STATE OF ILLINOIS  
Pollution Control Board

PC 03-218

PC #23

**My name is Lyle Headon and I am a resident of Creston Illinois. In fact I am third generation and my grandchildren are fifth generation who all were and are continuous in residence of the Village of Creston. We reside there because of the quality of life found only in close-knit communities such as ours.**

**Now we are faced with a great change that could jeopardize that same quality of life we enjoy. We are confronted with the landfill that could pollute our precious water supply. Yes, there has been much debate about the porous rock that separates the landfill from our aquifer and the promoters feel that there is no concern. However, we the opposition feel that there are still too many uncertainties about this issue and that our drinking water needs the protection it deserves.**

**I for one certainly understand that life has no guarantees, but if we do not take the initiative to deny the possibility of our children being faced with polluted drinking water, what can we say for our existence here?**

Sincerely,

Lyle G. Headon

Creston, Illinois
