

ILLINOIS POLLUTION CONTROL BOARD  
March 19, 1987

IN THE MATTER OF: )  
 )  
THE APPLICATION OF WILMETTE ) PCB 87-32  
HARBOR ASSOCIATION, INC. FOR A )  
LAKE MICHIGAN PERMIT )

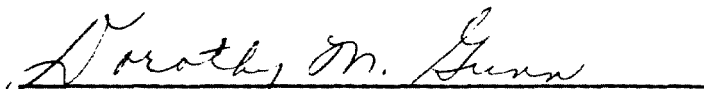

ORDER OF THE BOARD (by B. Forcade):

On March 12, 1987, the Illinois Department of Transportation filed information it had received regarding an application for permit from Wilmette Harbor Association, Inc.. On page one of the attached data summary sheet regarding sediment analyses, the chromium levels are listed as 69-84 mg/kg. The United States Environmental Protection Agency's "Guidelines for the Pollution Classification of Great Lakes Harbor Sediments" defines any sediment having a concentration of greater than 75 mg/kg as heavily polluted. The information provided, to date, is inadequate to support a conclusion that the levels of chromium and other contaminants in the sediment will not cause pollution upon disposal in the beach and nearshore areas.

The application for Board concurrence on this permit, when filed, must provide more information to assure the Board that disposal of the dredge material will not cause a violation of the Environmental Protection Act or Board regulations or harm to the environment. If additional information is not included in the application, that application will be deemed incomplete.

IT IS SO ORDERED.

I, Dorothy M. Gunn, Clerk of the Illinois Pollution Control Board, hereby certify that the above Order was adopted on the 19<sup>th</sup> day of March, 1987, by a vote of 6-0.

  
Dorothy M. Gunn, Clerk  
Illinois Pollution Control Board
