Subject: Ameren's petition for variance, Docket No. PCB 2012-126

Dear Illinois Pollution Control Board Members:

Illinois made the correct moral choice in 2006 by passing leading mercury pollution reduction standards. As a person of faith, I support this original agreement for new mercury, sulfur dioxide (SO₂) and nitrous oxide (NO_x) clean air standards. Our future generations are too important to not take these steps to prevent health-related problems in our communities.

Ameren is trying to stall cleaning up its coal plants. Their largest coal plant in Illinois, the Newton Generating Station, is seeking a five-year delay to install their pollution controls. This delay would cause another 2,000 asthma attacks and 125 premature deaths, all consequences of environmental degradation.

Please reject Ameren's petition for variance, Docket No. PCB 2012-126.

Mr. John Schreiber

Docket No. PCB 2012-126

Dear PCB 2012-126,

I object to Ameren's Petition for a Variance, Docket No. PCB 2012-126.

In 2006, Illinois made history by passing a leading mercury pollution reduction standard. The original agreement included new clean air standards for mercury, sulfur dioxide (SO₂) and nitrous oxide (NO_x), which create acid rain and smog, as well as many health-related problems. Ameren committed to a schedule for reducing its SO₂ and NO_x pollution in return for more time to make its mercury pollution reductions.

The state upheld its side of the deal, but now Ameren is trying to stall cleaning up its coal plants like it promised to. Please reject the company's request for a variance and hold the company to the standard passed in 2006. The agreement to reduce mercury pollution is vital in protecting public health and the environment through Illinois and the Midwest. This is critical for my health, our environment and the Midwest's future.

Sincerely,

M. Ken Donart

Subject: DENY AMEREN'S PETITION FOR VARIANCE: Docket No. PCB 2012-126!!

Dear Illinois Pollution Control Board (IPCB) Members:

Illinois made both the "correct moral/ethical choice" and "sound science choice" in 2006 by passing leading toxic mercury pollution reduction standards. As an energy-environmental researcher who also believes in "ecological stewardship," I support this original agreement for new toxic mercury, sulfur dioxide (SO₂) and nitrous oxide (NO_x) cleaner air standards. Because protecting future generations is too important a goal, we MUST take these steps IMMEDIATELY to prevent health-related problems in our communities.

During 2006, a requirement for the Ameren Corporation to install newer pollution control equipment at its biggest coal-fired power plant, the Newton Generating Station in Newton, IL, was agreed to (and passed). Yet Ameren is now requesting a five-year delay for this update. Unfortunately, this unnecessary delay would cause another 2,000 asthma attacks and 125 premature deaths!

PLEASE REJECT AMEREN'S PETITION FOR VARIANCE: Docket No. PCB 2012-126.

Mr. Dennis Nelson

Jul 31, 2012

Docket No. PCB 2012-126

Dear PCB 2012-126,

I object to Ameren's Petition for a Variance, Docket No. PCB 2012-126.

In 2006, Illinois made history by passing a leading mercury pollution reduction standard. The original agreement included new clean air standards for mercury, sulfur dioxide (SO₂) and nitrous oxide (NO_x), which create acid rain and smog, as well as many health-related problems. Ameren committed to a schedule for reducing its SO₂ and NO_x pollution in return for more time to make its mercury pollution reductions.

The state upheld its side of the deal, but now Ameren is trying to stall cleaning up its coal plants like it promised to. Please reject the company's request for a variance and hold the company to the standard passed in 2006. The agreement to reduce mercury pollution is vital in protecting public health and the environment through Illinois and the Midwest. This is critical for my health, our environment and the Midwest's future.

Sincerely,

Ms. Alexandra Sipiora

Subject: Ameren's petition for variance, Docket No. PCB 2012-126

Dear Illinois Pollution Control Board Members:

Illinois made the correct moral choice in 2006 by passing leading mercury pollution reduction standards. As a person of faith, I support this original agreement for new mercury, sulfur dioxide (SO₂) and nitrous oxide (NO_x) clean air standards. Our future generations are too important to not take these steps to prevent health-related problems in our communities.

Ameren is trying to stall cleaning up its coal plants. Their largest coal plant in Illinois, the Newton Generating Station, is seeking a five-year delay to install their pollution controls. This delay would cause another 2,000 asthma attacks and 125 premature deaths, all consequences of environmental degradation.

Please reject Ameren's petition for variance, Docket No. PCB 2012-126.
