Respondent.)	

SUPPLEMENTAL STATEMENT (by Mr. Dumelle):

The suspended particulate levels quoted by Mr. William Dallas for the monitor on his home are quite high (R. 99). The reading of 753 ug/m^3 and other values of 420 and 442 ug/m^3 he reported exceed the Illinois and United States air quality standard of 260 ug/m^3 (for a 24-hour period) by 190%, 62%, and 70% respectively.

We do not know, on this record, whether air quality standards will be met everywhere even after the expenditure of the \$17,500,000 control program. The control program proposed ought to go forward with the utmost speed to achieve maximum relief for all of Granite City. But after completion, the area of the Dallas instrument location especially should be checked to determine if it is in conformance with the air quality standards. Air quality standards still govern even if specific Board emission regulations are met.

Submitted by:

Jacob D. Dumelle

I, Christan L. Moffett, Clerk of the Illinois Pollution Control Board, hereby certify the above Supplemental Statement was submitted on the 17th day of September, 1976.

Christan L. Moffett, Clerk
Illinois Pollution Control Board
