Agency
William Jefferson Clinton South Bldg., Room 6144
12th St. and Pennsylvania Ave NW.
Washington, DC 20004.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.183 Exports of Hazardous Waste

a) General Export Requirements. Except as provided in subsections (a)(5) and (a)(6), an exporter that receives an AOC from USEPA before December 31, 2016 is subject to that approval and the requirements listed in the AOC as they existed at the time of that approval until the approval period expires. All other exports of hazardous waste are prohibited unless the following conditions are fulfilled:

1) The exporter complies with the contract requirements in subsection (f);

2) The exporter complies with the notification requirements in subsection (b);

3) The exporter receives an AOC from USEPA documenting consent from the countries of import and transit (and original country of export if exporting previously imported hazardous waste);

4) The exporter ensures compliance with the movement documents requirements in subsection (d);

5) The exporter ensures compliance with the manifest instructions for export shipments in subsection (c); and

6) The exporter or a U.S. authorized agent must submit electronic export information (EEI) for each shipment to the Automated Export System (AES) or its successor system, under the International Trade Data System (ITDS) platform, in compliance with 15 CFR 30.4(b), incorporated by reference in 35 Ill. Adm. Code 720.111, and includes the following items in the EEI, along with the other information required under 15 CFR 30.6, incorporated by reference in 35 Ill. Adm. Code 720.111:

A) The USEPA license code;

B) The commodity classification code for each hazardous waste per 15 CFR 30.6(a)(12), incorporated by reference in 35 Ill. Adm. Code 720.111;

C) The USEPA consent number for each hazardous waste;

D) The country of ultimate destination code per 15 CFR 30.6(a)(5), incorporated by reference in 35 Ill. Adm. Code 720.111;

E) The date of export per 15 CFR 30.6(a)(2), incorporated by reference in 35 Ill. Adm. Code 720.111;

F) The RCRA hazardous waste manifest tracking number, if required;

G) The quantity of each hazardous waste in shipment and units for reported quantity, if required reporting units established by value for the reported commodity classification number are in units of weight or volume per 15 CFR 30.6(a)(15), incorporated by reference in 35 Ill. Adm. Code 720.111; or

H) The USEPA net quantity for each hazardous waste reported in units of kilograms if solid or in units of liters if liquid, if required reporting units established by value for the reported commodity classification number are not in units of weight or volume.

b) Notifications

1) General Notifications. At least 60 days before the first shipment of hazardous waste is expected to leave the United States, the exporter must provide notification in English to USEPA of the proposed transboundary movement. Notifications must be submitted electronically using USEPA's Waste Import Export Tracking System (WIETS), or its successor system. The notification may cover up to one year of shipments of one or more hazardous wastes being sent to the same recovery or disposal facility, and the notification must include all of the following information:

A) The exporter name and USEPA identification number, site address, telephone, fax numbers, and email address;

B) The foreign receiving facility name, site address, telephone, fax numbers, email address, technologies employed, and the applicable recovery or disposal operations, as defined in Section 722.181;

C) The foreign importer name (if not the owner or operator of the foreign receiving facility), site address, telephone, fax numbers, and email address;

D) The intended transporters or their agents; site address, telephone, fax, and email address;

E) "U.S." as the country of export name, "USA01" as the relevant competent authority code, and the intended U.S. ports of exit;

F) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and the ports of entry and exit for each country of transit;

G) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and port of entry for the country of import;

H) A statement of whether the notification covers a single shipment or multiple shipments;

I) The start and end dates requested for transboundary movements;

J) The planned means of transport;

K) A description of each hazardous waste, including whether each hazardous waste is regulated universal waste under 35 Ill. Adm. Code 733, spent lead-acid batteries being exported for recovery of lead under Subpart G of 35 Ill. Adm. Code 726, or industrial ethyl alcohol being exported for reclamation under 35 Ill. Adm. Code 721.106(a)(3)(A); the estimated total quantity of each waste in either metric tons or cubic meters; the applicable USEPA hazardous waste numbers for each hazardous waste; the applicable waste code from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous

Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each waste;

L) Specification of the recovery or disposal operations, as defined in Section 722.181.

M) A declaration and certification signed by the exporter that states as follows:

> I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally enforceable written contractual obligations have been entered into and that any applicable insurance or other financial guarantee is or shall be in force covering the transboundary movement.
>
> Name:
> Signature:
> Date:

BOARD NOTE: The United Nations Environment Programme, Basel Convention maintains an on-line list of competent authorities by country (www.basel.int/Countries/CountryContacts/tabid/1342/Default.aspx). The European Commission maintains a list of competent authorities for European Union members (ec.europa.eu/environment/waste/shipments/pdf/list_competent_authorities.pdf).

2) Exports to Pre-Consented Recovery Facilities in OECD Member Countries. If the recovery facility is located in an OECD member country and has been pre-consented by the competent authority of the OECD member country to recover the waste sent by exporters located in other OECD member countries, the notification may cover up to three years of shipments. A notification proposing export to a preconsented facility in an OECD member country must include all information listed in subsections (b)(1)(A) through (b)(1)(M) and additionally state that the facility is preconsented. The exporter must submit the notification to USEPA using the methods listed in subsection (b)(1) at least ten days before the first shipment is expected to leave the United States.

3) Notifications Listing Interim Recycling Operations or Interim Disposal Operations. If the foreign receiving facility listed in subsection (b)(1)(B) will engage in any of the interim recovery operations R12 or R13 or interim disposal operations D13 through D15, or in the case of transboundary movements with Canada, any of the interim recovery operations R12, R13, or RC3, or interim disposal operations D13 to D14,

or D15, the notification submitted in compliance with ~~according to~~ subsection (b)(1) must also include the final foreign recovery or disposal facility name, site address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11 and D1 through D12, or in the case of transboundary movements with Canada, which of the applicable recovery disposal operations R1through R11, RC1 to RC2, D1 through D12, and DC1 to DC2 will be employed at the final foreign recovery or disposal facility~~ will employ. For transboundary movements to Canada, in addition to the foreign receiving facilities listed in subsection (b)(1)(B), if the foreign receiving facility will engage in interim recovery operations or interim disposal operations, the notification submitted according to subsection (b)(1) must also include the final foreign recovery or disposal facility name, address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11, RC1 to RC2, D1 through D12, and DC1 to DC2 the final foreign recovery or disposal facility will employ.~~ The recovery and disposal operations in this subsection (b)(3) are defined in Section 722.181.

4) Renotifications. When the exporter wishes to change any of the information specified on the original notification (including increasing the estimate of the total quantity of hazardous waste specified in the original notification or adding transporters), the exporter must submit a renotification of the changes to USEPA using the methods in subsection (b)(1). Any shipment using the requested changes cannot take place until the countries of import and transit consent to the changes and the exporter receives an USEPA AOC letter documenting the countries' consents to the changes.

5) If the proposed country of import and recovery or disposal operations are not covered under an international agreement to which both the United States and the country of import are parties, USEPA will coordinate with the Department of State to provide the complete notification to the country of import and any countries of transit. In all other cases, USEPA will provide the notification directly to the country of import and any countries of transit. A notification is complete when USEPA receives a notification that USEPA determines satisfies the requirements of subsections (b)(1)(A) through (b)(1)(M).

6) If the countries of import and transit consent to the proposed transboundary movements of the hazardous wastes, USEPA will forward an USEPA AOC letter to the exporter documenting the countries' consents. Where any of the countries of import and transit objects to the proposed transboundary movements of the hazardous waste or withdraws a prior consent, USEPA stated that it will notify the exporter.

7) Export of hazardous wastes for recycling or disposal operations that were originally imported into the United States for recycling or disposal operations in a third country is prohibited unless an exporter in the United States complies with the export requirements in Section 722.183, including providing notification to USEPA in compliance with subsection (b)(1). In addition to listing all required information in subsections (b)(1)(A) through (b)(1)(M), the exporter must provide the original consent number issued for the initial import of the wastes in the notification, and receive an AOC from USEPA documenting the consent of the competent authorities in new country of import, the original country of export, and any transit countries prior to reexport.

8) Upon request by USEPA, the exporter must furnish to USEPA any additional information which the country of import requests to respond to a notification.

c) RCRA Manifest Instructions for Export Shipments. The exporter must comply with the manifest requirements of Sections 722.120 through 722.125~~722.123~~, except that~~with the following exceptions~~:

1) (Block 8): Instead of the name, site address and USEPA ID number of the designated facility, the exporter must enter the name and site address of the foreign receiving facility;

2) (Block 16): In the International Shipments block on the continuation sheet (USEPA Form 8700-22A), the exporter must: ~~check the export box and enter the port of exit (city and state) from the United States.~~

A) Check the export box and enter the U.S. port of exit (city and State) from the United States

B) Enter the exporter's USEPA ID number, if the exporter is not identified in Item 5 of the manifest (USEPA Form 8700-22) for the export shipment; and

C) List the waste stream consent number from the AOC for each hazardous waste listed on the manifest, matched to the relevant list number for the hazardous waste from block 9b. If additional space is needed, the exporter should use an additional Continuation Sheet(s) (USEPA Form 8700-22A).

3) The exporter may obtain the manifest from any source so long as the source of the printed form has received approval from the USEPA to print the manifest in compliance with 40 CFR 262.21(g)(1). ~~The exporter must list the consent number from the AOC for each hazardous waste listed on~~

~~the manifest, matched to the relevant list number for the hazardous waste from block 9b. If additional space is needed, the exporter should use Continuation Sheets (USEPA Form 8700-22A).~~

4) Beginning on December 1, 2025, within 30 days of receiving an export manifest from the final domestic transporter to carry the export shipment to or across the U.S. port of exit, the exporter must submit the top copy (Page 1) of the signed and dated manifest (whether electronic or paper) and all continuation sheets (whether electronic or paper) to the USEPA e-Manifest system. The exporter must submit the paper manifest and all paper continuation sheets to the USEPA e-Manifest system for purposes of data entry and processing by transmitting to the USEPA e-Manifest system an image file of Page 1 of the manifest and all continuation sheets, or by transmitting to the USEPA e-Manifest system both a data file and the image file corresponding to Page 1 of the manifest and all continuation sheets.

~~The exporter may obtain the manifest from any source that is registered with the USEPA as a supplier of manifests (e.g., a state, a waste handler, or a commercial forms printer).~~

~~BOARD NOTE: USEPA maintains a listing of registered sources at https://www.epa.gov/hwgenerators/approved-registered-printers-epas-manifest-registry~~

A) As prescribed in 40 CFR 265.1311, and determined in 40 CFR 265.1312, an exporter who is a user of the electronic manifest system shall be assessed a user fee by the USEPA for the submission and processing of each electronic and paper manifest. The USEPA shall update the schedule of user fees and publish them to the user community, as provided in 40 CFR 265.1313.

B) An exporter subject to user fees under 40 CFR 262.83 must make user fee payments in compliance with the requirements of 40 CFR 265.1314, subject to the informal fee dispute resolution process of 40 CFR 265.1316, and subject to the sanctions for delinquent payments under 40 CFR 265.1315.

C) Electronic manifest signatures shall meet the criteria described in 40 CFR 262.25.

D) Within 30 days of receiving a paper replacement manifest from the last transporter carrying the shipment to or across the U.S. border for a manifest that was originated electronically, the exporter must send a signed and dated copy of the paper replacement manifest to the USEPA e-Manifest system.

E After foreign facilities have certified to the receipt of hazardous wastes by sending a copy of the movement document to the exporter per subsection (d)(2)(Q), any post-receipt data corrections may be submitted at any time by any interested person (*e.g.*, domestic waste handler) shown on the manifest. If requested by the USEPA, an exporter must address manifest data corrections within 30 days from the date of the request. Data correction submissions must be made electronically via the post-receipt data corrections process as described in 40 CFR 265.71(l), which applies to corrections made to either paper or electronic manifests.

d) Movement Document Requirements for Export Shipments

1) An exporter must ensure that a movement document meeting the conditions of subsection (d)(2) accompanies each transboundary movement of hazardous wastes from the initiation of the shipment until the wastes reach the foreign receiving facility, including cases where the hazardous waste is stored or sorted by the foreign importer before shipment to the foreign receiving facility, except as follows:

A) For shipments of hazardous waste within the United States solely by water (bulk shipments only), the exporter must forward the movement document to the last water (bulk shipment) transporter to handle the hazardous waste in the United States if exported by water.

B) For rail shipments of hazardous waste within the United States which start from the company originating the export shipment, the exporter must forward the movement document to the next non-rail transporter, if any, or the last rail transporter to handle the hazardous waste in the United States if exported by rail.

2) The movement document must include the following:

A) The corresponding consent numbers and USEPA hazardous waste numbers for the listed hazardous waste from the relevant USEPA AOCs and if required to be accompanied by a RCRA Uniform Hazardous Waste Manifest within the United States, the manifest tracking number from block 4;

B) The shipment number and the total number of shipments from the USEPA AOC or the movement tracking number;

C) The exporter name and USEPA identification number, site address, telephone, fax numbers, and email address;

D) The foreign receiving facility name, site address, telephone, fax numbers, email address, technologies employed, and the applicable recovery or disposal operations, as defined in Section 722.181;

E) The foreign importer name (if not the owner or operator of the foreign receiving facility), site address, telephone, fax numbers, and email address;

F) A description of each hazardous waste; the quantity of each hazardous waste in the shipment; the applicable hazardous waste numbers for each hazardous waste; the applicable OECD waste code for each hazardous waste from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each hazardous waste;

G) The date movement started;

H) The name (if not exporter), site address, telephone, fax numbers, and email of company originating the shipment;

I) The company name, USEPA identification number, site address, telephone, fax numbers, and email address of each transporter;

J) Identification (license, registered name, or registration number) of means of transport, including types of packaging;

K) Any special precautions to be taken by transporters;

L) A declaration and certification signed and dated by the exporter that the information in the movement document is complete and correct;

M) The appropriate signatures for each custody transfer (e.g., transporter, importer, and owner or operator of the foreign receiving facility);

N) Each U.S. person that has physical custody of the hazardous waste from the time the movement starts until it arrives at the foreign receiving facility must sign the movement document (e.g., transporter, foreign importer, and owner or operator of the foreign receiving facility); and

O) As part of the contract requirements in subsection (f), the exporter must require that the foreign receiving facility send a copy of the signed movement document to the competent authorities of the countries of import and transit to confirm receipt within three working days of shipment delivery to the exporter, and to the competent authorities of the countries of import and transit that control the shipment as an import and transit of hazardous waste respectively. For shipments occurring on or after the electronic import-export reporting compliance date, the The exporter must: ~~additionally require that the foreign receiving facility send a copy to USEPA at the same time using the WIETS described in subsection (b)(1).~~

i) Initiate the movement document using the allowable methods listed in subsection (b)(1); and

ii) Close out the movement document within three working days of receiving a copy of the signed movement document sent from the foreign receiving facility to confirm receipt using the allowable methods listed in subsection (b)(1).

P) As part of the contract requirements per subsection (f), the exporter must require that the foreign receiving facility send a copy of the confirmation of recover or disposal, as soon as possible, but no later than thirty days after completing recovery or disposal on the waste in the shipment and no later than one calendar year following receipt of the waste to the exporter and to the competent authority of the country of import. If the movement includes shipment to a foreign interim receiving facility, the exporter must additionally require that the interim receiving facility promptly send copies of the confirmation of recovery or disposal that it receives from the final recovery or disposal facility within one year of shipment delivery to the final recovery or disposal facility that performed one of recovery operations R1 through R11, or RC1, or one of disposal operations D1 through D12, DC1 or DC2 as defined in Section 722.181 to the competent authority of the country of import and to the exporter. For shipments occurring on or after the electronic import-export reporting compliance date, the exporter must submit each confirmation of recovery or disposal to the USEPA within three working days of receiving the confirmation of recovery or disposal from the foreign receiving facility using the allowable methods listed in subsection (b)(1); and

Q) For shipments sent to a country with which the USEPA has established an electronic exchange of movement document tracking state, foreign receiving facility transmittal to the exporter

of the confirmation receipt and the confirmation of recovery or disposal may be sent via the electronic exchange.

e) Duty to Return or Re-Export Hazardous Wastes. When a transboundary movement of hazardous wastes cannot be completed in compliance with the terms of the contract or the consents and alternative arrangements cannot be made to recover or dispose of the waste in an environmentally sound manner in the country of import, the exporter must ensure that the hazardous waste is returned to the United States or reexported to a third country. If the waste must be returned, the exporter must provide for the return of the hazardous waste shipment within ninety days from the time the country of import informs USEPA of the need to return the waste or other period of time as the concerned countries agree. In all cases, the exporter must submit an exception report to USEPA in compliance with subsection (h).

f) Export Contract Requirements

1) Exports of hazardous waste are prohibited unless they occur under the terms of a valid written contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). A contract or equivalent arrangements for export of hazardous waste must be executed by the exporter, foreign importer (if different from the foreign receiving facility), and the owner or operator of the foreign receiving facility. The contract or equivalent arrangements must specify responsibilities for each of the exporter, the foreign importer, and the owner or operator of the foreign receiving facility. A contract or equivalent arrangements is valid for the purposes only if each person assuming obligations under the contracts or equivalent arrangements has appropriate legal status to conduct the operations specified in the contract or equivalent arrangements.

2) A contract or equivalent arrangements must specify the name and USEPA identification number of the following:

A) The company from where each export shipment of hazardous waste is initiated;

B) Each person who will have physical custody of the hazardous wastes;

C) Each person who will have legal control of the hazardous wastes; and

D) The foreign receiving facility.

3) A contract or equivalent arrangements must specify which party to the contract will assume responsibility for alternate management of the hazardous waste if its disposition cannot be carried out as described in the notification of intent to export. For this contingency, contracts must specify the following:

A) That the transporter or foreign receiving facility in possession of or physical control over the hazardous wastes will immediately inform the exporter, USEPA, and either the competent authority of the country of transit or the competent authority of the country of import of the need to make alternate management arrangements; ~~and~~

B) That the person specified in the contract will assume responsibility for the adequate management of the hazardous wastes in compliance with applicable laws and regulations, including arranging the return of hazardous wastes, providing the notification for re-export to the competent authority in the country of import, including the equivalent of the information required in subsection (b)(1) and the original consent number issued for the initial export of the hazardous wastes in the notification, and obtaining consent from USEPA and the competent authorities in the new country of import and any transit countries, as necessary, prior to re-export;~~,~~ and

C) Transmittals made by the transporter or foreign receiving facility under subsection (A) being sent to the exporter or USEPA from a country with which the USEPA has established an electronic exchange of movement document tracking data may be sent vial the electronic exchange.

4) A contract must require that the foreign receiving facility send a copy of the signed movement document to confirm receipt within three working days of shipment delivery to the exporter and to the competent authorities of the countries of import and transit that control the shipment as an import and transit of hazardous waste respectively. For shipments sent to a country with which the USEPA has established an electronic exchange of movement document tracking data, foreign receiving facility transmittal to the exporter of the confirmation of receipt may be sent via the electronic exchange.~~ The contract must additionally require that the foreign receiving facility send a copy to USEPA at the same time using the WIETS described in subsection (b)(1).~~

5) A contract must require that the foreign receiving facility send a copy of the signed and dated confirmation of recovery or disposal, as soon as possible, but no later than thirty days after completing recovery or disposal

on the waste in the shipment and no later than one calendar year following receipt of the waste, to the exporter and to the competent authority of the country of import that controls the shipment as an import of hazardous waste. For shipments sent to a country with which the USEPA has established an electronic exchange of movement document tracking data, foreign receiving facility transmittal to the exporter of the confirmation of recovery or disposal may be sent via the electronic exchange. ~~to the exporter and to the competent authority of the country of import, as soon as possible, within thirty days after completing recovery or disposal on the waste in the shipment and within one calendar year after receiving the waste. The contract must additionally require that the foreign receiving facility send a copy to USEPA at the same time using the WIETS described in subsection (b)(1).~~

6) A contract must require that the foreign importer or the foreign receiving facility that performed interim recycling operations R12, R13, or RC3, or interim disposal operations D13 through D15, (recovery and disposal operations defined in 35 Ill. Adm. Code 722.181) do the appropriate of the following:

A) Provide the notification required in subsection (f)(3)(B) before any re-export of the hazardous wastes to a final foreign recovery or disposal facility in a third country; and

B) Promptly send copies of the confirmation of recovery or disposal that it receives from the final foreign recovery or disposal facility to the competent authority of the country of import within one year of shipment delivery to the final foreign recovery or disposal facility that performed one of recovery operations R1 through R11, or RC1 or one of disposal operations D1 through D12, DC1, or DC2 to the competent authority of the country of import that controls the shipment as an import of hazardous waste and to the exporter.. ~~The contracts must additionally require that the foreign facility send copies to USEPA at the same time using the WIETS described in subsection (b)(1).~~ For shipments sent to a country with which the USEPA has established an electronic exchange of movement document tracking data, foreign receiving facility transmittal to the exporter of the confirmation of recovery or disposal may be sent via the electronic exchange.

7) A contract or equivalent arrangements must include provisions for financial guarantees, if required by the competent authorities of the country of import and any countries of transit, in compliance with national or international law requirements.

BOARD NOTE: Financial guarantees required by competent authorities are intended to provide for alternate recycling, disposal, or other means of sound management of the wastes in cases where arrangements for the shipment and the recovery operations cannot be carried out. The United States does not require financial guarantees at this time; however, some OECD member countries and other foreign countries do. It is the responsibility of the exporter to ascertain and comply with any foreign requirements; in some cases, persons or facilities located in those OECD member countries or other foreign countries may refuse to enter into the necessary contracts absent specific references or certifications to financial guarantees.

8) A contract or equivalent arrangements must contain provisions requiring each contracting party to comply with all applicable requirements of Subpart H.

9) Upon request by USEPA or the Agency, U.S. exporters, importers, or recovery facilities must submit to the requestor copies of contracts, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity).

g) Annual Reports. The exporter must file an annual report with USEPA by March 1 of each year summarizing the types, quantities, frequency, and ultimate destination of all hazardous waste exported during the previous calendar year. The exporter must submit annual reports to the USEPA using the allowable methods specified in subsection (b)(1).~~Before December 31, 2018, the exporter must mail or hand-deliver annual reports to USEPA for all shipments made the previous calendar year using one of the appropriate of the addresses specified in Section 722.182(e), or submit to USEPA using the WIETS described in subsection (b)(1) if the exporter has electronically filed USEPA information in AES under subsection (a)(6)(A)(i). Subsequently, the exporter must submit annual reports to USEPA using the WIETS described in subsection (b)(1).~~ The annual report must include all the following subsections (g)(1) through (6) specified as follows~~information~~:

1) The USEPA identification number, name, and mailing and site address of the exporter filing the report;

2) The calendar year covered by the report;

3) The name and site address of each foreign receiving facility;

4) By foreign receiving facility, for each hazardous waste exported:

A) A description of the hazardous waste;

B) The applicable USEPA hazardous waste numbers (from Subpart C or D of 35 Ill. Adm. Code 721) for each waste;

C) The applicable waste code from the appropriate OECD waste list in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111;

D) The applicable USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111;

E) The name and USEPA identification number (where applicable) for each transporter used over the calendar year covered by the report; and

F) The consent numbers under which the hazardous waste was shipped, and for each consent number, the total amount of the hazardous waste and the number of shipments exported during the calendar year covered by the report;

5) In even numbered years, for each hazardous waste exported, except for hazardous waste produced by exporters of greater than 100 kg but less than 1,000 kg in a calendar month, and except for hazardous waste for which information was already provided under Section 722.141:

A) A description of the efforts taken during the year to reduce the volume and toxicity of the waste generated; and

B) A description of the changes in volume and toxicity of the waste achieved during the year in comparison to previous years to the extent the information is available for years before 1984; and

6) A certification signed by the exporter that states:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

h) Exception Reports

1) The exporter must file an exception report instead of the requirements of Section 722.142 (if applicable) with USEPA if any of the following occurs:

A) The exporter has not received a copy of the RCRA hazardous waste manifest (if applicable) signed by the transporter identifying the point of departure of the hazardous waste from the United States within 45 days from the date hazardous waste was accepted by the initial transporter, in which case the exporter must file the exception report within the next 30 days;

B) The exporter has not received a written confirmation of receipt from the foreign receiving facility in compliance with subsection (d) within 90 days from the date the waste was accepted by the initial transporter in which case the exporter must file the exception report within the next 30 days; or

C) The foreign receiving facility notifies the exporter, or the country of import notifies USEPA, of the need to return the shipment to the U.S. or arrange alternate management, in which case the exporter must file the exception report within 30 days of notification, or one day before the date the return shipment starts , whichever is sooner.

2) Before December 31, 2018, exception reports must be mailed or hand delivered to USEPA using the addresses listed in Section 722.182(e). Subsequently, exception reports must be submitted to USEPA using the WIETS described in subsection (b)(1).

i) Recordkeeping

1) The exporter must keep the following records in subsections (i)(1)(A) through (i)(1)(F)~~(i)(1)(E)~~ and provide them to the USEPA or authorized Agency personnel upon request:

A) A copy of each notification of intent to export and each USEPA AOC at least three years from the date the hazardous waste was accepted by the initial transporter;

B) A copy of each annual report at least three years from the due date of the report;

C) A copy of any exception reports and a copy of each confirmation of receipt (i.e., movement document) sent by the foreign receiving facility to the exporter for at least three years from the date the hazardous waste was accepted by the initial transporter;

D) A copy of each confirmation of recovery or disposal sent by the foreign receiving facility to the exporter for at least three years from the date that the foreign receiving facility completed interim or final processing of the hazardous waste shipment; and

E) A copy of each contract or equivalent arrangement established per subsection (f) ~~under Section 722.185~~ for at least three years after the date the contract expired or equivalent arrangement.

F) A copy of each manifest sent by the last transporter in the United States per Section 723.120(g).

2) The exporters may satisfy these recordkeeping requirements by keeping electronically submitted documents in the exporter's account on USEPA's WIETS, if the copies are readily available for viewing and production if requested by any USEPA or Agency inspector. An exporter may not be held liable for the inability to produce the documents for inspection under this section if the exporter can demonstrate that the inability to produce the document is due exclusively to technical difficulty with USEPA's WIETS for which the exporter has no responsibility.

3) The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested in writing by USEPA or the Agency.

BOARD NOTE: Any Agency request for extended records retention under subsection (i)(3) is subject to Board review under Section 40 of the Act.

(Source: Amended at 48 Ill. Reg. 9846, effective June 20, 2024)

Section 722.184 Imports of Hazardous Waste

a) General Import Requirements

1) Except for subsection (a)(5), the importer of a shipment covered under a consent from USEPA to the country of export issued before December 31, 2016 is subject to that approval and the requirements that existed at the time of that approval until the approval period expires. Otherwise, any person that imports hazardous waste from a foreign country into the United States must comply with the requirements of this Part and the special requirements of this Subpart H.

2) Where the country of export does not require the foreign exporter to submit a notification and obtain consent to the export prior to shipment, the importer must submit a notification to USEPA in compliance with subsection (b).

3) The importer must comply with the contract requirements in subsection (f).

4) The importer must ensure compliance with the movement documents requirements in subsection (d); and

5) The importer must ensure compliance with the manifest instructions for import shipments in subsection (c).

b) Notifications. Where the competent authority of the country of export does not regulate the waste as hazardous waste and does not require the foreign exporter to submit a notification proposing export and obtain consent from USEPA and the competent authorities for the countries of transit, but USEPA does regulate the waste as hazardous waste, the following requirements apply:

1) The importer is required to provide notification in English to USEPA of the proposed transboundary movement of hazardous waste at least sixty days before the first shipment is expected to depart the country of export. A notification submitted prior to the electronic import-export reporting compliance date must be mailed or hand delivered to USEPA at the addresses specified in Section 722.182(e). Notifications submitted on or after the electronic import-export reporting compliance date must be submitted electronically using USEPA's WIETS. The notification may cover up to one year of shipments of one or more hazardous wastes being sent from the same foreign exporter, and must include all the following information:

A) The foreign exporter name, site address, telephone, fax numbers, and email address;

B) The receiving facility name, USEPA identification number, site address, telephone, fax numbers, email address, technologies employed, and the applicable recovery or disposal operations, as defined in Section 722.181;

C) The importer name (if not the owner or operator of the receiving facility), USEPA identification number, site address, telephone, fax numbers, and email address;

D) The intended transporters or their agents; site address, telephone, fax numbers, and email address;

E) "U.S. " as the country of import, "USA01" as the relevant competent authority code, and the intended U.S. ports of entry;

F) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and the ports of entry and exit for each country of transit;

G) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and port of exit for the country of export;

H) A statement of whether the notification covers a single shipment or multiple shipments;

I) The start and end dates requested for transboundary movements;

J) The planned means of transport;

K) A description of each hazardous waste, including whether each hazardous waste is regulated universal waste under 35 Ill. Adm. Code 733, spent lead-acid batteries being exported for recovery of lead under Subpart G of 35 Ill. Adm. Code 726, or industrial ethyl alcohol being exported for reclamation under 35 Ill. Adm. Code 721.106(a)(3)(A); the estimated total quantity of each hazardous waste; the applicable USEPA hazardous waste numbers for each hazardous waste; the applicable waste code from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each hazardous waste;

L) Specification of the recovery or disposal operations, as defined in Section 722.181; and

M) A declaration and certification signed by the exporter that states the following:

> I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally enforceable written contractual obligations have been entered into and that any applicable insurance or other

financial guarantee is or shall be in force covering the transboundary movement.

Name:
Signature:
Date:

BOARD NOTE: The United States does not currently require financial assurance for these waste shipments.

BOARD NOTE: The United Nations Environment Programme, Basel Convention maintains an on-line list of competent authorities by country (www.basel.int/Countries/CountryContacts/tabid/1342/Default.aspx). The European Commission maintains a list of competent authorities for European Union members (ec.europa.eu/environment/waste/shipments/pdf/list_competent_authorities.pdf).

2) Notifications Listing Interim Recycling Operations or Interim Disposal Operations. If the receiving facility listed in subsection (b)(1)(B) will engage in any of the interim recovery operations R12, R13, or RC3 or interim disposal operations D13 through D15, the notification submitted according to subsection (b)(1) must also include the final recovery or disposal facility name, site address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11, RC1, and D1 through D12, will be employed at the final recovery or disposal facility. The recovery and disposal operations in this subsection are defined in Section 722.181.

3) Renotifications. If the foreign exporter wishes to change any of the conditions specified on the original notification (including increasing the estimate of the total quantity of hazardous waste specified in the original notification or adding transporters), the importer must submit a renotification of the changes to USEPA using the methods in subsection (b)(1). Any shipment using the requested changes cannot take place until USEPA and the countries of transit consent to the changes and the importer receives an USEPA AOC letter documenting the consents to the changes.

4) A notification is complete when USEPA determines the notification satisfies the requirements of subsections (b)(1)(A) through (b)(1)(M).

5) If USEPA and the countries of transit consent to the proposed transboundary movements of the hazardous wastes, USEPA will forward an USEPA AOC letter to the importer documenting the countries' consents and USEPA's consent. If any of the countries of transit or

USEPA objects to the proposed transboundary movements of the hazardous waste or withdraws a prior consent, USEPA will notify the importer.

6) Export of Hazardous Wastes Originally Imported into the United States. Export of hazardous wastes that were originally imported into the United States for recycling or disposal operations is prohibited unless an exporter in the United States complies with the export requirements in Section 722.183(b)(7).

c) RCRA Manifest Instructions for Import Shipments

1) When importing hazardous waste, the importer must meet all the requirements of Section 722.120 for the manifest, with the following exceptions:

A) (Block 5): In place of the generator's name, mailing and site addresses and USEPA identification number, the name and site address of the foreign generator and the importer's name, mailing address and USEPA identification number must be used.

B) (Block 15): In place of the generator's signature on the certification statement, the importer or its agent must sign and date the certification and obtain the signature of the initial transporter.

2) The importer may obtain the manifest form from any source that is registered with the USEPA as a supplier of manifests (e.g., a state, a waste handler, or a commercial forms printer).
BOARD NOTE: USEPA maintains a listing of registered sources at https://www.epa.gov/hwgenerators/approved-registered-printers-epas-manifest-registry

3) In the International Shipments block (block 16) on the Continuation Sheet (USEPA Form 8700-22A), the importer must check the import box and enter the port~~point~~ of entry (city and state) into the United States.

4) Instead of the requirements of Section 722.120(d), if a shipment cannot be delivered for any reason to the receiving facility, the importer must instruct the transporter in writing via fax, email, or mail to the following:

A) Return the hazardous waste to the foreign exporter or designate another facility within the United States; and

B) Revise the manifest in accordance with the importer's instructions.

~~The importer must provide the transporter with an additional copy of the manifest to be submitted by the receiving facility to USEPA in compliance with 35 Ill. Adm. Code 724.171(a)(3) and 725.171(a)(3).~~

~~5) Instead of the requirements of Section 722.120(d), if a shipment cannot be delivered for any reason to the receiving facility, the importer must instruct the transporter in writing via fax, email, or mail to do the following:~~

~~A) Return the hazardous waste to the foreign exporter or designate another facility within the United States; and~~

~~B) Revise the manifest in accordance with the importer's instructions.~~

d) Movement Document Requirements for Import Shipments

1) The importer must make sure that a movement document meeting the conditions of subsection (d)(2) accompanies each transboundary movement of hazardous wastes from the initiation of the shipment in the country of export until it reaches the receiving facility, including cases in which the hazardous waste is stored or sorted by the importer before shipment to the receiving facility, except as provided in subsections (d)(1)(A) and (d)(1)(B).

A) For shipments of hazardous waste within the United States by water (bulk shipments only), the importer must forward the movement document to the last water (bulk shipment) transporter to handle the hazardous waste in the United States if imported by water.

B) For rail shipments of hazardous waste within the United States which start from the company originating the export shipment, the importer must forward the movement document to the next non-rail transporter, if any, or the last rail transporter to handle the hazardous waste in the United States if imported by rail.

2) The movement document must include the following:

A) The corresponding USEPA AOC numbers and USEPA hazardous waste numbers for the listed waste and if required to be accompanied by a RCRA uniform hazardous waste manifest within the United States, the manifest tracking number from block 4;

B) The shipment number and the total number of shipments under the USEPA AOC number or the movement tracking number;

C) The foreign exporter name, site address, telephone, fax numbers, and email address;

D) The receiving facility name, USEPA identification number, site address, telephone, fax numbers, email address, technologies employed, and the applicable recovery or disposal operations, as defined in Section 722.181;

E) The importer name (if not the owner or operator of the receiving facility), USEPA identification number, site address, telephone, fax numbers, and email address;

F) A description of each hazardous waste, quantity of each hazardous waste in the shipment; the applicable hazardous waste numbers for each hazardous waste; the applicable waste code for each hazardous waste from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each hazardous waste;

G) The date movement started;

H) The name (if not the foreign exporter), site address, telephone, fax numbers, and email of the foreign company originating the shipment;

I) The company name, USEPA identification number (for transporters carrying RCRA manifested hazardous waste within the U.S. only), address, telephone, fax numbers, and email address of all transporters;

J) Identification (license, registered name or registration number) of the means of transport, including types of packaging;

K) Any special precautions to be taken by transporters;

L) A declaration and certification signed and dated by the foreign exporter that the information in the movement document is complete and correct;

M) The appropriate signatures for each custody transfer (e.g., transporter, importer, and owner or operator of the receiving facility);

N) Each person that has physical custody of the waste from the time the movement starts until it arrives at the receiving facility must sign the movement document (e.g., transporter, importer, and owner or operator of the receiving facility); and

O) The receiving facility must send a copy of the signed movement document to confirm receipt within three working days of shipment delivery to the foreign exporter and to the competent authorities of the countries of export and transit that control the shipment as an export and transit of hazardous waste respectively. For shipments received on or after the electronic import-export reporting compliance date, the receiving facility must close out the movement document to confirm receipt within three working days of shipment delivery using the USEPA's WIETS, or its successor system. For shipments sent from a country with which the USEPA has established an electronic exchange of movement document tracking data, the receiving facility may use WIETS or its successor system to send movement document confirmation data back through the electronic exchange to the foreign exporter and the country of export.~~The receiving facility must send a copy of the signed movement document to the competent authorities of the countries of export and transit to confirm receipt within three working days after shipment delivery to the foreign exporter. For shipments received on or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's WIETS.~~

e) Duty to Return or Export Hazardous Wastes. If a transboundary movement of hazardous wastes cannot be completed in compliance with the terms of the contract or the consents, the provisions of subsection (f)(4) apply. If alternative arrangements cannot be made to recover the hazardous waste in an environmentally sound manner in the United States, the hazardous waste must be returned to the country of export or exported to a third country. The provisions of subsection (b)(6) apply to any hazardous waste shipments to be exported to a third country. If the return shipment will cross any transit country, the return shipment may only occur after USEPA provides notification to and obtains consent from the competent authority of the country of transit, and provides a copy of that consent to the importer.

f) Import Contract Requirements

1) Imports of hazardous waste must occur under the terms of a valid written contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). A contract or equivalent arrangements must specify responsibilities for each of the foreign exporter, the importer, and the

owner or operator of the receiving facility, and each must execute the contract or equivalent arrangements. A contract or equivalent arrangements is valid for hazardous waste import only if all persons assuming obligations under the contract or equivalent arrangements have appropriate legal status to conduct the operations specified in the contract or equivalent arrangements.

2) Contracts or equivalent arrangements must specify the name and USEPA identification number, where available, of the following persons:

A) The foreign company from which each import shipment of hazardous waste is initiated;

B) Each person that will have physical custody of the hazardous wastes;

C) Each person that will have legal control of the hazardous wastes; and

D) The receiving facility.

3) A contract or equivalent arrangements must specify the use of a movement document in compliance with Section 722.184(d).

4) A contract or equivalent arrangements must specify which party to the contract will assume responsibility for alternate management of the hazardous waste if the wastes' disposition cannot be carried out as described in the notification of intent to export submitted by either the foreign exporter or the importer. In these cases, the contract must specify the following:

A) That the transporter or receiving facility in possession or physical control over the hazardous wastes will immediately inform the foreign exporter, the importer, and the competent authority where the shipment is located of the need to arrange alternate management or return; and

B) That the person specified in the contract will assume responsibility for the adequate management of the hazardous wastes in compliance with applicable laws and regulations, including arranging the return of the hazardous wastes, if necessary, providing the notification for re-export as required by Section 722.183(b)(7).

C) Transmittals made by the transporter or receiving facility under subsection (A) being sent to a competent authority or foreign

exporter in a country with which the USEPA has established an electronic exchange of movement document tracking data may be sent via the electronic exchange.

5) A contract must specify that the importer or the receiving facility performing interim recycling operations R12, R13, or RC3 or interim disposal operations D13 through D15, as appropriate, will provide the notification required by Section 722.183(b)(7) prior to the re-export of hazardous waste. The recovery and disposal operations in this subsection are defined in Section 722.181.

6) A contract or equivalent arrangements must include provisions for financial guarantees, if required by the competent authorities of any countries concerned, in compliance with applicable national or international law requirements.

BOARD NOTE: Financial guarantees required by competent authorities are intended to provide for alternate recycling, disposal, or other means of sound management of the wastes in cases where arrangements for the shipment and the recovery operations cannot be carried out as foreseen. The United States does not require financial guarantees at this time; however, some OECD Member countries or other foreign countries do. It is the responsibility of the importer to ascertain and comply with any financial requirements; in some cases, persons or facilities located in those countries may refuse to enter into the necessary contracts absent specific references or certifications to financial guarantees.

7) A contract or equivalent arrangements must contain provisions requiring each contracting party to comply with all requirements of Subpart H.

8) Upon request by USEPA, an importer or disposal or recovery facility must submit to USEPA copies of the contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity).

g) Confirmation of Recovery or Disposal. The receiving facility must do the following:

1) Send copies of the signed and dated confirmation of recovery or disposal, as soon as possible, but no later than thirty days after completing recovery or disposal on the waste in the shipment and no later than one calendar year following receipt of the waste, to the foreign exporter, to the competent authority of the country of export that controls the shipment as an export of hazardous waste, and for shipments recycled or disposed of on or after the electronic import-export reporting compliance date, to the USEPA electronically using the USEPA's WIETS, or its successor system.

For shipments sent from a country with which the USEPA has established an electronic exchange of movement document tracking data, the receiving facility may use WIETS or its successor system to send confirmation of recovery or disposal data back through the electronic exchange to the foreign exporter and the country of export. ~~Send copies of the signed and dated confirmation of recovery or disposal to the foreign exporter and to the competent authority of the country of export, as soon as possible, within thirty days after completing recovery or disposal of the waste in the shipment and within one calendar year after receiving the waste. For shipments recycled or disposed of on or after the electronic import-export reporting compliance date, reporting to USEPA must occur electronically using USEPA's WIETS.~~

2) If the receiving facility performed any of recovery operations R12, R13, or RC3, or disposal operations D13 through D15, the receiving facility must promptly send copies of the confirmation of recovery or disposal that it receives from the final recovery or disposal facility within one year of shipment delivery to the final recovery or disposal facility that performed one of recovery operations R1 through R11, or RC1 to RC2~~RC3~~, or one of disposal operations D1 through D12, or DC1 to DC2, to the competent authority of the country of export that controls the shipment as an export of hazardous waste, and for confirmations received on or after the electronic import-export reporting compliance date, to the USEPA electronically using the USEPA's WIETS, or its successor system. The recovery and disposal operations in this subsection (g)(2) are defined in Section 722.181. ~~within one year of shipment delivery. For confirmations received on or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's WIETS, or its successor system. The recovery and disposal operations in this subsection (g)(2) are defined in Section 722.181.~~ For shipments sent from a country with which the USEPA has established an electronic exchange of movement document tracking data, the receiving facility may use WIETS or its successor syste-m to send confirmation of recovery or disposal data back through the electronic exchange to the country of export.

h) Recordkeeping

1) The importer must keep the following records and provide them to USEPA or the Agency upon request:

A) A copy of each notification that the importer sends to USEPA under subsection (b)(1) and each USEPA AOC the importer receives in response at least three years from the date the hazardous waste was accepted by the initial foreign transporter; and

B) A copy of each contract or equivalent arrangement established per subsection (f) for at least three years from the date the contract expires or equivalent arrangement.

2) The receiving facility must keep the following records:

A) A copy of each confirmation of receipt (i.e., movement document) that the receiving facility sends to the foreign exporter for at least three years from the date it received the hazardous waste;

B) A copy of each confirmation of recovery or disposal that the receiving facility sends to the foreign exporter for at least three years from the date that it completed processing the waste shipment;

C) For the receiving facility that performed any of recovery operations R12, R13, or RC3, or disposal operations D13 through D15 (recovery and disposal operations defined in Section 722.181), a copy of each confirmation of recovery or disposal that the final recovery or disposal facility sent to the receiving facility for at least three years from the date that the final recovery or disposal facility completed processing the waste shipment; and

D) A copy of each contract or equivalent arrangement established under subsection (f) for at least three years after the contract expires or equivalent arrangement.

3) An importer or receiving facility may satisfy these recordkeeping requirements by keeping electronically submitted documents in the importer's or receiving facility's account on USEPA's WIETS, if the copies are readily available for viewing and production if requested by any USEPA or Agency inspector. An importer or receiving facility may not be held liable for the inability to produce the documents for inspection under this Section if the importer or receiving facility can demonstrate that the inability to produce the document is due exclusively to technical difficulty with USEPA's WIETS for which the importer or receiving facility has no responsibility.

4) The periods of retention referred to in this Section are extended automatically during any unresolved enforcement action regarding the regulated activity or as requested in writing by USEPA or the Agency.

BOARD NOTE: Any Agency request for extended records retention under this subsection (h)(4) is subject to Board review under Section 40 of the Act.

SUBPART K: ALTERNATIVE REQUIREMENTS FOR HAZARDOUS WASTE DETERMINATION AND ACCUMULATION OF UNWANTED MATERIAL FOR LABORATORIES OWNED BY ELIGIBLE ACADEMIC ENTITIES

Section 722.300 Definitions

The following definitions apply for Subpart K:

"College or University" means a private or public post-secondary degree-granting academic institution that is accredited by an accrediting agency listed annually by the U.S. Department of Education.

BOARD NOTE: The Department of Education maintains on-line lists of accrediting agencies on the Internet at the following address: www.ed.gov/admins/finaid/accred/accreditation_pg6.html#NationallyRecognized.

"Eligible academic entity" means a college or university, a non-profit research institute that is owned by or which has a formal written affiliation agreement with a college or university, or a teaching hospital that is owned by or which has a formal written affiliation agreement with a college or university.

"Formal written affiliation agreement" for a non-profit research institute means a written document that establishes a relationship between institutions for research or education and which is signed by an authorized representative, as that term is defined in 35 Ill. Adm. Code 720.110, from each institution. A relationship that exists on a project-by-project or grant-by-grant basis is not considered a formal written affiliation agreement. "Formal written affiliation agreement" for a teaching hospital means a "master affiliation agreement" and "program letter of agreement", as these terms are defined in the document entitled "Accreditation Council for Graduate Medical Education: Glossary of Terms", incorporated by reference in 35 Ill. Adm. Code 720.111, with an accredited medical program or medical school.

"Laboratory" means an area owned by an eligible academic entity where relatively small quantities of chemicals and other substances are used on a non-production basis for teaching or research (or diagnostic purposes at a teaching hospital) and are stored and used in containers that are easily manipulated by one person. Photo laboratories, art studios, and field laboratories are laboratories within the meaning of this definition. Areas such as chemical stockrooms and preparatory laboratories that provide a support function to teaching or research laboratories (or diagnostic laboratories at teaching hospitals) are also laboratories within the meaning of this definition.

"Laboratory clean-out" means an evaluation of the inventory of chemicals and other materials in a laboratory that are no longer needed or which have expired and the subsequent removal of those chemicals or other unwanted materials from the laboratory. A clean-out may occur for several reasons. It may be on a routine basis (e.g., at the end of a semester or academic year) or as a result of a renovation, relocation, or change in laboratory supervisor or occupant. A regularly scheduled removal of unwanted material, as required by Section 722.308, does not qualify as a laboratory clean-out within the meaning of this definition.

"Laboratory worker" means a person who handles chemicals or unwanted material in a laboratory. This may include, but is not limited to, any member of faculty or staff, a post-doctoral fellow, an intern, a researcher, a technician, a supervisor or manager, or a principal investigator. A person does not need to be paid or otherwise compensated for his or her work in the laboratory to be considered a laboratory worker. An undergraduate or graduate student in a supervised classroom setting is not a laboratory worker.

"Non-profit research institute" means an organization that conducts research as its primary function and which files as a nonprofit organization under section 501(c)(3) of the federal tax code (26 USC 501(c)(3)).

"Reactive acutely hazardous unwanted material" means an unwanted material that is one of the acutely hazardous commercial chemical products listed in 35 Ill. Adm. Code 721.133(e) for reactivity.

"Teaching hospital" means a hospital that trains students to become physicians, nurses, or other health or laboratory personnel.

"Trained professional" means a person who has completed the applicable RCRA training requirements of 35 Ill. Adm. Code 722.117(a)(7), for an LQG, or who is knowledgeable about normal operations and emergencies in compliance with Section 722.116(b)(9)(C), for an SQG or VSQG that opt into 35 Ill. Adm. Code. 722.Subpart K. A trained professional may be an employee of the eligible academic entity or a contractor or vendor who meets the requisite training requirements.

"Unwanted material" means any chemical, mixtures of chemicals, products of experiments, or other material from a laboratory that is no longer needed, wanted, or usable in the laboratory and which is destined for hazardous waste determination by a trained professional. Unwanted material includes reactive acutely hazardous unwanted material, material that may eventually be determined not to be solid waste under 35 Ill. Adm. Code 721.102, or a hazardous waste under 35 Ill. Adm. Code 721.103. If an eligible academic entity elects to use another equally effective term instead of "unwanted material", as allowed by Section 722.306(a)(1)(A), the equally effective term will have the same meaning, and the material designated by that term will be subject to the same requirements as "unwanted material" under Subpart K.

"Working container" means a small container (i.e., two gallons (7.6 ℓ) or less) that is in use at a laboratory bench, hood, or other work station, to collect unwanted material from a laboratory experiment or procedure.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.301 Applicability

a) LQGs and SQGs. This Subpart K provides alternative requirements to the requirements set forth in Sections 722.111 and 722.115 for determination of hazardous waste and accumulation of hazardous waste in a laboratory owned by an eligible academic entity that chooses to be subject to this Subpart K, provided that the academic entity fulfills the notification requirements of Section 722.303.

b) VSQGs. This Subpart K provides alternative requirements to the conditional exemption set forth in 35 Ill. Adm. Code 722.114 for the accumulation of hazardous waste in a laboratory owned by an eligible academic entity that chooses to be subject to this Subpart K, provided that the academic entity fulfills the notification requirements of Section 722.303.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.302 Opting into the Subpart K Requirements

a) LQGs and SQGs. An eligible academic entity has the option of complying with this Subpart K with respect to its laboratories, as an alternative to complying with the requirements set forth in Sections 722.111 and 722.115.

b) VSQGs. An eligible academic entity has the option of complying with this Subpart K with respect to its laboratories, as an alternative to complying with the conditional exemption of 35 Ill. Adm. Code 722.114.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.303 Notice of Election into the Subpart K Requirements

a) If an eligible academic entity elects to become subject to the requirements of this Subpart K, it must notify the Agency of this election in writing using the Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12) for all the laboratories that the eligible academic entity owns or operates under the same USEPA identification number. If the eligible academic entity is a VSQG that does not have a USEPA identification number, the VSQG must notify the Agency and USEPA Region 5 that it has made this choice for all the laboratories that the eligible academic entity owns or operates that are onsite, as defined by 35 Ill. Adm. Code 720.110. If the eligible academic entity has multiple USEPA identification numbers, or if it is a VSQG with multiple sites, it must submit a separate notification (using USEPA Form 8700-12) for each USEPA identification number (or site, for a VSQG) that it elects to become subject to the requirements of this Subpart K. The eligible academic entity must submit USEPA Form 8700-12 to the Agency before it begins operating under this Subpart K.

BOARD NOTE: Corresponding 40 CFR 262.203(a) requires the use of the "RCRA Subtitle C Site Identification Form (EPA Form 8700-12)". The title on USEPA Form 8700-12, however, is "Notification of RCRA Subtitle C Activity". USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

b) When submitting USEPA Form 8700-12, the eligible academic entity must, at a minimum, fill out each of the following fields on the form:

"1. Reason for Submittal"

"2. Site EPA identification number" (except for a VSQG)

"3. Site Name"

"4. Site Location Information"

"5. Site Land Type"

"6. North American Industry Classification System (NAICS) Code(s) for the Site"

BOARD NOTE: See the definition of "NAICS Code" in 35 Ill. Adm. Code 720.110.

"7. Site Mailing Address"

"8. Site Contact Person"

"9. Operator and Legal Owner of the Site"

"10. Type of Regulated Waste Activity"

"13. Certification"

c) An eligible academic entity must keep a copy of USEPA Form 8700-12, as filed with the Agency pursuant to subsection (a), on file at the eligible academic entity for as long as its laboratories are subject to this Subpart K.

d) A teaching hospital that is not owned by a college or university must keep a copy of its formal written affiliation agreement with a college or university on file at the teaching hospital for as long as its laboratories are subject to this Subpart K.

e) A non-profit research institute that is not owned by a college or university must keep a copy of its formal written affiliation agreement with a college or university on file at the non-profit research institute for as long as its laboratories are subject to this Subpart K.

(Source: Amended at 43 Ill. Reg. 5955, May 2, 2019)

Section 722.304 Notice of Withdrawal from the Subpart K Requirements

a) If an eligible academic entity elects to no longer remain subject to the requirements of this Subpart K for all the laboratories that the eligible academic entity owns or operates under the same USEPA identification number, it elects to instead comply with the requirements set forth in Sections 722.111 and 722.115, which are the generally applicable standards for SQGs and LQGs. An eligible academic entity must notify the Agency in writing of this election using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12). If the eligible academic entity is a VSQG that does not have a USEPA identification number, it must notify the Agency and USEPA Region 5 that it has elected to withdraw from the requirements of this Subpart K for all of the laboratories that it owns or operates that are on site. The eligible academic

entity that is a VSQG that makes this election must comply with the conditional exemption in 35 Ill. Adm. Code 722.114. If the eligible academic entity has multiple USEPA identification numbers, or if it is a VSQG with multiple sites, it must submit a separate notification (using USEPA Form 8700-12) for each USEPA identification number (or site, for a VSQG) that it elects to withdraw from the requirements of this Subpart K. The eligible academic entity that chooses to withdraw from the requirements of this Subpart K must submit USEPA Form 8700-12 to the Agency before it begins operating under the standards in Sections 722.111 and 722.115, which are the generally applicable standards for SQGs and LQGs, or Section 722.114, which are the generally applicable standards for VSQGs.

BOARD NOTE: Corresponding 40 CFR 262.204(a) requires the use of the "RCRA Subtitle C Site Identification Form (EPA Form 8700-12)". The title on USEPA Form 8700-12, however, is "Notification of RCRA Subtitle C Activity". USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

b) When submitting USEPA Form 8700-12, the eligible academic entity must, at a minimum, fill out each of the following fields on the form:

"1. Reason for Submittal"

"2. Site EPA identification number" (except for a VSQG)

"3. Site Name"

"4. Site Location Information"

"5. Site Land Type"

"6. North American Industry Classification System (NAICS) Code(s) for the Site"

BOARD NOTE: See the definition of "NAICS Code" in 35 Ill. Adm. Code 720.110.

"7. Site Mailing Address"

"8. Site Contact Person"

"9. Operator and Legal Owner of the Site"

"10. Type of Regulated Waste Activity"

"13. Certification"

c) An eligible academic entity must keep a copy of USEPA Form 8700-12, as filed with the Agency pursuant to subsection (a), on file at the eligible academic entity for three years after the date of the notification of withdrawal.

(Source: Amended at 43 Ill. Reg. 5955, May 2, 2019)

Section 722.305 Summary of the Requirements of this Subpart K

An eligible academic entity that chooses to become subject to the requirements of this Subpart K is not required to have interim status or a RCRA Part B permit for the accumulation of unwanted material and hazardous waste in its laboratories, provided the laboratories comply with the provisions of this Subpart K, and the eligible academic entity has a Laboratory Management Plan (LMP) that complies with Section 722.314 which describes how the laboratories owned by the eligible academic entity will comply with the requirements of this Subpart K.

(Source: Added at 34 Ill. Reg. 18817, effective November 12, 2010)

Section 722.306 Container Standards in the Laboratory

An eligible academic entity must manage containers of unwanted material while in the laboratory in accordance with the requirements in this Section.

a) Labeling. The eligible academic entity must label containers of unwanted material as follows:

1) The following information must be affixed or attached to the container:

A) The words "unwanted material", or another equally effective term that is to be used consistently by the eligible academic entity and that is identified in Part I of the Laboratory Management Plan; and

B) Sufficient information to alert emergency responders to the contents of the container. Examples of information that would be sufficient to alert emergency responders to the contents of the container include, but are not limited to, the following:

i) The name of the chemicals; or

ii) The type or class of chemicals, such as organic solvents or halogenated organic solvents.

2) The following information may be affixed or attached to the container, but must be associated with the container if not attached to it:

A) The date on which the unwanted material first began accumulating in the container; and

B) Information sufficient to allow a trained professional to properly identify whether an unwanted material is a solid waste and a hazardous waste and to assign the proper USEPA hazardous waste numbers to the material, pursuant to Section 722.111. Examples of information that would allow a trained professional to properly identify whether an unwanted material is a solid waste and hazardous waste include, but are not limited to, the following:

i) The name or description of the chemical contents or the composition of the unwanted material or, if known, the product of the chemical reaction;

ii) Whether the unwanted material has been used or is unused; and

iii) A description of the manner in which the chemical was produced or processed, if applicable.

b) Management of Containers in the Laboratory. An eligible academic entity must properly manage containers of unwanted material in the laboratory in a way that assures safe storage of the unwanted material and which prevents leaks, spills, emissions to the air, adverse chemical reactions, and dangerous situations that may result in harm to human health or the environment. Proper container management must include the following actions:

1) Containers must be maintained and kept in good condition, and damaged containers must be replaced, overpacked, or repaired;

2) Containers must be compatible with their contents, in order to avoid reactions between the contents and the container; and they must be made of, or lined with, material that is compatible with the unwanted material, so that the container's integrity is not impaired; and

3) Containers must be kept closed at all times, except under the following circumstances:

A) A container may be open when adding, removing, or bulking unwanted material;

B) A working container may be open until the end of the procedure, until the end of the work shift, or until it is full, whichever comes first, at which time either the working container must be closed or its contents emptied into a separate container that is then closed; or

C) A container may be open when venting of a container is necessary for either of the following reasons:

i) It is necessary for the proper operation of laboratory equipment, such as with inline collection of unwanted materials from high performance liquid chromatographs; or

ii) It is necessary to prevent dangerous situations, such as a build-up of extreme pressure.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.307 Personnel Training

An eligible academic entity must provide training to all individuals working in its laboratory, as follows:

a) It must provide training for laboratory workers and students that is commensurate with their duties, so that the workers and students understand the requirements of this Subpart K and can implement them.

b) An eligible academic entity may provide training for laboratory workers and students in a variety of ways, including, but not limited to, any of the following:

1) Instruction by the professor or laboratory manager before or during an experiment;

2) Formal classroom training;

3) Electronic or written training;

4) On-the-job training; or

5) Written or oral exams.

c) An eligible academic entity that is an LQG (see Section 722.127) must maintain for the durations specified in 35 Ill. Adm. Code 725.116(e) documentation which is sufficient to demonstrate that training for all laboratory workers has occurred. Examples of documentation which demonstrates that training has occurred can include, but are not limited to, the following:

1) Sign-in or attendance sheets for training sessions;

2) Syllabi for training sessions;

3) Certificates of training completion; or

4) Test results.

d) A trained professional is required for either of the following tasks:

1) A trained professional must accompany the transfer of unwanted material and hazardous waste when the unwanted material and hazardous waste is removed from the laboratory; and

2) A trained professional must make the hazardous waste determination for unwanted material, pursuant to Section 722.111(a) through (d).

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.308 Removing Unwanted Material from the Laboratory

a) Removing containers of unwanted material on a regular schedule. An eligible academic entity must do either of the following:

1) It must remove all containers of unwanted material from each laboratory on a regular interval, not to exceed 12 months; or

2) It must remove containers of unwanted material from each laboratory within 12 months after each container's accumulation start date.

b) The eligible academic entity must specify in Part I of its Laboratory Management Plan whether it will comply with subsection (a)(1) or (a)(2) for the regular removal of unwanted material from its laboratories.

c) The eligible academic entity must specify in Part II of its Laboratory Management Plan how it will comply with subsection (a)(1) or (a)(2) and how the eligible academic entity will develop a schedule for regular removals of unwanted material from its laboratories.

d) Removing containers of unwanted material when volumes are exceeded.

1) If a laboratory accumulates a total volume of unwanted material (including reactive acutely hazardous unwanted material) in excess of 55 gallons (208 ℓ) before the regularly scheduled removal, the eligible academic entity must ensure that the following requirements are fulfilled for all containers of unwanted material in the laboratory (including reactive acutely hazardous unwanted material):

A) The containers are marked on the label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) with the date on which 55 gallons (208 ℓ) was exceeded; and

B) The containers are removed from the laboratory within 10 calendar days after the date on which 55 gallons (208 ℓ) was exceeded, or on the date of the next regularly scheduled removal, whichever comes first.

2) If a laboratory accumulates more than one quart (0.946 ℓ) of liquid reactive acutely hazardous unwanted material or more than 1 kg (2.2 lbs) of solid reactive acutely hazardous unwanted material before the regularly scheduled removal, then the eligible academic entity must ensure that the following requirements are fulfilled for all containers of reactive acutely hazardous unwanted material:

A) The containers are marked on the label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) with the date on which one quart (0.946 ℓ) or 1 kg was exceeded; and

B) The containers are removed from the laboratory within 10 calendar days after the date on which one quart (0.946 ℓ) or 1 kg was exceeded, or at the next regularly scheduled removal, whichever comes first.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.309 Hazardous Waste Determination and Removal of Unwanted Material from the Laboratory

a) LQGs and SQGs. An eligible academic entity that is an LQG or an SQG must ensure that a trained professional makes a hazardous waste determination, pursuant to Section 722.111, for unwanted material in any of the following areas within the time given for that area:

1) In the laboratory, before the unwanted material is removed from the laboratory, in accordance with Section 722.310;

2) At an on-site central accumulation area, within four calendar days after the waste arrives in the area, in accordance with Section 722.311; or

3) At an on-site interim status or permitted treatment, storage, or disposal facility, within four calendar days after the waste arrives in the facility, in accordance with Section 722.312.

b) VSQGs. An eligible academic entity that is a conditionally exempt small quantity generator must ensure that a trained professional makes a hazardous waste determination, pursuant to Section 722.111(a) through (d), for unwanted material in the laboratory before the unwanted material is removed from the laboratory, in accordance with Section 722.310.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.310 Hazardous Waste Determination in the Laboratory

When an eligible academic entity makes the hazardous waste determination, pursuant to Section 722.111, for unwanted material in the laboratory, it must fulfill the following requirements:

a) A trained professional must make the hazardous waste determination, pursuant to Section 722.111(a) through (d), before the unwanted material is removed from the laboratory.

b) If an unwanted material is a hazardous waste, the eligible academic entity must do the following:

1) It must write the words "hazardous waste" on the container label that is affixed or attached to the container, before the hazardous waste may be removed from the laboratory;

2) It must write the appropriate USEPA hazardous waste numbers on the label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) before the hazardous waste is transported off-site; and

3) It must count the hazardous waste toward the amount used to determine the eligible academic entity's generator category, pursuant to Section 722.113, in the calendar month that the hazardous waste determination was made.

c) A trained professional must accompany all hazardous waste that is transferred from the laboratory to an on-site central accumulation area or on-site interim status or permitted treatment, storage, or disposal facility.

d) When hazardous waste is removed from the laboratory, the following requirements apply:

1) An eligible academic entity that is an LQG or an SQG must ensure that its hazardous waste is taken directly from the laboratory to an on-site central accumulation area or to an on-site interim status or permitted treatment, storage, or disposal facility, or the waste is transported off-site.

2) An eligible academic entity that is a VSQG must ensure that its hazardous waste is taken directly from the laboratory to any of the types of facilities listed in Section 722.114.

e) An unwanted material that is a hazardous waste is subject to all applicable hazardous waste regulations after it has been removed from the laboratory.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.311 Hazardous Waste Determination at an On-Site Central Accumulation Area

When an eligible academic entity makes the hazardous waste determination, pursuant to Section 722.111, for unwanted material at an on-site central accumulation area, it must fulfill the following requirements:

a) A trained professional must accompany all unwanted material that is transferred from the laboratory to an on-site central accumulation area.

b) All unwanted material removed from the laboratory must be taken directly from the laboratory to the on-site central accumulation area.

c) The unwanted material becomes subject to the generator accumulation regulations of Section 722.116, for an SQG, or Section 722.117, for an LQG, as soon as the material arrives in the central accumulation area, except for the "hazardous waste" labeling requirements of Sections 722.116(b)(6) and 722.117(a)(5).

d) A trained professional must determine, pursuant to Section 722.111(a) through (d), if the unwanted material is a hazardous waste within four calendar days after the unwanted material has arrived at the on-site central accumulation area.

e) If the unwanted material is a hazardous waste, the eligible academic entity must fulfill the following requirements:

    1) It must write the words "hazardous waste" on the container label that is affixed or attached to the container, within four calendar days after the unwanted material has arrived at the on-site central accumulation area and before the hazardous waste may be removed from that area;

    2) It must write the appropriate USEPA hazardous waste numbers on the container label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) before the hazardous waste may be treated or disposed of on-site or transported offsite;

    3) It must count the hazardous waste toward the amount used to determine the eligible academic entity's generator category, pursuant to 35 Ill. Adm. Code 722.113, in the calendar month that the hazardous waste determination was made; and

    4) It must manage the hazardous waste according to all applicable hazardous waste regulations.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.312 Hazardous Waste Determination at an On-Site Treatment, Storage, or Disposal Facility

When an eligible academic entity makes the hazardous waste determination, pursuant to Section 722.111, for unwanted material at an on-site interim status or permitted treatment, storage, or disposal facility, it must fulfill the following requirements:

a) A trained professional must accompany all unwanted material that is transferred from the laboratory to an on-site interim status or permitted treatment, storage, or disposal facility;

b) All unwanted material removed from the laboratory must be taken directly from the laboratory to the on-site interim status or permitted treatment, storage, or disposal facility;

c) The unwanted material becomes subject to the terms of the eligible academic entity's hazardous waste permit or interim status as soon as it arrives at the on-site treatment, storage, or disposal facility;

d) A trained professional must determine, pursuant to Section 722.111(a) through (d), if the unwanted material is a hazardous waste within four calendar days after the unwanted material has arrived at an on-site interim status or permitted treatment, storage or disposal facility; and

e) If the unwanted material is a hazardous waste, the eligible academic entity must fulfill the following requirements:

    1) It must write the words "hazardous waste" on the container label that is affixed or attached to the container within four calendar days after the unwanted material has arrived at the on-site interim status or permitted treatment, storage, or disposal facility and before the hazardous waste may be removed from that facility;

    2) It must write the appropriate USEPA hazardous waste numbers on the container label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) before the hazardous waste may be treated or disposed of on-site or transported off-site;

    3) It must count the hazardous waste toward the amount used to determine the eligible academic entity's generator category, pursuant to 35 Ill. Adm. Code 722.113 in the calendar month that the hazardous waste determination was made; and

    4) It must manage the hazardous waste according to all applicable hazardous waste regulations.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.313 Laboratory Clean-Outs

a) Once in any 12-month period for each laboratory, an eligible academic entity may opt to conduct a laboratory clean-out that is subject to all the applicable requirements of this Subpart K, except that the following limitations apply:

1) If the volume of unwanted material in the laboratory exceeds 55 gallons (208 ℓ) (or one quart (0.946 ℓ) of liquid reactive acutely hazardous unwanted material or 1 kg (0.45 lb) of solid reactive acutely hazardous unwanted material), the eligible academic entity is not required to remove all unwanted materials from the laboratory within 10 calendar days after exceeding 55 gallons (208 ℓ) (or one quart (0.946 ℓ) of liquid reactive acutely hazardous unwanted material or 1 kg (0.45 lb) of solid reactive acutely hazardous unwanted material), as required by Section 722.308. Instead, the eligible academic entity must remove all unwanted materials from the laboratory within 30 calendar days after the start of the laboratory clean-out;

2) For the purposes of on-site accumulation, an eligible academic entity is not required to count toward its hazardous waste generator category, pursuant to 35 Ill. Adm. Code 722.113, a hazardous waste that is an unused commercial chemical product (one that is listed in Subpart D of 35 Ill. Adm. Code 721 or which exhibits one or more of the characteristics set forth in Subpart C of 35 Ill. Adm. Code 721) that is solely generated during the laboratory clean-out. An unwanted material that is generated prior to the beginning of the laboratory clean-out and which is still in the laboratory at the time the laboratory clean-out commences must be counted toward hazardous waste generator category, pursuant to 35 Ill. Adm. Code 722.113, if it is determined to be hazardous waste;

3) For the purposes of off-site management, an eligible academic entity must count all of its hazardous waste, regardless of whether the hazardous waste was counted toward generator category under subsection (a)(2), and if the eligible academic entity generates more than one kg per month of acute hazardous waste or more than 100 kg per month of non-acute hazardous waste (i.e., the VSQG limits, as defined in 35 Ill. Adm. Code 720.110), the hazardous waste is subject to all applicable hazardous waste regulations when it is transported off site; and

4) An eligible academic entity must document the activities of the laboratory clean-out. The documentation must, at a minimum, identify the laboratory being cleaned out, the date the laboratory clean-out began and ended, and the volume of hazardous waste generated during the laboratory clean-out. The eligible academic entity must maintain these records for a period of three years from the date on which the clean-out ended.

b) For all other laboratory clean-outs conducted during the same 12-month period, an eligible academic entity is subject to all the applicable requirements of this Subpart K, including, but not limited to the following:

1) The requirement to remove all unwanted materials from the laboratory within 10 calendar days of exceeding 55 gallons (208 ℓ) (or one quart (0.946 ℓ) of reactive acutely hazardous unwanted material), as required by Section 722.308; and

2) The requirement to count all hazardous waste, including unused hazardous waste, that is generated during the laboratory clean-out toward its hazardous waste generator category, pursuant to 35 Ill. Adm. Code 722.113.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.314 Laboratory Management Plan

An eligible academic entity must develop and retain a written Laboratory Management Plan, or revise an existing written plan. The Laboratory Management Plan is a site-specific document that describes how the eligible academic entity will manage unwanted materials in compliance with this Subpart K. An eligible academic entity may write one Laboratory Management Plan for all of the laboratories that it owns which have opted into this Subpart K, even if the laboratories are located at sites with different USEPA identification numbers. The Laboratory Management Plan must contain two parts, with a total of the nine elements identified in subsections (a) and (b). In Part I of its Laboratory Management Plan, an eligible academic entity must describe its procedures for each of the elements listed in subsection (a). An eligible academic entity must implement and comply with the specific provisions that it develops to address the elements in Part I of its Laboratory Management Plan. In Part II of its Laboratory Management Plan, an eligible academic entity must describe its best management practices for each of the elements listed in subsection (b). The specific actions taken by an eligible academic entity to implement each element in Part II of its Laboratory Management Plan may vary from the procedures described in the eligible academic entity's Laboratory Management Plan, without constituting a violation of this Subpart K. An eligible academic entity may include additional elements and best management practices in Part II of its Laboratory Management Plan if it so chooses.

a) The eligible academic entity must implement and comply with the specific provisions of Part I of its Laboratory Management Plan. In Part I of its Laboratory Management Plan, an eligible academic entity must include the following information:

1) Part I must describe procedures for container labeling in accordance with Section 722.306(a), as follows:

A) Identification whether the eligible academic entity will use the term "unwanted material" on the containers in the laboratory. If not, identification of an equally effective term that the eligible

academic entity will consistently use in lieu of "unwanted material". The equally effective term, if used, has the same meaning as the term "unwanted material", and the material is subject to the same requirements as if it were called "unwanted material"; and

B) Identification of the manner in which information that is "associated with the container" will be imparted.

2) Identification whether the eligible academic entity will comply with Section 722.308(a)(1) or (a)(2) for regularly scheduled removals of unwanted material from the laboratory.

b) In Part II of its Laboratory Management Plan, an eligible academic entity must include the following information:

1) Description of its intended best practices for container labeling and management (see the required standards at Section 722.306);

2) Description of its intended best practices for providing training for laboratory workers and students commensurate with their duties (see the required standards at Section 722.307(a));

3) Description of its intended best practices for providing training to ensure safe on-site transfers of unwanted material and hazardous waste by trained professionals (see the required standards at Section 722.307(d)(1));

4) Description of its intended best practices for removing unwanted material from the laboratory, including the following:

A) For regularly scheduled removals, a regular schedule for identifying and removing unwanted materials from its laboratories (see the required standards at Section 722.308(a)(1) and (a)(2));

B) For removals when maximum volumes are exceeded, the following:

i) Description of the eligible academic entity's intended best practices for removing unwanted materials from the laboratory within 10 calendar days after the date on which unwanted materials have exceeded their maximum volumes (see the required standards at Section 722.308(d)); and

ii) Description of its intended best practices for communicating that unwanted materials have exceeded their maximum volumes;

5) Description of its intended best practices for making hazardous waste determinations, including specifying the duties of the individuals involved in the process (see the required standards at Sections 722.111(a) through (d) and 722.309 through 722.312);

6) Describe its intended best practices for laboratory clean-outs, if the eligible academic entity plans to use the incentives for laboratory clean-outs provided in Section 722.313, including the following:

A) Procedures for conducting laboratory clean-outs (see the required standards at Section 722.313(a)(1) through (a)(3)); and

B) Procedures for documenting laboratory clean-outs (see the required standards at Section 722.313(a)(4));

7) Description of the eligible academic entity's intended best practices for emergency prevention, including the following information:

A) Procedures for emergency prevention, notification, and response that are appropriate to the hazards in the laboratory;

B) A list of chemicals that the eligible academic entity has, or is likely to have, that become more dangerous when they exceed their expiration date or as they degrade;

C) Procedures to safely dispose of chemicals that become more dangerous when they exceed their expiration date or as they degrade; and

D) Procedures for the timely characterization of unknown chemicals.

c) An eligible academic entity must make its Laboratory Management Plan available to laboratory workers, students, or any others at the eligible academic entity who may request it.

d) An eligible academic entity must review and revise its Laboratory Management Plan as needed.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.315 Unwanted Material That Is Not Solid Waste or Hazardous Waste

a) If an unwanted material does not meet the definition of solid waste in 35 Ill. Adm. Code 721.102, it is no longer subject to the requirements of this Subpart K or to the RCRA hazardous waste regulations of 35 Ill. Adm. Code 702, 703, 705, and 720 through 728.

b) If an unwanted material does not meet the definition of hazardous waste in 35 Ill. Adm. Code 721.103, it is no longer subject to this Subpart K or to the RCRA hazardous waste regulations, but must be managed in compliance with any other applicable regulations or conditions.

(Source: Added at 34 Ill. Reg. 18817, effective November 12, 2010)

Section 722.316 Non-Laboratory Hazardous Waste Generated at an Eligible Academic Entity

An eligible academic entity that generates hazardous waste outside of a laboratory is not eligible to manage that hazardous waste under this Subpart K, and either of the following is true of the waste:

a) That hazardous waste remains subject to the generator requirements of Sections 722.111 and 722.115, for an LQG or an SQG (if the hazardous waste is managed in a satellite accumulation area), and all other applicable generator requirements of 35 Ill. Adm. Code 722; or

b) That hazardous waste remains subject to the conditional exemption of 35 Ill. Adm. Code 722.114, for a VSQG.

(Source: Amended at 42 Ill. Reg. 22047, effective November 19, 2018)

SUBPART L: ALTERNATIVE STANDARDS FOR EPISODIC GENERATION

Section 722.330 Applicability

This subpart is applicable to VSQGs and SQGs, as defined in 35 Ill. Adm. Code 720.110.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.331 Definitions for This Subpart L

"Episodic event" means an activity or activities, either planned or unplanned, that does not normally occur during generator operations, resulting in an increase in the generation of hazardous wastes that exceeds the calendar month quantity limits for the generator's usual category.

"Planned episodic event" means an episodic event that the generator planned and prepared for, including regular maintenance, tank cleanouts, short-term projects, and removal of excess chemical inventory.

"Unplanned episodic event" means an episodic event that the generator did not plan or reasonably did not expect to occur, including production process upsets, product recalls, accidental spills, or "acts of nature", such as tornado, hurricane, or flood.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.332 Conditions for a Generator Managing Hazardous Waste from an Episodic Event

a) VSQGs. A VSQG may maintain its existing generator category for hazardous waste generated during an episodic event provided that the generator complies with the following conditions:

1) The VSQG is limited to one episodic event per calendar year, unless the Agency has determined that an additional episodic event is necessary, as provided in Section 722.333;

2) Notification. The VSQG must notify the Agency no later than 30 calendar days prior to initiating a planned episodic event using Notification of RCRA Subtitle C Activities (Site Identification From) (USEPA Form 8700-12). In the event of an unplanned episodic event, the generator must notify Agency within 72 hours of the unplanned event via phone, email, or fax and subsequently submit USEPA Form 8700-12. The generator must include the start date and end date of the episodic event, the reasons for the event and the types and estimated quantities of hazardous waste expected to be generated as a result of the episodic event, and the generator must identify a facility contact and emergency coordinator with 24-hour telephone access to discuss the notification submittal or respond to an emergency in compliance with Section 722.116(b)(9)(A);

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

3) USEPA Identification Number. The VSQG must have a USEPA identification number or obtain a USEPA identification number using USEPA Form 8700-12;

4) Accumulation. A VSQG is prohibited from accumulating hazardous waste generated from an episodic event on drip pads or in containment buildings. When accumulating hazardous waste in containers and tanks the following conditions apply:

A) Containers. A VSQG accumulating in containers must mark or label its containers with the following:

i) The words “Episodic Hazardous Waste”;

ii) An indication of the hazards of the contents. Examples include the applicable hazardous waste characteristics (i.e.,

ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labelling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111; and

iii) The date when the episodic event began, clearly visible for inspection on each container.

B) Tanks. A VSQG accumulating episodic hazardous waste in tanks must do the following:

i) Mark or label the tank with the words "Episodic Hazardous Waste";

ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Use inventory logs, monitoring equipment, or other records to identify the date upon which each episodic event begins; and

iv) Keep inventory logs or records with the information required by subsection (a)(4)(B)(iii) on site and readily available for inspection.

C) The generator must manage hazardous waste in a manner that minimizes the possibility of a fire, explosion, or release of hazardous waste or hazardous waste constituents to the air, soil, or water;

i) Containers must be in good condition and compatible with the hazardous waste being accumulated in them. The generator must keep containers closed except to add or remove waste; and

ii) Tanks must be in good condition and compatible with the hazardous waste accumulated in them. Tanks must have procedures in place to prevent the overflow (e.g., be equipped with a means to stop inflow with systems such as a waste feed cutoff system or bypass system to a standby tank when hazardous waste is continuously fed into the tank). Tanks must be inspected at least once each operating day to ensure all applicable discharge control equipment, such as waste feed cutoff systems, bypass systems, and drainage systems are in good working order and to ensure that the generator operates the tank according to its design by reviewing the data gathered from monitoring equipment such as pressure and temperature gauges from the inspection.

5) The VSQG must comply with the hazardous waste manifest provisions of Subpart B and the recordkeeping provisions for SQG in Section 722.144 when the VSQG sends its episodic event hazardous waste off site to a designated facility, as defined in 35 Ill. Adm. Code 720.110.

6) The VSQG has up to 60 calendar days from the start of the episodic event to manifest and send its hazardous waste generated from the episodic event to a designated facility, as defined in 35 Ill. Adm. Code 720.110.

7) A VSQG must maintain the following records for three years from the end date of the episodic event:

A) The beginning and end dates of the episodic event;

B) A description of the episodic event;

C) A description of the types and quantities of hazardous wastes generated during the event;

D) A description of how the hazardous waste was managed, as well as the name of the RCRA-designated facility that received the hazardous waste;

E) The names of hazardous waste transporters; and

F) The approval letter from the Agency if the generator requested the Agency under Section 722.333 to conduct one additional episodic event per calendar year.

b) SQGs. An SQG may maintain its existing generator category during an episodic event provided that the generator complies with the following conditions:

1) The SQG is limited to one episodic event per calendar year, unless the Agency has determined that an additional episodic event is necessary, as provided in Section 722.333;

2) Notification. The SQG must notify Agency no later than 30 calendar days prior to initiating a planned episodic event using USEPA Form 8700-12 (Notification of RCRA Subtitle C Activities (Site Identification From)). In the event of an unplanned episodic event, the SQG must notify Agency within 72 hours of the unplanned event via phone, email, or fax and subsequently submit USEPA Form 8700-12. The SQG must include the start date and end date of the episodic event, the reasons for the event and the types and estimated quantities of hazardous wastes expected to be generated as a result of the episodic event, and the generator must identify a facility contact and emergency coordinator with 24-hour telephone access to discuss the notification submittal or respond to emergency;

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

3) USEPA Identification Number. The SQG must have a USEPA identification number or obtain a USEPA identification number using USEPA Form 8700-12; and

4) Accumulation by SQGs. An SQG is prohibited from accumulating hazardous wastes generated from an episodic event on drip pads and in containment buildings. When accumulating hazardous waste generated from an episodic event in containers and tanks, the following conditions apply:

A) Containers. An SQG accumulating episodic hazardous waste in containers must meet the standards at Section 722.116(b)(2) and must mark or label its containers with the following:

i) The words “Episodic Hazardous Waste”;

ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous

waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with the USDOT requirements at subpart E (labeling) and subpart F (placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111; and

iii) The date when the episodic event began, clearly visible for inspection on each container.

B) Tanks. An SQG accumulating episodic hazardous waste in tanks must meet the standards at Section 722.116(b)(3) and must do the following:

i) Mark or label its tank with the words "Episodic Hazardous Waste";

ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic) listed in Subpart C or D of 35 Ill. Adm. Code 721; hazard communication consistent with USDOT requirements at subpart E (labeling) and subpart F (placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Use inventory logs, monitoring equipment or other records to identify the date upon which episodic event begins; and

iv) Keep inventory logs or records with the above information on site and available for inspection.

5) The SQG must treat hazardous waste generated from an episodic event on site or manifest and ship the hazardous waste off site to a designated facility (as defined by 35 Ill. Adm. Code 720.110) within 60 calendar days from the start of the episodic event.

6) The SQG must maintain the following records for three years from the end date of the episodic event:

A) The beginning and end dates of the episodic event;

B) A description of the episodic event;

C) A description of the types and quantities of hazardous wastes generated during the event;

D) A description of how the hazardous waste was managed as well as the name of the designated RCRA facility (as defined by 35 Ill. Adm. Code 720.110) that received the hazardous waste;

E) The names of hazardous waste transporters; and

F) The approval letter from the Agency if the generator requested the Agency under Section 722.333 to conduct one additional episodic event per calendar year.

(Source: Amended at 48 Ill. Reg.16994, effective November 22, 2024)

Section 722.333 Request to Manage One Additional Episodic Event Per Calendar Year

a) After obtaining a provisional variance from the Agency, a generator may conduct a second episodic event not to exceed 60 days in a calendar year without impacting its generator category under the following conditions:

1) If a VSQG or SQG has already held a planned episodic event in a calendar year, the generator may conduct an additional unplanned episodic event in that calendar year. The generator must submit a written request for a provisional variance to the Agency within 72 hours after the unplanned event.

2) If a VSQG or SQG has already held an unplanned episodic event in a calendar year. The generator must obtain a provisional variance from the Agency before beginning the additional planned episodic event.

b) The generator must submit the written request using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12), identifying it as a request for an additional episodic request. The written request must include the following information:

1) The reasons why an additional episodic event is needed and the nature of the episodic event;

2) The estimated amount of hazardous waste to be managed from the event;

3) How the generator will manage the hazardous waste;

4) The estimated length of time needed to complete management of the hazardous waste generated from the episodic event—not to exceed 60 days; and

5) Information regarding the previous episodic event managed by the generator, including the nature of the event, whether it was a planned or unplanned event, and how the generator complied with the conditions.

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

c) The generator must submit the written request to the Agency either on paper or electronically.

d) The generator must retain written approval in its records for three years from the date the episodic event ended.

e) If the Agency determines the following is true of the additional episodic event, the Agency must approve the request in writing:

1) The prior episodic event meets the definition of a planned episodic event or unplanned episodic event in Section 722.331;

2) The additional episodic event meets the definition of a planned episodic event or unplanned episodic event in Section 722.331;

3) The additional episodic event fulfills the criteria of subsection (a)(1) or subsection (a)(2);

4) The generator is legitimately having episodic events, and the generator is using this Section for true episodic events and not as a way to regularly avoid managing hazardous waste at a higher generator category;

5) The generator will comply with the applicable requirements of Section 722.332(a)(4) through (a)(7) or (b)(4) through (b)(6); and

6) The generator will manage the hazardous waste in a way that no violation of the Act or Board regulations will occur.

BOARD NOTE: Any Agency determination made under this Section is not a "RCRA permit", as such is defined in 35 Ill. Adm. Code 702.110, and is not subject to the procedures of 35 Ill. Adm. Code 702, 703, or 705. A failure to obtain Agency approval as provided in this Section

subjects the generator to higher generator category standards, and non-compliance may subject the generator to enforcement action.

(Source: Amended at 43 Ill. Reg. 5955, May 2, 2019)

SUBPART M: PREPAREDNESS, PREVENTION, AND EMERGENCY PROCEDURES FOR LARGE QUANTITY GENERATORS

Section 722.350 Applicability

The regulations of this Subpart M apply to those areas of an LQG where hazardous waste is generated or accumulated on site.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.351 Maintenance and Operation of Facility

An LQG must maintain and operate its facility in a manner that minimizes the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.352 Required Equipment

The LQG must equip all areas to which Section 722.350 deems this Subpart M applicable with the items in subsections (a) through (d) (unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified in this Section or the actual hazardous waste generation or accumulation area does not lend itself for safety reasons to have a particular kind of equipment specified in this Section). An LQG may determine the most appropriate locations within its facility to locate equipment necessary to prepare for and respond to emergencies. The LQG must have the appropriate of the following equipment:

a) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

b) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams;

c) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and

d) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.353 Testing and Maintenance of Equipment

The LQG must test and maintain all required communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment as necessary to assure their proper operation in time of emergency.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.354 Access to Communications or Alarm System

a) Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access (i.e., direct or unimpeded access) to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required under Section 722.352.

b) In the event there is just one employee on the premises while the facility is operating, the employee must have immediate access (i.e., direct or unimpeded access) to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required under Section 722.352.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.355 Required Aisle Space

The LQG must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.356 Arrangements with Local Authorities

a) The LQG must attempt to make arrangements with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals, taking into account the types and quantities of hazardous wastes handled at the facility. The LQG may make arrangements with the Local Emergency Planning Committee, if it is the appropriate organization with which to make arrangements.

BOARD NOTE: The State Emergency Response Commission (SERC) maintains an on-line listing of Local Emergency Planning Committees in Illinois by jurisdiction: www.illinois.gov/iema/Preparedness/SERC/Documents/LEPC_ReleaseReportingContactList.pdf.

1) An LQG attempting to make arrangements with its local fire department must determine the potential need for the services of the local police department, other emergency response teams, emergency response contractors, equipment suppliers and local hospitals.

2) As part of this coordination, the LQG must attempt to make arrangements, as necessary, to familiarize the above organizations with the layout of the facility, the properties of the hazardous waste handled at the facility and associated hazards, places where personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes, as well as the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.

3) Where more than one police or fire department might respond to an emergency, the LQG must attempt to make arrangements designating primary emergency authority to a specific fire or police department, and arrangements with any others to provide support to the primary emergency authority.

b) The LQG must maintain records documenting the arrangements with the local fire department as well as any other organization necessary to respond to an emergency. This documentation must include documentation in the operating record that either confirms such arrangements actively exist or, in cases where no arrangements exist, confirms that the LQG attempted to make these arrangements.

c) A facility possessing 24-hour response capabilities may seek a waiver from the authority having jurisdiction over the fire code within the State or facility's locality as far as needing to make arrangements with the local fire department, as well as any other organization necessary to respond to an emergency, provided that the waiver is documented in the operating record.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.360 Purpose and Implementation of Contingency Plan

a) An LQG must have a contingency plan for the facility. The LQG must design the contingency plan to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.

b) The LQG must carry out the provisions of the plan immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.361 Content of Contingency Plan

a) The contingency plan must describe the actions required of facility personnel to comply with Sections 722.360 and 722.365 in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.

b) If the generator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan in accordance with 40 CFR 112 or some other emergency or contingency plan, the generator needs only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the standards of this Part. The generator may develop one contingency plan that meets all regulatory standards.

BOARD NOTE: USEPA recommends that the plan be based on the National Response Team's Integrated Contingency Plan Guidance ("One Plan"). The National Response Team published the Guidance at 61 Fed. Reg. 28642 (June 5, 1996).

c) The plan must describe arrangements agreed to with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, local hospitals, or the Local Emergency Planning Committee, if applicable, pursuant to Section 722.356.

d) The plan must list names and emergency telephone numbers of all persons qualified to act as emergency coordinator (see Section 722.364), and the generator must keep this list up to date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates. If the generator facility has an emergency coordinator continuously on duty because it operates 24 hours per day, every day of the year, the plan may list the staffed position (e.g., operations manager, shift coordinator, shift operations supervisor), as well as an emergency telephone number that will be answered at all times.

e) The plan must include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. The generator must keep this list up to date. In addition, the plan must include the location and a physical description of each item on the list, and a brief outline of its capabilities.

f) The plan must include an evacuation plan for generator personnel where there is a possibility that evacuation could be necessary. This plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires).

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.362 Copies of Contingency Plan

A copy of the contingency plan and all revisions to the plan must be maintained at the LQG facility, and the LQG must to the following:

a) The LQG must submit a copy of the contingency plan and all revisions to all local emergency responders (i.e., police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services). The generator may also submit this document to the Local Emergency Planning Committee, as appropriate.

b) An LQG that first becomes subject to these provisions or an LQG that is otherwise amending its contingency plan must at that time submit a quick reference guide of the contingency plan to the local emergency responders identified in subsection (a) or, as appropriate, the Local Emergency Planning Committee. The quick reference guide must include the following elements:

1) The types or names of hazardous wastes in layman's terms and the associated hazard associated with each hazardous waste present at any one time (e.g., toxic paint wastes, spent ignitable solvent, corrosive acid, etc.);

2) The estimated maximum amount of each hazardous waste that may be present at any one time;

3) The identification of any hazardous wastes where exposure would require unique or special treatment by medical or hospital staff;

4) A map of the facility showing where hazardous wastes are generated, accumulated, and treated and routes for accessing these wastes;

5) A street map of the facility in relation to surrounding businesses, schools and residential areas to understand how best to get to the facility and also evacuate citizens and workers;

6) The locations of water supply (e.g., fire hydrants and their flow rate);

7) The identification of on-site notification systems (e.g., a fire alarm that rings off site, smoke alarms, etc.); and

8) The name of the emergency coordinators and 24/7 emergency telephone numbers or, in the case of a facility where an emergency coordinator is continuously on duty, the emergency telephone number for the emergency coordinator.

c) A generator must update its quick reference guides, if necessary, whenever the contingency plan is amended and submit these documents to the local emergency responders identified in subsection (a) or, as appropriate, the Local Emergency Planning Committee.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.363 Amendment of Contingency Plan

The generator must review its contingency plan and immediately amend the plan, if necessary, whenever any of the following occurs:

a) Applicable regulations are revised;

b) The plan fails in an emergency;

c) The generator facility changes—in its design, construction, operation, maintenance, or other circumstances—in a way that materially increases the potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents or which changes the response necessary in an emergency;

d) The list of emergency coordinators changes; or

e) The list of emergency equipment changes.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.364 Emergency Coordinator

At all times, at least one employee must be either on the generator's premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures and implementing the necessary emergency procedures outlined in Section 722.365. Although responsibilities may vary depending on factors such as type and variety of hazardous wastes handled by the facility, as well as type and complexity of the facility, this emergency coordinator must be thoroughly familiar with all aspects of the generator's contingency plan, all operations and activities at the facility, the location and characteristics of hazardous waste handled, the location of all records within the facility, and the facility's layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan.

(Source: Added at 42 Ill. Reg. 22047, effective November 19, 2018)

Section 722.365 Emergency Procedures

a) Whenever there is an imminent or actual emergency situation, the emergency coordinator (or his designee when the emergency coordinator is on call) must immediately undertake the following actions:

1) Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

2) Notify appropriate state or local agencies with designated response roles if their help is needed.

b) Whenever there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of the facility records or manifests and, if necessary, by chemical analysis.

c) Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-offs from water or chemical agents used to control fire and heat-induced explosions, etc.).

d) If the emergency coordinator determines that the facility has had a release, fire, or explosion which could threaten human health or the environment outside the facility, the emergency coordinator must report the findings as follows:

1) If the assessment indicates that evacuation of local areas may be advisable, the emergency coordinator must immediately notify appropriate local authorities. The emergency coordinator must be available to help appropriate officials decide whether local areas should be evacuated; and

2) The emergency coordinator must immediately notify either the government official designated as the on-scene coordinator for that geographical area or the National Response Center (using their 24-hour toll free number 800/424–8802). The report must include:

A) The name and telephone number of the reporter;

B) The name and address of the generator;

C) The time and type of incident (e.g., release, fire, etc.);

D) The name and quantity of materials involved, to the extent known;

E) The extent of injuries, if any; and

F) The possible hazards to human health or the environment outside the facility.

e) During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the generator's facility. These measures must include, where applicable, stopping processes and operations, collecting and containing released hazardous waste, and removing or isolating containers.

f) If the generator stops operations in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

g) Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. Unless the generator can demonstrate, in accordance with 35 Ill. Adm. Code 721.103(c) or (d), that the recovered material is not a hazardous waste, then it is a newly generated hazardous waste that must be managed in accordance with all the applicable requirements and conditions for exemption in 35 Ill. Adm. Code 722, 723, and 725.

h) The emergency coordinator must ensure that the following is true in the affected areas of the facility:

1) No hazardous waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and

2) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

i) The generator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the generator must submit a written report on the incident to the Agency. The report must include the following information:

1) The name, address, and telephone number of the generator;

2) The date, time, and type of incident (e.g., fire, explosion, etc.);

3) The name and quantity of materials involved;

4) The extent of injuries, if any;

5) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and

6) The estimated quantity and disposition of recovered material that resulted from the incident.

SUBPART C: HAZARDOUS WASTE DISCHARGES

Section

723.130 Immediate Action
723.131 Discharge Cleanup

AUTHORITY: Implementing Sections 7.2 and 22.4 and authorized by Section 27 of the Environmental Protection Act [415 ILCS 5/7.2, 22.4 and 27].

SOURCE: Adopted in R81-22 at 5 Ill. Reg. 9781, effective May 17, 1982; amended and codified in R81-22 at 6 Ill. Reg. 4828, effective May 17, 1982; amended in R84-9 at 9 Ill. Reg. 11961, effective July 24, 1985; amended in R86-19 at 10 Ill. Reg. 20718, effective December 2, 1986; amended in R86-46 at 11 Ill. Reg. 13570, effective August 4, 1987; amended in R87-5 at 11 Ill. Reg. 19412, effective November 12, 1987; amended in R95-6 at 19 Ill. Reg. 9945, effective June 27, 1995; amended in R96-10/R97-3/R97-5 at 22 Ill. Reg. 589, effective December 16, 1997; amended in R97-21/R98-3/R98-5 at 22 Ill. Reg. 17965, effective September 28, 1998; amended in R06-5/R06-6/R06-7 at 30 Ill. Reg. 3180, effective February 23, 2006; amended in R06-16/R06-17/R06-18 at 31 Ill. Reg. 881, effective December 20, 2006; amended in R07-5/R07-14 at 32 Ill. Reg. 11969, effective July 14, 2008; amended in R11-2/R11-16 at 35 Ill. Reg. 17959, effective October 14, 2011; amended in R15-1 at 39 Ill. Reg. 1711, effective January 12, 2015; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. 22595, effective November 19, 2018; amended in R19-3 at 43 Ill. Reg. 585, effective December 6, 2018;

amended in R19-11 at 43 Ill. Reg. 5995, effective May 2, 2019; amended in R20-8/R20-16 at 44 Ill. Reg. 15331, effective September 3, 2020.

SUBPART A: GENERAL

Section 723.110 Scope

a) These regulations establish standards which apply to persons transporting hazardous waste into, out of or through Illinois if the transportation requires a manifest under 35 Ill. Adm. Code 722.

b) These regulations do not apply to on-site transportation of hazardous waste by generators or by owners or operators of permitted hazardous waste management facilities.

c) A transporter of hazardous waste must also comply with 35 Ill. Adm. Code 722, "Standards Applicable to Generators of Hazardous Waste", if either of the following occurs:

1) It transports hazardous waste into the United States from abroad; or

2) It mixes hazardous waste of different DOT shipping descriptions by placing them into a single container.

d) A transporter of hazardous waste that is being imported from or exported to any other country for purposes of recovery or disposal is subject to this Subpart and to all other relevant requirements of 35 Ill. Adm. Code 722.Subpart H, including, but not limited to, 35 Ill. Adm. Code 722.183(d) and 722.184 for movement documents.

e) The regulations in this Part do not apply to transportation during an explosives or munitions emergency response, conducted in accordance with 35 Ill. Adm. Code 724.101(g)(8)(A)(iv) or (g)(8)(D) or 35 Ill. Adm. Code 725.101(c)(11)(A)(iv) or (c)(11)(D), and 35 Ill. Adm. Code 703.121(a)(4) or (c).

f) 35 Ill. Adm. Code 726.303 identifies how the requirements of this Part apply to military munitions classified as solid waste under 35 Ill. Adm. Code 726.302.

(Source: Amended at 42 Ill. Reg. 22595, effective November 19, 2018)

Section 723.111 USEPA Identification Number

a) A transporter must not transport hazardous waste without having received a USEPA identification number from the Administrator.

b) A transporter who has not received a USEPA identification number may obtain one by applying to the Agency using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12). Upon receiving the request, USEPA Region 5 will assign a USEPA identification number to the transporter.

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

(Source: Amended at 43 Ill. Reg. 5995, May 2, 2019)

Section 723.112 Transfer Facility Requirements

a) A transporter that stores manifested shipments of hazardous waste in containers meeting the independent requirements of 35 Ill. Adm. Code 722.130 at a transfer facility for a period of 10 days or less is not subject to regulations under 35 Ill. Adm. Code 702, 703, 724, 725, 727, or 728 with respect to the storage of those wastes.

b) When consolidating the contents of two or more containers with the same hazardous waste into a new container, or when combining and consolidating two different hazardous wastes that are compatible with each other, the transporter must mark its containers of 119 gallons (450 ℓ) or less capacity with the following information:

1) The words "Hazardous Waste"; and

2) The applicable USEPA hazardous waste numbers in Subparts C and D of 35 Ill. Adm. Code 721, or in compliance with 35 Ill. Adm. Code 722.132(c).

(Source: Amended at 42 Ill. Reg. 22595, effective November 19, 2018)

Section 723.113 Electronic Reporting

The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Derived from 40 CFR 3, as added, and 40 CFR 271.10(b), 271.11(b), and 271.12(h) (2005), as amended at 70 Fed. Reg. 59848 (Oct. 13, 2005).

(Source: Added at 31 Ill. Reg. 881, effective December 20, 2006)

SUBPART B: COMPLIANCE WITH THE MANIFEST SYSTEM AND RECORDKEEPING

Section 723.120 The Manifest System

a) No Acceptance Without a Manifest

1) Manifest Requirement. A transporter may not accept hazardous waste from a generator unless the transporter is also provided with a manifest form (USEPA Form 8700-22, and if necessary, USEPA Form 8700-22A) signed in accordance with the provisions of 35 Ill. Adm. Code 723.123, or is provided with an e-Manifest that is obtained, completed, and transmitted in accordance with 35 Ill. Adm. Code 722.120(a)(3) and signed with a valid and enforceable electronic signature as described in 35 Ill. Adm. Code 722.125.

2) Exports. For exports of hazardous waste subject to Subpart H of 35 Ill. Adm. Code 722, a transporter may not accept hazardous waste without a manifest signed by the generator in compliance~~accordance~~ with this Section, as appropriate, and ~~for exports occurring under the terms of a consent issued by USEPA on or after December 31, 2016,~~ a movement document that includes all information required by 35 Ill. Adm. Code 722.183~~(d)~~.

3) This subsection (a)(3) corresponds with 40 CFR 263.20(a)(3), an applicability statement that became obsolete for the purposes of the Illinois rules on September 6, 2006. This statement maintains structural parity with the corresponding federal regulations.

4) Use of e-Manifest—Legal Equivalence to Paper Forms for Participating Transporters. E-Manifests that are obtained, completed, and transmitted in accordance with 35 Ill. Adm. Code 722.120(a)(3), and used in accordance with this Section in lieu of USEPA Forms 8700-22 and 8700-22A, are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these regulations to obtain, complete, sign, carry, provide, give, use, or retain a manifest.

A) Any requirement in 35 Ill. Adm. Code 720 through 728 to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 35 Ill. Adm. Code 722.125.

B) Any requirement in 35 Ill. Adm. Code 720 through 728 to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when a copy of an e-Manifest is transmitted to the other person by submission to the e-Manifest System.

C) Any requirement in 35 Ill. Adm. Code 720 through 728 for a manifest to accompany a hazardous waste shipment is satisfied

when a copy of an e-Manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the waste shipment, except that, to the extent that the hazardous materials regulation on shipping papers for carriage by public highway requires transporters of hazardous materials to carry a paper document to comply with 49 CFR 177.817, incorporated by reference in 35 Ill. Adm. Code 720.111, a hazardous waste transporter must carry one printed copy of the e-Manifest on the transport vehicle.

D) Any requirement in 35 Ill. Adm. Code 720 through 728 for a transporter to keep or retain a copy of a manifest is satisfied by the retention of an e-Manifest in the transporter's account on the e-Manifest System, provided that such copies are readily available for viewing and production if requested by any USEPA or authorized state inspector.

E) No transporter may be held liable for the inability to produce an e-Manifest for inspection under this Section if that transporter can demonstrate that the inability to produce the e-Manifest is exclusively due to a technical difficulty with the USEPA e-Manifest System for which the transporter bears no responsibility.

BOARD NOTE: The Board has rendered the language "any requirement in these regulations" in corresponding 40 CFR 263.20(a)(4)(i) through (a)(4)(iv) as "any requirement in any provision of 35 Ill. Adm. Code 720 through 728" in the appropriate segments of this subsection (a)(4).

5) A transporter may participate in the e-Manifest System either by accessing the e-Manifest System from the transporter's own electronic equipment, or by accessing the e-Manifest System from the equipment provided by a participating generator, by another transporter, or by a designated facility.

6) Special Procedures When e-Manifest Is Not Available. If after a manifest has been originated electronically and signed electronically by the initial transporter, and the e-Manifest System should become unavailable for any reason, then the following requirements apply:

A) The transporter in possession of the hazardous waste when the e-Manifest becomes unavailable must reproduce sufficient copies of the printed manifest that is carried on the transport vehicle under subsection (a)(4)(C) or obtain and complete another paper manifest for this purpose. The transporter must reproduce sufficient copies to provide the transporter and all subsequent waste handlers with a copy for their files, plus two additional copies that will be delivered to the designated facility with the hazardous waste.

B) On each printed copy, the transporter must include a notation in the Special Handling and Additional Description space (Item 14) that the paper manifest is a replacement manifest for a manifest originated in the e-Manifest System, must include (if not pre-printed on the replacement manifest) the manifest tracking number of the e-Manifest that is replaced by the paper manifest, and must also include a brief explanation why the e-Manifest was not available for completing the tracking of the shipment electronically.

C) A transporter signing a replacement manifest to acknowledge receipt of the hazardous waste must ensure that each paper copy is individually signed and that a legible handwritten signature appears on each copy.

D) From the point at which the e-Manifest is no longer available for tracking the waste shipment, the paper replacement manifest copies must be carried, signed, retained as records, and given to a subsequent transporter or to the designated facility, following the instructions, procedures, and requirements that apply to the use of all other paper manifests.

7) Special Procedures for Electronic Signature Methods Undergoing Tests. If a transporter using an e-Manifest signs this manifest electronically using an electronic signature method that is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the transporter must sign the e-Manifest electronically and also sign with an ink signature the transporter acknowledgement of receipt of materials on the printed copy of the manifest that is carried on the vehicle in accordance with subsection (a)(4)(C)(i). This printed copy bearing the generator's and transporter's ink signatures must also be presented by the transporter to the designated facility to sign in ink to indicate the receipt of the waste materials or to indicate discrepancies. After the owner or operator of the designated facility has signed this printed manifest copy with its ink signature, the printed manifest copy must be delivered to the designated facility with the waste materials.

8) This subsection (a)(8) corresponds with 40 CFR 263.20(a)(8), which USEPA has removed and marked "reserved". This statement maintains consistency with the corresponding federal rules.

9) Post-Receipt Manifest Data Corrections. After a facility has certified ~~to the receipt of hazardous wastes by signing Item 20 of the manifest,~~ that the manifest is complete, by signing it at the time of submission to the USEPA

e-Manifest system, any post-receipt data corrections may be submitted at any time by any interested person (e.g., waste handler) named on the manifest. ~~A transporter may participate electronically~~ If corrections requested by the USEPA for portions of the manifest that a transporter is required to complete, the transporter must address the data correction within 30 days from the date of the request. Data correction submissions must be made electronically via~~in~~ the post-receipt data corrections process ~~by following the process~~ described in 35 Ill. Adm. Code 725.171(l)~~724.171(l)~~, which applies to corrections made to either paper or electronic manifests. ~~records~~.

b) Before transporting the hazardous waste, the transporter must sign and date the manifest acknowledging acceptance of the hazardous waste from the generator. The transporter must return a signed copy to the generator before leaving the generator's property.

c) The transporter must ensure that the manifest accompanies the hazardous waste. For exports, the transporter must ensure that a movement document that includes all information required by Section 722.183(d) also accompanies the hazardous waste. For imports, the transporter must ensure that a movement document that includes all information required by Section 722.184(d) also accompanies the hazardous waste.~~In the case of exports occurring under the terms of a consent issued by USEPA to the exporter on or after December 31, 2016, the transporter must ensure that a movement document that includes all information required by 35 Ill. Adm. Code 722.183(d) also accompanies the hazardous waste. In the case of imports occurring under the terms of a consent issued by USEPA to the country of export or the importer on or after December 31, 2016, the transporter must ensure that a movement document that includes all information required by 35 Ill. Adm. Code 722.184(d) also accompanies the hazardous waste.~~

d) A transporter that delivers a hazardous waste to another transporter or to the designated facility must do the following:

1) It must obtain the date of delivery and the handwritten signature of that transporter or of the owner or operator of the designated facility on the manifest;

2) It must retain one copy of the manifest in accordance with Section 723.122; and

3) It must give the remaining copies of the manifest to the accepting transporter or designated facility.

e) Subsections (c), (d), and (f) do not apply to water (bulk shipment) transporters if all of the following are true:

1) The hazardous waste is delivered by water (bulk shipment) to the designated facility;

2) A shipping paper containing all the information required on the manifest (excluding the USEPA identification numbers, generator certification and signatures) accompanies the hazardous waste and, for exports or imports occurring under the terms of a consent issued by USEPA, a movement document that includes all information required by 35 Ill. Adm. Code 722.183(d) or 722.184(d) accompanies the hazardous waste;

3) The delivering transporter obtains the date of delivery and handwritten signature of the owner or operator designated facility on either the manifest or the shipping paper;

4) The person delivering the hazardous waste to the initial water (bulk shipment) transporter obtains the date of delivery and signature of the water (bulk shipment) transporter on the manifest and forwards it to the designated facility; and

5) A copy of the shipping paper or manifest is retained by each water (bulk shipment) transporter in accordance with Section 723.122.

f) For shipments involving rail transportation, the following requirements apply instead of subsections (c), (d), and (e), which do not apply:

1) When accepting hazardous waste from a non-rail transporter, the initial rail transporter must do the following:

A) It must sign and date the manifest acknowledging acceptance of the hazardous waste;

B) It must return a signed copy of the manifest to the non-rail transporter;

C) It must forward at least three copies of the manifest to the following entities:

i) The next non-rail transporter, if any;

ii) The designated facility, if the shipment is delivered to that facility by rail; or

iii) The last rail transporter designated to handle the waste in the United States; and

D) It must retain one copy of the manifest and rail shipping paper in accordance with Section 723.122.

2) Rail transporters must ensure that a shipping paper containing all the information required on the manifest (excluding the USEPA identification numbers, generator certification and signatures) and, for exports or imports occurring under the terms of a consent issued by USEPA, a movement document that includes all information required by 35 Ill. Adm. Code 722.183(d) or 722.184(d) accompanies the hazardous waste at all times.

BOARD NOTE: Intermediate rail transporters are not required to sign the manifest, movement document, or shipping paper.

3) When delivering hazardous waste to the designated facility, a rail transporter must do the following:

A) It must obtain the date of delivery and handwritten signature of the owner or operator of the designated facility on the manifest or the shipping paper (if the manifest has not been received by the facility); and

B) It must retain a copy of the manifest or signed shipping paper in accordance with Section 723.122.

4) When delivering hazardous waste to a non-rail transporter a rail transporter must do the following:

A) It must obtain the date of delivery and the handwritten signature of the next non-rail transporter on the manifest; and

B) It must retain a copy of the manifest in accordance with Section 723.122.

5) Before accepting hazardous waste from a rail transporter, a non-rail transporter must sign and date the manifest and provide a copy to the rail transporter.

g) Transporters that transport hazardous waste out of the United States must do the following:

1) Sign and date the manifest in the International Shipments block on the Continuation Sheet (USEPA Form 8700-22A) to indicate the date that the hazardous waste left the United States or has been delivered to a seaport of exit for loading onto an international carrier;

2) Retain one copy in accordance with Section 723.122(d);

3) Compliance date for manifest returns on January 22, 2025. Beginning on January 22, 2025, return signed, top copies of the manifest and continuation sheet to the generator. On December 1, 2025, this paragraph (g)(3) no longer applies, and paragraph (g)(4) of this section applies instead.~~Return a signed copy of the manifest to the generator; and~~

4) Compliance date for manifest returns on December 1, 2025. Beginning on December 1, 2025, return signed, top copies of the manifest and continuation sheet to the exporter.~~For paper manifests only, the transporter must do the following:~~

~~A) Send a copy of the manifest to the e-Manifest System in accordance with the allowable methods specified in 35 Ill. Adm. Code 724.171(a)(2)(E); and~~

~~B) For shipments initiated prior to December 31, 2017, when instructed by the exporter to do so, give a copy of the manifest to a U.S. Customs official at the point of departure from the United States.~~

h) A transporter transporting hazardous waste from a generator that generates greater than 100 kg (220 lbs) but less than 1,000 kg (2,200 lbs) of hazardous waste in a calendar month need not comply with this Section or Section 723.122 provided that:

1) The waste is being transported under a reclamation agreement provided for in 35 Ill. Adm. Code 722.120(e);

2) The transporter records, on a log or shipping paper, the following information for each shipment:

A) The name, address and USEPA Identification Number (35 Ill. Adm. Code 722.118) of the generator of the waste;

B) The quantity of waste accepted;

C) All shipping information required by the United States Department of Transportation;

D) The date the waste is accepted; and

3) The transporter carries this record when transporting waste to the reclamation facility; and

4) The transporter retains these records for a period of at least three years after termination or expiration of the agreement.

(Source: Amended at 44 Ill. Reg. 15331, effective September 3, 2020)

Section 723.121 Compliance with the Manifest

a) Except as provided in subsection (b), the transporter must deliver the entire quantity of hazardous waste that it has accepted from a generator or a transporter to:

1) The designated facility listed on the manifest; or

2) The alternate designated facility, if the hazardous waste cannot be delivered to the designated facility because an emergency prevents delivery; or

3) The next designated transporter; or

4) The place outside the United States designated by the generator.

b) Non-Delivery of the Hazardous Waste

1) Emergency Condition. If the hazardous waste cannot be delivered in accordance with subsection (a)(1), (a)(2), or (a)(4) because of an emergency condition other than rejection of the waste by the designated facility or alternate designated facility, then the transporter must contact the generator for further instructions and must revise the manifest according to the generator's instructions.

2) Transporters Without Generator-Agency Authority. If the hazardous waste is not delivered to the next designated transporter in accordance with subsection (a)(3), and the current transporter is without contractual authorization from the generator to act as the generator's agent with respect to transporter additions or substitutions, then the current transporter must contact the generator for further instructions prior to making any revisions to the transporter designations on the manifest. The current transporter may thereafter make such revisions if the condition of subsection (b)(2)(C) is true and the condition of either subsection (b)(2)(A) or (b)(2)(B) is also true:

A) The hazardous waste is not delivered in accordance with subsection (a)(3) because of an emergency condition.

B) The current transporter proposes to change the transporters designated on the manifest by the generator, or to add a new

transporter during transportation, to respond to an emergency, or for purposes of transportation efficiency, convenience, or safety.

C) The generator authorizes the revision.

3) Transporters with Generator-Agency Authority. If the hazardous waste is not delivered to the next designated transporter in accordance with subsection (a)(3), and the current transporter has authorization from the generator to act as the generator's agent, then the current transporter may change the transporters designated on the manifest, or add a new transporter, during transportation without the generator's prior, explicit approval, provided that all of the following conditions are true:

A) The current transporter is authorized by a contractual provision that provides explicit agency authority for the transporter to make such transporter changes on behalf of the generator;

B) The transporter enters, in Item 14 of each manifest for which such a change is made, the following statement of its generator-agency authority: "Contract retained by generator confers agency authority on initial transporter to add or substitute additional transporters on generator's behalf"; and

C) The change in designated transporters is necessary to respond to an emergency, or for purposes of transportation efficiency, convenience, or safety.

4) Generator Liability. The grant by a generator of authority to a transporter to act as the agent of the generator with respect to changes to transporter designations under subsection (b)(3) does not affect the generator's liability or responsibility for complying with any applicable requirement under 35 Ill. Adm. Code, or grant any additional authority to the transporter to act on behalf of the generator.

c) If hazardous waste is rejected by the designated facility while the transporter is on the premises of the designated facility, then the transporter must obtain the following, as appropriate:

1) For a partial load rejection or for regulated quantities of container residues: a copy of the original manifest that includes the facility's date and signature, the manifest tracking number of the new manifest that will accompany the shipment, and a description of the partial rejection or container residue in the discrepancy block of the original manifest. The transporter must retain a copy of this manifest in accordance with Section 723.122 and give the remaining copies of the original manifest to the rejecting designated facility. If the transporter is forwarding the rejected

part of the shipment or a regulated container residue to an alternate facility or returning it to the generator, the transporter must obtain a new manifest to accompany the shipment, and the new manifest must include all of the information required in 35 Ill. Adm. Code 724.172(e)(1) through (e)(6) or (f)(1) through (f)(6) or 725.172(e)(1) through (e)(6) or (f)(1) through (f)(6).

2) For a full load rejection that will be taken back by the transporter: a copy of the original manifest that includes the rejecting facility's signature and date attesting to the rejection, the description of the rejection in the discrepancy block of the manifest, and the name, address, phone number, and USEPA identification number for the alternate facility or generator to whom the shipment must be delivered. The transporter must retain a copy of the manifest in accordance with Section 723.122 and give a copy of the manifest containing this information to the rejecting designated facility. If the original manifest is not used, then the transporter must obtain a new manifest for the shipment and comply with 35 Ill. Adm. Code 724.172(e)(1) through (e)(6) or (f)(1) through (f)(6) or 725.172(e)(1) through (e)(6) or (f)(1) through (f)(6).

(Source: Amended at 44 Ill. Reg. 15331, effective September 3, 2020)

Section 723.122 Recordkeeping

a) A transporter of hazardous waste must keep a copy of the manifest signed by the generator, himself, and the next designated transporter or the owner or operator of the designated facility for a period of three years from the date the hazardous waste was accepted by the initial transporter.

b) For shipments delivered to the designated facility by water (bulk shipment), each water (bulk shipment) transporter must retain a copy of the shipping paper containing all the information required in Section 723.120(e)(2) for a period of three years from the date the hazardous waste was accepted by the initial transporter.

c) For shipments of hazardous waste by rail within the United States:

1) The initial rail transporter must keep a copy of the manifest and shipping paper with all the information required in Section 723.120(f)(2) for a period of three years from the date the hazardous waste was accepted by the initial transporter, and

2) The final rail transporter must keep a copy of the signed manifest (or the shipping paper if signed by the designated facility in lieu of the manifest) for a period of three years from the date the hazardous waste was accepted by the initial transporter.

BOARD NOTE: Intermediate rail transporters are not required to keep records pursuant to these regulations.

d) A transporter who transports hazardous waste out of the United States must keep a copy of the manifest indicating that the hazardous waste left the United States for a period of three years from the date the hazardous waste was accepted by the initial transporter.

e) The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the Director.

Section 723.125 Electronic Manifest Signatures---

a) e-Manifest signatures must meet the criteria described in 35 Ill. Adm. Code 722.125.

b) This subsection (b) corresponds with 40 CFR 263.25(b), a provision that USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal rule.

(Source: Amended at 42 Ill. Reg. 22595, effective November 19, 2018)

SUBPART C: HAZARDOUS WASTE DISCHARGES

Section 723.130 Immediate Action

a) In the event of a discharge of hazardous waste during transportation, the transporter must take appropriate immediate action to adequately protect human health and the environment (e.g., notify local authorities, dike the discharge area).

b) If a discharge of hazardous waste occurs during transportation and an official (of state or local government or of a federal agency) acting within the scope of his or her official responsibilities determines that immediate removal of the waste is necessary to adequately protect human health or the environment, that official may authorize the removal of the waste by transporters that do not have USEPA identification numbers and without the preparation of a manifest.

c) An air, rail, highway, or water transporter that has discharged hazardous waste must:

1) Give notice to the National Response Center (800-424-8802 or 202-426-2675), if required by 49 CFR 171.15 (Immediate Notice of Certain Hazardous Materials Incidents), incorporated by reference in 35 Ill. Adm. Code 720.111(b);

2) Report in writing to the Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau, Department of Transportation, Washington, D.C. 20590, as required by 49 CFR 171.16 (Detailed Hazardous Materials Incident Reports), incorporated by reference in 35 Ill. Adm. Code 720.111(b); and

3) Give notice to the following State agency:

Illinois Emergency Management Agency
110 East Adams
Springfield, Illinois 62706
217-782-7860

d) A water (bulk shipment) transporter that has discharged hazardous waste must give the same notice as required by 33 CFR 153.203 (Procedure for the Notice of Discharge), incorporated by reference in 35 Ill. Adm. Code 720.111(b), for oil and hazardous substances.

(Source: Amended at 31 Ill. Reg. 881, effective December 20, 2006)

Section 723.131 Discharge Cleanup

A transporter must clean up any hazardous waste discharge that occurs during transportation or take such action as may be required or approved by federal, State, or local officials so that the hazardous waste discharge no longer presents a hazard to human health or the environment.

(Source: Amended at 30 Ill. Reg. 3180, effective February 23, 2006)

TITLE 35: ENVIRONMENTAL PROTECTION

STANDARDS FOR OWNERS AND OPERATORS OF HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES

SUBPART A: GENERAL PROVISIONS

Section
724.101 Purpose, Scope, and Applicability
724.103 Relationship to Interim Status Standards
724.104 Electronic Reporting

SUBPART B: GENERAL FACILITY STANDARDS

Section
724.110 Applicability
724.111 USEPA Identification Number
724.112 Required Notices
724.113 General Waste Analysis
724.114 Security
724.115 General Inspection Requirements
724.116 Personnel Training
724.117 General Requirements for Ignitable, Reactive, or Incompatible Wastes
724.118 Location Standards
724.119 Construction Quality Assurance Program

SUBPART C: PREPAREDNESS AND PREVENTION

Section
724.130 Applicability
724.131 Design and Operation of Facility
724.132 Required Equipment
724.133 Testing and Maintenance of Equipment
724.134 Access to Communications or Alarm System
724.135 Required Aisle Space
724.137 Arrangements with Local Authorities

SUBPART D: CONTINGENCY PLAN AND EMERGENCY PROCEDURES

Section
724.150 Applicability
724.151 Purpose and Implementation of Contingency Plan

724.152 Content of Contingency Plan
724.153 Copies of Contingency Plan
724.154 Amendment of Contingency Plan
724.155 Emergency Coordinator
724.156 Emergency Procedures

SUBPART E: MANIFEST SYSTEM, RECORDKEEPING AND REPORTING

Section

724.170 Applicability
724.171 Use of Manifest System
724.172 Manifest Discrepancies
724.173 Operating Record
724.174 Availability, Retention, and Disposition of Records
724.175 Annual Facility Activities Report
724.176 Unmanifested Waste Report
724.177 Additional Reports

SUBPART F: RELEASES FROM SOLID WASTE MANAGEMENT UNITS

Section

724.190 Applicability
724.191 Required Programs
724.192 Groundwater Protection Standard
724.193 Hazardous Constituents
724.194 Concentration Limits
724.195 Point of Compliance
724.196 Compliance Period
724.197 General Groundwater Monitoring Requirements
724.198 Detection Monitoring Program
724.199 Compliance Monitoring Program
724.200 Corrective Action Program
724.201 Corrective Action for Solid Waste Management Units

SUBPART G: CLOSURE AND POST-CLOSURE CARE

Section

724.210 Applicability
724.211 Closure Performance Standard
724.212 Closure Plan; Amendment of Plan
724.213 Closure; Time Allowed for Closure
724.214 Disposal or Decontamination of Equipment, Structures, and Soils
724.215 Certification of Closure
724.216 Survey Plat
724.217 Post-Closure Care and Use of Property
724.218 Post-Closure Care Plan; Amendment of Plan

724.219 Post-Closure Notices
724.220 Certification of Completion of Post-Closure Care

SUBPART H: FINANCIAL REQUIREMENTS

Section
724.240 Applicability
724.241 Definitions of Terms as Used in This Subpart
724.242 Cost Estimate for Closure
724.243 Financial Assurance for Closure
724.244 Cost Estimate for Post-Closure Care
724.245 Financial Assurance for Post-Closure Care
724.246 Use of a Mechanism for Financial Assurance of Both Closure and Post-Closure Care
724.247 Liability Requirements
724.248 Incapacity of Owners or Operators, Guarantors, or Financial Institutions
724.251 Wording of the Instruments

SUBPART I: USE AND MANAGEMENT OF CONTAINERS

Section
724.270 Applicability
724.271 Condition of Containers
724.272 Compatibility of Waste with Container
724.273 Management of Containers
724.274 Inspections
724.275 Containment
724.276 Special Requirements for Ignitable or Reactive Waste
724.277 Special Requirements for Incompatible Wastes
724.278 Closure
724.279 Air Emission Standards

SUBPART J: TANK SYSTEMS

Section
724.290 Applicability
724.291 Assessment of Existing Tank System Integrity
724.292 Design and Installation of New Tank Systems or Components
724.293 Containment and Detection of Releases
724.294 General Operating Requirements
724.295 Inspections
724.296 Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems
724.297 Closure and Post-Closure Care
724.298 Special Requirements for Ignitable or Reactive Waste
724.299 Special Requirements for Incompatible Wastes

724.300 Air Emission Standards

SUBPART K: SURFACE IMPOUNDMENTS

Section
724.320 Applicability
724.321 Design and Operating Requirements
724.322 Action Leakage Rate
724.323 Response Actions
724.326 Monitoring and Inspection
724.327 Emergency Repairs; Contingency Plans
724.328 Closure and Post-Closure Care
724.329 Special Requirements for Ignitable or Reactive Waste
724.330 Special Requirements for Incompatible Wastes
724.331 Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027
724.332 Air Emission Standards

SUBPART L: WASTE PILES

Section
724.350 Applicability
724.351 Design and Operating Requirements
724.352 Action Leakage Rate
724.353 Response Action Plan
724.354 Monitoring and Inspection
724.356 Special Requirements for Ignitable or Reactive Waste
724.357 Special Requirements for Incompatible Wastes
724.358 Closure and Post-Closure Care
724.359 Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

SUBPART M: LAND TREATMENT

Section
724.370 Applicability
724.371 Treatment Program
724.372 Treatment Demonstration
724.373 Design and Operating Requirements
724.376 Food-Chain Crops
724.378 Unsaturated Zone Monitoring
724.379 Recordkeeping
724.380 Closure and Post-Closure Care
724.381 Special Requirements for Ignitable or Reactive Waste
724.382 Special Requirements for Incompatible Wastes

724.383 Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

SUBPART N: LANDFILLS

Section
724.400 Applicability
724.401 Design and Operating Requirements
724.402 Action Leakage Rate
724.403 Monitoring and Inspection
724.404 Response Actions
724.409 Surveying and Recordkeeping
724.410 Closure and Post-Closure Care
724.412 Special Requirements for Ignitable or Reactive Waste
724.413 Special Requirements for Incompatible Wastes
724.414 Special Requirements for Bulk and Containerized Liquids
724.415 Special Requirements for Containers
724.416 Disposal of Small Containers of Hazardous Waste in Overpacked Drums (Lab Packs)
724.417 Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

SUBPART O: INCINERATORS

Section
724.440 Applicability
724.441 Waste Analysis
724.442 Principal Organic Hazardous Constituents (POHCs)
724.443 Performance Standards
724.444 Hazardous Waste Incinerator Permits
724.445 Operating Requirements
724.447 Monitoring and Inspections
724.451 Closure

SUBPART S: SPECIAL PROVISIONS FOR CLEANUP

Section
724.650 Applicability of Corrective Action Management Unit Regulations
724.651 Grandfathered Corrective Action Management Units
724.652 Corrective Action Management Units
724.653 Temporary Units
724.654 Staging Piles
724.655 Disposal of CAMU-Eligible Wastes in Permitted Hazardous Waste Landfills

SUBPART W: DRIP PADS

Section
724.670 Applicability
724.671 Assessment of Existing Drip Pad Integrity
724.672 Design and Installation of New Drip Pads
724.673 Design and Operating Requirements
724.674 Inspections
724.675 Closure

SUBPART X: MISCELLANEOUS UNITS

Section
724.700 Applicability
724.701 Environmental Performance Standards
724.702 Monitoring, Analysis, Inspection, Response, Reporting, and Corrective Action
724.703 Post-Closure Care

SUBPART AA: AIR EMISSION STANDARDS FOR PROCESS VENTS

Section
724.930 Applicability
724.931 Definitions
724.932 Standards: Process Vents
724.933 Standards: Closed-Vent Systems and Control Devices
724.934 Test Methods and Procedures
724.935 Recordkeeping Requirements
724.936 Reporting Requirements

SUBPART BB: AIR EMISSION STANDARDS FOR EQUIPMENT LEAKS

Section
724.950 Applicability
724.951 Definitions
724.952 Standards: Pumps in Light Liquid Service
724.953 Standards: Compressors
724.954 Standards: Pressure Relief Devices in Gas/Vapor Service
724.955 Standards: Sampling Connecting Systems
724.956 Standards: Open-ended Valves or Lines
724.957 Standards: Valves in Gas/Vapor or Light Liquid Service
724.958 Standards: Pumps, Valves, Pressure Relief Devices, and Other Connectors
724.959 Standards: Delay of Repair
724.960 Standards: Closed-Vent Systems and Control Devices
724.961 Alternative Percentage Standard for Valves
724.962 Skip Period Alternative for Valves
724.963 Test Methods and Procedures
724.964 Recordkeeping Requirements
724.965 Reporting Requirements

SUBPART CC: AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS

Section
724.980 Applicability
724.981 Definitions
724.982 Standards: General
724.983 Waste Determination Procedures
724.984 Standards: Tanks
724.985 Standards: Surface Impoundments
724.986 Standards: Containers
724.987 Standards: Closed-Vent Systems and Control Devices
724.988 Inspection and Monitoring Requirements
724.989 Recordkeeping Requirements
724.990 Reporting Requirements
724.991 Alternative Control Requirements for Tanks (Repealed)

SUBPART DD: CONTAINMENT BUILDINGS

Section
724.1100 Applicability
724.1101 Design and Operating Standards
724.1102 Closure and Post-Closure Care

SUBPART EE: HAZARDOUS WASTE MUNITIONS AND EXPLOSIVES STORAGE

Section
724.1200 Applicability
724.1201 Design and Operating Standards
724.1202 Closure and Post-Closure Care

724.APPENDIX A Recordkeeping Instructions
724.APPENDIX B EPA Report Form and Instructions (Repealed)
724.APPENDIX D Cochran's Approximation to the Behrens-Fisher Student's T-Test
724.APPENDIX E Examples of Potentially Incompatible Waste
724.APPENDIX I Groundwater Monitoring List

AUTHORITY: Implementing Sections 7.2, 22.4, and 22.23e and authorized by Section 27 of the Environmental Protection Act [415 ILCS 5/7.2, 22.4, 22.23e, and 27].

Reg. 1724, effective January 12, 2015; amended in R16-7 at 40 Ill. Reg. 11726, effective August 9, 2016; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. 22614, effective November 19, 2018; amended in R19-3 at 43 Ill. Reg. 601, effective December 6, 2018; amended in R19-11 at 43 Ill. Reg. 5999, effective May 2, 2019; amended in R20-8/R20-16 at 44 Ill. Reg. 15347, effective September 3, 2020; amended in R21-13, R22-13, R24-4 at 48 Ill. Reg. 9892, effective June 20, 2024; amended in R24-12 at 48 Ill. Reg. 17057, effective November 7, 2024; amended in R25-22 at 49 Ill. Reg. 11384, effective August 27, 2025.

SUBPART A: GENERAL PROVISIONS

Section 724.101 Purpose, Scope, and Applicability

a) This Part establishes minimum standards that define the acceptable management of hazardous waste.

b) The standards in this Part apply to owners and operators of all facilities that treat, store, or dispose of hazardous waste, except as specifically provided otherwise in this Part or 35 Ill. Adm. Code 721.

c) This Part applies to a person disposing of hazardous waste by means of ocean disposal subject to a permit issued under the federal Marine Protection, Research and Sanctuaries Act (33 USC 1401 et seq.) only to the extent they are included in a RCRA permit by rule granted to such a person under 35 Ill. Adm. Code 703.141. A "RCRA permit" is a permit required by Section 21(f) of the Environmental Protection Act and 35 Ill. Adm. Code 703.121.

BOARD NOTE: This Part does apply to the treatment or storage of hazardous waste before it is loaded onto an ocean vessel for incineration or disposal at sea.

d) This Part applies to a person disposing of hazardous waste by means of underground injection subject to a permit issued by the Agency under Section 12(g) of the Act only to the extent they are required by Subpart F of 35 Ill. Adm. Code 704.

BOARD NOTE: This Part does apply to the above-ground treatment or storage of hazardous waste before it is injected underground.

e) This Part applies to the owner or operator of a POTW (publicly owned treatment works) that treats, stores, or disposes of hazardous waste only to the extent included in a RCRA permit by rule granted to such a person under 35 Ill. Adm. Code 703.141.

f) This subsection (f) corresponds with 40 CFR 264.1(f), which provides that the federal regulations do not apply to T/S/D activities in authorized states, except under limited, enumerated circumstances. This statement maintains structural consistency with USEPA rules.

g) This Part does not apply to the following:

1) The owner or operator of a facility permitted by the Agency under Section 21 of the Act to manage municipal or industrial solid waste, if the only hazardous waste the facility treats, stores, or disposes of is excluded from regulation under this Part by 35 Ill. Adm. Code 722.114.

BOARD NOTE: The owner or operator may be subject to 35 Ill. Adm. Code 807 and may have to have a supplemental permit under 35 Ill. Adm. Code 807.210.

2) The owner or operator of a facility managing recyclable materials described in 35 Ill. Adm. Code 721.106(a)(2) through (a)(4) (except to the extent that requirements of this Part are referred to in Subpart C, F, G, or H of 35 Ill. Adm. Code 726 or 35 Ill. Adm. Code 739).

3) A generator accumulating waste on-site in compliance with 35 Ill. Adm. Code 722.114, 722.115, 722.116, 722.117, or 722.Subpart K or L.

4) A farmer disposing of waste pesticides from the farmer's own use in compliance with 35 Ill. Adm. Code 722.170.

5) The owner or operator of a totally enclosed treatment facility, as defined in 35 Ill. Adm. Code 720.110.

6) The owner or operator of an elementary neutralization unit or a wastewater treatment unit, as defined in 35 Ill. Adm. Code 720.110, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 High TOC Subcategory defined in Table T to 35 Ill. Adm. Code 728) or reactive (D003) waste to remove the characteristic before land disposal, the owner or operator must comply with the requirements set out in Section 724.117(b).

7) This subsection (g)(7) corresponds with 40 CFR 264.1(g)(7), reserved by USEPA. This statement maintains structural consistency with USEPA rules.

8) Immediate Response

A) Except as provided in subsection (g)(8)(B), a person engaged in treatment or containment activities during immediate response to any of the following situations:

i) A discharge of a hazardous waste;

ii) An imminent and substantial threat of a discharge of hazardous waste;

iii) A discharge of a material that becomes a hazardous waste when discharged; or

iv) An immediate threat to human health, public safety, property, or the environment from the known or suspected presence of military munitions, other explosive material, or an explosive device, as determined by an explosives or munitions emergency response specialist as defined in 35 Ill. Adm. Code 720.110.

B) An owner or operator of a facility otherwise regulated by this Part must comply with all applicable requirements of Subparts C and D.

C) Any person that is covered by subsection (g)(8)(A) and that continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of this Part and 35 Ill. Adm. Code 702, 703, and 705 for those activities.

D) In the case of an explosives or munitions emergency response, if a federal, State, or local official acting within the scope of his or her official responsibilities or an explosives or munitions emergency response specialist determines that immediate removal of the material or waste is necessary to adequately protect human health or the environment, that official or specialist may authorize the removal of the material or waste by transporters that do not have USEPA identification numbers and without the preparation of a manifest. In the case of emergencies involving military munitions, the responding military emergency response specialist's organizational unit must retain records for three years identifying the dates of the response, the responsible persons responding, the type and description of material addressed, and its disposition.

9) A transporter storing manifested shipments of hazardous waste in containers meeting 35 Ill. Adm. Code 722.130 at a transfer facility for a period of ten days or less.

10) The addition of absorbent materials to waste in a container (as defined in 35 Ill. Adm. Code 720) or the addition of waste to absorbent material in a container, provided these actions occur at the time waste is first placed in the container, and Sections 724.117(b), 724.271, and 724.272 are complied with.

11) A universal waste handler or universal waste transporter (as defined in 35 Ill. Adm. Code 720.110) that handles any of the wastes listed below is subject to regulation under 35 Ill. Adm. Code 733 when handling the following universal wastes:

A) Batteries, as described in 35 Ill. Adm. Code 733.102;

B) Pesticides, as described in 35 Ill. Adm. Code 733.103;

C) Mercury-containing equipment, as described in 35 Ill. Adm. Code 733.104;

D) Lamps, as described in 35 Ill. Adm. Code 733.105;

E) Aerosol cans, as described in 35 Ill. Adm. Code 733.106; and

F) Paint and paint-related wastes, as described in 35 Ill. Adm. Code 733.107.

12) This subsection (g)(12) corresponds with 40 CFR 264.1(g)(12), which applies only to a facility outside Illinois. This statement maintains structural consistency with the corresponding USEPA rule.

13) A reverse distributor accumulating potentially creditable hazardous waste pharmaceuticals and evaluated hazardous waste pharmaceuticals, as defined in 35 Ill. Adm. Code 726.600. A reverse distributor is subject to regulation under Subpart P of 35 Ill. Adm. Code 726 instead of this Part for the accumulation of potentially creditable hazardous waste pharmaceuticals and evaluated hazardous waste pharmaceuticals.

h) This Part applies to owners and operators of facilities that treat, store, or dispose of hazardous wastes referred to in 35 Ill. Adm. Code 728.

i) 35 Ill. Adm. Code 726.505 identifies when this Part applies to the storage of military munitions classified as solid waste under 35 Ill. Adm. Code 726.302. The treatment and disposal of hazardous waste military munitions are subject to the applicable permitting, procedural, and technical standards in 35 Ill. Adm. Code 702, 703, 705, 720 through 728, and 738.

j) Subparts B, C, and D and Section 724.201 do not apply to remediation waste management sites. (However, some remediation waste management sites may be a part of a facility that is subject to a traditional RCRA permit because the facility is also treating, storing, or disposing of hazardous wastes that are not remediation wastes. In these cases, Subparts B, C, and D, and Section 724.201 do apply to the facility subject to the traditional RCRA permit.) Instead of Subparts B, C, and D, the owner or operator of a remediation waste management site must comply with the following requirements:

1) The owner or operator must obtain a USEPA identification number by applying to the Agency using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12), as described in Section 724.111;

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage.

2) The owner or operator must obtain a detailed chemical and physical analysis of a representative sample of the hazardous remediation wastes to be managed at the site. At a minimum, the analysis must contain all of the information that must be known to treat, store, or dispose of the waste

according to this Part and 35 Ill. Adm. Code 728, and the owner or operator must keep the analysis accurate and up to date;

3) The owner or operator must prevent people who are unaware of the danger from entering the site, and the owner or operator must minimize the possibility for unauthorized people or livestock entering onto the active portion of the remediation waste management site, unless the owner or operator can demonstrate the following to the Agency:

   A) That physical contact with the waste, structures, or equipment within the active portion of the remediation waste management site will not injure people or livestock that may enter the active portion of the remediation waste management site; and

   B) That disturbance of the waste or equipment by people or livestock that enter onto the active portion of the remediation waste management site will not cause a violation of the requirements of this Part;

4) The owner or operator must inspect the remediation waste management site for malfunctions, deterioration, operator errors, and discharges that may be causing or may lead to a release of hazardous waste constituents to the environment or a threat to human health. The owner or operator must conduct these inspections often enough to identify problems in time to correct them before they harm human health or the environment, and the owner or operator must remedy the problem before it leads to a human health or environmental hazard. If a hazard is imminent or has already occurred, the owner or operator must immediately take remedial action;

5) The owner or operator must provide personnel with classroom or on-the-job training on how to perform their duties in a way that ensures the remediation waste management site complies with this Part, and on how to respond effectively to emergencies;

6) The owner or operator must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste, and the owner or operator must prevent threats to human health and the environment from ignitable, reactive, and incompatible waste;

7) For remediation waste management sites subject to regulation under Subparts I through O and Subpart X, the owner or operator must design, construct, operate, and maintain a unit within a 100-year floodplain to prevent washout of any hazardous waste by a 100-year flood, unless the owner or operator can meet the requirements of Section 724.118(b);

8) The owner or operator must not place any non-containerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground mine, or cave;

9) The owner or operator must develop and maintain a construction quality assurance program for all surface impoundments, waste piles, and landfill units that are required to comply with Sections 724.321(c) and (d), 724.351(c) and (d), and 724.401(c) and (d) at the remediation waste management site, according to Section 724.119;

10) The owner or operator must develop and maintain procedures to prevent accidents and a contingency and emergency plan to control accidents that occur. These procedures must address proper design, construction, maintenance, and operation of remediation waste management units at the site. The goal of the plan must be to minimize the possibility of, and the hazards from, a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment. The plan must explain specifically how to treat, store, and dispose of the hazardous remediation waste in question, and must be implemented immediately whenever a fire, explosion, or release of hazardous waste or hazardous waste constituents occurs that could threaten human health or the environment;

11) The owner or operator must designate at least one employee, either on the facility premises or on call (that is, available to respond to an emergency by reaching the facility quickly), to coordinate all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan;

12) The owner or operator must develop, maintain, and implement a plan to meet the requirements in subsections (j)(2) through (j)(6) and (j)(9) through (j)(10); and

13) The owner or operator must maintain records documenting compliance with subsections (j)(1) through (j)(12).

(Source: Amended at 49 Ill. Reg. 11384, effective August 27, 2025)

Section 724.103 Relationship to Interim Status Standards

A facility owner or operator that has fully complied with the requirements for interim status—as defined in Section 3005(e) of RCRA and regulations under Subpart C of 35 Ill. Adm. Code 703—must comply with the regulations specified in 35 Ill. Adm. Code 725 in lieu of the regulations in this Part, until final administrative disposition of his permit application is made, except as provided under Subpart S of this Part.

BOARD NOTE: As stated in Section 21(f) of the Illinois Environmental Protection Act, the treatment, storage, or disposal of hazardous waste is prohibited, except in accordance with a RCRA permit. 35 Ill. Adm. Code 703, Subpart C provides for the continued operation of an existing facility that meets certain conditions until final administrative disposition of the owner's or operator's permit application.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.104 Electronic Reporting

The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Derived from 40 CFR 3, as added, and 40 CFR 271.10(b), 271.11(b), and 271.12(h) (2005), as amended at 70 Fed. Reg. 59848 (Oct. 13, 2005).

(Source: Added at 31 Ill. Reg. 893, effective December 20, 2006)

SUBPART B: GENERAL FACILITY STANDARDS

Section 724.110 Applicability

a) The regulations in this Subpart B apply to owners and operators of all hazardous waste facilities, except as provided in Section 724.101 and subsection (b).

b) Section 724.118(b) applies only to facilities subject to regulation under Subparts I through O and X.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.111 USEPA Identification Number

Every facility owner or operator must apply to the Agency for a USEPA identification number using Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12).

BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.

(Source: Amended at 43 Ill. Reg. 5999, May 2, 2019)

Section 724.112 Required Notices

a) The owner or operator of a facility that is arranging to receive hazardous waste subject to Subpart H of 35 Ill. Adm. Code 722 from a foreign source must submit the following required notices:

1) As required by 35 Ill. Adm. Code 722.184(b), for imports where the competent authority of the country of export does not require the foreign exporter to submit to it a notification proposing export and obtain consent from USEPA and the competent authorities for the countries of transit, the owner or operator of the facility, if acting as the importer, must provide notification of the proposed transboundary movement in English to USEPA using the methods listed in 35 Ill. Adm. Code 722.182(e) at least 60 days before the first shipment is expected to depart the country of export. The notification may cover up to one year of shipments of wastes having similar physical and chemical characteristics; the same United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111; the same USEPA hazardous waste numbers (from Subpart C or D of 35 Ill. Adm. Code 721); the waste codes from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and being sent from the same foreign exporter.

2) As required by 35 Ill. Adm. Code 722.184(d)(2)(O), a copy of the movement document with all the required signatures within three working days after receiving the shipment to the foreign exporter and~~;~~ to the competent authorities of the countries of export and transit that control the shipment as an export and transit shipment of hazardous waste, respectively.~~; and,~~ For shipments received on or after the electronic import-export reporting compliance date, ~~to USEPA electronically using~~ the receiving facility must close out the movement document to confirm receipt within three working days of shipment delivery using the USEPA's Waste Import Export Tracking System (WIETS) or successor system. For shipments sent from a country with which the USEPA has established an electronic exchange of movement document tracking stat, the receiving facility may use WIETS or its successor system to send movement document confirmation data back through the electronic exchange to foreign exporter and the country of export. The original of the signed movement document must be maintained at the facility for at least three years. The owner or operator of a facility may meet this recordkeeping requirement by retaining electronically submitted documents in the facility's account on USEPA's WIETS, or its successor system, provided that ~~if~~ copies are readily available for viewing and production upon

request by any USEPA or Agency inspector. An owner or operator of a facility may not be held liable for the inability to produce the documents for inspection under this section if the owner or operator of a facility can demonstrate that the inability to produce the document is due exclusively to technical difficulty with USEPA's WIETS, or its successor system, for which ~~and~~ the owner or operator of a facility has no responsibility.

3) As required by 35 Ill. Adm. Code 722.184(f)(4), if the facility has physical control of the waste and it must be sent to an alternate facility or returned to the country of export, the owner or operator of the facility must inform USEPA, using the methods listed in 35 Ill. Adm. Code 722.184(b)(1) of the need to return or arrange alternate management of the shipment.

4) As required by 35 Ill. Adm. Code 722.184(g), the facility owner or operator must do the following:

A) Send copies of the signed and dated confirmation of recovery or disposal, as soon as possible, but no later than thirty days after completing recovery or disposal on the waste in the shipment and no later than one calendar year following receipt of the waste, to the foreign exporter, to the competent authority of the country of export that controls the shipment as an export of hazardous waste, and for shipments recycled or disposed of on or after the electronic import-export reporting compliance date, to the USEPA electronically using WIETS, or its successor system. For shipments sent from a country with which the USEPA has established an electronic exchange of movement document tracking data, the receiving facility may use WIETS or its successor system to send confirmation of recovery or disposal data back through the electronic exchange to the foreign exporter and the country of export. ~~The owner or operator must send copies of the signed and dated confirmation of recovery or disposal, as soon as possible, within 30 days after completing recovery or disposal on the waste in the shipment and within one calendar year after receiving the waste, to the foreign exporter, to the competent authority of the country of export that controls the shipment as an export of hazardous waste. For shipments recycled or disposed of on or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's WIETS.~~

B) If the facility performed any of recovery operations R12, R13, or RC3 or disposal operations D13 through D15, the owner or operator must promptly send copies of the confirmation of recovery or disposal that it receives from the final recovery or disposal facility within one year of shipment delivery to the final recovery or disposal facility that performed one of recovery

operations R1 through R11 or RC1 to RC2, or one of disposal operations D1 through D12 or DC1 to DC2, to the competent authority of the country of export that controls the shipment as an export of hazardous waste. On or after the electronic import-export reporting compliance date, the owner or operator must make this submission to USEPA electronically using USEPA's WIETS, or its successor system. The recovery and disposal operations in this subsection (a)(4)(B) are defined in 35 Ill. Adm. Code 722.181. For shipments sent from a country with which the USEPA has established an electronic exchange of movement document tracking data, the receiving facility may use WIETS or its successor system to send confirmation of recovery or disposal data back through the electronic exchange to the country of export.

b) The owner or operator of a facility that receives hazardous waste from an off-site source (except where the owner or operator is also the generator) must inform the generator in writing that the owner or operator has the appropriate permits for, and will accept, the waste that the generator is shipping. The owner or operator must keep a copy of this written notice as part of the operating record.

c) Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the post-closure care period, the owner or operator must notify the new owner or operator in writing of the requirements of this Part and 35 Ill. Adm. Code 702 and 703.

BOARD NOTE: An owner's or operator's failure to notify the new owner or operator of the requirements of this Part in no way relieves the new owner or operator of his obligation to comply with all applicable requirements.

(Source: Amended at 48 Ill. Reg. 17057, effective November 7, 2024)

Section 724.113 General Waste Analysis

a) Analysis

1) Before an owner or operator treats, stores, or disposes of any hazardous wastes, or non-hazardous wastes if applicable under Section 724.213(d), the owner or operator must obtain a detailed chemical and physical analysis of a representative sample of the wastes. At a minimum, the analysis must contain all the information that must be known to treat, store, or dispose of the waste in accordance with this Part and 35 Ill. Adm. Code 728.

2) The analysis may include data developed under 35 Ill. Adm. Code 721 and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes.

BOARD NOTE: For example, the facility's records of analyses performed on the waste before the effective date of these regulations or studies conducted on hazardous waste generated from processes similar to that which generated the waste to be managed at the facility may be included in the data base required to comply with subsection (a)(1). The owner or operator of an off-site facility may arrange for the generator of the hazardous waste to supply part or all of the information required by subsection (a)(1), except as otherwise specified in 35 Ill. Adm. Code 728.107(b) and (c). If the generator does not supply the information, and the owner or operator chooses to accept a hazardous waste, the owner or operator is responsible for obtaining the information required to comply with this Section.

3) The analysis must be repeated as necessary to ensure that it is accurate and up to date. At a minimum, the analysis must be repeated as follows:

A) When the owner or operator is notified, or has reason to believe, that the process or operation generating the hazardous waste, or non-hazardous waste if applicable under Section 724.213(d), has changed; and

B) For off-site facilities, when the results of the inspection required in subsection (a)(4) indicate that the hazardous waste received at the facility does not match the waste designated on the accompanying manifest or shipping paper.

4) The owner or operator of an off-site facility must inspect and, if necessary, analyze each hazardous waste shipment received at the facility to determine whether it matches the identity of the waste specified on the accompanying manifest or shipping paper.

b) The owner or operator must develop and follow a written waste analysis plan that describes the procedures that it will carry out to comply with subsection (a). The owner or operator must keep this plan at the facility. At a minimum, the plan must specify the following:

1) The parameters for which each hazardous waste, or non-hazardous waste if applicable under Section 724.213(d), will be analyzed and the rationale for the selection of these parameters (i.e., how analysis for these parameters will provide sufficient information on the waste's properties to comply with subsection (a)).

2) The test methods that will be used to test for these parameters.

3) The sampling method that will be used to obtain a representative sample of the waste to be analyzed. A representative sample may be obtained using either of the following:

A) One of the sampling methods described in Appendix A to 35 Ill. Adm. Code 721; or

B) An equivalent sampling method.

BOARD NOTE: See 35 Ill. Adm. Code 720.121.

4) The frequency with which the initial analysis of the waste will be reviewed or repeated to ensure that the analysis is accurate and up to date.

5) For off-site facilities, the waste analyses that hazardous waste generators have agreed to supply.

6) Where applicable, the methods that will be used to meet the additional waste analysis requirements for specific waste management methods as specified in Sections 724.117, 724.414, 724.441, 724.934(d), 724.963(d), and 724.983 and 35 Ill. Adm. Code 728.107.

7) For surface impoundments exempted from land disposal restrictions under 35 Ill. Adm. Code 728.104(a), the procedures and schedules for the following:

A) The sampling of impoundment contents;

B) The analysis of test data; and

C) The annual removal of residues that are not delisted under 35 Ill. Adm. Code 720.122 or which exhibit a characteristic of hazardous waste and either of the following is true of the waste:

i) The residues do not meet applicable treatment standards of Subpart D of 35 Ill. Adm. Code 728; or

ii) Where no treatment standards have been established, such residues are prohibited from land disposal under 35 Ill. Adm. Code 728.132 or 728.139 or such residues are prohibited from land disposal under 35 Ill. Adm. Code 728.133(f).

8) For owners and operators seeking an exemption to the air emission standards of Subpart CC in accordance with Section 724.982, the following information:

A) If direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis and the analysis of test data to verify the exemption.

B) If knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the waste, if the waste is received from off-site, that is used as the basis for knowledge of the waste.

c) For off-site facilities, the waste analysis plan required in subsection (b) must also specify the procedures that will be used to inspect and, if necessary, analyze each shipment of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. At a minimum, the plan must describe the following:

1) The procedures that will be used to determine the identity of each movement of waste managed at the facility;

2) The sampling method that will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling; and

3) The procedures that the owner or operator of an off-site landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that the waste analysis plan be submitted with Part B of the permit application.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.114 Security

a) The owner or operator must prevent the unknowing entry, and minimize the possibility for the unauthorized entry, of persons or livestock onto the active portion of the facility, unless the owner or operator demonstrates the following to the Agency:

1) That physical contact with the waste, structures or equipment within the active portion of the facility will not injure unknowing or unauthorized persons or livestock that may enter the active portion of a facility; and

2) That disturbance of the waste or equipment, by the unknowing or unauthorized entry of persons or livestock onto the active portion of a facility, will not cause a violation of the requirements of this Part.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that an owner or operator who wishes to make the demonstration referred to above must do so with Part B of the permit application.

b) Unless the owner or operator has made a successful demonstration under subsections (a)(1) and (a)(2), a facility must have the following:

1) A 24-hour surveillance system (e.g., television monitoring or surveillance by guards or facility personnel) that continuously monitors and controls entry onto the active portion of the facility; or

2) Physical Barriers

A) An artificial or natural barrier (e.g., a fence in good repair or a fence combined with a cliff), which completely surrounds the active portion of the facility; and

B) A means to control entry, at all times, through the gates or other entrances to the active portion of the facility (e.g., an attendant, television monitors, locked entrance, or controlled roadway access to the facility).

BOARD NOTE: The requirements of subsection (b) are satisfied if the facility or plant within which the active portion is located itself has a surveillance system, or a barrier and a means to control entry, that complies with the requirements of subsection (b)(1) or (b)(2).

c) Unless the owner or operator has made a successful demonstration under subsections (a)(1) and (a)(2), a sign with the legend, "Danger—Unauthorized Personnel Keep Out", must be posted at each entrance to the active portion of a facility, and at other locations, in sufficient numbers to be seen from any approach to this active portion. The sign must be legible from a distance of at least 25 feet. Existing signs with a legend other than "Danger—Unauthorized Personnel Keep Out" may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the active portion, and that entry onto the active portion can be dangerous.

BOARD NOTE: See Section 724.217(b) for discussion of security requirements at disposal facilities during the post-closure care period.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.115 General Inspection Requirements

a) The owner or operator must conduct inspections often enough to identify problems in time to correct them before they harm human health or the environment. The owner or operator must inspect the facility for malfunctions and deterioration, operator errors, and discharges that may be causing or may lead to either of the following:

1) Release of hazardous waste constituents to the environment; or

2) A threat to human health.

b) Inspection Schedule

1) The owner or operator must develop and follow a written schedule for inspecting monitoring equipment, safety and emergency equipment, security devices, and operating and structural equipment (such as dikes and sump pumps) that are important to preventing, detecting, or responding to environmental or human health hazards.

2) The owner or operator must keep this schedule at the facility.

3) The schedule must identify the types of problems (e.g., malfunctions or deterioration) that are to be looked for during the inspection (e.g., inoperative sump pump, leaking fitting, eroding dike, etc.).

4) The frequency of inspection may vary for the items on the schedule. However, the frequency should be based on the rate of deterioration of the equipment and the probability of an environmental or human health incident if the deterioration, malfunction, or operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the items and frequencies called for in Sections 724.274, 724.293, 724.295, 724.326, 724.354, 724.378, 724.403, 724.447, 724.702, 724.933, 724.952, 724.953, 724.958, and 724.983 through 724.990, where applicable. 35 Ill. Adm. Code 703 requires the inspection schedule to be submitted with Part B of the permit application. The Agency must evaluate the schedule, along with the rest of the application, to ensure that it adequately protects human health and the environment. As part of this review, the Agency may modify or amend the schedule as may be necessary.

c) The owner or operator must remedy any deterioration or malfunction of equipment or structures that the inspection reveals on a schedule which ensures that the problem does not lead to an environmental or human health hazard.

Where a hazard is imminent or has already occurred, remedial action must be taken immediately.

d) The owner or operator must record inspections in an inspection log or summary. The owner or operator must keep these records for at least three years from the date of inspection. At a minimum, these records must include the date and time of the inspection, the name of the inspector, a notation of the observations made and the date, and nature of any repairs or other remedial actions.

(Source: Amended at 48 Ill. Reg. 17057, effective November 7, 2024)

Section 724.116 Personnel Training

a) The Personnel Training Program

1) Facility personnel must successfully complete a program of classroom instruction or on-the-job training that teaches them to perform their duties in a way that ensures the facility's compliance with the requirements of this Part. The owner or operator must ensure that this program includes all the elements described in the document required under subsection (d)(3).

BOARD NOTE: 35 Ill. Adm. Code 703 requires that owners and operators submit with Part B of the RCRA permit application, an outline of the training program used (or to be used) at the facility and a brief description of how the training program is designed to meet actual jobs tasks.

2) This program must be directed by a person trained in hazardous waste management procedures, and must include instruction that teaches facility personnel hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed.

3) At a minimum, the training program must be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including, where applicable:

A) Procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment;

B) Key parameters for automatic waste feed cut-off systems;

C) Communications or alarm systems;

D) Response to fires or explosions;

E) Response to groundwater contamination incidents; and

F) Shutdown of operations.

4) For facility employees that have receive emergency response training pursuant to the federal Occupational Safety and Health Administration (OSHA) regulations at 29 CFR 1910.120(p)(8) and (q), the facility is not required to provide separate emergency response training pursuant to this Section, provided that the overall facility OSHA emergency response training meets all the requirements of this Section.

b) Facility personnel must successfully complete the program required in subsection (a) within six months after the effective date of these regulations or six months after the date of their employment or assignment to a facility, or to a new position at a facility, whichever is later. Employees hired after the effective date of these regulations must not work in unsupervised positions until they have completed the training requirements of subsection (a).

c) Facility personnel must take part in an annual review of the initial training required in subsection (a).

d) The owner or operator must maintain the following documents and records at the facility:

1) The job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job;

2) A written job description for each position listed under subsection (d)(1). This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but must include the requisite skill, education or other qualifications, and duties of employees assigned to each position;

3) A written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed under subsection (d)(1);

4) Records that document that the training or job experience required under subsections (a), (b), and (c) has been given to, and completed by, facility personnel.

e) Training records on current personnel must be kept until closure of the facility; training records on former employees must be kept for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.117 General Requirements for Ignitable, Reactive, or Incompatible Wastes

a) The owner or operator must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. This waste must be separated and protected from sources of ignition or reaction including but not limited to: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical or mechanical), spontaneous ignition (e.g., from heat-producing chemical reactions), and radiant heat. While ignitable or reactive waste is being handled, the owner or operator must confine smoking and open flame to specially designated locations. "No Smoking" signs must be conspicuously placed wherever there is a hazard from ignitable or reactive waste.

b) Where specifically required by this Part, the owner or operator of a facility that treats, stores or disposes ignitable or reactive waste, or mixes incompatible waste and other materials, must take precautions to prevent reactions that do the following:

1) Generate extreme heat or pressure, fire or explosions, or violent reactions;

2) Produce uncontrolled toxic mists, fumes, dusts or gases in sufficient quantities to threaten human health or the environment;

3) Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;

4) Damage the structural integrity of the device or facility;

5) Through other like means threaten human health or the environment.

c) When required to comply with subsection (a) or (b), the owner or operator must document that compliance. This documentation may be based on references to published scientific or engineering literature, data from trial tests (e.g., bench scale or pilot scale tests), waste analyses (as specified in Section 724.113), or the results of the treatment of similar wastes by similar treatment processes and under similar operating conditions.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.118 Location Standards

a) Seismic Considerations

1) Portions of new facilities where treatment, storage or disposal of hazardous waste will be conducted must not be located within 61 meters (200 feet) of a fault that has had displacement in Holocene time.

2) As used in subsection (a)(1):

A) "Fault" means a fracture along which rocks on one side have been displaced with respect to those on the other side.

B) "Displacement" means the relative movement of any two sides of a fault measured in any direction.

C) "Holocene" means the most recent epoch of the Quaternary period, extending from the end of the Pleistocene to the present.

BOARD NOTE: Procedures for demonstrating compliance with this standard in Part B of the permit application are specified in 35 Ill. Adm. Code 703.182. Facilities that are located in political jurisdictions other than those listed in appendix VI to 40 CFR 264 (Political Jurisdictions in Which Compliance with § 264.18(a) Must Be Demonstrated), incorporated by reference in 35 Ill. Adm. Code 720.111(b), are assumed to be in compliance with this requirement.

b) Floodplains

1) A facility located in a 100-year floodplain must be designed, constructed, operated and maintained to prevent washout of any hazardous waste by a 100-year flood, unless the owner or operator can demonstrate the following to the Agency's satisfaction:

A) That procedures are in effect that will cause the waste to be removed safely, before flood waters can reach the facility, to a location where the wastes will not be vulnerable to flood waters; or

B) For existing surface impoundments, waste piles, land treatment units, landfills and miscellaneous units, that no adverse effect on human health or the environment will result if washout occurs, considering the following:

i) The volume and physical and chemical characteristics of the waste in the facility;

ii) The concentration of hazardous constituents that would potentially affect surface waters as a result of washout;

iii) The impact of such concentrations on the current or potential uses of and water quality standards established for the affected surface waters; and

iv) The impact of hazardous constituents on the sediments of affected surface waters or the soils of the 100-year floodplain that could result from washout;

2) As used in subsection (b)(1):

A) "100-year floodplain" means any land area that is subject to a one percent or greater chance of flooding in any given year from any source.

B) "Washout" means the movement of hazardous waste from the active portion of the facility as a result of flooding.

C) "100-year flood" means a flood that has a one percent chance of being equalled or exceeded in any given year.

BOARD NOTE: Requirements pertaining to other federal laws that affect the location and permitting of facilities are found in 40 CFR 270.3. For details relative to these laws, see USEPA's manual for SEA (special environmental area) requirements for hazardous waste facility permits. Though USEPA is responsible for complying with these requirements, applicants are advised to consider them in planning the location of a facility to help prevent subsequent project delays. Facilities may be required to obtain from the Illinois Department of Transportation on a permit or certification that a facility is flood-proofed.

c) Salt dome formations, salt bed formations, underground mines and caves. The placement of any non-containerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground cave or mine is prohibited.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.119 Construction Quality Assurance Program

a) Construction Quality Assurance (CQA) Program

1) A CQA program is required for all surface impoundment, waste pile and landfill units that are required to comply with Sections 724.321(c) and (d), 724.351(c) and (d), and 724.401(c) and (d). The program must ensure that the constructed unit meets or exceeds all design criteria and specifications in the permit. The program must be developed and implemented under the direction of a CQA officer who is a registered professional engineer.

2) The CQA program must address the following physical components, where applicable:

A) Foundations;

B) Dikes;

C) Low-permeability soil liners;

D) Geomembranes (flexible membrane liners);

E) Leachate collection and removal systems and leak detection systems; and

F) Final cover systems.

b) Written CQA Plan. The owner or operator of units subject to the CQA program under subsection (a) must develop and implement a written CQA plan. The plan must identify steps that will be used to monitor and document the quality of materials and the condition and manner of their installation. The CQA plan must include the following:

1) Identification of applicable units, and a description of how they will be constructed.

2) Identification of key personnel in the development and implementation of the CQA plan, and CQA officer qualifications.

3) A description of inspection and sampling activities for all unit components identified in subsection (a)(2), including observations and tests that will be used before, during and after construction to ensure that the construction materials and the installed unit components meet the design specifications. The description must cover: Sampling size and locations; frequency of testing; data evaluation procedures; acceptance and rejection criteria for construction materials; plans for implementing corrective measures; and data or other information to be recorded and retained in the operating record under Section 724.173.

c) Contents of Program

1) The CQA program must include observations, inspections, tests and measurements sufficient to ensure the following:

A) Structural stability and integrity of all components of the unit identified in subsection (a)(2);

B) Proper construction of all components of the liners, leachate collection and removal system, leak detection system, and final cover system, according to permit specifications and good engineering practices and proper installation of all components (e.g., pipes) according to design specifications;

C) Conformity of all materials used with design and other material specifications under Sections 724.321, 724.351, and 724.401.

2) The CQA program must include test fills for compacted soil liners, using the same compaction methods as in the full scale unit, to ensure that the liners are constructed to meet the hydraulic conductivity requirements of Sections 724.321(c)(1)(A)(ii), 724.351(c)(1)(A)(ii), or 724.401(c)(1)(A)(ii) in the field. Compliance with the hydraulic conductivity requirements must be verified by using in-situ testing on the constructed test fill. The Agency must accept an alternative demonstration, in lieu of a test fill, where data are sufficient to show that a constructed soil liner will meet the hydraulic conductivity requirements of Sections 724.321(c)(1)(A)(ii), 724.351(c)(1)(A)(ii), or 724.401(c)(1)(A)(ii) in the field.

d) Certification. Waste must not be received in a unit subject to Section 724.119 until the owner or operator has submitted to the Agency by certified mail or hand delivery a certification signed by the CQA officer that the approved CQA plan has been successfully carried out and that the unit meets the requirements of Sections 724.321(c) or (d), 724.351(c) or (d), or 724.401(c) or (d); and the procedure in 35 Ill. Adm. Code 703.247(b) has been completed. Documentation supporting the CQA officer's certification must be furnished to the Agency upon request.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

SUBPART C: PREPAREDNESS AND PREVENTION

Section 724.130 Applicability

The regulations in this Subpart C apply to owners and operators of a11 hazardous waste management facilities, except as Section 724.101 provides otherwise.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.131 Design and Operation of Facility

Facilities must be designed, constructed, maintained and operated to minimize the possibility of a fire, explosion or any unplanned sudden or non-sudden release of hazardous waste or

hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.132 Required Equipment

All facilities must be equipped with the following, unless the owner or operator demonstrates to the Agency that none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below:

a) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

b) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams;

c) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment and decontamination equipment; and

d) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers or water spray systems.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that an owner or operator who wishes to make the demonstration referred to above must do so with Part B of the permit application.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.133 Testing and Maintenance of Equipment

All facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, must be tested and maintained as necessary to assure its proper operation in time of emergency.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.134 Access to Communications or Alarm System

a) Whenever hazardous waste is being poured, mixed, spread or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless the permit specifies that such a device is not required under Section 724.132.

b) If there is ever just one employee on the premises while the facility is operating, the employee must have immediate access to a device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning external emergency assistance, unless the permit specifies that such a device is not required under Section 724.132.

Section 724.135 Required Aisle Space

The owner or operator must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless the owner or operator demonstrates to the Agency that aisle space is not needed for any of these purposes.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that an owner or operator who wishes to make the demonstration referred to above must do so with Part B of the permit application.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.137 Arrangements with Local Authorities

a) The owner or operator must attempt to make the following arrangements as appropriate for the type of waste handled at the facility and the potential need for the services of these organizations:

1) Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to and roads inside the facility, and possible evacuation routes;

2) Where more than one police and fire department might respond to an emergency, agreements designating primary emergency authority to a specific police and a specific fire department, and agreements with any others to provide support to the primary emergency authority;

3) Agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and

4) Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses that could result from fires, explosions or releases at the facility.

b) Where state or local authorities decline to enter into such arrangements, the owner or operator must document the refusal in the operating record.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

SUBPART D: CONTINGENCY PLAN AND EMERGENCY PROCEDURES

Section 724.150 Applicability

The regulations in this Subpart D apply to owners and operators of all hazardous waste management facilities, except as Section 724.101 provides otherwise.

(Source: Amended at 30 Ill. Reg. 3196, effective February 23, 2006)

Section 724.151 Purpose and Implementation of Contingency Plan

a) Each owner or operator must have a contingency plan for the facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.

b) The provisions of this plan must be carried out immediately whenever there is a fire, explosion or release of hazardous waste or hazardous waste constituents that could threaten human health or the environment.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.152 Content of Contingency Plan

a) The contingency plan must describe the actions facility personnel must take to comply with Sections 724.151 and 724.156 in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.

b) If the owner or operator has already prepared a Spill Prevention Control and Countermeasures (SPCC) Plan in accordance with federal 40 CFR 112, or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the requirements of this Part. The owner or operator may develop one contingency plan that meets all regulatory requirements. USEPA has recommended that the plan be based on the National Response Team's Integrated Contingency Plan Guidance (One Plan). When modifications are made to non-RCRA provisions in an integrated contingency plan, the changes do not trigger the need for a RCRA permit modification.

BOARD NOTE: The federal One Plan guidance appeared in the Federal Register at 61 Fed. Reg. 28642 (June 5, 1996), and was corrected at 61 Fed. Reg. 31103 (June 19, 1996). USEPA, Office of Resource Conservation and Recovery,

Chemical Emergency Preparedness and Prevention Office, has made these documents available on-line for examination and download at www.epa.gov/emergencies (search for "one plan" or "integrated contingency plan" documents).

c) The plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services pursuant to Section 724.137.

d) The plan must list names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator (see Section 724.155), and this list must be kept up to date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates. For new facilities, this information must be supplied to the Agency at the time of certification, rather than at the time of permit application.

e) The plan must include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list must be kept up to date. In addition, the plan must include the location and a physical description of each item on the list and a brief outline of its capabilities.

f) The plan must include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan must describe signals to be used to begin evacuation, evacuation routes and alternative evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires).

(Source: Amended at 35 Ill. Reg. 17965, effective October 14, 2011)

Section 724.153 Copies of Contingency Plan

A copy of the contingency plan and all revisions to the plan must be:

a) Maintained at the facility; and

b) Submitted to all local police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services.

BOARD NOTE: The contingency plan must be submitted to the Agency with Part B of the permit application under 35 Ill. Adm. Code 702 and 703, and, after modification or approval, the plan will become a condition of any permit issued.

(Source: Amended at 30 Ill. Reg. 3196, effective February 23, 2006)

Section 724.154 Amendment of Contingency Plan

The contingency plan must be reviewed, and immediately amended, if necessary, when any of the following occurs:

a) The facility permit is revised;

b) The plan fails in an emergency;

c) The facility changes—in its design, construction, operation, maintenance or other circumstances—in a way that materially increases the potential for fires, explosions or releases of hazardous waste or hazardous waste constituents, or changes the response necessary in an emergency;

d) The list of emergency coordinators changes; or

e) The list of emergency equipment changes.

(Source: Amended at 33 Ill. Reg. 1106, effective December 30, 2008)

Section 724.155 Emergency Coordinator

At all times, there must be at least one employee either on the facility premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan.

BOARD NOTE: The emergency coordinator's responsibilities are more fully spelled out in Section 724.156. Applicable responsibilities for the emergency coordinator vary, depending on factors such as type and variety of wastes handled by the facility, and type and complexity of the facility.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.156 Emergency Procedures

a) Whenever there is an imminent or actual emergency situation, the emergency coordinator (or the designee when the emergency coordinator is on call) must immediately do the following:

1) He or she must activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

2) He or she must notify appropriate State or local agencies with designated response roles if their help is needed.

b) Whenever there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analysis.

c) Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-off from water or chemical agents used to control fire and heat-induced explosions).

d) If the emergency coordinator determines that the facility has had a release, fire, or explosion that could threaten human health or the environment outside the facility, the emergency coordinator must report the findings as follows:

1) If the assessment indicates that evacuation of local areas may be advisable, the emergency coordinator must immediately notify appropriate local authorities. The emergency coordinator must be available to help appropriate officials decide whether local areas should be evacuated; and

2) The emergency coordinator must immediately notify either the government official designated as the on-scene coordinator for that geographical area or the National Response Center (using their 24-hour toll free number 800-424-8802). The report must include the following:

A) The name and telephone number of the reporter;

B) The name and address of the facility;

C) The time and type of incident (e.g., release, fire);

D) The name and quantity of materials involved, to the extent known;

E) The extent of injuries, if any; and

F) The possible hazards to human health or the environment outside the facility.

e) During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing release waste, and removing or isolating containers.

f) If the facility stops operations in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

g) Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility.

BOARD NOTE: Unless the owner or operator can demonstrate, in accordance with 35 Ill. Adm. Code 721.103(d) or (e), that the recovered material is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and must manage it in accordance with all applicable requirements of 35 Ill. Adm. Code 722, 723, and 724.

h) The emergency coordinator must ensure that the following is true in the affected areas of the facility:

1) No waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and

2) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

i) The owner or operator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the owner or operator must submit a written report on the incident to the Agency. The report must include the following:

1) The name, address, and telephone number of the owner or operator;

2) The name, address, and telephone number of the facility;

3) The date, time, and type of incident (e.g., fire, explosion);

4) The name and quantity of materials involved;

5) The extent of injuries, if any;

6) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and

7) The estimated quantity and disposition of recovered material that resulted from the incident.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

SUBPART E: MANIFEST SYSTEM, RECORDKEEPING AND REPORTING

Section 724.170 Applicability

The regulations in this Subpart E apply to owners and operators of both on-site and off-site facilities, except as Section 724.101 provides otherwise. Sections 724.171, 724.172, and 724.176 do not apply to owners and operators of on-site facilities that do not receive any hazardous waste from off-site sources, nor do they apply to owners and operators of off-site facilities with respect to waste military munitions exempted from manifest requirements under 35 Ill. Adm. Code 726.303(a). Section 724.173(b) only applies to permittees that treat, store, or dispose of hazardous wastes on-site where such wastes were generated.

(Source: Amended at 35 Ill. Reg. 17965, effective October 14, 2011)

Section 724.171 Use of Manifest System

a) Receipt of Manifested Hazardous Waste

1) If a facility receives hazardous waste accompanied by a manifest, the owner, operator, or its agent must sign and date the manifest, as indicated in subsection (a)(2), to certify that the hazardous waste covered by the manifest was received, that the hazardous waste was received except as noted in the discrepancy space of the manifest, or that the hazardous waste was rejected as noted in the manifest discrepancy space.

2) If a facility receives a hazardous waste shipment accompanied by a manifest, the owner, operator, or its agent must do the following:

A) The owner, operator, or agent must sign and date, by hand, each copy of the manifest;

B) The owner, operator, or agent must note any discrepancies (as defined in Section 724.172) on each copy of the manifest;

C) The owner, operator, or agent must immediately give the transporter at least one copy of the manifest;

D) This subsection (D) corresponds with 40 CFR 264.71(a)(2)(iv), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal regulations.~~The owner, operator, or agent must send a copy (Page 3) of the manifest to the generator within 30 days after delivery;~~

E) Paper manifest submission requirements are the following:

i) This subsection (E) corresponds with 40 CFR 264.71(a)(2)(v), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal regulations.~~The owner, operator, or agent must send the top copy (Page 1) of any paper manifest and any paper continuation sheet to the e-Manifest System for purposes of data entry and processing, or in lieu of submitting the paper copy to the e-Manifest System operator, the owner or operator may transmit to the e-Manifest System operator an image file of Page 1 of the manifest and any continuation sheet, or both a data string file and the image file corresponding to Page 1 of the manifest and any continuation sheet, within 30 days after the date of delivery. Submissions of copies to the e-Manifest System must be made at the mailing address or electronic mail/submission address specified at the e-Manifest program website's directory of services. Beginning on June 30, 2021, USEPA will not accept mailed paper manifests from facilities for processing in the e-Manifest System; and~~

ii) Options for compliance on June 30, 2021. Send to the USEPA e-Manifest system an image file of the top copy (Page 1) of the manifest and any continuation sheet, or send to the USEPA e-Manifest system both a data file and the image file corresponding to Page 1 of the manifest and any continuation sheet, within 30 days of the date; of delivery; and ~~Options for Compliance on June 30, 2021. Beginning on June 30, 2021, the requirement to submit the top copy (Page 1) of the paper manifest and any paper continuation sheet to the e-Manifest System for purposes of data entry and processing may be met by the owner or operator only by transmitting to the e-Manifest System an image file of Page 1 of the manifest and any continuation sheet, or by transmitting to the e-Manifest System both a data file and the image file corresponding to Page 1 of the manifest and any continuation sheet, within 30 days after the date of delivery. Submissions of copies to the e-Manifest System~~

~~must be made to the electronic mail/submission address specified at the e-Manifest program website's directory of services. Beginning on June 30, 2021, USEPA will not accept mailed paper manifests from facilities for processing in the e-Manifest System; and~~

F) The owner, operator, or agent must retain at the facility a copy of each manifest for at least three years after the date of delivery.

3) The owner or operator of a facility receiving hazardous waste subject to Subpart H of 35 Ill. Adm. Code 722 from a foreign source must do the following:

A) List the relevant waste stream consent number from consent documentation supplied by USEPA to the facility for each waste listed on the manifest in the International Shipments block on the Continuation Sheet (USEPA Form 8700-22A), matched to the relevant list number for the waste from block 9b. If additional space is needed, the owner or operator should use an additional Continuation Sheet(s)~~Sheets~~ (USEPA Form 8700–22A); and

B) Send a copy of the manifest within 30 days of delivery to ~~USEPA using the addresses listed in 35 Ill. Adm. Code 722.182(e) until the facility can submit such a copy to~~ the USEPA e-Manifest system per subsection (a)(2)(E).

b) If a facility receives, from a rail or water (bulk shipment) transporter, hazardous waste that is accompanied by a shipping paper containing all the information required on the manifest (excluding the USEPA identification numbers, generator's certification, and signatures), the owner or operator, or the owner or operator's agent, must do the following:

1) It must sign and date each copy of the manifest or shipping paper (if the manifest has not been received) to certify that the hazardous waste covered by the manifest or shipping paper was received;

2) It must note any significant discrepancies (as defined in Section 724.172(a)) in the manifest or shipping paper (if the manifest has not been received) on each copy of the manifest or shipping paper;

BOARD NOTE: The Board does not intend that the owner or operator of a facility whose procedures under Section 724.113(c) include waste analysis must perform that analysis before signing the shipping paper and giving it to the transporter. Section 724.172(b), however, requires reporting an unreconciled discrepancy discovered during later analysis.

3) It must immediately give the rail or water (bulk shipment) transporter at least one copy of the manifest or shipping paper (if the manifest has not been received);

4) Within 30 days of delivery, send a copy (Page 1) of the signed and dated manifest to the USEPA e-Manifest system; and~~The owner or operator must send a copy of the signed and dated manifest or a signed and dated copy of the shipping paper (if the manifest has not been received within 30 days after delivery) to the generator within 30 days after the delivery; and~~

~~BOARD NOTE: Section 722.123(c) requires the generator to send three copies of the manifest to the facility when hazardous waste is sent by rail or water (bulk shipment).~~

5) Retain at the facility a copy of the manifest and shipping paper (if signed in lieu of the manifest at the time of delivery) for at least three years from the date of delivery.

c) Whenever a shipment of hazardous waste is initiated from a facility, the owner or operator of that facility must comply with the requirements of 35 Ill. Adm. Code 722. The provisions of 35 Ill. Adm. Code 722.115, 722.116, and 722.117 are applicable to the on-site accumulation of hazardous wastes by generators. Therefore, the provisions of 35 Ill. Adm. Code 722.115, 722.116, and 722.117 only apply to owners or operators that are shipping hazardous waste that they generated at that facility or operating as a large quantity generator consolidating hazardous waste from a VSQG under 35 Ill. Adm. Code 722.117(f).

d) International movement documents. As required by 35 Ill. Adm. Code 722.184(d)(2)(O), within three working days after the receipt of a shipment subject to Subpart H of 35 Ill. Adm. Code 722, the owner or operator of a facility must provide a copy of the movement document bearing all required signatures to the foreign exporter and competent authorities of all the countries of export and transit that control the shipment as an export or transit of hazardous waste. For shipments received- on~~On~~ or after the electronic import-export reporting compliance date, the receiving facility must close out the movement document to confirm receipt within three working days of shipment delivery using ~~to~~ USEPA's WIETS or its successor system~~ electronically using USEPA's WIETS~~. For shipments sent from a country with which USEPA has established an electronic exchange of movement document tracking data, the receiving facility may use WIETS or its successor system to send movement document confirmation data back through the electronic exchange to the foreign exporter and the country of export. The original copy of the movement document must be maintained at the facility for at least three years from the date of signature. The owner or operator of a facility may satisfy this recordkeeping requirement by retaining electronically submitted documents in the facility's account on USEPA's WIETS, provided that copies are readily available for viewing and production if requested by any

USEPA or authorized state inspector. No owner or operator of a facility may be held liable for the inability to produce the documents for inspection under this section if the owner or operator of a facility can demonstrate that the inability to produce the document is due exclusively to technical difficulty with USEPA's WIETS, for which the owner or operator of a facility bears no responsibility.

e) A facility must determine whether the consignment state for a shipment regulates any additional wastes (beyond those regulated federally) as hazardous wastes under its state hazardous waste program. A facility must also determine whether the consignment state or generator state requires the facility to submit any copies of the manifest to that state.

f) Legal Equivalence to Paper Manifests. E-Manifests that are obtained, completed, transmitted in accordance with 35 Ill. Adm. Code 722.120(a)(3), and used in accordance with this Section in lieu of the paper manifest form are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in 35 Ill. Adm. Code 720 through 728 to obtain, complete, sign, provide, use, or retain a manifest.

1) Any requirement in 35 Ill. Adm. Code 720 through 728 for the owner or operator of a facility to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 35 Ill. Adm. Code 722.125.

2) Any requirement in 35 Ill. Adm. Code 720 through 728 to give, provide, send, forward, or to return to another person a copy of the manifest is satisfied when a copy of an e-Manifest is transmitted to the other person.

3) Any requirement in 35 Ill. Adm. Code 720 through 728 for a manifest to accompany a hazardous waste shipment is satisfied when a copy of an e-Manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the hazardous waste shipment.

4) Any requirement in 35 Ill. Adm. Code 720 through 728 for an owner or operator to keep or retain a copy of each manifest is satisfied by the retention of the facility's e-Manifest copies in its account on the e-Manifest System, provided that such copies are readily available for viewing and production if requested by any USEPA or Agency inspector.

5) No owner or operator may be held liable for the inability to produce an e-Manifest for inspection under this Section if the owner or operator can demonstrate that the inability to produce the e-Manifest is due exclusively to a technical difficulty with the e-Manifest System for which the owner or operator bears no responsibility.

g) An owner or operator may participate in the e-Manifest System either by accessing the e-Manifest System from the owner's or operator's electronic equipment, or by accessing the e-Manifest System from portable equipment brought to the owner's or operator's site by the transporter that delivers the waste shipment to the facility.

h) Special Procedures Applicable to Replacement Manifests. If a facility receives hazardous waste that is accompanied by a paper replacement manifest for a manifest that was originated electronically, the following procedures apply to the delivery of the hazardous waste by the final transporter:

1) Upon delivery of the hazardous waste to the designated facility, the owner or operator must sign and date each copy of the paper replacement manifest by hand in Item 20 (Designated Facility Certification of Receipt) and note any discrepancies in Item 18 (Discrepancy Indication Space) of the paper replacement manifest;

2) The owner or operator of the facility must give back to the final transporter one copy of the paper replacement manifest;

3) Within 30 days after delivery of the hazardous waste to the designated facility, the owner or operator of the facility must send one signed and dated copy of the paper replacement manifest to the generator and send an additional signed and dated copy of the paper replacement manifest to the e-Manifest System; and

4) The owner or operator of the facility must retain at the facility one copy of the paper replacement manifest for at least three years after the date of delivery.

i) Special Procedures Applicable to Electronic Signature Methods Undergoing Tests. If an owner or operator using an e-Manifest signs this manifest electronically using an electronic signature method that is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, the owner or operator must also sign with an ink signature the facility's certification of receipt or discrepancies on the printed copy of the manifest provided by the transporter. Upon executing its ink signature on this printed copy, the owner or operator must retain this original copy among its records for at least three years after the date of delivery of the waste.

j) Imposition of User Fee for Electronic Manifest Submissions

1) As prescribed in 40 CFR 264.1311, incorporated by reference in 35 Ill. Adm. Code 720.111, and determined in 40 CFR 264.1312, incorporated by reference in 35 Ill. Adm. Code 720.111, an owner or operator that is a

user of the e-Manifest System must be assessed a user fee by USEPA for the submission and processing of each e-Manifest and paper manifest. USEPA has stated that it would update the schedule of user fees and publish them to the user community, as provided in 40 CFR 264.1313, incorporated by reference in 35 Ill. Adm. Code 720.111.

2) An owner or operator subject to user fees under this Section must make user fee payments in accordance with the requirements of 40 CFR 264.1314, incorporated by reference in 35 Ill. Adm. Code 720.111, subject to the informal fee dispute resolution process of 40 CFR 264.1316, incorporated by reference in 35 Ill. Adm. Code 720.111, and subject to the sanctions for delinquent payments under 40 CFR 264.1315, incorporated by reference in 35 Ill. Adm. Code 720.111.

k) E-Manifest Signatures. E-Manifest signatures must meet the criteria described in 35 Ill. Adm. Code 722.125.

l) Post-Receipt Manifest Data Corrections. After a facility has certified ~~to the receipt of hazardous wastes by signing Item 20 of the manifest~~ that the manifest is complete, by signing it at the time of submission to the USEPA e-Manifest system, any post-receipt stat corrections may be submitted at any time by any interested person(e.g., waste handler) named on the manifest. ~~any interested person (i.e., any waste handler shown on the manifest or the Agency) may submit any post-receipt data corrections at any time.~~ If corrections are requested by the Agency for portions of the manifest that a designated facility is required to complete, the facility must make the data correction within 30 days from the date of the request.

1) An interested person must make all corrections to manifest data by electronic submission, either by directly entering corrected data to the web-based service provided in the e-Manifest System for such corrections, or by an upload of a data file containing data corrections relating to one or more previously submitted manifests.

2) Each correction submission must include the following information:

A) The Manifest Tracking Number and date of receipt by the facility of the original manifests for which data are being corrected;

B) The item numbers of the original manifest that is the subject of the submitted corrections; and

C) For each item number with corrected data, the data previously entered and the corresponding data as corrected by the correction submission.

3) Each correction submission must include a statement that the person submitting the corrections certifies that, to the best of his or her knowledge or belief, the corrections that are included in the submission will cause the information reported about the previously received hazardous wastes to be true, accurate, and complete:

A) The person must execute the certification statement with a valid electronic signature; and

B) The person may submit a batch upload of data corrections under one certification statement.

4) Upon receipt by the e-Manifest System of any correction submission, other interested persons shown on the manifest will be provided electronic notice of the submitter's corrections.

5) Other interested persons shown on the manifest may respond to the submitter's corrections with comments to the submitter, or by submitting another correction to the e-Manifest System, certified by the respondent as specified in subsection (l)(3), and with notice of the corrections to other interested persons shown on the manifest.

(Source: Amended at 44 Ill. Reg. 15347, effective September 3, 2020)

Section 724.172 Manifest Discrepancies

a) "Manifest discrepancies" are defined as any one of the following:

1) Significant differences (as defined by subsection (b) between the quantity or type of hazardous waste designated on the manifest or shipping paper, and the quantity and type of hazardous waste a facility actually receives;

2) Rejected wastes, which may be a full or partial shipment of hazardous waste that the treatment, storage, or disposal facility cannot accept; or

3) Container residues, which are residues that exceed the quantity limits for empty containers in 35 Ill. Adm. Code 721.107(b) and 726.607.

b) "Significant differences in quantity" are defined as the appropriate of the following: for bulk waste, variations greater than 10 percent in weight; or, for batch waste, any variation in piece count, like a discrepancy of one drum in a truckload. "Significant differences in type" are defined as obvious differences that can be discovered by inspection or waste analysis, like waste solvent substituted for waste acid, or toxic constituents not reported on the manifest or shipping paper.

c) Upon discovering a significant difference in quantity or type, the owner or operator must attempt to reconcile the discrepancy with the waste generator or transporter (*e.g.,* with telephone conversations). If the discrepancy is not resolved within 2015 days after receiving the waste, the owner or operator must: ~~immediately submit to the Agency a letter describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.~~

1) Immediately submit to the Agency a letter describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.

2) Beginning December 1 2025, immediately submit a Discrepancy report to the USEPA e-manifest system describing the discrepancy and attempt to reconcile it, and a copy of the e-manifest or shipping paper at issue. Beginning on December 1, 2025, the USEPA will no longer accept mailed paper Discrepancy Reports from facilities.

d) Rejection of Hazardous Waste

1) Upon rejecting waste or identifying a container residue that exceeds the quantity limits for empty containers in 35 Ill. Adm. Code 721.107(b), the facility owner or operator must consult with the generator before sending the waste to another facility that can manage the waste. If it is impossible to locate an alternative facility that can receive the waste, the facility owner or operator may return the rejected waste or residue to the generator. The facility owner or operator must send the waste to the alternative facility or to the generator within 60 days after the rejection or the container residue identification.

2) While the facility owner or operator is making arrangements to send rejected wastes or residues to another facility under this Section, it must ensure that either the delivering transporter retains custody of the waste, or the facility owner or operator must provide for secure, temporary custody of the waste, pending delivery of the waste to the first transporter designated on the manifest prepared under subsection (e) or (f).

e) Except as provided in subsection (e)(7), for full or partial load rejections and residues that are to be sent off-site to an alternate facility, the facility owner or operator is required to prepare a new manifest complying with 35 Ill. Adm. Code 722.120(a) and the instructions in subsections (e)(1) through (e)(6):

1) The facility owner or operator must write the generator's USEPA identification number in Item 1 of the new manifest. The facility owner or operator must write the generator's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the generator's

site address, then the facility owner or operator must write the generator's site address in the designated space in Item 5.

2) The facility owner or operator must write the name of the alternate designated facility and the facility's USEPA identification number in the designated facility block (Item 8) of the new manifest.

3) The facility owner or operator must copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.

4) The facility owner or operator must copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).

5) The facility owner or operator must write the USDOT description for the rejected load or the residue in Item 9 (USDOT Description) of the new manifest and write the container types, quantity, and volumes of waste.

6) The facility owner or operator must sign the Generator's/Offeror's Certification to certify, as the offeror of the shipment, that the waste has been properly packaged, marked and labeled and is in proper condition for transportation, and mail a signed copy of the manifest to the generator identified in Item 5 of the new manifest.

7) For full load rejections that are made while the transporter remains present at the facility, the facility owner or operator may forward the rejected shipment to the alternate facility by completing Item 18b of the original manifest and supplying the information on the next destination facility in the Alternate Facility space. The facility owner or operator must retain a copy of this manifest for its records, and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility owner or operator must use a new manifest and comply with subsections (e)(1) through (e)(6).

f) Except as provided in subsection (f)(7), for rejected wastes and residues that must be sent back to the generator, the facility owner or operator is required to prepare a new manifest complying with 35 Ill. Adm. Code 722.120(a) and the instructions in subsections (f)(1) through (f)(6) and (f)(8):

1) The facility owner or operator must write the facility's USEPA identification number in Item 1 of the new manifest. The facility owner or operator must write the facility's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the facility's site

address, then the facility owner or operator must write the facility's site address in the designated space for Item 5 of the new manifest.

2) The facility owner or operator must write the name of the initial generator and the generator's USEPA identification number in the designated facility block (Item 8) of the new manifest.

3) The facility owner or operator must copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.

4) The facility owner or operator must copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).

5) The facility owner or operator must write the USDOT description for the rejected load or the residue in Item 9 (USDOT Description) of the new manifest and write the container types, quantity, and volumes of waste.

6) The facility owner or operator must sign the Generator's/Offeror's Certification to certify, as offeror of the shipment, that the waste has been properly packaged, marked and labeled and is in proper condition for transportation.

7) For full load rejections that are made while the transporter remains at the facility, the facility owner or operator may return the shipment to the generator with the original manifest by completing Item 18b of the manifest and supplying the generator's information in the Alternate Facility space. The facility owner or operator must retain a copy for its records and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility owner or operator must use a new manifest and comply with subsections (f)(1) through (f)(6) and (f)(8).

8) For full or partial load rejections and container residues contained in non-empty containers that are returned to the generator, the facility owner or operator must also comply with the exception reporting requirements in 35 Ill. Adm. Code 722.142(a).

g) If a facility owner or operator rejects a waste or identifies a container residue that exceeds the quantity limits for empty containers in 35 Ill. Adm. Code 721.107(b) after it has signed, dated, and returned a copy of the manifest to the delivering transporter or to the generator, the facility owner or operator must amend its copy of the manifest to indicate the rejected wastes or residues in the discrepancy space of the amended manifest. The facility owner or operator must also copy the

manifest tracking number from Item 4 of the new manifest to the Discrepancy space of the amended manifest, and must re-sign and date the manifest to certify to the information as amended. The facility owner or operator must retain the amended manifest for at least three years from the date of amendment, and must, within 30 days, send a copy of the amended manifest to the transporter ~~and generator~~ that received copies before being amended. Facilities are not required to send the amended manifest to any transporter who is registered in the USEPA's e-Manifest system. Registered transporters may obtain the signed and dated copy of a completed manifest from the USEPA e-Manifest system in lieu of receiving the manifest through U.S. postal mail.

(Source: Amended at 48 Ill. Reg. 17057, effective November 7, 2024)

Section 724.173 Operating Record

a) The owner or operator must keep a written operating record at the facility.

b) The following information must be recorded as it becomes available and maintained in the operating record for three years unless otherwise provided as follows:

1) A description and the quantity of each hazardous waste received and the methods and dates of its treatment, storage, or disposal at the facility, as required by Appendix A. This information must be maintained in the operating record until closure of the facility;

2) The location of each hazardous waste within the facility and the quantity at each location. For disposal facilities, the location and quantity of each hazardous waste must be recorded on a map or diagram that shows each cell or disposal area. For all facilities, this information must include cross-references to manifest document numbers, if the waste was accompanied by a manifest. This information must be maintained in the operating record until closure of the facility;

BOARD NOTE: See Section 724.219 for related requirements.

3) Records and results of waste analyses and waste determinations performed as specified in Sections 724.113, 724.117, 724.414, 724.441, 724.934, 724.963, and 724.983 and in 35 Ill. Adm. Code 728.104(a) and 728.107;

4) Summary reports and details of all incidents that require implementing the contingency plan, as specified in Section 724.156(j);

5) Records and results of inspections, as required by Section 724.115(d) (except these data need to be kept only three years);

6) Monitoring, testing, or analytical data and corrective action data where required by Subpart F or Sections 724.119, 724.291, 724.293, 724.295, 724.322, 724.323, 724.326, 724.352 through 724.354, 724.376, 724.378, 724.380, 724.402 through 724.404, 724.409, 724.702, 724.934(c) through (f), 724.935, 724.963(d) through (i), 724.964, and 724.982 through 724.990. Maintain in the operating record for three years, except for records and results pertaining to groundwater monitoring and cleanup, which must be maintained in the operating record until closure of the facility;

7) For off-site facilities, notices to generators as specified in Section 724.112(b);

8) All closure cost estimates under Section 724.242 and, for disposal facilities, all post-closure care cost estimates under Section 724.244. This information must be maintained in the operating record until closure of the facility;

9) A certification by the permittee, no less often than annually: that the permittee has a program in place to reduce the volume and toxicity of hazardous waste that the permittee generates, to the degree the permittee determines to be economically practicable, and that the proposed method of treatment, storage, or disposal is that practicable method currently available to the permittee that minimizes the present and future threat to human health and the environment;

10) Records of the quantities and date of placement for each shipment of hazardous waste placed in land disposal units under an extension of the effective date of any land disposal restriction granted pursuant to 35 Ill. Adm. Code 728.105, a petition pursuant to 35 Ill. Adm. Code 728.106 or a certification under 35 Ill. Adm. Code 728.108, and the applicable notice required of a generator pursuant to 35 Ill. Adm. Code 728.107(a). This information must be maintained in the operating record until closure of the facility;

11) For an off-site treatment facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;

12) For an on-site treatment facility, the information contained in the notice (except the manifest number), and the certification and demonstration, if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;

13) For an off-site land disposal facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or

the owner or operator of a treatment facility under 35 Ill. Adm. Code 728.107 or 728.108, whichever is applicable;

14) For an on-site land disposal facility, the information contained in the notice required of the generator or owner or operator of a treatment facility under 35 Ill. Adm. Code 728.107, except for the manifest number, and the certification and demonstration, required under 35 Ill. Adm. Code 728.108, whichever is applicable;

15) For an off-site storage facility, a copy of the notice, and the certification and demonstration if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;

16) For an on-site storage facility, the information contained in the notice (except the manifest number), and the certification and demonstration if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;

17) Any records required under Section 724.101(j)(13);

18) Monitoring, testing, or analytical data where required by Section 724.447 must be maintained in the operating record for five years; and

19) Certifications, as required by Section 724.296(f), must be maintained in the operating record until closure of the facility.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.174 Availability, Retention, and Disposition of Records

a) All records, including plans, required under this Part must be furnished upon request, and made available at all reasonable times for inspection, by authorized representatives of the Agency.

b) The retention period for all records required under this Part is extended automatically during the course of any unresolved enforcement action regarding the facility or as requested in writing by the Agency.

c) A copy of records of waste disposal locations and quantities under Section 724.173(b)(2) must be submitted to the Agency and to the County Recorder upon closure of the facility.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.175 Annual Facility Activities Report

The owner or operator must complete and submit USEPA Form 8700–13 A/B to the Agency by March 1 of each year and must cover activities during the previous year.

BOARD NOTE: Corresponding 40 CFR 264.75 requires biennial reporting. The Board has required annual reporting, since Section 20.1 of the Act requires the Agency to assemble annual reports, and only annual facility activities reports will enable the Agency to fulfill this mandate.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.176 Unmanifested Waste Report

a) If a facility accepts for treatment, storage, or disposal any hazardous waste from an off-site source without an accompanying manifest, or without an accompanying shipping paper, as described by 35 Ill. Adm. Code 723.120(e), and if the waste is not excluded from the manifest requirement by 35 Ill. Adm. Code 260 through 265, then the owner or operator must prepare and submit a letter to the Agency within 15 days after receiving the waste. The unmanifested waste report must contain the following information:

1) The USEPA identification number, name, and address of the facility;

2) The date the facility received the waste;

3) The USEPA identification number, name, and address of the generator and the transporter, if available;

4) A description and the quantity of each unmanifested hazardous waste the facility received;

5) The method of treatment, storage, or disposal for each hazardous waste;

6) The certification signed by the owner or operator of the facility or its authorized representative; and

7) A brief explanation of why the waste was unmanifested, if known.

b) Beginning on December 1, 2025, if a facility accepts for treatment, storage, or disposal any hazardous waste from an off-site source without an accompanying manifest, or without an accompanying shipping paper as described by Section 723.120(e), and if the waste is not excluded from the manifest requirement by this chapter, then the owner or operator must prepare an electronic Unmanifested Waste Report in the USEPA e-Manifest system for submission to the USEPA within 15 days after receiving the waste. The Unmanifested Waste Report must contain the following information: ~~This subsection (b) corresponds with 40 CFR 264.76(b), which USEPA has marked "reserved". This statement maintains structural consistency with the corresponding federal regulations.~~

1) The USEPA identification number, name and address of the facility;

2) The date the facility received the waste;

3) The USEPA identification number, name and address of the generator and the transporter, if available;

4) A description and the quantity of each unmanifested hazardous waste the facility received;

5) The method of treatment, storage, or disposal for each hazardous waste;

6) The certification signed by the owner or operator of the facility or his authorized representative; and

7) A brief explanation of why the waste was unmanifested, if known.

BOARD NOTE: Small quantities of hazardous waste are excluded from regulation under this Part and do not require a manifest. Where a facility receives unmanifested hazardous wastes, USEPA has suggested that the owner or operator obtain from each generator a certification that the waste qualifies for exclusion. Otherwise, USEPA has suggested that the owner or operator file an unmanifested waste report for the hazardous waste movement.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.177 Additional Reports

In addition to submitting the annual report and unmanifested waste reports described in Sections 724.175 and 724.176, the owner or operator must also report to the Agency:

a) Releases, fires, and explosions, as specified in Section 724.156(j);

b) Facility closures specified in Section 724.215; and

c) As otherwise required by Subparts F, K through N, AA, BB, and CC of this Part.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

SUBPART F: RELEASES FROM SOLID WASTE MANAGEMENT UNITS

Section 724.190 Applicability

a) Types of Units

1) Except as provided in subsection (b), the regulations in this Subpart F apply to owners and operators of facilities that treat, store or dispose of hazardous waste. The owner or operator must satisfy the requirements identified in subsection (a)(2) for all wastes (or constituents thereof) contained in solid waste management units at the facility regardless of the time at which waste was placed in such units.

2) All solid waste management units must comply with the requirements in Section 724.201. A surface impoundment, waste pile, land treatment unit, or landfill that receives hazardous waste after July 26, 1982 (referred to in this Subpart F as a "regulated unit") must comply with Sections 724.191 through 724.200, in lieu of Section 724.201, for purposes of detecting, characterizing, and responding to releases to the uppermost aquifer. The financial responsibility requirements of Section 724.201 apply to regulated units.

b) The owner or operator's regulated unit or units are not subject to regulation for releases into the uppermost aquifer under this Subpart F if the following is true:

1) The owner or operator is exempted pursuant to Section 724.101; or

2) The owner or operator operates a unit that the Agency finds:

A) Is an engineered structure.

B) Does not receive or contain liquid waste or waste containing free liquids.

C) Is designed and operated to exclude liquid, precipitation, and other run-on and run-off.

D) Has both inner and outer layers of containment enclosing the waste.

E) Has a leak detection system built into each containment layer.

F) The owner or operator will provide continuing operation and maintenance of these leak detection systems during the active life of the unit and the closure and post-closure care periods.

G) To a reasonable degree of certainty, will not allow hazardous constituents to migrate beyond the outer containment layer prior to the end of the post-closure care period; or

3) The Agency finds, pursuant to Section 724.380(d), that the treatment zone of a land treatment unit that qualifies as a regulated unit does not contain

levels of hazardous constituents that are above background levels of those constituents by an amount that is statistically significant, and if an unsaturated zone monitoring program meeting the requirements of Section 724.378 has not shown a statistically significant increase in hazardous constituents below the treatment zone during the operating life of the unit. An exemption pursuant to this subsection (b) can only relieve an owner or operator of responsibility to meet the requirements of this Subpart F during the post-closure care period; or

4) The Agency finds that there is no potential for migration of liquid from a regulated unit to the uppermost aquifer during the active life of the regulated unit (including the closure period) and the post-closure care period specified pursuant to Section 724.217. This demonstration must be certified by a qualified geologist or geotechnical engineer. In order to provide an adequate margin of safety in the prediction of potential migration of liquid, the owner or operator must base any predictions made pursuant to this subsection (b) on assumptions that maximize the rate of liquid migration; or

5) The owner or operator designs and operates a pile in compliance with Section 724.350(c).

c) The regulations under this Subpart F apply during the active life of the regulated unit (including the closure period). After closure of the regulated unit, the following is true of the applicability of the regulations in this Subpart F:

1) Do not apply if all waste, waste residues, contaminated containment system components, and contaminated subsoils are removed or decontaminated at closure;

2) Apply during the post-closure care period pursuant to Section 724.217 if the owner or operator is conducting a detection monitoring program pursuant to Section 724.198; or

3) Apply during the compliance period pursuant to Section 724.196 if the owner or operator is conducting a compliance monitoring program pursuant to Section 724.199 or a corrective action program pursuant to Section 724.200.

d) This Subpart F applies to miscellaneous units if necessary to comply with Sections 724.701 through 724.703.

e) The regulations of this Subpart F apply to all owners and operators subject to 35 Ill. Adm. Code 703.161, when the Agency issues a post-closure care permit or other enforceable document that contains alternative requirements for the facility, as provided in 35 Ill. Adm. Code 703.161. When alternative requirements apply to a

facility, a reference in this Subpart F to "in the permit" must mean "in the enforceable document".

f) A permit or enforceable document can contain alternative requirements for groundwater monitoring and corrective action for releases to groundwater applicable to a regulated unit that replace all or part of the requirements of 35 Ill. Adm. Code 724.191 through 724.200, as provided pursuant to 35 Ill. Adm. Code 703.161, where the Board or Agency determines the following:

1) The regulated unit is situated among solid waste management units (or areas of concern), a release has occurred, and both the regulated unit and one or more solid waste management units (or areas of concern) are likely to have contributed to the release; and

2) It is not necessary to apply the groundwater monitoring and corrective action requirements of 35 Ill. Adm. Code 724.191 through 724.200 because alternative requirements will adequately protect human health and the environment.

(Source: Amended at 43 Ill. Reg. 5999, May 2, 2019)

Section 724.191 Required Programs

a) Owners and operators subject to this Subpart F must conduct a monitoring and response program as follows:

1) Whenever hazardous constituents pursuant to Section 724.193 from a regulated unit are detected at a compliance point pursuant to Section 724.195, the owner or operator must institute a compliance monitoring program pursuant to Section 724.199. "Detected" is defined as statistically significant evidence of contamination, as described in Section 724.198(f).

2) Whenever the groundwater protection standard pursuant to Section 724.192 is exceeded, the owner or operator must institute a corrective action program pursuant to Section 724.200. "Exceeded" is defined as statistically significant evidence of increased contamination, as described in Section 724.199(d).

3) Whenever hazardous constituents pursuant to Section 724.193 from a regulated unit exceed concentration limits pursuant to Section 724.194 in groundwater between the compliance point pursuant to Section 724.195 and the downgradient facility property boundary, the owner or operator must institute a corrective action program pursuant to Section 724.200; or

4) In all other cases, the owner or operator must institute a detection monitoring program pursuant to Section 724.198.

b) The Agency must specify in the facility permit the specific elements of the monitoring and response program. The Agency may include one or more of the programs identified in subsection (a) in the facility permit as may be necessary to adequately protect human health and the environment and must specify the circumstances under which each of the programs will be required. In deciding whether to require the owner or operator to be prepared to institute a particular program, the Agency must consider the potential adverse effects on human health and the environment that might occur before final administrative action on a permit modification application to incorporate such a program could be taken.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.192 Groundwater Protection Standard

The owner or operator must comply with conditions specified in the facility permit that are designed to ensure that hazardous constituents under Section 724.193 detected in the groundwater from a regulated unit do not exceed the concentration limits under Section 724.194 in the uppermost aquifer underlying the waste management area beyond the point of compliance under Section 724.195 during the compliance period under Section 724.196. The Agency must establish this groundwater protection standard in the facility permit when hazardous constituents have been detected in the groundwater.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.193 Hazardous Constituents

a) The Agency must specify in the facility permit the hazardous constituents to which the groundwater protection standard of Section 724.192 applies. Hazardous constituents are constituents identified in Appendix H of 35 Ill. Adm. Code 721 that have been detected in groundwater in the uppermost aquifer underlying a regulated unit and that are reasonably expected to be in or derived from waste contained in a regulated unit, unless the Agency has excluded them under subsection (b).

b) The Agency must exclude a constituent in Appendix H of 35 Ill. Adm. Code 721 from the list of hazardous constituents specified in the facility permit if it finds that the constituent is not capable of posing a substantial present or potential hazard to human health or the environment. In deciding whether to grant an exemption, the Agency must consider the following:

1) Potential adverse effects on groundwater quality, considering the following:

A) The physical and chemical characteristics of the waste in the regulated unit, including its potential for migration;

B) The hydrogeological characteristics of the facility and surrounding land;

C) The quantity of groundwater and the direction of groundwater flow;

D) The proximity and withdrawal rates of groundwater users;

E) The current and future uses of groundwater in the area;

F) The existing quality of groundwater, including other sources of contamination, and their cumulative impact on the groundwater quality;

G) The potential for health risks caused by human exposure to waste constituents;

H) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents;

I) The persistence and permanence of the potential adverse effects; and

2) Potential adverse effects on hydraulically-connected surface water quality, considering the following:

A) The volume and physical and chemical characteristics of the waste in the regulated unit;

B) The hydrogeological characteristics of the facility and surrounding land;

C) The quantity and quality of groundwater and the direction of groundwater flow;

D) The patterns of rainfall in the region;

E) The proximity of the regulated unit to surface waters;

F) The current and future uses of surface waters in the area and any water quality standards established for those surface waters;

G) The existing quality of surface water, including other sources of contamination, and the cumulative impact on surface water quality;

H) The potential for health risks caused by human exposure to waste constituents;

I) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents; and

J) The persistence and permanence of the potential adverse effects.

c) In making any determination under subsection (b) about the use of groundwater in the area around the facility, the Agency must consider any identification of underground sources of drinking water and exempted aquifers made under 35 Ill. Adm. Code 704.123.

d) The Agency must make specific written findings in granting any exemptions under subsection (b).

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.194 Concentration Limits

a) The Agency must specify in the facility permit concentration limits in the groundwater for hazardous constituents established under Section 724.193. The following must be true of the concentration of a hazardous constituent:

1) It must not exceed the background level of that constituent in the groundwater at the time that limit is specified in the permit; or

2) For any of the constituents listed in Table 1, it must not exceed the respective value given in that Table if the background level of the constituent is below the value given in Table 1; or

3) It must not exceed an alternative limit established by the Agency under subsection (b).

TABLE 1—MAXIMUM CONCENTRATION OF CONSTITUENTS FOR GROUNDWATER PROTECTION

Constituent	Maximum Concentration (mg/ℓ)
Arsenic (CAS No. 7440-38-2)	0.05
Barium (CAS No. 7440-39-3)	1.0

Cadmium (CAS No. 7440-43-9)	0.01
Chromium (CAS No. 7440-47-3)	0.05
Lead (CAS No. 7439-92-1)	0.05
Mercury (CAS No. 7439-97-6)	0.002
Selenium (CAS No. 7782-49-2)	0.01
Silver (CAS No. 7440-22-4)	0.05
Endrin (1,2,3,4,10,10-hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-endo,endo-1,4:5,8-dimethanonaphthalene) (CAS No. 72-20-8)	0.0002
Lindane (1,2,3,4,5,6-hexachlorocyclohexane, gamma isomer) (CAS No. 58-89-9)	0.004
Methoxychlor (1,1,1-Trichloro-2,2-bis(p-methoxy-phenyl)ethane) (CAS No. 72-43-5)	0.1
Toxaphene ($C_{10}H_{10}Cl_6$, Technical chlorinated camphene, 67-69 percent chlorine) (CAS No. 8001-35-2)	0.005
2,4-D (2,4-Dichlorophenoxyacetic acid) (CAS No. 94-75-7)	0.1
2,4,5-TP (Silvex) (2,4,5-Trichlorophenoxypropionic acid) (CAS No. 93-72-1)	0.01

b) The Agency must establish an alternative concentration limit for a hazardous constituent if it finds that the constituent will not pose a substantial present or potential hazard to human health or the environment as long as the alternative concentration limit is not exceeded. In establishing alternate concentration limits, the Agency must consider the following factors:

1) Potential adverse effects on groundwater quality, considering the following:

A) The physical and chemical characteristics of the waste in the regulated unit, including its potential for migration;

B) The hydrogeological characteristics of the facility and surrounding land;

C) The quantity of groundwater and the direction of groundwater flow;

D) The proximity and withdrawal rates of groundwater users;

E) The current and future uses of groundwater in the area;

F) The existing quality of groundwater, including other sources of contamination and their cumulative impact on the groundwater quality;

G) The potential for health risks caused by human exposure to waste constituents;

H) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents;

I) The persistence and permanence of the potential adverse effects; and

2) Potential adverse effects on hydraulically-connected surface-water quality, considering the following:

A) The volume and physical and chemical characteristics of the waste in the regulated unit;

B) The hydrogeological characteristics of the facility and surrounding land;

C) The quantity and quality of groundwater and the direction of groundwater flow;

D) The patterns of rainfall in the region;

E) The proximity of the regulated unit to surface waters;

F) The current and future uses of surface waters in the area and any water quality standards established for those surface waters;

G) The existing quality of surface water, including other sources of contamination and the cumulative impact on surface-water quality;

H) The potential for health risks caused by human exposure to waste constituents;

I) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents; and

J) The persistence and permanence of the potential adverse effects.

c) In making any determination under subsection (b) about the use of groundwater in the area around the facility, the Agency must consider any identification of underground sources of drinking water and exempted aquifers made under 35 Ill. Adm. Code 704.123.

d) The Agency must make specific written findings in setting any alternate concentration limits under subsection (b).

(Source: Amended at 40 Ill. Reg. 11726, effective August 9, 2016)

Section 724.195 Point of Compliance

a) The Agency must specify in the facility permit the point of compliance at which the groundwater protection standard of Section 724.192 applies and at which monitoring must be conducted. The point of compliance is a vertical surface located at the hydraulically downgradient limit of the waste management area that extends down into the uppermost aquifer underlying the regulated units.

b) The waste management area is the limit projected in the horizontal plane of the area on which waste will be placed during the active life of a regulated unit.

1) The waste management area includes horizontal space taken up by any liner, dike, or other barrier designed to contain waste in a regulated unit.

2) If the facility contains more than one regulated unit, the waste management area is described by an imaginary line circumscribing the several regulated units.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.196 Compliance Period

a) The Agency must specify in the facility permit the compliance period during which the groundwater protection standard of Section 724.192 applies. The compliance period is the number of years equal to the active life of the waste management area (including any waste management activity prior to permitting, and the closure period.)

b) The compliance period begins when the owner or operator initiates a compliance monitoring program meeting the requirements of Section 724.199.

c) If the owner or operator is engaged in a corrective action program at the end of the compliance period specified in subsection (a), the compliance period is extended until the owner or operator can demonstrate that the groundwater protection standard of Section 724.192 has not been exceeded for a period of three consecutive years.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.197 General Groundwater Monitoring Requirements

The owner or operator must comply with the following requirements for any groundwater monitoring program developed to satisfy Section 724.198, 724.199, or 724.200.

a) The groundwater monitoring system must consist of a sufficient number of wells, installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer that fulfill the following requirements:

1) They represent the quality of background groundwater that has not been affected by leakage from a regulated unit. A determination of background groundwater quality may include sampling of wells that are not hydraulically upgradient from the waste management area where the following is true:

A) Hydrogeologic conditions do not allow the owner or operator to determine what wells are upgradient; or

B) Sampling at other wells will provide an indication of background groundwater quality that is as representative or more representative than that provided by the upgradient wells;

2) They represent the quality of groundwater passing the point of compliance; and

3) They allow for the detection of contamination when hazardous waste or hazardous constituents have migrated from the hazardous waste management area to the uppermost aquifer.

b) If a facility contains more than one regulated unit, separate groundwater monitoring systems are not required for each regulated unit provided that provisions for sampling the groundwater in the uppermost aquifer will enable detection and measurement at the compliance point of hazardous constituents from the regulated units that have entered the groundwater in the uppermost aquifer.

c) All monitoring wells must be cased in a manner that maintains the integrity of the monitoring well bore hole. This casing must be screened or perforated and packed with gravel or sand, where necessary, to enable collection of groundwater samples. The annular space (i.e., the space between the bore hole and well casing) above the sampling depth must be sealed to prevent contamination of samples and the groundwater.

d) The groundwater monitoring program must include consistent sampling and analysis procedures that are designed to ensure monitoring results that provide a reliable indication of groundwater quality below the waste management area. At a minimum the program must include procedures and techniques for the following:

1) Sample collection;

2) Sample preservation and shipment;

3) Analytical procedures; and

4) Chain of custody control.

e) The groundwater monitoring program must include sampling and analytical methods that are appropriate for groundwater sampling and that accurately measure hazardous constituents in groundwater samples.

f) The groundwater monitoring program must include a determination of the groundwater surface elevation each time groundwater is sampled.

g) In detection monitoring or where appropriate in compliance monitoring, data on each hazardous constituent specified in the permit will be collected from background wells and wells at the compliance points. The number and kinds of samples collected to establish background must be appropriate for the form of statistical test employed, following generally accepted statistical principles. The sample size must be as large as necessary to ensure with reasonable confidence that a contaminant release to groundwater from a facility will be detected. The owner or operator will determine an appropriate sampling procedure and interval for each hazardous constituent listed in the facility permit that must be specified in the unit permit upon approval by the Agency. This sampling procedure must fulfill the following requirements:

1) It may be a sequence of at least four samples, taken at an interval that assures, to the greatest extent technically feasible, that an independent sample is obtained, by reference to the uppermost aquifer's effective porosity, hydraulic conductivity and hydraulic gradient, and the fate and transport characteristics of the potential contaminants; or

2) It may be an alternate sampling procedure proposed by the owner or operator and approved by the Agency.

h) The owner or operator must specify one of the following statistical methods to be used in evaluating groundwater monitoring data for each hazardous constituent that, upon approval by the Agency, will be specified in the unit permit. The statistical test chosen must be conducted separately for each hazardous constituent

in each well. Where practical quantification limits (pqls) are used in any of the following statistical procedures to comply with subsection (i)(5), the pql must be proposed by the owner or operator and approved by the Agency. Use of any of the following statistical methods must adequately protect human health and the environment and must comply with the performance standards outlined in subsection (i).

1) A parametric analysis of variance (ANOVA) followed by multiple comparisons procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance well's mean and the background mean levels for each constituent.

2) An analysis of variance (ANOVA) based on ranks followed by multiple comparisons procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance well's median and the background median levels for each constituent.

3) A tolerance or prediction interval procedure in which an interval for each constituent is established from the distribution of the background data, and the level of each constituent in each compliance well is compared to the upper tolerance or prediction limit.

4) A control chart approach that gives control limits for each constituent.

5) Another statistical test method submitted by the owner or operator and approved by the Agency.

i) Any statistical method chosen pursuant to subsection (h) for specification in the unit permit must comply with the following performance standards, as appropriate:

1) The statistical method used to evaluate groundwater monitoring data must be appropriate for the distribution of chemical parameters or hazardous constituents. If the distribution of the chemical parameters or hazardous constituents is shown by the owner or operator to be inappropriate for a normal theory test, then the data should be transformed or a distribution-free theory test should be used. If the distributions for the constituents differ, more than one statistical method may be needed.

2) If an individual well comparison procedure is used to compare an individual compliance well constituent concentration with background constituent concentrations or a groundwater protection standard, the test must be done at a Type I error level no less than 0.01 for each testing period. If a multiple comparisons procedure is used, the Type I

experimentwise error rate for each testing period must be no less than 0.05; however, the Type I error of no less than 0.01 for individual well comparisons must be maintained. This performance standard does not apply to tolerance intervals, prediction intervals or control charts.

3) If a control chart approach is used to evaluate groundwater monitoring data, the specific type of control chart and its associated parameter value must be proposed by the owner or operator and approved by the Agency if the Agency finds it to adequately protect human health and the environment.

4) If a tolerance interval or a prediction interval is used to evaluate groundwater monitoring data, the levels of confidence and, for tolerance intervals, the percentage of the population that the interval must contain, must be proposed by the owner or operator and approved by the Agency if the Agency finds these parameters to adequately protect human health and the environment. These parameters will be determined after considering the number of samples in the background database, the data distribution, and the range of the concentration values for each constituent of concern.

5) The statistical method must account for data below the limit of detection with one or more statistical procedures that adequately protect human health and the environment. Any practical quantification limit (pql) approved by the Agency pursuant to subsection (h) that is used in the statistical method must be the lowest concentration level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions that are available to the facility.

6) If necessary, the statistical method must include procedures to control or correct for seasonal and spatial variability, as well as temporal correlation in the data.

j) Groundwater monitoring data collected in accordance with subsection (g), including actual levels of constituents, must be maintained in the facility operating record. The Agency must specify in the permit when the data must be submitted for review.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.198 Detection Monitoring Program

An owner or operator required to establish a detection monitoring program under this Subpart F must, at a minimum, discharge the following responsibilities:

a) The owner or operator must monitor for indicator parameters (e.g., specific conductance, total organic carbon, or total organic halogen), waste constituents or

reaction products that provide a reliable indication of the presence of hazardous constituents in groundwater. The Agency must specify the parameters or constituents to be monitored in the facility permit, after considering the following factors:

1) The types, quantities, and concentrations of constituents in wastes managed at the regulated unit;

2) The mobility, stability, and persistence of waste constituents or their reaction products in the unsaturated zone beneath the waste management area;

3) The detectability of indicator parameters, waste constituents, and reaction products in groundwater; and

4) The concentrations or values and coefficients of variation of proposed monitoring parameters or constituents in the groundwater background.

b) The owner or operator must install a groundwater monitoring system at the compliance point as specified under Section 724.195. The groundwater monitoring system must comply with Sections 724.197(a)(2), 724.197(b), and 724.197(c).

c) The owner or operator must conduct a groundwater monitoring program for each chemical parameter and hazardous constituent specified in the permit pursuant to subsection (a) in accordance with Section 724.197(g). The owner or operator must maintain a record of groundwater analytical data, as measured and in a form necessary for the determination of statistical significance under Section 724.197(h).

d) The Agency must specify the frequencies for collecting samples and conducting statistical tests to determine whether there is statistically significant evidence of contamination for any parameter or hazardous constituent specified in the permit conditions under subsection (a) in accordance with Section 724.197(g).

e) The owner or operator must determine the groundwater flow rate and direction in the uppermost aquifer at least annually.

f) The owner or operator must determine whether there is statistically significant evidence of contamination for any chemical parameter or hazardous constituent specified in the permit pursuant to subsection (a) at a frequency specified under subsection (d).

1) In determining whether statistically significant evidence of contamination exists, the owner or operator must use the methods specified in the permit

under Section 724.197(h). These methods must compare data collected at the compliance points to the background groundwater quality data.

2) The owner or operator must determine whether there is statistically significant evidence of contamination at each monitoring well at the compliance point within a reasonable period of time after completion of sampling. The Agency must specify in the facility permit what period of time is reasonable, after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of groundwater samples.

g) If the owner or operator determines pursuant to subsection (f) that there is statistically significant evidence of contamination for chemical parameters or hazardous constituents specified pursuant to subsection (a) at any monitoring well at the compliance point, the owner or operator must do the following:

1) Notify the Agency of this finding in writing within seven days. The notification must indicate what chemical parameters or hazardous constituents have shown statistically significant evidence of contamination.

2) Immediately sample the groundwater in all monitoring wells and determine whether constituents in the list of Appendix I are present, and if so, in what concentration. However, the Agency must allow sampling for a site-specific subset of constituents from the Appendix I list and for other representative or related waste constituents if it determines that sampling for that site-specific subset of contaminants and other constituents is more economical and equally effective for determining whether groundwater contamination has occurred.

3) For any compounds in Appendix I found in the analysis pursuant to subsection (g)(2), the owner or operator may resample within one month or at an alternative site-specific schedule approved by the Agency and repeat the analysis for those compounds detected. If the results of the second analysis confirm the initial results, then these constituents will form the basis for compliance monitoring. If the owner or operator does not resample for the compounds set forth in subsection (g)(2), the hazardous constituents found during this initial Appendix I analysis will form the basis for compliance monitoring.

4) Within 90 days, submit to the Agency an application for a permit modification to establish a compliance monitoring program meeting the requirements of Section 724.199. The application must include the following information:

A) An identification of the concentration of any constituent in Appendix I detected in the groundwater at each monitoring well at the compliance point;

B) Any proposed changes to the groundwater monitoring system at the facility necessary to meet the requirements of Section 724.199;

C) Any proposed additions or changes to the monitoring frequency, sampling and analysis procedures or methods, or statistical methods used at the facility necessary to meet the requirements of Section 724.199;

D) For each hazardous constituent detected at the compliance point, a proposed concentration limit under Section 724.194(a)(1) or (a)(2), or a notice of intent to seek an alternate concentration limit under Section 724.194(b).

5) Within 180 days, submit the following to the Agency:

A) All data necessary to justify an alternate concentration limit sought under Section 724.194(b); and

B) An engineering feasibility plan for a corrective action program necessary to meet the requirement of Section 724.200, unless the following is true:

i) All hazardous constituents identified under subsection (g)(2) are listed in Table 1 of Section 724.194 and their concentrations do not exceed the respective values given in that table; or

ii) The owner or operator has sought an alternate concentration limit under Section 724.194(b) for every hazardous constituent identified under subsection (g)(2).

6) If the owner or operator determines, pursuant to subsection (f), that there is a statistically significant difference for chemical parameters or hazardous constituents specified pursuant to subsection (a) at any monitoring well at the compliance point, the owner or operator may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis or statistical evaluation, or natural variation in the groundwater. The owner or operator may make a demonstration under this subsection (g) in addition to, or in lieu of, submitting a permit modification application under subsection (g)(4); however, the owner or operator is not relieved of the requirement to submit a permit modification

application within the time specified in subsection (g)(4) unless the demonstration made under this subsection (g) successfully shows that a source other than a regulated unit caused the increase, or that the increase resulted from error in sampling, analysis, or evaluation. In making a demonstration under this subsection (g), the owner or operator must do the following:

A) Notify the Agency in writing, within seven days of determining statistically significant evidence of contamination at the compliance point, that the owner or operator intends to make a demonstration under this subsection (g);

B) Within 90 days, submit a report to the Agency that demonstrates that a source other than a regulated unit caused the contamination or that the contamination resulted from error in sampling, analysis, or evaluation;

C) Within 90 days, submit to the Agency an application for a permit modification to make any appropriate changes to the detection monitoring program facility; and

D) Continue to monitor in accordance with the detection monitoring program established under this Section.

h) If the owner or operator determines that the detection monitoring program no longer satisfies the requirements of this Section, the owner or operator must, within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.199 Compliance Monitoring Program

An owner or operator required to establish a compliance monitoring program under this Subpart F must, at a minimum, discharge the following responsibilities:

a) The owner or operator must monitor the groundwater to determine whether regulated units are in compliance with the groundwater protection standard under Section 724.192. The Agency must specify the groundwater protection standard in the facility permit, including the following:

1) A list of the hazardous constituents identified under Section 724.193;

2) Concentration limits under Section 724.194 for each of those hazardous constituents;

3) The compliance point under Section 724.195; and

4) The compliance period under Section 724.196.

b) The owner or operator must install a groundwater monitoring system at the compliance point as specified under Section 724.195. The groundwater monitoring system must comply with Section 724.197(a)(2), 724.197(b), and 724.197(c).

c) The Agency must specify the sampling procedures and statistical methods appropriate for the constituents and facility, consistent with Section 724.197(g) and (h).

1) The owner or operator must conduct a sampling program for each chemical parameter or hazardous constituent in accordance with Section 724.197(g).

2) The owner or operator must record groundwater analytical data as measured and in a form necessary for the determination of statistical significance under Section 724.197(h) for the compliance period of the facility.

d) The owner or operator must determine whether there is statistically significant evidence of increased contamination for any chemical parameter or hazardous constituent specified in the permit, pursuant to subsection (a), at a frequency specified under subsection (f).

1) In determining whether statistically significant evidence of increased contamination exists, the owner or operator must use the methods specified in the permit under Section 724.197(h). The methods must compare data collected at the compliance points to a concentration limit developed in accordance with Section 724.194.

2) The owner or operator must determine whether there is statistically significant evidence of increased contamination at each monitoring well at the compliance point within a reasonable time period after completion of the sampling. The Agency must specify that time period in the facility permit, after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of groundwater samples.

e) The owner or operator must determine the groundwater flow rate and direction in the uppermost aquifer at least annually.

f) The Agency must specify the frequencies for collecting samples and conducting statistical tests to determine statistically significant evidence of increased contamination in accordance with Section 724.197(g).

g) The owner or operator must annually determine whether additional hazardous constituents from Appendix I, which could possibly be present but are not on the detection monitoring list in the permit, are actually present in the uppermost aquifer and, if so, at what concentration, pursuant to procedures in Section 724.198(f). To accomplish this, the owner or operator must consult with the Agency to determine the following on a case-by-case basis: which sample collection event during the year will involve enhanced sampling; the number of monitoring wells at the compliance point to undergo enhanced sampling; the number of samples to be collected from each of these monitoring wells; and, the specific constituents from Appendix I for which these samples must be analyzed. If the enhanced sampling event indicates that Appendix I constituents are present in the ground water that are not already identified in the permit as monitoring constituents, the owner or operator may resample within one month or at an alternative site-specific schedule approved by the Agency, and repeat the analysis. If the second analysis confirms the presence of new constituents, the owner or operator must report the concentration of these additional constituents to the Agency within seven days after the completion of the second analysis and add them to the monitoring list. If the owner or operator chooses not to resample, then it must report the concentrations of these additional constituents to the Agency within seven days after completion of the initial analysis, and add them to the monitoring list.

h) If the owner or operator determines, pursuant to subsection (d) that any concentration limits under Section 724.194 are being exceeded at any monitoring well at the point of compliance, the owner or operator must do the following:

1) Notify the Agency of this finding in writing within seven days. The notification must indicate what concentration limits have been exceeded.

2) Submit to the Agency an application for a permit modification to establish a corrective action program meeting the requirements of Section 724.200 within 180 days, or within 90 days if an engineering feasibility study has been previously submitted to the Agency under Section 724.198(g)(5). The application must at a minimum include the following information:

A) A detailed description of corrective actions that will achieve compliance with the groundwater protection standard specified in the permit under subsection (a); and

B) A plan for a groundwater monitoring program that will demonstrate the effectiveness of the corrective action. Such a groundwater monitoring program may be based on a compliance

monitoring program developed to meet the requirements of this Section.

i) If the owner or operator determines, pursuant to subsection (d), that the groundwater concentration limits under this Section are being exceeded at any monitoring well at the point of compliance, the owner or operator may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis, or statistical evaluation, or natural variation in groundwater. In making a demonstration under this subsection (i), the owner or operator must do the following:

1) Notify the Agency in writing within seven days that it intends to make a demonstration under this subsection (i);

2) Within 90 days, submit a report to the Agency that demonstrates that a source other than a regulated unit caused the standard to be exceeded or that the apparent noncompliance with the standards resulted from error in sampling, analysis, or evaluation;

3) Within 90 days, submit to the Agency an application for a permit modification to make any appropriate changes to the compliance monitoring program at the facility; and

4) Continue to monitor in accord with the compliance monitoring program established under this Section.

j) If the owner or operator determines that the compliance monitoring program no longer satisfies the requirements of this Section, the owner or operator must, within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.200 Corrective Action Program

An owner or operator required to establish a corrective action program pursuant to this Subpart F must, at a minimum, discharge the following responsibilities:

a) The owner or operator must take corrective action to ensure that regulated units are in compliance with the groundwater protection standard pursuant to Section 724.192. The Agency must specify the groundwater protection standard in the facility permit, including the following:

1) A list of the hazardous constituents identified pursuant to Section 724.193;

2) Concentration limits pursuant to Section 724.194 for each of those hazardous constituents;

3) The compliance point pursuant to Section 724.195; and

4) The compliance period pursuant to Section 724.196.

b) The owner or operator must implement a corrective action program that prevents hazardous constituents from exceeding their respective concentration limits at the compliance point by removing the hazardous waste constituents or treating them in place. The permit will specify the specific measures that must be taken.

c) The owner or operator must begin corrective action within a reasonable time period after the groundwater protection standard is exceeded. The Agency must specify that time period in the facility permit. If a facility permit includes a corrective action program in addition to a compliance monitoring program, the permit will specify when the corrective action must begin and such a requirement will operate in lieu of Section 724.199(i)(2).

d) In conjunction with a corrective action program, the owner or operator must establish and implement a groundwater monitoring program to demonstrate the effectiveness of the corrective action program. Such a monitoring program may be based on the requirements for a compliance monitoring program pursuant to Section 724.199 and must be as effective as that program in determining compliance with the groundwater protection standard pursuant to Section 724.192 and in determining the success of a corrective action program pursuant to subsection (e) where appropriate.

e) In addition to the other requirements of this Section, the owner or operator must conduct a corrective action program to remove or treat in place any hazardous constituents pursuant to Section 724.193 that exceed concentration limits pursuant to Section 724.194 in groundwater, as follows:

1) At the following locations:

A) Between the compliance point pursuant to Section 724.195 and the downgradient facility property boundary; and

B) Beyond the facility boundary, where necessary to adequately protect human health and the environment, unless the owner or operator demonstrates to the Agency that, despite the owner's or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such action. The owner and operator are not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where off-site

access is denied. On-site measures to address such releases will be determined on a case-by-case basis.

2) The permit will specify the following measures to be taken:

A) Corrective action measures pursuant to this subsection (e) must be initiated and completed within a reasonable period of time considering the extent of contamination.

B) Corrective action measures pursuant to this subsection (e) may be terminated once the concentration of hazardous constituents pursuant to Section 724.193 is reduced to levels below their respective concentration limits pursuant to Section 724.194.

f) The owner or operator must continue corrective action measures during the compliance period to the extent necessary to ensure that the groundwater protection standard is not exceeded. If the owner or operator is conducting corrective action at the end of the compliance period, the owner or operator must continue that corrective action for as long as necessary to achieve compliance with the groundwater protection standard. The owner or operator may terminate corrective action measures taken beyond the period equal to the active life of the waste management area (including the closure period) if the owner or operator can demonstrate, based on data from the groundwater monitoring program pursuant to subsection (d), that the groundwater protection standard of Section 724.192 has not been exceeded for a period of three consecutive years.

g) The owner or operator must report in writing to the Agency on the effectiveness of the corrective action program. The owner or operator must submit these reports annually.

h) If the owner or operator determines that the corrective action program no longer satisfies this Section, the owner or operator must, within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.201 Corrective Action for Solid Waste Management Units

a) The owner or operator of a facility seeking a permit for the treatment, storage, or disposal of hazardous waste must institute corrective action as necessary to adequately protect human health and the environment for all releases of hazardous waste or constituents from any solid waste management unit at the facility, regardless of the time at which waste was placed in such unit.

b) Corrective action will be specified in the permit in accordance with this Section and Subpart S. The permit will contain schedules of compliance for such corrective action (where such corrective action cannot be completed prior to issuance of the permit) and assurances of financial responsibility for completing such corrective action.

c) The owner or operator must implement corrective action measures beyond the facility property boundary, where necessary to adequately protect human health and the environment, unless the owner or operator demonstrates to the Agency that, despite the owner or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such actions. The owner and operator are not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where off-site access is denied. On-site measures to address such releases will be determined on a case-by-case basis. Assurances of financial responsibility for such corrective action must be provided.

d) This Section does not apply to remediation waste management sites unless they are part of a facility subject to a permit for treating, storing, or disposing of hazardous wastes that are not remediation wastes.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

SUBPART G: CLOSURE AND POST-CLOSURE CARE

Section 724.210 Applicability

Except as Section 724.101 provides otherwise, the following are required:

a) Section 724.211 through 724.215 (which concern closure) apply to the owners and operators of all hazardous waste management facilities;

b) Sections 724.216 through 724.220 (which concern post-closure care) apply to the owners and operators of the following:

1) All hazardous waste disposal facilities;

2) Waste piles and surface impoundments from which the owner or operator intends to remove the wastes at closure, to the extent that Sections 724.216 through 724.220 are made applicable to such facilities in Sections 724.328 or 724.358;

3) Tank systems that are required pursuant to Section 724.297 to meet the requirements for landfills; or

4) Containment buildings that are required pursuant to Section 724.1102 to meet the requirements for landfills; and

c) A permit or enforceable document can contain alternative requirements that replace all or part of the closure and post-closure care requirements of this Subpart G (and the unit-specific standards referenced in Section 724.211(c) applying to a regulated unit) with alternative requirements set out in a permit or other enforceable document, as provided pursuant to 35 Ill. Adm. Code 703.161, where the Board or Agency determines the following:

1) The regulated unit is situated among solid waste management units (or areas of concern), a release has occurred, and both the regulated unit and one or more solid waste management units (or areas of concern) are likely to have contributed to the release; and

2) It is not necessary to apply the closure requirements of this Subpart G (and those referenced herein) because the alternative requirements will adequately protect human health and the environment and will satisfy the closure performance standard of Section 724.211(a) and (b).

(Source: Amended at 31 Ill. Reg. 893, effective December 20, 2006)

Section 724.211 Closure Performance Standard

The owner or operator must close the facility in a manner that does the following:

a) The closure minimizes the need for further maintenance;

b) The closure controls, minimizes, or eliminates, to the extent necessary to adequately protect to human health and the environment, post-closure escape of hazardous waste, hazardous constituents, leachate, contaminated run-off, or hazardous decomposition products to the ground or surface waters or to the atmosphere; and

c) The closure complies with the closure requirements of this Part including, but not limited to, Sections 724.278, 724.297, 724.328, 724.358, 724.380, 724.410, 724.451 and 724.701 through 724.703, and 724.1102.

(Source: Amended at 31 Ill. Reg. 893, effective December 20, 2006)

Section 724.212 Closure Plan; Amendment of Plan

a) Written Plan Required

1) The owner or operator of a hazardous waste management facility must have a written closure plan. In addition, certain surface impoundments and waste piles from which the owner or operator intends to remove or decontaminate the hazardous waste at partial or final closure are required

by Sections 724.328(c)(1)(A) and 724.358(c)(1)(A) to have contingent closure plans. The plan must be submitted with the permit application, in accordance with 35 Ill. Adm. Code 703.183, and approved by the Agency as part of the permit issuance proceeding pursuant to 35 Ill. Adm. Code 705. In accordance with 35 Ill. Adm. Code 703.241, the approved closure plan will become a condition of any RCRA permit.

2) The Agency's approval of the plan must ensure that the approved closure plan is consistent with Sections 724.211 through 724.215 and the applicable requirements of Sections 724.190 et seq., 724.278, 724.297, 724.328, 724.358, 724.380, 724.410, 724.451, 724.701, and 724.1102. Until final closure is completed and certified in accordance with Section 724.215, a copy of the approved plan and approved revisions must be furnished to the Agency upon request, including requests by mail.

b) Content of Plan. The plan must identify steps necessary to perform partial or final closure of the facility at any point during its active life. The closure plan must include, at least the following:

1) A description of how each hazardous waste management unit at the facility will be closed in accordance with Section 724.211;

2) A description of how final closure of the facility will be conducted in accordance with Section 724.211. The description must identify the maximum extent of the operations that will be unclosed during the active life of the facility;

3) An estimate of the maximum inventory of hazardous wastes ever on-site over the active life of the facility and a detailed description of the methods to be used during partial closures and final closure, including, but not limited to, methods for removing, transporting, treating, storing, or disposing of all hazardous wastes, and identification of the types of off-site hazardous waste management units to be used, if applicable;

4) A detailed description of the steps needed to remove or decontaminate all hazardous waste residues and contaminated containment system components, equipment, structures, and soils during partial and final closure, including, but not limited to, procedures for cleaning equipment and removing contaminated soils, methods for sampling and testing surrounding soils, and criteria for determining the extent of decontamination required to satisfy the closure performance standard;

5) A detailed description of other activities necessary during the closure period to ensure that all partial closures and final closure satisfy the closure performance standards, including, but not limited to, groundwater monitoring, leachate collection, and run-on and run-off control;

6) A schedule for closure of each hazardous waste management unit and for final closure of the facility. The schedule must include, at a minimum, the total time required to close each hazardous waste management unit and the time required for intervening closure activities that will allow tracking of the progress of partial and final closure (For example, in the case of a landfill unit, estimates of the time required to treat and dispose of all hazardous waste inventory and of the time required to place a final cover must be included.);

7) For facilities that use trust funds to establish financial assurance pursuant to Section 724.243 or 724.245 and that are expected to close prior to the expiration of the permit, an estimate of the expected year of final closure; and

8) For a facility where alternative requirements are established at a regulated unit pursuant to Section 724.190(f), 724.210(c), or 724.240(d), as provided pursuant to 35 Ill. Adm. Code 703.161, either the alternative requirements applying to the regulated unit or a reference to the enforceable document containing those alternative requirements.

c) Amendment of the Plan. The owner or operator must submit a written notification of or request for a permit modification to authorize a change in operating plans, facility design, or the approved closure plan in accordance with the applicable procedures in 35 Ill. Adm. Code 702, 703, and 705. The written notification or request must include a copy of the amended closure plan for review or approval by the Agency.

1) The owner or operator may submit a written notification or request to the Agency for a permit modification to amend the closure plan at any time prior to notification of partial or final closure of the facility.

2) The owner or operator must submit a written notification of or request for a permit modification to authorize a change in the approved closure plan whenever any of the following occurs:

A) Changes in operating plans or facility design affect the closure plan;

B) There is a change in the expected year of closure, if applicable;

C) In conducting partial or final closure activities, unexpected events require modification of the approved closure plan; or

D) The owner or operator requests the establishment of alternative requirements, as provided pursuant to 35 Ill. Adm. Code 703.161, to

a regulated unit pursuant to Section 724.190(f), 724.210(c), or 724.240(d).

3) The owner or operator must submit a written request for a permit modification including a copy of the amended closure plan for approval at least 60 days prior to the proposed change in the facility design or operation, or no later than 60 days after an unexpected event has occurred that has affected the closure plan. If an unexpected event occurs during the partial or final closure period, the owner or operator must request a permit modification no later than 30 days after the unexpected event. An owner or operator of a surface impoundment or waste pile that intends to remove all hazardous waste at closure and is not otherwise required to prepare a contingent closure plan pursuant to Section 724.328(c)(1)(A) or 724.358(c)(1)(A), must submit an amended closure plan to the Agency no later than 60 days after the date the owner or operator or Agency determines that the hazardous waste management unit must be closed as a landfill, subject to Section 724.410, or no later than 30 days after that date if the determination is made during partial or final closure. The Agency must approve, disapprove or modify this amended plan in accordance with the procedures in 35 Ill. Adm. Code 702, 703, and 705. In accordance with 35 Ill. Adm. Code 702.160 and 703.241, the approved closure plan will become a condition of any RCRA permit issued.

4) The Agency may request modifications to the plan under the conditions described in Section 724.212(c)(2). The owner or operator must submit the modified plan within 60 days after the Agency's request, or within 30 days if the change in facility conditions occurs during partial or final closure. Any modifications requested by the Agency must be approved in accordance with the procedures in 35 Ill. Adm. Code 702, 703, and 705.

d) Notification of Partial Closure and Final Closure

1) The owner or operator must notify the Agency in writing at least 60 days prior to the date on which the owner or operator expects to begin closure of a surface impoundment, waste pile, land treatment, or landfill unit or final closure of a facility with such a unit. The owner or operator must notify the Agency in writing at least 45 days prior to the date on which the owner or operator expects to begin final closure of a facility with only treatment or storage tanks, container storage, or incinerator units to be closed. The owner or operator must notify the Agency in writing at least 45 days prior to the date on which the owner or operator expects to begin partial or final closure of a boiler or industrial furnace, whichever is earlier.

2) The date when the owner or operator "expects to begin closure" must be either of the following:

A) No later than 30 days after the date on which any hazardous waste management unit receives the known final volume of hazardous wastes or, if there is a reasonable possibility that the hazardous waste management unit will receive additional hazardous wastes, no later than one year after the date on which the unit received the most recent volume of hazardous waste. If the owner or operator of a hazardous waste management unit demonstrates to the Agency that the hazardous waste management unit or facility has the capacity to receive additional hazardous wastes and that the owner or operator has taken and will continue to take all steps to adequately prevent threats to human health and the environment, including compliance with all applicable permit requirements, the Agency must approve an extension to this one-year limit; or

B) For units meeting the requirements of Section 724.213(d), no later than 30 days after the date on which the hazardous waste management unit receives the final known volume of non-hazardous wastes, or, if there is a reasonable possibility that the hazardous waste management unit will receive additional non-hazardous wastes, no later than one year after the date on which the unit received the most recent volume of non-hazardous wastes. If the owner or operator demonstrates to the Agency that the hazardous waste management unit has the capacity to receive additional non-hazardous wastes and that the owner and operator have taken, and will continue to take, all steps to adequately prevent threats to human health and the environment, including compliance with all applicable permit requirements, the Agency must approve an extension to this one-year limit.

3) If the facility's permit is terminated, or if the facility is otherwise ordered by judicial decree or Board order to cease receiving hazardous wastes or to close, then this subsection (d) does not apply. However, the owner or operator must close the facility in accordance with the deadlines established in Section 724.213.

e) Removal of Wastes and Decontamination or Dismantling of Equipment. Nothing in this Section must preclude the owner or operator from removing hazardous wastes and decontaminating or dismantling equipment in accordance with the approved partial or final closure plan at any time before or after notification of partial or final closure.

(Source: Amended at 43 Ill. Reg. 5999, May 2, 2019)

Section 724.213 Closure; Time Allowed for Closure

a) All permits must require that, within 90 days after receiving the final volume of hazardous waste, or the final volume of non-hazardous wastes, if the owner or operator complies with all the applicable requirements of subsections (d) and (e), at a hazardous waste management unit or facility, the owner or operator treat, remove from the unit or facility, or dispose of on-site, all hazardous wastes in accordance with the approved closure plan, unless the owner or operator makes the following demonstration by way of permit application or modification application. The Agency must approve a longer period if the owner or operator demonstrates that the following is true:

1) Either of the following:

A) The activities required to comply with this subsection (a) will, of necessity, take longer than 90 days to complete; or

B) All of the following is true:

i) The hazardous waste management unit or facility has the capacity to receive additional hazardous wastes, or has the capacity to receive non-hazardous wastes, if the owner or operator complies with subsections (d) and (e);

ii) There is a reasonable likelihood that the owner or operator or another person will recommence operation of the hazardous waste management unit or facility within one year; and

iii) Closure of the hazardous waste management unit or facility would be incompatible with continued operation of the site; and

2) The owner or operator has taken and will continue to take all steps to prevent threats to human health and the environment, including compliance with all applicable permit requirements.

b) All permits must require that the owner or operator complete partial and final closure activities in accordance with the approved closure plan and within 180 days after receiving the final volume of hazardous wastes, or the final volume of non-hazardous wastes, if the owner or operator complies with all applicable requirements in subsections (d) and (e), at the hazardous waste management unit or facility, unless the owner or operator makes the following demonstration by way of permit application or modification application. The Agency must approve a longer closure period if the owner or operator demonstrates as follows:

1) Either of the following:

A) The partial or final closure activities will, of necessity, take longer than 180 days to complete; or

B) All of the following:

i) The hazardous waste management unit or facility has the capacity to receive additional hazardous wastes, or has the capacity to receive non-hazardous wastes, if the owner or operator complies with subsections (d) and (e);

ii) There is reasonable likelihood that the owner or operator will recommence operation of the hazardous waste management unit or facility within one year; and

iii) Closure of the hazardous waste management unit or facility would be incompatible with continued operation of the site; and

2) The owner and operator have taken and will continue to take all steps to prevent threats to human health and the environment from the unclosed but not operating hazardous waste management unit or facility including compliance with all applicable permit requirements.

c) The demonstration referred to in subsections (a)(1) and (b)(1) must be made as follows:

1) The demonstration in subsection (a)(1) must be made at least 30 days prior to the expiration of the 90-day period in subsection (a); and

2) The demonstration in subsection (b)(1) must be made at least 30 days prior to the expiration of the 180-day period in subsection (b), unless the owner or operator is otherwise subject to deadlines in subsection (d).

d) Continued Receipt of Non-Hazardous Waste. The Agency must permit an owner or operator to receive only non-hazardous wastes in a landfill, land treatment unit, or surface impoundment unit after the final receipt of hazardous wastes at that unit if the following is true:

1) The owner or operator requests a permit modification in compliance with all applicable requirements in 35 Ill. Adm. Code 702, 703, and 705, and in the permit modification request demonstrates the following:

A) That the unit has the existing design capacity as indicated on the Part A application to receive non-hazardous wastes;

B) That there is a reasonable likelihood that the owner or operator or another person will receive non-hazardous wastes in the unit within one year after the final receipt of hazardous wastes;

C) That the non-hazardous wastes will not be incompatible with any remaining wastes in the unit, or with the facility design and operating requirements of the unit or facility pursuant to this Part;

D) That closure of the hazardous waste management unit would be incompatible with continued operation of the unit or facility; and

E) That the owner or operator is operating and will continue to operate in compliance with all applicable permit requirements;

2) The request to modify the permit includes an amended waste analysis plan, groundwater monitoring and response program, human exposure assessment required pursuant to 35 Ill. Adm. Code 703.186, and closure and post-closure plans and updated cost estimates and demonstrations of financial assurance for closure and post-closure care, as necessary and appropriate, to reflect any changes due to the presence of hazardous constituents in the non-hazardous wastes, and changes in closure activities, including the expected year of closure if applicable pursuant to Section 724.212(b)(7), as a result of the receipt of non-hazardous wastes following the final receipt of hazardous wastes;

3) The request to modify the permit includes revisions, as necessary and appropriate, to affected conditions of the permit to account for the receipt of non-hazardous wastes following receipt of the final volume of hazardous wastes; and

4) The request to modify the permit and the demonstrations referred to in subsections (d)(1) and (d)(2) are submitted to the Agency no later than 120 days prior to the date on which the owner or operator of the facility receives the known final volume of hazardous wastes at the unit or no later than 90 days after the effective date of this Section, whichever is later.

e) Surface Impoundments. In addition to the requirements in subsection (d), an owner or operator of a hazardous waste surface impoundment that is not in compliance with the liner and leachate collection system requirements in Section 724.321(c), (d), or (e) must receive non-hazardous wastes only as authorized by an adjusted standard pursuant to this subsection (e).

1) The petition for adjusted standard must include the following:

A) A plan for removing hazardous wastes; and

B) A contingent corrective measures plan.

2) The removal plan must provide for the following:

A) Removing all hazardous liquids; and

B) Removing all hazardous sludges to the extent practicable without impairing the integrity of the liner or liners, if any; and

C) Removal of hazardous wastes no later than 90 days after the final receipt of hazardous wastes. The Board will allow a longer time, if the owner or operator demonstrates the following:

i) That the removal of hazardous wastes will, of necessity, take longer than the allotted period to complete; and

ii) That an extension will not pose a threat to human health and the environment.

3) The following requirements apply to the contingent corrective measures plan:

A) It must meet the requirements of a corrective action plan pursuant to Section 724.199, based upon the assumption that a release has been detected from the unit.

B) It may be a portion of a corrective action plan previously submitted pursuant to Section 724.199.

C) It may provide for continued receipt of non-hazardous wastes at the unit following a release only if the owner or operator demonstrates that continued receipt of wastes will not impede corrective action.

D) It must provide for implementation within one year after a release, or within one year after the grant of the adjusted standard, whichever is later.

4) Definition of "Release." A release is defined as a statistically significant increase (or decrease in the case of pH) over background values for detection monitoring parameters or constituents specified in the permit, or over the facility's groundwater protection standard at the or over the facility's groundwater protection standard at the point of compliance, if applicable, detected in accordance with the requirements in Subpart F.

5) In the event of a release, the owner or operator of the unit must do the following:

A) Within 35 days, the owner or operator must file with the Board a petition for adjusted standard. If the Board finds that it is necessary to do so in order to adequately protect human health and the environment, the Board will modify the adjusted standard to require the owner or operator to fulfill the conditions of subsections (e)(5)(A)(i) and (e)(5)(A)(ii). The Board will retain jurisdiction or condition the adjusted standard so as to require the filing of a new petition to address any required closure pursuant to subsection (e)(7).

i) Begin to implement that corrective measures plan in less than one year; or

ii) Cease the receipt of wastes until the plan has been implemented.

B) The owner or operator must implement the contingent corrective measures plan.

C) The owner or operator may continue to receive wastes at the unit if authorized by the approved contingent measures plan.

6) Annual Report. During the period of corrective action, the owner or operator must provide annual reports to the Agency that do the following:

A) They must describe the progress of the corrective action program;

B) They must compile all groundwater monitoring data; and

C) They must evaluate the effect of the continued receipt of non-hazardous wastes on the effectiveness of the corrective action.

7) Required Closure. The owner or operator must commence closure of the unit in accordance with the closure plan and the requirements of this Part if the Board terminates the adjusted standard, or if the adjusted standard terminates pursuant to its terms.

A) The Board will terminate the adjusted standard if the owner or operator failed to implement corrective action measures in accordance with the approved contingent corrective measures plan.

B) The Board will terminate the adjusted standard if the owner or operator fails to make substantial progress in implementing the

corrective measures plan and achieving the facility's groundwater protection standard, or background levels if the facility has not yet established a groundwater protection standard.

C) The adjusted standard will automatically terminate if the owner or operator fails to implement the removal plan.

D) The adjusted standard will automatically terminate if the owner or operator fails to timely file a required petition for adjusted standard.

8) Adjusted Standard Procedures. The following procedures must be used in granting, modifying or terminating an adjusted standard pursuant to this subsection (e).

A) Except as otherwise provided, the owner or operator must follow the procedures of Section 28.1 of the Act and 35 Ill. Adm. Code 101 and 104 to petition the Board for an adjusted standard.

B) Initial justification. The Board will grant an adjusted standard pursuant to subsection (e)(1) if the owner or operator demonstrates that the removal plan and contingent corrective measures plans meet the requirements of subsections (e)(2) and (e)(3).

C) The Board will include the following conditions in granting an adjusted standard pursuant to subsection (e)(1):

i) A plan for removing hazardous wastes.

ii) A requirement that the owner or operator remove hazardous wastes in accordance with the plan.

iii) A contingent corrective measures plan.

iv) A requirement that, in the event of a release, the owner or operator must do as follows: within 35 days, file with the Board a petition for adjusted standard; implement the corrective measures plan; and, file semi-annual reports with the Agency.

v) A condition that the adjusted standard will terminate if the owner or operator fails to do as follows: implement the removal plan; or timely file a required petition for adjusted standard.

vi) A requirement that, in the event the adjusted standard is terminated, the owner or operator must commence closure of the unit in accordance with the requirements of the closure plan and this Part.

D) Justification in the Event of a Release. The Board will modify or terminate the adjusted standard pursuant to a petition filed pursuant to subsection (e)(5)(A), as provided in that subsection or in subsection (e)(7).

9) The Agency must modify the RCRA permit to include the adjusted standard.

10) The owner or operator may file a permit modification application with a revised closure plan within 15 days after an adjusted standard is terminated.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.214 Disposal or Decontamination of Equipment, Structures, and Soils

During the partial and final closure periods, all contaminated equipment, structures, and soils must be properly disposed of or decontaminated unless otherwise specified in Sections 724.297, 724.328, 724.358, 724.380, or 724.410, or under the authority of Sections 724.701 and 724.703. By removing any hazardous wastes or hazardous constituents during partial and final closure, the owner or operator may become a generator of hazardous waste and must handle that waste in accordance with all applicable requirements of 35 Ill. Adm. Code 722.

(Source: Amended at 27 Ill. Reg. 3725, effective February 14, 2003)

Section 724.215 Certification of Closure

Within 60 days after completion of closure of each hazardous waste surface impoundment, waste pile, land treatment, or landfill unit, and within 60 days after completion of final closure, the owner or operator must submit to the Agency, by registered mail, a certification that the hazardous waste management unit or facility, as applicable, has been closed in accordance with the specifications in the approved closure plan. The certification must be signed by the owner or operator and by a qualified Professional Engineer. Documentation supporting the Professional Engineer's certification must be furnished to the Agency upon request until the Agency releases the owner or operator from the financial assurance requirements for closure under Section 724.243(i).

(Source: Amended at 32 Ill. Reg. 12365, effective July 14, 2008)

Section 724.216 Survey Plat

No later than the submission of the certification of closure of each hazardous waste disposal unit, the owner or operator must submit to any local zoning authority or authority with jurisdiction over local land use and to the Agency and record with land titles, a survey plat indicating the location and dimensions of landfill cells or other hazardous waste disposal units with respect to permanently surveyed benchmarks. This plat must be prepared and certified by a professional land surveyor. The plat filed with the local zoning authority or the authority with jurisdiction over local land use must contain a note, prominently displayed, that states the owner's and operator's obligation to restrict disturbance of the hazardous waste disposal unit in accordance with the applicable regulations of Subpart G.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.217 Post-Closure Care and Use of Property

a) Post-Closure Care Period

1) Post-closure care for each hazardous waste management unit subject to the requirements of Sections 724.217 through 724.220 must begin after completion of closure of the unit and continue for 30 years after that date and must consist of at least the following:

A) Monitoring and reporting in accordance with the requirements of Subparts F, K, L, M, N, and X; and

B) Maintenance and monitoring of waste containment systems in accordance with the requirements of Subparts F, K, L, M, N, and X.

2) Any time preceding partial closure of a hazardous waste management unit subject to post-closure care requirements or final closure, or any time during the post-closure care period for a particular unit, the Board may, in accordance with the permit modification procedures of 35 Ill. Adm. Code 702, 703, and 705, do either of the following:

A) Shorten the post-closure care period applicable to the hazardous waste management unit or facility if all disposal units have been closed and the Board has found by an adjusted standard issue pursuant to Section 28.1 of the Act and 35 Ill. Adm. Code 101 and 104 that the reduced period is sufficient to adequately protect human health and the environment (e.g., leachate or groundwater monitoring results, characteristics of the waste, application of advanced technology or alternative disposal, treatment, or re-use techniques indicate that the hazardous waste management unit or facility is secure); or

B) Extend the post-closure care period applicable to the hazardous waste management unit or facility if the Board has found by an adjusted standard issue pursuant to Section 28.1 of the Act and 35 Ill. Adm. Code 101 and 104 that the extended period is necessary to adequately protect human health and the environment (e.g., leachate or groundwater monitoring results indicate a potential for migration of hazardous wastes at levels that may be harmful to human health and the environment).

b) The Agency must require continuation at partial or final closure of any of the security requirements of Section 724.114 during part or all of the post-closure period when either of the following is true:

1) Hazardous wastes may remain exposed after completion of partial or final closure; or

2) Access by the public or domestic livestock may pose a hazard to human health.

c) Post-closure use of property on or in which hazardous wastes remain after partial or final closure must never be allowed to disturb the integrity of the final cover, liners, or any other components of the containment system or the function of the facility's monitoring systems, unless the Agency finds, by way of a permit modification, that the disturbance is necessary for either of the following reasons:

1) It is necessary to the proposed use of the property, and will not increase the potential hazard to human health or the environment; or

2) It is necessary to reduce a threat to human health or the environment.

d) All the post-closure care activities must be in accordance with the provisions of the approved post-closure plan as specified in Section 724.218.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.218 Post-Closure Care Plan; Amendment of Plan

a) Written Plan. The owner or operator of a hazardous waste disposal unit must have a written post-closure care plan. In addition, certain surface impoundments and waste piles from which the owner or operator intends to remove or decontaminate the hazardous wastes at partial or final closure are required by Sections 724.328(c)(1)(B) and 724.358(c)(1)(B) to have contingent post-closure care plans. Owners or operators of surface impoundments and waste piles not otherwise required to prepare contingent post-closure care plans under Sections 724.328(c)(1)(B) or 724.358(c)(1)(B) must submit a post-closure care plan to the Agency within 90 days from the date that the owner or operator or Agency

determines that the hazardous waste management unit must be closed as a landfill, subject to the requirements of Sections 724.217 through 724.220. The plan must be submitted with the permit application, in accordance with 35 Ill. Adm. Code 703.183, and approved by the Agency as part of the permit issuance proceeding under 35 Ill. Adm. Code 705. In accordance with 35 Ill. Adm. Code 703.241, the approved post-closure care plan will become a condition of any RCRA permit issued.

b) For each hazardous waste management unit subject to the requirements of this Section, the post-closure care plan must identify the activities that will be carried on after closure and the frequency of these activities, and include at least the following:

1) A description of the planned monitoring activities and frequencies that they will be performed to comply with Subparts F, K, L, M, N, and X during the post-closure care period.

2) A description of the planned maintenance activities, and frequencies at which they will be performed, to ensure the following:

A) The integrity of the cap and final cover or other containment systems in accordance with the requirements of Subparts F, K, L, M, N, and X; and

B) The function of the facility monitoring equipment in accordance with the requirements of Subparts F, K, L, M, N, and X.

3) The name, address, and phone number of the person or office to contact about the hazardous disposal unit during the post-closure care period.

4) For a facility where alternative requirements are established at a regulated unit under Section 724.190(f), 724.210(c), or 724.240(d), as provided under 35 Ill. Adm. Code 703.161, either the alternative requirements that apply to the regulated unit, or a reference to the enforceable document containing those requirements.

c) Until final closure of the facility, a copy of the approved post-closure care plan must be furnished to the Agency upon request, including request by mail. After final closure has been certified, the person or office specified in subsection (b)(3) must keep the approved post-closure care plan during the remainder of the post-closure care period.

d) Amendment of Plan. The owner or operator must submit a written notification of or request for a permit modification to authorize a change in the approved post-closure care plan in accordance with the applicable requirements of 35 Ill. Adm.

Code 703 and 705. The written notification or request must include a copy of the amended post-closure care plan for review or approval by the Agency.

1) The owner or operator may submit a written notification or request to the Agency for a permit modification to amend the post-closure care plan at any time during the active life of the facility or during the post-closure care period.

2) The owner or operator must submit a written notification of or request for a permit modification to authorize a change in the approved post-closure care plan whenever any of the following occurs:

   A) Changes in operating plans or facility design affect the post-closure care plan;

   B) There is a change in the expected year of closure if applicable;

   C) Events occur during the active life of the facility, including partial and final closures, that affect the approved post-closure care plan; or

   D) The owner or operator requests establishment of alternative requirements to a regulated unit under Section 724.190(f), 724.210(c), or 724.240(d).

3) The owner or operator must submit a written request for a permit modification at least 60 days prior to the proposed change in facility design or operation, or no later than 60 days after an unexpected event has occurred that has affected the post-closure care plan. An owner or operator of a surface impoundment or waste pile that intends to remove all hazardous waste at closure and is not otherwise required to submit a contingent post-closure care plan under Sections 724.328(c)(1)(B) or 724.358(c)(1)(B) must submit a post-closure care plan to the Agency no later than 90 days after the date that the owner or operator or Agency determines that the hazardous waste management unit must be closed as a landfill, subject to the requirements of Section 724.410. The Agency must approve, disapprove, or modify this plan in accordance with the procedure in 35 Ill. Adm. Code 703 and 705. In accordance with 35 Ill. Adm. Code 703.241, the approved post-closure care plan will become a permit condition.

4) The Agency may request modifications to the plan under the conditions described in subsection (d)(2). The owner or operator must submit the modified plan no later than 60 days after the request, or no later than 90 days if the unit is a surface impoundment or waste pile not previously required to prepare a contingent post-closure care plan. Any

modifications requested by the Agency must be approved, disapproved, or modified in accordance with the procedure in 35 Ill. Adm. Code 703 and 705.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.219 Post-Closure Notices

a) No later than 60 days after certification of closure of each hazardous waste disposal unit, the owner or operator of a disposal facility must submit to the Agency, to the County Recorder and to any local zoning authority or authority with jurisdiction over local land use, a record of the type, location, and quantity of hazardous wastes disposed of within each cell or other disposal unit of the facility. For hazardous wastes disposed of before January 12, 1981, the owner or operator must identify the type, location, and quantity of the hazardous waste to the best of the owner or operator's knowledge and in accordance with any records the owner or operator has kept.

b) Within 60 days after certification of closure of the first hazardous waste disposal unit and within 60 days after certification of closure of the last hazardous waste disposal unit, the owner or operator must do the following:

1) Record a notation on the deed to the facility property—or on some other instrument that is normally examined during title search—that will in perpetuity notify any potential purchaser of the property as follows:

A) That the land has been used to manage hazardous wastes; and

B) That its use is restricted pursuant to this Subpart G; and

C) That the survey plat and record of the type, location, and quantity of hazardous wastes disposed of within each cell or other hazardous waste disposal unit of the facility required by subsection (a) and Section 724.216 have been filed with the Agency, the County Recorder and any local zoning authority or authority with jurisdiction over local land use; and

2) Submit a certification to the Agency, signed by the owner or operator, that the owner or operator has recorded the notation specified in subsection (b)(1), including a copy of the document in which the notation has been placed, to the Agency.

c) If the owner or operator or any subsequent owner or operator of the land upon which a hazardous waste disposal unit is located wishes to remove hazardous wastes and hazardous waste residues, the liner, if any, or contaminated soils, such person must request a modification to the post-closure plan in accordance with the

applicable requirements in 35 Ill. Adm. Code 703 and 705. The owner and operator must demonstrate that the removal of hazardous wastes will satisfy the criteria of Section 724.217(c). By removing hazardous waste, the owner or operator may become a generator of hazardous waste and must manage it in accordance with all applicable requirements of 35 Ill. Adm. Code 703 and 720 through 728, and 738. If the owner or operator is granted a permit modification or otherwise granted approval to conduct such removal activities, the owner or operator may request that the Agency approve either of the following:

1) The removal of the notation on the deed to the facility property or other instrument normally examined during title search; or

2) The addition of a notation to the deed or instrument indicating the removal of the hazardous waste.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.220 Certification of Completion of Post-Closure Care

No later than 60 days after completion of the established post-closure care period for each hazardous waste disposal unit, the owner or operator must submit to the Agency, by registered mail, a certification that the post-closure care period for the hazardous waste disposal unit was performed in accordance with the specifications in the approved post-closure plan. The certification must be signed by the owner or operator and a qualified Professional Engineer. Documentation supporting the Professional Engineer's certification must be furnished to the Agency upon request until the Agency releases the owner or operator from the financial assurance requirements for post-closure care under Section 724.245(i).

(Source: Amended at 32 Ill. Reg. 12365, effective July 14, 2008)

SUBPART H: FINANCIAL REQUIREMENTS

Section 724.240 Applicability

a) The requirements of Sections 724.242, 724.243, and 724.247 through 724.251 apply to owners and operators of all hazardous waste facilities, except as provided otherwise in this Section or in Section 724.101.

b) The requirements of Sections 724.244 and 724.245 apply only to owners and operators of the following:

1) Disposal facilities;

2) Piles, and surface impoundments from which the owner or operator intends to remove the wastes at closure, to the extent that Sections 724.244

and 724.245 are made applicable to such facilities in Sections 724.328 and 724.358;

3) Tank systems that are required pursuant to Section 724.297 to meet the requirements for landfills; or

4) Containment buildings that are required pursuant to Section 724.1102 to meet the requirements for landfills.

c) The State and the federal government are exempt from the requirements of this Subpart H.

d) A permit or enforceable document can contain alternative requirements that replace all or part of the financial assurance requirements of this Subpart H applying to a regulated unit, as provided in 35 Ill. Adm. Code 703.161, where the Board or Agency has done the following:

1) The Board or Agency has established alternative requirements for the regulated unit established pursuant to Section 724.190(f) or 724.210(c); and

2) The Board or Agency determines that it is not necessary to apply the financial assurance requirements of this Subpart H because the alternative financial assurance requirements will adequately protect human health and the environment.

(Source: Amended at 32 Ill. Reg. 12365, effective July 14, 2008)

Section 724.241 Definitions of Terms as Used in This Subpart

For the purposes of this Subpart H, the following terms have the given meanings:

a) "Closure plan" means the plan for closure prepared in accordance with the requirements of Section 724.212.

b) "Current closure cost estimate" means that the most recent of the estimates prepared in accordance with Section 724.242(a), (b), and (c).

c) "Current post-closure cost estimate" means the most recent of the estimates prepared in accordance with Section 724.244(a), (b), and (c).

d) "Parent corporation" means a corporation that directly owns at least 50 percent of the voting stock of the corporation which is the facility owner or operator; the latter corporation is deemed a "subsidiary" of the parent corporation.

e) "Post-closure plan" means the plan for post-closure care prepared in accordance with the requirements of Sections 724.217 through 724.220.

f) The following terms are used in the specifications for the financial test for closure, post-closure care, and liability coverage. The definitions are intended to assist in the understanding of these regulations and are not intended to limit the meanings of terms in a way that conflicts with generally accepted accounting practices.

"Assets" means all existing and all probable future economic benefits obtained or controlled by a particular entity.

"Current assets" means cash or other assets or resources commonly identified as those that are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

"Current liabilities" means obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities.

"Current plugging and abandonment cost estimate" means the most recent of the estimates prepared in accordance with 35 Ill. Adm. Code 704.212(a), (b), and (c).

"Independently audited" refers to an audit performed by an independent certified public accountant in accordance with generally accepted auditing standards.

"Liabilities" means probable future sacrifices of economic benefits arising from present obligations to transfer assets or provide services to other entities in the future as a result of past transactions or events.

"Net working capital" means current assets minus current liabilities.

"Net worth" means total assets minus total liabilities and is equivalent to owner's equity.

"Tangible net worth" means the tangible assets that remain after deducting liabilities; such assets would not include intangibles, such as goodwill and rights to patents or royalties.

g) In the liability insurance requirements the terms "bodily injury" and "property damage" have the meanings given below. The Board intends the meanings of other terms used in the liability insurance requirements to be consistent with their common meanings within the insurance industry. The definitions given below of several of the terms are intended to assist in the understanding of these regulations and are not intended to limit their meanings in a way that conflicts with general insurance industry usage.

"Accidental occurrence" means an accident, including continuous or repeated exposure to conditions, that results in bodily injury or property damage neither expected nor intended from the standpoint of the insured.

"Bodily injury" means bodily injury, sickness, or disease sustained by a person, including death resulting from any of these at any time. However, this term does not include those liabilities that, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for bodily injury.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term.

"Environmental damage" means the injurious presence in or upon land, the atmosphere, or any watercourse or body of water of solid, liquid, gaseous, or thermal contaminants, irritants, or pollutants.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term. This term is used in the definition of "pollution incident".

"Legal defense costs" means any expenses that an insurer incurs in defending against claims of third parties brought under the terms and conditions of an insurance policy.

"Nonsudden accidental occurrence" means an occurrence that takes place over time and involves continuous or repeated exposure.

"Pollutants" means any solid, liquid, gaseous or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals, and waste.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term. This definition is used in the definition of "pollution incident".

"Pollution incident" means emission, discharge, release, or escape of pollutants into or upon land, the atmosphere or any watercourse or body of water, provided that such emission, discharge, release, or escape results in "environmental damage". The entirety of any such emission, discharge, release, or escape must be deemed to be one "pollution incident".

"Waste" includes materials to be recycled, reconditioned, or reclaimed. The term "pollution incident" includes an "occurrence".

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term. This definition is used in the definition of "property damage".

"Property damage" means as follows:

Either of the following:

Physical injury to, destruction of or contamination of tangible property, including all resulting loss of use of that property; or

Loss of use of tangible property that is not physically injured, destroyed or contaminated, but has been evacuated, withdrawn from use or rendered inaccessible because of a "pollution incident".

This term does not include those liabilities that, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for property damage.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term.
"Sudden accidental occurrence" means an occurrence that is not continuous or repeated in nature.

h) "Substantial business relationship" means the extent of a business relationship necessary under applicable state law to make a guarantee contract issued incident to that relationship valid and enforceable. A "substantial business relationship" must arise from a pattern of recent or ongoing business transactions, in addition to the guarantee itself, such that the Agency can reasonably determine that a substantial business relationship currently exists between the guarantor and the owner or operator that is adequate consideration to support the obligation of the guarantee relating to any liability towards a third party. "Applicable state law", as used in this subsection (h), means the laws of the State of Illinois and those of any sister state that govern the guarantee and the adequacy of the consideration.

BOARD NOTE: Derived from 40 CFR 264.141(h) (2017) and the discussion at 53 Fed. Reg. 33938, 33941-33943 (Sep. 1, 1988). This term is also independently defined in 35 Ill. Adm. Code 725.141(h) and 727.240(b)(8). Any Agency determination that a substantial business relationship exists is subject to Board review pursuant to Section 40 of the Act.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.242 Cost Estimate for Closure

a) The owner or operator must have detailed a written estimate, in current dollars, of the cost of closing the facility in accordance with the requirements in Sections 724.211 through 724.215 and applicable closure requirements in Sections 724.278, 724.297, 724.328, 724.358, 724.380, 724.410, 724.451, 724.701 through 724.703, and 724.1102.

1) The estimate must equal the cost of final closure at the point in the facility's active life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan (see Section 724.212(b)).

2) The closure cost estimate must be based on the costs to the owner or operator of hiring a third party to close the facility. A third party is a party who is neither a parent nor a subsidiary of the owner or operator. (See definition of parent corporation in Section 724.241(d).) The owner or operator may use costs for on-site disposal if the owner or operator demonstrates that on-site disposal capacity will exist at all times over the life of the facility.

3) The closure cost estimate must not incorporate any salvage value that may be realized with the sale of hazardous wastes, or non-hazardous wastes if permitted by the Agency pursuant to Section 724.213(d), facility structures or equipment, land, or other assets associated with the facility at the time of partial or final closure.

4) The owner or operator must not incorporate a zero cost for hazardous wastes, or non-hazardous wastes if permitted by the Agency pursuant to Section 724.213(d), that might have economic value.

b) During the active life of the facility, the owner or operator must adjust the closure cost estimate for inflation within 60 days prior to the anniversary date of the establishment of the financial instruments used to comply with Section 724.243. For owners and operators using the financial test or corporate guarantee, the closure cost estimate must be updated for inflation within 30 days after the close of the firm's fiscal year and before submission of updated information to the Agency as specified in Section 724.243(f)(3). The adjustment may be made by recalculating the maximum costs of closure in current dollars, or by using an inflation factor derived from the annual Implicit Price Deflator for Gross National Product (Deflator) as published by the U.S. Department of Commerce in its Survey of Current Business, as specified in subsections (b)(1) and (b)(2). The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year.

1) The first adjustment is made by multiplying the closure cost estimate by the inflation factor. The result is the adjusted closure cost estimate.

2) Subsequent adjustments are made by multiplying the latest adjusted closure cost estimate by the latest inflation factor.

BOARD NOTE: The table of Deflators is available as Table 1.1.9., "Implicit Price Deflators for Gross Domestic Product", in the National Income and Product Account Tables, published by U.S. Department of Commerce, Bureau of Economic Analysis, National Economic Accounts, available on-line at the following web address: www.bea.gov/national/nipaweb/TableView.asp?SelectedTable=13&FirstYear=2002&LastYear=2004&Freq=Qtr.

c) During the active life of the facility the owner or operator must revise the closure cost estimate no later than 30 days after the Agency has approved the request to modify the closure plan, if the change in the closure plan increases the cost of closure. The revised closure cost estimate must be adjusted for inflation, as specified in subsection (b).

d) The owner or operator must keep the following at the facility during the operating life of the facility: the latest closure cost estimate prepared in accordance with subsections (a) and (c) and, when this estimate has been adjusted in accordance with subsection (b), the latest adjusted closure cost estimate.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.243 Financial Assurance for Closure

An owner or operator of each facility must establish financial assurance for closure of the facility. The owner or operator must choose from the options that are specified in subsections (a) through (f).

a) Closure Trust Fund

1) An owner or operator may satisfy the requirements of this Section by establishing a closure trust fund that conforms to the requirements of this subsection (a) and submitting an original signed duplicate of the trust agreement to the Agency. An owner or operator of a new facility must submit the original signed duplicate of the trust agreement to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage or disposal. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or State agency.

2) The wording of the trust agreement must be that specified in Section 724.251, and the trust agreement must be accompanied by a formal certification of acknowledgment, as specified in Section 724.251.

Schedule A of the trust agreement must be updated within 60 days after a change in the amount of the current closure cost estimate covered by the agreement.

3) Payments into the trust fund must be made annually by the owner or operator over the term of the initial RCRA permit or over the remaining operating life of the facility as estimated in the closure plan, whichever period is shorter; this period is hereafter referred to as the "pay-in period". The payments into the closure trust fund must be made as follows:

A) For a new facility, the first payment must be made before the initial receipt of hazardous waste for treatment, storage, or disposal. A receipt from the trustee for this payment must be submitted by the owner or operator to the Agency before this initial receipt of hazardous waste. The first payment must be at least equal to the current closure cost estimate, except as provided in subsection (g), divided by the number of years in the pay-in period. Subsequent payments must be made no later than 30 days after each anniversary date of the first payment. The amount of each subsequent payment must be determined by the following formula:

$$\text{Next Payment} = \frac{(\text{CE} - \text{CV})}{\text{Y}}$$

Where:

CE = the current closure cost estimate

CV = the current value of the trust fund

Y = the number of years remaining in the pay-in period

B) If an owner or operator establishes a trust fund as specified in 35 Ill. Adm. Code 725.243(a) and the value of that trust fund is less than the current closure cost estimate when a permit is awarded for the facility, the amount of the current closure cost estimate still to be paid into the trust fund must be paid in over the pay-in period as defined in subsection (a)(3). Payments must continue to be made no later than 30 days after each anniversary date of the first payment made pursuant to 35 Ill. Adm. Code 725. The amount of each payment must be determined by the following formula:

$$\text{Next Payment} = \frac{(\text{CE} - \text{CV})}{\text{Y}}$$

Where:

CE = the current closure cost estimate

CV = the current value of the trust fund

Y = the number of years remaining in the pay-in period

4) The owner or operator may accelerate payments into the trust fund or may deposit the full amount of the current closure cost estimate at the time the fund is established. However, the owner or operator must maintain the value of the fund at no less than the value that the fund would have if annual payments were made as specified in subsection (a)(3).

5) If the owner or operator establishes a closure trust fund after having used one or more alternate mechanisms specified in this Section or in 35 Ill. Adm. Code 725.243, its first payment must be in at least the amount that the fund would contain if the trust fund were established initially and annual payments made according to specifications of this subsection (a) and 35 Ill. Adm. Code 725.243, as applicable.

6) After the pay-in period is completed, whenever the current closure cost estimate changes, the owner or operator must compare the new estimate with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less than the amount of the new estimate, the owner or operator, within 60 days after the change in the cost estimate, must either deposit an amount into the fund so that its value after this deposit at least equals the amount of the current closure cost estimate or obtain other financial assurance as specified in this Section to cover the difference.

7) If the value of the trust fund is greater than the total amount of the current closure cost estimate, the owner or operator may submit a written request to the Agency for release of the amount in excess of the current closure cost estimate.

8) If an owner or operator substitutes other financial assurance, as specified in this Section for all or part of the trust fund, it may submit a written request to the Agency for release of the amount in excess of the current closure cost estimate covered by the trust fund.

9) Within 60 days after receiving a request from the owner or operator for release of funds as specified in subsection (a)(7) or (a)(8), the Agency must instruct the trustee to release to the owner or operator such funds as the Agency specifies in writing.

10) After beginning partial or final closure, an owner or operator or another person authorized to conduct partial or final closure may request reimbursement for closure expenditures by submitting itemized bills to the

Agency. The owner or operator may request reimbursement for partial closure only if sufficient funds are remaining in the trust fund to cover the maximum costs of closing the facility over its remaining operating life. Within 60 days after receiving bills for partial or final closure activities, the Agency must instruct the trustee to make reimbursement in those amounts as the Agency specifies in writing if the Agency determines that the partial or final closure expenditures are in accordance with the approved closure plan, or otherwise justified. If the Agency determines that the maximum cost of closure over the remaining life of the facility will be significantly greater than the value of the trust fund, it must withhold reimbursement of such amounts as it deems prudent until it determines, in accordance with subsection (i), that the owner or operator is no longer required to maintain financial assurance for final closure of the facility. If the Agency does not instruct the trustee to make such reimbursements, the Agency must provide the owner or operator with a detailed written statement of reasons.

11) The Agency must agree to termination of the trust when either of the following occurs:

A) An owner or operator substitutes alternate financial assurance, as specified in this Section; or

B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

b) Surety Bond Guaranteeing Payment into a Closure Trust Fund

1) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (b) and submitting the bond to the Agency. An owner or operator of a new facility must submit the bond to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage or disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury. BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies", on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: http://www.fms.treas.gov/c570/.

2) The wording of the surety bond must be that specified in Section 724.251.

3) The owner or operator who uses a surety bond to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements specified in subsection (a) except as follows:

A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and

B) Until the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations:

i) Payments into the trust fund as specified in subsection (a);

ii) Updating of Schedule A of the trust agreement (see 35 Ill. Adm. Code 724.251) to show current closure cost estimates;

iii) Annual valuations, as required by the trust agreement; and

iv) Notices of nonpayment as required by the trust agreement.

4) The bond must guarantee that the owner or operator will do one of the following:

A) Fund the standby trust fund in an amount equal to the penal sum of the bond before the beginning of final closure of the facility;

B) Fund the standby trust fund in an amount equal to the penal sum within 15 days after an order to begin final closure is issued by the Board or a U.S. district court or other court of competent jurisdiction; or

C) Provide alternate financial assurance as specified in this Section, and obtain the Agency's written approval of the assurance provided, within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety.

5) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.

6) The penal sum of the bond must be in an amount at least equal to the current closure cost estimate, except as provided in subsection (g).

7) Whenever the current closure cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current closure cost estimate and submit evidence of such increase to the Agency or obtain other financial assurance, as specified in this Section, to cover the increase. Whenever the current closure cost estimate decreases, the penal sum may be reduced to the amount of the current closure cost estimate following written approval by the Agency.

8) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.

9) The owner or operator may cancel the bond if the Agency has given prior written consent based on its receipt of evidence of alternate financial assurance as specified in this Section.

c) Surety Bond Guaranteeing Performance of Closure

1) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (c) and submitting the bond to the Agency. An owner or operator of a new facility must submit the bond to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage, or disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury. BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies", on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: http://www.fms.treas.gov/c570/.

2) The wording of the surety bond must be that specified in Section 724.251.

3) The owner or operator who uses a surety bond to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust must meet the requirements specified in subsection (a), except as follows:

A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and

B) Unless the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations:

i) Payments into the trust fund, as specified in subsection (a);

ii) Updating of Schedule A of the trust agreement (as specified in Section 724.251) to show current closure cost estimates;

iii) Annual valuations, as required by the trust agreement; and

iv) Notices of nonpayment, as required by the trust agreement.

4) The bond must guarantee that the owner or operator will do the following:

A) Perform final closure in accordance with the closure plan and other requirements of the permit for the facility whenever required to do so; or

B) Provide alternative financial assurance, as specified in this Section, and obtain the Agency's written approval of the assurance provided, within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety.

5) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond. Following a final judicial determination or Board order finding that the owner or operator has failed to perform final closure in accordance with the approved closure plan and other permit requirements when required to do so, under the terms of the bond the surety will perform final closure, as guaranteed by the bond, or will deposit the amount of the penal sum into the standby trust fund.

6) The penal sum of the bond must be in an amount at least equal to the current closure cost estimate.

7) Whenever the current closure cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current closure cost estimate and submit evidence of such increase to the Agency or obtain other financial assurance as

specified in this Section. Whenever the current closure cost estimate decreases, the penal sum may be reduced to the amount of the current closure cost estimate following written approval by the Agency.

8) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.

9) The owner or operator may cancel the bond if the Agency has given prior written consent. The Agency must provide such written consent when either of the following occurs:

A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or

B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

10) The surety must not be liable for deficiencies in the performance of closure by the owner or operator after the Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

d) Closure Letter of Credit

1) An owner or operator may satisfy the requirements of this Section by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subsection (d) and submitting the letter to the Agency. An owner or operator of a new facility must submit the letter of credit to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage, or disposal. The letter of credit must be effective before this initial receipt of hazardous waste. The issuing institution must be an entity that has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

2) The wording of the letter of credit must be that specified in Section 724.251.

3) An owner or operator who uses a letter of credit to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the Agency must be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the Agency. This

standby trust fund must meet the requirements of the trust fund specified in subsection (a), except as follows:

A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the letter of credit; and

B) Unless the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations.

i) Payments into the trust fund, as specified in subsection (a);

ii) Updating of Schedule A of the trust agreement (as specified in Section 724.251) to show current closure cost estimates;

iii) Annual valuations, as required by the trust agreement; and

iv) Notices of nonpayment, as required by the trust agreement.

4) The letter or credit must be accompanied by a letter from the owner or operator referring to the letter of credit by number, issuing institution, and date and providing the following information: the USEPA identification number, name and address of the facility, and the amount of funds assured for closure of the facility by the letter of credit.

5) The letter of credit must be irrevocable and issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless, at least 120 days before the current expiration date, the issuing institution notifies both the owner or operator and the Agency by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the 120 days will begin on the date when both the owner or operator and the Agency have received the notice, as evidenced by the return receipts.

6) The letter of credit must be issued in an amount at least equal to the current closure cost estimate, except as provided in subsection (g).

7) Whenever the current closure cost estimate increases to an amount greater than the amount of the credit, the owner or operator, within 60 days after the increase, must either cause the amount of the credit to be increased so that it at least equals the current closure cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance, as specified in this Section, to cover the increase. Whenever the current closure cost estimate decreases, the amount of the credit may be reduced to the amount of the current closure cost estimate following written approval by the Agency.

8) Following a final judicial determination or Board order finding that the owner or operator has failed to perform final closure in accordance with the closure plan and other permit requirements when required to do so, the Agency may draw on the letter of credit.

9) If the owner or operator does not establish alternative financial assurance, as specified in this Section, and obtain written approval of such alternative assurance from the Agency within 90 days after receipt by both the owner or operator and the Agency of a notice from issuing institution that it has decided not to extend the letter of credit beyond the current expiration date, the Agency must draw on the letter of credit. The Agency may delay the drawing if the issuing institution grants an extension of the term of the credit. During the last 30 days of any such extension the Agency must draw on the letter of credit if the owner or operator has failed to provide alternative financial assurance, as specified in this Section, and obtain written approval of such assurance from the Agency.

10) The Agency must return the letter of credit to the issuing institution for termination when either of the following occurs:

A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or

B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

e) Closure Insurance

1) An owner or operator may satisfy the requirements of this Section by obtaining closure insurance that conforms to the requirements of this subsection (e) and submitting a certificate of such insurance to the Agency. An owner or operator of a new facility must submit the certificate of insurance to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage, or disposal. The insurance must be effective before this initial receipt of hazardous waste. At a minimum, the insurer must be licensed to transact the business of insurance or be eligible to provide insurance as an excess or surplus lines insurer in one or more States.

2) The wording of the certificate of insurance must be that specified in Section 724.251.

3) The closure insurance policy must be issued for a face amount at least equal to the current closure cost estimate, except as provided in subsection (g). The term “face amount” means the total amount the insurer is

obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer's future liability will be lowered by the amount of the payments.

4) The closure insurance policy must guarantee that funds will be available to close the facility whenever final closure occurs. The policy must also guarantee that, once final closure begins, the insurer will be responsible for paying out funds, up to an amount equal to the face amount of the policy, upon the direction of the Agency to such party or parties, as the Agency specifies.

5) After beginning partial or final closure, an owner or operator or any other person authorized to conduct closure may request reimbursement for closure expenditures by submitting itemized bills to the Agency. The owner or operator may request reimbursements for partial closure only if the remaining value of the policy is sufficient to cover the maximum costs of closing the facility over its remaining operating life. Within 60 days after receiving bills for closure activities, the Agency must instruct the insurer to make reimbursement in such amounts, as the Agency specifies in writing, if the Agency determines that the partial or final closure expenditures are in accordance with the approved closure plan or otherwise justified. If the Agency determines that the maximum cost of closure over the remaining life of the facility will be significantly greater than the face amount of the policy, it must withhold reimbursement of such amounts that it deems prudent, until it determines, in accordance with subsection (i), that the owner or operator is no longer required to maintain financial assurance for closure of the facility. If the Agency does not instruct the insurer to make such reimbursements, the Agency must provide the owner or operator with a detailed written statement of reasons.

6) The owner or operator must maintain the policy in full force and effect until the Agency consents to termination of the policy by the owner or operator, as specified in subsection (e)(10). Failure to pay the premium, without substitution of alternative financial assurance, as specified in this Section, will constitute a significant violation of these regulations, warranting such remedy as the Board may impose pursuant to the Environmental Protection Act. Such violation will be deemed to begin upon receipt by the Agency of a notice of future cancellation, termination or failure to renew due to nonpayment of the premium, rather than upon the date of expiration.

7) Each policy must contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditional upon consent of the insurer, provided such consent is not unreasonably refused.

8) The policy must provide that the insurer may not cancel, terminate, or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may elect to cancel, terminate, or fail to renew the policy by sending notice by certified mail to the owner or operator and the Agency. Cancellation, termination, or failure to renew may not occur, however, during the 120 days beginning with the date of receipt of the notice by both the Agency and the owner or operator, as evidenced by the return receipts. Cancellation, termination, or failure to renew may not occur, and the policy will remain in full force and effect, in the event that on or before the date of expiration one of the following occurs:

A) The Agency deems the facility abandoned;

B) The permit is terminated or revoked or a new permit is denied;

C) Closure is ordered by the Board or a U.S. district court or other court of competent jurisdiction;

D) The owner or operator is named as debtor in a voluntary or involuntary proceeding under 11 USC (Bankruptcy); or

E) The premium due is paid.

9) Whenever the current closure cost estimate increases to an amount greater than the face amount of the policy, the owner or operator, within 60 days after the increase, must either cause the face amount to be increased to an amount at least equal to the current closure cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance, as specified in this Section to cover the increase. Whenever the current closure cost estimate decreases, the face amount may be reduced to the amount of the current closure cost estimate following written approval by the Agency.

10) The Agency must give written consent to the owner or operator that it may terminate the insurance policy when either of the following occurs:

A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or

B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

f) Financial Test and Corporate Guarantee for Closure

1) An owner or operator may satisfy the requirements of this Section by demonstrating that it passes a financial test, as specified in this subsection (f). To pass this test the owner or operator must meet the criteria of either subsection (f)(1)(A) or (f)(1)(B):

A) The owner or operator must have the following:

i) Two of the following three ratios: a ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5;

ii) Net working capital and tangible net worth each at least six times the sum of the current closure and post-closure cost estimates; and the current plugging and abandonment cost estimates;

iii) Tangible net worth of at least $10 million; and

iv) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the sum of the current closure and post-closure cost estimates and the current plugging and abandonment cost estimates.

B) The owner or operator must have the following:

i) A current rating for its most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's;

ii) Tangible net worth at least six times the sum of the current closure and post-closure cost estimates and the current plugging and abandonment cost estimates;

iii) Tangible net worth of at least $10 million; and

iv) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the sum of the current closure and post-closure estimates and the current plugging and abandonment cost estimates.

2) The phrase "current closure and post-closure cost estimates", as used in subsection (f)(1), refers to the cost estimates required to be shown in subsections 1-4 of the letter from the owner's or operator's chief financial

officer (see Section 724.251). The phrase "current plugging and abandonment cost estimates", as used in subsection (f)(1), refers to the cost estimates required to be shown in subsections 1-4 of the letter from the owner's or operator's chief financial officer (see 35 Ill. Adm. Code 704.240).

3) To demonstrate that it meets this test, the owner or operator must submit the following items to the Agency:

A) A letter signed by the owner's or operator's chief financial officer and worded as specified in Section 724.251; and

B) A copy of the independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year; and

C) A special report from the owner's or operator's independent certified public accountant to the owner or operator stating the following:

i) That the accountant has compared the data that the letter from the chief financial officer specifies as having been derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements; and

ii) In connection with that procedure, that no matters came to the accountant's attention which caused the accountant to believe that the specified data should be adjusted.

4) An owner or operator of a new facility must submit the items specified in subsection (f)(3) to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage, or disposal.

5) After the initial submission of items specified in subsection (f)(3), the owner or operator must send updated information to the Agency within 90 days after the close of each succeeding fiscal year. This information must consist of all three items specified in subsection (f)(3).

6) If the owner or operator no longer meets the requirements of subsection (f)(1) the owner or operator must send notice to the Agency of intent to establish alternative financial assurance, as specified in this Section. The notice must be sent by certified mail within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements. The owner or operator must

provide the alternative financial assurance within 120 days after the end of such fiscal year.

7) The Agency may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subsection (f)(1), require reports of financial condition at any time from the owner or operator in addition to those specified in subsection (f)(3). If the Agency finds, on the basis of such reports or other information, that the owner or operator no longer meets the requirements of subsection (f)(1), the owner or operator must provide alternative financial assurance, as specified in this Section, within 30 days after notification of such a finding.

8) The Agency may disallow use of this test on the basis of qualifications in the opinion expressed by the independent certified public accountant in the accountant's report on examination of the owner's or operator's financial statements (see subsection (f)(3)(B)). An adverse opinion or a disclaimer of opinion will be cause for disallowance. The Agency must evaluate other qualifications on an individual basis. The owner or operator must provide alternative financial assurance, as specified in this Section, within 30 days after notification of the disallowance.

9) The owner or operator is no longer required to submit the items specified in subsection (f)(3) when either of the following occurs:

   A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or

   B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

10) An owner or operator may meet the requirements of this Section by obtaining a written guarantee, hereafter referred to as "corporate guarantee". The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements for owners or operators in subsections (f)(1) through (f)(8), must comply with the terms of the corporate guarantee, and the wording of the corporate guarantee must be that specified in Section 724.251. The certified copy of the corporate guarantee must accompany the items sent to the Agency, as specified in subsection (f)(3). One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the

owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee. The terms of the corporate guarantee must provide as follows:

A) If the owner or operator fails to perform final closure of a facility covered by the corporate guarantee in accordance with the closure plan and other permit requirements whenever required to do so, the guarantor will do so or establish a trust fund, as specified in subsection (a), in the name of the owner or operator.

B) The corporate guarantee will remain in force unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.

C) If the owner or operator fails to provide alternative financial assurance as specified in this Section and obtain the written approval of such alternative assurance from the Agency within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor will provide such alternative financial assurance in the name of the owner or operator.

g) Use of Multiple Financial Mechanisms. An owner or operator may satisfy the requirements of this Section by establishing more than one financial mechanism per facility. These mechanisms are limited to trust funds, surety bonds guaranteeing payment into a trust fund, letters of credit, and insurance. The mechanisms must be as specified in subsections (a), (b), (d), and (e), respectively, except that it is the combination of mechanisms, rather than the single mechanism, that must provide financial assurance for an amount at least equal to the current closure cost estimate. If an owner or operator uses a trust fund in combination with a surety bond or a letter of credit, it may use the trust fund as the standby trust fund for the other mechanisms. A single standby trust fund may be established for two or more mechanisms. The Agency may use any or all of the mechanisms to provide for closure of the facility.

h) Use of a Financial Mechanism for Multiple Facilities. An owner or operator may use a financial assurance mechanism specified in this Section to meet the requirements of this Section for more than one facility. Evidence of financial assurance submitted to the Agency must include a list showing, for each facility, the USEPA identification number, name, address, and the amount of funds for closure assured by the mechanism. The amount of funds available through the mechanism must be no less than the sum of funds that would be available if a separate mechanism had been established and maintained for each facility. The

amount of funds available to the Agency must be sufficient to close all of the owner or operator's facilities. In directing funds available through the mechanism for closure of any of the facilities covered by the mechanism, the Agency may direct only the amount of funds designated for that facility, unless the owner or operator agrees to the use of additional funds available under the mechanism.

i) Release of the Owner or Operator from the Requirements of This Section. Within 60 days after receiving certifications from the owner or operator and a qualified Professional Engineer that final approved closure has been accomplished in accordance with the closure plan, the Agency must notify the owner or operator in writing that it is no longer required by this Section to maintain financial assurance for closure of the facility, unless the Agency determines that closure has not been in accordance with the approved closure plan. The Agency must provide the owner or operator a detailed written statement of any such determination that closure has not been in accordance with the approved closure plan.

j) Appeal. The following Agency actions are deemed to be permit modifications or refusals to modify for purposes of appeal to the Board (35 Ill. Adm. Code 702.184(e)(3)):

1) An increase in, or a refusal to decrease the amount of, a bond, letter of credit, or insurance;

2) Requiring alternative assurance upon a finding that an owner or operator or parent corporation no longer meets a financial test.

(Source: Amended at 42 Ill. Reg. 22614, effective November 19, 2018)

Section 724.244 Cost Estimate for Post-Closure Care

a) The owner or operator of a disposal surface impoundment, disposal miscellaneous unit, land treatment unit, or landfill unit or the owner or operator of a surface impoundment or waste pile required under Sections 724.328 or 724.358 to prepare a contingent closure and post-closure plan must have a detailed written estimate, in current dollars, of the annual cost of post-closure monitoring and maintenance of the facility in accordance with the applicable post-closure regulations in Sections 724.217 through 724.220, 724.328, 724.358, 724.380, 724.410, and 724.703.

1) The post-closure cost estimate must be based on the costs to the owner or operator of hiring a third party to conduct post-closure care activities. A third party is a party who is neither a parent nor a subsidiary of the owner or operator. (See definition of parent corporation in Section 724.241(d)).

2) The post-closure cost estimate is calculated by multiplying the annual post-closure cost estimate by the number of years of post-closure care required under Section 724.217.

b) During the active life of the facility, the owner or operator must adjust the post-closure cost estimate for inflation within 60 days prior to the anniversary date of the establishment of the financial instruments used to comply with Section 724.245. For owners or operators using the financial test or corporate guarantee, the post-closure cost estimate must be updated for inflation within 30 days after the close of the firm's fiscal year and before the submission of updated information to the Agency, as specified in Section 724.245(f)(5). The adjustment may be made by recalculating the post-closure cost estimate in current dollars or by using an inflation factor derived from the annual Implicit Price Deflator for Gross National Product, as published by the U.S. Department of Commerce in its Survey of Current Business, as specified in subsections (b)(1) and (b)(2). The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year.

1) The first adjustment is made by multiplying the post-closure cost estimate by the inflation factor. The result is the adjusted post-closure cost estimate.

2) Subsequent adjustments are made by multiplying the latest adjusted post-closure cost estimate by the latest inflation factor.

c) During the active life of the facility the owner or operator must revise the post-closure cost estimate within 30 days after the Agency has approved a request to modify the post-closure plan if the change in the post-closure plan increases the cost of post-closure care. The revised post-closure cost estimate must be adjusted for inflation, as specified in Section 724.244(b).

d) The owner or operator must keep the following at the facility during the operating life of the facility: The latest post-closure cost estimate prepared in accordance with Section 724.244(a) and (c) and, when this estimate has been adjusted in accordance with Section 724.244(b), the latest adjusted post-closure cost estimate.

(Source: Amended at 40 Ill. Reg. 11726, effective August 9, 2016)

Section 724.245 Financial Assurance for Post-Closure Care

An owner or operator of a hazardous waste management unit subject to the requirements of Section 724.244 must establish financial assurance for post-closure care in accordance with the approved post-closure plan for the facility 60 days prior to the initial receipt of hazardous waste or the effective date of the regulation, whichever is later. The owner or operator must choose from among the following options:

a) Post-Closure Trust Fund

1) An owner or operator may satisfy the requirements of this Section by establishing a post-closure trust fund that conforms to the requirements of this subsection (a) and submitting an original, signed duplicate of the trust agreement to the Agency. An owner or operator of a new facility must submit the original, signed duplicate of the trust agreement to the Agency at least 60 days before the date on which hazardous waste is first received for disposal. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or State agency.

2) The wording of the trust agreement must be that specified in Section 724.251 and the trust agreement accompanied by a formal certification of acknowledgment (as specified in Section 724.251). Schedule A of the trust agreement must be updated within 60 days after a change in the amount of the current post-closure cost estimate covered by the agreement.

3) Payments into the trust fund must be made annually by the owner or operator over the term of the initial RCRA permit or over the remaining operating life of the facility as estimated in the closure plan, whichever period is shorter; this period is hereafter referred to as the "pay-in period". The payments into the post-closure trust fund must be made as follows:

A) For a new facility, the first payment must be made before the initial receipt of hazardous waste for disposal. A receipt from the trustee for this payment must be submitted by the owner or operator to the Agency before this initial receipt of hazardous waste. The first payment must be at least equal to the current post-closure cost estimate, except as provided in subsection (g), divided by the number of years in the pay-in period. Subsequent payments must be made no later than 30 days after each anniversary date of the first payment. The amount of each subsequent payment must be determined by the following formula:

$$\text{Next Payment} = \frac{(\text{CE} - \text{CV})}{\text{Y}}$$

Where:

CE = the current closure cost estimate

CV = the current value of the trust fund

Y = the number of years remaining in the pay-in period

B) If an owner or operator establishes a trust fund, as specified in 35 Ill. Adm. Code 725.245(a), and the value of that trust fund is less than the current post-closure cost estimate when a permit is awarded for the facility, the amount of the current post-closure cost estimate still to be paid into the trust fund must be paid in over the pay-in period as defined in subsection (a)(3). Payments must continue to be made no later than 30 days after each anniversary date of the first payment made pursuant to 35 Ill. Adm. Code 725. The amount of each payment must be determined by the following formula:

$$\text{Next Payment} = \frac{(\text{CE} - \text{CV})}{\text{Y}}$$

Where:

CE = the current closure cost estimate

CV = the current value of the trust fund

Y = the number of years remaining in the pay-in period

4) The owner or operator may accelerate payments into the trust fund or may deposit the full amount of the current post-closure cost estimate at the time the fund is established. However, the owner or operator must maintain the value of the fund at no less than the value that the fund would have if annual payments were made as specified in subsection (a)(3).

5) If the owner or operator establishes a post-closure trust fund after having used one or more alternative mechanisms specified in this Section or in 35 Ill. Adm. Code 725.245, its first payment must be in at least the amount that the fund would contain if the trust fund were established initially and annual payments made according to specifications of this subsection (a) and 35 Ill. Adm. Code 725.245, as applicable.

6) After the pay-in period is completed, whenever the current post-closure cost estimate changes during the operating life of the facility, the owner or operator must compare the new estimate with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less than the amount of the new estimate, the owner or operator, within 60 days after the change in the cost estimate, must either deposit an amount into the fund so that its value after this deposit at least equals the amount of the current post-closure cost estimate, or obtain other financial assurance, as specified in this Section, to cover the difference.

7) During the operating life of the facility, if the value of the trust fund is greater than the total amount of the current post-closure cost estimate, the

owner or operator may submit a written request to the Agency for release of the amount in excess of the current post-closure cost estimate.

8) If an owner or operator substitutes other financial assurance as specified in this Section for all or part of the trust fund, it may submit a written request to the Agency for release of the amount in excess of the current post-closure cost estimate covered by the trust fund.

9) Within 60 days after receiving a request from the owner or operator for release of funds, as specified in subsection (a)(7) or (a)(8), the Agency must instruct the trustee to release to the owner or operator such funds as the Agency specifies in writing.

10) During the period of post-closure care, the Agency must approve a release of funds if the owner or operator demonstrates to the Agency that the value of the trust fund exceeds the remaining cost of post-closure care.

11) An owner or operator or any other person authorized to perform post-closure care may request reimbursement for post-closure care expenditures by submitting itemized bills to the Agency. Within 60 days after receiving bills for post-closure activities, the Agency must instruct the trustee to make requirements in those amounts that the Agency specifies in writing if the Agency determines that the post-closure care expenditures are in accordance with the approved post-closure plan or otherwise justified. If the Agency does not instruct the trustee to make such reimbursements, the Agency must provide the owner or operator with a detailed written statement of reasons.

12) The Agency must agree to termination of the trust when either of the following occurs:

A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or

B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

b) Surety Bond Guaranteeing Payment into a Post-Closure Trust Fund

1) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (b) and submitting the bond to the Agency. An owner or operator of a new facility must submit the bond to the Agency at least 60 days before the date on which hazardous waste is first received for disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a

minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies", on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: http://www.fms.treas.gov/c570/.

2) The wording of the surety bond must be that specified in Section 724.251.

3) The owner or operator who uses a surety bond to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements specified in subsection (a), except as follows:

   A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and

   B) Until the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations:

      i) Payments into the trust fund, as specified in subsection (a);

      ii) Updating of Schedule A of the trust agreement (as specified in Section 724.251) to show current post-closure cost estimates;

      iii) Annual valuations, as required by the trust agreement; and

      iv) Notices of nonpayment, as required by the trust agreement.

4) The bond must guarantee that the owner or operator will do one of the following:

   A) Fund the standby trust fund in an amount equal to the penal sum of the bond before the beginning of final closure of the facility;

   B) Fund the standby trust fund in an amount equal to the penal sum within 15 days after an order to begin closure is issued by the Board or a U.S. district court or other court of competent jurisdiction; or

C) Provide alternative financial assurance as specified in this Section, and obtain the Agency's written approval of the assurance provided, within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety.

5) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.

6) The penal sum of the bond must be in an amount at least equal to the current post-closure cost estimate, except as provided in subsection (g).

7) Whenever the current post-closure cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current post-closure cost estimate and submit evidence of such increase to the Agency or obtain other financial assurance, as specified in this Section, to cover the increase. Whenever the current post-closure cost estimate decreases, the penal sum may be reduced to the amount of the current post-closure cost estimate following written approval by the Agency.

8) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidence by the return receipts.

9) The owner or operator may cancel the bond if the Agency has given prior written consent based on its receipt of evidence of alternative financial assurance, as specified in this Section.

c) Surety Bond Guaranteeing Performance of Post-Closure Care

1) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (c) and submitting the bond to the Agency. An owner or operator of a new facility must submit the bond to the Agency at least 60 days before the date on which hazardous waste is first received for disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies", on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: http://www.fms.treas.gov/c570/.

2) The wording of the surety bond must be that specified in Section 724.251.

3) The owner or operator who uses a surety bond to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust must meet the requirements specified in subsection (a), except as follows:

   A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and

   B) Unless the standby trust fund is funded pursuant to the requirements of this Section, the following are not required:

      i) Payments into the trust fund, as specified in subsection (a);

      ii) Updating of Schedule A of the trust agreement (as specified in Section 724.251) to show current post-closure cost estimates;

      iii) Annual valuations, as required by the trust agreement; and

      iv) Notices of nonpayment, as required by the trust agreement.

4) The bond must guarantee that the owner or operator will do either of the following:

   A) Perform final post-closure care in accordance with the post-closure plan and other requirements of the permit for the facility; or

   B) Provide alternative financial assurance, as specified in this Section, and obtain the Agency's written approval of the assurance provided, within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety.

5) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond. Following a final judicial determination or Board order finding

that the owner or operator has failed to perform post-closure care in accordance with the approved post-closure plan and other permit requirements, under the terms of the bond the surety will perform post-closure care in accordance with post-closure plan and other permit requirements or will deposit the amount of the penal sum into the standby trust fund.

6) The penal sum of the bond must be in an amount at least equal to the current post-closure cost estimate.

7) Whenever the current post-closure cost estimate increases to an amount greater than the penal sum during the operating life of the facility, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current post-closure cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance, as specified in this Section. Whenever the current closure cost estimate decreases during the operating life of the facility, the penal sum may be reduced to the amount of the current post-closure cost estimate following written approval by the Agency.

8) During the period of post-closure care, the Agency must approve a decrease in the penal sum if the owner or operator demonstrates to the Agency that the amount exceeds the remaining cost of post-closure care.

9) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.

10) The owner or operator may cancel the bond if the Agency has given prior written consent. The Agency must provide such written consent when either of the following occurs:

A) An owner or operator substitutes alternative financial assurance as specified in this Section; or

B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

11) The surety will not be liable for deficiencies in the performance of post-closure care by the owner or operator after the Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

d) Post-Closure Letter of Credit

1) An owner or operator may satisfy the requirements of this Section by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subsection (d) and submitting the letter to the Agency. An owner or operator of a new facility must submit the letter of credit to the Agency at least 60 days before the date on which hazardous waste is first received for disposal. The letter of credit must be effective before this initial receipt of hazardous waste. The issuing institution must be an entity that has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or State agency.

2) The wording of the letter of credit must be that specified in Section 724.251.

3) An owner or operator who uses a letter of credit to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the Agency must be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements of the trust fund specified in subsection (a), except as follows:

   A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the letter of credit; and

   B) Unless the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations:

      i) Payments into the trust fund, as specified in subsection (a);

      ii) Updating of Schedule A of the trust agreement (as specified in Section 724.251) to show current post-closure cost estimates;

      iii) Annual valuations, as required by the trust agreement; and

      iv) Notices of nonpayment, as required by the trust agreement.

4) The letter or credit must be accompanied by a letter from the owner or operator referring to the letter of credit by number, issuing institution, and date and providing the following information: the USEPA identification number, name and address of the facility, and the amount of funds assured for post-closure care of the facility by the letter of credit.

5) The letter of credit must be irrevocable and issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless, at least 120 days before the current expiration date, the issuing institution notifies both the owner or operator and the Agency by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the 120 days will begin on the date when both the owner or operator and the Agency have received the notice, as evidenced by the return receipts.

6) The letter of credit must be issued in an amount at least equal to the current post-closure cost estimate, except as provided in subsection (g).

7) Whenever the current post-closure cost estimate increases to an amount greater than the amount of the credit during the operating life of the facility, the owner or operator, within 60 days after the increase, must either cause the amount of the credit to be increased so that it at least equals the current post-closure cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance as specified in this Section to cover the increase. Whenever the current post-closure cost estimate decreases during the operating life of the facility, the amount of the credit may be reduced to the amount of the current post-closure cost estimate following written approval by the Agency.

8) During the period of post-closure care, the Agency must approve a decrease in the amount of the letter of credit if the owner or operator demonstrates to the Agency that the amount exceeds the remaining cost of post-closure care.

9) Following a final judicial determination or Board order finding that the owner or operator has failed to perform post-closure care in accordance with the approved post-closure plan and other permit requirements, the Agency may draw on the letter of credit.

10) If the owner or operator does not establish alternative financial assurance, as specified in this Section, and obtain written approval of such alternative assurance from the Agency within 90 days after receipt by both the owner or operator and the Agency of a notice from the issuing institution that it has decided not to extend the letter of credit beyond the current expiration date, the Agency must draw on the letter of credit. The Agency may delay the drawing if the issuing institution grants an extension of the term of the credit. During the last 30 days of any such extension the Agency must draw on the letter of credit if the owner or operator has failed to provide alternative financial assurance, as specified in this Section, and obtain written approval of such assurance from the Agency.

11) The Agency must return the letter of credit to the issuing institution for termination when either of the following occurs:

A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or

B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).

e) Post-Closure Insurance

1) An owner or operator may satisfy the requirements of this Section by obtaining post-closure insurance that conforms to the requirements of this subsection (e) and submitting a certificate of such insurance to the Agency. An owner or operator of a new facility must submit the certificate of insurance to the Agency at least 60 days before the date on which hazardous waste is first received for disposal. The insurance must be effective before this initial receipt of hazardous waste. At a minimum, the insurer must be licensed to transact the business of insurance or be eligible to provide insurance as an excess or surplus lines insurer in one or more states.

2) The wording of the certificate of insurance must be that specified in Section 724.251.
