742.APPENDIX F	Amend

- 4) <u>Statutory Authority</u>: Authorized by Section 27 of the Environmental Protection Act [415 ILCS 5/27]
- 5) <u>A Complete Description of the Subjects and Issues Involved</u>: On April 19, 2012, the Illinois Pollution Control Board (Board) adopted an opinion and order proposing first-notice amendments to the Tiered Approach to Corrective Action Objectives (TACO) rules (35 Ill. Adm. Code 742). The rulemaking is docketed Tiered Approach to Corrective Action Objectives (TACO) (Indoor Inhalation): Amendments to 35 Ill. Adm. Code 742, R11-9. Since 1997, the TACO rules have provided procedures for developing remediation objectives based upon risks posed to human health by environmental conditions at a variety of sites. TACO is used at sites being remediated under any one of several regulatory programs: Leaking Underground Storage Tank (UST) Program; Site Remediation Program (SRP); and Resource Conservation and Recovery Act (RCRA) Part B Permits and Closure Plans.

The first-notice amendments include the addition of a new exposure route under TACO:

POLLUTION CONTROL BOARD

NOTICE OF PROPOSED AMENDMENTS

the indoor inhalation exposure route. To protect building occupants, this exposure route addresses the potential for vapors to migrate into buildings from underlying volatile chemicals in soil or groundwater, a process commonly known as "vapor intrusion" or "VI." The Board also proposed adding 13 chemicals to the TACO tables based upon the Board's pending rulemaking on groundwater quality standards, Proposed Amendments to Groundwater Quality Standards (35 III. Adm. Code 620), R08-18. Further, the firstnotice amendments to TACO update physical and chemical parameters and revise toxicity values in accordance with the new United States Environmental Protection Agency hierarchy for selecting human health toxicity values.

The R11-9 rulemaking was initiated when the Illinois Environmental Protection Agency (IEPA) filed a proposal with the Board on November 9, 2010, under Section 27 of the Environmental Protection Act [415 ILCS 5/27]. After conducting two public hearings and receiving public comments, the Board has adopted, for first notice, the amendments proposed or agreed to by IEPA, with minor clarifying changes. In addition, the Board proposed requiring that IEPA be notified if an indoor inhalation building control technology at a school is rendered inoperable. The Board also proposed that the entire set of amendments would become effective on a date certain 60 days after their final adoption. For further information, please refer to the Board's first-notice opinion and order of April 19, 2012, which is available through the Clerk's Office On-Line (COOL) on the Board's Web site at www.ipcb.state.il.us.

- 7) <u>Will this rulemaking replace any emergency rulemaking currently in effect</u>? No
- 8) <u>Does this rulemaking contain an automatic repeal date</u>? No
- 9) <u>Does this rulemaking contain incorporations by reference</u>? Yes
- 10) Are there any other proposed amendments pending on this Part? No
- 11) <u>Statement of Statewide Policy Objectives</u>: These proposed amendments do not create or

POLLUTION CONTROL BOARD

NOTICE OF PROPOSED AMENDMENTS

enlarge a State mandate as defined in Section 3(b) of the State Mandates Act [30 ILCS 805/3(b)].

12) <u>Time, Place, and Manner in which interested persons may comment on this proposed</u> <u>rulemaking</u>: The Board will accept written public comments on this proposal for a period of 45 days after the date of publication in the Illinois Register. Public comments should refer to docket R11-9 and must be filed with the Clerk of the Board. Public comments may be filed at the following address:

> Pollution Control Board John Therriault, Assistant Clerk JRTC 100 W. Randolph Street, Suite 11-500 Chicago, IL 60601

In addition, public comments may be filed electronically through COOL on the Board's Web site at www.ipcb.state.il.us. Persons interested in obtaining copies of Board opinions and orders in R11-9 may do so by contacting the Clerk's office at (312) 814-3620 or by download from COOL on the Board's Web site. For more information, please contact Hearing Officer Richard McGill by telephone at (312) 814-6983 or by e-mail at mcgillr@ipcb.state.il.us.

13) Initial Regulatory Flexibility Analysis:

- A) <u>Types of small businesses, small municipalities, and not-for-profit corporations affected</u>: This rulemaking could impact any small business, small municipality, and not-for-profit corporation in a regulatory program subject to TACO remediation objectives (e.g., Leaking UST Program or SRP). The amendments are proposed to become effective on a date certain 60 days after their final adoption by the Board. The delayed effective date would help to accommodate those entities with sites near closure who wish to submit remediation completion documentation to IEPA in order to receive a No Further Remediation (NFR) letter in accordance with the existing TACO regulations.
- B) <u>Reporting, bookkeeping, or other procedures required for compliance</u>: This rulemaking does not impose additional bookkeeping requirements beyond those already required by the existing rules. Under the proposed amendments, where a school receives an NFR letter based upon the use of an indoor inhalation building control technology, the site owner/operator must notify IEPA upon the building control technology being rendered inoperable.

 $\frac{11}{12}$

POLLUTION CONTROL BOARD

NOTICE OF PROPOSED AMENDMENTS

- C) <u>Types of Professional skills necessary for compliance</u>: In addition to the professional skills currently necessary to comply with the existing TACO regulations, compliance with the amendments may involve addressing the indoor inhalation exposure route through the sampling/analysis of soil gas and the design/installation of building control technologies, such as sub-slab depressurization (SSD) systems or vented raised floors.
- 14) <u>Regulatory Agenda in which these amendments were summarized</u>: January 2012

The full text of the Proposed Amendments begins on the next page:

SUBPART A: INTRODUCTION

Section 742.105 Applicability

a) Any person, including a person required to perform an investigation pursuant to the Illinois Environmental Protection Act [415 ILCS 5] (Act), may elect to proceed under this Part to the extent allowed by State or federal law and regulations and the provisions of this Part and subject to the exceptions listed in subsection (h) below. A person proceeding under this Part may do so to the extent such actions are consistent with the requirements of the program under which site remediation is being addressed.

b) This Part is to be used in conjunction with the procedures and requirements applicable to the following programs:

1) Leaking Underground Storage Tanks (35 Ill. Adm. Code 731, 732, and 734);

2) Site Remediation Program (35 Ill. Adm. Code 740); and

3) RCRA Part B Permits and Closure Plans (35 Ill. Adm. Code 724 and 725).

c) The procedures in this Part may not be used if their use would delay response action to address imminent and substantial threats to human health and the environment. This Part may only be used after actions to address such threats have been completed.

d) This Part may be used to develop remediation objectives to protect surface waters, sediments or ecological concerns, when consistent with the regulations of other programs, and as approved by the Agency.

e) A no further remediation determination issued by the Agency prior to July 1, 1997 pursuant to Section 4(y) of the Act or one of the programs listed in subsection (b) of this Section that approves completion of remedial action relative to a release shall remain in effect in accordance with the terms of that determination.

f) Site specific groundwater remediation objectives determined under this Part for contaminants of concern may exceed the groundwater quality standards established pursuant to the rules promulgated under the Illinois Groundwater Protection Act [415 ILCS 55] as long as done in accordance with Sections 742.805 and 742.900(c)(9). (See 415 ILCS 5/58.5(d)(4)

g) Where contaminants of concern include polychlorinated byphenyls (PCBs), a person may need to evaluate the applicability of regulations adopted under the Toxic Substances Control Act (15 U.S.C.USC 2601).

h) This Part may not be used in lieu of the procedures and requirements applicable to landfills under 35 Ill. Adm. Code 807 or 811 through 814.

i) An evaluation of the indoor inhalation exposure route under this Part addresses the potential of contaminants present in soil gas or groundwater to reach human receptors within buildings. This Part does not address the remediation or mitigation of any contamination within a building from a source other than soil gas or groundwater, such as the building structure itself and products within the building.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.110 Overview of Tiered Approach

a) This Part presents an approach for developing remediation objectives (see Appendix A, Illustrations A and B) that include an option for exclusion of pathways from further consideration, use of area background concentrations as remediation objectives and three tiers for selecting applicable remediation objectives. An understanding of human exposure routes is necessary to properly conduct an evaluation under this approach. In some cases, applicable human exposure route(s)routes can be excluded from further consideration prior to any tier evaluation. Selecting which tier or combination of tiers to be used to develop remediation objectives is dependent on the site-specific conditions and remediation goals. Tier 1 evaluations and Tier 2 evaluations are not prerequisites to conducting Tier 3 evaluations.

b) A Tier 1 evaluation compares the concentration of contaminants detected at a site to the corresponding remediation objectives for residential and industrial/ commercial properties contained in Appendix B, Tables A, B, C, D and E, G, H and I. To complete a Tier 1 evaluation, the extent and concentrations of the contaminants of concern, the groundwater class, the land use classification, human exposure routes at the site, and, if appropriate, soil pH,

must be known. If remediation objectives are developed based on industrial/commercial property use, then institutional controls under Subpart J are required.

c) A Tier 2 evaluation uses the risk based equations from the Soil Screening Level (SSL Model) model and Risk Based Corrective Action (RBCA Model) model and modified Johnson and Ettinger Model (J&E Model) model) documents listed in Appendix C, Tables A, and C, and L, respectively. In addition to the information that is required for a Tier 1 evaluation, site-specific information is used to calculate Tier 2 remediation objectives. As in Tier 1, Tier 2 evaluates residential and industrial/commercial properties only. If remediation objectives are developed based on industrial/commercial property use, then institutional controls under Subpart J are required.

d) A Tier 3 evaluation allows alternative parameters and factors, not available under a Tier 1 or Tier 2 evaluation, to be considered when developing remediation objectives. Remediation objectives developed for conservation and agricultural properties can only be developed under Tier 3.

e) Remediation objectives may be developed using area background concentrations or any of the three tiers if the evaluation is conducted in accordance with applicable requirements in Subparts D through I. When contaminant concentrations do not exceed remediation objectives developed under one of the tiers or area background procedures under Subpart D, further evaluation under any of the other tiers is not required.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.115 Key Elements

To develop remediation objectives under this Part, the following key elements shall be addressed.

a) Exposure Routes

1) This Part identifies the following as potential exposure routes to be addressed:

A) Outdoor Inhalation; inhalation;

B) Indoor Inhalation; inhalation;

C-B) Soil ingestion;

D-C) Groundwater ingestion; and

E-D) Dermal contact with soil.

2) The evaluation of exposure routes under subsections (a)(1)(A), (a)(1)(B),and (a)(1)(C) and (a)(1)(D) of this Section is required for all sites when developing remediation objectives or excluding exposure pathways. Evaluation of the dermal contact exposure route is required for use of RBCA equations in Appendix C, Table C or use of formal risk assessment under Section 742.915.

3) The groundwater ingestion exposure route is comprised of two components:

A) Migration from soil to groundwater (soil component); and

B) Direct ingestion of groundwater (groundwater component).

4) The outdoor inhalation route is comprised of two components:

A) Migration from soil through soil gas to outdoor air (soil component); and

B) Migration from soil gas to outdoor air (soil gas component).

5) The indoor inhalation exposure route is comprised of two components:

A) Migration from soil gas to indoor air (soil gas component); and

B) Migration from groundwater through soil gas to indoor air (groundwater component).

b) Contaminants of Concern

The contaminants of concern to be remediated depend on the following:

1) The materials and wastes managed at the site;

2) The extent of the no further remediation determination being requested from the Agency pursuant to a specific program; and

3) The requirements applicable to the specific program, as listed at Section 742.105(b) under which the remediation is being performed.

c) Land Use

The present and post-remediation uses of the site where exposures may occur shall be evaluated. The land use of a site, or portion thereof, shall be classified as one of the following:

- 1) Residential property;
- 2) Conservation property;
- 3) Agricultural property; or

4) Industrial/commercial property.

d) Environmental Media of Concern This Part provides procedures for developing remediation objectives for the following environmental media:

1) Soil;

- 2) Soil gas;
- 3) Groundwater.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

SUBPART B: GENERAL

Section 742.200 Definitions

Except as stated in this Section, or unless a different meaning of a word or term is clear from the context, the definition of words or terms in this Part shall be the same as that applied to the same words or terms in the Act.

"Act" means the Illinois Environmental Protection Act [415 ILCS 5].

"ADL" means Acceptable Detection Limit, which is the detectable concentration of a substance that is equal to the lowest appropriate Practical Quantitation Limit (PQL) as defined in this Section.

"Agency" means the Illinois Environmental Protection Agency.

"Agricultural Property" means any real property for which its present or postremediation use is for growing agricultural crops for food or feed either as harvested crops, cover crops or as pasture. This definition includes, but is not limited to, properties used for confinement or grazing of livestock or poultry and for silviculture operations. Excluded from this definition are farm residences, farm outbuildings and agrichemical facilities.

"Aquifer" means saturated (with groundwater) soils and geologic materials which are sufficiently permeable to readily yield economically useful quantities of water to wells, springs, or streams under ordinary hydraulic gradients. (Illinois Groundwater Protection Act [415 ILCS 55/3(a)])

"Area Background" means concentrations of regulated substances that are consistently present in the environment in the vicinity of a site that are the result of natural conditions or human activities, and not the result solely of releases at the site. [415 ILCS 5/58.2]

"ASTM" means the American Society for Testing and Materials.

"Board" means the Illinois Pollution Control Board.

"Building" means a man-made structure with an enclosing roof and enclosing walls, except for windows and doors, that is fit for any human occupancy for at least six consecutive months.

"Building Control Technology" means any technology or barrier that affects air flow or air pressure within a building for purposes of reducing contaminant migration to the indoor air.

"Cancer Risk" means a unitless probability of an individual developing cancer from a defined exposure rate and frequency.

"Cap" means a barrier designed to prevent the infiltration of precipitation or other surface water, or impede the ingestion or inhalation of contaminants.

"Capillary Fringe" means the zone above the water table in which water is held by surface tension. Water in the capillary fringe is under a pressure less than atmospheric.

"Carcinogen" means a contaminant that is classified as a category A1 or A2 carcinogen by the American Conference of Governmental Industrial Hygienists; a category 1 or 2A/2B carcinogen by the World Health Organization's International Agency for Research on Cancer; a "human carcinogen" or "anticipated human carcinogen" by the United States Department of Health and Human Service National Toxicological Program; or a category A or B1/B2 carcinogen or as "carcinogenic to humans" or "likely to be carcinogenic to humans" by the United States Environmental Protection Agency in the integrated risk information system or a final rule issued in a Federal Register notice by the USEPA. [415 ILCS 5/58.2]

"Class I Groundwater" means groundwater that meets the Class I: Potable Resource Groundwater criteria set forth in 35 Ill. Adm. Code 620.

"Class II Groundwater" means groundwater that meets the Class II: General Resource Groundwater criteria set forth in 35 Ill. Adm. Code 620.

"Conservation Property" means any real property for which present or postremediation use is primarily for wildlife habitat.

"Construction Worker" means a person engaged on a temporary basis to perform work involving invasive construction activities including, but not limited to, personnel performing demolition, earth-moving, building, and routine and emergency utility installation or repair activities.

"Contaminant of Concern" or "Regulated Substance of Concern" means any contaminant that is expected to be present at the site based upon past and current land uses and associated releases that are known to the person conducting a remediation based upon reasonable inquiry. [415 ILCS 5/58.2]

"County highwayHighway" means county highway as defined in the Illinois Highway Code, [605 ILCS 5].

"District road<u>Road</u>" means district road as defined in the Illinois Highway Code₇ [605 ILCS 5].

"Engineered Barrier" means a barrier designed or verified using engineering practices that limits exposure to or controls migration of the contaminants of concern.

"Environmental Land Use Control" means an instrument that meets the requirements of this Part and is placed in the chain of title to real property that limits or places requirements upon the use of the property for the purpose of protecting human health or the environment, is binding upon the property owner, heirs, successors, assigns, and lessees, and runs in perpetuity or until the Agency approves, in writing, removal of the limitation or requirement from the chain of title.

"Exposure Route" means the transport mechanism by which a contaminant of concern reaches a receptor.

"Federally Owned Property" means real property owned in fee by the United States of America on which institutional controls are sought to be placed in accordance with this Subpart.

"Federal Landholding Entity" means that federal department, agency, or instrumentality with the authority to occupy and control the day-to-day use, operation and management of Federally Owned Property.

"Free Product" means a contaminant that is present as a non-aqueous phase liquid for chemicals whose melting point is less than 302-2C (e.g., liquid not dissolved in water).

"GIS" means Geographic Information System.

"GPS" means Global Positioning System.

"Groundwater" means underground water which occurs within the saturated zone and geologic materials where the fluid pressure in the pore space is equal to or greater than atmospheric pressure. [415 ILCS 5/3.64]

"Groundwater Quality Standards" means the standards for groundwater as set forth in 35 Ill. Adm. Code 620.

"Hazard Quotient" means the ratio of a single substance exposure level during a specified time period to a reference dose for that substance derived from a similar exposure period.

"Highway" means any public way for vehicular travel which has been laid out in pursuance of any law of this State, or of the Territory of Illinois, or which has been established by dedication, or used by the public as a highway for 15 years, or which has been or may be laid out and connect a subdivision or platted land with a public highway and which has been dedicated for the use of the owners of the land included in the subdivision or platted land where there has been an acceptance and use under such dedication by such owners, and which has not been vacated in pursuance of law. The term "highway" includes rights of way, bridges, drainage structures, signs, guard rails, protective structures and all other structures and appurtenances necessary or convenient for vehicular traffic. A highway in a rural area may be called a "road", while a highway in a municipal area may be called a "street". (Illinois Highway Code [605 ILCS 5/2-202])

"Highway Authority" means the Department of Transportation with respect to a State highway; the Illinois State Toll Highway with respect to a toll highway; the County Board with respect to a county highway or a county unit district road if a discretionary function is involved and the County Superintendent of Highways if a ministerial function is involved; the Highway Commissioner with respect to a township or district road not in a county unit road district; or the corporate authorities of a municipality with respect to a municipal street. (Illinois Highway Code [605 ILCS 5/2-213])

"Human Exposure Pathway" means a physical condition which may allow for a risk to human health based on the presence of all of the following: contaminants of concern; an exposure route; and a receptor activity at the point of exposure that could result in contaminant of concern intake.

"Industrial/Commercial Property" means any real property that does not meet the definition of residential property, conservation property or agricultural property.

"Infiltration" means the amount of water entering into the ground as a result of precipitation.

"Institutional Control" means a legal mechanism for imposing a restriction on land use, as described in Subpart J.

"Land Use Control Memoranda of Agreement" mean agreements entered into between one or more agencies of the United States and the Illinois Environmental Protection Agency that limit or place requirements upon the use of Federally Owned Property for the purpose of protecting human health or the environment. "Man-Made Pathways" means constructed physical conditions that may allow for the transport of regulated substances including, but not limited to, sewers, utility lines, utility or elevator vaults, building foundations, basements, crawl spaces, drainage ditches, or previously excavated and filled areas, or sumps. [415 ILCS 5/58.2]

"Natural Pathways" means natural physical conditions that may allow for the transport of regulated substances including, but not limited to, soil, groundwater, sand seams and lenses, and gravel seams and lenses. [415 ILCS 5/58.2]

"Person" means an individual, trust, firm, joint stock company, joint venture, consortium, commercial entity, corporation (including a government corporation), partnership, association, state, municipality, commission, political subdivision of a state, or any interstate body including the United States government and each department, agency, and instrumentality of the United States. [415 ILCS 5/58.2]

"Point of Human Exposure" means the points at which human exposure to a contaminant of concern may reasonably be expected to occur. The point of human exposure is at the source, unless an institutional control limiting human exposure for the applicable exposure route has been or will be in place, in which case the point of human exposure will be the boundary of the institutional control. Point of human exposure may be at a different location than the point of compliance.

"Populated Area" means:___

an area within the boundaries of a municipality that has a population of 10,000 or greater based on the year 2000 or most recent census; or

an area less than three miles from the boundary of a municipality that has a population of 10,000 or greater based on the year 2000 or most recent census.

"Potable" means generally fit for human consumption in accordance with accepted water supply principles and practices. (Illinois Groundwater Protection Act [415 ILCS 55/3(h)])

"PQL" means practical quantitation limit or estimated quantitation limit, which is the lowest concentration that can be reliably measured within specified limits of precision and accuracy for a specific laboratory analytical method during routine laboratory operating conditions in accordance with "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", EPA Publication No. SW-846, incorporated by reference in Section 742.210. When applied to filtered water samples, PQL includes the method detection limit or estimated detection limit in accordance with the applicable method revision in: "Methods for the Determination of Organic Compounds in Drinking Water", Supplement II", EPA Publication No. EPA/600/4-88/039; "Methods for the Determination of Organic Compounds in Drinking Water, Supplement III", EPA Publication No. EPA/600/R-95/131, all of which are incorporated by reference in Section 742.210.

"Qsoil" means the volumetric flow rate of soil gas from the subsurface into the enclosed building space.

"RBCA" means Risk Based Corrective Action as defined in ASTM E-1739-95, as incorporated by reference in Section 742.210.

"RCRA" means the Resource Conservation and Recovery Act of 1976 (42 $\frac{U.S.C.USC}{0.000}$

"Reference Concentration" or "RfC" means an estimate of a daily exposure, in units of milligrams of chemical per cubic meter of air (mg/m+3), to the human population (including sensitive subgroups) that is likely to be without appreciable risk of deleterious effects during a portion of a lifetime (up to approximately seven years, subchronic) or for a lifetime (chronic).

"Reference Dose" or "RfD" means an estimate of a daily exposure, in units of milligrams of chemical per kilogram of body weight per day (mg/kg/d), to the human population (including sensitive subgroups) that is likely to be without appreciable risk of deleterious effects during a portion of a lifetime (up to approximately seven years, subchronic) or for a lifetime (chronic).

"Regulated Substance" means any hazardous substance as defined under Section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (P.L. 96-510) and petroleum products including crude oil or any fraction thereof, natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). [415 ILCS 5/58.2]

"Residential Property" means any real property that is used for habitation by individuals, or where children have the opportunity for exposure to contaminants through soil ingestion or inhalation (indoor or outdoor) at educational facilities, health care facilities, child care facilities or outdoor recreational areas. [415 ILCS 5/58.2]

"Right of Way" means the land, or interest therein, acquired for or devoted to a highway. (Illinois Highway Code [605 ILCS 5/2-217])

"Saturated Zone" means a subsurface zone in which all the interstices or voids are filled with water under pressure greater than that of the atmosphere.

"Similar-Acting Chemicals" are chemical substances that have toxic or harmful effect on the same specific organ or organ system (see Appendix A.Tables E and F for a list of similar-acting chemicals with noncarcinogenic and carcinogenic effects).

"Site" means any single location, place, tract of land or parcel of property, or portion thereof, including contiguous property separated by a public right-of-way. [415 ILCS 5/58.2]

"Slurry Wall" means a man-made barrier made of geologic material which is constructed to prevent or impede the movement of contamination into a certain area.

"Soil Gas" means the air existing in void spaces in the soil between the groundwater table and the ground surface.

"Soil Saturation Limit" or "Csat" means the contaminant concentration at which soil pore air and pore water are saturated with the chemical and the adsorptive limits of the soil particles have been reached. the contaminant concentration at which the absorptive limits of the soil particles, the solubility limits of the available soil moisture, and saturation of soil pore air have been reached. Above the soil saturation concentration, the assumptions regarding vapor transport to air and/or dissolved phase transport to groundwater (for chemicals which that are liquid at ambient soil temperatures) do not apply, and alternative modeling approaches are required.

"Soil Vapor Saturation Limit" or "Cvsat" means the maximum vapor concentration that can exist in the soil pore air at a given temperature and pressure.

"Solubility" means a chemical specific maximum amount of solute that can dissolve in a specific amount of solvent (groundwater) at a specific temperature.

"SPLP" means Synthetic Precipitation Leaching Procedure (Method 1312) as published in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", USEPA Publication No. SW-846, as incorporated by reference in Section 742.210.

"SSL" means Soil Screening Levels as defined in USEPA's Soil Screening Guidance: User's Guide and Technical Background Document, as incorporated by reference in Section 742.210.

"State highwayHighway" means stateState highway as defined in the Illinois Highway Code [605 ILCS 5].

"Stratigraphic Unit" means a site-specific geologic unit of native deposited material and/or bedrock of varying thickness (e.g., sand, gravel, silt, clay, bedrock, etc.). A change in stratigraphic unit is recognized by a clearly distinct contrast in geologic material or a change in physical features within a zone of gradation. For the purposes of this Part, a change in stratigraphic unit is identified by one or a combination of differences in physical features such as texture, cementation, fabric, composition, density, and/or permeability of the native material and/or bedrock.

"Street" means street as defined in the Illinois Highway Code [605 ILCS 5].

"TCLP" means Toxicity Characteristic Leaching Procedure (Method 1311) as published in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", USEPA Publication No. SW-846, as incorporated by reference in Section 742.210.

"Toll highwayHighway" means toll highway as defined in the Illinois Highway Code [605 ILCS 5].

"Total Petroleum Hydrocarbon <u>(" or "</u>TPH)" means the additive total of all petroleum hydrocarbons found in an analytical sample.

"Township **road**Road" means township road as defined in the Illinois Highway Code [605 ILCS 5].

"Unconfined Aquifer" means an aquifer whose upper surface is a water table free to fluctuate under atmospheric pressure.

"Volatile Chemicals" means chemicals with a Dimensionless Henry's Law Constant of greater than 1.9 x 10-2 or a vapor pressure greater than 0.1 Torr (mmHg) at 25°C. For purposes of the indoor inhalation exposure route, elemental mercury is included in this definition. "Volatile Organic Compounds (VOCs)" means organic chemical analytes identified as volatiles as published in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", USEPA Publication No. SW 846 (incorporated by reference in Section 742.210), method numbers 8011, 8015B, 8021B, 8031, 8260B, 8315A, and 8316. For analytes not listed in any category in those methods, those analytes which have a boiling point less than 200? C and a vapor pressuregreater than 0.1 Torr (mm Hg) at 20? C.

"Water Table" means the top water surface of an unconfined aquifer at atmospheric pressure.

Section 742.220 Determination of Soil Saturation Limit

a) For any organic contaminant that has a melting point below $30 \bullet \underline{C} \circ \underline{C}$, the remediation objective for the outdoor inhalation exposure route developed under Tier 2 shall not exceed the soil saturation limit, as determined under subsection (c) of this Section.

b) For any organic contaminant that has a melting point below $30 \stackrel{\circ}{\leftrightarrow} \stackrel{\circ}{\leftarrow} \stackrel{\circ}{\leftarrow}$, the remediation objective under Tier 2 for the soil component of the groundwater ingestion exposure route shall not exceed the soil saturation limit, as determined under subsection (c) of this Section.

c) The soil saturation limit shall be:

1) The value listed in Appendix A, Table A for that specific contaminant; ----

2) A value derived from Equation S29 in Appendix C, Table A; or

3) A value derived from another method approved by the Agency.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.222 Determination of Soil Vapor Saturation Limit

a) For any volatile chemical, the soil gas remediation objective for the indoor and outdoor inhalation exposure routes developed under Tier 2 shall not exceed the soil vapor saturation limit, as determined under subsection (b) of this Section.

b) The soil vapor saturation limit shall be:

1) The value listed in Appendix A, Table K for that specific contaminant;

2) A value derived from Equation J&E5 in Appendix C, Table L; or

3) A value derived from another method approved by the Agency.

(Source: Added at 36 Ill. Reg. ____, effective _____)

Section 742.225 Demonstration of Compliance with Soil and Groundwater Remediation Objectives

Compliance with soil and groundwater remediation objectives is achieved if each sample result does not exceed that respective remediation objective unless a person elects to proceed under subsections (c), (d) and (e) of this Section.

a) Compliance with groundwater remediation objectives developed under Subparts D through F and H through I shall be demonstrated by comparing the contaminant concentrations of discrete samples at each sample point to the applicable groundwater remediation objective. Sample points shall be determined by the program under which remediation is performed.

b) Unless the person elects to composite samples or average sampling results as provided in subsections (c) and (d) of this Section, compliance with soil remediation objectives developed under Subparts D through G and I shall be demonstrated by comparing the contaminant concentrations of discrete samples to the applicable soil remediation objective.

1) Except as provided in subsections (c) and (d) of this Section, compositing of samples is not allowed.

2) Except as provided in subsections (c) and (d) of this Section, averaging of sample results is not allowed.

3) Notwithstanding subsections (c) and (d) of this Section, compositing of samples and averaging of sample results is not allowed for the construction worker population.

4) The number of sampling points required to demonstrate compliance is determined by the requirements applicable to the program under which remediation is performed.

c) If a person chooses to composite soil samples or average soil sample results to demonstrate compliance relative to the soil component of the groundwater ingestion exposure route, the following requirements apply:

1) A minimum of two sampling locations for every 0.5 acre of contaminated area is required, with discrete samples at each sample location obtained at every two feet of depth, beginning at six inches below the ground surface for surface contamination and at the upper limit of contamination for subsurface contamination and continuing through the zone of contamination. Alternatively, a sampling method may be approved by the Agency based on an appropriately designed site-specific evaluation. Samples obtained at or below the water table shall not be used in compositing or averaging.

2) For contaminants of concern other than volatile organic contaminants chemicals:

A) Discrete samples from the same boring may be composited; or

B) Discrete sample results from the same boring may be averaged.

3) For volatile organic contaminants chemicals:

A) Compositing of samples is not allowed.

B) Discrete sample results from the same boring may be averaged.

4) Composite samples may not be averaged. An arithmetic average may be calculated for discrete samples collected at every two feet of depth through the zone of contamination as specified above in <u>Section 742.225</u> subsection (c)(1) of this Section.

d) If a person chooses to composite soil samples or average soil sample results to demonstrate compliance relative to the outdoor inhalation exposure route or ingestion exposure routes<u>route</u>, the following requirements apply:

1) A person shall submit a sampling plan for Agency approval, based upon a site-specific evaluation;

2) For volatile organic compounds chemicals, compositing of samples is not allowed; and

3) All samples shall be collected within the contaminated area-

4) Composite samples may not be averaged. Procedures specified in "Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites", USEPA Office of Emergency and Remedial Response, OSWER 9285.6-10 (December 2002), as incorporated by reference in Section 742.210, or an alternative procedure approved by the Agency, shall be used to determine sample averages.

e) When averaging under this Section, if no more than 15% of sample results are reported as "non-detect", "no contamination", "below detection limits", or similar terms, such results shall be included in the averaging calculations as one-half the reported analytical detection limit for the contaminant. However, when performing a test for normal or lognormal distribution for the purpose of calculating a 95% Upper Confidence Limit of the mean for a contaminant, a person may substitute for each non-detect value a randomly generated value between, but not including, zero and the reported analytical detection limit. If more than 15% of sample results are "non-detect", procedures specified in "Guidance for Data Quality Assessment, Practical Methods for Data Analysis, EPA QA/G-9, QA00 Update", EPA/600/R-96/084 (July 2000), as incorporated by reference in Section 742.210, or an alternative procedure approved by the Agency shall be used to address the non-detect values, or another statistically valid procedure approved by the Agency may be used to determine an average.

f) All soil samples collected after August 15, 2001,2001 shall be reported on a dry weight basis for the purpose of demonstrating compliance, with the exception of the TCLP and SPLP and the property pH.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.227 Demonstration of Compliance with Soil Gas Remediation Objectives for the Outdoor and Indoor Inhalation Exposure Routes

Compliance shall be demonstrated by comparing the contaminant concentrations of discrete samples at each sample point to the applicable soil gas remediation objective. As specified in Section 742.510(c), the soil gas remediation objectives for the outdoor inhalation exposure route are contained in Appendix B, Table G. As specified in Section 742.515, the soil gas remediation objectives for the indoor inhalation exposure route are contained in Appendix B, Tables H and I. This Section 742.227 applies to exterior soil gas samples or near-slab samples collected outside a building. Proposals to use sub-slab soil gas data for the indoor inhalation exposure route shall follow Section 742.935(c).

a) Sample points shall be determined by the program under which remediation is performed.

b) When collecting soil gas samples:

1) Use rigid-wall tubing made of nylon or Teflon(r) or other material approved by the Agency;

2) Use gas-tight, inert containers to hold the sample. For light sensitive or halogenated volatile chemicals, these containers shall be opaque or dark-colored;

3) Purge three volumes before obtaining each discrete soil gas sample;

4) Use a helium tracer or other leak apparatus detection system approved by the Agency; and

5) Limit the flow rate to 200 ml/min.

c) Soil gas samples shall be analyzed using a National Environmental Laboratory Accreditation Program (NELAP) certified laboratory.

d) Soil gas remediation objectives shall be compared to concentrations of soil gas collected at a depth at least 3 feet below ground surface and above the saturated zone.

(Source: Added at 36 Ill. Reg. ____, effective _____)

SUBPART C: EXPOSURE ROUTE EVALUATIONS

Section 742.305 Contaminant Source and Free Product Determination

No exposure route shall be excluded from consideration relative to a contaminant of concern unless the following requirements are met:

 The sum of the concentrations of all organic contaminants of concern shall not exceed the attenuation capacity of the soil as determined under Section 742.215;

b) The concentrations of any organic contaminants of concern remaining in the soil shall not exceed the soil saturation limit as determined under Section 742.220;

c) Any soil which contains contaminants of concern shall not exhibit any of the characteristics of reactivity for hazardous waste as determined under 35 Ill. Adm. Code 721.123;

d) Any soil which contains contaminants of concern shall not exhibit a pH less than or equal to 2.0 or greater than or equal to 12.5, as determined by SW-846 Method 9040B: pH Electrometric for soils with 20% or greater aqueous (moisture) content or by SW-846 Method 9045C: Soil pH for soils with less than 20% aqueous (moisture) content as incorporated by reference in Section 742.210;

e) Any soil which contains contaminants of concern in the following list of inorganic chemicals or their salts shall not exhibit any of the characteristics of toxicity for hazardous waste as determined by 35 Ill. Adm. Code 721.124: arsenic, barium, cadmium, chromium, lead, mercury, selenium or silver; and

f) If contaminants of concern include polychlorinated biphenyls (PCBs), the concentration of any PCBs in the soil shall not exceed 50 parts per million as determined by SW-846 Methods; and

g) The concentration of any contaminant of concern in soil gas shall not exceed 10% of its Lower Explosive Limit (LEL) as measured by a hand held combustible gas indicator that has been calibrated to manufacturer specifications.

(Source: Amended at 36 Ill. Reg. _____, effective ______)

Section 742.310 Outdoor Inhalation Exposure Route

The outdoor inhalation exposure route may be excluded from consideration if:

a) The following requirements in subsections subsection (a)(1) or (a)(2) are met:

1) An approved engineered barrier is in place that meets the requirements of Subpart K; or

2) The only contaminants of concern are benzene, toluene, ethylbenzene, and total xylenes, and a demonstration of active biodegradation has been made for benzene, toluene, ethylbenzene, and total xylenes such that no outdoor inhalation exposure will occur. This demonstration shall be submitted to the Agency for review and approval;

bab) The requirements of Sections 742.300 and 742.305 are met;

b) An approved engineered barrier is in place that meets the requirements of Subpart K;

c) Safety worker precautions for the construction worker are taken if the Tier 1 construction worker remediation objectives are exceeded; and

d) An institutional control, in accordance with Subpart J, will be placed on the property.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.312 Indoor Inhalation Exposure Route

The indoor inhalation exposure route may be excluded from consideration if:

a) None of the contaminants of concern are listed on Appendix A, Table J and none of the contaminants of concern are volatile chemicals, as defined in Section 742.200; or

b) The following requirements in subsections (b)(1)(A) - or (B) or (C) - and (b)(2) and (b)(3) are met:

1) Exclusion options when the contaminants of concern are volatile chemicals:

A) No building or man-made pathway exists or will be placed above the contaminated soil gas or groundwater; or

B) An approved building control technology is in place or will be placed that meets the requirements of Subpart L; or

C) If the contaminants of <u>concernsconcern</u> are benzene, toluene, ethylbenzene, and total xylenes only, a demonstration of active biodegradation has been made for benzene, toluene, ethylbenzene, and total xylenes such that no indoor inhalation exposure will occur. This demonstration shall be submitted to the Agency for review and approval;

2) The requirements of Sections 742.300 and 742.305 are met; and

3) An institutional control, in accordance with Subpart J, will be placed on the property.

(Source: Added at 36 Ill. Reg. __, effective _____)

SUBPART D: DETERMINING AREA BACKGROUND

Section 742.405 Determination of Area Background for Soil

a) Soil sampling results shall be obtained for purposes of determining area background levels in accordance with the following procedures:

1) For volatile organic contaminants chemicals, sample results shall be based on discrete samples;

2) Unless an alternative method is approved by the Agency, for contaminants other than volatile organic contaminants chemicals, sample results shall be based on discrete samples or composite samples. If a person elects to use composite samples, each 0.5 acre of the area to be sampled shall be divided into quadrants and 5 aliquots of equal volume per quadrant shall be composited into 1 sample;

3) Samples shall be collected from similar depths and soil types, which shall be consistent with the depths and soil types in which maximum levels of contaminants are found in the areas of known or suspected releases; and

4) Samples shall be collected from areas of the site or adjacent to the site that are unaffected by known or suspected releases at or from the site. If the sample results show an impact from releases at or from the site, then the sample results shall not be included in determining area background levels under this Part.

b) Area background shall be determined according to one of the following approaches:

1) Statewide Area Background Approach:

A) The concentrations of inorganic chemicals in background soils listed in Appendix A, Table G may be used as the upper limit of the area background concentration for the site. The first column to the right of the chemical name presents inorganic chemicals in background soils for counties within Metropolitan Statistical Areas. Counties within Metropolitan Statistical Areas are identified in Appendix A, Table G, Footnote a. Sites located in counties outside Metropolitan Statistical Areas shall use the concentrations of inorganic chemicals in background soils shown in the second column to the right of the chemical name.
B) Soil area background concentrations determined according to this statewide area background approach shall be used as provided in Section 742.415(b) of this Part. For each parameter whose sampling results demonstrate concentrations above those in Appendix A, Table G, the person shall develop appropriate soil remediation objectives in accordance with this Part, or may determine area background in accordance with subsection (b)(2) of this Section.

2) A statistically valid approach for determining area background concentrations appropriate for the characteristics of the data set, and approved by the Agency.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

SUBPART E: TIER 1 EVALUATION

Section 742.500 Tier 1 Evaluation Overview

a) A Tier 1 evaluation compares the concentration of each contaminant of concern detected at a site to the baseline remediation objectives provided in Appendix B, Tables A, B, C, D, and E, G, H and I. Use of Tier 1 remediation objectives requires only limited site-specific information: concentrations of contaminants of concern, groundwater classification, land use classification, and, if appropriate, soil pH. (See Appendix B, Illustration A.)

b) Although Tier 1 allows for differentiation between residential and industrial/commercial property use of a site, an institutional control under Subpart J is required where remediation objectives are based on an industrial/commercial property use.

c) Any given exposure route is not a concern if the concentration of each contaminant of concern detected at the site is below the Tier 1 value of that given route. In such a case, no further evaluation of that route is necessary.

(Source: Amended at 36 Ill. Reg. _, effective _____)

Section 742.505 Tier 1 Soil, Soil Gas and Groundwater Remediation Objectives

a) Soil

1) Outdoor Inhalation Exposure Route

A) The Tier 1 soil remediation objectives for this exposure route based upon residential property use are listed in Appendix B, Table A.

B) The Tier 1 soil remediation objectives for this exposure route based upon industrial/commercial property use are listed in Appendix B, Table B. Soil remediation objective determinations relying on this table require use of institutional controls in accordance with Subpart J.

C) For this exposure route, it is acceptable to determine compliance by meeting either the soil or soil gas remediation objectives.

2) Ingestion Exposure Route

A) The Tier 1 soil remediation objectives for this exposure route based upon residential property use are listed in Appendix B, Table A.

B) The Tier 1 soil remediation objectives for this exposure route based upon industrial/commercial property use are listed in Appendix B, Table B. Soil remediation objective determinations relying on this table require use of institutional controls in accordance with Subpart J.

3) Soil Component of the Groundwater Ingestion Route

A) The Tier 1 soil remediation objectives for this exposure route based upon residential property use are listed in Appendix B, Table A.

B) The Tier 1 soil remediation objectives for this exposure route based upon industrial/commercial property use are listed in Appendix B, Table B.

C) The pH-dependent Tier 1 soil remediation objectives for identified ionizable organics or inorganics for the soil component of the groundwater ingestion exposure route (based on the total amount of contaminants present in the soil sample results and groundwater classification) are provided in Appendix B, Tables C and D.

D) Values used to calculate the Tier 1 soil remediation objectives for this exposure route are listed in Appendix B, Table F.

4) Evaluation of the dermal contact with soil exposure route is not required under Tier 1.

- b) Soil Gas
- 1) Outdoor Inhalation Exposure Route

A) The Tier 1 soil gas remediation objectives for this exposure route based upon residential property use are listed in Appendix B, Table G.

B) The Tier 1 soil gas remediation objectives for this exposure route based upon industrial/commercial property use, including the construction worker population, are listed in Appendix B, Table G. Soil gas remediation objective determinations relying on an industrial/commercial scenario require use of institutional controls in accordance with Subpart J.

C) For this exposure route, it is acceptable to determine compliance by meeting either the soil or soil gas remediation objectives.

2) Indoor Inhalation Exposure Route

A) The Tier 1 soil gas remediation objectives for this exposure route are listed in Appendix B, Tables H and I.

B) The Tier 1 soil gas remediation objectives for this exposure route are based on a default water-filled soil porosity value of 0.15 cm3/cm3.

C) Appendix B, Table H shall be used when soil or groundwater contamination is within 5 feet, vertically or horizontally, of an existing or potential building or man-made pathway. In this scenario, the mode of contaminant transport is both diffusion and advection, which sets the Qsoil value at 83.33 cm3/sec. D) Appendix B, Table I shall be used when soil and groundwater contamination are more than 5 feet, vertically and horizontally, from an existing or potential building or man-made pathway. In this scenario, the mode of contaminant transport is diffusion only, which sets the Qsoil value at 0.0 cm3/sec. Soil gas remediation objective determinations relying on this table require use of institutional controls in accordance with Subpart J.

E) To determine whether the Qsoil value can be set at 0.0 cm3/sec, the site evaluator shall demonstrate that soil and groundwater within 5 feet, vertically and horizontally, of an existing or potential building or man-made pathway meet the Tier 1 remediation objectives for residential property listed in Appendix B, Table A, and the Tier 1 remediation objectives for Class I groundwater listed in Appendix B, Table E, respectively.

b-c) Groundwater

1) The Tier 1 groundwater remediation objectives for the groundwater component of the groundwater ingestion route are listed in Appendix B, Table E.

2) The Tier 1 groundwater remediation objectives for this exposure route are given for Class I and Class II groundwaters, respectively.

3) The evaluation of 35 Ill. Adm. Code 620.615 regarding mixtures of similaracting chemicals shall be considered satisfied for Class I groundwater at the point of human exposure if:

A) No more than one similar-acting noncarcinogenic chemical as listed in Appendix A, Table E is detected in the groundwater at the site; and

B) No carcinogenic contaminant of concern as listed in Appendix A, Table I is detected in any groundwater sample associated with the site, using analytical procedures capable of achieving either the 1 in 1,000,000 cancer risk concentration or the ADL, whichever is greater.

4) If the conditions of subsection (c)(3)(b)(3) of this Section are not met, the Class I groundwater remediation objectives set forth in Appendix B, Table E shall be corrected for the cumulative effect of mixtures of similar-acting chemicals using the following methodologies:

A) For noncarcinogenic chemicals, the methodologies set forth at Section 742.805(c) or Section 742.915(h) shall be used; and

B) For carcinogenic chemicals, the methodologies set forth at Section 742.805(d) or Section 742.915(h) shall be used.

5) For the groundwater component of the indoor inhalation exposure route, the Tier 1 groundwater remediation objectives are listed in Appendix B, Tables H and I.

A) The Tier 1 groundwater remediation objectives for this exposure route are based on a default water-filled soil porosity value of 0.15 cm3/cm3.

B) Appendix B, Table H shall be used when soil or groundwater contamination is within 5 feet, vertically and horizontally, of an existing or potential building or man-made pathway. In this scenario, the mode of contaminant transport is both diffusion and advection, which sets the Qsoil value at 83.33 cm3/sec.

C) Appendix B, Table I shall be used when soil and groundwater contamination are more than 5 feet, vertically and horizontally, from an existing or potential building or man-made pathway. In this scenario, the mode of contaminant transport is diffusion only, which sets the Qsoil value at 0.0 cm3/sec. Groundwater remediation objective determinations relying on this table require use of institutional controls in accordance with Subpart J.

D) To determine whether the Qsoil value can be set at 0.0 cm3/sec, the site evaluator shall demonstrate that soil and groundwater within 5 feet, vertically and horizontally, of an existing or potential building or man-made pathway meet the Tier 1 remediation objectives for residential property listed in Appendix B, Table A, and the Tier 1 remediation objectives for Class I groundwater listed in Appendix B, Table E, respectively.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.510 Tier 1 Remediation Objectives Tables for the Ingestion, Outdoor Inhalation and Soil Component of the Groundwater Ingestion Exposure Routes

a) Soil remediation objectives are listed in Appendix B, Tables A, B, C and D.

1) Appendix B, Table A is based upon residential property use.

A) The first column to the right of the chemical name lists soil remediation objectives for the soil ingestion exposure route.

B) The second column lists the soil remediation objectives for the outdoor inhalation exposure route.

C) The third and fourth columns list soil remediation objectives for the soil component of the groundwater ingestion exposure route for the respective classes of groundwater:

- i) Class I groundwater; and
- ii) Class II groundwater.

D) The final column lists the Acceptable Detection Limit (ADL), only wherewhen applicable.

2) Appendix B, Table B is based upon industrial/commercial property use.

A) The first and third columns to the right of the chemical name list the soil remediation objectives for the soil ingestion exposure route based on two receptor populations:

- i) Industrial/commercial; and
- ii) Construction worker.

B) The second and fourth columns to the right of the chemical name list the soil remediation objectives for the outdoor inhalation exposure route based on two receptor populations:

i) Industrial/commercial; and

ii) Construction worker.

C) The fifth and sixth columns to the right of the chemical name list the soil remediation objectives for the soil component of the groundwater ingestion exposure route for two classes of groundwater:

i) Class I groundwater; and

ii) Class II groundwater.

D) The final column lists the acceptable detection limit (ADL), only wherewhen applicable.

3) Appendix B, Tables C and D set forth pH specific soil remediation objectives for inorganic and ionizing organic chemicals for the soil component of the groundwater ingestion route.

A) Table C sets forth remediation objectives based on Class I groundwater and Table D sets forth remediation objectives based on Class II groundwater.

B) The first column in Tables C and D lists the chemical names.

C) The second through ninth columns to the right of the chemical names list the pH based soil remediation objectives.

4) For the inorganic chemicals listed in Appendix B, Tables A and B, the soil component of the groundwater ingestion exposure route shall be evaluated using TCLP (SW-846 Method 1311) or SPLP (SW-846 Method 1312), incorporated by reference at Section 742.210 unless a person chooses to evaluate the soil component on the basis of the total amount of contaminant in a soil sample result in accordance with subsection (a)(5) of this Section.

5) For those inorganic and ionizing organic chemicals listed in Appendix B, Tables C and D, if a person elects to evaluate the soil component of the groundwater ingestion exposure route based on the total amount of contaminant in a soil sample result (rather than TCLP or SPLP analysis), the person shall determine the soil pH at the site and then select the appropriate soil remediation objectives based on Class I and Class II groundwaters from Tables C and D, respectively. If the soil pH is less than 4.5 or greater than 9.0, then Tables C and D cannot be used.

6) Unless one or more exposure routes are excluded from consideration under Subpart C, the most stringent soil remediation objective of the exposure routes (i.e., soil ingestion exposure route, outdoor inhalation exposure route, and soil component of the groundwater ingestion exposure route) shall be compared to the concentrations of soil contaminants of concern measured at the site. When using Appendix B, Table B to select soil remediation objectives for the ingestion exposure route and outdoor inhalation exposure routes, the remediation objective shall be the more stringent soil remediation objective of the industrial/commercial populations and construction worker populations.

7) Confirmation sample results may be averaged or soil samples may be composited in accordance with Section 742.225.

8) If a soil remediation objective for a chemical is less than the ADL, the ADL shall serve as the soil remediation objective.

B) Groundwater remediation objectives for the groundwater component of the groundwater ingestion exposure route are listed in Appendix B, Table E.
 However, Appendix B, Table E must be corrected for cumulative effect of mixtures of similar-acting noncarcinogenic chemicals as set forth in Section Sections - 742.505(c)(3) and (c)(4).

1) The first column to the right of the chemical name lists groundwater remediation objectives for Class I groundwater, and the second column lists the groundwater remediation objectives for Class II groundwater.

2) To use Appendix B, Table E of this Part, the 35 Ill. Adm. Code 620 classification for groundwater at the site shall be determined. The concentrations of groundwater contaminants of concern at the site are compared to the applicable Tier 1 groundwater remediation objectives for the groundwater component of the groundwater ingestion exposure route in Appendix B, Table E.

c) Soil gas remediation objectives for the outdoor inhalation exposure route are listed in Appendix B, Table G.

1) The first column to the right of the chemical name lists the soil gas remediation objectives for residential populations.

2) The second and third columns to the right of the chemical names list the soil gas remediation objectives for the outdoor inhalation exposure route based on two receptor populations:

A) Industrial/commercial; and

B) Construction worker.

edd) For contaminants of concern not listed in Appendix B, Tables A, B and , E, and G, a person may request site-specific remediation objectives from the Agency or propose site-specific remediation objectives in accordance with 35 Ill. Adm. Code 620, Subpart I of this Part, or both.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.515 Tier 1 Remediation Objectives Tables for the Indoor Inhalation Exposure Route

a) When the mode of contaminant transport is both diffusion and advection as described in Section 742.505 (i.e., soil or groundwater contamination is within 5 feet of an existing or potential building or man-made pathway), the remediation objectives for soil gas and groundwater listed in Appendix B, Table H shall be used.

1) The first column to the right of the chemical name lists the soil gas remediation objectives for residential receptors.

2) The second column lists the soil gas remediation objectives for industrial/commercial receptors.

3) The third column lists the groundwater remediation objectives for residential receptors.

4) The fourth column lists the groundwater remediation objectives for industrial/commercial receptors.

b) When the mode of contaminant transport is diffusion only as described in Section 742.505 (i.e., soil and groundwater contamination are more than 5 feet from an existing or potential building or man-made pathway), the remediation objectives for soil gas and groundwater listed in Appendix B, Table I shall be used. Remediation objectives relying on this table require use of institutional controls in accordance with Subpart J.

1) The first column to the right of the chemical name lists the soil gas remediation objectives for residential receptors.

2) The second column lists the soil gas remediation objectives for industrial/commercial receptors.

3) The third column lists the groundwater remediation objectives for residential receptors.

4) The fourth column lists the groundwater remediation objectives for industrial/commercial receptors.

c) If using Appendix B, Table H, compliance is determined by meeting either the soil gas remediation objectives or the groundwater remediation objectives.

d) If using Appendix B, Table I, compliance is determined by meeting both the soil gas remediation objectives and the groundwater remediation objectives.

e) For volatile chemicals not listed in Appendix B, Table H or I, a person may request site-specific remediation objectives from the Agency or propose site-specific remediation objectives in accordance with Subpart I of this Part, or both.

(Source: Added at 36 Ill. Reg. ____, effective _____)

SUBPART F: TIER 2 GENERAL EVALUATION

Section 742.600 Tier 2 Evaluation Overview

a) Tier 2 remediation objectives are developed through the use of equations which allow site-specific data to be used. (See Appendix C, Illustrations A and B.) The equations identified in Appendix C, Tables A, and C, and L may be used to develop Tier 2 remediation objectives.

b) Tier 2 evaluation is only required for contaminants of concern and corresponding exposure routes (except where excluded from further consideration under Subpart C) exceeding the Tier 1 remediation objectives. When conducting Tier 2 evaluations, the values used in the calculations must have the appropriate units of measure as identified in Appendix C, Tables B, and D, and M.

c) Any development of remediation objectives using site-specific information or equations outside the Tier 2 framework shall be evaluated under Tier 3.

d) Any development of a remediation objective under Tier 2 shall not use a target hazard quotient greater than one at the point of human exposure or a target cancer risk greater than 1 in 1,000,000 at the point of human exposure.

e) In conducting a Tier 2 evaluation, the following conditions shall be met:

1) For each discrete sample, the total soil contaminant concentration of either a single contaminant or multiple contaminants of concern shall not exceed the attenuation capacity of the soil as provided in Section 742.215.

2) Remediation objectives for noncarcinogenic compounds which affect the same target organ, organ system or similar mode of action shall meet the requirements of Section 742.720.

3) The soil remediation objectives based on the outdoor inhalation exposure route and the soil component of the groundwater ingestion exposure routes shall not exceed the soil saturation limit as provided in Section 742.220.

4) The soil gas remediation objectives based on the indoor and outdoor inhalation exposure routes shall not exceed the soil vapor saturation limit as provided in Section 742.222.

f) Tier 2 remediation objectives for the indoor inhalation exposure route shall be calculated for either soil gas or groundwater if a Qsoil value of 83.33 cm3/sec is used.

g) Tier 2 remediation objectives for the indoor inhalation exposure route shall be calculated for both soil gas and groundwater if a Qsoil value of 0.0 cm3/sec is used.

f) If the calculated Tier 2 soil remediation objective for an applicable exposure route is more stringent than the corresponding Tier 1 remediation objective, then the Tier 1 remediation objective applies.

g)i) If the calculated Tier 2 soil remediation objective for an exposure route is more stringent than the Tier 1 soil remediation objective(s)objectives for the other exposure routes, then the Tier 2 calculated soil remediation objective applies and Tier 2 soil remediation objectives for the other exposure routes are not required.

h)j) If the calculated Tier 2 soil remediation objective is less stringent than one or more of the soil remediation objectives for the remaining exposure routes, then the Tier 2 values are calculated for the remaining exposure route(s)routes and the most stringent Tier 2 calculated value applies.

k) If a contaminant has both carcinogenic and noncarcinogenic effects for any applicable exposure route or receptor, remediation objectives shall be calculated for each effect and the more stringent remediation objective shall apply. The toxicological-specific information is described in Section 742.705(d).

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.605 Land Use

a) Present and post-remediation land use is evaluated in a Tier 2 evaluation. Acceptable exposure factors for the Tier 2 evaluation for residential, industrial/commercial, and construction worker populations are provided in the far right column of Appendix C, Tables B, and D, and M. Use of exposure factors different from those in Appendix C, Tables B, and D, and M must be approved by the Agency as part of a Tier 3 evaluation.

b) If a Tier 2 evaluation is based on an industrial/commercial property use, then:

1) Construction worker populations shall also be evaluated, except for the indoor inhalation exposure route; and

2) Institutional controls are required in accordance with Subpart J.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.610 Chemical and Site Properties

a) Physical and Chemical Properties of Contaminants

Tier 2 evaluations require information on the physical and chemical properties of the contaminants of concern. The physical and chemical properties used in a Tier 2 evaluation are contained in Appendix C, Table E. If the site has contaminants not included in this table, a person may request the Agency to provide the applicable physical and chemical input values or may propose input values under Subpart I. If a person proposes to apply values other than those in Appendix C, Table E, or those provided by the Agency, the evaluation shall be considered under Tier 3.

b) Soil and Groundwater Parameters

1) A Tier 2 evaluation requires examination of soil and groundwater parameters. The parameters that may be varied, and the conditions under which these parameters are determined as part of Tier 2, are summarized in Appendix C, Tables B, and D, and M. If a person proposes to vary site-specific parameters outside of the framework of these tables, the evaluation shall be considered under Tier 3.

2) To determine site-specific physical soil parameters, a minimum of one boring per 0.5 acre of contamination shall be collected. This boring must be deep enough to allow the collection of the required field measurements. The site-specific physical soil parameters must be determined from the portion of the boring representing the stratigraphic <u>unit(s)units</u> being evaluated. For example, if evaluating the soil component of the groundwater ingestion exposure route, two samples from the boring will be required:

A) A sample of the predominant soil type for the vadose zone; and

B) A sample of the predominant soil type for the saturated zone.

3) A site-specific SSL dilution factor (used in developing soil remediation objectives based upon the protection of groundwater) may be determined by substituting site information in Equation S22 in Appendix C, Table A. To make this demonstration, a minimum of three monitoring wells shall be used to determine the hydraulic gradient. As an alternative, the default dilution factor value listed in Appendix C, Table B may be used. If monitoring wells are used to determine the hydraulic gradient, the soil taken from the borings shall be visually inspected to ensure there are no significant differences in the stratigraphy. If there are similar soil types in the field, one boring shall be used to determine the site-specific physical soil parameters. If there are significant differences, all of the borings shall be evaluated before determining the site-specific physical soil parameters for the site.

4) Not all of the parameters identified in Appendix C, Tables B, and D, and M need to be determined on a site-specific basis. A person may choose to collect partial site-specific information and use default values as listed in Appendix C, Tables B, and D, and M for the rest of the parameters.

(Source: Amended at 36 Ill. Reg. ____, effective _____) SUBPART G: TIER 2 SOIL AND SOIL GAS EVALUATION Section 742.700 Tier 2 Soil Evaluation Overview

a) Tier 2 remediation objectives are developed through the use of models which allow site-specific data to be considered. Appendix C, Tables A, and C, and L list equations that shall be used under a Tier 2 evaluation to calculate soil remediation objectives prescribed by SSL, and RBCA, and the modified J&E models, respectively. (See also Appendix C, Illustration A.)

b) Appendix C, Table A lists equations that are used under the SSL model.(See also Appendix C, Illustration A.) The SSL model has equations to evaluate the following human exposure routes:

1) Soil ingestion exposure route;

2) Outdoor Inhalation exposure route for:; and

A) Organic contaminants;

B) Fugitive dust; and

3) Soil component of the groundwater ingestion exposure route.

c) Evaluation of the dermal exposure route is not required under the SSL model.

d) Appendix C, Table C lists equations that are used under the RBCA model. (See also Appendix C, Illustration A.) The RBCA model has equations to evaluate human exposure based on the following:

1) The combined exposure routes of outdoor inhalation of vapors and particulates, soil ingestion and dermal contact with soil;

2) The ambient vapor inhalation (outdoor) outdoor inhalation exposure route from subsurface soils;

3) Soil component of the groundwater ingestion route; and

<u>4)</u> <u>Groundwater ingestion exposure route.</u>

e) Appendix C, Table L lists equations that are used under the modified J&E model. The modified J&E model has equations to evaluate human exposure by the indoor inhalation exposure route. The modified model allows for the development of soil gas remediation objectives.

f) c) The equations in either Appendix C, Table A, or C, or L may be used to calculate remediation objectives for each contaminant of concern under Tier 2, if the following requirements are met:

1) The Tier 2 soil or soil gas remediation objectives for the ingestion and outdoor inhalation exposure routes shall use the applicable equations from the same approach (i.e., SSL equations in Appendix C, Table C). For the indoor inhalation exposure route, only the J&E equations can be used.

2) The equations used to calculate soil remediation objectives for the soil component of the groundwater ingestion exposure route are not dependent on the approach utilized to calculate soil remediation objectives for the other exposure routes. For example, it is acceptable to use the SSL equations for calculating Tier 2 soil remediation objectives for the ingestion and outdoor inhalation exposure routes, and the RBCA equations for calculating Tier 2 soil remediation of the groundwater ingestion exposure route.

3) Combining equations from Appendix C, Tables A, and C, and L to form a new model is not allowed. In addition, Appendix C, Tables A, and C, and L must use their own applicable parameters identified in Appendix C, Tables B, and D, and M, respectively.

g) f) In calculating soil or soil gas remediation objectives for industrial/commercial property use, applicable calculations shall be performed twice: once using industrial/commercial population default values and once using construction worker population default values. The more stringent soil or soil gas remediation objectives derived from these calculations must be used for further Tier 2 evaluations. The indoor inhalation exposure route does not apply to the construction worker population.

h) -g) Tier 2 data sheets provided by the Agency shall be used to present calculated Tier 2 remediation objectives, if required by the particular program for which remediation is being performed.

i) h) The RBCA equations which rely on the parameter Soil Water Sorption Coefficient (ks) can only be used for ionizing organics and inorganics by substituting values for ks from Appendix C, Tables I and J, respectively. This will also require the determination of a site-specific value for soil pH.

j) For the outdoor inhalation exposure route, it is acceptable to use either <u>Section</u> 742.710 to develop a soil remediation objective or <u>Section</u> 742.712 to develop a soil gas remediation objective to determine compliance with the pathway.

(Source: Amended at 36 Ill. Reg. _____, effective ______)

Section 742.705 Parameters for Soil Remediation Objective Equations

a) Appendix C, Tables B, and D, and M list the input parameters for the SSL, and RBCA, and J&E equations, respectively. The first column lists each symbol as it is presented in the equation. The next column defines the parameters. The third column shows the units for the parameters. The fourth column identifies where information on the parameters can be obtained (i.e., field measurement, applicable equation(s)equations, reference source, or default value). The last column identifies how the parameters can be generated.

b) Default Values

Default values are numerical values specified for use in the Tier 2 equations. The fourth column of Appendix C, Tables B, and D, and M denotes if the default values are from the SSL model, RBCA model, the modified J&E model or some other source. The last column of Appendix C, Tables B, and D, and M lists the numerical values for the default values used in the SSL, and RBCA, and J&E equations, respectively.

c) Site-specific Information

Site-specific information is a parameter measured, obtained, or determined from the site to calculate Tier 2 remediation objectives. The fourth column of Appendix C, Tables B, and D, and M identifies those site-specific parameters that may require direct field measurement. For some parameters, numerical default inputs have been provided in the last column of Appendix C, Tables B, and D, and M to substitute for site-specific information. In some cases, information on the receptor or soil type is required to select the applicable numerical default inputs. Site-specific information includes:

1) Physical soil parameters identified in Appendix C, Table F. The second column identifies the location where the sample is to be collected. Acceptable methods for measuring or calculating these soil parameters are identified in the last column of Appendix C, Table F;

2) Institutional controls or engineered barriers, pursuant to Subparts J and K, describe applicable institutional controls and engineered barriers under a Tier 2 evaluation; and

- 3) Land use classification
- d) Toxicological-specific Information

1) Toxicological-specific information is used to calculate Tier 2 remediation objectives for the following parameters, if applicable:

A) Oral Chronic Reference Dose (RfDo, expressed in mg/kg-d);

B) Oral Subchronic Reference Dose (RfDs, expressed in mg/kg-d, shall be used for construction worker remediation objective calculations);

C) Oral Slope Factor (SFo, expressed in (mg/kg-d)-1);

D) Inhalation Unit Risk Factor (URF expressed in (?ug/m3)-1);

E) Inhalation Chronic Reference Concentration (RfC, expressed in mg/m3);

F) Inhalation Subchronic Reference Concentration (RfCs, expressed in mg/m3, shall be used for construction worker remediation objective calculations);

G) Inhalation Chronic Reference Dose (RfDi, expressed in mg/kg-d);

H) Inhalation Subchronic Reference Dose (RfDis, expressed in mg/kg-d, shall be used for construction worker remediation objective calculations); and

Inhalation Slope Factor (SFi, expressed in (mg/kg-d)-1);

2) Toxicological information can be obtained from IRIS by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210, or the program under which the remediation is being performed.

 chemical-specific Information Chemical-specific information used to calculate Tier 2 remediation objectives is listed in Appendix C, Table E.

f) Calculations

Calculating numerical values for some parameters requires the use of equations listed in Appendix C, <u>TableTables</u> A, <u>or</u> C, and L. The parameters that are calculated are listed in Appendix C, Tables B, <u>and</u> D, and M.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.710 SSL Soil Equations

a) This Section sets forth the equations and parameters used to develop Tier
 2 soil remediation objectives for the three exposure routes using the SSL approach.

b) Soil Ingestion Exposure Route

1) Equations S1 through S3 form the basis for calculating Tier 2 remediation objectives for the soil ingestion exposure route using the SSL approach. Equation S1 is used to calculate soil remediation objectives for noncarcinogenic contaminants. Equations S2 and S3 are used to calculate soil remediation objectives for carcinogenic contaminants for residential populations and industrial/commercial and construction worker populations, respectively.

2) For Equations S1 through S3, the SSL default values cannot be modified with site-specific information.

c) Outdoor Inhalation Exposure Route

1) Equations S4 through S16, S26 and S27 are used to calculate Tier 2 soil remediation objectives for the outdoor inhalation exposure route using the SSL approach. To address this exposure route, organic contaminants and mercury must be evaluated separately from fugitive dust using their own equations set forth in subsections (c)(2) and (c)(3) of this Section, respectively.

2) Organic Contaminants

A) Equations S4 through S10 are used to calculate Tier 2 soil remediation objectives for organic contaminants and mercury based on the outdoor inhalation exposure route. Equation S4 is used to calculate soil remediation objectives for noncarcinogenic organic contaminants in soil for residential and industrial/commercial populations. Equation S5 is used to calculate soil remediation objectives for noncarcinogenic organic contaminants and mercury in soil for construction worker populations. Equation S6 is used to calculate soil remediation objectives for carcinogenic organic contaminants in soil for residential and industrial/commercial populations. Equation S7 is used to calculate soil remediation objectives for carcinogenic organic contaminants in soil for construction worker populations. Equations S8 through S10, S27 and S28 are used for calculating numerical values for some of the parameters in Equations S4 through S7. B) For Equation S4, a numerical value for the Volatilization Factor (VF) can be calculated in accordance with subsection (c)(2)(F) of this Section. The remaining parameters in Equation S4 have either SSL default values listed in Appendix C, Table B or toxicological-specific information (i.e., RfC), which can be obtained <u>from IRIS</u> by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

C) For Equation S5, a numerical value for the Volatilization Factor adjusted for Agitation (VF') can be calculated in accordance with subsection (c)(2)(G) of this Section. The remaining parameters in Equation S5 have either SSL default values listed in Appendix C, Table B or toxicological-specific information (i.e., RfC), which can be obtained <u>from IRIS</u> by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

D) For Equation S6, a numerical value for VF can be calculated in accordance with subsection (c)(2)(F) of this Section. The remaining parameters in Equation S6 have either default values listed in Appendix C, Table B or toxicological-specific information (i.e., URF), which can be obtained from IRIS by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

E) For Equation S7, a numerical value for VF' can be calculated in accordance with subsection (c)(2)(G) of this Section. The remaining parameters in Equation S7 have either default values listed in Appendix C, Table B or toxicological-specific information (i.e., URF), which can be obtained from IRIS by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

F) The VF can be calculated for residential and industrial/commercial populations using one of the following equations based on the information known about the contaminant source and receptor population:

i) Equation S8, in conjunction with Equation S10, is used to calculate VF assuming an infinite source of contamination; or

ii) If the area and depth of the contaminant source are known or can be estimated reliably, mass limit considerations may be used to calculate VF using Equation S26.

G) The VF' can be calculated for the construction worker populations using one of the following equations based on the information known about the contaminant source:

i) Equation S9 is used to calculate VF' assuming an infinite source of contamination; or

ii) If the area and depth of the contaminant source are known or can be estimated reliably, mass limit considerations may be used to calculate VF' using Equation S27.

3) Fugitive Dust

A) Equations S11 through S16 are used to calculate Tier 2 soil remediation objectives using the SSL fugitive dust model for the outdoor inhalation exposure route. Equation S11 is used to calculate soil remediation objectives for noncarcinogenic contaminants in fugitive dust for residential and industrial/commercial populations. Equation S12 is used to calculate soil remediation objectives for noncarcinogenic contaminants in fugitive dust for construction worker populations. Equation S13 is used to calculate soil remediation objectives for carcinogenic contaminants in fugitive dust for residential and industrial/commercial populations. Equation S14 is used to calculate soil remediation objectives for carcinogenic contaminants in fugitive dust for construction worker populations. Equations S15 and S16 are used for calculating numerical quantities for some of the parameters in Equations S11 through S14.

B) For Equation S11, a numerical value can be calculated for the Particulate Emission Factor (PEF) using Equation S15. This equation relies on various input parameters from a variety of sources. The remaining parameters in Equation S11 have either SSL default values listed in Appendix C, Table B or toxicologicalspecific information (i.e., RfC), which can be obtained <u>from IRIS</u> by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

C) For Equation S12, a numerical value for the Particulate Emission Factor for Construction Worker (PEF') can be calculated using Equation S16. The remaining parameters in Equation S12 have either SSL default values listed in Appendix C, Table B or toxicological-specific information (i.e., RfC), which can be obtained <u>from IRIS</u> by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

D) For Equation S13, a numerical value for PEF can be calculated using Equation S15. The remaining parameters in Equation S13 have either default values listed in Appendix C, Table B or toxicological-specific information (i.e., URF), which can be obtained from IRIS by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

E) For Equation S14, a numerical value for PEF' can be calculated using Equation S16. The remaining parameters in Equation S14 have either default values listed in Appendix C, Table B or toxicological-specific information (i.e., URF), which can be obtained from IRIS by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

d) Soil Component of the Groundwater Ingestion Exposure Route

The Tier 2 remediation objective for the soil component of the groundwater ingestion exposure route can be calculated using one of the following equations based on the information known about the contaminant source and receptor population:

1) Equation S17 is used to calculate the remediation objective assuming an infinite source of contamination.

A) The numerical quantities for four parameters in Equation S17, the Target Soil Leachate Concentration (Cw), Soil-Water Partition Coefficient (Kd) for non-ionizing organics, Water-Filled Soil Porosity $\frac{1}{1}$ $\frac{$

Filled Soil Porosity Theta aThetaa (qaTa), are calculated using Equations S18, S19, S20 and S21, respectively. Equations S22, S23, S24 and S25 are also needed to calculate numerical values for Equations S18 and S21. The pH-dependent Kd values for ionizing organics can be calculated using Equation S19 and the pH-dependent Koc values in Appendix C, Table I.

B) The remaining parameters in Equation S17 are Henry's Law Constant (H'), a chemical specific value listed in Appendix C, Table E and Dry Soil Bulk Density $(\underline{rb}2b)$, a site-specific based value listed in Appendix C, Table B.

C) The default value for GWobj is the Tier 1 groundwater objective. For chemicals for which there is no Tier 1 groundwater remediation objective, the value for GWobj shall be the concentration determined according to the procedures specified in 35 Ill. Adm. Code 620, Subpart F. As an alternative to using Tier 1 groundwater remediation objectives or concentrations determined according to the procedures specified in 35 Ill. Adm. Code 620, Subpart F. As an alternative to using Tier 1 groundwater remediation objectives or concentrations determined according to the procedures specified in 35 Ill. Adm. Code 620, Subpart F., GWobj may be developed using Equations R25 and R26, if approved institutional controls are in place as required in Subpart J.

2) If the area and depth of the contaminant source are known or can be estimated reliably, mass limit considerations may be used to calculate the remediation objective for this exposure route using Equation S28. The parameters in Equation S28 have default values listed in Appendix C, Table B.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.712 SSL Soil Gas Equation for the Outdoor Inhalation Exposure Route

a) This <u>sectionSection</u> sets forth the equation and parameters used to develop Tier 2 soil gas remediation objectives for the outdoor inhalation exposure route using the SSL approach.

b) Equation S30 is used to calculate Tier 2 soil gas remediation objectives for the outdoor inhalation exposure route for residential, industrial/commercial, and construction worker populations.

c) Equations S4 through S16, S26 and S27, which calculate Tier 2 soil remediation objectives as described in Section 742.710(c), form the basis for developing the Tier 2 soil gas remediation objectives for the outdoor inhalation exposure route using the SSL model.

d) The remaining parameters used to calculate Equation S30 are listed in Appendix C, Table B, except for Dimensionless Henry's Law Constant (25? C), a chemical specific value listed in Appendix C, Table E.

(Source: Added at 36 Ill. Reg. ____, effective _____)

Section 742.715 RBCA Soil Equations

a) This Section presents the RBCA model and describes the equations and parameters used to develop Tier 2 soil remediation objectives.

b) Ingestion, Outdoor Inhalation, and Dermal Contact

1) The two sets of equations in subsections (b)(2) and (b)(3) of this Section shall be used to generate Tier 2 soil remediation objectives for the combined ingestion, outdoor inhalation, and dermal contact with soil exposure routes.

2) Combined Exposure Routes of Soil Ingestion, Outdoor Inhalation of Vapors and Particulates, and Dermal Contact with Soil

A) Equations R1 and R2 form the basis for deriving Tier 2 remediation objectives for the set of equations that evaluates the combined exposure routes of soil ingestion, outdoor inhalation of vapors and particulates, and dermal contact with soil using the RBCA approach. Equation R1 is used to calculate soil remediation objectives for carcinogenic contaminants. Equation R2 is used to calculate soil remediation objectives for noncarcinogenic contaminants. Soil remediation objectives for the <u>ambient vapor inhalation (outdoor)</u> outdoor inhalation exposure route from subsurface soils must also be calculated in accordance with the procedures outlined in subsection (b) (3) of this Section and compared to the values generated from Equations R1 or R2. The smaller value (i.e., R1 and R2 compared to R7 and R8, respectively) from these calculations is the Tier 2 soil remediation objective for the combined exposure routes of soil ingestion, outdoor inhalation, and dermal contact with soil.

B) In Equation R1, numerical values are calculated for two parameters:

i) The volatilization factor for surficial soils (VFss) using Equations R3 and R4; and

ii) The volatilization factor for subsurface surficial soils regarding particulates (VFp) using Equation $R_{5.5.5}$

C) VFss uses Equations R3 and R4 to derive a numerical value. Equation R3 requires the use of Equation R6. Both equations must be used to calculate the VFss. The lowest calculated value from these equations must be substituted into Equation R1.

D) The remaining parameters in Equation R1 have either default values listed in Appendix C, Table D or toxicological-specific information (i.e., SFo, SFi), which can be obtained from IRIS by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

E) For Equation R2, the parameters VFss and VFp are calculated. The remaining parameters in Equation R2 have either default values listed in Appendix C, Table D or toxicological-specific information (i.e., RfDo, RfDi+, which can be obtained from IRIS by following the guidelines in OSWER Directive 9285.7-53, as incorporated by reference in Section 742.210 or requested from the program under which the remediation is being performed.

F) For chemicals other than inorganics which do not have default values for the dermal absorption factor (RAFd) in Appendix C, Table D_{τ} a dermal absorption factor of 0.5 shall be used for Equations R1 and R2. For inorganics, dermal absorption may be disregarded (i.e., RAFd = 0).

3) Ambient Vapor Inhalation (outdoor) Outdoor Inhalation Exposure Route route from Subsurface Soils (soil below one meter)

A) Equations R7 and R8 form the basis for deriving Tier 2 remediation objectives for the ambient vapor inhalation (outdoor) outdoor inhalation

exposure <u>route</u> from subsurface soils using the RBCA approach. Equation R7 is used to calculate soil remediation objectives for carcinogenic contaminants. Equation R8 is used to calculate soil remediation objectives for noncarcinogenic contaminants.

B) For Equation R7, the carcinogenic risk-based screening level for air (RBSLair) and the volatilization factor for soils below one meter to ambient air (VFsamb) have numerical values that are calculated using Equations R9 and R11, respectively. Both equations rely on input parameters from a variety of sources.

C) The noncarcinogenic risk-based screening level for air (RBSLair) and the volatilization factor for soils below one meter to ambient air (VFsamb) in Equation R8 have numerical values that can be calculated using Equations R10 and R11, respectively.

c) Soil Component of the Groundwater Ingestion Exposure Route

1) Equation R12 forms the basis for deriving Tier 2 remediation objectives for the soil component of the groundwater ingestion exposure route using the RBCA approach. The parameters, groundwater at the source (GWsource) and Leaching Factor (LFsw), have numerical values that are calculated using Equations R13 and R14, respectively.

2) Equation R13 requires numerical values that are calculated using Equation R15.

3) Equation R14 requires numerical values that are calculated using Equations R21, R22, and R24. For non-ionizing organics, the Soil Water Sorption Coefficient (ks) shall be calculated using Equation R20. For ionizing organics and inorganics, the values for (ks) are listed in Appendix C, Tables I and J, respectively. The pH-dependent ks values for ionizing organics can be calculated using Equation R20 and the pH- dependent Koc values in Appendix C, Table I. The remaining parameters in Equation R14 are field measurements or default values listed in Appendix C, Table D.

d) The default value for GW comp is the Tier 1 groundwater remediation objective. For chemicals for which there is no Tier 1 groundwater remediation objective, the value for GW comp shall be the concentration determined according to the procedures specified in 35 Ill. Adm. Code 620, Subpart F. As an alternative to using the above concentrations, GW comp may be developed using Equations R25 and R26, if approved institutional controls are in place as may be required in Subpart J.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.717 J&E Soil Gas Equations for the Indoor Inhalation Exposure Route

a) This Section sets forth the equations and parameters to be used to develop Tier 2 soil gas remediation objectives for the indoor inhalation exposure route using the modified J&E model.

b) Equations J&E1 and J&E2 calculate, for carcinogens and noncarcinogens, respectively, an acceptable concentration of the contaminant of concern in indoor air that adequately protects humans who inhale this air. Equation J&E3 converts indoor air concentrations from parts per million volume to milligrams per cubic meter. c) Equation J&E4 calculates an acceptable concentration of the contaminant of concern in the soil gas at the source of contamination. This calculation is made using: -+

1) an attenuation factor developed in accordance with Equations J&E7 through 18; and +

2) the acceptable concentration of the contaminant of concern in indoor air calculated in accordance with Equation J&E1 (for carcinogens) or J&E2 (for noncarcinogens).

d) The attenuation factor (Equation J&E7 or J&E8) accounts for the following processes:

1) Migration of contaminants from the source upwards through the vadose zone;

2) Migration of contaminants through the earthen filled cracks in the slabon-grade or basement floor and walls; and

3) Mixing of the contaminants with air inside the building.

e) Equation J&E7 is used <u>wherewhen</u> the mode of contaminant transport is both diffusion and advection. In this scenario, the Qsoil value equals 83.33 cm3/sec as described in Section 742.505.

f) Equation J&E8 is used wherewhen the mode of contaminant transport is diffusion only. In this scenario, the Qsoil value equals 0.0 cm3/sec as described in Section 742.505.

g) Equations J&E9a through J&E18 calculate input parameters for either Equation J&E7 or J&E8 (the equations used to calculate an attenuation factor). These equations assume there are "n" different soil layers between the source of the contamination and the floor of the building. Equations J&E11, 16, 17 and 18 shall be used to calculate the needed parameters for each of the n layers (the general soil layer is referred to as soil layer "i" and $i = \frac{1,2, \ldots, 1,2,\ldots, n}{2,\ldots, n}$. Equations J&E16, 17, and 18 shall also be used to calculate needed parameters for the soil in the cracks of the floor of the building (it is through these cracks that contaminants flow from the subsurface and into the building).

h) The default representative subsurface temperature for Henry's Law Constant is 13?C. This value shall be used, as appropriate, in all calculations needed to represent the system by which contaminants migrate through the subsurface.

i) The calculated soil gas remediation objective shall be compared with the saturated vapor concentration (Cvsat, Equation J&E6b) for each volatile chemical. The calculated Cvsat shall use the default representative subsurface temperature specified in 742.717 subsection (g). If the calculated soil gas remediation objective is greater than Cvsat, then Cvsat is used as the soil gas remediation objective.

j) The calculated soil gas remediation objective shall be compared to concentrations of soil gas collected at a depth at least 3 feet below ground surface and above the saturated zone. If a valid sample cannot be collected, a soil gas sampling plan shall be approved by the Agency under Tier 3.

(Source: Added at 36 Ill. Reg. _, effective _____)

SUBPART H: TIER 2 GROUNDWATER EVALUATION

Section 742.805 Tier 2 Groundwater Remediation Objectives

a) To develop a groundwater remediation objective under this Section that exceeds the applicable Tier 1 groundwater remediation objective, or for which there is no Tier I groundwater remediation objective, a person may request approval from the Agency if the person has performed the following:

1) Identified the horizontal and vertical extent of groundwater for which the Tier 2 groundwater remediation objective is sought;

2) Taken corrective action, to the maximum extent practicable to remove any free product;

3) Using Equation R26 in accordance with Section 742.810, demonstrated that the concentration of any contaminant of concern in groundwater will meet:

A) The applicable Tier 1 groundwater remediation objective at the point of human exposure; or

B) For any contaminant of concern for which there is no Tier 1 groundwater remediation objective, the concentration determined according to the procedures specified in 35 Ill. Adm. Code 620 at the point of human exposure. A person may request the Agency to provide these concentrations or may propose these concentrations under Subpart I;

4) Using Equation R26 in accordance with Section 742.810, demonstrated that the concentration of any contaminant of concern in groundwater within the minimum or designated maximum setback zone of an existing potable water supply well will meet the applicable Tier 1 groundwater remediation objective or, if there is no Tier 1 groundwater remediation objective, the concentration determined according to the procedures specified in 35 Ill. Adm. Code 620. A person may request the Agency to provide these concentrations or may propose these concentrations under Subpart I;

5) Using Equation R26 in accordance with Section 742.810, demonstrated that the concentration of any contaminant of concern in groundwater discharging into a surface water will meet the applicable water quality standard under 35 Ill. Adm. Code 302;

6) Demonstrated that the source of the release is not located within the minimum or designated maximum setback zone or within a regulated recharge area of an existing potable water supply well; and

7) If the selected corrective action includes an engineered barrier as set forth in Subpart K to minimize migration of contaminants of concern from the soil to the groundwater, demonstrated that the engineered barrier will remain in place for post-remediation land use through an institutional control as set forth in Subpart J.

b) A groundwater remediation objective that exceeds the water solubility of that chemical (refer to Appendix C, Table E for solubility values) is not allowed. c) The contaminants of concern for which a Tier 1 remediation objective has been developed shall be included in any mixture of similar-acting chemicals under consideration in Tier 2. The evaluation of 35 Ill. Adm. Code 620.615 regarding mixtures of similar-acting chemicals shall be considered satisfied for Class I groundwater at the point of human exposure if either of the following requirements are achieved:

1) Calculate the weighted average using the following equations:

Wave=x1+x2+x3+...+xaCUOxCUOxCUOxCUOx123a
where:

Wave = Weighted AveragexAveragex1 through xa = Concentration of each individual contaminant at the location of concern. Note that, depending on the target organ, the actual number of contaminants will range from 2 to 33. CUOxa CUOx = A Tier 1 or Tier 2 remediation objective must be developed for each xa. A If the value of the weighted average calculated in accordance with the equations above is less than or equal to 1.0, then the remediation objectives are met for those chemicals.

B) If the value of the weighted average calculated in accordance with the equations above is greater than 1.0, then additional remediation must be carried out until the level of contaminants remaining in the remediated area has a weighted average calculated in accordance with the equation above less than or equal to one; or

2) Divide each individual chemical's remediation objective by the number of chemicals in that specific target organ group that were detected at the site. Each of the contaminant concentrations at the site is then compared to the remediation objectives that have been adjusted to account for this potential additivity.

d) The evaluation of 35 Ill. Adm. Code 620.615 regarding mixtures of similaracting chemicals are considered satisfied if the cumulative risk from any contaminant(s)contaminants of concern listed in Appendix A, Table I, plus any other contaminant(s)contaminants of concern detected in groundwater and listed in Appendix A, Table F as affecting the same target organ/organ system as the contaminant(s)contaminants of concern detected from Appendix A, Table I, does not exceed 1 in 10,000.

e) Groundwater remediation objectives for the indoor inhalation exposure route shall be developed in accordance with Section 742.812.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.810 RBCA Calculations to Predict Impacts from Remaining Groundwater Contamination

a) Equation R26 predicts the contaminant concentration along the centerline of a groundwater plume emanating from a vertical planar source in the aquifer (dimensions Sw wide and Sd deep). This model accounts for both threedimensional dispersion (x is the direction of groundwater flow, y is the other horizontal direction, and z is the vertical direction) and biodegradation.

1) The parameters in this equation are: X

distance from the planar source to the location of concern, along the X= centerline of the groundwater plume (i.e., y = 0, z = 0)Cx = the concentration of the contaminant at a distance X from the source, along the centerline of the plumeCsource = the greatest potential concentration of the contaminant of concern in the groundwater at the source of the contamination, based on the concentrations of contaminants in groundwater due to the release and the projected concentration of the contaminant migrating from the soil to the groundwater. As indicated above, the model assumes a planar source discharging groundwater at a concentration equal to Csource.ax dispersivity in the x direction (i.e., Equation R16)ay = dispersivity in the y direction (i.e., Equation R17)az = dispersivity in the z direction (i.e., Equation R18)U = specific discharge (i.e., actual groundwater flow velocity through a porous medium; takes into account the fact that the groundwater actually flows only through the pores of the subsurface materials) where the aquifer hydraulic conductivity (K), the hydraulic gradient (I) and the total soil porosity qTTT must be known (i.e., Equation R19) 12= first order degradation constant obtained from Appendix C, Table E or from measured groundwater dataSw dataSw= width of planar groundwater source in the y directionSd directionSd= depth of planar groundwater source in the z direction

2) The following parameters are determined through field measurements: U, K, I, qTTT, Sw, Sd.

A) The determination of values for U, K, I and qTTT can be obtained through the appropriate laboratory and field techniques;

B) From the immediate down-gradient edge of the source of the groundwater contamination values for Sw and Sd shall be determined. Sw is defined as the width of groundwater at the source which exceeds the Tier 1 groundwater remediation objective. Sd is defined as the depth of groundwater at the source which exceeds the Tier 1 groundwater remediation objective; and

C) Total soil porosity can also be calculated using Equation R23.

b) Once values are obtained for all the input parameters identified in subsection (a) of this Section, the contaminant concentration Cx along the centerline of the plume at a distance X from the source shall be calculated so that X is the distance from the down-gradient edge of the source of the contamination at the site to the point where the contaminant concentration is equal to the Tier 1 groundwater remediation objective or concentration determined according to the procedures specified in 35 Ill. Adm. Code 620, Subpart F.

1) If there are any potable water supply wells located within the calculated distance X, then the Tier 1 groundwater remediation objective or concentration shall be met at the edge of the minimum or designated maximum setback zone of the nearest potable water supply down-gradient of the source. To demonstrate that a minimum or maximum setback zone of a potable water supply well will not be impacted above the applicable Tier 1 groundwater remediation objective or concentration determined according to the procedures specified in 35 Ill. Adm. Code 620, Subpart F, X shall be the distance from the Csource location to the edge of the setback zone.

2) To demonstrate that no surface water is adversely impacted, X shall be the distance from the down-gradient edge of the source of the contamination site to the nearest surface water body. This calculation must show that the contaminant

in the groundwater at this location (Cx) does not exceed the applicable water quality standard.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.812 J&E Groundwater Equations for the Indoor Inhalation Exposure Route

Groundwater remediation objectives for the indoor inhalation exposure route are calculated using the modified J&E model as described in Section 742.717, except as follows:

a) In Equation J&E9a, the total number of layers of soil that contaminants migrate through from the source to the building shall include a capillary fringe layer.

b) The thickness of the capillary fringe layer is 37.5 cm.

c) The volumetric water content of the capillary fringe shall be 90 % of the total porosity of the soil that comprises the capillary fringe.

d) Equations J&E7 and J&E8 calculate an acceptable groundwater remediation objective.

1) This calculation is made using: (1

 \underline{A}) the soil gas remediation objective calculated in accordance with Equation $J\&E_{4,4}^{4}$ and $\frac{42}{2}$

 \underline{B}) the assumption that this gas is in equilibrium with any contamination in the groundwater.

 ± 2) Equation J&E7 is used wherewhen the mode of contaminant transport is both diffusion and advection. In this scenario, the Qsoil value equals 83.33 cm3/sec as described in Section 742.505.

23) Equation J&E8 is used wherewhen the mode of contaminant transport is diffusion only. In this scenario, the Qsoil value equals 0.0 cm3/sec as described in Section 742.505.

e) A groundwater remediation objective that exceeds the water solubility of that chemical (refer to Appendix C, Table E for solubility values) is not allowed.

(Source: Added at 36 Ill. Reg. ____, effective _____)

SUBPART I: TIER 3 EVALUATION

Section 742.900 Tier 3 Evaluation Overview

a) Tier 3 sets forth a flexible framework to develop remediation objectives outside of the requirements of Tiers 1 and 2. Although Tier 1 and Tier 2 evaluations are not prerequisites to conduct Tier 3 evaluations, data from Tier 1 and Tier 2 can assist in developing remediation objectives under a Tier 3 evaluation. b) The level of detail required to adequately characterize a site depends on the particular use of Tier 3. Tier 3 can require additional investigative efforts beyond those described in Tier 2 to characterize the physical setting of the site. However, in situations where remedial efforts have simply reached a physical obstruction additional investigation may not be necessary for a Tier 3 submittal.

c) Situations that can be considered for a Tier 3 evaluation include, but are not limited to:

1) Modification of parameters not allowed under Tier 2;

2) Use of models different from those used in Tier 2;

3) Use of additional site data, such as results of indoor air sampling, to improve or confirm predictions of exposed receptors to contaminants of concern;

4) Analysis of site-specific risks using formal risk assessment, probabilistic data analysis, and sophisticated fate and transport models (e.g., requesting a target hazard quotient greater than 1 or a target cancer risk greater than 1 in 1,000,000);

5) Requests for site-specific remediation objectives because an assessment indicates further remediation is not practical;

6) Incomplete human exposure pathway(s)parkways not excluded under Subpart C;

7) Use of toxicological-specific information not available from the sources listed in Tier 2;

8) Land uses which are substantially different from the assumed residential or industrial/commercial property uses of a site (e.g., a site will be used for recreation in the future and cannot be evaluated in Tier 1 or 2); and

9) Requests for site-specific remediation objectives that exceed Tier 1 groundwater remediation objectives so long as the following is demonstrated:

A) To the extent practical, the exceedance of the groundwater quality standard has been minimized and beneficial use appropriate to the groundwater that was impacted has been returned; and

B) Any threat to human health or the environment has been minimized. [415 ILCS 5/58.5(d)(4)(A)]; and

10) Use of building control technologies, other than those described in Subpart L, to prevent completion of the indoor inhalation exposure route.

d) For requests of a target cancer risk ranging between 1 in 1,000,000 and 1 in 10,000 at the point of human exposure or a target hazard quotient greater than 1 at the point of human exposure, the requirements of Section 742.915 shall be followed. Requests for a target cancer risk exceeding 1 in 10,000 at the point of human exposure are not allowed.

e) Requests for approval of a Tier 3 evaluation must be submitted to the Agency for review under the specific program under which remediation is performed. When reviewing a submittal under Tier 3, the Agency shall consider whether the interpretations and conclusions reached are supported by the information gathered. [415 ILCS 58.7(e)(1)]. The Agency shall approve a Tier 3 evaluation if the person submits the information required under this Part and establishes through such information that public health is protected and that specified risks to human health and the environment have been minimized.

f) If contaminants of concern include polychlorinated biphenyls (PCBs), requests for approval of a Tier 3 evaluation must additionally address the applicability of 40 CFR 761.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.920 Impractical Remediation

Any request for site-specific remediation objectives due to impracticality of remediation shall be submitted to the Agency for review and approval. Any request for site-specific remediation objectives due to impracticality of remediation that involves the indoor inhalation exposure route shall follow Section 742.935 in lieu of this Section. A submittal under this Section shall include the following information:

a) The reason(s)reasons why the remediation is impractical;

- b) The extent of contamination;
- c) Geology, including soil types;
- d) The potential impact to groundwater;
- e) Results and locations of sampling events;
- f) Map of the area, including all utilities and structures; and

g) Present and post-remediation uses of the area of contamination, including human receptors at risk.

(Source: Amended at 36 Ill. Reg. __, effective _____)

Section 742.925 Exposure Routes

Technical information may demonstrate that there is no actual or potential impact of contaminants of concern to receptors from a particular exposure route. In these instances, a demonstration excluding an exposure route shall be submitted to the Agency for review and approval. A demonstration that involves the indoor inhalation exposure route shall follow Section 742.935 in lieu of this Section. A submittal under this Section shall include the following information:

a) A description of the route evaluated;

b) A description of the site and physical site characteristics;

c) A discussion of the result and possibility of the route becoming active in the future; and

d) Technical support that may include, but is not limited to, the following:

1) a discussion of the natural or man-made barriers to that exposure route;

- calculations and modeling;
- 3) physical and chemical properties of contaminants of concern; and
- 4) contaminant migration properties.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.935 Indoor Inhalation Exposure Route

a) Exclusion of Exposure Route Site information may demonstrate that there is no actual or potential impact of contaminants of concern to receptors from the indoor inhalation exposure route. In suchthe instances, a demonstration excluding the exposure route shall be submitted to the Agency for review and approval. A submittal under this Section shall include the following information:

1) A description of the site, physical site characteristics, existing and planned buildings, and existing and planned manmade pathways; and

2) A discussion of the possibility of the route becoming active in the future.

b) Exclusion of Exposure Route Using Building Control Technologies Any proposals to use building control technologies as a means to prevent or mitigate human exposures under the indoor inhalation exposure route that differ from the requirements of Subpart L shall be submitted to the Agency for review and approval. A submittal under this Section shall include the following information:

1) A description of the site and physical site characteristics;

2) The current extent of contamination;

3) Geology, including soil parameters;

4) Results and locations of sampling events;

5) Scaled map of the area, including all buildings and man-made pathways;

6) A description of building characteristics and methods of construction, including a description of man-made pathways;

7) Present and post-remediation uses of the land above the area of contamination, including human receptors at risk;

8) A description of any building control technologies currently in place or proposed for installation that can reduce or eliminate the potential for completion of the exposure route, including design and construction specifications;

9) Information regarding the effectiveness of any building control technologies currently in place or proposed for installation and a schedule for performance testing to show the effectiveness of the control technology. For buildings not yet constructed, an approved building control technology shall be in place and operational prior to human occupancy;

10) Identification of documents reviewed and the criteria used in the documents for determining whether building control technologies are effective and how those criteria compare to existing or potential buildings or man-made pathways at the site; and

11) A description as to how the effectiveness of the building control technologies will be operated and maintained for the life of the buildings and man-made pathways, or until soil gas and groundwater contaminant concentrations have reached remediation objectives that are approved by the Agency. This includes provisions for potential extended system inoperability due to power failure or other disruption.

c) Calculations and Modeling Used to Establish Soil Gas Remediation Objectives

The calculations and modeling shall account for contaminant transport through the mechanisms of diffusion and advection. Proposals to use soil gas data, including <u>subslabsub-slab</u> samples, to establish remediation objectives for the indoor inhalation exposure route that differ from the requirements of Section 742.227 shall be submitted to the Agency for review and approval. A submittal under this Section shall include the following information:

 Scaled map of the area, showing all buildings and man-made pathways (current and planned);

2) The current extent of contamination;

3) Geology, including soil parameters;

4) Depth to groundwater (including seasonal variation) and flow direction;

5) Location of soil gas sampling points; and

6) A discussion of soil gas sampling procedures that, at a minimum, addresses the following:

A) sampling equipment;

B) soil gas collection protocol, including field tests and weather conditions; and

C) laboratory analytical methods.

d) Calculations and Modeling Used to Establish Soil Remediation Objectives The calculations and modeling shall account for contaminant transport through the mechanisms of diffusion and advection. Any proposals to use soil data in lieu of soil gas data to establish remediation objectives for the indoor inhalation exposure route shall be submitted to the Agency for review and approval. A submittal under this Section shall include the following information:

1) Scaled map of the area, showing all buildings and man-made pathways (current and planned);

2) The current extent of contamination;

3) Geology, including soil parameters;

4) Location of soil sampling points; and

5) A discussion of soil sampling procedures that, at a minimum, addresses the following:

A) sampling equipment;

B) soil collection protocol, including field tests and weather conditions; and

C) laboratory analytical methods-1

6) Mathematical and technical justification for the model proposed; and

7) Demonstration that the model was correctly applied.

e) Calculations and Modeling Used to Establish Groundwater Remediation Objectives

The calculations and modeling shall account for contaminant transport through the mechanisms of diffusion and advection. Proposals to use groundwater data to establish remediation objectives for the indoor inhalation exposure route that differ from the requirements of <u>SectionSections</u> 742.805 and <u>Section</u> 742.812 shall be submitted to the Agency for review and approval. A submittal under this Section shall include the following information...

 Scaled map of the area, showing all buildings and man-made pathways (current and planned);

2) The current extent of contamination;

3) Geology, including soil parameters and the thickness of the capillary fringe;

4) Depth to groundwater (including seasonal variation) and flow direction;

5) Results and locations of groundwater sampling events;

6) Mathematical and technical justification for the model proposed; and

7) Demonstration that the model was correctly applied.

(Source: Added at 36 Ill. Reg. ____, effective _____)

SUBPART J: INSTITUTIONAL CONTROLS

Section 742.1000 Institutional Controls

a) Institutional controls in accordance with this Subpart must be placed on the property when remediation objectives are based on any of the following assumptions:

1) Industrial/Commercial property use;

Target cancer risk greater than 1 in 1,000,000;

3) Target hazard quotient greater than 1;

4) Engineered barriers;

5) The point of human exposure is located at a place other than at the source;

6) Exclusion of exposure routes; or

7) Use of remediation objectives based on a diffusion only mode of contaminant transport for the indoor inhalation exposure route;

8) Use of an indoor inhalation building control technology; or

b) The Agency shall not approve any remediation objective under this Part that is based on the use of institutional controls unless the person has proposed institutional controls meeting the requirements of this Subpart and the requirements of the specific program under which the institutional control is proposed. A proposal for approval of institutional controls shall provide identification of the selected institutional controls from among the types recognized in this Subpart.

c) The following instruments may be institutional controls subject to the requirements of this Subpart J and the requirements of the specific program under which the institutional control is proposed:

1) No Further Remediation Letters;

2) Environmental Land Use Controls;

3) Land Use Control Memoranda of Agreement;

4) Ordinances adopted and administered by a unit of local government;

5) Agreements between a property owner (or, in the case of a petroleum leaking underground storage tank, the owner or operator of the tank) and a highway authority with respect to any contamination remaining under highways; and

6) Agreements between a highway authority, which that is also the property owner (or, in the case of a petroleum leaking underground storage tank, the owner or operator of the tank) and the Agency with respect to any contamination remaining under the highways.

d) No Further Remediation Letters and Environmental Land Use Controls that meet the requirements of this Subpart and the recording requirements of the program under which remediation is being performed are transferred with the property.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.1010 Environmental Land Use Controls

a) An Environmental Land Use Control (ELUC) is an institutional control that may be used under this Part to impose land use limitations or requirements

related to environmental contamination. ELUCs are only effective when approved by the Agency in accordance with this Part. Activities or uses that may be limited or required include, but are not limited to, prohibition of use of groundwater for potable purposes, restriction to industrial/commercial uses, operation or maintenance of engineered barriers, indoor inhalation building control technologies, or worker safety plans. ELUCs may be used in the following circumstances:

1) When No Further Remediation Letters are not available, including but not limited to when contamination has migrated off-site or outside the remediation site; or

2) When No Further Remediation Letters are not issued under the program for which a person is undergoing remediation.

b) Recording requirements:

, * ,

> 1) An ELUC approved by the Agency pursuant to this Section must be recorded in the Office of the Recorder or Registrar of Titles for the county in which the property that is the subject of the ELUC is located. A copy of the ELUC demonstrating that it has been recorded must be submitted to the Agency before the Agency will issue a no further remediation determination.

2) An ELUC approved under this Section will not become effective until officially recorded in the chain of title for the property that is the subject of the ELUC in accordance with subsection (b)(1) of this Section.

3) Reference to the recorded ELUC must be made in the instrument memorializing the Agency's no further remediation determination. Recording of the no further remediation determination and confirmation of recording must be in accordance with the requirements of the program under which the determination was issued.

4) The requirements of this Section do not apply to Federally Owned Property for which the Federal Landholding Entity does not have the authority under federal law to record land use limitations on the chain of title.

5) The requirements of this Section apply only to those sites for which a request for a no further remediation determination has not yet been made to the Agency by January 6, 2001.

c) Duration:

1) Except as provided in this subsection (c), an ELUC shall remain in effect in perpetuity.

2) At no time shall any site for which an ELUC has been imposed as a result of remediation activities under this Part be used in a manner inconsistent with the land use limitation unless attainment of objectives appropriate for the new land use is achieved and a new no further remediation determination has been obtained and recorded in accordance with the program under which the ELUC was first imposed or the Site Remediation Program (35 Ill. Adm. Code 740).--- [415 ILCS 58.8(c)]. In addition, the appropriate release or modification of the ELUC must be prepared by the Agency and filed on the chain of title for the property that is the subject of the ELUC. A) For a Leaking Underground Storage Tank (LUST) site under 35 Ill. Adm. Code 731, or 732, or 734 or a Site Remediation Program site under 35 Ill. Adm. Code 740, an ELUC may be released or modified only if the NFR Letter is also modified under the Site Remediation Program to reflect the change;

B) For a RCRA site under 35 Ill. Adm. Code 721-730, an ELUC may be released or modified only if there is also an amended certification of closure or a permit modification.

3) In addition to any other remedies that may be available, a failure to comply with the limitations or requirements of an ELUC may result in voidance of an Agency no further remediation determination in accordance with the program under which the determination was made. The failure to comply with the limitations or requirements of an ELUC may also be grounds for an enforcement action pursuant to Title VIII of the Act.

d) An ELUC submitted to the Agency must match the form and contain the same substance, except for variable elements (e.g., name of property owner), as the model in Appendix F and must contain the following elements:

1) Name of property owners and declaration of property ownership;

2) Identification of the property to which the ELUC applies by common address, legal description, and Real Estate Tax Index/Parcel Index Number;

3) A reference to the Bureau of Land LPC numbers or 10-digit identification numbers under which the remediation was conducted;

4) A statement of the reason for the land use limitation or requirement relative to protecting human health and the surrounding environment from soil, groundwater, and/or other environmental contamination;

5) The language instituting such land use limitations or requirements;

6) A statement that the limitations or requirements apply to the current owners, occupants, and all heirs, successors, assigns, and lessees;

7) A statement that the limitations or requirements apply in perpetuity or until:

A) The Agency determines that there is no longer a need for the ELUC;

B) The Agency, upon written request, issues to the site that received the no further remediation determination that relies on the ELUC a new no further remediation determination approving modification or removal of the limitations or requirements;

C) The new no further remediation determination is filed on the chain of title of the site subject to the no further remediation determination; and

D) A release or modification of the land use limitation is filed on the chain of title for the property that is the subject of the ELUC;

8) Scaled site maps showing:

.

A) The legal boundary of the property to which the ELUC applies;

B) The horizontal and vertical extent of contaminants of concern above applicable remediation objectives for soil, and groundwater, and soil gas to which the ELUC applies;

C) Any physical features to which an ELUC applies (e.g., engineered barriers, monitoring wells, caps, indoor inhalation building control technologies); and

D) The nature, location of the source, and direction of movement of the contaminants of concern;

9) A statement that any information regarding the remediation performed on the property for which the ELUC is necessary may be obtained from the Agency through a request under the Freedom of Information Act [5 ILCS 140] and rules promulgated thereunder; and

10) The dated, notarized signatures of the property owners or authorized agent.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

Section 742.1015 Ordinances

An ordinance adopted by a unit of local government that effectively a) prohibits the installation of potable water supply wells (and the use of such wells) may be used as an institutional control to meet the requirements of Section 742.320(d) or 742.805(a)(3) if the requirements of this Section are met. A model ordinance is found in Appendix G. Ordinances prohibiting the installation of potable water supply wells (and the use of such wells) that do not expressly prohibit the installation of potable water supply wells (and the use of such wells) by units of local government may be acceptable as institutional controls if the requirements of this Section are met and a Memorandum of Understanding (MOU) is entered into under subsection (i) of this Section. For purposes of this Section, a unit of local government is considered to be expressly prohibited from installing and using potable water supply wells only if the unit of local government is included in the prohibition provision by name. The prohibition required by this Section shall satisfy the following requirements at a minimum:

1) The prohibition shall not allow exceptions for potable water well installation and use other than for the adopting unit of local government;

2) The prohibition shall apply at all depths and shall not be limited to particular aquifers or other geologic formations;

3) If the prohibition does not apply everywhere within the boundaries of the unit of local government, the limited area to which the prohibition applies shall be easily identifiable and clearly defined by the ordinance (e.g., narrative descriptions accompanied by maps with legends or labels showing prohibition boundaries, or narrative descriptions using fixed, common reference points such as street names). Boundaries of prohibitions limited by area shall be fixed by the terms of the ordinance and shall not be subject to change without amending the ordinance in which the prohibition has been adopted (e.g., no boundaries defined with reference to zoning districts or the availability of the public water supply); and

4) The prohibition shall not in any way restrict or limit the Agency's approval of the use of the ordinance as an institutional control pursuant to

this Part (e.g., no restrictions based on remediation program participation τ or no restrictions on persons performing remediation within the prohibition area who may use the ordinance).

b) A request for approval of a local ordinance as an institutional control shall provide the following:

1) A copy of the ordinance restricting groundwater use certified by an official of the unit of local government in which the site is located that it is a true and accurate copy of the ordinance, unless the Agency and the unit of local government have entered an agreement under subsection (i) of this Section, in which case the request may alternatively reference the MOU. The ordinance must demonstrate that potable use of groundwater from potable water supply wells is prohibited;

2) A scaled map(s) or maps delineating the area and extent of groundwater contamination modeled above the applicable remediation objectives including any measured data showing concentrations of contaminants of concern in which the applicable remediation objectives are exceeded;

3) A scaled map delineating the boundaries of all properties under which groundwater is located which<u>that</u> exceeds the applicable groundwater remediation objectives;

4) Information identifying the current owner(s)owners of each property identified in subsection (b)(3) of this Section; and

5) A copy of the proposed written notification to the unit of local government that adopted the ordinance and to the current owners identified in subsection (b)(4) of this Section that includes the following information:

A) The name and address of the unit of local government that adopted the ordinance;

B) The ordinance's citation;

C) A description of the property being sent notice by adequate legal description, reference to a plat showing the boundaries of the property, or by accurate street address;

D) Identification of the party requesting to use the groundwater ordinance as an institutional control, and a statement that the party has requested approval from the Agency to use the ordinance as an institutional control;

E) A statement that use of the ordinance as an institutional control allows contamination above groundwater ingestion remediation objectives to remain in groundwater beneath the affected properties, and that the ordinance strictly prohibits human and domestic consumption of the groundwater;

F) A statement as to the nature of the release and response action with the site name, site address, and Agency site number or Illinois inventory identification number; and

G) A statement that more information about the remediation site may be obtained by contacting the party requesting the use of the groundwater ordinance as an institutional control or by submitting a FOIA request to the Agency. c) Written notification proposed pursuant to subsection (b)(5) of this Section must be sent to the unit of local government that adopted the ordinance. as well as <u>to</u> all current property owners identified in subsection (b)(4). Written proof that the notification was sent to the unit of local government and the property owners shall be submitted to the Agency within 45 days from the date the Agency's no further remediation determination is recorded. Such proof may consist of the return card from certified mail, return receipt requested, a notarized certificate of service, or a notarized affidavit.

d) Unless the Agency and the unit of local government have entered into a MOU under subsection (i) of this Section, the current owner or successors in interest of a site who have received approval of use of an ordinance as an institutional control under this Section shall:

1) Monitor activities of the unit of local government relative to variance requests or changes in the ordinance relative to the use of potable groundwater at properties identified in subsection (b)(3) of this Section; and

2) Notify the Agency of any approved variance requests or ordinance changes within 30 days after the date such action has been approved.

e) The information required in subsections (b)(1) through (b)(5) of this Section and the Agency letter approving the groundwater remediation objective shall be submitted to the unit of local government. Proof that the information has been filed with the unit of local government shall be provided to the Agency.

f) Any ordinance or MOU used as an institutional control pursuant to this Section shall be recorded in the Office of the Recorder or Registrar of Titles of the county in which the site is located together with the instrument memorializing the Agency's no further remediation determination pursuant to the specific program within 45 days after receipt of the Agency's no further remediation determination.

g) An institutional control approved under this Section shall not become effective until officially recorded in accordance with subsection (f) of this Section. The person receiving the approval shall obtain and submit to the Agency within 30 days after recording a copy of the institutional control demonstrating that it has been recorded.

h) The following shall be grounds for voidance of the ordinance as an institutional control and the instrument memorializing the Agency's no further remediation determination:

1) Modification of the ordinance by the unit of local government to allow potable use of groundwater;

2) Approval of a site-specific request, such as a variance, to allow potable use of groundwater at a site identified in subsection (b)(3) of this Section;

3) Violation of the terms of an institutional control recorded under Section 742.1005 or Section 742.1010; or

4) Failure to provide notification and proof of such notification pursuant to subsection (c) of this Section.

i) The Agency and a unit of local government may enter into a MOU under this Section if the unit of local government has adopted an ordinance satisfying subsection (a) of this Section and if the requirements of this subsection are met. The MOU submitted to the Agency must match the form and contain the same substance as the model in Appendix H and shall include the following:

1) Identification of the authority of the unit of local government to enter the MOU;

2) Identification of the legal boundaries, or equivalent, under which the ordinance is applicable;

3) A certified copy of the ordinance;

- 1

4) A commitment by the unit of local government to notify the Agency of any variance requests or proposed ordinance changes at least 30 days prior to the date the local government is scheduled to take action on the request or proposed change;

5) A commitment by the unit of local government to maintain a registry of all sites within the unit of local government that have received no further remediation determinations pursuant to specific programs; and

6) If the ordinance does not expressly prohibit the installation of potable water supply wells (and the use of such wells) by units of local government, a commitment by the unit of local government:

A) To review the registry of sites established under subsection (i)(5) of this Section prior to siting potable water supply wells within the area covered by the ordinance;

B) To determine whether the potential source of potable water may be or has been affected by contamination left in place at those sites; and

C) To take whatever steps are necessary to ensure that the potential source of potable water is protected from the contamination or treated before it is used as a potable water supply.

j) A groundwater ordinance may not be used to exclude the indoor inhalation exposure route.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

SUBPART K: ENGINEERED BARRIERS

Section 742.1105 Engineered Barrier Requirements

a) Natural attenuation, access controls, and point of use treatment shall not be considered engineered barriers. Engineered barriers may not be used to prevent direct human exposure to groundwater without the use of institutional controls.

b) For purposes of determining remediation objectives under Tier 1, engineered barriers are not recognized.

c) The following engineered barriers are recognized for purposes of calculating remediation objectives that exceed residential remediation objectives:

1) For the soil component of the groundwater ingestion exposure route, the following engineered barriers are recognized if they prevent completion of the exposure pathway:

A) Caps or walls constructed of compacted clay, asphalt, concrete or other material approved by the Agency; and

B) Permanent structures such as buildings and highways.

2) For the soil ingestion exposure route, the following engineered barriers are recognized if they prevent completion of the exposure pathway:

A) Caps or walls constructed of compacted clay, asphalt, concrete, or other material approved by the Agency;

B) Permanent structures such as buildings and highways; and

C) Soil, sand, gravel, or other geologic materials that:

i) Cover the contaminated media;

2.8

ii) Meet the soil remediation objectives under Subpart E for residential property for contaminants of concern; and

iii) Are a minimum of three feet in depth.

3) For the outdoor inhalation exposure route, the following engineered barriers are recognized if they prevent completion of the exposure pathway:

A) Caps or walls constructed of compacted clay, asphalt, concrete, or other material approved by the Agency;

B) Permanent structures such as buildings and highways; and

C) Soil, sand, gravel, or other geologic materials that:

i) Cover the contaminated media;

ii) Meet the soil remediation objectives under Subpart E for residential property for contaminants of concern; and

iii) Are a minimum of ten feet in depth and not within ten feet of any manmade pathway.

4) For the ingestion of groundwater exposure route, the following engineered barriers are recognized if they prevent completion of the exposure pathway:

A) Slurry walls; and

B) Hydraulic control of groundwater.
d) Unless otherwise prohibited under Section 742.1100, any other type of engineered barrier may be proposed if it will be as effective as the options listed in subsection (c) of this Section.

(Source: Amended at 36 Ill. Reg. ____, effective _____)

SUBPART L: BUILDING CONTROL TECHNOLOGIES

Section 742.1200 Building Control Technologies

a) Any person who develops remediation objectives under this Part based on building control technologies shall meet the requirements of this Subpart and the requirements of Subpart J relative to institutional controls.

b) The Agency shall not approve any remediation objective under this Part that is based on the use of building control technologies unless the person has proposed building control technologies meeting the requirements of this Subpart or Subpart I and Subpart J relative to institutional controls.

c) The use of building control technologies can be recognized in determining remediation objectives only if the building control technologies are intended for use as part of the final corrective action.

d) An approved building control technology shall be in place and operational prior to human occupancy.

e) Any no further remediation determination based upon the use of building control technologies shall require effective maintenance of the building control technology. The maintenance requirements shall be included in an institutional control under Subpart J. This institutional control shall address provisions for inoperability by requiring the following if the building control technology is rendered inoperable:

1) The site owner/operator shall notify building occupants and workers in advance of intrusive activities. Such The notification shall enumerate the contaminant of concern known to be present;

2) The site owner/operator shall require building occupants and workers to implement protective measures consistent with good industrial hygiene practice; and

3) For a school, the site owner/operator shall notify the Agency upon any building control technology being rendered inoperable. For the purposes of this subsection (e)(3), the term "school" means any public educational facility in Illinois, including grounds and/or campus, consisting of students, comprising one or more grade groups or other identifiable groups, organized as one unit with one or more teachers to give instruction of a defined type. Public educational facility includes, but is not limited to, primary and secondary (kindergarten <u>-</u>12th grade), charter, vocational, alternative, and special education schools. Public educational facility does not include junior colleges, colleges, or universities.

f) Failure to install or maintain a building control technology in accordance with a no further remediation determination shall be grounds for voidance of the determination and the instrument memorializing the Agency's no further remediation determination.

(Source: Added at 36 Ill. Reg. _, effective _____)

Section 742.1205 Building Control Technology Proposals

A proposal to use a building control technology under this Subpart shall include the following information:

a) A description of the site and physical site characteristics;

b) The current extent and modeled migration of contamination;

c) Geology, including soil types;

d) Results and locations of sampling events;

e) Scaled map of the area, including all buildings and man-made pathways;

f) A description of building characteristics and methods of construction, including a description of man-made pathways; and

g) Present and post-remediation uses of the land above the area of contamination, including human receptors at risk.

(Source: Added at 36 Ill. Reg. ____, effective _____)

Section 742.1210 Building Control Technology Requirements

a) Natural attenuation, access controls, and point of use treatment shall not be considered building control technologies.

b) For purposes of determining compliance with remediation objectives under Tier 1, building control technologies are not recognized.

c) The following building control technologies are recognized for purposes of pathway exclusion under Section 742.312.

1) Sub-slab depressurization (SSD) systems meeting the following requirements:

A) A suction pit is installed that is at least two cubic feet and extends at least 6 inches below the slab (larger suction pits may be excavated as needed to achieve the performance criteria in <u>Section 742.1210subsection</u>(c)(1)(B));

B) A PVC pipe of at least 3 inches in diameter extends from the suction pit to the intake side of an in-line fan capable of achieving a static vacuum of at least 0.25 inches water column (wc) at the suction point and measureable vacuum at the <u>furthestfarthest</u> edges of the area served by the suction pit under worst case conditions (all exhaust fans and heating systems running, during cold weather) as determined by a differential pressure reading of at least -0.003 inches we below the slab or visible downward flow of air at test holes using chemical or smoke sticks;

C) All visible cracks and joints in the slab (including the place where the pipe exits the slab) and foundation walls are sealed;

D) The pipe exhausts outside the building at least 10 feet above ground and at least 10 feet from any door or window; and

E) Additional suction pits meeting the requirements of <u>Section</u> 742.1210<u>subsection</u>(c)(1)(A) shall be installed as necessary to achieve measureable vacuum below the slab in all areas, including in any area where subsurface or foundation conditions (e.g., a sub-slab grade beam) prevent adequate suction field extension.

2) Sub-membrane depressurization (SMD) systems meeting the following requirements:

A) A non-woven geotextile is installed on the exposed earthen material;

B) A cross-laminated polyethylene membrane liner at least 0.10 mm (or 4 mil) thick is placed over the geotextile and sealed to foundation walls using a low volatile adhesive that is recommended by the liner manufacturer (e.g., acrylic latex adhesive);

C) A 3 inch diameter PVC pipe extends from a hole cut in the liner to the intake side of an in-line fan capable of achieving a static vacuum of at least 0.25 inches water column (wc) at the riser pipe and measureable vacuum at the furthestfarthest edges of the liner under worst case conditions (all exhaust fans running during cold weather) as determined by a differential pressure reading of at least -0.003 inches wc below the liner or visible downward flow of air in test holes using chemical or smoke sticks;

D) The pipe is sealed to the liner;

E) The pipe exhausts outside the building at least 10 feet above ground and at least 10 feet from any door or window; and

F) No leaks based on smoke stick tests along the entire perimeter of the liner (i.e., at all sealed edges) with the fan running. Where leaks are identified, appropriate repairs are undertaken and smoke stick testing repeated until no leaks are detected.

3) Membrane barrier systems when placed below concrete slabs meeting the following requirements:

A) The membrane is impermeable to volatile chemicals and is not less than 1.5 mm (or 60 mil) thick;

B) The membrane is sealed to foundation walls and any penetrating pipes according to membrane manufacturer/installer recommendations;

C) The membrane is installed in accordance with the manufacturer's requirements and by an applicator trained and approved by the manufacturer;

D) A smoke test of the membrane system (where smoke is injected below the installed liner prior to slab installation), in accordance with the manufacturer's requirements, is performed to ensure no leaks exist. Where leaks are identified, appropriate repairs are undertaken and smoke testing repeated until no leaks are detected; E) The membrane is puncture resistant to slab installation construction activities and protected by sand layers or geotextiles as recommended by the manufacturer; and

F) Construction activities following membrane installation do not damage, puncture or tear the membrane or otherwise compromise its ability to prevent the migration of volatile chemicals.

4) Vented raised floors meeting the following requirements:

A) An interconnected void system below the slab sufficient to allow free movement of air and communication of negative pressures to all points below the slab;

B) Sealing of all construction joints, open cracks, and penetrations through the slab (e.g., for utilities and riser pipes) with a low volatile caulk; and

C) At least one 3 inch diameter riser pipe venting to the atmosphere above the roof line (at least 10 feet from any doors or windows) for each 5000 square feet of membrane area, with the capability of converting passively vented floor systems to actively vented or SSD systems meeting the performance requirements of Section 742.1210(c)(1). subsection (c)(1).

a For the outdoor inhalation exposure route, it is acceptable to determine compliance by meeting either the soil or soil gas remediation objectives. The soil remediation objectives for the outdoor inhalation route are located in Appendix B, Tables A and B.

b Calculated values correspond to a target hazard quotient of 1.

c Calculated values correspond to a cancer risk level of 1 in 1,000,000.

d PCBs are a mixture of different congeners. The appropriate values to use for the physical/chemical and toxicity parameters depend on the congeners present at the site. Persons remediating sites should consult with BOL if calculation of Tier 2 or 3 remediation objectives is desired.

e The value shown is the Cvsat value of the chemical in soil gas. The Cvsat of the chemical becomes the remediation objective if the calculated value exceeds the Cvsat value or if there are no toxicity criteria available for the inhalation route of exposure.

f Value for the inhalation exposure route is based on Reference Concentration for elemental Mercury (CAS No. 7439-97-6). Inhalation remediation objectives only apply at sites where elemental Mercury is a contaminant of concern.

a Compliance is determined by meeting either the soil gas remediation objectives or the groundwater remediation objectives. See Sections 742.505 and 742.515.

b Calculated values correspond to a target hazard quotient of 1.

c Calculated values correspond to a cancer risk level of 1 in 1,000,000.

d PCBs are a mixture of different congeners. The appropriate values to use for the physical/chemical and toxicity parameters depend on the congeners present at the site. Persons remediating sites should consult with BOL if calculation of Tier 2 or 3 remediation objectives is desired.

e Groundwater remediation objective calculated at 25°C. For Dalapon and 1,2-Dibromo-3-chloropropane, the critical temperature (Tc) and enthalpy of vaporization at the normal boiling point (Hv,b) are not available. For Xylenes (total), the enthalpy of vaporization at the normal boiling point (Hv,b) is not available.

f The value shown is the Cvsat value of the chemical in soil gas. The Cvsat of the chemical becomes the remediation objective if the calculated value exceeds the Cvsat value or if there are no toxicity criteria available for the inhalation route of exposure.

The value shown is the solubility of the chemical in water. The solubility of the chemical becomes the remediation objective if the calculated value exceeds the solubility or if there are no toxicity criteria available for the ingestion route of exposure. Value for the inhalation exposure route is based on Reference h Concentration for elemental Mercury (CAS No. 7439-97-6). Inhalation remediation objectives only apply at sites where elemental Mercury is a contaminant of concern. The value shown is the Groundwater Remediation Objective listed in i i Appendix B, Table E. (Source: Added at 36 Ill. Reg. _, effective _____) Section 742.APPENDIX B- Tier 1 Illustrations and Tables Section 742.TABLE I:--- Tier 1 Soil Gas and Groundwater Remediation Objectives for the Indoor Inhalation Exposure Route - Diffusion Only Qsoil equals 0.0 cm3/seca,b Soil GasGroundwaterCAS No.Chemical NameResidential (mg/m3) Industrial/ Commercial (mg/m3)Residential (mg/L) Industrial/ Commercial (mg/L)67-64-1Acetone750,000g750,000g1,000,000h1,000,000h71-43-2Benzene41d300d0.41d2.6d111-44-4Bis(2-chloroethyl)ether1.9d14d6.6d48d75-27-4Bromodichloromethane450,000g450,000g6,700h6,700h75-25-2Bromoform1,800d13,000d170d1,300d71-36-3Butano129,000g29,000g74,000h74,000h78-93-32-Butanone (MEK) 380,000g380,000g220,000h220,000h75-15-0Carbon disulfide81,000c500,000c170c820c56-23-5Carbon tetrachloride24d180d0.052d0.31d108-90-7Chlorobenzene8,300c51,000c130c470h124-48-1Chlorodibromomethane57,000g57,000g2,600h2,600h67-66-3Chloroform12d87d0.17d1.1d95-57-82-Chlorophenol17,000g17,000g22,000h22,000h75-99-0Dalaponf1,500g1,500g900,000h900,000h96-12-81,2-Dibromo-3chloropropanef0.17d1.3d0.029d0.21d106-93-41,2-Dibromoethane1.1d7.9d0.073d0.52d95-50-11,2-Dichlorobenzene11,000g11,000g160h160h106-46-71,4-Dichlorobenzene8,400g8,400g79h79h75-71-8Dichlorodifluoromethane32,000c200,000c6.8c33c75-34-31,1-Dichloroethane81,000c500,000c750c4,100c107-06-21,2-Dichloroethane10d76d0.50d3.5d75-35-41,1-Dichloroethylene27,000c160,000c61c300c156-59-2cis-1,2-Dichloroethylene1,100,000g1,100,000g3,500h3,500h156-60-5trans-1,2-Dichloroethylene10,000c63,000c58c310c78-87-51,2-Dichloropropane36d260d0.67d4.5d542-75-61,3-Dichloropropylene (cis + trans)110d830d0.42d2.6d123-91-1p-Dioxane15d110d140d1,000d100-41-4Ethylbenzene150d1,100d1.3d8.1d76-44-8Heptachlor0.97d7.1d0.058d0.18h118-74-1Hexachlorobenzene0.28g0.28g0.0062h0.0062h7-47-4Hexachlorocyclopentadiene86c530c0.29c1.5c67-72-1Hexachloroethane2,800g2,800g50h50h78-59-1Isophorone3,400g3,400g12,000h12,000h98-82-8Isopropylbenzene (Cumene) 30,000g30,000g6.2c30c7439-97-6Mercuryi22g22g0.060h0.060h74-83-9Methyl bromide830c5,100c6.1c33c1634-04-4Methyl tertiary-butyl ether420,000c1,200,000g30,000c51,000h75-09-2Methylene

Chemical Abstracts Service (CAS) registry number. This number in the format xxx-
xx x, is unique for each chemical and allows efficient searching on computerized
data bases.
```

```
    a Soil Remediation objectives are determined pursuant to 40 CFR 761, as incorporated by reference at Section 732.104 (the USEPA "PCB Spill Cleanup Policy"), for most sites;
    persons remediating sites should consult with BOL if calculation of Tier 2-soil remediation objectives is desired.

a Soil remediation objectives are determined pursuant to 40 CFR 761, as incorporated by reference at Section 742.210(b) (the USEPA "PCB Spill Cleanup Policy"), for most sites; persons remediating sites should consult with BOL if calculation of Tier 2 or 3 remediation objectives is desired. PCBs are a mixture of different congeners. The appropriate values to use for the physical/chemical parameters depend on congeners present at the site.-

b Dimensionless Henry's Law Constant at 13°C is not calculated because the chemical is not volatile and does not require evaluation under the indoor inhalation exposure route.

c Dimensionless Henry's Law Constant = 20°C

d These chemicals are ionizing and its Koc value will change with pH. The Koc values listed in this table is the effective Koc at pH of 6.8. If the sitespecific pH is <u>values</u> value other than 6.8, the Koc value listed in <u>Section</u> 742, Appendix C, Table I should be used.

e The values in this table were taken from the following sources (in order of preference): SCDMS online database (http://www.epa.gov/superfund/sites/npl/hrsres/tools/scdm.htm); CHEMFATE online database (http://www.srcinc.com/what-we-do/databaseforms.aspx?id=381); PhysProp online database (http://www.srcinc.com/what-we-do/databaseforms.aspx?id=386); Water9 (http://www.epa.gov/ttn/chief/software/water/) for diffusivity values; and Handbook of Environmental Degradation Rates by P.H. Howard (1991) for first order degradation constant values.

Model Environmental Land Use Control

WHEREAS, 415 ILCS 5/58.17 and 35 Ill. Adm. Code 742 provide for the use of an ELUC as an institutional control in order to impose land use limitations or requirements related to environmental contamination so that persons conducting remediation can obtain a No Further Remediation determination from the Illinois Environmental Protection Agency ("IEPA"). The reason for an ELUC is to ensure protection of human health and the environment. The limitations and requirements contained herein are necessary in order to protect against exposure to contaminated soil, or groundwater, or soil gas both, that may be present on the property as a result of [VARIABLE] activities. Under 35 Ill. Adm. Code 742, the use of risk-based, site-specific remediation objectives may require the use of an ELUC on real property, and the ELUC may apply to certain physical features (e.g., engineered barriers, indoor inhalation building control technologies, monitoring wells, caps, etc.).

WHEREAS, _____ [the party performing remediation] intends to request torequest risk-based, site specific soil, and groundwater, or soil gas remediation objectives from IEPA under 35 Ill. Adm. Code 742 to obtain riskbased closure of the site, identified by Bureau of Land [10-digit LPC or Identification number] _____, utilizing an ELUC.

NOW, THEREFORE, the recitals set forth above are incorporated by reference as if fully set forth herein, and the Property Owner agrees as follows:

Date:-

By:Director

Section One. Property Owner does hereby establish an ELUC on the real estate, <u>situated insituatedin</u> the County of ______, State of Illinois and further described in Exhibit <u>A attachedAattached</u> hereto and incorporated herein by reference (the "Property").

Attached as Exhibit B are site maps that show the legal boundary of the Property, any physical features to which the ELUC applies, the horizontal and vertical extent of the contaminants of concern above the applicable remediation objectives for soil, or groundwater, or soil gas both, and the nature, location of the source, and direction of movement of the contaminants of concern, as required under 35 Ill. Adm. Code 742.

Section Two. Property Owner represents and warrants he/she is the current owner of the Property theProperty and has the authority to record this ELUC on the chain of title for the Property with the Office theOffice of the Recorder or Registrar of Titles in _____ CountyinCounty, Illinois.

Section Three. The Property Owner hereby agrees, for himself/herself, and his/her heirs, grantees, successors, assigns, transferees and any other owner, occupant, lessee, possessor or user of the Property or the holder of any portion thereof or interest therein, that [INSERT RESTRICTION (e.g., the groundwater under the Property shall not be used as a potable supply of water, and any contaminated groundwater or soil that is removed, excavated, or disturbed from the Property described in Exhibit A herein must be handled in accordance with all applicable laws and regulations)]. Section Four. This ELUC is binding on the Property Owner, his/her heirs, grantees, successors, assigns, transferees and any other owner, occupant, lessee, possessor or user of the Property or the holder of any portion thereof or interest therein. This ELUC shall apply in perpetuity against the Property and shall not be released until the IEPA determines there is no longer a need for this ELUC as an institutional control; until the IEPA, upon written request, issues to the site that received the no further remediation determination a new no further remediation determination approving modification or removal of the limitation(s) or requirement(s); the new no further remediation determination is filed on the chain of title of the site subject to the no further remediation determination; and until a release or modification of the land use limitation or requirement is filed on the chain of title for the Property.

Section Five. Information regarding the remediation performed on the Property may be obtained from the IEPA through a request under the Freedom of Information Act $\{ _ 5 \text{ ILCS } 140 \} _$ and rules promulgated thereunder by providing the IEPA with the $\{ _ 10 - \text{digit } \text{LPC or identification number} \}$ listed above.

Section Six. The effective date of this ELUC shall be the date that it is officially recorded in the chain of title for the Property to which the ELUC applies.

WITNESS the following signatures:

Property Owner(s)

210	SU	BPART A: INTRODUCTION
211		
212	Section 742.105 Applicability	
213		
214	a) Any person, including	ng a person required to perform an investigation pursuant to
215	the Illinois Environ	nental Protection Act [415 ILCS 5] (Act), may elect to

216 217 218 219 220 221		proceed under this Part to the extent allowed by State or federal law and regulations and the provisions of this Part and subject to the exceptions listed in subsection (h) below. A person proceeding under this Part may do so to the extent such actions are consistent with the requirements of the program under which site remediation is being addressed.				
222 222 223	b)	This Part is to be used in conjunction with the procedures and requirements applicable to the following programs:				
224 225 226 227		1) Leaking Underground Storage Tanks (35 Ill. Adm. Code 731, 732, and 734);				
227 228 229		2) Site Remediation Program (35 Ill. Adm. Code 740); and				
230 231		3) RCRA Part B Permits and Closure Plans (35 Ill. Adm. Code 724 and 725).				
232 233 234 235 236	c)	The procedures in this Part may not be used if their use would delay response action to address imminent and substantial threats to human health and the environment. This Part may only be used after actions to address such threats have been completed.				
237 238 239 240	d)	This Part may be used to develop remediation objectives to protect surface waters, sediments or ecological concerns, when consistent with the regulations of other programs, and as approved by the Agency.				
241 242 243 244 245	e)	A no further remediation determination issued by the Agency prior to July 1, 1997 pursuant to Section $4(y)$ of the Act or one of the programs listed in subsection (b) of this Section that approves completion of remedial action relative to a release shall remain in effect in accordance with the terms of that determination.				
246 247 248 249 250 251	f)	Site specific groundwater remediation objectives determined under this Part for contaminants of concern may exceed the groundwater quality standards established pursuant to the rules promulgated under the Illinois Groundwater Protection Act [415 ILCS 55] as long as done in accordance with Sections 742.805 and 742.900(c)(9). (See 415 ILCS 5/58.5(d)(4)				
251 252 253 254 255	g)	Where contaminants of concern include polychlorinated byphenyls (PCBs), a person may need to evaluate the applicability of regulations adopted under the Toxic Substances Control Act (15 <u>USCU.S.C.</u> 2601).				
256 257 258	h)	This Part may not be used in lieu of the procedures and requirements applicable to landfills under 35 Ill. Adm. Code 807 or 811 through 814.				

259 i) An evaluation of the indoor inhalation exposure route under this Part addresses the potential of contaminants present in soil gas or groundwater to reach human 260 receptors within buildings. This Part does not address the remediation or 261 262 mitigation of any contamination within a building from a source other than soil gas or groundwater, such as the building structure itself and products within the 263 264 building. 265 (Source: Amended at 36 Ill. Reg., effective) 266 267 268 Section 742.110 Overview of Tiered Approach 269 270 a) This Part presents an approach for developing remediation objectives (see Appendix A, Illustrations A and B) that include an option for exclusion of 271 272 pathways from further consideration, use of area background concentrations as remediation objectives and three tiers for selecting applicable remediation 273 274 objectives. An understanding of human exposure routes is necessary to properly conduct an evaluation under this approach. In some cases, applicable human 275 276 exposure routesroute(s) can be excluded from further consideration prior to any 277 tier evaluation. Selecting which tier or combination of tiers to be used to develop 278 remediation objectives is dependent on the site-specific conditions and 279 remediation goals. Tier 1 evaluations and Tier 2 evaluations are not prerequisites to conducting Tier 3 evaluations. 280 281 282 b) A Tier 1 evaluation compares the concentration of contaminants detected at a site 283 to the corresponding remediation objectives for residential and industrial/ 284 commercial properties contained in Appendix B, Tables A, B, C, D-and E, G, H 285 and I. To complete a Tier 1 evaluation, the extent and concentrations of the contaminants of concern, the groundwater class, the land use classification. 286 human exposure routes at the site, and, if appropriate, soil pH, must be known. If 287 288 remediation objectives are developed based on industrial/commercial property use, then institutional controls under Subpart J are required. 289 290 291 A Tier 2 evaluation uses the risk based equations from the Soil Screening Level c) 292 (SSL) model and Risk Based Corrective Action (RBCA) model and modified Johnson and Ettinger (J&E) model) documents listed in Appendix C, Tables A, 293 294 and C and L, respectively. In addition to the information that is required for a 295 Tier 1 evaluation, site-specific information is used to calculate Tier 2 remediation objectives. As in Tier 1, Tier 2 evaluates residential and industrial/commercial 296 properties only. If remediation objectives are developed based on 297 298 industrial/commercial property use, then institutional controls under Subpart J are 299 required. 300 301 d) A Tier 3 evaluation allows alternative parameters and factors, not available under

302 303		a Tier objecti	1 or Tie ves. R	er 2 evaluation, to be considered when developing remediation emediation objectives developed for conservation and agricultural
304		proper	ties car	n only be developed under Tier 3.
305				
306	e)	Remed	liation	objectives may be developed using area background concentrations
307		or any	of the 1	three tiers if the evaluation is conducted in accordance with
308		applica	able req	uirements in Subparts D through I. When contaminant
309		concer	tration	s do not exceed remediation objectives developed under one of the
310		tiers or	area b	ackground procedures under Subpart D, further evaluation under
311		any of	the oth	er tiers is not required.

315	Section 742.	115 Key	Elemo	ents
316	T 1 1	1		
317	To develop r	emediatio	on obje	ectives under this Part, the following key elements shall be
318	addressed.			
319	-)	D		
320	a)	Exposi	ire Rot	nes
321		1)	Thia D	Port identifies the following as notartial announce routes to be
322		1)	1111S F	art identifies the following as potential exposure foules to be
323			adures	sseu.
325			۵)	Outdoor inhalationInhalation.
326			11)	<u>Outdoor milatation</u> milatation,
327			B)	Indoor inhalation:
328				<u>moor minimuton.</u>
329			C) B)	Soil ingestion:
330			<u> </u>	~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
331			D) C)	Groundwater ingestion: and
332			/	
333			<u>E)</u> D)	Dermal contact with soil.
334			,	
335		2)	The ev	valuation of exposure routes under subsections $(a)(1)(A)$, $(a)(1)(B)$,
336			and-(a)	(1)(C) and $(a)(1)(D)$ of this Section is required for all sites when
337			develo	pping remediation objectives or excluding exposure pathways.
338			Evalua	ation of the dermal contact exposure route is required for use of
339			RBCA	a equations in Appendix C, Table C or use of formal risk assessment
340			under	Section 742.915.
341				
342		3)	The gr	oundwater ingestion exposure route is comprised of two
343			compo	onents:
344				

345			A)	Migration from soil to groundwater (soil component); and
340 347			B)	Direct ingestion of groundwater (groundwater component)
348			D)	Direct ingestion of groundwater (groundwater component).
349		<u>4)</u>	The	outdoor inhalation route is comprised of two components:
350				
351			<u>A)</u>	<u>Migration from soil through soil gas to outdoor air (soil</u>
352				<u>component); and</u>
353				
354			<u>B)</u>	<u>Migration from soil gas to outdoor air (soil gas component).</u>
333		5)		inde an interfaction and a second second size of a fitter second s
336		<u>5)</u>	Ine	indoor inhalation exposure route is comprised of two components:
259 259			A)	Migration from goil gas to indeer oir (goil gas component); and
350			\underline{A}	implation from son gas to indoor an (son gas component), and
360			B)	Migration from groundwater through soil gas to indoor air
361			<u>D</u>)	(groundwater component)
362				(Stourid water component).
363	b)	Cont	aminan	ts of Concern
364	-)			
365		The o	contam	inants of concern to be remediated depend on the following:
366				1 0
367		1)	The	materials and wastes managed at the site;
368				
369		2)	The	extent of the no further remediation determination being requested
370			from	the Agency pursuant to a specific program; and
371				
372		3)	The	requirements applicable to the specific program, as listed at Section
373			742.	105(b) under which the remediation is being performed.
374				
375	c)	Land	Use	
376		The j	present	and post-remediation uses of the site where exposures may occur
377		shall	be eval	luated. The land use of a site, or portion thereof, shall be classified as
378		one	of the fo	ollowing:
379		1)	ъ ·	a
380		1)	Resi	dential property;
381		2)	C	
382		2)	Cons	servation property;
283 294		2)	1 ani	aultural proportiry or
204 285		5)	Agri	cultural property, of
286 286		4)	Indu	strial/commercial property
387		4)	mau	surar commercial property.
201				

388	<u>d)</u>	Environmental Media of Concern
389		This Part provides procedures for developing remediation objectives for the
390		following environmental media:
391		
392		1) Soil;
393		
394		2) Soil gas;
395		
396		3) Groundwater.
397		
398	(Sourc	e: Amended at 36 Ill. Reg., effective
399	× ×	ö
400		SUBPART B: GENERAL
401		
402	Section 742.2	00 Definitions
403		
404	Except as stat	ed in this Section, or unless a different meaning of a word or term is clear from the
405	context, the d	efinition of words or terms in this Part shall be the same as that applied to the same
406	words or term	is in the Act.
407		
408		"Act" means the Illinois Environmental Protection Act [415 ILCS 5].
409		
410		"ADL" means Acceptable Detection Limit, which is the detectable concentration
411		of a substance that is equal to the lowest appropriate Practical Quantitation Limit
412		(POL) as defined in this Section.
413		
414		"Agency" means the Illinois Environmental Protection Agency.
415		
416		"Agricultural Property" means any real property for which its present or post-
417		remediation use is for growing agricultural crops for food or feed either as
418		harvested crops, cover crops or as pasture. This definition includes, but is not
419		limited to, properties used for confinement or grazing of livestock or poultry and
420		for silviculture operations. Excluded from this definition are farm residences.
421		farm outbuildings and agrichemical facilities.
422		
423		"Aquifer" means saturated (with groundwater) soils and geologic materials which
424		are sufficiently permeable to readily yield economically useful quantities of water
425		to wells, springs, or streams under ordinary hydraulic gradients. (Illinois
426		Groundwater Protection Act [415 ILCS 55/3(a)])
427		
428		"Area Background" means concentrations of regulated substances that are
429		consistently present in the environment in the vicinity of a site that are the result
430		of natural conditions or human activities, and not the result solely of releases at

t

431	the site. [415 ILCS 5/58.2]
432	
433	"ASTM" means the American Society for Testing and Materials.
434	
435	"Board" means the Illinois Pollution Control Board.
436	
437	"Building" means a man-made structure with an enclosing roof and enclosing
438	walls, except for windows and doors, that is fit for any human occupancy for at
439	least six consecutive months.
440	
441	"Building Control Technology" means any technology or barrier that affects air
442	flow or air pressure within a building for purposes of reducing contaminant
443	migration to the indoor air.
444	
445	"Cancer Risk" means a unitless probability of an individual developing cancer
446	from a defined exposure rate and frequency.
447	
448	"Cap" means a barrier designed to prevent the infiltration of precipitation or other
449	surface water, or impede the ingestion or inhalation of contaminants.
450	
451	"Capillary Fringe" means the zone above the water table in which water is held by
452	surface tension. Water in the capillary fringe is under a pressure less than
453	atmospheric.
454	
455	"Carcinogen" means a contaminant that is classified as a category A1 or A2
456	carcinogen by the American Conference of Governmental Industrial Hygienists; a
457	category 1 or 2A/2B carcinogen by the World Health Organization's International
458	Agency for Research on Cancer; a "human carcinogen" or "anticipated human
459	carcinogen" by the United States Department of Health and Human Service
460	National Toxicological Program; or a category A or B1/B2 carcinogen or as
461	"carcinogenic to humans" or "likely to be carcinogenic to humans" by the United
462	States Environmental Protection Agency in the integrated risk information system
463	or a final rule issued in a Federal Register notice by the USEPA. [415 ILCS
464	5/58.2]
465	
466	"Class I Groundwater" means groundwater that meets the Class I: Potable
467	Resource Groundwater criteria set forth in 35 Ill. Adm. Code 620.
468	
469	"Class II Groundwater" means groundwater that meets the Class II: General
470	Resource Groundwater criteria set forth in 35 Ill. Adm. Code 620.
471	
472	"Conservation Property" means any real property for which present or post-
473	remediation use is primarily for wildlife habitat.

i -

474	
475	"Construction Worker" means a person engaged on a temporary basis to perform
476	work involving invasive construction activities including, but not limited to,
477	personnel performing demolition, earth-moving, building, and routine and
478	emergency utility installation or repair activities.
479	
480	"Contaminant of Concern" or "Regulated Substance of Concern" means any
481	contaminant that is expected to be present at the site based upon past and current
482	land uses and associated releases that are known to the person conducting a
483	remediation based upon reasonable inquiry. [415 ILCS 5/58.2]
484	
485	"County Highway" means county highway as defined in the Illinois Highway
486	Code [605 ILCS 5].
487	
488	"District Road" means district road as defined in the Illinois Highway Code [605
489	ILCS 51.
490	- 1
491	"Engineered Barrier" means a barrier designed or verified using engineering
492	practices that limits exposure to or controls migration of the contaminants of
493	concern.
494	
495	"Environmental Land Use Control" means an instrument that meets the
496	requirements of this Part and is placed in the chain of title to real property that
497	limits or places requirements upon the use of the property for the purpose of
498	protecting human health or the environment, is binding upon the property owner.
499	heirs, successors, assigns, and lessees, and runs in perpetuity or until the Agency
500	approves, in writing, removal of the limitation or requirement from the chain of
501	title.
502	
503	"Exposure Route" means the transport mechanism by which a contaminant of
504	concern reaches a receptor.
505	
506	"Federally Owned Property" means real property owned in fee by the United
507	States of America on which institutional controls are sought to be placed in
508	accordance with this Subpart.
509	1
510	"Federal Landholding Entity" means that federal department, agency, or
511	instrumentality with the authority to occupy and control the day-to-day use.
512	operation and management of Federally Owned Property.
513	
514	"Free Product" means a contaminant that is present as a non-aqueous phase liquid
515	for chemicals whose melting point is less than 30°C (e.g., liquid not dissolved in
516	water).
516	water).

517	
518	"GIS" means Geographic Information System.
519	
520	"GPS" means Global Positioning System.
521	
522	"Groundwater" means underground water which occurs within the saturated zone
523	and geologic materials where the fluid pressure in the pore space is equal to or
524	greater than atmospheric pressure. [415 ILCS 5/3.64]
525	
526	"Groundwater Quality Standards" means the standards for groundwater as set
527	forth in 35 Ill. Adm. Code 620.
528	
529	"Hazard Quotient" means the ratio of a single substance exposure level during a
530	specified time period to a reference dose for that substance derived from a similar
531	exposure period.
532	
533	"Highway" means any public way for vehicular travel which has been laid out in
534	pursuance of any law of this State, or of the Territory of Illinois, or which has
535	been established by dedication, or used by the public as a highway for 15 years,
536	or which has been or may be laid out and connect a subdivision or platted land
537	with a public highway and which has been dedicated for the use of the owners of
538	the land included in the subdivision or platted land where there has been an
539	acceptance and use under such dedication by such owners, and which has not
540	been vacated in pursuance of law. The term "highway" includes rights of way,
541	bridges, drainage structures, signs, guard rails, protective structures and all
542	other structures and appurtenances necessary or convenient for vehicular traffic.
543	A highway in a rural area may be called a "road", while a highway in a
544	municipal area may be called a "street". (Illinois Highway Code [605 ILCS 5/2-
545	202])
546	
547	"Highway Authority" means the Department of Transportation with respect to a
548	State highway; the Illinois State Toll Highway with respect to a toll highway; the
549	County Board with respect to a county highway or a county unit district road if a
550	discretionary function is involved and the County Superintendent of Highways if a
551	ministerial function is involved; the Highway Commissioner with respect to a
552	township or district road not in a county unit road district; or the corporate
553	authorities of a municipality with respect to a municipal street. (Illinois Highway
554	Code [605 ILCS 5/2-213])
555	
556	"Human Exposure Pathway" means a physical condition which may allow for a
557	risk to human health based on the presence of all of the following: contaminants
558	of concern; an exposure route; and a receptor activity at the point of exposure that
559	could result in contaminant of concern intake.

560	
561	"Industrial/Commercial Property" means any real property that does not meet the
562	definition of residential property, conservation property or agricultural property.
563	
564	"Infiltration" means the amount of water entering into the ground as a result of
565	precipitation.
566	
567	"Institutional Control" means a legal mechanism for imposing a restriction on
568	land use, as described in Subpart J.
569	-
570	"Land Use Control Memoranda of Agreement" mean agreements entered into
571	between one or more agencies of the United States and the Illinois Environmental
572	Protection Agency that limit or place requirements upon the use of Federally
573	Owned Property for the purpose of protecting human health or the environment.
574	
575	"Man-Made Pathways" means constructed physical conditions that may allow for
576	the transport of regulated substances including, but not limited to, sewers, utility
577	lines, utility or elevator vaults, building foundations, basements, crawl spaces,
578	drainage ditches, or previously excavated and filled areas or sumps. [415 ILCS
579	5/58.2]
580	
581	"Natural Pathways" means <i>natural</i> physical conditions that may allow for the
582	transport of regulated substances including, but not limited to, soil, groundwater,
583	sand seams and lenses, and gravel seams and lenses. [415 ILCS 5/58.2]
584	
585	"Person" means an individual, trust, firm, joint stock company, joint venture,
586	consortium, commercial entity, corporation (including a government
587	corporation), partnership, association, state, municipality, commission, political
588	subdivision of a state, or any interstate body including the United States
589	government and each department, agency, and instrumentality of the United
590	States. [415 ILCS 5/58.2]
591	
592	"Point of Human Exposure" means the points at which human exposure to a
593	contaminant of concern may reasonably be expected to occur. The point of
594	human exposure is at the source, unless an institutional control limiting human
595	exposure for the applicable exposure route has been or will be in place, in which
596	case the point of human exposure will be the boundary of the institutional control.
597	Point of human exposure may be at a different location than the point of
598	compliance.
599	
600	"Populated Area" means:
601	
602	an area within the boundaries of a municipality that has a population of

	JCAR350742-1207340r01
603	10,000 or greater based on the year 2000 or most recent census; or
604	
605	an area less than three miles from the boundary of a municipality that has
606	a population of 10,000 or greater based on the year 2000 or most recent
607	census.
608	
609	"Potable" means generally fit for human consumption in accordance with
610	accepted water supply principles and practices. (Illinois Groundwater Protection
611	Act [415 ILCS 55/3(h)])
612	
613	"PQL" means practical quantitation limit or estimated quantitation limit, which is
614	the lowest concentration that can be reliably measured within specified limits of
615	precision and accuracy for a specific laboratory analytical method during routine
616	laboratory operating conditions in accordance with "Test Methods for Evaluating
617	Solid Wastes, Physical/Chemical Methods", EPA Publication No. SW-846,
618	incorporated by reference in Section 742.210. When applied to filtered water
619	samples, PQL includes the method detection limit or estimated detection limit in
620	accordance with the applicable method revision in: "Methods for the
621	Determination of Organic Compounds in Drinking Water", Supplement II", EPA
622	Publication No. EPA/600/4-88/039; "Methods for the Determination of Organic
623	Compounds in Drinking Water, Supplement III", EPA Publication No.
624	EPA/600/R-95/131, all of which are incorporated by reference in Section
625	742.210.
626	
627	"Q _{soil} " means the volumetric flow rate of soil gas from the subsurface into the
628	enclosed building space.
629	
630	"RBCA" means Risk Based Corrective Action as defined in ASTM E-1739-95, as
631	incorporated by reference in Section 742.210.
632	
633	"RCRA" means the Resource Conservation and Recovery Act of 1976 (42 USC
634	6921).
635	
636	"Reference Concentration" or "RfC" means an estimate of a daily exposure, in
637	units of milligrams of chemical per cubic meter of air (mg/m ³), to the human
638	population (including sensitive subgroups) that is likely to be without appreciable
639	risk of deleterious effects during a portion of a lifetime (up to approximately
640	seven years, subchronic) or for a lifetime (chronic).
641	
642	"Reterence Dose" or "RtD" means an estimate of a daily exposure, in units of
643	milligrams of chemical per kilogram of body weight per day (mg/kg/d), to the
644	human population (including sensitive subgroups) that is likely to be without
645	appreciable risk of deleterious effects during a portion of a lifetime (up to

646	approximately seven years subchronic) or for a lifetime (chronic)
647	approximatory seven years, succimente) or for a meanie (emome).
648	"Regulated Substance" means any hazardous substance as defined under Section
649	101(14) of the Comprehensive Environmental Response Compensation and
650	Liability Act of 1980 (P I $96-510$) and petroleum products including crude oil or
651	any fraction thereof natural gas natural gas liquids liquids duatural gas or
652	synthetic as usable for fuel (or mixtures of natural as and such synthetic as)
653	[A15 II CS 5/58 2]
654	[415 IEC5 5/58.2]
655	"Peridential Property" magne any real property that is used for habitation by
656	individuals or where children have the apportunity for exposure to contaminente
657	through soil ingestion or inholation (indeer or outdoor) at advastional facilities
659	has the same facilities, shild some facilities or synthese respectivel energy [415 II CC
650	5/58 21
660	5/58.2]
000	"Dialt of Way" magnetic low interest the sector sector is the sector is
001	Right of way means the land, or interest therein, acquired for or devoted to a
002	nignway. (IIIInois Highway Code [605 ILCS 5/2-217])
003	
664	"Saturated Zone" means a subsurface zone in which all the interstices or voids are
665	filled with water under pressure greater than that of the atmosphere.
666	
667	"Similar-Acting Chemicals" are chemical substances that have toxic or harmful
668	effect on the same specific organ or organ system (see Appendix A. Tables E and
669	F for a list of similar-acting chemicals with noncarcinogenic and carcinogenic
670	effects).
671	
672	"Site" means any single location, place, tract of land or parcel of property, or
673	portion thereof, including contiguous property separated by a public right-of-
674	way. [415 ILCS 5/58.2]
675	
676	"Slurry Wall" means a man-made barrier made of geologic material which is
677	constructed to prevent or impede the movement of contamination into a certain
678	area.
679	
680	"Soil Gas" means the air existing in void spaces in the soil between the
681	groundwater table and the ground surface.
682	
683	"Soil Saturation Limit" or "C _{sat} " means the contaminant concentration at which
684	the absorptive limits of the soil particles, the solubility limits of the available soil
685	moisture, and saturation of soil pore air have been reached. Above the soil
686	saturation concentration, the assumptions regarding vapor transport to air and/or
687	dissolved phase transport to groundwater (for chemicals that are liquid at ambient
688	soil temperatures) do not apply, and alternative modeling approaches are required

689	the contaminant concentration at which soil pore air and pore water are saturated
690	with the chemical and the adsorptive limits of the soil particles have been reached.
691	
692	"Soil Vapor Saturation Limit" or "C _v ^{sat} " means the maximum vapor concentration
693	that can exist in the soil pore air at a given temperature and pressure.
694	
695	"Solubility" means a chemical specific maximum amount of solute that can
696	dissolve in a specific amount of solvent (groundwater) at a specific temperature.
697	
698	"SPLP" means Synthetic Precipitation Leaching Procedure (Method 1312) as
699	published in "Test Methods for Evaluating Solid Waste, Physical/Chemical
700	Methods", USEPA Publication No. SW-846, as incorporated by reference in
701	Section 742.210.
702	
703	"SSL" means Soil Screening Levels as defined in USEPA's Soil Screening
704	Guidance: User's Guide and Technical Background Document, as incorporated by
705	reference in Section 742.210.
706	
707	"State <u>Highwayhighway</u> " means State highway as defined in the Illinois Highway
708	Code [605 ILCS 5].
709	
710	"Stratigraphic Unit" means a site-specific geologic unit of native deposited
711	material and/or bedrock of varying thickness (e.g., sand, gravel, silt, clay,
712	bedrock, etc.). A change in stratigraphic unit is recognized by a clearly distinct
713	contrast in geologic material or a change in physical features within a zone of
714	gradation. For the purposes of this Part, a change in stratigraphic unit is identified
715	by one or a combination of differences in physical features such as texture,
716	cementation, fabric, composition, density, and/or permeability of the native
717	material and/or bedrock.
718	
719	"Street" means street as defined in the Illinois Highway Code [605 ILCS 5].
720	
721	"TCLP" means Toxicity Characteristic Leaching Procedure (Method 1311) as
722	published in "Test Methods for Evaluating Solid Waste, Physical/Chemical
723	Methods", USEPA Publication No. SW-846, as incorporated by reference in
724	Section 742.210.
725	
726	"Toll <u>Highwayhighway</u> " means toll highway as defined in the Illinois Highway
727	Code [605 ILCS 5].
728	
729	"Total Petroleum Hydrocarbon" or "TPH" means the additive total of all
730	petroleum hydrocarbons found in an analytical sample.
731	

732		"Township <u>Road</u> " means township road as defined in the Illinois Highway
733		Code [605 ILCS 5].
734		
735		"Unconfined Aquifer" means an aquifer whose upper surface is a water table free
736		to fluctuate under atmospheric pressure.
737		
738		"Volatile Chemicals" means chemicals with a Dimensionless Henry's Law
739		Constant of greater than 1.9×10^{-2} or a vapor pressure greater than 0.1 Torr
740		(mmHg) at 25°C. For purposes of the indoor inhalation exposure route, elemental
741		mercury is included in this definition.
742		
743		"Volatile Organic Compounds" or "VOCs" means organic chemical analytes
744		identified as volatiles as published in "Test Methods for Evaluating Solid Waste,
745		Physical/Chemical Methods", USEPA Publication No. SW-846 (incorporated by
746		reference in Section 742.210), method numbers 8011, 8015B, 8021B, 8031,
747		8260B, 8315A, and 8316. For analytes not listed in any category in those
748		methods, those analytes which have a boiling point less than 200°C and a vapor
749		pressure greater than 0.1 Torr (mm Hg) at 20°C.
750		
751		"Water Table" means the top water surface of an unconfined aquifer at
752		atmospheric pressure.
753

1085			
1086	Section 742.2	225 De	monstration of Compliance with Soil and Groundwater Remediation
1087	Objectives		
1088			
1089	Compliance y	<u>with soi</u>	l and groundwater remediation objectives is achieved if each sample result
1090	does not exce	ed that	respective remediation objective unless a person elects to proceed under
1091	subsections (c), (d) a	nd (e) of this Section.
1092			
1093	a)	Comp	bliance with groundwater remediation objectives developed under Subparts
1094		D thro	ough F and H through I shall be demonstrated by comparing the contaminant
1095		conce	ntrations of discrete samples at each sample point to the applicable
1096		groun	dwater remediation objective. Sample points shall be determined by the
1097		progra	am under which remediation is performed.
1098			
1099	b)	Unles	s the person elects to composite samples or average sampling results as
1100		provid	ded in subsections (c) and (d) of this Section, compliance with soil
1101		remed	liation objectives developed under Subparts D through G and I shall be
1102		demo	nstrated by comparing the contaminant concentrations of discrete samples to
1103		the ap	plicable soil remediation objective.
1104			
1105		1)	Except as provided in subsections (c) and (d) of this Section, compositing
1106			of samples is not allowed.
1107			
1108		2)	Except as provided in subsections (c) and (d) of this Section, averaging of
1109			sample results is not allowed.
1110			
1111		3)	Notwithstanding subsections (c) and (d) of this Section, compositing of
1112		-	samples and averaging of sample results is not allowed for the
1113			construction worker population.
1114			
1115		4)	The number of sampling points required to demonstrate compliance is
1116		,	determined by the requirements applicable to the program under which
1117			remediation is performed.

1118						
1119	c)	If a person chooses to composite soil samples or average soil sample results to				
1120		demonstrate compliance relative to the soil component of the groundwater				
1121		ingestion exposure route, the following requirements apply:				
1122		_	_			
1123		1)	1) A minimum of two sampling locations for every 0.5 acre of contaminate			
1124		,	area is	s required, with discrete samples at each sample location obtained at		
1125			every	two feet of depth, beginning at six inches below the ground surface		
1126			for su	rface contamination and at the upper limit of contamination for		
1127			subsu	rface contamination and continuing through the zone of		
1128			contar	nination. Alternatively, a sampling method may be approved by the		
1129			Agenc	cy based on an appropriately designed site-specific evaluation.		
1130			Sampl	les obtained at or below the water table shall not be used in		
1131			compo	ositing or averaging.		
1132			1	0 0 0		
1133		2)	For co	ontaminants of concern other than volatile chemicals organic		
1134		/	contar	ninants:		
1135						
1136			A)	Discrete samples from the same boring may be composited: or		
1137			/	I Friday in the second s		
1138			B)	Discrete sample results from the same boring may be averaged.		
1139			,			
1140		3)	For vo	olatile <u>chemicalsorganic contaminants</u> :		
1141		,				
1142			A)	Compositing of samples is not allowed.		
1143						
1144			B)	Discrete sample results from the same boring may be averaged.		
1145						
1146		4)	Comp	osite samples may not be averaged. An arithmetic average may be		
1147			calcula	ated for discrete samples collected at every two feet of depth		
1148			throug	the zone of contamination as specified in subsection (c)(1) of this		
1149			Sectio	n.		
1150						
1151	d)	If a pe	rson ch	ooses to composite soil samples or average soil sample results to		
1152		demonstrate compliance relative to the outdoor inhalationinhalation exposure				
1153		route o	or inges	tion exposure route, the following requirements apply:		
1154						
1155		1)	A pers	son shall submit a sampling plan for Agency approval, based upon a		
1156			site-sp	pecific evaluation;		
1157						
1158		2)	For vo	platile <u>chemicalsorganic compounds</u> , compositing of samples is not		
1159			allowe	ed;		
1160						

1161		3)	All samples shall be collected within the contaminated area:-
1162		1)	
1103		4)	Composite samples may not be averaged. Procedures specified in
1164			Calculating Upper Confidence Limits for Exposure Point Concentrations
1165			at Hazardous Waste Sites", USEPA Office of Emergency and Remedial
1166		-	Response, OSWER 9285.6-10 (December 2002), as incorporated by
1167		:	reference in Section 742.210, or an alternative procedure approved by the
1168			Agency, shall be used to determine sample averages.
1169			
1170	e)	When a	veraging under this Section, if no more than 15% of sample results are
1171		reported	l as "non-detect", "no contamination", "below detection limits", or similar
1172		terms, s	uch results shall be included in the averaging calculations as one-half the
1173		reported	analytical detection limit for the contaminant. However, when
1174		perform	ing a test for normal or lognormal distribution for the purpose of
1175		calculat	ing a 95% Upper Confidence Limit of the mean for a contaminant, a
1176		person 1	nay substitute for each non-detect value a randomly generated value
1177		betweer	n, but not including, zero and the reported analytical detection limit. If
1178		more th	an 15% of sample results are "non-detect", procedures specified in
1179		"Guidar	nce for Data Quality Assessment, Practical Methods for Data Analysis,
1180		EPA QA	A/G-9, QA00 Update", EPA/600/R-96/084 (July 2000), as incorporated by
1181		reference	e in Section 742.210, or an alternative procedure approved by the Agency
1182		shall be	used to address the non-detect values, or another statistically valid
1183		procedu	re approved by the Agency may be used to determine an average.
1184		•	
1185	f)	All soil	samples collected after August 15, 2001, shall be reported on a dry weight
1186	,	basis for	r the purpose of demonstrating compliance, with the exception of the
1187		TCLP a	nd SPLP and the property pH.
1188			
1189	(Sour	ce: Amer	ided at 36 Ill. Reg., effective)
1190			
1191	Section 742.2	227 Dem	onstration of Compliance with Soil Gas Remediation Objectives for
1192	the Outdoor	and Indo	oor Inhalation Exposure Routes
1193			
1194	Compliance s	shall be de	emonstrated by comparing the contaminant concentrations of discrete
1195	samples at ea	ch sample	e point to the applicable soil gas remediation objective. As specified in
1196	Section 742.5	510(c), the	e soil gas remediation objectives for the outdoor inhalation exposure route
1197	are contained	in Appen	dix B, Table G. As specified in Section 742.515, the soil gas remediation
1198	objectives for	the indoc	or inhalation exposure route are contained in Appendix B, Tables H and I.
1199	This Section	applies to	exterior soil gas samples or near-slab samples collected outside a
1200	building. Pro	posals to	use sub-slab soil gas data for the indoor inhalation exposure route shall
1201	follow Sectio	n 742.935	<u>5(c).</u>
1202			

1203	<u>a)</u>	Sample points shall be determined by the program under which remediation is					
1204		performed.					
1205	1 \	TT 71 11 .' '1 1					
1206	<u>b)</u>	When collecting soil gas samples:					
1207							
1208		1) Use rigid-wall tubing made of nylon or Teflon [®] or other material approved					
1209		by the Agency;					
1210							
1211		2) Use gas-tight, inert containers to hold the sample. For light sensitive or					
1212		halogenated volatile chemicals, these containers shall be opaque or dark-					
1213		<u>colored;</u>					
1214							
1215		3) Purge three volumes before obtaining each discrete soil gas sample;					
1216							
1217		4) Use a helium tracer or other leak apparatus detection system approved by					
1218		the Agency; and					
1219							
1220		5) Limit the flow rate to 200 ml/min.					
1221							
1222	c)	Soil gas samples shall be analyzed using a National Environmental Laboratory					
1223	<u>_</u>	Accreditation Program (NELAP) certified laboratory.					
1224							
1225	(b	Soil gas remediation objectives shall be compared to concentrations of soil gas					
1226	<u></u> /	collected at a depth at least 3 feet below ground surface and above the saturated					
1227		zone					
1228		20110.

1304						
1305	<u>b)</u>	<u>The re</u>	quirem	ents in subsections (b)(1)(A), (B) or (C) and (b)(2) and (b)(3) are		
1306		<u>met:</u>				
1307						
1308		<u>1)</u>	Exclu	sion options when the contaminants of concern are volatile		
1309			<u>chemi</u>	<u>cals:</u>		
1310						
1311			<u>A)</u>	No building or man-made pathway exists or will be placed above		
1312				the contaminated soil gas or groundwater; or		
1313						
1314			<u>B)</u>	An approved building control technology is in place or will be		
1315				placed that meets the requirements of Subpart L; or		
1316						
1317			<u>C)</u>	If the contaminants of concern are benzene, toluene, ethylbenzene,		
1318				and total xylenes only, a demonstration of active biodegradation		
1319				has been made for benzene, toluene, ethylbenzene, and total		
1320				xylenes such that no indoor inhalation exposure will occur. This		
1321				demonstration shall be submitted to the Agency for review and		
1322				approval;		
1323						
1324		2)	The re	equirements of Sections 742.300 and 742.305 are met; and		
1325		,				
1326		3)	An ins	stitutional control, in accordance with Subpart J, will be placed on		
1327			the pro	operty.		
1328

1331		SU	UBPAR	T D: DETERMINING AREA BACKGROUND		
1332 1333	Section 742	2.405 De	termina	ation of Area Background for Soil		
--------------	-------------	----------	----------	--		
1334						
1335	a)	Soil s	ampling	results shall be obtained for purposes of determining area		
1336		backg	round le	evels in accordance with the following procedures:		
1337						
1338		1)	For vo	platile <u>chemicalsorganic contaminants</u> , sample results shall be based		
1339			on dis	crete samples;		
1340						
1341		2)	Unles	s an alternative method is approved by the Agency, for contaminants		
1342		,	other	than volatile <u>chemicalsorganic contaminants</u> , sample results shall be		
1343			based	on discrete samples or composite samples. If a person elects to use		
1344			compo	osite samples, each 0.5 acre of the area to be sampled shall be		
1345			divide	ed into quadrants and 5 aliquots of equal volume per quadrant shall		
1346			be cor	nposited into 1 sample;		
1347						
1348		3)	Sampl	les shall be collected from similar depths and soil types, which shall		
1349		,	be cor	sistent with the depths and soil types in which maximum levels of		
1350			contar	ninants are found in the areas of known or suspected releases; and		
1351				* *		
1352		4)	Sampl	les shall be collected from areas of the site or adjacent to the site that		
1353			are un	affected by known or suspected releases at or from the site. If the		
1354			sampl	e results show an impact from releases at or from the site, then the		
1355			sampl	e results shall not be included in determining area background levels		
1356			under	this Part.		
1357						
1358	b)	Area l	oackgro	und shall be determined according to one of the following		
1359		approa	aches:			
1360						
1361		1)	Statev	vide Area Background Approach:		
1362						
1363			A)	The concentrations of inorganic chemicals in background soils		
1364				listed in Appendix A, Table G may be used as the upper limit of		
1365				the area background concentration for the site. The first column to		
1366				the right of the chemical name presents inorganic chemicals in		
1367				background soils for counties within Metropolitan Statistical		
1368				Areas. Counties within Metropolitan Statistical Areas are		
1369				identified in Appendix A, Table G, Footnote a. Sites located in		
1370				counties outside Metropolitan Statistical Areas shall use the		
1371				concentrations of inorganic chemicals in background soils shown		
1372				in the second column to the right of the chemical name.		
1373				-		
1374			B)	Soil area background concentrations determined according to this		

1375 1376		statewide area background approach shall be used as provided in Section 742.415(b) of this Part. For each parameter whose
1377		sampling results demonstrate concentrations above those in
1378		Appendix A. Table G. the person shall develop appropriate soil
1379		remediation objectives in accordance with this Part or may
1380		determine area background in accordance with subsection (b)(2) of
1381		this Section.
1382		
1383		2) A statistically valid approach for determining area background
1384		concentrations appropriate for the characteristics of the data set and
1385		approved by the Agency.
1386		
1387		(Source: Amended at 36 Ill. Reg, effective)
1388		
1389		SUBPARTE: TIER I EVALUATION
1390		
1391	Section 742.5	00 Ther I Evaluation Overview
1392	``	
1393	a)	A fier I evaluation compares the concentration of each contaminant of concern
1394		detected at a site to the baseline remediation objectives provided in Appendix B,
1395		Tables A, B, C, D, and E, G, H and I. Use of Tier I remediation objectives
1396		requires only limited site-specific information: concentrations of contaminants of
1397		concern, groundwater classification, land use classification, and, if appropriate,
1398		soil pH. (See Appendix B, Illustration A.)
1399	1 \	
1400	b)	Although Lier I allows for differentiation between residential and
1401		industrial/commercial property use of a site, an institutional control under Subpart
1402		J is required where remediation objectives are based on an industrial/commercial
1403		property use.
1404	ς.	
1405	c)	Any given exposure route is not a concern if the concentration of each
1406		contaminant of concern detected at the site is below the Tier I value of that given
1407		route. In such a case, no further evaluation of that route is necessary.
1408	(6

1618 1619 ii) Construction worker.
1619 11) Construction worker.
1.000
1621 C) The fifth and sixth columns to the right of the chemical name list
1622 the soil remediation objectives for the soil component of the
1623 groundwater ingestion exposure route for two classes of
1624 groundwater:
1025
1620 I) Class I groundwater, and
1027
1020 $11)$ Class II groundwater.
1027 1630 D) The final column lists the accontable detection limit (ADI) only
1631 when applicable
1632

1633 1634	3)	Appendix B, Tables C and D set forth pH specific soil remediation objectives for inorganic and ionizing organic chemicals for the soil
1635		component of the groundwater ingestion route
1636		component et me ground nuter mgestion route.
1637		A) Table C sets forth remediation objectives based on Class I
1638		groundwater and Table D sets forth remediation objectives based
1639		on Class II groundwater.
1640		
1641		B) The first column in Tables C and D lists the chemical names.
1642		,
1643		C) The second through ninth columns to the right of the chemical
1644		names list the pH based soil remediation objectives.
1645		
1646	4)	For the inorganic chemicals listed in Appendix B. Tables A and B. the soil
1647	,	component of the groundwater ingestion exposure route shall be evaluated
1648		using TCLP (SW-846 Method 1311) or SPLP (SW-846 Method 1312).
1649		incorporated by reference at Section 742.210 unless a person chooses to
1650		evaluate the soil component on the basis of the total amount of
1651		contaminant in a soil sample result in accordance with subsection (a)(5) of
1652		this Section.
1653		
1654	5)	For those inorganic and ionizing organic chemicals listed in Appendix B,
1655		Tables C and D, if a person elects to evaluate the soil component of the
1656		groundwater ingestion exposure route based on the total amount of
1657		contaminant in a soil sample result (rather than TCLP or SPLP analysis),
1658		the person shall determine the soil pH at the site and then select the
1659		appropriate soil remediation objectives based on Class I and Class II
1660		groundwaters from Tables C and D, respectively. If the soil pH is less
1661		than 4.5 or greater than 9.0, then Tables C and D cannot be used.
1662		
1663	6)	Unless one or more exposure routes are excluded from consideration
1664		under Subpart C, the most stringent soil remediation objective of the
1665		exposure routes (i.e., soil ingestion exposure route, outdoor inhalation
1666		exposure route, and soil component of the groundwater ingestion exposure
1667		route) shall be compared to the concentrations of soil contaminants of
1668		concern measured at the site. When using Appendix B, Table B to select
1669		soil remediation objectives for the ingestion exposure route and outdoor
1670		inhalation exposure routes route, the remediation objective shall be the
1671		more stringent soil remediation objective of the industrial/commercial
1672		populations and construction worker populations.
1673		
1674	7)	Confirmation sample results may be averaged or soil samples may be
1675		composited in accordance with Section 742.225.

1676			
1677		8)	If a soil remediation objective for a chemical is less than the ADL, the
1678		,	ADL shall serve as the soil remediation objective.
1679			5
1680	b)	Grou	ndwater remediation objectives for the groundwater component of the
1681	,	grour	ndwater ingestion exposure route are listed in Appendix B, Table E.
1682		How	ever, Appendix B, Table E must be corrected for cumulative effect of
1683		mixtı	ures of similar-acting noncarcinogenic chemicals as set forth in Section
1684		742.5	505(cb)(3) and $(c)(4)$.
1685			
1686		1)	The first column to the right of the chemical name lists groundwater
1687		,	remediation objectives for Class I groundwater, and the second column
1688			lists the groundwater remediation objectives for Class II groundwater.
1689			
1690		2)	To use Appendix B, Table E of this Part, the 35 Ill. Adm. Code 620
1691		,	classification for groundwater at the site shall be determined. The
1692			concentrations of groundwater contaminants of concern at the site are
1693			compared to the applicable Tier 1 groundwater remediation objectives for
1694			the groundwater component of the groundwater ingestion exposure route
1695			in Appendix B, Table E.
1696			
1697	c)	Soil g	gas remediation objectives for the outdoor inhalation exposure route are
1698		listed	l in Appendix B, Table G.
1699			
1700		1)	The first column to the right of the chemical name lists the soil gas
1701			remediation objectives for residential populations.
1702			
1703		2)	The second and third columns to the right of the chemical names list the
1704			soil gas remediation objectives for the outdoor inhalation exposure route
1705			based on two receptor populations:
1706			
1707			<u>A)</u> <u>Industrial/commercial; and</u>
1708			
1709			B) Construction worker.
1710			
1711	<u>d)</u> e)	For c	ontaminants of concern not listed in Appendix B, Tables A, B, and E, and G,
1712		a pers	son may request site-specific remediation objectives from the Agency or
1713		propo	ose site-specific remediation objectives in accordance with 35 Ill. Adm. Code
1714		620, 5	Subpart I of this Part, or both.
1715		·

1769			
1770			SUBPART F: TIER 2 GENERAL EVALUATION
1771			
1772	Section 742	.600 Tie	er 2 Evaluation Overview
1773			
1774	a)	Tier 2	remediation objectives are developed through the use of equations which
1775		allow	site-specific data to be used. (See Appendix C, Illustrations A and B.) The
1776		equati	ons identified in Appendix C, Tables A, and C, and L may be used to
1777		develo	op Tier 2 remediation objectives.
1778			
1779	b)	Tier 2	evaluation is only required for contaminants of concern and corresponding
1780		expos	ure routes (except where excluded from further consideration under Subpart
1781		C) exc	ceeding the Tier 1 remediation objectives. When conducting Tier 2
1782		evalua	ations, the values used in the calculations must have the appropriate units of
1783		measu	are as identified in Appendix C, Tables B, and D, and M.
1784			
1785	c)	Any d	evelopment of remediation objectives using site-specific information or
1786		equati	ons outside the Tier 2 framework shall be evaluated under Tier 3.
1787			
1788	d)	Any d	evelopment of a remediation objective under Tier 2 shall not use a target
1789		hazaro	d quotient greater than one at the point of human exposure or a target cancer
1790		risk gi	reater than 1 in 1,000,000 at the point of human exposure.
1791		-	
1792	e)	In con	ducting a Tier 2 evaluation, the following conditions shall be met:
1793		1	
1794		1)	For each discrete sample, the total soil contaminant concentration of either
1795			a single contaminant or multiple contaminants of concern shall not exceed
1796			the attenuation capacity of the soil as provided in Section 742.215.
1797		•	
1798		2)	Remediation objectives for noncarcinogenic compounds which affect the
1799			same target organ, organ system or similar mode of action shall meet the
1800			requirements of Section 742.720.
1801		2)	
1802		3)	I ne soll remediation objectives based on the <u>outdoor inhalation exposure</u>
1803			route inhalation and the soil component of the groundwater ingestion

1804 1805		exposure routes shall not exceed the soil saturation limit as provided in Section 742.220.
1806		
1807		4) The soil gas remediation objectives based on the indoor and outdoor
1808		inhalation exposure routes shall not exceed the soil vapor saturation limit
1809		provided in Section 742.222.
1810		
1811	<u>f</u>)	Tier 2 remediation objectives for the indoor inhalation exposure route shall be
1812		calculated for either soil gas or groundwater if a Q _{soil} value of 83.33 cm ³ /sec is
1813		used.
1814		
1815	<u>g)</u>	Tier 2 remediation objectives for the indoor inhalation exposure route shall be
1816		calculated for both soil gas and groundwater if a Q_{soil} value of 0.0 cm ³ /sec is used.
1817		
1818	<u>h)</u> f)	If the calculated Tier 2 soil remediation objective for an applicable exposure route
1819		is more stringent than the corresponding Tier 1 remediation objective, then the
1820		Tier 1 remediation objective applies.
1821		
1822	i) g)	If the calculated Tier 2 soil remediation objective for an exposure route is more
1823	<i>40</i>	stringent than the Tier 1 soil remediation <u>objectives</u> objectives for the other
1824		exposure routes, then the Tier 2 calculated soil remediation objective applies and
1825		Tier 2 soil remediation objectives for the other exposure routes are not required.
1826		5 1 1
1827	i) h)	If the calculated Tier 2 soil remediation objective is less stringent than one or
1828	/ موجع	more of the soil remediation objectives for the remaining exposure routes, then
1829		the Tier 2 values are calculated for the remaining exposure routes route(s) and the
1830		most stringent Tier 2 calculated value applies.
1831		
1832	k)	If a contaminant has both carcinogenic and noncarcinogenic effects for any
1833		applicable exposure route or receptor, remediation objectives shall be calculated
1834		for each effect and the more stringent remediation objective shall apply. The
1835		toxicological-specific information is described in Section 742,705(d).
1836		
1837	(Sourc	e: Amended at 36 III. Reg. effective)
1838	(······································
1839	Section 742.6	05 Land Use
1840		
1841	a)	Present and post-remediation land use is evaluated in a Tier 2 evaluation.
1842		Acceptable exposure factors for the Tier 2 evaluation for residential.
1843		industrial/commercial, and construction worker populations are provided in the
1844		far right column of Appendix C, Tables Band D, and M. Use of exposure factors
1845		different from those in Appendix C. Tables B. and D. and M must be approved by
1846		the Agency as part of a Tier 3 evaluation.

1847			
1848	b)	If a T	ier 2 evaluation is based on an industrial/commercial property use, then:
1849			
1850		1)	Construction worker populations shall also be evaluated, except for the
1851			indoor inhalation exposure route; and
1852			
1853		2)	Institutional controls are required in accordance with Subpart J.
1854			
1855	(Sou	rce: An	nended at 36 III. Reg, effective)
1856			
1857	Section 742.	610 Cł	nemical and Site Properties
1858			
1859	a)	Physi	cal and Chemical Properties of Contaminants
1860		Tier 2	2 evaluations require information on the physical and chemical properties of
1861		the co	ontaminants of concern. The physical and chemical properties used in a Tier
1862		2 eva	luation are contained in Appendix C, Table E. If the site has contaminants
1863		not in	cluded in this table, a person may request the Agency to provide the
1864		applic	cable physical and chemical input values or may propose input values under
1865		Subp	art I. If a person proposes to apply values other than those in Appendix C,
1866		Table	E, or those provided by the Agency, the evaluation shall be considered
1867		under	Tier 3.

1914	Section 742.7	700 Tie	r 2 Soi	l Evaluation Overview
1915				
1916	a)	Tier 2	remedi	ation objectives are developed through the use of models which
1917	u)	allow	site-sne	ecific data to be considered. Appendix C. Tables A and C and L list
1918		equati	ons that	t shall be used under a Tier 2 evaluation to calculate soil remediation
1919		object	ives pre	escribed by SSL and RBCA and the modified L&E models
1920		respec	tively.	(See also Appendix C. Illustration A.)
1921		respec	u verj.	
1922	h)	Annen	dix C	Table A lists equations that are used under the SSL model (See also
1923	0)	Appen	dix C	Illustration A) The SSL model has equations to evaluate the
1924		follow	ving hin	nan exposure routes.
1925		10110 11	1116 1141	
1926		1)	Soil ir	ngestion exposure route.
1927		1)	bon n	
1928		2)	Outdo	or Inhalation exposure route: and for:
1929		<i>-</i> ,	June	<u>And and a postile route, and</u> for.
1930			<u> </u>	Organic contaminants:
1931				
1932			B)	Fugitive dust: and
سار د			<i>D</i>)	r abraro aubi, una

1933			
1934		3)	Soil component of the groundwater ingestion exposure route.
1935		,	
1936	c)	Evalua	ation of the dermal exposure route is not required under the SSL model.
1937	,		1 1
1938	d)	Apper	ndix C, Table C lists equations that are used under the RBCA model. (See
1939	,	also A	ppendix C, Illustration A.) The RBCA model has equations to evaluate
1940		humar	n exposure based on the following:
1941			1
1942		1)	The combined exposure routes of outdoor inhalation of vapors and
1943		,	particulates, soil ingestion and dermal contact with soil:
1944			,
1945		2)	The outdoor inhalation exposure ambient vapor inhalation (outdoor) route
1946		_)	from subsurface soils:
1947			
1948		3)	Soil component of the groundwater ingestion route: and
1949		-)	
1950		4)	Groundwater ingestion exposure route.
1951		•)	
1952	e)	Apper	ndix C. Table L lists equations that are used under the modified J&E model.
1953	<u>-</u> ,	The m	odified J&E model has equations to evaluate human exposure by the indoor
1954		inhala	tion exposure route. The modified model allows for the development of soil
1955		gas rei	mediation objectives.
1956		B	
1957	f) e)	The ec	nuations in either Appendix C. Table A -or C. or L. may be used to calculate
1958	<u>~1</u> ~)	remed	intion objectives for each contaminant of concern under Tier 2 if the
1959		follow	ing requirements are met.
1960		10110	mg requirements are met
1961		1)	The Tier 2 soil or soil gas remediation objectives for the ingestion and
1962		-)	outdoor inhalation exposure routes shall use the applicable equations from
1963			the same approach (i.e. SSL equations in Appendix C. Table C). For the
1964			indoor inhalation exposure route, only the I&E equations can be used
1965			<u>mader miniation enposite route, only nie veels equations ear ee asea.</u>
1966		2)	The equations used to calculate soil remediation objectives for the soil
1967		-)	component of the groundwater ingestion exposure route are not dependent
1968			on the approach utilized to calculate soil remediation objectives for the
1969			other exposure routes. For example, it is acceptable to use the SSL
1970			equations for calculating Tier 2 soil remediation objectives for the
1971			ingestion and outdoor inhalation exposure routes and the RBCA equations
1972			for calculating Tier 2 soil remediation objectives for the soil component of
1973			the groundwater ingestion exposure route
1974			and Droman and and Dobate route.
1975		3)	Combining equations from Appendix C. Tables A -and C. and L. to form a
1710		2,	comments of automs from representations of a function of and D to form a

1976 1977		new model is not allowed. In addition, Appendix C, Tables A, and C, and \underline{L} must use their own applicable parameters identified in Appendix C,
1978		Tables B, and D, and M, respectively.
1980	a) D	In calculating soil or gas remediation objectives for industrial/commercial
1981	51-)	property use, applicable calculations shall be performed twice: once using
1982		industrial/commercial population default values and once using construction
1983		worker population default values. The more stringent soil or gas remediation
1984		objectives derived from these calculations must be used for further Tier 2
1985		evaluations. The indoor inhalation exposure route does not apply to the
1986		construction worker population.
1987		
1988	<u>h)g</u>	Tier 2 data sheets provided by the Agency shall be used to present calculated Tier
1989		2 remediation objectives, if required by the particular program for which
1990		remediation is being performed.
1991		
1992	<u>i)</u> h)	The RBCA equations which rely on the parameter Soil Water Sorption
1993		Coefficient (k _s) can only be used for ionizing organics and inorganics by
1994		substituting values for k _s from Appendix C, Tables I and J, respectively. This will
1995		also require the determination of a site-specific value for soil pH.
1996		
1997	j)	For the outdoor inhalation exposure route, it is acceptable to use either Section
1998		742.710 to develop a soil remediation objective or Section 742.712 to develop a
1999		soil gas remediation objective to determine compliance with the pathway.

2163	E)	For Eq	uation S7, a numerical value for VF' can be calculated in
2164		accorda	ance with subsection $(c)(2)(G)$ of this Section. The
2165		remain	ing parameters in Equation S7 have either default values
2166		listed in	n Appendix C, Table B or toxicological-specific information
2167		(i.e., U	RF), which can be obtained by following the guidelines in
2168		<u>OSWE</u>	R Directive 9285.7-53, as incorporated by reference in
2169		Section	n 742.210 from IRIS or requested from the program under
2170		which	the remediation is being performed.
2171			
2172	F)	The VI	F can be calculated for residential and industrial/commercial
2173		populat	tions using one of the following equations based on the
2174		inform	ation known about the contaminant source and receptor
2175		populat	tion:
2176			
2177		i)	Equation S8, in conjunction with Equation S10, is used to
2178			calculate VF assuming an infinite source of contamination;
2179			or
2180			
2181		ii)	If the area and depth of the contaminant source are known
2182		,	or can be estimated reliably, mass limit considerations may
2183			be used to calculate VF using Equation S26.
2184			
2185	G)	The VI	' can be calculated for the construction worker populations
2186	,	using o	ne of the following equations based on the information
2187		known	about the contaminant source:
2188			
2189		i)	Equation S9 is used to calculate VF' assuming an infinite
2190		,	source of contamination; or

2192 ii) If the area and depth of the contaminant source are known 2193 or can be estimated reliably, mass limit considerations may be used to calculate VF' using Equation S27. 2194 2195 3) Fugitive Dust 2196 2197 2198 Equations S11 through S16 are used to calculate Tier 2 soil A) remediation objectives using the SSL fugitive dust model for the 2199 outdoor inhalation exposure route. Equation S11 is used to 2200 2201 calculate soil remediation objectives for noncarcinogenic contaminants in fugitive dust for residential and 2202 2203 industrial/commercial populations. Equation S12 is used to calculate soil remediation objectives for noncarcinogenic 2204 contaminants in fugitive dust for construction worker populations. 2205 2206 Equation S13 is used to calculate soil remediation objectives for 2207 carcinogenic contaminants in fugitive dust for residential and industrial/commercial populations. Equation S14 is used to 2208 2209 calculate soil remediation objectives for carcinogenic contaminants in fugitive dust for construction worker populations. Equations 2210 2211 S15 and S16 are used for calculating numerical quantities for some of the parameters in Equations S11 through S14. 2212 2213 2214 B) For Equation S11, a numerical value can be calculated for the Particulate Emission Factor (PEF) using Equation S15. This 2215 2216 equation relies on various input parameters from a variety of sources. The remaining parameters in Equation S11 have either 2217 SSL default values listed in Appendix C, Table B or toxicological-2218 2219 specific information (i.e., RfC), which can be obtained by following the guidelines in OSWER Directive 9285.7-53, as 2220 incorporated by reference in Section 742.210from IRIS or 2221 requested from the program under which the remediation is being 2222 performed. 2223 2224 2225 C) For Equation S12, a numerical value for the Particulate Emission 2226 Factor for Construction Worker (PEF') can be calculated using 2227 Equation S16. The remaining parameters in Equation S12 have either SSL default values listed in Appendix C, Table B or 2228 2229 toxicological-specific information (i.e., RfC), which can be obtained by following the guidelines in OSWER Directive 9285.7-2230 53, as incorporated by reference in Section 742.210from IRIS or 2231 requested from the program under which the remediation is being 2232 performed. 2233

Equation R7 is used to calculate soil remediation objectives for carcinogenic contaminants. Equation R8 is used to calculate soil remediation objectives for noncarcinogenic contaminants. For Equation R7, the carcinogenic risk-based screening level for air (RBSL_{air}) and the volatilization factor for soils below one meter to ambient air (VF_{samb}) have numerical values that are calculated using Equations R9 and R11, respectively. Both equations rely on input parameters from a variety of sources. The noncarcinogenic risk-based screening level for air (RBSL_{air}) in Equation factor for soils below one meter to ambient are variety of sources.

2406		
2407	c)	Soil Component of the Groundwater Ingestion Exposure Route
2408	,	
2409		1) Equation R12 forms the basis for deriving Tier 2 remediation objectives
2410		for the soil component of the groundwater ingestion exposure route using
2411		the RBCA approach. The parameters, groundwater at the source
2412		(GW_{source}) and Leaching Factor (LF _{sw}), have numerical values that are
2413		calculated using Equations R13 and R14, respectively.
2414		
2415		2) Equation R13 requires numerical values that are calculated using Equation
2416		R15.
2417		
2418		3) Equation R14 requires numerical values that are calculated using
2419		Equations R21, R22, and R24. For non-ionizing organics, the Soil Water
2420		Sorption Coefficient (k_0) shall be calculated using Equation R20. For
2421		ionizing organics and inorganics, the values for f_{k} are listed in Appendix
2422		C. Tables I and J. respectively. The pH-dependent k _e values for ionizing
2423		organics can be calculated using Equation R20 and the pH dependent K _{oc}
2424		values in Appendix C. Table I. The remaining parameters in Equation
2425		R14 are field measurements or default values listed in Appendix C. Table
2426		D.
2427		
2428	d)	The default value for GW _{comp} is the Tier 1 groundwater remediation objective.
2429		For chemicals for which there is no Tier 1 groundwater remediation objective, the
2430		value for GW _{comp} shall be the concentration determined according to the
2431		procedures specified in 35 III. Adm. Code 620. Subpart F. As an alternative to
2432		using the above concentrations, GW_{comp} may be developed using Equations R25
2433		and R26. if approved institutional controls are in place as may be required in
2434		Subpart J.

2438 Sectio	n 742.7	17 J&E Soil Gas Equations for the Indoor Inhalation Exposure Route
2439		
2440	<u>a)</u>	This Section sets forth the equations and parameters to be used to develop Tier 2
2441		soil gas remediation objectives for the indoor inhalation exposure route using the
2442		modified J&E model.
2443		
2444	<u>b)</u>	Equations J&E1 and J&E2 calculate, for carcinogens and noncarcinogens,
2445		respectively, an acceptable concentration of the contaminant of concern in indoor
2446		air that adequately protects humans who inhale this air. Equation J&E3 converts
2447		indoor air concentrations from parts per million volume to milligrams per cubic
2448		meter.

2449		
2450	c)	Equation J&E4 calculates an acceptable concentration of the contaminant of
2451	- <u></u>	concern in the soil gas at the source of contamination. This calculation is made
2452		using:
2453		<u></u>
2454		1) an attenuation factor developed in accordance with Equations I&F7
2455		through 18: and
2456		<u>unough ro, unu</u>
2457		2) the acceptable concentration of the contaminant of concern in indoor air
2458		calculated in accordance with Equation 1&F1 (for carcinogens) or 1&F2
2459		(for noncarcinogens)
2460		(101 honouromogens).
2460	d)	The attenuation factor (Equation $1\&E7$ or $1\&E8$) accounts for the following
2462	<u>u</u>)	nrocesses:
2462		
2403		1) Migration of contaminants from the source unwards through the vadage
2404		<u>1)</u> <u>Wingration of containmants from the source upwards through the vadose</u>
2405		<u>2011e.</u>
2400		2) Migration of contaminants through the contam filled creaks in the clab on
2407		2) <u>Wingration of containmains through the earthen fined cracks in the stab-on-</u> grade or becoment floor and wells; and
2408		grade of basement noor and wans, and
2409		2) Mixing of the contominants with air incide the building
2470		<u>5)</u> <u>Mixing of the containmants with all miside the building.</u>
2471	2)	Equation IRE7 is used when the mode of conteminent transment is both diffusion
2472	<u>e</u>]	Equation $J \approx E/Is$ used when the mode of contaminant transport is both diffusion and advaction. In this geometric the Q value equals $82.22 \text{ cm}^3/\text{cos}$ as described
2475		and advection. In this scenario, the Q _{soil} value equals 85.55 cm /sec as described
2474		<u>III Section 742.303.</u>
2475	6	Equation 10-EQ is used when the used a first structure to 1:00 and 1
2470	<u>1)</u>	Equation J&E8 is used when the mode of contaminant transport is diffusion only.
2477		In this scenario, the Q _{soil} value equals 0.0 cm ² /sec as described in Section
2478		<u></u>
2479	``	
2480	g)	Equations J&E9a through J&E18 calculate input parameters for either Equation
2481		J&E / or J&E8 (the equations used to calculate an attenuation factor). These
2482		equations assume there are "n" different soil layers between the source of the
2483		contamination and the floor of the building. Equations J&E11, 16, 17 and 18 shall
2484		be used to calculate the needed parameters for each of the n layers (the general
2485		soil layer is referred to as soil layer "i" and $i = 1, 2,, n$). Equations J&E16, 17,
2486		and 18 shall also be used to calculate needed parameters for the soil in the cracks
2487		of the floor of the building (it is through these cracks that contaminants flow from
2488		the subsurface into the building).
2489		

2490	h)	The det	fault re	presentative subsurface temperature for Henry's Law Constant is
2491		13°C.	This va	alue shall be used, as appropriate, in all calculations needed to
2492		represe	nt the s	system by which contaminants migrate through the subsurface.
2493		<u>.</u>		······································
2494	i)	The cal	culated	d soil gas remediation objective shall be compared with the saturated
2495		vapor c	oncent	ration (C_v^{sat} , Equation J&E6b) for each volatile chemical. The
2496		calcula	ted C_v^{s}	^{at} shall use the default representative subsurface temperature
2497		specifie	ed in si	ibsection (g). If the calculated soil gas remediation objective is
2498		greater	than C	c_{x}^{sat} , then C_{y}^{sat} is used as the soil gas remediation objective.
2499		<u> </u>		<u>, , , , , , , , , , , , , , , , , , , </u>
2500	i)	The cal	culated	soil gas remediation objective shall be compared to concentrations
2501	<i>علي</i> لي	of soil	gas col	lected at a depth at least 3 feet below ground surface and above the
2502		saturate	ed zone	Let a valid sample cannot be collected a soil gas sampling plan
2503		shall be	e appro	ved by the Agency under Tier 3
2504		<u>011011 0 0</u>	<u>appro</u>	ved of the right funder file 5.

2508				
2509	Section 742.8	805 Tier	2 Gro	undwater Remediation Objectives
2510			- 010	
2511	a)	To deve	elon a s	proundwater remediation objective under this Section that exceeds
2512	~)	the app	licable	Tier 1 groundwater remediation objective or for which there is no
2513		Tier I g	roundy	vater remediation objective a person may request approval from the
2514		Agency	if the	person has performed the following.
2515		Berrej		person ma performed die fono milg.
2516		1)	Identif	ied the horizontal and vertical extent of groundwater for which the
2517		-)	Tier 2	groundwater remediation objective is sought.
2518				
2519		2)	Taken	corrective action, to the maximum extent practicable to remove any
2520		_/	free pr	oduct:
2521			I	,
2522		3)	Using	Equation R26 in accordance with Section 742.810, demonstrated
2523		,	that the	e concentration of any contaminant of concern in groundwater will
2524			meet:	
2525				
2526			A)	The applicable Tier 1 groundwater remediation objective at the
2527			,	point of human exposure: or
2528				
2529			B)	For any contaminant of concern for which there is no Tier 1
2530			,	groundwater remediation objective. the concentration determined
2531				according to the procedures specified in 35 Ill. Adm. Code 620 at
2532				the point of human exposure. A person may request the Agency to

2533			provide these concentrations or may propose these concentrations
2534			under Subpart I;
2535			
2536		4)	Using Equation R26 in accordance with Section 742.810, demonstrated
2537			that the concentration of any contaminant of concern in groundwater
2538			within the minimum or designated maximum setback zone of an existing
2539			potable water supply well will meet the applicable Tier 1 groundwater
2540			remediation objective or, if there is no Tier 1 groundwater remediation
2541			objective, the concentration determined according to the procedures
2542			specified in 35 III. Adm. Code 620. A person may request the Agency to
2543			provide these concentrations or may propose these concentrations under
2544			Subpart I;
2545			
2546		5)	Using Equation R26 in accordance with Section 742.810, demonstrated
2547			that the concentration of any contaminant of concern in groundwater
2548			discharging into a surface water will meet the applicable water quality
2549			standard under 35 Ill. Adm. Code 302;
2550			
2551		6)	Demonstrated that the source of the release is not located within the
2552			minimum or designated maximum setback zone or within a regulated
2553			recharge area of an existing potable water supply well; and
2554			
2555		7)	If the selected corrective action includes an engineered barrier as set forth
2556			in Subpart K to minimize migration of contaminantscontaminant of
2557			concern from the soil to the groundwater, demonstrated that the
2558			engineered barrier will remain in place for post-remediation land use
2559			through an institutional control as set forth in Subpart J.
2560

2608	Contaminat	ion	
2609 2610 2611 2612 2613 2614 2615	a)	Equation R2 groundwater (dimensions dimensional horizontal di	6 predicts the contaminant concentration along the centerline of a plume emanating from a vertical planar source in the aquifer S_w wide and S_d deep). This model accounts for both three- dispersion (x is the direction of groundwater flow, y is the other rection, and z is the vertical direction) and biodegradation.
2616 2617		1) The j	parameters in this equation are:
2017		Х	= distance from the planar source to the location of concern, along the centerline of the groundwater plume (i.e., $y = 0$, $z = 0$)
		C _x	= the concentration of the contaminant at a distance X from the source, along the centerline of the plume
		C _{sour}	c_{ce} = the greatest potential concentration of the contaminant of concern in the groundwater at the source of the contamination, based on the concentrations of contaminants in groundwater due to the release and the projected concentration of the contaminant migrating from the soil to the groundwater. As indicated above, the model assumes a planar source discharging groundwater at a concentration equal to C _{source} .
		$\alpha_{\rm x}$	= dispersivity in the x direction (i.e., Equation R16)
		α_y	= dispersivity in the y direction (i.e., Equation R17) = dispersivity in the z direction (i.e., Equation R18)
		U U	= specific discharge (i.e., actual groundwater flow velocity through a porous medium; takes into account the fact that the groundwater actually flows only through the pores of the subsurface materials) where the aquifer hydraulic conductivity (K), the hydraulic gradient (I) and the total soil porosity $\Theta_{\rm T}$ must be known (i.e., Equation R19)
		λ	 first order degradation constant obtained from Appendix C, Table E or from measured groundwater data
		S_w	= width of planar groundwater source in the y direction
2618		S_d	= depth of planar groundwater source in the z direction
2619 2620 2621		2) The f K, I,	following parameters are determined through field measurements: U, Θ_T , S _w , S _d .
2622 2623 2624		A)	The determination of values for U, K, I and Θ_T can be obtained through the appropriate laboratory and field techniques;

2625 2626		B)	From the immediate down-gradient edge of the source of the
2620			ground water contamination values for S_w and S_d shall be
2628			source which exceeds the Tier 1 groundwater at the
2629			objective. Signation as the death of groundwater remediation
2630			which exceeds the Tier 1 groundwater remodiation a light
2631			which exceeds the field groundwater remediation objective; and
2632		(\mathbf{C})	Total soil porosity can also be calculated using Equation D22
2633		0)	rotar son porosity can also be calculated using Equation R23.
2634	b)	Once value	s are obtained for all the input parameters identified in subsection (a)
2635	0)	of this Sect	ion the contaminant concentration $C_{\rm c}$ along the centerline of the
2636		plume at a	distance X from the source shall be calculated so that X is the distance.
2637		from the do	wn-gradient edge of the source of the contamination at the site to the
2638		point where	the contaminant concentration is equal to the Tier 1 groundwater
2639		remediation	objective or concentration determined according to the procedures
2640		specified in	35 Ill. Adm. Code 620. Subpart F.
2641		Specifica in	50 m. rum. 0000 020; 500 part 1.
2642		1) If th	ere are any potable water supply wells located within the calculated
2643		dista	ance X, then the Tier 1 groundwater remediation objective or
2644		cone	centration shall be met at the edge of the minimum or designated
2645		max	imum setback zone of the nearest notable water supply down gradient
2646		oft	the source. To demonstrate that a minimum or maximum setback zone
2647		ofa	notable water supply well will not be impacted above the applicable
2648		Tier	1 groundwater remediation objective or concentration determined
2649		acco	ording to the procedures specified in 35 Ill. Adm. Code 620. Subport F.
2650		X sł	all be the distance from the Course location to the edge of the setback
2651		zone	2.
2652			
2653		2) To c	emonstrate that no surface water is adversely impacted X shall be the
2654		dista	ince from the down-gradient edge of the source of the contamination
2655		site	to the nearest surface water body. This calculation must show that the
2656		cont	aminant in the groundwater at this location (C_{ν}) does not exceed the
2657		appl	icable water quality standard.

2698 SUBPART I: TIER 3 EVALUATION
2699
2700 Section 742.900 Tier 3 Evaluation Overview
2701
a) Tier 3 sets forth a flexible framework to develop remediation objectives outside of
the requirements of Tiers 1 and 2. Although Tier 1 and Tier 2 evaluations are not
2704 prerequisites to conduct Tier 3 evaluations, data from Tier 1 and Tier 2 can assist
in developing remediation objectives under a Tier 3 evaluation.
2706
b) The level of detail required to adequately characterize a site depends on the
2708 particular use of Tier 3. Tier 3 can require additional investigative efforts beyond
those described in Tier 2 to characterize the physical setting of the site. However,
2710 in situations where remedial efforts have simply reached a physical obstruction

2711		additic	onal inve	estigation may not be necessary for a Tier 3 submittal.		
2712		Situati	Situations that can be considered for a Tion 2 conduction in the last one and			
2713	0)	Situations that can be considered for a fifer 3 evaluation include, but are not				
2714		mmee	1 10:			
2715		1)	M. J.C.			
2/10		1)	Modin	cation of parameters not allowed under 11er 2;		
2/1/		•	TT C			
2/18		2)	Use of	models different from those used in Tier 2;		
2719		2)				
2720		3)	Use of	additional site data, such as results of indoor air sampling, to		
2721			improv	e or confirm predictions of exposed receptors to contaminants of		
2722			concern	n;		
2723						
2724		4)	Analys	is of site-specific risks using formal risk assessment, probabilistic		
2725			data an	alysis, and sophisticated fate and transport models (e.g., requesting		
2726			a target	t hazard quotient greater than 1 or a target cancer risk greater than 1		
2727			in 1,00	0,000);		
2728						
2729		5)	Reques	sts for site-specific remediation objectives because an assessment		
2730			indicat	es further remediation is not practical;		
2731				-		
2732		6)	Incomp	olete human exposure <u>parkwayspathway(s)</u> not excluded under		
2733			Subpar	t C;		
2734						
2735		7)	Use of	toxicological-specific information not available from the sources		
2736		,	listed in	n Tier 2:		
2737				,		
2738		8)	Land u	ses which are substantially different from the assumed residential		
2739		-)	or indu	strial/commercial property uses of a site (e.g. a site will be used for		
2740			recreat	ion in the future and cannot be evaluated in Tier 1 or 2): and		
2741			1001000			
2742		9)	Reques	ts for site-specific remediation objectives that exceed Tier 1		
2743		~)	ground	water remediation objectives so long as the following is		
2743			demon	strated.		
2744			demon.			
2745			۵)	To the extent practical the exceedance of the groundwater quality		
2740			лј	standard has been minimized and hereficial use appropriate to the		
2747				sumaaru nas been minimizeu ana beneficial use appropriale io ine		
2740				groundwater that was impacted has been returned, and		
∠147 2750			D)	Any threat to have me health on the and in the		
2751			D)	Any inreal to numan nearin or the environment has been		
2751				minimizea- [415 ILCS 5/58.5(d)(4)(A)]; and		
2752						

.

2753		10) Use of building control technologies, other than those described in Subpart
2754		L, to prevent completion of the indoor inhalation exposure route.
2755	1	
2756	d)	For requests of a target cancer risk ranging between 1 in 1,000,000 and 1 in
2757		10,000 at the point of human exposure or a target hazard quotient greater than 1 at
2758		the point of human exposure, the requirements of Section 742.915 shall be
2759		followed. Requests for a target cancer risk exceeding 1 in 10,000 at the point of
2760		human exposure are not allowed.
2761		
2762	e)	Requests for approval of a Tier 3 evaluation must be submitted to the Agency for
2763		review under the specific program under which remediation is performed. When
2764		reviewing a submittal under Tier 3, the Agency shall consider whether the
2765		interpretations and conclusions reached are supported by the information
2766		gathered- [415 ILCS 58.7(e)(1)]. The Agency shall approve a Tier 3 evaluation if
2767		the person submits the information required under this Part and establishes
2768		through such information that public health is protected and that specified risks to
2769		human health and the environment have been minimized.
2770		
2771	f)	If contaminants of concern include polychlorinated biphenyls (PCBs), requests for
2772	,	approval of a Tier 3 evaluation must additionally address the applicability of 40
2773		CFR 761.

2977			SUBPART J: INSTITUTIONAL CONTROLS
2978			
2979	Section 742.1	000 In	stitutional Controls
2980			
2981	a)	Institu	tional controls in accordance with this Subpart must be placed on the
2982	,	proper	ty when remediation objectives are based on any of the following
2983		assum	ptions:
2984			*
2985		1)	Industrial/Commercial property use;
2986		<i>.</i>	
2987		2)	Target cancer risk greater than 1 in 1,000,000;
2988		,	
2989		3)	Target hazard quotient greater than 1;
2990		,	
2991		4)	Engineered barriers;
2992		<i>,</i>	
2993		5)	The point of human exposure is located at a place other than at the source;
2994			
2995		6)	Exclusion of exposure routes; or
2996			
2997		7)	Use of remediation objectives based on a diffusion only mode of
2998		,	contaminant transport for the indoor inhalation exposure route;
2999			
3000		<u>8)</u>	Use of an indoor inhalation building control technology; or
3001			
3002		<u>9)7)</u>	Any combination of the above.
3003			
3004	b)	The A	gency shall not approve any remediation objective under this Part that is
3005	,	based	on the use of institutional controls unless the person has proposed
3006		institu	tional controls meeting the requirements of this Subpart and the
3007		require	ements of the specific program under which the institutional control is
3008		propos	sed. A proposal for approval of institutional controls shall provide
3009		identif	ication of the selected institutional controls from among the types
3010		recogn	ized in this Subpart.

3011			
3012	c)	The follow	ing instruments may be institutional controls subject to the
3013	,	requiremen	ts of this Subpart J and the requirements of the specific program under
3014		which the i	nstitutional control is proposed:
3015			
3016		1) No	Further Remediation Letters:
3017		,	,
3018		2) Env	vironmental Land Use Controls:
3019		/	· · · · · · · · · · · · · · · · · · ·
3020		3) Lan	d Use Control Memoranda of Agreement:
3021		/	8,
3022		4) Ord	linances adopted and administered by a unit of local government:
3023		.,	
3024		5) Agi	et the case of a property owner (or, in the case of a petroleum
3025		leak	king underground storage tank, the owner or operator of the tank) and a
3026		hig	hway authority with respect to any contamination remaining under
3027		hig	hways: and
3028		0	
3029		6) Agr	eements between a highway authority that is also the property owner
3030		(or.	in the case of a petroleum leaking underground storage tank, the
3031		owi	her or operator of the tank) and the Agency with respect to any
3032		con	tamination remaining under the highways.
3033			
3034	d)	No Further	Remediation Letters and Environmental Land Use Controls that meet
3035	,	the require	ments of this Subpart and the recording requirements of the program
3036		under whic	h remediation is being performed are transferred with the property.
3037

3039	Ň		
3040	Section 742.1	010 Enviro	nmental Land Use Controls
3041			
3042	a)	An Enviror	mental Land Use Control (ELUC) is an institutional control that may
3043	,	be used und	der this Part to impose land use limitations or requirements related to
3044		environmen	ntal contamination. ELUCs are only effective when approved by the
3045		Agency in a	accordance with this Part. Activities or uses that may be limited or
3046		required in	clude, but are not limited to, prohibition of use of groundwater for
3047		potable pur	poses, restriction to industrial/commercial uses, operation or
3048		maintenanc	e of engineered barriers, indoor inhalation building control
3049		technologie	es, or worker safety plans. ELUCs may be used in the following
3050		circumstan	ces:
3051			
3052		1) Wh	en No Further Remediation Letters are not available, including but not
3053		limi	ited to when contamination has migrated off-site or outside the

,

3054			remediation site; or
3055		•	
3056		2)	When No Further Remediation Letters are not issued under the program
3057			for which a person is undergoing remediation.
3058			
3059	b)	Record	ling requirements:
3060			
3061		1)	An ELUC approved by the Agency pursuant to this Section must be
3062			recorded in the Office of the Recorder or Registrar of Titles for the county
3063			in which the property that is the subject of the ELUC is located. A copy
3064			of the ELUC demonstrating that it has been recorded must be submitted to
3065			the Agency before the Agency will issue a no further remediation
3066			determination.
3067			
3068		2)	An ELUC approved under this Section will not become effective until
3069			officially recorded in the chain of title for the property that is the subject
3070			of the ELUC in accordance with subsection (b)(1) of this Section.
3071			
3072		3)	Reference to the recorded ELUC must be made in the instrument
3073			memorializing the Agency's no further remediation determination.
3074			Recording of the no further remediation determination and confirmation of
3075			recording must be in accordance with the requirements of the program
3076			under which the determination was issued.
3077			
3078		4)	The requirements of this Section do not apply to Federally Owned
3079		,	Property for which the Federal Landholding Entity does not have the
3080			authority under federal law to record land use limitations on the chain of
3081			title.
3082			
3083		5)	The requirements of this Section apply only to those sites for which a
3084		,	request for a no further remediation determination has not yet been made
3085			to the Agency by January 6, 2001.
3086			
3087	c)	Duratio	on:
3088	,		
3089		1)	Except as provided in this subsection (c), an ELUC shall remain in effect
3090		-)	in perpetuity.
3091			
3092		2)	At no time shall any site for which an ELUC has been imposed as a result
3093		-,	of remediation activities under this Part be used in a manner inconsistent
3094			with the land use limitation unless attainment of objectives appropriate for
3095			the new land use is achieved and a new no further remediation
3096			determination has been obtained and recorded in accordance with the

3097			progr	am under which the ELUC was first imposed or the Site Remediation
3098			Progr	ram (35 Ill. Adm. Code 740)- [415 ILCS 58.8(c)]. In addition, the
3099			appro	priate release or modification of the ELUC must be prepared by the
3100			Agen	cy and filed on the chain of title for the property that is the subject of
3101			the E	LUC.
3102				
3103			A)	For a Leaking Underground Storage Tank (LUST) site under 35
3104			,	Ill. Adm. Code 731, or 732, or 734 or a Site Remediation Program
3105				site under 35 Ill. Adm. Code 740, an ELUC may be released or
3106				modified only if the NFR Letter is also modified under the Site
3107				Remediation Program to reflect the change:
3108				
3109			B)	For a RCRA site under 35 III Adm Code 721-730 an ELUC may
3110			2)	be released or modified only if there is also an amended
3111				certification of closure or a permit modification
3112				continuation of closure of a permit mounteauton.
3113		3)	In add	dition to any other remedies that may be available, a failure to
3114		2)	comp	ly with the limitations or requirements of an FLUC may result in
3115			voida	nce of an Agency no further remediation determination in
3116			accor	dance with the program under which the determination was made

3184	(Sour	ce: Am	ended at 36 Ill. Reg., effective)
3185	× ×		
3186	Section 742.1	1015 O	rdinances
3187		-	
3188	a)	An or	dinance adopted by a unit of local government that effectively prohibits the
3189	,	install	ation of potable water supply wells (and the use of such wells) may be used
3190		as an i	institutional control to meet the requirements of Section 742.320(d) or
3191		742.80	05(a)(3) if the requirements of this Section are met. A model ordinance is
3192		found	in Appendix G. Ordinances prohibiting the installation of potable water
3193		supply	wells (and the use of such wells) that do not expressly prohibit the
3194		install	ation of potable water supply wells (and the use of such wells) by units of
3195		local	government may be acceptable as institutional controls if the requirements
3196		of this	s Section are met and a Memorandum of Understanding (MOU) is entered
3197		into u	nder subsection (i) of this Section. For purposes of this Section a unit of
3198		local	government is considered to be expressly prohibited from installing and
3199		using	potable water supply wells only if the unit of local government is included
3200		in the	prohibition provision by name. The prohibition required by this Section
3201		shall s	satisfy the following requirements at a minimum:
3202			
32.03		1)	The prohibition shall not allow exceptions for potable water well
3204		-)	installation and use other than for the adopting unit of local government:
3205			and the set of the set of the support of the support of the set by the set of
3206		2)	The prohibition shall apply at all depths and shall not be limited to
3207		-)	particular aquifers or other geologic formations:
3208			Partie and addition of caref Boologie roundations,
3209		3)	If the prohibition does not apply everywhere within the boundaries of the
3210		2)	unit of local government, the limited area to which the prohibition applies
3211			shall be easily identifiable and clearly defined by the ordinance (e.g.
3212			narrative descriptions accompanied by maps with legends or labels
3213			showing prohibition boundaries or narrative descriptions using fixed.
3214			common reference points such as street names). Boundaries of
3215			prohibitions limited by area shall be fixed by the terms of the ordinance
3216			and shall not be subject to change without amending the ordinance in
3217			which the prohibition has been adopted (e.g., no boundaries defined with
3218			reference to zoning districts or the availability of the public water supply):
3219			and
3220			
3221		4)	The prohibition shall not in any way restrict or limit the Agency's approval
3222		- /	of the use of the ordinance as an institutional control pursuant to this Part
3223			(e.g., no restrictions based on remediation program participation or no
3224			restrictions on persons performing remediation within the prohibition area
3225			who may use the ordinance).

.

\$ ~

3227 b) A request for approval of a local ordinance as an institutional control shall provide the following: 3229 3230 1) A copy of the ordinance restricting groundwater use certified by an official of the unit of local government in which the site is located that it is a true and accurate copy of the ordinance, muless the Agency and the unit of local government have entered an agreement under subsection (i) of this Section, in which case the request may alternatively reference the MOU. The ordinance mute demonstrate that potable use of groundwater from potable water supply wells is prohibited; 3237 2) A scaled map or mapsmap(s) delineating the area and extent of groundwater contaminants on concern in which the applicable remediation objectives including any measured data showing concentrations of contaminants of concern in which the applicable remediation objectives are exceeded; 3244 3) A scaled map delineating the boundaries of all properties under which groundwater is located that which exceeds the applicable groundwater remediation objectives; 3248 4) Information identifying the current <u>owners(s)</u> of each property identified in subsection (b)(3) of this Section; and 3250 5) A copy of the proposed written notification to the unit of local government that adopted the ordinance; 3251 5) A copy of the proposed written notification to the unit of local government that adopted the ordinance; 3252 A) The name and address of the unit of local government that adopted the ordinance;	3226								
3228 the following: 3229 1) A copy of the ordinance restricting groundwater use certified by an official of the unit of local government in which the site is located that it is a true and accurate copy of the ordinance, unless the Agency and the unit of local government have entered an agreement under subsection (i) of this 3234 3230 1) A copy of the ordinance, unless the Agency and the unit of local government have entered an agreement under subsection (i) of this 3234 3231 Section, in which case the request may alternatively reference the MOU. The ordinance must demonstrate that potable use of groundwater from potable water supply wells is prohibited; 3236 Ph A scaled <u>map or mapsmap(s)</u> delineating the area and extent of groundwater contamination modeled above the applicable remediation objectives including any measured data showing concentrations of contaminants of concern in which the applicable remediation objectives are exceeded; 3240 Objectives including any measured data showing concentrations of contaminants of concern in which the applicable groundwater remediation objectives; 3241 contaminants of concern in which the applicable groundwater remediation objectives; 3242 a scaled map delineating the boundaries of all properties under which groundwater is located that the averes of a scale and extent of scale the in subsection (b)(3) of this Section; and 3251 5) A copy of the proposed written notification to the unit of local government that adopted the ordinance and to the current owners identified in subsection (b)(4) of this S	3227	b)	A req	A request for approval of a local ordinance as an institutional control shall provide

3268	3267				institutional control;				
	3268								

ti 5 4.

3269 3270 3271		 E) A statement that use of the ordinance as an institutional control allows contamination above groundwater ingestion remediation objectives to remain in groundwater beneath the affected
3272 3273 3274		properties, and that the ordinance strictly prohibits human and domestic consumption of the groundwater;
3275 3276 3277		F) A statement as to the nature of the release and response action with the site name, site address, and Agency site number or Illinois inventory identification number; and
3278 3279 3280 3281 3282 3283		G) A statement that more information about the remediation site may be obtained by contacting the party requesting the use of the groundwater ordinance as an institutional control or by submitting a FOIA request to the Agency.
3283 3284 3285 3286 3287 3288 3289 3290 3291 3292	c)	Written notification proposed pursuant to subsection (b)(5) of this Section must be sent to the unit of local government that adopted the ordinance, as well as to all current property owners identified in subsection (b)(4). Written proof that the notification was sent to the unit of local government and the property owners shall be submitted to the Agency within 45 days from the date the Agency's no further remediation determination is recorded. Such proof may consist of the return card from certified mail, return receipt requested, a notarized certificate of service, or a notarized affidavit.
3293 3294 3295 3296 3297	d)	Unless the Agency and the unit of local government have entered into a MOU under subsection (i) of this Section, the current owner or successors in interest of a site who have received approval of use of an ordinance as an institutional control under this Section shall:
3298 3299 3300 3301 3302		1) Monitor activities of the unit of local government relative to variance requests or changes in the ordinance relative to the use of potable groundwater at properties identified in subsection (b)(3) of this Section; and
3303 3304 3305		2) Notify the Agency of any approved variance requests or ordinance changes within 30 days after the date such action has been approved.
3306 3307 3308 3309 3310	e)	The information required in subsections $(b)(1)$ through $(b)(5)$ of this Section and the Agency letter approving the groundwater remediation objective shall be submitted to the unit of local government. Proof that the information has been filed with the unit of local government shall be provided to the Agency.
3311	f)	Any ordinance or MOU used as an institutional control pursuant to this Section

¢ ,

3312 3313 3314 3315 3316		shall be recorded in the Office of the Recorder or Registrar of Titles of the county in which the site is located together with the instrument memorializing the Agency's no further remediation determination pursuant to the specific program within 45 days after receipt of the Agency's no further remediation determination.
2217	\sim	An institutional control approved under this Section shall not become offective
2210	g)	All institutional control approved under this Section shall not become effective
2210		until officially recorded in accordance with subsection (1) of this section. The
3319		person receiving the approval shall obtain and submit to the Agency within 30
3320		days after recording a copy of the institutional control demonstrating that it has
3321		been recorded.
3322	1 \	
3323	n)	The following shall be grounds for voidance of the ordinance as an institutional
3324		control and the instrument memorializing the Agency's no further remediation
3325		determination:
3326		
3327		1) Modification of the ordinance by the unit of local government to allow
3328		potable use of groundwater;
3329		
3330		2) Approval of a site-specific request, such as a variance, to allow potable
3331		use of groundwater at a site identified in subsection (b)(3) of this Section;
3332		
3333		3) Violation of the terms of an institutional control recorded under Section
3334		742.1005 or Section 742.1010; or
3335		
3336		4) Failure to provide notification and proof of such notification pursuant to
3337		subsection (c) of this Section.
3338		
3339	i)	The Agency and a unit of local government may enter into a MOU under this
3340		Section if the unit of local government has adopted an ordinance satisfying
3341		subsection (a) of this Section and if the requirements of this subsection are met.
3342		The MOU submitted to the Agency must match the form and contain the same
3343		substance as the model in Appendix H and shall include the following:
3344		
3345		1) Identification of the authority of the unit of local government to enter the
3346		MOU;
3347		
3348		2) Identification of the legal boundaries, or equivalent, under which the
3349		ordinance is applicable;
3350		
3351		3) A certified copy of the ordinance;
3352		
3353		4) A commitment by the unit of local government to notify the Agency of
3354		any variance requests or proposed ordinance changes at least 30 days prior

3479		<u>control</u>	under	Subpart J. This insti	tutional contro	l shall add	lress provisions for
3480		inopera	<u>ability b</u>	y requiring the follo	wing if the bui	lding cont	trol technology is
3481		rendere	ed inope	erable:			
3482			-				

F F

3483		<u>1)</u>	The site owner/operator shall notify building occupants and workers in
3484			advance of intrusive activities. The notification shall enumerate the
3485			contaminant of concern known to be present;
3486			
3487		<u>2)</u>	The site owner/operator shall require building occupants and workers to
3488			implement protective measures consistent with good industrial hygiene
3489			practice; and
3490			
3491		<u>3)</u>	For a school, the site owner/operator shall notify the Agency upon any
3492			building control technology being rendered inoperable. For the purposes
3493			of this subsection (e)(3), the term "school" means any public educational
3494			facility in Illinois, including grounds and/or campus, consisting of
3495			students, comprising one or more grade groups or other identifiable
3496			groups, organized as one unit with one or more teachers to give instruction
3497			of a defined type. Public educational facility includes, but is not limited
3498			to, primary and secondary (kindergarten-12 th grade), charter, vocational,
3499			alternative, and special education schools. Public educational facility does
3500			not include junior colleges, colleges, or universities.
3501			
3502	f)	Failure	to install or maintain a building control technology in accordance with a
3503		no furtl	her remediation determination shall be grounds for voidance of the
3504		determ	ination and the instrument memorializing the Agency's no further
3505		remedia	ation determination.
3506			
3507	(Sourc	e: Adde	ed at 36 Ill. Reg, effective)
3508			
3509	Section 742.1	<u>205 Bu</u>	ilding Control Technology Proposals
3510			
3511	A proposal to	<u>use a bu</u>	ilding control technology under this Subpart shall include the following
3512	information:		
3513			
3514	<u>a)</u>	A desci	ription of the site and physical site characteristics;
3515			
3516	<u>b)</u>	The cu	rrent extent and modeled migration of contamination;
3517			
3518	<u>c)</u>	<u>Geolog</u>	y, including soil types;
3519			
3520	<u>d)</u>	<u>Results</u>	and locations of sampling events;
3521			
3522	<u>e)</u>	Scaled	map of the area, including all buildings and man-made pathways;
3523			
3524	<u>f</u>)	A desci	ription of building characteristics and methods of construction, including a
3525		descrip	tion of man-made pathways; and

3526			
3527	g)	Present and p	post-remediation uses of the land above the area of contamination.
3528		including hur	man receptors at risk.
3529			
3530	(Sour	rce: Added at 3	6 Ill. Reg, effective)
3531			
3532	Section 742.	<u>1210 Building</u>	<u>Control Technology Requirements</u>
3533			
3534	<u>a)</u>	Natural atten	uation, access controls, and point of use treatment shall not be
3535		considered by	uilding control technologies.
3536			
3537	<u>b)</u>	For purposes	of determining compliance with remediation objectives under Tier
3538		<u>1, building co</u>	ontrol technologies are not recognized.
3539			
3540	<u>c)</u>	<u>The followin</u>	g building control technologies are recognized for purposes of
3541		pathway excl	usion under Section 742.312.
3542			
3543		<u>1)</u> <u>Sub-s</u>	lab depressurization (SSD) systems meeting the following
3544		requir	<u>cements:</u>
3545			
3546		<u>A)</u>	A suction pit is installed that is at least two cubic feet and extends
3547			at least 6 inches below the slab (larger suction pits may be
3548			excavated as needed to achieve the performance criteria in
3549			subsection $(c)(1)(B)$;
3550			
3551		<u>B)</u>	A PVC pipe of at least 3 inches in diameter extends from the
3552			suction pit to the intake side of an in-line fan capable of achieving
3553			a static vacuum of at least 0.25 inches water column (wc) at the
3554			suction point and measureable vacuum at the farthest edges of the
3555			area served by the suction pit under worst case conditions (all
3556			exhaust fans and heating systems running during cold weather) as
3557			determined by a differential pressure reading of at least -0.003
3558			inches we below the slab or visible downward flow of air at test
3559			holes using chemical or smoke sticks;
3560			
3561		C)	All visible cracks and joints in the slab (including the place where
3562			the pipe exits the slab) and foundation walls are sealed:
3563			
3564		D)	The pipe exhausts outside the building at least 10 feet above
3565		<u> </u>	ground and at least 10 feet from any door or window: and
3566			
3567		E)	Additional suction pits meeting the requirements of subsection
3568		<i>=</i> 7	(c)(1)(A) shall be installed as necessary to achieve measureable

*

3569			vacuum below the slab in all areas, including in any area where
3570			subsurface or foundation conditions (e.g., a sub-slab grade beam)
3571			prevent adequate suction field extension.
3572			
3573	<u>2)</u>	<u>Sub-r</u>	nembrane depressurization (SMD) systems meeting the following
3574		requir	rements:
3575		-	
3576		A)	A non-woven geotextile is installed on the exposed earthen
3577			material;
3578			
3579		B)	A cross-laminated polyethylene membrane liner at least 0.10 mm
3580			(or 4 mil) thick is placed over the geotextile and sealed to
3581			foundation walls using a low volatile adhesive that is
3582			recommended by the liner manufacturer (e.g., acrylic latex
3583			adhesive):
3584			
3585		C)	A 3 inch diameter PVC pipe extends from a hole cut in the liner to
3586			the intake side of an in-line fan canable of achieving a static
3587			vacuum of at least 0.25 inches water column (wc) at the riser pipe
3588			and measureable vacuum at the farthest edges of the liner under
3589			worst case conditions (all exhaust fans running during cold
3590			weather) as determined by a differential pressure reading of at least
3591			-0.003 inches we below the liner or visible downward flow of air
3592			in test holes using chemical or smoke sticks:
3593			
3594		D)	The pipe is sealed to the liner:
3595		<i>_</i> _	
3596		E)	The pipe exhausts outside the building at least 10 feet above
3597			ground and at least 10 feet from any door or window: and
3598			
3599		F)	No leaks based on smoke stick tests along the entire perimeter of
3600			the liner (i.e., at all sealed edges) with the fan running. Where
3601			leaks are identified, appropriate repairs are undertaken and smoke
3602			stick testing repeated until no leaks are detected.
3603			<u></u>
3604	3)	Meml	brane barrier systems when placed below concrete slabs meeting the
3605		follov	ving requirements:
3606			
3607		A)	The membrane is impermeable to volatile chemicals and is not less
3608		<i>L</i>	than 1.5 mm (or 60 mil) thick:
3609			
3609			

3610	<u>B)</u>	The membrane is sealed to foundation walls and any penetrating
3611		pipes according to membrane manufacturer/installer
3612		recommendations;
3613		
3614	<u>C)</u>	The membrane is installed in accordance with the manufacturer's
3615		requirements and by an applicator trained and approved by the
3616		manufacturer;
3617		
3618	<u>D)</u>	A smoke test of the membrane system (where smoke is injected
3619		below the installed liner prior to slab installation), in accordance
3620		with the manufacturer's requirements, is performed to ensure no
3621		leaks exist. Where leaks are identified, appropriate repairs are
3622		undertaken and smoke testing repeated until no leaks are detected;
3623		
3624	<u>E)</u>	The membrane is puncture resistant to slab installation
3625		construction activities and protected by sand layers or geotextiles
3626		as recommended by the manufacturer; and
3627		
3628	<u>F)</u>	Construction activities following membrane installation do not
3629		damage, puncture or tear the membrane or otherwise compromise
3630		its ability to prevent the migration of volatile chemicals.
3631		
3632	<u>4) Vente</u>	d raised floors meeting the following requirements:
3633		
3634	<u>A)</u>	An interconnected void system below the slab sufficient to allow
3635		free movement of air and communication of negative pressures to
3636		all points below the slab;
3637		
3638	<u>B)</u>	Sealing of all construction joints, open cracks, and penetrations
3639		through the slab (e.g., for utilities and riser pipes) with a low
3640		volatile caulk; and
3641		
3642	<u>C)</u>	At least one 3 inch diameter riser pipe venting to the atmosphere
3643		above the roof line (at least 10 feet from any doors or windows) for
3644		each 5000 square feet of membrane area, with the capability of
3645		converting passively vented floor systems to actively vented or
3646		SSD systems meeting the performance requirements of subsection
3647		(c)(1).

4028

4029 Chemical Name and Remediation Objective Notations

4030

4031 ^a For the outdoor inhalation exposure route, it is acceptable to determine compliance by

4032 meeting either the soil or soil gas remediation objectives. The soil remediation objectives for
 4033 the outdoor inhalation route are located in Appendix B, Tables A and B.

4034

ł s

4035	<u>b</u>	Calculated values correspond to a target hazard quotient of 1
4036		Caroanatod variaos correspond to a angor nazara quonent or 1.
4037	<u>c</u>	Calculated values correspond to a cancer risk level of 1 in 1,000,000.
4038		
4039	<u>d</u>	PCBs are a mixture of different congeners. The appropriate values to use for the
4040		physical/chemical and toxicity parameters depend on the congeners present at the site.
4041		Persons remediating sites should consult with BOL if calculation of Tier 2 or 3 remediation
4042		objectives is desired.
4043		
4044	e	The value shown is the Cysat value of the chemical in soil gas. The Cysat of the chemical
4045		becomes the remediation objective if the calculated value exceeds the Cvsat value or if there
4046		are no toxicity criteria available for the inhalation route of exposure.
4047		
4048	f	Value for the inhalation exposure route is based on Reference Concentration for elemental
4049		Mercury (CAS No. 7439-97-6). Inhalation remediation objectives only apply at sites where
4050		elemental Mercury is a contaminant of concern.

4060 <u>Chemical Name and Remediation Objective Notations</u>

4061

4062 ^a <u>Compliance is determined by meeting either the soil gas remediation objectives or the</u>

4063 groundwater remediation objectives. See Sections 742.505 and 742.515.

4064

*

f E

4065	<u>b</u>	Calculated values correspond to a target hazard quotient of 1.
4066		
4067	<u>c</u>	Calculated values correspond to a cancer risk level of 1 in 1,000,000.
4068		
4069	<u>d</u>	PCBs are a mixture of different congeners. The appropriate values to use for the
4070		physical/chemical and toxicity parameters depend on the congeners present at the site.
4071		Persons remediating sites should consult with BOL if calculation of Tier 2 or 3 remediation
4072		objectives is desired.
4073		
4074	<u>e</u>	Groundwater remediation objective calculated at 25°C. For Dalapon and 1.2-Dibromo-3-
4075		chloropropane, the critical temperature (Tc) and enthalpy of vaporization at the normal
4076		boiling point (Hv,b) are not available. For Xylenes (total), the enthalpy of vaporization at the
4077		normal boiling point (Hv,b) is not available.
4078		
4079	f	The value shown is the Cvsat value of the chemical in soil gas. The Cvsat of the chemical
4080		becomes the remediation objective if the calculated value exceeds the Cvsat value or if there
4081		are no toxicity criteria available for the inhalation route of exposure.
4082		
4083	g	The value shown is the solubility of the chemical in water. The solubility of the chemical
4084		becomes the remediation objective if the calculated value exceeds the solubility or if there
4085		are no toxicity criteria available for the ingestion route of exposure.
4086		
4087	<u>h</u>	Value for the inhalation exposure route is based on Reference Concentration for elemental
4088		Mercury (CAS No. 7439-97-6). Inhalation remediation objectives only apply at sites where
4089		elemental Mercury is a contaminant of concern.
4090		
4091	<u>i</u>	The value shown is the Groundwater Remediation Objective listed in Appendix B, Table E.

r N

01 <u>Chemical Name and Remediation Objective Notations</u>

4103 4104	<u>a</u>	Compliance is determined by meeting both the soil gas remediation objectives and the groundwater remediation objectives. See Sections 742.505 and 742.515.
4105 4106	<u>b</u>	Remediation objectives relying on this table require use of institutional controls in
4107	0	accordance with Subpart J.
4108	ē	<u>Calculated values correspond to a target hazard quotient of 1.</u>
4109	đ	
4110	ū	Calculated values correspond to a cancer risk level of 1 in 1,000,000.
4111		
4112	e	PCBs are a mixture of different congeners. The appropriate values to use for the
4113		physical/chemical and toxicity parameters depend on the congeners present at the site.
4114		Persons remediating sites should consult with BOL if calculation of Tier 2 or 3 remediation
4115		objectives is desired
4116		
4117	<u>f</u>	Groundwater remediation objective calculated at 25°C. For Dalapon and 1,2-Dibromo-3-
4118		chloropropane, the critical temperature (Tc) and enthalpy of vaporization at the normal
4119		boiling point (Hv,b) are not available. For Xylenes (total), the enthalpy of vaporization at the
4120		normal boiling point (Hv,b) is not available.
4121		
4122	g	The value shown is the Cysat value of the chemical in soil gas. The Cysat of the chemical
4123		becomes the remediation objective if the calculated value exceeds the Cysat value or if there
4124		are no toxicity criteria available for the inhalation route of exposure
4125		<u>are no tomony entena avanable for the miniation foute of exposure.</u>
4126	h	The value shown is the solubility of the chemical in water. The solubility of the chemical
4127		becomes the remediation objective if the calculated value exceeds the solubility or if there
4128		are no toxicity criteria available for the inhalation route of exposure
4120		are no toxicity enterna available for the initiation foute of exposure.
4120	i	Value for the inhalation exposure route is based on Reference Concentration for elemental
4131		Mercury (CAS No. 7439-97-6) Inhalation remediation objectives only apply at sites where
4131 4132		elemental Mercury is a contaminant of concern
A132		cionentar mereury is a containmant of concern.

<u>Chemical Abstracts Service (CAS) registry number. This number in the format xxx-xx-x, is</u> unique for each chemical and allows efficient searching on computerized databases.

4162	<u>a</u>	Soil remediation objectives are determined pursuant to 40 CFR 761, as incorporated by
4163		reference at Section 742.210(b) (the USEPA "PCB Spill Cleanup Policy"), for most sites;
4164		persons remediating sites should consult with BOL if calculation of Tier 2 or 3 remediation
4165		objectives is desired. PCBs are a mixture of different congeners. The appropriate values to
4166		use for the physical/chemical parameters depend on congeners present at the site.
4167		
4168	<u>b</u>	Dimensionless Henry's Law Constant at 13°C is not calculated because the chemical is not
4169		volatile and does not require evaluation under the indoor inhalation exposure route.
4170		
4171	<u>C</u>	<u>Dimensionless Henry's Law Constant = 20°C</u>
4172		
4173	<u>d</u>	These chemicals are ionizing and its K_{oc} value will change with pH. The K_{oc} values listed in
4174		this table is the effective K_{oc} at pH of 6.8. If the site-specific pH is a value other than 6.8, the
4175		K_{oc} value listed Appendix C, Table I should be used.
4176		
4177	e	The values in this table were taken from the following sources (in order of preference):
4178		SCDMS online database (http://www.epa.gov/superfund/sites/npl/hrsres/tools/scdm.htm);
4179		CHEMFATE online database (http://www.srcinc.com/what-we-
4180		do/databaseforms.aspx?id=381); PhysProp online database (http://www.srcinc.com/what-we-
4181		do/databaseforms.aspx?id-386); Water (http://www.epa.gov/ttn/chief/software/water/) for
4182		diffusivity values; and Handbook of Environmental Degradation Rates by P.H. Howard (1991)
4183		for first order degradation constant values.
4184		
4185

~

Chemical Abstracts Service (CAS) registry number. This number in the format xxx-xx-x, is unique for each chemical and allows efficient searching on computerized data bases. 4187

4188

^a Soil Remediation objectives are determined pursuant to 40 CFR 761, as incorporated by
reference at Section 732.104 (the USEPA "PCB Spill Cleanup Policy"), for most sites; persons
remediating sites should consult with BOL if calculation of Tier 2 soil remediation objectives
is desired.

4217	Section 742.APPENDIX F Environmental Land Use Control
4218	PREPARED BY:
4220	Name:
	Address:
4221 4222	
4223 4224	RETURN TO:
	Name:
	Address:
4225 4226	THE ABOVE SPACE FOR RECORDER'S OFFICE
4227 4228	Model Environmental Land Use Control
4229	THIS ENVIRONMENTAL LAND USE CONTROL ("ELUC"), is made this
4020	day of, 20 by, ("Property Owner") of the real property located at the common address ("Property").
4230 4231	WHEREAS, 415 ILCS 5/58.17 and 35 Ill. Adm. Code 742 provide for the use of an
4232 4233	ELUC as an institutional control in order to impose land use limitations or requirements related
4234	Remediation determination from the Illinois Environmental Protection Agency ("IEPA"). The
4235	reason for an ELUC is to ensure protection of human health and the environment. The
4236	limitations and requirements contained herein are necessary in order to protect against exposure
4237	to contaminated soil, or groundwater, or soil gasboth, that may be present on the property as a
4238	result of [VARIABLE] activities. Under 35 Ill. Adm. Code 742, the use of risk-based, site-
4239	specific remediation objectives may require the use of an ELUC on real property, and the ELUC
4240	may apply to certain physical features (e.g., engineered barriers, <u>indoor inhalation building</u>
4241 4747	control technologies, monitoring wens, caps, etc.).
147 4	WHEREAS, [the party performing remediation] intends to
	request risk-based, site specific soil, and groundwater, or soil gas remediation objectives from
	IEPA under 35 Ill. Adm. Code 742 to obtain risk-based closure of the site, identified by Bureau

of Land

`

.

[10-digit LPC or Identification number] , utilizing an ELUC.
NOW, THEREFORE, the recitals set forth above are incorporated by reference as if fully set forth herein, and the Property Owner agrees as follows:
Date: By:
Director
Section One. Property Owner does hereby establish an ELUC on the real estate, situated in the County of, State of Illinois and further described in Exhibit A attached hereto and incorporated herein by reference (the "Property").
Attached as Exhibit B are site maps that show the legal boundary of the Property, any physical features to which the ELUC applies, the horizontal and vertical extent of the contaminants of concern above the applicable remediation objectives for soil <u>, or</u> groundwater <u>, or soil gasboth</u> , and the nature, location of the source, and direction of movement of the contaminants of concern, as required under 35 Ill. Adm. Code 742.
Section Two. Property Owner represents and warrants he/she is the current owner of the Property and has the authority to record this ELUC on the chain of title for the Property with the Office of the Recorder or Registrar of Titles in County, Illinois.
Section Three. The Property Owner hereby agrees, for himself/herself, and his/her heirs, grantees, successors, assigns, transferees and any other owner, occupant, lessee, possessor or user of the Property or the holder of any portion thereof or interest therein, that [INSERT RESTRICTION (e.g., the groundwater under the Property shall not be used as a potable supply of water, and any contaminated groundwater or soil that is removed, excavated, or disturbed from the Property described in Exhibit A herein must be handled in accordance with all applicable laws and regulations)].
Section Four. This ELUC is binding on the Property Owner, his/her heirs, grantees, successors, assigns, transferees and any other owner, occupant, lessee, possessor or user of the Property or the holder of any portion thereof or interest therein. This ELUC shall apply in perpetuity against the Property and shall not be released until the IEPA determines there is no longer a need for this ELUC as an institutional control; until the IEPA, upon written request, issues to the site that received the no further remediation determination a new no further remediation determination (s) or requirement(s); the new no further remediation determination is filed on the chain of title of the site subject to the no further remediation determination; and until a release or modification of the land use limitation or requirement is filed on the chain of title for the Property.
Section Five. Information regarding the remediation performed on the Property may be obtained from the IEPA through a request under the Freedom of Information Act [5 ILCS 140]

.

and rules promulgated thereunder by providing number listed above.	ng the IEPA with the 10-digit LPC or identification
Section Six. The effective date of thi recorded in the chain of title for the Property	is ELUC shall be the date that it is officially to which the ELUC applies.
